- ii. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no greater than:

- a. [The appropriate percentage (F_x) from Table 11.1 applied to the 2012 IAM Basic Mortality Table] with [Projection Scale G2] for individual payout annuity contracts and deferred annuity contracts with guaranteed living benefits

$$q_x^{2012+n} = q_x^{2012}(1 - G2_x)^n * F_x$$

- b. [1983 Table “a”] for structured settlements or other contracts with impaired mortality
- c. [1994 GAR Table] with [Projection Scale AA] for group annuities

$$q_x^{1994+n} = q_x^{1994}(1 - AA_x)^n$$

iii. For a business segment with non-U.S. insureds, an established industry or national mortality table may be used, with approval from the domiciliary commissioner.

4. Additional Considerations Involving Data

The following considerations shall apply to mortality data specific to the business segment for which assumptions are being determined (i.e., direct data discussed in Section 11.B.1 or other than direct data discussed in Section 11.B.2).

a. Underreporting of Deaths

Mortality data shall be examined for possible underreporting of deaths. Adjustments shall be made to the data if there is any evidence of underreporting. Alternatively, exposure by lives or amounts on contracts for which death benefits were in the money may be used to determine expected mortality curves. Underreporting on such exposures should be minimal; however, this reduced subset of data will have less credibility.

b. Experience by Contract Duration

Experience of a plus segment shall be examined to determine if mortality by contract duration increases materially due to selection at issue. In the absence of information, the company shall assume that expected mortality will increase by contract duration for an appropriate select period. As an alternative, if the company determines that mortality is affected by selection, the company could apply margins to the expected mortality in such a way that the actual mortality modeled does not depend on contract duration.

c. Modification and Relevance of Data

Even for a large company, the quantity of life exposures and deaths are such that a significant amount of smoothing may be required to determine expected mortality curves from mortality experience. Expected mortality curves, when applied to the recent historic exposures (e.g., three to seven years), should not result in an estimate of aggregate number of deaths less (greater) than the actual number deaths during the exposure period for plus (minus) segments.

In determining expected mortality curves (and the credibility of the underlying data), older data may no longer be relevant. The “age” of the experience data used to determine expected mortality curves should be documented.

d. Other Considerations

In determining expected mortality curves, consideration should be given to factors that include, but are not limited to, trends in mortality experience, trends in exposure, volatility in year-to-year A/E mortality ratios, mortality by lives relative to mortality by amounts, changes in the mix of business and product features that could lead to mortality selection.

C. Adjustment for Credibility to Determine Prudent Estimate Mortality

1. Adjustment for Credibility

The expected mortality curves determined in Section 11.B shall be adjusted based on the credibility of the experience used to determine the curves in order to arrive at prudent estimate mortality. The adjustment for credibility shall result in blending the expected mortality curves with the mortality assumption described in Section 11.B.3. The approach used to adjust the curves shall suitably account for credibility.

Guidance Note: For example, when credibility is zero, an appropriate approach should result in a mortality assumption consistent with 100% of the mortality table used in the blending.

2. Adjustment of Statutory Valuation Mortality for Improvement

For purposes of the adjustment for credibility, the mortality table for a plus segment may be and the mortality table for a minus segment must be adjusted for mortality improvement. Such adjustment shall reflect the mortality improvement scale described in Section 11.B.3 from the effective date of the respective mortality table to the experience weighted average date underlying the data used to develop the expected mortality curves.

3. Credibility Procedure

The credibility procedure used shall:

- a. Produce results that are reasonable.
- b. Not tend to bias the results in any material way.
- c. Be practical to implement.
- d. Give consideration to the need to balance responsiveness and stability.
- e. Take into account not only the level of aggregate claims but the shape of the mortality curve.

f. Contain criteria for full credibility and partial credibility that have a sound statistical basis and be appropriately applied.

4. Further Adjustment of the Credibility-Adjusted Table for Mortality Improvement

The credibility-adjusted table used for plus segments may be and the credibility adjusted table used for minus segments must be adjusted for mortality improvement using the applicable mortality improvement scale described in Section 11.B.3 from the experience weighted average date underlying the company experience used in the credibility process to the valuation date.

Any adjustment for mortality improvement beyond the valuation date is discussed in Section 11.D.

D. Future Mortality Improvement

The mortality assumption resulting from the requirements of Section 11.C shall be adjusted for mortality improvements beyond the valuation date if such an adjustment would serve to increase the resulting stochastic reserve. If such an adjustment would reduce the stochastic reserve, such assumptions are permitted, but not required. In either case, the assumption must be based on current relevant data with a margin for uncertainty (increasing assumed rates of improvement if that results in a higher reserve or reducing them otherwise).

Section 12: Allocation of Aggregate Reserves to the Contract Level

Section 3.F states that the aggregate reserve shall be allocated to the contracts falling within the scope of these requirements. That allocation should be done for both the pre- and post-reinsurance ceded reserves. Contracts that have passed the stochastic exclusion test as defined in Section 7.B will not be included in the allocation of the aggregate reserve. For the purpose of this section, if a contract does not have a cash surrender value, then the cash surrender value is assumed to be zero.

Contracts for which the Deterministic Certification Option is elected in Section 7.E are intended to use the methodology described in this section to allocate aggregate reserves in excess of the cash surrender value to individual contracts.

The contract-level reserve for each contract shall be the sum of the following:

- A. The contract’s cash surrender value.

Drafting Note: The American Academy of Actuaries Annuity Reserves and Capital Work Group is including two potential options for allocating the excess portion of the aggregate reserve over cash surrender value: (1) Use the same approach as VM-21 (2) Allocate based on an actuarial present value calculation.

The Work Group did not reach a consensus between these two approaches, so wording for both is included in the text below. The Work Group recommends field testing both approaches and considering the results in determining future decisions.

Option 1: VM-21 Approach

- B. An allocated portion of the excess of the aggregate reserve over the aggregate cash surrender value shall be allocated to each contract based on a measure of the risk of that product relative to its cash surrender value in the context of the company’s in force contracts (assuming zero cash value for contracts that do not contain such). The measure of risk should consider the impact of risk mitigation programs, including hedge programs and reinsurance, that would affect the risk of the product. The specific method of assessing that risk and how it contributes to the company’s aggregate reserve shall be defined by the company. The method should provide for an equitable allocation based on risk analysis.

- 1. As an example, consider a company with the results of the following three contracts:

Table 12.1: Sample Allocation of Aggregate Reserve

Contract (i)	1	2	3	Total
Cash Surrender Value, C	28	40	52	120
Risk adjusted measure, R	38	52	50	
Aggregate Reserve				140
Allocation Basis for the excess of the Aggregate Reserve over the Cash Surrender Value $A_i = \text{Max}(R_i - C_i, 0)$	10	12	0	22

Allocation of the excess of the Aggregate Reserve over the Cash Surrender Value $Li = (Ai)/\Sigma Ai * [Aggregate Reserve - \Sigma Ci]$	9.09	10.91	0.00	20
Contract-level reserve $Ci + Li$	37.09	50.91	52.00	140.00

2. In this example, the Aggregate Reserve exceeds the aggregate Cash Surrender Value by 20. The 20 is allocated proportionally across the three contracts based on the allocation basis of the larger of (i) zero; and (ii) a risk adjusted measure based on reserve principles. Therefore, contracts 1 and 2 receive 45% (9/22) and 55% (11/22), respectively, of the excess Aggregate Reserve. As Contract 3 presents no risk in excess of its cash surrender value, it does not receive an allocation of the excess Aggregate Reserve.

Option 2: Actuarial Present Value Approach

- B. The excess of the aggregate reserve over the aggregate cash surrender value is allocated to policies based on a calculation of the actuarial present value of projected liability cash flows in excess of the cash surrender value:
 1. Discount the liability cash flows at the NAER, pursuant to requirements in Section 4, for the scenario that produces the scenario reserve closest to, but not less than the stochastic reserve defined in Section 3.D.
 - a. Groups of contracts that elect the Deterministic Certification Option defined in Section 7.E shall use the NAER in the single scenario used to calculate the reserve to discount liability cash flows.
 2. If the actuarial present value is less than the cash surrender value, then the excess actuarial present value to be used for allocating the excess aggregate reserve over the cash value shall be floored at zero.
 - a. If all contracts have an excess actuarial present value that is floored at zero, then use the cash surrender value to allocate any excess aggregate reserve over the aggregate cash surrender value.
 3. For projecting future liability cash flows, assume the same liability assumptions that were used to calculate the stochastic reserve defined in 3.D.
 4. As a hypothetical example, consider a company with the results of the following five contracts:

Table 12.1: Hypothetical Sample Allocation of Aggregate Reserve

Contract	Example Product Type	CSV* (1)	Scenario APV (2)	Excess (Floored) of the scenario APV over CSV* (3) = $\text{Max}[(2), 0]$	Aggregate Reserve CTE 70 (4)	Excess of Aggregate Reserve over Aggregate CSV* (5) = $\text{Max}[(4 \text{ Total}) - (1 \text{ Total}), 0]$	Allocated Excess Reserve (6) = $(3) \times [(5 \text{ Total}) / (3 \text{ Total})]$	Total Contract Level Reserve (7) = (1) + (6)
Contract 1:	Indexed Annuity with no GLWB**	95.0	90.0	0.0			0.0	95.0
Contract 2:	Indexed Annuity with low benefit GLWB**	92.0	95.0	3.0			3.6	95.6
Contract 3:	Indexed Annuity with medium benefit GLWB**	90.0	100.0	10.0			12.0	102.0
Contract 4:	Indexed Annuity with high benefit GLWB**	88.0	105.0	17.0			20.4	108.4
Contract 5:	Fixed Life Contingent Payout Annuity	0.0	70.0	70.0			84.0	84.0
Total		365.0		100.0	485.0	120.0	120.0	485.0

*Cash Surrender Value

**Guaranteed Lifetime Withdrawal Benefit

Guidance Note: The actuarial present value (APV) in the section above is separate from the Guarantee Actuarial Present Value (GAPV) referred to in the additional standard projection amount calculation in VM-21. The GAPV is only applicable to guaranteed minimum benefits and uses prescribed liability assumptions. In contrast, the APV in this section applies to the entire contract, irrespective of whether guaranteed benefits are attached, and uses company prudent estimate liability assumptions.

Section 13: Statutory Maximum Valuation Interest Rates for Income Annuity Formulaic Reserves

A. Purpose and Scope

1. These requirements define for single premium immediate annuity contracts and other similar contracts, certificates and contract features the statutory maximum valuation interest rate that complies with Model #820. These are the maximum interest rate assumption requirements to be used in the CARVM and for certain contracts, the CRVM. These requirements do not preclude the use of a lower valuation interest rate assumption by the company if such assumption produces statutory reserves at least as great as those calculated using the maximum rate defined herein.
2. The following categories of contracts, certificates and contract features, whether group or individual, including both life contingent and term certain only contracts, directly written or assumed through reinsurance, with the exception of benefits arising from variable annuities, are covered in this section:
 - a. Immediate annuity contracts issued after Dec. 31, 2017;
 - b. Deferred income annuity contracts issued after Dec. 31, 2017;
 - c. Structured settlements in payout or deferred status issued after Dec. 31, 2017;
 - d. Fixed payout annuities resulting from the exercise of settlement options or annuitizations of host contracts issued after Dec. 31, 2017;
 - e. Fixed payout annuities resulting from the exercise of settlement options or annuitizations of host contracts issued during 2017, for fixed payouts commencing after Dec. 31, 2018, or, at the option of the company, for fixed payouts commencing after Dec. 31, 2017;
 - f. Supplementary contracts, excluding contracts with no scheduled payments (such as retained asset accounts and settlements at interest), issued after Dec. 31, 2017;
 - g. Fixed income payment streams, attributable to contingent deferred annuities (CDAs) issued after Dec. 31, 2017, once the underlying contract funds are exhausted;
 - h. Fixed income payment streams attributable to guaranteed living benefits associated with deferred annuity contracts issued after Dec. 31, 2017, once the contract funds are exhausted; and
 - i. Certificates with premium determination dates after Dec. 31, 2017, emanating from non-variable group annuity contracts specified in Model #820, Section 5.C.2, purchased for the purpose of providing certificate holders benefits upon their retirement.

Guidance Note: For Section 13.A.2.d, Section 13.A.2.e, Section 13.A.2.f and Section 13.A.2.h above, there is no restriction on the type of contract that may give rise to the benefit.

3. Exemptions:
 - a. With the permission of the domiciliary commissioner, for the categories of annuity contracts, certificates and/or contract features in scope as outlined in Section 13.A.2.d, Section 13.A.2.e, Section 13.A.2.f, Section 13.A.2.g or Section 13.A.2.h, the company may use the same maximum valuation interest rate used to value the payment stream in accordance with the guidance applicable to the host contract. In order to obtain such

permission, the company must demonstrate that its investment policy and practices are consistent with this approach.

4. The maximum valuation interest rates for the contracts, certificates and contract features within the scope of Section 13 of VM-22 supersede those described in Appendix VM-A and Appendix VM-C, but they do not otherwise change how those appendices are to be interpreted. In particular, *Actuarial Guideline IX-B—Clarification of Methods Under Standard Valuation Law for Individual Single Premium Immediate Annuities, Any Deferred Payments Associated Therewith, Some Deferred Annuities and Structured Settlements Contracts* (AG-9-B) (see VM-C) provides guidance on valuation interest rates and is, therefore, superseded by these requirements for contracts, certificates and contract features in scope. Likewise, any valuation interest rate references in *Actuarial Guideline IX-C—Use of Substandard Annuity Mortality Tables in Valuing Impaired Lives Under Individual Single Premium Immediate Annuities* (AG-9-C) (see VM-C) are also superseded by these requirements.

B. Definitions

1. The term “reference period” means the length of time used in assigning the Valuation Rate Bucket for the purpose of determining the statutory maximum valuation interest rate and is determined as follows:
 - a. For contracts, certificates or contract features with life contingencies and substantially similar payments, the reference period is the length of time, rounded to the nearest year, from the premium determination date to the earlier of: i) the date of the last non-life-contingent payment under the contract, certificate or contract feature; and ii) the date of the first life-contingent payment under the contract, certificate or contract feature, or
 - b. For contracts, certificates or contract features with no life-contingent payments and substantially similar payments, the reference period is the length of time, rounded to the nearest year, from the premium determination date to the date of the last non-life-contingent payment under the contract, certificate or contract feature, or
 - c. For contracts, certificates or contract features where the payments are not substantially similar, the actuary should apply prudent judgment and select the Valuation Rate Bucket with Macaulay duration that is a best fit to the Macaulay duration of the payments in question.

Guidance Note: Contracts with installment refunds or similar features should consider the length of the installment period calculated from the premium determination date as the non-life contingent period for the purpose of determining the reference period.

Guidance Note: The determination in Section 13.B.1.c above shall be made based on the materiality of the payments that are not substantially similar relative to the life-contingent payments.

2. The term “jumbo contract” means a contract with an initial consideration equal to or greater than \$250 million. Considerations for contracts issued by an insurer to the same contract holder within 90 days shall be combined for purposes of determining whether the contracts meet this threshold.

Guidance Note: If multiple contracts meet this criterion in aggregate, then each contract is a jumbo contract.

3. The term “non-jumbo contract” means a contract that does not meet the definition of a jumbo contract.

4. The term “premium determination date” means the date as of which the valuation interest rate for the contract, certificate or contract feature being valued is determined.
5. The term “initial age” means the age of the annuitant as of his or her age last birthday relative to the premium determination date. For joint life contracts, certificates or contract features, the “initial age” means the initial age of the younger annuitant. If a contract, certificate or contract feature for an annuitant is being valued on a standard mortality table as an impaired annuitant, “initial age” means the rated age. If a contract, certificate or contract feature is being valued on a substandard mortality basis, “initial age” means an equivalent rated age.
6. The term “Table X spreads” means the prescribed VM-22 Section 13 current market benchmark spreads for the quarter prior to the premium determination date, as published on the Industry tab of the NAIC website. The process used to determine Table X spreads is the same as that specified in VM-20 Appendix 2.D for Table F, except that JP Morgan and Bank of America bond spreads are averaged over the quarter rather than the last business day of the month.
7. The term “expected default cost” means a vector of annual default costs by weighted average life. This is calculated as a weighted average of the VM-20 Table A prescribed annual default costs published on the Industry tab of the NAIC website in effect for the quarter prior to the premium determination date, using the prescribed portfolio credit quality distribution as weights.
8. The term “expected spread” means a vector of spreads by weighted average life. This is calculated as a weighted average of the Table X spreads, using the prescribed portfolio credit quality distribution as weights.
9. The term “prescribed portfolio credit quality distribution” means the following credit rating distribution:
 - a. 5% Treasuries
 - b. 15% Aa bonds (5% Aa1, 5% Aa2, 5% Aa3)
 - c. 40% A bonds (13.33% A1, 13.33% A2, 13.33% A3)*
 - d. 40% Baa bonds (13.33% Baa1, 13.33% Baa2, 13.33% Baa3)*

*40%/3 is used unrounded in the calculations.

C. Determination of the Statutory Maximum Valuation Interest Rate

1. Valuation Rate Buckets

- a. For the purpose of determining the statutory maximum valuation interest rate, the contract, certificate or contract feature being valued must be assigned to one of four Valuation Rate Buckets labeled A through D.
- b. If the contract, certificate or contract feature has no life contingencies, the Valuation Rate Bucket is assigned based on the length of the reference period (RP), as follows:

Table 3-1: Assignment to Valuation Rate Bucket by Reference Period Only

RP ≤ 5 Years	5Y < RP ≤ 10Y	10Y < RP ≤ 15Y	RP > 15Y
A	B	C	D

- c. If the contract, certificate or contract feature has life contingencies, the Valuation Rate Bucket is assigned based on the length of the RP and the initial age of the annuitant, as follows:

Table 3-2: Assignment to Valuation Rate Bucket by Reference Period and Initial Age

Initial Age	RP ≤ 5Y	5Y < RP ≤ 10Y	10Y < RP ≤ 15Y	RP > 15Y
90+	A	B	C	D
80–89	B	B	C	D
70–79	C	C	C	D
< 70	D	D	D	D

2. Premium Determination Dates

- a. The following table specifies the decision rules for setting the premium determination date for each of the contracts, certificates and contract features listed in Section 1:

Table 3-3: Premium Determination Dates

Section	Item Description	Premium determination date
A.2.a	Immediate annuity	Date consideration is determined and committed to by contract holder
A.2.b	Deferred income annuity	Date consideration is determined and committed to by contract holder
A.2.c	Structured settlements	Date consideration is determined and committed to by contract holder
A.2.d and A.2.e	Fixed payout annuities resulting from settlement options or annuitizations from host contracts	Date consideration for benefit is determined and committed to by contract holder
A.2.f	Supplementary contracts	Date of issue of supplementary contract
A.2.g	Fixed income payment streams from CDAs, AV becomes 0	Date on which AV becomes 0
A.2.h	Fixed income payment streams from guaranteed living benefits, AV becomes 0	Date on which AV becomes 0

A.2.i	Group annuity and related certificates	Date consideration is determined and committed to by contract holder
-------	--	--

Guidance Note: For the purposes of the items in the table above, the phrase “date consideration is determined and committed to by the contract holder” should be interpreted by the company in a manner that is consistent with its standard practices. For some products, that interpretation may be the issue date or the date the premium is paid.

b. Immaterial Change in Consideration

If the premium determination date is based on the consideration, and if the consideration changes by an immaterial amount (defined as a change in present value of less than 10% and less than \$1 million) subsequent to the original premium determination date, such as due to a data correction, then the original premium determination date shall be retained. In the case of a group annuity contract where a single premium is intended to cover multiple certificates, certificates added to the contract after the premium determination date that do not trigger the company’s right to reprice the contract shall be treated as if they were included in the contract as of the premium determination date.

3. Statutory Maximum Valuation Interest Rate

- a. For a given contract, certificate or contract feature, the statutory maximum valuation interest rate is determined based on its assigned Valuation Rate Bucket (Section 13.C.1) and its Premium Determination Date (Section 13.C.2) and whether the contract associated with it is a jumbo contract or a non-jumbo contract.
- b. Statutory maximum valuation interest rates for jumbo contracts are determined and published daily by the NAIC on the Industry tab of the NAIC website. For a given premium determination date, the statutory maximum valuation interest rate is the daily statutory maximum valuation interest rate published for that premium determination date.
- c. Statutory maximum valuation interest rates for non-jumbo contracts are determined and published quarterly by the NAIC on the Industry tab of the NAIC website by the third business day of the quarter. For a given premium determination date, the statutory maximum valuation interest rate is the quarterly statutory maximum valuation interest rate published for the quarter in which the premium determination date falls.

d. Quarterly Valuation Rate:

For each Valuation Rate Bucket, the quarterly valuation rate is defined as follows:

$$I_q = R + S - D - E$$

Where:

- a. R is the reference rate for that Valuation Rate Bucket (defined in Section 13.C.4);
- b. S is the spread rate for that Valuation Rate Bucket (defined in Section 13.C.5);
- c. D is the default cost rate for that Valuation Rate Bucket (defined in Section 13.C.6);

and

d. E is the spread deduction defined as 0.25%.

e. Daily Valuation Rate:

For each Valuation Rate Bucket, the daily valuation rate is defined as follows:

$$I_d = I_q + C_{d-1} - C_q$$

Where:

- a. I_q is the quarterly valuation rate for the calendar quarter preceding the business day immediately preceding the premium determination date;
- b. C_{d-1} is the daily corporate rate (defined in Section 13.C.7) for the business day immediately preceding the premium determination date; and
- c. C_q is the average daily corporate rate (defined in Section 13.C.8) corresponding to the same period used to develop I_q .

For jumbo contracts, the daily statutory maximum valuation interest rate is the daily valuation rate (I_d) rounded to the nearest one-hundredth of one percent (1/100 of 1%).

4. Reference Rate

Reference rates are updated quarterly as described below:

- a. The “quarterly Treasury rate” is the average of the daily Treasury rates for a given maturity over the calendar quarter prior to the premium determination date. The quarterly Treasury rate is downloaded from <https://fred.stlouisfed.org>, and is rounded to two decimal places.
- b. Download the quarterly Treasury rates for two-year, five-year, 10-year and 30-year U.S. Treasuries.
- c. The reference rate for each Valuation Rate Bucket is calculated as the weighted average of the quarterly Treasury rates using Table 1 weights (defined in Section 13.C.9) effective for the calendar year in which the premium determination date falls.

5. Spread

The spreads for each Valuation Rate Bucket are updated quarterly as described below:

- a. Use the Table X spreads from the NAIC website for WALs two, five, 10 and 30 years only to calculate the expected spread.
- b. Calculate the spread for each Valuation Rate Bucket, which is a weighted average of the expected spreads for WALs two, five, 10 and 30 using Table 2 weights (defined in Section 3.I) effective for the calendar year in which the premium determination date falls.

6. Default costs for each Valuation Rate Bucket are updated annually as described below:

- a. Use the VM-20 prescribed annual default cost table (Table A) in effect for the quarter prior to the premium determination date for WAL two, WAL five and WAL 10 years only to calculate the expected default cost. Table A is updated and published annually on

the Industry tab of the NAIC website during the second calendar quarter and is used for premium determination dates starting in the third calendar quarter.

- b. Calculate the default cost for each Valuation Rate Bucket, which is a weighted average of the expected default costs for WAL two, WAL five and WAL 10, using Table 3 weights (defined in Section 13.C.9) effective for the calendar year in which the premium determination date falls.

7. Daily Corporate Rate

Daily corporate rates for each valuation rate bucket are updated daily as described below:

- a. Each day, download the Bank of America Merrill Lynch U.S. corporate effective yields as of the previous business day’s close for each index series shown in the sample below from the St. Louis Federal Reserve website: <https://research.stlouisfed.org/fred2/categories/32348>. To access a specific series, search the St. Louis Federal Reserve website for the series name by inputting the name into the search box in the upper right corner, or input the following web address: [https://research.stlouisfed.org/fred2/series/\[replace with series name from the table below\]](https://research.stlouisfed.org/fred2/series/[replace with series name from the table below]).

Table 3-4: Index Series Names

Maturity	Series Name
1Y – 3Y	BAMLC1A0C13YEY
3Y – 5Y	BAMLC2A0C35YEY
5Y – 7Y	BAMLC3A0C57YEY
7Y – 10Y	BAMLC4A0C710YEY
10Y – 15Y	BAMLC7A0C1015YEY
15Y+	BAMLC8A0C15PYEY

- b. Calculate the daily corporate rate for each valuation rate bucket, which is a weighted average of the Bank of America Merrill Lynch U.S. corporate effective yields, using Table 4 weights (defined in Section 13.C.9) effective for the calendar year in which the business date immediately preceding the premium determination date falls.

8. Average Daily Corporate Rate

Average daily corporate rates are updated quarterly as described below:

- a. Download the quarterly average Bank of America Merrill Lynch U.S. corporate effective yields for each index series shown in Section 3.G.1 from the St. Louis Federal Reserve website: <https://research.stlouisfed.org/fred2/categories/32348>. To access a specific series, search the St. Louis Federal Reserve website for the series name by inputting the name into the search box in the upper right corner, or input the following web address: [https://research.stlouisfed.org/fred2/series/\[replace with series name from Section 13.C.7.a\]](https://research.stlouisfed.org/fred2/series/[replace with series name from Section 13.C.7.a]).

- b. Calculate the average daily corporate rate for each valuation rate bucket, which is a weighted average of the quarterly average Bank of America Merrill Lynch U.S. corporate effective yields, using Table 4 weights (defined in Section 13.C.9) for the same calendar year as the weight tables (i.e. Tables 1, 2, and 3) used in calculating I_q in Section 13.C.3.e.

9. Weight Tables 1 through 4

The system for calculating the statutory maximum valuation interest rates relies on a set of four tables of weights that are based on duration and asset/liability cash-flow matching analysis for representative annuities within each valuation rate bucket. A given set of weight tables is applicable to the calculations for every day of the calendar year.

In the fourth quarter of each calendar year, the weights used within each valuation rate bucket for determining the applicable valuation interest rates for the following calendar year will be updated using the process described below. In each of the four tables of weights, the weights in a given row (valuation rate bucket) must add to exactly 100%.

Weight Table 1

The process for determining Table 1 weights is described below:

- a. Each valuation rate bucket has a set of representative annuity forms. These annuity forms are as follows:
 - i. Bucket A:
 - a) Single Life Annuity age 91 with 0 and five-year certain periods.
 - b) Five-year certain only.
 - ii. Bucket B:
 - a) Single Life Annuity age 80 and 85 with 0, five-year and 10-year certain periods.
 - b) 10-year certain only.
 - iii. Bucket C:
 - a) Single Life Annuity age 70 with 0 and 15-year certain periods.
 - b) Single Life Annuity age 75 with 0, 10-year and 15-year certain periods.
 - c) 15-year certain only.
 - iv. Bucket D:
 - a) Single Life Annuity age 55, 60 and 65 with 0 and 15-year certain periods.
 - b) 25-year certain only.
- b. Annual cash flows are projected assuming annuity payments are made at the end of each year. These cash flows are averaged for each valuation rate bucket across the annuity forms for that bucket using the statutory valuation mortality table in effect for the following calendar year for individual annuities for males (ANB).

- c. The average daily rates in the third quarter for the two-year, five-year, 10-year and 30-year U.S. Treasuries are downloaded from <https://fred.stlouisfed.org> as input to calculate the present values in Step d.
- d. The average cash flows are summed into four time period groups: years 1–3, years 4–7, years 8–15 and years 16–30. (**Note:** The present value of cash flows beyond year 30 are discounted to the end of year 30 and included in the years 16–30 group. This present value is based on the lower of 3% and the 30-year Treasury rate input in Step c.)
- e. The present value of each summed cash-flow group in Step d is then calculated by using the Step 3 U.S. Treasury rates for the midpoint of that group (and using the linearly interpolated U.S. Treasury rate when necessary).
- f. The duration-weighted present value of the cash flows is determined by multiplying the present value of the cash-flow groups by the midpoint of the time period for each applicable group.
- g. Weightings for each cash-flow time period group within a valuation rate bucket are calculated by dividing the duration weighted present value of the cash flow by the sum of the duration weighted present value of cash flow for each valuation rate bucket.

Weight Tables 2 through 4

Weight Tables 2 through 4 are determined using the following process:

- i. Table 2 is identical to Table 1.
 - ii. Table 3 is based on the same set of underlying weights as Table 1, but the 10-year and 30-year columns are combined since VM-20 default rates are only published for maturities of up to 10 years.
 - iii. Table 4 is derived from Table 1 as follows:
 - a) Column 1 of Table 4 is identical to column 1 of Table 1.
 - b) Column 2 of Table 4 is 50% of column 2 of Table 1.
 - c) Column 3 of Table 4 is identical to column 2 of Table 4.
 - d) Column 4 of Table 4 is 50% of column 3 of Table 1.
 - e) Column 5 of Table 4 is identical to column 4 of Table 4.
 - f) Column 6 of Table 4 is identical to column 4 of Table 1.
10. Group Annuity Contracts

For a group annuity purchased under a retirement or deferred compensation plan (Section 13.A.2.i), the following apply:

- a. The statutory maximum valuation interest rate shall be determined separately for each certificate, considering its premium determination date, the certificate holder's initial age, the reference period corresponding to its form of payout and whether the contract is a jumbo contract or a non-jumbo contract.

Guidance Note: Under some group annuity contracts, certificates may be purchased on different dates.

- b. In the case of a certificate whose form of payout has not been elected by the beneficiary at its premium determination date, the statutory maximum valuation interest rate shall be based on the reference period corresponding to the normal form of payout as defined in the contract or as is evidenced by the underlying pension plan documents or census file. If the normal form of payout cannot be determined, the maximum valuation interest rate shall be based on the reference period corresponding to the annuity form available to the certificate holder that produces the most conservative rate.

Guidance Note: The statutory maximum valuation interest rate will not change when the form of payout is elected.

Valuation Manual Section II. Reserve Requirements

Subsection 2: Annuity Products

- A. This subsection establishes reserve requirements for all contracts classified as annuity contracts as defined in SSAP No. 50 in the AP&P Manual.
- B. Minimum reserve requirements for variable annuity (VA) contracts and similar business, specified in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, shall be those provided by VM-21. The minimum reserve requirements of VM-21 are considered PBR requirements for purposes of the *Valuation Manual*.
- C. Minimum reserve requirements for fixed annuity contracts issued prior to 1/1/2024 are those requirements as found in VM-A and VM-C as applicable, with the exception of the minimum requirements for the valuation interest rate for single premium immediate annuity contracts, and other similar contracts, issued after Dec. 31, 2017, including those fixed payout annuities emanating from host contracts issued on or after Jan. 1, 2017, and on or before Dec. 31, 2017. The maximum valuation interest rate requirements for those contracts and fixed payout annuities are defined in Section 13 of VM-22, Statutory Maximum Valuation Interest Rates for Income Annuity Formulaic Reserves.
- D. Minimum reserve requirements for fixed annuity contracts issued on 1/1/2024 and later are those requirements as found in Sections 1 through 12 of VM-22.
- E. The below principles may serve as key considerations for assessing whether VM-21 or VM-22 requirements apply:
 - 1. Index-linked or modified guaranteed annuity contracts or riders that satisfy both of the following conditions may be a key consideration for application of VM-22 requirements:
 - a. Guarantees the principal amount of purchase payments, net of any partial withdrawals, and interest credited thereto, less any deduction (without regard to its timing) for sales, administrative or other expenses or charges.
 - b. Credits a rate of interest under the contract that is at least equal to the minimum rate required to be credited by the standard nonforfeiture law in the jurisdiction in which the contract is issued.

Guidance Note: Paragraph E.1.b is intended to apply prior to the application of any market value adjustments for modified guaranteed annuities where the underlying assets are held in a separate account. If meeting Paragraph E.1.b prior to the application of any market value adjustments and Paragraph E.1.a above, it may be appropriate to value such contracts under VM-22 requirements.

- 2. Index-linked or modified guaranteed annuity contracts that do not satisfy either of the two conditions listed above in Paragraph E.1.i and E.1.ii may be a key consideration for application of VM-21 requirements.

Subsection 6: Riders and Supplemental Benefits

Guidance Note: Policies or contracts with riders and supplemental benefits which are created to simply disguise benefits subject to the Valuation Manual section describing the reserve methodology for the base product to which they are attached, or exploit a perceived loophole, must be reserved in a manner similar to more typical designs with similar riders.

- A. If a rider or supplemental benefit is attached to a health insurance product, deposit-type contract, or credit life or disability product, it may be valued with the base contract unless it is required to be separated by regulation or other requirements.
- B. For supplemental benefits on life insurance policies or annuity contracts, including Guaranteed Insurability, Accidental Death or Disability Benefits, Convertibility, Nursing Home Benefits or Disability Waiver of Premium Benefits, the supplemental benefit may be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, VM-A, and/or VM-C, as applicable.
- C. ULSG and other secondary guarantee riders on a life insurance policy shall be valued with the base policy and follow the reserve requirements for ULSG policies under VM-20, VM-A and/or VM-C, as applicable.
- D. Any guaranteed minimum benefits on life insurance policies or annuity contracts not subject to Paragraph C above including, but not limited to, Guaranteed Minimum Accumulation Benefits, Guaranteed Minimum Death Benefits, Guaranteed Minimum Income Benefits, Guaranteed Minimum Withdrawal Benefits, Guaranteed Lifetime Income Benefits, Guaranteed Lifetime Withdrawal Benefits, Guaranteed Payout Annuity Floors, Waiver of Surrender Charges, Return of Premium, Systematic Withdrawal Benefits under Required Minimum Distributions, and all similar guaranteed benefits shall be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, and VM-A and/or VM-C, as applicable.
- E. If a rider or supplemental benefit to a life insurance policy or annuity contract that is not addressed in Paragraphs B, C, or D above possesses any of the following attributes, the rider or supplemental benefit shall be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, and VM-A and/or VM-C, as applicable.
 - 1. The rider or supplemental benefit does not have a separately identified premium or charge.
 - 2. After issuance, the rider or supplemental benefit premium, charge, value or benefits are determined by referencing the base policy or contract features or performance.
 - 3. After issuance, the base policy or contract value or benefits are determined by referencing the rider or supplemental benefit features or performance. The deduction of rider or benefit premium or charge from the contract value is not sufficient for a determination by reference.
- F. If a term life insurance rider on the named insured[s] on the base life insurance policy does not meet the conditions of Paragraph E above, and either (1) guarantees level or near level premiums until a specified duration followed by a material premium increase; or (2) for a rider for which level or near level premiums are expected for a period followed by a material premium increase, the rider is separated from the base policy and follows the reserve requirements for term policies under VM20, VM-A and/or VM-C, as applicable.

- G. For all other riders or supplemental benefits on life insurance policies or annuity contracts not addressed in Paragraphs B through F above, the riders or supplemental benefits may be valued with the base policy or contract and follow the reserve requirements for the base policy or contract under VM-20, VM-21, VM-22, VM-A and/or VM-C, as applicable. For a given rider, the election to include riders or supplemental benefits with the base policy or contract shall be determined at the policy form level, not on a policy-by-policy basis, and shall be treated consistently from year-to-year, unless otherwise approved by the domiciliary commissioner.
- H. Any supplemental benefits and riders offered on life insurance policies or annuity contracts that would have a material impact on the reserve if elected later in the contract life, such as joint income benefits, nursing home benefits, or withdrawal provisions on annuity contracts, shall be considered when determining reserves using the following principles:
1. Policyholders with living benefits and annuitization in the same contract will generally use the more valuable of the two benefits.
 2. When advantageous, policyholders will commence living benefit payouts if not started yet.

Brian Bayerle
Senior Actuary

November 19, 2021

Mr. Bruce Sartain
Chair, NAIC Valuation Manual (VM)-22 (A) Subgroup (Subgroup)

Re: ACLI Comments on ARCWG VM-22 Framework Draft Proposal

Dear Mr. Sartain:

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments on the American Academy of Actuaries (the Academy) Annuity Reserves and Capital Work Group) VM-22 Framework Exposure.

ACLI appreciates all the hard work of the Subgroup and ARCWG in development of this draft. We believe the framework is an excellent first step towards principles-based requirements for fixed annuities. We look forward to working with the Subgroup and ARCWG in further development of the framework, and on notable areas that were not addressed in this first exposure.

ACLI supports the continued development of principles-based reserving. We believe that this development is the natural progression of measurement of underlying risks in company portfolios. PBR enables better measurement of complex guarantees and other risks and reflects the underlying experience of the block, while maintaining appropriate flexibility consistent with the complexity of the risks being measured,

Our comments are broken into two sections: priority areas for requested comment and comments on individual sections of the VM-22. You will also find our comments in the accompanying Word document.

VM-22 Exposure Comments and Priorities Comments:

- **Standard Projection Amount (SPA):** If any reserve method includes a SPA, the ACLI supports making the SPA a nonbinding disclosure item across the applicable VM chapters. We appreciate the use of the SPA to help identify outlier assumptions; however, we note that having one-size-fits-all prescribed assumptions is extremely challenging due to the variety of designs in the market. Further, a binding floor introduces non-economic considerations to the reserve that do not align with management of the portfolio. Consistent with our feedback regarding the variable annuity framework, we are concerned

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

about the possibility of this approach producing false positives and false negatives regarding outliers.

- **Reserving Categories:** We believe aggregation should be consistent with management of liabilities and assets throughout the lifecycle of the portfolio and VM-22 should allow for companies to designate aggregation of blocks consistent with their operational and investment management. Multiple categories and other aggregation limits could create disconnects with the actual management and asset portfolio of the company. Further, a greater level of aggregation encourages well-diversified portfolios and sound-risk management.

Were multiple reserve categories to be defined, we would support a principles-based categorization to accommodate innovation in the market. Further, we suggest an “at issue” approach to better align with management of the block and to avoid any disconnects in the level of the reserve were a block to switch between categories. Additionally, certain additional disclosures may not be applicable under this approach, such as those related to investment strategy when the company is not modeling it; we would suggest limiting the disclosures and reporting to items actually used in the calculation. For Option 1, we suggest deleting item #6 to be consistent with VM-21 or at least need to exclude payment streams from VAs which are scoped into VM-21.

- **Model Segments (Section 3.E):** Consistent with our comments on reserving categories, we believe the model segments should appropriately align with the internal management framework of companies to appropriately reflect inherent offsets in risks, which is in the spirit of a principle-based framework. We do not believe restrictive requirements around segments serves to solve any known problems, as two disjoint scenarios cannot occur at the same time within a company’s portfolio. We suggest consistency of this text with the existing VM-20 Section 7.A.1.b.
- **Allocation (Section 12):** We believe discussion of allocation of aggregate reserves should be analyzed as part of the field study.
- **VM-21 vs. VM-22 Distinction (VM Section II edits):** Consistent with the exposed framework, we support the continued inclusion of RILA and RILA-like products within VM-21. We are appreciative of the key considerations outlined in Valuation Manual Section II. Reserve Requirements Subsection 2.E and support further clarification of the intent of this text for greater clarity on the applicable guidance.
- **Exclusion Test:** ACLI is supportive of the exclusion test, however, we believe there are areas that could be clarified. We think there could be greater clarity regarding how exactly the exclusion test should be executed. For the Deterministic Certification Option, we request the text to be clarified regarding what business can use this option due to potential confusion in the current text; it would be clearer if the Guidance Note after 7.E.2 were moved to the beginning of Section 7.E to clarify what type of business falls into this category.

We do not believe in the necessity of including longevity risk within the scope of the exclusion test since we are not attempting to model longevity/mortality stochastically. We recommend striking longevity risk related components of this section throughout, including in 7.B and 7.C.1, and deleting the Drafting Note after 7.E.1.d.

Please find additional comments below in Section 7.

Specific feedback on sections:

- Section 1
 - A (Purpose): The proposal suggests VM-22 is not operative until 1/1/2024, which contradicts Section 13 and existing requirements. We would suggest rewording this to clarify that Section 13 is effective after 12/31/2017. Further, we would suggest consistency in labeling of dates (either all text or all numeric).
 - A (Relationship to RBC Requirements): The VM-21 guidance note was not included in VM-22; however, we believe it would be appropriate to retain and reword to say, “products that calculate a stochastic reserve”, since the relationship to RBC would likely be maintained.
 - B (Principles): We would support consistent application of principles across all chapters as currently VM-20 does not have a like-set of principles. We believe this could involve a broader discussion of the assorted product requirements in the VM. As a shorter-term fix, we would recommend generalizing the principles where appropriate and moving these to "Section I. Introduction" or "VM-01" and equally applying to VM-20.
 - B (Principle 2): We support this principle but note that later sections appear to contradict this principle. For example, the statement “The analysis reflects prudent estimate assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions) to allow the natural offset of risks within a given scenario.” contradicts with the introduction of additional reserve categories and other limitations (such as model segment restrictions).
 - B (Principle 3): We suggest deleting the sentence "Generally, assumptions are..." since it does not provide guidance. We also suggest tightening the remainder of the text for clarity.
 - B (Principle 5): We recommend deleting the third sentence (starting with “Therefore, the use of assumptions...”) because this lacks historical context and is covered by the final sentence.
 - C (Risks Reflected): Consistent with our comments on 1.B, we would support consistent application of risks reflected across all chapters, rather than embedding the language in each chapter. Were this to be retained in VM-22, we would suggest maintaining consistency with VM-21 to avoid any confusion.
 - C.2.c.i: We recommend removing the bullet “Risks modeled in the company’s risk assessment processes that are related to the contracts, as described above” as this is unclear and probably extraneous.
 - C.3: We recommend removing this section. With the specific RBC language removed, the section loses meaning: "a" is unnecessary and "b" is redundant with

other sections of the VM which allow for materiality considerations (language in VM-20 is likely better for this purpose and should be used consistently).

- C.4.b.iv: We recommend removing the bullet “Significant future reserve increases as an unfavorable scenario is realized” as this is extraneous.
- C.4.c (General business risks): List could be expanded to include operational risk and litigation risk.
- D (Specific definitions for VM-22): It seems the definitions included in this section are largely only used for the purpose of establishing the Scope in Section 2. Since this is intended to be a principles-based methodology, recommend a strong definition of “Fixed Annuity” instead of specific products underneath this business. The first paragraph in A. Scope seems to provide this with specific references which are out of scope. If changing the scope section, we would suggest deleting the various product definitions if not used elsewhere; if these definitions are potentially applied beyond VM-22, we would suggest moving any necessary definitions to VM-01.
- D (Deferred Income Annuity (DIA) definition/Single Premium Immediate Annuity (SPIA) definition): Suggest aligning the cut off to 13 months for alignment consistent with Actuarial Guideline IX, rather than the 1 year that currently is in the VM-22 draft.
- D (Fixed Indexed Annuity (FIA) definition): Is “typically” intended to be a requirement in the definition? That is, to qualify as FIA does there need to be guaranteed principle?
- D (Index Parameter definition): We would suggest adding performance trigger to the list, along with other potential crediting methods; alternatively, the definition could specify that the crediting methods listed are examples only.
- D (Longevity Reinsurance definition): The definition states that “Agreements which are not treated as reinsurance under Statement of Statutory Accounting Principles (SSAP) No. 61R are not included in this definition”. Why is this the case and does this imply that longevity swaps are not within the scope of VM-22? Recommend adding to the out-of-scope list in “2.A. Scope” if that is the case. Clarification would also be helpful on what guidance should be used for these agreements if out of scope for VM-22. Further, we would suggest removing “typically” from the definition.
- D (Modified Guaranteed Annuity): We recommend editing the definition as follows “A type of market-value adjusted annuity contract where the underlying assets are most commonly held in an insurance company separate account...”
- D (Pension Risk Transfer (PRT) Annuity definition): Is “typically” intended to be a requirement in the definition? That is, to qualify as PRT must the insurance company have the asset risk? Consistent with the comment on Longevity Reinsurance, it would be helpful to clarify where a longevity swap contract falls within these definitions. Notably, index-based longevity swaps should be out of scope as they do not meet definition of “annuity contract” in SSAP 50. It should also be made explicit that PRT contracts can include lump sum benefits, death benefits and cash balance benefits as well.
- D (Registered Index-Linked Annuity (RILA)): It is unclear to us why RILA is defined in VM-22 when it is being used to exclude the product from VM-22 requirements.

- D (Structured Settlement Contracts (SSC)): Suggest striking sentence “Adverse mortality is typically expected for these contracts.” from definition. Additionally, it is possible that there may be non-substandard settlements.
- Section 2
 - Consistent with our comment in Section 1, the language around effective date should be clear this only applies to new PBR methodology, and rates in Section 13 have a different effective date.
 - We would support reworking this section to rely on principles, rather than definitions to determine what is in and out of scope. As product innovation continues, a simple list may not appropriately accommodate the applicability of this chapter. However, if such a list is included, then we believe it should align with the full list presented in Section 13.
 - We suggest moving or deleting the sentence “The company may elect to exclude one or more groups of contracts from the stochastic reserve calculation in certain situations, pursuant to the exclusion test requirements defined in Section 3.E of VM-22.” from this section as it does not seem fitting here.
- Section 3
 - B: Guidance is needed on how a pre-reinsurance reserve is to be determined.
 - D: The term "Deterministic Certification Option" may be confusing, as there is no "deterministic" reserve, unlike VM-20. We recommend consideration of an alternative term. In addition, we recommend changing the phrasing to "with the exception of groups of contracts for which a company elects the [Deterministic Certification Option], following the requirements of Section 7.E."
 - E.1: Seems to imply that only SPIAs would pass due to the linkage to Section 13. But the reference to interest rates should be broader, if even necessary. Suggest editing as:
 - "these groups of contracts may be valued using the methodology and statutory maximum valuation rate pursuant to applicable requirements in VM-A, and VM-C, and with the statutory maximum valuation rate for immediate annuities specified in Section 13."
 - E.2: This section seems to indicate that the grouping of contracts in exclusion testing should be the same as the grouping of contracts for aggregation. This might cause fewer product types to be qualifying for exclusion if the test must be performed at a higher level of aggregation.
 - E (Guidance note beginning “The intention of contracts that pass the stochastic exclusion test...”): We believe this guidance note is unnecessary as the intent of the section is clear, and the wording is possibly confusing.
 - F (Allocation) Either in this item or in Section 12 allocation to contracts not covered by PBR methodology in VM-22 needs to be addressed e.g., carve out because reserves calculated on seriatim formulaic basis.
 - G (Prudent Estimate Assumptions): This sub-section seems more appropriate in Section 4 (or pulled out completely and consolidated within "I. Introduction" or "VM-01" and applied to all PBR methods).

- G.2: Suggest replacing “If the results of statistical testing or other testing” with “If the results of the review” to simplify language and avoid possible confusion.
- Section 4
 - A.1.b (Guidance Note): The purpose of this guidance note is not clear as these charges would be reflected in the cash flows.
 - A.2: Suggest editing the first sentence to note scope is FIAs and to avoid confusion regarding the term “investment guideline” as follows: “Index crediting strategies for fixed indexed annuities may be grouped for modeling using an approach that recognizes the investment guidelines and objectives of each index crediting strategy.”
 - Given that Section 9 covers hedging, we would suggest considering moving parts of Section 4.A.4 to that section.
 - A.4: Suggest rewording “Future hedging program” to “hedging program with future transactions” to avoid ambiguity.
 - A.4.b.ii.b): “Any other purpose” in the last sentence seems overly broad and should be narrowed.
 - A.4.b.ii.c): Margins are discussed in a different section, so recommend deleting.
 - A.4.b.i.c): We believe the company should determine the appropriate margin based on their demonstration of effectiveness. Any guardrails on these undetermined values should be minimal, including as low as 0, subject to the appropriate demonstration of effectiveness. Further, we believe that documentation of effective product management should be contemplated in addition to historical effectiveness.
 - A.5: Unclear why Revenue Sharing is considered for non-variable products, can probably delete.
 - B.1: Section does not specify what the reserve floor shall be (if any) for contracts without cash surrender value.
 - B.3.a We believe that assets held in the separate account with performance not impacting policyholder benefits should be modeled consistent with how the business is managed.
 - D.4.b: Request clarification around the meaning of “general account index funds.”
 - E.1.b. Suggest deleting “In contrast, for payouts specified at issue, the payout rates modeled should be consistent with those specified in the contract.” as it appears to be covered by E.1.a.
 - E.2: Suggest deleting “may” as there appears to be only option.
- Section 5: The wording and titling may need to be tightened due to clarify which items apply to assumed and ceded reinsurance in the text.
- Section 7
 - B.3: We recommend removing “pension risk transfer business” from products scoped out of SET certification method. It is unclear why this business would be treated differently from individually issued business for testing intended to capture interest rate risk.

- C.1: As written, the SERT assumes a single premium product given the change of the denominator to the scenario reserve. Alternative product designs (such as longevity swap) could result in unintended results. We recommend maintaining consistency with VM-20 and using a denominator of future benefits (annuity payments, DBs, etc., excluding premium considerations, expenses, etc.).
 - C.2.d: Clarification is needed around reference to “significantly different risk profiles.”
 - C.3: We request clarification or definition of the term “non-proportional reinsurance.”
 - C.3.a.iii: We believe subscript “gy” should be “gn.”
 - D.1.a: Does this statement imply a floor reserve of VM-A and VM-C? VM-20 does require the NPR as the floor of the reserve but as written, VM-22 does not require a floor reserve. Recommend removing 1.a. Same statement with the 2.a statement demonstration. This requirement does not apply to the other permitted tests, which seemed counterintuitive.
- Section 9
 - Section 4.A.4 (Modeling of Hedges) has some relationship with this section, we request clarification around the applicability of these two areas of hedge guidance.
 - A.1: We seek clarification of this text: if a company only hedges indices or separates index crediting from other hedges, does this apply, or does it only apply to any other hedging?
 - A.3: The sentence “Prior to reflection in projections, the strategy for future hedge purposes shall be the actual practice of the company for a period of time not less than [6] months.” seems to suggest you would do something other than the actual hedging strategy after [6] months. In this case, what are you assuming for modeling? We suggest clarification of this sentence.
 - D.2: Suggest replacing “indexed” with “fixed” since this would apply to all fixed annuities.
 - Section 10
 - A.7: We would suggest rewording this section to be considerations rather than posed as questions.
 - D.8: This section states that “contract holder behavior should neither assume that all contract holders act with 100% efficiency in a financially rational manner nor assume that contract holders will always act irrationally.” This text seems to directly contradict Section II. Reserve Requirements 6.H.2 which states “When advantageous, policyholders will commence living benefit payouts if not started yet..” We suggest revising 6.H.2 to align with the text of 10.D.8.
 - C (Sensitivity Testing): Suggest updating bullet to “Other material behavior assumptions if relevant to the risks in the product.”
 - E.2: Suggest replacing “Risk factors that are not scenario tested but” with “Static assumptions that” to improve clarity in the wording.
 - F.1.d (Volatile credit spreads): Suggesting deleting as we are not aware of dynamic credit spreads typically being modeled.

- Section 11
 - Specific requirements will require further discussion, particularly what if any industry experience is identified for the SPA. Ideally, updated, and appropriate assumptions should be used for better alignment and to avoid any false positives flagged as an outlier by the SPA.
 - A.4: Terming the segments “mortality (longevity) segments” would be easier to understand than “plus (minus) segments.”
 - B.3.ii.c: For PRT an assumption based on a third-party data provider would be better than the industry table to get contract specific mortality assumptions. Is this permitted? The guidance note in A.3 seems to get at this, but it is not clear in B.3.ii.c whether this is allowed. This is an important distinction as PRT population can vary from those populations the tables are based upon.
 - B.3.iii The phrase “When little or no experience or information is available on a business segment” is not included, unlike in (i) and (ii) of the same sub-section. It appears to be the intent that this is the only situation in which this would apply, but it would be helpful to make this explicit.
 - C.1: Both plan and industry data should get weighted for business such as PRT. This text says to blend with prescribed tables, but that might not make sense unless additional experience data was unavailable.
 - C.2: Mortality improvement should be consistent with the underlying tables used, so we would suggest this being based on available experience subject to appropriate guardrails.
- Section 12: We believe discussion of allocation of aggregate reserves should be analyzed as part of the field study.
- Section II. Reserve Requirements
 - We believe a Fixed Annuity PBR Exemption should be incorporated into draft in a manner consistent with the Life PBR Exemption.
 - 6.H.2: This section states that “When advantageous, policyholders will commence living benefit payouts if not started yet.” This text seems to directly contradict VM-22 Section 6.H.2 which states “contract holder behavior should neither assume that all contract holders act with 100% efficiency in a financially rational manner nor assume that contract holders will always act irrationally”. We suggest revising 6.H.2 to align with the text of 10.D.8.

We appreciate the consideration of our comments and look forward to discussing at a future meeting.

Sincerely,

cc: Reggie Mazyck, NAIC

TO: Reggie Mazyck, NAIC
RE: ARCWG VM-22 Framework Exposure

Dear Mr. Mazyck:

I'm writing to comment on the lack of a true exemption from Annuity PBR as outlined in VM-22.

VM-22 contains a number of exclusion tests, but these differ in meaningful ways from the Life PBR small company exemption (SCE). The primary difference is in the level of complexity required to demonstrate compliance with any of the VM-22 exclusion tests.

The Life PBR SCE is simple by design. It can be completed on a single page using data from financial statements that are readily available. The criteria for this exemption were also simple by design and intentionally did not require any modeling to demonstrate compliance. This exemption was crucial to gaining support for Life PBR from smaller companies with smaller actuarial departments whose primary concerns about PBR came from expense and resource management rather than capital management. For many companies, such an exemption was a prerequisite for their support of PBR during the legislative process.

On the other hand, demonstration of compliance with any of the exclusion tests in VM-22 will likely require a modeling exercise using multiple interest rate scenarios along with supporting documentation that is not meaningfully less than the work and documentation required for those who do not pass an exclusion test. This is hardly the same kind of exemption as is included for Life PBR. Furthermore, it is my understanding that since VM-22 is an amendment to an already adopted valuation manual, it is not required to go through the legislative process and be adopted by state legislatures. If this is the case, I can't help but wonder if smaller companies would have been supportive of PBR in general had they been aware that their exemption from it could be placed in jeopardy by future edits to the valuation manual.

Given that formulaic reserves have protected the solvency of life insurers for decades in the US, a true exemption should remain available for well-capitalized companies with smaller levels of annuity production who wish to continue to avoid the complexities and expenses associated with model-based reserves.

The Indexed Universal Life (IUL) (A) Subgroup Exposure

The Indexed Universal Life (IUL) (A) Subgroup is exposing the options below for public comment.

Please provide comments by Tuesday, July 26 regarding these potential options to address the AG 49-A issues:

- (a) attempt a quick fix on the current concern (some companies illustrating uncapped volatility-controlled policies better than capped S&P 500 policies) with a brief revision to AG 49-A; it can be discussed with A committee whether there are plans to address any broader issues with life illustrations;
- (b) make no changes to AG 49-A (allow current practices);
- (c) attempt to revise AG 49A more extensively to address the current concern and any other identified potential concerns; or
- (d) apply a hard cap on various IUL illustration metrics.

There will also be a subsequent opportunity to provide written comments for a period after the August NAIC national meeting.

Please send comments to Reggie Mazyck (RMazyck@NAIC.ORG) by close of business July 26.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

July 26, 2022

Mr. Fred Andersen
Chair, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners (NAIC)

Re: The Indexed Universal Life (IUL) Illustration (A) Subgroup Exposure (July 18, 2022)

Dear Mr. Andersen,

The American Academy of Actuaries¹ Life Illustrations Work Group (the “Work Group”) is pleased to provide comments to the IUL Illustration (A) Subgroup on the IUL Exposure from the July 18, 2022, meeting of the Subgroup.

As our Work Group discussed the options in the exposure, we realized we don’t have a clear understanding of the regulators’ views on certain matters. We have identified some questions that we encourage the regulators to answer early in the process to help frame the discussion:

1. What, if anything, is the problem that the IUL Subgroup is seeking to resolve?
Articulating the problem will help regulators and interested parties identify the appropriate option.
 - a. If the regulators are comfortable with current IUL illustration practices, then the option to do nothing may be appropriate.
 - b. If the problem is limited to volatility-controlled indices, then a “quick fix” may be appropriate.
 - c. If the problem is that Actuarial Guideline (AG) 49-A does not readily accommodate evolving product design, then a more principle-based approach to AG 49-A may be appropriate.
 - d. If the problem cannot be addressed within AG 49-A, then a broader effort may be appropriate.

2. Does the “quick fix” option necessitate discussion with the Life Insurance and Annuities (A) Committee as to whether there are plans to address any broader issues with life illustrations, or are there really two options embedded within option (a)?

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

3. What is meant by a “hard cap”? How would it be determined? How would it apply to the product features? Why would a hard cap be appropriate?
4. Which options support consumer understanding of the product features?
5. What information is needed to help the IUL Subgroup develop and evaluate any of the options?

Should the IUL Subgroup decide to apply a “quick fix” to AG 49-A, we suggest referring to the Work Group’s [letter dated February 3, 2022](#), for potential approaches.

The Work Group appreciates the efforts of the Life Actuarial (A) Task Force LATF and IUL Illustration Subgroup to review AG 49-A. If you have any questions or would like to dialogue on the above topics, please contact Amanda Barry-Moilanen, life policy analyst, at barrymoilanen@actuary.org.

Sincerely,

Alicia Carter, MAAA, FSA
Chairperson, Life Illustrations Work Group

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup

Re: IUL SG Exposure Jul 18

Mr. Andersen,

Allianz appreciates the opportunity to provide comments on the exposure from the IUL Illustration Subgroup. Our comment letter from February provides relevant information to the discussion on Volatility Control Indexes (VCIs), the additional consumer benefits they can provide, and illustrations practices. As such, Allianz is resubmitting the original letter. Since February, the equity markets, bond markets, and therefore VCIs have generally performed poorly, but that does not materially change the content of the letter. These challenging market conditions highlight the protection inherent in IUL, while also demonstrating the additional value VCIs provide when combined with fixed bonuses.

Thank you for the opportunity to provide these comments.

Regards,

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup

Re: IUL Exposure

Mr. Andersen,

Allianz appreciates the opportunity to provide comments on the matters discussed in the LATF IUL Exposure from December, 2021. Allianz offers a variety of allocations with various crediting methods and indexes to consumers. When the cost of hedging any given allocation changes, it is possible to have better historical performance than the S&P500 at a lower cost. In these cases, a company can decide what they would like to do with this excess hedge budget and what the consumer may find most valuable, whether it be higher caps/rates, fixed bonuses, lower charges, or other unique features. The decision on where to provide additional value occurs across all allocations, whether or not they are a Volatility Control Index (VCI). When there are situations where hedging costs are lower and the allocation provides historical outperformance compared to the S&P500, we think it is valuable to the consumer to reflect the additional affordable benefits that are offered within the current restrictions of AG 49-A. Because VCIs are specifically highlighted in the LATF letter and Allianz has offered VCIs for over 8 years, we wanted to provide our perspective on the consumer value of VCIs.

Allianz History

Allianz began offering allocations tied to VCIs on its Fixed Index Annuity (FIA) and IUL products in 2013 and 2014 respectively. The benefits of offering an index with a volatility control mechanism include diversification, stability in rate renewal, stability in and strong credit performance, and unique benefits only available with VCIs. Because of these benefits, allocations tied to VCIs offer and have delivered unique value to our policyholders and they are an important part of our index line-up.

VCIs are indexes that have some type of mechanism to control volatility. This mechanism can range from a defined formulaic approach, to active management, to something in between. The VCIs that Allianz offers on our IUL products use a defined formula that rebalances between an equity component and fixed income/cash components on a daily basis. The purpose of this daily rebalancing is to hit a specific volatility target, thus controlling the volatility of the index. Generally speaking, equities are more volatile than fixed income, so the indexes will allocate more heavily to equity in times of low volatility and more heavily to fixed income in times of high volatility.

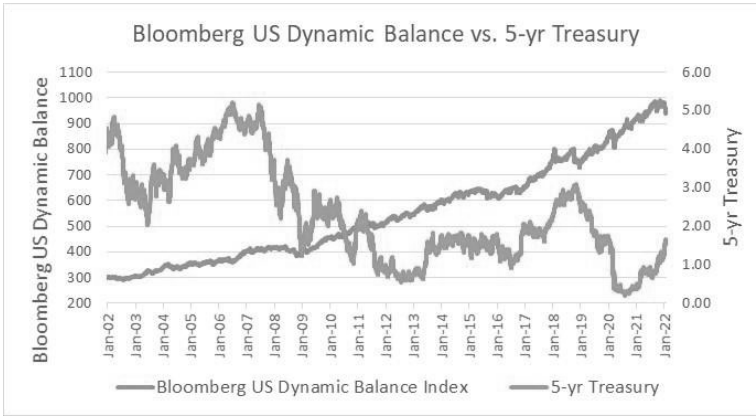

Benefits of Volatility Controlled Indexes

Diversification

The combination of equity and fixed income can provide a diversification benefit and the VCIs we offer have both equity and fixed income components, leading to more diversification than a standard equity only index. VCI performance can benefit when either equity or fixed income does well, or if one of the components does not perform well, the other component can offset that low performance and allow the policyholder to still get a credit. This allows the policyholder to experience positive results in many different market environments, not only when the equity market is strong.

Diversification through fixed income can bring risks, and a common question raised about VCIs is will their high allocation to fixed income lead to underperformance in rising interest rate environments and is their good historical performance due to decreasing interest rates over the last 20 years. It is true that fixed income allocations will likely underperform when interest rates rise, but because of the diversification VCIs offer, the overall impact on long term performance of the VCI will vary based on all components of the index, including the

equity component. The chart below compares the relationship of interest rates with the performance of the first VCI we offered, the Bloomberg US Dynamic Balance Index over the last 20 years.

Note: The Bloomberg US Dynamic Balance Index has been active since 2013, index performance before that is based on the underlying components of the index and the prescribed formula used to balance between the components.

While the general trend in rates has been down over the last 20 years, there have been several periods of sustained rate increases or rate spikes, like 2003-2006, 2009, 2017-2018, or 2021. The performance of the Bloomberg US Dynamic Balance Index during those periods is mixed, some really good, some moderate, and some flat. This is because market volatility and the performance of the equity component are material considerations of the VCI performance. In fact, over the last 10 years, interest rates have risen slightly and the performance of the index has been strong, mainly due to lower volatility and strong equity performance.

Because of the diversification offered by VCIs, the performance of the index is also able to weather equity market downturns, like the ones in 2002, 2008/2009, 2018, and 2020. The graph above shows that the VCI did not suffer large losses during those periods. This was due to the volatility control mechanism allocating away from equities when volatility spiked during the market downturns, further enhancing the benefits of diversification of the VCI.

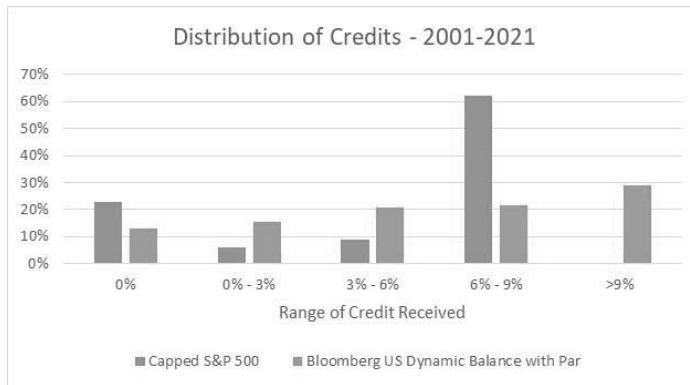

Stable Rate Renewal

Volatility is a key driver of hedging costs and market volatility can fluctuate greatly from year-to-year. For a capped S&P500 allocation, changes in market volatility will lead to changes in hedging costs and therefore changes in the offered cap. This can lead to large changes in caps on a year-to-year basis and large changes in the historical lookback used for setting maximum illustrated rates in AG49. By contrast, VCIs target a stable volatility, leading to more stable option costs and therefore more stable affordable participation rates. On a year-to-year basis, the policyholder is less likely to experience large changes in participation rates and large changes in the AG49 lookback. This provides the policyholder a more stable and predictable experience over the life of their contract and creates historical lookbacks that rely less on current market conditions and are more representative of what would have actually been experienced over the historical period.

Stable and Strong Credit Performance

The VCIs we offer target a low and controlled volatility, so the index will increase and decrease more slowly than a higher volatility index, like an equity index. More stable index values lead to more stable credits, which is a benefit for IUL policyholders where product fees are present and timing of high or low credits can impact long term policy performance. Stable credits also better align with IUL illustrations, which do not show the variability of index performance.

The higher stability in credits a VCI can achieve is illustrated below by comparing the distribution of historical performance over the last 20 years between the Bloomberg US Dynamic Balance Index allocation and our capped S&P500 allocation. The analysis uses currently offered caps and participation rates and it can be seen that the distribution of the Bloomberg US Dynamic Balance Index credits are more evenly distributed than the S&P500 credits, which are more barbell shaped and have more instances where the policyholder does not receive a credit.

Note: The Bloomberg US Dynamic Balance Index has been active since 2013, index performance before that is based on the underlying components of the index and the prescribed formula used to balance between the components.

What can also be seen in the analysis above is that Bloomberg US Dynamic Balance Index allocation offers more potential upside than the capped S&P500 allocation. This strong historical performance is seen in the differences in historical lookbacks between the VCI allocations we offer and the capped S&P500, with the VCI allocations outperforming the S&P500 allocation by 2-3% on average.

Allianz started offering allocations tied to the Bloomberg US Dynamic Balance Index on our IUL policies in 2014, so in addition to strong historical lookback performance, we have 7 full years of credits that have been realized by our policyholders. Over that time, our allocation to this VCI has averaged 1.25% higher credits per year than the S&P500 allocation and both of the allocations have performed above the AG49 maximum allowed illustrated credit.

Average Realized Credits 2015-2022		AG49 Maximum Illustration Limit	
Capped S&P500	Bloomberg US Dynamic Balance with Par Rate	Average Limit 2015-2022	Current Limit
6.77%	8.02%	6.18%	5.50%

Note: The analysis above assumes a 1/1/2015 contract issue date, with the version of our IUL product available at that time

Unique Benefits Available to VCIs

The composition of the VCIs we offer allow us to offer unique benefits to our policyholders. Hedging for the VCIs we offer currently cost less than options for S&P500. We are able to take the hedging savings and offer a variety of benefits for the policyholder to choose from, including higher participation rates, a multiplier bonus, or a fixed bonus, all with a unique lock feature on top of these other benefits.

Our lock feature allows a policyholder to “lock-in” their index performance at any point during their crediting period instead of waiting until their policy anniversary, giving the policyholder a level of control over their policy that they cannot get with any other index. We have seen tremendous interest in this benefit since we introduced it in 2019 and we are only able to offer it because of the stable option costs for VCIs.

Summary

Allianz has offered allocations tied to VCIs since 2013. Our policyholders that have allocated to these indexes have benefited from diversification, stability in renewal rates, stability in and strong credit performance, and features like Index Lock. These policyholders have realized credits that exceed our S&P500 allocations and have been the recipients of additional benefits because of the lower and more stable option costs associated with the VCIs. The VCIs we offer and the additional benefits tied to them make up an important part of our product offering and give our policyholders valuable choice in their allocations. In order to have a fully informed and educated consumer when selecting their allocation choice, we feel that the additional benefits and value VCIs provide should be reflected while still adhering to the current AG 49-A illustration restrictions.

Thank you for the opportunity to provide these comments.

Allianz Life Insurance Company of North America

EQUITABLE

Dear Mr. Andersen,

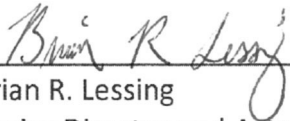

We very much appreciate the opportunity to submit the following comments in response to the Indexed Universal Life (IUL) (A) Subgroup Exposure dated July 18th, 2022.

- In February Equitable had provided comments in response to the December 9th, 2021 IUL Exposure, which consisted of (1) a reminder of Equitable's 2020 proposal and (2) an indication of how the 2020 proposal would relate to illustrations of uncapped volatility-controlled policies. We stated our belief that reconsideration of Equitable's 2020 proposal would be appropriate if regulators decided that substantive changes to AG 49-A were needed.

We similarly believe that reconsideration of Equitable's 2020 proposal would be appropriate if regulators decide to pursue option (c) of the latest Exposure, for the same reasons that were stated in our attached February submission. (In viewing the attached Word document, please note that there are two PDFs embedded into the third page containing a more detailed explanation of Equitable's 2020 proposal.)

- We also believe that option (a) of the latest Exposure should be bifurcated into two separate options,
 - an attempted quick fix to AG 49-A to address the current concern relating to illustrations of uncapped volatility-controlled policies, versus
 - a discussion with A Committee as to whether there are plans to address any broader issues with life illustrations.
- Finally, we feel that we would need to gain a better understanding of option (d) in order to provide any evaluation of it (for example, what illustration metrics would be subjected to a hard cap, how would such a hard cap be applied, and how would this affect the accuracy of depictions of how IUL policies work?).

Thanks again for the opportunity to share our thoughts with you and the other members of the IUL Illustration (A) Subgroup on these issues.

 Brian R. Lessing
 Senior Director and Actuary

Exposure 2-4-2022.d

Adopted by the Life Insurance and Annuities (A) Committee – Dec. 11, 2016
Adopted by the Life Actuarial (A) Task Force – Nov. 17, 2016

Actuarial Guideline XLIX-A – Draft [Equitable Integrated Proposal DRAFT MAY 27, 2020]

**THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION
TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5
months after LATF adoption and 3 months after EX/Plenary Adoption*]**

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an ~~external~~ index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

- (1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
- (2) Limits the policy loan leverage shown in an illustration.
- (3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective ~~as follows:~~ **for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].**

- i. ~~Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.~~
- ii. ~~Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.~~
- iii. ~~Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.~~

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

- i. The policy is subject to Model #582.
- ii. ~~Interest credits are linked to an external index or indices.~~
- ii. **The policy offers Indexed Credits.**

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

- i. ~~The credited rate for each Index Account does not exceed the lesser of the maximum credited rate for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate for each Index Account shall not exceed the average of the maximum credited rate for the illustrated scale and the guaranteed credited rate for that account. However, the credited rate for each Index Account shall never be less than the guaranteed credited rate for that account.~~ **The total Indexed Credits illustrated as a percentage of the account value in each Indexed Account does not exceed the maximum total Annualized Percentage Rate of Indexed Credits for the illustrated scale for each Index Account determined in accordance with 4(B) and 4(C), but with the multiple of 120% specified in 4(B) replaced by a multiple of 100%.**
- ii. ~~If the illustration includes a loan, the illustrated rate credited to the loan balance does~~ **Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge. Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.**
- iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: **Gross portfolio annual earnings rate of the general account assets (excluding hedges for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.**

C. Annualized Percentage Rate of Indexed Credits: **The annualized total Indexed Credits divided by the account value used to determine index credits according to the policy features.**

~~B.D.~~ Benchmark Index Account: An Index Account with the following features:

- i. The interest calculation is based on the percent change in S&P 500[®] Index value only, over a one-year period using only the beginning and ending index values. (S&P 500[®] Index ticker: SPX)
- ii. An annual cap is used in the interest calculation.
- iii. The annual floor used in the interest calculation shall be 0%.
- iv. The participation rate used in the interest calculation shall be 100%.
- v. Interest is credited once per year.
- vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy's Index Accounts, subject to the requirements of 5.D.. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.
- vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts

include all credits that increase policy values, including but not limited to experience refunds or bonuses, that are not linked to an index or indices.

viii. There are no limitations on the portion of account value allocated to the account.

~~C.E.~~ **Fixed Account:** An account where the credited rate is not tied to an external index or indices there are no Indexed Credits .

F. **Index Account:** An account where some or all of the amount credited are Indexed Credits.

G. **Indexed Credits:** Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Any additional amounts credited to the policy resulting from an annual floor on an Index Account are included.

H. **Hedge Budget:** For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

I. **Loan Balance:** Any outstanding policy loan and loan interest, as defined in the policy.

J. **Policy Loan Interest Rate:** The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

~~D.K.~~ **Policy Loan Interest Credited Rate:** The annual interest rate is tied to an external index or indices credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

ii. For the portion of the account value in the Fixed Account that is backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits for that account, as defined in the policy.

4. Illustrated Scale

The ~~credited rate~~total Annualized Percentage Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

- A. Calculate the geometric average annual credited rate for each applicable ~~the~~ Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year. Calculate the value of the replicating option trades to provide the total Indexed Credits for the Benchmark Index Account over the preceding calendar year, based on the Black-Scholes formula using the following inputs calculated on each trading day:
- i. Average closing implied volatility for 12-month, at-the-money S&P 500 call options
 - ii. Average closing implied volatility for out-of-the-money 12-month S&P 500 call options with a normalized strike price equal to the currently declared cap
 - iii. Average dividend yield on the S&P 500
 - A.iv. Average 12-month LIBOR or another appropriate interest rate measure
 - i.v. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

- ii.vi. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of a Benchmark Index Account, and shall use that cap in 4 (A).
- B. For each applicable Benchmark Index Account, ~~the total Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed 120% of the minimum of (i) and (ii):~~
- iii.i. ~~the value calculated in 4 (A) the arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale).~~
 - ii. **the greater of 5% and the Annual Net Investment Earnings Rate.**
- C. ~~For any other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall~~ **Account that is not the Benchmark Index Account in 3 (D), the total Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):**
- i. **The maximum Indexed Credits for the Benchmark Index Account calculated in 4 (B).**
 - B.ii. **Total Indexed Credits that reflect the fundamental characteristics of the Index Account as related to the Black-Scholes valuation formula, including realized volatility, implied volatility, volatility targets (if applicable), embedded fees (if applicable), deduction of an interest rate component (if applicable), dividend participation (if applicable) and any other factors that may apply. The illustration actuary shall use actuarial judgement to determine this value using Black Scholes methodology in a manner consistent with 4(A) and 4(B) where appropriate. and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in 4 (B).**
- D. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).
5. Disciplined Current Scale
The earned interest rate for the disciplined current scale shall be limited as follows:
- A. If an insurer engages in a hedging program for ~~index-based interest~~ **Indexed Credits**, the assumed earned interest rate underlying the disciplined current scale for the policy, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed ~~145:~~
- i. **the Annual Net Investment Earnings Rate, plus**
 - ii. **45% of the Hedge Budget minus any annual floor. ~~net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding~~**
- These amounts should be adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost. The assumed return on hedges ~~for index-based credits) allocated to support~~ shall only be used in the disciplined current scale testing to support the illustrated Index Credits in the policy.**

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

- ~~A.B.~~ If an insurer does not engage in a hedging program for ~~index-based interest~~ **Indexed Credits**, the assumed earned interest rate underlying the disciplined current scale shall not exceed the ~~annual net investment earnings rate of the general account assets allocated to support the policy~~ **Annual Net Investment Earnings Rate**.
- ~~B.C.~~ These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all **illustrated** benefits including any **illustrated** bonuses that **impact the policy's account value**.
- ~~C.D.~~ If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the ~~illustrated rate credited to the loan balance~~ **Policy Loan Interest Credited Rate** shall not exceed the ~~illustrated loan charge~~ **Policy Loan Interest Rate** by more than 100 basis points. For example, if the **illustrated Policy Loan Interest Rate** is 4%, the **Policy Loan Interest Credited Rate** shall not exceed 5%.

7. Additional Standards

The basic illustration shall also include the following:

- A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.
- ~~B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).~~
- ~~C.B.~~ For each Index Account illustrated, a table showing actual historical index changes and corresponding ~~hypothetical interest rates~~ **Indexed Credits** using current index parameters for the most recent 20-year period.

Fred,

Thank you for the opportunity comment on the four potential options for handling the identified issue with Indexed Universal Life illustrations.

We believe that the current state of Indexed UL illustrations warrants a quick and comprehensive response from the Subgroup. As the letter from the Coalition of Concerned Insurance Professionals pointed out in February (attached), Indexed UL illustrations using non-BIA strategies with fixed interest bonuses can generate illustrated income in excess of 60% higher than BIA strategies. This is, in our view, entirely inconsistent with the intent of regulators in crafting AG 49-A.

The gamesmanship currently occurring in illustrations is similar in effect and pervasiveness to the buy-up caps and multipliers that proliferated after AG 49 and resulted in AG 49-A. However, it is important to note that this time the methodology is fundamentally different. Rather than increasing the option budget in order to augment illustrated performance (which is what buy-up caps and multipliers did), life insurers are now using essentially the opposite strategy by:

1. Using indices with lookback-based illustrated option profits far in excess of the BIA;
2. Reducing the actual option budget so that the lookback rate for the non-BIA account matches the BIA;
3. Deploying the savings in a fixed interest bonus that is added to the illustrated rate and loan arbitrage.

The net effect is non-BIA account options that illustrate significantly better than the BIA but, in the real world, will very likely perform worse. Often, life insurers set these strategies as the *default* allocation in their illustration software in order to maximize their competitive positioning. This is not what was intended by AG 49-A – nor is it beneficial for consumers or even defensible under the arguments put forth previously by industry.

As a result, Option B is simply not an option. Amongst life insurers, the issue at hand is crystal clear; everyone is well aware of exactly what is going on. The majority of top Indexed UL sellers are already using precisely this strategy in their products, and to great effect. In our view, this latest variant of Indexed UL illustration gamesmanship is more aggressive and puts clients in a worse position than the previous attempts. This must be addressed. To not do so would be inconsistent with previous Subgroup inquiries.

Options A, C and D imply tradeoffs that *don't actually exist*. A simple solution (Option A) need not be targeted only to the current issue. A proactive solution (Option C) need not require extensive modifications to the guideline. A “hard cap” (Option D) need not exist in isolation.

The best potential solutions would satisfy all three Options – simple and proactive, with “hard caps” to avoid edge cases and ambiguity. Fortunately, these solutions exist and have been presented previously to the Subgroup by several parties (including various life insurers) over the past eight years.

Considering that the complex, reactive and ambiguous solutions promoted by industry have resulted only in more illustration warfare and repeated regulatory inquiries, it's time to dust off the alternative proposals and give them serious consideration.

July 25, 2022

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup (IUL Subgroup)

Dear Fred,

Securian Financial respectfully submits these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on AG49-A.

To reiterate the main points of Securian's comment letter in February

- AG49-A was successful for products that charge for multipliers and/or buy-up accounts as they are illustrating substantially similar to those products without the additional charges.
- There is nothing inherently wrong with fixed account value bonuses, proprietary indices, or the combination of them.
- Securian Financial has deep concerns that the amount of leverage being illustrated on non-BIA Indexed accounts is not consistent with the intent of AG49/AG49-A or what LATF would expect of these type of illustrations.

Securian Financial believes that option (a) of the July request for comment is the most desirable of the choices presented. There are several straightforward ways to change AG49-A to make it clearer/enforce that the BIA guardrails apply to all illustrated indexes. We would like the language below to be added to AG49-A as a starting point for the conversation on how the subgroup could approach option (a) in the July requests for comments.

Recommended Changes

We would like to recommend changes to AG49-A 4C by adding condition (iii) to limit the maximum amount of leverage illustrated to that of the BIA:

C. For any other Index Account that is not the Benchmark Index Account in 3 (D), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i), (ii) and (iii):

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

- iii. The lesser of (a) and (b) multiplied by the Annual Rate of Index Credits for the Benchmark Index Account, calculated in 4B, divided by (b); plus, the supplemental hedge budget:
- a) The Hedge Budget of the Indexed Account
 - b) Hedge Budget of the Benchmark Indexed Account.

The spreadsheet attached uses the same parameters as was used in 2020 but with two more examples to show how the proposed change would impact several index designs and the added rows for the new 4(c)iii and the resulting options profit being illustrated. Focus your attention on Column E and note that without 4(c)(iii), the illustrated leverage (option profit) as seen on Row 29 would be 155%.

Respectfully,

Seth Detert, Securian Financial

January 27, 2021

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup (IUL Subgroup)

Dear Fred,

Securian Financial respectfully presents these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the findings from the Q3 Post AG49-A IUL survey.

Securian believes the Post AG49-A IUL survey demonstrates that AG49-A accomplished one of the main goals set forth by the Subcommittee:

- That products with charged for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

However, with new developments in the industry AG49-A appears to have fallen short of the second stated goal:

- That within an illustration there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

Specifically, after AG49-A, as noted by the request for comment letter, we are seeing an increase in the utilization of volatility-controlled indices in conjunction with fixed bonuses. Carriers are utilizing this combination to drive meaningfully higher illustrated results.

In direct contrast to the intent of AG49-A, carriers are illustrating much more aggressively with these volatility-controlled indices relative to their own S&P 500 BIA accounts.

Securian does not believe there is anything inherently wrong with fixed account value based bonuses. Fixed account value bonuses are not specific to IUL and they have been part of the individual life products for decades. In addition, fixed bonuses were discussed rather extensively during the drafting of AG-49A and from those discussions LATF determined it was appropriate to illustrate them, in hopes of furthering consumer understanding on the differences between products.

Volatility-controlled indices have also been in the insurance industry for years. They have been prevalent in Fixed Index Annuities for a decade (or more) and there have been a small amount of them available for on IUL contracts for the last 5 to 10 years. We are seeing an increase in the availability and utilization of volatility-controlled index in the industry and Securian supports that direction. Volatility-controlled indexes provide options for our clients that can reasonably provide more stable index returns over a long period of time.

However, Securian does think that the current practice of how volatility-controlled indexes are being illustrated in the industry does not meet the intention of AG49 or AG49-A and should be addressed in

the very near future. Specifically, the 145% limit should be applied to all accounts, not just the BIA account. Let me explain further.

Within AG-49 the determination of the maximum illustrated rate for the BIA account is limited to 145% of the Annual Net Investment Earnings Rate used to support the index. We think this guardrail should also be applied to **non-BIA** accounts. What we are seeing in the industry can be illustrated by a simple example:

- Let's consider a carrier that has a 4% Annual Net Investment Earnings Rate and they spend that amount on the BIA account. This translates to a maximum illustrated rate of $4\% * 1.45\% = 5.8\%$.
- The carrier also has a volatility-controlled index that costs 3% to hedge which allows the carrier to offer a 1% fixed bonus on that indexed account to get a total 4% cost.
- The volatility-controlled index's 30 year look back rate is at or above the maximum BIA rate of 5.8% in this example. Most carriers are then illustrating the volatility-controlled index at 5.8%.
- By illustrating the volatility-controlled index at 5.8% they are illustrating a hedge payoff of $(5.8\%/3\%) = 1.93\%$ which is excess of the 1.45% guardrail of the BIA.
- The increased illustrated hedging payoff in excess of the 145% BIA guardrail is what Securian believes is the main driver higher illustrated values for volatility-controlled indices.
- If volatility-controlled indices were limited in illustrating a maximum of 1.45% hedge payoff you would get a max illustrated rate in this example of $3\% * 1.45\% = 4.35\%$.
- Using the example above with an adjustment to AG49-A to limit the hedge payoff to 145% of the volatility-controlled index you would get a total crediting rate of 4.35% plus the 1% fixed bonuses for a total crediting rate of 5.35% versus what is being currently being illustrated in the industry of 5.8% plus a 1% fixed bonus for a total crediting rate of 6.8%.

Securian believes there are several ways to change AG49-A to make it clearer/enforce that the 145% guardrail applies to all illustrated indexes. If desired by LATF we are ready to work with our industry peers to put forth draft language to address what we see is the crux of the concern presented by LATF from the findings of the post AG49-A survey.

Respectfully,

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup (IUL Subgroup)

via email to RMazyck@naic.org

Re.: IUL Exposure

Dear Messrs. Boerner and Andersen:

The Transamerica Companies (“Transamerica”) appreciate the opportunity to provide comments on the exposed options for the work of the IUL Subgroup and potentially other NAIC committees. Transamerica is a leading provider of IUL and had the top-selling individual IUL product across all channels in 2021, according to Wink, Inc.¹

From our standpoint, AG49-A has successfully remediated concerns with illustrations of multipliers and certain other IUL product design features. More recently, we understand that questions have emerged around illustrations for products with uncapped volatility-controlled indices and fixed bonuses. Although we regard these features as having somewhat less impact on illustrations than multipliers, we can support an update to AG49-A to address these features. It should be noted that Transamerica does not currently sell a product with an uncapped volatility-controlled index and a fixed bonus.

Of the four options in the exposure, Transamerica supports option (a), the “quick fix” approach. For example, consideration could be given to requiring each index account to separately pass both the self-support and lapse support tests as prescribed under Model #582. We can also support A Committee consideration of a longer-term, multi-year effort to overhaul illustrations for all fixed life insurance products, presumably involving the re-opening of the model. We believe such an effort should address illustrations holistically across products rather than taking a piecemeal approach.

We appreciate the work of LATF and the IUL Subgroup in addressing concerns related to IUL illustrations.

Sincerely,

A handwritten signature in black ink, appearing to read "Andrew DeMarco".

Andrew DeMarco
Head of Life Solutions
Transamerica

July 26, 2022

Mr. Fred Andersen
Chair, NAIC Indexed Universal Life (IUL) Illustration (A) Subgroup

Western & Southern Financial Group, Inc. (“Western & Southern”) appreciates the opportunity to comment on the Indexed Universal Life (IUL) (A) Subgroup (“IUL Subgroup”) exposure of options to address AG 49-A.

Western & Southern does not have concerns with IUL products incorporating volatility-controlled indexes, nor does it have concerns with IUL products including fixed interest rate bonuses. However, Western & Southern believes the current approach of pairing a volatility-controlled index with a fixed interest rate bonus and having that combination illustrate better than capped S&P 500 benchmark indexed account (BIA) policies falls outside the intent of AG49-A.

Thus, Western & Southern supports option A to “attempt a quick fix on the current concern (some companies illustrating uncapped volatility-controlled policies better than capped S&P 500 policies) with a brief revision to AG 49-A.” Western & Southern notes that the American Academy of Actuaries Life Illustrations Work Group presented two viable options to address the issue within its February 3, 2022 comment letter. Western & Southern supports additional consideration of those two options and the expeditious implementation of whichever one (or a newly identified alternative) that the IUL Subgroup deems to be most effective in addressing the current issue. If the IUL Subgroup decides to take additional time to analyze options C or D, Western & Southern encourages it also to move forward with option A concurrently to ensure a level playing field and the protection of consumers.

Western & Southern appreciates the IUL Subgroup’s continued review of AG49-A; thank you for the opportunity to comment.

Respectfully,

Ryan Richey, FSA, MAAA
Vice President, Product Actuarial

Draft: 7/28/22

Indexed Universal Life (IUL) Illustration (A) Subgroup
Virtual Meeting
July 18, 2022

The Indexed Universal Life (IUL) Illustration (A) Subgroup met July 18, 2022. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Manny Hidalgo (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Derek Wallman (NE); Bill Carmello (NY); Peter Weber (OH); Maribel Castillo, Darlene Plyler, and Heike Ulrich (TX); Shelley Wiseman (UT); and Craig Chupp (VA).

1. Exposed Options for Revising AG 49-A

Mr. Andersen said the Subgroup last met on Feb. 24. He suggested that three meetings will be necessary to decide how to address the issues that have arisen since the 2020 adoption of *AG XLIX-A— The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold on or After December 14, 2020* (AG 49-A). He said there will be a two-step approach to addressing the issues. The first step will be to publicly expose a set of options on which all parties will be asked to comment before the close of business July 26. He said those comments will be considered during the Life Actuarial (A) Task Force meeting at the Summer National Meeting. He said the second step will be to continue discussion during a Subgroup meeting after the Summer National Meeting. He said review of the compliance of indexed universal life (IUL) illustrations with AG 49-A requirements showed that the guideline has been effective in addressing multipliers and buy-up accounts, the product features that were the prior concern. He said the new issue of concern is that companies are illustrating the combination of uncapped volatility-controlled funds and a fixed bonus more favorably than illustrations based on a traditional capped Standard and Poor's 500 index (S&P 500).

Mr. Andersen said the options for the Subgroup to consider implementing to address the concern are:

- Attempt a quick fix on the current concern (some companies illustrating uncapped volatility-controlled policies better than capped S&P 500 policies) with a brief revision to AG 49-A. It can be discussed with the Life Insurance and Annuities (A) Committee whether there are plans to address any broader issues with life illustrations.
- Make no changes to AG 49-A (and allow current practices).
- Attempt to revise AG 49-A more extensively to address the current concern and any other identified potential concerns.
- Apply a hard cap on various IUL illustration metrics.

Birny Birnbaum (Center for Economic Justice—CEJ) said that the last two options have been tried previously with no success. He said companies have been able to easily game AG 49-A. He asked why Mr. Andersen expects a different outcome if one of those options is chosen. Mr. Andersen said he included those options because he wanted to give a full slate of workable options. He said there are pros and cons to each of the four options, including those mentioned by Mr. Birnbaum, that will likely be considered.

There was no objection from Subgroup members to exposing the options for addressing the AG 49-A concerns (Attachment Thirty-Nine-A) for an eight-day public comment period ending July 26.

Having no further business, the Indexed Universal Life (IUL) Illustration (A) Subgroup adjourned.

[https://NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/LIFE INS and ANNUITIES \(A\) COMMITTEE/Life Actuarial \(A\) TF/IUL SG/07 18/July 18 Minutes.docx](https://NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/LIFE INS and ANNUITIES (A) COMMITTEE/Life Actuarial (A) TF/IUL SG/07 18/July 18 Minutes.docx)

July 18, 2022

The Indexed Universal Life (IUL) (A) Subgroup Exposure

The Indexed Universal Life (IUL) (A) Subgroup is exposing the options below for public comment.

Please provide comments by Tuesday, July 26 regarding these potential options to address the AG 49-A issues:

- (a) attempt a quick fix on the current concern (some companies illustrating uncapped volatility-controlled policies better than capped S&P 500 policies) with a brief revision to AG 49-A; it can be discussed with A committee whether there are plans to address any broader issues with life illustrations;
- (b) make no changes to AG 49-A (allow current practices);
- (c) attempt to revise AG 49A more extensively to address the current concern and any other identified potential concerns; or
- (d) apply a hard cap on various IUL illustration metrics.

There will also be a subsequent opportunity to provide written comments for a period after the August NAIC national meeting.

Please send comments to Reggie Mazyck (RMazyck@NAIC.ORG) by close of business July 26.

Actuarial Guideline AAT Templates - Instructions

Overview

These templates are intended to serve as a standardized format for submitting sensitivity testing, attribution, and disclosure requests for Actuarial Guideline AAT, consistent with Section 6 described within the Actuarial Guideline. The objective of such templates is to provide results associated with the actuarial guideline in an easy-to-digest manner, with the intention of educating regulators on the yield or spread (as applicable) assumptions reflected for each asset class for asset adequacy testing purposes. Companies are encouraged to read the below instructions and use their best efforts and judgement in completing the exercise. In addition, companies may provide commentary to further explain certain data items or for regulators to consider as it relates to improving the exercise for future reporting years. Companies must submit the templates by April 1 following the applicable valuation date for the asset adequacy testing submission.

Asset Summary Tab

Scope: Applies to all general account and non-unitized separate account assets supporting liabilities in Exhibits 5, 6, 7, and 8 of the Annual Statement reflected in asset adequacy analysis for the company. Refer to Section 2 of the Actuarial Guideline for more details.

Granularity: Provide one template for all portfolios and applicable business in aggregate; shall also submit separate templates for each line of business or portfolio to the extent separate templates are submitted for the other tabs.

Amount field: Provide the amount consistent with the valuation basis held for statutory accounting (i.e., book value for corporate bonds, market value for equities, etc.). The amounts should tie to the statement amount of assets used in asset adequacy analysis (not necessarily the actual statutory balance sheet).

P.H.N.Y. Amount field: Provide the amount of assets within each category that meets the definition of "Projected High Net Yield Assets" in Section 3F of the Actuarial Guideline.

Affiliate Amount field: Provide the amount of assets within each category that is originated by affiliated legal entities or other entities within same insurance group.

Reinvestment Allocation field: Provide the reinvestment strategy assumption for new asset purchases in asset adequacy analysis.

- If reinvestment strategy assumptions vary by different lines of business or portfolios, then the company may provide separate templates for each. However, an aggregate template is still also required, in which the aggregate reinvestment allocation assumption shall be determined by weighting the assumptions across different segments based on the "Amount" column.
- If reinvestment strategy assumptions vary by scenario, then use the assumption for the level scenario and describe in commentary how the assumption may differ for different asset adequacy analysis scenarios.

- If reinvestment strategy assumptions vary by duration, then the company should only show the long-term reinvestment strategy assumption used in asset adequacy analysis. If there is no clear long-term reallocation assumption, then the company can use a simplification to provide one value and describe in the commentary section.

Asset Spreads - Initial Assets and Asset Spreads - Reinvestments Tabs

Scope: Applies to all general account and non-unitized separate account assets supporting liabilities in Exhibits 5, 6, 7, and 8 of the Annual Statement reflected in asset adequacy analysis for the company, with the exception of treasuries and agencies.

Granularity: Company may either submit a template for each segment (i.e., portfolios and lines of business) or submit one aggregate template for the full company asset adequacy analysis (in which case, please describe the approach for how data was aggregated across different portfolios and lines of business in the commentary section).

Gross Yield field: Provide the gross yield consistent with the valuation basis held for statutory accounting in asset adequacy analysis (i.e., book value for corporate bonds, market value for equities, etc.).

Default Assumption field: Provide the default assumption used in asset adequacy analysis, inclusive of any margins or provisions for adverse deviation reflected.

Investment Expense Assumption field: Provide the investment expense assumption used in asset adequacy analysis, inclusive of any margins or provisions for adverse deviation reflected.

Other field: Provide the any additional components necessary to arrive at the net spread, whether positive or negative, and describe these components in the "other" field provided in the template.

Max Gross Yield field: Provide the greatest gross yield reflected for any given asset modeled in asset adequacy analysis. If the company holds an immaterial amount of that asset, then the company has the option to provide a gross yield such that no more than 0.5% of the assets held in the portfolio exceed this gross yield. For reinvestments, the company is to provide this for the level scenario and either provide a long-term projected yield or use judgement with commentary provided.

Max Net Yield field: Provide the greatest net yield reflected for any given asset modeled in asset adequacy analysis. If the company holds an immaterial amount of that asset, then the company has the option to provide a net yield such that no more than 0.5% of the assets held in the portfolio exceed this net yield. For reinvestments, the company is to provide this for the level scenario and either provide a long-term projected yield or use judgement with commentary provided.

Affiliate vs. Non-Affiliate field: Provide entries in the template separately for affiliate vs. non-affiliate. Affiliate refers to assets originated by affiliated legal entities or other entities within same insurance group. Non-affiliated refers to all other assets not categorized as affiliate.

Yield assumptions that vary by duration: If yield assumptions vary by duration in the level scenario, then the actuary should only include long-term assumptions in the "Asset Spreads - Reinvestments" tab. If there is not one clear long-term assumption, then the judgement shall be used with accompanying commentary in the template.

Sensitivity Test Tab

Scope: Applies to all general account and non-unitized separate account assets supporting liabilities in Exhibits 5, 6, 7, and 8 of the Annual Statement reflected in asset adequacy analysis for the company, with the exception of assets listed in Section 3fiii of the Actuarial Guideline (and the two left column fields are not to be completed for Equity-Like Instruments).

Granularity: Company may either submit a template for each segment (i.e., portfolios and lines business) or submit one aggregate template used for the full company asset adequacy analysis (in which case, please describe the approach for how data was aggregated across different portfolios and lines of business in the commentary section).

Percentage of Assets with Reduced Spread field: Calculate the percent of assets that required adjustments to the investment yield to comply with the in Section 5A of the Actuarial Guideline. This percentage shall be calculated based on the asset amount. Since the sensitivity test only applies to reinvestments, the company may choose to calculate this percentage at the tenth projected year in the level scenario in asset adequacy analysis, or can use an alternative approach if described in the commentary section.

Spread Reduction field: Provide the aggregate amount of spread or investment rate that was reduced to fit the requirements of the sensitivity test in Section 5A of the Actuarial Guideline. To provide this number in aggregate across assets within each asset type, weight by the asset amount. Since the sensitivity test only applies to reinvestments, the company may choose to calculate this reduction amount at the tenth projected year in the level scenario for asset adequacy analysis, or can use an alternative approach if described in the commentary section.

Cash Flow Testing sidebar: Provide the results of asset adequacy analysis using the present value of market value of surplus metric in the level scenario for completing the sensitivity test in Section 5A of the Actuarial Guideline. Use a step-by-step impact test where change for Section 5a(i) is completed first, then Section 5a(ii) is completed next, and then the total impact is the sum of the two results. If the company uses any simplifications or an alternative process to determine the impact, please provide commentary.

"Other Derivative Instruments" row: Unlike the "Derivative Instruments linked to Equity-Like Instruments", the "Other Derivative Instruments" row requests entries for the fields labeled "Percentage of Assets with Reduced Spread" and "Spread Reduction". This is because while "Derivative Instruments linked to Equity-Like Instruments" may be considered Equity-Like Instruments, this may not be the case for derivatives linked to underlying assets other than equities or similar instruments. Therefore, the intention is that such assets would be subject to the Investment Grade Net Spread Benchmark and those two fields would be applicable.

Attribution - Initial Assets and Attribution - Reinvestments Tabs

Scope: Applies to all general account and non-unitized separate account assets supporting liabilities in Exhibits 5, 6, 7, and 8 of the Annual Statement reflected in asset adequacy analysis for the company, with the exception of assets listed in Section 3Fiii of the Actuarial Guideline and Equity-Like Instruments.

Granularity: Company may either submit a template for each segment (i.e., portfolios and lines business) or submit one aggregate template used for the full company asset adequacy analysis (in which case, please describe the approach for how data was aggregated across different portfolios and lines of business in the commentary section).

Net Market Spread field: Provide the Net Market Spread, as defined in Section 3 of the Actuarial Guideline, for each asset type.

IG Net Spread Benchmark field: Provide the Investment Grade Net Spread Benchmark, as defined in Section 3 of the Actuarial Guideline, for each asset type.

Guideline Excess Spread field: Provide the Guideline Excess Spread, as defined in Section 3 of the Actuarial Guideline, for each asset type.

Credit Risk field: Provide the component of the Guideline Excess Spread that is attributable to credit risk, as described in Section 5B of the Actuarial Guideline.

Illiquidity Risk field: Provide the component of the Guideline Excess Spread that is attributable to illiquidity risk, as described in Section 5B of the Actuarial Guideline.

Other Risk Component fields: Fill out the additional headers and add more risk component fields that comprise the Guideline Excess Spread as needed.

"Other Derivative Instruments" row: Unlike the "Derivative Instruments linked to Equity-Like Instruments", the "Other Derivative Instruments" row requests entries for the attribution fields. This is because while "Derivative Instruments linked to Equity-Like Instruments" may be considered Equity-Like Instruments, this may not necessarily be the case for derivatives linked to underlying assets other than equities or similar instruments. Therefore, the intention is that such assets would be subject to attribution analysis requirements.

Asset Summary for Asset Adequacy Testing

Asset Type	Amount ¹ (\$M)	%	P.H.N.Y. Amount (\$M)	%	Affiliate ² Amount (\$M)	%	Reinvestment Strategy (%)
Treasuries and Agencies	0.0	0%	0	0%	0	0%	0%

Total Impact	Baseline Sensitivity Test Change (%)	0%

(1) "Percentage of Assets with Reduced Spread" is the percentage of asset amount for which the net spread must be reduced to comply with the cap at the Investment Grade Net Spread Benchmark
 (2) "Net Spread Reduction" means the aggregate net spread reduction in each asset category as a result of capping individual assets at the Investment Grade Net Spread Benchmark
 (3) Intended to measure the impact of asset adequacy testing under the level scenario for the New York 7 (i.e., NY1), may use gross premium reserve if consistent with asset adequacy testing approach

National Association of Insurance Commissioners (NAIC) Life Actuarial (A) Task Force (LATF)
August 8, 2022

Agenda

1. Goals of this session
2. Ideal process for ESG development and maintenance
3. Stylized facts (SF)
4. Acceptance criteria (AC)
5. Discussion and Q&A

Goals of this session

1. Explain a sound process for developing and maintaining an ESG.
2. Understand the role of stylized facts and acceptance criteria.
3. Ensure that the importance of calibration targets and calibration methods are clear.
4. Provide an understanding of how stylized facts and acceptance criteria are used to select and assess models and/or calibrations and generate scenarios that are suitable for purpose.

3

What is a Sound Process for Developing and Maintaining an ESG?

- Determine the general application
- Understand the financial variables that must be modeled and obtain data for these variables
- Compile a list of important features of the variables, often referred to as stylized facts, that serve to define the development and performance characteristics of the model
- Not all stylized facts can be accommodated by a model so a prioritization is needed
- Select candidate component models with necessary dynamical properties guided by vital stylized facts
- Develop acceptance criteria
- Determine an estimation/calibration process for the model
- Estimate/calibrate the ESG models
- Validate models against previously agreed upon acceptance criteria
- Test and understand dynamics of selected model and calibration when used for intended purpose (e.g., field test)
- Models need to be regularly estimated/calibrated and validated. This is part of an ongoing ESG maintenance process that may result in a need for model changes

4

The above steps overlap with each other and involve a significant amount of expert judgement.

What is a Sound Process for Developing and Maintaining an ESG? – More Detail

- General application (Purpose)
 - Real world risk simulation, risk-neutral pricing application, combination real world and risk-neutral such as outer/inner loop applications
 - Time horizon for the analysis
 - Simulation detail required
 - NAIC application is real world risk simulation for U.S. Statutory Reserve & Capital Reporting for Long-Duration Life & Annuity Products
- Financial variables
 - Obtain publicly verifiable data for the economic variables to be modeled
 - What data window? Consider the relevance and credibility of the data, e.g., balancing need for insight against relevant changes like Treasury-Federal Reserve (Fed) Accord (1951) and inflation targeting (1993)
 - Examine qualitative and statistical aspects of data
- Develop stylized facts
 - Broadly generalized observations that characterize the most important relationships in the data
 - Establish and prioritize the properties that the ESG model must have to be useful for the application at hand
 - Basic techniques provide valuable insights; more sophisticated econometric tools are needed to understand other features of the data
 - The essential point is to identify the most important stylized facts that must be captured by the ESG models
 - More discussion of stylized facts can be found in the Society of Actuaries “Economic Scenario Generators: A Practical Guide”
<https://www.soa.org/globalassets/assets/files/research/projects/research-2016-economic-scenario-generators.pdf>

5

What is a Sound Process for Developing and Maintaining an ESG? – More Detail

Quoting from the Society of Actuaries “Economic Scenario Generators: A Practical Guide”

- *Stylized facts refer to generalized interpretations of empirical findings that provide a basis for consistent understanding of markets or economic drivers across a wide range of instruments, markets and time periods. Analysis of historical data is commonly used as the basis for determining stylized facts and setting calibration targets; however, stylized facts can also be based on expert judgement. Stylized facts are important in guiding the design of an ESG in that they help establish and prioritize the properties that the ESG model must have to be useful for a given application. The historical record of economic and financial markets is an indispensable guide to the dynamics that govern ESG model simulations. Detailed knowledge of these dynamics is essential for setting ESG model calibration targets and understanding strengths and weaknesses of various ESG model frameworks.*
- *It is natural to summarize financial market variables in terms of their averages, standard deviations and correlations such as in a mean-variance framework. These summary statistics tell a good bit of the story, but they do not inform the subtle but important aspects of how markets are experienced through time. **More advanced applications such as those used for pricing and risk management typically require additional specifications that may include information related to distributional shapes (fat tails), pathwise behavior (how variables move over time) and the ways characteristics of modeled variables change under different economic environments*.***

*[emphasis added]

6

What is a Sound Process for Developing and Maintaining an ESG? – More Detail

- Identify models with necessary dynamics
 - Requires an understanding of the stochastic properties of candidate model classes
 - Estimation and validation process will ultimately determine if the selected model classes are acceptable
 - Obtaining a successful model is an iterative estimation/calibration and validation process—hard scientific R&D
- Estimate/calibrate the models
 - Might simply select a data window (1953-2020 for example) and apply an econometric estimation process such as maximum likelihood.
 - In this approach the data window will speak to all aspects of the model (means, mean reversion, volatility, etc.). This process may have to be supplemented with expert judgment in order to obtain practical results. Past history determines future dynamics in this approach.
 - One can also base the estimation process on an optimization to calibration targets. The calibration targets might be based on expert judgment, forecasting, or statistical formula.
 - Key issue is the method by which the targets are set. Different methods can lead to significant differences in calibrations based on the same data set.
 - There are many ways to set calibration targets and one must ensure that the calibration is consistent with the purpose of the model.
 - The process for setting calibration targets and performing the calibrations must be transparent, reproducible, and well-documented because it is such a fundamental input to the model. It is what brings the model alive!

7

What is a Sound Process for Developing and Maintaining an ESG? – More Detail

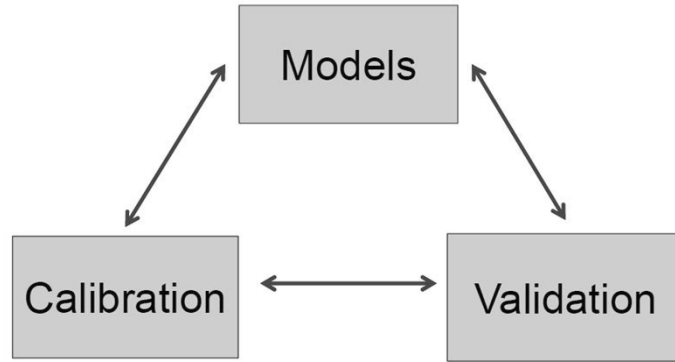

- Validate/acceptance criteria
 - Can apply statistical checks such as Percentiles Exponentially Weighted (PEWs) or matching simulation statistics against calibration targets.
 - In practice, a mixture of checks might get applied such as initial yield curve fit, average level of rates across simulation, steady state means and volatilities of rates and returns, relative risk-return position of various asset classes, overall check that the simulation produces extreme but plausible scenarios.
 - Back-testing is important. Did the models generate scenarios that encompassed future outcomes when the established maintenance process was applied?
 - The Academy's ESGWG believes that the **pathwise characteristics of the scenarios** are very important for the NAIC application. Two important examples are:
 - Distributions of gross wealth factors across the entire simulation horizon
 - Low-for-long scenarios
- Maintenance process
 - Market conditions may drive a model out of the acceptable category.
 - At some point there may not be a calibration that can accommodate the acceptance criteria (or implications of market data).
 - Sensitivity of parameters to changes in market data is not known until a model is developed and understood.

8

Three components of the ESG process (that determine ESG performance)

- An interactive and dynamic process.
- Once a suite of models has been chosen, they are brought alive by the calibration.
- The limitations of the model become apparent over time as the model is calibrated and validated in changing economic environments.
- At some point it might happen that an ESG model component can no longer be calibrated to produce scenarios that meet current validation/acceptance criterion.
- In such a case one would need to revisit model design.
- Since models must work together in an ESG ensemble, changing model components is a major issue.

Stylized Facts

13

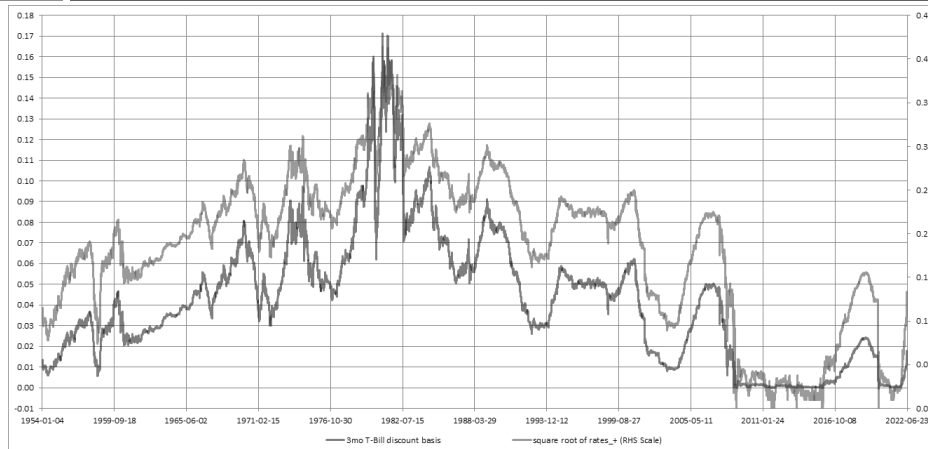

Source: Federal Reserve H.15 data set and Hal Pedersen analysis.

- Volatility is stochastic.
- Long-term interest rate volatility can be greater than short-term interest rate volatility.
- We can use some additional econometric techniques to gain a more detailed understanding of the nature of volatility.
- I will now follow the ideas developed by Phil Dybvig in his paper "Exploration of Interest Rates."

Stylized Facts

14

Source: Federal Reserve H.15 data set and Hal Pedersen analysis.

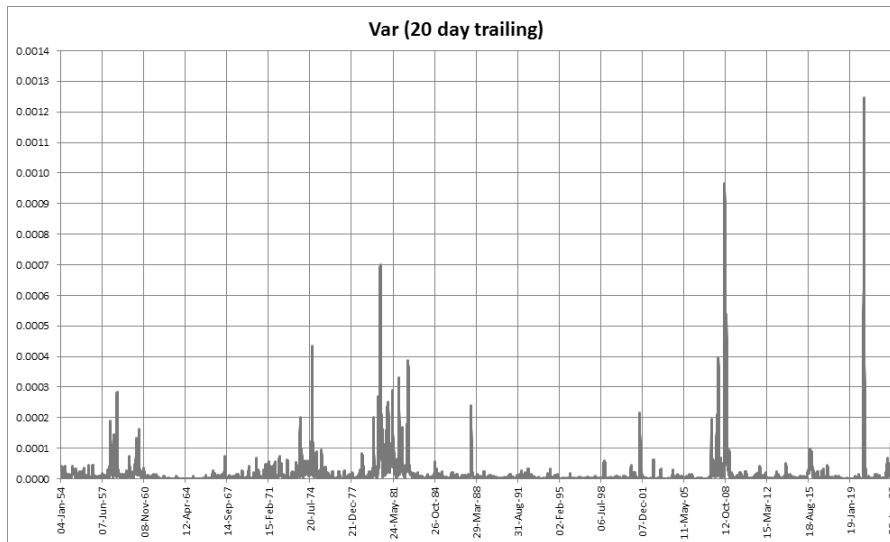

- If we use a daily series of U.S. short-term interest rates we can develop stylized facts on volatility.
- Volatility is highest in the '80s. A square root transformation of the series makes it more homoskedastic.
- This hints at a square-root diffusion Cox-Ingersoll-Ross (CIR) model class.
- However, if we look more carefully at the volatility behavior of the series we see that we are missing something important.

AMERICAN ACADEMY OF ACTUARIES
Objective. Independent. Effective.™

Stylized Facts

15

- The volatility in the square-root transformed series is still very irregular and it is unclear how one might model it.
- Econometricians say that this is a heteroskedastic series. We see this type of behavior across financial return series as well.
- However, if we take the logarithm of this series we see that there is a very manageable structure in the data!

Stylized Facts

16

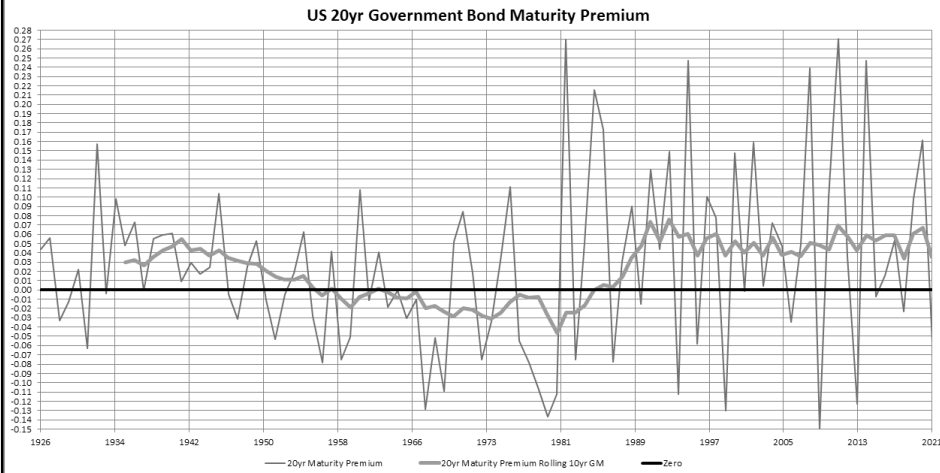

- The logarithm of the volatility is a homoskedastic mean reverting process.
- This we can model using mean reverting diffusion processes.
- We arrive at the useful stylized fact that the square root of the interest rate has stochastic volatility that looks like a homoskedastic mean-reverting diffusion.
- This suggests that square-root diffusion models with stochastic volatility would be a good candidate model class.

Stylized Facts

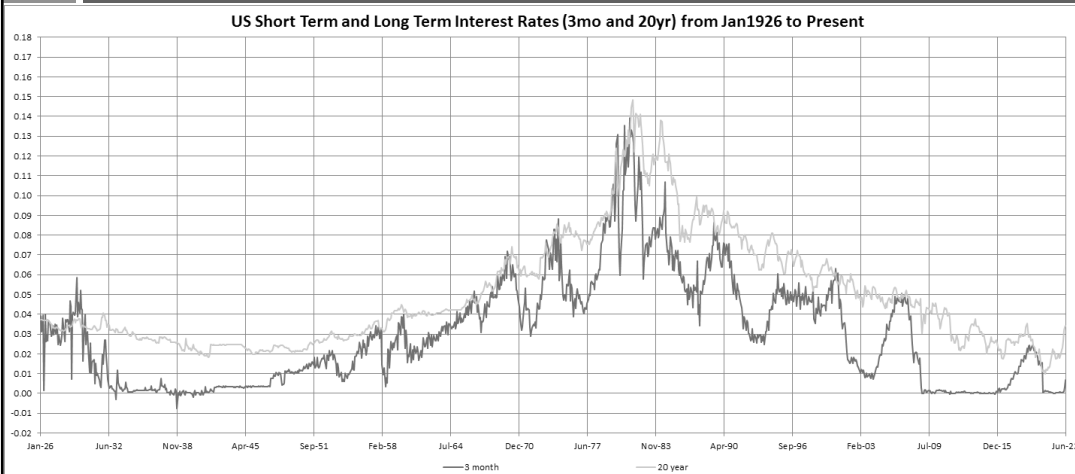

- Longer term bonds tend to return more than shorter term bonds.
- There is a cyclical aspect to bond maturity premia (bull and bear bond markets).
- Generally, financial economists expect bond maturity premia increase with tenor.
- This is an ex-post analysis, different from other term premia estimates.

Stylized Facts

S&P 500 Daily Returns have significant kurtosis and are not well approximated by normal distributions.

Source: Federal Reserve (FRED) and Hal Pedersen analysis.

25

Stylized Facts

- S&P 500 has not experienced a loss over any 20-year period using the last 95 years of data.
- If we model stochastic volatility and jump aspects of the data faithfully we will see some large simulated losses over a 20-year period.
- How do we reconcile what the data says about model characteristics with our historical experience?

26

Source: Federal Reserve (FRED) and Hal Pedersen analysis.

Stylized Facts

- How can stylized facts be used to eliminate model classes from consideration?
 - ▣ If a class of models cannot capture what is determined to be a vital stylized fact then that model class should not be developed.
 - ▣ This requires a detailed knowledge of the dynamics and stochastic properties of various model classes.
 - ▣ Sometimes one can make simple determinations based on general properties. For example, if stochastic volatility is needed then models that cannot produce that feature would be removed from consideration.
 - ▣ If it is required that a model produce scenarios representative of recent low-for-long experience, short rates at zero and longer rates moving; then many classical models are not a good choice. If one can accept periods of relatively low long-term rates regardless of what is going on at the short end of the yield curve, then a specialized parameterization may allow some classical models to capture part of the stylized fact.
 - ▣ There is an aspect of expert judgment because many stylized facts are qualitative rather than hard statistical criteria.

27

Acceptance Criteria

Quoting from the Society of Actuaries “Economic Scenario Generators: A Practical Guide”

pp. 11-12: VALIDATION

Validation ensures that the estimation of an ESG’s parameters results in simulated behavior that is a good representation of the variable or market under consideration. Effective validation of an ESG requires comparing simulated output data with some predefined benchmark of acceptance criteria.

For a typical insurance or pension undertaking, the list of financial and economic variables that may be of interest is typically quite large. For this reason, the validation system and validation environment require careful design at inception, in order to organize the various data elements in an ordered fashion.

An automated validation system is preferable to manual validation. Validation should be repeatable and consistent through time. Before any data are analyzed or validation performed, it is helpful to form the acceptance criteria upon which the model output will be judged. This type of approach to validation, whereby the particular desirable features of an ESG are based on analysis of a firm’s risk exposures, is preferable to what might be called a “problem discovery” approach. In a problem discovery approach, a user first runs the ESG, creating a large output data set, and then tries to discover problems with the output.

The paper can be found at <https://www.soa.org/globalassets/assets/files/research/projects/research-2016-economic-scenario-generators.pdf>

28

Acceptance Criteria

Quoting from the Society of Actuaries “Economic Scenario Generators: A Practical Guide” p. 89: ACCEPTANCE CRITERIA

Before any data are analyzed or validation performed, it is helpful to form the acceptance criteria upon which the model output will be judged. These acceptance criteria should be based on what the end user expects the model to do. An idealized process for forming acceptance criteria might be as follows:

1. Select a person or persons to formulate acceptance criteria. Ideally, this would be a group made up of the direct users of the system, the end user of the scenarios or derived data, participants in the market to be validated and risk model experts, as well as individuals who are independent of the system usage to provide oversight.
2. Decide which economic variables are to be validated and determine the materiality of these variables.
3. Formulate concrete acceptance criteria, which should be based on a combination of analysis of market data, expert judgment and an understanding of the sensitivities to and materiality of particular risk factors of a firm. Acceptance criteria should not be arbitrary but instead justifiable and based on data analysis and informed judgment.
4. Define when a model is accepted and when rejected. This is usually best dealt with by scoring the ESG output against particular acceptance criteria and holistically considering the extent to which it matches all the acceptance criteria. For all but the most simplistic uses of an ESG, it is likely that some areas will perform better than other areas; therefore, it is better to answer the question “How well does the ESG as a whole perform?” than to reject a model because a single acceptance criterion is not adequately met.

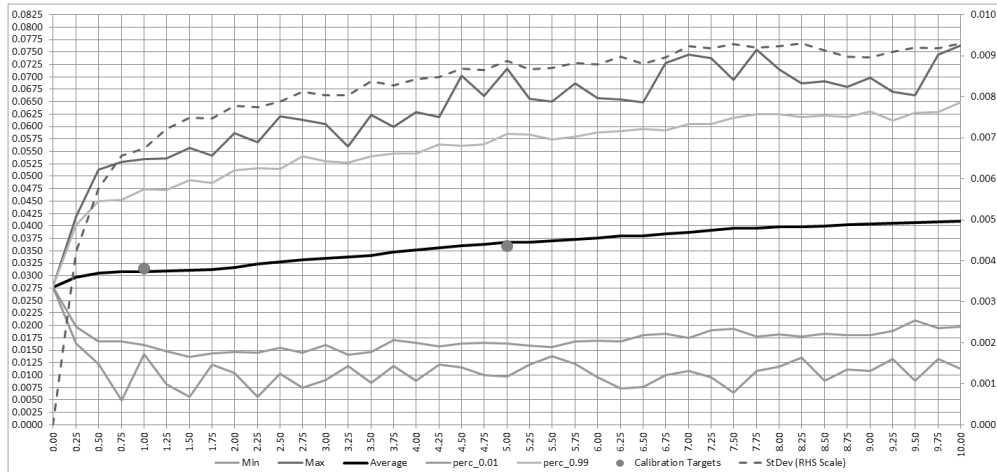

Therefore, it is recommended that the validation process start with acceptance criteria and then move on to the validation stage. Chapter 6 discussed the model specification process and the development of stylized facts that form the basis of the acceptance criteria.

With the acceptance criteria in place, the next stage is to actually validate the ESG and determine its appropriateness to the application for which it is intended. Usually, validation entails comparing the output of the ESG with market data, and finally with the acceptance criteria, which may be based on market data or a combination of market data and expert judgment. In this process, there are several considerations to take into account.

A Framework for Developing, Evaluating, and Implementing Economic Scenario Generators (ESGs) – ESG Model Governance

Tony Dardis, MAAA, FSA, CERA, FIA, CFA
Vice Chairperson, Economic Scenario Generator Work Group (ESGWG)

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

National Association of Insurance Commissioners (NAIC) Life Actuarial (A) Task Force (LATF)
August 8, 2022

ESG Model Governance – Agenda

2

1. Background Considerations
2. The Importance of Model Governance
3. Core Components of an ESG Model Governance Program
4. Other Considerations

2

Background Considerations

3

- ESG model governance is concerned with the processes for ongoing scenario generation and delivery
- Any members of the American Academy of Actuaries (“the Academy”) who are involved in the production of the scenarios should consider what actuarial standards of practice (ASOPs) may apply
 - *ASOP No. 56, Modeling*, is particularly relevant. Even for those who are not members of the Academy, this ASOP provides many elements of best practice as far as model governance is concerned and should be viewed as an important reference for the National Association of Insurance Commissioners (NAIC) and Conning.
- The *Model Governance Practice Note* developed by the Model Governance Practice Note Work Group of the Academy is also a very useful reference

3

ASOP No. 56, *Modeling*, provides guidance to practicing actuaries with respect to using, reviewing, or evaluating models

4

- Section 3.1.2 states actuaries “evaluating the model ... should confirm that, in the actuary’s professional judgment, the model reasonably meets the intended purpose.”
- Section 3.1.3 states that “[w]hen using the model, the actuary should make reasonable efforts to confirm that the model structure, data, assumptions, governance and controls, and model testing and output validation are consistent with the intended purpose.”
- Sections 3.2 and 3.4 also have important requirements in connection with model understanding.

As a general point, the ESGWG would like to reiterate the view previously communicated by Academy Life Practice Council work groups that the use of scenario sets generated by proprietary ESGs be permitted as an alternative option to scenario sets prescribed by the NAIC, subject to proper documentation on how the scenario sets were developed and why they are appropriate for statutory reserves and capital.

4

The Importance of Model Governance

5

- ASOP No. 56, *Modeling*, Section 3.5.2, Appropriate Governance and Controls, states:
 - “The actuary should use or, if appropriate, rely on others to use appropriate governance and controls to minimize model risk” to maintain the integrity of the model, and to avoid the introduction or use of unintentional or untested changes.
- Robust model governance processes will be critical to the ongoing delivery of scenarios for a number of reasons:
 - Mitigates the risk of output errors
 - Reduces the risk of selecting an incorrect (not fit-for-purpose) model & ensures it continues to be fit for purpose
 - Allows for the smoother, more efficient, production of scenarios
 - Increases transparency, which aids clarity and builds common understanding
 - Allows issues to get resolved effectively due to built-in preparedness & escalation procedures for when things go wrong
 - Gives the industry confidence and builds reputation for outside observers

5

Core Components of an ESG Model Governance Program

6

- **Roles & Responsibilities**—Define and document responsibilities for *all* stakeholders involved in the ongoing production of scenarios
- **Model Selection and Review Processes**—Establish processes for selecting fit-for-purpose models and for reviewing and validating the model and its outputs
- **Sign-off Protocols**—Establish where sign-offs need to take place
- **Change Control Procedures**—Establish processes for authorizing, reviewing, and testing changes to the model and calibration parameters
- **Access Controls**—For any aspects of the scenario generation process that are outside of Conning’s control, define processes for limiting access to models or processes through access authorization and periodic access review
- **Documentation**—This flows throughout the entire governance process. Documentation of all of the agreed upon processes and procedures should be produced, plus:
 - Appropriate documentation covering each published scenario set
 - Documentation of ongoing model updates and assumption changes

6

The Importance of Documentation: The NAIC’s View

7

- Deliverable I of NAIC RFP #2053
 - “Full documentation on the ESG specifications, calibration, and tools.”
- NAIC May 2020 Q&A
 - Q: Is the level of detail in the documentation expected to be comparable to the existing Academy Interest Rate Generator (AIRG) documentation, more, or less detailed? Does the NAIC intend on making the documentation public (like existing documentation on AIRG), or private (for NAIC eyes only)?
 - A: The documentation is expected to be robust and available to ESG end users. The quality of the documentation provided will be judged as one of the vendor selection criteria. Note that Section III.L of the RFP requires information on how end-users of the ESG will be able to generate scenarios on the fly through a mechanism such as software licensing, an application programming interface (API), and/or available full documentation of the technical workings of the ESG.
- *Note, additional information on the AIRG is available at the following webpage:*
 - <https://www.soa.org/4a20d1/globalassets/assets/files/static-pages/research/2021-academy-interest-rate-generator-faq.pdf>

7

The Importance of Documentation: Comprehensive model documentation is highlighted in ASOP No. 56 and the Practice Note

8

- ASOP No. 56, *Modeling*, and the *Model Governance Practice Note* discuss several important aspects of model documentation:
 - The intended purpose of the model
 - The conceptual framework of the model, including key methodologies, assumptions, and parameters
 - Model risks and potential limitations, including any approximations and shortcuts used
 - Data inputs, outputs, formats, and reports
 - Processes used to update assumptions, parameters, and other model data
 - Process maps identifying key controls and data handoff points
 - Applicable vendor or third-party documentation and the rationale for the selection of options where options exist

8

Details: Some immediate questions that need to be addressed

9

- What will final model documentation look like?
- What reports, statistics, charts, etc. will accompany each scenario set?
- How is “validation” defined and how will scenario sets be validated? What will the sign-off protocols be? What parties will be involved and what will their roles be? How will duties be segregated?
- What happens if a scenario set “fails” the NAIC’s validation, or does something unexpected?
- What aspects of the model will be updated or changed each month, each year? How will changes to the model be performed (formula/algorithm/judgment), controlled, documented, reviewed, and signed off on? For example, what will the process and frequency be for updating long-term mean reversion points?
- How will changes to initial conditions, and their impact on scenario sets, be monitored?
- What is the regular timeline and process for recalibration timeline? What would trigger an “off-cycle” recalibration and how is that monitored, e.g., can a recalibration be triggered by significant changes to initial conditions or Federal Reserve policy that may change forward-looking expectations?
- What comprises user support (“help desk”)?

9

Other Considerations

10

- **Field testing**
 - As a best practice, on-going field testing should be built into the governance process for where there have been significant changes to ESG models, assumptions, and calibrations before final launch. This can be viewed as a form of impact analysis.
- **Industry alerts on updates to the ESG**
 - How can updates on the ongoing developments of the statutorily prescribed scenarios be more widely disseminated across the industry?
 - E.g., Besides valuation, risk and pricing, practitioners need to be aware of developments
 - Add ESG section to NAIC’s PBR landing page
- **Retention of documents on the NAIC website**
 - There should be a careful record of dates and versions for official exposure documents. Previously some documents have been removed and replaced with no version control record.
 - E.g., Have documentation in a single document, with controlled updates and versioning

Life Actuarial (A) Task Force: NAIC Economic Scenario Generator (ESG) Field Test Update

Scott O'Neal, FSA, MAAA

August 8th, 2022

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Agenda

1. Background
2. Field Test Summary
3. Field Test Participation
4. Field Test Results Summaries
5. Plan for Collecting, Reviewing, and Sharing Field Test Results
6. Variable Annuity and Index-Linked Variable Annuity Model Office
7. Current Timeline and Risk of Extension

Appendices:

- Appendix 1: Field Test Participation by Product
- Appendix 1: Data to be Collected

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Background

- Principle-based statutory reserve and capital frameworks have incorporated the use of economic scenario generators (ESGs) to determine assumptions such as discount rates, policyholder separate account fund investment returns, and assumptions related to model asset sales and reinvestment across a variety of potential future economic environments. The ESGs that are currently prescribed in the NAIC's life and annuity statutory reserve and capital frameworks were developed by the American Academy of Actuaries (AAA).
- In 2017 the AAA notified the Life Actuarial (A) Task Force (LATF) that it did not have the resources to maintain the prescribed ESGs, except in their current form until a suitable replacement could be found.
- In June of 2019, the Financial Stability (E) Task Force noted a potential deficiency in the prescribed ESGs related to a limited reflection of extended periods of low and even negative interest rates and requested the Valuation Analysis (E) working Group assess the macro prudential risk to insurance organizations in the United States with a focus on variable annuity writers.
- After extensive work with regulators and ESG subject matter experts from the life insurance industry, the NAIC issued the RFP for a new economic scenario generator in March of 2020. Conning was selected as the ESG vendor in September 2020.
- Over the past two years since Conning was selected as the ESG vendor, regulators from LATF and the Life Risk-based Capital Working Group (LRBC WG) have spent significant time with Conning Staff, NAIC Staff, and subject-matter experts from the AAA and the industry defining the desired properties of the ESG and developing an ESG Field Test. The field test is currently underway with results due from participants on August 31, 2022.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Field Test Summary - ESG Models

Model	ESG Candidate	Description
Treasury	Conning Calibration and Generalized Fractional Floor ("Non-shadow")	<ul style="list-style-type: none"> • Conning developed Treasury model according to regulator's acceptance criteria • Generalized fractional floor reduces severity and frequency of negative interest rates
	Alternative Calibration and Shadow Floor ("Shadow")	<ul style="list-style-type: none"> • Calibration developed by AAA ESGW that meets regulator acceptance criteria and places additional emphasis on "term premium" • Shadow floor preserves reduces severity and frequency of negative interest rates while preserving "arbitrage-free" nature of Treasury scenarios
Equity	GEMS® Baseline Equity Calibration	<ul style="list-style-type: none"> • Calibrations that preserves base functionality of the GEMS® equity model while partially mitigating the impact of the equity-Treasury linkage
	Original GEMS® Conning Equity Calibration	<ul style="list-style-type: none"> • Calibration that assumes that the equity risk premium over Treasuries has a constant mean in every projection period. In low starting interest rate environments, this calibration produces lower gross wealth factors than the AIRG equity model.
	ACLI GEMS® Equity Model Calibration	<ul style="list-style-type: none"> • Calibration developed by the ACLI that assumes a constant mean equity return that is independent of starting Treasury rates. The constant mean equity return is set to produce a reasonable relationship with long-term equity returns and steady state interest rates.
Corporate	GEMS® corporate model	<ul style="list-style-type: none"> • Corporate model that captures complex dynamics that affect bond fund returns (e.g. dynamic spreads, defaults, and credit rating transitions) • Other simplified models may be included in future field tests

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Field Test Summary - Runs

Note: Bold = Required Run

Run #	Description	Purpose of Run
Baseline #1	Scenario set(s) the company used for 12/31/21 statutory reporting	Baseline used as comparative basis for 12/31/21 runs
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with a 12/31/19 yield curve modified using a 200 BP increase across all maturities	Baseline used as comparative basis for 12/31/19 + 200 BP runs
Test #1a	GEMS® Baseline Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	Tests Conning Treasury model w/ GFF and Baseline Equity at YE 2021
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	Tests Alternative Treasury model with shadow floor and Baseline Equity at YE 2021
Test #2a	Same as Test #1a, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities. All other initial market conditions are unchanged. The Equity model parameters would be adjusted from #1a so that the year 30 median Large Cap Equity gross wealth factors remain consistent with #1a.	Stresses the starting Treasury rates using the same calibration as 1a to evaluate whether the model produces appropriate results in different economic environments
Test #2b	Same as Test #2a, but with the Alternative Treasury model calibration with shadow floor instead of the Conning Treasury model calibration with generalized fractional floor	Same as 2a, but designed to stress the 1b calibration

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Field Test Summary - Runs (cont.)

Note: Bold = Required Run

Run #	Description	Purpose of Run
Test #3	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Baseline Equity model corresponding to a 12/31/19 yield curve with a 200 BP increase across all maturities	Attribution analysis that will illustrate how much of the difference between runs #1a and #2a is driven by the equity model vs the Treasury and Corporate models
Test #4	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	Same as #3, but with respect to runs #1b and #2b.
Test #5a	Same as #1a, but with Conning's original Equity model calibration that had significantly lower Gross Wealth Factor's (GWFs) than the AIRG Equity Model.	Tests Conning Treasury model w/ GFF and original equity model as of year-end 2021.
Test #5b	Same as #5a but using a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities. The parameters of Conning's original Equity model are used without any adjustment.	Stresses the starting Treasury rates to understand the full impact of equity-Treasury linkage in Conning's original equity model
Test #6	Same as #1a, but with the ACLI's GEMS® Equity Calibration	Tests the ACLI's GEMS® Equity Calibration that assumes a constant mean equity return independent of rates and increases alignment with AIRG equity model GWFs
Test #7	12/31/21 scenarios from the ESG prescribed in VM-20 with a Mean Reversion Parameter (MRP) set to 3.25%	Attribution analysis to understand the impact of moving from the current C3 Phase I MRP of 6.55% to a lower MRP that incorporates recent UST history.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC NATIONAL MEETING SUMMER 2022

Plan for Collecting, Reviewing, and Sharing Field Test Results

- The NAIC has entered into a legal agreement with the Texas Department of Insurance to directly request and collect field test results under the regulatory authority of the Texas Insurance Commissioner. This agreement will maintain confidentiality of the field test results pursuant to Texas confidentiality laws while also streamlining the collection of the data.
- Under the agreement, the NAIC will be able to confidentially share field test results with state regulators, NAIC Committees, Task Forces, and Working Groups - including the Valuation Analysis Working Group. The NAIC will also be able to share aggregated field test results at public meetings.
- The NAIC will review individual company results for reasonableness, compile and aggregate field test results, and present the consolidated results at public NAIC meetings.
- Domestic regulators of the ESG Field Test participants have been provided with information on their respective participating domiciled companies and also informed on options that are available for their involvement in the review of field test results.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC NATIONAL MEETING SUMMER 2022

Variable Annuity and Index-Linked Variable Annuity Model Office

- After a fiscal was approved during a joint meeting of NAIC Internal Administration (EX1) Subcommittee and the NAIC Executive (EX) Committee, NAIC signed a statement of work for the consulting firm Oliver Wyman to build and deliver an AXIS model office to support the ESG Field Test. The model office will contain an inforce Variable Annuity (VA) product and a new-business Index-Linked Variable Annuity (ILVA) product.
 - The inforce VA model office will contain guaranteed minimum death benefits and a variety of guaranteed living benefits with different levels of richness that are commonly seen on inforce products throughout the industry. Different levels of in-the-moneyness at valuation will be included.
 - The new-business ILVA model office will include a buffer crediting strategy (consistent with common industry practice) with different levels of buffer, varying from 5% to 10%.
- Once the model is delivered (expected late August), the NAIC will have the capability to run the model using the ESG Field Test scenarios sets. The results of the model office can then be used to confirm, understand, and extend the participant field test results, in a similar fashion to how a model office was used for the VM-20 non-guaranteed YRT Field Test.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC NATIONAL MEETING **SUMMER 2022**

Current Project Timeline

6/1 - 8/31	Companies participating in the NAIC’s ESG Field test will run their life insurance and annuity statutory reserve and capital models using field test scenario sets. The NAIC has conducted three meetings with participants in June and July. Results are due August 31 st .
8/1 - 11/30	The NAIC compiles and aggregates individual participant field test results starting in August as results are submitted and ending in September. The aggregated and anonymized results will be presented at public joint meetings of LATF and the LRBC WG starting in September and ending in November.
Late 2022 - Early 2023	If field test results show that modifications are needed for the ESG, then Conning will make changes as directed by regulators. A follow-up field test may be held in early 2023 to quantify the impact of these changes to the reserve and capital calculations.
2024	If regulators are satisfied with the performance of the ESG in a follow-up field test, necessary updates will be made to the Valuation Manual and Life RBC instructions. For implementation in 2024, amendments to the Valuation Manual would need to be approved by June 2023 and updates to the RBC instructions would need to be adopted by June 2024.

The timeline is likely to be extended due to the large amount of field test results to compile, aggregate, and present under the current timeline.

2023 GRET Recommendation

Tony Phipps, FSA, MAAA
Chair SOA Research Institute Committee on Life Insurance Expenses
August 8, 2022

Agenda

- Methodology
- Recommendation
- Comparison to Prior Years
- Information on Companies in Study

Presentation Disclaimer

The material and information contained in this presentation is for general information only. It does not replace independent professional judgment and should not be used as the basis for making any business, legal or other decisions. The Society of Actuaries Research Institute assumes no responsibility for the content, accuracy or completeness of the information presented.

Methodology

1. Calculate Actual to Expected Expenses
 - Gather data points from company Annual Statement submissions provided by NAIC
 - Seed factors used to calculate expected expenses.
2. Determine Distribution Channel
 - Survey sent by SOA Research Institute to companies to determine primary distribution channel.
 - This channel is used or the historical distribution channel for those companies that did not respond.
3. Remove outlier companies
4. Analyze data to derive unit expense factors by those Distribution Channels

Seed Values

Expenses allocated to acquisition and maintenance categories using the same seeds as has been previously used:

- Acquisition/Policy: \$200.00
- Acquisition/Face Amount: \$1.10
- Acquisition/Premium: 50%
- Maintenance/Policy: \$60.00

Recommendation for 2023 GRET Factors

Proposed 2023 GRET Factors Based on Average of 2020/2021 Data					
Description	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Company Count
Independent	\$180	\$1.00	45%	\$54	141
Career	203	1.10	51%	61	84
Direct Marketing	197	1.10	49%	59	21
Niche Marketing	147	0.80	37%	44	30
Other*	153	0.90	39%	46	106
					382

* Includes companies that did not respond to this or prior year surveys

Current 2022 GRET Factors Based on Average of 2019/2020 Data					
Description	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Company Count
Independent	\$183	\$1.00	46%	\$55	142
Career	212	1.20	53%	64	77
Direct Marketing	200	1.10	50%	60	23
Niche Marketing	151	0.90	37%	45	24
Other*	139	0.80	35%	42	109
					375

* Includes companies that did not respond to this or prior year surveys

Comparison to Prior Years

Acquisition per Policy					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$180	-2%	\$183	10%	\$166
Career	203	-4%	212	-1%	214

Niche Marketing	147	-3%	151	10%	137
Other*	153	10%	139	10%	126

* Includes companies that did not respond to this or prior year surveys

Acquisition per Unit					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$1.00	0%	\$1.00	11%	\$0.90
Career	1.10	-8%	1.20	0%	1.20
Direct Marketing	1.10	0%	1.10	0%	1.10
Niche Marketing	0.80	-11%	0.90	13%	0.80
Other*	0.90	13%	0.80	14%	0.70

* Includes companies that did not respond to this or prior year surveys

Comparison to Prior Years

Acquisition per Premium					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	45%	-2%	46%	10%	42%
Career	51%	-4%	53%	-2%	54%
Direct Marketing	49%	-2%	50%	2%	49%
Niche Marketing	37%	0%	37%	9%	34%
Other*	39%	11%	35%	9%	32%

* Includes companies that did not respond to this or prior year surveys

Maintenance per Policy					
Description	2023	Percentage Change	2022	Percentage Change	2021
Independent	\$54	-2%	\$55	10%	\$50
Career	61	-5%	64	0%	64
Direct Marketing	59	-2%	60	2%	59
Niche Marketing	44	-2%	45	10%	41
Other*	46	10%	42	11%	38

* Includes companies that did not respond to this or prior year surveys

Survey Results

- Percent of survey respondents that that responded that GRET factors are used for individual life sales illustration purposes:

Percentage of Companies that use GRET Factors	
Survey Year	Percentage
2022	35%
2021	31%
2020	29%
2019	26%
2018	28%
2017	30%
2016	26%

- We believe variation is a result of the mix of respondents and the limited number of responses

Information on Companies in Study

- NAIC Data extracts included:
 - 2021: 766 companies
 - 2020: 771 companies
- Total ordinary policies issued saw a modest increase of 3.1% (312k) in 2021 after having been relatively flat for the previous two years.
- Face amount issued increased by 6.9% over the prior year, which was an increase compared to the 2.6% from last year, but more in line with the 6.1% from the year before that.
- The final companies used in the GRET calculation was 382, an increase of 7 from the previous year.

Tony Phipps, Chair, SOA Research Institute Committee on Life Insurance Company Expenses
DATE: July 23, 2022
RE: 2023 Generally Recognized Expense Table (GRET) – SOA Research Institute Analysis

Dear Mr. Mazyck:

As in previous years, the Society of Actuaries Research Institute expresses its thanks to NAIC staff for their assistance and responsiveness in providing Annual Statement expense and unit data for the 2023 GRET analysis for use with individual life insurance sales illustrations. The analysis is based on expense and expense related information reported on companies' 2020 and 2021 Annual Statements. This project has been completed to assist the Life Actuarial Task Force (LATF) in its consideration of potential revisions to the GRET that could become effective for calendar year 2023. This memo describes the analysis and resultant findings.

NAIC staff provided Annual Statement data for life insurance companies for calendar years 2020 and 2021. This included data from 771 companies in 2020 and 766 companies in 2021. This decrease resumes the trend of small decreases from year to year. Of the total companies, 382 were in both years and passed the outlier exclusion tests and were included as a base for the GRET factors (375 companies passed similar tests last year).

APPROACH USED

The methodology for calculating the recommended GRET factors based on this data is similar to that followed the last several years. The methodology was last altered in 2015. The changes made at that time can be found in the recommendation letter sent to LATF on July 30, 2015¹.

To calculate updated GRET factors, the average of the factors from the two most recent years (2020 and 2021 for those companies with data available for both years) of Annual Statement data was used. For each company an actual-to-expected ratio was calculated. Companies with ratios that fell outside predetermined parameters were excluded. This process was completed three times to stabilize the average rates. The boundaries of the exclusions have been modified from time to time; however, there were no adjustments made this year. Unit expense seed factors (the seeds for all distribution channel categories are the same), as shown in Appendix B, were used to compute total expected expenses. Thus, these seed factors were used to implicitly allocate expenses between acquisition and maintenance expenses, as well as among the three acquisition expense factors (on a direct of ceded reinsurance basis).

Companies were categorized by their reported distribution channel (four categories were used as described in Appendix A included below). There remain a significant number of companies for which no distribution channel was provided, as no responses to the annual surveys have been received from those companies. The characteristics of these companies vary significantly, including companies not currently writing new business or whose major line of business is not individual life insurance. Any advice or assistance from LATF in future years to increase the response rate to the surveys of companies that submit Annual Statements in order to reduce the number of companies in the "Other" category would be most welcomed. The intention is to

¹ <https://www.soa.org/Files/Research/Projects/research-2016-gret-recommendation.pdf>

continue surveying the companies in future years to enable enhancement of this multiple distribution channel information.

Companies were excluded from the analysis if in either 2020 or 2021 (1) their actual to expected ratios were considered outliers, often due to low business volume, (2) the average first year and single premium per policy were more than \$40,000, (3) they are known reinsurance companies or (4) their data were not included in the data supplied by the NAIC. To derive the overall GRET factors, the unweighted average of the remaining companies’ actual-to-expected ratios for each respective category was calculated. The resulting factors were rounded, as shown in Table 1.

THE RECOMMENDATION

The above methodology results in the proposed 2023 GRET values shown in Table 1. To facilitate comparisons, the current 2022 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount (\$000s) per policy issued.

To facilitate comparisons, the current 2022 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount (\$000s) per policy issued.

TABLE 1
 PROPOSED 2023 GRET FACTORS, BASED ON AVERAGE OF 2019/2020 DATA

DESCRIPTION	Acquisition per Policy	Acquisition per Unit	Acquisition per Premium	Maintenance per Policy	Companies Included	Average Premium Per Policy Issued During Year	Average Face Amt (000) Per Policy Issued During Year
Independent	\$180	\$1.00	45%	\$54	141	3,073	204
Career	203	1.10	51%	61	84	2,296	197

Other*	139	0.80	35%	42	109	786	70
* Includes companies that did not respond to this or prior year surveys					375		

In previous recommendations, an effort was made to reduce volatility in the GRET factors from year-to-year by limiting the change in GRET factors between years to about ten percent of the prior value. The changes from the 2022 GRET were reviewed to ensure that a significant change was not made in this year's GRET recommendation.

All GRET factors for the other distribution channel category experienced a change greater than ten percent so the factors for these lines were capped at this ten percent level (or slightly above 10% due to rounding of the factor) from the corresponding 2022 GRET values. The volatility occurred due to incorrect NAIC data for 2018 for some companies, which caused their actual to expected ratios to be considered outliers and they were not included in the calculation. This resulted in lower final 2022 GRET factors and subsequently the same for the 2023 recommendation. Over the next one to three years, the ten percent cap will allow this difference to be graded in so calculated GRET will be used for the final recommended GRET factors.

USAGE OF THE GRET

This year's survey, responded to by companies' Annual Statement correspondent, included a question regarding whether the 2022 GRET table was used in its illustrations by the company. Last year, 31% of the responders indicated their company used the GRET for sales illustration purposes, with similar percentage results by size of company; this contrasted with about 29% in 2020. This year, 35% of responding companies indicated that they used the GRET in 2022 for sales illustration purposes. The range was from 33% for Career and Niche Marketing to 43% for Independent. No companies in Career or Other used GRET. Based on the information received over the last several years, the variation in GRET usage appears to be in large part due to the relatively small sample size and different responders to the surveys.

We hope LATF finds this information helpful and sufficient for consideration of a potential update to the GRET. If you require further analysis or have questions, please contact Pete Miller at 847-706-3566.

Kindest personal regards,

Life Insurance Company Expenses

APPENDIX A -- DISTRIBUTION CHANNELS

The following is a description of distribution channels used in the development of recommended 2022 GRET values:

1. Independent – Business written by a company that markets its insurance policies through an independent insurance agent or insurance broker not primarily affiliated with any one insurance company. These agencies or agents are not employed by the company and operate without an exclusive distribution contract with the company. These include most PPGA arrangements.
2. Career – Business written by a company that markets insurance and investment products through a sales force primarily affiliated with one insurance company. These companies recruit, finance, train, and often house financial professionals who are typically referred to as career agents or multi-line exclusive agents.
3. Direct Marketing – Business written by a company that markets its own insurance policies direct to the consumer through methods such as direct mail, print media, broadcast media, telemarketing, retail centers and kiosks, internet, or other media. No direct field compensation is involved.
4. Niche Marketers – Business written by home service, pre-need, or final expense insurance companies as well as niche-market companies selling small face amount life products through a variety of distribution channels.
5. Other – Companies surveyed were only provided with the four options described above. Nonetheless since there were many companies for which we did not receive a response (or whose response in past years' surveys confirmed an "other" categorization (see below), values for the "other" category are given in the tables in this memo. It was also included to indicate how many life insurance companies with no response (to this survey and prior surveys) and to indicate whether their exclusion has introduced a bias into the resulting values.

APPENDIX B – UNIT EXPENSE SEEDS

The expense seeds used in the 2014 and prior GRETs were differentiated between branch office and all other categories, due to the results of a relatively old study that had indicated that branch office acquisition cost expressed on a per Face Amount basis was about double that of other distribution channels. Due to the elimination of the branch office category in the 2015 GRET, non-differentiated unit expense seeds have been used in the current and immediately prior studies.

The unit expense seeds used in the 2022 GRET and the 2021 GRET recommendations were based on the average of the 2006 through 2010 Annual SOA expense studies. These studies differentiated unit expenses by type of individual life insurance policy (term and permanent coverages). As neither the GRET nor the Annual Statement data provided differentiates between these two types of coverage, the unit expense seed was derived by judgment based this information. The following shows the averages derived from the Annual SOA studies and the seeds used in this study. Beginning with the 2020 Annual Statement submission this information will become more readily available.

2006-2010 (AVERAGE) CLICE STUDIES:

	Acquisition/ Policy	Acquisition/ Face Amount (000)	Acquisition/ Premium	Maintenance/ Policy
Term				
Weighted Average	\$149	\$0.62	38%	\$58
Unweighted Average	\$237	\$0.80	57%	\$76
Median	\$196	\$0.59	38%	\$64
Permanent				
Weighted Average	\$167	\$1.43	42%	\$56
Unweighted Average	\$303	\$1.57	49%	\$70
Median	\$158	\$1.30	41%	\$67

CURRENT UNIT EXPENSE SEEDS:

	Acquisition/ Policy	Acquisition/ Face Amount (000)	Acquisition/ Premium	Maintenance/ Policy
All distribution channels	\$200	\$1.10	50%	\$60

Mortality Improvement Survey Report

- 35 companies/groups participating
- Goals:
 - Reactions to the COVID-19 Pandemic
 - Examine mortality improvement practices as of year-end 2021 with respect to life insurance and annuity pricing and financial projections

Mortality Improvement Survey Report

- Key Takeaways
 - Mortality improvement factors used in 2021 are generally lower than 2018 for both life and annuity products when comparing across comparable companies
 - Updates to mortality improvement factors are more likely in near term than in later years
 - Companies that adjust durational mortality improvement factors tend to differentiate based on attained age, sex, duration and calendar year; less differentiation for smoking status and risk class

Mortality Improvement Survey Report

Overview of Select Summary Statistics

Mortality Improvement Survey Question	Pricing Life	Pricing Annuities	Financial Projections Life	Financial Projections Annuities
Average Minimum Annual Improvement Rate	0.08	0.10	0.11	0.09
Average Maximum Annual Improvement Rate	1.48	1.41	1.54	1.41

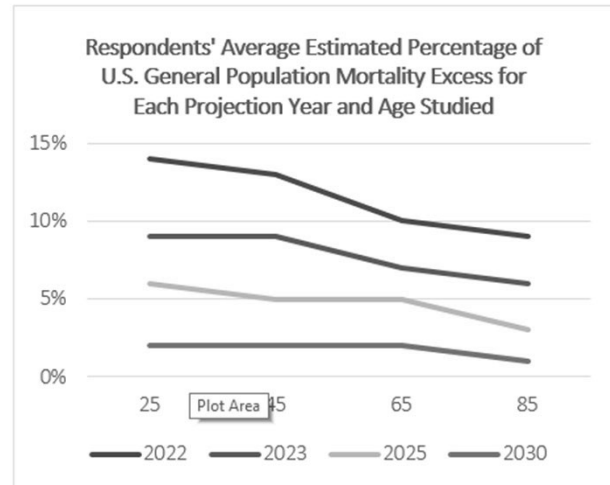

COVID-19 and the Short-Term Impact on Future U.S. Mortality

- Expert Opinion Survey of key actuaries and related medical / demographic professionals
- Opinions of excess population and insured mortality in 2022, 2023, 2025 and 2030 using 2019 mortality as a baseline
- 59 responses to survey

COVID-19 and the Short-Term Impact on Future U.S. Mortality

- Key results
- Excess mortality expected to continue for U.S. population in near term, but declining over time

COVID-19 and the Short-Term Impact on Future U.S. Mortality

- Key results
- Excess population mortality expected to be higher than for the insured, annuitant and pension plan populations
- Non-COVID-19 causes of death to contribute more to excess mortality than COVID-19 for younger ages. For older ages, COVID-19 expected to drive excess mortality
- Mortality from cardiovascular disorders, cancer and drug overdose mortality expected to deteriorate due of COVID era impact / long COVID in coming years

Life Actuarial Task Force (LATF) Meeting—August 8-9, 2022

Agenda

- ❑ Items addressed in the 2022 scale recommendation
- ❑ Mortality/Mortality Improvement (MI) Industry Group—
Principles for COVID-19 Impact on Valuation Mortality/Longevity
Assumptions
- ❑ Recommendation for 2022 Historical Mortality Improvement
(HMI) and Future Mortality Improvement (FMI) scales
- ❑ Next steps

Items addressed in 2022 scale recommendation

Develop HMI and FMI scales for use in 2022 valuation year.

The 2022 recommendations include:

- ▣ Reflecting COVID-19 impacts for HMI and FMI
- ▣ FMI margin

3

Mortality/MI Industry Group - COVID-19 Impact

- ▣ Group representing members of the American Academy of Actuaries (“Academy”), the Society of Actuaries, and members of the National Association of Insurance Commissioners (NAIC), Life Actuarial (A) Task Force (LATF).
- ▣ Convened in January 2022.
- ▣ Focused on developing a set of consistent principles to be considered in reflecting the impact of COVID-19 in mortality and longevity valuation work.

4

Industry Group Principles

Valuation mortality assumption should represent:

“the expected ongoing mortality level” over the full period of the reserve projection.

Therefore, the basic valuation mortality and MI assumption

- Should not reflect the full initial shock of the pandemic on mortality as an ongoing event
- Should reflect expected ongoing impacts

HMI Recommendation: Apply Standard Methodology with Full COVID Impact for 2020

Change from 7/7/22 LATF Call Discussion

- Interim approach
- Standard longer term approach for COVID-19 impact will be considered in 2023 subgroup work along with additional data

6

FMI Recommendation:

Apply approved methodology with additional temporary COVID-19 margin

- Basic FMI
 - Grade from 2022 HMI to long-term (LT) MI level based on Social Security Administration (SSA) Alt 2 Intermediate Projection (2022 Trustees Report)
- General Margin
 - Reduce improvement by 25% or
 - Increase deterioration by 25%
- Short term additional COVID-19 Margin
 - 25% grading down to zero over 5 years

Additional Considerations

- Insured population mortality materially lower than general population mortality
 - ▣ Insured population is generally in higher socioeconomic categories
 - ▣ Lower mortality and higher mortality improvement seen in higher socioeconomic categories (implicit margin in our recommendations)
- MI improvement scale annual updates should not create reserve volatility
- Individual companies should also consider their own business and make appropriate additional adjustments

Reserve Impact - NAIC Model Office

- Universal Life with Secondary Guarantees (ULSG) focus—long-duration product, larger potential for reserve reduction
 - ▣ Model office and assumptions same as used in the yearly renewable term (YRT) representative model analysis
 - ▣ Lifetime shadow account secondary guarantee
 - ▣ No reinsurance in the model
- Combined model office

Component	Values
Issue ages	Decennial issue ages 30 – 70
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)

These principles are consistent with international views on mortality projection and COVID-19 impacts...

- Social Security Administration 2022 Trustees Report **MS5**
 - “Projected death rates for years after 2023 are unchanged from the levels that would have been projected in the absence of the pandemic, under the assumption that increased deaths from the residual effects of living through the pandemic (both physiological and psychological) will be roughly offset by decreased deaths that instead happened sooner (during the pandemic).”
- Continuous Mortality Investigation (CMI) Mortality Projections Committee
 - “If we gave full weight to 2020 data ... the reduction in life expectancy would have been in excess of what most users of the model would consider reasonable.”
 - CMI_2021 incorporates mortality data to 31 December 2021
 - 2020 and 2021 data is given 0% weight in the Core version – Consistent with approach for CMI_2020 supported by consultation – Data for 2020 and 2021 is unlikely to be indicative of future trends – Using 100% weight for 2020 and 2021 data would lead to excessive falls in life expectancy
- Mortality projections for Social Security Programs in Canada (Actuarial Studies No. 22 and 23)

Approach for Smoothing (HMI and FMI)

- By age
- Use same approach for 2022 as past years
 - ▣ Ages 0-15 = 1.5 x adult average improvement/deterioration
 - ▣ Ages 16-20 = Grade to adult average
 - ▣ Ages 21-84 = Assumed adult average
 - ▣ Ages 85-94 = Grade to ultimate level of at 95
 - ▣ Ages 95+ = 0.1%

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

- The 2021 and prior versions of VM-20 prohibited including FMI in the calculation of deterministic and stochastic reserves, while allowing the mortality assumption to be improved up to the valuation date using a historical mortality improvement (HMI) assumption developed by the MILWG.
- An **“exact” approach** to including FMI in the calculation of deterministic and stochastic reserves would utilize the MILWG’s HMI assumption to bring the mortality table up to the valuation date and then apply the separate FMI assumptions beyond the valuation date.

22

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

A modeling simplification was employed that utilized the new MILWG FMI assumption as both HMI and FMI in the deterministic reserve projection.

This simplification allows for the impact of including FMI in current and future deterministic reserve calculations to be quantified.

Industry Experience Studies Partnership
August 8, 2022

A Powerful Industry Partnership

In 2021, LIMRA and the SOA Research Institute entered into a partnership to support the industry with a **comprehensive program of industry experience studies**.

This program will provide timely, consistent, and comprehensive releases of industry experience data — providing you with the necessary tools for addressing **product development, pricing, and regulatory strategies**.

Together, We have Unmatched Breadth & Depth of Experience

Expertise

We are both associations dedicated to this industry, with a long history of conducting large data-intensive efforts

Trust

Strong reputation for unbiased research, analysis, and industry relationships

Value

Together we provide unparalleled value while delivering cost-effective insights

Benefits to Participants

Credible, robust, benchmarking, and strong industry representation:
70% market participation is typical

Comprehensive and timely: updates of industry data on a regularly published schedule

Detailed and deeper analytics: to support product development, inforce management, reserving, and growth strategies

Robust Reporting Options

Standard Data Package

- Executive Summary Dashboard highlighting key findings and top-line analysis
- Detailed report presenting results and analysis of key findings
- Access to an aggregated industry level dataset for further analysis by companies
- Individualized presentation by SOA and LIMRA of your own company results and a discussion of the relationship to industry

Premium Data Package

- Standard Data Package plus...
- Customized tools for participating companies' own analysis
- Including predictive modeling and Artificial Intelligence methods

* Non participants are defined as companies or organizations that do not provide data for the study analysis.
+ per study

Robust Reporting Options

Standard Data Package

Life Actuarial Task Force (LATF) Meeting—August 7, 2022

Webinars and Events

- Recent
 - ASOP No. 2 Webinar related to Nonguaranteed Elements (April 5)
 - Life Policy Update Webinar (May 4)
 - ASOP No. 11 Webinar on Reinsurance (May 12)
- Upcoming
 - ASOP No. 22 Webinar related to Asset Adequacy Testing—
The Revised ASOP No. 22: What You Need to Know (July 28)
 - American Academy of Actuaries Annual Meeting (Nov 2-3)
 - Webinar on VM-31 PBR Actuarial Report Reviews (Fall 2022)
 - Webinar on VM-22 Updates (Fall 2022)

2

Recent Activity

- Presented recommendations for C-2 mortality factors to the NAIC’s Life Risk-Based Capital (E) Working Group
 - The Working Group ultimately adopted an alternative version based on the Academy’s proposal
- Proposed an amendment proposal form to LATF on transitioning from LIBOR to SOFR (APF 2022-04)
 - Also submitted subsequent follow-up letters to provide support and input on the transition, leading up to the adoption of the amendment

3

Recent Activity (continued)

- Published a “COVID-19 in Life Insurance Mortality Improvement” Discussion Brief
- In collaboration with the Society of Actuaries Research Institute provided future mortality improvement scale development
- Developed a document that summarizes sources of information on Life Insurance COVID-19 mortality

4

Recent Activity (continued)

- Submitted comments to LATF on high yielding asset actuarial guideline for asset adequacy analysis
- Shared a comment letter with the Index-Linked Variable Annuity (A) Subgroup on the nonforfeiture interim value actuarial guideline exposure
- Developed a C-3 Phase I template for the upcoming economic scenario generator field test
- Gave a presentation to the NAIC VM-22 Subgroup on an overview of longevity reinsurance transactions

5

Ongoing Activities

- Developing fixed annuity principle-based approach joint field study for non-variable annuities in coordination with the NAIC and ACLI
- Providing input on economic scenario generator transition and field study
- Updating the practice note on life insurance illustrations and starting a practice note on non-guaranteed elements
- Continuing to provide comments and ideas on active LATF issues

6

Thank You

National Association of Insurance Commissioners (NAIC) Life Actuarial (A) Task Force (LATF)
August 9, 2022

Agenda

2

1. Background, framework, and purpose
2. Overview of equity stylized facts
3. Detail on each equity stylized fact
4. Questions and next steps

2

1. Background, framework, and purpose

Our goal today is to present equity stylized facts and hear feedback so the ESGWG can begin work to develop equity acceptance criteria

4

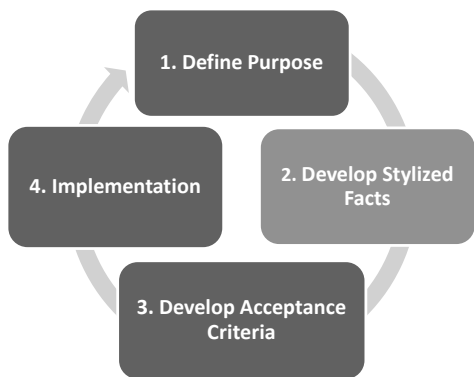

- The charge for the Academy’s Economic Scenario Generator Work Group (ESGWG) is to help ensure a smooth transition from the currently prescribed ESG (i.e., the Academy Interest Rate Generator or AIRG) to the NAIC’s new ESG developed by Conning.
- LATF has requested the ESGWG assist with developing and proposing formal acceptance criteria for use in validating scenarios produced by the NAIC’s new ESG.
- As discussed in our presentation on “A Framework for Developing, Evaluating, and Implementing an ESG”:
 - A comprehensive set of *qualitative* stylized facts is a key prerequisite for model selection and the development of acceptance criteria.
 - A comprehensive set of *quantitative* acceptance criteria is key to making objective, timely, and actionable decisions on scenario sets produced by an ESG and helps ensure the ESG is performing in line with agreed upon stylized facts.

4

Framework for developing, implementing, and evaluating ESGs and the scenario sets they produce

5

- **1. Define Purpose:** The intended purpose of the ESG informs the stylized facts and their relative importance.
- **2. Develop Stylized Facts:** Equity stylized facts describe properties of equity returns observed in capital markets that should be reflected in sets of economic scenarios given the defined purpose. **The establishment of stylized facts is critical for selecting an ESG model and a key prerequisite for the development of acceptance criteria.**
- **3. Develop Acceptance Criteria:** A set of quantitative metrics or target values at different time horizons or in different economic conditions used to ensure the scenarios it produces are consistent with agreed upon stylized facts.
- **4. Implementation:** ESG models are selected based on their ability to reflect agreed upon stylized facts, then calibrated in accordance with acceptance criteria. **This is an iterative process.** Also, it is important to periodically review and recalibrate the ESG as market conditions change over time.

5

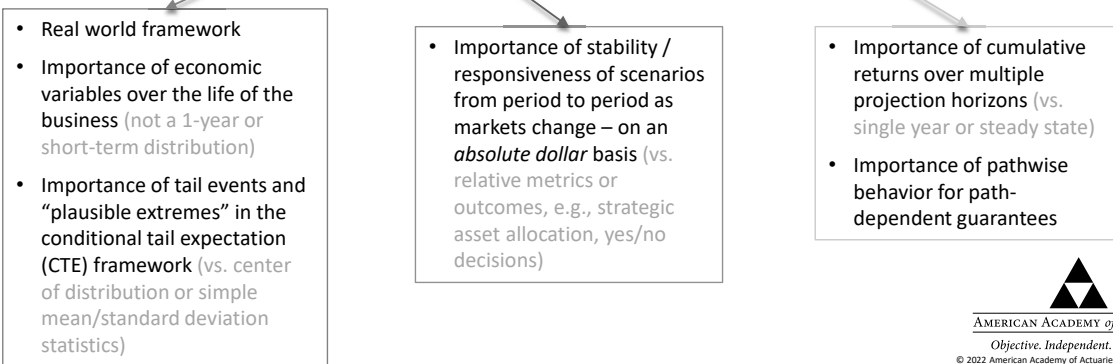

“Suitability for Purpose” considerations help inform Stylized Facts

“ESGs are a critical component of a wide range of applications used by insurers in managing the economic risks of their operations. For a given application, it is critical that the ESG be suitable and properly maintained relative to the application’s purposes.”

“The objective and purpose of the analysis to be undertaken with an ESG should dictate the techniques and modeling formulas used.”

- CAS Research Paper (<https://www.casact.org/sites/default/files/2021-02/economic-scenario-generation-conning1020.pdf>)

US Statutory Reserve & Capital Reporting for Long-Duration Life & Annuity Products

6

2. Overview of equity stylized facts

AMERICAN ACADEMY of ACTUARIES
Objective. Independent. Effective.™
 © 2022 American Academy of Actuaries. All rights reserved.
 May not be reproduced without express permission.

Equity Stylized Facts are a key part of the framework for developing, implementing, and evaluating ESGs

8

- Equity stylized facts describe properties of equity returns observed in capital markets that should be reflected in sets of economic scenarios.
- There are several important considerations for equity stylized facts:
 - ▣ Long-term pathwise behaviors within single scenarios
 - ▣ Single-period distributions across all scenarios
 - ▣ How a set of scenarios transitions from initial market conditions to steady state equilibrium
 - ▣ Changes in the distribution from one valuation date to the next as initial market conditions change
 - ▣ The nature of the relationships between different economic variables simulated by the ESG

8

AMERICAN ACADEMY of ACTUARIES
Objective. Independent. Effective.™
 © 2022 American Academy of Actuaries. All rights reserved.
 May not be reproduced without express permission.

It is important to consider the relative importance of stylized facts

9

- ESG models differ in their ability to reflect stylized facts and no ESG model will be able to perfectly reflect all of them
- Stylized facts can be prioritized by looking to the ESG’s intended purpose
 - ▣ Stylized facts related to the **pathwise behavior of equity markets over long time horizons** should be prioritized given that long-duration life and annuity products tend to be sensitive to *cumulative* equity returns over the life of the product.
 - ▣ Stylized facts related to how scenario sets should **change as initial conditions change** should be prioritized to avoid artificial volatility one valuation date to the next is a key consideration for statutory reserves and capital.

9

Equity Stylized Facts

10

1. Equity indices (indeed, all asset classes) tend to exhibit **consistent risk/reward relationships** over long time horizons.
2. Cumulative equity returns tend to exceed the compounded risk-free rate (positive **equity risk premium**) over long time horizons, but over short time horizons the equity risk premium fluctuates due to several factors and can be negative.
3. Equities **fluctuate between bull and bear markets** (bubbles tend to burst) – Markets can experience significant losses but eventually tend to **move back into positive territory** (negative cumulative equity returns become less likely over longer time horizons).
4. Cumulative equity returns **over long time horizons are not materially impacted by initial market conditions.**

10

Equity Stylized Facts (cont'd)

11

- 5. The **volatility of equity returns varies over time but quickly reverts to normative levels**. This allows for both extreme gains and extreme losses over short time periods (i.e., the distribution has fat tails, or **positive kurtosis**). Furthermore, the **volatility of equity returns is higher in bear markets**. This increases the probability of extreme losses relative to extreme gains (i.e., the distribution has a longer left tail, or **negative skewness**).
- 6. Equity markets contain **pathwise dynamics** over long time horizons that aren't present in the distribution of single-period returns. Future equity scenarios should have reasonable distributions of cumulative equity returns over long time horizons (e.g., 10, 20, 30 years), especially since these distributions are key to the performance of long-duration life and annuity products.
- 7. Future equity scenarios should include events that are **plausibly more extreme than history**.
- 8. Equity returns have both a **price and dividend component**, and they behave differently – Dividend returns tend to be more stable than price returns.

11

3. Additional detail on each equity stylized fact

1. Equity indices (indeed, all asset classes) tend to exhibit **consistent risk/reward relationships** over longtime horizons.

13

- The principle of consistent risk/reward relationships between equity indices is already a common theme in the valuation manual, often expressed in terms of the market price of risk (Sharpe ratio) or mean-variance efficiency.
- Excerpts from the 2022 valuation manual:
 - ▣ “It would generally be inappropriate to assume that a market or fund consistently outperforms (lower risk, higher expected return relative to the efficient frontier) over the long term.”
 - ▣ “One approach to establish consistent scenarios would set the model parameters to maintain a *near*-constant market price of risk. A closely related method would assume some form of mean-variance efficiency to establish consistent model parameters.”
 - ▣ “The Market Price of Risk implied in the projected fund returns when compared against the Market Price of Risk for all funds generated by the prescribed scenario generator should produce reasonable relationships.”
 - ▣ “Guidance Note: While the model need not strictly adhere to “mean-variance efficiency,” prudence dictates some form of consistent risk/return relationship between the proxy investment funds.”
 - ▣ “Recognizing the uncertainty in the data, a “corridor” could be established for the frontier. Model parameters would then be adjusted to move the proxy market (fund) inside the corridor.”

13

1. Equity indices (indeed, all asset classes) tend to exhibit **consistent risk/reward relationships** over long time horizons. *(continued)*

14

- The NAIC’s ESG Drafting Group has already provided some direction consistent with this stylized fact in their 3/31/21 update to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group which contained the following recommendation for the field test:
 - ▣ “Apply a Sharpe-ratio approach with a 5% corridor [relative to the S&P 500 index] to set the expected returns for the [other equity indices, e.g., the] diversified international equity, aggressive international equity, and US aggressive equity indices.”
- The S&P 500 index is generally used as the reference point for other indices due to its longstanding predominance in the U.S. market; it has the a much larger historical data set than the other equity indices.

14

2. Cumulative equity returns tend to exceed the compounded risk-free rate (positive **equity risk premium**) over long time horizons, but over short time horizons the equity risk premium fluctuates due to several factors and can be negative.

15

- The Equity Risk Premium (ERP) is the *expected* return on stocks less the compounded (expected) risk-free rate. It is the compensation investors require to holding risky stocks over risk-free bonds.
- The ERP fluctuates (oscillates) over short time periods.
 - ▣ The fluctuation isn't completely random, but more of an oscillation due to several factors such as cyclical effects and systematic trends.
 - ▣ It fluctuates as the business cycle changes. It tends to contract in bull markets when stock prices rise and risk aversion falls, and tends to expand in bear markets when stock prices fall and risk aversion rises.
 - ▣ It fluctuates as bond yields change. It shrinks when the return on risk-free bonds increases and grows when the yield on risk-free bonds decreases.
 - This inverse relationship (i.e., ERP contracting when rates increase and expanding when rates fall) is consistent with economic theory such as the dividend discount model, where a company's valuation (based on the present value of future dividends) falls as rates rise.
 - It is also consistent with the Fed's use of monetary policy (i.e., short term rate management) as a key tool to achieve their dual mandate of maximum employment and price stability.
 - Such relationships have also been observed in historical data.

15

2. Cumulative equity returns tend to exceed the compounded risk-free rate (positive **equity risk premium**) over long time horizons, but over short time horizons the equity risk premium fluctuates due to several factors and can be negative. *(continued)*

16

“Five myths about equity risk premiums

3. The equity risk premium does not change much over time: Equity risk premiums reflect both economic fundamentals and investor risk aversion and they do change over time, sometimes over very short intervals, as evidenced by what happened in the last quarter of 2008. Shocks to the system – a collapse of a large company or sovereign entity or a terrorist attack – can cause premiums to shoot up overnight. A failure to recognize this reality will lead to analyses that lag reality.”

- Equity Risk Premiums (ERP): Determinants, Estimation, and Implications – The 2021 Edition, Aswath Damodaran Stern School of Business (p. 130)

Excerpts from Academic Research

“What are the determinants of equity risk premiums?”

- *investors’ risk aversion and consumption preferences*
- *overall economic risk*
- *inflation and interest rates*
- *quality and availability of earnings information*
- *liquidity and fund flows into/out of equities*
- *potential for catastrophic risk / rare events*
- *government policies*
- *monetary policy*
- *irrational behavior”*

- Equity Risk Premiums (ERP): Determinants, Estimation, and Implications – The 2021 Edition, Aswath Damodaran (pp. 10-21)

“[The] DDM-based approach has been the only one with any real traction since the turn of the millennium....”

“[It] focuses on the expected rather than the realized ERP. This literature asserts that, like most DDM estimates, the ERP is time varying and countercyclical: The ERP is high when the market is low, and vice versa.”

- The Equity Risk Premium: A Contextual Literature Review, CFA Institute (p. 9)

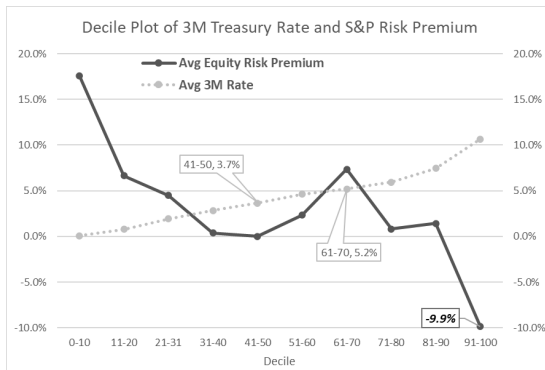

16

2. Cumulative equity returns tend to exceed the compounded risk-free rate (positive **equity risk premium**) over long time horizons, but over short time horizons the equity risk premium fluctuates due to several factors and can be negative. *(continued)*

17

- Historical data suggests an inverse (countercyclical) relationship, i.e., one that is better described by a constant mean return than a constant mean ERP.

The methodology used by the ESGWG to create this chart was to calculate monthly ERP as the monthly return on S&P 500 less their monthly average 3-month Treasury rate. The monthly ERPs were then ranked ordered by the 3-month Treasury rate and bucketed into 10 equally sized groups. The average monthly ERP for each bucket is calculated and then translated to an annual ERP.

17

- The chart to the left illustrates the range observed for the S&P 500's ERP over the 3-month Treasury rate from April 1953 to December 2020.
- The graph shows positive ERPs in the three lowest buckets and near-zero or negative ERPs in the three highest buckets.
- Note that the 3M Treasury Rate is indirectly impacted by Fed monetary policy, for example:
 - The Fed increases/decreases short-term rates to slow/stimulate economic activity in the near term and maintain long-term stability.
 - The '70s & '80s featured high rates with low ERP and equity returns while the last decade had low rates with high ERP and equity returns.
 - The Fed is currently raising Fed Fund rates to fight inflation which has had a bearish impact on equity markets as companies deal with higher borrowing costs.

2. Cumulative equity returns tend to exceed the compounded risk-free rate (positive **equity risk premium**) over long time horizons, but over short time horizons the equity risk premium fluctuates due to several factors and can be negative. *(continued)*

18

- This stylized fact is prioritized because the nature of the ERP relationship within the ESG directly affects the shape of the scenario distribution (particularly in the tails) and how scenario distributions respond changes in initial market conditions.
 - The method an ESG uses to reflect the ERP has significant implications for the behavior of equity return paths in the tail scenarios that drive U.S. statutory reserve and capital requirements.
 - The method an ESG uses to reflect the ERP also has significant implications for how scenario sets produced by the ESG change under different initial conditions, which could introduce artificial volatility into U.S. statutory reserve and capital requirements from one valuation date to the next.

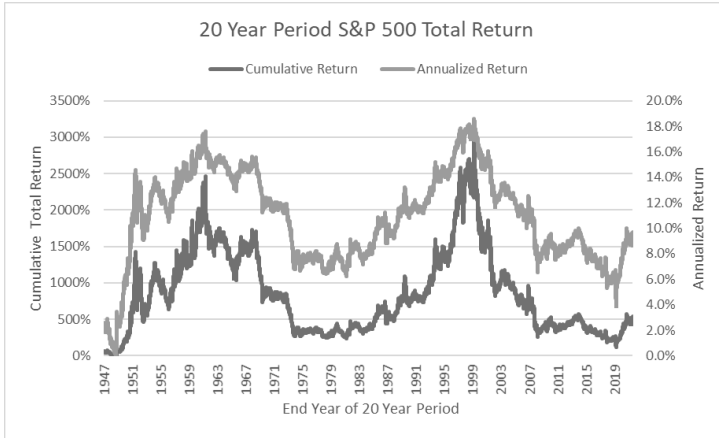

Direction on this stylized fact is key for the subsequent development of equity acceptance criteria by the ESGWG.

18

3. Equities **fluctuate between bull and bear markets** (bubbles tend to burst) – Markets can experience significant losses but eventually tend to **move back into positive territory** (negative cumulative equity returns become less likely over longer time horizons).

19

- Equity markets can and do crash, but looking at historical S&P 500 cumulative returns over 20 years suggests markets tend to move back into positive territory given enough time.
 - This chart only shows cumulative returns over a 20-year time horizon. Acceptance criteria should consider cumulative returns over multiple time horizons (e.g., 1, 5, 10, 20, 30 years).
- Future scenarios for the S&P 500 should include the possibility of negative cumulative returns over 20-year periods.
 - Even though this has not happened historically, there are relatively few non-overlapping periods to draw from.
 - Acceptance criteria will attempt to quantify the likelihood of this happening, which is informed by historical data and economic theory/models.

19

3. Equities **fluctuate between bull and bear markets** (bubbles tend to burst) – Markets can experience significant losses but eventually tend to **move back into positive territory** (negative cumulative equity returns become less likely over longer time horizons). *(continued)*

20

- The NAIC’s ESG Drafting Group has already provided direction consistent with this stylized fact
 - Per their 12/17/20 update to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group:

Goal relating to the equity scenarios:

5. Equity scenarios need to reflect the possibility of a very long recovery after a period of losses

Rationale and Background: During certain periods of time after periods of recession or depression, there have been extended periods of equity market recovery. This is important to reflect in the scenarios due to the long-term nature of some insurance liabilities.

- Per their 3/31/22 update to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group:

“After a recession or depression, there have been some extended periods of equity market recovery. This is important to reflect in the scenarios due to the long-term nature of some insurance liabilities.”

20

4. Cumulative equity returns *over long time horizons* are not materially impacted by initial market conditions.

21

- Over short time horizons (within a business cycle), equity returns may be impacted by initial market conditions (observables) such as recent interest rates and equity returns, current market sentiment, current point in the business cycle, and news on current dividend and cash flow yields.
- But over long time horizons (10, 20, 30+ years), changes in initial market conditions should not materially impact future expectations (cumulative equity returns).
 - ▣ Markets bouncing around during the quarter (trading fluctuations) shouldn't materially change future expectations.
 - ▣ Instead, cumulative equity returns over long time horizons are driven by fundamental factors such as future GDP and earnings growth
 - ▣ For example, equity market sell-offs often occur during periods of investor fear and uncertainty. This increases short-term market volatility but is not expected to have a significant impact on long-term GDP and earnings growth.
- If there isn't sufficiently compelling evidence to the contrary there should be not be any material procyclical or countercyclical equity return response to changes in initial market conditions.
 - ▣ Note, we are referring to changes in initial market conditions that are *not* indicative of a change in long-term trends or policies

21

4. Cumulative equity returns *over long time horizons* are not materially impacted by initial market conditions. (continued)

22

Business cycle considerations

- The Fed uses monetary policy to maintain long-term stability, so more often than not, long-term equity expectations should not change as initial market conditions change.
 - ▣ Fed actions to manage the business cycle are not likely to materially change cumulative equity return distributions beyond the current cycle.
 - ▣ For example, if the Fed raises short term rates to 3.5% to slow a heated economy, there is little reason to suddenly expect cumulative equity returns over the next 30-50 years to be significantly higher.
 - ▣ However, if the Fed changes its mandate or long-term targets (e.g., 3% instead of 2% inflation) then long-term equity expectations should change.
- The National Bureau of Economic Research (NBER) maintains data on the length of the U.S. business cycles. For the years 1945 through 2020:
 - ▣ Contractions have averaged approximately 1 year
 - ▣ Expansions have averaged approximately 5 years
 - ▣ Taken together, the full business cycle has averaged approximately 6 years
 - ▣ Source: <https://www.nber.org/research/data/us-business-cycle-expansions-and-contractions>

22

4. Cumulative equity returns *over long time horizons* are not materially impacted by initial market conditions. (continued)

23

Do other regulatory or accounting frameworks have anything to say on this topic?

- US GAAP (countercyclical view): existing insurance accounting models (e.g., FAS 97 UL deferred acquisition costs, SOP 03-1 reserves for GMDs and life secondary guarantees)
 - ▣ A common practice is to assume that if recent equity returns (e.g., over the last 4-year period) were low, then future equity returns (e.g., over the next 4-year period) will be high (and vice versa); i.e., that the combined equity return over both periods will be consistent with long-term averages.
- Canada: excerpts from OSFI's 2012 policy paper, Evidence for Mean Reversion in Equity Prices
 - ▣ "The claim that equity returns revert to the mean over the long term is not completely unfounded, and cannot be dismissed out of hand. However, there is at least as much evidence to refute this claim as there is to support it, and there is certainly no consensus answer within the economics profession. OSFI must therefore rely on its own judgement as to whether to accept mean reversion assumptions in modeling segregated funds."
 - ▣ "Given the large reduction in segregated fund guarantee reserve and capital requirements that would result from assuming mean reversion in equity returns, it would not be prudent for OSFI to approve equity return models that are based on the assumption of mean reversion without strong evidence that mean reversion actually occurs in the market and is likely to continue in the future. The current state of research does not provide such evidence to a sufficiently high degree of certainty."

23

5. The **volatility of equity returns varies over time but quickly reverts to normative levels**. This allows for both extreme gains and extreme losses from one period to the next (i.e., the distribution has fat tails, or **positive kurtosis**). Furthermore, the **volatility of equity returns is higher in bear markets**. This increases the probability of extreme losses relative to extreme gains (i.e., the distribution has a longer left tail, or **negative skewness**).

24

- Equity return volatility should be stochastic, time varying, with strong mean reversion.
 - Equity return volatility, especially over short time periods, is driven by market sentiment and the flow of new information to the market, and where the economy is in the business cycle (economic outlook), both of which are quite unpredictable.
 - As these things change, the level of equity return volatility fluctuates and clusters (exhibits regimes of high and low volatility) over time but tends to revert to normative levels rather quickly.
- Historically, the level of equity return volatility has tended to be higher in bear markets and lower in bull markets.
 - ▣ Recently, fears of recession and prolonged inflation have caused equity return volatility to increase.

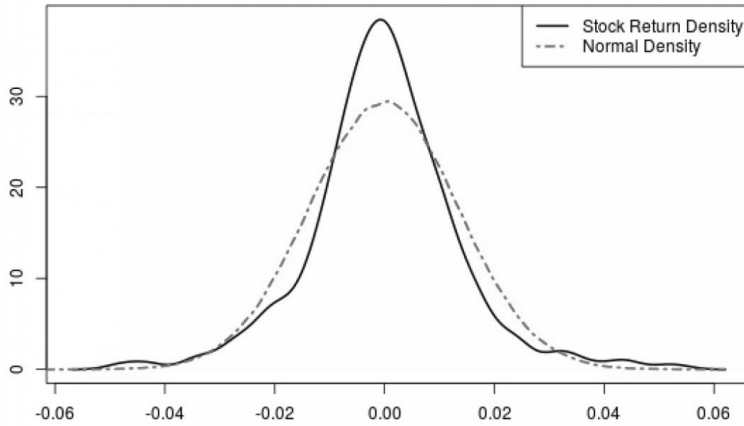

24

5. The **volatility of equity returns varies over time but quickly reverts to normative levels**. This allows for both extreme gains and extreme losses from one period to the next (i.e., the distribution has fat tails, or **positive kurtosis**). Furthermore, the **volatility of equity returns is higher in bear markets**. This increases the probability of extreme losses relative to extreme gains (i.e., the distribution has a longer left tail, or **negative skewness**). (continued)

25

- Distributions of historical equity returns (see below for an illustrative example) generally exhibit positive kurtosis and negative skewness, consistent with the volatility characteristics presented on the last slide.

25

5. The **volatility of equity returns varies over time but quickly reverts to normative levels**. This allows for both extreme gains and extreme losses from one period to the next (i.e., the distribution has fat tails, or **positive kurtosis**). Furthermore, the **volatility of equity returns is higher in bear markets**. This increases the probability of extreme losses relative to extreme gains (i.e., the distribution has a longer left tail, or **negative skewness**). (continued)

26

- Conning’s “NAIC Scenario Set Technical Documentation – Equity and Dividend Model” contains the following chart associated observations:

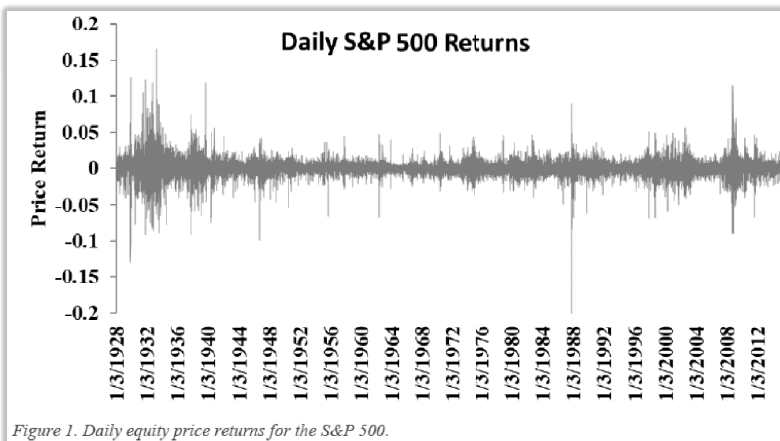

Figure 1. Daily equity price returns for the S&P 500.

Source: NAIC Scenario Set Technical Documentation (Conning)

26

- A degree of randomness or stochasticity in the price returns.
- Periods of high and low volatility which have a tendency to cluster.
- Extreme events, with the price return suddenly spiking to high positive or negative values.
- A higher frequency and a larger magnitude of extreme events during periods of high volatility.
- A higher frequency of extreme negative returns as compared to extreme positive returns.

5. The **volatility of equity returns varies over time but quickly reverts to normative levels**. This allows for both extreme gains and extreme losses from one period to the next (i.e., the distribution has fat tails, or **positive kurtosis**). Furthermore, the **volatility of equity returns is higher in bear markets**. This increases the probability of extreme losses relative to extreme gains (i.e., the distribution has a longer left tail, or **negative skewness**). (continued)

27

- The NAIC’s ESG Drafting Group has already provided direction consistent with this stylized fact
 - Per their 12/17/20 update to the Life Actuarial (A) Task Force and the Life RBC (E) Working Group:

Goal relating to the equity scenarios:

3. The equity model should have stochastic volatility and the initial volatility should be updated frequently

Rationale for this Goal: Most equity models have stochastic volatility because this allows for fatter tails in the scenario distribution. Without it, there would be little ability to produce big drops, such as the 2008 financial crisis or Black Monday.

- The NAIC’s 3/31/22 update also provided data points on normative levels of volatility:

Historical Period	Mean	Standard Deviation
1900-2003	11.8%	21.1%
3/1957-2003	11.9%	16.5%
1900 -2021	11.8%	20.4%
3/1957-2021	12%	16.2%

27

6. Equity markets contain **pathwise dynamics** over long time horizons that aren’t present in the distribution of single-period returns. Future equity scenarios should have reasonable distributions of cumulative equity returns over long time horizons (e.g., 10, 20, 30 years), especially since these distributions are key to the performance of long-duration life and annuity products.

28

- “A path represents one possible future evolution of the economy and therefore represents one possible complete future “economic experience.” The importance of pathwise model behavior is that it is the simulated path that represents the way an insurance company will experience the evolution of the economy. If the overall distribution of returns for an asset class is correct but the pathwise behavior does not correspond to the nature of the fluctuations that we see in the historical record, then the model has an issue.”
 - Source: “A User’s Guide to Economic Scenario generation in Property/Casualty Insurance” (p.12), sponsored by the Casualty Actuarial Society and Conning (2020)
- This stylized fact is critical for understanding and modeling long-term insurance liabilities
 - Long-term insurance liabilities have account values that accumulate over time, investment returns over time with cashflows, and guarantee amounts—all of which are path-dependent. At each individual point in time, it’s not the cross-sectional distribution at that point in time that matters, but the specific path taken leading up to that point in time.
- The importance of pathwise behavior in interest rates to insurance products is evident by looking at the types of scenarios present in the ubiquitous “New York 7” scenarios
 - E.g., level, pop up, pop down, up/down, down/up, delayed pop up, delayed pop down

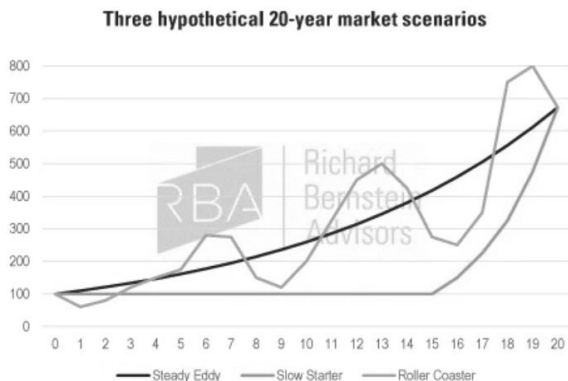

28

6. Equity markets contain **pathwise dynamics** over long time horizons that aren't present in the distribution of single-period returns. Future equity scenarios should have reasonable distributions of cumulative equity returns over long time horizons (e.g., 10, 20, 30 years), especially since these distributions are key to the performance of long-duration life and annuity products. *(continued)*

29

- An example—clearly, guaranteed amounts and resulting cash flows will differ under the three scenarios

Initial \$100 investments with different contribution rates

Market Scenarios	No additional contributions	With contributions	With contributions that keep pace with inflation
Steady Eddy	\$673	\$6,400	\$7,628
Roller Coaster	\$673	\$7,488	\$8,852
Slow Starter	\$673	\$11,640	\$14,872

Source: Richard Bernstein Advisors LLC, Bloomberg, S&P <https://www.rb advisors.com/insights/the-good-side-to-a-bad-market/>

Note: Each scenario results in 10% compounded annual returns

Note: "With contributions" assumes constant \$100 annual contributions.

"With contributions" that keep pace with inflation assumes the \$100 initial contribution grows 2.5% per year.

29

7. Future equity scenarios should include events that are **plausibly more extreme than the historical record.**

30

- "A good ESG produces some extreme but plausible outcomes, which encapsulate historical behavior but do not stray too far from market norms."
 - Source: "A User's Guide to Economic Scenario generation in Property/Casualty Insurance" (p.12), sponsored by the Casualty Actuarial Society and Conning (2020)
- It's important to distinguish between *plausible* events versus implausible but *theoretically possible* events.
 - The tails of scenario distributions should reflect plausibly severe stresses (including some more extreme than the historical record) that are appropriate for statutory reserves and capital.
 - While it's theoretically possible for an asteroid to hit the Earth someday, scenarios like that probably shouldn't be driving statutory reserve and capital levels.
 - Black swan events should occur with black swan probabilities.

30

7. Future equity scenarios should include events that are ***plausibly more extreme than the historical record.*** (continued)

31

- For example, since the historical record contains fewer non-overlapping 30-year equity returns than 1-month equity returns, there is a greater chance for future 30-year equity returns to be more extreme than the historical record than there is for 1-month equity returns.
- The plausibility range for such extreme events should be informed using judgment combined with economic theory/models.

31

8. Equity returns have both a **price and dividend component**, and they behave differently—dividend returns tend to be more stable than price returns.

32

- This stylized fact is last because although long duration life and annuity products are often very sensitive to *total* returns, they tend not to be that sensitive to how those total returns are *split* between price and dividend
 - For liability cashflows on life and annuity products, it's usually the total returns that matter. However, price returns do potentially come into play on the asset side, particularly when it comes to derivatives and hedging.
 - When considering probabilities of cumulative losses or distributions in general, it's important know if those probabilities or distributions are for total returns or price returns—cumulative losses are less likely when considering total returns.

32

8. Equity returns have both a **price and dividend component**, and they behave differently—dividend returns tend to be more stable than price returns. (continued)

33

- Conning’s “NAIC Scenario Set Technical Documentation – Equity and Dividend Model” contains the following language and chart, which are consistent with this stylized fact.

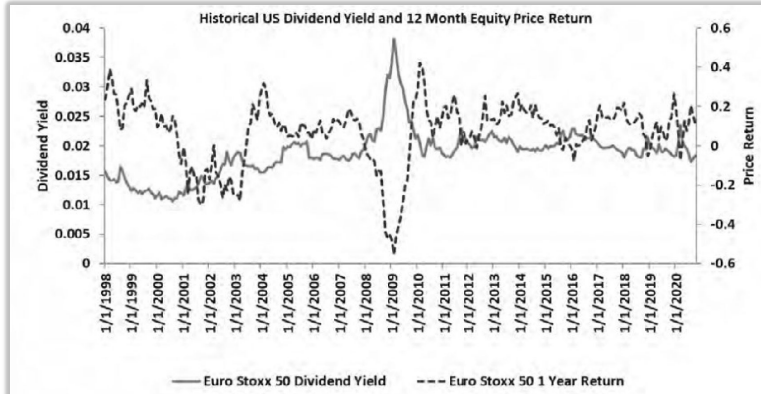

Figure 2 Historical relationship between large cap price returns in a rolling twelve month window and dividend yields.

“Another important dynamic to capture in equity markets are the income cash flows received from dividends. In particular it is observed across multiple equity markets that dividend yields are negatively correlated with price returns, and that when jumps are observed in equity prices the dividend yield tends to jump in the opposite direction. Figure 2 shows this behavior in the historical data. We observe that the rolling 12-month equity price returns and the 12-month dividend yield on United States Large Cap equity are negatively correlated and during the 2008 crisis moved rapidly apart.”

33

4. Next steps and questions

The Academy’s proposed schedule for developing acceptance criteria and other elements of a framework for working with ESGs

35

Session	Duration (hours)	Topic
1	1.5	Overview - A process for implementing and evaluating ESG scenario sets
2	2.0	Equity Model - Stylized facts
3	1.5	Corporate Credit Model - Stylized facts and acceptance criteria
4	1.5	Corporate Credit Model - ESGWG simplified corporate credit model
5	1.5	Equity Model - Acceptance criteria
6	1.5	Interest Rate Model - Stylized facts and acceptance criteria (1 of 2)
7	1.5	Interest Rate Model - Stylized facts and acceptance criteria (2 of 2)
8	1.0	Interest Rate Model - ACLI alternative interest rate model
9	1.0	Interest Rate Model - Other interest rate models

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Health Insurance and Managed Care (B) Committee Aug. 11, 2022, Minutes 6-2
Health Innovations (B) Working Group Aug. 10, 2022, Minutes (Attachment One) 6-7

Draft: 8/22/22

Health Insurance and Managed Care (B) Committee
Portland, Oregon
August 11, 2022

The Health Insurance and Managed Care (B) Committee met in Portland, OR, Aug. 11, 2022. The following Committee members participated: Glen Mulready, Chair (OK); Troy Downing, Co-Vice Chair (MT); Russell Toal Co-Vice Chair, represented by Paige Duhamel (NM); Lori K. Wing-Heier (AK); Michael Conway (CO); Amy L. Beard represented by Alex Peck (IN); Anita G. Fox (MI); Grace Arnold (MN); Chris Nicolopoulos (NH); Andrew R. Stolfi and TK Keen (OR); Michael Humphreys (PA); Jon Pike (UT); Mike Kreidler and Molly Nollette (WA); and Allan L. McVey represented by Erin Porter (WV). Also participating were: Vicki Schmidt (KS); Larry D. Deiter (SD); and Cassie Brown (TX).

1. Adopted its Spring National Meeting Minutes

Director Wing-Heier made a motion, seconded by Director Fox, to adopt the Committee's April 7 minutes (see *NAIC Proceedings – Spring 2022, Health Insurance and Managed Care (B) Committee*). The motion passed unanimously.

2. Adopted its Subgroup, Working Group, and Task Force Reports

Commissioner Pike made a motion, seconded by Ms. Peck, to adopt the following reports: 1) the Consumer Information (B) Subgroup; 2) the Health Innovations (B) Working Group, including its Aug. 10 minutes (Attachment One); 3) the Health Actuarial (B) Task Force; 4) the Regulatory Framework (B) Task Force; and 5) the Senior Issues (B) Task Force. The motion passed unanimously.

3. Heard a Panel Discussion on Why States Should Create SBEs

J.P. Wieske (Horizon Government Affairs), Heather Korbolic (GetInsured), and Randy Pate (StatesWork) discussed options and opportunities for states to establish state-based exchanges (SBEs). Mr. Wieske outlined four reasons why states should set up their own SBE: 1) the cost of technology associated with operating an SBE has dropped, which means that a state most likely can operate an exchange at a cheaper rate than what a state is paying the federal government to operate an exchange in their state; 2) the ability to gather information and data directly to assist in understanding the state's own health insurance market rather than relying on what information and data a state may receive from the federal government; and 3) the ability to have control over what is going on in the state; and 4) flexibility for states to set their own rules.

Ms. Korbolic discussed the different SBE operation models. She said the move from HealthCare.gov to an SBE is risk-free now that end-to-end (call center, technology, and operations) solutions are readily available from private vendors with a proven track record. She explained that Healthcare.gov is built to support many states with an inflexible infrastructure that does not easily support policy flexibility. Ms. Korbolic reiterated some of the reasons Mr. Wieske discussed as reasons why states should establish an SBE, including: 1) cost savings, which can be repurposed for reinsurance; 2) independence from the federal government; 3) lower premium growth rates along with the ability to innovate with state policy; and 4) better churn management between Medicaid and commercial insurers. Ms. Korbolic said GetInsured has developed model legislation that states can tailor to fit their needs and use as the enacting legislation for an SBE.

Mr. Pate also explained the benefits of a state establishing its own SBE already discussed. He also suggested that having an SBE would give states greater flexibility to innovate using the federal Affordable Care Act (ACA) Section 1332 waiver process.

Director Wing-Heier asked the panel how a state would begin the process of exploring establishing an SBE. Mr. Pate said a state should first look at its needs, population, enrollment, and the user fees it is paying the federal government to operate the federally facilitated exchange (FFE). He also suggested that if the “math” does not seem to work for a smaller state to establish an SBE, the state may want to consider establishing a shared services exchange. A shared services exchange would allow a small state to share with another state the costs of operating certain higher costs operations, such as call centers, to lower operational costs.

Commissioner Mulready asked the panel members what they have seen as the biggest hurdles for a state establishing an SBE. Ms. Korbolic said the biggest hurdles GetInsured has seen include: 1) political will; 2) making a financial argument; and 3) managing risk, particularly related to technology. Mr. Wieske said that with respect to political will, the ability to control their own market and wanting more flexibility will be important factors for states considering establishing an SBE.

Ms. Nollette said she knows there are vendors providing the websites and the technical support for multiple SBEs. She asked if any states are actually sharing the same platform. Ms. Korbolic said there are eight different SBEs on the GetInsured platform, and those states share in the cost of any technical changes or policy changes multiple states want to make.

4. Heard a Presentation on Medicaid Redeterminations Following the End of the COVID-19 PHE

Miranda Motter (America’s Health Insurance Plans—AHIP) presented to the Committee on “The End of the Public Health Emergency: Medicaid Redeterminations.” She provided an overview of the COVID-19 authorities, federal and state emergency declarations, and the public health emergency (PHE). She also discussed and provided examples of key requirements and flexibilities tied to the PHE. She said that once the PHE ends, most requirements and flexibilities tied to the PHE will likely end automatically.

Ms. Motter said the end of the PHE was most recently extended to Oct. 13. She said the Biden Administration has said that it will provide the states 60-day notice before the PHE expires. She explained that to provide the promised 60-day notice, the Biden Administration would need to provide notice by Aug. 14 if the PHE is to end Oct. 13. If no notice is provided by that date, then the PHE is automatically extended for another 90 days ending Jan. 10, 2023. She said the Biden Administration would have to provide the states notice by Nov. 12 if the PHE is to end Jan. 10, 2023.

Ms. Motter provided an in-depth discussion of the Medicaid redetermination process, including the process pre-PHE, during the PHE, and post-PHE. She explained that the significant change in the process is that as a condition of receiving the enhanced federal medical assistance percentage (FMAP) under the federal Families First Coronavirus Responses Act, states are required to maintain enrollment of their Medicaid enrollees through the end of the PHE with no redeterminations. She said that when the PHE ends, states must resume the Medicaid redetermination processes.

Ms. Motter outlined the reasons why this is significant: 1) the volume of Medicaid redeterminations within the condensed time frame is unprecedented; 2) the states will have 12 months to initiate and 14 months to complete a full renewal of all individuals enrolled in Medicaid and the federal Children’s Health Insurance Program (CHIP); and 3) the states, counties, and beneficiaries have not done this over two years. She explained why the stakes are high for the states, counties, beneficiaries, providers, and other stakeholders with respect to Medicaid redeterminations.

Ms. Motter listed 10 fundamental actions for states to take to prepare for the unwinding of the PHE, including creating a comprehensive state unwinding operational plan and coordinating with partners, including state, tribal, and state and federal government partners.

5. Heard an Update from the CCIIO on its Recent Activities

Ellen Montz (federal Center for Consumer Information and Insurance Oversight—CCIIO) provided an update on activities of interest to the Committee. She focused her remarks on the end of the PHE and the CCIIO's work to bring about a successful and smooth transition from Medicaid or CHIP to the private health insurance marketplace. Dr. Montz said this unwinding presents both an opportunity and a challenge. She said the federal Centers for Medicare & Medicaid Services (CMS) is committed to providing a 60-day notice of the ending of the PHE. As Ms. Motter noted, if the PHE is to end Oct. 13, the CMS would have to provide notice by Aug. 14. If the CMS does not provide that notice, then the PHE is automatically extended an additional 90 days to January 2023.

Dr. Montz said it is vitally important that all stakeholders plan and prepare for when the PHE ends. She said the CCIIO is developing a comprehensive plan for mitigating coverage lost. She said that part of CCIIO's preparation includes improving consumer notices and streamlining application processes to eliminate extra paperwork. She said the CCIIO is also planning aggressive outreach and enrollment strategies for unwinding. The CCIIO also will harness the power of its partnerships with stakeholders, including SBEs, state Medicaid agencies, health carriers, navigators, and state insurance regulators. She said the CCIIO's partnership with health carriers that offer Medicaid managed care organizations (MCOs) and qualified health plans (QHPs) will be vital because they can conduct outreach to Medicaid and CHIP enrollees during the redetermination process both before and after an individual loses coverage to assist in the transition to marketplace coverage. She said the CCIIO is also encouraging these health carriers to coordinate across their business lines and with their state Medicaid agencies and state departments of insurance (DOIs) to facilitate a smooth and seamless transition for consumers.

Dr. Montz encouraged state insurance regulators to work with these health carriers to assist them in their efforts. She said another area state insurance regulators can help will be outreach. She said it will be vital that there is open communication and successful feedback loop between all stakeholders involved in the redetermination process and unwinding to ensure a smooth transition and great consumer experience.

6. Heard a Federal Legislative and Regulatory Update

Brian R. Webb (NAIC) provided an update on federal legislative and regulatory activities of interest to the Committee. He focused his remarks on the recent extension of two subsidies for three additional years under the federal American Rescue Plan Act (ARPA) of 2021 due to the passage of the federal Inflation Reduction Act of 2022. He said this could be a challenge for the states in finalizing rates for 2023 because the deadline to submit those rates to HealthCare.gov is Aug. 17.

Mr. Webb provided an update on the status and attention received from the U.S. Congress on the letters the NAIC has sent to the Congress and federal agencies on addressing issues such as the so-called "family glitch." He said that just prior to the time the NAIC sent its letter, the CMS issued a proposed rule to address the issue. He said the public comment period has ended, and the CMS is reviewing the comments. It is anticipated that a final rule will be issued soon and apply for plans issued in 2023. He said the NAIC also sent letters on issues related to health savings accounts (HSAs) and the copayment accumulator. He said that to date, NAIC staff have not received any response related to the issues raised in this letter.

Mr. Webb said another letter the NAIC sent concerns Medicare Advantage marketing requesting that the federal government make the states the primary regulator because the states can more effectively address and resolve the marketing abuses that the states have been following and have documented. He said there has been a lot of

interest from the Congress on this issue, and NAIC staff have been talking to key congressional staff about it as well. He said a similar issue getting a lot of attention is the improper marketing of health plans. He said NAIC staff have been talking to key congressional staff on ways that the federal government might be able to assist the states in addressing the issue, particularly when those engaging in these deceptive marketing practices are foreign entities and operating through the internet.

Mr. Webb said that another big issue NAIC staff are working with the CCIIO, and other federal agencies, is the implementation of the federal No Surprises Act (NSA). He said one of the main issues is enforcement and the role of, and how, the states can work with and coordinate with the CCIIO to enforce the rules.

Mr. Webb said another issue is the implementation of the federal network adequacy requirements beginning with the 2023 plan year. He said that for QHPs in FFEs, beginning with plan year 2023, the CMS will begin implementing time/distance standards for various types of providers and facilities, and beginning in plan year 2024, the CMS will begin implementing wait time standards. To comply with the time and distance standards, at least 90% of QHP enrollees must live within the maximum distance to at least one provider of each type. He said NAIC staff are working with the CCIIO as they move forward with implementation.

Mr. Webb also noted that health plan transparency requirements recently became effective July 1. He said the states are the primary regulators in enforcing these requirements. However, the CCIIO is conducting a thorough review of the information provided by the plans. He encouraged the states to reach out to the CCIIO if they receive complaints.

7. Received an Update on the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup's Work

Mr. Keen said the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup has been meeting to hear presentations from various stakeholder groups providing their perspective on the Subgroup's charge to develop a white paper examining pharmacy benefit manager (PBM) business practices. He said that to date, the Subgroup has heard presentations from about 17 stakeholder groups.

Mr. Keen said he anticipates the Subgroup holding at least one more meeting in late August during which it would hear from at least one additional stakeholder group on the Subgroup's upcoming work on the white paper. He said he anticipates the Subgroup beginning its work on the white paper in September. He said that on Aug. 15, the Subgroup plans meet in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals), paragraph 8 (consideration of strategic planning issues), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings, to: 1) discuss its approach to the white paper; 2) discuss a draft white paper outline; and 3) seek volunteers from among the Subgroup members to begin drafting sections of the white paper. He said he hopes the Subgroup can complete its work on the white paper by the end of the year. However, to allow for robust discussion and comments from all stakeholders, the Subgroup's work on the white paper could extend into early 2023. He said he would continue to provide updates to the Committee and the Regulatory Framework (B) Task Force on the Subgroup's progress to complete the white paper.

8. Received an Update on the Special (EX) Committee on Race and Insurance Workstream Five's Work

Commissioner Arnold provided an update to the Committee on Workstream Five's work to date since her last update to the Committee at the Spring National Meeting. She said that since the Workstream's last update to the Committee at the Spring National Meeting, the Workstream announced the dates and times and focus of four meetings it plans to hold before the end of the year. She said the Workstream has held the first two meetings already. The first meeting was June 30. Its focus was on provider network composition.

Commissioner Arnold said that during its June 30 meeting, the Workstream heard from two NAIC consumer representatives who discussed cultural competency in provider networks. The Workstream also heard from the Colorado DOI on its work through the Colorado Option to improve racial health equity for consumers purchasing health insurance in the individual and small group markets. She said the Workstream held its second meeting on July 26. The focus of this meeting was on barriers to care with respect to providers.

Commissioner Arnold said during its July 26 meeting, the Workstream heard a presentation from Quest Analytics on emerging ideas and approaches state insurance regulators might consider to close the health equity gap when developing plan network adequacy requirements. The Workstream also heard a presentation from an NAIC consumer representative, who discussed barriers that people of color and other historically underrepresented populations encounter when trying to obtain treatment from network providers, particularly for those who have plans with narrow networks. She said the American Medical Association (AMA) presented on the work it is doing related to provider directories and associated challenges, including their accuracy and issues associated with the inclusion of provider race and ethnicity information. The Blue Cross Blue Shield Association (BCBSA) and one of its member plans discussed challenges and efforts to mitigate race-based barriers to insurance. They also discussed ways that state insurance regulators can increase access to culturally competent care.

Commissioner Arnold said the Workstream's next meeting is Aug. 23. She said the focus of this meeting is on barriers to care related to benefit design. She said the Workstream has invited speakers to discuss what ways the structure of available benefits, such as cost-sharing or utilization management, can sometimes uniquely disadvantage communities of color, and what actions can state insurance regulators take to remedy such benefit designs. She said the Workstream anticipates hearing presentations from Mila Kofman (DC Health Benefit Exchange Authority—DCHBX), a representative from the American Academy of Actuaries' (Academy's) Health Equity Work Group, and a panel of NAIC consumer representatives. She said the Workstream's last scheduled meeting is Sept. 20, which will focus on innovations in benefit design. She said the Workstream's planned speakers for this meeting include speakers to discuss standardized plans and value-based insurance designs.

Commissioner Arnold said the Workstream's next series of meetings will focus on effective consumer education and engagement, as well as mechanisms to understand barriers at the community level. She said the Workstream is in the process of finalizing those meeting agendas.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/2022 Summer National Meeting/Final Minutes/08-Bmin

Draft: 8/23/22

Health Innovations (B) Working Group
Portland, Oregon
August 10, 2022

The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met in Portland, OR, Aug. 10, 2022. The following Working Group members participated: Andrew R. Stolfi, Chair (OR); Laura Arp, Co-Vice Chair (NE); Richard Wicka and Rachel Cissne Carabell, Co-Vice Chairs (WI); Sarah Bailey (AK); Yada Horace (AL); Howard Liebers (DC); Angela Burke Boston and Andria Seip (IA); Alex Peck (IN); Julie Holmes and Kenneth Scott (KS); Robert Wake and Marti Hooper (ME); Renee Campbell (MI); Peter Brickwedde (MN); Carrie Couch and Amy Hoyt (MO); Ross Hartley and Chrystal Bartuska (ND); Maureen Belanger (NH); Paige Duhamel (NM); Jack Childress (NV); Rachel Bowden, Valerie Brown, and R. Michael Markham (TX); Heidi Clausen, Tanji J. Northrup, and Shelley Wiseman (UT); Ned Gaines and Jennifer Kreidler (WA); and Joylynn Fix and Erin K. Hunter (WV). Also participating were: Troy Downing (MT); Glen Mulready and Rebecca Ross (OK); Richard L. Hendrickson and Lindsy Swartz (PA); and Jill Kruger (SD).

1. Adopted its Spring National Meeting Minutes

Mr. Wicka made a motion, seconded by Ms. Arp, to adopt the Working Group's April 4 minutes (*see NAIC Proceedings – Spring 2022, Health Insurance and Managed Care (B) Committee, Attachment Two*). The motion passed unanimously.

2. Heard a Presentation on the Colorado Option Waiver

Commissioner Stolfi said members of the Working Group are interested in learning more about the Colorado Option. Commissioner Conway said the state has been working on the Colorado Option for four years. He said the state's reinsurance program has reduced premiums, but there is no product that is guaranteed to be available off exchange in all parts of the state. He said the Colorado Option will be available for those eligible for federal Affordable Care Act (ACA) subsidies and those who are not. Commissioner Conway said the primary goals of the Colorado Option are to improve affordability and access. He said core components include a standardized plan design, required premium reductions, and expansion of eligibility regardless of immigration status.

Commissioner Conway said the state can continue to control costs through the reinsurance program, and it wants to use available pass-through funds to expand access and affordability. He said the state chose to keep it simple and continue to waive the same provision of the ACA as in the reinsurance waiver. He said the premium rate reductions would be achieved through public hearings. He said the law gives state insurance regulators authority over hospital and provider rates. Commissioner Conway said Colorado will improve access for state residents inside and outside the exchange, in the individual and small group markets. He said the Colorado Option cost controls will affect the market differently from reinsurance. He said all issuers participating in the individual and small group markets will be required to offer Colorado Option plans. He said competition will result in either fewer competing products or lower prices in competing products.

Commissioner Conway said Colorado expects \$1.5 billion in savings from the Colorado Option and 12% higher enrollment. The savings will be reinvested in access and affordability and to boost health equity. The state will use a cost-sharing wrap to increase actuarial value beginning in 2023 and allow some ineligible for federal tax credits to access subsidies. He said state insurance regulators will hold a public hearing when issuers miss the required premium reductions. He said the state has authority to set provider rates (down to a floor specified in law) if provider rates are keeping premiums up. In addition, the state would seek to reduce insurers' administrative costs.

Ms. Seip asked for more details on how premium reductions would be achieved. Commissioner Conway said a formula in the law allows provider rates to be set down to 165% of Medicare rates for hospitals and 130% of Medicare for other providers. He said the hearings will allow a conversation around rates with these limits in mind.

Ms. Bartuska said North Dakota does not have many issuers and asked whether the waiver had encouraged more issuers to enter Colorado's market. Commissioner Conway said it has not led to more carriers coming into the state, but carriers have been expanding within the state, though not necessarily related to the Colorado Option. He said the waiver's competition comes from a new product everywhere in the state that is a better product competing against existing products. Ms. Bartuska asked about issuer participation in both individual and small group markets. Commissioner Conway clarified that the law requires carriers to offer the Colorado Option in the market or markets they participate in—not that they must offer it in both if they only participate in one.

3. Heard Presentations from Health Plans on Programs to Improve Access

Commissioner Stolfi said during this meeting, the Working Group would focus on the last part of its charge from the Special (EX) Committee on Race and Insurance. The Working Group is charged to evaluate mechanisms to resolve disparities through programs to improve access to historically underserved communities. He said the Working Group has not yet narrowed its focus in this work, but would hear presentations on it from both health plans and the federal Centers for Medicare & Medicaid Services (CMS). He said Oregon has a long history of innovation in both Medicaid and commercial markets. He said Oregon's Medicaid coordinated care model has been a proving ground for innovations that can make a difference in the commercial market.

Dr. Briar Ertz-Berger (Kaiser Permanente) said social health includes all aspects of a person's life outside of their physical and mental health. She said social health plays a key role in overall health, and it must be addressed to achieve health equity. She said most of what drives health is outside of the health care system and is instead related to social health, such as physical environment, social and economic factors, and health behaviors. She said structural and institutional racism compounds the barriers to health and social health. Dr. Ertz-Berger said the cost of racial inequities is in the hundreds of billions of dollars. She said patients from different ZIP codes have different outcomes due to different histories and exposures to violence and racism. She said Kaiser Permanente is making investments in improved care delivery and connecting people to social resources. She said patients are screened for social needs, and the results are documented for all clinicians. She said members are linked in Connect Oregon, which allows closed-loop referrals to community organizations.

Karis Stoudamire-Phillips (Moda Health) said Moda is focused on the way to better health, but with a different path for different individuals. She said Moda uses corporate responsibility dollars to fund community organizations across the state. She said the company is deliberate in looking at the connection between health, environment, and social equity. She said nonprofit organizations have connections to Moda employees like customer service workers and community outreach workers. Dr. Yale Popowich (Moda Health) said the company has implemented Moda 360, which shows providers a more complete view of patients. They help guide patients to care coordination interventions and provide health context to evaluate health equity. He gave an example of a member with diabetic status who has transportation challenges who can be referred to a diabetes management program that can be used at home through an app and provides testing supplies for free. He said that some programs carry over from Medicaid to the commercial market. He shared examples of a program to improve access to fresh produce when members have food insecurity and another to provide cribs for parents who cannot afford them. Ms. Stoudamire-Phillips said Moda also provides flex services, which include air purifiers, temporary housing, and cooking supplies. She said the company looks for organizations that are fulfilling community needs and funds them, such as organizations that provide air conditioners to help members deal with heat waves.

Erin Fair Taylor (PacificSource) said the Medicaid Coordinated Care Organizations (CCOs) are testing grounds that provide lessons that can be used across markets. She said the CCO model has been around for 10 years, and its goals are better health, better care, and lower costs. She said each CCO has a health council that is locally accountable and sets priorities. She said each region has unique needs, so solutions have to be local and responsive to community needs. She said hospitals, providers, enrollees, dental providers, and the company are represented on the health councils. She said there is shared decision-making on investments. She said the company's margin is limited, and any earnings above the limit go to the health council to invest in social determinants and addressing equity. She said community benefit initiatives include community health workers, community information exchange, and projects like parks and bike paths. She said getting more stakeholders at the table means it is not just clinicians making decisions to improve health.

Commissioner Stolfi asked how state insurance regulators can be helpful in work to address health equity and improve access. Dr. Ertz-Berger said there is opportunity in thinking about what mandated benefits could improve equity and how provider networks can improve social care access, not just health care access. Dr. Popowich agreed and said state insurance regulators should look to Medicaid because it has encouraged health plans to work closely with hospitals, social workers, and others. Ms. Fair Taylor said state insurance regulators should pay attention to incentives because when they are community-focused, they encourage meaningful change.

Ms. Duhamel asked what uptake has been in diabetes management. Dr. Popowich said plans ask whether they can operate these programs themselves or hire vendors. He said Moda's experience with a vendor, Livongo, has been phenomenal. It provides free supplies and gathers useful data on patients. He said other programs encourage lifestyle changes to prevent diabetes in the first place. He said uptake has been as high as 20%, which Moda considers a win for a new program.

Commissioner Stolfi asked if other states have seen learning from Medicaid spread to the commercial market and if the panel has suggestions for fostering the spread of best practices. Ms. Fair Taylor said community feedback has been standardized in Oregon, including how to perform on quality measures, and this could be used in other states. Dr. Popowich said Moda has spread its Oregon practices to Alaska and other states.

4. Heard a Presentations from CMS about Programs to Improve Access

Commissioner Stolfi introduced Jeff Wu (federal Center for Consumer Information and Insurance Oversight [CCIIO] at CMS). Mr. Wu said working with state insurance regulators is fundamental to CMS' work in health insurance markets. Mr. Wu said CMS has built health equity into its thinking and strategies going forward.

Mr. Wu said health equity work is in many cases complex and subtle. He said CMS has a strategic plan with six pillars, three of which are tied to health equity. He said President Joe Biden's first executive order established a commitment to advancing racial equity and support for underserved communities. Mr. Wu said CMS published a framework for health equity, and its first priority is to collect standardized data.

Mr. Wu outlined the CCIIO's health equity goals, including coverage, access, and consumer protection. He said that coverage has been improved by expanding the open enrollment period and introducing a special enrollment period (SEP) for low-income individuals. He said the SEP will be particularly important as the public health emergency ends and individuals' Medicaid coverage is redetermined. He said the agency has invested heavily in navigators, who may reach underserved communities more than agents and brokers. He said choice of issuers has increased in places where there previously was less choice, and the agency continues to work to increase choice in rural counties. He said that Federally Facilitated Marketplace (FFM) enrollment among underrepresented groups has increased by 25%.

Mr. Wu said many provisions of the last payment notice focus on access to care, including network adequacy. He said CMS has ongoing engagement with carriers where there are network challenges. He said CMS has focused its SEP verification efforts on the most common eligibility factor, loss of minimum essential coverage.

Mr. Wu said consumer protections promote health equity by protecting consumers from limited benefit designs and discriminatory provisions. He said CMS has collaborated with other colleagues in the U.S. Department of Health and Human Services (HHS) to finalize non-discrimination rules.

Mr. Wu said better data is needed to inform work internally and to share with stakeholders. He said the 2023 payment notice provides for expanded data collection through the edge server. This will include five new data elements, including ZIP code, race and ethnicity, and receipt of subsidies. He said CMS is working to increase consumers' completion of race and ethnicity fields in applications.

5. Heard an Update on its Memorandum to the Special (EX) Committee on Race and Insurance

Commissioner Stolfi said the Working Group would collect comments on the final part of its charge by email. He said work on the first part of the charge is closer to completion. He said Kelly Edmiston (Center for Insurance Policy and Research—CIPR) helped summarize findings on health disparities in a draft memorandum to the Special (EX) Committee on Race and Insurance.

Mr. Edmiston said the memorandum focuses on the efficacy of telehealth on reducing disparities and the impacts of alternative payment models on disparities. He said a full report on alternative payment models would be distributed to the Working Group soon. He said the memorandum documents limited access to providers in rural areas and some underserved communities in urban areas. Mr. Edmiston said the greatest potential for telehealth is to increase access to care for many specialties, not just psychiatry and radiology. He said the most significant barriers to telehealth access are physical access to the required technology, privacy when using it, and digital literacy. He said regulatory barriers could include payment levels and licensing of providers.

Mr. Edmiston said that providers consider the quality of care they provide more important than financial incentives. He said alternative payment models were not designed to ameliorate disparities, but rather to increase quality of care and efficiency. He said incentives and disincentives to provide appropriate care vary by program.

Commissioner Stolfi asked Working Group members to send comments on the memorandum to NAIC support staff.

Having no further business, the Health Innovations (B) Working Group adjourned.

Health Actuarial (B) Task Force
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
August 1, 2022

The Health Actuarial (B) Task Force met Aug. 1, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, represented by Julie Weinberg (NM); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ahmad Kamil (CA); Michael Conway represented by Eric Unger (CO); Vicki Schmidt represented by Nicole Boyd (KS); Kathleen A. Birrane represented by Brad Boban (MD); Timothy N. Schott represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Grace Arnold represented by Julia Lyng (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Judith L. French represented by Craig Kalman (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Jim Laverty (PA); Cassie Brown represented by Aaron Hodges (TX); Mike Kreidler represented by Lichiou Lee (WA); and Allan L. McVey represented by Joylynn Fix (WV). Also participating was: Tomasz Serbinowski (UT).

1. Adopted its June 30 and May 16 Minutes

Mr. Lombardo said the Task Force met June 30 and May 16. During these meetings, the Task Force took the following action: 1) heard a Society of Actuaries (SOA) Research Institute 2022 Individual Life Waiver of Premium (ILWOP) Experience Study presentation; and 2) heard an update on the American Academy of Actuaries (Academy) and SOA Research Institute Group Life Waiver of Premium Valuation Table (GLWPVT) Work Group efforts towards developing valuation tables to replace the 2005 Group Term Life Waiver Mortality and Recovery Tables in *Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves* (AG 44).

Mr. Dyke made a motion, seconded by Ms. Weinberg, to adopt the Task Force’s June 30 (Attachment One) and May 16 (Attachment Two) minutes. The motion passed unanimously.

2. Adopted the Report of the Long-Term Care Actuarial (B) Working Group

Mr. Serbinowski said the Working Group met June 24. During this meeting, the Working Group discussed the Academy and SOA Research Institute’s final Long-Term Care Insurance Mortality and Lapse Study.

Mr. Hodges made a motion, seconded by Mr. Schallhorn, to adopt the report of the Long-Term Care Actuarial (B) Working Group (Attachment Three). The motion passed unanimously.

3. Heard an Update on the SOA Research Institute/LIMRA Experience Studies Partnership

Marianne Purushotham (Life Insurance Marketing and Research Association—LIMRA) and Dale Hall (SOA) gave an update on the SOA Research Institute/LIMRA Experience Studies Partnership (Attachment Four).

4. Heard an Update on the SOA Research Institute Activities

Mr. Hall gave an update on SOA Research Institute activities (Attachment Five).

5. Heard an Update from the Academy Health Practice Council

Barbara Klever (Blue Cross Blue Shield Association—BCBSA) gave an update on Academy Health Practice Council activities (Attachment Six).

6. Heard an Academy Update on Professionalism

Lisa Slotznick (Academy) said the Academy Committee on Qualifications (COQ) issued a final amended U.S. Qualification Standards (USQS) late in 2021 after exposing two drafts. She said during the exposure period, the COQ presented several webinars explaining the changes. She said the USQS specifies that qualifications for statements of actuarial opinion (SAO) are not limited to regulatory required opinions. She said the COQ has also updated frequently asked questions (FAQ) to help actuaries understand the USQS, and many of the FAQ started as questions received through the website. She said the COQ has received nine questions this year, two of which were referred to the Actuarial Board for Counseling and Discipline (ABCD) as requests for guidance. She said most of the other questions were about continuing education (CE) requirements and basic education.

Ms. Slotznick said actuaries who were qualified before the amended version of the USQS took effect remain qualified, and the changes mostly apply to new actuaries. She said the USQS now includes a new requirement for one hour of bias CE, which applies to all actuaries. She said CE can be obtained through self-study.

Darrell Knapp (Actuarial Standards Board—ASB) said the ASB has been focusing on six themes currently running through the ASB's work: 1) addressing various tasks within scope, such as conducting reviews; 2) using a template to increase consistency in language across Actuarial Standards of Practice (ASOPs); 3) trying to avoid duplication with ASOP No. 1, Introductory Actuarial Standard of Practice, with "materiality" and "professional judgment" as examples; 4) adding guidance for reliance on other actuaries and experts; 5) focusing on the distinction between documentation and disclosures; and 6) focusing on gender, race, and employer type diversity on committees and task forces. He said because ASOP No. 1 calls on actuaries to always use professional judgment, the ASB is trying to avoid saying "the actuary should use professional judgment" in other ASOPs.

Mr. Knapp said the ASB approved an exposure draft of ASOP No. 41, Actuarial Communications in June, which will soon be released for exposure and go through the typical exposure process. He said the ASB will review the proposed exposure draft of ASOP No. 12, Risk Classification at its September meeting, and it should be exposed soon after that. He said the ASB is trying to find the right balance between the importance of risk classification systems to actuarial work and potential abuses in their application. He said a revision to ASOP No. 28, Statements of Actuarial Opinion Regarding Health Insurance Assets and Liabilities that was recently implemented took effect July 1. He said the ASB just released a technical correction to the scope of ASOP No. 28, along with that of ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss, Loss Adjustment Expense, or Other Reserves. He said the current scope of each ASOP has a mutual exclusion where if one applies, the other does not. He said both ASOPs were originally written with the scope limited to NAIC SAOs. He said the scope of both ASOPs has been expanded to include broader SAOs, and as a result, the ASB must address those exclusions simultaneously and is therefore exposing just the scope of ASOP No. 28. He said the ASB is working on revisions to ASOP No. 49, Medicaid Managed Care Capitation Rate Development and Certification.

Shawna Ackerman (California Earthquake Authority—CEA) said the ABCD performs the two primary functions of addressing requests for guidance (RFGs) and investigations into complaints. She said the ABCD may recommend discipline, but it is up to the organization the subject actuary is a member of to decide whether to discipline an actuary. She said recent RFGs in the health area included questions about the obligation to report under Precept 13, Violations of the Code of Professional Conduct of the Academy's Code of Professional Conduct (CPC) and the procedures for doing that, as well as qualifications. She said the majority of RFGs are related to CPC Precept 1, Integrity and the actuary's responsibility to the public.

Mr. Lombardo asked when bias CE webinars will be conducted. Ms. Slotznick said several webinars that qualify for bias CE were produced and are available to Academy members on its website.

7. Discussed an Academy and SOA Research Institute GLWPVT Work Group Valuation Tables Proposal

Mr. Lombardo said the Academy and SOA Research Institute GLWPVT Work Group has proposed valuation tables to replace the 2005 Group Term Life Waiver Mortality and Recovery Tables in AG 44. He said the proposed tables exhibit higher recovery rates and lower mortality factors than the current tables. He said the proposal is exposed for a public comment period ending Aug. 11.

Having no further business, the Health Actuarial (B) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/HATF/2022_Summer/08-01-22/ Minutes_HATF_08-01-22.docx

Draft: 7/18/22

Health Actuarial (B) Task Force
Virtual Meeting
June 30, 2022

The Health Actuarial (B) Task Force met June 30, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, represented by Julie Weinberg (NM); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Rodney Haviland (CA); Michael Conway represented by Eric Unger (CO); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Jim Laverty (PA); Cassie Brown represented by Aaron Hodges (TX); Mike Kreidler represented by Lichiou Lee (WA); and Allan L. McVey represented by Joylynn Fix (WV).

1. Heard an ILWOP Experience Study Presentation

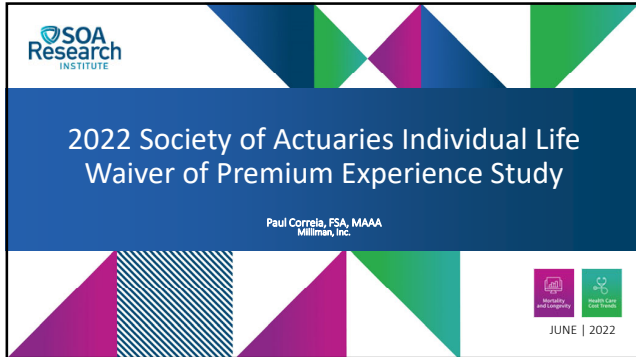

Paul Correia (Milliman) gave a presentation (Attachment One-A) on the Society of Actuaries (SOA) Research Institute 2022 *Individual Life Waiver of Premium (ILWOP) Experience Study*. He said the study's objectives are to: 1) compare recent industry experience for ILWOP insurance products to the expected incidence and claim termination rates from the 1952 SOA Disability Table; 2) analyze actual-to-expected (A/E) incidence and claim termination ratios across key segments such as gender and attained age; 3) develop an illustrative experience basis for calculating policy and claim reserves based on the results from the A/E studies; and 4) compare reserves calculated using experience assumptions to the reserves calculated using the 1952 SOA Disability Table for an illustrative cohort of ILWOP business.

The Task Force identified the following items that it will need to appropriately evaluate the experience study results: 1) the definition of disability that determines disability benefit eligibility as used in the 1952 SOA Disability Table; 2) whether the 1952 SOA Disability Table includes margins; and 3) a comparison of aggregate active life and disabled life reserves using industry data.

Mr. Lombardo said the Task Force will consider whether to proceed with the development of new valuation tables to replace the 1952 SOA Disability Table after it has reviewed needed additional information to be provided by the SOA Research Institute.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Meetings/Member Meetings/B CMTE/HATF/2022_Summer/06-30-22/Minutes_HATF_06-30-22 LTCAWG.docx

Presentation Disclaimer

The material and information contained in this presentation is for general information only. It does not replace independent professional judgment and should not be used as the basis for making any business, legal or other decisions. The Society of Actuaries assumes no responsibility for the content, accuracy or completeness of the information presented.

2022 SOA ILWOP Experience Study Objectives

- Compare recent industry experience for individual life waiver of premium (ILWOP) insurance products to the expected incidence and claim termination rates from the 1952 SOA Disability Table;
- Analyze actual-to-expected (A/E) incidence and claim termination ratios across key segments such as gender, attained age, etc.;
- Develop an illustrative experience basis for calculating policy and claim reserves based on the results from the A/E studies; and
- Compare reserves calculated using experience assumptions to the reserves calculated using the 1952 SOA Disability Table for an illustrative cohort of ILWOP business.

SOA Research INSTITUTE

2022 SOA ILWOP Experience Study Background

According to a survey performed by the SOA in 2018, most insurers use the 1952 SOA Disability Table for calculating statutory policy and claim reserves for ILWOP products.

Statutory Reserve Assumptions		
Source: 2018 Survey Sponsored by the Society of Actuaries		
Valuation Table	Incidence Rates	Claim Termination Rates
1952 SOA Disability Table	8	10
1964 CDT Table	0	0
1985 CIDA Table	2	1
2013 Individual Disability Table	0	0
Company experience	1	1
Other	1	1

SOA Research INSTITUTE

2022 SOA ILWOP Experience Study A/E Incidence Study

A/E Incidence Ratios by Gender and Attained Age			
Attained Age	Male	Female	Total
< 30	19.3%	14.6%	17.0%
30-39	32.7%	34.1%	33.4%
40-49	41.4%	39.5%	40.6%
50 +	19.6%	14.3%	17.6%
Total	23.4%	20.0%	22.1%

- Actual ILWOP incidence rates during the 2003-2016 experience period were significantly lower than the expected incidence rates from the 1952 Table.
- The A/E ratios are higher in total for males than females, and are lower at the youngest and highest attained age bands.

2022 SOA ILWOP Experience Study A/E Incidence Study

- A/E incidence ratios are generally decreasing during the experience period.
- A flattening occurs in 2008-09 followed by a slight uptick in 2010, which may be linked to the economic recession in those years.

2022 SOA ILWOP Experience Study A/E Incidence Study

A/E Incidence Ratios by Coverage Type	
Coverage Type	A/E
Included with Base Policy	14.5%
Optional Rider	26.4%
Total	22.1%

- The A/E incidence ratios are higher when ILWOP benefits are offered as an optional rider than when benefits are included in the base policy.
- May indicate adverse selection risk, or that policyholders are not as aware of waiver of premium benefits when they are included in the base policy.

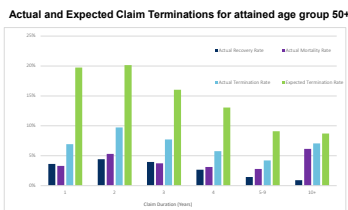

2022 SOA ILWOP Experience Study A/E Claim Termination Study

Gender	Claim Duration (Years)						Total
	1	2	3	4	5-9	10+	
Male	35.6%	45.1%	47.3%	42.2%	46.8%	82.2%	59.2%
Female	30.1%	36.0%	39.7%	35.5%	39.8%	69.6%	45.4%
Total	33.6%	41.6%	44.4%	39.7%	44.3%	79.1%	54.7%

- Actual ILWOP claim termination rates during the 2003-2016 experience period were lower than the expected claim termination rates from the 1952 Table.
- The overall A/E claim termination ratio is 54.7%, although the ratios are lower for claims in durations 1-9 years than in durations 10+ years.

2022 SOA ILWOP Experience Study A/E Claim Termination Study

- Actual claim terminations in later durations are dominated by deaths.

2022 SOA ILWOP Experience Study A/E Claim Termination Study

A/E Claim Termination Ratios by Disability Diagnosis			
Disability Diagnosis	Actual Terminations	Expected Terminations	A/E Ratio
Cancer	8,358	8,638	96.8%
Circulatory	4,334	9,573	45.3%
Musculoskeletal	7,656	20,323	37.7%
Mental & Nervous	3,457	9,941	34.8%
Nervous System	2,563	7,541	34.0%
Other	18,164	49,530	36.7%
No Diagnosis	89,628	139,660	64.2%
Total	134,160	245,206	54.7%

- The A/E ratio for cancer claims is much higher than the overall A/E ratio of 54.7%.
- The A/E ratios for musculoskeletal, mental & nervous, and nervous system claims are lower than the overall result.

2022 SOA ILWOP Experience Study ALR Reserve Comparisons

Illustrative ILWOP Active Life Reserve Comparisons									
Reserves in \$ Millions

➤ Experience Basis reserves were calculated using adjustment factors to the 1952 Table that reflect the results from the A/E claim termination study.

2022 SOA ILWOP Experience Study Limitations

The results in this report are technical in nature and are dependent on certain assumptions and methods. No party should rely upon these results without a thorough understanding of those assumptions and methods. Such an understanding may require consultation with qualified professionals. This report should be distributed and reviewed only in its entirety.

In conducting the analysis, Milliman relied upon the policy and data provided by contributors to the ILWOP Experience Study. Milliman did not audit or independently verify any of the information furnished, except for reviewing the data for reasonableness and consistency. To the extent that any of the data or other information supplied to us was incorrect or inaccurate, the results of this analysis could be materially affected.

This report is intended for the benefit of the Society of Actuaries. Although the authors understand that this report will be made available to third parties, Milliman does not assume any duty or liability to such third parties with its work. This report should be distributed and reviewed in its entirety and is subject to the agreement between Milliman and the Society of Actuaries dated May 30, 2017.

This report includes illustrative reserve estimates that are based on a variety of assumptions about ILWOP incidence and claim termination experience. It is highly likely that actual experience on any given block of ILWOP business will vary from the assumptions, and that the illustrative reserves may be higher or lower than reserves calculated using a different set of assumptions. Also the illustrative reserves are presented on a best estimate basis without any added valuation margins.

I, Paul Correia, FSA, MAAA am a consulting actuary for Milliman, Inc and a member of the American Academy of Actuaries. I meet the qualification standards of these organizations to render the actuarial opinion contained herein.

Draft: 5/31/22

Health Actuarial (B) Task Force
Virtual Meeting
May 16, 2022

The Health Actuarial (B) Task Force met May 16, 2022. The following Task Force members participated: Andrew N. Mais, Chair, represented by Paul Lombardo (CT); Russel Toal, Vice Chair, represented by Julie Weinberg (NM); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Rodney Haviland (CA); Michael Conway represented by Eric Unger (CO); Amy L. Beard represented by Stephen Chamblee (IN); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Marti Hooper (ME); Anita G. Fox represented by Kevin Dyke (MI); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Jim Laverty (PA); Cassie Brown represented by Aaron Hodges (TX); Mike Kreidler represented by Lichiou Lee (WA); and Allan L. McVey represented by Joylynn Fix (WV).

1. Heard an Update on GLWPVT Development

Sue Sames (Willis Towers Watson) gave an update (Attachment Two-A) on the American Academy of Actuaries (Academy) and Society of Actuaries Research Institute (SOARI) Group Life Waiver of Premium Valuation Table (GLWPVT) Work Group (Work Group) efforts towards developing valuation tables to replace the 2005 Group Term Life Waiver Mortality and Recovery Tables in *Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves* (AG 44).

Ms. Sames said the Work Group will submit an executive summary of the table development process and a paper detailing the predictive analytics approach to table development to the Task Force. Mr. Lombardo said the Task Force will schedule a future meeting to hear an overview of the predictive analytics approach and executive summary, and hold a question-and-answer (Q & A) session with the Work Group.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Group Life Waiver Premium Valuation Table Work Group Updates Presentation

Sue Sames, MAAA, FSA
Chairperson, Group Life Waiver Valuation Table Work Group

May 16, 2022—NAIC Health Actuarial (B) Task Force (HATF) Meeting

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Agenda

- Background, Scope and Approach
- Recommendation
- Proposed table
- Predictive Analytics
- Comparison of 2005 and 2022 Tables
- Considerations for AG 44
 - Credibility
 - Retroactive
 - Margins
- How can we best support HATF in its approval process?

2

Background: Description of Benefits and Reserves

- Waiver of Premium is a disability benefit on group term life coverage
- If the insured is disabled under the terms of the contract, premiums are waived and benefits are payable upon death
 - Unless the insured recovers or benefits expire, e.g., upon attainment of age 65
 - Possible company variations include: definition of disability, elimination period, benefit period, benefit reduction schedules based on age
- Reserves are the actuarial present value of future benefits
 - Calculated using a double decrement of mortality and recovery, as described in Actuarial Guideline 44 (AG 44)

3

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Background: Evolution of Waiver Tables

- Historically insurers used 75% of the face amount as the reserve
- Krieger Table published in 1971, based on 1955-65 data
 - 135,000 life-years of experience
 - Table dimensions:
 - recovery/death decrements separated
 - disability duration (quarters 4-8 and years 3-10 select, then ultimate by attained age)
 - age at disability
 - A de facto standard
- SOA 2005 Table published in 2006, based on 1993 through 2002 data
 - 750,000 life-years (~6x more than Krieger study)
 - 17 companies
 - Added gender to table dimensions
 - AG 44 introduced 2005 Table as a valuation standard
- New table (SOA 2022) is based on 2006 to 2015 data
 - Over 2 million life-years (~3x more than 2005 study)
 - 20 companies
 - Adding "diagnosis group" dimension to SOA 2005 table structure
 - Developed using predictive analytics

4

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Background, Scope, and Approach

Who we are:

- A group of volunteers representing a good cross-section of companies, reinsurers and consultants working in group life
- The group commenced in 2019
- Volunteers represent members of the SOA and the Academy, and we are ably supported by their staff
- We had an external consultant conducting the data analytics under our direction

Our purpose in meeting with HATF:

- Provide an overview of our process
- Present our recommended Group Life Waiver of Premium Valuation Table and Actuarial Guideline 44, as well as supporting information
- Develop a better understanding of how we can support HATF in your review process

5

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Recommendation

Supporting Documents:

- Table
- Revised AG 44
- Paper supporting predictive analytics by external consultant, Jerry Holman

Improvements over 2005 Table:

- Significantly more (and better) data
- Using predictive analytics better reflects interaction of variables
- Including diagnosis as a new variable improves fit

6

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Proposed Table

Structure Consistent with 2005:

- Select period based on:
 - gender
 - age at disability
 - duration of disability
- Durations 11+ are on an attained age basis

Enhancements:

- Factors reflecting diagnosis
 - Unisex basis
 - Used same 15 diagnosis variables Group Long-Term Disability (“LTD”)
 - Grouped low/medium/high separately for deaths and recoveries
 - Protocol established for unknown diagnosis
- Developed using predictive analytics

7

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Predictive Analytics

From ASOP Exposure Draft on Assumptions:

- If Predictive Analytics was utilized for any actuarial assumptions in the analysis:*
- Describe how each model was selected and explain why it was appropriate for the purpose
 - Describe each algorithm in use, its parameterization, and changes in the parameter values from last year if applicable
 - Describe how common data issues, (e.g., cleaning, partitioning, and overfitting) were addressed
 - Provide an attribution analysis for each resultant assumption.

Enhancements:

- Using predictive analytics has greatly improved the quality of the result as these techniques are designed to appropriately attribute interactions between variables
- Work was done by Jerry Holman, the SOA’s external consultant, with oversight by the work group
- A paper outlining Holman’s methodology is submitted with this recommendation—it addresses in detail the issues outlined in the ASOP

8

Comparison of 2005 and 2022 Tables

Total – All Benefit Periods	SOA 2005	SOA 2022	Compare %
Reserve: Experience Table	\$4,319 B	\$4,260 B	99%
Reserve: Valuation Table (Full margins)	\$5,228 B	\$4,784 B	92%
Margin: (Valuation Rev/Experience Rev) - 1	21.0%	12.3%	59%
NAR: 1- (Valuation Rev/Face)	71.2%	73.7%	104%
Exposed Claims	239,381	239,381	100%

- To assess the impact of the new table, we calculated reserves for the 239,381 claims open at the end of 2014
- Reserves are calculated using the experience tables and then adding in the margins
 - Results are quite close 99% and 92%
- Margins are quite high for the 2005 Table. We feel that the lower margin is appropriate given that the 2022 Table has more data, more variables and a much stronger technique

9

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

Comparison of 2005 and 2022 Tables (cont.)

Total – All Benefit Periods	SOA 2005	SOA 2022	Compare %
Reserve: Experience Table	\$4,319 B	\$4,260 B	99%
Reserve: Valuation Table (Full margins)	\$5,228 B	\$4,784 B	92%
Margin: (Valuation Rev/Experience Rev) - 1	21.0%	12.3%	59%
NAR: 1- (Valuation Rev/Face)	71.2%	73.7%	104%
Exposed Claims	239,381	239,381	100%

- Results are shown Lifetime versus “To Age 65”
- Lifetime margins are lower than “To Age 65,” which seems reasonable given the lower Net Amount at Risk
- “To Age 65” margins are over 25% for the 2005 Table, which we felt were quite high

10

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

AG 44—Margins

- The current AG 44 assesses margin on each decrement separately
 - 25% for mortality, i.e., mortality rates are multiplied by 125%
 - 35% for recovery, i.e., recovery rates are multiplied by (1-35% or 65%)
 - These margins were based on Krieger’s work in 1970 and result in a very high overall reserve margin of 21.0%, as well as even higher margins for “To Age 65”
- Under our proposal, the base reserve is first calculated on an experience basis, with the margin applied after
 - Margins start at 15% and grade down to 5% for companies with fully credible experience
 - The formula, which is based on that for group long-term disability, is provided in the proposed revision to AG 44

11

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

AG 44—Credibility

- We feel strongly that the proposed table is a very good representation of industry experience. We also want to enable companies to reflect their own experience.
- We continue the practice of assessing credibility separately for mortality and recovery. We assess credibility separately by duration group, as follows:
 - Group 1: durations up to 24 months
 - Group 2: durations 24 to 60 months
 - Group 3: duration over 60 months
- For full credibility, each mortality group requires 800 claims; recovery requires 1,700 claims.

12

© 2022 American Academy of Actuaries. All rights reserved. May not be reproduced without express permission.

AG 44—Retroactivity

- Our proposed revised AG 44 is provided.
- Because this table is an enhancement to the prior version, our proposal would allow companies to apply it, along with the AG 44 revisions, retroactively to all claims at their election.
 - Note that the current AG 44 allows an insurer to apply the 2005 Table retroactively to pre-AG 44 claims subject to the approval of the commissioner in the state of domicile.

13

Appendix

The following slides illustrate the impact of the diagnosis groupings

- Death decrement – select period
- Death rates – select period table compare
- Death rates – ultimate period
- Recovery decrement – select period
- Recovery rates – select period table compare
- Recovery rates – ultimate period

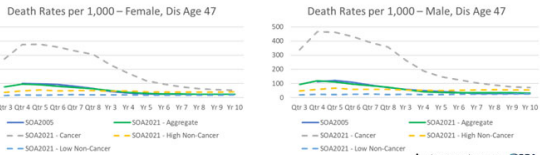

Note these slides were prepared for an SOA presentation November 9, 2021.

14

Death Decrement – Select Period

- A key enhancement in the SOA 2022 table is the addition of diagnosis groups to differentiate termination rates.
- Mortality rates in the 2022 table are generally lower than the 2005 table for durations <7 years, but higher in duration years 7 to 10.
 - The Male-to-female mortality ratio has not changed materially in the 2021 table.

15

Death Rates – Select Period Table Compare

- Death rates are generally lower in the early ages and durations in the 2022 table, but higher in the later durations and older ages, when compared to the 2005 experience table.
- Similar relationships exist for females

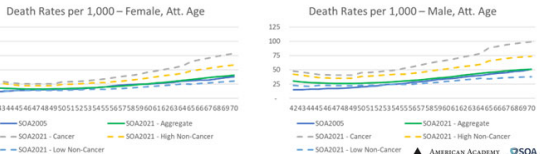

Duration	27	32	37	42	47	52	57	62
Qtr 3	60%	66%	63%	72%	82%	88%	95%	81%
Qtr 4	83%	84%	80%	92%	105%	112%	125%	103%
Qtr 5	100%	92%	69%	60%	51%	105%	120%	119%
Qtr 6	57%	53%	65%	74%	89%	102%	116%	115%
Qtr 7	44%	53%	75%	86%	94%	108%	119%	117%
Qtr 8	33%	46%	77%	89%	101%	116%	144%	129%
Yr 1	58%	65%	74%	84%	94%	107%	113%	121%
Yr 2	69%	76%	83%	92%	104%	108%	116%	121%
Yr 3	63%	70%	69%	77%	87%	100%	107%	113%
Yr 4	66%	69%	77%	86%	97%	108%	109%	118%
Yr 5	68%	69%	99%	109%	113%	126%	124%	138%
Yr 6	96%	96%	101%	112%	124%	133%	100%	101%
Yr 7	100%	115%	109%	115%	123%	119%	97%	101%
Yr 10	126%	126%	113%	126%	122%	112%	96%	96%

16

Death Rates – Ultimate Period

- Diagnosis will differentiate ultimate death rates in the 2022 table.
- Notably, the 2022 table ultimate mortality for males is higher than the 2005 table for ages 42 to 70.
 - Female ultimate mortality is also generally higher, but to a lesser degree.

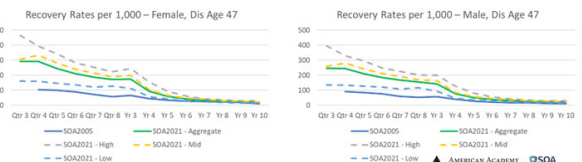

17

Recovery Rates – Select Period

- Like death rates, diagnosis group will be utilized to differentiate recovery rates in the 2022 table.
- The 2022 table has recovery rates 2-3x higher than the 2005 table for the first 4 years of disability for all disability ages.
 - Female recovery rates remain 10-20% higher than male rates, based on the underlying experience data.

18

Recovery Rates – Select Period Table Compare

- Recovery rates are roughly ~250%+ in the early durations in the 2022 table, but about ~150% higher in duration years 4+, when compared to the 2005 experience table.
- Similar relationships exist for males

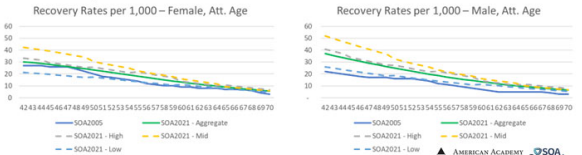

Duration	2022 Table Recovery Rates as a % of 2005 (Female)														
	2005 Age						2022 Age

19

Recovery Rates – Ultimate Period

- Diagnosis will differentiate ultimate recovery rates in the 2022 as well.
 - The Mid diagnosis group does in fact exhibit higher recovery rates than the high diagnosis group.
- The 2022 table will have recovery rates 150-200% higher than the 2005 table in the ultimate period.

Draft: 7/5/22

Long-Term Care Actuarial (B) Working Group
Virtual Meeting
June 24, 2022

The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met June 24, 2022. The following Working Group members participated: Tomasz Serbinowski, Chair (UT); Jennifer Li (AL); Lisa Luo (CA); Paul Lombardo (CT); Hannah Howard (FL); Marti Hooper (ME); Michael Muldoon (NE); Bill Carmello (NY); Craig Kalman (OH); Andrew Schallhorn (OK); Steve Boston (PA); Andrew Dvorine (SC); and Aaron Hodges (TX).

1. Discussed an LTCI Mortality and Lapse Study

Warren Jones (Retired) gave an update (Attachment Three-A) to the American Academy of Actuaries (Academy) and Society of Actuaries (SOA) Research Institute's Final Long-Term Care Insurance (LTCI) Mortality and Lapse Study (Mortality and Lapse Study) as requested by the Working Group during its March 9 meeting. He said the Academy Long-Term Care Valuation Work Group used more recent SOA Long-Term Care Intercompany Experience Study data in a comparison to the Mortality and Lapse Study's earlier experience data. He said the more recent experience data has significant limitations that affect its use and that the original earlier data set is a much better data source than the newer source for the purpose of creating a valuation mortality table.

Mr. Serbinowski said the Working Group will draft a set of questions concerning the use of marital status and risk class adjustments, as well as the use of static versus generational tables to be included with an exposure of the Mortality and Lapse Study recommended tables. He said the questions and recommended tables will be exposed in early July for a public comment period of 60 days.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Meetings/Member Meetings/B CMTE/HATF/2022_Summer/LTCAWG/06-24-22/Minutes_LTCAWG_06-24-22docx

Long-Term Care Insurance Mortality and Lapse Study

Warren Jones, MAAA, FSA, FCA
Chairperson, Valuation Work Group

Developed by the Long-Term Care Valuation Work Group of the American Academy of Actuaries and the Society of Actuaries Research Institute

Presentation to NAIC Long-Term Care Actuarial (B) Working Group—June 24, 2022

Long-Term Care Insurance (LTCI) Mortality and Lapse Study

- [Study Released November 2021](#)
- Developed by the Long-Term Care Valuation Work Group of the American Academy of Actuaries and the Society of Actuaries Research Institute

Long-Term Care Insurance Mortality and Lapse Study
November 2021

Developed by the Long-Term Care Valuation Work Group of the American Academy of Actuaries and the Society of Actuaries Research Institute

November 2021

© 2022 Society of Actuaries. All rights reserved. May not be reproduced without express permission.

Requests of the LTC Valuation Work Group

- Develop a replacement mortality table for LTCI active life reserves
 - Based on the 2012 Individual Annuity Mortality Table
 - Recommend a margin for conservatism
- Develop a replacement lapse table
 - Recommend a margin for conservatism
- Consider developing tables for valuation on total lives basis as well as active lives basis

Mortality Valuation Tables

- Developed valuation mortality table
 - Mortality is select and ultimate; all previous valuation mortality tables have been aggregate
 - Optional factors are provided for marital status and risk class
 - Mortality tables are provided for both total lives and active lives (off-claim) exposures
 - Margin for valuation mortality tables is included
 - Tables are included in the report as an Excel file

Data Source

- SOA/LIMRA LTC Voluntary Lapse and Mortality Experience Study
 - Comprised of experience data from 2000 through 2011 for 22 companies
- Selected the observation period 2008–2011 to reflect more recent trends
- Identified certain participating companies with relatively more accurate data submitted

Data Source

- Data from 10 companies (DEFN 2 in Report) satisfied the following conditions:
 - Deaths are separately identified from lapses
 - Unknown terminations are less than 25% of total terminations
 - Performed matching with Social Security death records within the previous three years from the date of submission.
 - DEFN 2 companies represent approximately 70% of the industry experience for the exposure period used

More Recent Experience Study

- Long-Term Care Intercompany Experience Study—Aggregate Database 2000–2016 Report published August 12, 2020
- Limitations:
 - Credible data for ages over attained age 80 by individual age from few companies that submitted directly to LIMRA
 - Data via MIB is aggregated for attained ages over 90 and LIMRA has grouped the data for ages 80-90

More Recent Experience Study

- Limitations Continued:
 - Not able to apply DEFN 2 filter used by the 2016 study. DEFN 2 filter provided a better determination of mortality v. lapse
 - Not able to do the same level of validation due to limitations of the data provided and length of time between the data submissions to MIB and when received at LIMRA (over 1 year)
 - Not able to calculate active life exposures; only total life mortality can be calculated
 - Only 6 of the original 10 DEFN companies participated in both studies

Conclusions

- 2016 study has more exposures (2012–2016)
- 2016 experience includes data for more recent period (2016 v. 2011)
- 2016 study has significant limitations that impact its use
- By including the DEFN 2 filter, the 2011 study is a much better data source than the 2016 source for purpose of creating a valuation mortality table
- Limitations of the 2016 study should be considered when designing future LTCI mortality experience studies that could be used to develop valuation mortality tables

A Powerful Industry Partnership

In 2021, LIMRA and the SOA Research Institute entered into a partnership to support the industry with a **comprehensive program of industry experience studies**.

This program will provide timely, consistent, and comprehensive releases of industry experience data — providing you with the necessary tools for addressing **product development, pricing, and regulatory strategies**.

SOA Research INSTITUTE LIMRA

Together, We have Unmatched Breadth & Depth of Experience

Expertise

We are both associations dedicated to this industry, with a long history of conducting large data-intensive efforts

Trust

Strong reputation for unbiased research, analysis, and industry relationships

Value

Together we provide unparalleled value while delivering cost-effective insights

SOA Research INSTITUTE LIMRA

Benefits to Participants

- Credible, robust, benchmarking, and strong industry representation:**
70% market participation is typical
- Comprehensive and timely:** updates of industry data on a regularly published schedule
- Detailed and deeper analytics:** to support product development, inform management, reserving, and growth strategies

SOA Research INSTITUTE LIMRA

Robust Reporting Options

Standard Data Package

- Executive Summary Dashboard highlighting key findings and top-line analysis
- Detailed report presenting results and analysis of key findings
- Access to an aggregated industry level dataset for further analysis by companies
- Individualized presentation by SOA and LIMRA of your own company results and a discussion of the relationship to industry

Premium Data Package

- Standard Data Package plus...
- Customized tools for participating companies' own analysis
- Including predictive modeling and Artificial Intelligence methods

* Non participants are defined as companies or organizations that do not provide data for the study analysis.
+ per study

SOA Research INSTITUTE LIMRA

Robust Reporting Options

Standard Data Package

\$10-\$15K for participants+
\$30-\$60K for non participants**

- Executive Summary Dashboard highlighting key findings and top-line analysis
- Detailed report presenting results and analysis of key findings
- Access to an aggregated industry level dataset for further analysis by companies
- Individualized presentation by SOA and LIMRA of your own company results and a discussion of the relationship to industry

Premium Data Package

\$20-\$35K for participants+
\$45-\$85K for non participants**

- Standard Data Package plus...
- Customized tools for participating companies' own analysis
- Including predictive modeling and Artificial Intelligence methods

* Non participants are defined as companies or organizations that do not provide data for the study analysis.

Historical Underwriting Margins and Ratios Realized

- On average, the actual performance of Medicaid insurers, measured as the insurer's underwriting ratio before taxes, is less than assumed in the state's rate development. Further, approximately one-third of Medicaid managed care plans can expect to have a net operating loss.
- In general, the margins for Medicaid managed care organizations are significantly less than those earned by either commercial insurers or Medicare Advantage plans.
- However, even a MMC insurer operating with a low profit margin may still offer the potential for significant returns on equity and/or capital.

	Underwriting Margin ¹ Included in Rate Development	Actual Underwriting Ratio ² from MMC Filings	% of MMCs operating at a Loss ² from MMC Filings
2016	1.30%	1.38%	32.5%
2017	1.29%	0.27%	37.6%
2018	1.29%	0.66%	36.8%
2019	1.18%	(0.25%)	48.1%
2020	1.15%	2.89%	23.1%
Overall Average	1.24%	0.99%	35.6%

Note 1: Underwriting Margins extracted from research group's review of 250 individual Medicaid Data Books spanning the five years. Excludes chiropractic and dental plans.
Note 2: Underwriting Ratio reflects data taken from PT, Row 24, Col 8 of NAIC Filings, i.e., Net Underwriting Gain or (Loss).

Purpose of the Underwriting Margin Model

To calculate the cost of capital and determine the risk margin necessary to achieve a user defined target of

- net income before taxes, and
- the probability of ruin

while considering:

- cost of capital,
- transfer payments,
- cash flow considerations, and
- unachieved withholds.

Note: All components are dependent on each other.

Target Selection

The Underwriting Margin Model solves for minimum risk margin needed to achieve the selected target.

Three potential targets are included to address different needs of actuaries.

- Net Income
 - Net Income is program revenues less expenses.
 - The target amount is defined as a percent of premium.
- Probability of Ruin
 - The likelihood that there is a net income loss that exceeds the targeted amount of reserve equity.
- Risk Margin
 - Expressed as a Percent of Premium
 - This target type allows user to define the risk margin while using the model to calculate other items, such as the cost of capital, transfer payments, and the cost of cash flows.

Medicaid Underwriting Gain

American Academy of Actuaries Health Practice Council Summer 2022 Updates

Barbara Klever, MAAA, FSA
Vice Chairperson, Health Practice Council
American Academy Of Actuaries

Aug. 1, 2022—National Association of Insurance Commissioners (NAIC) Health Actuarial (B) Task Force (HATF) Meeting in Lieu of Summer National Meeting

About the American Academy of Actuaries

The Academy assists public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy and its boards also set qualification, practice, and other professionalism and ethical standards for actuaries credentialed by one or more of the five U.S.-based actuarial organizations in the United States.

Public Policy and the Academy

The Academy, through its public policy work, seeks to address pressing issues that require or would benefit from the application of sound actuarial principles. The Academy provides unbiased actuarial expertise and advice to public policy decision-makers and stakeholders at the state, federal, and international levels in all areas of actuarial practice.

Health Practice Council—Key Policy Priorities for 2022

- Health Equity
- COVID-19: Implications for Health Care Utilization and Spending
- Insurance Coverage
- Long-Term Care
- Medicare Sustainability
- Payment and Delivery Reform
- Climate Change and Health

Health Equity

- Issue Briefs:
 - [Data Collection for Measurement of Health Disparities](#) (forthcoming)
 - [Health Risk Assessment and Risk Adjustment in the Context of Health Equity](#) (forthcoming)
- Comment Letters:
 - [Comment letter](#) to the Colorado Division of Insurance on the implementation of Colorado Revised Statute (C.R.S.) § 10-3-1104.9. The law prohibits unfair discrimination based on certain personal characteristics—race, color, national or ethnic origin, religion, sex, sexual orientation, disability, gender identity, or gender expression—in any insurer practice. It also prohibits the use of external data, algorithms, or predictive models that unfairly discriminate against individuals with these characteristics. (2022)

COVID-19: Implications for Health Care Utilization and Spending

- Issue Briefs / Papers:
 - [Considerations for Reflecting the Impact of COVID-19 in Medicaid Managed Care Plan Rate Setting](#) (2021)

 - May 24 - “Health Spending Projections in the Wake of COVID-19” ([Webinar](#))

Health Insurance Coverage

- Issue Briefs:
 - [Drivers of 2023 Health Insurance Premium Changes \(and infographic\)](#) (2022)
- Comment Letters:
 - [Comments on Family Glitch Proposed Rules](#) (2022)
 - [Comments on Draft 2023 Actuarial Value \(AV\) Calculator Methodology](#) (2022)
 - [Comments on 2023 Notice of Benefit and Payment Parameters \(NBPP\)](#) (2022)
 - [Comment Letter to CMS/CCIIO on Exposure Draft of Risk Adjustment Technical Paper](#) (2021)
- Virtual Briefing:
 - July 5 – “[Drivers of 2023 Health Insurance Premium Changes](#)”

7

Long-Term Care Insurance (LTCI)

- Issue Briefs:
 - [Value of Reduced Benefit Options in Long-Term Care Insurance Rate Increases](#) (LTC Actuarial Equivalence) (2022)
- Comment Letters:
 - [Comment letter](#) to the Centers for Medicare & Medicaid Services (CMS) on the Proposed Rule for the 2023 Policy and Technical Changes to the Medicare Advantage and Medicare Prescription Drug Benefit Programs (comments involved Dual Eligible Special Needs Plans (D-SNPs) and medical loss ratios (MLRs)) (2022)
- Reports:
 - [Long-Term Care Insurance Mortality and Lapse Study](#) (joint project between Academy and Society of Actuaries Research Institute (SOARI)) (2021)
 - Request from NAIC Long-Term Care Actuarial Working Group (LTCAWG)
 - [Presentation](#) to NAIC HATF in November 2021; discussion with NAIC LTCAWG in March 2022. Follow-up [presentation](#) in June 2022.
 - Group Life Waiver Valuation Table Work Group – submitted report on updating AG-44 for the NAIC (joint project between Academy and SOARI) ([Report/Tables](#)) (2022)
 - [Presentation](#) to NAIC HATF in May 2022.
- Webinars:
 - June 10 – “[Value of Reduced Benefit Options in Long-Term Care Insurance Rate Increases](#)” (LTC Actuarial Equivalence)

8

Medicare Sustainability

- Issue Brief:
 - [Medicare’s Financial Condition: Beyond Actuarial Balance](#) (2022)
- Essential Elements:
 - [Medicare’s Long-Term Sustainability Challenge](#) (2022)
- Statements/Testimony:
 - [Statement for the Record](#) to the U.S. Senate Committee on Finance Subcommittee on Fiscal Responsibility and Economic Growth on the Hospital Insurance Trust Fund and the future of Medicare financing (2022)
- Capitol Forum Webinar:
 - June 17 - “[Social Security and Medicare Trustees Reports: A Deep-Dive Discussion With the Programs’ Chief Actuaries](#)”

9

Payment and Delivery Reform

- Issue Briefs:
 - [Implications of Hospital Price Transparency on Hospital Prices and Price Variation](#) (2022)
- Comment Letters:
 - [Comments on 2023 Notice of Benefit and Payment Parameters \(NBPP\)](#) (2022)
 - [Comments to CMS on Payment Parameters Proposed Rule](#) (2021)
- Webinars:
 - April 14 - “[Hospital Prices: Can Greater Price Transparency Drive Lower Prices and Reduce Price Variation?](#)”
 - May 24 - “[Health Spending Projections in the Wake of COVID-19](#)”

10

Climate Change and Health

- In November of 2021, the Academy launched the Climate Change Joint Task Force
 - Membership is comprised of members from the Health, Casualty, Life, and Pension practice areas and is organized under the Risk Management and Financial Reporting Council (RMFRC)
- Comment Letters:
 - [Comment letter](#) to the International Sustainability Standards Board (ISSB) on the exposure draft of Climate-related Disclosures (due on July 29, 2022)
 - [Comment letter](#) to the Securities and Exchange Commission’s (SEC) request for public input on the enhancement and standardization of climate-related disclosures. (2022)
 - [Comment letter](#) on the RFI from the U.S. Department of Labor (DOL) Employee Benefits Security Administration (EBSA) on possible Agency Actions to Protect Life Savings and Pensions from Threats of Climate-Related Financial Risks (2022)
 - [Comment letter](#) on the RFI from the U.S. Department of the Treasury and FIO on Climate-Related Financial Risk and the Insurance Sector (2021)—and forthcoming to the Department of Labor on Environmental, Social, and Governance (ESG)

11

HPC NAIC Workstreams—HRBC

Regulatory Framework (B) Task Force
Portland, Oregon
August 10, 2022

The Regulatory Framework (B) Task Force met in Portland, OR, Aug. 10, 2022. The following Task Force members participated: Vicki Schmidt, Chair (KS); Sharon P. Clark, Vice Chair (KY); Lori K. Wing-Heier represented by Sarah Bailey (AK); Mark Fowler represented by Yada Horace (AL); Ricardo Lara represented by Tyler McKinney (CA); Michael Conway represented by Kate Harris (CO); Andrew N. Mais represented by Jared Kosky (CT); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Frank Pyle and Tim Li (DE); David Altmaier represented by Chris Struk and Shannon Doheny (FL); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Weston Trexler and Kathy McGill (ID); Amy L. Beard represented by Alex Peck (IN); Gary D. Anderson represented by Kevin Beagan (MA); Timothy N. Schott represented by Robert Wake (ME); Anita G. Fox represented by Karen Dennis (MI); Chlora Lindley-Myers represented by Carrie Couch and Amy Hoyt (MO); Edward M. Deleon Guerrero represented by Charlette C. Borja (MP); Mike Causey represented by Ted Hamby and Robert Croom (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning represented by Laura Arp (NE); Chris Nicolopoulos (NH); Russell Toal represented by Paige Duhamel (NM); Judith L. French represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by TK Keen (OR); Michael Humphreys (PA); Patrick Tigue represented by Alyssa Metivier-Fortin and Courtney Miner (RI); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Rachel Bowden (TX); Jon Pike represented by Tanji J. Northrup (UT); Scott A. White represented by Julie Fairbanks and Julie Blauvelt (VA); Mike Kreidler represented by Molly Nollette and Jane Beyer (WA); Nathan Houdek (WI); and Allan L. McVey represented by Erin K. Hunter (WV). Also, participating was: Erica Weyhenmeyer (IL).

1. Adopted its Spring National Meeting Minutes

Mr. Keen made a motion, seconded by Ms. Kruger, to adopt the Task Force's March 23 minutes (*see NAIC Proceedings – Spring 2022, Regulatory Framework (B) Task Force*). The motion passed unanimously.

2. Adopted its Subgroup and Working Group Reports

a. Accident and Sickness Insurance Minimum Standards (B) Subgroup

Ms. Arp said the Subgroup met July 11, June 13, June 6, May 9, and April 18. She said that during these meetings, the Subgroup discussed comments received on Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) and its drafting note to clarify what is and what is not “fixed indemnity coverage.” Based on the comments received and discussion, she said she developed a chair draft of proposed revisions to Section 8B. The Subgroup discussed the chair draft of proposed revisions to Section 8B and agreed on preliminary revisions to Section 8B for inclusion in the draft of revisions to Model #171.

Ms. Arp said the Subgroup also discussed comments received on the NAIC consumer representatives' initial comments on Section 8C—Disability Income Protection Coverage and agreed on preliminary revisions to Section 8C for inclusion in the draft of revisions to Model #171.

Ms. Arp said the Subgroup is nearing completion of its work related to Section 8—Supplementary and Short-Term Health Insurance Minimum Standards for Benefits. She said that after it finishes its work on this section, the Subgroup will start reviewing and considering revisions to the disclosure and notice provisions in Model #171. She

said she believes the Subgroup remains on track to finish its work revising Model #171 by the end of the year and forward the revised model to the Task Force for its consideration.

b. ERISA (B) Working Group

Mr. Wake said the Employee Retirement Income Security Act (ERISA) (B) Working Group met Aug. 10. He said that during this meeting, the Working Group adopted its May 24 minutes, which included the adoption of a summary from the case of *Rutledge v. Pharmaceutical Care Management Association (PCMA)* for inclusion in the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook). The Working Group heard an update from the U.S. Department of Labor (DOL) regarding its ongoing efforts to implement the federal No Surprises Act (NSA) and mental health parity. He said the Working Group discussed and agreed to update the NAIC Chart on Multiple Employer Welfare Arrangements (MEWA)/Multiple Employer Trust (MET) and Association Plans. NAIC staff will survey the states regarding their laws. The Working Group also discussed whether to update the ERISA Handbook, but it decided that it would be premature to undertake such a project at this time given all the case law that remains in flux in the courts. He said the Working Group agreed to survey the states regarding their stop loss laws in relation to level funded plans.

Mr. Wake said that following all these discussions, the Working Group adjourned into a regulator-to-regulator session, pursuant to paragraph 2 (pending investigations), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues relating to federal legislative and regulatory matters) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

c. MHPAEA (B) Working Group

Ms. Weyhenmeyer said most of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group meetings to date have been in regulator-to-regulator session to provide the opportunity for Working Group members and interested state insurance regulators to discuss MHPAEA enforcement and compliance issues. She said that in March, the Working Group held a series of regulator-to-regulator sessions to discuss potential changes to the mental health parity chapter of the *Market Regulation Handbook*. The Working Group finished its review and forwarded its suggested revisions to the Market Conduct Examination Guidelines (D) Working Group for its consideration. She said the Market Conduct Examination Guidelines (D) Working Group reviewed the Working Group's suggested revisions and adopted them. The Market Regulation and Consumer Affairs (D) Committee will consider adoption of the revised mental health parity chapter during its Aug. 12 meeting.

Ms. Weyhenmeyer said that in June, the Working Group drafted a letter to the U.S. Congress in support of congressional legislation that would provide grants to the states to assist them with mental health parity plan compliance determination, enforcement, and training. She said that during its meetings, the Working Group has discussed how the states are in different positions regarding their level of expertise in carrying out their mental health parity plan compliance work. She said that regardless of such expertise, most states are working to educate their state on the complexities related to mental health parity plan compliance and would benefit from more educational opportunities for their staff.

Ms. Weyhenmeyer said that during the Working Group's April 5 meeting at the Spring National Meeting, it heard a presentation from Illinois and Washington on a designation in behavioral health parity analysis that the Insurance Regulatory Examiners Society (IRES) has developed. She said the first course related to this designation starts in June. She said that during its April 5 meeting, the Working Group also heard: 1) a presentation from the DOL on mental health parity enforcement activities; and 2) a presentation from the American Psychiatric Association (APA) outlining an example of how insurers may document compliance with mental health parity regulations.

Ms. Weyhenmeyer said the Working Group plans to meet Aug. 11. During this meeting, the Working Group plans to hear: 1) a presentation from The Kennedy Forum on insurance coverage for behavioral health emergencies; and 2) presentations from the APA and the American Association for Marriage and Family Therapy (AAMFT) on provider experiences with insurance payment for behavioral health treatment and limitations applied by insurers. She said that following its open session, the Working Group plans to adjourn into regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals), paragraph 8 (consideration of strategic planning issues), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings.

Commissioner Clark highlighted the need of state departments of insurance (DOIs) for training in mental health parity plan compliance and applauded the Working Group's efforts related to that issue. She said that this training issue needs to be at the forefront of everyone's minds, particularly each NAIC member. She said she would take steps to ensure it becomes a focus of the NAIC membership.

d. Pharmacy Benefit Manager Regulatory Issues (B) Subgroup

Mr. Keen said the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup met Aug. 9. During this meeting, the Subgroup adopted its July 29, June 15, April 25, and April 4 minutes. He said the Subgroup also heard: 1) a presentation from the PCMA; 2) the Pharmaceutical Research and Manufacturers of America (PhRMA); and 3) the Oregon Primary Care Association (OPCA). He said these presentations focused on issues for the Subgroup to consider as it begins its work to draft the white paper on pharmacy benefit manager (PBM) business practices.

Mr. Keen said he anticipates the Subgroup holding at least one more meeting in late August during which it would hear from at least one additional stakeholder group on the Subgroup's upcoming work on the white paper. He said he anticipates the Subgroup beginning its work on the white paper in September. He said that on Aug. 15, the Subgroup plans meet in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals), paragraph 8 (consideration of strategic planning issues), and paragraph 9 (any other subject required to be kept confidential) of the NAIC Policy Statement on Open Meetings, to: 1) discuss its approach to the white paper; 2) discuss a draft white paper outline; and 3) seek volunteers from among the Subgroup members to begin drafting sections of the white paper. He said he hopes the Subgroup can complete its work on the white paper by the end of the year.

Commissioner Clark said completing the white paper by the end of the year is an ambitious timeline. She said completing the white paper within that time frame is a laudable goal, but that the Subgroup should not rush its work. Commissioner Schmidt agreed that completing the work by the end of the year should not be set in stone, but it should be a target with the understanding that to ensure robust discussion and stakeholder comment, the white paper may not be finished until sometime in early 2023. Mr. Keen agreed.

Commissioner Clark made a motion, seconded by Ms. Nollette, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its July 11 (Attachment One), June 13 (Attachment Two), June 6 (Attachment Three), May 9 (Attachment Four), and April 18 (Attachment Five) minutes; the ERISA (B) Working Group, including its Aug. 10 minutes (Attachment Six), which also includes the adoption of the *Rutledge v. Pharmaceutical Care Management Association* (PCMA) case summary for inclusion in the ERISA Handbook; the MHPAEA (B) Working Group, including its April 5 minutes (Attachment Seven); and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its Aug. 9 minutes (Attachment Eight). The motion passed unanimously.

3. Heard an Update on the CHIR's Work

Maanasa Kona (Center on Health Insurance Reforms—CHIR, Georgetown University Health Policy Institute) provided an update on the CHIR's recent and forthcoming work. She said the CHIR is researching public option plans and recently published an in-depth analysis of Colorado's federal Affordable Care Act (ACA) Section 1332 waiver for a public option-style plan. The CHIR recently published a brief on the efforts California's state-based insurance marketplace is trying in order to reduce the number of uninsured and underinsured.

Ms. Kona said the CHIR also recently published a brief on actions state insurance regulators can take to prepare for the post-public health emergency (PHE) Medicaid unwinding. She said another issue the CHIR is analyzing is abortion and contraceptive coverage after the recent U.S. Supreme Court ruling in *Dobbs v. Jackson Women's Health Organization*.

Ms. Kona said the CHIR is continuing to monitor and analyze state action related to health equity. She said it recently published a report entitled, "Improving Race and Ethnicity Data Collection: A First Step to Furthering Health Equity Through SBMs."

Ms. Kona said the CHIR is also continuing its work related to the implementation of the NSA as she discussed during her update during the Task Force's March 23 meeting. She said the CHIR plans to release a study on state laws related to surprise billing enacted since the enactment of the NSA. She said the CHIR recently completed a study comparing the federal and state network adequacy standards governing Medicaid and ACA marketplace plans in six states.

Ms. Kona said the CHIR's future work includes: 1) publishing an issue brief on state efforts to enforce the MHPAEA; and 2) a 50-state research project on medical debt consumer protections.

4. Heard a Presentation from the AAM on the Usage of the Term "Interchangeable Biosimilar Product" in Model #22

Craig Burton (Association for Accessible Medicines—AAM) presented on the use of the term "interchangeable biosimilar product" in the *Health Carrier Prescription Drug Benefit Management Model Act* (#22) and its effect on prescription drug substitutions. He first discussed the mission of the Biosimilars Council (Council), which is a division of the AAM. The Council works to ensure a positive regulatory, reimbursement, political, and policy environment for biosimilar products and educates the public and patients about the safety and effectiveness of biosimilars. He said Council member organizations include companies or stakeholder organizations working to develop biosimilar products with the intent to compete in the U.S. market. The Council was created in 2015 to support the growing biosimilars sector and works to increase patient access to biosimilar medicines.

Mr. Burton discussed how biosimilars are currently reducing spending and potential savings in the future. He said the definition of "drug substitution" in Section 3G(2) of Model #22 should be revised as follows to ensure patient savings: "(2) For biologics, the substitution of a biosimilar product, as defined in 42 USC §262(i), that the FDA has determined to be biosimilar in accordance with the standards set forth in 42 USC §262(k) or an interchangeable biosimilar product, which is a biosimilar product, as that term is defined in 42 USC §262(k)(4), and listed as such in the latest edition of or supplement to the FDA Lists of Licensed Biological Products with Reference to Product Exclusivity and Biosimilarity or Interchangeability Evaluations, also known as the Purple Book."

Mr. Burton explained that biosimilar versus interchangeable is not relevant for formulary regulations. The distinction is only meaningful at the pharmacy counter and is not an indication of superior quality. He said that revising Model #22, as the AAM suggests, to allow formularies to substitute a biosimilar for a reference product: 1) empowers plans to encourage the use of an equally effective, lower cost biosimilar; 2) supports patient access

and savings through lower cost biosimilars; and 3) does not change state dispensing requirements for interchangeable products.

Commissioner Clark said that she first became aware of this issue during Kentucky's more recent legislative session during discussions of proposed legislation on step therapy protocols. The Task Force discussed Mr. Burton's presentation, particularly whether there is a need to revise Model #22 as the AAM suggests. After additional discussion, the Task Force decided to have an ad hoc group of Task Force members examine the issues more thoroughly and report back to the Task Force with any recommendations before or at the Fall National Meeting.

5. Heard an Update on the Implementation of the Federal Network Adequacy Standards for QHPs in FFEs

Brian R. Webb (NAIC) provided an update on the implementation of the federal network adequacy standards for qualified health plans (QHPs) in federally facilitated exchanges (FFE). He discussed the history of federal regulators attempting to impose federal network adequacy standards beginning with the Obama Administration, which initially proposed federal network adequacy standards, but after a rocky implementation rollout, the Obama Administration ended its efforts and returned network adequacy oversight to the states.

Mr. Webb said a federal court subsequently ruled this change was arbitrary and capricious and that the federal government must ensure networks are adequate. He said that because of this ruling, federal oversight is scheduled to resume for the 2023 plan year. He said that for QHPs in FFEs, beginning with plan year 2023, the federal Centers for Medicare & Medicaid Services (CMS) will begin implementing time/distance standards for various types of providers and facilities, and beginning in plan year 2024, the CMS will begin implementing wait time standards. To comply with the time and distance standards, at least 90% of QHP enrollees must live within the maximum distance to at least one provider of each type.

Mr. Webb said the proposed regulations include a provision allowing those FFE states that have network adequacy rules that are as stringent as the federal rules and a review process that is as stringent as the federal review process, then the state can determine network adequacy for QHPs in that state. He said that to date, the CMS has found that four states—Michigan, New Hampshire, South Dakota, and West Virginia—satisfy these criteria. For all the FFE states not meeting these criteria, the CMS is in the process of reviewing information from health carriers and determining whether they satisfy the federal network adequacy standards or if the health carrier is “justified” in not meeting the standards. He said there have been ongoing meetings between the CMS and the states to discuss a number of issues as the CMS begins implementation, including issues related to coordination, information-sharing, and enforcement. He said another issue being discussed is whether the states have a role in reviewing or providing information to the CMS on health carrier justifications for not meeting the federal network adequacy requirements.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

MtgMin.docx

Draft: 7/18/22

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
July 11, 2022

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met July 11, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk (FL); Amy Hoyt and Camille Anderson-Weddle (MO); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman, Heidi Clausen, and Tanji J. Northrup (UT); Jamie Gile and Mary Block (VT); and Ned Gaines (WA).

1. Continued Discussion of Suggested Revisions to Section 8C of Model #171

The Subgroup continued its discussion from its June 13 meeting of the comments received on the NAIC consumer representatives' initial comments on Section 8C—Disability Income Protection Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171).

Ms. Arp asked for additional discussion on Section 8C(1) concerning the age an insurer could potentially reduce periodic payments based solely on age and the NAIC consumer representatives' concern that this provision could encourage an individual to take early retirement at age 62 with reduced Social Security benefits. Their suggestion is to revise this provision to require that any reduction in benefits related to a person's age be tied to an individual's eligibility for full Social Security retirement benefits, not their eligibility for early retirement benefits.

Chris Petersen (Arbor Strategies) said America's Health Insurance Plans (AHIP) has no issues with the current language in Section 8C(1), but in the interest of addressing the NAIC consumer representatives' concerns, AHIP could support removing Section 8C(1) altogether.

J.P. Wieske (Health Benefits Institute—HBI) said that it is HBI's understanding that this provision is rarely, if at all, used because it is hard to administer.

Anna Schwamlein Howard (American Cancer Society Cancer Action Network—ACS CAN) asked about the impact of removing Section 8C(1) and whether due to its removal, insurers could reduce benefits at any age.

The Subgroup discussed the interaction of Section 8C(1) with Section 8C(3). Ms. Howard suggested adding language to Section 8C(1) to refer to both "Social Security retirement benefits" and "Social Security disability income benefits." Mr. Wieske expressed concern with adding such language because Section 8C(1) only concerns Social Security retirement benefits. The Subgroup discussed using the term "Social Security normal retirement age (SSNRA)," as referenced in the HBI's comments. The Subgroup discussed various revisions to Section 8C(1). After additional discussion, the Subgroup decided to revise Section 8C(1) based on the NAIC consumer representatives' suggested revisions.

The Subgroup next discussed Section 8C(2). Ms. Howard reiterated the NAIC consumer representatives' concerns with the elimination periods. After discussion, the Subgroup decided to leave the provision unchanged.

The Subgroup next discussed Section 8C(3). After discussion, the Subgroup decided to remove the phrase referring to pregnancy, childbirth, or miscarriage.

During its May 9 meeting, the Subgroup had agreed to change the reference to six months to three months. The Subgroup next discussed Section 8C(4). Ms. Howard pointed out the NAIC consumer representatives' suggestion to add the word "both" for clarity. After discussion, the Subgroup agreed to accept the suggested revision.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B CMTE/RFTF/Accident and Sickness Subgrp/Accident and Sickness Ins Min Stds Subgrp 7-11-22MtgMin.docx

Draft: 6/23/22

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
June 13, 2022

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met June 13, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Howard Liebers (DC); Chris Struk (FL); Robert Wake (ME); Amy Hoyt (MO); Rachel Bowden (TX); Shelley Wiseman, Heidi Clausen, and Tanji J. Northrup (UT); Anna Van Fleet, Mary Block, Emily Brown, Jamie Gile, and Christine Menard-O’Neil (VT); and Ned Gaines (WA).

1. Continued Discussion of Suggested Revisions to Section 8B of Model #171

Using the NAIC staff comment chart (*see NAIC Proceedings – Summer 2022, Regulatory Framework (B) Task Force, Attachment Three-A*), the Subgroup continued its discussion from its June 6 meeting of the comments received on the co-chair’s draft proposed revisions to Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* and its drafting note. Jolie H. Matthews (NAIC) pointed out draft language for a proposed drafting note for Section 8B(2). She said this proposed drafting note is intended to address the Subgroup’s June 6 meeting discussion about the placeholder language. After discussion, the Subgroup agreed to add the proposed drafting note to the draft of proposed revisions to Model #171. Mr. Struk suggested adding the word “minimum” before the words “benefit amounts.” The Subgroup accepted his suggested revision.

The Subgroup next discussed the Law Office of William G. Schiffbauer comments suggesting revisions to the drafting notes. Ms. Arp said she believes the suggested language for the drafting note is a good reminder to state insurance regulators that it is not necessarily the product that is the issue, but how some insurance producers and insurers market and sell the product to consumers, leading the consumer to believe it is a substitute for major medical insurance coverage. The Subgroup discussed the suggested language. After discussion, the Subgroup agreed to add the language. The Subgroup also agreed to accept the American Council of Life Insurers’ (ACLI’s) suggested edit to Section 8B(1) to change “benefit” to “benefits” and change “event” to “events.”

2. Discussed Comments Received on Section 8C of Model #171

The Subgroup next discussed the comments received on the NAIC consumer representatives’ initial comments on Section 8C—Disability Income Protection Coverage. Ms. Arp said NAIC staff compiled a chart reflecting the comments received from the ACLI, America’s Health Insurance Plans (AHIP), the Health Benefits Institute (HBI), and the NAIC consumer representatives (Attachment Two-A). The Subgroup discussed the comments on Section 8C(1) concerning the age an insurer could potentially reduce periodic payments based solely on age. Cindy Goff (ACLI) discussed the ACLI’s comments and the need for flexibility when an individual elects to receive Social Security benefits at age 62; as a result, the part of the individual’s income is being replaced by those benefits. She explained that this is optional for the insurer, not a requirement. The Subgroup discussed the NAIC consumer representatives’ concern that this provision could encourage an individual to take early retirement at age 62 with reduced Social Security benefits, and their suggestion is to revise this provision to require that any reduction in benefits related to a person’s age be tied to an individual’s eligibility for full Social Security retirement benefits, not their eligibility for early retirement benefits. Ms. Goff explained that this provision does not require an insurer to automatically reduce benefits when an individual turns age 62. The provision allows the insurer, if the insurer decides to do so, to reduce the benefit when the individual elects to take early retirement and access Social Security retirement benefits at age 62. Anna Schwamlein Howard (American Cancer Society, Cancer Action

Network—ACS CAN) asked if Ms. Goff could confirm her comments and understanding on how this provision works with her colleagues at the ACLI during a future Subgroup meeting. Ms. Goff agreed.

Ms. Arp asked about the last sentence in Section 8C(3), which states, “No reduction in benefits shall be put into effect because of an increase in Social Security or similar benefits during a benefit period.” Ms. Howard said she believes this language refers to Social Security disability benefits, not Social Security retirement benefits. Bonnie Burns (California Health Advocates—CHA) pointed out that the reference in Section 8C(3) to Social Security does not specifically state whether it is Social Security disability benefits or Social Security retirement benefits. She also expressed concern that an insurer could include a provision in a disability income protection policy requiring an insured to elect early Social Security retirement benefits at age 62. Mr. Schallhorn said he believes this provision was included to establish a floor as to how much an insurer can reduce benefits based solely on age if the insurer elects to reduce the benefits. He said without this provision, an insurer could potentially reduce the amount of benefits at its discretion at age 62. Ms. Howard explained that to address its concerns with this provision, the NAIC consumer representatives suggest tying the reduction of benefits to when an individual reaches full Social Security retirement age. Ms. Arp said the HBI suggests similar language in its comments. She also pointed out that in its comments, AHIP says it could support revising the specific age of 62 to a more flexible reference, such as “the Social Security retirement age.” The Subgroup discussed these comments, including that “full” Social Security retirement age differs based on when an individual was born.

Ms. Arp asked Ms. Goff to poll her colleagues at the ACLI and ACLI members on whether the reference to and language related to age 62 in Section 8C(1) is tied to Social Security retirement benefits or refers to something else. Ms. Goff also agreed to try to get clarification on the language in Section 8C(3) referring to “benefit period” and the length of such a period, such as whether it is a month, a year, or the length of the claim.

Chris Petersen (Arbor Strategies LLC) said AHIP suggests revising Section 3—Applicability and Scope to include a reference to “certificate” to reflect that Model #171 now applies to group disability income protection policies. The Subgroup took this suggested revision under advisement.

The Subgroup decided to continue this discussion during its next meeting on July 11.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B Cmte /RFTF/Accident and Sickness Subgrp/Accident and Sickness Ins Min Stds Subgrp 6-13-22MtgMin.docx

Disability Income Protection Provision Suggested Revisions
Comments on NAIC Consumer Representatives' Initial Suggested Revisions

<p>C. Disability Income Protection Coverage</p> <p>“Disability income protection coverage” is a policy that provides for periodic payments, weekly or monthly, for a specified period during the continuance of disability resulting from either sickness or injury or a combination of them that:</p> <p>(1) Provides that periodic payments that are payable at ages after sixty-two (62) and reduced solely on the basis of age are at least fifty percent (50%) of amounts payable immediately prior to sixty-two (62);</p> <p>(2) Contains an elimination period no greater than: (a) Ninety (90) days in the case of a coverage providing a benefit of one year or less; (b) One hundred and eighty (180) days in the case of coverage providing a benefit of more than one year but not greater than two (2) years; or (c) Three hundred sixty five (365) days in all other cases during the continuance of disability resulting from sickness or injury;</p> <p>(3) Has a maximum period of time for which it is payable during disability of at least six (6) months except in the case of a policy covering disability arising out of pregnancy, childbirth or miscarriage in which case the period for the disability may be one month. (good with change 7/11/22) No reduction in benefits shall be put into effect because of an increase in Social Security or similar benefits during a benefit period;</p> <p>(4) Where a policy provides (good with change 7/11/22) total disability benefits and partial disability benefits, only one elimination period may be required.</p>	<p>ACLI</p> <p>Section 8(C)(1) Payments After Age 62 ACLI recommends preserving this provision because some individuals choose to take partial social security benefits at age 62. When this occurs, some carriers will reduce the benefit payments to reflect the income replacement they are receiving from social security when they take leave. This avoids duplicate or inappropriate wage replacement amounts.</p> <p>Section 8(C)(2) Elimination Periods These standards were originally intended to apply only to individual products and having them apply to both group and individual creates some issues as outlined below.</p> <p>ACLI recommends leaving the elimination periods as is. These elimination periods as a minimum standard allow insurers the ability to offer the choice of products with different elimination periods which can translate into lower premiums.</p>
---	---

For groups specifically, the elimination period should be flexible to allow the employer to customize a plan that is the most appropriate and that considers the employer's paid sick leave, paid time off, paid family or medical leave, salary continuation plans, and/or whether the employer offers short term disability coverage. This highlights a key difference between individual and group policies: that group policies must take into account all other employee benefits, which will vary widely from employer to employer.

As a **specific illustration** of wording for the model regulation to provide for the flexibility requested above, **we suggest the following:** *“Longer elimination periods are permissible if the insured is in receipt of income replacement benefits prior to the start of disability benefits or if the design of the long-term disability plan is selected by a group policyholder on behalf of the members of the group.”*

The proposed changes would create an overly restrictive minimum standard for group policies more so than any state currently requires.

Additionally, longer elimination periods can be used in underwriting as an option for consumers should an underwritable condition or circumstance be discovered during the medical underwriting phase. The longer elimination period allows insurers to offer some level of coverage instead of declining coverage outright. Consumers often choose this option to lower the cost of premium.

Section 8(c)(3) Benefit Duration

ACLI requests clarification on the intent of the change from one month to three months for disabilities arising out of pregnancy, childbirth, or miscarriage because this is typically treated the same as other conditions and as illness. The proposed change would imply that the maximum benefit duration for short term disability plans would become three months. There are some group plans with shorter benefit durations that would need to be increased as a result. ACLI is unsure if this was the intent and, if so, would recommend against the change to keep the lower-cost option available for those employers who have chosen it and any who may choose it in the future.

ACLI recommends clarifying that short term disability plans are exempt from the requirement for disability plans to have a maximum benefit duration of six months. Two of the most popular short term maximum payment durations requested by employers are 13 weeks and 26 weeks, which coordinate with 90-day and 180-day elimination periods respectively. Insurers would appreciate a clarification that these types of plans comply with the minimum standards.

<p>AHIP</p>	<p>Section 8 (C) (1) states that disability income protection coverage:</p> <p><i>(1) Provides that periodic payments that are payable at ages after sixty-two (62) and reduced solely on the basis of age are at least fifty percent (50%) of amounts payable immediately prior to sixty-two (62);</i></p> <p>AHIP supports the current language that references age sixty-two (62), which is the earliest time one may choose to receive Social Security retirement benefits. The NAIC Subgroup is asking for specific comments regarding the age a policy could lower the benefit payment amount. Given that this minimum age may change in the future, AHIP would also support revising the specific age of 62 to a more flexible reference such as “<i>the Social Security retirement age.</i>”</p> <p>Section 8 (C) (2) recognizes the need for different elimination periods for different levels of benefits that disability income protection policies offer. We support the current elimination periods outlined in this section.</p> <p>The NAIC Subgroup is asking for specific comments on the “appropriate” elimination period for policies providing benefits at various lengths of coverage. AHIP would like to note that the Texas Department of Insurance has suggested that this provision be simplified and modified “to provide that an elimination period cannot exceed 50% of the benefit period.” AHIP would also support this suggested change.</p> <p>Section 8 (C) (3) requires a minimum benefit duration of three (3) months² payable after a disability and allows a one month minimum for a disability arising out of pregnancy, childbirth or miscarriage.</p> <p>The NAIC Subgroup is asking for specific comments on why there is a separate provision for a disability arising out of pregnancy, childbirth or miscarriage. AHIP believes that all disabilities, including pregnancy, childbirth or miscarriage should be treated equally as other disabilities, as mandated by the Pregnancy Discrimination Act of Title VII of the Civil Rights Act. A separate reference for disability arising out of pregnancy, childbirth or miscarriage, is unnecessary. Our suggested redlined edit follows:</p> <p><i>(3) Has a maximum period of time for which it is payable during disability of at least three (3) months. No reduction in benefits shall be put into effect because of an increase in Social Security or similar benefits during a benefit period.</i></p>
<p>Health Benefits Institute (HBI)</p>	<p>Section 8 (C) (1).</p> <p>We believe the language is intended to reflect the fact that insurers are obligated to provide coverage to reflect that the insurer should pay the maximum benefit (i.e. the number of days, months, or years of coverage) until the consumer’s normal retirement age. Insurers will not actually reduce the amount of periodic payments contracted for, but rather stop making payments at the retirement age. This should reflect current disability policy.</p> <p>We would suggest the following language to clarify the issue:</p>

	<p>(1) Provides that periodic payments that are payable at ages after sixty-two (62) as calculated by the Age Discrimination in Employment Act schedule I or schedule II or until social security normal retirement age (SSNRA) as determined by the policy;</p> <p>Drafting Note: The intent of this section is to ensure that disabled employees who are covered under a disability policy are covered under their maximum time benefit or until their social security normal retirement age (specifically when the disabled employee is able to claim 100% of their social security benefits). Some employer plans may be covered under the Age Discrimination in Employment Act which may require a different benefit schedule.</p> <p>Section 8 (C) (2). The current language includes significant employer flexibility surrounding the elimination period of benefits. We believe preserving this language is vital.</p> <p>We urge the committee not to reduce consumer options in purchasing elimination periods. We agree with the general comments that support the affordability of coverage – ensuring that consumers can continue to afford this coverage. More importantly is the impact on employer benefits. Shortening elimination time frames will lead to employers reducing employee benefits like sick leave and PTO which typically pay 100% of salary for an insured benefit which provides less than 100% of salary.</p> <p>Section 8 (C) (3). It is our understanding that current disability policies cover disability arising from pregnancy the same as any other disability. As a result, we believe this section can be deleted.</p>
<p>NAIC consumer representatives</p>	<p>After hearing the conversation at the Working Group’s meeting on May 9, we would like to offer an amended version of our previous comments (first offered in June of 2019). We strongly believe that with respect to the definition of disability income protection, any reduction in benefits related to a person’s age should be tied an individual’s eligibility for full Social Security retirement benefits – not their eligibility for early retirement benefits.</p> <p>Amended Suggested Revisions: “Disability income protection coverage” is a policy that provides for periodic payments, weekly or monthly, for a specified period during the continuance of disability resulting from either sickness or injury or a combination of them that:</p>

<p>(1) Provides that a plan is prohibited from reducing periodic payments based on age, except that a plan may reduce periodic payments provided that reductions not take place until the individual has reached their full retirement age to receive Social Security benefits, and those payments are at least 50% of amounts payable prior to their reaching that age. Periodic payments that are payable at ages after sixty-two (62) and reduced solely on the basis of age are at least fifty percent (50%) of amounts payable immediately prior to sixty-two (62);</p> <p>Drafting Note: States should be aware that the term “full retirement age” is the age at which an individual will start receiving full retirement benefit amounts from Social Security. The full retirement age will differ depending on the age of the individual. The full retirement age is 66 for individuals born between 1943 and 1954. The full retirement age increases gradually for individuals born between 1955 and 1960, until it reaches 67. For individuals born after 1960, their full retirement age is 67.</p> <p>More information is available at https://www.ssa.gov/benefits/retirement/learn.html#:~:text=The%20full%20retirement%20age%20is,are%20payable%20at%20age%2067.</p> <p>(2) Contains an elimination period no greater than: (a) Ninety (90) <u>Thirty (30)</u> days in the case of a coverage providing a benefit of one year or less; (b) One hundred and eighty (180) <u>Ninety (90)</u> days in the case of coverage providing a benefit of more than one year but not greater than two (2) years; or (c) Three hundred sixty-five (365) <u>One hundred and eighty (180)</u> days in all other cases during the continuance of disability resulting from sickness and/or injury;</p> <p>(3) Has a maximum period of time for which it is payable during disability of at least six (6) months except in the case of a policy covering disability arising out of pregnancy, childbirth or miscarriage in which case the period for the disability may be one month. No reduction in benefits shall be put into effect because of an increase in Social Security or similar benefits during a benefit period;</p> <p>(4) Where a policy provides both total disability benefits and partial disability benefits, only one elimination period may be required.</p>

Draft: 6/14/22

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
June 6, 2022

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met June 6, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Chris Struk (FL); Camille Anderson-Weddle, Amy Hoyt, and Cynthia Amann (MO); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman and Tanji J. Northrup (UT); Anna Van Fleet, Mary Block, and Jamie Gile (VT); and Ned Gaines (WA).

1. Discussed Suggested Revisions to Section 8B of Model #171

Ms. Arp said in response to the Subgroup's request for comments on the co-chair's draft proposed revisions to Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* and its drafting note, the Subgroup received comments from the American Council of Life Insurance (ACLI), America's Health Insurance Plans (AHIP), the Health Benefits Institute (HBI), the NAIC consumer representatives, the Law of Office William G. Schiffbauer (Schiffbauer), and the Vermont Department of Insurance (DOI). She said NAIC staff developed a chart reflecting the comments received, including suggested revisions to the co-chair's draft proposed revisions (Attachment Three-A). Each of the commenters discussed their comments.

With respect to the ACLI's suggestion to add "fixed percentage," the Subgroup decided not to accept the suggested revision because such language could be confusing to consumers. In addition, the Subgroup said adding such language would deviate from the federal definition with respect to indemnity products. The Subgroup discussed the general purpose of the co-chair's proposed revisions to this provision, including the drafting notes, which is to provide guidance to state insurance regulators on the framework for these products and provide some guardrails on what products fall within the provision's scope and those products that do not.

The Subgroup discussed AHIP's suggestion to replace "health-related" event with "specified" event. Ms. Arp asked if there would ever not be a "health-related" event. After discussion, the Subgroup decided not to accept the suggested revision because of how benefits are triggered. Benefits are triggered based on a health-related event, but the benefits provided due to that triggering event may not be "health-related." To address these issues, the Subgroup decided to revise the language to add "triggered by."

The Subgroup discussed Schiffbauer's comments, including whether the language should include the specific reference to the federal law on excepted benefits and the differences in the language in federal law for individual coverage versus group coverage. After discussion, the Subgroup decided to remove the reference and consider adding language to the last drafting note to flag it for state insurance regulators when reviewing form filings. The Subgroup discussed the following language for the potential drafting note: "If the product does not meet the federal definition of excepted benefits under 42 U.S.C. §300gg 91(c)(3) and its implementing regulations, it should be treated and regulated as a comprehensive major medical coverage subject to the requirements of the federal Affordable Care Act (ACA)."

The Subgroup discussed the HBI's suggestion to delete the reference to "31 days" in paragraph 2 and replace it with "[X] days" because "31 days" is outdated and possibly reflects the previous version of Model #171 that included major medical type coverage. The Subgroup discussed deleting paragraph 2. After additional discussion, the Subgroup decided to retain it because it exists in current state laws and regulations. To address concerns with

the placeholder language, the Subgroup decided to add a drafting note alerting state insurance regulators that when setting lump sum benefits or daily benefits for hospital indemnity coverage, they should be mindful to not set benefits that are so low that they may not provide any actual benefit to consumers or set benefits so high that consumers could be led to believe the coverage is major medical coverage.

The Subgroup decided to continue the discussion during its next meeting June 13.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Chair Draft Suggested Indemnity Provision Language Revisions
Comments on Suggested Revisions
(Assuming the chair suggested revisions are accepted)

<p>B. Hospital Indemnity or Other Fixed Indemnity Coverage</p> <p>(1) “Hospital indemnity or other fixed indemnity coverage” provides a benefit for hospital confinement or another health-related event based on a fixed dollar amount, regardless of the amount of expenses incurred, without coordination with any other health coverage, and consistent with the requirements for excepted benefits under 42 U.S.C. §300gg-91(c)(3) and its implementing regulations.</p> <p>(2) “Hospital indemnity coverage” may provide a single lump sum benefit for hospital confinement of not less than \$[X], and/or a daily benefit for hospital confinement on an indemnity basis in an amount not less than \$[X] per day and not less than thirty one (31) days during each period of confinement for each person insured under the policy.</p> <p>(3) Coverage shall not be excluded due to a preexisting condition for a period greater than twelve (12) months following the effective date of coverage of an insured person unless the preexisting condition is specifically and expressly excluded.</p> <p>Drafting Notes: Hospital indemnity or other fixed indemnity coverage is recognized as supplemental coverage. Any hospital indemnity or other fixed indemnity coverage, therefore, must be payable regardless of other coverage. The same general rule should apply so that group insurance cannot reduce its benefits because of the existence of hospital indemnity or other fixed indemnity coverage. Section 3H(4) of the <i>Coordination of Benefits Model Regulation</i> states that the definition of a plan (for the purposes of coordination of benefits)...shall not include individual or family insurance contracts....” States should consider using this language to prevent benefit reductions that could otherwise occur because of the existence of hospital indemnity or other fixed indemnity coverage purchased by the insured.</p> <p>For indemnity products that are triggered by a variety of health events and provide a variety of daily benefit dollar amounts, regulators should examine the amount payable per day and the total amount payable per year or lifetime to determine whether an indemnity product’s benefits resemble comprehensive major medical coverage. Indemnity products should not be developed, marketed, or sold as a replacement for major medical coverage.</p>	<p>ACLI</p> <p>(1) “Hospital indemnity or other fixed indemnity coverage” may include but is not limited to a benefits for hospital confinement or another health-related events based on a fixed dollar amount or fixed percentage, regardless of the amount of expenses incurred, without coordination with any other health coverage, and consistent with the requirements for excepted benefits under 42 U.S.C. §300gg-91(c)(3) and its implementing regulations.</p>
---	--

<p>AHIP</p>	<p>(1) "Hospital indemnity or other fixed indemnity coverage" provides a benefit for hospital confinement or another specified event based on a fixed dollar amount, regardless of the amount of expenses incurred, without coordination with any other health coverage, and consistent with the requirements for excepted benefits under 42 U.S.C. §300gg-91(c)(3) and its implementing regulations.</p> <p>(2) "Hospital indemnity coverage" may provide a single lump sum benefit for hospital confinement of not less than \$[X], and/or a daily benefit for hospital confinement on an indemnity basis in an amount not less than \$[X] per day for each person insured under the policy.</p>
<p>Health Benefits Institute (HBI)</p>	<p>*****</p> <p>(2) "Hospital indemnity coverage" may provide a single lump sum benefit for hospital confinement of not less than \$[X], and/or a daily benefit for hospital confinement on an indemnity basis in an amount not less than \$[X] per day and not less than [X] days during each period of confinement for each person insured under the policy.</p>
<p>NAIC consumer representatives</p>	<p>*****</p> <p>(3) Coverage shall not be excluded due to a preexisting condition for a period greater six (6) months following the effective date of coverage of an insured person unless the preexisting condition is specifically and expressly excluded.</p> <p>Drafting Notes: Hospital indemnity or other fixed indemnity coverage is recognized as supplemental coverage. Any hospital indemnity or other fixed indemnity coverage, therefore, must be payable regardless of other coverage. The same general rule should apply so that group insurance cannot reduce its benefits because of the existence of hospital indemnity or other fixed indemnity coverage. Section 3H(4) of the <i>Coordination of Benefits Model Regulation</i> states that the definition of a plan (for the purposes of coordination of benefits)...shall not include individual or family insurance contracts...." States should consider using this language to prevent benefit reductions that could otherwise occur because of the existence of hospital indemnity or other fixed indemnity coverage purchased by the insured.</p> <p>For indemnity products that are triggered by a variety of health events and provide a variety of daily benefit dollar amounts, regulators should examine the amount payable per day and the total amount payable per year or lifetime to determine whether consumers could reasonably perceive an indemnity product's benefits resemble comprehensive major medical coverage. Indemnity products should not be developed, marketed, or sold as a replacement for major medical coverage.</p> <p>Drafting Note: In setting the minimum daily or lump sum benefit amounts, states should examine the extent to which the benefit amount is in line with a reasonable expectation of a consumer's out-of-pocket costs. State regulators should also</p>

	<p>examine these benefit amounts to determine whether they could reasonably be construed as violating the state's <i>Unfair Trade Practices Act</i> [#880].</p>
<p>William G. Schiffbauer Law Office</p>	<p>B. Hospital Indemnity or Other Fixed Indemnity Coverage</p> <p>(1) In General. "Hospital indemnity or other fixed indemnity coverage" provides benefits for specified events based on a fixed dollar amount, regardless of the amount of expenses incurred, without coordination with any other health coverage.</p> <p>(2) Hospital Indemnity Coverage. "Hospital indemnity coverage" may provide a single lump sum benefit fixed dollar benefit for hospital confinement and/or a fixed dollar daily benefit for hospital confinement in addition to benefits for other specified events on an indemnity basis.</p> <p>(3) Other Fixed Indemnity Coverage. Provides benefits for specified events based on a fixed dollar amount, regardless of the amount of expenses incurred, and without coordination with any other health coverage.</p> <p>(4) Preexisting Conditions. Coverage shall not be excluded due to a preexisting condition for a period greater than twelve (12) months following the effective date of coverage of an insured person unless the preexisting condition is specifically and expressly excluded.</p> <p>Drafting Notes: Hospital indemnity or other fixed indemnity coverage is supplemental coverage. Any hospital indemnity or other fixed indemnity coverage, therefore, must be payable regardless of other coverage. The same general rule should apply so that group insurance cannot reduce its benefits because of the existence of hospital indemnity or other fixed indemnity coverage. Section 3H(4) of the <i>Coordination of Benefits Model Regulation</i> states that the definition of a plan (for the purposes of coordination of benefits)...shall not include individual or family insurance contracts...." States should consider using this language to prevent benefit reductions that could otherwise occur because of the existence of hospital indemnity or other fixed indemnity coverage purchased by the insured.</p> <p>For indemnity products that are triggered by a variety of health events and provide a variety of daily benefit dollar amounts, regulators should examine the amount payable per day and the total amount payable per year or lifetime to determine whether an indemnity product's benefits resemble comprehensive major medical coverage. Indemnity products should not be developed, marketed, or sold as an alternative to, or substitute for, or replacement for major medical coverage. It is the marketing of supplementary coverage as an alternative, substitute or replacement for major medical coverage that presents the unfair trade practice, and not the supplementary coverage itself when it is offered and marketed as supplementary excepted benefits coverage.</p>

	<p>These proposed changes broaden the definition of indemnity to match the excepted benefit rules for individual coverage. Vermont uses this regulation to regulate group supplemental health insurance as well. If any state used it for that purpose perhaps a drafting note should be added to address that these standards are designed for individual insurance and that the group excepted benefit rule should be consulted for states using this regulation for group insurance. 45 CFR 146.145.</p>
Vermont Division of Insurance	

Draft: 5/23/22

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
May 9, 2022

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met May 9, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Chris Struk (FL); Robert Wake (ME); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman and Heidi Clausen (UT); Anna Van Fleet, Mary Block, Emily Brown, and Christine Menard-O'Neil (VT); and Ned Gaines (WA).

1. Continued Discussion of Comments Received on Model #171

Ms. Arp said that instead of reviewing a chair draft of proposed revisions to Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) and its drafting note reflecting the Subgroup's discussion during its April 18 meeting, the Subgroup would continue discussion of the comments received on Model #171 beginning with Section 8C—Disability Income Protection Coverage.

The Subgroup discussed America's Health Insurance Plans' (AHIP) suggestion to revise the length of the maximum period for which periodic payments are payable during a disability from at least six months to three months except in the case of a policy covering disability arising out of pregnancy, childbirth, or miscarriage. The Subgroup discussed the suggested revision. Some stakeholders expressed support for revising the time frame to permit more flexibility, particularly with respect to short-term disability income protection coverage. Ms. Arp expressed support for the revision. Without objection, the Subgroup accepted AHIP's suggested revision.

The Subgroup next discussed the NAIC consumer representatives' suggested revisions to Section 8C. Ms. Arp said the NAIC consumer representatives suggest striking the language in paragraph (1). For a policy providing periodic payments at ages after 62, paragraph (1) provides that an insurer may reduce such payments solely based on age at an amount at least 50% of amounts payable immediately prior to age 62. She said the NAIC consumer representatives also suggest shortening the elimination period time frames in paragraph (2). The NAIC consumer representatives also suggest lengthening the maximum period for a disability arising out of pregnancy, childbirth, or miscarriage from one month to three months in paragraph (3). The Subgroup discussed the suggested revisions. The Subgroup discussed why age 62 was chosen as the age when an insurer may reduce benefit payments. Some stakeholders suggested that age 62 was chosen because individuals can receive partial Social Security benefits at that age. The Subgroup also discussed the different elimination periods based on the length of benefit coverage. After discussion, the Subgroup decided to request comments on the NAIC consumer representatives' suggested revisions for a public comment period ending May 27. The Subgroup intends to review any comments received during its next meeting June 6. During its June 6 meeting, the Subgroup also plans to review comments submitted on the chair draft of proposed revisions to Section 8B.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 5/9/22

Accident and Sickness Insurance Minimum Standards (B) Subgroup
Virtual Meeting
April 18, 2022

The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met April 18, 2022. The following Subgroup members participated: Laura Arp, Co-Chair (NE); Andy Schallhorn, Co-Chair (OK); Debra Judy (CO); Chris Struk (FL); Amy Hoyt, Carrie Couch, and Cynthia Amann (MO); Shari Miles (SC); Rachel Bowden (TX); Shelley Wiseman and Heidi Clausen (UT); Jamie Gile and Christine Menard-O'Neil (VT); and Ned Gaines (WA).

1. Discussed Comments Received on Revising Section 8B of Model #171

Ms. Arp said that during the Subgroup's March 21 meeting, she asked Subgroup members, interested state insurance regulators, and interested parties to submit language for the Subgroup's consideration and discuss revisions to Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)* and its drafting note clarifying what is and what is not "fixed indemnity coverage." She said the Subgroup received two comment letters—the Health Benefits Institute (HBI) and the Law Office of William G. Schiffbauer (Schiffbauer Law Office).

J.P. Wieske (HBI) said that in HBI's comments, it suggests adding a new drafting note to Section 8B that addresses the different approaches the states have taken on whether referenced-based pricing constitutes fixed indemnity coverage or major medical coverage. He said the HBI understands that reference-based pricing creates new challenges to state insurance regulators in seeking to protect consumers from being confused and led to believe they are purchasing major medical coverage. He said the proposed new drafting note also suggests state insurance regulators pair a review of reference-based pricing plans with the health carrier's marketing materials to ensure that the carrier is not developing, marketing, or selling products as a replacement for major medical coverage.

Mr. Wieske said the HBI comments also include its previous suggestions on provisions to be added to Model #171 concerning short-term, limited-duration (STLD) plans, including a proposed definition of the term.

Bill Schiffbauer (Schiffbauer Law Office) discussed his suggested revisions to Section 8B. He said the first revision would amend the definition of "hospital indemnity or other fixed indemnity" insurance based on the definition of that term in the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170)*, the companion model act to Model #171. He said this revised definition adds further interpretation based on the federal excepted benefits statutory conditions that have remained unchanged in federal Public Health Service Act (PHSA) Section 2721(c) and Section 2971(c) since the enactment of the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA). He said he also suggests adding language to require a health carrier to annually certify to the state department of insurance (DOI) that its hospital indemnity or other fixed indemnity products are not offered or marketed as major medical coverage or as an alternative or substitute for major medical coverage. He said his last suggested revision is to add a requirement for a prominent disclosure statement in the application above the applicant's signature line. He said this placement provides certainty that the consumer clearly understands that the product being offered for purchase is hospital or other fixed indemnity health insurance coverage and not major medical coverage.

The Subgroup discussed the HBI's and the Schiffbauer Law Office's suggested revisions to Section 8B. Ms. Arp raised a concern about situations when a fixed indemnity plan pays an amount for a certain benefit that substantially or completely covers the actual cost of the service. She said consumers could be confused by this

and led to believe the coverage is major medical coverage. She asked if the Subgroup thinks Section 8B should address this situation. Anna Schwamlein Howard (American Cancer Society, Cancer Action Network—ACS CAN) reiterated the NAIC consumer representatives' concern that the Subgroup rely on disclosures to ensure consumers understand that the fixed indemnity product they are purchasing is not major medical coverage. Ms. Arp acknowledged Ms. Howard's concerns. However, she said some of Ms. Howard's concerns relate to STLD plan coverage, which the Subgroup will address later when it considers what provisions to add to Model #171 for STLD plans. Ms. Bowden said she believes the Subgroup's focus regarding Section 8B is to craft a definition for "hospital indemnity or other fixed indemnity" that aligns with provisions in federal law and regulations on excepted benefits. She said she also believes Section 8B should clarify the issue Ms. Arp raised with respect to the language "regardless of the actual expense incurred" because she does not believe that the situation referenced by Ms. Arp related to this language reflects the intent of the federal law or regulations provisions on excepted benefits. She said, as the Subgroup has discussed, the states have interpreted "regardless of the actual expense incurred" differently when deciding whether a product is a fixed indemnity product or a major medical product. A drafting note to Section 8B could outline both sides of the issue and the different interpretations leaving it up to each state to decide its approach.

After additional discussion, Ms. Arp volunteered to work with other Subgroup members to revise Section 8B to reflect the Subgroup's discussion, including adding a new drafting note to reflect the different approaches taken by the states concerning reference-based pricing plans. She said she would circulate the draft revisions for the Subgroup's consideration and discussion during a future meeting.

Ms. Howard asked Ms. Arp to consider including in the proposed new drafting note language suggesting that in reviewing these products, the states pay particular attention to the benefit amount to be paid under the plan for a specific service to potentially determine if the plan is providing an actual benefit to consumers.

The Subgroup discussed revising the \$40 daily benefit amount in Section 8B because it has not changed since the last time Model #171 was revised in 1998. Mr. Wieske suggested the Subgroup consider replacing the specific dollar amount with a placeholder "X" and including in the proposed new drafting note language suggesting that the states, in reviewing the product filing, consider whether the dollar amount for the benefit included in the filing is so high such that it could lead the consumer to think the product is a major medical product or whether it is so low that the plan does not provide any actual benefit to the consumer. After discussion, Ms. Arp agreed to put language in the proposed new Section 8B drafting note reflecting Ms. Howard's and Mr. Wieske's suggestion.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.

Draft: 8/17/22

Employee Retirement Income Security Act (ERISA) (B) Working Group
Portland, Oregon
August 10, 2022

The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met in Portland, OR, Aug. 10, 2022. The following Working Group members participated: Robert Wake, Chair (ME); Yada Horace (AL); Kate Harris (CO); Howard Liebers (DC); Andria Seip (IA); Julie Holmes (KS); Peter Brickwedde and Julia Dreier (MN); Carrie Couch (MO); Robert Croom (NC); Laura Arp (NE); Stephanie McGee (NV); Rebecca Ross (OK); Jill Kruger (SD); Tanji Northrup (UT); Charles Malone (WA); and Richard Wicka (WI).

1. Adopted its May 24 Minutes

Mr. Wake said the Working Group met May 24 to adopt a summary of the U.S. Supreme Court case *Rutledge v. Pharmaceutical Care Management Association* (PCMA) for inclusion in the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook).

Mr. Wake made a motion, seconded by Ms. Kruger, to adopt the Working Group's May 24 minutes (Attachment Six-A). The motion passed unanimously.

2. Heard an Update from the DOL

Amber Rivers (U.S. Department of Labor—DOL) gave an update on activity at the DOL. She said the DOL is working on implementation of the federal No Surprises Act (NSA), which was passed as part of the federal Consolidated Appropriations Act, 2021 (CAA). She said that the DOL has been working with the U.S. Department of Health and Human Services (HHS) and the U.S. Department of the Treasury (Treasury) on information sessions. She said there have been a number of lawsuits filed and that the DOL received a couple of adverse decisions vacating some of the core provisions that related to the interim final rules issued last October establishing the independent dispute resolution process. She said that the agencies have been working on additional rulemaking to address those vacated provisions.

Ms. Rivers said the DOL was also working on mental health parity implementation. She said in January, the DOL, HHS, and Treasury issued their Report to Congress addressing compliance with the federal Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) generally and serving as the disclosure requirement implemented by the CAA. A second Report to Congress is currently underway. Ms. Rivers also said that the DOL, HHS and Treasury are working on a new proposed rule to address the new mental health parity requirements under the CAA.

Beth Baum (DOL) said that on July 23, the DOL, HHS, and Treasury issued a frequently asked questions (FAQ) document clarifying access to contraceptive coverage required under the federal Affordable Care Act (ACA). She also said that the DOL, HHS, and Treasury are working on a proposed rule addressing the moral and religious exemption.

3. Discussed Updating the NAIC Chart on MEWA/MET and Association Plans

Mr. Wake explained that there is an NAIC chart on state laws addressing multiple employer welfare arrangements (MEWAs) and multiple employer trusts (METs) that could use some updating. He said that it might be useful to survey the states to see if there are any new laws or regulations. He said that the chart could be turned into a compendium of state options for regulating. Mr. Wake said that he would like to know if any states regulate fully

insured MEWAs—not just the insurer providing the coverage, but the reserves and finances of the MEWA itself—which is specifically allowed under ERISA §514(b)(6)(A)(i). Ms. Seip said that Iowa promulgated association health plan (AHP) regulations in response to the 2018 AHP rule issued by the DOL in 2018, which is not enforceable since the District Court for the District of Columbia vacated key provisions of the AHP rule. Ms. Seip said she would like to know how other states have addressed the situation and what have they done with their rules. Mr. Wake said when Maine enacted the AHP section of its small group law, it included a clause requiring compliance with federal requirements. Jennifer Cook (NAIC) said she will send an email survey to the states regarding their laws.

4. Discussed Whether to Update the ERISA Handbook

Mr. Wake explained that during the drafting of the *Rutledge v. Pharmaceutical Care Management Association* (PCMA) summary for inclusion in the ERISA Handbook, the Working Group received some comments pointing out that the Working Group's last comprehensive review of the ERISA Handbook did not catch all the obsolete points. Mr. Wake said he wondered if it was time to undertake another comprehensive review of the ERISA Handbook. Ms. Arp said her recollection was that the comment to revisit the ERISA Handbook was made in the context of an expansive reading of the *Rutledge* decision and, in her opinion, it is premature to revisit the rest of the ERISA Handbook based on the *Rutledge* decision when the implications of that decision on other laws is still unknown. Mr. Wake said he was thinking that the comments were referencing that the Working Group had not fully digested some of the older cases, but he agreed with Ms. Arp's point that there is likely to be litigation in the near future, and the Working Group is better off waiting a little longer to see how the ERISA case law evolves. He said even the 2018 AHP rule is not completely settled. He said DOL has not replaced or repealed the rule, and as a result, he would not be comfortable amending the ERISA Handbook to remove the information. The Working Group decided it would be premature to undertake a revision of the ERISA Handbook at this time.

Having no further business, the ERISA (B) Working Group adjourned.

Employee Retirement Income Security Act (ERISA) (B) Working Group
Virtual Meeting
May 24, 2022

The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met May 24, 2022. The following Working Group members participated: Robert Wake, Chair (ME); Yada Horace (AL); Jason Lapham (CO); Doug Ommen and Andria Seip (IA); Julie Holmes (KS); Victoria Bares and Norman Barrett Wiik (MN); Amy Hoyt (MO); Ted Hamby (NC); Laura Arp (NE); Jeremy Christensen (NV); Laura Miller (OH); Andrew Schallhorn (OK); Tanji J. Northrup (UT); Andrea Jensen (WA); and Richard Wicka (WI).

1. Discussed the May 6 Draft Case Summary of the *Rutledge v. PCMA* Decision for Inclusion in the ERISA Handbook

Mr. Wake said the first item on the agenda is to discuss the May 6 revision of the summary in the case of *Rutledge v. Pharmaceutical Care Management Association (PCMA)* for inclusion in the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook). He explained that the May 6 draft incorporates the comments that were submitted on the Feb. 16 draft by the April 21 deadline. Carl Schmid (HIV+Hepatitis Policy Institute) said the NAIC consumer representatives identified other parts of the ERISA Handbook that need updating. Mr. Wake explained that he would like to focus on incorporating the Rutledge decision into the “Key U.S. Supreme Court Opinions on ERISA’s Preemption Provisions” section of the ERISA Handbook, but he agreed that additional updates to the ERISA Handbook should be considered as part of a more full-scale review at some point in the future.

Cari Lee (Stephoe & Johnson LLP) asked for some clarification regarding what was meant by the third sentence in the summary: “Unlike the PBM laws in some states, Act 900 was not structured as an insurance law.” She said it is unclear because Act 900 involves the Arkansas Department of Insurance (DOI). Mr. Wake said the next sentence was intended to clarify what he meant: “It applied to all transactions between PBMs and pharmacies, including transactions where the PBM was acting on behalf of a self-insured ERISA plan, so Arkansas could not rely on the saving clause as its defense against an ERISA preemption challenge.” Mr. Wake suggested making the following revision to the sentence: “Unlike the PBM laws in some states, Act 900 was not strictly structured as an insurance law.” The Working Group agreed that the addition of “strictly” is a helpful change.

Kris Hathaway (America’s Health Insurance Plans—AHIP) suggested the following two revisions to the last paragraph the Rutledge summary:

However, the Court limited its decision to only considered the provisions of the Arkansas PBM law as they stood at the time PCMA filed its preemption challenge, not the amendments the legislature subsequently made while *Rutledge* was making its way through the appellate courts. Additionally, the Court did not address preemption under Medicare Part D and issues that have been raised by PBM and pharmacy laws in other states, including laws regulating provider networks and laws addressing contractual restrictions on discussions between pharmacies and patients. Subsequent to the *Rutledge* decision, additional ERISA challenges continue, at the time of this writing, to make their way through the courts.

Mr. Wake said with respect to the first suggested change, he believes the existing language is more accurate. He said saying the Court “limited its decision” implies certain issues were before the Court and the Court decided not to consider them, which is not the case. The Arkansas law was later amended, but those amendments were never before the Court, so “only considered” language seems to accurately describe the situation. With respect to the second suggested revision, Mr. Wake said Medicare Part D seems to be a peripheral issue, but he agreed that the suggested revision to mention Medicare Part D as an example of an issue not addressed in this case could be helpful for future readers to place the decision in context.

Ms. Arp made a motion, seconded by Mr. Wicka, to adopt the May 6 draft case summary with the “strictly” and “preemption under Medicare Part D and” revisions discussed on the call (Attachment Six-A1). The motion passed unanimously.

Having no further business, the ERISA (B) Working Group adjourned.

Adopted by ERISA (B) Working Group on May 24, 2022 for inclusion in the *Health and Welfare Benefit Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation*

RUTLEDGE v. PHARMACEUTICAL CARE MANAGEMENT ASS'N,
141 S.Ct. 474 (2020)

In *Rutledge v. PCMA*, the Court held that ERISA did not preempt an Arkansas law, Act 900, which required pharmacy benefits managers (“PBMs”)¹ to reimburse pharmacies at a price equal to or higher than what the pharmacy paid to buy the drug. Act 900 required PBMs to provide administrative appeal procedures for pharmacies to challenge reimbursement prices that are below the pharmacies’ acquisition costs, and it also authorized pharmacies to decline to dispense drugs when a PBM would provide a below-cost reimbursement. Unlike the PBM laws in some states, Act 900 was not strictly structured as an insurance law. It applied to all transactions between PBMs and pharmacies, including transactions where the PBM was acting on behalf of a self-insured ERISA plan, so Arkansas could not rely on the saving clause as its defense against an ERISA preemption challenge.

In a suit brought by Pharmaceutical Care Management Association (“PCMA”), a national trade association representing 11 PBMs, the Eastern District of Arkansas ruled that Act 900 was preempted by ERISA, and the Eighth Circuit affirmed.² Both courts relied on a recent Eighth Circuit decision striking down a similar Iowa law because it “made ‘implicit reference’ to ERISA by regulating PBMs that administer benefits for ERISA plans”³ and “was impermissibly ‘connected with’ an ERISA plan because, by requiring an appeal process for pharmacies to challenge PBM reimbursement rates and restricting the sources from which PBMs could determine pricing, the law limited the plan administrator’s ability to control the calculation of drug benefits.”⁴

The Supreme Court, however, concluded that “[t]he logic of *Travelers* decides this case,”⁵ and ruled that Act 900 was not preempted by ERISA. The Court compared its decisions in *Gobeille*, where it held that a state law is preempted if it “governs a central matter of plan administration or interferes with nationally uniform plan administration,”⁶ and *Travelers*, where it held that ERISA does not preempt state price regulations that “merely increase costs or alter incentives for ERISA plans without forcing plans to adopt any particular scheme of substantive coverage,”⁷ even if the law “affects an ERISA plan or causes some disuniformity in plan administration.”⁸ The Court explained that ERISA is “primarily concerned with preempting laws that require ... structure[ing] benefit plans in particular ways, such as by requiring payment of specific benefits, or by binding plan administrators to specific rules for determining beneficiary status. A state law may also be subject to pre-emption if ‘acute, albeit indirect, economic effects of the state law force an ERISA plan to adopt a certain scheme of substantive coverage.’”⁹ The Court observed that Act 900 “does not require plans to provide any particular benefit to any particular

¹ As the term is spelled in Act 900. Supreme Court style refers to “pharmacy benefit managers.”

² *PCMA v. Rutledge*, 891 F.3d 1109 (8th Cir. 2018).

³ 141 S.Ct. at 479, quoting *PCMA v. Gerhart*, 852 F.3d 722, 729 (8th Cir. 2017).

⁴ *Id.* at 479, quoting *Gerhart*, 852 F.3d at 726, 731.

⁵ *Id.* at 481.

⁶ *Id.* at 480, quoting *Gobeille*, 577 U.S. at 320.

⁹ *Id.*, quoting *Gobeille*, 577 U.S. at 320.

beneficiary in any particular way,”¹⁰ and determined that like the law at issue in *Travelers*, “Act 900 is merely a form of cost regulation.”¹¹

The Court reviewed the standards it has established for interpreting ERISA’s preemption clause, which preempts all state laws “insofar as they ... relate to any employee benefit plan”¹² unless some exception to preemption applies. The Court explained that a state law triggers the preemption clause when it “has a connection with or reference to” an ERISA plan.¹³ The Court rejected PCMA’s contention “that Act 900 has an impermissible connection with an ERISA plan because its enforcement mechanisms both directly affect central matters of plan administration and interfere with nationally uniform plan administration.”¹⁴ The Court acknowledged that Act 900 required ERISA plan administrators to “comply with a particular process” and standards,¹⁵ but explained that those enforcement mechanisms “do not require plan administrators to structure their benefit plans in any particular manner, nor do they lead to anything more than potential operational inefficiencies” for PBMs.¹⁶ The Court held further that ERISA did not preempt Act 900’s decline-to-dispense provision, even though it “effectively denies plan beneficiaries their benefits” because any denial of benefits would be the consequence of the lawful state regulation of reimbursement rates and the PBM’s refusal to comply.¹⁷

Finally, the Court rejected PCMA’s claim that the law had an impermissible “reference to” ERISA. As the Court explained, Act 900 “applies to PBMs whether or not they manage an ERISA plan,” and Act 900 did not treat ERISA plans differently than non-ERISA plans.¹⁸

However, the Court only considered the provisions of the Arkansas PBM law as they stood at the time PCMA filed its preemption challenge, not the amendments the legislature subsequently made while *Rutledge* was making its way through the appellate courts. Additionally, the Court did not address preemption under Medicare Part D and issues that have been raised by PBM and pharmacy laws in other states, including laws regulating provider networks and laws addressing contractual restrictions on discussions between pharmacies and patients. Subsequent to the *Rutledge* decision, additional ERISA challenges continue, at the time of this writing, to make their way through the courts.

Draft: 4/27/22

Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group
Kansas City, Missouri
April 5, 2022

The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met in Kansas City, MO, April 5, 2022. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Jane Beyer, Vice Chair, and John Haworth (WA); Damion Hughes (CO); Kurt Swan (CT); Kenneth Scott and Barbara Torkelson (KS); Mary Kwei (MD); Paul Hanson (MN); Cynthia Amann and Carrie Couch (MO); David Dachs (MT); John Arnold and Chrystal Bartuska (ND); Laura Arp (NE); Maureen Belanger (NH); Laura Miller (OH); Landon Hubbart (OK); Shannen Logue and Katie Merritt (PA); Chris Herrick (TX); Ryan Jubber and Tanji J. Northrup (UT); Don Beatty and Julie Fairbanks (VA); Erin K. Hunter (WV); and Bryce Hamilton (WY).

1. Heard a Presentation on the Development of a Designation in Mental Health Parity by the IRES

Ms. Weyhenmeyer and Mr. Haworth presented on a new designation from the Insurance Regulatory Examiners Society (IRES). Ms. Weyhenmeyer provided background on the IRES and said it has a goal of creating a consistent approach in behavioral health parity audits. Mr. Haworth said the IRES plans to develop core classes for the designation. Core 1 would be the history of state and federal laws and regulations on mental health parity. Core 2 would describe the requirements around quantitative treatment limits (QTLs) and non-quantitative treatment limits (NQTLs). Core 3 would look at medical necessity and utilization review. Core 4 would be a catch-all that looks at claims coding, network access and adequacy, and vendor oversight. Mr. Haworth said supplemental courses would examine criteria for treatment from the American Society of Addiction Medicine (ASAM), quality assessments, and newer state laws. Ms. Weyhenmeyer said the current focus is on the initial core courses, and the intent is to offer some of them in the career development seminar in August or September. Mr. Haworth said ASAM criteria is an example, but the designation would include other criteria as well.

2. Heard a Presentation on Mental Health Parity Enforcement by the DOL

Amber Rivers (U.S. Department of Labor Employee Benefits Security Administration—DOL EBSA) presented on activity on mental health parity enforcement on private employment-based health plans. She said enforcement of the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) and the new provisions under the Consolidated Appropriations Act, 2021 is a top priority for the EBSA. She said plans are now required to document their compliance with mental health parity, and the DOL is required to collect comparative analyses and report its findings to the U.S. Congress (Congress). She said the new tools have been important in encouraging plans to take the requirements seriously. She said the DOL has released guidance and responded to questions before asking for documentations from plans. She said the substance of mental health parity rules has not changed, so all previous guidance from federal agencies is still applicable; what has been added is a requirement to document compliance.

Ms. Rivers said the DOL has released a report to Congress on its enforcement. She said the report shows the actions the DOL has taken and what it has received from plans. She said NQTLs are complex to analyze, and the DOL has highlighted interest in four areas: 1) prior authorization; 2) concurrent review; 3) admission into plan networks; and 4) out-of-network reimbursement rates. She said the report documents 156 letters requesting analyses of 216 NQTLs across 86 investigations. She said many plans and issuers were unprepared to provide analyses. They were missing key information that was outlined in previously published frequently asked questions (FAQ). Ms. Rivers said the DOL has issued over 30 findings of parity violations. She said plans may submit a

corrective action plan when they are found not compliant. She said the next report will come in October. She said the DOL plans a proposed rule on the MHPAEA.

3. Heard a Presentation on Documenting Compliance with NQTLs

Tim Clement (American Psychiatric Association—APA) presented a sample comparative analysis to demonstrate how a health plan could document that one of its NQTLs complies with mental health parity regulations. He said health plans often hear that their analyses did not hit the mark for what is required. He said his example would be a focus on concurrent review.

Mr. Clement said comparative analyses do not need to be lengthy; rather, being concise is a virtue. He said there are five steps in his example based on the provisions of the MHPAEA statute. He said step one includes definitions of terms used. He said step two covers the factors that determine when concurrent review occurs. He described step three as explaining in more detail how each factor is applied, and it could include supporting data to show that the plan has calculated data appropriately. He said the comparative analysis should be self-contained, and attachments should offer verifying proof in support rather than take the place of the analysis itself. He described how the analysis could demonstrate the factors it applies through data or a chosen rationale. He said all factors should be covered in the analysis, as well as all evidence and sources. He said this step should list sources, which should be explained more fully in step four.

Mr. Clement said step four has the most content. He said the analysis must demonstrate that processes and strategies are no more restrictive for mental health and substance use disorder (MU/SUD) benefits than for medical and surgical (M/S) benefits. He said state insurance regulators should not be unsure whether the standard has been met after reading step four. He said the analysis should discuss the plan's utilization management manual in step four. This discussion establishes whether processes and strategies are the same or no more restrictive as written. Mr. Clement said processes in operation must also be analyzed. He said the analyses should describe first and second level utilization reviews rather than appeals. He said analyses should show that some review occurred to demonstrate that processes meet parity in operation. He said the necessary analysis is at the process level and should show how and why processes are comparable. He said step five should review all the previous steps and show how they lead to a conclusion of parity compliance.

Having no further business, the MHPAEA (B) Working Group adjourned into regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.

Draft: 8/17/22

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Portland, Oregon
August 9, 2022

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met in Portland, OR, Aug. 9, 2022. The following Subgroup members participated: TK Keen, Chair (OR); Laura Arp, Vice Chair, and Eric Dunning (NE); Sarah Bailey (AK); Jimmy Dunn, Reyn Norman, and Sheila Travis (AL); Crystal Phelps (AR); Paul Lombardo and Mike Shanahan (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt and LeAnn Crow (KS); Daniel McIlwain and Rob Roberts (KY); Chad Arnold (MI); T.J. Patton (MN); Amy Hoyt (MO); Mary Belcher (MT); Robert Croom (NC); Ralph Boeckman and Erin Porter (NJ); Paige Duhamel (NM); Kelli Price (OK); Karen Feather (PA); Melissa Manning (SC); Scott McAnally and Brian Hoffmeister (TN); Tanji J. Northrup (UT); Don Beatty (VA); Jennifer Kreitler and Molly Nollette (WA); Nathan Houdek and Jennifer Stegall (WI); Allan McVey and Jamie Taylor (WV); and Bryce Hamilton (WY). Also participating were: Weston Trexler (ID); Paul Meyer (MD); and Larry D. Deiter (SD).

1. Adopted its July 29, June 15, April 25, and Spring National Meeting Minutes

The Subgroup met July 29, June 15, April 25, and April 4. During these meetings, the Subgroup heard presentations from various stakeholders on issues from their perspective on the Subgroup's 2022 charge to develop a white paper on pharmacy benefit manager (PBM) business practices.

Mr. Lombardo made a motion, seconded by Mr. Roberts, to adopt the Subgroup's July 29 (Attachment Eight-A), June 15 (Attachment Eight-B), April 25 (Attachment Eight-C), and April 4 (Attachment Eight-D) minutes. The motion passed unanimously.

2. Heard a Presentation from the PCMA

Peter Fjelstad (Pharmaceutical Care Management Association—PCMA) discussed the value of PBMs and the services they provide with respect to pharmacy benefit management. He said PBMs are committed to helping patients. PBMs are the only entity in the pharmaceutical supply chain advocating for lower prescription drug costs for patients and payers. He explained that the plan sponsor is the PBM's client, who always has the final say when creating and designing a prescription drug benefit plan to include elements such as formulary management, specialty and mail order pharmacies, preferred pharmacy networks, and negotiation of rebates. There is no one-size-fits all model because each plan sponsor has unique needs.

Mr. Fjelstad outlined the plan sponsor request for proposal (RFP) process and how PBMs bid in this competitive process by offering various design models and compensation terms, depending on the plan sponsor's specific needs. He detailed the types of pharmacy benefit management services PBMs can provide to plan sponsors. He also discussed the tools PBMs use to reduce prescription drug costs for patients and payors, which include: 1) negotiating rebates from prescription drug manufacturers; 2) reducing waste; 3) encouraging use of generics and preferred brand name drugs; 4) improving adherence; and 5) managing high-cost specialty medications. Mr. Fjelstad said that research shows that the current use of these PBM tools will save plan sponsors and consumers more than \$1 trillion in prescription drug costs from 2020 to 2029. He discussed the results of a 2020 survey of company benefit managers and human resource directors indicating high satisfaction with their company's PBM, PBM contract transparency, and the PBM's effectiveness in reducing prescription drug costs for their company.

Mr. Fjelstad discussed a PBM's role in the pharmaceutical supply chain. He suggested that the Subgroup examine and identify in the white paper the role each entity plays in the pharmaceutical supply chain. He said the pharmaceutical drug manufacturer is the only entity in the supply chain that sets the list price of drugs. He also said that an analysis of data from 2016 to 2020, published in January 2022, indicates that manufacturer prescription drug price increases are unrelated to PBM negotiated rebates.

Mr. Fjelstad highlighted how PBM technology and expertise helps patients to lead healthier lives. PBMs administer prescription drug benefits for 266 million Americans, which means immediate access to the right prescription drugs at the right time and place for thousands of patients each day. PBMs continue to innovate, providing information on cost-sharing and drug coverage through real-time benefit tool (RTBT) access to 82% and electronic approval coverage for drugs that need authorization to 98% of patients who have coverage through contracted health plans and PBMs. He said PBMs are also developing technology to directly engage with patients and enhance their lives, which not only improves clinical outcomes, but also gives patients greater control over their own health.

Commissioner Schmidt asked Mr. Fjelstad about PBM vertical integration with PBMs owning pharmacies and concerns that because of such market consolidation, there is less transparency about PBM business practices. She also noted that the statistics cited during the presentation did not include any statistics on independent community pharmacist satisfaction with PBMs, which would probably show a much different level of satisfaction as compared with the level of satisfaction indicated for company benefit managers and human resource directors. Mr. Fjelstad said there is more of an adversarial relationship between independent community pharmacists and PBMs than perhaps other entities in the pharmaceutical supply chain. He said that about 83% of independent community pharmacies use pharmacy services administrative organizations (PSAOs), which are large conglomerates, to negotiate their contracts with PBMs on their behalf. Therefore, it is not like these pharmacies do not have any leverage or are mismatched in their business dealings with PBMs. He said with respect to vertical integration, the health care industry has seen a lot of integration whether it be PBMs and health insurers owning PBMs and a chain of retail pharmacies. He said increased state and federal regulatory requirements since the enactment of the federal Affordable Care Act (ACA) has led to smaller independent community pharmacies going out of business because they do not necessarily have the expertise, time, or manpower to keep up with these regulatory compliance requirements, such as those involved in dispensing prescription drugs under the federal 340B program. He said this is a factor in the market consolidation among the entities in the pharmaceutical supply chain. Commissioner Schmidt disagreed with Mr. Fjelstad's argument that independent community pharmacies lack the expertise necessary to stay in business due to increased regulatory requirements and competition with large "big box" chain pharmacies.

Mr. Beatty said that statistics are not needed to know that there is tension between independent community pharmacists and PBMs. He asked Mr. Fjelstad about the actions the PCMA, on behalf of the PBM industry, could do voluntarily to alleviate this tension without involving state and federal regulators. Mr. Fjelstad suggested that meetings such as this meeting on the local and state level where all the stakeholders are participating would help alleviate such tensions. Mr. Lombardo asked about spread risk pricing and the recent enactment in some states prohibiting it and the impact, if any, on PBM revenue, when spread risk pricing is eliminated. Mr. Fjelstad said he would be happy to follow up with Mr. Lombardo regarding his specific question. He said, generally, in a spread risk pricing model, or risk mitigation model, the PBM takes the risk to either lose money or gain a profit or a margin. However, which risk mitigation model is chosen depends on the plan sponsor. The plan sponsor decides whether it wants to use a pass-through model where rebates are shared with specific entities or a spread risk pricing model. He said he believes that the PBM industry's position on this issue is that the states should not intrude on the private contractual negotiations between the plan sponsor and the PBM. Mr. Lombardo said his concern with eliminating spread pricing, which would increase the payments to pharmacies and allow PBMs to increase their administrative fees to make up lost revenue, is that it would add cost to the pharmaceutical

distribution system. As such, he would appreciate follow-up information on what actions PBMs are taking, if any, in response to the elimination of spread risk pricing.

3. Heard a Presentation from the PhRMA on Issues Related to the Lack of Transparency in PBM Practices

Emily Donaldson (Pharmaceutical Research and Manufacturers of America—PhRMA) discussed issues related to the lack of transparency in PBM practices. She explained that this lack of transparency has led to misaligned incentives, which can cause an increase in costs throughout the health care system. She said that there is evidence that shows one such misaligned incentive appears to provide PBMs incentives to prefer medicines with higher list prices and large rebates. She discussed how PBMs have increased their influence in the pharmaceutical supply chain through horizontal and vertical consolidation.

Ms. Donaldson said a large—and growing—share of the rebates paid by manufacturers are not being used to reduce patient costs at the pharmacy counter. She provided an example of how consumers do not directly benefit from the rebates and discounts with respect to prescription drugs unlike the direct benefits consumers receive with respect to medical services. She said consumers can end up paying a greater share of total cost for their prescription drugs than their health insurers.

Ms. Donaldson discussed policy solutions to address misaligned incentives in the pharmaceutical supply chain. She suggested these policy solutions: 1) anti-steering policies prohibiting PBMs from directing patients to affiliate pharmacies, which would improve competition and reduce incentives for PBMs to self-deal; 2) sharing rebates at the point-of-sale; and 3) “delinking” PBM compensation from the price of medicines, which would prevent PBMs from skirting regulation on rebates.

4. Heard a Presentation from the OPCA on the Federal 340B Prescription Drug Program

Marty Carty (Oregon Primary Care Association—OPCA) discussed the federal 340B prescription drug program. He said the program began in 1992 and requires pharmaceutical manufacturers to sell drugs at a discount to “covered entity” providers. These providers include federally qualified health centers (FQHCs), Ryan White clinics, and disproportionate share hospitals (DSHs). Mr. Carty outlined the 340B program requirements for participants, which include: 1) registration and recurring recertification; 2) subject to federal audits; 3) must work to avoid duplicate discounts on a single drug; and 4) ensure appropriate use of 340B program savings. He highlighted how the 340B program has assisted two entities, the Neighborhood Health Center and the Siskiyou Community Health Center, in enhancing and enabling them to provide much needed assistance to patients by covering the cost of prescription medications, medical and dental care, food, and transportation.

Mr. Carty discussed how in 2016–2017 community health centers began fighting state-by-state to retain 340B savings on prescription drugs reimbursed under Medicaid managed care and how this so-called “pick-pocketing” continues to expand rapidly. He said to combat these actions, states began enacting 340B anti-discrimination legislation. He said 22 states prohibit PBMs from: 1) refusing to contract with 340B program participating providers; 2) reimbursing at a lower amount; 3) imposing different fees; and 4) otherwise discriminating against a 340B covered entity. He asked that the state insurance regulators use the tools available to them to protect the 340B program.

Director Dunning asked about rebates and the 340B program, particularly any rebates paid back to those patients receiving services from an FQHC who are commercially insured. Mr. Carty said he does not have information about commercially insured patients. He said a majority of those receiving services through an FQHC are either uninsured

or Medicaid recipients. Mr. Carty agreed to follow up with any information he might have about rebates and patients receiving services through a FQHC who are commercially insured.

Commissioner Schmidt said she has worked with FQHCs and the 340B program and appreciates the work that they do. She said she believes the Subgroup should discuss the issues Mr. Carty raised with respect to discriminatory pricing that some 340B program participating providers have experienced.

Mr. Keen asked Mr. Carty that because enforcement of the anti-discrimination laws that have been enacted rests with state insurance regulators, if he was aware of any enforcement actions taken by the states. Mr. Carty said he is not aware of any such actions, but he would follow up with Mr. Keen after he does some research. Ms. Seip asked Mr. Carty if he had any examples of discriminatory pricing and what that contract language would look like that he could share with the Subgroup. Mr. Carty said he would follow up with Ms. Seip to provide such examples.

5. Discussed Next Steps

Mr. Keen said he anticipates the Subgroup meeting within the next few weeks to complete its work on hearing from various stakeholders on issues from their perspective on the Subgroup's 2022 charge to develop a white paper examining PBM business practices. He said that he also anticipates during this meeting a discussion of the implications, if any, of a provision in the federal Inflation Reduction Act of 2022 allowing Medicare to negotiate for prescription drug prices.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

Draft: 8/2/22

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Virtual Meeting
July 29, 2022

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met July 29, 2022. The following Subgroup members participated: TK Keen, Chair (OR); Laura Arp, Vice Chair, and Eric Dunning (NE); Kayla Erickson (AK); Anthony L. Williams (AL); Kathy Belfi and Michael Shanahan (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt (KS); Sharon P. Clark and Daniel McIlwain (KY); Jeff Zewe (LA); Joe Stoddard (MI); Chlora Lindley-Myers and Cynthia Amann (MO); Andrew Kleinendorst and Victoria Bares (MN); David Dachs (MT); Tracy Biehn (NC); Erin Porter and Ralph Boeckman (NJ); Paige Duhamel (NM); Kelli Price (OK); Ana Paulina Gomez (PA); Maggie Rosa (SC); Scott McAnally and Brian Hoffmeister (TN); Tanji J. Northrup (UT); Don Beatty (VA); Jennifer Kreitler and Ned Gaines (WA); Jennifer Stegall (WI); Jamie Taylor (WV); and Bryce Hamilton (WY). Also, participating were: Paula Shamburger (GA); and Emily Brown (VT).

1. Discussed Questions on NCPA Presentation

As a follow-up from its June 15 meeting, the Subgroup held a question and answer (Q&A) session on the National Community Pharmacists Association (NCPA) presentation. Ms. Price asked Matthew Magner (NCPA) if the NCPA would be in favor of state laws that require pharmacy benefit managers (PBMs) to reimburse pharmacies for filling prescriptions in amounts at or above the pharmacy acquisition costs, or has the NCPA found that such laws make it difficult for pharmacies and pharmacy services administrative organizations (PSAOs) to negotiate with PBMs with respect to other contract provisions. Mr. Magner said the NCPA has been supportive of a reimbursement benchmark. He discussed recent legislation enacted in West Virginia that the NCPA believes is a good example of a reimbursement benchmark. Mr. Keen asked about higher reimbursement and dispensing fees and the ultimate impact, if any, on consumers and/or end users. Mr. Magner said the NCPA believes the key issue is the lack of transparency in reimbursement. A pharmacist does not know how much he or she will ultimately be reimbursed even after a claim has been adjudicated because of retroactive clawbacks months later. Mr. Magner said that for consumers in the deductible phase, the amount the consumer pays at the counter for a prescription drug is based on the pharmacy's reimbursement amount for that drug, which does not account for any retroactive clawbacks. As such, the consumer is paying an inflated amount. He said that again, the key to address this issue is transparency.

2. Heard a Presentation on the Pharmaceutical Distributor Perspective

Will Dane (Healthcare Distribution Alliance—HDA) presented on a pharmaceutical distributor perspective on issues related to the Subgroup's 2022 charge to develop a white paper to: 1) analyze and assess the role PBMs, PSAOs, and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine, and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements, rebating, and spread pricing, including the implications of the *Rutledge v. Pharmaceutical Care Management Association (PCMA)* decision on such business practices; and 3) discuss any challenges, if any, the states have encountered in implementing such laws and/or regulations. He provided background on the HDA, including its role, since its founding in 1876, in helping its members navigate regulations and innovations to get the right medicines to the right patients at the right time, safely and efficiently. The HDA's members include 35 national, regional, and specialty primary distribution companies constantly envisioning new ways to move and secure the nation's medicines, all while protecting patient safety. Mr. Dane described the pharmaceutical distribution system, highlighting the role pharmaceutical distributors play in the supplying

prescription drugs nationwide. He also illustrated what the prescription drug supply chain would look like with and without pharmaceutical distributors.

Mr. Dane summarized the role pharmaceutical wholesale distributors play in the prescription drug supply chain as follows: 1) distributors purchase health care products from manufacturers based on the wholesale acquisition cost (WAC), which manufacturers set; 2) distributors charge manufacturers fees related to their services, which are not passed on to the customer nor do they affect patients' cost; 3) distributors sell brand medications to providers based on the WAC or WAC minus a certain percentage; and 4) for generic drugs, since they are commodities, distributors can negotiate prices typically below manufacturer WACs in exchange for sourcing certain generic drugs solely from one source or from a few specified sources. He also provided an example of supply chain profits. He explained that pharmaceutical wholesale distributors primarily use a fee-for-service model. He added that the pharmaceutical distribution model is a high-value, high-volume but low-profit margin industry. Mr. Dane said a recent analysis from Berkeley Research Group (BRG) shows the profit margin for a wholesaler is approximately 1% of the cost of brand medicines.

Ms. Brown asked Mr. Dane if providers typically purchase pharmaceuticals from one distributor. Mr. Dane said it varies depending on the type of provider, such as, for example, an independent community pharmacy versus a hospital. Mr. Hamilton asked about the extent of vertical integration between manufacturers and wholesale distributors. Mr. Dane said none. He described different approaches some wholesalers have taken regarding pharmaceuticals, such as creating repackaging and relabeling businesses, but he noted that these businesses would not be thought of as manufacturers and as such, this would not be considered vertical integration.

3. Heard Presentation on the PSAO Perspective

Scott Pace (Impact Management Group) provided the PSAO perspective on issues related to the Subgroup's 2022 white paper charge. He discussed the role and value of PSAOs. PSAOs are service organizations that provide back-office support to independent community pharmacies and small chains, including services such as: 1) evaluation and navigation of PBM contracts; 2) help desk to assist pharmacies with communications with the PBMs; 3) credentialing and compliance assistance; 4) central payment facilitation; and 5) PBM audit support. For providing such services, PSAOs charge a flat monthly fee.

Mr. Pace explained who PSAOs are. He said that in a 2013 report, the Government Accountability Office (GAO) identified 22 PSAOs owned by a mix of wholesalers, PSAO-member pharmacies, group purchasing organizations, and other private entities. Today, it is estimated there are fewer than 10 PSAOs in operation. He said that according to one analysis, it is estimated that in 2021, the six largest PSAOs had 1,700 to 6,800 participating independent pharmacies each, with a median of 4,250 per PSAO. He said that in comparison with PBMs, the percentage of total U.S. prescription claims managed by the six largest PBMs in 2018 was 95%. The top three PBMs control 77% percent of the prescription market, and the second largest PBM accounts for approximately 90 million plan members and controlled 68,000+ pharmacies.

Mr. Pace explained that independent community pharmacies and/or small chains often do not have the infrastructure and expertise of their larger chain competitors. He said that as a result, some choose to contract with a PSAO to assist with managing their PBM interactions and "back-office" administrative duties. He described the scope of these services, including services a PSAO does not provide, such as: 1) dictating reimbursement rates; 2) setting maximum allowable cost (MAC) rates; 3) retaining any portion of the pharmacy reimbursement; and 4) creating direct or indirect remuneration (DIR) fees.

Mr. Pace provided a summary of the current landscape with respect to state policy trends and understanding of PSAOs, including misunderstandings of the services PSAOs provide and their role. He suggested that the states

when considering legislative proposals involving PSAOs, they should consider the PSAO perspective and its actual role. He also advocated the idea that “if it ain’t broke, don’t fix it.” He said PSAOs are not PBMs or insurers and should not be treated as such. He also suggested that the states remember the actual role of PSAOs and that PSAOs do not notably affect the cost of medication. PSAOs also are not responsible for patient benefit design. Mr. Pace said PSAOs are administrative support service providers. He also said not all PSAOs are wholesale distributor-owned, and not all wholesalers operate a PSAO business. He said who owns a PSAO does not affect market influence or prices. In summarizing his presentation, Mr. Pace said: 1) PSAOs are administrative service entities that charge a transparent flat fee for their services; 2) PSAOs assist with executing contracts; they do not negotiate with manufacturers, determine medication costs, nor sell medications to pharmacies; 3) pharmacies engage PSAOs to provide administrative support and expertise so pharmacists can focus on serving their patients; and 4) PSAOs do not affect the cost of pharmaceutical drug products and have no role in health benefit plan formulary design.

Ms. Duhamel asked if PSAOs file MAC appeals on behalf of pharmacies. Mr. Pace said sometimes PSAOs have filed such appeals on behalf of pharmacies. He said pharmacies like PSAOs to make such filings, but PBMs have been reluctant to accept appeals from PSAOs. He also said the reluctance of PBMs to accept MAC appeals from PSAOs is easing because some states have passed laws allowing PBMs to accept MAC appeals made on behalf of pharmacies from PSAOs. Mr. McAnally asked about the payment timeline. Mr. Pace said payment terms are usually described in the contract. He explained that in Arkansas, for Medicaid fee-for-service claims, his pharmacy is paid around seven days after the filing a claim. For other types of plans, his pharmacy is paid around 15 days after filing a claim. He noted that some states have enacted prompt pay laws that apply to pharmacy claims that set a maximum time within which a claim is to be paid. Mr. Pace noted that these reimbursements do not account for retroactive clawbacks or so-called “true ups” occurring months after the initial claim has been paid. Mr. Pace also discussed “true up” process and aggregate payments based on the effective rate. He said that a few states, including Arkansas, prohibit the use of effective rates.

Mr. Hamilton asked about vertical integration in the PSAO industry. Mr. Pace said he would consider such integration to fall into two buckets: 1) wholly owned affiliates, which is a PSAO owned by a pharmaceutical wholesaler; and 2) stand-alone entities, some of which are owned by group purchasing organizations. He said from a payment perspective, whether it is a wholly owned affiliate or a stand-alone entity, there is not much of a difference in the reimbursement rates a pharmacy receives. Ms. Shamburger asked about PSAOs’ regulatory compliance and credentialing services. Mr. Pace said one example of this would be the excluded provider list. Prescribers on this list are not eligible to write prescriptions and receive reimbursement under Medicare. He said PSAOs provide pharmacies with updated excluded provider lists on a weekly or monthly basis, which assists pharmacies with regulatory compliance.

Mr. Dachs asked if in Mr. Pace’s experience, in negotiating contract terms with PBMs, does negotiating on behalf of a larger number of pharmacies provider better leverage than negotiating on behalf of one pharmacy. Mr. Pace said that based on his experience, it makes no difference. He said, however, that for contract terms involving non-payment issues, such as audit practices and timelines, he believes PSAOs are better able to negotiate than an individual pharmacy can. Mr. Hamilton asked if pharmaceutical manufacturers are purchasing entities further down the prescription drug supply chain in an effort to possibly maintain their lists prices. Mr. Pace said he is not aware of this. He said that based on his experience, pharmaceutical manufacturers are moving in the opposite direction away from direct purchasers of the product.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Virtual Meeting
June 15, 2022

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met June 15, 2022. The following Subgroup members participated: TK Keen, Chair (OR); Laura Arp, Vice Chair (NE); Kayla Erickson (AK); Anthony L. Williams, William Rogers, and Jimmy Gunn (AL); Beth Barrington (AR); Jessica Ryan (CA); Kathy Belfi, Mike Shanahan, and Paul Lombardo (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt, Tate Flott, Craig Van Aalst, and Julie Holmes (KS); Daniel McIlwain (KY); Jeff Zewe (LA); Chad Arnold and Joe Stoddard (MI); Amy Hoyt (MO); Andrew Kleinendorst and Galen Benshoof (MN); David Dachs (MT); Ted Hamby and Robert Croom (NC); Erin Porter and Ralph Boeckman (NJ); Renee Blechner (NM); Kelli Price (OK); Mike Humphreys and Ana Paulina Gomez (PA); Katrina Rodon (SC); Scott McAnally (TN); Shelley Wiseman (UT); Don Beatty (VA); Ned Gaines (WA); Jennifer Stegall (WI); Michael Malone (WV); and Jeff Rude and Bryce Hamilton (WY).

1. Heard a Presentation from the NCPA Discussing its Perspective on the Subgroup's Charge to Develop a Whitepaper

Matthew Magner (National Community Pharmacists Association—NCPA) discussed the independent community pharmacists' perspective on issues related to the Subgroup's charge to develop a white paper to: 1) analyze and assess the role pharmacy benefit managers (PBMs), pharmacy services administrative organizations (PSAOs), and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine, and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements, rebating, and spread pricing, including the implications of the *Rutledge vs. Pharmaceutical Care Management Association (PCMA)* decision on such business practices; and 3) discuss any challenges, if any, the states have encountered in implementing such laws and/or regulations.

Mr. Magner provided a profile of independent community pharmacists and pharmacies. He said there are 19,400 independent community pharmacies nationwide. Of these pharmacies, approximately 80% are in areas with populations of less than 50,000 people. He said that in such areas and underserved areas, residents consider independent community pharmacists as essential health care providers and local health care problem solvers because they are the only health care providers available to them. He discussed the current business climate for independent community pharmacies and its impact on their ability to contract with PBMs. He said having three PBMs control as much as 80% of the market and the role of PSAOs in the contracting process are key factors independent community pharmacies face in contracting with PBMs. Mr. Magner suggested that such a business climate and other issues—such as the conflicts of interest in the prescription drug supply and distribution chain due to increased consolidation and integration, rising prescription drug costs, and a lack of accountability—is why regulatory oversight of PBMs is necessary. He discussed state efforts to regulate PBMs, including state PBM licensing and registration laws, state laws prohibiting mandatory mail-order, and state laws addressing reimbursements to PBM-affiliated entities.

Mr. Magner described some of the drawbacks in state PBM laws, such as overly broad exclusions and exemptions for Employee Retirement Income Security Act of 1974 (ERISA) plans and Medicare Part D plans, which create obstacles to reform. He pointed out guidance from federal courts on ERISA preemption in recent rulings, such as the U.S. Supreme Court's ruling in *Rutledge* and federal circuit courts of appeal rulings in the *PCMA v. Wehbi* case and the *PCMA v. Mulready* case. He said another obstacle to reform are restrictions placed on the ability of pharmacists to alert state departments of insurance (DOIs) or other regulatory authorities about PBM business

practices that potentially conflict with state laws. He said such restrictions include state laws that only allow a state DOI to accept complaints from a consumer. Mr. Magner also said pharmacists are afraid to complain because they fear retaliation by PBMs through audits and increased scrutiny. He said another obstacle to reform related to state laws is whether the state law applies to the insurer or the PBM and whether the state law applies to plans that originate out of state. He said contractual and definitional loopholes in some state laws are also problematic. Mr. Magner urged the Subgroup to highlight these issues in the white paper to make states aware of these issues and potentially address them.

The Subgroup ran out of time for questions and agreed to invite Mr. Magner back for a question-and-answer session during one of the Subgroup's future meetings.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Virtual Meeting
April 25, 2022

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met April 25, 2022. The following Subgroup members participated: TK Keen, Chair (OR); Eric Dunning, Vice Chair (NE); Sarah Bailey and Kayla Erickson (AK); Beth Barrington (AR); Jessica Ryan (CA); Paul Lombardo (CT); Howard Liebers (DC); Andria Seip (IA); Tate Flott (KS); Sharon P. Clark and Daniel McIlwain (KY); Jeff Zewe (LA); Chad Arnold and Joe Stoddard (MI); Amy Hoyt (MO); Andrew Kleinendorst, Galen Benshoof, and Norman Barrett Wiik (MN); Troy Downing and David Dachs (MT); Ted Hamby and Robert Croom (NC); Erin Porter (NJ); Renee Blechner (NM); Glen Mulready and Kelli Price (OK); Ana Paulina Gomez (PA); Carlos Valles (PR); Maggie Rosa (SC); Brian Hoffmeister and Scott McAnally (TN); Heidi Clausen (UT); James Young (VA); Jennifer Kreitler and Ned Gaines (WA); Jennifer Stegall (WI); Ellen Potter (WV); and Jeff Rude and Bryce Hamilton (WY). Also participating were: Amy L. Beard (IN); Paul Meyer (MD); and Eamon G. Rock (NY).

1. Heard Presentation on PBM Markets

Neeraj Sood (University of Southern California [USC], Shaeffer Center for Health Policy & Economics) and Karen Van Nuys (USC, Shaeffer Center for Health Policy & Economics) presented on “How Well Are PBM Markets Functioning?” Dr. Van Nuys discussed the flow of money through the pharmaceutical distribution system, which is further detailed in a 2017 research paper *The Flow of Money Through the Pharmaceutical Distribution System*, co-authored by Dr. Sood and others. She said Dr. Sood discussed this in his presentation to the Subgroup a few years ago, but she wanted to refresh the Subgroup’s memory on this subject and then provide an update on what she and Dr. Sood are currently researching related to this topic.

Dr. Van Nuys explained that at the time the research paper was published in 2017, the researchers could only examine the flow of money through the pharmaceutical distribution system for prescription drugs in the aggregate. The researchers could not single out one specific prescription drug in following the flow of money and determining the amount of money each entity along that system captured from a typical expenditure. Dr. Van Nuys said that based on this, the natural question to ask is whether the amount of money captured by some of the intermediaries along the distribution system is excessive. She said that determining whether the amount of money being captured is excessive depends, in part, on the level of risk that entity is taking to participate in the distribution system. She said Dr. Sood, along with other researchers, published a research article in January 2021 examining this question. She described the methodology used to estimate so-called “excess returns,” which is the extent to which an entity’s profits are higher than expected given the risk associated with their investments, for manufacturers, and intermediaries in the pharmaceutical supply chain to determine who is making excessive profits. She said the researchers’ findings suggest that: 1) there are excess returns in the distribution system and amongst prescription drug manufacturers and biotech manufacturers; and 2) there are potentially certain public policies, which promote competition in all areas of the pharmaceutical supply chain, that could curtail prescription drug spending. Dr. Sood noted that some aspects of the research into this question were limited due to the fact of vertical integration in the system—insurers owning pharmacies and other such consolidation in the distribution system.

Dr. Van Nuys next discussed current research as a result of changes since 2017, when the first research paper she discussed was published, which allowed researchers, such as herself and Dr. Sood, to analyze the flow of money along the pharmaceutical distribution system for specific drugs, such as diabetes drugs. One example of such a change was the enactment of state laws requiring prescription drug manufacturers to disclose certain financial

information. She referenced a Nevada law that requires such disclosure for diabetes drugs, including insulin, and a report from the Ohio Auditor of State examining the state's Medicaid managed care pharmacy services and spread pricing within the program. Dr. Van Nuys discussed the methodology, including the meanings of "list price," "net price," and "net expenditure." She also discussed findings from a research paper published in the Journal of the American Medical Association (JAMA) Health Forum in November 2021 titled "Estimation of the Share of Net Expenditures on Insulin Captured by U.S. Manufacturers, Wholesalers, Pharmacy Benefit Managers, Pharmacies, and Health Plans from 2014 to 2018," which she co-authored with Dr. Sood and other researchers that uses this new data resource to examine the money flows from insulin distribution.

Dr. Sood discussed preliminary research and findings related to the Medicare Part D market and the issue of vertical integration and market consolidation. He explained that the research in this area is continuing and as such, it has not been published. He said he hopes to be able to publish sometime in the near future. He discussed three insurer-pharmacy benefit manager (PBM) relationships: 1) in-house, where the insurer uses its own PBM—for example, CVS. This PBM also provides PBM services to other insurers; 2) rival PBMs, where the insurer uses a PBM owned by a rival health plan—for example, HealthNet contracting with CVS; and 3) standalone PBM, where the insurer uses a PBM that is not owned by a health plan, such as Catamaran, which no longer exists because it was acquired by UnitedHealthcare. Dr. Sood explained that the last insurer-PBM relationship no longer exists in the Part D market. There are no stand-alone PBMs. He discussed how the market has evolved over time with in-house PBMs taking over more and more of the market share between 2010 and 2018. He noted again that the market share for stand-alone PBMs is zero beginning in 2016 for various reasons, including their acquisition by insurers. Dr. Sood said his preliminary research examines how these changes in market share—the increase market share of in-house PBMs, the decrease in market share for rival PBMs, and the elimination of market share for stand-alone PBMs—are potentially affecting Medicare Part D beneficiaries, health care costs, and premiums. He discussed the concept of "customer foreclosure." He explained that because such a large share of the market, approximately 80% of the Medicare Part D market, is controlled by in-house PBMs, those customers served by these PBMs are not available to rival PBMs, which potentially reduces incentives and creates a barrier to market entry for new entrants, both PBM and insurer new entrants.

Dr. Sood next discussed the concept of "input foreclosure" and why it is relevant for understanding the impact of vertical integration. He explained that input foreclosure occurs when there is a lack of competition in the market, such as in-house PBMs holding a huge portion of the market share and lower market share for rival PBMs. This means that in-house PBMs have reduced incentives to provide high-quality PBM services at a competitive price to rival insurers—input foreclosure. He said input foreclosure could explain the increase in premium by insurers who obtain pharmacy services through a rival PBM from 2010–2018 versus in-house PBM premiums, which barely increased during the same period.

Dr. Van Nuys discussed potential policy solutions to the issues raised during the presentation: 1) enforce existing antitrust laws in key market segments; 2) encourage alternative PBM models, such as independent PBMs, to provide more market competition; 3) create full transparency within the distribution system; 4) pass prescription drug manufacturer rebates through to the patients at the point of sale; and 5) restrict PBMs to fixed fee rather than percent-of-price contracts.

Dr. Van Nuys responded to a question about what information in the reports used for the research related to insulin flow of money distribution chain was most helpful. She said that it would have been help if the Nevada report include more desegregated data and specifics related to insulin and/or specific diabetes drugs, which would also assist researchers in assessing the quality of the data. Mr. Meyer asked about the impact of pharmacy services administrative organizations (PSAOs) on the distribution system. Dr. Sood said it is unclear, but these entities could be trying to counteract the influence of such a small number of players in the prescription drug distribution system by giving pharmacies more bargaining power and leverage. He noted that it appears drug wholesalers are

acquiring more and more of the PSAOs also to get leverage over the PBMs. In addition, he noted that the drug wholesale market also is highly concentrated. He said that it seems that given the way the pharmaceutical distribution system is evolving, it is going to be just two or three large players along the prescription drug supply chain that are super vertically integrated and competing with other, which may not lead to the best outcomes for consumers

Mr. Rock asked about the firewalls that insurers and PBMs point to when countering questions about the impact of vertical integration on access and affordability of prescription drugs. Dr. Sood said one of the reasons he wanted to research vertical integration in the prescription drug market and pharmaceutical distribution system was to determine if such firewalls are effective. He said that based on his preliminary research, it does not appear they are effective. He said that if firewalls were effective, it would not matter if an insurer used a rival PBM for its pharmacy services, but his preliminary research shows it makes a difference in premium costs. The firewalls do not appear to be a significant enough of a barrier to reduce the incentives between the insurer and the PBM it owns when that PBM is working with a rival insurer. Dr. Van Nuys, noting that the preliminary research did not study firewalls, said some insurers with in-house PBMs assert vertical integration creates efficiencies. She said that if this is true, then net expenditures should be shrinking, but that does not appear to be happening. Mr. Eamon asked if Ms. Van Nuys looked at state laws with copayment caps on insulin. She said no but explained that a cap on out-of-pocket costs helps consumers at the point of sale, but such a cap does not reduce net expenditures. Consumers could still be paying more because of increased premium because the difference must be made up somewhere to cover the cost of the prescription drug because the total expenditure for that drug has remained the same.

Mr. Keen asked Dr. Sood and Dr. Van Nuys about the Federal Trade Commission's (FTC's) recently released request for information (RFI) related to PBM business practices. Dr. Van Nuys said she believes this is a good thing and that she is cautiously optimistic that the FTC could start enforcing its antitrust laws against certain PBM business practices. She said that she, Dr. Sood, and other researchers have been compiling information on these issues and plan to submit comments to the FTC in response to the RFI.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/B Cmte/RFTF/PBM Regulatory Issues Subgrp/PBM Reg Issues MtgMin 4-25-22.docx

Draft: 5/5/22

Pharmacy Benefit Manager Regulatory Issues (B) Subgroup
Kansas City, Missouri
April 4, 2022

The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met in Kansas City, MO, April 4, 2022. The following Subgroup members participated: TK Keen, Chair, Numi Griffith and Ralph Margrish (OR); Laura Arp, Vice Chair (NE); Yada Horace (AL); Alan McClain and Beth Barrington (AR); Paul Lombardo (CT); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt and Julie Holmes (KS); Sharon P. Clark and Daniel McIlwain (KY); Chad Arnold (MI); Cynthia Amann (MO); David Dachs (MT); Ted Hamby and Robert Croom (NC); Renee Blechner (NM); Erin Porter (NJ); Glen Mulready and Kelli Price (OK); Ana Paulina Gomez (PA); Carlos Valles (PR); Scott McAnally (TN); Tanji J. Northrup (UT); Stephen Hogge and Katie Johnson (VA); Ned Gaines and Jennifer Kreitler (WA); Nathan Houdek and Jennifer Stegall (WI); Erin K. Hunter (WV); and Bryce Hamilton (WY).

1. Heard an Update from Oklahoma on Implementation of its PBM Law

Ms. Price discussed Oklahoma's Patient's Right to Pharmacy Choice Act, which was effective Nov. 1, 2019. The Act establishes a regulatory structure for pharmacy benefit managers (PBMs), including licensing requirements. She explained how the *Rutledge v. Pharmaceutical Care Management Association* case and the U.S. Supreme Court's decision in that case affected the Oklahoma Department of Insurance's (DOI's) implementation and enforcement of the Act and its potential effect on the U.S. District Court's ruling in the *Pharmaceutical Care Management Association v. Mulready* case.

Ms. Price said since Sept. 1, 2020, the Oklahoma DOI has received and reviewed almost 177,000 alleged violations of the Act. She said approximately 87,000 have been resolved to date. She said enforcement actions taken against PBMs include: eight cease-and-desist orders, 13 other orders, and five settlement agreements entered. Ms. Price described the specific issues the Oklahoma DOI is seeing, such as determining whether: 1) a regulation is a "cost regulation" or "central to plan administration regulation"; 2) settlement agreements made outside of the formal administrative process are confidential or are they subject to federal Freedom of Information Act (FOIA) and/or open records requests; and 3) for purposes of licensing, should a PBM and its financial status be reviewed for stability and solvency.

2. Heard a Presentation on PBM Regulation in Oregon

Mr. Griffith discussed Oregon's current PBM laws and regulations. He highlighted a few of the law and regulation provisions, including: 1) a PBM registration requirement; 2) maximum allowable cost (MAC) appeals process requirements; 3) a prohibition on requiring patients to use mail-order pharmacy; and 4) prohibiting "claw back" claims except under certain circumstances, such as fraudulent submission or duplicate claims. He said that currently 55 PBMs have registered with Oregon. Mr. Griffith explained that the Oregon DOI's enforcement of its PBM laws is driven by pharmacy complaints. He said that to date, the Oregon DOI has not initiated any enforcement actions because as far as the Oregon DOI knows, there have been no pharmacy complaints. He said this reflects PBMs satisfactory compliance with the law. He also highlighted that the Oregon DOI's regulations do not apply to health carriers that directly administer their pharmacy benefits, which is a limitation on the Oregon DOI's ability to review certain types of complaints related to its PBM law.

Mr. Griffith next discussed Oregon's work related to prescription drug price transparency, including the work of the Joint Task Force for Fair Pricing of Prescription Drugs and its recommendations. He also noted that the Oregon

Secretary of State Audits Division recently began an audit of all PBM contracts used by Medicaid managed care entities in Oregon.

Mr. Margrish, chair of the Oregon Prescription Drug Affordability Board (PDAB), discussed additional work being done in Oregon related to PBM transparency and the anticipated work of the PDAB related to PBM transparency. He said Oregon's PDAB legislation passed in 2021, which directs the PDAB to conduct affordability reviews for the health care system for high out-of-pocket costs for residents. He explained that the PDAB will meet for the first time this summer to develop its annual work plan, which will include identifying PBM transparency issues. He said that in addition to conducting affordability reviews, the PDAB is also tasked with studying the entire prescription drug distribution and payment system in Oregon and the policies adopted by other states and countries designed to lower the list price of prescription drugs.

With respect to the drug affordability reviews, Mr. Margrish explained that in conducting the reviews, the PDAB must look at multiple factors in the purchasing and supply chain, including: 1) the estimated total amount of the price concession, discount, or rebate the manufacturer provides to each PBM registered in Oregon for the prescription drug under review, expressed as a percentage of the prices; and 2) the estimated average price concession, discount, or rebate the manufacturer provides or is expected to provide to health insurance plans and PBMs in Oregon for therapeutic alternatives. He discussed Oregon's objectives with respect to transparency and cost, such as 1) identifying where the profits are distributed and living between industry and PBMs; 2) identifying its impact on the system and consumers; and 3) informing what drugs get presented to the PDAB for affordability reviews. He said the PDAB plans to implement through administrative rulemaking the criteria it must use to conduct the affordability reviews, which will take about four to six months. He said that means the PDAB will probably not begin conducting such reviews until the beginning of calendar year 2023. He said he would be happy to share the PDAB's findings to the Subgroup sometime next year.

Mr. Margrish discussed the analytic opportunities the PDAB's work will provide to inform policy because it will be examining the whole transaction and prescription drug distribution supply chain from end to end.

3. Heard a Presentation on the Subgroup's Charge to Develop a White Paper from a Consumer Perspective

Carl Schmid (HIV + Hepatitis Policy Institute) and Anna Schwamlein Howard (American Cancer Society, Cancer Action Network—ACS CAN) provided a consumer perspective on the Subgroup's charge to develop a white paper on PBMs and PBM business practices.

Mr. Schmid discussed the role of PBMs in prescription drug access and affordability for consumers. He discussed how PBMs are involved in formulary decisions and potential factors influencing these decisions, including which drugs will be covered, adding newly approved drugs, removal of drugs, and drug exclusions. He also discussed how PBMs affect prescription drug affordability particularly due to increased prescription drug cost-sharing and other factors affecting health care costs for consumers.

Mr. Schmid also touched on the importance of prescription copayment assistance to consumers and its role in helping to reduce out-of-pocket costs. With respect to such assistance, he discussed copayment accumulator adjustment programs, which are programs that restrict a prescription drug manufacturer's assistance coupon from counting towards a patient's deductible or other out-of-pocket cost-sharing requirement. He also discussed: 1) the percentage of plans in states with copayment accumulator policies and states with laws banning copayment accumulators; 2) potential conflicts of state copayment accumulator ban laws with federal requirements related to health savings account (HSA)-qualified high deductible health plan (HDHP) and continued eligibility to contribute to an HSA in light of such a law; and 3) potential solutions to address the issue.

Ms. Howard said the Subgroup’s proposed [State] Pharmacy Benefit Manager Licensure and Regulation Act was an important first step. She said the NAIC consumer representatives strongly support the development of the white paper. She said the white paper is an opportunity for the Subgroup to build on the policies included in the proposed model’s Section 8—Regulations drafting note and when finished, it will offer a road map for states that might want to go further than what was included in the draft model. She suggested the Subgroup consider additional topics not included in the drafting note related to provisions in PBM laws that states have enacted, such as PBM network adequacy requirements, prior authorization requirements, and PBM complaint process requirements. She discussed additional items the Subgroup should consider for inclusion in the white paper, including: 1) clearly defining health carrier obligations; 2) sharing rebates with patients; and 3) the impact of the *Rutledge* decision and other PBM-related cases working their way through the courts.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

Portland, Oregon
August 10, 2022

The Senior Issues (B) Task Force met in Portland, OR, Aug. 10, 2022. The following Task Force members participated: Marlene Caride, Chair (NJ); Jon Pike, Vice Chair, and Tomasz Serbinowski (UT); Lori K. Wing-Heier represented by Sarah Bailey (AK); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Frank Pyle (DE); David Altmaier represented by John Reilly (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Randy Pipal (ID); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt represented by Craig VanAalst (KS); Sharon P. Clark represented by Rob Roberts (KY); James J. Donelon represented by Ron Henderson (LA); Kathleen A. Birrane represented by James Williams (MD); Timothy N. Schott represented by Marti Hooper (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Julia Drier (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Causey represented by Robert Croom (NC); Jon Godfread represented by Chrystal Bartuska (ND); Eric Dunning represented by Laura Arp (NE); Barbara D. Richardson represented by Jack Childress (NV); Judith L. French represented by Daniel Bradford (OH); Andrew R. Stolfi represented by Tricia Goldsmith (OR); Michael Humphreys (PA); Larry D. Deiter represented by Jill Kruger (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Scott A. White represented by Julie Blauvelt (VA); Kevin Gaffney represented by Pat Murray (VT); Mike Kreidler represented by Todd Dixon (WA); Nathan Houdek represented by Jennifer Stegall (WI); and Allan L. McVey represented by Erin K. Hunter (WV).

1. Adopted its June 7, May 11, and Spring National Meeting Minutes

The Task Force conducted an e-vote that concluded June 7 to adopt a letter to the federal Centers for Medicare & Medicaid Services (CMS) asking for assurances that there will be coordination between the CMS and the U.S. Social Security Administration (SSA) should the proposed rule to simplify Medicare enrollment and expand access be made final and implemented, and work with state insurance regulators to minimize any possible gaps in coverage for beneficiaries.

The Task Force met May 11 and examined the proposed rule promulgated by the CMS to simplify Medicare enrollment rules and agreed to send a letter asking for assurances that there will be coordination between the CMS and the SSA should the proposed rule to simplify Medicare enrollment and expand access be made final and implemented, and work with state insurance regulators to minimize any possible gaps in coverage for beneficiaries.

Mr. Lombardo made a motion, seconded by Mr. Croom, to adopt the Task Force's June 7 (Attachment One); May 11 (Attachment Two); and March 17 (*see NAIC Proceedings – Spring 2022, Senior Issues (B) Task Force*) minutes. The motion passed unanimously.

2. Heard a Presentation Regarding Medicare Part D and Auto-Enrollment

Harry Ting (Health Consumer Advocate) presented an issue that poses difficulties for State Health Insurance Assistance Program (SHIP) counselors and the harm inflicted on Medicare Part D enrollees. He said he is asking the Task Force to endorse some actions and contact the CMS regarding this problem.

Dr. Ting said the situation arises when an insurer discontinues one of its Medicare prescription drug plans (PDPs) for the next calendar year and the beneficiary is then crosswalked to another of the insurer's PDPs. He said enrollees are notified via the Annual Notice of Change (ANOC) mailing in September, and in 2021, 3.2 million PDP enrollees were crosswalked into a different PDP for 2022.

Dr. Ting said many of these ANOCs are confused with junk mail and thrown out by the beneficiary. He said the same ANOC formats are sent out every year to all Medicare Part D enrollees, but the choice they are presented with is confusing, and the beneficiaries are not given proper guidance. He provided an example of a client being crosswalked from the Mutual of Omaha Rx Value Plan and thus being switched from one of the lowest cost plans in the beneficiary's area to one of the highest. He said the change in premium for this client went from \$22.20 a month to \$77.90 a month. He said it is not the fault of the insurance plan but rather a problem with the CMS' rules and regulations.

Dr. Ting said the ANOC tells beneficiaries to check the changes to the benefits and costs to see if they affect the beneficiary. He said this is difficult for many beneficiaries to do. For example, he said one client of his takes 43 different medications and drugs, and the ANOC tells the beneficiary to go to the online drug list if there are changes. He said the online drug list is a 45-page formulary for seniors to go through. He said the ANOC asks whether one's drugs are in a different tier with different cost sharing and points out that there are five tiers with 10 cost-sharing categories. He said the ANOC asks whether one's drugs have new restrictions, and it instructs seniors to call their insurer; if the senior can use the same pharmacy, the senior is instructed to go to a website or call to obtain a directory. He said there is no mention of Medicare or SHIP resources, and the section entitled "additional resources" tells seniors to call their insurer, which is not helpful when seeking unbiased and objective answers.

Dr. Ting said there are three changes the CMS can do to address this issue, and he asks that the NAIC act in contacting the CMS to implement these changes. He said the first change is for the CMS to notify crosswalked Medicare Part D enrollees directly so the ANOC letters are not confused as junk mail and the beneficiary has notice from the CMS about upcoming changes. He suggested a sample letter that the CMS could implement. He said the second change is to modify the ANOC template currently being used. He said additional language should be made available beyond the current standard language that this document is available in (e.g., Spanish, Braille, and large print). He suggested that the section start with advising beneficiaries to call their SHIP or the 800 Medicare number, as well as provide the Medicare.gov web page.

Dr. Ting said the first two suggestions can be done by the CMS through its current rules. He said the third suggestion is for the CMS to allow crosswalked Part D plan enrollees to switch Part D plans during the January through March period, the same as Medicare Advantage (MA) enrollees. He said he believes this can be implemented through the CMS' regulations, but if not, he would propose it as an amendment. He said he would like the Task Force and the NAIC to support the three suggestions and ask the CMS to modify its Medicare Part D ANOC template to include objective resources and tell the CMS to give crosswalked Medicare Part D drug plan enrollees the same protections as those in MA plans.

Mr. Lombardo asked Dr. Ting if he has reached out to the CMS and, if so, what response has he received, if any. Dr. Ting said he has reached out several times and has to date received no response. Ms. Seip asked if Dr. Ting has reached out to the SHIP offices and programs about this matter. Dr. Ting said he has spoken to many SHIPs as they are in some states better equipped to address the problems than departments of insurance (DOIs) and they are aware, but the work is on a case-by-case basis.

Commissioner Caride asked if a letter from the Task Force to the CMS to help get a response to Dr. Ting might be in order and asked if there was any objection. Mr. Henderson and Mr. Lombardo both agreed a letter is a good idea, at least to let the CMS know that state insurance regulators are aware of this matter. Mr. Dixon said a letter

is a good idea and pointed out that many SHIP counselors are volunteers and, in most cases, cannot lobby or advocate to the CMS. Commissioner Caride asked David Torian (NAIC) to work with Dr. Ting to draft language.

3. Heard a Discussion About Medicare and COBRA

Bonnie Burns (California Health Advocates—CHA) said the Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) is a federal law giving one the legal right to keep their employer's health benefits that might otherwise end due to job loss, divorce, or death. She said employers of a certain size are required to offer COBRA when one retires or leaves an employer, and this is the same health plan coverage one had while working. Yet federal health benefit payment rules that apply while one is working and eligible for Medicare are not the same after one stops working and is eligible for COBRA and Medicare at the same time.

Ms. Burns said CMS' recent rule establishing a new special enrollment period (SEP) for health plan or employer error provides relief in instances where individuals can demonstrate that their employer or health plan, or agent materially misrepresented information related to enrolling in Medicare timely. She said the benefits of this narrow SEP are: 1) it avoids waiting to enroll during the general enrollment period (GEP); 2) it avoids late enrollment penalty avoids gap in coverage; and 3) it provides Medigap guaranteed issue.

Ms. Burns said individuals would be required to provide the SSA or CMS evidence that shows what misinformation was initially provided by the employer, group health plan (GHP), or representative. She said those tasked with providing information and guidance—employers and their agents, including human resources (HR) firms and agents/brokers—often do not understand the complex rules involving Medicare and COBRA coverage and material misrepresentation is difficult to document and prove. She said most information about COBRA occurs in verbal conversations with HR or other representatives, and employers are unlikely to state misrepresentation in writing.

Ms. Burns provided as an example a 76-year-old client who left employment and signed up for Medicare Part A at age 65 but did not sign up for Part B as he was still working. She said the employer is large group health benefits consultant, the employer provided eight months free COBRA as part of his separation agreement, and he was provided a lot of verbal instruction. She said the COBRA carrier is large group health benefits company and paid the COBRA primary benefits, but at six months, the carrier discovered eligibility for Medicare but not enrolled for benefits. She said the client had large medical expenses, and the carrier sought recovery for \$80,000 of primary COBRA paid benefits.

Ms. Burns said COBRA is the same as primary health benefits as employed. She said the former employee pays 100% of premium plus an administrative fee. She said with or without Medicare benefits, Medicare Secondary Payer rules do not apply. She said COBRA is automatically secondary and added there is a disconnect between Social Security and Medicare.

Ms. Burns said the NAIC *Coordination of Benefits Model Regulation* (Model #120) exception pertaining to people who are eligible or who could be eligible for Medicare benefits is unfairly discriminatory. She said the NAIC should delete the exception for Medicare Part B in Model #120 as there is no rationale for this exception in the NAIC historical record, and it unfairly penalizes and discriminates against Medicare beneficiaries. She said the action specified in the exception, "is or could have been covered," produces a result that is expressly prohibited in the same subsection for any other form of health benefits. Ms. Burns recommended changes to parts of Section 5 of Model #120.

Commissioner Caride suggested that the Task Force hold an open meeting solely on this issue to discuss the matter further, and invite relevant stakeholders to help state insurance regulators decide if Model #120 should be opened and edited. Commissioner Pike asked if Ms. Burns knew how many states follow the model law and how

widespread the problem is. Ms. Burns said she does not know how many states follow the model but that most states have their own regulation or laws on coordination of benefits. Ms. Blauvelt raised a similar issue involving the Affordable Care Act (ACA) small group plans, not COBRA, but that there are parallel similarities as it pertains to Model #120. She said she had inquired if other states have guidance or information regarding coordination of benefits with marketplace consumers of Medicare age who not enrolled in Medicare for either residency ineligibility (recently immigrated to the U.S.); insured to pay Part A premium; and/or eligible but not yet enrolled.

4. Disbanded the Long-Term Care Insurance Model Update (B) Subgroup

Commissioner Caride asked Mr. Torian to explain the situation. Mr. Torian said since the previous chair of the Subgroup had left in December 2021, a new chair has not been found. He said in that time, there has been only one inquiry into the status of the Subgroup. He said the anticipated work from the Long-Term Care Insurance Reduced Benefits Options (EX) Subgroup never materialized, and that Subgroup is not disbanded. He pointed out that the charge of the Long-Term Care Insurance Model Update (B) Subgroup is to determine whether the *Long-Term Care Insurance Model Act (#640)* and the *Long-Term Care Insurance Model Regulation (#641)* retain their flexibility to remain compatible with the evolving delivery of long-term care (LTC) services and the evolving long-term care insurance (LTCI) marketplace. He said it appears by the lack of interest in the status of the Subgroup that there may be a feeling that the models do retain their flexibility to be compatible with the evolving delivery of LTC services and the evolving LTCI marketplace, and the purpose of this agenda item is for the Task Force to discuss the future of the Subgroup and whether it should be repurposed or disbanded.

Mr. Lombardo said he thinks that the lack of inquiry into the status of the Subgroup leads towards disbanding the Subgroup and that he would support that move. Ms. Arp said that the models do work and that the work of the Subgroup did not make much of an impact. Mr. Serbinowski said the Subgroup did a lot of work, and it should not end in this manner without some wrap-up or summary of the work done. He said the Subgroup did go section by section through Model #640 and part of Model #641 and offered some good suggestions to address products and changes in the marketplace that are not reflected in the model, such as hybrid products and revision issues. Ms. Burns agreed with Mr. Serbinowski.

Commissioner Caride agreed the work of the Subgroup should not be dismissed so easily but asked the Task Force what should be done.

Mr. Lombardo made a motion, seconded by Mr. Hoffmeister, to disband the Long-Term Care Insurance Model Update (B) Subgroup. The motion passed.

5. Discussed Any Other Matters

Commissioner Caride informed the Task Force that the previous night, she received a response from the CMS to the March 17 letter sent by the Task Force seeking guidance from the CMS on the issue of the treatment of nonparticipating durable medical equipment (DME) suppliers under Medicare's "Limitation on Beneficiary Liability." She said the CMS response was sent out to Task Force members, interested state insurance regulators, and interested parties, and it has been posted on the Task Force's web page.

Having no further business, the Senior Issues (B) Task Force adjourned.

Draft: 6/21/22

Senior Issues (B) Task Force
E-Vote
June 7, 2022

The Senior Issues (B) Task Force conducted an e-vote that concluded June 7, 2022. The following Task Force members participated: Marlene Caride, Chair (NJ); Jon Pike, Vice Chair (UT); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Peni Itula Sapini Teo (AS); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais (CT); Trinidad Navarro (DE); David Altmaier (FL); John F. King (GA); Doug Ommen (IA); Dean L. Cameron (ID); Amy L. Beard (IN); Vicki Schmidt (KS); James L. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox (MI); Grace Arnold (MN); Chlora Lindley-Myers (MO); Troy Downing (MT); Mike Causey (NC); Jon Godfread (ND); Eric Dunning (NE); Barbara D. Richardson (NV); Judith L. French (OH); Glen Mulready (OK); Michael Humphreys (PA); Carter Lawrence (TN); Cassie Brown (TX); Scott A. White (VA); Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Allan L. McVey (WV).

1. Adopted a Letter Asking the CMS to Coordinate on its Proposed Rule and Mitigate Possible Gaps in Coverage

The Task Force conducted an e-vote to: 1) consider adoption of a letter to the federal Centers for Medicare & Medicaid Services (CMS) asking for assurances that there will be coordination between the CMS and the U.S. Social Security Administration (SSA) should the proposed rule to simplify Medicare enrollment and expand access be made final and implemented; and 2) work with state insurance regulators to minimize any possible gaps in coverage for beneficiaries.

Without objection, the Task Force adopted the comment letter (Attachment One-A) by a vote of 37 to 1.

Having no further business, the Senior Issues (B) Task Force adjourned.

June 8, 2022

Hon. Chiquita Brooks-LaSure - Administrator
Centers for Medicare & Medicaid Services
Department of Health and Human Services
200 Independence Avenue, SW
Washington, D.C. 20201

Dear Administrator Brooks-LaSure:

The National Association of Insurance Commissioners (NAIC), the standard setting organization representing the chief insurance regulators in the 50 states, the District of Columbia, and the United States territories, is writing to you regarding the CMS proposed rule to simplify Medicare enrollment and expand access (**CMS-4199-P**). We applaud the proposed rule and CMS' attempt to simplify the Medicare enrollment process. However, as state insurance regulators, we do have concerns about possible and potential gaps in coverage for beneficiaries.

The new special enrollment periods (SEPs) are good and we are pleased to see CMS recognized the need for an SEP to coordinate with the termination of Medicaid coverage that would allow individuals to enroll after termination of Medicaid eligibility. But beneficiaries trying to get a Medicare Supplement (Medigap) plan may experience gaps in coverage while they try to come up with documentation of their dates of Medicare eligibility and try to coordinate with an application for Medigap, or to join a Medicare Advantage (MA) plan. Since the Social Security Administration (SSA) is in charge of eligibility, we hope there will be coordination between CMS and SSA to minimize the possibility of creating gaps in coverage for Medigap or MA plans and to address the delays of beneficiaries receiving their Medicare cards.

We were pleased with the discussions NAIC staff had with CMS and SSA regarding the inquiry made last year about delay issues of beneficiaries receiving their Medicare cards. As you are aware, the initial application for cards starts with the SSA, not CMS. Both CMS and SSA explained that under the current process SSA mails out (usually initiated by a phone call) the application and receives and processes the application then sends to CMS to send the Medicare card to the enrollee. Because SSA field offices were closed due to the pandemic, almost all applications were being mailed to seniors, then they were required to mail the application and supporting materials back to SSA.

CMS and SSA told NAIC staff they have found that serious mail delays (3-4 weeks for each mailing) have resulted in significant delays in the final application being received by SSA. Once a complete application is received by SSA, it usually takes about 24 hours for the information to be forwarded to CMS (through daily data dumps) and then CMS mails the card within a day, but mail delivery problems have caused most of the delay problems. CMS and SSA told NAIC staff they have identified some issues on their ends that have delayed the review and approval of applications and transferring to CMS for final action, and they are working to address these issues.

We would like assurances that there will be coordination between CMS and SSA should this proposed rule be made final and implemented and that Federal agencies will work with state insurance regulators to minimize any possible gaps in coverage for beneficiaries.

Sincerely,

Draft: 5/18/22

Senior Issues (B) Task Force
Virtual Meeting
May 11, 2022

The Senior Issues (B) Task Force met May 11, 2022. The following Task Force members participated: Marlene Caride, Chair, represented by Chanell McDevitt; Jon Pike, Vice Chair (UT); Lori K. Wing-Heier represented by Mayumi Gabor (AK); Jim L. Ridling represented by William Rodgers (AL); Alan McClain represented by Jimmy Harris (AR); Ricardo Lara represented by Tyler McKinney (CA); Michael Conway represented by Peg Brown (CO); Andrew N. Mais represented by Paul Lombardo (CT); Trinidad Navarro represented by Susan Jennette (DE); David Altmaier represented by Chris Struk (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Shannon Hohl (ID); Amy L. Beard represented by Mary Ann Williams (IN); Vicki Schmidt represented by Craig VanAalst (KS); Sharon P. Clark represented by Stephanie McGaughey-Bowker (KY); James J. Donelon represented by Ron Henderson (LA); Gary D. Anderson represented by Rebecca Butler (MA); Kathleen A. Birrane represented by Fern Thomas (MD); Timothy N. Schott represented by Marti Hooper (ME); Anita G. Fox represented by Renee Campbell (MI); Grace Arnold represented by Julia Dreier (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Yuri Venjohn (ND); Eric Dunning represented by Laura Arp (NE); Barbara D. Richardson represented by Jack Childress (NV); Judith L. French represented by Laura Miller (OH); Glen Mulready (OK); Michael Humphreys represented by Michael Gurgiolo (PA); Larry D. Deiter represented by Lisa Harmon (SD); Carter Lawrence represented by Vickie Trice (TN); Cassie Brown represented by Rachel Bowden (TX); Scott A. White represented by Bob Grissom (VA); Michael S. Pieciak represented by Mary Block (VT); Mike Kreidler represented by Molly Nollette (WA); Nathan Houdek represented by Jennifer Stegall (WI); and Allan L. McVey represented by Samantha Chase (WV). Also participating were: Eric Anderson (IL); Chris Nicolopoulos (NH); Bogdanka Kurahovic (NM); Sarah Allen (NY); Patrick Smock (RI); Tomasz Serbinowski (UT); and Mavis Earnshaw (WY).

1. Discussed the CMS' Proposed Rule on Medicare Part B Enrollment

Commissioner Pike said the purpose of this Task Force meeting is to examine the proposed rule promulgated by the Centers for Medicare & Medicaid Services (CMS) to simplify Medicare enrollment rules and whether there is an impact on Medicare supplement and guaranteed issue (GI). Commissioner Pike asked William Schiffbauer (Schiffbauer Law Offices) to explain the summary he prepared and shared with the Task Force.

Mr. Schiffbauer said the proposed rule includes changes with respect to: 1) Part B enrollment simplification and new Special Enrollment Periods (SEPs); 2) extended Part B coverage limited to immunosuppressive drugs for certain end-stage renal disease (ESRD) beneficiaries; 3) simplification changes to Medicare enrollment forms; and 4) Medicaid state buy-in of Medicare premiums. He said of interest to Medigap carriers and beneficiaries are proposals relating to: 1) "simplifying" changes to Part B enrollment with respect to the effective dates for Part B entitlement; and 2) new Part B SEPs for "exceptional conditions."

Mr. Schiffbauer said the statutory amendments did not change the open enrollment and GI requirements applicable to Medigap health insurance. He said the SEPs in the proposed rule affect the Medigap GI provision and that current laws are maintained with respect to Medigap open enrollment. He said the proposed rule creates some uniformity for Medicare enrollment timing, making it bit more consistent, and that current federal and state laws remain in place and unaffected by the proposed rule.

Bonnie Burns (California Health Advocates—CHA) asked Mr. Schiffbauer if any those GI events under the new SEPs create a problem to access Medigap. Mr. Schiffbauer said no. He said the new SEPs in the proposed rule all are entries into Medicare, so once one is enrolled in Part B, it would trigger their Medigap open enrollment. He said all of the same GI provisions for Medigap remain the same. Ms. Burns asked if it is the case where a person who exercises an SEP and is 65 years of age or older is the only person who would have access to Medigap. Mr. Schiffbauer said that is dependent on state law, so if state law provides access to open enrollment or GI to those under 65, that state law remains in place, and this proposed rule does not change that. He said everything current regarding Medigap open enrollment and Medigap GI remains the same. He said this proposed rule would begin entitlement to Medicare Part B a little earlier as there has been for some a couple months delay depending on when the person signed up for their initial or general open enrollment for Medicare. He said the proposed rule moves the start date into a more uniform setting across the board.

Ms. Burns said that raises another issue because the time frame for a person to apply and to get Medigap is shortened and that can create a doughnut hole for benefits between the time a person is eligible for Medicare and when Medicare begins and the time the person is actually issued coverage under Medigap that has a different effective date. Mr. Schiffbauer said it is a matter of what evidence Medigap requires today to demonstrate that a person is enrolled in Medicare Part B, which remains the same, and so CMS will have to move faster in getting the enrollment cards or the evidence of enrollment to the beneficiaries within that time frame.

Ms. Burns said therein lies the problem as those cards come out of the Social Security Administration (SSA) and not CMS, and it is well-known the delay problem SSA is encountering with Medicare cards, so this could exacerbate the problem. She said she could envision greater problems for Medicare beneficiaries in proving that they are eligible for Medicare and in getting an effective date for Medigap that is going to coordinate with Medicare.

Mr. Schiffbauer said where CMS is seeking comments from the beneficiary community is on the new SEP and employer information and what is the burden on the beneficiary in getting the needed evidence from the employer to show that they are eligible to enroll in Medicare now. Ms. Burns said this is a place for the NAIC to weigh in and comment on behalf of consumers, as well as the timing issue for getting Medigap under this proposed rule.

Commissioner Pike asked Ms. Burns if SSA were able to address the Medicare enrollment card issue and found a way to get the cards out in a timely fashion, would this rule still be troublesome. Ms. Burns said the proof of eligibility is very important, and the gap that could occur between the time a person is eligible for Medicare and when Medicare begins and the time the person is actually issued coverage under Medigap is of concern. She said she is glad CMS has broad authority regarding the SEPs. Mr. Schiffbauer said CMS has the authority, which is statutory, and has said that if someone does not fall within the specific SEPs, then CMS will consider that person's circumstances on a case-by-case basis and that authority of CMS does not prevent CMS from coming up with other SEPs in the future.

Harry Ting (Health Consumer Advocate) said he is an NAIC consumer representative and State Health Insurance Assistance Program (SHIP) counselor. He said the overall changes in the proposed rule are excellent. He pointed out that the proposed rule would extend coverage for immunosuppressive drugs for people who had kidney transplants and were on ESRD coverage under Medicare for dialysis, which Medicare Part B only covers for 36 months; this new rule would extend coverage indefinitely.

Dr. Ting said there is one area of the proposed rule that he has concerns about, which Mr. Schiffbauer raised earlier, and that is where there is employer misrepresentation on providing information about enrolling in Medicare Part B. He said the proposed rule would create an SEP to allow an individual who can demonstrate that they were misinformed by their employer about enrolling in Medicare Part B, and he cited himself as an example

of being told to choose Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA) coverage and to continue under his employer's plan. He said although it initially sounded reasonable when he did research, it was clear that COBRA was much more expensive than getting coverage under Medicare and then getting Medigap and a drug plan. He said most people do not know this or know how to research this, and they rely on the information their employer's human resources (HR) department provides. He said the problem with this SEP is that in order to qualify, the person has to demonstrate that their employer sent them information in writing that gave false or bad information, and that information influenced their delay in enrolling in Medicare Part B. He said most information and guidance from HR departments are verbal, as was in his case, and there would be no written misinformation to provide as evidence. He said the rule should allow for a person who is enrolled in COBRA to be allowed to get into this new SEP until their COBRA expires.

Commissioner Pike asked if any regulators have any questions especially as it may relate to state laws. Ms. Hohl said the proposed rule is a good starting point and perhaps taking a look at the *Coordination of Benefits Model Regulation (Model #120)* may not be a bad idea although that is not the issue currently. She said her concern is that there is no mention of SSA in the proposed rule and how SSA will implement this proposed rule. She said she has seen issues with Idaho SHIP offices and their difficulties to work with SSA, which is the gate keeper for Part B enrollment. She said the SHIP offices see problems where beneficiaries seek equitable relief, which is separate topic, but that there are great challenges in working with the SSA. She said often times CMS is not really involved in the conversation, and it is just the beneficiary and the SSA. She said if the Task Force decides to comment, it may want to consider ask CMS: 1) what guidance will be provided to SSA; 2) where does a beneficiary go if they cannot work with SSA; or 3) how to appeal a decision. She said SSA tends to have a lot of authority in these decisions.

Ms. Burns said she would ask and encourage the NAIC to comment on the proposed rule on behalf of beneficiaries and consumers.

Having no further business, the Senior Issues (B) Task Force adjourned.

Draft: 8/19/22

Property and Casualty Insurance (C) Committee
Portland, Oregon
August 12, 2022

The Property and Casualty Insurance (C) Committee met in Portland, OR, Aug. 12, 2022. The following Committee members participated: Mike Chaney, Chair (MS); Alan McClain, Co-Vice Chair (AR); Anita G. Fox, Co-Vice Chair (MI); Mark Fowler (AL); Ricardo Lara (CA); Andrew N. Mais and George Bradner (CT); Trinidad Navarro (DE); Colin M. Hayashida and Martha Im (HI); Vicki Schmidt (KS); James J. Donelon (LA); Chris Nicolopoulos represented by Emily Doherty (NH); Glen Mulready (OK); Larry D. Deiter (SD); and Allan L. McVey represented by Erin Hunter (WV). Also participating was: Kathleen A. Birrane (MD).

1. Adopted its Aug. 1 and Spring National Meeting Minutes

Director Fox said the Committee adopted the Pet Insurance Model Act on its Aug. 1 conference call.

Commissioner Schmidt made a motion, seconded by Commissioner Lara, to adopt the Committee's Aug. 1 (Attachment One) and April 7 (*see NAIC Proceedings – Spring 2022, Property and Casualty Insurance (C) Committee*) minutes. The motion passed unanimously.

2. Adopted the Reports of its Task Forces and Working Groups

Commissioner Donelon said the Surplus Lines (C) Task Force has been receiving updates from a drafting group revising the *Nonadmitted Insurance Model Act* (#870). The drafting group met six times since its formation, and as a result of those meetings, it addressed 40 comments on the model language. During its May 23 meeting, the Task Force exposed Model #870 for a 60-day public comments period that ended July 21. Commissioner Donelon said the Task Force will be meeting soon to discuss comments.

Mr. Bradner said the Transparency and Readability of Consumer Information (C) Working Group exposed its draft of the *Best Practices for Insurance Rate Disclosures* document in June and received comments. He said the consumer education information section discusses rates, underwriting, and discounts. There were several comments received regarding readability. The drafting group met in July, and NAIC staff are working on making the changes to this piece of the document. Comments have been received on the rate filing checklist, which is based on the checklist that has been used in Kansas for several years. Mr. Bradner noted that Washington released a proposed rule for comments related to a rate filing checklist, which uses language like what is in the disclosure language in the NAIC draft. The disclosure drafting group will meet in August to discuss possible changes to the document based on comments. NAIC staff did a side-by-side comparison on the first draft of Washington's proposed rule, and NAIC staff are updating this comparison to include changes in the second draft. Mr. Bradner said the document could be adopted by the Working Group and forwarded to the Committee by the Fall National Meeting.

David F. Snyder (American Property Casualty Insurance Association—APCIA) asked if the Working Group is looking to adopt the Washington proposal as opposed to disclosure standards in other states. He said the APCIA has concerns about the Washington rate filing checklist, and he believes other state disclosures would be more workable. Mr. Bradner said the Working Group looked at different disclosures, but it is looking for additional information related to rates. Mr. Snyder said insurers have concerns with being able to comply because they are not able to allocate premium increases to individual rate factors.

Commissioner Lara made a motion, seconded by Commissioner Donelon, to adopt the following task force and working group reports: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers' Compensation (C) Task Force; Cannabis Insurance (C) Working Group (Attachment Two); Catastrophe Insurance (C) Working Group (Attachment Three); Pet Insurance (C) Working Group (Attachment Four); Terrorism Insurance Implementation (C) Working Group; and Transparency and Readability of Consumer Information (C) Working Group (Attachment Five). The motion passed unanimously.

3. Heard a Federal Update

Brooke Stringer (NAIC) said the U.S. Congress (Congress) just passed the Inflation Reduction Act of 2022, which includes significant climate investment. She said the National Flood Insurance Program's (NFIP's) latest extension expires Sept. 30, and another short-term extension is expected. She said senators from Florida, Louisiana, and Mississippi have introduced legislation to reauthorize the NFIP for one year. She also noted that the Federal Emergency Management Agency (FEMA) sent congressional leaders a list of 17 legislative proposals for NFIP reauthorization. The proposals would require legislation in order to become law; they have received mixed reviews from Congress. FEMA is calling for a 10-year reauthorization and focusing on improving the NFIP's financial framework, risk analysis and communication, resilience, and technical/operational enhancements. FEMA included a proposal that the NAIC supports, which would ensure that private flood insurance meets the continuous coverage requirement, so policyholders have a choice to return to the NFIP without losing any subsidy they previously had with the NFIP.

Ms. Stringer said the U.S. Government Accountability Office (GAO) has reached out to the NAIC and is starting work on two separate studies. One is on pandemic business interruption, and the other is on private flood insurance.

Ms. Stringer noted that the U.S. House of Representatives (House) recently passed the Wildfire Response and Drought Resiliency Act (HR 5118), but the measure faces an uncertain future in the U.S. Senate (Senate). House Committee on Financial Services Chairwoman Maxine Waters' (D-CA) Wildfire Insurance Coverage Study Act of 2022 was included in the package that requires FEMA and the GAO to conduct studies assessing the danger wildfires pose to communities and how the market for homeowners insurance is responding to this growing threat. The GAO report would also assess the state insurance regulatory response to increased premium rates, cost-sharing, or both for coverage for damage from wildfires and exclusion of such coverage from homeowners policies.

Ms. Stringer also said the House recently passed the Secure and Fair Enforcement (SAFE) Banking Act for the seventh time, this time as an amendment to the annual National Defense Authorization Act (NDAA). The NAIC supports the SAFE Banking Act, which would provide a safe harbor from violations of federal law for those engaged in the business of insurance participating in cannabis industry activity that is permissible under state law. The amended NDAA with the SAFE Banking Act is now in the hands of the Senate, which has delayed its vote until September.

4. Heard a Presentation on Cyber Insurance Data

Aaron Brandenburg (NAIC) said the Committee has a charge to, "Report on the cyber insurance market including data reported within the Cybersecurity Insurance and Identity Theft Coverage Supplement." He said the data currently available does not include alien surplus lines data, but that data would be added later this year within a written report. The Supplement shows that direct written premium for the admitted cyber market is at \$4.8 billion in 2021, up 75% from 2020. The number of policies in force declined in 2021; however, most of the decrease was in package policies, which make up the bulk of policies. Stand-alone policies increased by 31% in 2021. He said claims reported grew by about 15% in 2021, and the loss ratio remained stable at around 65%.

Mr. Brandenburg said the largest 15 insurers wrote nearly 75% of the market in 2021. He said industry reports show that 2021 saw underpricing in the cyber insurance market, along with an increase in frequency and severity of cyberattacks. He said much of the premium growth was due to actual pricing increases, rather than additional coverage. The market has recently seen stricter underwriting requirements; reduced limits; higher deductibles; more restrictive terms; and with the rise in ransomware, sublimits to policies.

Mr. Brandenburg also said identity theft insurance coverage within the Supplement does not provide valuable information since much of this coverage is provided within existing policies. He also said a definition for package policies could help insurers understand the data being sought. He said he would distribute a memorandum with recommended changes to the Supplement so Committee members could consider forwarding the recommendations to the Blanks (E) Working Group.

5. Received an Update on the Collaboration Forum on Algorithmic Bias

Commissioner Birrane said the Innovation, Cybersecurity, and Technology (H) committee has a goal of ensuring coordination and cooperation among various working groups working on topics relevant to the Committee. She said the Committee decided to establish a Collaboration Forum to identify the various working groups that touch on algorithmic bias. The Collaboration Forum is focused on communication among groups and education of the issue. The Collaboration Forum had a foundational educational session in Kansas City in July to discuss basic concepts and topics related to algorithmic bias and unfair bias. Commissioner Birrane said there were about 200 regulators that participated, including 37 commissioners. She said the working groups working on related issues will begin to step in to provide some additional regulatory-only foundational education.

Commissioner Birrane also said the Collaboration Forum is building out more public-facing education and information, such as what is being planned at the Insurance Summit, including a session related to marketing. She said the Forum will be working on the definition of key terms and will take public comment on these. She said the Forum will also work on a common framework for what is responsible artificial intelligence (AI) and what sort of tools regulators can rely on.

6. Heard an Overview of a Member Visit to the IBHS

Commissioner Richardson said the Climate and Resiliency (EX) Task Force's Pre-Mitigation Workstream co-hosted a trip with the Center for Insurance Policy and Research (CIPR) to Richburg, SC, in late July where state insurance regulators toured the Insurance Institute for Business and Home Safety (IBHS). She said state insurance regulators toured the lab and discussed how fraud and misconceptions about property insurance drive a lot of consumer complaints following catastrophic events. She said state insurance regulators discussed opportunities to work collaboratively with the IBHS to address consumer complaints through consumer outreach and education. State insurance regulators also discussed the changing market and whether insurers are moving towards different coverages and deductibles due to risks such as severe convective storms. Mitigation actions such as those offered through the IBHS FORTIFIED program, or their recently established Wildfire Prepared Home and Community Programs, can help reduce property damage risk and future potential losses for the industry.

Commissioner Richardson said the IBHS has published research showing the impact of mitigation, and it has released numerous communication pieces that commissioners could use with stakeholders to show how mitigation and fortifying property can lead to risk reduction. IBHS research and messaging is available for use by all state departments of insurance (DOIs). Commissioner Richardson encouraged commissioners to leverage the science and expertise of the IBHS as it considers ways to ensure consumers are protected from natural disaster risks.

7. Discussed its Charge Related to Parametric Insurance

Mr. Brandenburg explained that the Committee has a charge to, “Provide a forum for discussing issues related to parametric insurance and consider the development of a white paper or regulatory guidance.” He said NAIC staff have been in contact with several insurers on making presentations in the future. He noted that there has been some work going on related to parametric insurance within the NAIC, including the CIPR having an A-Z topic page that includes academic literature and the Task Force having an innovation workstream, which has heard numerous presentations related to community-based, commercial and personal parametric products.

Mr. Brandenburg said the CIPR web page defines parametric as a contract that “... insures a policyholder against the occurrence of a specific event by paying a set amount based on the magnitude of the event, as opposed to the magnitude of the losses in a traditional indemnity policy.” He said a parametric trigger is met when an objective number is measured and verified. A common example is an earthquake that registers a certain magnitude threshold or when a wind speed reading is met. Mr. Brandenburg also noted that there are academic studies and reports concerning whether such products can improve the financial resilience of low-income households in the U.S. and globally, as well as the regulatory environment, including whether the products qualify as insurance or something like a swap.

Mr. Brandenburg said the Innovation Workstream of the Task Force has heard presentations related to community-based coverage, such as coverage for cities or coral reefs. The workstream has also heard about commercial and personal coverages, such as products that make payouts in low-income areas or to assist with high deductibles, such as in earthquake prone areas or hurricanes in Puerto Rico. Mr. Brandenburg also noted that the May 2022 Central U.S. Quake Summit included reinsurers and brokers speaking about parametric products.

Mr. Brandenburg said parametric insurance products may provide several benefits, such as faster claims approval, which leads to faster payouts and lower time and expense for the insurer. The trigger and payout can be customized, helping to get money quickly to policyholders when they may need to make up a percentage deductible to assist their more traditional indemnity product.

Mr. Brandenburg said there are regulatory concerns with parametric products, including the fact that the product typically pays a relatively small amount, which could lead to consumer confusion. He said one of the big questions is whether the products are insurance since they may not meet requirements, including insurable interest, and they may function more like a derivative or swap.

Birny Birnbaum (Center for Economic Justice—CEJ) said parametric products are not insurance, and they are more like the lottery with a possible quick payout based on whether the numbers come out right. He said an event could cause great damage but not hit the threshold and not lead to any benefits under the parametric policy, creating confusion among consumers. He said parametric products currently exist, such as travel delay benefits under travel insurance that are triggered by a threshold. He said the Committee should look at parametric applications that would be of benefit, such as community-based applications.

Director Fox asked NAIC staff to conduct additional research, including what states are thinking about the products. She said it makes sense to collect insurance definitions within the various states. She said NAIC staff may wish to schedule a presentation for the Committee that could lay the groundwork for the issue. This would then aid the Committee as it begins to look more deeply into the products.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer

Draft: 8/3/22

Property and Casualty Insurance (C) Committee
Virtual Meeting
August 1, 2022

The Property and Casualty Insurance (C) Committee met Aug. 1, 2022. The following Committee members participated: Mike Chaney, Chair (MS); Alan McClain, Co-Vice Chair (AR); Anita G. Fox, Co-Vice Chair (MI); Mark Fowler represented by Brian Powell (AL); Ricardo Lara and Kendra Zoller (CA); Andrew N. Mais represented by George Bradner (CT); Colin M. Hayashida (HI); Vicki Schmidt (KS); James J. Donelon represented by Warren Byrd and Tom Travis (LA); Chris Nicolopoulos represented by Christian Citarella (NH); and Larry D. Deiter (SD). Also participating was: Don Beatty (VA).

1. Adopted the Pet Insurance Model Act

Mr. Beatty said in 2019, the Property and Casualty Insurance (C) Committee created the Pet Insurance (C) Working Group to discuss the potential development of a model law that would address regulatory concerns found within the pet insurance industry. He said the Working Group has held 26 open meetings with active participation from industry, consumer representatives, producers, and veterinarian groups.

Mr. Beatty said the proposed Pet Insurance Model Act covers required definitions and disclosures, as well as regulations for policy conditions, sales practices for wellness programs, and producer training. The Working Group had extensive discussions on the following major issues: preexisting conditions, waiting periods, free-look periods, policy renewals, wellness programs, and licensing. While the Working Group did decide that this model was not the appropriate place to decide the type of license required to sell pet insurance, state insurance regulators wanted to make sure producers are trained on the specific features of pet insurance products before selling those products. Mr. Beatty said the industry does have issues with the waiting periods and wellness programs language in the adopted version, but state insurance regulators thought this language was necessary to include in this model.

Mr. Beatty noted the model was adopted by the Pet Insurance (C) Working Group and the Property and Casualty Insurance (C) Committee prior to the 2021 Fall National Meeting, but there were concerns about language in the producer training section that could cause unintended consequences to producer licensing and reciprocity. At the 2021 Fall National Meeting, the model was sent back to the Pet Insurance (C) Working Group for revision. Mr. Beatty said after discussions about the concerns raised related to the producer licensing language, the Working Group, on July 21, 2022, adopted the Pet Insurance Model Act with revisions to the Producer Training section, which now includes required training topics for pet insurance producers and language that allows for training requirements to be satisfied by substantially similar requirements in another state.

Director Fox made a motion, seconded by Commissioner Schmidt, to adopt the Pet Insurance Model Act (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Three*). The motion passed unanimously.

Commissioner Chaney thanked Mr. Beatty and Ms. Zoller for their leadership on the Pet Insurance (C) Working Group. He noted that the Model Act would be considered by Plenary at the Summer National Meeting.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) thanked state insurance regulators for their work in finalizing the Model Act.

2. Discussed Other Matters

Commissioner Chaney said the Committee would meet at the Summer National Meeting on Aug. 12 and that the agenda has been posted online.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer/08-01_CCmte.docx

Draft: 7/21/22

Cannabis Insurance (C) Working Group
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
July 12, 2022

The Cannabis Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met July 12, 2022. The following Working Group members participated: Ricardo Lara, Chair, represented by Melerie Michael and Camilo Pizarro (CA); Michael Conway, Vice Chair, represented by Peg Brown (CO); Lori K. Wing-Heier represented by Austin Childs (AK); Jimmy Harris (AR); Angela King (DC); Christina Miller (DE); Marlene Caride represented by Randall Currier (NJ); Barbara D. Richardson and Gennady Stolyarov (NV); Glen Mulready represented by Andrew Schallhorn (OK); Carlos Valles (PR); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Karla Nussl and Marcia Violette (VT); and Michael Walker (WA).

1. Adopted its Spring National Meeting Minutes

Ms. Brown made a motion, seconded by Mr. Walker, to adopt the Working Group's March 24 minutes (*see NAIC Proceedings – Spring 2022, Property and Casualty Insurance (C) Committee, Attachment One*). The motion passed unanimously.

2. Received a Status Report on the Drafting of the *Understanding the Market for Cannabis Insurance 2.0* White Paper

Ms. Michael stated the drafting group continues to meet every few weeks and has made considerable progress. The draft *Understanding the Market for Cannabis Insurance 2.0* white paper covers the expansion of states legalizing cannabis and recent federal legislative activities. It also provides information on the current cannabis business regulatory, licensing, and educational landscape. The evolution of operating and organizational structures for cannabis businesses is discussed. An understanding of cannabis insurance needs, coverage currently available, and market considerations is also included. The white paper concludes with discussion on the next steps for moving forward. The drafting is in its final stages with only a few additional emerging issues left to be added. This includes minor cannabinoids, which is being discussed today, and on-site consumption lounges. The drafting group anticipates bringing the completed draft before the Working Group by early 2023, with full adoption by the 2023 Summer National Meeting.

3. Heard a Presentation on How Insurers are Dealing with State Legalization of Minor Cannabinoids

Matthew Johnson (QuadScore) stated that QuadScore is a custom cannabis insurance company serving licensed marijuana operations. It was created to help fill the insurance needs of the largest companies in the U.S. Although only a small portion of QuadScore's losses is from product liability, that amount is expected to grow significantly—driven in large part by novel cannabinoids. Losses could come from claims against advertising practices, lack of proper testing or manufacturing protocol, or as a result of frustration from licensed marijuana operators over the entrance of unlicensed businesses operating in a gray market.

Jodi Green (Miller Nash) stated product liability is an area of future concern because the partially regulated, complex nature of this industry lacks a gold standard for labeling, testing, and protocols. Minor cannabinoids that have intoxicating effects are of particular concern for insurers. The federal 2018 Farm Bill de-scheduled hemp, which is defined as a cannabis plant containing no more than 0.3% delta-9 tetrahydrocannabinol (THC)—levels considered too low to be psychoactive. Cannabis plants exceeding the 0.3% THC level constitute marijuana and remain a Schedule 1 controlled substance under the federal Controlled Substances Act (CSA). The U.S. Drug

Enforcement Administration (DEA) responded to the de-scheduling by publishing its interim final rule (IFR) on implementation of the Farm Bill. The IFR stated naturally occurring THC in hemp is not a controlled substance if it has no more than 0.3% delta-9 THC. However, it also stated the DEA would view synthetically derived THC as a Schedule 1 controlled substance regardless of whether it was derived from hemp and its delta-9 THC concentration.

Mr. Johnson stated that the cannabis plant contains more than 500 chemical compounds, including more than 140 cannabinoids, like cannabidiol (CBD) and various forms of THC. Scientists have identified that more than a dozen of these cannabinoids are intoxicating. However, there are only eight or nine major cannabinoids that naturally occur within the cannabis plant with quantities high enough for direct extraction. Since delta-8 and delta-10 only occur naturally in the cannabis plant in very small amounts, they must be derived from the conversion of CBD using chemical agents in a laboratory setting. Ms. Green stated that while delta-8 and delta-10 THC are not explicitly banned or prohibited from production, sale, or ownership under the Farm Bill, the IFR's reference to synthetically derived THC being viewed as a controlled substance creates a gray area of legality. At the heart of the debate is whether the process used to convert hemp-derived CBD should be considered as synthetically derived.

Mr. Johnson stated products with delta-8 and delta-10 THC have become popular because they have a psychoactive effect. In Atlanta, GA, where he lives, medical cannabis laws have been slow to roll out. However, sales of products containing novel cannabinoids like delta-8 have taken off without a strong understanding of the intoxicating chemicals, how they are produced, and the science around its health consequences. Many cannabinoids share similar atomic structures and can be synthesized via chemical processes such as isomerization or acetylation. This synthetization can leave residual chemicals in finished products. There is also a lack of product testing and lack of age verification at the point of sale. Oversight, regulation, and good manufacturing practices are needed in this space to protect consumers. Ms. Green stated the most significant liability concerns involve the potentially harmful solvents used in the chemical conversion process. The health risks increase even more when taken in combination with risk from cartridges.

Mr. Johnson stated delta-8 and delta-10 THC are delta-9 THC's isomers. Isomers are molecules comprised of the same number and types of atoms but with differing arrangements. Isomers are similar in structure and diverge only in one or two bonds. Delta-8 THC and delta-10 THC are distinct from delta-9 THC only in the location of the double bond in the cyclohexene moiety. Because of the difference in the location of one of the double bonds, delta-8 has less potency than delta-9 THC. Delta-10 THC tends to also have milder effects. Manufacturers dilute the delta-9 that still exists after processing to be compliant with the Farm Bill. However, there are some products on the market that contain both delta-8 and delta-9 THC, as well as other fillers or chemicals. Consumers may be unknowingly purchasing higher intoxication inducing products.

Ms. Green stated delta-8 and other minor cannabinoids are being sold outside of the regulated cannabis market because of the loophole in the Farm Bill. In states where it is legal, delta-8 products are being sold in grocery stores and gas stations as hemp or CBD products. This is confusing for consumers, who may not understand they are purchasing an intoxicating product. This includes children who are drawn to the wide variety of colorful gummies in various flavors. In May 2021, the U.S. Food and Drug Administration (FDA) issued five warning letters to companies for selling products containing CBD in ways that violate the Federal Food, Drug, and Cosmetic (FD&C) Act. Specifically, it took issue with its potential safety and efficacy concerns as unapproved CBD products. FDA warning letters are typically followed by litigation, although none has occurred yet. In September 2021, the FDA issued and updated a consumer advisory on delta-8 safety concerns, including the potentially harmful chemicals used in its synthetic production. In September 2021, the DEA clarified in a non-binding response letter to the Alabama Board of Pharmacy that synthetically produced THCs are illegal and not exempt under the Farm Bill. It remains unclear if the conversion process used to produce delta-8 would be considered synthetically produced.

Adding to the confusion, in May 2021, the Ninth Circuit Court of Appeals held in *AK Futures LLC v. Boyd St. Distro* that delta-8 THC is legal for purposes of trademark protection. It further stated that it would be the responsibility of the U.S. Congress to fix any inadvertent loophole. The quandary is that different circuit courts of appeals may reach different decisions or different decisions in a different context.

Ms. Green stated about 18 states have banned or restricted delta-8 THC products. Some states have placed any minor cannabinoids that are considered intoxicating into the regulated cannabis market. Like cannabis, intoxicating cannabinoids are then subject to testing, labeling, and sale requirements. This eliminates the consumer confusion that may occur when being purchased from a whole foods store. Other states, such as Oregon, recently banned all artificially derived (i.e., substances created by changing the molecular structure) cannabinoids from any part of the cannabis plant. California has a complicated system of two regulated markets. The first is for hemp and food products, which diverges from federal law. The second is for cannabis containing more than 0.3% delta-9. This means that delta-8 and delta-10 fall under the hemp and food products regulations. The California legislature has reserved the right to prohibit or add to the list of prohibited items any other intoxicating cannabinoids that are developed after for the research. Ms. Green said that states across the country are grappling with these issues and trying to understand the science just like we are.

Mr. Johnson stated there are three chief concerns: 1) residual chemicals in finished products; 2) lack of product testing; and 3) lack of age verification at point of sale. A dispensary will check consumers' identification when they enter the door and when they make a purchase. There is no control when products are being sold through a gas station or whole food store. This is particularly troublesome in the context of copycat products. These products are similarly packaged to a standard food item but infused with intoxicating cannabinoids. Intoxicating Stony Patch Kids look appealing to young and impressionable children who enjoy nonintoxicating Sour Patch Kids candy. Adults too have been confused and accidentally ingested chocolate they did not realize was intoxicating. This should be caveated with the knowledge that the human endocannabinoid system can automatically shut off people's receptors if they have ridiculously high doses of cannabinoids in their systems. This effectively safeguards the type of overdose one might have in a parallel industry, like alcohol. While these products do illicit intoxicating effects, there have not been any death claims tied to them. The concerns are around how the products are made, labeled, tested, and overseen. Ms. Green stated that outside of a few states, there is not a gold standard on product testing that identifies the amount of each type of cannabinoid and any byproducts in the product. The market for intoxicating minor cannabinoids is attractive as it bypasses the high barriers to entry (licensing costs, testing, compliance, etc.) of the regulated cannabis market.

Ms. Green stated the typical policy form for insurance coverage for cannabis products that is developed for non-cannabis industries is problematic for cannabis operators. They have cannabis exclusions that prohibit coverage for products, bodily injury, or property damage arising from cannabis operations. These cannabis exclusions will read broadly enough to encompass delta-8 THC products. If a negative event occurs related to the product, more exclusions are likely to follow. Exclusions could include language that excludes hemp-derived intoxicating cannabinoids or use the Farm Bill definition by exempting products with less than 0.3% delta-9 THC. Coverage could also be denied on the basis the policy did not specifically specify the cannabinoids are covered. Health hazard exclusions are likely to be more prominent with delta-8 THC as it is synthetically derived and has the potential for harmful byproducts.

Mr. Walker asked if Congress would be likely to take legislative action in this area in the near term.

Ms. Green stated it is plausible federal legislation could be passed in the next five years. Many states have passed medical and/or recreation legislation over the last five years. This, coupled with growing medical research and favorable court and public opinions, increases the likelihood some sort of federal legalization will occur in the next five years. Federal regulation would help eliminate loopholes like the one being used to produce and sell delta-8

THC and create consistent testing and label protocols. Mr. Johnson stated federal regulation would help address disparity issues such as arrest rates for Black cannabis users being four times higher than those for white users.

Mr. Currier asked what the reinsurance market is like for minor cannabinoids. Mr. Johnson stated that the reinsurers he works with do not understand the cannabis industry. Reinsurers are wary of the product liability exposure created by an unregulated market. His company determined the exclusionary language included in its reinsurance policies did not provide appropriate mitigation against potential claims. For this reason, his company has determined to insure only licensed marijuana businesses.

Ms. Michael asked if risks are minimized or eliminated in states that regulate this space and if there are any take-aways state insurance regulators should prioritize from the presentation. Mr. Johnson stated that it helps, but risks can never be truly eliminated. Appropriate regulation and oversight that includes mandatory product testing for new products is needed. Consumers should not consume anything that has not been tested for their own safety. Producers of minor cannabinoids should be held at the same standards as the pharmaceutical industry. Ms. Green stated there has been little research on short-term and long-term effects for some of the minor cannabinoids that are found in small quantities in the cannabis plant. Policy exclusions create the potential for coverage gaps and uninsured risks. These may be particularly troublesome for delta-8 products, where these exclusions may be ambiguous with unknown interpretation.

Having no further business, the Cannabis Insurance (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer/Cannabis/In leu of Summer NM/7-CannabisWG.docx

Draft: 8/16/22

Catastrophe Insurance (C) Working Group
and the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group
Portland, Oregon
August 9, 2022

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met in Portland, OR, Aug. 9, 2022, in joint session with the NAIC/FEMA (C) Advisory Group of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee. The following Working Group members participated: David Altmaier, Chair, and Christina Huff (FL); Mike Causey, Vice Chair, represented by Tracy Biehn (NC); Lori K. Wing-Heier and Sian Ng-Ashcraft (AK); Brian Powell (AL); Alan McClain (AR); Ricardo Lara, Lucy Jabourian, and Lynne Wehmuller (CA); George Bradner and Amy Waldhauer (CT); Martha Im and Kathleen Nakasone (HI); Travis Grassel (IA); Judy Mottar (IL); Julie Holmes (KS); James J. Donelon and Tom Travis (LA); Joy Hatchette (MD); Jo LeDuc and Lori Cray (MO); Andy Case (MS); Tom Botsko (OH); Glen Mulready (OK); Tricia Goldsmith (OR); David Buono, Michael McKenney, and Shannen Logue (PA); Alexander S. Adams Vega (PR); Beth Vollucci (RI); Stephanie Cope (TN); Mark Worman (TX); David Forte and Matt Stoutenburg (WA); and Greg Elam (WV). The following Advisory Group members participated: Glen Mulready, Chair (OK); Carter Lawrence, Vice Chair, represented by Stephanie Cope (TN); Lori K. Wing-Heier and Sian Ng-Ashcraft (AK); Brian Powell (AL); Lucy Jabourian (CA); George Bradner (CT); David Altmaier and Christina Huff (FL); Travis Grassel (IA); Julie Holmes (KS); Tom Travis (LA); Joy Hatchette (MD); Lori Cray and Jo LeDuc (MO); Tricia Goldsmith (OR); Beth Vollucci (RI); David Forte and Matt Stoutenburg (WA); and Greg Elam (WV). Also participating was: Jennifer Catechis (NM).

1. Adopted the Working Group's and Advisory Group's Spring National Meeting Minutes

Mr. Botsko made a motion, seconded by Mr. Bradner, to adopt the Working Group's and Advisory Group's April 4 minutes (see *NAIC Proceedings – Spring 2022, Property and Casualty Insurance (C) Committee, Attachment Two*). The motion passed unanimously.

2. Heard an Update on Federal Legislation

Brooke Stringer (NAIC) said the U.S. Senate (Senate) passed the Inflation Reduction Act of 2022, which is significant to climate. It is expected to head to the U.S. House of Representatives (House) Aug. 12 and pass. Ms. Stringer said the Act includes funding for climate and clean energy programs and funding for resilience block grants, which include forest restoration and resilience project and coastal community resilience building, among other grants.

Ms. Stringer said the National Flood Insurance Program's (NFIP's) extension expires Sept. 30, and a short-term extension is expected. She said U.S. Sen. Bill Cassidy (R-LA), U.S. Sen. John Kennedy (R-LA), U.S. Sen. Marco Rubio (R-FL), and U.S. Sen. Cindy Hyde-Smith (R-MS) have introduced legislation to reauthorize the NFIP until Sept. 30, 2023. Additionally, Sen. Cassidy has called for Risk Rating 2.0 to be rolled back.

Ms. Stringer said this spring, FEMA sent Congressional leaders a list of 17 legislative proposals for NFIP reauthorization. These proposals would require legislation to become law and have mixed reviews from the U.S. Congress (Congress). Ms. Stringer said FEMA is asking for a 10-year reauthorization, and its proposals focus on improving the NFIP's sound financial framework, risk analysis and communication, resilience, and technical/operational enhancements.

Ms. Stringer said one proposal that has garnered significant attention would prohibit NFIP coverage for new construction in the highest-risk areas and for commercial properties. FEMA says this will help to promote the

growth of the private flood insurance market by creating an inventory of new properties for which private insurers could compete. Ms. Stringer said some members of Congress are strongly opposed to this provision.

Ms. Stringer said FEMA included a proposal the NAIC supports, which would ensure that private flood insurance meets the continuous coverage requirement, so policyholders have a choice to return to the NFIP without losing any subsidy they previously had with the NFIP.

Ms. Stringer said the House passed the Wildfire Response and Drought Resiliency Act (H.R. 5118) on July 29. This bill includes 40 bills aimed at addressing the escalating wildfire and drought in the West. She said this measure faces uncertainty in the Senate. She said this House wildfire package would require FEMA to collaborate with the National Academies of Sciences, Engineering, and Medicine to study wildfire insurance and potential solutions to address affordability and availability, including considering a national “all hazard” insurance program. She said this wildfire package would require FEMA and the National Academies of Sciences, Engineering, and Medicine to consult with state insurance regulators, the insurance industry, and consumers.

Ms. Stringer said the House Committee on Financial Services Chairwoman Maxine Waters’ (D-CA) Wildfire Insurance Coverage Study Act of 2022 was included. This Act requires FEMA and the U.S. Government Accountability Office (GAO) to conduct studies assessing the danger wildfires pose to communities and how the market for homeowners insurance is responding to this growing threat. Ms. Stringer said the report required by FEMA is focused on wildfire assessment, and the report required by the U.S. GAO focuses on assessing the state insurance regulatory response to increased premium rates, cost-sharing, or both for the insurance coverage provided or excluded in a homeowners policy for damage from wildfires. She said even if the bill does not pass, Chairwoman Waters can ask the U.S. GAO to study these items.

3. Discussed *Catastrophe Computer Modeling Handbook* Updates

Aaron Brandenburg (NAIC) said the drafting group formed to consider revisions to the *Catastrophe Computer Modeling Handbook* has held several conference calls. He said Nicole Crockett (FL) has agreed to lead the drafting group.

The drafting group decided to make the *Catastrophe Computer Modeling Handbook* into a primer, which will focus on providing departments of insurance (DOIs) with the information needed to address the basics of catastrophe modeling and serve as a resource available to inform new and non-expert staff about the basics of catastrophe modeling. The Center for Insurance Policy and Research’s (CIPR’s) Catastrophe Modeling Center of Excellence (COE) has been approved, and the primer will serve as a transition to the COE, which will provide more technical training beyond the scope of this primer.

The drafting group has met on several occasions and plans to meet once or twice a month to work on the primer. The next meeting of the drafting group will be held on Aug. 16. Additionally, drafting group members will have access to a SharePoint site, which will allow for improved collaboration.

The drafting group has created an outline that will be used to discuss the items that are determined necessary to include in the primer. A copy of this outline is included in the materials and includes topics such as: 1) what a catastrophe model is and what it is designed to answer; 2) how catastrophe models are used and why they are important and useful; 3) advantages of catastrophe models; 4) the type and complexity of catastrophe models and their components; 5) the types of losses modeled; 6) key metrics; and 7) model usage and regulatory interaction.

Anyone that has not joined the drafting group but has contributions on the outline should reach out Sara Robben (NAIC).

4. Heard an Update from the Alabama DOI Regarding its Private Flood Insurance Initiatives

Mr. Powell provided an update from the Alabama DOI regarding its private flood insurance initiatives. Alabama experiences both coastal and inland flooding, less than 2% of the single-family residences have flood insurance through the NFIP, and consumers have limited choices for flood insurance through private insurers, particularly in the admitted market.

Mr. Powell said the private flood insurance market is relatively underdeveloped and does not bridge much of the flood protection gap. The direct written premium written in the private flood insurance market in Alabama was just over \$6 million, representing less than one-fifth of the NFIP premiums written.

Mr. Powell said the private flood insurance market has grown significantly in recent years across the country. He said this has likely been spurred by the advancement of flood risk modeling and increases in reinsurance capacity. However, the private flood insurance market is not as competitive as other property lines of business, making it difficult for consumers to obtain flood insurance outside of the NFIP.

Mr. Powell said the DOI surveyed the private insurance market to determine some of the regulatory concerns with developing a private flood insurance market so it could prioritize some actions of the DOI to help close the flood protection gap. The Alabama DOI engaged the services of an outside consulting firm to survey insurers, reinsurers, and managing general agents (MGAs) to help the DOI determine the concerns and perspectives regarding writing private flood insurance in the state.

Mr. Powell said there were four recommendations the DOI received from the survey to help increase the writing of private flood insurance in Alabama. The first recommendation was to develop and communicate a long-term strategy for flexible rate and form filing requirements that would reflect the unique nature of flood perils and the underserved flood insurance market. Respondents consistently asked for flexibility in rates, forms, and exposure management. Other concerns expressed were to treat rate and rules pages as confidential in the filings, as well as the ability to cancel, non-renew, or surcharge prior loss properties.

Mr. Powell said the second recommendation was to develop a plan to increase consumer awareness regarding flood risks. Those responding to the survey suggested that the DOI consider creating a risk disclosure that is provided to policyholders when purchasing or renewing property insurance. It was also suggested that it would be effective to highlight that there are differences in coverage depending on the policy and whether a property is inside or outside of a Special Flood Hazard Area (SFHA).

Mr. Powell said the third recommendation was for the DOI to collaborate with insurance agents, insurance industry groups, real estate professionals, flood plain managers, and other government agencies to increase consumer flood risk and flood insurance awareness. The survey results emphasized that real estate professionals and insurance agents play a crucial role in a consumer's decision regarding the purchase of flood insurance. It was suggested that real estate agents receive training and continuing education (CE) regarding flood risk. The insurance industry believes real estate agents dissuade home buyers from purchasing a flood insurance policy if the home is not in an SFHA.

Mr. Powell said the fourth and final recommendation was to promote mitigation and responsible building and raise the profile of the state's effort to close the flood protection gap and reduce flood risk. Respondents specifically asked for the DOI to be more engaged.

Mr. Powell said the DOI has issued a bulletin intended to spur the growth of the private flood insurance market. This bulletin essentially removed the barriers to entry and exit for insurers willing to write private flood insurance policies. The bulletin stated that insurers are not required to file rates for flood insurance on property other than vehicles. This exemption includes standalone flood insurance policies and endorsements for other property insurance policies. Mr. Powell said the DOI requires an insurer writing a private flood insurance policy to firmly state that the policy will meet or exceed the coverage provided in a standard NFIP flood insurance policy.

Mr. Powell said the DOI works closely with the Alabama Center for Insurance Information and Research (ACIIR), which is associated with the University of Alabama. The DOI is in ongoing conversations with the ACIIR to explore prior research data around private flood to develop a strategy to expand the private flood insurance market.

Mr. Powell said the DOI is working with nonprofit organizations to secure additional funding and assistance to deliver programs that would help to support the private flood insurance market. He said the DOI also created a mitigation resource division that deals not only with mitigation but also with resilience issues. He said the mitigation resource division takes on many tasks, including helping to develop the private flood insurance market. Mr. Powell said the DOI also has a successful wind mitigation program that helps to strengthen homes in the mitigation resource division.

Mr. Powell said the DOI is playing a major role in the creation of a resilience council, which provides a forum for coordinating activities of state government and proactively reimagining the state's approach to harmful societal impacts before they occur. This organization will create a coordinated effort to address issues such as expanding the private flood insurance market and bring multiple resources and experts to assist. The council will also help to address other perils.

Mr. Travis asked if the Alabama DOI has considered enacting any legislation. Mr. Powell said he believes this will happen as the private flood insurance market matures and the DOI has additional conversations with the ACIIR. He said the DOI will likely look at some legislation that will give the DOI a little more authority to help stimulate the private flood insurance market. Mr. Travis said Florida, Louisiana, South Carolina, and possibly Iowa have implemented some private flood insurance legislation. He said the Louisiana DOI would like to see the results of the survey.

Commissioner Mulready asked if the training for real estate agents is being done by the DOI or if they are going through a third party. Mr. Powell said it has not started this program yet; however, the DOI did do some training with real estate agents regarding wind mitigation. He said regarding the wind mitigation training, the DOI developed the criteria for the course and hired a third party to deliver the materials.

Commissioner Altmaier said this is an area of interest for many state insurance regulators, and the Working Group is a good forum to collaborate as Alabama continues its work.

5. Heard an Update from the NAIC on Private Flood Insurance Data

Mr. Brandenburg provided an update regarding the data reported on the Property/Casualty (P/C) Annual Statement blank. Prior to the 2020 data year, the private flood insurance line of the annual statement did not separate the commercial line of business and the residential line of business. The NAIC conducted a data call to obtain 2018 and 2019 data. The data is additionally categorized by standalone, first dollar, excess, and endorsement. The NAIC also collected several new data elements; i.e., number of policies, number of claims opened, and number of claims closed with payment. As of the 2020 data year, the annual statement Private Flood Insurance Supplement collects this information. The supplement is due by April 1.

Mr. Brandenburg said there are some caveats. He said last year, there were some insurers that did not file correctly; therefore, there were some errors and missing data within the dataset. He said this data is now available for 2018 through 2021 on the NAIC website.

Mr. Brandenburg said the number of commercial and residential policies combined rose from 431,323 to 561,871, which was approximately a 30% increase. Direct written premiums were just over \$1 billion, which is over two times higher than the direct written premiums reported in 2018.

Mr. Brandenburg said direct written premium for residential private flood insurance policies rose substantially in 2021, as the direct written premium increased by 61%. Standalone policies showed a larger increase—60%—than policies with endorsements. However, policies with endorsements increased by 20%. First dollar policies also increased substantially; however, there was a decline in excess policy direct written premium.

Mr. Brandenburg said the total number of residential private flood insurance policies increased by 30% in 2021, with the largest increases being in standalone policies. The number of policies with endorsements decreased.

Mr. Brandenburg said private flood insurance residential losses increased substantially. Losses in 2020 were approximately \$52 million, while they totaled almost \$175 million in 2021. The number of claims also increased significantly in 2021. There were 380 claims in 2020 and 1,900 claims in 2021.

Mr. Brandenburg said average standalone residential private flood insurance premiums rose in 2021; however, there was a decrease in the two years prior. He said the average premiums for policy endorsements is increasing as well.

Mr. Brandenburg has the highest premiums for residential private flood insurance occurred in California, Florida, New Jersey, New York, and Texas. The highest loss ratios in 2021 occurred in Alabama, Kentucky, New Jersey, Pennsylvania, and Washington. The states with the most residential private flood insurance premiums included California, Florida, New Jersey, New York, and Texas.

Mr. Brandenburg said in 2021, there were 24 insurers writing over \$1 million in residential private flood insurance. The largest insurers wrote \$273 million in direct written premium, which was over 81% of the total residential private flood insurance market. The NFIP wrote 4.9 million flood insurance policies in 2021, which was down from 4.9 million flood insurance policies in the previous year.

Mr. Grassel said during the National Flood Conference in June, it was mentioned that it is a re-education of the agency force and letting agents know that private flood insurance is now something available in the marketplace.

Mr. Travis said Louisiana has done CE for real estate agents.

Director Wing-Heier said flood has been front and center in the past few months in several states. She asked if anything is being done regarding the recommendation of a combined earthquake/flood insurance policy from private insurers where residential private flood insurance is concerned. She said a lot of states that have flood exposure also sit on a fault line. Commissioner Altmaier asked Working Group members to take this back to their zones and let the Working Group know if there is any feedback on this matter.

6. Heard an Update from the New Mexico DOI on Recent Wildfires

Ms. Catechis said on April 6, the Hermits Peak Fire was started by the U.S. Forest Service (USFS), followed by the Calf Canyon Fire on April 19, which was also started by the USFS. These two fires combined on April 22 to create

the largest wildfire in the history of New Mexico. On April 12, the McBride Fire, which was caused by utilities, started in the southeastern portion of the state. This fire has been contained but not before taking two lives on April 22.

Ms. Catechis said on April 22, the Cerro Pelado Fire east of Los Alamos County started from an unknown cause. On May 13, the Black Fire, which was human caused, started in the southwestern portion of the state and was the second largest wildfire in the history of the state; however, there were no structures lost in this fire. These five fires accounted for nearly 800,000 acres burned across the state of New Mexico. Ms. Catechis said there are several fires that have occurred since these fires and continue to occur.

Ms. Catechis said it took months for these fires to be contained, as containment occurred in mid-July. She said hundreds of homes and families continue to be at risk due to flash flooding, which has been exacerbated by the burn scars. To date, four people have died due to flash flooding.

Ms. Catechis said these fires were unique, as they burned for quite some time, and both the state and FEMA declared these fires a national disaster before they were contained. FEMA was on the ground to assist communities before they could even get in to assess damages.

Ms. Catechis said the New Mexico Office of Superintendent of Insurance (OSI) has a small staff. She said there are six staff members between the Consumer Assistance Bureau and the Property and Casualty Bureau. She said four of these staff members were directly affected by these fires and were evacuated themselves. It took at least four hours for a staff member to drive to the evacuation centers due to the size of the state, which made outreach difficult.

Ms. Catechis said New Mexico has a challenge with uninsured homes. Many of the people living in the state have lived in the same home for eight generations, and until recently, they have been spared from wildfire and have not felt the need to purchase insurance.

Ms. Catechis said the counties that were the most affected by wildfires include San Miguel, Mora, and Lincoln. San Miguel County is the largest, most populated county, with a population of 28,000. There were 2,300 homeowners policies in place. Mora County, having a population of 4,500, had 270 homeowners policies in place. Lincoln County, which is more affluent with many vacation homes and a population of 19,000, had 4,300 homeowners policies in place. To date, Lincoln County has had 86 claims totaling \$20 million.

Ms. Catechis said New Mexico has a FAIR Plan that covers vandalism and fire losses only. She said the FAIR Plan insures homes for up to \$250,000 or commercial properties for up to \$500,000. She said the lowest premium in place for a FAIR Plan policy is \$75 per year. She said there were fewer than 12 of these policies in place in northern New Mexico at the time of the wildfires. She said many residents were not aware that the FAIR Plan exists, and insurance agents were not trying to sell policies under the FAIR Plan.

Ms. Catechis said following the wildfires, the DOI was able to take advantage of some of the new emergency powers the New Mexico Superintendent of Insurance received in their 2021 legislative session. This allowed the OSI to help consumers obtain prescriptions, etc.

Ms. Catechis said the OSI created its own emergency staff team, a hotline, and a dedicated web page, and it is still staffing the emergency center in Las Vegas.

Ms. Catechis said the OSI had some good contacts following the FEMA Region 6 event that was held in May. She said the OSI was able to talk with FEMA coordinators daily.

Ms. Catechis said the OSI also had contacts with the American Property Casualty Insurance Association (APCIA) and the Rocky Mountain Insurance Association. These two groups helped the OSI reach out to insurers and provide necessary contact information to the insurers in the state, as well as help with press releases, as the OSI does not have a communications director or press person.

Ms. Catechis said the OSI received assistance from the NAIC and other states regarding best practices and how to use the data obtained through an NAIC data call. She said staff from other states volunteered and were on site to help with the recovery process.

Ms. Catechis suggested making connections with FEMA prior to a catastrophic event occurring, as it is helpful to know who to contact and develop relationships early. She said the OSI created emergency consumer “to go” boxes with materials needed to take to an emergency center site.

Ms. Catechis advised using the media most used in one’s state when messaging with consumers. She said in northern New Mexico, radio is the best form of communication. The OSI also created business cards that simply had the 800 assistance number on the card.

7. Heard an Update from the Northeast Zone on its Catastrophe Team

Mr. Bradner said the Northeast Zone Catastrophe team began meeting again. This team was originally formed in 2012. The purpose of the team was to discuss what each state was seeing in their jurisdiction. This included legislation, what each state was seeing in the insurance industry, and things like hurricane and wind/hail deductibles.

Mr. Bradner said the Northeast Zone states believed it would be beneficial to reach out to each other to discover what each of the states were doing to prepare for a catastrophic event and see if assistance was needed.

Mr. Bradner said prior to Superstorm Sandy, the Northeast Zone Catastrophe team had begun to work on a reporting mechanism tool to provide consistency regarding information for insurers to report damage estimates to the DOIs in the zone. Ultimately, the Working Group created a form to be used on a national level.

Mr. Bradner said the team quit meeting on a regular basis approximately five years ago, and during the Northeast Zone retreat last year, it was suggested that the team reconvene. He said the team had its first meeting in June and coordinated with the NAIC. He said because of this meeting, catastrophe contacts in each of the Northeast Zone states have been updated and are posted on the Working Group’s web page. He said the team also discussed NAIC educational services and support provided by the NAIC in the event of a catastrophic event.

Mr. Bradner said in 2012, the team created a spreadsheet that listed information regarding deductibles in their states. This information included if insurers had caps on hurricane deductibles, the duration of the hurricane deductible, the kind of mitigation that might have been put in place, and whether an insurer could non-renew business in specific locations. Mr. Bradner said this collaboration clarified what was being done at a state level.

Mr. Bradner said the team discussed holding a meeting with the FEMA regions in the Northeast Zone states. There are three different FEMA regions in the Northeast Zone that could hold a collaborative meeting.

Mr. Bradner said the team also discussed how states can work with their sister agencies and construction services. Many states are responsible for construction building codes, and a collaborative effort would prove to be helpful. Mr. Bradner said as of 2018, a code revision was passed in Connecticut, requiring anyone putting a new roof on their home to have to tape the entire roof. To get this code revision passed, it was necessary to determine who

oversaw the building codes and bring those in charge and the Insurance Institute for Business & Home Safety (IBHS) into the meetings to explain how roof taping would help mitigate losses.

Mr. Bradner said the team plans to meet on a quarterly basis.

8. Heard an Update from the Washington DOI on Cascadia Rising

Mr. Stoutenburg said every two years, the U.S. Department of Homeland Security (DHS) conducts national exercises around the country based on regional level catastrophes. This year, an exercise was conducted based on the Cascadia subduction zone, which is approximately 70 miles off the coast of Washington. This subduction zone has the potential to produce a 9.0 magnitude earthquake, as well as a tsunami. An event of this proportion would affect all the Northwest metropolitan areas, including portions of California, Portland, Seattle, Vancouver, and British Columbia, as well as coastal regions.

Mr. Stoutenburg said Washington participated in the exercise for three reasons: 1) to exercise its continuity plan; 2) to determine ways to help consumers following an event; and 3) to learn how the Washington State Office of the Insurance Commissioner (OIC) could implement the NAIC disaster response plan and assistance programs.

Mr. Stoutenburg said the NAIC has been working with the OIC regarding its disaster assistance program and has tested transferring the consumer call center 800 number to the NAIC call center. The NAIC also participated in the exercise by providing information regarding the NAIC disaster assistance program and disaster response plan.

Mr. Stoutenburg said the OIC is resilient, as it has an emergency action plan, which covers its agency on a 24/7 basis. He said the OIC also has a Continuity of Operations Plan (COOP) that provides a plan for the OIC to continue providing services following a disaster. The OIC requires a COOP, as well as practicing the COOP.

Mr. Stoutenburg said FEMA organizes Disaster Recovery Centers (DRCs) for federally declared disasters. DRCs can be open for 30 days or longer. The DRCs include federal and non-federal agencies and volunteer organizations with disaster recovery resources.

Mr. Stoutenburg said when FEMA does not declare individual assistance for a disaster, the states will reach out and provide local assistance. This is another area OIC staff could be participating in.

Mr. Stoutenburg said the OIC had a conversation with the emergency management division in Washington, as it is the liaison between the OIC and FEMA.

Mr. Stoutenburg said the OIC's next steps are to prepare to have a presence at DRCs to enhance preparedness and partner with the emergency management division.

9. Heard an Update on the NAIC/FEMA Region 6 Event

Commissioner Mulready said the five states from FEMA Region 6 met with FEMA Headquarters and FEMA Region 6 colleagues in a hybrid event hosted by the Oklahoma DOI. In addition to hearing an overview of recent catastrophic events in the region, the following items were discussed: 1) information regarding FEMA Region 6 stakeholder roundtables; 2) how states are organized and plan for disaster; 3) NAIC capabilities to assist states; 4) FEMA Headquarter operations, including the flood response playbook; 5) claims information; 6) communication and messaging; and 7) how states interact with FEMA at DRCs.

Commissioner Mulready said the group also visited the severe convective storm facility in Norman, OK, and it heard from Harold Brooks (National Oceanic and Atmospheric Administration—NOAA), a leading expert at the NOAA regarding warning systems and communications at the weather center.

Commissioner Mulready said the states in FEMA Region 6 build relationships with their FEMA colleagues at this event. He believes communication with FEMA is improved through this event and will continue to grow in the future.

Commissioner Mulready suggested that states that would like to hold one of these workshops reach out to the NAIC.

Having no further business, the Catastrophe Insurance (C) Working Group and the NAIC/FEMA (C) Advisory Group adjourned.

Draft: 8/4/22

Pet Insurance (C) Working Group
E-Vote
August 4, 2022

The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded Aug. 4, 2022. The following Working Group members participated: Don Beatty, Chair, (VA); Kendra Zoller, Vice Chair, (CA); Alex Reno (AK); George Bradner (CT); Warren Byrd (LA); Shirley Corbin (MD); Jo LeDuc (MO); Michael McKenney (PA); and Molly Nollette (WA).

1. Adopted its July 21 Minutes

The Working Group met July 21 to discuss proposed changes and to adopt the Pet Insurance Model Act.

A majority of the Working Group members voted in favor of adopting the July 21 minutes (Attachment Four-A). The motion passed.

Having no further business, the Pet Insurance (C) Working Group adjourned.

Draft: 8/1/22

Pet Insurance (C) Working Group
Virtual Meeting
July 21, 2022

The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met July 21, 2022. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley, Rebecca Nichols, Phyllis Oates, and Richard Tozer (VA); Kendra Zoller, Vice Chair, Risa Salat-Kolm, and Tyler McKinney (CA); Alex Reno (AK); Jimmy Harris (AR); Kristin Fabian (CT); Angela King (DC); Warren Byrd (LA); Sheri Cullen (MA); Shirley Corbin (MD); Jo LeDuc, Jeana Thomas, and Marjorie Thompson (MO); Erin Summers (NV); Michael McKenney and Dennis Sloand (PA); Patrick Smock (RI); Kathy Stajduhar (UT); Jamie Gile, Mary Block, Nick Marineau, and Anna Van Fleet (VT); and Molly Nollette and Eric Slavich (WA). Also participating were: Ken Williamson and Jimmy Gunn (AL); Lucretia Prince (DE); Brenda Johnson and Craig VanAalst (KS); Brock Bubar (ME); Chad Arnold and Michele Riddering (MI); Sandra Anderson and Christine Peters (MN); Eric Dunning (NE); Chris Aufenthie (ND); Larry D. Deiter (SD); Jody Ullman (WI); and Danie Capps (WY).

1. Adopted its June 7 Minutes

The Working Group met on June 7 to discuss proposed changes to Section 7 of the Pet Insurance Model Act.

Mr. Byrd made a motion, seconded by Ms. Nollette, to adopt the Working Group's June 7 meeting minutes (Attachment Four-A1). The motion passed unanimously.

2. Adopted the Revised Pet Insurance Model Act

Mr. Beatty said the Working Group has two versions of the model to consider for adoption, one submitted by Ms. Zoller and the other from Birny Birnbaum (Center for Economic Justice—CEJ).

Ms. Zoller said her proposal, which eliminates the proposed drafting note in Section 3 that clarifies the description of pet insurance as property, is only for the purpose of financial reporting of data. She said this drafting note would not provide uniformity of pet insurance data reporting.

Ms. Zoller said her proposal eliminates the proposed drafting notes in Section 7 because they do not offer uniformity or reciprocity. She said her proposal retains baseline training requirements in the model. She said for the sake of reciprocity, there is language that streamlines the licensing process in different states if the training is substantially similar.

Mr. McKenney said the language "but is not limited to" should be struck from Subsection 7B as it does not make sense to list the required training in the model if it does not include all training. Ms. Summers suggested "shall include at a minimum" to replace the current language. Mr. Byrd said the phrase "is not limited to" is redundant, and he agrees it should be removed. Ms. Zoller agreed with removing "but is not limited to."

Director Dunning said he does not understand the purpose of Subsection 7D because state legislatures are always empowered to make laws and do not need the permission of the insurance commissioner. He said there is regulatory authority already outlined in the model. Ms. Zoller said the language was included to allow states the ability to further clarify, interpret, or implement the model, if necessary. Director Dunning said this language is more appropriate as a drafting note. Mr. Smock said the language in Subsection 7D would apply only to producer

training and allows the individual states to include their producer training requirements. Director Dunning said the regulatory authority provided in Section 8 applies to the whole model and that there does not need to be separate language for this section of the model. Brendan Bridgeland (Center for Insurance Research—CIR) said the language in Subsection 7D should either be included or not but should not be made into a drafting note. He said a drafting note has the potential to limit regulatory authority. Mr. Byrd said the language in Section 8 gives regulatory authority and, therefore, the language in Subsection 7D should be removed. Ms. Zoller agreed this subsection could be removed. Director Dunning said the language in Section 8 should be reworded to say, “The Commissioner may promulgate rules and regulations to administer this part.”

Mr. Byrd said in Subsection 7E, the word “to” should be inserted before “satisfy.” There was no objection to this correction.

Isham Jones (American Veterinary Medical Association—AVMA) and Gail Golab (AVMA) said they support the language in Section 7. Dr. Golab said because this is a unique insurance coverage, it is important that those providing the coverage have a thorough understanding of the product.

Mr. Beatty asked Mr. Bridgeland to discuss the concerns listed in Mr. Birnbaum’s comments and address how his proposal would compare to the California proposal. Mr. Bridgeland said beyond the concerns with Subsection 7D, which have already been discussed, the California proposal does not address the concerns that originally held up the model at the 2021 Fall National Meeting. Ms. Zoller said the California proposal addresses the producer licensing concerns that were brought up at that time.

Mr. Bridgeland said that in Subsection 7E, there needs to be clarification about which subsection is being addressed. Ms. Zoller said the language in Subsection 7E is referring to the list of required training topics in Subsection 7C, and it would be up to individual states to determine if another state’s requirements are substantially similar. Ms. Riddering said this language was included to help address the issue of training required for limited lines licensees. Mr. Bridgeland asked if Subsection 7E could be reworded to clarify that it is referring to the training requirements listed in Subsection 7C. Ms. Riddering suggested changing the language to: “The satisfaction of the training requirements of another state that are substantially similar to the provisions of Subsection C shall be deemed to satisfy the training requirements in this state.” There was no objection to this language.

Ms. Zoller made a motion, seconded by Mr. Byrd to adopt the Pet Insurance Model Act as proposed by California with the following changes: 1) striking the “but is not limited to” language in Subsection 7C; 2) removing Subsection 7D; 3) changing the language in Subsection 7E to reflect that it is referring to the training requirements listed in Subsection 7C; and 4) changing Section 8 to: “ The commissioner may promulgate rules and regulations to administer this part.” The motion passed unanimously.

Having no further business, the Pet Insurance (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Spring National Meeting/Committee Meetings/PROPERTY and CASUALTY INS (C) COMMITTEE/Pet Insurance (C) WG/PetInsWG_0721min

Draft: 6/7/22

Pet Insurance (C) Working Group
Virtual Meeting
June 7, 2022

The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met June 7, 2022. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley, and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Charlene Ferguson (CA); Alex Reno (AK); Jimmy Harris (AR); George Bradner and Kristin Fabian (CT); Angela King (DC); Warren Byrd (LA); Sheri Cullen (MA); Shirley Corbin and Linas Glemza (MD); Carrie Couch, Jo LeDuc and Jeana Thomas (MO); Michael McKenney (PA); Matt Gendron, Rachel Chester, and Beth Vollucci (RI); Kathy Stajduhar (UT); Jamie Gile, Mary Block, and Anna Van Fleet (VT); and David Forte, Ned Gaines, John Haworth, Molly Nollette, and Eric Slavich (WA). Also participating were: Linda Grant (IN); Tate Flott, Brenda Johnson, and Shannon Lloyd (KS); Sharon P. Clark (KY); Brock Bubar, Sandra Darby, and Leah Piatt (ME); Joseph Sullivan (MI); Sandy Anderson (MN); Eric Dunning (NE); Melissa Robertson (NM); Lee Anne Washburn and Tynesia Dorsey (OH); Jody Ullman and Mark Prodoehl (WI); and Danie Capps (WY).

1. Discussed Proposed Changes to the Pet Insurance Model Act

Mr. Beatty said the Pet Insurance Model Act was adopted by this Working Group and the Property and Casualty Insurance (C) Committee (C Committee) prior to the 2021 NAIC Fall National Meeting. He said at that meeting, there were concerns about Section 7 and the draft model was pulled from the Executive/Plenary meeting agenda. He said this Working Group was reappointed at the 2022 NAIC Spring National Meeting to re-evaluate the Pet Insurance Model Act.

Mr. Beatty said there are two minor edits, and two larger proposed changes to the model at this time.

Mr. Beatty said the first minor edit is changing a reference in Section 5 to Section 6B. He said this reference should be to 5B but was not changed when the model sections were reordered. Mr. Byrd made a motion, seconded by Mr. Gendron, to correct the references in Section 5.

Mr. Beatty said the second minor edit was proposed by Missouri and involves adding the word “the” to the beginning of Section 7B. Ms. LeDuc said adding the word “the” would allow for a more correct reading of the statement. Ms. LeDuc made a motion, seconded by Mr. Forte, to add the word “the” to the beginning of 7B.

Mr. Gendron said Rhode Island submitted a proposal that addressed the concerns around the training requirements outlined in Section 7 of the draft model. He said those specific requirements were removed and replaced with language stating that insurance companies need to make sure producers are trained on the features of their products.

Mr. Bradner suggested having two options in the model for Section 7 where Option 1 would be the original adopted language and Option 2 would be the proposed language from Rhode Island. Mr. Gendron agreed this could be a reasonable approach. Mr. Byrd said the shorter, less specific version of the language would likely be better received by the C Committee.

Ms. Zoller said California would not support the new proposed language as it does not promote uniformity which is the goal of the model.

Birny Birnbaum (Center for Economic Justice —CEJ) said he opposes the removal of the producer training section and its replacement with a drafting note. He said that pet insurance specific producer training is necessary, particularly if it is sold by a property and casualty licensed producer. He said the drafting note says that states may wish to include producer training requirements for pet insurance but with the proposed deletion, there is no guidance for what those training requirements should be. He agreed that removing the specific training requirements would lead to a lack of uniformity.

Mr. Birnbaum proposed that the model should retain Section 7 as it was previously adopted and insert a drafting note that “States may determine that existing training requirements suffice for the sale of pet insurance depending upon the type of producer license and line of insurance used for the sale of pet insurance in the state. If a state determines that existing training requirements for producers are sufficient, the requirements in this section serve as a guide for recommended training for produces engaged in the sale of pet insurance.”

Brendan Bridgeland (Center for Insurance Research—CIR) agreed with Mr. Birnbaum’s proposal. He said he would merge the existing drafting note in Section 7 into the language in 7B.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said IIABA supported the original adopted language in Section 7. He said the model should be specific about the training requirements for someone holding a major lines license versus someone who has a limited lines license.

Cari Lee (North American Pet Health Insurance Association—NAPHIA) said NAPHIA supports a robust training for all agents selling pet insurance. She said NAPHIA supports uniformity. She said NAPHIA will support states that choose to require producer training and would support the original adopted language in Section 7. Lisa Brown (American Property Casualty Insurance Association—APCIA) and Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) agreed with Ms. Lee.

Mr. Forte said guidance on licensing, continuing education, and pre-licensing education and training should be left to the Producer Licensing Task Force. He said Washington would vote to adopt the language in Section 7 proposed Rhode Island. Commissioner Clark agree that uniformity on this issue should go through the Producer Licensing Task Force.

Mr. Gendron suggested adding language in Section 7 that says states can promulgate a regulation defining other training requirements. Mr. Beatty said it is important to work towards uniformity for states in this model.

Commissioner Clark asked if specific training requirements exists in any other model. Mr. Gendron said the original language was modeled after the producer training sections of the Long-Term Care Insurance Model Act and the Suitability in Annuity Transactions Model Regulation.

Mr. Beatty said there was suggestion to replace the proposed drafting note in Section 3 that deals with the characterization of pet insurance as property insurance for the purposes of financial reporting. Mr. Byrd said the drafting note should be removed from the model.

Mr. Beatty said the Working Group will schedule a meeting in the near future to wrap up discussions on the current proposals for Section 7.

Having no further business, the Pet Insurance (C) Working Group adjourned.

Draft: 8/3/22

Transparency and Readability of Consumer Information (C) Working Group
E-Vote
August 2, 2022

The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded Aug. 2, 2022. The following Working Group members participated: Joy Hatchette, Chair (MD); Willard Smith (AL); Ken Allen (CA); Bobbie Baca (CO); George Bradner (CT); Angela King (DC); Julie Rachford (IL); Sara Hurtado (KS); Ron Henderson (LA); Carrie Couch (MO); Kathy Shortt (NC); David Buono (PA); and Vickie Trice (TN).

1. Adopted its June 9 Minutes

The Working Group conducted an e-vote to consider adoption of its June 9 minutes (Attachment Five-A). The motion passed with a majority of the members voting in favor of adopting the Working Group's June 9 minutes.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.

Draft: 7/19/22

Transparency and Readability of Consumer Information (C) Working Group
Virtual Meeting
June 9, 2022

The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met June 9, 2022. The following Working Group members participated: Joy Hatchette, Chair (MD); Jimmy Gunn, Yada Horace, Willard Smith and Stephanie Tompkins (AL); Ken Allen (CA); Bobbie Baca (CO); George Bradner (CT); Julie Rachford (IL); Sara Hurtado and Brenda Johnson (KS); Ron Henderson (LA); Carrie Couch, Samantha Henson, Jeana Thomas, and Camille Anderson-Weddle (MO); Kathy Shortt (NC); Janelle Middlestead (ND); David Buono (PA); Jennifer Castaldi and Beth Vollucci (RI); and Marianne Baker and J'ne Byckovski (TX). Also participating were: Paula Shamburger (GA); Linda Grant (IN); Renee Campbell (MI); Jana Jarrett (OH); Tracy Klausmeier (UT); Manabu Mizushima and Michael Walker (WA); Jody Ullman (WI); and Bill Cole and Tana Howard (WY).

1. Discussed the Best Practices for Insurance Rate Disclosures Document and Exposed for a 14-Day Comment Period

The Working Group was tasked with creating a document regarding best practices for insurance rate disclosures. This document included an example rate filing checklist, an example disclosure notice for rate increases (with and without capping), and consumer education information regarding rates, underwriting, and discounts.

Ms. Hatchette said the drafting groups formed by the Working Group worked on this product for the past year and a half.

Mr. Bradner provided an overview of the work completed on the disclosure notice that was drafted. The purpose of the disclosure document is to provide a guide for states to use to implement a disclosure that provides consumers with information regarding a premium increase. The drafting group held numerous meetings, which included the participation of interested parties.

The drafting group created two documents: 1) one for increases with capping; and 2) one for increases without capping.

Recommendations for disclosures included: 1) insurers are required to send disclosure notices to insureds receiving at least a 10% premium increase; 2) the notice is required to be sent to insureds at least 30 days prior to the renewal date. (It can be included with the renewal notice, by separate mailing or by email.); 3) the disclosure notice must include a listing of the rating factors/characteristics and the dollar impact of each rating factor/characteristic on premium increase, such that at least 80% of the uncapped premium is explained and listed in descending order; and 4) insureds should receive proper information regarding the rating factors so they are able to understand if they have the ability to mitigate the increase caused by the rating factor.

Mr. Bradner said this notice is not intended to be required to be sent by an insurer if a notification process in place is acceptable to the state's insurance regulator. This is suggested to be the minimum required notice. However, insurers are permitted to provide additional information. Disclosure notice examples for both capped and uncapped are included in the materials.

Mr. Allen said he believes there needs to be more clarity in the way the premium increase is conveyed if capping is being used. The drafting group will review any suggestions for changes.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said the drafting group spent a lot of time trying to figure out how to provide more specific data to a policyholder regarding their premium increase. She said if this notice is used, it will be the first time a notice has gone out regarding a rate capping issue, and providing specific dollar amounts to subsequent renewals would require a detailed document to add all the necessary caveats regarding future rates, such as the insureds have no accidents, no tickets, no additional vehicles, etc. Ms. Brown said she believes the document in its current form is the cleanest way to reflect premium increases due to capping without causing undue confusion.

Birny Birnbaum (Center for Economic Justice—CEJ) said rate increases may result from higher premiums for existing coverage, but increases can also be due to a reduction in coverage. He said policyholders paying the same premium from one year to the next are actually paying a higher rate if their coverage has been reduced by something like a higher deductible, a cap on coverage amounts that are smaller than they were previously, or by paying for actual cash value coverage instead of replacement cost coverage. Mr. Birnbaum said consumer understanding of the impact of premium increases through coverage reduction is as important as simple premium increases.

Mr. Birnbaum suggested the 10% threshold be calculated before the reduction in coverage. For example, if the policyholder's premium increase was 3%, but reflected a coverage change from replacement costs to actual cash value, the actual increase would be 11% prior to the reduction in coverage, and a disclosure should be sent.

Mr. Birnbaum also suggested adding a second section to reflect coverage changes, called coverage reductions and the dollar impact, that would be placed under reasons the policyholder's premium increased. This section would indicate the decrease due to coverage changes and the amount of the decrease.

Mr. Birnbaum said there has been a tremendous amount of shrinking coverage across the country and telling the consumer that their premium has increased does not impart the knowledge to the policyholder that their coverage may have been reduced to keep the premium lower.

Tony Cotto (National Association of Mutual Insurance Companies—NAMIC) said the National Council of Insurance Legislators (NCOIL) is considering insurance scoring and rating transparency issues for a potential model act.

Mr. Cotto said NAMIC additionally believes disclosure notices should be triggered by a consumer request rather than an automatic disclosure going out to every consumer receiving a certain percent increase in their premium. Ken Klein (California Western School of Law) said consumers face problems because they are not being informed. He said he believes there is not a lot of consumer engagement. Therefore, it would not be beneficial to consumers to receive information regarding premium increases only if requested, as usually consumers will not ask for this type of information.

Mr. Cotto said NAMIC also has concerns with "major" reasons for an increase at renewal, as well as providing the exact dollar amount attributable to individual reasons. He said this is impractical and could threaten certain trade secrets and proprietary formulas, allowing for backwards engineering once some of these items are disclosed. Mr. Cotto said NAMIC is more supportive of the list the drafting group developed regarding reasons for rate increases. He said NAMIC plans to submit additional recommendations to ensure the list is more robust, as well as submit comments regarding the consumer education pieces.

Mr. Cotto said a 14-day public comment period is too short and asked for a 30-day public comment period. Ms. Hatchette said the Working Group has been working on this project for more than a year and is not inclined to extend the comment period beyond 14 days. However, she said she will leave it to a vote of the Working Group.

The Working Group formed a drafting group to draft consumer education language for use by departments of insurance (DOIs) for both auto insurance and homeowners insurance. The drafting group met every month (at least twice each month) to create these materials. The drafting groups included state insurance regulators and interested parties.

The purpose of the document is to provide DOIs with information it can use to create social media posts, consumer alerts, or any document to provide information to the consumer.

Mr. Klein said the section on consumer education information for homeowners accurately describes the need for homeowners to be aware that what they pay to buy a home and what it costs to rebuild a home can be different numbers. He said insurers can estimate adequate rebuilding coverage if they are asked. Mr. Klein said what happens is that if a consumer does pursue replacement cost coverage and suffers a catastrophic loss, the insurance can be inadequate to cover rebuilding costs. He said insurers often respond by telling the policyholder it was just an estimate and the policyholder is the one choosing the amount, so they should know if the estimate is low. Mr. Klein says the ultimate decision falls to the consumer. He said the advice this document gives is good advice. However, he said the estimate may not cover the actual loss, and this should be noted.

Ms. Shortt said this is great feedback and that Mr. Klein brings up a valid perspective. She said the drafting group could look at the current language and add some cautionary language within the document. Ms. Shortt said the drafting group would welcome any language Mr. Klein would like to provide. Mr. Klein is to provide some suggested language.

Mr. Bradner made a motion, seconded by Mr. Allen, to expose the Best Practices for Disclosures document for a 14-day public comment period ending June 24. The motion passed.

Once the comments are received, NAIC staff will compile the comments for the Working Group members to review and discuss.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.

Casualty Actuarial and Statistical (C) Task Force
Portland, Oregon
August 10, 2022

The Casualty Actuarial and Statistical (C) Task Force met in Portland, OR, Aug. 10, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Phil Vigliaturo (MN); Ricardo Lara represented by Ken Allen and Lynne Wehmueller (CA); Michael Conway represented by Sydney Sloan (CO); Andrew N. Mais represented by Wanchin Chou (CT); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Bruce Sartain and Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Timothy N. Schott represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann and Julie Lederer (MO); Mike Causey represented by Richard Kohan (NC); Russell Toal and Anna Krylova (NM); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Shannen Logue (PA); Michael Wise represented by Will Davis (SC); Cassie Brown represented by Miriam Fisk (TX); Kevin Gaffney and Rosemary Raszka (VT); and Allan L. McVey represented by Greg Elam (WV).

1. Adopted its July 12, June 14, and Spring National Meeting Minutes

Mr. Slavich said the Task Force met July 12, June 14, and March 8. During these meetings, the Task Force took the following action: 1) exposed the loss cost multiplier (LCM) form for a 40-day public comment period ending June 7; and 2) exposed the regulatory review of tree-based model guidance for a 25-day public comment period ending Aug. 5.

The Task Force also met June 21, May 17, April 19, and March 15 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

The Task Force held Predictive Analytics Book Club meetings on July 26, June 28, April 26, and March 22. On July 26, Betterview presented on “Leveraging Computer Vision and AI for Property and Risk Management.” On June 28, Dorothy L. Andrews (American Academy of Actuaries—Academy) and Julia Romero (Academy) presented on “Correlation vs. Causation.” On April 26, Kris DeFrain (NAIC), Ms. Andrews (NAIC), Sam Kloese (NAIC), and Roberto Perez (NAIC) presented on “Speed to Market.” On March 22, Brian Fannin (Casualty Actuarial Society—CAS) presented on “R for Actuaries and Data Scientists with Application to Insurance.”

Mr. Vigliaturo made a motion, seconded by Mr. Botsko, to adopt the Task Force’s July 12 (Attachment One); June 14 (Attachment Two); and March 8 (*see NAIC Proceedings – Spring 2022, Casualty Actuarial and Statistical (C) Task Force*) minutes. The motion passed unanimously.

2. Adopted the Report of the Actuarial Opinion (C) Working Group

Ms. Krylova said the Actuarial Opinion (C) Working Group met Aug. 2. The Working Group discussed a Financial Analysis (E) Working Group referral on predictive analytics in a reserve setting, potential changes to the qualification documentation requirements and disclosures, and potential changes to 2022 Regulatory Guidance and 2023 *Annual Statement Instructions*. The Actuarial Opinion (C) Working Group has begun to draft some financial surveillance questions that could be asked about reserve models. Because the qualification documentation is a burden on actuaries and does not change much year to year, the Working Group is discussing

whether the qualification documentation only needs to be submitted to the Board ever five years and when there have been significant changes in the actuarial qualifications or a company's operations.

Ms. Krylova said the Working Group also met July 22 and June 3 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss 2021 Statements of Actuarial Opinion (SAOs). She said no serious issues or trends were identified.

Ms. Krylova made a motion, seconded by Mr. Botsko, to adopt the report of the Actuarial Opinion (C) Working Group, including its Aug. 2 minutes (Attachment Three). The motion passed unanimously.

3. Adopted the Report of the Statistical Data (C) Working Group

Ms. Darby said the Statistical Data (C) Working Group met Aug. 4, July 20, June 15, May 18, and April 14. During these meetings, the Working Group: 1) discussed implementing an accelerated timeline for the *Auto Insurance Database Report* (Auto Report); 2) heard a presentation from the Center for Economic Justice (CEJ) on the modernization of statistical data reporting; and 3) discussed proposed changes to the Auto Report, the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report), the *Competition Database Report* (Competition Report), and the *Report on Profitability by Line by State* (Profitability Report) presented by Arthur Schwartz (LA). As previously reported, the Working Group adopted an accelerated timeline for the submission of auto insurance premium and exposure data. Statistical agents will now provide that data by Dec. 1 following the end of the data year. The Working Group will continue to consider the proposed changes to the statistical reports, as well as consider the need for updates to the *Statistical Handbook of Data Available to Insurance Regulators* and the statistical data reporting process.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group, including its Aug. 4 minutes (Attachment Four). The motion passed unanimously.

4. Exposed the LCM Form and Memorandum

Mr. Slavich said the idea to create an updated LCM form was brought forward at the Spring National Meeting, after which Larry Steinert (IN) led a volunteer group to update and combine the NAIC's numerous forms. At the July 12 meeting, there were no suggested changes to the form; however, the Task Force decided to wait on adoption until the LCM memorandum could be updated and considered for adoption at the same time. A proposed memorandum was distributed for the call. The Task Force had no questions about the form or memorandum.

The Task Force exposed the LCM form and associated memorandum for a 45-day public comment period ending Sept. 23.

5. Adopted the Regulatory Review of Tree-Based Models Guidance

At the Spring National Meeting, the Task Force adopted the appendix for the random forest models as regulatory guidance and noted that the plan would be to combine all similar appendices together for consideration as an attachment to the *Regulatory Review of Predictive Models* white paper.

At the July 14 meeting, Mr. Kloese proposed that the random forest guidance be replaced with guidance for all tree-based models. Mr. Slavich said the guidance did not need to change substantially. The Task Force exposed the regulatory review of tree-based model guidance for a 25-day public comment period ending Aug. 5. No comment letters were received.

Mr. Vigliaturo made a motion, seconded by Mr. Botsko, to adopt the regulatory review of tree-based models document (Attachment Five) as a replacement for the random forest document. The motion passed unanimously.

Mr. Kloese said he plans to next draft generalized additive modeling (GAM) guidance for Task Force review and consideration.

6. Received a Report on the NAIC Algorithmic Bias Training

At the Spring National Meeting, Mr. Slavich said he gave a report about coordination with the Innovation, Cybersecurity, and Technology (H) Committee and the Special (EX) Committee on Race and Insurance Workstream Three. He said that coordination led to the NAIC hosting a Collaboration Forum on Algorithmic Bias in Kansas City, July 18–19. Ms. Andrews gave a brief report on the forum, saying the forum contained numerous sessions on bias, how bias can get into data, governance addressing bias, and data needed for bias detection.

7. Heard a Presentation on the openIDL Initiative

Mr. Slavich introduced Jefferson Braswell (openIDL) and said openIDL is the Linux Foundation project that is coordinating the development of a collaborative, open network of insurance carriers, analytical services, and state insurance commissioners to enable more efficient and timely access to insurance industry data on the part of commissioners. He said the Task Force is hearing the presentation because of the work at the Statistical Data (C) Working Group. Mr. Braswell gave his presentation (Attachment Six).

8. Heard from Professional Actuarial Organizations

The Academy, the Actuarial Board for Counseling and Discipline (ABCD), and the Society of Actuaries (SOA) provided reports on current activities.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer/CASTF/08-10 min.docx

Draft: 7/28/22

Casualty Actuarial and Statistical (C) Task Force
Virtual Meeting
July 12, 2022

The Casualty Actuarial and Statistical (C) Task Force met July 12, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Connor Meyer (MN); Ricardo Lara represented by Mitra Sanandajifar (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Dana Popish Severinghaus represented by Anthony Bredel and Reid McClintock (IL); Amy L. Beard represented by Larry Steinert (IN); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by Arthur Schwartz and Nichole Torblaa (LA); Kathleen A. Birrane represented by Ronald Coleman and Walter Dabrowski (MD); Timothy N. Schott represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Cynthia Amann and Julie Lederer (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Michelle Osborne (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Russell Toal and Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl (OR); Michael Humphreys represented by Michael McKenney (PA); Cassie Brown represented by J'ne Byckovski (TX); Kevin Gaffney represented by Rosemary Raszka (VT); and Allan L. McVey represented by Juanita Wimmer (WV).

1. Adopted the Report of the Statistical Data (C) Working Group

Ms. Darby said the Statistical Data (C) Working Group met June 15 to discuss the timeline of the *Auto Insurance Database Report* (Auto Report) and changes proposed by Mr. Schwartz to the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report); the Auto Report; the *Competition Database Report* (Competition Report); and the *Report on Profitability by Line by State* (Profitability Report). The Working Group voted to accelerate the timeline of the Auto Report. Written premium and exposure data will now be submitted by Dec. 1 following the end of the data year. This will move up the publication of the report by about six months. This is generally the same timeline adopted for the Homeowners Report in a prior meeting.

The Working Group plans to meet July 20 to continue the discussion of Mr. Schwartz's proposed changes. It also plans to meet in August after the Summer National Meeting in regulator-to-regulator session to discuss the data for this year's Homeowners Report and Auto Report.

Ms. Darby made a motion, seconded by Ms. Krylova, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

2. Discussed the NAIC's LCM Form

The idea to compile and update multiple NAIC loss cost multiplier (LCM) forms into one was brought forward at the Spring National Meeting. Mr. Steinert's group of volunteers submitted an initial proposal, which was exposed for a public comment period that ended Feb. 7. The group revised the proposal.

Mr. Steinert said the group proposes that the form be in an Excel file. State insurance regulators can protect cells and include calculations. Mr. Steinert walked through the revised form and pointed out some programming and

wording changes. He said the group did not include the System for Electronic Rates & Forms Filings (SERFF) filing number and the NAIC group code because those can be found in the filing elsewhere. The profit and contingencies entry was combined with investment income offset. Additional calculations of percent change were added.

Mr. Steinert said there is an instructions document that will need some updates. He suggests that the instructions remain a separate document because it is more applicable to providing guidance about loss costs and loss cost filings rather than technical instructions about the LCM calculations. Mr. Schwartz volunteered to redraft the instructions document. Mr. Slavich asked the group to produce an instructions document to be considered for adoption as a package with the proposed form at the Summer National Meeting.

Ms. Darby asked for the consideration of states that require a portable document format (PDF) version in SERFF. The PDF version is needed for production of the SERFF pipeline document. The group will consider adding some instructions for how to convert an Excel file into a PDF document for SERFF filing purposes.

Mr. Steinert said the Excel file will have a password with locked cells. Only the input cells would be changeable, not the formulas.

3. Discussed the Regulatory Review of Tree-Based Rate Models

At its meeting in lieu of the Spring National Meeting, the Task Force adopted a document describing the regulatory review of random forest models and accompanying definitions. Sam Kloese (NAIC) began work to develop similar materials for gradient boosting machines (GBMs) and decided to instead propose a modification to the random forest documents for them to apply more broadly to all tree-based models.

Mr. Kloese provided education on random forest models and tree-based models (Attachment One-A). He presented his proposal for the regulatory review of tree-based models.

With few changes from the already adopted random forest models document, the Task Force agreed to a short exposure. Mr. Slavich said comments would be due Aug. 5 and discussed at the Summer National Meeting.

4. Discussed Other Matters

Mr. Slavich said the Task Force discussed the possibility of creating a handbook to help guide NAIC staff in their technical reviews of models during its June 14 call. NAIC staff will discuss the alternative of creating a steering committee with senior NAIC management.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer/CASTF/07-12-22/07-12 min.docx

Introduction

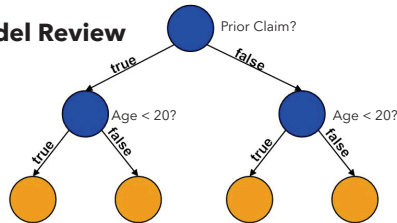

- GLM's are industry standard
- The CASTF White Paper for Predictive Models is focused primarily on GLM's
- New Appendix for Random Forests has been adopted
- Boosted trees are very similar with a couple differences

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 2

Tree Based Model Review

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted

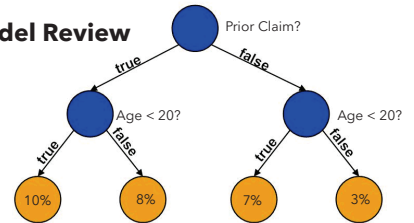

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 3

Tree Based Model Review

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted
- Classification returns a likelihood

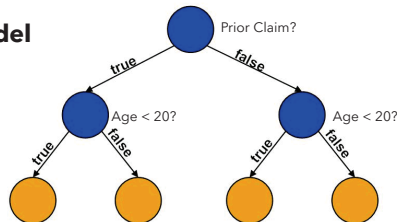

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 4

Tree Based Model

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted
- Classification returns a likelihood

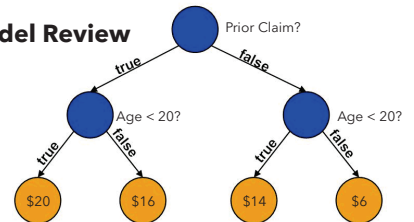

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 5

Tree Based Model Review

- Single Decision Tree
- Easy to Understand
- Mimics how people make decisions
- Easily interpreted
- Classification returns a likelihood
- Regression returns a predicted amount

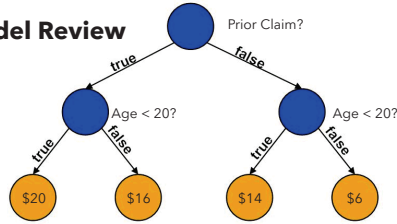

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 6

Tree Based Model Review

- Terminology
 - Root
 - Sub-Node
 - Parent/Child
- Splitting
 - Branch
 - Sub-Tree

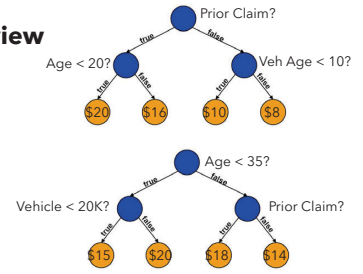

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 7

Random Forest Review

- Random Forest
 - Each tree is based on a different bootstrap sample
 - Additionally: **Randomly** chosen variables considered at each **split**
 - Each tree is grown the same way
 - Final prediction is the average of each trees prediction
- Advantages
 - Trees are substantially different
 - Each tree not based on the same sample
 - Each split not based on the same variables

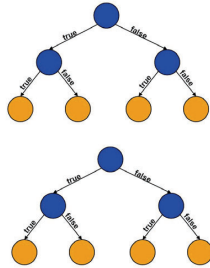

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 8

Random Forest Review

- Hyperparameters
 - Number of trees
 - Criteria on which to split
 - Bootstrap sample size (% of rows)
- When to stop splitting
 - Max Tree Depth
 - Minimum Node Size
 - Max Leaf Nodes
- Random Variables for each split (# of columns)

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 9

Differences Between RF and Boosted Trees

- Main differences
 - Boosting is run sequentially
 - Each subsequent tree attempts to refine the model further
 - The data is reweighted after each tree, so subsequent trees focus more on wrong predictions
 - Often takes longer to run than RF, trees can not be run simultaneously
 - New Hyperparameter "Learning Rate"
 - Also known as "shrinkage parameter"
 - Between 0 and 1 (usually small, closer to 0)
 - There is a trade off between number of trees and learning rate

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 10

Boosted Trees

- Boosted Trees algorithms:
 - Adaboost (Adaptive Boosting)
 - GBM (Gradient Boosting Machines)
 - XGBoost (eXtreme Gradient Boosting)
 - CatBoost (Categorical Boosting)

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 11

XGBoost

- Particularly Popular Boosting Algorithm
 - Many machine learning competitions won with XGBoost
 - Available in open source software R and Python
- Xgboost() function arguments
 - Common Hyperparameters
 - Max_depth: how many splits deep can a tree grow
 - Nrounds: Number of trees
 - Eta: Learning Rate
 - Colsample_bytree: % of columns (predictor variables) to use at each split
 - Subsample: % of rows (records) to use within each tree

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 12

XGBoost

- Other xgboost() function arguments
 - Specifying the input data
 - Data = matrix containing predictor variables
 - Label = matrix containing target variable
 - Weight = matrix containing weights (earned exposures, claim counts, etc.)
 - Specifying the learning objection (many options)
 - Objective = Reg:squarederror
 - Objective = Reg:logistic
 - Objective = Count:poisson
 - Objective = Reg:gamma
 - Objective = Reg:tweedie
 - Objective = binary:logistic

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 13

Tree Based Model Challenges Revisited

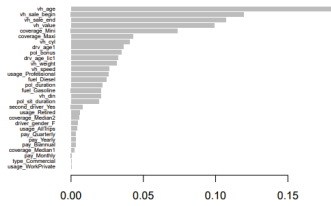

- Interpretability
 - Boosted Trees even less interpretable than RF
 - Individual trees can be counterintuitive, because they target residual from prior trees
- Prone to Overfit
 - Boosted Trees even more likely than RF to be overfit
 - Sequential nature of boosted trees means they can chase after the outliers
- Auditability
 - Same issue with auditability
 - Requires documentation of all trees to reproduce model predictions

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 14

Variable Triaging

- Variable Importance Plots
 - Provide a measure of which variables are relatively more important than others
 - High importance variables should be evaluated as they will have the greatest impact on consumers
 - Low importance variables should be evaluated for whether there is a good reason to include them
 - Similar to questioning variables with high p-values in a GLM

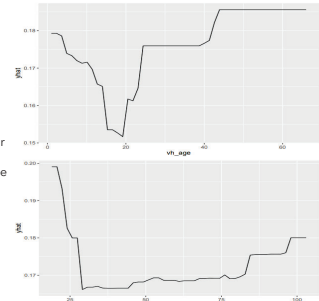

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 15

Interpretability Plots

- Partial Dependence Plots
 - Computes the marginal effect of a given feature on the prediction
 - Fixes the value of the predictor variable of interest, calculating the model prediction for each observation using the fixed value
 - Repeat for all values of the predictor variable

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 16

Interpretability Plots

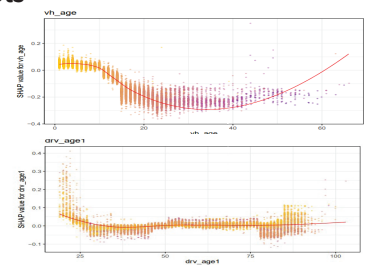

- Accumulated Local Effects
 - Better option in the case of correlated features
 - Calculates and accumulates incremental changes in the feature effects
 - Shows the expected and centered effects of a feature, like a coefficient in a GLM

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

July 2021 Book Club: <https://www.youtube.com/watch?v=yMfZAbank> 8/19/2022 17

Interpretability Plots

- Shapely Additive Explanations
 - How much that feature moves the prediction away from the overall average prediction.
 - >0, feature increases predicted value higher than average value
 - <0, feature decreases predicted value lower than average value

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 18

Challenges - Prone to Overfit

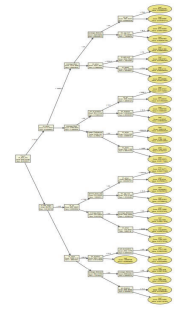

- Review general narrative on setting of hyperparameters
- Hyperparameter Consideration
 - Number of trees should be large enough, but no larger
 - Look at plot to minimize OOB/Test Error or Deviance
 - Learning Rate
 - Greater than 0, commonly < 0.2
 - Tree Complexity
 - Minimum node size should be set high enough for reasonable credibility
 - Rule of Thumb: Max depth of > 8 may be too high
 - Other hyperparameters should be disclosed and briefly commented on
 - Bootstrap sample size (% of rows)
 - Random Variables tried for each split (# of columns)
 - Criteria to split should match the model purpose (classification, regression)
- Review lift charts on test/holdout data

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 19

Challenges - Auditability

- Comprehensive Documentation
 - Allows for third party audit
 - Makes reproducing predictions from data to decision possible
 - Ideally would not require understanding complex code or specific software
 - Document entire tree ensemble
 - Print tree logic for each tree OR
 - Plot all trees OR
 - Provide a table with prediction for all possible values

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 20

Challenges - Auditability

- Sample Prediction Examples
 - Exhibits could be made for **spot-checking** against tree documentation
 - Input Predictors
 - Individual Tree Predictions
 - Overall Model Prediction

Sample Risk	Driver Age	Prior Claims	Vehicle Age	...	Tree 1	Tree 2	Tree 3	...	Model Prediction
1	16	0	5	...	\$ 50.00	\$ 40.00	\$ 30.00	...	\$ 40.00
2	17	0	6	...	\$ 49.00	\$ 39.20	\$ 29.40	...	\$ 39.20
3	18	0	7	...	\$ 48.00	\$ 38.42	\$ 28.81	...	\$ 38.42
4	19	1	8	...	\$ 47.06	\$ 37.65	\$ 28.23	...	\$ 37.65
5	20	0	9	...	\$ 46.12	\$ 36.90	\$ 27.67	...	\$ 36.90

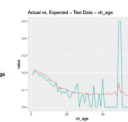

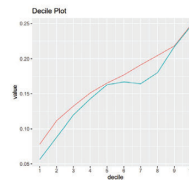

- However, **auditing** every prediction for a book of business would still be **extremely difficult**

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

8/19/2022 21

Review Other Useful Exhibits

- Quantile Plots on Holdout Data
- Compares fitted average to observed average by Quantile
- Actual vs. Expected plots on Holdout Data
- Separate plot by variable
- Demonstrates fit across variable levels

Draft: 7/27/22

Casualty Actuarial and Statistical (C) Task Force
Virtual Meeting
June 14, 2022

The Casualty Actuarial and Statistical (C) Task Force met June 14, 2022. The following Task Force members participated: Mike Kreidler, Chair, represented by Eric Slavich (WA); Grace Arnold, Vice Chair, represented by Connor Meyer and Phil Vigliaturo (MN); Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Lynne Wehmueller (CA); Michael Conway represented by Mitchell Bronson (CO); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by David Christhilf (DC); David Altmaier represented by Greg Jaynes (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus represented by Chantel Long, Reid McClintock, and Judy Mottar (IL); Amy L. Beard represented by Larry Steinert (IN); Vicki Schmidt represented by Nicole Boyd (KS); James J. Donelon represented by Nichole Torblaa and Arthur Schwartz (LA); Kathleen A. Birrane represented by Ron Coleman and Walter Dabrowski (MD); Timothy N. Schott represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Julie Lederer (MO); Troy Downing represented by Mari Kindberg (MT); Mike Causey represented by Michelle Osborne (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Russell Toal and Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Judith L. French represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn and Kate Yang (OK); Andrew R. Stolfi represented by David Dahl and Ying Liu (OR); Michael Humphreys represented by Kevin Clark and Michael McKenney (PA); Michael Wise represented by Will Davis (SC); Cassie Brown represented by J'ne Byckovski (TX); and Kevin Gaffney represented by Rosemary Raszka (VT). Also participating was: Kevin Dyke (MI).

1. Adopted the Report of the Actuarial Opinion (C) Working Group

Ms. Krylova said the Actuarial Opinion (C) Working Group met in regulator-to-regulator sessions to discuss individual Statements of Actuarial Opinion (SAOs). The Working Group also received a referral from the Financial Analysis (E) Working Group.

Ms. Krylova made a motion, seconded by Ms. Lederer, to adopt the report of the Actuarial Opinion (C) Working Group. The motion passed unanimously.

2. Adopted the Report of the Statistical Data (C) Working Group

Ms. Darby said the Statistical Data (C) Working Group is making progress on its charge to accelerate the reporting of average premiums for auto and homeowners insurance. For both auto and homeowners insurance, 2020 data is being collected. For homeowners insurance, 2021 data is also being collected. The aim for homeowners is to produce two reports, with the 2020 data being released in late 2022 and the 2021 data being released in the early months of 2023. For auto insurance, similar timelines are planned. The Working Group will hear from Louisiana during the June 15 meeting on suggested revisions to future statistical reports.

The Working Group is collecting information on state data calls. The goal is to find common data elements that are being requested in these data calls to inform updates to the *Statistical Handbook of Data Available to Insurance Regulators*. The Working Group is trying to determine the type of data state insurance regulators would find useful and include those data elements in the required statistical reporting. Members of the Task Force were asked to send any data call templates to Libby Crews (NAIC). Ms. Crews said there is no need to send information about past data calls when the NAIC was involved.

Ms. Darby made a motion, seconded by Mr. Chou, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

3. Discussed the NAIC LCM Form

In March, Mr. Steinert asked if there was interest in updating the NAIC's loss cost multiplier (LCM) forms. After the Task Force agreed, a Subgroup was formed to create a draft for exposure. The Subgroup's draft was then exposed for a public comment period ending June 7. Parties who submitted written comments (Attachment Two-A) presented their comments orally to the Task Force. Mr. Slavich asked the Subgroup to consider the written comments and discussion to produce a revised draft.

4. Discussed the Creation of a Rate Review Support Services Handbook

The NAIC's Rate Model Review Team was created by the Executive (EX) Committee after the former Big Data (EX) Working Group asked the Committee to research the best option to provide rate model assistance to states. Around the same time, the Task Force was asked to write a white paper about the regulatory review of predictive analytics, which was adopted in 2020.

With the completion of its white paper, which contains the recommendations for the priority of information items needed to review a rate filing's risk classification model, NAIC staff were able to begin to implement the NAIC rate model review process based largely on the white paper.

The NAIC Rate Model Review Team has now built processes, a shared model database, and technical review templates based on the white paper, advice from a few state insurance regulators who would use the database, and requests from individual users of the NAIC rate model technical reviews. Those processes and procedures have largely stabilized.

Mr. Slavich said the Blanks (E) Working Group has a handbook for the adoption of blanks changes, the Financial Analysis (E) Working Group has a handbook for its operations, and other NAIC committee activities have handbooks or guidance manuals. He asked the Task Force whether it should create a handbook to explain the NAIC staff technical reviews of models and help guide staff over time. He said such a handbook could contain current processes and procedures for NAIC rate model review; include state insurance regulators' guidance to the NAIC Rate Model Review Team, perhaps including the appendices of the Task Force white paper; explain how regulators want the NAIC to prioritize requests if not on a first come, first served basis; and include a process for requesting changes in the process.

Kris DeFrain (NAIC) said her vision of a handbook would not be technical, such as the development of templates, and would not put restraints on NAIC staff who might need to make changes depending on the individual filing. She said the handbook could document the history and purpose and explain confidentiality. She said most of the other NAIC staff operations have a direct tie to a specific committee that oversees the work.

Mr. Stolyarov said it might be best to keep internal documentation rather than a Task Force handbook.

Mr. Dyke said although the nature of this work is different from other committee/NAIC staff work, there might be some information in other NAIC regulator-only handbooks that could prove useful. He said the handbook for blanks is a public-facing document, and that does not seem appropriate for this case.

Mr. Davis said he sometimes just wants to ask questions to the Rate Model Review Team. He said a compilation of questions and answers (Q&As) might prove useful. He suggested creating an academic resource and Q&A

document for state insurance regulators' access. Ms. DeFrain said there is no Q&A document at this time, but academic resources are available to regulators on I-SITE. Mr. Steinert said a collection of common pitfalls, such as collinearity or things that could go wrong when modeling, would be helpful.

Mr. Slavich said it would be important to record practice and procedures in case of staff turnover. He said he does not believe the Task Force needs to exert control over the process. Ms. Darby agreed, saying that when she used the resource, she had control over how the model was reviewed and what questions were asked for the companies to answer.

The group seemed to agree that the individual state should control the process it uses with NAIC staff. There was no interest in directing the content of the NAIC's technical reports, generally because that was thought to be best handled between the individual state and NAIC staff.

Ms. DeFrain said there are some decisions where it would be helpful to have state agreement. For example, should NAIC staff work on a first come, first served basis? Ms. DeFrain asked if it is fair if one state dominates the staff resource given every state can benefit from every review due to the sharing of information in the shared model database or would regulators prefer a more even distribution of requesting states? Another example is whether there are enough NAIC resources dedicated to the project. Mr. Vigliaturo said determining priorities may be helpful, but he would suggest handling questions on a case-by-case basis. He said things appear to work fine now, and nothing may be needed unless things start to break down. Mr. Dyke said it sounds like NAIC staff may want assistance before things break down.

Mr. Dyke said another approach might be the creation of a steering committee like System for Electronic Rates & Forms Filing (SERFF) uses. That might handle what sounds like a governance role. Ms. DeFrain said she would gather information about whether a steering committee could be created.

5. Discussed the Insurance Summit's Predictive Analytics Session

The Insurance Summit will be a hybrid event hosted in Kansas City, MO, at the Loews Hotel and Convention Center. Mr. Slavich asked what content would be beneficial in a half-day predictive analytics regulator-to-regulator session on Friday, Sept. 23 all via webinar. Given the time, he asked members to send suggestions to Ms. DeFrain.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

NAIC LOSS COST FILING DOCUMENT

CALCULATION OF COMPANY LOSS COST MULTIPLIER

(EFFECTIVE ____)

Company Name	
NAIC Company Code	
Line, subline, coverage, territory, etc. combination to which this form applies	
Does this form apply to all class codes? (Yes/No) (If no, list class codes in a specifically identified attachment.)	
SERFF Filing # [NEEDED? Group Code needed too?]	
Loss Cost Reference Filing (Advisory Org. and Reference Filing #)	
Expense constant(s) (0 if no expense constant is used): Justify any expense constant(s) in a specifically identified attachment.)	

1. Declaration

The above insurer hereby declares that it is a member, subscriber, or service purchaser of the named advisory organization for this line of insurance and is filing the prospective loss costs in the captioned Loss Cost Reference Filing. The insurer's rates will be the combination of the prospective loss costs and the loss cost multipliers and, if utilized, the expense constants.

2. Rule of Application (Check One)

<input type="checkbox"/>	Current and future loss cost reference filings -- The insurer hereby files to have its loss cost multipliers and, if utilized, expense constants be applicable to future revisions of the advisory organization's prospective loss costs for this line of insurance. The insurer's rates will be the combination of the advisory organization's prospective loss costs and the insurer's loss cost multipliers and if utilized, expense constants. The rates will apply to policies written on or after the effective date of the advisory organization's prospective loss costs. This authorization is effective until disapproved by the Commissioner, or until amended or withdrawn by the insurer. Note: Some states prohibit this option.
<input type="checkbox"/>	Current loss cost reference filing only -- The insurer hereby files to have its loss cost multipliers and, if utilized, expense constants be applicable only to the above Loss Cost Reference Filing.

3. Loss Cost Modification/Deviation

(See examples below. Attach supporting data and/or rationale for the modification(s) in a specifically identified attachment.)

Loss Cost Modification Factor Examples:

- If the loss cost modification is 0%, the Loss Cost Modification Factor is 1.00.
- If your company's loss cost modification is -10%, the Loss Cost Modification factor is 0.900. The calculation is (1.000 - 0.100).
- If your company's loss cost modification is +15%, the Loss Cost Modification Factor is 1.150. The calculation is (1.000 + 0.150).

	Current	Proposed	% Change
Loss Cost Modification Factor			

NAIC LOSS COST FILING DOCUMENT

4. Expense Provisions

Projected expenses should be relative to charged premium (for non-workers’ compensation lines) and standard premium (for workers’ compensation) using the company’s rates in effect. (Attach exhibit detailing insurer expense data, impact of premium discount plans, and/or other supporting information in a specifically identified attachment.)

		Current	Proposed
A.	Commission and Brokerage	%	%
B.	Other Acquisition	%	%
C.	General Expenses	%	%
D.	Taxes, Licenses & Fees	%	%
E.	Underwriting Profit & Contingencies (before investment income offset)	%	%
F.	Investment Income Offset (show as negative value)	%	%
G.	Average Premium Discount (i.e., for workers’ compensation)	%	%
H.	Other 1 (If used, explain in Section 9.)	%	%
I.	Other 2 (If used, explain in Section 9.)	%	%
J.	Total (sum A through I)	%	%

5. Calculation of Permissible Loss (and Loss Adjustment Expense) Ratio

		Current	Proposed
A.	Permissible Loss Ratio: $PLR = 100.0\% - 4J =$	%	%
B.	PLR in Decimal Form =		

6. Additional Adjustments

(Use 1.000 where not applicable.)

		Current	Proposed
A.	Loading Factor Relative to Loss (for states where LAE is not included in loss costs)		
B.	Overall Impact of Expense Constant and Minimum Premiums (e.g., a 2.3% impact would be expressed as 1.023)		

7. Calculation and Selection of Loss Cost Multiplier

(Explain any differences, other than rounding, between 7A and 7B in Section 9.)

		Current	Proposed
A.	Company Formula Loss Cost Multiplier $[(3 \times 6A) / (5B \times 6B)]$		
B.	Company Selected Loss Cost Multiplier		

NAIC LOSS COST FILING DOCUMENT

8. Percent Change (from Current to Proposed)

		% Change
A.	Percent Change in Loss Cost Multiplier (7B proposed / 7B Current – 1.000)	%
B.	Percent Change in Loss Costs (Weighted on company’s own book of business and not the advisory organization unless company has zero premium volume)	%
C.	Percent Change in Other Rating Items (as identified in Section 9.)	%
D.	Total Percent Change [(1.000 + 8A) x (1.000 + 8B) x (1.000 + 8C) - 1.000]	%

9. Additional Comments

(If needed, attach a specifically identified attachment.)

Comments about LCM Form Exposure

CONNECTICUT

From: Gozzo Andrews, Susan <Susan.Gozzo.Andrews@ct.gov>
Sent: Wednesday, May 4, 2022 1:44 PM
To: Steinert, Larry <lsteinert@idoi.in.gov>; DeFrain, Kris <kdefrain@naic.org>
Cc: Thomas, Lia C <LCThomas@naic.org>
Subject: RE: CASTF - LCM Form Exposed for Comment

Thanks for the response Larry:
I didn't have you email. Now I do.

To clarify where I was going with that is I want to see three things always:
% in expense component of LCM
% change in loss modification
% total LCM change

This is what I ask for in our actuarial checklist in CT.

- e. Support for changing LCM (Lost Cost Multipliers) – Exhibits and narrative has been provided to explain the LCM changes.

Note 1: For LCMs, this includes a comparison of the proposed and current LCMs total broken out by the “pure LCM” component based on filed expense ratios ($1 / (1 - \text{total expense ratio})$), and the “loss modification factors”.

Note 2: Exhibits need to show % changes for the proposed LCMs in total and separately by “pure LCM” and “loss modification” components.

Seems to me that a lot of companies, maybe do to changing staffs, are changing LCM in total to get to their rate change, but are not connecting the total LCM change to the two components.

I also think sending out updated instructions with the new form is going to help us re-educate industry on this.

Thanks for all your good work on this.

Regards,

Sue

6/7/22

Comments about LCM Form Exposure

Thanks Susan. I would assume sections 4 and 5 would show additive differences, while sections 6 and 7 would show multiplicative differences (% change)?

The drafting group did consider this, but we may have felt that if the total expenses were changing significantly, it would be easy to “eyeball” the current and proposed columns and see what is changing most significantly. But we can certainly ask the larger group what they think.

Thanks again !

Lawrence Steinert, FCAS
Actuary
Indiana Dept. of Insurance
317-234-6622

On May 2, 2022, at 3:20 PM, Gozzo Andrews, Susan <Susan.Gozzo.Andrews@ct.gov> wrote:

I would like to comment that it would be helpful if we could add a column of “% change” to all the elements in Page 2.

With the loss modification percentage change on bottom of Page 1, and all the expense components on Page 2, adding % change to those elements on Page 2 would be helpful to regulators to see major changes in expenses.

And it would also help us understand what is driving the “LCM change” in 8A; that is the Loss Modification Factor or Expense change (and which expense change even).

Thank you for considering this.

Sue

From: Randy Jacobson, FCAS, MAAA
Member of the CASTF (representing Hawaii)

Subject: NAIC LCM Form – Exposed on 4/28/2022 for Comments

6/7/22

Comments about LCM Form Exposure

Dear Mr. Slavich:

Thank you for providing me this opportunity to review and comment on the proposed LCM form. After a thorough review of it, I believe it does reflect some good improvements compared to the currently published forms. With that said, I have just one comment (which I title as “*Investment Income Offset Line Item*”):

Investment Income Offset Line Item,

It is suggested that Line 4.F. “*Investment Income Offset ...*”, should be removed. It is confusing and awkward to put this item on the form. It appears to imply that an investment income offset is a result of the profit & contingency load. That is materially untrue. (Investment income comes from the investment return that is expected to be earned on the “float” -- i.e. unearned premium reserve & loss and LAE reserves – as well as earmarked surplus).

With this removal, Line 4.E. would appropriately be modified. If it is wished, Line 4.E. could be asterisked to still say, “*Show corresponding support, including how investment income is accounted for.*”

Once again, thank you for the opportunity to provide comments in this matter.

Very truly yours,

Randy Jacobson

MISSOURI

From: Lederer, Julie <Julie.Lederer@insurance.mo.gov>

Sent: Monday, June 6, 2022 4:50 PM

To: DeFrain, Kris <kdefrain@naic.org>

Cc: LeDuc, Jo <Jo.LeDuc@insurance.mo.gov>; Lennon, Patrick <Patrick.lennon@insurance.mo.gov>

Subject: RE: CASTF - LCM Form Exposed for Comment

Dear Kris,

Thank you to Larry Steinert and the other volunteer drafters for their work on the LCM form. Missouri appreciates their efforts to modernize the form and combine the two forms into one. We would like to offer a few minor comments.

Minor comments for consideration as we finalize the form:

1. Regarding the line "Does this form apply to all class codes? (Yes/No)": We might consider adding an "N/A" to the options for non-WC filings.
1. Regarding the question on whether the SERFF tracking number should be requested: If the company submits this form with the filing, the company may not know the SERFF number.

Other comments from Missouri – *these likely would **not** lead to any changes in the proposed form, but we were hoping to discuss them on a CASTF call and get insights from others:*

1. Regarding line 4.G ("Average Premium Discount"): It appears that premium discount may be treated differently in the proposed form versus the current WC form. The different treatment appears to lead to a change in the calculated LCM.
 - In the current WC form, the average discount is expressed as a factor in line 7, and this factor is in the denominator of the LCM calculation in line 8. In the proposed form, the average discount is treated as a component of the expenses and therefore factors into the PLR calculation in line 5.

6/7/22

Comments about LCM Form Exposure

- Suppose that the expenses (excluding average discount) are 30%, the average discount is 10%, and the loss cost modification as a factor is 1.00.
 - Then, using the current form, the LCM would be $1.00/(0.70*0.90) = 1.587$.
 - Using the proposed form, the LCM would be $1.00/(0.60) = 1.667$.
1. Regarding line 6.B (“Overall Impact of Expense Constant and Minimum Premiums”): This line item is unchanged from the current WC form but we are wondering how companies generally calculate this item.

Missouri appreciates the opportunity to comment.
Sincerely,

Subject: Re: CASTF - LCM Form Exposed for Comment

Good afternoon,

I'm providing comments for West Virginia on the proposed LCM form.

West Virginia could use the proposed NAIC form for all lines but would like to add the following additions or comments:

- We would like to keep the SERFF Filing number.
- We would like to add the NAIC group code.
- Can we include a field for the policy count affected by the proposed LCM?
- Can we include the effective date for the current factor so we know how long it's been in effect or when it was last changed?
- The check boxes in Question 2: Rule of Application didn't work properly for my test and may need revision before distribution or utilization.
- The current West Virginia loss cost form is located here: <https://www.wvinsurance.gov/Portals/4/pdf/rates/PCA-LCR-2009.pdf>

6/7/22

Comments about LCM Form Exposure

and the current West Virginia Rate Filing abstract is located here: <https://www.wvinsurance.gov/Portals/4/pdf/rates/PCA-R-2009.pdf>

I appreciate the chance to provide feedback and would like to express my thanks to the volunteer drafters for their work on the form.

Please let me know if you have any questions or need additional information.

Thanks,

AMERICAN ASSOCIATION OF INSURANCE SERVICES (AAIS)

From: Lori Dreaver Munn <lorim@AAISonline.com>
Sent: Tuesday, May 24, 2022 3:45 PM
To: Thomas, Lia C <LCThomas@naic.org>; DeFrain, Kris <kdefrain@naic.org>
Cc: Michael Payne <michaelpa@AAISonline.com>; Robin Westcott <robinw@AAISonline.com>
Subject: RE: CASTF - LCM Form Exposed for Comment

Good afternoon Kris and Lia,

On behalf of the American Association of Insurance Services (AAIS) we offer the following comments in response to your email dated April 28, 2022. Overall, we feel that the additional level of detail and explanations are great improvements. We have provided feedback specific to each section as indicated below:

General

- SERFF Filing # would be good information to capture.

3. Loss Cost Modification/Deviation

- For complete transparency, it may be helpful to add another row in this section for the factors instead of using the descriptive examples.

	Current	Proposed	% Change
A. Loss Cost Modification	%	%	N/A
A. Loss Cost Modification Factor (1.000 + 3A)			

6/7/22

Comments about LCM Form Exposure

- A formula for the % Change field may also be beneficial.
5. Calculation of Permissible Loss (and Loss Adjustment Expense) Ratio
- In item 5.B., consideration should be given to displaying the formula, perhaps replacing the '=' with [5A/100] following the word Form. For consistency, perhaps in item 5.A., the '=' following 4J should be removed as well. (Items 7 and 8 do not display '=' in their formulas).
8. Percent Change (from Current to Proposed)
- In item 8.A., for clarity of the formula, it may be more meaningful to move the ')' after the word 'Current' or to use a display similar to 8.D, like [(7B Prop / 7B Curr) – 1.000]

Expense Constant

- Are there instructions for how to calculate an expense constant, if applicable?

Please do not hesitate to contact me if you have any questions or if you require any additional information.

Thank you.

Eric Slavich, CASTF Chair, exposes the attached proposed NAIC loss cost multiplier form for a 40-day comment period, with comments due by **Tuesday, June 7**. The volunteer drafters, led by Larry Steinert, propose this revised form could apply to any line of business (so there would no longer be a separate form for work comp). There is also an aim for this form to meet the needs of almost all states, if possible, whether LAE is included in loss costs or not. If your state has a special need that could be met with a proposed NAIC form, please submit comments. The

Actuarial Opinion (C) Working Group
Virtual Meeting
August 2, 2022

The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met Aug. 2, 2022. The following Working Group members participated: Anna Krylova, Chair (NM); Miriam Fisk, Vice Chair (TX); Qing He (CT); David Christhlf (DC); Judy Mottar (IL); Sandra Darby (ME); Julie Lederer (MO); Gordon Hay (NE); Tom Botsko (OH); Andrew Schallhorn (OK); and Kevin Clark, James DiSanto, and Jeffery Smith (PA).

1. Discussed a Financial Analysis (E) Working Group Referral on Predictive Analytics in Reserve Setting

The Working Group received a referral from the Financial Analysis (E) Working Group (Attachment Three-A) asking for discussion of the use of predictive analytics in reserve setting and consideration of drafting guidance.

Ms. Lederer said it might be helpful to provide financial examiners with questions they might want to ask about any type of model. The Working Group discussed creating questions general in nature; using Actuarial Standard of Practice (ASOP) No. 56, Modeling; paring down questions for rating models in the *Regulatory Review of Predictive Models* white paper; investigating whether models are being used for case reserves, not just incurred but not reported claim reserves; separating out questions based on types of reserves being established; and adding subsections specific to the type of model in addition to the general questions.

2. Discussed Potential Changes to the Qualification Documentation Requirements and Disclosures

Ms. Krylova said the Working Group met June 3 and May 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the individual companies' Statements of Actuarial Opinion (SAOs). The Working Group expressed agreement to reconsider qualification documentation requirements. One idea is to only require qualification documentation every five years or if the company has significant changes. Ms. Lederer said the risk-based capital (RBC) instructions contain a list of requirements for filing the catastrophe risk charge documentation that may be useful as sample language to adjust for the qualification documentation. Interested parties said there would likely be numerous issues that would need to be detailed in the instructions if they are changed.

3. Discussed Proposed Changes to Regulatory Guidance and Annual Statement Instructions

State insurance regulators noticed that COVID-19 exposure was not always mentioned in 2021 actuarial opinions. Ms. Krylova suggested that the Working Group discuss whether COVID-19 exposure should continue to be in the opinions or whether it may be appropriate to eliminate COVID-19 disclosure in the opinion at some point.

Ms. Krylova said the Working Group previously discussed which ASOPs to reference in the instructions or whether to refer to the actuarial matrix. She said some potential wording would be as follows: "Although it is the responsibility of the Appointed Actuary to identify the ASOPs applicable to the Actuarial Opinion, Actuarial Opinion Summary, and the Actuarial Report, the Appointed Actuary may find it useful to review the Applicability Guidelines for Actuarial Standards of Practice published by the Actuarial Standards Board (ASB)."

Ms. Krylova asked whether the applicable ASOPs should be disclosed in the Actuarial Report. Working Group members did not identify significant value in having such a list.

Ms. Krylova said the Working Group previously discussed defining “conclusions” and “actuary’s conclusions” and some additional proposals regarding Section 7. With limited discussion on the call, Ms. Krylova said the changes could be discussed on the next call.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.

MEMORANDUM

TO: Anna Krylova, Chair, Actuarial Opinion (C) Working Group

FROM: Judy Weaver, Chair, Financial Analysis (E) Working Group

DATE: May 9, 2022

RE: Enhanced Regulatory Guidance

As you may be aware, the Financial Analysis (E) Working Group (FAWG) meets annually in Kansas City to discuss among other things, potentially troubled insurers and insurance groups. During this meeting, FAWG also discusses issues and industry trends, including identifying any that are potentially adverse or might warrant communication and coordination with other NAIC groups. As a result of the issues and trends discussed, FAWG would like to refer the following items to the attention of your group.

1. **Use of Predictive Analytics in Reserve Setting** – In conducting “post-mortem” analysis of a recently failed insurer, we discussed whether the insurer's use of "predictive analytical models" could have been a contributing factor. We would like you to a) discuss the use of predictive analytical models in setting reserves and b) recommend whether additional guidance should be offered to regulators who are reviewing predictive models in reserving.

In considering these issues, FAWG recommends consideration of additional guidance for regulatory actuaries and/or financial analysts/examiners to ensure these concerns are adequately addressed. If necessary and appropriate, the Working Group should consider working with the Financial Analysis Solvency Tools (E) Working Group and/or the Financial Examiners Handbook (E) Technical Group to address. If there are any questions regarding the proposed recommendation, please contact me or NAIC staff (Bruce Jenson at bjenson@naic.org) for clarification.

Thank you for your consideration.

Statistical Data (C) Working Group
E-Vote
August 4, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force conducted an e-vote that concluded Aug. 4, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair (CT); David Christhlf (DC); Arthur Schwartz (LA); Alexander Vajda (NY); Tom Botsko (OH); Landon Hubbard (OK); and David Dahl (OR).

1. Adopted its July 20 Minutes

The Working Group met July 20 to discuss proposed changes to the *Competition Database Report* (Competition Report) and the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report).

A majority of the Working Group members voted in favor of adopting the Working Group's July 20 minutes (Attachment Four-A). The motion passed.

Having no further business, the Statistical Data (C) Working Group adjourned.

Statistical Data (C) Working Group
Virtual Meeting
July 20, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met July 20, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, and Qing He (CT); David Christhif (DC); Arthur Schwartz (LA); Cynthia Amann and Brent Kabler (MO); Christian Citarella (NH); Alexander Vajda (NY); Tom Botsko (OH); Landon Hubbart (OK); David Dahl and Ying Liu (OR); and Brian Ryder and Ken Burton (TX). Also participating were: David Dombrowski (MT); Martin Swanson (NE); and Mike Andring (ND).

1. Adopted its June 15 Minutes

The Working Group met June 15 to: 1) adopt an accelerated timeline for auto premium and exposure data collection; and 2) discuss proposed changes to the *Competition Database Report* (Competition Report) and the *Dwelling, Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report).

Mr. Botsko made a motion, seconded by Ms. Amann, to adopt the Working Group's June 15 minutes (Attachment Four-A1). The motion passed unanimously.

2. Discussed Proposed Changes to NAIC Statistical Reports

Ms. Darby said the Working Group discussed the proposed changes to the Competition Report and the Homeowners Report during its June 15 meeting. She said the Working Group will discuss proposed changes to the *Auto Insurance Database Report* (Auto Report) and the *Report on Profitability By Line By State* (Profitability Report).

Mr. Schwartz said in the Profitability Report, he would like to see a breakout of the rate of return by different types of insurers, including mutual reciprocals, risk retention groups (RRGs), surplus lines, and stock insurers. He said this would be valuable for state insurance regulators when looking at rate filings and company reserves. Birny Birnbaum (Center for Economic Justice—CEJ) agreed that it is useful to look at the profitability of investor-owned insurers versus policyholder-owned insurers because the profitability of the industry is distorted in the aggregate. He said different types of companies have different goals for their rate of return. He said he does not see the need for a breakout of surplus lines insurers. Ms. Darby said she would like NAIC staff to see if Mr. Schwartz's suggested changes can be incorporated into the report.

Mr. Schwartz said the Auto Report is useful and often quoted in the media. He said he would like to improve on the report with additional useful information. He said the report currently shows the average premium by state, but he would like the report to show the average premium by metropolitan statistical area (MSA). He said this would be useful in comparing states and areas with similar populations. Ms. Darby asked if MSA or ZIP code data would be better to include. Mr. Schwartz said he wants to be able to drill down into premiums in heavily populated areas versus less populated areas, but he does not have a preference whether that data is collected by ZIP code or MSA. Mr. Citarella said MSAs can cross state lines, so they may not directly correlate to state totals. Mr. Birnbaum said insurance companies would have to convert existing data into geographic areas that correlate to the MSA. He said companies would more easily be able to provide ZIP code data.

Mr. Schwartz said he would like the Auto Report to include additional information such as the average age of private passenger autos (PPAs) on the road, median value of cars on the road, median liability policy limit, median per capita disposable income, population, number of insured drivers, number of registered personal autos, number of earned exposures, minimum liability limits, number of accidents, number of DUI arrests, and accident count and frequency with autonomous emergency braking (AEB) systems. He said some of this information can be collected from insurers, and other information would need to come from external sources such as government databases. He said adding these metrics would allow the report to become a warehouse of extremely useful data.

Ms. Darby asked if the report should include data on other driver assistance systems beyond the AEB system data. Mr. Schwartz said the AEB data would be most important to collect, but the other data would also be useful.

Mr. Chou said the Working Group should weigh the costs and benefits of adding additional information to the report. He said it should consider the cost of adding data that may delay the publication of the report. He said the Working Group should also consider who the customer is and what benefits this additional data would provide them.

Mr. Citarella said some of the external data would be hard to obtain, such as number of licensed drivers and number of crashes.

Mr. Birnbaum said the Working Group needs to consider how the Auto Report is used and what kind of data state insurance regulators and other users would find useful. He said the report should be a high-level summary of premiums and exposures across states. He said the report should only include insurance-relevant information. He said to get a more granular level of detail, statistical reporting would have to be required on a transactional level. He said some of the additional data elements that are being discussed for this report should be included in a re-engineered statistical plan.

Tony Cotto (National Association of Mutual Insurance Companies—NAMIC) said NAMIC is committed to working with state insurance regulators to provide the data that is needed. He said many of the data found in government databases are estimates that are compiled from state agencies. He encouraged the Working Group to look at information from the Insurance Institute of Highway Safety (IIHS), which may be helpful for its review of auto insurance data. He agreed that the purpose of this Auto Report is to be a high-level public consumption summary.

Mr. Schwartz said he would like the Working Group to consider changing the names of certain statistical reports so that all reports coming from this Working Group have a consistent naming structure. He said, for example, the Homeowners Report should be titled the Homeowners Insurance Database. He said this is more consistent with the name of the Auto Report and allows people to easily search for the report.

Ms. Darby said NAIC staff will summarize the proposed changes and that the Working Group would continue to consider these changes in future meetings.

Having no further business, the Statistical Data (C) Working Group adjourned.

Statistical Data (C) Working Group
Virtual Meeting
June 15, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met June 15, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, George Bradner, and Qing He (CT); David Christhlf (DC); Arthur Schwartz (LA); Cynthia Amann and Jo LeDuc (MO); Christian Citarella (NH); Alexander Vajda (NY); Andrew Schallhorn and Landon Hubbard (OK); Ying Liu (OR); and Brian Ryder (TX). Also participating were: Luciano Gobbo (CA); Tate Flott (KS); Mari Kindberg and David Dombrowski (MT); and Mike Andring (ND).

1. Adopted its May 18 Minutes

The Working Group met May 18 to hear a presentation from the Center for Economic Justice (CEJ) on statistical data collection.

Ms. Amann made a motion, seconded by Mr. Vajda, to adopt the Working Group's May 18 minutes (Attachment Four-A1a). The motion passed unanimously.

2. Adopted an Accelerated Timeline for Auto Premium and Exposure Data Collection

Ms. Darby said discussion with statistical agents has found that most submitting statistical agents could provide the written premium and exposure data for auto insurance by November following the end of the data year. She said other statistical agents indicated that they would be able to adjust their timelines to the Working Group's requested date. She said Texas data would be available toward the end of November following the end of the data year. Ms. Darby said NAIC staff would need about eight weeks to check the submitted data and compile the full report. She said that after review from this Working Group and the Casualty Actuarial and Statistical (C) Task Force, the publication would be available for release about three months into the following year.

Ms. Darby said the data is currently provided about 18 months after the end the data period. She said the accelerated timeline would speed up the publishing of the *Auto Insurance Database Report* (Auto Report) to about nine months sooner.

Mr. Chou made a motion, seconded by Ms. Amann, to move up the reporting timeline for auto premium and exposure data to Dec. 1 following the end of the data year.

3. Discussed Proposed Changes to NAIC Statistical Reports

Mr. Schwartz said he has proposed changes to the statistical reports that would include data that would be more useful than what is currently in the reports. He said he is open to these additional elements being published after the average premium reports, as the average premium is much more important to have in a timely manner.

Mr. Schwartz said the *Competition Database Report* (Competition Report) should show the breakout of the market share by different types of insurance companies. He said whether a company is a stock, mutual, risk retention group (RRG), or surplus carrier would affect how it is viewed in an analysis of market competition. Mr. Vajda asked where residual market insurers would fit in to the new proposed columns. Jennifer Gardner (NAIC) said the report does currently include RRGs and surplus lines carriers. She said residual markets are not included because most

of them do not report on the NAIC Annual Statement. Mr. Schwartz said he would still like to see additional columns for breaking out stock and mutual companies. Ms. Gardner said those columns replace the columns that currently show the last five-year average.

Mr. Bradner agreed that he would like to see a breakout of residual markets in this report. He said that states could require the residual markets to report their data for this report. Ms. Gardner said she would have to research which residual markets might already report on the NAIC annual statement, but the Working Group could look at collecting the data separate from the annual statement and add it into the Competition Report.

Birny Birnbaum (CEJ) said the Property Insurance Plans Service Office (PIPSO) and AIPSO collect the residual market information. Mr. Bradner said not all state residual markets may provide that data currently. He said if PIPSO and AIPSO could provide that data, it would be a simple way to add the data into the report. He said there is an issue that there are different kinds of residual markets. He said some are assigned risk plans where the risk is assigned to different companies. He said in that case, companies would need to break out their voluntary experience from their assigned risk experience. He said having the residual market data is a good indicator of disruption in the market if a residual market is growing in a certain state. Ms. Gardner said the residual market should be an appendix to the current report in order to not skew the number of insurers shown in the report. Mr. Citarella said states would likely see indicators of an increase in residual market growth before this data would even be available. Mr. Bradner agreed and said this data would just be in addition to other data the department would receive, such as consumer complains. Ms. LeDuc said Missouri receives updates from its residual markets on at least an annual basis, if not quarterly.

Mr. Schwartz said in the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative United Owners Insurance* (Homeowners Report), he would like to see a chart of average premium by state. He said these premiums would need to be tempered by the average policy limit, as well as the number of homes insured in that particular state. He said the Census Bureau can provide the number of owner-occupied homes versus the number of rental homes, as well as the number of homes insured under a Fair Access to Insurance Requirements Plan (FAIR Plan). He said he would also like to include flood insurance data, including the number of homes insured in a flood zone and how many homes are insured via the National Flood Insurance Program (NFIP) and how many homes are insured by private flood insurance. Mr. Bradner said that the Federal Emergency Management Agency (FEMA) flood data is hard to obtain and that much of the private flood insurance is written by surplus lines carriers, but he would like to be able to see that information included in the report. He said it would be most useful to state insurance regulators to have all of this information available in a Tableau dashboard that each state insurance regulator can use to drill down the data in their state.

Having no further business, the Statistical Data (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C Cmte/2022_Summer/CASTF/SDWG/06-15-22/StatDataWGmin_615.docx

Draft: 6/7/22

Statistical Data (C) Working Group
Virtual Meeting
May 18, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met May 18, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, George Bradner, and Amy Waldhauer (CT); Daniel Davis (AL); Arthur Schwartz (LA); Cynthia Amann (MO); Christian Citarella (NH); Ed Scanlon (NJ); Tom Botsko (OH); Andrew Schallhorn (OK); David Dahl and Ying Liu (OR); and Brian Ryder (TX). Also participating were: Luciano Gobbo (CA); Anthony Bredel (IL); Mari Kindberg (MT); Chris Aufenthie and Mike Andring (ND); and Mary Block (VT).

1. Adopted its April 14 Minutes

The Working Group met April 14 to: 1) discuss the timeline of data collection for the *Auto Insurance Database Report* (Auto Report); and 2) discuss updating the *Statistical Handbook of Data Available to Regulators* (Handbook).

Ms. Amann made a motion, seconded by Mr. Botsko, to adopt the Working Group's April 14 minutes (Attachment Four-A1a1). The motion passed unanimously.

2. Heard a Presentation from the Center for Economic Justice on Statistical Data Collection

Birny Birnbaum (Center for Economic Justice—CEJ) said the topic of his presentation is modernizing statistical data reporting for personal lines insurance. He said the availability of the data relating to the Covid-19 pandemic is a good place to begin looking at how data can be collected. He said Workers' Compensation insurance data related to Covid-19 claims, as well as mortgage lending and other financial data on CARES Act funds were made available during the pandemic. He said the data was available on a one to two month lag. Mr. Birnbaum said there was not available data for regulators for personal lines insurance like auto and homeowners.

Mr. Birnbaum said the NAIC Statistical Handbook says responsibilities most relevant to statistical data collection include ensuring rates meet statutory standards and monitoring market structure and performance. He said currently the statistical data system fails to provide timely and relevant data for most Property and Casualty lines of business to assist regulators in carrying out these responsibilities. He said the statistical agency system has not been updated in most states in 40 years and that has led to the NAIC producing Auto and Homeowners Reports three years after the experience period begins.

Mr. Birnbaum said there are three differences in the reporting of Workers' Compensation data and personal lines insurance data: 1) Workers' Compensation data is collected by a single statistical agent in each state while insurers for other property and casualty lines have about four different statistical agents to choose from; 2) Workers' Compensation data is collected at a transaction level; and 3) Workers' Compensation data is collected on a monthly basis which offers a much faster turn around time for data analysis.

Mr. Birnbaum said the solution to modernizing the collection of statistical data is to use existing regulatory authority to update statistical plans, designate a single statistical agent through a competitive bidding process, and establish requirements that the primary duty of the statistical agent is to serve the regulator. He said updated statistical plans should require reporting on at least a quarterly basis.

Mr. Birnbaum said statistical agents that collect transaction level data are in a better position to provide the data in a timely manner and to do better data quality checks. He said moving to a single statistical agent approach would increase the efficiency of data reporting.

Mr. Scanlon said some statistical agents have more relaxed reporting requirements and therefore companies are reporting skeletal data that still satisfies the requirements. He asked if changing the reporting requirements would increase costs. Mr. Birnbaum said that a new statistical plan and reporting system would increase efficiencies and lower cost. He said companies that are reporting in Texas are already doing this kind of data collection and reporting. He said a more robust statistical plan would decrease the amount of special data calls for companies. Mr. Scanlon asked to what extent should stricter reporting requirements be seen as a barrier to entry. Mr. Birnbaum said reporting transaction data should not be difficult for companies because it is essentially a data dump, whereas a summary report would require a program to pull and aggregate the data.

Mr. Chou asked how to go about getting all statistical agents to compile with transaction reporting. Mr. Birnbaum said Commissioner's have the authority to designate statistical plans and even to designate a single statistical agent. He said that process begins with this working group modernizing the statistical reporting system.

Ms. Darby asked if it is possible to request that all statistical agents provide transaction data. Mr. Birnbaum said at least 2 large statistical agents only collect summary data and would need to transition their systems.

Albert Burton (Independent Statistical Service—ISS) said some companies do not have a need for the expansive reporting required by Insurance Services Office (ISO) and that ISS is able to fill their need with less requirements. He said if reporting requirements in the NAIC Statistical Handbook change, then ISS will comply with those changes.

Mr. Schwartz said auto and homeowners data was coming in during the pandemic via fast track reports and regulators were actively looking at those reports. He said the fast track reports could be improved as an alternative to the idea of a new, single statistical agent.

Steve Clarke (ISO) said the way the Workers' Compensation industry developed led to one statistical agent collecting the data for purposes of experience modification. He said ratemaking is the main reason for statistical agents that are also advisory organization to collect robust data. He said many states that have adopted regulations around statistical reporting have language that while the Commissioner appoints statistical agents, the companies get to choose a statistical agent to act on its behalf. He said instead of making the move to a single statistical agent, regulators should decide what data they need and why they need that data.

Ms. Darby said the discussion of specific data elements and what data regulators need will be a topic during the next meeting.

Having no further business, the Statistical Data (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C Cmte/2022_Summer/CASTF/SDWG/05-18-22/StatDataWGmin_518.docx

Draft: 4/29/22

Statistical Data (C) Working Group
Virtual Meeting
April 14, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met April 14, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, George Bradner, and Qing He (CT); David Christhilf (DC); Cynthia Amann (MO); Alexander Vajda (NY); Tom Botsko (OH); Landon Hubbard (OK); David Dahl (OR); and Brian Ryder (TX). Also participating were: Luciano Gobbo (CA); Randy Jacobson (HI); Anthony Bredel (IL); Brenda Johnson (KS); Regan Hess (MT); and Michael Muldoon (NE).

1. Adopted its March 10 Minutes

The Working Group met March 10 to: 1) discuss the timeline of data collection for the *Auto Insurance Database Report* (Auto Report); and 2) discuss updating the *Statistical Handbook of Data Available to Regulators* (Handbook).

Ms. Amann made a motion, seconded by Mr. Chou, to adopt the Working Group's March 10 minutes (Attachment Four-A1a1a). The motion passed unanimously.

2. Discussed the Timeline of Data Collection for the Auto Report

Ms. Darby said the Working Group has been discussing the possibility of requesting data on a faster timeline for the Auto Report. She said the NAIC sent questions to the submitting statistical agents to get a better sense of each statistical agent's timeline for submitting data for written premium and exposures, earned premium and exposures, and losses.

Ms. Darby said the first question asked was when statistical agents currently submit their data. She said the responses reflect that the data is submitted between March and May. She said the data is submitted on a two-year lag for written premium and a three-year lag for earned premium and losses.

Ms. Darby said the second question asked was when statistical agents could submit written premium and exposure data for the previous year. She said the Insurance Service Office (ISO) and the Commonwealth Automobile Reinsurers (CAR) indicated that they could submit that data in May following the end of the data year. She said the National Independent Statistical Service (NISS), the American Association of Insurance Services (AAIS), and the California Department of Insurance (DOI) indicated that they could submit that data from October to November following the end of the data year. She said the Independent Statistical Services Inc. (ISS) indicated that it would be able to submit the data on the same timeline that it is currently submitted.

Mr. Bradner asked why certain statistical agents are not able to provide the data as quickly and what they would need to do to get the data in faster. Mr. Gobbo said California collects all the data in one data call, and losses are evaluated as of June 30. He said the deadline for data submission from the companies is Sept. 1. Truman Esmond (AAIS) said the AAIS has similar restraints with respect to when the data is collected. He said the AAIS is also required to reconcile the data to the finalized financial statement data. Theresa Szwast (NISS) said companies submit their auto data by June 15 following the end of the data year. She said the NISS would need until October to do data quality checks before sending it to the NAIC.

Birny Birnbaum (Center for Economic Justice—CEJ) asked what is different about the data collections and systems for the statistical agents that can provide the data much sooner than the others. Laura Panesso (ISO) said the ISO collects data on a quarterly basis as opposed to an annual basis. Mr. Birnbaum asked if the quarterly data was reconciled to the financial statement. Ms. Panesso said the ISO performs several data quality checks on the quarterly data, but the reconciliation to the financial statement happens on an annual basis. Mr. Esmond said the AAIS receives quarterly and some monthly data, but the financial statement reconciliation only happens on an annual basis. He said if the financial statement data can be finalized faster, the AAIS would be able to provide the data faster. Mr. Birnbaum asked why the reconciliation of the annual data would take seven months if the quarterly data is reconciled throughout the year. Mr. Esmond said the AAIS would not need seven months. He said if it relies on only quarterly reports, the data could change in the final annual data. He said the AAIS would be able to meet accelerated requirements as it is able to.

Ms. Darby said she does not want to give statistical agents an unreasonable timeline for data submission, but it seems most statistical agents can speed up the data submission.

Mr. Birnbaum said reconciliation to the financial annual statement is not the only tool to check data quality. He said the reconciliation is not a requirement of the Handbook. Susan Chudwick (Travelers Insurance) said if the reconciliation is not required, that would speed up the reporting of the data. Mary Annese (ISO) said with the accelerated timeline, the ISO would not be able to fully reconcile the data to the financial annual statement. She said the ISO has many other data checks that allow them to be confident in the data quality. Mr. Bradner said it makes sense to speed up the timeline and worry about the reconciliation of the data later since there are other data checks in place. Ms. Szwast said the NISS only receives the data annually in June, and it would still need time to do data quality checks before sending the data to the NAIC. She said the June deadline is set to meet reporting requirements for the statistical data that is sent to states.

Ms. Darby asked if the statistical agents would similarly be able to move up the earned premium and earned exposure data. Ms. Panesso said the ISO would be able to move up the earned premium to the same timeline as written premium. Ms. Szwast said the NISS earned premium data is tied to the loss data, and that could be provided in May, two years after the data year.

Mr. Birnbaum said the Working Group should not aim for a timeline of the lowest common denominator. Ms. Darby said the goal is to really explore the limitations of the statistical agent's ability to send data faster, and once that has been uncovered, state insurance regulators can push for a faster timeline that is feasible for the statistical agents.

3. Discussed Updating the Handbook

Ms. Darby said during the last meeting, Section 1 of the Handbook was opened for comment. She said before beginning specific updates, the Working Group should dig in to see if and how states are currently using the statistical data. She said the Working Group needs to determine what data is useful to state insurance regulators.

Mr. Dahl said Oregon is looking at data reporting because it has questions from the legislature about sub-markets in Oregon. He said Oregon is looking at developing a specialized data call at the zip code level to answer questions about localized markets.

Mr. Birnbaum said the Handbook says the responsibilities most relevant to statistical collection are to: 1) ensure rates meet statutory standards, meaning they are not inadequate, excessive, or unfairly discriminatory; and 2) monitor market structure and performance, and act if necessary to restore competition or remedy problems. He said states cannot use the statistical reports to determine if companies' rates do not meet statutory standards

because there is no individual company data, and the data is too old to be helpful. Robin Westcott (AAIS) said most states do not have specific requirements for statistical reporting in their legislation. She said the AAIS is looking at what data state insurance regulators need, why and how they use it, and how industry can facilitate getting useful data to them.

Ms. Darby said conversations around the timeline of auto data reporting and updating the Handbook would continue in the next meeting.

Having no further business, the Statistical Data (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/C CMTE/2022_Summer/CASTF/SDWG/04-14-22/StatDataWGmin_414.docx

Draft: 3/31/22

Statistical Data (C) Working Group
Virtual Meeting
March 10, 2022

The Statistical Data (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met March 10, 2022. The following Working Group members participated: Sandra Darby, Chair (ME); Wanchin Chou, Vice Chair, and Qing He (CT); Daniel Davis (AL); David Christhlf (DC); Cynthia Amann (MO); Christian Citarella (NH); Alexander Vajda (NY); Tom Botsko (OH); David Dahl (OR); and Brian Ryder (TX). Also participating were: Luciano Gobbo (CA); Randy Jacobson (HI); Anthony Bredel (IL); Brenda Johnson (KS); Nichole Torblaa (LA); Regan Hess (MT); Chris Aufenthie and Mike Andring (ND); and Eric Lowe (VA).

1. Discussed Changes to the Timeline of the Auto Database Report

Ms. Darby said that during the Working Group's Jan. 27 meeting, it voted to collect 2020 and 2021 data for homeowners from statistical agents and residual markets. She said the request has been sent out and that while the *2020 Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner's Insurance Report* (Homeowners Report) could be released at the end of 2022, the 2021 Homeowners Report would likely be published in early 2023 due to the timeline that certain statistical agents receive and send their data to the NAIC.

Ms. Darby said during that meeting, the Working Group also discussed the timeline of the *Auto Insurance Database Report* (Auto Report), and she had asked NAIC staff to mock up a new version of the Auto Report tables with previous year data. She said Table 1A through Table 5 show written premium and exposure. She said based on previous conversations about this topic, the Working Group knows the Texas previous year data would not be able to be provided. Mr. Ryder said Texas is having internal discussions on the best way to present its data, but it currently find it acceptable to put "N/A" or leave blank the space for its previous year data.

Ms. Darby said adding previous data year written premium and exposure to Table 1A through Table 5 would satisfy the charge from the Casualty Actuarial and Statistical (C) Task Force to speed up the report of average premiums for auto insurance. Mr. Dahl said he agrees this would satisfy the charge. There was no disagreement from Working Group members.

Ms. Darby said during the last meeting of the Working Group, there was discussion about the comparison of premiums and exposure to the loss data. She said this data starts in Table 6 of the Auto Report. She said statistical agents have already commented that they cannot speed up submission of loss data, and there was concern that earned premium data may not directly correlate to the loss data if premium data could be submitted faster than loss data. She said the mock-up of the Auto Report tables shows a possible additional appendix in which to display the earned premium and exposure data. Mr. Chou said the earned premium data should be published as soon as it is available.

Theresa Szwast (National Independent Statistical Service—NISS) said while earned premium can be provided somewhat faster than it currently is, it could be provided even faster if it was not requested at a coverage level. She said if it was provided in a similar matter as the data in Table 1A through Table 5, which groups all liability coverage together, then it could be provided much faster than the current submission time. Birny Birnbaum (Center for Economic Justice—CEJ) asked how much longer the data broken down by coverage type would take to submit. Ms. Szwast said that data is closely related to their claims system and, therefore, could only be provided at the same time as the claims and loss data.

Mr. Birnbaum said the report currently provides average premium and average expenditure calculations. He said without having the earned exposures broken down by coverage, the report would not show both calculations. Mr. Citarella said policies have different coverages included and, therefore, the total earned exposures would not reflect what the earned exposures by coverage type shows.

Mr. Citarella said he understands that it takes time for the statistical agents to be able to submit the data broken down by coverage type. He said the exact timing of data submission is still an open question. Laura Panesso (Insurance Service Office—ISO) said the ISO could provide earned premium and exposure data in the same time frame as the written premium and could provide the loss data mid-year for the prior data year. Ms. Darby said she would like NAIC staff to gather more specific time frame data from submitting statistical agents so the Working Group can evaluate the full time frame for the Auto Report during its next meeting.

2. Discussed the Need for Updates to the Statistical Handbook of Data Available to Insurance Regulators

Ms. Darby said she would like the Working Group to hold open meetings monthly to review and suggest changes to the *Statistical Handbook of Data Available to Insurance Regulators*. She said she would like to work on one section of the Handbook at a time, and she opened Section 1 of the handbook for comment.

Having no further business, the Statistical Data (C) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Spring National Meeting/...

APPENDIX B-RF – INFORMATION ELEMENTS AND GUIDANCE FOR A REGULATOR TO MEET BEST PRACTICES’ OBJECTIVES (WHEN REVIEWING RANDOM FORESTS)

This appendix identifies the information a state insurance regulator may need to review a Random Forest predictive model used by an insurer to support a personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to sufficient information that helps determine if the rating plan meets state-specific filing and legal requirements. Documentation of the design and operational details of the model will help ensure the business continuity and transparency of the models used. Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software, and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be documented and shared with regulators in a timely and appropriate manner. Information technology (IT) controls should be in place, such as a record of versions, change control, and access to the model.¹

Many information elements listed below are probably confidential, proprietary, or trade secret and should be treated as such, in accordance with state laws and/or regulations. Regulators should be aware of their state laws and/or regulations on confidentiality when requesting data from insurers that may be proprietary or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may compromise the model’s protection.² Although the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).

The “Level of Importance to the Regulator’s Review” is a ranking of information a regulator may need to review, which is based on the following level criteria:

Level 1 – This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

Level 2 – This information is necessary to continue the review of all but the most basic models, such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

Level 3 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Level 1 and Level 2. These data elements address even more detailed aspects of the model. This information does not necessarily need to be included with the initial submission, unless specifically requested by a particular state, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws and/or regulations.

Level 4 – This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Level 1, Level 2, and Level 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission,

¹ Bourdeau, M., 2016. “Model Risk Management: An Overview,” The Modeling Platform, Issue 4, December. Accessed online at <https://www.soa.org/globalassets/assets/library/newsletters/the-modeling-platform/2016/december/mp-2016-iss4.pdf>

² There are some models that are made public by the vendor and would not result in a hindrance of the model’s protection.

unless specifically requested by a particular state. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, and/or unfairly discriminatory.

Appendix B-RF is focused on Random Forest models and should not be referenced in the review of other model types. Random Forest models are a tree-based approach with many significant differences from GLMs. This Appendix B-RF is intended to provide state guidance for the review of rate filings based on Random Forest models.

A. SELECTING MODEL INPUT

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
1. Available Data Sources			
A.1.a	Review the details of sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model).	1	<p>Request details of data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data is aggregated by calendar, accident, fiscal, or policy year and when it was last evaluated. For each data source, get a list of all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets.</p> <p>Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the federal Fair Credit Reporting Act (FCRA). If the data is from an outside source, find out what steps were taken to verify the data was accurate, complete, and unbiased in terms of a relevant and representative time frame, representative of potential exposures, and lacking in obvious correlation to protected classes.</p> <p>Note: Reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh.</p>
A.1.b	Reconcile aggregated insurance data underlying the model with available external insurance reports.	4	<p>Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer’s data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer’s data banks without further modification (i.e., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.</p>

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
A.1.c	Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.	2	Many models are developed using a countrywide or a regional dataset. The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing, and validation. The company should explain why any states were excluded from the countrywide data. The company should provide an explanation where the data came from geographically and that it is a good representation for a state; i.e., the distribution by state should not introduce a geographic bias. However, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur. The company should provide a demonstration that the model fits well on the specific state or surrounding region.
2. Sub-Models			
A.2.a	Consider the relevance of (i.e., whether there is bias) of overlapping data or variables used in the model and sub-models.	3	Check if the same variables/datasets were used in the model, a sub-model, or as stand-alone rating characteristics. Random Forest models handle redundant variables by splitting on only one of the variables within each component tree. By contrast, generalized linear models (GLMs) struggle with redundant variables as they try to include redundant variables simultaneously. However, best actuarial practice is to keep models as parsimonious as possible and only include additional variables that contribute significant additional predictive power.
A.2.b	Determine if the sub-model was previously approved (or accepted) by the regulatory agency.	1	If the sub-model was previously approved/accepted, that may reduce the extent of the sub-model’s review. If approved, obtain the tracking number(s) (e.g., state, System for Electronic Rates & Forms Filing [SERFF]) and verify when and if it was the same model currently under review. Note: A previous approval does not necessarily confer a guarantee of ongoing approval; e.g., when statutes and/or regulations have changed or if a model’s indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether the prior decision needs to be revisited. In some circumstances, direct dialogue with the vendor could be quicker and more useful.

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
A.2.c	Determine if the sub-model output was used as input to the Random Forest; obtain the vendor name, as well as the name and version of the sub-model.	1	<p>To accelerate the review of the filing, it may be desirable to request (from the company) the name and contact information for a vendor representative. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The “contact” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with a subject matter expert (SME) at the vendor.</p> <p>Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. Sub-model SMEs may need to be brought into the conversation with regulators (whether in-house or third-party sub-models are used).</p>
A.2.d	If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.	1	<p>To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The “SME” can be an intermediary at the insurer (e.g., a filing specialist), who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor.</p> <p>For example, it is important to know hurricane model settings for storm surge, demand surge, and long-term/short-term views.</p>
A.2.e	Obtain an explanation of how catastrophe models are integrated into the model to ensure no double-counting.	1	<p>If a weather-based sub-model is input to the Random Forest under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double-counting such losses when determining relativities or loss loads in the filed rating plan.</p> <p>For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model or inclusion of freeze losses when using a winter storm model.</p>
A.2.f	If using output of any scoring algorithms, obtain a list of the variables used to determine the score, and provide the source of the data used to calculate the score.	1	<p>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.</p>

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
3. Adjustments to Data			
A.3.a	Determine if premium, exposure, loss, or expense data were adjusted (e.g., on-leveled, developed, trended, adjusted for catastrophe experience, or capped). If so, how? Do the adjustments vary for different segments of the data? If so, identify the segments and how the data was adjusted.	2	<p>The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation of how they were handled. These treatments need to be identified, and the company/regulator needs to determine whether model data needs to be adjusted.</p> <p>For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model’s training, test, and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered?</p> <p>Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane, or severe convective storm losses for personal automobile comprehensive or home insurance.</p> <p>Premium should be brought to current rate level if the target variable is calculated with a premium metric, such as loss ratio. Premium can be brought to current rate level with the extension of exposures method or the parallelogram method. Note that the premium must be on-leveled at a granular variable level for each variable included in the new model if the parallelogram method is used. Statewide on-level factors by coverage are typically sufficient for statewide rate indication development but not sufficient for models that determine rates by variable level.</p>
A.3.b	Identify adjustments that were made to aggregated data (e.g., transformations, binning, and/or categorizations). If any, identify the name of the characteristic/variable, and obtain a description of the adjustment.	1	Pre-modeling binning may be unnecessary in a Random Forest model. The tree model will naturally segment numerical values in the splitting process of the trees. However, if the insurer does bin variables before modeling, the reason should be understood.

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
A.3.c	Ask for aggregated data (one dataset of pre-adjusted/scrubbed data and one dataset of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.	4	<p>This is most relevant for variables that have been “scrubbed” or adjusted.</p> <p>Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it.</p> <p>It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category are provided. This data can be displayed in either graphical or tabular formats.</p>
A.3.d	Determine how missing data was handled.	1	<p>This is most relevant for variables that have been “scrubbed” or adjusted. The regulator should be aware of assumptions the modeler made in handling missing, null, or “not available” values in the data.</p> <p>For example, it would be helpful to the reviewer if the modeler were to provide a statement as to whether there is any systemic reason for missing data. If adjustments or recoding of values were made, they should be explained. It may also be useful to the regulator if the percentage of exposures and premium for missing information from the model data are provided. This data can be displayed in either graphical or tabular formats.</p> <p>The modeler should describe the way the tree fitting process handled missing values. The modeler should specify if missing values are treated before running the tree model or if they are allowed to be handled by the tree model.</p> <p>When creating predictions on new datasets (such as hold out datasets), tree-based models may have different approaches for handling missing data or categorical levels not encountered in the training data for a predictor variable. The modeler should specify the process utilized when this occurs.</p>
A.3.e	If duplicate records exist, determine how they were handled.	1	
A.3.f	Determine if there were any material outliers identified and subsequently adjusted during the scrubbing process.	3	<p>Look for a discussion of how outliers were handled. If necessary, the regulator may want to investigate further by getting a list (with description) of the types of outliers, and determine what adjustments were made to each type of outlier. To understand the filer’s response, the regulator should ask for the filer’s materiality standard.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
4. Data Organization			
A.4.a	Obtain documentation on the methods used to compile and organize data, including procedures to merge data from different sources or filter data based on particular characteristics and a description of any preliminary analyses, data checks, and logical tests performed on the data and the results of those tests.	2	This should explain how data from separate sources was merged and/or how subsets of policies, based on selected characteristics, are filtered to be included in the data underlying the model and the rationale for that filtering.
A.4.b	Obtain documentation on the insurer's process for reviewing the appropriateness, reasonableness, consistency, and comprehensiveness of the data, including a discussion of the rational relationship the data has to the predicted variable.	2	An example is when by-peril or by-coverage modeling is performed; the documentation should be for each peril/coverage and make rational sense. For example, if "murder" or "theft" data is used to predict the wind peril, the company should provide support and a rational explanation for their use.
A.4.c	Identify material findings the company had during its data review, and obtain an explanation of any potential material limitations, defects, bias, or unresolved concerns found or believed to exist in the data. If issues or limitations in the data influenced modeling analysis and/or results, obtain a description of those concerns and an explanation how modeling analysis was adjusted and/or results were impacted.	1	"None" or "N/A" may be an appropriate response.

B. BUILDING THE MODEL

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
1. High-Level Narrative for Building the Model			
B.1.a	Identify the type of model underlying the rate filing (e.g., Random Forest, GLM, decision tree, Bayesian GLM, gradient-boosting machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.	1	<p>It is important to understand if the model in question is a Random Forest and, therefore, these information elements are applicable, or if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by- peril/by-coverage.</p> <p>Note: If the model is not a Random Forest, the information elements in this appendix may not apply in their entirety.</p>
B.1.b	Identify the software used for model development. Obtain the name of the software vendor/developer, software product, and a software version reference used in model development.	3	<p>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The contact can be an intermediary at the insurer (e.g., a filing specialist) who can place the regulator in direct contact with the appropriate SME at the vendor.</p> <p>Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</p>
B.1.c	Obtain a description of how the available data was divided between model training, test, and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data, and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation of why that came to occur. Obtain a discussion of whether the model was rebuilt using all the data or if it was only based on the training data.	1	<p>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all.</p> <p>The reviewer should note whether a company employed cross-validation techniques instead of a training/test/validation dataset approach. If cross-validation techniques were used, the reviewer should request a description of how cross-validation was done and confirm that the final model was not built on any particular subset of the data, but rather the full dataset.</p> <p>The discussion of training, test, and/or validation datasets is a separate discussion from the percentage of observations (rows of data) or percentage of features (columns of data) used within each tree. These splits are based on hyperparameters and are commented on in other sections.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
B.1.d	Obtain a brief description of the development process, from initial concept to final model and filed rating plan.	1	The narrative should have the same scope as the filing.
B.1.e	Obtain a narrative on whether loss ratio, pure premium, or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.	1	
B.1.f	Identify the model's target variable.	1	A clear description of the target variable is key to understanding the purpose of the model. It may also prove useful to obtain a sample calculation of the target variable in Excel format, starting with the "raw" data for a policy, or a small sample of policies, depending on the complexity of the target variable calculation.
B.1.g	Obtain a description of the candidate variable selection process prior to the model building.	1	<p>Candidate variables are the variables used as input to the modeling process. Certain variables may not end up used in the final model if none of the component trees of the model split on the variable. The narrative regarding the candidate variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making the decisions regarding candidate variable selection.</p> <p>The modeler should comment on the use of automated feature selection algorithms to choose candidate predictor variables and explain how potential overfitting that can arise from these techniques was addressed.</p>
B.1.h	In conjunction with variable selection, obtain a narrative on how the company determined the granularity of the rating variables during model development.	3	The narrative should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected.
B.1.i	Determine if model input data was segmented in any way (e.g., by-coverage, by-peril, or by-form basis). If so, obtain a description of data segmentation and the reasons for data segmentation.	1	The regulator would use this to follow the logic of the modeling process.

Section	Information Element	Level of Importance to the Regulator's Review	Comments
2. Medium-Level Narrative for Building the Model			
B.2.a	At crucial points in model development, if selections were made among alternatives regarding model assumptions, techniques, or hyperparameters, obtain a narrative on the judgment used to make those selections.	2	
B.2.b	If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.	2	Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding of how these adjustments were done, including any statistical improvement measures relied upon.
B.2.c	Identify which distribution was used for the model (e.g., Regression based on Poisson, Gamma, Logistic, or Tweedie are common choices). Obtain an explanation of why the distribution was chosen. Certain distribution assumptions will involve numerical parameters; i.e., regression with a Tweedie assumed distribution will have a p power value. Obtain the specific numerical parameters associated with the distribution.	1	
B.2.d	Obtain a narrative on how the predictions from the component trees are combined to arrive at a final model prediction.	2	Tree-based methods combine predictions from multiple component trees and aggregate them into a final prediction for each observation. Common methods for combining Random Forest model predictions include the arithmetic or geometric mean of all the component trees.
B.2.e	If there were data situations in which weights were used, obtain an explanation of how and why they were used.	3	Investigate whether identical records were combined to build the model.

Section	Information Element	Level of Importance to the Regulator's Review	Comments
B.2.f	Obtain the number of component trees comprising the Random Forest model. Obtain a narrative on how this number was chosen.	1	<p>Random Forest models should contain enough trees to reduce error to an acceptable level. Random Forest models should balance this with the concept of parsimony. A model with fewer trees that achieves relatively similar reduction in error is preferable to a model with more trees. Checking the error on a test dataset or out of bag error for different numbers of trees can reveal at what value the error on test data starts to level off.</p> <p>Modelers might rely on early stopping rules within modeling software to arrive at the final number of trees. The narrative on the number of trees should discuss the stopping criterion, which defines what condition is met when the model stopped adding more trees.</p>
B.2.g	Obtain the sampling parameters that apply to both the percent of observations used in each component tree and the number of features tested for each split within each tree. Obtain a narrative on how the sampling parameters were selected.	1	<p>Random Forest models often sample both the observations (typically rows of modeling data) with replacement and sample the features (typically columns of modeling data) This means that each tree has a bootstrapped dataset.</p> <p>The company should discuss the bagging fraction (sample size) applied to observations (typically rows of data). This is often expressed as a percent. For example: perhaps each tree is based on a bootstrapped sample that is 50% of the original dataset.</p> <p>The company should discuss the number of features considered at each split. This is often expressed as an integer. A common choice for the number of features is equal to roughly the square root of the total number of candidate variables. For example: perhaps each split is based on 10 randomly selected features (typically columns of data) when there are 100 candidate variables.</p>
B.2.h	Obtain the maximum depth that applies to the component trees in the model. Obtain a narrative on how this number was chosen.	1	<p>The depth of a tree is the number of splits that are allowed to occur between the root node and the terminal nodes. This number can be set explicitly in modeling software or may be implicitly set if the company applies a splitting constraint, such as a minimum observations per node. Maximum tree depths of eight or higher are considered extremely high.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
B.2.i	Obtain parameters that determined the volume of data in each tree node and a narrative of how parameters were chosen.	1	<p>Minimum data volume constraints can be applied to a tree-based model, such that the trees will not create a split that would result in terminal nodes with volume below a set amount. The modeler should comment on how the threshold was chosen.</p> <p>If there was no minimum data volume threshold applied to the trees, or if the threshold was exceedingly small, obtain an explanation of any post-modeling adjustments the modeler made to address the credibility considerations and how the adjustments were applied.</p>
B.2.j	Obtain a narrative of the process to select all hyperparameters for the Random Forest. Detail how this process addressed potential overfitting in the model.	2	<p>The narrative should include a description of each hyperparameter, document the values of the hyperparameters, specify the implication of using a higher or lower value for each hyperparameter, and discuss any sensitivity testing completed on the hyperparameters and observations from the sensitivity analysis. Hyperparameter tuning can be done in a variety of ways. The rigor of the tuning process should reflect the risk of overfitting on the specific dataset.</p>
3. Predictor Variables			
B.3.a	Obtain a complete data dictionary, including the names, types, definitions, and rationales for each variable.	1	<p>Types of variables might be continuous, discrete, Boolean, etc. Identify any variable used as an offset or control in the Random Forest model and the offset factor that was applied for each level of the offset variable.</p> <p>For any variable(s) intended to function as a control or offset, obtain an explanation of its purpose and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.</p>
B.3.b	Obtain a list of predictor variables considered but not used in the final model and the rationale for their removal.	4	<p>The purpose of this requirement is to identify variables the company finds to be predictive but ultimately may reject for reasons other than loss-cost considerations (e.g., price optimization). Also, look for variables the company tested and then rejected. This item could help address concerns about data dredging.</p>
B.3.c	Obtain a correlation matrix for all predictor variables included in the model and sub-model(s).	3	<p>High correlation is less of an issue for tree-based models than it is for GLMs. Tree-based models naturally only use one variable at a time during each split in each tree. However, a correlation matrix still helps the reviewer understand relationships in the data being modeled better. The company should indicate what statistic was used (e.g., Pearson, Cramer's V, etc.) in the correlation matrix. The regulatory reviewer should understand what statistic was used to produce the matrix but should not prescribe the statistic.</p>

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
B.3.d	Obtain plots describing the relationship between each predictor variable and the target variable. Obtain a rational explanation for the observed relationship between each predictor variable and the target variable (frequency, severity, loss costs, expenses, or any element or characteristic being predicted).	1	<p>Partial dependence plots (PDPs), accumulated local effects (ALE) plots, or Shapley plots will help improve model interpretability. There should be at least one plot for every variable used in the model. The plots should be accompanied by commentary on why the visualized relationship is reasonable for variables of concern. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate.</p> <p>For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the relationship that variable has to the target variable.</p> <p>The regulator should also consider that interpretability plots for tree-based models need to be reviewed with other considerations in mind. For example, partial dependence calculations assume independence with other variables in the model.</p>
B.3.e	If the modeler made use of one or more dimensionality reduction techniques, such as a principal component analysis (PCA), obtain a narrative about that process, an explanation why that technique was chosen, and a description of the step-by-step process used to transform observations (usually correlated) into a set of linearly uncorrelated variables. In each instance, obtain a list of the pre-transformation and post-transformation variable names, as well as an explanation of how the results of the dimensionality reduction technique was used within the model.	2	
B.3.f	Obtain variable importance plots. Obtain a description of how variable importance was calculated.	1	<p>Variable Importance Plots for tree-based methods highlight which variables contributed most to the model. There are multiple ways to calculate variable importance.</p> <p>Variables with the lowest importance measures should be prioritized when identifying variables that may not be contributing significantly to the model. Variables may have a low importance measure due to high correlation with other variables but may still prove useful if they interact with other variables to identify unique subsets of risks.</p> <p>Variables with the highest importance measures should be prioritized when determining which variables have the largest impact on predictions.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
4. Adjusting Data, Model Validation, and Goodness-of-Fit Measures			
B.4.a	Obtain a description of the methods used to assess the statistical significance/goodness-of-fit of the model to validation data, such as lift charts and statistical tests. Compare the model's projected results to historical actual results and verify that modeled results are reasonably similar to actual results from validation data.	1	<p>For models that are built using multistate data, validation data for some segments of risk is likely to have low credibility in individual states. Nevertheless, some regulators require model validation on state-only data, especially when analysis using state-only data contradicts the countrywide results. State-only data might be more applicable, but it could also be impacted by low credibility for some segments of risk.</p> <p>Note: It may be useful to consider geographic stability measures for territories within the state.</p>
B.4.b	Obtain evidence that the model fits the training data well by variable and for the overall model.	2	<p>The regulator should ask for the company to provide exhibits or plots that show the fitted average makes sense when compared to the observed average for variables of interest. Regulators would ideally review this comparison for every variable, but time constraints may limit the focus to just variables of interest. Variables of interest should include those with a high importance measure (which will have the most material impact on rates), those with a low importance measure (which may not be contributing significantly to the model), variables without an intuitive relationship to loss, or variables that may be proxies for a protected class attribute.</p>

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
B.4.c	Obtain a description how the model was tested for stability over time.	2	<p>Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets).</p> <p>Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data.</p> <p>The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model?</p> <p>The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile), their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time.</p>
B.4.d	Obtain a narrative on how potential concerns with overfitting were addressed.	2	<p>Tree-based models such as Random Forest models are notorious for overfitting. The company should provide a narrative on how overfitting was addressed. The company should provide a lift chart on training data used to fit the model and a lift chart on testing data that was not used to fit the model. If pruning was used to address overfitting, the narrative should provide commentary on the pruning process.</p>
B.4.e	Obtain support demonstrating that the Random Forest assumptions are appropriate.	3	<p>A visual review of plots of actual errors is usually sufficient.</p> <p>The reviewer should look for a conceptual narrative covering these topics: How does this particular Random Forest work? Why did the rate filer do what it did? Why employ this design instead of alternatives? Why choose this particular distribution function and this particular link function? A company response may be at a fairly high level and reference industry practices.</p> <p>If the reviewer determines that the model makes no assumptions that are considered to be unreasonable, the importance of this item may be reduced.</p>

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
B.4.f	Obtain 5-10 sample records with corresponding output from the model for those records.	2	The company should provide comprehensive documentation of the rating algorithm such that a rate can be reproduced for any theoretical risk. The company should demonstrate the comprehensiveness of the documentation by providing 5-10 sample records with corresponding input variable values and the final model prediction. The company should describe how the final model prediction aggregates the individual tree model predictions. The company should describe how to use other filing exhibits to reproduce the final model prediction for each sample record.
B.4.g	Obtain a deviance analysis by number of trees.	2	The company should provide a plot showing that the deviance of the overall model decreases after each iteration (each additional tree).
5. “Old Model” Versus “New Model”			
B.5.a	Obtain an explanation of why this model is an improvement to the current rating plan. If it replaces a previous model, find out why it is better than the one it is replacing; determine how the company reached that conclusion and identify metrics relied on in reaching that conclusion. Look for an explanation of any changes in calculations, assumptions, parameters, and data used to build this model from the previous model.	2	The regulator should expect to see improvement in the new class plan’s predictive ability or other sufficient reason for the change.
B.5.b	Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison.	3	This information element requests a comparison of the Lorenz curve and Gini coefficient from the prior model to the Gini coefficient of proposed model. It is expected that there should be improvement in the Gini coefficient. A higher Gini coefficient indicates greater differentiation produced by the model and how well the model fits that data. This is relevant when one model is being updated or replaced. The regulator should expect to see improvement in the new class plan’s predictive ability. One example of a comparison might be sufficient. Note: This comparison is not applicable to initial model introduction. The reviewer can look to CAS monograph, “Generalized Linear Models for Insurance Rating.”
B.5.c	Determine if double-lift charts were analyzed and obtain a narrative on the conclusion drawn from this analysis.	3	One example of a comparison might be sufficient. Note: “Not applicable” is an acceptable response.

Section	Information Element	Level of Importance to the Regulator's Review	Comments
B.5.d	<p>If replacing an existing model, obtain a list of any predictor variables used in the old model that are not used in the new model as candidate variables. Obtain an explanation of why these variables were dropped from the new model.</p> <p>Obtain a list of all new predictor variables in the new model that were not in the prior old model.</p>	2	It is useful to differentiate between old and new variables so the regulator can prioritize more time on variables not yet reviewed.
6. Modeler Software			
B.6.a	Request access to SMEs (e.g., modelers) who led the project, compiled the data, and/or built the model.	4	The filing should contain a contact that can put the regulator in touch with appropriate SMEs and key contributors to the model development to discuss the model.

C. THE FILED RATING PLAN

Section	Information Element	Level of Importance to the Regulator’s Review	Comments
1. General Impact of Model on Rating Algorithm			
C.1.a	In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (i.e., how it was used) in the rating system.	1	<p>The “role of the model” relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model’s goal, but rather a description of how specifically the model is used.</p> <p>This item is particularly important if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</p>
C.1.b	Obtain an explanation of how the model was used to adjust the filed rating algorithm.	1	The regulator should consider asking for an explanation of how the model was used to adjust the rating algorithm.
C.1.c	Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.	1	Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.
2. Relevance of Variables and Relationship to Risk of Loss			
C.2.a	Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced.	2	<p>The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model visualization plots (such as partial dependence plots, accumulated local effects plots, or Shapley plots) should be consistent with the expected direction of the relationship.</p> <p>Note: This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
3. Comparison of Model Outputs to Current and Selected Rating Factors			
C.3.a	Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected rates filed in the rating plan.	1	<p>The documentation should include explanations for the necessity of any such adjustments and each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived.</p> <p>Note: This information is especially important if differences between model-indicated values and selected values are material and/or impact one consumer population more than another.</p>
C.3.b	For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative regarding how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures.	2	<p>The insurer should address this possibility or other considerations; e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan.</p> <p>One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals.</p>
4. Responses to Data, Credibility, and Granularity Issues			
C.4.a	Determine what, if any, consideration was given to the credibility of the output data.	2	The regulator should determine at what level of granularity credibility is applied. If modeling was by coverage, by form, or by peril, the company should explain how these were handled when there was not enough credible data by coverage, form, or peril to model.
C.4.b	If the rating plan is less granular than the model, obtain an explanation of why.	2	This is applicable if the company had to combine modeled output in order to reduce the granularity of the rating plan.
C.4.c	If the rating plan is more granular than the model, obtain an explanation of why.	2	A more granular rating plan may imply that the company had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. It may be necessary to extrapolate due to data availability or other considerations.

Section	Information Element	Level of Importance to the Regulator's Review	Comments
5. Definitions of Rating Variables			
C.5.a	Obtain a narrative regarding adjustments made to model output (e.g., transformations, binning and/or categorizations). If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment.	2	If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation of how model output was translated into these rating tiers or intermediate rating categories.
6. Supporting Data			
C.6.a	Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation of whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments.	4	For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference.
7. Consumer Impacts			
C.7.a	Obtain a listing of the top five rating variables that contribute the most to large swings in renewal premium, both as increases and decreases, as well as the top five rating variables with the largest spread of impact for both new and renewal business.	4	These rating variables may represent changes to rating factors, be newly introduced to the rating plan, or have been removed from the rating plan.
C.7.b	Determine if the company performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing.	3	One way to see sensitivity is to analyze a graph of each risk characteristic's/variable's average fitted model prediction. Look for significant variation between the average fitted model predictions for adjacent rating variable levels and evaluate if such variation is reasonable and credible.
C.7.c	For the proposed filing, obtain the impacts on renewal business, and describe the process used by management, if any, to mitigate those impacts.	2	Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense and, hence, may be viewed as unfairly discriminatory by some states.

Section	Information Element	Level of Importance to the Regulator's Review	Comments
C.7.d	Obtain a rate disruption/dislocation analysis demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business) and sufficient information to explain the disruptions to individual consumers.	2	<p>The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan.</p> <p>While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated.</p> <p>See Appendix D for an example of a disruption analysis.</p>
C.7.e	Obtain exposure distributions for the model's output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.	3	See Appendix D for an example of an exposure distribution.
C.7.f	Identify policy characteristics, used as input to a model or sub-model, that remain "static" over a policy's lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as "static," yet change over time.	3	<p>Some examples of "static" policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy.</p> <p>The reviewer should be aware of, and possibly concerned about, how the company treats an insured over time when the insured's risk profile based on "static" variables changes over time, but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured's true and current risk profile.</p> <p>A few examples of "non-static" policy characteristics are age of driver, driving record, and credit information (FCRA-related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
C.7.g	Obtain a means to calculate the rate charged a consumer.	3	<p>The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. The ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note: This information may be proprietary.</p> <p>For the rating plan, the rate order of calculation rule may be sufficient. However, it may not be feasible for a regulator to get all the input data necessary to reproduce a model's output. Credit and telematics models are examples of model types where model output would be readily available, but the input would not be readily available to the regulator.</p>
C.7.h	In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors.	1	<p>If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, it may need to be documented with an overview of who owns it.</p> <p>The topic of consumer verification may also need to be addressed, including how consumers can verify their data and correct errors.</p>
8. Accurate Translation of Model into a Rating Plan			
C.8.a	Obtain sufficient information to understand how the model outputs are used within the rating system and to verify that the rating plan's manual, in fact, reflects the model output and any adjustments made to the model output.	1	The regulator can review the rating plan's manual to see that modeled output is properly reflected in the manual's rules, rates, factors, etc.
9. Efficient and Effective Review of Rate Filing			
C.9.a	Establish procedures to efficiently review rate filings and models contained therein.	1	<p>"Speed to market" is an important competitive concept for insurers. Although the regulator needs to understand the rate filing before accepting the rate filing, the regulator should not request information that does not increase his/her understanding of the rate filing.</p> <p>The regulator should review the state's rate filing review process and procedures to ensure that they are fair and efficient.</p>

Section	Information Element	Level of Importance to the Regulator's Review	Comments
C.9.b	Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state laws and/or regulations.	1	This is a primary duty of state insurance regulators. The regulator should be knowledgeable of state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination.
C.9.c	Be knowledgeable of state laws and regulations in order to determine if any information contained in the rate filing (and models) should be treated as confidential.	1	The regulator should be knowledgeable of state laws and regulations regarding confidentiality of rate filing information and apply them to a rate filing fairly and efficiently. Confidentiality of proprietary information is key to innovation and competitive markets.
C.9.d	Obtain complete documentation that would allow future audits of model predictions.	1	The company should provide comprehensive documentation of the rating algorithm such that a rate can be reproduced for any theoretical risk. Comprehensive documentation could be provided as one of the following: a complete set of tree diagrams, a set of if-else logic statements that represents the trees, or a table showing every possible combination of risk characteristics and the final prediction.

RANDOM FOREST GLOSSARY OF TERMS

Accumulated Local Effects Plots: A type of interpretability plot. Accumulated local effects (ALE) plots calculate smaller, incremental changes in the feature effects. ALE shows the expected and centered effects of a variable.

Bagged Trees: An ensemble of trees where each tree is based on a “bootstrap aggregated” sample.

Branch: A connection on a decision tree between a parent node and a child node. A relationship based on a predictor variable is checked at each node, determining which branch applies.

Candidate Variables: The variables specified by the modeler to be used within the full model. The random variable selection by a Random Forest means that component trees might only use a subset of these variables in each tree.

Child Node: The node below a parent node. The child node is the result of a split that occurs based on a predictor variable. The node above the child node, which is where the split occurred resulting in the creation of the child nodes, is called the parent node. There is one parent node for every child node. The root node is the only node that is not a child node.

Component Tree: An individual tree within an approach based on an ensemble of trees, such as Random Forest or gradient boosting machine.

Deviance: A measure of model fit. Deviance is based on the difference between the log-likelihood of the saturated model and the log-likelihood of the proposed model being evaluated. Smaller values of deviance demonstrate that a model’s predictions fit closer to actual. Deviance on training data will always decrease as model complexity increases.

Hyperparameter: A model hyperparameter is a model setting specified by the modeler that is external to the model and whose value cannot be estimated from data.

Node: A point on a decision tree. Nodes are either root nodes (the top node), leaf nodes (a terminal node at which point no further splitting occurs), or an internal node that appears in the middle of the tree while splitting is still taking place.

Out-of-Bag Error: Error calculated for observations based on the trees that did not include them in the set of training observations. Out-of-Bag Error is calculable when bootstrapping is used to generate different datasets for each component tree in an ensemble tree method.

Parent Node: The node above a child node. The parent node is where a split occurs based on a predictor variable. The nodes below the parent node, which are a direct result of the parent node’s split, are called child nodes. There are typically two child nodes for every parent node. Terminal nodes cannot be parent nodes.

Partial Dependence Plots: A type of interpretability plot. The partial dependence plot computes the marginal effect of a given variable on the prediction.

Pruning: The process of scaling back a tree to reduce its complexity. This results in trees with fewer branches and terminal nodes appearing higher on the tree. Pruning is more common on models built on a single decision tree rather than on ensemble models such as Random Forests or gradient boosting machines.

Random Forest: An ensemble of trees where each tree is based on a bootstrap aggregated sample, and each split is based on a random sample of the candidate variables.

Root Node: The first (top) node in a decision tree. This node contains the entire set of data used by the tree as no splits have occurred yet.

Shapley Additive Explanation Plots: A type of interpretability plot. Shapley plots investigate the effect of including a variable in the model by the order in which it is added. The Shapley value represents the amount the variable of interest contributes to the prediction.

Splitting: The process of dividing a node into two or more sub-nodes, starting from the root node. Splitting occurs at every node up until the terminal (leaf) nodes when the stopping criterion is met.

Stopping Criterion: A criterion applied to the splitting process that informs the node when it is ineligible to split any further. Volume of data is often used as a stopping criterion, such that each leaf node is based on at least a pre-determined amount of data.

Terminal Node: An end node containing no child nodes because the node has met the stopping criterion. The terminal node is associated with a prediction for one of the component trees. The terminal node is also known as a “leaf” node, the resulting endpoint of a decision tree.

Tree-Based Model: A model that can be represented as a decision tree or a collection of decision trees.

Tree Depth: The maximum number of splits between the root node and a leaf node for a tree.

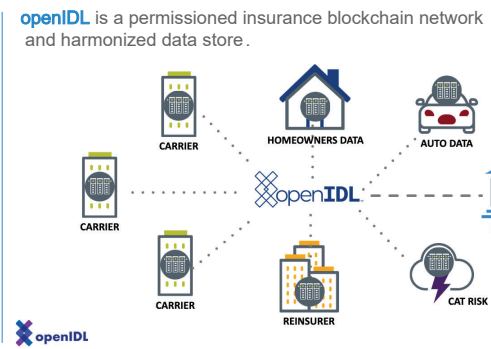

Variable Importance: A measure of how the variables (a.k.a. features) contribute to the overall model. There are multiple ways to measure variable importance.

The Linux Foundation is working with the global technology community to solve the world's hardest problems through open source and **creating the largest shared technology investment in history**. Some of the 150+ gamechanging initiatives hosted by The Linux Foundation include:

openIDL is for:

Carriers

Generating operational efficiency, flexibility, interoperability, and product development opportunities.

Regulators

Access to timely and accurate information enabling more holistic and dynamic reporting as well as valuable and relevant insights into exposures, market activity, and trends.

Industry at Large

Establishing and maintaining an agnostic network, providing efficient mechanisms for relevant participation and collaboration.

openIDL Members

PREMIER MEMBERS

GENERAL MEMBERS

SELECTIVE INSURANCE[®]

ASSOCIATE MEMBERS

Regulators

Associations

INFRASTRUCTURE PARTNER MEMBERS

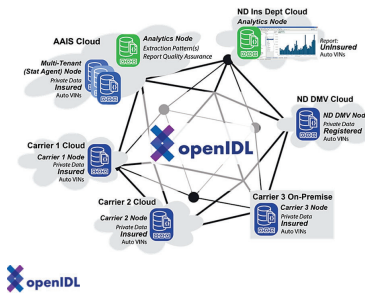

Goals and Benefits of openIDL for the Insurance Industry

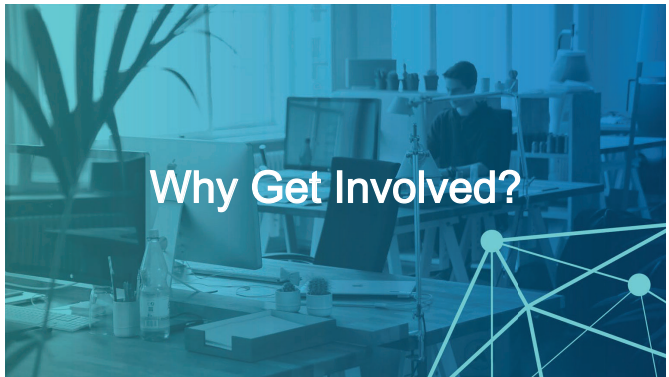

- Dramatically improve the **timeliness** and **availability** of insurance industry data for regulators
- **Reduce costs** and **improve security** of regulatory reporting by carriers
- Enable transparent and constructive **collaboration** of regulators, agencies, and carriers
- Provide a **standardized, federated** insurance data repository and an extensible network community

North Dakota Uninsured Motorist Network

- › Establishes a role for regulators and advisory organizations on the network.
- › Demonstrates how "stat data" can be reused for other applications.
- › The network is being evaluated for procurement.

openIDL for Regulators:

Interdepartmental/Interjurisdictional Data

Data efficiency and integration across your state, departments and related jurisdictions.

Officials and Legislatures

Provide legislators and leaders visualizations into trusted data for policy decisions and dashboards on impact and effectiveness.

Community Information, Preparation and Response

Collaborate with the public and industry to prepare and protect communities from common risks.

Licensing and Regulation

Connect trusted state and third-party data sources and licensing agencies to provide efficient experiences and solve problems unique to your community.

Industry Audit and Compliance

Streamline and help your businesses and critical infrastructure remain compliant to the needs of the constituents and law through objective rules, transparent infrastructure and private data.

openIDL for Technology Providers

Products & Platforms

Create and leverage private data in the openIDL Regulatory Reporting Data Network or your own proprietary network while ensuring your assets and confidential data remain secure – within your control.

Services & Partnerships

Design, implement and maintain solutions for your clients' businesses and operations, or your own unique vertical or horizontal partnerships to enable a unique customer experience and value.

Data and Insights

Gather actionable insights from customer activities and experiences that can inform and improve the value of your products and services.

Customer Data Privacy

Gain insights, efficiently and transparently, while still protecting your customers' data, identity and operations

Quality and Accountability

Establish a framework of operations that assures integrity and objective quality, with transparent accountability and controls that establish and maintain your competitors.

openIDL is Strategic for Member Insurers

As an **Insurer** and Member, leverage **openIDL** for you:

Enterprise

- › Automate internal reporting/auditing, retire legacy datastores/endpoints, integrate/automate operations, reduce data sharing/shipping, dynamic capital management, internal accountability

Partner Relationships

- › Efficient data operations, transparent/accountable performance, innovative solution delivery and new value-add opportunities in existing relationships: reinsurance, broker, TPAM/GA, agent, systems, etc.

Programs

- › Parametric benefits, automated/objective underwriting, ML/AI knowledge pooling, responsive/specific rating, contract certainty, loss control solutions, niche and customized coverage programs

Why companies join openIDL

<p>Thought Leadership</p> <p>Be part of defining and maintaining the technologies that are at the forefront of the industry</p>	<p>Networking & Partnerships</p> <p>Network with other members of openIDL Support the community</p>	<p>Build</p> <p>Ensure the success of openIDL by building networks, products, services and solutions with and on top of openIDL's code bases that are critical to your lines of business.</p>

SURPLUS LINES (C) TASK FORCE

The Surplus Lines (C) Task Force did not meet at the Summer National Meeting.

TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force Aug. 11, 2022, Minutes 7-100

Draft: 8/22/22

Title Insurance (C) Task Force
Portland, Oregon
August 11, 2022

The Title Insurance (C) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Eric Dunning, Chair, and Connie Van Slyke (NE); Kevin Gaffney, Vice Chair (VT); Mark Fowler represented by Erick Wright (AL); Michael Conway represented by Peg Brown, Neil A. Derr, Kris Fabricius, Evelyn Keuter, and Dennis Newman (CO); David Altmaier represented by Anoush Brangaccio and Jeffrey Joseph (FL); Colin M. Hayashida represented by Grant Shintaku and Randy Jacobson (HI); Vicki Schmidt represented by Jessica Lillibridge and Barb Rankin (KS); James J. Donelon represented by Warren Byrd and Matthew Stewart (LA); Kathleen A. Birrane represented by Mary Kwei and David Zitterbart (MD); Grace Arnold represented by Jason Broberg (MN); Chlora Lindley-Myers represented by Carrier Couch and Marjorie Thompson (MO); Troy Downing represented by Ole Olson (MT); Mike Causey represented by Angela Hatchell (NC); Barbara D. Richardson represented by David Cassidy (NV); Judith L. French represented by Tom Botsko, Tynesia Dorsey, Maureen Motter, and Michelle Brugh Rafeld (OH); Glen Mulready represented by Diane Carter (OK); Michael Humphreys represented by Shannen Logue and Michael Mckenney (PA); Elizabeth Kelleher Dwyer represented by Patrick Smock (RI); Michael Wise represented by Daniel Morris (SC); Larry D. Deiter represented by Tony Dorschner (SD); Cassie Brown represented by Randall Evans, David Muckerheide, and Jamie Walker (TX); and Scott A. White represented by Richard Tozer (VA).

1. Heard an Educational Roundtable Discussion on the Various Approaches States Use to Regulate Rates

Joe Petrelli (Demotech) and Sharon Romano Petrelli (Demotech) discussed the approaches Ohio and Louisiana take to regulating title insurance rates. They are retained by the members of the Ohio Title Insurance Rating Bureau (OTIRB) and the Louisiana Title Statistical Services Organization (LATISSO) to serve in a non-voting, administrative support role. Ohio and Louisiana require prior approval of title insurers' rates and forms and use statistical agents. The OTIRB is the statistical agent for Ohio. The current OTIRB was incorporated July 29, 1991. Chapter 3935 of the Ohio Revised Code references rating bureaus. Chapter 3953 of the Ohio Revised Code references title insurance. All meetings, whether full membership or committee meetings, are coordinated to accommodate the participation of antitrust counsel. The meetings include an agenda approved by antitrust counsel prior to distribution and begin with an antitrust statement of direction. All rate, rule, and form filings are submitted to the Ohio Department of Insurance (DOI) for its review, evaluation, and, if sufficiently documented, approval. Virtually all submissions have had questions, comments, or requests for clarification or additional documentation. Some of the OTIRB's rate, rule, and form filings have been disapproved by the Ohio DOI. Ohio law requires that a financial and statistical plan be completed and approved by the DOI each year. The compilation is reviewed and the aggregated, completed financial and statistical plan is forwarded to the Insurance Department for its review, consideration, and acceptance. Updates to the financial and statistical plan are also submitted to and approved by the DOI. The OTIRB uses a certified public accountant to compile and submit its annual filing requirements with the Internal Revenue Service (IRS). Dues, including minimum dues, are set by members with input from antitrust counsel to ensure that minimum dues are reasonable. Throughout its history, several deviations from the manual, rules, forms, and rates filed by the OTIRB have been submitted to and approved by the DOI.

The LATISSO is the statistical agent for Louisiana. The LATISSO was incorporated Feb. 7, 2002, and commenced business circa 2003–2004. Section 22 of the Louisiana Revised Statutes addresses title insurance and rating organization. The LATISSO is member-managed with constant communication with antitrust counsel. All meetings, whether full membership or committee meetings, are coordinated to accommodate the participation of antitrust counsel. All meetings have an agenda and begin with an antitrust statement of direction. All rate, rule, and form

filings are submitted to the Louisiana DOI for its review and, if sufficiently documented, approval. Virtually all submissions have had questions, comments, or requests for clarification or additional documentation. Some of the LATISSO's rate, rule, and form filings have been disapproved by the Louisiana DOI. A financial and statistical plan, approved by the DOI, is completed each year. The compilation is reviewed, and then the completed financial and statistical plan is forwarded to the DOI for its review, consideration, and acceptance. Updates to the financial and statistical plan are also submitted to and approved by the DOI. The LATISSO uses a certified public accountant to compile and submit its annual filing requirements with the IRS. Dues, including minimum dues, are set by members with input from antitrust counsel to ensure that minimum dues are reasonable. Throughout its history, deviations from the manual, rules, forms, and rates filed by the LATISSO have been submitted to and approved by the DOI. The LATISSO has never contested a deviation filing by a member. By statute, the Louisiana commissioner of insurance, chair of the Louisiana House of Representatives Insurance Committee, and chair of the Louisiana Senate Insurance Committee are ex-officio members.

Mr. Muckerheide stated that Texas employs an extensive body of rules, forms, and a promulgated rate that is set at a hearing about every five years. Promulgated rates are required under Chapter 2703 of the Texas Insurance Code. Rates are set or changed through the insurance commissioner during periodic hearings. Hearings used to be more frequent until legislation in 2011 that lengthened the periodic hearing requirement to about every five years. However, certain stakeholders can request a hearing to change rates. Stakeholders include title insurance companies from the Texas Office of Public Insurance Counsel (OPIC), qualifying trade associations, and interested persons. Under the new legislation, the Department of Insurance conducts rate setting hearings as rulemaking hearings. Once the DOI receives a request for a hearing, it begins as a rulemaking hearing with a tight timeline within which stakeholders can request the hearing be conducted as a contested case hearing. If granted, the process becomes more similar to a litigation process. The few times a contested case hearing has been requested, it proceeded as a rulemaking hearing. The rulemaking hearing must be initiated within 60 days of the hearing request, and then the insurance commissioner has 120 days to issue a final order. Only two petitions to change the rates have been received since the new legislation in 2011. To manage the tight timeline following these petitions, the DOI collected information informally and set up public stakeholder meetings in advance of the formal petition coming in. The insurance commissioner's main statutory charge is to consider all relevant income and expenses of title insurance companies and agents. Unlike most other states, title insurance rates in Texas include costs associated with the title search and transaction, but not the escrow fees. However, the DOI does collect data on escrow data and considers if it is excessive in its ratemaking proceedings. Other annual data collected includes income statement operating revenues and expenses from title agents. From title insurance companies, it collects: income statement operating revenues and expenses; balance sheet; information about policies written and endorsements; claims and losses; and agent ownership and affiliation with underwriters.

Ms. Rankin stated Kansas uses a file and approve system. While the Kansas DOI reviews filings for compliance, it does not regulate title insurance rates. It operates off statutory construct that went into effect in 1999. Insurance companies issuing the title policy in Kansas are required to file policy forms with the DOI according to K.S.A. 40-216(a)(2)(A). In addition, under K.S.A. 40-952(c), companies must file the rates, rate manuals, rate plans, and charges to be used in connection with approved title policy forms. All insurance agents and agencies authorized to transact title insurance in the state must file all the rates they plan to charge with the insurance commissioner. This includes title premium rates and separate agency fees charged to clients for other services, such as escrow settlement and closing fees. There is no standard of review for the DOI. Agencies can either adopt the rates that are charged by the underwriters, or they can decide to deviate from those rates and charge lower rates. The title agency then sends an agreed upon premium to the underwriter. The DOI does not regulate the percentage of premiums allocated. This allows title agencies to decide if they want to take less of the premium to sell more policies. The financial difference is then made up through volume. The market controls the rates and keeps them low. To further increase transparency, the DOI is considering placing all rate filings on its website. This would eliminate the need for a records request. Anecdotally, agencies express they can make more money in states that set the rates, such as Texas.

2. Heard a Presentation on New Title Insurance-Like Alternatives that Use Attorney Opinion Letters Backed by an Enhanced Errors and Omissions Policy Through the Surplus Lines Market

Chris Morton (American Land Title Association—ALTA) stated that in April, Fannie Mae issued selling guidance that for the first time allowed the use of attorney opinion letters in lieu of title insurance in limited circumstances. This provides protection on the lender policy side. Freddie Mac did this several years ago and has indicated there has been little adoption in the marketplace. This shift in selling guidance is the outcome of efforts by the Federal Housing Finance Agency (FHFA), which is over Fannie Mae and Freddie Mac. The FHFA has been asked to put together what are called equitable housing finance plans designed to provide additional opportunities for affordable and sustainable housing amongst minority and low-income borrowers. Components of these plans include consumer education to ensure homeowners understand the housing marketplace, credit reform, improving the appraisal process with technology, and developing special purpose credit programs with lenders. There has been discussion on whether there are ways to reduce costs within the marketplace. The use of attorney opinion letters is being purported as an opportunity to explore. However, there are gaps in coverage, particularly on the consumer side, with this approach. Additionally, there is a question as to how an attorney opinion letter fits into title insurance in the context of these plans.

Tim Kemp (Greenberg Traurig) stated the only information available to him for analysis were marketing materials, policies, and attorney's opinions. In previous times, the Task Force has acted on entities providing title-type coverages without a license. This product should be of concern to state insurance regulators. Attorneys' opinions have been around for a long time. This product combines an attorney opinion letter, service agreement, and specialty errors and omissions insurance into one comprehensive alternative to traditional title insurance. The company currently selling these, Voxtur, is publicly traded and based in Toronto, Canada. Its marketing materials state it accelerates the lending loan cycle with technology-driven settlement services, evaluation tax assessment data, and analytics. Attorney opinions require an attorney license in a state, so this product also includes a partnership with attorneys. There is also a partnership with carriers since the attorney's opinion letter is backed by mortgage service providers. The insurance policy covers the full value of the loan for the life of the loan and is fully transferable in the secondary market. Unlike title insurance, this product uses legal opinions to confirm marketability of title. The product's market materials state that this is not new, but a new iteration that makes these opinions scalable, affordable, and widely available. This allows for the product to be offered as a more affordable option than title insurance. Each attorney is acting under the authority and blessing of the Supreme Court of the state of the subject property, with the protection of a comprehensive liability wrapper. To state it has the blessing of the state Supreme Court could be misleading.

Today, Freddie Mac and Fannie Mae allow the use of an attorney opinion letter in lieu of title insurance. Freddie Mac's guidelines are limited to areas where attorney opinion letters are more commonly used in southern Ohio, Kentucky, and Iowa. There must be a statement stating, "We [I] agree to indemnify you and your successors in interest in the [Mortgage] [deed of trust] opined hereto, to the full extent of any loss attributable to a breach of our [my] duty to exercise reasonable care and skill in the examination of the title and the giving of this opinion." Additionally, the attorney must have malpractice insurance. Similarities between the title policy and the attorney's opinion include that both have some assurance that the title is vested as described, there is protection offered in having a marketable title, protection against having no right of access to the property, and protection in the lean priority of the mortgage. However, there is no closing protection letter (CPL). The insurance wrapper is structured like a service provider policy. The lender is made whole for any monetary loss if the provider fails to meet its obligations, including following closing instructions. However, there are no protections for the consumer if someone absconds with the settlement money. Additionally, the attorney opinion letter with the liability wrap only has a duty to search the most current public records available. Unrecorded interests, mechanic liens, etc., are not within the scope of coverage. Those of the income level who would benefit most from a lower cost alternative to title insurance are least likely to be able to protect themselves in the event of a claim. Also not covered under the alternative product are fraud, forgery, duress, incapacity, impersonations, and other similar

coverages. Proper execution of documents, including the use of a remote notary, is not included. Other core coverages not provided under the alternative product include defective judicial proceedings, boundary line disputes, and marketability line coverage. Additionally, the alternative product has limited or no coverage for liens and encumbrances, other coverages, claims duties, and defalcation.

State insurance regulators are asked to consider if these should be considered title insurance coverages. If they determine they do qualify as title insurance coverage, then state insurance regulators should consider if those selling these alternative products are licensed to do so, if they are reserving, how reserves are being determined, and if other guard rails for the title industry are being adhered to.

Director Dunning stated it was his understanding that a standard title insurance policy did not require proof of error for the policy to respond and clean the title. He asked if the alternative product would require the property owner to show competency failure on the part of the lawyer before he could recover. Mr. Morton stated it does not matter if the policyholder proves anything. It only matters if it is covered under the terms of the policy. Regarding the alternative product, only the lender benefits from the errors and omission policy. There must be a foreclosure before the homeowner recovers anything.

Ms. Rankin asked for clarification on when the malpractice insurance attorneys must have come into play. Mr. Morton stated if the attorney opinion is issued to the lender, then the liability wrap is around that opinion. He did not know if the homeowners could go against the attorney. This begs another question as to who the attorney's client is in this circumstance. Mr. Kemp stated that this product is currently being marketed as available in all 50 states with up to \$1 million of coverage.

Birny Birnbaum (Center for Economic Justice —CEJ) stated he has worked on title insurance rates since 1991. The presentations illustrate why title insurance markets are not competitive and why title insurance is massively overpriced. Over the last 30 years, loss ratios have typically been around 4%, outside of the financial crisis, when they reached double digits. The paper-based manual process has been replaced with a digitized automated process. Despite innovations, such as Dolma's underwriting through an algorithm, the innovator struggles to gain market share. This is because competition is based on which real estate professionals can steer business to the title agent or insurer rather than price. State insurance regulators should be skeptical about efforts to exclude innovators. Unlike other types of insurance, title insurance is characterized by reverse competition. This suggests that not all expenses are reasonable. The real innovation in title insurance would be to create a competitive market in which the purchasers of title insurance have the market power to discipline the seller of title insurance. Mr. Birnbaum offered to present at a future meeting on how different states examine title rates for reasonableness.

Having no further business, the Title Insurance (C) Task Force adjourned.

WORKERS' COMPENSATION (C) TASK FORCE

Workers' Compensation (C) Task Force Aug. 2, 2022, Minutes..... 7-105

Draft: 8/3/22

Workers' Compensation (C) Task Force
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
August 2, 2022

The Workers' Compensation (C) Task Force met Aug. 2, 2022. The following Task Force members participated: Alan McClain, Chair, and Jimmy Harris (AR); John F. King, Vice Chair, Steve Manders, Paula Shamburger, and Martin Sullivan (GA); Lori K. Wing-Heier represented by Anna Latham and Alex Reno (AK); Mark Fowler represented by Yada Horace and Erick Wright (AL); Ricardo Lara represented by Yvonne Hauscarriague, Giovanni Muzzarelli, Mitra Sanandajifar, and Sarah Ye (CA); Andrew N. Mais, George Bradner, and Wanchin Chou (CT); Karima M. Woods represented by David Christhilf and Angela King (DC); Trinidad Navarro represented by Christina Miller (DE); David Altmaier represented by Greg Jaynes and Sandra Starnes (FL); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Travis Grassel, Jared Kirby, and Jolene Schurman (IA); Dean L. Cameron represented by Katie Deaver and Randy Pipal (ID); Vicki Schmidt represented by Julie Holmes, Sara Hurtado, and Craig VanAalst (KS); James J. Donelon represented by Warren Byrd and Tom Travis (LA); Gary D. Anderson represented by Matthew Mancini (MA); Timothy N. Schott represented by Brock Bubar and Sandra Darby (ME); Grace Arnold represented by Sandra Anderson, Tammy Lohmann, and Phil Vigliaturo (MN); Chlora Lindley-Myers represented by Jo LeDuc, Patrick Lennon, and Debbie Goeller; (MO); Mike Causey, Tracy Biehn, and Fred Fuller (NC); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Barbara D. Richardson represented by Gennady Stolyarov (NV); Andrew R. Stolfi represented by David Dahl (OR); Michael Humphreys represented by Shannen Logue and Eric Zhou (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Larry D. Deiter represented by Tony Dorschner (SD); Jon Pike represented by Tracy Klausmeier and Reed Stringham (UT); Kevin Gaffney represented by Mary Block, Isabelle Turpin Keiser, Nick Marineau, Pat Murray, and Rosemary Raszka (VT); and Allan L. McVey, Tonya Gillespie, and Juanita Wimmer (WV). Also participating were: Kaylee Baumstark (AZ); Anthony Bredel, Keith Fanning, and Reid McClintock (IL); Thomas Faust (IN); Tina Nacy (MI); Connie Van Slyke (NE); Ruju Dave (NH); Bogdanka Kurahovic and Jennifer Catechis (NM); Benna Nye (OK); Marianne Baker and Nicole Elliott (TX); Rebecca Nichols (VA); and David Haushalter and Shasta Hoffhein (WI).

1. Discussed Presumptions and Their Erosion of a Balanced Workers' Compensation Industry

Commissioner McClain said several states enacted presumption legislation in response to the COVID-19 pandemic. While the presumptions have expired in many states, there are a few states that extended their presumptions into late 2022 and 2023.

Heather Lore (International Association of Industrial Accident Boards and Commissions—IAIABC) said the IAIABC is a trade association of regulatory bodies, which now also includes private sector organizations. These organizations all met and shared ideas regarding workers' compensation policy, regulation, and administration. The IAIABC includes members from 65 jurisdictions from the U.S. and around the world, including Australia, Canada, Germany, Malaysia, South Korea, and Taiwan. There are additionally 171 private sector members that have an interest in workers' compensation. Ms. Lore said that state insurance regulators do have a membership with the IAIABC. She said if state insurance regulators have interest in a particular workers' compensation topic, the IAIABC can help by providing access to resources.

Ms. Lore said the IAIABC develops informational resources and data reporting standards on workers' compensation. The IAIABC additionally hosts virtual educational programs on hot topics, trends, and continuing challenges in the regulation and administration of workers' compensation. The IAIABC provides opportunities for members to connect and share information and insights with their peers.

Ms. Lore said the IAIABC stays current on issues that are affecting the workers' compensation system, including the issue of presumptions and the future of work.

Ms. Lore said presumptions have existed in workers' compensation for years. Presumptions are created where injuries or illnesses occurring to an employee would not be covered by workers' compensation or could be easily challenged by a jurisdiction's workers' compensation act. These injuries are presumed to have occurred in the workplace due to the nature of the work. Commonly, these presumptions include first responders, such as emergency medical technicians (EMTs), firefighters, and police officers. Presumptions affecting the employee cover cancers, such as colon or kidney cancer, heart disease, or infectious disease.

Ms. Lore said presumptions typically have employment requirements, as well as requiring a minimum number of years of service. Presumptions are usually rebuttable, allowing the presumption of a workplace injury to be rebutted through evidence. She said other presumptions include miners who contract black lung disease, or for hazardous waste workers.

Ms. Lore said there has been a lot of activity related to presumptions in the last two years. The COVID-19 pandemic had a dramatic impact on presumptions and started a heated discussion regarding what is promised by workers' compensation as the exclusive remedy. Many states enacted COVID-19 presumptive coverage for essential workers, namely health care workers, including doctors, nurses, and first responders.

Ms. Lore said in California, there is a measure that would extend the current COVID-19 presumption for another two years. She said this measure will be addressed by the California Senate Appropriations Committee next week.

Ms. Lore said Florida is adding post-traumatic stress disorder (PTSD) for corrections officers and 911 operators, and Michigan is extending presumptions to part-time employees and volunteer firefighters. She said Washington now has a presumption for personnel working at a radiological hazardous waste facility.

Ms. Lore said the National Council on Compensation Insurance (NCCI) has been tracking the COVID-19 presumption activity, which confirms that some states have extended their presumptions, while many others have allowed their presumptions to expire.

Ms. Lore said workers' compensation was meant to be the exclusive remedy for any workplace injury but asked if presumptions create inequities in the workers' compensation system based on an employee's type of work. In 2020, when the COVID-19 presumptions began rolling out, alarms were raised in the workers' compensation industry. The workers' compensation industry raised the concern that these presumptions went beyond the original intent of workers' compensation of just providing medical care and wage loss benefits for workplace injuries.

Ms. Lore said COVID-19 is a highly communicable disease, and suddenly workers were receiving workers' compensation for medical and indemnity benefits for something they may have caught outside of work. It was determined that the likelihood of contracting COVID-19 was much higher for the doctors, nurses, firefighters, and police officers compared to the rest of the general population of workers, so presumptions allowed these workers to receive workers' compensation coverage should they get ill or need to miss work.

Ms. Lore said workers' compensation is supposed to be the exclusive remedy for workplace injuries and illnesses, so she posed the question, "Why did the presumption stop with these few types of workers?" Washington did extend its presumption to any worker; however, all other states had qualifiers regarding the types of employment.

Ms. Lore said that beyond COVID-19 presumptions, first responders are usually the only ones typically covered for PTSD. She said mental health was typically becoming less stigmatized, and workers' compensation is more aware

of it now that it has been in the past. Ms. Lore asked if PTSD care must be a part of presumptive activity, or should states confer coverage to all workers to ensure equity in the system.

Ms. Lore said these are complex questions that will likely require a great deal of discussion, and the IAIABC held a conversation regarding this topic.

Commissioner King said Georgia passed a mental health parity bill last year. He said the concerns regarding this bill mainly deal with the cost and the impacts of these costs to the business community. Commissioner King said it is important to discuss the impact, as well as the cost. He said the topic of 911 operators has been seriously discussed because people do not realize the pressures exerted on these employees and how critical they are to law enforcement functions.

Mr. Manders said one thing Georgia did several years ago was to take cancer out of the workers' compensation system and create a private separate benefit that private insurers are writing. He said the benefit has prescribed benefits like workers' compensation, but it is not covered by the workers' compensation system. He said the benefit provides medical and indemnity benefits for a limited period. Mr. Manders said there is discussion in the legislature to do something of a similar nature regarding PTSD.

Ms. Lore said many of the workers' compensation presumptions are for workers that work for self-insured employers, such as municipalities. She said this means the municipalities are bearing the costs. Ms. Lore said the IAIABC has discussed how this can be managed and balanced to ensure that the benefit is there for the people in need but are not causing an undue burden on the municipalities that are paying out benefits on the presumptions.

2. Discussed the Future of Work and How the Hybrid Work Force is Affecting Claims Frequency

Ms. Lore said the IAIABC and the NAIC collaborated last year on a paper regarding the future of work. The name of the paper is *Workers' Compensation Policy and the Changing Workforce*, and it can be found on either the IAIABC website or on the NAIC website. The paper discusses the changes in work and the evolving landscape of workplaces, as well as the shifting responsibility of workers' compensation coverage and benefits.

Ms. Lore said while the future of work was changing prior to 2020, the pandemic accelerated these changes and shifted the workplace and work arrangements drastically. There has been a lot of job shifting over the last couple of years. Ms. Lore said there has been an increase in workers who have been at their jobs for less than a year. She said according to a McKinsey Global Institute report from 2021, the COVID-19 pandemic will cause an estimated 25% of workers to not only change jobs, but to change their occupations by 2030. Ms. Lore said the report indicated younger workers have faced higher levels of unemployment, as well as reduced access to training.

Ms. Lore said there was a huge change in the number of remote workers between 2015 and 2021. She said remote work is continuing in many industries and jobs. She said the IAIABC's entire staff is now full-time remote. Ms. Lore said the McKinsey Global Institute report estimated that 25% of workers in high-income countries will continue full- or part-time remote work.

Ms. Lore said the number of workers in non-standard work arrangements has been growing since 2008. These workers are largely without job protections, such as workers' compensation. Ms. Lore said the Pew Research Center estimated that gig work was the main job for 31% of gig workers in 2021.

Ms. Lore said regarding automation, artificial intelligence (AI), and robotics, workplaces are changing in response to the pandemic and lack of workers. More than half of global businesses have increased automation. Businesses are finding increases and efficiency using innovative technologies, and some of these technologies are taking on more risky, unsafe jobs, allowing workers to retrain in other areas.

Ms. Lore said during the NCCI's Annual Insights Symposium (AIS), there was a discussion regarding the great reshuffle in the labor markets. She said part of what was discussed was the impact of the reshuffling on claim frequency. They also discussed short-tenured workers, remote workers, and industry mix. Ms. Lore said the NCCI did not discuss gig workers or automation, but certainly what they discussed has an impact on claims frequency.

Ms. Lore said short-tenured workers are more likely to suffer injuries, and claims frequency has been affected due to the increase in the number of short-tenured workers over the last couple of years. She said frequency is low for remote workers, although there is not much data to compare since the share of remote workers was much lower pre-pandemic.

Ms. Lore said the Pew Research Center estimated that 9% of U.S. adults are current or recent gig workers. The continued increase in gig work, coupled with the increase in automation, may make up for some of the shifts in the workforce. Since gig workers are typically not covered by workers' compensation, their workplace injuries are not affecting claims frequency, as they are being moved into general health care and Social Security disability income.

Ms. Lore said the future of work is having an impact on claims frequency and is going to continue to have an impact. She said for non-COVID-19 claims, the California Workers' Compensation Insurance Rating Bureau (WCIRB) reported that non-COVID-19 claims decreased by 22.2% in California in 2020 due to layoffs, businesses closing or cutting back on hours, and the large number of employees moving to remote work. However, the frequency increased by 12.6% in 2021, which was the first increase in frequency in a decade. In the past 20 years, frequency has been decreasing.

Ms. Lore said increases in automation and safety are helping to drive that frequency down, as well as more workers moving to gig work and more employees moving to remote work. While the increases in short-tenured workers are driving the frequency up, the downward trend in frequency is likely to continue due to all the shifts in the future of work.

Mr. Stolyarov said he appreciates the focus on the various trends that are driving frequency down versus the trends that are driving frequency up. He said he believes the future trajectory will depend on what happens with both remote work, as well as the great reshuffle. Mr. Stolyarov said he agrees that remote work has a favorable impact on frequency. He said there is uncertainty whether the increase in short-tenured employees is going to be commonplace or a temporary phenomenon because of one-time structural changes to the economy.

Commissioner McClain said he recalls that the NCCI presentation indicated a lot of the shuffle occurred in the service industry. He said the service industry typically sees reshuffling.

Mr. Byrd said employees in the Louisiana Department of Insurance (DOI) are asking if they can do their job remotely, which is currently not an option. He said an overall concern is how much of the labor force is required to be at a physical location—such as plumbers, carpenters, and electricians—versus those who can work from home.

Commissioner McVey said during the pandemic, many of the DOIs' employees worked remotely, which did decrease the claims frequency. He said operations like construction and maintenance, or industries of this type, are going to see a shifting from the older employees to younger employees, who are going to be in training. Commissioner McVey said frequency will be dictated by the type of industry.

Mr. Byrd asked if a person was working remotely and was walking to get a cup of coffee and fell, would that be covered under workers' compensation. Ms. Lore said this would generally be covered, as this is something you would do in the office. She said if you were walking up the stairs to change your laundry during the day, this would

generally not be covered. Ms. Lore said some organizations come to a remote worker's office and do a safety check or have employees send a picture of their workspace.

Mr. Byrd asked if this would raise the level of potential fraud. Ms. Lore said this is being discussed because it is a valid concern.

3. Discussed How States are Recruiting and Training With the DOI

Commissioner McClain said he thinks remote work is a good strategy for recruitment and retention of employees.

Mr. Bradner asked Ms. Lore if the IAIABC indicated in the job posting if the job was remote and the applicant did not have to live in the state where the business is located. He said Connecticut is allowing employees to work from home, but, remote workers must be within two hours of the office so they are able to come into the office. He said, however, that they are trying to waive this restriction.

Ms. Lore said the IAIABC's job posting said the position would be remote for the right candidate. Currently, all the IAIABC employees are remote.

Commissioner McClain said if the Arkansas DOI were able to have more flexibility with remote work, it would help with recruitment and retention. He said they lost several employees throughout the DOI to employers that offer a more flexible work environment.

Mr. Grassel said the Iowa DOI recently started a pilot internship program that it is in the middle of structuring to recruit talent. Currently, this is being done with high school students, but the Iowa DOI is hoping it will be able to begin bringing in college students. Mr. Grassel said the Iowa DOI is in the office three days a week and remote two days a week. He said it is a challenge for retention if full remote work is not offered.

Ms. Murray said the Vermont DOI has a successful internship program and has retained one college graduate on a full-time basis. She said this is the fifth year of its internship program, and it has three summer interns. Ms. Murray said the Vermont DOI looks for local students. She said, however, it takes students from all over the country.

Ms. Murray said the Vermont DOI has worked hybrid the past two years, and it has worked out well. Commissioner Gaffney said DOIs cannot always make up the compensation gap. He said, however, that learning that working in a remote fashion can be productive for many jobs has helped fill that gap. He said embracing remote work will help balance the compensation difference.

Mr. Byrd said the Louisiana DOI has performance standards in place. He said if these standards are being met, it will provide some guidance on when working from home is working for a particular work situation. Mr. Byrd said performance standards would play a role in the future.

Ms. Lore posted a link to a webinar and discussion session held in May regarding recruitment and retention. This webinar discusses strategies to improve recruitment and retention. The link to the webinar is as follows: <https://educationhq.iaiaabc.org/learn/course/86/play/455/dive-in-discussion-on-recruitment-and-retention-2022>

Mr. Manders said there are two large risk management schools in Georgia. He said it is helpful to reach out to the local colleges and develop a relationship with the deans. Mr. Manders said Georgia has two deans that sit on its residual market boards as public members.

Ms. Klausmeier said Utah is offering remote work, and it has been key to attracting and retaining employees.

Having no further business, the Workers' Compensation (C) Task Force adjourned.

Draft: 8/16/22

Market Regulation and Consumer Affairs (D) Committee
Portland, Oregon
August 12, 2022

The Market Regulation and Consumer Affairs (D) Committee met in Portland, OR, Aug. 12, 2022. The following Committee members participated: Jon Pike, Chair (UT); Trinidad Navarro, Vice Chair (DE); Evan G. Daniels (AZ); Sharon P. Clark (KY); Chlora Lindley-Myers represented by Jo LeDuc (MO); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by John Arnold (ND); Eric Dunning represented by Martin Swanson (NE); Russell Toal represented by Leatrice Geckler (NM); Barbara D. Richardson (NV); Michael Humphreys (PA); Cassie Brown (TX); and Kevin Gaffney represented by Karla Nuissl (VT). Also participating were: Michael Conway (CO); Erica Weyhenmeyer (IL); Rebecca Nichols (VA); and John Haworth (WA).

1. Adopted its July 15 Minutes

Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt the Committee's July 15 minutes (Attachment One). The motion passed unanimously.

2. Adopted Revisions to the Handbook

Ms. Weyhenmeyer said revisions to Chapter 1—Introduction of the *Market Regulation Handbook* (Handbook) were adopted by the Market Conduct Examination Guidelines (D) Working Group during its July 14 meeting. She said discussion on the issue of coordination between market conduct state insurance regulators and state insurance financial examiners had been occurring since the drafting of Chapter 20—General Examination Standards of the Handbook. She said the purpose of adding the revision to Section B of Chapter 1 is to insert guidance into the Handbook to address the need for state insurance market conduct regulators to recognize domestic financial examiners as a resource available to them and market conduct examiners to coordinate with domestic financial regulators to obtain information relating to a company's group capital calculations (GCCs), liquidity stress test (LST) results, corporate governance, and Own Risk and Solvency Assessment (ORSA), as needed.

Ms. Weyhenmeyer said revisions to Chapter 20 of the Handbook were also adopted during the Working Group's July 14 meeting. The revisions align the Handbook with various provisions of the *Insurance Holding Company System Regulatory Act* (#440) and make several changes to Chapter 20.

Ms. Weyhenmeyer said revisions to Chapter 21—Conducting the Property and Casualty Examination of the Handbook were adopted during the Working Group's April 21 meeting. The revisions align the chapter with provisions of the *Real Property Lender-Placed Insurance Model Act* (#631).

Ms. LeDuc made a motion, seconded by Ms. Biehn, to adopt the revisions to Chapters 1 (Attachment Two), 20 (Attachment Three), and 21 (Attachment Four) of the Handbook. The motion passed unanimously.

3. Adopted the New Handbook Chapter 24B

Ms. Weyhenmeyer said the Market Conduct Examination Guidelines (D) Working Group adopted the new Chapter 24B—Conducting the Mental Health Parity Addiction Equity Act-Related Examination of the Handbook on July 14. She said the drafting of the new chapter was in response to the Nov. 3, 2021, letter to the Committee from 19 organizations in the mental health field. She said the letter indicated that the mental health parity examination chapter of the Handbook was outdated because of 2021 federal amendments to the federal Paul Wellstone and

Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) requirements for analyzing the parity compliance of non-quantitative treatment limitations (NQTLs).

Ms. Weyhenmeyer said a new draft of Chapter 24B entitled “Conducting the Mental Health Parity Addiction Equity Act-Related Examination” was first prepared under the guidance of the MHPAEA (B) Working Group, as its members have expertise in this subject area. She said the drafting sessions were attended by state insurance regulators and federal regulators who provided input on the updated MHPAEA chapter. She said after the Working Group reviewed the draft chapter, it was distributed to the Market Conduct Examination Guidelines (D) Working Group, interested state insurance regulators, and interested parties. Numerous comments were received on the chapter from state insurance regulators, industry representatives, and consumer representatives.

Ms. Weyhenmeyer said interested parties asked the Working Group to defer adopting the MHPAEA chapter until another federal rule is potentially issued in the fall of this year. She said those potential federal rules have not yet been drafted or presented, and the Working Group decided it was important to move forward with adoption of the chapter and then modify the chapter, as needed.

Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt Chapter 24B of the Handbook (Attachment Five). The motion passed unanimously.

4. Adopted Recommendations for the Incorporation of AI in the MIS

Commissioner Conway said on June 16, the Market Information Systems (D) Task Force adopted the report of the Market Information Systems Research and Development (D) Working Group, including the “Recommendations for the Incorporation of Artificial Intelligence in the NAIC Market Information Systems.” He said the report is the final product of the Task Force’s charge to make recommendations regarding the use of artificial intelligence (AI) techniques in the NAIC Market Information Systems (MIS).

Commissioner Conway said the report was completed and adopted by the Working Group prior to the 2021 Summer National Meeting. He said the Task Force considered the report during its next three meetings and had robust discussions among regulatory, consumer, and industry stakeholders. He said the final adoption by the Task Force accepted the report with no revisions.

Commissioner Conway said the recommendations consist of five steps: 1) analyze current MIS data and identify deficiencies; 2) identify the predictive power of market analysis scoring systems, and integrate all data into a single analysis; 3) incorporate promising AI modes of analyses, as well as statistical models; 4) assess the ways AI can improve analysis and facilitate pattern recognition; and 5) systematically explore potential data sources suitable for AI techniques.

Ms. LeDuc made a motion, seconded by Director Daniels, to adopt the “Recommendations for the Incorporation of Artificial Intelligence in the NAIC Market Information Systems” (Attachment Six) The motion passed with Commissioner Brown voting against.

5. Adopted Guidelines for Amending the NAIC Uniform Applications

Commissioner Clark said the Producer Licensing (D) Task Force adopted the “Guidelines for Amending the NAIC Uniform Applications” on May 5. She said the guidelines will be used for the review and adoption of substantive changes to the NAIC’s Uniform Licensing Applications in support of the NAIC and National Insurance Producer Registry (NIPR) missions of maintaining stable and consistent NAIC Uniform Applications for producer licensing.

Commissioner Clark said the guidelines set forth a five-step process to be followed on a biennial basis. She said any party requesting proposed changes to the NAIC's Uniform Licensing Applications would submit the proposed changes to NAIC staff by Feb. 1, and the proposed changes would be circulated for a 30-day public comment period. She said after the comment period, the Producer Licensing Uniformity (D) Working Group and the Task Force will have until the close of the next Summer National Meeting to adopt or reject the proposed changes. She said for proposed changes that are adopted, NAIC staff will coordinate with NIPR and the states, including any back-office system support vendors, to conduct an analysis of how long it will take to implement the proposed change and the cost to implement. She said this work is to be completed within 45 days. She said the Committee will then be presented with the proposed changes for consideration and consider adoption of the proposed changes by Oct. 15 for the Executive (EX) Committee and Plenary to consider adoption of the proposed changes at the Fall National Meeting.

Commissioner Clark said the guidelines are intended to provide structure around how proposed changes to the NAIC's Uniform Licensing Applications should be considered. She said the time periods set forth in the guidelines are not intended to be strict administrative rules that cannot be modified, as needed, to efficiently complete the review of proposed changes to the NAIC's Uniform Licensing Applications. She said if adopted, the guidelines will be used by the Working Group to review the proposed amendments to the NAIC's Uniform Licensing Applications from 2018.

Commissioner Clark made a motion, seconded by Commissioner Navarro, to adopt the "Guidelines for Amending the NAIC Uniform Applications" (Attachment Seven). The motion passed unanimously.

6. Adopted the Antifraud Plan Repository Workflow

Commissioner Navarro said in 2019, the Antifraud (D) Task Force began discussing the development of an NAIC antifraud plan submission and repository system to automate and streamline antifraud plan compliance nationwide. He said the topic was introduced to the Task Force after industry representatives explained how cumbersome it is to stay in compliance with state antifraud plan laws.

Commissioner Navarro said antifraud plan requirements differ tremendously from state to state, and insurance company representatives manually create and submit individual plans to states that have an antifraud plan requirement. He said to address the industry's concern, as well as to promote antifraud plan uniformity, the Task Force determined that it would be beneficial to create an antifraud plan system that works in the same way as the NIPR system.

Commissioner Navarro said Task Force members determined that a similar electronic system could be created, using a uniform antifraud plan template, to streamline the antifraud plan creation and submission process. He said as part of this project, the Task Force, with industry assistance, redesigned the *Antifraud Plan Guideline* (#1690) to ensure it included all the key elements that insurance companies should consider when developing an antifraud plan. He said the revisions of the guideline were adopted during the 2021 Spring National Meeting.

Commissioner Navarro said in the second phase of the project, the Antifraud Technology (D) Working Group, using the newly adopted guideline, worked with industry representatives to develop an Antifraud Plan Repository Workflow. He said in June, the Task Force adopted the workflows and business rules. He said the workflows and business rules, not only outline how the Task Force envisions the system working from a user perspective but will also serve as a resource for the NAIC's Information Technology (IT) Department as it works on the project.

Commissioner Richardson said she believes this is a good idea, but she is worried that using a template would make the creation of antifraud plans perfunctory, and she would have to vote against the proposal due to that concern.

Commissioner Clark made a motion, seconded by Director Daniels, to adopt the Antifraud Plan Repository Workflow (Attachment Eight). The motion passed with Commissioner Richardson voting against.

7. Adopted it Task Force and Working Group Reports

a. Antifraud (D) Task Force

Commissioner Navarro said the Antifraud (D) Task Force met June 30 and finalized the Antifraud Technology (D) Working Group's charge concerning the development of an Antifraud Plan Repository.

b. Producer Licensing (D) Task Force

Commissioner Clark said the Producer Licensing (D) Task Force met May 5. She said the Task Force received a report from the NIPR Board of Directors, which highlighted that NIPR is now processing appointments and terminations for all states. She said the Task Force also discussed the 1033 waiver process and industry's request to simplify this process. She said in response to this request, NAIC staff were asked to work with a small group of state insurance regulators to develop suggested next steps for review by the Task Force. She said the Task Force discussed the potential development of best practices and a national solution on how states should address the submission of producer applications with errors or misstatements completed by authorized third-party submitters.

c. Market Analysis Procedures (D) Working Group

Mr. Haworth said the Market Analysis Procedures (D) Working Group met June 8 and July 13. He said on June 8, the Working Group adopted standard ratios for the travel insurance Market Conduct Annual Statement (MCAS) and the short-term limited-duration (STLD) MCAS. He said the standard ratios are calculated at the state level and publicly posted on the NAIC MCAS web page each year. He noted that during the July 13 meeting, the Working Group considered some additional standard ratios for travel insurance, and these are posted for comment.

Mr. Haworth said during both the June 8 and July 13 meetings, the Working Group began discussions on the next line of business to be added to the MCAS. The Working Group heard several suggestions, including pet insurance, credit life insurance, credit disability insurance, title insurance, and business owner's policy (BOP) insurance. He said the Working Group hopes to make a final recommendation before the Fall National Meeting.

Mr. Haworth said the Working Group has been considering enhancements to the Market Analysis Review System (MARS). He said the enhancements are focused on more quickly incorporating new MCAS data into the MARS and adding additional line of business options to be available to market analysts.

d. Market Regulation Certification (D) Working Group

Mr. Haworth said the Market Regulation Certification (D) Working Group met June 1 and July 13. He said the Working Group is working on three documents that make up the Voluntary Market Regulation Certification Program: 1) the Certification Program requirements and guidelines; 2) the Certification Program scoring matrix; and 3) the Certification Program implementation plan.

Mr. Haworth said during the Working Group's June and July meetings, the Working Group adopted the scoring matrix and began work on the requirements and implementation plan. He said a small group of state insurance regulators are reviewing the requirements and the revisions that were suggested by the pilot states. He said the small group will be meeting weekly or bi-weekly, as needed, and report back to the Working Group at each of its meetings.

Mr. Haworth said the implementation plan is being re-drafted in its entirety since it has been quite some time since its original drafting and much of the material is dated. He said this work is being done at the Working Group level.

Mr. Haworth said the Working Group plans to complete its work in time for the Fall National Meeting.

e. Speed to Market (D) Working Group

Ms. Nichols said the Speed to Market (D) Working Group met April 20 and July 12. She said during the April 20 meeting, Working Group members were updated about the ongoing review and editing of the 2016 *Product Filing Review Handbook*. She said the drafters are editing outdated and obsolete information, such as referring to the Working Group as the Speed to Market (D) Task Force.

Ms. Nichols said the Working Group also heard an update from NAIC staff on the System for Electronic Rates & Forms Filing (SERFF) Modernization Project. She said attendees on the call were invited to attend the SERFF Product Steering Committee (PSC) meetings. She said Working Group meetings will include a standing agenda item to receive updates regarding the SERFF Modernization Project.

Ms. Nichols said during the July 12 meeting, Working Group members discussed and considered suggestions for changes to the uniform transmittal documents (UTDs) and the product coding matrix (PCM). She said a change to the Life & Health UTD was unanimously adopted by the Working Group. She said the change adds “withdrawn” as a status option. She said the change will be effective Jan. 1, 2023.

Director Daniels made a motion, seconded by Mr. Arnold, to adopt the following reports: 1) Antifraud (D) Task Force; 2) Market Information Systems (D) Task Force; 3) Producer Licensing (D) Task Force; 4) Market Analysis Procedures (D) Working Group (Attachment Nine); 5) Market Conduct Annual Statement Blanks (D) Working Group (Attachment Ten); 6) Market Regulation Certification (D) Working Group (Attachment Eleven); 7) Market Conduct Examination Guidelines (D) Working Group (Attachment Twelve); and 8) Speed to Market (D) Working Group (Attachment Thirteen). The motion passed unanimously.

8. Heard a Presentation on Dark Patterns on Websites

Birny Birnbaum (Center for Economic Justice—CEJ) said dark patterns are user interface techniques that benefit an online service by leading consumers into making decisions they might not otherwise make. He said some dark patterns deceive consumers, while others exploit cognitive biases or shortcuts to manipulate or coerce them into choices that are not in their best interests. He said dark patterns are a specific type of choice architecture in website and application design that interfere with a user’s autonomy and choice. He said dark patterns modify the presentation of choices available to users or manipulate the flow of information so users make selections they would not otherwise have chosen to their own detriment and the benefit of the website or app provider.

Mr. Birnbaum provided examples of types of dark patterns utilized by website and application developers including: 1) Nagging – repeated requests to do something the firm prefers; 2) Confirm-Shaming – a choice framed in a way that makes it seem dishonorable or stupid; 3) Forced Action – requiring opt-out of optional services and the manipulative extraction of personal information and information about other users; 4) Social Proof – false/misleading notices that others are purchasing or offering testimonials; 5) Roach Motel – asymmetry between signing up and canceling; 6) Price Comparison Prevention – difficulties in understanding and comparing prices; and 7) Hidden Information/Aesthetic Manipulation – important information visually obscured. He also said a common example of a dark pattern is the ease with which websites will allow a user to accept cookies, but if a user does not want to accept cookies, many steps are necessary. He provided results of testing on dark patterns

that indicate that the use of dark patterns is very effective in guiding user choices to the benefit of the website provider.

Mr. Birnbaum said it is important for state insurance regulators to address the use of dark patterns by insurance providers. He noted that insurance regulatory disclosures are based on and designed for paper, not digital interfaces. He said on a digital interface, requirements such as “prominently display” and font size have no meaning. He noted that there has been a rapid increase in digital interactions in place of paper or face-to-face interactions between consumers and insurers from digital claim settlements to interactions involving insurance applications.

Mr. Birnbaum urged state insurance departments and the NAIC to: 1) train analysts and examiners to recognize dark patterns and manipulative digital design; 2) compile resources on manipulative digital design; 3) review existing disclosure requirements and whether they make sense for a digital interface and protect against dark patterns; 4) update guidance in regulations identifying dark patterns as an unfair and deceptive trade practice; and 5) develop relevant methods of regulatory review and update the Handbook accordingly.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

[D Cmte Minutes](#)

Draft: 8/2/22

Market Regulation and Consumer Affairs (D) Committee
Virtual Meeting
July 15, 2022

The Market Regulation and Consumer Affairs (D) Committee met July 15, 2022. The following Committee members participated: Jon Pike, Chair (UT); Trinidad Navarro represented by Frank Pyle, Vice Chair (DE); Evan G. Daniels (AZ); Sharon P. Clark (KY); Chlora Lindley-Myers represented by Jo LeDuc (MO); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by Johnny Palsgraaf (ND); Barbara D. Richardson (NV); Michael Humphreys represented by David Buono (PA); Cassie Brown represented by Matthew Tarpley (TX); and Kevin Gaffney represented by Mary Block (VT). Also participating was: Erica Weyhenmeyer (IL).

1. Adopted its Spring National Meeting Minutes

Commissioner Richardson made a motion, seconded by Commissioner Clark, to adopt the Committee's April 7 minutes (see *NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee*). The motion passed unanimously.

2. Adopted its 2022 Revised Charges

Commissioner Pike said the references to the System for Electronic Rates & Forms Filing (SERFF) Advisory Board are being deleted since this Board was disbanded at the Spring National Meeting. In addition to this charge, the Producer Licensing (D) Task Force charges are being revised to appoint a new Adjuster Licensing (D) Working Group. Commissioner Pike said this will allow for a new working group to review adjuster licensing reciprocity and uniformity issues rather than the Producer Licensing (D) Task Force.

Ms. LeDuc made a motion, seconded by Mr. Pyle, to adopt the Committee's revised charges (Attachment One-A). The motion passed unanimously.

3. Adopted Revised Homeowners MCAS, Revised PPA MCAS, Revised Life and Annuity MCAS, and New Other Health MCAS

Ms. Weyhenmeyer said the changes to the homeowners data call and definitions and the private passenger auto (PPA) data call and definitions are the same and that the Market Conduct Annual Statement (MCAS) digital claims reporting additions for home and PPA have already been adopted by the Committee for reporting in the 2023 data year. Ms. Weyhenmeyer said the interrogatories have some minor revisions since their initial adoption.

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group adopted a significant change for the lawsuits reporting within the homeowners and PPA data call and definitions. The lawsuit data elements are removed from the claims reporting section and placed into a newly created reporting section specifically created for reporting lawsuit activity. Ms. Weyhenmeyer said only claims-related lawsuits have been reported, and to keep continuity, the coverage-type reporting of claims will continue to include only claims-related lawsuits. An additional reporting category was created to capture non-claims-related lawsuits.

Ms. Weyhenmeyer said this change to the lawsuit reporting required edits to the lawsuit definition.

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group adopted edits to the life Market Conduct Annual Statement (MCAS) data call and definitions to include the reporting of accelerated

underwriting data. A new Interrogatories reporting section was created to capture basic information related to the products where accelerated underwriting is used and the types of data companies use for Accelerated Underwriting. Ms. Weyhenmeyer said the accelerated underwriting reporting breakouts were created for existing life MCAS data elements. This will allow for the reporting of individual cash value and non-cash value products with MCAS accelerated underwriting vs. other than MCAS accelerated underwriting. The data elements selected for accelerated underwriting reporting include: new policies issued; policies applied for; free looks; policies in-force at the end of the period; direct premiums; amount of insurance issued; and amount of insurance in-force at the end of the period.

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group had hoped to adopt accelerated underwriting reporting last year but delayed the adoption to ensure that the Accelerated Underwriting (A) Working Group's definition of accelerated underwriting could be considered for MCAS reporting. The Market Conduct Annual Statement Blanks (D) Working Group found that for reporting purposes, the Accelerated Underwriting (A) Working Group's adopted definition did not quite fit. At the same time, Ms. Weyhenmeyer said the definition adopted by the Accelerated Underwriting (A) Working Group is included within the life MCAS data call and definitions document to ensure consistency.

Ms. Weyhenmeyer said the Market Conduct Annual Statement Blanks (D) Working Group adopted the other health MCAS blank. With the adoption of this blank, the MCAS now collects underwriting, claims, complaint, and marketing information on health plans not subject to the federal Affordable Care Act (ACA). Those plans include the following: 1) accident only; 2) accidental death and dismemberment; 3) specified disease and critical illness; 4) hospital and other indemnity; and 5) hospital/surgical and other expense. Ms. Weyhenmeyer said the data on these policies is divided into those sold directly to individuals, those sold through associations, and those sold through employer groups. The blank is divided into five sections. The interrogatories collect information on how the company distributes its products and their relationships with associations and third-party administrators (TPAs). There are also questions regarding fees that are either included, or not included, in the premium charged to policy and certificate holders. The underwriting section collects information such as premium written, numbers of policies and covered lives, cancellations, and reasons for cancellations. The claims sections will provide market analysts with information on claims received, paid, and denied, and the reasons for the denials. The claims section will also collect information on the total dollar amount of claims paid and the timeliness of the payments or denials. The consumer complaints and lawsuits section collects data on the number of complaints and lawsuits received against the company. The marketing section collects information on the number of applications received, approved, and denied. This section also collects data on how the applications are received by the company and commissions paid or returned to the company. Ms. Weyhenmeyer said there is a \$50,000 premium threshold for reporting, and policies/certificates will be reported to the state in which the insured resides. In combination with the health MCAS blank, which collects data on plans subject to the ACA, and the short-term, limited-duration (STLD) MCAS blank, most of the health insurance marketplace will now be subject to MCAS reporting.

Mr. Pyle made a motion, seconded by Ms. LeDuc, to adopt the revised homeowners MCAS (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Five*), the revised PPA MCAS (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Six*), the revised life and annuity MCAS (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Seven*), and the new other health MCAS (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Four*). The motion passed unanimously.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

[D Cmte Minutes 7.15.22](#)

Draft: 6/2/22

Adopted by the Executive (EX) Committee and Plenary, _____, _____

Adopted by the Market Regulation and Consumer Affairs (D) Committee, July, xx, 2022

2022 Proposed Revised Charges

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

The mission of the Market Regulation and Consumer Affairs (D) Committee is to monitor all aspects of the market regulatory process for continuous improvement. This includes market analysis, regulatory interventions with companies, and multi-jurisdictional collaboration. The Committee will also review and make recommendations regarding the underwriting and market practices of insurers and producers, as those practices affect insurance consumers, including the availability and affordability of insurance.

Ongoing Support of NAIC Programs, Products or Services

1. The **Market Regulation and Consumer Affairs (D) Committee** will:
 - A. Monitor the centralized collection and storage of market conduct data, national analysis, and reporting at the NAIC, including issues regarding the public availability of data.
 - B. Monitor and assess the current process for multi-jurisdictional market conduct activities and provide appropriate recommendations for enhancement, as necessary.
 - C. Evaluate all data currently collected in the NAIC Market Information Systems (MIS) and considered confidential to determine what, if any, can be made more widely available.
 - D. Oversee the activities of the Antifraud (D) Task Force.
 - E. Oversee the activities of the Market Information Systems (D) Task Force.
 - F. Oversee the activities of the Producer Licensing (D) Task Force.
 - G. Monitor the underwriting and market practices of insurers and producers, as well as the conditions of insurance marketplaces, including urban markets, to identify specific market conduct issues of importance and concern. Hold public hearings on these issues at the NAIC national meetings, as appropriate.
 - H. In collaboration with other technical working groups, discuss and share best practices through public forums to address broad consumer concerns regarding personal insurance products.
 - I. Coordinate with the International Insurance Relations (G) Committee to develop input and submit comments to the International Association of Insurance Supervisors (IAIS) and/or other related groups on issues regarding market regulation concepts.
 - J. Coordinate with the Health Insurance and Managed Care (B) Committee to provide policy recommendations regarding uniform state enforcement of the federal Affordable Care Act (ACA).
 - K. Review the “Best Practices and Guidelines for Consumer Information Disclosures” (adopted October 2012) and update, as needed.

2. The **Advisory Organization (D) Working Group** will:
 - A. Revise the protocols, as necessary, for the examination of national or multistate advisory organizations (including rating organizations and statistical agents) to be more comprehensive, efficient, and possibly less frequent than the current system of single-state exams. Solicit input and collaboration from other interested and affected committees and task forces.
 - B. Monitor the data reporting and data collection processes of advisory organizations (including rating organizations and statistical agents) to determine if they are implementing appropriate measures to ensure data quality. Report the results of this ongoing charge, as needed.
 - C. Actively assist with and coordinate multistate examinations of advisory organizations (including rating organizations and statistical agents).

3. The **Market Actions (D) Working Group** will:
 - A. Facilitate interstate communication and coordinate collaborative state regulatory actions.
4. The **Market Analysis Procedures (D) Working Group** will:
 - A. Recommend changes to the market analysis framework based on results over the past five years, including the current set of Level 1 and Level 2 questions.
 - B. Discuss other market data collection issues and make recommendations, as necessary.
 - C. Consider recommendations for new lines of business for the Market Conduct Annual Statement (MCAS).
5. The **Market Conduct Annual Statement Blanks (D) Working Group** will:
 - A. Review the MCAS data elements and the “Data Call and Definitions” for those lines of business that have been in effect for longer than three years and update them, as necessary.
 - B. Develop an MCAS blank to be used for the collection of data for additional lines of business, where appropriate.
6. The **Market Conduct Examination Guidelines (D) Working Group** will:
 - A. Develop market conduct examination standards, as necessary, for inclusion in the *Market Regulation Handbook*.
 - B. Monitor the adoption and revision of NAIC models and develop market conduct examination standards to correspond with adopted NAIC models.
 - C. Develop updated standardized data requests, as necessary, for inclusion in the *Market Regulation Handbook*.
 - D. Develop uniform market conduct procedural guidance (e.g., a library, depository, or warehouse with market conduct examination templates, such as an exam call letter, exam exit agenda, etc.) for inclusion in, or for use in conjunction with, the *Market Regulation Handbook*.
 - E. Coordinate with the Innovation, Cybersecurity, and Technology (H) Committee to develop market conduct examiner guidance for the oversight of regulated entities’ use of insurance and non-insurance consumer data and models using algorithms and artificial intelligence (AI).
 - F. Discuss the effectiveness of group supervision of market conduct risks and develop examination procedural guidance, as necessary.
 - G. Discuss the role of market conduct examiners in reviewing insurers’ corporate governance as outlined in the NAIC’s *Corporate Governance Annual Disclosure Model Act* (#305) and *Corporate Governance Annual Disclosure Model Regulation* (#306).
7. The **Market Regulation Certification (D) Working Group** will:
 - A. Develop a formal market regulation certification proposal for consideration by the NAIC membership that provides recommendations for the following: 1) certification standards; 2) a process for the state implementation of the standards; 3) a process to measure the states’ compliance with the standards; 4) a process for future revisions to the standards; and 5) assistance for jurisdictions to achieve certification.
8. The **Speed to Market (D) Working Group** will:
 - A. Consider proposed System for Electronic Rate and Form Filing (SERFF) features or functionality presented to the Working Group by the SERFF ~~Advisory Board (SAB), likely originating from the SERFF~~ Product Steering Committee (PSC). ~~Upon approval and acquisition of any needed funding, direct the SAB to implement the project.~~ Receive periodic reports from the ~~SAB~~ PSC, as needed.
 - B. Provide feedback and recommendations concerning the SERFF modernization when requested by the Executive (EX) Committee and any group assigned oversight of the SERFF modernization by the Executive (EX) Committee.

- C. Discuss and oversee the implementation and ongoing maintenance/enhancement of speed to market operational efficiencies related to product filing needs, efficiencies, and effective consumer protection. This includes the following activities:
- i. Provide a forum to gather information from the states and the industry regarding tools, policies, and resolutions to assist with common filing issues. Provide oversight in evaluating product filing efficiency issues for state insurance regulators and the industry, particularly regarding uniformity.
 - ii. Use SERFF data to develop, refine, implement, collect, and distribute common filing metrics that provide a tool to measure the success of the speed to market modernization efforts, as measured by nationwide and individual state speed to market compliance, with an emphasis on monitoring state regulatory and insurer responsibilities for speed to market for insurance products.
 - iii. Facilitate proposed changes to the product coding matrices (PCMs) and the uniform transmittal document (UTD) on an annual basis, including the review, approval, and notification of changes. Monitor, assist with, and report on state implementation of any PCM changes.
 - iv. Facilitate the review and revision of the *Product Filing Review Handbook*, which contains an overview of all the operational efficiency tools and describes best practices for industry filers and state reviewers regarding the rate and form filing and review process. Develop and implement a communication plan to inform the states about the *Product Filing Review Handbook*.
- D. Provide direction to NAIC staff regarding SERFF functionality, implementation, development, and enhancements. Direct NAIC staff to provide individual state speed to market reports to each commissioner at each national meeting. Receive periodic reports from NAIC staff, as needed.
- E. Conduct the following activities, as desired, by the Interstate Insurance Product Regulation Commission (Compact):
- i. Provide support to the Compact as the speed to market vehicle for asset-based insurance products, encouraging the states' participation in, and the industry's usage of, the Compact.
 - ii. Receive periodic reports from the Compact, as needed.

NAIC Support Staff: Tim Mullen/Randy Helder

B. Resources Within State Insurance Departments

Many of these resources, such as a state insurance department consumer complaint resolution unit, are discussed in detail in the body of this handbook. Other key resources include:

Market Conduct and Financial Examinations

Market conduct examinations focus on such areas as operations/management, complaint handling, marketing and sales, producer licensing, policyholder service, underwriting and rating, and claims. The financial condition examination system focuses on financial and corporate matters. Market conduct compliance issues can have a significant effect on legal and compliance risks, which in turn can create material solvency issues. Coordination with the financial examination function is an important area for market conduct examiners to understand. Guidance on financial condition examinations is provided in the *Financial Condition Examiner's Handbook* and is available through the Insurance Products and Services Division of the NAIC.

Financial Analysis

Financial reporting and analysis information is shared with the NAIC, which assembles a wide range of data compilations on a multistate basis. An insurance department's financial analysis and examination staff can provide valuable assistance in interpreting this information. [Additionally, market regulators are encouraged to coordinate with a company's domestic financial regulator to obtain information related to the company's group capital calculations, liquidity stress test results, corporate governance, and Own Risk and Solvency Assessment \(ORSA\).](#)

Rates and Forms Information

Tools such as the System for Electronic Rate and Form Filing (SERFF) and the insurance department posting of state filing review requirements provide a wide range of new data in formats that are more readily comparable across state and regional lines. As of April 2021, 53 jurisdictions including the District of Columbia, Puerto Rico, Guam and the Virgin Islands – plus more than 6,500 insurance companies, third-party filers, rating organizations and other companies—are using SERFF to efficiently and effectively speed insurance products to the market. The SERFF system provides an indicator of marketplace trends, such as overall increases in premiums or changes in coverages by the submission of filing of amendatory endorsements and exclusions.

Organized Intra-Department Communication

State insurance departments are organized differently, but all perform a range of market regulation functions, from consumer assistance to producer licensing, from rate and form review to market conduct exams, and from investigations to enforcement. All of these functions, as well as financial regulation functions, generate useful information about market problems. An effective market analysis program must include clear procedures for regularly sharing data and other information among the various divisions of an insurance department. Recommended methods of sharing internal information include holding a monthly update meeting or emailing issues that may be of concern or interest to other sections.

**STANDARDS
MARKETING AND SALES**

Standard 1

All advertising and sales materials are in compliance with applicable statutes, rules and regulations.

Apply to: All regulated entities

Priority: Essential

Documents to be Reviewed

- _____ Applicable statutes, rules and regulations (Note: Reference applicable Interstate Insurance Product Regulation Commission (IIPRC) uniform standards for products approved by the IIPRC)
- _____ All regulated entity advertising and sales materials, including radio and audiovisual items such as television commercials, telemarketing scripts, pictorial materials, social media or other electronic medium

IIPRC Uniform Standard References

IIPRC Standards for Individual Long-Term Care Advertising Materials (applicable to individual long-term care (LTC) products and associated advertising materials submitted and/or approved by the IIPRC)

Review Procedures and Criteria

Review advertising materials in conjunction with the appropriate policy form. If statistics are included, proper citation should be included in the documentation.

Materials should not:

- Misrepresent the dividends or share of the surplus to be received on any policy;
- Make a false or misleading statement as to the dividends or share of the surplus previously paid on the policy;
- Misrepresent any policy as being shares of stock;
- Misrepresent policy benefits forms or conditions by failing to disclose limitations, exclusions or reductions or use terms or expressions that are misleading or ambiguous;
- Make unfair or incomplete comparisons with other policies;
- Make false, deceptive or misleading statements or representations with respect to any person, regulated entity or organization in the conduct of insurance business; and
- Offer unlawful rebates or inducements.

Materials should:

- Disclose the name and address of insurer;
- Comply with applicable statutes, rules and regulations; and
- Cite the source of statistics used by the regulated entity.

Determine if the regulated entity approves producer sales materials and advertising. Determine if advertisements or lead-generating calls falsely project the image that they were sent by a government agency.

Review the regulated entity's and producer's websites with the following questions in mind:

- Does the website disclose who is selling/advertising/servicing for the website?
- Does the website disclose what is being sold or advertised?
- If required by statutes, rules or regulations, does the website reveal the physical location of the regulated entity/entities?
- Does the website reveal the jurisdictions where the advertised product is (or is not) approved, or use some other mechanism (including, but not limited to, identifying persons by geographic location) to accomplish an appropriate result?

For the review of Internet advertisements:

- Run an inquiry with the regulated entity's name;
- Review the regulated entity's home page;
- Identify all lines of business referenced on the regulated entity's home page;
- Research the ability to request more information about a particular product and verify the information provided is accurate; and
- Review the regulated entity's procedures related to producers advertising on the Internet and ensure the regulated entity requires prior approval of the producer pages, if the regulated entity name is used.

For the review of social media:

- Perform a search of social media sites with the regulated entity's name;
- Identify social media sites in which the regulated entity is active;

- Review identified social media sites and verify any product information provided by the regulated entity is accurate;
- Review the regulated entity’s policies and procedures to identify the personnel involved in monitoring the regulated entity’s marketing and sales-related social media activity;
- Review the regulated entity’s policies and procedures for tracking marketing and sales-related social media requiring regulated entity review; and
- If the regulated entity requires preapproval of producer advertising on the Internet, review the regulated entity’s preapproval procedures to determine whether the regulated entity identifies marketing and sales-related social media as also requiring regulated entity preapproval.

Automation Tip:

Enter a summary of all marketing materials of whatever description in an Excel spreadsheet. Capture the regulated entity’s name of the material; the form number, if any; the edition date, if any; source, if applicable; and media, such as Internet or direct mail. Include fields to note exceptions, such as unsupported statistics or possible misleading statements. Insert each possible violation/exception in a separate field.

Statistics and statements are likely to be repeated in more than one “piece” of marketing material. It is also possible that one piece of marketing material will contain more than one violation/exception.

The spreadsheet will make it easier to track any repeated statements and to identify any marketing material containing apparent multiple violations/exceptions.

**STANDARDS
MARKETING AND SALES**

Standard 1
The regulated entity’s mass marketing of property/casualty insurance is in compliance with applicable statutes, rules and regulations.

Apply to: All regulated entities

Priority: Recommended

Documents to be Reviewed

_____ Applicable statutes, rules and regulations

_____ New business policy forms and certificate of insurance (such certificates will only be requested for lender-placed insurance policies)

_____ Advertising materials

_____ Disclosure materials

Guidelines for Regulations and Legislation on Workers' Compensation Coverage for Professional Employer Organization Arrangements (#1950)

[Real Property Lender Placed Model Act \(#631\), Section 9](#)

Review Procedures and Criteria

The purpose of this review is to determine that the final premium charged to the employer is being applied correctly, fairly and consistently.

The sample's premium audits should contain specific information on each policy. The sample's information should be compared to the NCCI unit statistical report and to the company's rating plan, to verify accuracy in the application and reporting of the following factors when applicable:

- Premiums by classification code;
- Payroll exposure;

- Schedule rating;
- Cost containment discount;
- Premium discounting;
- Designated medical provider discount;
- Expense loading;
- Application of the correct experience modifier;
- Small employer discount;
- Discount for rehiring previously disabled employees; and
- Any other rating elements.

The company documents should be reviewed. Any additional areas or lack of information should be discussed with company management.

It is recommended that separate samples be obtained for standard voluntary market, assigned risk (if applicable), large deductible (if applicable) and PEO accounts.

**STANDARDS
 UNDERWRITING AND RATING**

Standard 6
Verification of loss reporting.

Apply to: All workers’ compensation examinations [and lender-placed insurance examinations, as applicable](#)

Priority: Essential

Documents to be Reviewed

- _____ Applicable statutes, rules and regulations
- _____ NCCI (and similar advisory organizations’) rules governing the reporting of losses on unit statistical reports
- _____ Loss data pertaining to the policy sample and maintained by the regulated entity
- _____ Unit statistical reports pertaining to the policy sample and used to report regulated entity information to the NCCI (and similar advisory organizations)
- _____ [Applicable reports filed with the commissioner \(e.g., required reporting for insurers with at least \\$100,000 in direct written premium for lender-placed insurance, and required rate filing for insurers with an annual loss ratio of less than 35% in any lender-placed program, except with respect to lender-placed flood insurance, for two consecutive years\)](#)

Guidelines for Regulations and Legislation on Workers’ Compensation Coverage for Professional Employer Organization Arrangements (#1950)
[Real Property Lender Placed Model Act \(#631\), Section 9](#)

Review Procedures and Criteria

Losses under each policy should be clearly and accurately maintained at the regulated entity, so that paid amounts, reserves, ~~and deductibles~~ and, with respect to losses under lender-placed insurance policies, any excess amounts paid to the mortgagor can be easily reviewed. The sample data should be compared to the unit statistical reports to verify accuracy of reporting of the following items:

- Paid losses;
- Paid loss adjustment expenses;
- Net of deductible reporting on the unit statistical reports;
- Adjustments to reserves and revised unit statistical reports; and
- Any other adjustments, such as subrogation.

The regulated entity’s documents should be reviewed. Any additional areas or lack of information should be discussed with the regulated entity’s management.

**STANDARDS
 UNDERWRITING AND RATING**

Standard 8
Underwriting, rating and classification are based on adequate information developed at or near inception of the coverage rather than near expiration, or following a claim.

NAIC Model References

Unfair Trade Practices Act (#880)
[Real Property Lender Placed Model Act](#) (#631), Section 6

Review Procedures and Criteria

Any practice suggesting anti-competitive behavior may involve legal considerations that should be referred to insurance department legal counsel. This would include engaging in collusive underwriting practices that may inhibit competition; e.g., entering into an agreement with other companies to divide the auto market within the jurisdiction by territory.

The examiner should be aware of unlawful pricing and other prohibited anti-competitive acts or practices.

Chapter 24B—Conducting the Mental Health Parity and Addiction Equity Act (MHPAEA) Related Examination

IMPORTANT NOTE:

The standards set forth in this chapter are based on established procedures and/or NAIC models, not on the laws and regulations of any specific jurisdiction. This handbook is a guide to assist examiners in the examination process. Since it is based on NAIC models, use of the handbook should be adapted to reflect each state's own laws and regulations with appropriate consideration for any bulletins, audit procedures, examination scope and the priorities of examination. Further important information on this and how to use this handbook is included in the Foreward section of the handbook.

Introduction

The purpose of this chapter, Conducting the Mental Health Parity and Addiction Equity Act (MHPAEA) Related Examination, is to provide guidance for examiners when reviewing insurers whose business includes major medical policies offering mental health and/or substance use disorder coverage.

Federal law relies on state insurance regulators as the first-line enforcers of health reform provisions in the individual, small group and large group insurance markets. The examination standards in Chapter 24—Conducting the Health Examination of the *Market Regulation Handbook* provide guidance specific to all health carriers that may or may not include offering mental health and/or substance use disorder coverage. Chapter 24, Section G Claims, Standard 3 applies to examinations related to the Mental Health Parity and Addiction Equity Act (MHPAEA) of 2008 found at 42 U.S.C. § 300gg-26.

The guidance found in this chapter recognizes that when developing an examination or review plan related to MHPAEA compliance, it is important to consider examination standards as applicable from Chapter 24 and Chapter 24A—Conducting the Affordable Care Act (ACA) Related Examination, as well as Chapter 20.

Regardless of which chapter is used in the *Market Regulation Handbook*, the examiner will also need to reference Chapter 20—General Examination Standards for general examination standards that apply to all insurers.

Mental Health and Substance Use Disorder Parity

1. Purpose

Mental health and substance use disorder parity compliance examinations should be designed to ensure that all health carriers are in compliance with all the requirements of the Mental Health Parity and Addiction Equity Act (MHPAEA) of 2008 (as amended by the Consolidated Appropriations Act of 2021) found at 42 U.S.C. § 300gg-26 and its implementing regulations found at 45 CFR § 146.136 and 45 CFR § 147.160.

These standards require health carriers to demonstrate compliance in terms of defining mental health or substance use disorder benefits, classifying benefits, financial requirements, quantitative treatment limitations (QTLs), nonquantitative treatment limitations (NQTLs), required disclosures and vendor coordination.

2. Definitions

For purposes of this Guide, except where the context clearly indicates otherwise, the following terms have the meanings indicated:

Aggregate Lifetime Dollar Limit means a dollar limitation on the total amount of specified benefits that may be paid under a health plan (45 CFR § 146.136(a)).

Annual Dollar Limit means a dollar limitation on the total amount of specified benefits that may be paid in a 12-month period under a health plan (45 CFR § 146.136(a)).

Classifications of benefits used for applying parity rules:

(1) Inpatient, In-network. Benefits furnished on an inpatient basis and within a network of providers established or recognized under a plan or health insurance coverage (45 CFR § 146.136(c)(2)(ii)(A)(1)). See special rule for plans with multiple network tiers in paragraph (c)(3)(iii)(B) of 45 CFR § 146.136.

- a. If a plan provides benefits through multiple tiers of in-network providers (such as in-network preferred and in-network participating providers), the plan may divide its benefits furnished on an in-network basis into subclassifications that reflect network tiers, if the tiering is based on reasonable factors determined in accordance with the rules for NQTLs (such as quality performance, and market standards) and without regard to whether a provider provides services with respect to medical/surgical benefits for MH/SUD benefits. After the tiers are established, the plan may not impose any financial requirement or treatment limitation on MH/SUD benefits in any tier that is more restrictive than the predominant financial requirement or treatment limitation that applies to substantially all medical/surgical benefits in the tier.

(2) Inpatient, Out-of-network. Benefits furnished on an inpatient basis and outside any network of providers established or recognized under a plan or health insurance coverage. This classification includes inpatient benefits under a plan (or health insurance coverage) that has no network of providers (45 CFR § 146.136(c)(2)(ii)(A)(2)).

(3) Outpatient, In-network. Benefits furnished on an outpatient basis and within a network of providers established or recognized under a plan or health insurance coverage. See special rules for office visits and plans with multiple network tiers in paragraph (c)(3)(iii)(C) and (c)(3)(iii)(B) of 45 CFR § 146.136.

- a. A plan may divide its benefits furnished on an outpatient basis into two subclassifications: (1) office visits; and (2) all other outpatient items and services, for purposes of applying the financial requirement and treatment limitation rules.
- b. If a plan provides benefits through multiple tiers of in-network providers (such as in-network preferred and in-network participating providers), the plan may divide its benefits furnished on an in-network basis into subclassification the reflect network tiers, if the tiering is based on reasonable factors determined in accordance with the rules for NQTLs (such as quality, performance, and market standards) and without regard to whether a provider provides services with respect to medical/surgical benefits or MH/SUD benefits. After the tiers are established the plan may not impose any financial requirements or treatment limitation on MH/SUD benefits in any tier that is more restrictive than the predominant financial requirement or treatment limitation that applies to substantially all medical/surgical benefits in the tier.

(4) Outpatient, Out-of-network. Benefits furnished on an outpatient basis and outside any network of providers established or recognized under a plan or. This classification includes outpatient benefits under a plan (or health insurance coverage) that has no network of providers (45 CFR § 146.136(c)(2)(ii)(A)(4)). See special rule for office visits in paragraph (c)(3)(iii)(C) of 45 CFR § 146.136.

- a. A plan may divide its benefits furnished on an outpatient basis into two subclassifications: (1) office visits; and (2) all other outpatient items and services, for purposes of applying the financial requirement and treatment limitation rules.

(5) Emergency Care. Benefits for emergency care (45 CFR § 146.136(c)(2)(ii)(A)(5)).

(6) Prescription Drugs. Benefits for prescription drugs (45 CFR § 146.136(c)(2)(ii)(A)(6)).

Coverage Unit refers to the way in which a plan (or health insurance coverage) groups individuals for purposes of determining benefits, or premiums or contributions. For example, different Coverage Units include self-only, family, and employee plus-spouse (45 CFR § 146.136(a)).

Cumulative Financial Requirements are financial requirements that determine whether or to what extent benefits are provided based on accumulated amounts and include deductibles and out-of-pocket maximums. (However, cumulative financial requirements do not include aggregate lifetime or annual dollar limits because these two terms are excluded from the meaning of financial requirements.) (45 CFR § 146.136(a))

Cumulative Quantitative Treatment Limitations are treatment limitations that determine whether or to what extent benefits are provided based on accumulated amounts, such as annual or lifetime day or visit limits (45 CFR § 146.136(a)).

Expected Plan Payments are payments expected to be paid under the plan for the plan year (45 CFR § 146.136(c)(3)(i)(C)). Any reasonable method may be used to determine the dollar amount expected to be paid under the plan for medical/surgical benefits subject to a financial requirement or QTL (45 CFR § 146.136(c)(3)(i)(E)).

Plan Payment is the dollar amount of plan payments and is based on the amount the plan allows (before enrollee cost sharing) rather than the amount the plan pays (after enrollee cost sharing) because payment based on the allowed amount covers the full scope of the benefits being provided (45 CFR § 146.136(c)(3)(i)(D)).

Financial Requirements include deductibles, copayments, coinsurance, or out-of-pocket maximums. Financial requirements do not include aggregate lifetime or annual dollar limits (45 CFR § 146.136(a)).

Medical/Surgical Benefits means benefits with respect to items or services for medical conditions or surgical procedures, as defined under the terms of the plan or health insurance coverage and in accordance with applicable Federal and State law, but does not include mental health or substance use disorder benefits. Any condition defined by the plan or coverage as being or as not being a medical/surgical condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the International Classification of Diseases (ICD) or State guidelines) (45 CFR § 146.136(a)).

Mental Health Benefits means benefits with respect to items or services for mental health conditions, as defined under the terms of the plan or health insurance coverage and in accordance with applicable Federal and State law. Any condition defined by the plan or coverage as being or as not being a mental health condition must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM), the most current version of the ICD, or State guidelines) (45 CFR § 146.136(a)).

Substance Use Disorder Benefits means benefits with respect to items or services for substance use disorders, as defined under the terms of the plan or health insurance coverage and in accordance with applicable Federal and State law. Any disorder defined by the plan as being or as not being a substance use disorder must be defined to be consistent with generally recognized independent standards of current medical practice (for example, the most current version of the DSM, the most current version of the ICD, or State guidelines) (45 CFR § 146.136(a)).

Treatment Limitations include limits on benefits based on the frequency of treatment, number of visits, days of coverage, days in a waiting period, or other similar limits on the scope or duration of treatment. Treatment limitations include both quantitative treatment limitations (QTLs), which are expressed numerically (such as 50 outpatient visits per year), and nonquantitative treatment limitations (NQTLs), which are not expressed numerically but otherwise limit the scope or duration of benefits for treatment

under a plan or coverage. A permanent exclusion of all benefits for a particular condition or disorder, however, is not a treatment limitation for purposes of this definition (45 CFR § 146.136(a)).

3. Techniques

To evaluate compliance with MHPAEA, examiners must request that the carrier submit the analyses and other underlying documentation that it has performed to determine that it meets all of the standards of MHPAEA. There must be specific documentation of how mental health conditions, substance use disorders and medical/surgical conditions were defined and how they were assigned to benefit classifications. There are specific mathematical analyses that the carrier must have performed in order to determine that it satisfies the MHPAEA requirements for financial requirements and quantitative treatment limitations QTLs. There are separate analyses the carrier must have performed in order to determine that it satisfies the MHPAEA requirement for NQTLs, which entail analyses for the “as written” component and analyses for the “in operation” component.

4. Standards and the Regulatory Tests

The mental health and substance use disorder parity review includes, but is not limited to, the following standards related to MHPAEA. The sequence of the standards listed here does not indicate priority of the standard.

STANDARDS
Mental Health and Substance Use Disorder Parity Compliance

Standard 1

The health carrier shall define all covered services as mental health or substance use disorder benefits or as medical or surgical benefits. Mental health benefits or substance use disorder benefits must be defined to mean items or services for the treatment of a mental health condition or substance use disorder, as defined by the terms of the health plan and applicable state and federal law. Any definition of a condition or disorder as being or as not being a mental health condition or substance use disorder must be consistent with generally recognized independent standards of current medical practice or state guideline. (45 CFR § 146.136(a)).

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Applicable state and federal statutes, rules, regulations and published sub-regulatory guidance
- _____ Type of generally recognized independent standards of current medical practice, state law or guidance, used to define mental health conditions, substance use disorders and medical/surgical conditions (e.g., the most current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM) or the International Statistical Classification of Diseases and Related Health Problems (ICD code), etc.)
- _____ List of specific mental health conditions or substance use disorders by diagnosis excluded from coverage as stated in the policy documents
- _____ Mental health and/or substance use disorder and medical/surgical claim files
- _____ Health carrier complaint/grievances/appeals records concerning mental health and/or substance use disorders (supporting documentation, including, but not limited to: written and phone records of inquiries, call center scripts, complaints, complainant correspondence and health carrier response)
- _____ Internal department appeals/grievance files
- _____ Applicable external appeals register/logs/files, external appeal resolution and associated documentation

[U.S. Department of Labor Frequently Asked Questions Guidance: https://www.dol.gov/agencies/ebsa/laws-and-regulations/laws/mental-health-and-substance-use-disorder-parity](https://www.dol.gov/agencies/ebsa/laws-and-regulations/laws/mental-health-and-substance-use-disorder-parity)

Review Procedures and Criteria

Review definitions in the health carrier's policy forms and/or certificates of coverage for compliance with the definitions in 45 CFR § 146.136(a) and included in the definitions section of this chapter.

Review the health carrier's description of the independent standards it used to define mental health conditions, substance use disorders and medical/surgical conditions. These independent standards must be generally recognized independent standards of current medical practice such as the Diagnostic and Statistical Manual (DSM) or the International Classification of Diseases (ICD), or state guidelines.

Review exclusions in the health carrier's policy forms and/or certificates of coverage to identify those that involve a mental health or substance use disorder condition or diagnosis and compare it to the list of mental health and substance use disorder conditions excluded from coverage provided by the health carrier.

Verify that exclusions in the health carrier's policy forms and/or certificates of coverage identified as not a mental health or substance use disorder condition comply with state law and are consistent with generally recognized independent standards such as the International Classification of Diseases (ICD) or the Diagnostic and Statistical Manual of Mental Disorders (DSM).

Review any attestations required by the state and submitted by the health carrier.

For services the health carrier has determined are both medical/surgical and mental health/substance use disorders, review the explanation of how they determine the correct expected dollar amount for these services (e.g., nutritional counseling, occupational therapy).

STANDARDS
Mental Health and Substance Use Disorder Parity Compliance

Standard 2

The health carrier must apply the same standards to medical/surgical benefits and to mental health or substance use disorder benefits in determining the classification in which a particular benefit belongs (or applicable sub-classification) (45 CFR § 146.136(c)(2)(ii)(A)).

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Applicable state and federal statutes, rules, regulations and published sub-regulatory guidance
- _____ All policy documents (e.g., if group or association, request master policy and a sample of each certificate type issued during the examination scope)
- _____ Documentation as to how the carrier demonstrates assignment to the six classifications of benefits (and applicable sub-classifications) and the standard used
- _____ Company and vendor claim procedure manuals and bulletins/communications (if a carrier uses a behavioral health claims vendor for processing MH/SUD claims or for providing utilization management services)
- _____ Internal company claim audit reports for both mental health or substance use disorders and medical/surgical services
- _____ Provider contracts, instructions, communications and similar documents regarding coding instructions, code changes, etc.
- _____ Utilization review and managed care guidelines and procedure manuals
- _____ Mental health and/or substance use disorder and medical/surgical claim files
- _____ Mental health and/or substance use disorder and medical/surgical complaint and grievance files

The Federal Parity Self Compliance Tool: <https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/laws/mental-health-parity/self-compliance-tool.pdf>

[U.S. Department of Labor Frequently Asked Questions Guidance: https://www.dol.gov/agencies/ebsa/laws-and-regulations/laws/mental-health-and-substance-use-disorder-parity](https://www.dol.gov/agencies/ebsa/laws-and-regulations/laws/mental-health-and-substance-use-disorder-parity)

Review Procedures and Criteria

Review the health carrier's list that specified the classification or sub-classification to which each benefit was assigned.

Determine whether the health carrier uses permissible sub-classifications for any benefits.

Please note that the only permissible sub-classifications are: multiple tiers for prescription drugs benefits that are based on reasonable factors¹ (45 CFR § 146.136(c)(3)(iii)(A)); multiple network tiers that are based on reasonable factors within the inpatient in-network and outpatient in-network classifications (45 CFR § 146.136(c)(3)(iii)(B)); outpatient office visits and outpatient other services within the outpatient in-network and outpatient out-of-network classifications (45 CFR § 146.136(c)(3)(iii)(C)). Reasonable factors include cost, efficacy, generic versus brand name, and mail order versus pharmacy pick-up (45 CFR § 146.136(c)(3)(iii)(A)).

Review the standard used by the health carrier to determine which classification of benefits (or applicable sub-classification) a particular benefit was assigned to and verify that the same standards were used for assigning medical/surgical benefits and mental health or substance use disorder benefits.

Review the health carrier's documentation that demonstrates that mental health or substance use disorder benefits are covered in each classification in which medical/surgical benefits are covered.

STANDARDS
Mental Health and Substance Use Disorder Parity Compliance

Standard 3

The health carrier shall not apply any financial requirement on mental health or substance use disorder benefits in any classification (or applicable sub-classification) that is more restrictive than the predominant financial requirement of that type applied to substantially all medical/surgical benefits in the same classification (or applicable sub-classification) (45 CFR § 146.136(c)(2)(i)).

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Applicable state and federal statutes, rules, regulations and published sub-regulatory guidance
- _____ Health carrier list of all financial requirements applied to mental health or substance use disorder benefits and medical/surgical benefits in each classification (or applicable sub-classification) (this will include schedules of benefits and other policy documents)
- _____ Health carrier documentation of the reasonable method used to determine expected plan payments for medical/surgical benefits within each classification of benefits (or applicable sub-classification), including documentation and communications with vendors engaged to provide assistance with analyses
- _____ Documentation demonstrating the predominant and substantially tests performed by the health carrier for each applicable financial requirement applied to all benefits
- _____ Internal company claim audit reports specific to mental health or substance use disorders
- _____ Mental health and/or substance use disorder and medical/surgical claim files
- _____ Health carrier complaint records concerning mental health and/or substance use disorder (supporting documentation, including, but not limited to: written and phone records of inquiries, complaints, complainant correspondence and health carrier response)
- _____ Internal department appeals/grievance files concerning mental health and/or substance use disorders
- _____ Applicable external appeals register/logs/files related to concerning mental health and/or substance use disorder, external appeal resolution and associated documentation

The Federal Parity Self Compliance Tool: <https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/laws/mental-health-parity/self-compliance-tool.pdf>

Review Procedures and Criteria

Financial requirements include deductibles, copayments, coinsurance and out-of-pocket maximums (45 CFR § 146.136(c)(1)(ii)). A financial requirement is considered to apply to substantially all medical/surgical benefits in a classification of benefits if it applies to at least two-thirds of all medical/ surgical benefits in that classification (45 CFR § 146.136(c)(3)(i)(A)). The level of the financial requirement that is considered the predominant level of that type in a classification of benefits is the level that applies to more than one-half of medical/surgical benefits in that classification subject to the financial requirement (45 CFR § 146.136(c)(3)(i)(B)). The determination of the portion of medical/ surgical benefits in a classification of benefits subject to a financial requirement (or subject to any level of a financial requirement) is based on the dollar amount of all plan payments for medical/surgical benefits in the classification expected to be paid under the plan for the plan year (or for the portion of the plan year after a change in plan benefits that affects the applicability of the financial requirement) (45 CFR § 146.136(c)(3)(i)(C)).

Review the health carrier's methodology for performing its analysis that determines expected plan payments within each classification of benefits (or applicable sub-classification) for medical/surgical benefits. Note: A health carrier must always use appropriate and sufficient data to perform the analysis in compliance with applicable Actuarial Standards of Practice (ACA FAQ 34 Q3).

Review the health carrier's documentation that demonstrates that any type of financial requirement applied to mental health or substance use disorder benefits in a classification (or applicable sub-classification) applies to at least two-thirds of expected plan payments on medical/surgical benefits within that classification (or applicable sub-classification) (45 CFR § 146.136(c)(3)(i)(A)). Note: If the financial requirement applies to all medical/surgical benefits in the classification, no cost analysis is required. No financial requirements shall apply only to mental health or substance use disorder benefits.

Determine whether the health carrier's documentation supports that the level of financial requirement applied to mental health or substance use disorder benefits in a classification (or applicable sub-classification) is comparable and no more restrictive than the level of financial requirement that applies to more than one-half of expected plan payments that are subject to the financial requirement within that classification for medical/surgical benefits (45 CFR § 146.136(c)(3)(i)(B)(1)).

If no single level of the financial requirement applies to more than one-half of medical/surgical benefits in the classification, determine whether the health carrier can demonstrate that it has satisfied this test (45 CFR § 146.136(c)(3)(i)(B)(2)).

STANDARDS
Mental Health and Substance Use Disorder Parity Compliance

Standard 4

The health carrier shall not apply any QTL on mental health or substance use disorder benefits in any classification (or applicable sub-classification) that is more restrictive than the predominant QTL of that type applied to substantially all medical/surgical benefits in the same classification (or applicable sub-classification) (45 CFR § 146.136(c)(2)(i)).

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Applicable state and federal statutes, rules, regulations and published sub-regulatory guidance
- _____ Health carrier list of all QTLs applied to mental health or substance use disorder benefits and medical/surgical benefits in each classification (or applicable sub-classification) (this will include schedules of benefits and other policy documents)
- _____ Health carrier documentation of the reasonable method used to determine expected plan payments for medical/surgical benefits within each classification of benefits (or applicable sub-classification), including documentation and communications with vendors engaged to provide assistance with analyses
- _____ Documentation demonstrating the predominant and substantially tests performed by the health carrier for each applicable financial requirement applied to all benefits
- _____ Internal company claim audit reports
- _____ Mental health and/or substance use disorder and medical/surgical claim files
- _____ Health carrier complaint, grievance and appeals records (supporting documentation, including, but not limited to: written and phone records of inquiries, complaints, call center scripts, complainant correspondence and health carrier response)

The Federal Parity Self Compliance Tool: <https://www.dol.gov/sites/dolgov/files/EBSA/laws-and-regulations/laws/mental-health-parity/self-compliance-tool.pdf>

Review Procedures and Criteria

QTLs include annual, episode, and lifetime day and visit limits. (45 CFR § 146.136(c)(1)(ii)). A QTL is considered to apply to substantially all medical/surgical benefits in a classification of benefits if it applies to at least two-thirds of all medical/ surgical benefits in that classification (45 CFR § 146.136(c)(3)(i)(A)). The level of the QTL that is considered the predominant level of that type in a classification of benefits is the level that applies to more than one-half of medical/surgical benefits in that classification subject to the QTL (45 CFR § 146.136(c)(3)(i)(B)). The determination of the portion of medical/ surgical benefits in a classification of benefits subject to a quantitative treatment limitation (or subject to any level of a quantitative treatment limitation) is based on the dollar amount of all plan payments for medical/surgical benefits in the classification expected to be paid under the plan for the plan year (or for the portion of the plan year after a change in plan benefits that affects the applicability of the quantitative treatment limitation) (45 CFR § 146.136(c)(3)(i)(C)).

Review the health carrier's methodology for performing its analysis that determines expected plan payments within each classification of benefits (or applicable sub-classification) for medical/surgical benefits. Note: A health carrier must always use appropriate and sufficient data to perform the analysis in compliance with applicable Actuarial Standards of Practice (ACA FAQ 34 Q3).

Review the health carrier's documentation that demonstrates that any type of QTL applied to mental health or substance use disorder benefits in a classification (or applicable sub-classification) applies to at least two-thirds of expected plan payments on medical/surgical benefits within that classification (or applicable sub-classification) (45 CFR § 146.136(c)(3)(i)(A)). Note: If the quantitative limitation applies to all medical/surgical benefits within the classification, no cost analysis is required. No quantitative treatment limitations shall apply only to mental health or substance use disorder benefits.

Determine whether the health carrier's documentation supports that the level of QTL applied to mental health or substance use disorder benefits in a classification (or applicable sub-classification) is no more restrictive than the level of QTL that applies to more than one-half of expected plan payments that are subject to the quantitative treatment limitation within that classification for medical/surgical benefits (45 CFR § 146.136(c)(3)(i)(B)(1)).

If no single level applies to more than one-half of medical/surgical benefits in the classification, determine whether the health carrier can demonstrate that it has satisfied this test (45 CFR § 146.136(c)(3)(i)(B)(2)).

STANDARDS**Mental Health and Substance Use Disorder Parity Compliance****Standard 5**

The health carrier shall apply non-quantitative treatment limitations (NQTLs) to mental health or substance use disorder benefits within a classification of benefits (or applicable sub-classification) so that any processes, strategies, evidentiary standards, or other factors used to apply a limitation, 1) as written and 2) in operation, are comparable to the processes, strategies, evidentiary standards, or other factors used to apply the limitation to medical/surgical benefits within the classification (or applicable sub-classification) (45 CFR § 146.136(c)(i)). The health carrier shall perform and document comparative analyses of the design and application of NQTLs in accordance with 42 U.S.C. § 300gg-26(a)(8)(A).

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage.

Priority: Recommended

Documents to be Reviewed

_____ Applicable state and federal statutes, rules, regulations and published sub-regulatory guidance

_____ A list of all NQTLs imposed upon mental health or substance use disorder benefits within each classification of benefits (or applicable sub-classification), including the methodology used to determine those NQTLs. A state may focus its review on a subset of NQTLs rather than all NQTLs. (See reference link to DOL Self-Compliance Tool for a non-exhaustive list) Note: Due to the significant number of potential NQTLs, it is advised that the examiner selects a targeted subset or sample of NQTLs based on examination resources, state specific concerns, company common practices, etc. to avoid the review of hundreds of service variations. Additional NQTLs can be phased into the review as appropriate.

_____ Utilization management manuals and utilization review documents such as: utilization review criteria; criteria hierarchies for performing utilization review; case management referral criteria; initial screening scripts and algorithms; policies relating to reviewer discretion; processes for identifying and evaluating clinical issues and utilizing performance goals

_____ Notes and/or logs kept during utilization review, such as those describing: peer clinical review; telephonic consultations with attending providers; consultations with expert reviewers; clinical rationale used in approving or denying benefits; the selection of information deemed reasonably necessary to make a medical necessity determination; adherence to utilization review criteria and criteria hierarchy; professional judgment used in lieu of utilization review criteria; actions taken when incomplete information is received from attending providers

_____ Company claim procedure manuals and bulletins/communications

_____ Claims processor and customer services MHPAEA training materials

_____ Company fraud, waste, and abuse policies and procedures

_____ Internal company claim audit reports

_____ Prescription drug formulary for each product/plan design

_____ Prescription drug utilization management documentation

- _____ Fail-first policies or step therapy protocols
- _____ Network development/contracting policies and procedures
- _____ Standards for provider admission to participate in a network, including credentialing requirements
- _____ Standards for determining provider reimbursement rates
- _____ Samples of provider/facility contracts in use during the exam period
- _____ Plan methods for determining usual, customary and reasonable charges for each product/plan design
- _____ Mental health and/or substance use disorder and medical/surgical claim files.
- _____ Mental health and/or substance use disorder and medical/surgical utilization review procedures
- _____ Complaint files, logs and disposition notes
- _____ Documentation, including but not limited to comparative analyses, demonstrating that within each of the 6 classifications of benefits (and applicable sub-classifications), the as written and in operation processes, strategies, evidentiary standards, or other factors used in applying a NQTL are comparable to and applied no more stringently to mental health or substance disorder benefits than to medical/surgical benefits in the classification.

FAQs about Mental Health and Substance Use Disorder Parity Implementation and the Consolidated Appropriations Act, 2021 Part 45 (ACA FAQ 45): <https://www.dol.gov/sites/dolgov/files/EBSA/about-ebsa/our-activities/resource-center/faqs/aca-part-45.pdf>

Review Procedures and Criteria

Review the list of all NQTLs imposed on mental health/substance use disorders and choose a sample.

Review the health carrier’s comparative analyses to verify that within any classification of benefits, as written and in operation, the process, strategies, evidentiary standards, or other factors used in applying an NQTL to mental health or substance disorder benefits are comparable to, and are applied no more stringently than those used in applying the limitation with respect to medical/surgical benefits in the classification. The comparative analyses

shall include the following, for each NQTL applied to mental health or substance use disorder benefits, separately for each classification of benefits (42 U.S.C. § 300gg-26(a)(8)(A):

- The specific coverage terms or other relevant terms regarding the NQTL and a description of all mental health or substance use disorder and medical or surgical benefits to which such NQTL applies in each respective benefits classification;
- The factors used to determine that the NQTL will apply to mental health or substance use disorder benefits and medical or surgical benefits;
- The evidentiary standards used for the factors identified, when applicable, provided that every factor shall be defined, and any other source or evidence relied upon to design and apply the NQTL to mental health or substance use disorder benefits and medical or surgical benefits;
- The comparative analyses demonstrating that the processes, strategies, evidentiary standards and other factors used to apply the NQTL to mental health or substance use disorder benefits, as written and in operation, are comparable to, and are applied no more stringently than, the processes, strategies, evidentiary standards, and other factors used to apply the NQTL to medical or surgical benefits in the benefits classification; and
- The specific findings and conclusions reached by the health carrier with respect to the health insurance coverage, including any results of the analyses described in 42 USC 300gg-26(a)(8)(A) that indicate that the health carrier is or is not in compliance with 45 CFR 146.136(c)(4).

The health carrier's analyses must contain the following, at a minimum (ACA FAQ 45 Q2):

1. A clear description of the specific NQTL, plan terms and policies at issue;
2. Identification of the specific mental health or substance use disorder and medical/surgical benefits to which the NQTL applies within each benefit classification, and a clear statement as to which benefits identified are treated as mental health or substance use disorder and which are treated as medical/surgical;
3. Identification of any factors, evidentiary standards or sources, or strategies or processes considered in the design or application of the NQTL and in determining which benefits, including both mental health or substance use disorder benefits and medical/surgical benefits, are subject to the NQTL. Analyses should explain whether any factors were given more weight than others and the reason(s) for doing so, including an evaluation of any specific data used in the determination;
4. To the extent the health carrier defines any of the factors, evidentiary standards, strategies, or processes in a quantitative manner, it must include the precise definitions used and any supporting sources;
5. The analyses, as documented, should explain whether there is any variation in the application of a guideline or standard used by the health carrier between mental health or substance use disorder and medical/surgical benefits and, if so, describe the process and factors used for establishing that variation;
6. If the application of the NQTL turns on specific decisions in administration of the benefits, the health carrier should identify the nature of the decisions, the decision maker(s), the timing of the decisions and the qualifications of the decision maker(s);
7. If the health carrier's analyses rely upon any experts, the analyses, as documented, should include an assessment of each expert's qualifications and the extent to which the health carrier ultimately relied upon each expert's evaluations in setting recommendations regarding both mental health or substance use disorder and medical/surgical benefits;
8. A reasoned discussion of the health carrier's findings and conclusions as to the comparability of the processes, strategies, evidentiary standards, factors and sources identified above within each affected classification, and their relative stringency, both as applied and as written. This discussion should include citations to any specific evidence considered and any results of analyses indicating that the health carrier is or is not in compliance with MHPAEA; and
9. The date of the analyses and the name, title and position of the person or persons who performed or participated in the comparative analyses.

The health carrier shall avoid the following practices and procedures when responding to a request for comparative analyses (ACA FAQ 45 Q3):

1. Production of a large volume of documents without a clear explanation of how and why each document is relevant to the comparative analysis;

2. Conclusory or generalized statements, including mere recitations of the legal standard, without specific supporting evidence and detailed explanations;
3. Identification of processes, strategies, sources and factors without the required or clear and detailed comparative analysis;
4. Identification of factors, evidentiary standards and strategies without a clear explanation of how they were defined and applied in practice;
5. Reference to factors and evidentiary standards that were defined or applied in a quantitative manner, without the precise definitions, data, and information necessary to assess their development or application; and
6. Analysis that is outdated due to the passage of time, a change in plan structure, or for any other reason.

STANDARDS**Mental Health and Substance Use Disorder Parity Compliance****Standard 6**

The health carrier shall ensure that it complies with all availability of plan information and related disclosure obligations regarding: 1) criteria for medical necessity determinations; 2) reasons for denial of services; 3) information relevant to medical/surgical, mental health and substance use disorder benefits; 4) rules regarding claims and appeals, including the right of claimants to free reasonable access to and copies of documents, records and other information including information on medical necessity criteria for both medical/surgical benefits and mental health and substance use disorder benefits, as well as the processes, strategies, evidentiary standards and other factors used to apply a NQTL with respect to medical/surgical benefits and mental health or substance use disorder benefits under the plan, including any analyses performed by the carrier as to how the NQTL complies with MHPAEA.

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Plan policies and procedures for responding to participant requests for medical necessity criteria for either or both mental health and substance use disorder services and medical/surgical services
- _____ Plan policies and procedures for responding to requests for information on the processes, strategies, evidentiary standards and other factors used to apply a NQTL with respect to medical/surgical benefits and mental health or substance use disorder benefits under the plan
- _____ Sample adverse benefit determination letters
- _____ Sample letters responding to disclosure requests for medical necessity criteria and information on NQTLs
- _____ Policies and procedures for classifying denials as administrative or medical necessity
- _____ Internal and external appeals files for mental health and substance use disorder services adverse benefit determinations
- _____ Log of disclosure requests, including date requested, date responses was provided, samples of documents sent in response

Other References

- 45 CFR § 146.136(d)
- ERISA 104
- 29 CFR § 2520.104b-1
- 29 CFR § 2560.503-1
- 29 CFR § 2590.715-2719

Review Procedures and Criteria

Review the health carrier's method for providing to any current or potential participant, beneficiary, or contracting provider upon request the medical necessity criteria used to make mental health or substance use disorder determinations (45 CFR § 146.136(d)(1)).

Review the health carrier's letters providing the reason for any denial of reimbursement for mental health or substance use disorder benefits and verify that the letters are dated within 30 days of the request (45 CFR § 146.136(d)(2)).

Review the health carrier's policy & procedure for responding promptly to requests for all documents, records and other information relevant to an adverse benefit determination, including medical necessity criteria and the comparative analysis required under (42 USC 300gg-26(a)(8)(A)), disclosures referenced above (45 CFR § 146.136(d)(3)) as referenced in ACA FAQ 45-Q6.

Document that the health carrier's claims processing and disclosure regarding adverse benefit determinations complies with the federal claims and appeals regulations (45 CFR § 147.136).

STANDARDS
Mental Health and Substance Use Disorder Parity Compliance

Standard 7

The health carrier as the entity is responsible for parity compliance. The health carrier shall ensure that management of mental health and substance use disorder benefits coverage as a whole complies with the applicable provisions of MHPAEA, including any vendor relationships. The carrier shall provide or require sufficient information in terms of plan structure and benefits to or from any vendor to ensure that the mental health and substance use disorder benefits are coordinated with the medical/surgical benefits for purposes of compliance with the requirements of MHPAEA.

Apply to: Certain group and individual health carriers offering mental health and substance use disorder coverage

Priority: Recommended

Documents to be Reviewed

- _____ Contractual agreements between the carrier and vendors having administrative, claims and/or medical management responsibilities
- _____ Policies and procedures for ensuring availability of health carrier information needed for vendor analysis of compliance with MHPAEA
- _____ A narrative summary outlining how the vendor and the carrier coordinate benefit design and application to ensure compliance with MHPAEA
- _____ Select written communications relevant to mental health and substance use disorder benefits between the carrier and the vendor

Other References

- 29 CFR § 2590.712(e).
- 75 FR § 5426
- 78 FR § 68250

Review Procedures and Criteria

Review the contractual agreements between the health carrier and any vendors providing administrative, claims and/or medical management responsibilities.

Review the health carrier's protocols and procedures to document that any contracted vendors are collaborating with the health carriers to satisfy compliance with MHPAEA. This shall include explanation of how both the design of benefits and the application of benefits, in operation, are compliant with MHPAEA.

Review any audits the health carrier has completed of its vendors to ensure compliance with MHPAEA.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

The Market Information Systems Research and Development (D) Working Group Review of Artificial Intelligence Techniques in Market Analysis

Executive Summary

This report fulfills the Market Information Systems Research and Development (D) Working Group charge to evaluate the potential benefits of artificial intelligence (AI) in relation to market analysis. After careful consideration, the Working Group concluded that there may be possible benefits to improve analysis techniques. Several caveats are discussed as well. AI may not be suitable for data currently available to state insurance regulators. In addition, some of the techniques perform complex data mining operations, which can produce results that lack a clear interpretation. Lastly, AI techniques are designed for, and many require, very large datasets. As such, AI should be contemplated in the context of a long-range plan, beginning with repairing known issues with existing data, and employing more rigorous traditional statistical techniques to assess predictive accuracy of analytical tools. Subsequently, state insurance regulators can consider the acquisition of data appropriate to AI.

Introduction

In early 2021, the Market Information Systems Research and Development (D) Working Group received a charge from the Market Information Systems (D) Task Force to explore possible applications of artificial intelligence (AI) methods in market analysis. An early difficulty encountered by the Working Group is that the term “AI” itself has a variety of contested meanings. In addition, private sector entities have adopted the term as a marketing concept and inappropriately apply the label to products simply as a selling point. As such, the term has come to acquire a variety of meanings and is an “essentially contested concept.”¹

At its most general level, the term “AI” implies machine capacities that mimic or are analogous to processes of human reasoning and learning and entail some degree of machine autonomy in which learning occurs without significant human intervention. Beyond this general description, the Working Group did not feel that an attempt to define the term more strictly would be fruitful. Rather, the term is employed simply as a shorthand reference for a collection of various techniques that algorithmically seek patterns in data that are predictive of some future outcome. Common methods include machine learning, neural networks, and decision tree analysis. These processes are often contrasted to the traditional hypothetical-deductive methods of model specification associated with classical statistics. However, there does not appear to be a bright line of demarcation so that a particular technique can be firmly fixed within either category.

¹ The term “essentially contested concept” was coined by W.B. Gallie in the seminal presentation to the Aristotelian Society in 1956.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

In addition, the Working Group focuses on what is commonly called “narrow AI,” in which machine algorithms are employed for narrowly defined and limited tasks. More advanced systems, called “general AI,” possess generalized autonomous problem-solving capacities that are comparable to the processes of the human brain, and they are able to adapt to novel situations or information (Macnisch et al., 2019).

It is important to emphasize the ways in which AI modeling techniques contrast to the standard scientific model employed in classical or traditional statistics:

Classical Statistics: Method of hypothetical-deductive reasoning in which hypotheses are clearly and narrowly specified *prior* to data testing, often with a prior understanding of the underlying causal nature of the relationships between variables. **Purpose:** To further causal understanding.

AI: Often employs a type of “data mining” in which a machine pattern-seeking algorithm is released “into the wild” to identify possible correlations between variables that may be predictive of some independent variable. Hypotheses are not specified prior to data analysis, and the algorithm may very well identify correlations that would not have occurred to an analyst and whose causal relationship is constructed post-hoc (to the degree that AI users are concerned with causality at all). **Purpose:** Predict future outcomes or events.

The difference between these two approaches is not trivial, and significant disagreements about the advantages and disadvantages of AI remain. It is of note that AI did not emerge principally from university statistics departments, but rather from the field of computer science. Many statisticians remain skeptical of the techniques and have offered up a variety of caveats for their use. For example, recently the American Statistical Society (ASA) reacted to the “reproducibility crisis” afflicting some disciplines that have discovered, with much consternation, that a large volume of published works could not be replicated. The concern was that increasingly less rigorous statistical methods departing from the hypothetical-deductive approach were becoming more prominent in a variety of fields, undermining confidence on research findings. Remarking on departures from a rigorous hypothetical-deductive approach with “data mining” and like methods in which pattern seeking is largely ceded from a researcher to a machine, the ASA warned about improper inferences that might result from such techniques. The ASA centered its discussion on the p-value, related to the probability that some observed relationship occurred by chance alone. A low p-value is often employed to minimize the probability that chance relationships will be misinterpreted as a relationship that is a meaningful, non-random outcome:

“Conducting multiple analyses of the data and reporting only those [analyses] with certain p-values...renders the reported p-values essentially uninterpretable. Cherry-picking promising findings, also known by such terms as data dredging, significant chasing, significance questions, selective inference and a ‘p-hacking’ leads to a spurious excess of statistically significant results...and should be vigorously avoided” (Wasserstein & Lazar, 2016).

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

To translate the ASA's statement into more easily understood and less technical terms, the ASA is warning against *false positives* in which an analysis produces random or chance correlations between items that are not meaningfully related—that is, where a chance relationship is mistaken for a true causal relationship. That AI largely jettisons causal understanding as its primary goal (to the degree that causality is a concern at all) increases the probability that statistical results may be uninterpretable in any meaningful sense. This is clearly evinced by the increasing debate among state insurance regulators and insurers regarding the meaning of statistical relationships appearing in predictive models that lack intuitive or, in many cases, even plausible explanations. See Appendix A for further discussion of the ASA statement.

The discussion above is not intended to sway state insurance regulators one way or the other with respect to AI. The purpose is simply to proffer some caveats shared by many statisticians. A final caveat is the AI techniques were developed to analyze very large data sets consisting of millions of records and possibly thousands or tens of thousands of variables. It is said to have an advantage in that algorithms can perform a large volume of analyses across different constellations of variables in a way that would be highly impractical employing traditional (and manual) model building. For small data sets, such as the limited data currently available to market analysts, it is unclear whether the expense associated with developing AI techniques can be justified, nor whether AI is at all superior to traditional model building methods. This is not an unimportant point and is discussed in more depth elsewhere in this recommendation.

Current Status of Market Analysis

Quantitative market analysis relies on just a handful of data sources:

The Complaint Database System (CDS): The NAIC compiles complaints against insurers received by state insurance regulators. Thus, each state has access to a national-level database. Complaint indices are “normalized” by expressing the volume of complaints to premium, compared with the overall industry total.

The Regulatory Information Retrieval System (RIRS): Regulatory actions in relation to insurance entities are captured in the RIRS database. Actions range from intervention in financially troubled entities to violations of producers and insurance carriers. Each record identifies the cause of the action, as well as any orders, fines, or restitution amounts. The RIRS database is currently being substantially revised to capture significantly more detail.

The Market Actions Tracking System (MATS): The MATS database captures information pertaining to market conduct exams, as well as actions short of exams. Data captured include area of scrutiny (claims, underwriting, etc.) and the outcome of the market action (order, fine, etc.). By matching MATS actions with RIRS, additional detail about the nature of the violation can be assessed.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

The Market Conduct Annual Statement (MCAS): The MCAS was developed to capture data with the primary purpose of assessing an insurer’s market performance and identify potential market irregularities. The data focus primarily on claims handling and underwriting, and data are scrutinized with respect to claims processing times and denials, nonrenewal and cancellation practices, and overall turnover in a book of business. Data are captured by line and coverage. To date, MCAS data are collected for life and annuities, private automobile, homeowners, health (both on and off the federally facilitated marketplace [FFM]), long-term care (LTC), lender-placed insurance, disability income, and private flood.

Miscellaneous Data Sources: Some financial data has been incorporated into market information systems. Insurers that are under financial stress, or that rapidly expand into or contract out of a line of business, or that exhibit high defense or other adjudication costs, may be subjected to additional analysis. While financial indicators are only indirect or proxy measures of potential market issues, and by themselves may have no clear market-based interpretation, interpretation within the context of a host of other indicators may be reflective of the present of a market-relevant issue.

The NAIC, in conjunction with state insurance regulators, has developed a broad scope “market score” that incorporates much of the data referenced above, which is made available to regulators via the Market Analysis Prioritization Tool (MAPT). One such data are “normalized” by the premium volume and scope of company operations as necessary. For example, several RIRS-based ratios express the volume of RIRS actions in relation to premium volume, the number of states in which they have significant premium, and a composite ratio that incorporates both premium and scope. Each ratio is given a score, and their contribution to the overall score weighted according to their perceived predictive relevance. For example, financial ratios are accorded significantly less weight than complaints, as their relationship to market misconduct is considered more speculative and indirect.

An important caveat is that predictive analytics is not well developed in market regulation. The ratios employed in the Market Analysis Review System (MARS) have not been subjected to rigorous statistical tests that demonstrate their analytic utility. While some work has been performed in this regard, such work is significantly hampered by a dearth of appropriate data. For example, future RIRS actions are often employed as the dependent variable (the outcome of interest to be predicted). However, this presents all manner of statistical challenges. While it is certainly reasonable to use prior outcomes (past RIRS actions) to predict future outcomes (the RIRS actions to be predicted), employing RIRS actions as both dependent and independent variable introduces significant complexities in the interpretation of any observed relationship between the two. One can imagine, for example, that the use of RIRS actions in market analysis invites greater scrutiny to a given insurer, and that in turn generates future regulatory actions precisely because the company received additional scrutiny. Companies that have no “prior offenses” fail to attract regulatory scrutiny, so that any infractions may escape regulatory action *for precisely that reason*. This problem is certainly not insurmountable, but it must be explicitly recognized in any model building exercise, whether with AI or with more conventional statistical techniques.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

In general, the paucity of rich data sources has significantly hampered the adoption of more rigorous analytical techniques. To return to RIRS, these data are not rich sources of detailed information. Schematics are not well designed “from the ground up.” Essential data are missing, such as line of business.

Any consideration of AI or any other analytical techniques must necessarily view the utility of such techniques within the context of available data. Regardless of the validity of a technique in general, it will have limited utility if data are themselves limited. Any recommendation to employ such methods must therefore at the same time recommend a thorough review of available data.

Importantly, results of quantitative analysis are always treated as merely suggestive and tentative and are regarded as at most a precursor to more qualitative analysis. It currently is employed to prioritize entities that may merit additional scrutiny and to narrow focus on a much more limited subset of companies out of a larger pool of companies. It therefore primarily prioritizes limited regulatory resources.

State insurance regulators avail themselves of the formal analytical processes adopted by the NAIC. Quantitative or “baseline” analysis identifies entities with anomalous indicators that significantly depart for industry-wide values. A “level 1” analysis may be pursued, in which an analyst devotes additional scrutiny to such things as complaint trends, common reasons complaints are lodged against an insurer, similarities in RIRS actions, etc. If concern still remains (or additional concerns are identified) subsequent to level 1 analysis, a structured level 2 analysis may be performed. A level 2 analysis requires a much greater commitment of time and resources. For example, rather than just manually reviewing complaint data to identify patterns, an analyst may manually review actual complaint documentation to garner a more detailed understanding of the nature of complaints.

As a preliminary to the following discussion, AI/statistical analysis may have two primary functions within the context of the current market analysis structure:

1. More accurately identify companies that merit the additional expenditure of resources necessary to perform the more labor-intensive level 1 and level 2 analyses. Analysis processes that more efficiently identify problem companies for this purpose are by definition more effective and more effectively target resources by avoiding “false positives” (for lack of a better word).
2. Potentially, AI methods could assume many of the functions that are currently performed manually. For example, many of the pattern-seeking analysis performed by analysts in a level 1 review could conceivably be more efficient if automated. Potentially, AI could identify patterns that might elude a human analysis. A very advanced level of AI could perhaps assume complex analysis involved with manually reviewing complaint files and documents. However, while the possibility is raised here, it is not further pursued. That level of AI suitable for tasks may not even exist as yet, or if it does, it may be so specialized that it may not be available to state insurance regulators. Even if available, the likely enormous costs themselves would render them highly impractical.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

Whether such AI exists, is available at a practical cost, and can actually out-perform more conventional analyses are questions that the Market Information Systems Research and Development (D) Working Group is simply unable to satisfactorily address. The Working Group merely suggests initially limiting the scope of ambitions to a few methods that are commonly, if not universally, recognized as AI, such as machine learning or neural networks. More expansive or ambitious efforts may result in a fruitless search for “unobtainium.”²

Given very large data sets, well beyond what is currently available to market analysts, AI may have clear advantages to more conventional approaches. The slow, methodical, hypothetical-deductive approach that forms the core of conventional statistics may have advantages in terms of generating valid causal conclusions. However, AI may have certain advantages with respect to confronting the enormity of modern data. As AI is well-suited to performing much more expansive analysis and pattern-seeking routines over vast quantities of data, it may well identify predictive patterns that would have escaped conventional analysis or that are counterintuitive such that some hypotheses may never have occurred to an analyst employing a standard hypothetical-deductive approach. However, there are distinct disadvantages as well, and they are shared by other approaches often termed “data mining.” The fact is that patterns may lack an intuitive meaning, and the manner in which such patterns are identified and render interpretation may be unclear. Additionally, patterns may generate numerous “false positives,” apparent patterns or correlations that are purely random and possess no meaning or any real predictive power whatsoever. This is not fatal for AI techniques, but it introduces much in the way of caveats and requires significant remedial measures to be employed. This problem is so significant that it merits a much fuller discussion in a separate section below.

The Work of Market Information Systems Research and Development (D) Working Group

The Working Group solicited input from various parties. Two parties delivered presentations to the Working Group:

1. On June 16, 2021, the Working Group discussed a presentation regarding AI methods currently being explored by NAIC staff to predict which insurers are likely to experience financial stress, including insolvency. Beginning in January 2021, an outside consulting group was retained to develop both AI as well as more traditional statistical techniques to construct predictive models of insolvency risk. The efforts are ongoing at the time of writing. Presenters believed the methods were promising and could significantly advance financial risk surveillance. Among AI and statistical models explored were decision tree analysis, generalized linear models (GLMs), and logistic regression.

² A tongue-in-cheek term originating among engineers in the 1950s. It is defined by Wikipedia as “... any hypothetical, fictional, or impossible material, but it can also mean a tangible but extremely rare, costly, or reasonably unobtainable material. Less commonly, it can refer to a device with desirable engineering properties for an application, but which are exceedingly difficult or impossible to achieve.”

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

2. During the Working Group's June 21, 2021, meeting, Birny Birnbaum (Center for Economic Justice—CEJ) encouraged the Working Group to adopt a long-term perspective and develop a multiyear plan to explore AI techniques that might be beneficial to market analysis. He also indicated that state insurance regulators have to date failed to acquire granular transactional data that could be exploited by AI methods to afford a much more robust surveillance system to reduce consumer harm to the extent possible.

After the meeting, the Working Group convened a subject-matter expert (SME) group with the intent of creating a draft recommendation to be submitted to the Working Group.

Recommendations

The Working Group recommends developing a long-range plan, in a sequence of five steps.

I. Existing Market Analysis Data

As noted above, market analysis suffers from a paucity of detailed data. Some movement in expanding data and remedying deficiencies was made with a complete redesign of the RIRS data, which will facilitate analysis of factors related to an entity sanctioned by state insurance regulators. If implemented, RIRS will also capture much more detailed data related to the specific misconduct that garnered a regulatory response. The RIRS proposal is currently under discussion with the Market Information Systems (D) Task Force, to which Working Group reports.

The remainder of available data also suffers from significant deficiencies. Insurers employ a variety of definitions to produce MCAS data. Even such a fundamental concept as a “claim” is reported differently by different insurers, making market-wide analysis challenging. For example, the MCAS defines a claim in the conventional sense of “a demand for payment.” Investigation by the Missouri Department of Commerce & Insurance (DCI) has determined that the definition is interpreted in wildly divergent ways across the industry that simply makes meaningful comparison impossible and renders key market indicators or ratios largely meaningless. Some insurers set up a claim on a coverage that is reasonably related to the facts of the incident as relayed by a claimant. Other insurers set up all possible coverages on a policy as a claim in their internal systems regardless of whether those coverages might be reasonable implicated in a claim. As might be imagined, those carriers have significantly higher ratios of claims closed without payment. This and other issues remain with the MCAS and significantly impair market analysis.

Recommendation 1: Survey currently available market analysis data, and identify substantive deficiencies based on the nature and substance of the data elements collected. Ensure that all data are consistently reported across insurers to the degree practical and ensure adherence to definitions of data elements.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

II. Existing Methods of Market Analysis

Current quantitative methods of market analysis are largely based on *ad hoc* and *intuitive* understanding of how data indicators might be related to market misconduct. For example, one of the earliest indicators developed are complaints received by state insurance regulators regarding insurers. It is probably not unreasonable to interrogate complaint data to identify trends over time, as well as just overall complaint volume, to attempt to identify potential problems in a market. Similar indices consider the volume of RIRS actions, as well as the gravity of infractions in terms of potential consumer harm. It is the opinion of many state insurance regulators that such indicators possess a rational relationship to market misconduct and are relevant to identify market actors that might benefit from a heightened level of regulatory scrutiny.

While the Working Group agrees with the rationale behind such market indicators, analytical tools have not to date been subjected to more rigorous statistical methods to clearly identify the predictive power and assess their relative importance or weight. For example, the MAPT, maintained by the NAIC and available to state insurance regulators, employs overall insurer scores based on various indicators. However, the weight of these indicators employed in the score were assigned by state insurance regulators based on experience, as well as assessment of whether a likely relationship have a clear rational meaning. For example, complaint ratios are weighted significantly more heavily than things like financial indicators. The Working Group believes subjecting the scoring system to rigorous statistical analysis could yield significant benefits in identifying problem market actors.

Recommendation 2: In conjunction with recommendation 1 (assess data quality), state insurance regulators should adopt a much more rigorously statistical approach to identify the predictive power of market scoring systems, assess how each variable should be weighted in terms of its unique contribution to productiveness, and drop those that lack analytic utility. In addition, effort should be made to integrate data into a single overall analysis. For example, the MAPT does not incorporate MCAS data, which is typically subject to a separate analysis. The Working Group believes that a “piecemeal” approach is likely less effective than a more integrated approach.

It is noted that the current state of data will likely prove limiting and that such efforts may not make much progress until additional data are made available (such as the proposed revisions to the RIRS data, currently subject to NAIC discussion).

III. Available Approaches: Exploring AI

In addition to more traditional statistical tools, such as various types of regression models and correlation analyses, AI may offer additional benefits. Some commercial statistical packages have incorporated AI methods. The statistics package SAS, which is widely used in both the private and

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

public sectors, makes some AI techniques available in its standard statistical module.³ In addition, SAS has developed a module called Enterprise Miner, which incorporates both data mining and some lower-level AI routines. (For those familiar with the terms, it performs such things as decision-tree analysis, neural networks, and like forms of analyses). Other modules make machine learning available—a potentially powerful type of analysis that modifies prior predictive algorithms as new data become available.

Recommendation 3: In undertaking recommendation 2, incorporate various promising AI modes of analyses, as well as traditional statistical modeling. Constantly assess the precision of model outcomes relative to objectives such as identifying potential market issues.

IV. Qualitative Analysis

The current model of market analysis incorporates a multistage hierarchical structure. First, quantitative analysis such as that produced by the MAPT identifies potential market problems and narrows focus to entities that appear to exhibit potential areas of regulatory concern. Having narrowed down the focus of analysis to a much more limited pool of candidates, market analysts in the states engage in more manual or qualitative analysis of additional information sources. For example, an analyst may review a selection of complaint files to identify additional patterns of market behavior to better understand their nature and substance.

As noted above, AI techniques such as text analysis could potentially expand such exercises and improve the identification of concerning patterns at a deeper level, as well as assess ways to improve the efficiency of other qualitative tasks.

Recommendation 4: Assess ways AI can improve both the efficiency of *qualitative* analysis and facilitate pattern recognition across larger volumes of textual evidence, including most especially complaints, but perhaps other textual sources. For example, the “level 1” analysis formalized in NAIC market system may include a review of the “management discussion and analysis” of the financial annual statement.

V. Longer-Range Planning

As noted above, data mining and AI techniques were developed primarily as tools to analyze large volumes of data. For data past a certain magnitude, including especially those containing many hundreds or even thousands of variables, the traditional hypothetical-deductive cornerstone that is the cornerstone of traditional statistical inference may be ill-suited as well as cost-prohibitive in terms of

³ SAS is markets in “modules,” each consisting of a different suite of capabilities that can be tailored to a user’s need. For example, “base SAS” provides standard data handling programs. A “statistics module” provides a wide-ranging set of analytical routines.

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

time and resources. If the purpose is solely prediction as opposed to causal understanding, AI can fine-tune predictive algorithms by testing relationships that may be unlikely to occur to a statistician employing causal modeling.

Currently, such large volumes of data are unavailable to market analysts, though they could potentially be obtained. More granular data pertaining to claims, underwriting, and other areas of company operations are routinely collected via the “standard data requests” adopted as a supplement to the *Market Regulation Handbook* and commonly employed in market conduct exams.

However, AI and data mining can churn up counterintuitive statistical relationships that defy ready interpretation. In addition, it is likely to detect proxy relationships that are not understood. Proxy relationships, in which a third variable is substituted for an underlying variable of interest, are often employed in statistical models. This is often due to the accessibility or cost of obtaining data of the actual causal variable of interest. However, when employed in traditional statistical analysis, the nature of the relationship between the proxy variable and the actual variable of interest is generally well understood. This is not true of AI techniques that employ or resemble data mining.

The techniques are also likely to generate some number of purely chance relationship, where a correlation is generated by random chance. Inferential statistics seek to minimize mistaking a chance relationship for a meaningful association. Typically, the use of a p-value requirement of 0.05 or less limits the probability of accepting a random relationship to no more than 5% of occurrences. However, a 5% threshold means that over time, false, or chance relationships will be misinterpreted of a true correlation.

This fact is not fatal for the use of AI in market analysis, but it does represent a strong caveat for those employing the techniques, at least those that share elements with data mining. Careful interpretations of p-values should recognize an increased possibility of false positives. Observed relationships should be assessed and validated over time to ensure correlations are stable. In addition, once relationships are identified via AI and found useful, standard statistical models should also be employed to test whether different techniques yield superior predictive power. Additional discussion of caveats is presented in the appendix.

That said, there is much potential of AI in market analysis, *assuming that additional, more granular, data are available*. As noted, such techniques are most suited for large datasets whose very size would make a standard statistical approach impractical just given the sheer number of possible correlations available for testing.

Recommendation 5: Systematically explore potential data sources suitable for AI techniques, with an eye for discovering patterns and relationships in relation to some well-defined outcome one is attempting to predict. This may be identifying entities that may merit additional regulatory scrutiny in a way that is currently done by the less sophisticated methods employed in the MAPT or with the

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

MCAS. Larger volumes of data, such as the standard data requests, can be subjected to AI to identify problematic claims handling, underwriting, and other insurer practices.

Summary of Recommendations

Recommendation 1: Survey currently available market analysis data, and identify substantive deficiencies based on the nature and substance of the data elements collected. Ensure that all data are consistently reported across insurers to the degree practical, and ensure adherence to definitions of data elements.

Recommendation 2: In conjunction with recommendation 1 (assess data quality), state insurance regulators should adopt a much more rigorously statistical approach to identify the predictive power of market scoring systems, assess how each variable should be weighted in terms of its unique contribution to productiveness, and drop those that lack analytic utility. In addition, effort should be made to integrate data into a single overall analysis. For example, the MAPT does not incorporate MCAS data, which is typically subject to a separate analysis. The Working Group believes that a “piecemeal” approach is likely less effective than a more integrated approach.

Recommendation 3: In undertaking recommendation 2, incorporate various promising AI modes of analyses, as well as traditional statistical modeling. Constantly assess the precision of model outcomes relative to objectives, such as identifying potential market issues.

Recommendation 4: Assess ways AI can improve both the efficiency of *qualitative* analysis and facilitate pattern recognition across larger volumes of textual evidence, including most especially complaints, but perhaps other textual sources. For example, the “level 1” analysis formalized in NAIC market system may include a review of the “management discussion and analysis” of the financial annual statement.

Recommendation 5: Systematically explore potential data sources suitable for AI techniques, with an eye for discovering patterns and relationships in relation to some well-defined outcome one is attempting to predict. This may be identifying entities that may merit additional regulatory scrutiny in a way that is currently done by the less sophisticated methods employed in the MAPT or with the MCAS. Larger volumes of data, such as the standard data requests, can be subjected to AI to identify problematic claims handling, underwriting, and other insurer practices.

Appendix: Caveats

Recently, some fields of scientific inquiry have experienced much consternation and hand-wringing due to the so-called “replicability crisis” resulting from the realization that many studies published in top-tier journals could not be replicated. In 2015, Open Science Collaboration published research into the replicability of psychological studies. Of the 100 studies that were subjected to testing, replications yielded statistically significant results in only 36% compared to 97% of the original publications (Open Science Collaboration, 2015). Similar reproducibility issues were found in other fields.

Attention was directed at quantitative methods, particularly those made possible by modern computing power. Researchers can run countless variations of models, including multiple different variables, cross-effects, and other tweaks, until they eventually produce positive or statistically significant results. The inevitable outcome of the lack of rigor of such methods is that many chance correlations will be mistaken for meaningful relationships.

Think of it this way. The probability of obtaining all heads from 10 flips of a fair coin is $1/1024$. So, if a researcher actually performed the experiment 1,024 times and obtained 10 heads at least once, it would obviously be improper to infer that the coin was a two-headed coin. Without knowledge of the total number of trials, one might reject the “null hypothesis” that the coin is fair, and results would be “statistically significant” with a p-value of $(1/1,024) = 0.00098$, well below the 0.05 maximum threshold to establish statistical significance. But the true p-value can only be calculated with knowledge of the total number of trials prior to obtaining the recorded result, such that the true p-value is well above the maximum threshold.

There are no allegations of willful misconduct so much as careless and sloppy methods, producing much introspection about how statistics methods are taught to scientists at colleges and universities. The problem is so significant that the following year, the American Statistical Association (ASA) released a statement regarding misuse of p-values and practices known as “p hacking” or “data dredging.” A letter from the ASA is reprinted below, with a link to the full statement (used with permission).

Really, this is a warning for state insurance regulators not to adopt a casual attitude about apparent relationships turned up by the methods. When such methods are employed, modelers should be on constant guard against mechanical interpretations of model outputs. It is important to fully understand what is going on in the “black box” of an AI algorithm, the results of all statistical tests performed, and the totality of processes generating final results.

A high number of false positives that prompt regulatory follow-up can risk draining away regulatory resources going down blind allies.

AMERICAN STATISTICAL ASSOCIATION RELEASES STATEMENT ON STATISTICAL SIGNIFICANCE AND P-VALUES

Provides Principles to Improve the Conduct and Interpretation of Quantitative Science

March 7, 2016

The American Statistical Association (ASA) has released a “Statement on Statistical Significance and P-Values” with six principles underlying the proper use and interpretation of the p -value [<http://amstat.tandfonline.com/doi/abs/10.1080/00031305.2016.1154108#.Vt2XIOaE2MN>]. The ASA releases this guidance on p -values to improve the conduct and interpretation of quantitative science and inform the growing emphasis on reproducibility of science research. The statement also notes that the increased quantification of scientific research and a proliferation of large, complex data sets has expanded the scope for statistics and the importance of appropriately chosen techniques, properly conducted analyses, and correct interpretation.

Good statistical practice is an essential component of good scientific practice, the statement observes, and such practice “emphasizes principles of good study design and conduct, a variety of numerical and graphical summaries of data, understanding of the phenomenon under study, interpretation of results in context, complete reporting and proper logical and quantitative understanding of what data summaries mean.”

“The p -value was never intended to be a substitute for scientific reasoning,” said Ron Wasserstein, the ASA’s executive director. “Well-reasoned statistical arguments contain much more than the value of a single number and whether that number exceeds an arbitrary threshold. The ASA statement is intended to steer research into a ‘post $p < 0.05$ era.’”

“Over time it appears the p -value has become a gatekeeper for whether work is publishable, at least in some fields,” said Jessica Utts, ASA president. “This apparent editorial bias leads to the ‘file-drawer effect,’ in which research with statistically significant outcomes are much more likely to get published, while other work that might well be just as important scientifically is never seen in print. It also leads to practices called by such names as ‘ p -hacking’ and ‘data dredging’ that emphasize the search for small p -values over other statistical and scientific reasoning.”

The statement’s six principles, many of which address misconceptions and misuse of the p -value, are the following:

1. *P-values can indicate how incompatible the data are with a specified statistical model.*

Adopted by the Market Information Systems Research and Development (D) Working Group, Oct. 14, 2021

Adopted by the Market Information Systems (D) Task Force, June 16, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

2. *P-values do not measure the probability that the studied hypothesis is true, or the probability that the data were produced by random chance alone.*
3. *Scientific conclusions and business or policy decisions should not be based only on whether a p-value passes a specific threshold.*
4. *Proper inference requires full reporting and transparency.*
5. *A p-value, or statistical significance, does not measure the size of an effect or the importance of a result.*
6. *By itself, a p-value does not provide a good measure of evidence regarding a model or hypothesis.*

The statement has short paragraphs elaborating on each principle.

In light of misuses of and misconceptions concerning p -values, the statement notes that statisticians often supplement or even replace p -values with other approaches. These include methods “that emphasize estimation over testing such as confidence, credibility, or prediction intervals; Bayesian methods; alternative measures of evidence such as likelihood ratios or Bayes factors; and other approaches such as decision-theoretic modeling and false discovery rates.”

“The contents of the ASA statement and the reasoning behind it are not new—statisticians and other scientists have been writing on the topic for decades,” Utts said. “But this is the first time that the community of statisticians, as represented by the ASA Board of Directors, has issued a statement to address these issues.”

“The issues involved in statistical inference are difficult because inference itself is challenging,” Wasserstein said. He noted that more than a dozen discussion papers are being published in the ASA journal *The American Statistician* with the statement to provide more perspective on this broad and complex topic. “What we hope will follow is a broad discussion across the scientific community that leads to a more nuanced approach to interpreting, communicating, and using the results of statistical methods in research.”

About the American Statistical Association

The ASA is the world’s largest community of statisticians and the oldest continuously operating professional science society in the United States. Its members serve in industry, government and academia in more than 90 countries, advancing research and promoting sound statistical practice to inform public policy and improve human welfare. For additional information, please visit the ASA website at www.amstat.org.

Draft: 3/22/22

Adopted by Market Regulation and Consumer Affairs (D) Committee, Aug. 12, 2022

Adopted by Producer Licensing (D) Task Force, May 5, 2022

DRAFT FOR DISCUSSION
GUIDELINES FOR AMENDING THE UNIFORM LICENSING APPLICATIONS

The mission of the Producer Licensing (D) Task Force includes the development and implementation of uniform standards with a primary emphasis on encouraging the use of electronic technology. As part of this mission, the Task Force has appointed a Producer Licensing Uniformity (D) Working Group to “review and update, as needed, the NAIC’s uniform producer licensing applications and uniform appointment form.” In support of this mission and charge, the Producer Licensing (D) Task Force recognizes the importance of having stable, streamlined, and consistent NAIC’s Uniform Producer Licensing Applications, which comply with the statutes and regulations of the NAIC Membership and encourage the use of electronic technology in the most efficient manner.

In support of this mission and the importance of maintaining stable and consistent NAIC Uniform Licensing Applications, the Producer Licensing (D) Task Force will use the following guidelines for substantive changes to the NAIC’s Uniform Licensing Applications.

1. On a biennial basis, the Producer Licensing (D) Task Force will send an email communication by Dec. 1, to members of the Producer Licensing (D) Task Force, interested regulators, interested parties, and state producer licensing directors, asking for proposed changes to the NAIC Uniform Licensing Applications. The requested changes are to be submitted as a Word document using the NAIC Uniform Licensing Application Change Request form. The form should be completed in its entirety, attached to an email message, and directed and submitted to the NAIC staff providing primary support for the Producer Licensing (D) Task Force. All requests should be submitted by Feb. 1.
2. If the Producer Licensing (D) Task Force recommends further analysis of the request, the Task Force will assign the request to the Producer Licensing Uniformity (D) Working Group by the close of the NAIC Spring National Meeting. The Working Group will review the request using the following guiding questions:
 - a. Does the proposed change maintain the NAIC Membership’s mission of uniform licensing standards with a primary emphasis on encouraging the use of electronic technology?
 - b. Does the proposed change serve the regulatory purpose of strengthening consumer protection while maintaining an efficient licensing process for producer applicants? This should include documentation on why the existing Uniform Applications do not meet these objectives.
 - c. Does the proposed change comply with the statutes and regulations of the NAIC Membership and encourage the use of the NAIC’s Uniform Applications in all jurisdictions?
3. The initial comment period on exposure drafts issued by the Producer Licensing Uniformity (D) Working Group should be 30 calendar days. The Working Group may consider additional exposure periods of less than 30 days for revisions to the same draft.
4. Revisions to the NAIC’s Uniform Applications should be adopted by the Producer Licensing Uniformity (D) Working Group and the Producer Licensing (D) Task Force by the close of the NAIC Summer National Meeting.¹
5. If the Producer Licensing Uniformity (D) Working Group recommends a requested change not be pursued, the request will be updated with that decision and filed for future reference. A copy of the recommendation and decision will be provided to the requestor.
6. If the Producer Licensing Uniformity (D) Working Group recommends proceeding with a requested change, NAIC staff providing primary support for the Producer Licensing (D) Task Force will coordinate with NIPR and States, including

¹The dates and meetings set forth herein pertain only to the year in which the Producer Licensing (D) Task Force solicits proposed changes to the Uniform Licensing Applications as described in item 1.

back-office system support vendors, during the next 45 days, conduct an analysis culminating in the provision of a time and cost estimate for the Producer Licensing (D) Task Force's review and prioritization. Using staff analysis, the Producer Licensing (D) Task Force will identify an appropriate implementation date.

7. Revisions to the NAIC's Uniform Applications should be adopted by the Market Regulation and Consumer Affairs (D) Committee by Oct. 15, and the Executive Committee and Plenary by the conclusion of the NAIC Fall National Meeting.

Internal Antifraud Awareness**

**Antifraud Plan Repository
Workflow**

Action:
Provide a description of the insurer’s internal awareness / antifraud education and training initiatives of any personnel involved in antifraud related efforts. Insurers should include all of the following when providing their description:

- *An overview of antifraud training provided to new employees.
- *An overview of the internal positions the insurer offers regular education and training, such as underwriters, adjusters, claims representatives, appointed agents, attorneys, etc.
- *A description of the various training topics covered with employees.
- *The method(s) in which training is provided.
- *The frequency and minimum number of training hours provided.

NOTE: A free form box with unlimited text allowance should appear beneath the overview so the insurer has the ability to provide a general narrative before getting into the added sections. The ability for spell check would be preferred as well.

Action:
Describe the various method(s) in which internal employees can report suspected fraud.

NOTE: This should be a free form box with unlimited text allowance. The ability for spell check would be preferred as well.

Market Analysis Procedures (D) Working Group
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
July 13, 2022

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 13, 2022. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Tolanda Coker (AZ); Don McKinley (CA); Damion Hughes (CO); Steve DeAngelis (CT); Susan Jennette (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy N. Schott (ME); Jeff Hayden (MI); Jo LeDuc, Cynthia Amann, and Teresa Kroll (MO); Martin Swanson and Robert McCullough (NE); Erin Porter (NJ); Leatrice Geckler (NM); Larry Wertel (NY); Todd Oberholtzer (OH); Shelly Scott (OK); Matt Gendron (RI); Rachel Moore (SC); Shelley Wiseman (UT); Will Felvey (VA); Karla Nuissl and Mary Block (VT); and Theresa Miller (WV). Also participating was: Shelli Isiminger (TN).

1. Adopted its June 8 Minutes

Mr. Haworth said the Working Group met June 8 and took the following action: 1) adopted the standard ratios for the Travel Insurance Market Conduct Annual Statement (MCAS) and the Short-Term Limited-Duration (STLD) MCAS; 2) considered new lines of business for the MCAS; and 3) considered improvements to the Market Analysis Review System (MARS).

Mr. Schott made a motion, seconded by Mr. Gendron, to adopt the Working Group's June 8 minutes (Attachment Nine-A). The motion passed unanimously.

2. Considered New Lines of Business in the MCAS

Mr. Haworth said suggestions have been made to add Pet Insurance, Title Insurance and business owner's policy (BOP) to the MCAS. He said the Working Group received comments from Rhode Island in support of Pet Insurance as the next line of business. He said Mr. Gendron provided some responses to the questions that need to be addressed per the "Process for Selecting New MCAS Lines of Business."

Mr. Haworth said Ms. Isiminger suggested adding Credit Life Insurance and Credit Disability Insurance to the MCAS. He said Ms. Isiminger also suggested adding data elements on Waiver of Premium (WoP) and Accelerated Death Benefits (ADB) to the Life MCAS blank.

Ms. Isiminger said credit life and credit disability insurance generate large profits for the companies writing, and the products are often marketed to and purchased by consumers least able to afford them. She said consumers often feel pressured to purchase the products even though it would be less expensive for them to shop around for the coverage. She said the lack of regulation leads to questions as to whether the consumers of the product are receiving the coverage they purchased. She noted there was very little, if any, regulation of the products.

Ms. Isiminger said WoP and ADB are either added as part of a life insurance policy or attached as a rider to the policy. She said she has seen WoP added to policies in an amount not sufficient to cover the entire premium. She said ADB coverage can be a very useful product for consumers, and the coverage keeps viatical companies at bay. She said it would be helpful to analyze whether consumers are being treated appropriately when they buy or make claims on WoP and ADB coverages.

Mr. Haworth noted that the request to add WoP and ADB data elements should be referred to the Market Conduct Annual Statement Blanks (D) Working Group.

John Euwema (Consumer Credit Industry Association—CCIA) said the suggestion to add credit insurance coverages to the MCAS was made and rejected by the Working Group in 2017 and 2018. He said nothing has changed in the credit insurance marketplace since then. He questioned why it should be considered again.

Birny Birnbaum (Center for Economic Justice—CEJ) said he supports adding credit life and credit disability insurance to the MCAS and offered his assistance.

Mr. Gendron said there are market conduct problems surrounding pet insurance. He said one issue is that the product is sold by companies that write many other lines of business, and because pet insurance is written as inland marine, there is no way to determine what premium is generated by their pet insurance products or even which companies may even be writing pet insurance without looking at all the form filings. He said pet insurance has grown rapidly in the last five years, especially as more people have purchased pets during the COVID-19 pandemic. Mr. Haworth noted that the only information available on pet insurance comes from the trade associations, and there is no way to verify the information. He said because of the uncertainty regarding the underwriters of the coverage, it is a challenge to identify what company a complaint is directed against.

Acting Superintendent Schott said Maine just passed legislation on pet insurance based on the *Pet Insurance Model Act* (#633). He said it would be very helpful to have pet insurance data.

Mr. Haworth said the Working Group would decide on the next line of business during its next meeting. Mr. Birnbaum said there was no opposition to adding pet insurance, and the suggestion has been exposed since the last Working Group meeting. Ms. LeDuc and Acting Superintendent Schott requested more time to review all proposals and John Fielding (Chubb) asked for additional time to allow the North American Pet Health Insurance Association (NAPHIA) the opportunity to comment.

Mr. Haworth asked for comments to be sent to Randy Helder (NAIC) by Aug. 12.

3. Discussed the Addition of Outstanding MCAS Lines of Business in the MARS

Mr. Haworth said since the last Working Group meeting, one comment was received from Tony Dorschner (SD) stating that South Dakota analysts often use the MARS to analyze companies seeking to expand their Certificate of Authority. He said South Dakota supports adding additional lines of business options to the MARS.

Mr. Haworth said the current lines available in the MARS are Credit, Homeowners, Long-Term Care (LTC), Medicare Supplemental, Workers' Compensation, Group Accident & Health (A&H), Individual A&H, Medical Professional, and Private Passenger Auto (PPA).

Ms. LeDuc said there are lines of business that do not have corresponding lines of business in the financial annual statement. Adding a line of business option in the MARS for those lines would be difficult. Mr. Haworth agreed, but he said state insurance regulators have MCAS data MARS does not have a designated Level 1 line of business available to perform analysis. He said this needs to be addressed.

Mr. Haworth said he will work with Mr. Helder to re-draft the Working Group's Uniform System Enhancement Request (USER) form to forward to the Market Information Systems Research and Development (D) Working Group requesting an expansion of the lines of business options in the MARS and adding the outstanding MCAS data lines.

4. Discussed Other Matters

Mr. Haworth said Maria Ailor (AZ) sent a comment letter to the Working Group in support of adding the Travel Insurance loss ratio to the standard MCAS ratios for Travel Insurance. He said Ms. Ailor noted that the blank collects the total dollar amount of claims (line item 29) and the total direct written premium (line items 44, 45, and 46). He said even though some travel insurance policies are short-duration and others are long-duration, the loss ratio derived from the MCAS data would provide a good average for each state.

Mr. Oberholtzer said the Working Group should consider whether the information would have value for market analysts. He said he does not believe the information would be helpful for analysts in Ohio. Mr. Swanson agreed.

Mr. Birnbaum said this was originally proposed during the June 8 Working Group meeting. He said there is no annual statement line for travel insurance, and the loss ratio cannot be derived. He said the loss ratio is the accepted method for evaluating the value of an insurance product for consumers. He said calculating the loss ratio allows the market analysts to compare loss ratios across companies. Mr. Birnbaum also noted that while the public would only see a statewide loss ratio, the market analysts would have a more granular level of access, allowing for the tracking of loss ratios of time. He said this would be a very valuable ratio for analysts.

Mr. Birnbaum said the CEJ also requested that the volume of direct written premium, the average number of insureds, and the number of claims be presented along with the standard ratios for travel insurance. He said even if some market analysts may not find the information useful, other stakeholders may.

Ms. LeDuc asked what effort this would create for the NAIC to add the additional travel insurance ratio. Mr. Helder said the data elements are being created, and the work on adding the adopted ratios is still in progress, so it should not create difficulties.

Ms. LeDuc said since travel insurance consists of many different types of coverages, it may not make sense to aggregate them into one loss ratio. Mr. Birnbaum said travel insurance is sold as a package of products so the aggregate loss ratio reflects the value of the product.

Mr. Haworth asked for comments to be sent to Mr. Helder by Aug. 12.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Sharepoint/Member Meetings/D CMTE/2022 Summer National Meeting/MAPWG/0713/0713 MAPWG .docx

Draft: 6/16/22

Market Analysis Procedures (D) Working Group
Virtual Meeting
June 8, 2022

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 8, 2022. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps and Russ Galbraith (AR); Maria Ailor (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo and Lori Cunningham (KY); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy N. Schott (ME); Jeff Hayden (MI); Jo LeDuc and Teresa Kroll (MO); David Dachs (MT); Martin Swanson and Robert McCullough (NE); Edwin Pugsley (NH); Ralph Boeckman and Erin Porter (NJ); Peggy Willard-Ross (NV); Larry Wertel (NY); Todd Oberholtzer and Guy Self (OH); Landon Hubbard (OK); Jeffrey Arnold (PA); Brett Bache and Matt Gendron (RI); Michael Bailes (SC); Shelley Wiseman (UT); Will Felvey (VA); Karla Nuisl and Mary Block (VT); and Theresa Miller (WV).

1. Adopted its March 3 Minutes

The Working Group met March 3 and took the following action: 1) reviewed its 2022 charges; 2) discussed the proposed standard ratios for the Travel and Short-Term Limited-Duration (STLD) Market Conduct Annual Statement (MCAS) blanks; and 3) discussed incorporating the new MCAS lines into the Market Analysis Review System (MARS).

Ms. Weyhenmeyer made a motion, seconded by Ms. Rebholz, to adopt the Working Group's March 3 minutes (see *NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Three*). The motion passed unanimously.

2. Adopted Standard Ratios for the Travel and STLD MCAS Lines of Business

Mr. Haworth said the proposed standard ratios for the Travel and STLD MCAS blanks were originally exposed prior to the Working Group's Nov. 18, 2021, meeting. He said at that time, the Working Group asked a group of subject matter experts (SMEs) to review and revise them as needed. The draft proposals are now exposed on the Working Group's web page.

Mr. Haworth said there are five proposed ratios for Travel and 11 ratios for STLD. He also noted that the drafting group made a couple suggestions for new data elements. He said the first suggestion is a new element for the Travel MCAS blank of "policies in force during the reporting period" to assist in analyzing complaint trends from year to year and company to company. He said it would enable the Working Group to add a ratio measuring cancellations to policies in force during the period. He said the second data element is recommended for the STLD MCAS blank and is the "dollar amount of claims paid during the reporting period."

Mr. Haworth said the Working Group would focus on adopting the Travel and STLD ratios and consider the new data elements later.

Birny Birnbaum (Center for Economic Justice—CEJ) said the proposed Travel ratio #5 measuring complaints to premium during the period was not useful because of the difference in the average premiums for the different products offered by different insurers. He suggested that the denominator would be more effective if the

denominator was the average of the number of individuals insured at the beginning of the period and the number of individuals insured at the end of the period.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said the drafting group considered Mr. Birnbaum's suggestion, but the group decided it did not work because most policies that are written are in force for time periods under a year. The two data elements suggested by Mr. Birnbaum does not yield an average. Ms. Brown said the lack of a good denominator for this ratio is the reason the drafting group suggested a new data element of "policies in force during the reporting period."

Ms. Ailor asked if there is time available to consider the new information provided or if there is a deadline to be met for adopting the ratios. Teresa Cooper (NAIC) said it is important that these are adopted soon so they can be entered into the system for next year, but an additional month would be possible. Ms. Nuisl agreed with Ms. Ailor that additional time would be helpful. Mr. Oberholtzer said he does not believe Mr. Birnbaum's comments should delay the adoption of the ratios. He said the drafting group spent time reviewing and coming up with the ratios that are proposed. Mr. Galbraith said comments were due in April, and now the Working Group will be delayed in deciding because of written comments received one day before the meeting. He said he would not want to see the Working Group set a precedent that anyone can submit comments long after the deadline for comments.

Ms. Weyhenmeyer suggested removing ratio #5 from consideration and only voting on the first four Travel ratios. Ms. Rebholz agreed with Ms. Weyhenmeyer. She said voting on the first four ratios would make sure some ratios are adopted regardless of any later decisions. Ms. Ailor said she also agrees with the idea, and she asked when new ratios can be introduced. Randy Helder (NAIC) said new ratios or modifications to other ratios still have time to be adopted. However, Ms. Cooper said any new data elements could not be effective until the 2024 data year.

Ms. Weyhenmeyer made a motion, seconded by Ms. Ailor, to adopt the first four Travel ratios (Attachment Nine-A1). The motion passed unanimously.

Ms. Weyhenmeyer made a motion, seconded by Mr. Schott, to adopt the STLD ratios (Attachment Nine-A2). The motions passed unanimously.

3. Discussed the Addition of Outstanding MCAS Lines of Business Data Elements to the MARS

Mr. Haworth said during the last Working Group meeting, the Working Group agreed to submit a Uniform System Enhancement Request (USER) form to the Market Information Systems Research and Development (D) Working Group to prioritize adding the Lender-Placed Insurance and Disability Insurance MCAS data elements to the MARS Level 1 set of questions. However, he noted that all the new MCAS lines of business need to be added to the MARS in time for the first collection of the data. He also said the MARS lines of business options are not broad enough to encompass each of the new lines of business added to the MCAS. For example, the new Travel MCAS would need to be completed under one of the available property/casualty (P/C) lines in the MARS.

Mr. Haworth said the Market Information Systems Research and Development (D) Working Group would like the Market Analysis Procedures (D) Working Group to expand on what should be required for the MARS to adequately meet the analysts' needs.

Mr. Dachs said he has had to use a different line of business in the MARS to do a Level 1 analysis on a line of business that is not an option in the MARS. He said the questions and data are not really on point. He said it would be useful to expand the line of business options in the MARS. Ms. Rebholz agreed that it would be helpful, but she does not know how difficult it would be to add the lines.

Mr. Haworth asked that comments be sent to Mr. Helder by July 11.

4. Considered New Lines of Business for the MCAS

Mr. Haworth said the Working Group needs to consider a new line of business for the MCAS, and he asked that suggestions be sent to Mr. Helder by July 11.

Mr. Birnbaum suggested three possible new lines of business for the MCAS. He said pet insurance has experienced tremendous growth and has doubled in size in the last four years. He said title insurance has \$20 billion in premium, and there is little review of the underwriting and claims handling for title insurance. Some states also allow title insurance policies to contain pre-dispute mandatory arbitration provisions. Finally, Mr. Birnbaum also suggested business owners insurance, which would limit policies under \$5,000 in premium covering small businesses who are similar to personal lines policyholders.

Mr. Gendron agreed with the pet insurance suggestion as a great way to gather information on these companies for analysis. He said pet insurance is reported as inland marine, and it is difficult to get premium volumes. Ms. Moran supported Mr. Gendron. Mr. Haworth said the market is larger than just “pet insurers.” He said there are only a small number of specialized pet insurers, but many companies market pet insurance under different branding. He said this is something to bear in mind if the Working Group moves forward on this.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.

Adopted by the Market Analysis Procedures (D) Working Group, June 8, 2022

DRAFT - MCAS Ratios

Travel

Ratio 1. The number of claims closed without payment compared to the total number of claims closed

$$\left(\frac{[\text{\# of claims closed without payment (20)}]}{[\text{\# of claims closed with payment (19)}] + [\text{\# of claims closed without payment (20)}]} \right)$$

Ratio 2. Percentage of claims unprocessed at the end of the period

$$\left(\frac{\begin{array}{l} \text{claims open at the Beginning of period (17) + claims opened during period (18)} \\ - \text{of claims closed with payment (19) - of claims closed without payment (20)} \end{array}}{\text{\# of claims open at the Beginning of period (17) + \# of claims opened during the period (18)}} \right)$$

Ratio 3. Percentage of claims paid beyond 30 days

$$\left(\frac{[\text{total \# of claims settled beyond 30 days (24+25)}]}{[\text{total \# of claims settled for all durations (23+24+25)}]} \right)$$

Ratio 4. The percentage of lawsuits closed with consideration for the consumer

$$\left(\frac{[\text{\# of lawsuits closed with consideration for consumer (34)}]}{[\text{total \# of lawsuits closed during the period (32)}]} \right)$$

Adopted by the Market Analysis Procedures (D) Working Group, June 8, 2022

DRAFT - MCAS Ratios

STLD

Ratio 1. **The number of claims denied, rejected or returned to the total number of claims paid, denied, rejected or returned**

$$\left(\frac{[\# \text{ of claim denied, rejected or returned (4-3)]}{[\# \text{ of claims pending at beginning of period (4-1) + \# \text{ of claims received (4-2)} - \# \text{ of claims pending at end of period (4-13)}]} \right)$$

Ratio 2. **Pre-existing Condition Denials to Total Denials**

$$\left(\frac{[\# \text{ of claim denied, rejected or returned as subject to pre – existing condition exclusion (4 – 8)]}{[\# \text{ of claims denied, rejected or returned (4 – 3)]} \right)$$

Ratio 3. **Prior Authorizations Denied to the Total Number of Prior Authorizations Received During the Period**

$$\left(\frac{[\text{total } \# \text{ of prior auths denied during the period (3-4)}]}{[\# \text{ of prior auths received during the period (3-1 + 3-3)}]} \right)$$

Ratio 4. **Member Months for Policies/Certificates Renewed/Reissued which had an option to renew/reissue without Underwriting to Total Member Month for Policies/Certificates Renewed/Reissued**

$$\left(\frac{[\# \text{ of member months on policies renewed/reissued without underwriting (2-16)}]}{[\text{total } \# \text{ of member months on total number of policies renewed/reissued during the period (2-15)}]} \right)$$

Ratio 5. **Cancellations During Free Look Period**

$$\left(\frac{[\# \text{ of policies/certificates cancelled during free look period (2-20)}]}{[\text{total } \# \text{ of policies issued during the period (2-6 all STLDI columns)}]} \right)$$

Ratio 6. **Claims Appeals per Claims Denied, Rejected, and Returned**

Adopted by the Market Analysis Procedures (D) Working Group, June 8, 2022

DRAFT - MCAS Ratios

$$\left(\frac{[\# \text{ of claims appeals pending at beginning (4-18) + \# of claims appeals received (4-19)]}{[\# \text{ of claim denied, rejected or returned (4-3)]} \right)$$

Ratio 7. Claims Appeals In which the Company Claims Decision is Overturned

$$\left(\frac{[\text{Number of Claim Decision Appeals Resulting in Decisions Overturned or Modified during the period (4-21)]}{[\# \text{ of claims appeals pending at beginning (4-18) + \# of claims appeals received (4-19)]} \right)$$

Ratio 8. Number of Complaints received per 1,000 Policies/Certificates In Force During the Period

$$\left(\frac{[\# \text{ of complaints received by company (5-1) + complaints received through DOI (5-2)]}{[(\text{policies/certificates in force at beginning (2-3)+ policies/certificates issued (2-6)]} \right)$$

Ratio 9. Percentage of Lawsuits Closed with Consideration for the Consumer

$$\left(\frac{[\# \text{ of lawsuits closed with consideration for the consumer (5-7)]}{[\# \text{ of lawsuits closed during the period (5-6)]} \right)$$

Ratio 10. Lawsuits to Policies/Certificates In Force During the Period

$$\left(\frac{[\# \text{ of lawsuits opened during the period (5-5)]}{[(\text{policies/certificates in force at beginning (2-3)+ policies/certificates issued (2-6)]} \right)$$

Ratio 11. Renewal/Reissue Applications Denied to Total Renewal/Reissue Applications

$$\left(\frac{[\# \text{ of renewal/reissue applications denied during the period (6-6)]}{[(\# \text{ of renewal/reissue applications received during the period(6-3)]} \right)$$

Draft: 8/3/22

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
July 21, 2022

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 21, 2022. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Maria Ailor (AZ); Scott Woods (FL); Heidi Walker (GA); October Nickel (ID); Tate Flott (KS); Lori Cunningham (KY); Dawna Kokosinski (MD); Jeff Hayden (MI); Jennifer Hopper, Jo LeDuc, and Teresa Kroll (MO); Martin Swanson (NE); Guy Self (OH); Jeffrey Arnold (PA); Rachel Moore (SC); Shelli Isiminger (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); and John Haworth (WA). Also participating was: Mary Kay Rodriguez (WI).

1. Adopted its May 26 Minutes

The Working Group met May 26 and took the following action: 1) adopted its April 28 minutes; 2) adopted the life Market Conduct Annual Statement (MCAS) edits for accelerated underwriting (AU); 3) adopted the other health MCAS data call and definitions; 4) adopted edits to the lawsuit definition for the home and auto MCAS; and 5) reviewed its charges and process for submitting requests for edits to the MCAS data call and definitions.

Mr. Swanson made a motion, seconded by Mr. Haworth, to adopt the Working Group's May 26 minutes (Attachment Ten-A). The motion passed unanimously.

2. Heard a Presentation from AHIP and the BCBSA on a Filing Deadline Proposal for the Health MCAS

Samantha Burns (America's Health Insurance Plans—AHIP) stated she and Joseph Zolecki (Blue Cross Blue Shield Association—BCBSA) would be giving a presentation today, representing the health industry interested parties group. She stated the group is comprised of single and multistate licensed health insurers and administrators, representing comprehensive major medical and managed health care carriers of all sizes, across the U.S. Ms. Burns stated AHIP members share the NAIC's goal to deliver health MCAS and request having an annual filing date that is mutually satisfactory for state insurance regulators and health carriers. She stated having a uniform MCAS filing deadline should not outweigh the need for reporting useful and reliable data for the health MCAS.

Ms. Burns stated the health MCAS is fundamentally different from other MCAS lines of business; it is more complex and manual in nature and significantly more voluminous. She stated the request being made in this presentation is that the June 30 filing deadline be maintained as the permanent filing deadline for the health MCAS. She provided some history of the health MCAS and explained that in October 2019, the Working Group approved what was a compromise position to make June 30 the filing deadline for data submission years of 2020, 2021, and 2022, with an industry option to request a reevaluation of the deadline beyond 2022. She stated the filing deadline will revert to April 30 with the 2023 submissions for data year 2022 if the June 30 date is not extended. Ms. Burns stated the health line of business has more data and is less automated. She stated the health line of business has four times as many data elements as homeowners and life, three times as many as long-term care (LTC), and four or more times data stratifications as the other lines of business. She stated health carriers also processed significantly more claims than claims filed for other lines of business.

Mr. Zolecki stated health claims processing requires significant time. He stated one of the key drivers for the health MCAS is the Supplemental Health Care Exhibit (SHCE), which carriers must file by April 1. He stated this report is a baseline carriers use to determine which states and even which carriers require an MCAS report. He stated when a carrier pulls data, the data is broken out by sub-stratification, and that is a complex process because it goes across all the carriers' memberships and systems, which is why carriers typically use the account stratification from the SHCE as a starting point for the MCAS. Mr. Zolecki stated data is brought in from multiple data sources and that those processes vary by company. He explained that external data processing is a factor to consider because some of the more extensively regulated and restricted products, such as behavioral health, are disproportionately complex and time-consuming compared to other MCAS lines of business. He stated behavioral health data is often held externally, which requires initial data retrieval from external sources, data matching to existing members, and policies on carriers' internal databases, which is followed by multiple iterations of testing and validation to ensure overall data accuracy and completeness.

Mr. Zolecki stated the health line is further unique and complex due to the timing of other mandatory state and federal reporting requirements, which enhances the challenges with an April 30 deadline. He provided examples of the prescription drug data collection report, which is required by the federal Consolidated Appropriations Act, Section 204, which is due June 1, and the mandatory federal and state rate and filings that many health carriers are subject to for the federal Affordable Care Act (ACA), which further stress the carriers' resources and systems. He stated the electronic data transaction sets are significantly larger for health, which is a direct reflection of the complexity of health care as a business. Mr. Zolecki stated a lot of progress toward automating has been made, but he added that full automation is likely not possible anytime soon. He stated that each year, issuers review their business and the inputs to determine what should be considered in the annual filing, and that much of that work begins in the first quarter of the year in order to be fully inclusive. He stated extensive validation of the data is required and that extensive logic testing is performed. He stated the detailed validation is extremely time-consuming and necessary in order to produce the most accurate and complete health MCAS reporting. Mr. Zolecki stated the uploading process can be time-consuming because of file size limitations for larger carriers, and he added that the health MCAS is a statistical report, not a financial report. He stated health carriers have continued to receive requests from state insurance regulators to compare or correlate health MCAS information or scorecard ratios to financial annual statement information. He stated having additional education and training in this area would be beneficial for everyone.

Ms. Burns stated that given the vast amount of data that is required to produce the health MCAS, the June 30 deadline increases the accuracy and avoids false identification outliers that cause unnecessary and additional work for both carriers and state insurance regulators. She stated considering that market conduct exams are more targeted reviews initiated by outlier MCAS ratios, having a June 30 date to have more reliable data would be preferable and would likely decrease extension requests.

Mr. Haworth stated he thinks it would be best to proceed with the current plan to have the 2023 health MCAS deadline coincide with April 30 as that is the date that was previously discussed by the Market Regulation and Consumer Affairs (D) Committee, and it makes it a lot easier for national market analysis through other Working Groups to have it earlier in the year. He stated when data is received in June, verification goes through September. He stated they are finding companies that file their financial annual statements incorrectly and saying they offer products they do not even have, which causes issues when MCAS reviews start taking place.

Mr. Swanson stated that the health line of business is different and that the data accumulated for the health plans does take longer for it to be done right since there is so much more of it. He stated he is agreeable with keeping the June 30 deadline.

Ms. LeDuc stated the timespan between the reporting of all the other MCAS lines of business being April 30 and the health line of business being June 30 complicates things when they are trying to plan their activities for the upcoming year because they do not have the whole picture and are unable to determine how to best use their resources. She stated she would like to see an earlier date than June 30 but could see the concerns with April 30 being the deadline for the health MCAS.

Ms. Weyhenmeyer stated because there are differing opinions on this issue being presented, a comment period will be opened and that a vote will take place. She stated Working Group members should be prepared for a roll vote on this matter. Ms. Ailor asked when a decision needs to be made, and Ms. Cooper stated it needs to be made before data call letters are sent out, which is done in December, but preferably sooner.

Mr. Zolecki stated having a decision as soon as possible would be beneficial for companies. Ms. Weyhenmeyer stated the Working Group's next meeting is scheduled for Aug. 24 and that the comment period will be opened now through Aug. 19. She said a vote will take place at the next meeting regarding the health MCAS deadline. Mr. Flott asked if the slide deck shared by Mr. Zolecki and Ms. Burns could be shared, and Ms. Cooper stated the slides would be posted for review.

3. Reviewed the Travel Data Element Addition Proposed by the Market Analysis Procedures (D) Working Group

Ms. Weyhenmeyer stated the Market Analysis Procedures (D) Working Group is charged with creating standard ratios for each of the MCAS lines of business. She stated while discussing ratios for the travel line of business, the Working Group found that it would be desirable to have the "policies in force during the reporting period" added to the travel underwriting activity section of reporting within the travel MCAS blank.

Mr. Helder stated the proposal is that a data element be added for "policies in force during the reporting period." He stated the reason for this proposal is to be able to develop ratios for cancellations and complaints. He stated because of the way travel insurance is written, it is difficult to get a good number for policies unless the data element for "policies in force during the reporting period" is used as the denominator in a ratio.

Ms. Weyhenmeyer stated this data element would be added to the travel MCAS reporting in the 2024 data year reported in 2025 if adopted.

Ms. LeDuc stated that what is being collected for policy counts currently is the number in force at the beginning of the period and the number in force at the end of the period. She stated there are policies purchased during the period that are not captured in the start or the end time frame, which leaves a gap and hampers the ability to formulate some ratios. She stated travel insurance policies are unique in that someone could purchase a policy today, travel tomorrow, and then the coverage ends. She stated other than the premium written, that policy may not be reflected in the statement unless there happened to be a claim filed.

Duke de Haas (Allianz Global Assistance) asked for clarification and if the data element being sought was the total number of policies written or the total number of policies in force as of a certain date. Mr. Helder stated the travel MCAS already has data elements for policies in force at the beginning and end of the period, but that policies that may begin in February and end in February are not being captured because they began and ended during the reporting period. He stated it is the policy count in force during the reporting period that is being sought.

Ms. Weyhenmeyer stated a comment period will be opened now through Aug. 19, and a vote will take place during the Working Group's next meeting on Aug. 24 regarding whether to add this data element to the travel MCAS.

4. Reviewed the STLDI Data Element Addition Proposed by the Market Analysis Procedures (D) Working Group

Ms. Weyhenmeyer stated the Market Analysis Procedures (D) Working Group is proposing the addition of a data element for “dollar amount of claims paid during the reporting period” within the claims section of the short-term, limited-duration insurance (STLDI) MCAS blank.

Mr. Helder stated for STLDI, there is no way for analysts to get the dollar amount of claims off the financial annual statement and that if the data element for “dollar amount of claims paid during the reporting period” was added to the MCAS, the ability to calculate loss ratios for the companies would be available.

Ms. Weyhenmeyer stated this data element would be added to the STLDI MCAS reporting in the 2024 data year reported in 2025 if adopted. She stated a comment period will be opened now through Aug. 19, and a vote will take place during the Working Group’s next meeting on Aug. 24 regarding whether to add this data element to the STLDI MCAS.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2022/WG Mtg 0721/MCAS Blanks WG Minutes July 21

Draft: 6/10/22

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
May 26, 2022

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met May 26, 2022. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Crystal Phelps (AR); Maria Ailor (AZ); Scott Woods (FL); Paula Shamburger (GA); Tate Flott (KS); Ron Kreiter (KY); Dawna Kokosinski (MD); Jeff Hayden (MI); Jennifer Hopper, Jo LeDuc, and Teresa Kroll (MO); Robert McCullough (NE); Hermoliva Abejar (NV); Guy Self (OH); Rachel Moore (SC); Tony Dorschner (SD); Joy Little and Rhonda Bowling-Black (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); Jason Carr (WA); and Letha Tate (WV). Also participating was: Mary Kay Rodriguez (WI).

1. Adopted its April 28 Minutes

The Working Group met April 28 and took the following action: 1) adopted its March 17 minutes; 2) received an update on the life Market Conduct Annual Statement (MCAS) draft edits for accelerated underwriting (AU); 3) received an update on the Other Health Drafting Group; 4) discussed possible edits to the lawsuit definition for all MCAS lines of business that contain lawsuit reporting; and 5) adopted the proposed lawsuit definitions and placement of the lawsuit data elements for the homeowners and private passenger auto (PPA) MCAS.

Mr. Flott made a motion, seconded by Ms. Rebholz, to adopt the Working Group's April 28 minutes (Attachment Ten-A1). The motion passed unanimously.

2. Adopted the Life MCAS Edits for AU

Ms. Weyhenmeyer stated that the draft data call and definitions for the life MCAS edits on AU was in the meeting materials with edits shown in red. She stated that following adoption of the definition of AU by the Accelerated Underwriting (A) Working Group, the subject matter expert (SME) group reconvened to discuss the definition to be proposed for MCAS reporting. She stated that for MCAS reporting purposes, the SME group decided that only a subset of the policies fits the full AU definition. She stated that Attachment Two, page 12 of the meeting materials shows the new proposed definition of AU followed by a reference to the Accelerated Underwriting (A) Working Group definition of AU to show continuity between the working groups.

Ms. Weyhenmeyer stated that the MCAS AU definition is as follows: "For this MCAS, data should be reported as Accelerated Underwriting when artificial intelligence and/or machine learning which utilizes, in whole or in part, Other Non-medical Third-party Data and/or FCRA Compliant Non-medical Third-party Data in the underwriting of life insurance; including when used in combination with Application Data or Medical Data." She stated that following the AU definition, there are definitions of "Application data," "Medical data," "FCRA Compliant non-medical third-party data," and "Other non-medical third-party data"; and those definitions are needed for understanding within the interrogatories. She stated that the proposed MCAS AU interrogatories are shown on pages 6 and 7 of the meeting materials, and a few edits were made to them to clarify and allow for cleaner responses that will be better for analysis purposes.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that the CEJ supports this proposal and asked the Working Group to adopt it.

Mr. Kreiter made a motion, seconded by Ms. Rebholz, to adopt the AU MCAS for Life Insurance (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Seven*). The motion passed unanimously.

3. Adopted the Other Health MCAS Data Call and Definitions

Ms. Rodriguez stated that the Other Health Drafting Group stated that comments were received from Missouri, and those comments and responses were posted on the Working Group's web page on May 11. She stated that those comments resulted in some revisions to the draft.

Rikki Pelta (American Council of Life Insurers—ACLI) stated that she has questions regarding Schedule 2 about terminations and cancellations. She asked if question 2-9 (Number of policy/certificate terminations and cancellations initiated by the policyholder/certificate holder) is the total sum of everyone who went out of force initiated by the policyholder and then broken out in questions 2-13 through 2-15. Ms. Rodriguez stated that question 2-14 (Number of covered lives on policies/certificates cancelled by the company due to non-payment of premium during the period) would not be included in question 2-9 since it is cancelled by the company, and question 2-15 (Number of policies/certificates cancelled by the company for any reason other than non-payment of premium during the period) would also not be included in question 2-9 since it is cancelled by the company. She stated that question 2-13 (Number of policy/certificate terminations and cancellations due to non-payment of premium) would also not be included since it relates to non-payment and would not be considered as initiated by the policyholder. Ms. Pelta asked where it would be reported when an insured dies. Ms. Rodriguez stated that she believes that would be considered as initiated by the policyholder or beneficiary. Ms. Pelta stated that question 2-5 (Number of new policy/certificate applications/enrollments received during the period) appears to be the same as question 5-2 (Number of applications/enrollments received during the period) in Schedule 5. Ms. Rodriguez confirmed that they are the same, and she recommended omitting the question in Schedule 5 and renumbering those questions in Schedule 5.

Samantha Burns (America's Health Insurance Plans—AHIP) stated that AHIP's membership is very broad, and it has several supplemental carriers that have been participating in the Other Health Drafting Group. She stated that AHIP also has major medical carriers that offer some of the products covered under the Other Health draft, and it has not had as much time to review the draft as its supplemental carriers have. She asked if AHIP could have another week or so to discuss the draft and submit questions. Teresa Cooper (NAIC) stated that for 2023 data to be reported in 2024, this would need to be adopted by the Working Group by June 1. Then, it would go to the Market Regulation and Consumer Affairs (D) Committee for its consideration, and it would need to be adopted by Aug. 1. Ms. Weyhenmeyer stated that the draft would likely be posted for at least one month before the Committee would vote on anything. Ms. Burns stated that she does not anticipate any substantive concerns, and she believes AHIP just needs a little more time to see if it has clarifying questions that need to be answered. Ms. Cooper stated that if this draft is adopted today, input could be provided for clarification in a frequently asked questions (FAQ) document, and Ms. Burns agreed with this suggestion. Ms. Burns asked what month in 2024 the deadline would be for the Other Health MCAS. Ms. Rodriguez stated that for new lines of business in the past, additional time has been provided, but the deadline had not been decided on yet. Ms. Pelta asked that additional time be provided than the normal deadline, especially for the first year of reporting. She recommended May or June. Ms. Burns recommended a June deadline. Ms. Ailor confirmed that additional time has been given in the past. Ms. Rodriguez stated that the short-term limited-duration (STLD) MCAS has a June 30 deadline for next year.

Ms. Hopper stated that the Products page has a variety of questions that say individual, association, and employer group, but there is nothing on the Products page that would be non-employer group products that are not issued in the association market. She believes this leaves out a big component of the Other Health market, and she asked

why that is. Ms. Rodriguez asked what is missing. Ms. Hopper stated non-employer groups that are not issued through an association, such as credit unions and banks that offer these types of coverages appear to be missing. She stated that there are a lot of other groups that do not fall into any of the buckets that are defined in the Other Health MCAS blank. Ms. Rodriguez stated that she reviewed the minutes in 2017 and 2018 when discussions for this blank began, and the reason this blank was requested is because companies were packaging different products to make it look like federal Affordable Care Act (ACA) plans and data need to be gathered to check on these plans. She stated that the products included in this draft were the ones most packaged. Ms. Hopper asked why if the goal is about understanding the association group market, and not about employer group coverage or even individual coverage, then this not just an association group data call. Ms. Rodriguez stated that some companies refer to products as individual, and some companies refer to products as group. She stated that if it appears that employer group should not be included in this blank, removing it can be considered. Ms. Hopper stated that she wants to make sure certain products have not been unintentionally omitted. Ms. Rodriguez confirmed that only the products identified in this blank need to be reported on.

Ms. Hopper stated that she provided comments to add “during the reporting period” to the end of questions 2-9, 2-13, and 2-16, and she wants to know if that comment has been considered. Ms. Rodriguez stated that the premise is that all questions are for the reporting period, but if adding that clarification to those questions would be helpful, it could be done. Ms. Hopper stated that for consistency, she believes it would be helpful since other questions have that language. Ms. Cooper stated that she would make those edits to questions 2-9, 2-13, and 2-16. Ms. Hopper stated that question 3-4 (Number of denied, rejected, or returned as non-covered or beyond benefit limitation) may be clearer if it reads “Number of denied, rejected, or returned as non-covered or maximum benefit exceeded” or something similar. Ms. Rodriguez stated that either sounds good, and the Working Group could provide feedback on that suggestion. Ms. Cooper stated that clarification on that could also be added to the FAQ document.

Ms. Hopper stated that on page 6 under “report by residency,” she noticed that the report by residency language is very different than in the Health MCAS. She stated that the language in the Health MCAS ties back to the NAIC’s *Annual Statement Instructions* for the supplemental health care exhibit, but this does not appear to. She stated that this could be complicated since the Other Health MCAS omits groups that would fall under the same premium and enrollment information as part of the annual statement. She stated that state insurance regulators frequently find it helpful to validate the MCAS by tying it back to components of the annual statement. Ms. Rodriguez asked if this could be tabled and addressed in future discussions for the FAQ document. Mr. Birnbaum stated that while it is useful to have MCAS data sort of reconcile to financial statement data, in some cases it is not possible (e.g., travel insurance since there is no travel insurance line). He stated that this issue should not be seen as an impediment to adopting the Other Health MCAS blank. Ms. Rebholz stated that the report by residency language in this blank matches the STLD blank’s language. She stated that she believes when the definition was being prepared, having the information made available through the blank was part of what was considered since the information is not available through any other source.

Ms. Hopper stated that in Schedule 1, as part of the definition, it says association/trust, and that same phrase is used in question 1-6, but everything else just says associations for those questions. She asked if trust information is also supposed to be provided or if it is just limited to associations for those questions. Ms. Rodriguez stated that she believes these questions are also similar to what is on the STLD blank. She asked if for consistency purposes, “/trust” should be added to the questions asking for information about associations, and Ms. Hopper stated that that would make sense. Ms. Hopper stated that in questions 1-17 through 1-20, adding wording for a trust would not apply, and Ms. Rodriguez stated that that would be explained.

Ms. Cooper clarified that the edits to be made before proceeding with a motion include omitting question 5-2 since it is a duplicate of question 2-5, proposing a first-year deadline of June 30 and second year deadline of April

30, adding “during the period” to the end of questions 2-9, 2-13, and 2-16, and adding “/trust” where applicable after associations. Ms. Pelta stated that she believes changing the wording in question 3-4 to “maximum benefit exceeded” in the blank instead of adding it to the FAQ document is more appropriate.

Ms. Gerachis made a motion, seconded by Mr. Flott, to adopt the Other Health MCAS draft reflecting the edits summarized (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Four*). Ms. Cooper asked if the motion includes changing the wording in question 3-4 to “maximum benefit exceeded” as suggested, and Ms. Gerachis confirmed that it does. The motion passed unanimously.

4. Adopted Edits to the Lawsuit Definition for the Home and Auto MCAS

Ms. Weyhenmeyer stated that during its last meeting, the Working Group adopted updates to the lawsuit reporting for home and auto, along with an updated definition, but there are some outstanding questions to address. She stated that there is a bullet that reads: “If one lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies, count the action as three lawsuits.” Questions regarding this bullet were introduced with a letter from Lisa Brown (American Property Casualty Insurance Association—APCIA).

Ms. Weyhenmeyer stated that Ms. Brown and Mr. Birnbaum indicated that the bullet should not be included in the MCAS lawsuit definition for home and auto because one lawsuit would be counted as multiple lawsuits if more than one policy from a single insurer is involved when the intent is to get a count of actual lawsuits. She stated that Ms. LeDuc also had a question about when the bullet was added to the home and auto lawsuit definition. Ms. Cooper did some research and found that the bullet in question is included in the lawsuit definition for Life, Annuity, Long-Term Care (LTC), Lender-Placed Insurance (LPI), Disability Income, and Private Flood; and while updating the home and auto lawsuit definition, it was included in the draft for consistency purposes. Ms. Weyhenmeyer stated that the bullet in question has not been included in the home and auto lawsuit definition in the past. She stated that previously, when Ms. Cooper said it was included for all lines other than Health, she was reviewing all lines other than home and auto because the Working Group was editing the definition for home and auto.

The proposal from the SME group is to remove the bullet in question from the home and auto MCAS lawsuit definitions and review the bullet in the context of the other MCAS lines of business to determine whether it is appropriate.

Mr. Birnbaum stated that including the bullet distorts the count of lawsuits and conflicts with the instructions for class action lawsuits. He stated that the CEJ supports removing the bullet and revisiting it in the other MCAS blanks.

Ms. LeDuc made a motion, seconded by Ms. Phelps, to remove the bullet from the home and auto MCAS lawsuit definition and review the language in the other MCAS lines of business. The motion passed unanimously.

5. Reviewed its Charges and Process for Submitting Requests for Edits to the MCAS Data Call and Definitions

Ms. Weyhenmeyer stated that Attachment Five in the meeting materials lists the Working Group charges. She stated that the Working Group is charged with reviewing the data call and definitions for lines of business that have been in effect for longer than three years, which would include: Life, Annuity, Home, PPA, LTC, Health, LPI, and Home and Auto. The Working Group is also charged with developing MCAS blanks for newly approved MCAS lines of business. Ms. Weyhenmeyer stated that the Market Analysis Procedures (D) Working Group has not

approved any new MCAS lines of business at this time, so the current focus will be on reviewing existing MCAS lines of business.

Ms. Weyhenmeyer stated that all state insurance regulators and interested parties can submit requests or suggestions via the Proposal Submission Form. She stated that a copy of this form is in Attachment Five of the meeting materials, and the form is also located in a fillable format on the Working Group web page under the Documents tab. She stated that if anyone has issues submitting a proposal, they should contact Ms. Cooper for assistance with filling out the form.

6. Discussed Other Matters

Ms. Weyhenmeyer stated that a letter was received by Joe Zolecki (Blue Cross Blue Shield Association—BCBSA) and the health industry interested parties regarding the filing deadline for the Health MCAS.

Mr. Zolecki stated that he has been working with Ms. Burns for the last few years, and this matter came up previously when the Health MCAS was new. He stated that there was a robust discussion about the filing date being changed from April 30 to June 30, and then moving back to April 30 in 2023. He stated that the Working Group agreed to reevaluate this, and he asked that this be discussed in more detail soon. Ms. Weyhenmeyer stated that it could be discussed during the Working Group's next meeting scheduled for June 23 or the July meeting if more time is needed.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2022/WG Mtg 0526/MCAS Blanks May 26 Minutes

Draft: 5/16/22

Market Conduct Annual Statement Blanks (D) Working Group
Virtual Meeting
April 28, 2022

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 28, 2022. The following Working Group members participated: Erica Weyhenmeyer, Chair (IL); Rebecca Rebholz, Vice Chair (WI); Alex May (FL); Tate Flott (KS); Ron Kreiter (KY); Dawna Kokosinski (MD); Jeff Hayden (MI); Jennifer Hopper (MO); Leatrice Geckler (NM); Guy Self (OH); Jeffrey Arnold (PA); Michael Bailes and Rachel Moore (SC); Tony Dorschner (SD); Shelli Isiminger (TN); Shelley Wiseman (UT); Melissa Gerachis (VA); and Letha Tate (WV). Also participating were: Shane Quinlan (NC); and Mary Kay Rodriguez (WI).

1. Adopted its March 17 Minutes

The Working Group met March 17 and took the following action: 1) adopted its Nov. 22, 2021, minutes; 2) received an update on the life Market Conduct Annual Statement (MCAS) draft edits for accelerated underwriting (AU); 3) received an update on the Other Health Drafting Group; 4) adopted the proposal for digital claims interrogatories for the homeowners and private passenger auto (PPA) lines of business; 5) discussed the proposed lawsuit definitions and placement of the lawsuit data elements for the homeowners and PPA MCAS; and 6) received guidance regarding the new number of lawsuits closed with consideration for the consumer data element for the homeowners and PPA MCAS lines of business.

Ms. Rebholz made a motion, seconded by Ms. Isiminger, to adopt the Working Group's March 17 minutes (see *NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Four*). The motion passed unanimously.

2. Received an Update on the Life MCAS Draft Edits for AU

Ms. Weyhenmeyer stated the AU subject matter expert (SME) group met on April 13 to begin discussing the definition of AU now that the Accelerated Underwriting (A) Working Group has adopted a definition. She stated the Accelerated Underwriting (A) Working Group's adopted definition does not fit the needs of MCAS reporting, so work will need to be done with the definition. Ms. Weyhenmeyer stated since the April 13 meeting, the American Council of Life Insurers (ACLI) has submitted a draft definition that will be discussed further during the next SME call, which is scheduled for May 2.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that deadlines to be aware of are June 1 for this Working Group and Aug. 1 for the Market Regulation and Consumer Affairs (D) Committee, so this Working Group would need to get something out by June 1 in order for 2023 data to be reported in 2024. Ms. Weyhenmeyer stated the SME group is planning on meeting twice in May in an effort to meet these deadlines.

3. Received an Update on the Other Health Draft Group

Randy Helder (NAIC) stated the Other Health Drafting Group posted the other health MCAS draft in early April under exposure drafts on the MCAS web page for review. He stated it is similar to other data call and definitions in terms of the scope, but he said that some of the interrogatories are devoted to gathering information on how products are marketed and the relationships of the company with the marketers. He stated there are also questions regarding how the products are administered, such as whether the company contracts with third-party

administrators (TPAs) and the identification of the TPAs used. Mr. Helder stated there are questions regarding whether the company distributes products through independent agents, captive agents, and employees. He said there are also questions regarding whether fees are included in the reported premium, and if not, what fees are charged to policyholders and certificate holders. He stated the products being covered are: accident only, accidental death and dismemberment, specified disease -limited benefit/critical illness, hospital/other indemnity, and hospital/surgical/medical expense. Mr. Helder stated the blank is intended to collect information on products that are purchased directly by individuals, purchased through an association for individuals, or through an employer group. He stated there are sections regarding policy/certificate administration and claims administration that are similar to other MCAS blanks. Mr. Helder stated there is a data element for the aggregate dollar amount of paid claims during the period because there was some discussion about developing a loss ratio based on that which could not otherwise be obtained. He stated there are also sections for consumer complaints and lawsuits, as well as marketing and sales. He stated the participation requirement is \$50,000 of health insurance premium and that a report by residency requirement is also outlined in the blank. Mr. Helder stated the definitions are similar to other MCAS blanks.

Rikki Pelta (American Council of Life Insurers—ACLI) stated it would be helpful to know how the loss ratios are being calculated and advised that this blank will require significant updates to administrative systems that collect this data by companies. She stated even if the due date is longer, companies will still have to have their systems updated by the end of this year, which is a big task.

Mr. Quinlan stated North Carolina does not have jurisdiction over policies issued in other states and expressed concern regarding reporting by residency. Ms. Rodriguez stated there are several states in the same situation and that one of the focuses of this blank is to see how consumers are finding products and being serviced, regardless of where the situs state is.

Ms. Hopper stated that on the report by residency requirement, it mentions forms issued to discretionary groups, associations, or trusts, but it does not mention other group coverage types, such as employer groups or multiple employer trusts. He stated that typically those are broken out separately. Ms. Rodriguez stated the focus was more on associations because many states felt that other health products sold through associations needed to be scrutinized more than employer group products. Ms. Hopper asked for clarification on the question related to the issuer and association's contractual relationship. She also asked why the System for Electronic Rates & Forms Filing (SERFF) filing number was being requested and why identifying the basis for not filing in a particular state was being asked. Ms. Rodriguez stated that she and Mr. Helder would review all of her questions and comments with SME group. Mr. Helder stated those responses would be posted to the MCAS blanks web page and shared prior to the next Working Group meeting.

Ms. Weyhenmeyer stated any comments related to the Other Health Draft should be submitted to Teresa Cooper (NAIC) no later than May 13.

4. Discussed Possible Edits to the Lawsuit Definition for all MCAS Lines of Business That Contain Lawsuit Reporting

Ms. Weyhenmeyer stated an SME group met to discuss edits to the home and auto MCAS definition of lawsuit to include non-claim-related suits. She stated while reviewing comments from the American Property Casualty Insurance Association (APCIA), it was found that all MCAS lawsuit definitions include a bullet that reads: "If one lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies, count the action as three lawsuits." She

stated the APCA requested that this language be clarified to account for instances where there are multiple policies involved that are issued by different insurers.

Lisa Brown (APCIA) stated the way the current bullet is written implies that a single reporting company might be responsible for reporting on another company's policies. She stated Mr. Birnbaum made a good point during an SME group meeting when he asked why a single lawsuit that touches multiple policies would be counted more than once, when what is being counted is lawsuits and not policies. She stated that if the data to be collected will continue to be lawsuits that account for multiple policies, then the language should state: "If a lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits." She then stated in hindsight, counting a single lawsuit multiple times may not be appropriate. Mr. Birnbaum stated it really seems inappropriate to count a single lawsuit against more than one policy as more than one lawsuit, as it increases the actual number of lawsuits. He expressed concern about how a company would count lawsuits this way as it could require their manual involvement. Ms. Weyhenmeyer asked if this is the way the lawsuit language reads in the other blanks except for health, and Ms. Cooper confirmed that is correct.

Ms. Rebholz stated the APCA's proposed language seems to provide clarification and that more time may be needed to review this further. Ms. Brown will send the proposed language to Ms. Cooper for the SME group to review further and bring back to the Working Group for consideration. Ms. Weyhenmeyer asked if a vote to change the lawsuit language in all of the MCAS blanks if needed and where it applies could be done in one vote, and Ms. Cooper stated it could as long as the motion was clearly outlined in that way. Ms. LeDuc stated she reviewed the 2019 Homeowners Data Call and Definitions and that she is not seeing the definition outlined there this way. She said that it may be helpful to look into the history for clarification. Ms. Cooper stated she would review this information.

5. Adopted the Proposed Lawsuit Definitions and Placement of Lawsuit Data Elements for the Homeowners and Auto MCAS

Ms. Weyhenmeyer stated the Working Group needs to discuss the Homeowner and Auto lawsuit reporting and definition edits in more depth. She stated the documentation for this discussion was in the meeting materials as Attachments Three and Four. She stated the homeowner and auto SME group first presented its lawsuit reporting and definition proposal to the Working Group in November 2021, and that the proposal simplifies the lawsuit reporting and its definition as much as possible. She stated the SME group proposed the following: 1) removal of the lawsuit data elements from the claims reporting section; 2) creation of a new reporting section for the lawsuit data elements; 3) reporting the lawsuit data elements by claims coverage type as has been done in the past; 4) adding reporting for "non-claim related lawsuits"; and 4) updating the definition of lawsuits to accommodate the new reporting structure. The SME group also proposed the addition of an interrogatory to capture comments for the newly added lawsuit section.

Ms. Weyhenmeyer stated during the Working Group's March 17 meeting, comments were heard from Lisa Brown (APCIA). She stated that as a result of Ms. Brown's comments, it was decided to reconvene the SME group to address the submitted comments. The SME group met on April 12 and April 20. Ms. Weyhenmeyer stated that one of the APCA's comments indicated concern that the word "agent" should be defined in the bullet that reads: "Include only lawsuits brought by an applicant for insurance, a policyholder or claimant as a plaintiff against the reporting insurer or its agent as a defendant." She stated as a result of this comment, the SME group proposes that "or its agent" be removed from the bullet item in question. She stated another one of the APCA's comments indicated concern about interpleader actions. The proposed definition provides for the exclusion of "arbitrations, mediation, appraisal, or any other form of dispute resolution not brought in a court of law." The APCA asked for the exclusion to be amended to exclude homeowners and private passenger appraisal matters filed in a court of law and interpleader actions filed by an insurance company. Ms. Weyhenmeyer stated that after discussion, the

SME group proposes that the exclusion bullets be updated to ensure interpleader actions are excluded from reporting. Mr. Birnbaum stated that the CEJ supports the proposed changes.

Ms. Rebholz made a motion, seconded by Ms. Johnson, to adopt the proposed lawsuit definition and placement of lawsuit data elements in the homeowners (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Five*) and auto (*see NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Six*) MCAS. Ms. Brown asked if the motion includes adopting counting multiple policies as multiple lawsuits, and Ms. Weyhenmeyer stated it did not; it was only regarding the edits to remove “or its agent” and to edit the exclusion bullets to ensure interpleader actions are excluded from reporting. Ms. Cooper clarified it also includes breaking out the lawsuit reporting to include the other than claims-related lawsuits and updating the definition as shown in the meeting materials, but not to the bullet discussed in the previous agenda item, which will be considered at a later date. The motion passed unanimously.

6. Discussed Other Matters

Ms. Weyhenmeyer stated some state-specific concerns had been raised that may need some clarification in the frequently asked questions (FAQ) document. She stated contact was made with state insurance regulators in Pennsylvania and Michigan regarding the concerns raised. The Pennsylvania state insurance regulator said companies could reach out and ask questions as needed regarding their writ of summons reporting. The Michigan state insurance regulator said they would draft language to be provided in the FAQ to address lawsuits filed by a medical provider for payment under personal injury protection (PIP) coverage.

Ms. Brown stated that in Pennsylvania, the writ of summons is just a notice and does not indicate a cause of action. She asked how companies will know whether to count it as a claim or non-claim if they do not know what the potential suit is about. Ms. Cooper some additional conversation on this topic will take place to see if additional clarifying language would be helpful.

Ms. Brown stated she wanted the state insurance regulators to understand that the lawsuit definition edits would require some heavy programming and process changes to pull out the non-claims-related lawsuits, especially for the larger insurers. Mr. Birnbaum stated the guidelines are set up so that companies have five months to prepare to collect information after approved by the Market Regulation and Consumer Affairs (D) Committee and then start reporting it two years after that approval. He stated the MCAS is a critical part of market analysis and market regulation and that when there are changes, companies should take it just as seriously as changes to the annual financial statement. Ms. Pelta stated her earlier comments regarding timeline concerns were related to the other health MCAS since some of the interrogatories and data elements have not been traditionally collected in other lines of business.

Ms. Weyhenmeyer stated she, Mr. Helder, and Ms. LeDuc gave a presentation at the Insurance Regulatory Examiners Society (IRES) foundation regarding changes to the homeowners and auto MCAS blanks for digital claims. She stated some clarifying questions came up that will be discussed in more detail with the Working Group at a later meeting. Ms. LeDuc asked Ms. Brown to start asking companies what questions they have regarding what constitutes a digital claim versus a hybrid claim so that those questions can be addressed.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/MCAS Blanks WG/2022/WG Mtg 0428/MCAS Blanks WG Minutes 0428

Draft: 7/21/22

Market Regulation Certification (D) Working Group
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
July 13, 2022

The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 13, 2022. The following Working Group members participated: Russell Toal, Chair (NM); John Haworth, Vice Chair (WA); Lori K. Wing-Heier represented by Sarah Bailey (AK); Doug Ommen represented by Kim Cross (IA); Erica Weyhenmeyer (IL); Chlora Lindley-Myers represented by Jo LeDuc (MO); Mike Causey represented by Tracy Biehn (NC); Martin Swanson and Robert McCullough (NE); Marlene Caride represented by Ralph Boeckman (NJ); Judith L. French represented by Don Layson (OH); Glen Mulready represented by Shelly Scott (OK); Don Beatty and Katie Johnson (VA); and Kevin Gaffney represented by Mary Block and Nick Marineau (VT). Also participating was: Pam O'Connell (CA).

1. Adopted its June 1 Minutes

Superintendent Toal said the Working Group met June 1. During this meeting, the Working Group took the following action: 1) adopted the Voluntary Market Regulation Certification Program scoring matrix; 2) reviewed the certification program implementation plan; and 3) reviewed the pilot state suggestions to the certification program.

Mr. Haworth made a motion, seconded by Ms. Weyhenmeyer, to adopt the Working Group's June 1 minutes (Attachment Eleven-A). The motion passed unanimously.

2. Reviewed the Certification Program Implementation Plan

Superintendent Toal said the implementation plan provides for a three-year self-certification period in which any jurisdiction may use the guidelines and checklists to measure its compliance to the certification requirements. He said that during the self-certification period, recommendations for changes and improvements to the requirements would be received and considered.

Superintendent Toal said that after three years, any jurisdiction could choose to continue to self-certify, or it could apply to be fully certified. He said a Market Regulation and Certification Committee would be formed to review each jurisdiction seeking full certification. He said a review team would be formed to review applications and report to the Committee, and re-evaluations would be done every five years.

Superintendent Toal said fully certified jurisdictions may withdraw at any time and continue to self-certify. He said any self-certified jurisdiction would be considered provisionally certified.

Superintendent Toal noted that during the last Working Group meeting on June 1, Mr. Haworth addressed the process for peer review, the timing for moving from self-certification to full certification, and whether the use of contractors in the certification process should be allowed. Superintendent Toal noted that in their comments to the Working Group, two states proposed the Working Group re-evaluate the implementation plan in its entirety and then re-draft a plan for adoption. He said that was a good idea. He said some of what is currently in the original implementation plan can be retained, but the Working Group should draft a plan that it determines is the best way to implement and administer the certification program.

Superintendent Toal asked for comments on the implementation plan to be sent to Randy Helder (NAIC) by July 29.

3. Reviewed Pilot State Suggested Revisions to the Certification Program

Superintendent Toal said the Working Group received three sets of comments. He said all the comments were helpful and will improve the certification program. He said his plan for the certification requirements is to ask a smaller group of state insurance regulators to meet a couple times in between each monthly Working Group meeting to review the recommendations on each requirement and report back to the Working Group on their progress. He said having a small group work on the certification requirements will also allow the Working Group time to work on the implementation plan.

Mr. Beatty said that requirement 2 requires jurisdictions to use the most current version of the NAIC *Market Regulation Handbook*, but there is no checklist question to affirm this. He suggested adding such a question. He said checklist question 3i asks about the staffing policies and procedures, and he said he is unsure how that relates to identifying market conduct issues. Regarding requirement 4, Mr. Beatty asked how a jurisdiction can support a claim that it encourages professional development. He also suggested that checklist item 4d should reference examiners in charge (EICs) to avoid confusion. Finally, Mr. Beatty said requirement 11 should provide the opportunity for a jurisdiction to indicate whether any of the companies chosen in the Market Actions (D) Working Group National Analysis Program wrote business in the jurisdiction since that would affect whether they participated.

Ms. O'Connell said her comments focused on correcting inconsistencies between the adopted scoring matrix and the certification program guidelines and checklist. She said she would be happy to work with the small group to discuss and incorporate appropriate suggestions.

Ms. LeDuc said her comments generally agreed with the comments of Ms. O'Connell. Ms. LeDuc said her comments noted some inconsistencies in the language used through the certification program requirement, guidelines and checklist, and identified areas that needed clarification. Her comments also pointed out some concerns with the requirements such as the blanket statement requiring the use of the most recent version of the NAIC *Market Regulation Handbook* rather than allowing for case-specific usage, especially for the application of standards to exams initiated prior to a new version. Ms. LeDuc volunteered to be on the small group to discuss the suggestions for revisions and make recommendations to the Working Group.

Mr. Swanson said hiring, training, and retaining employees is getting more difficult for departments of insurance (DOIs). He said that as the Working Group moves forward with the certification program, it needs to take into account the staffing difficulties. Superintendent Toal said that was a valid point and that most DOIs are experiencing the same hiring and retention issues. He said the Working Group needs to temper any unrealistic expectations of what a DOI can do and how quickly.

Superintendent Toal asked for volunteers to be on the drafting group for the requirements. Ms. LeDuc, Ms. O'Connell, Ms. Biehn, and Mr. Haworth volunteered.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.

Sharepoint/Member Meetings/D CMTE/2022 Summer National Meeting/MRCWG/0713/0713 MRCWG .docx

Draft: 6/15/22

Market Regulation Certification (D) Working Group
Virtual Meeting
June 1, 2022

The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 1, 2022. The following Working Group members participated: Russell Toal, Chair (NM); John Haworth, Vice Chair (WA); Lori K. Wing-Heier represented by Sarah Bailey (AK); Alan McClain represented by Crystal Phelps (AR); Erica Weyhenmeyer (IL); Chlora Lindley-Myers represented by Jo LeDuc (MO); Mike Causey represented by Tracy Biehn (NC); Chris Nicolopoulos represented by Edwin Pugsley (NH); Marlene Caride represented by Ralph Boeckman (NJ); Judith L. French represented by Todd Oberholtzer (OH); Andrew R. Stolfi represented by Brian Fordham (OR); Don Beatty, Katie Johnson, and Andrea Baytop (VA); Kevin Gaffney represented by Mary Block (VT); and Bill Cole (WY).

1. Adopted its March 22 Minutes

The Working Group met March 22 and took the following action: 1) reviewed the progress of the Voluntary Market Regulation Certification Program and discussed the charge to complete the revisions by the Fall National Meeting; and 2) reviewed the scoring matrix for the Market Regulation Certification Program.

Mr. Beatty made a motion, seconded by Mr. Cole, to adopt the Working Group's March 22 minutes (*see NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Two*). The motion passed unanimously.

2. Adopted the Certification Program Scoring Matrix

Superintendent Toal said that during the Working Group's Mar. 22 meeting, Mr. Haworth reviewed the draft of a scoring matrix to be used when evaluating whether a jurisdiction would be certified. He noted that the matrix was posted on the Working Group's web page under exposure drafts.

Superintendent Toal said the goal for the Working Group is to deliver a revised Certification Program to the Market Regulation and Consumer Affairs (D) Committee by the Fall National Meeting. That will require the Working Group to adopt three documents: 1) the scoring matrix; 2) the revisions to the Voluntary Market Regulation Certification Program; and 3) the implementation plan. All three documents are attached to the agenda. He said that because the scoring matrix is complete and was discussed in detail during the Working Group's Mar. 22 meeting, it would be considered for adoption during this meeting.

Mr. Haworth reviewed the scoring matrix. He said the Certification Program questions that are coded red must be met for the jurisdiction to be certified. If any of the red questions are not met, the jurisdiction cannot be certified regardless of its responses to the remaining questions. He said the yellow questions are primary goals and are scored according to whether the jurisdiction meets the goal. The green questions are not scored since they request additional information supportive of the yellow primary goals.

Ms. Baytop asked if questions 3d and 3e are answered affirmatively, would a jurisdiction receive 25 for both—meaning they use both state examiners and contract examiners. Mr. Haworth noted that the instructions read that if the jurisdiction can answer affirmatively to either having state examiners or using contract examiners, it would satisfy both questions, so the jurisdiction would only receive one score for both questions. Ms. Baytop asked if the same logic applied to questions 6b and 6c. Mr. Haworth said question 6b asks if the jurisdiction notified

other jurisdictions of potential collaborative actions, and if they received a positive response, did they make a referral to the Market Actions (D) Working Group. Mr. Haworth said if the jurisdiction did not have this type of situation arise, it would satisfy the requirement by having a policy in place.

Ms. LeDuc noted that question 6b requires notification by meeting, bulletin board, or other communications. She said there is a retention period for bulletin board posts, and the record of the notification would disappear if done via bulletin board. Randy Helder (NAIC) said the retention period for bulletin board posts is one year, but the recipient of emails from the bulletin board can save them for as long as needed. Ms. LeDuc and Mr. Gendron both said that the bulletin board postings are not always received, and that could affect a jurisdiction's ability to document compliance with question 6b. Superintendent Toal said that was a valid concern and is an operational issue that Mr. Helder will take back to the NAIC.

Mr. Haworth made a motion, seconded by Mr. Beatty, to adopt the Certification Program scoring matrix (Attachment Eleven-A1). The motion passed unanimously.

3. Reviewed the Market Regulation Certification Implementation Plan

Mr. Haworth said the implementation plan was reviewed with an eye towards updating it, putting some state insurance regulator concerns at ease. He noted that during the three-year self-certification period, any jurisdiction could request a peer review of seasoned state insurance regulators. Mr. Haworth suggested it would be good to put together a list of state insurance regulators who have agreed to perform requested peer reviews. He also noted there should be a communication plan between the requesting jurisdiction and the peer group of state insurance regulators. He said the posted implementation has his and Hermoliva Abejar's (NV) comments in the margin and should help to begin the discussion.

Superintendent Toal asked that comments on the implementation plan be sent to Mr. Helder by June 30.

4. Reviewed the Pilot Program Suggested Revisions to the Certification Program

Superintendent Toal said there are two versions of the suggested revisions of the pilot states to the Market Regulation Certification Program posted on the Working Group's web page. One is a portable document format (PDF) version, which is a little difficult to read because in the conversion of the redlined document to PDF, the color is removed. He said Mr. Helder also posted the Word document with the redline in the Exposure Documents of the Working Group.

Superintendent Toal asked all Working Group members, interested state insurance regulators, and interested parties to review the program and suggestions and provide comments to Mr. Helder by June 30.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.

Sharepoint/Teams/Marketregulationteam/Working Groups/MR Certification WG/D WG 2022/0601/

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 1				
1a	Does the department have the general authority to collect and analyze information whenever it is deemed necessary?			
1b	Is the department's authority broad enough to cover these market regulation activities?			
1c	If the department has authority specific to any of these itemized activities, please provide the citation:			
Requirement 2				
2a	Does the department have authority by statute, rule or other authority to utilize the Market Regulation Handbook or its predecessor/successor?			
2b	When conducting examinations or continuum activities, does the department incorporate applicable Market Regulation Handbook review standards and related materials to the extent they are consistent with state laws?			
2c	Does the department have examination-specific policies and procedures in addition to those guidelines set forth in the Market Regulation Handbook or its predecessor/successor? If Yes:			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
2c1	Is the jurisdiction able to demonstrate that it has followed its own established policies and procedures in adopting any process that deviates from the Market Regulation Handbook, including review and concurrence by a department's legal staff member?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 3				
3a	Does the department have analysts on staff or under contract whose responsibility is to conduct market analysis of insurers doing business in the state?			
3b	If the department utilizes contract analysts, please describe in a separate attachment the manner and extent of utilization in the department's recent activities.			
3c	Indicate below the number of contract and staff analysts, and supervisors for each of the last three years.			
3d	Does the department have examiners on staff whose responsibility is to examine and/or conduct continuum actions of insurance companies as indicated by the department's market analysis or as prescribed by state laws?	Read 3d and 3e together. Satisfaction of one satisfies both.		
3e	Does the department utilize contract examiners to examine and/or conduct continuum actions of insurance companies as indicated by the department's market analysis or as prescribed by state laws?	Read 3d and 3e together. Satisfaction of one satisfies both.		
3f	If the department utilizes contractual examiners, please describe in a separate attachment the manner and extent of utilization in the department's recent activities			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3g	<p>Indicate below the number of full-time market examiners, including supervisory personnel on the department's staff and/or the number of individual contract examiners used compared to the last three years. For contract examiners convert the number of contract hours to a full-time equivalent employee position. Also list your jurisdiction's premium volume for any and all examinations or actions written in the most recently completed year.</p>			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3h	As a separate attachment, provide a list of market examiners that includes the following: name; professional designation(s); title; years employed by the department (include functional area); type of college degree; and prior regulatory or insurance experience. Also indicate those market conduct examiners that are contractual and whether each is full-time with the department			
3i	Does the department have established staffing policies and procedures, subject to periodic review and updates, for identifying and addressing market conduct issues through the use of market analysis and market conduct continuum activities, including examinations?			
3j	If the answer to item 3i. is "Yes," what quantitative and subjective measurements are available to evaluate the department's achievement of such policies and procedures?			
3k	Has the department performed any targeted exams or continuum actions in the prior two years?			
3l	If the answer to item 3k. is "Yes," please provide a list of such exams or market continuum actions and the scope of the exams/actions.			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3m	If the answer to item 3k. is "No," does the department have the onstaff resources or the ability to contract additional resources to perform targeted exams/actions, if deemed necessary?			
3n	Does the department have the authority to hire contractors as specialists to perform market regulation?			
3o	If the department has authority to hire contractors, does it have either a statewide or departmental established process it follows for selecting contractors for market regulation purposes? Briefly explain			
3p	Does the department oversee and manage contractors [should this say "if the department has authority to hire contractors, does it oversee and manage those contractors?]			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
3q	Does the department have the appropriate staff to oversee and manage contractors? [see comment in 3p]			
3r	Based on the review of staff resources, please provide an explanation of any significant changes in resources and/or workload over the three-year period covered in the data above.			
Requirement 4				
4a	Does the department have a policy or procedure in place on necessary credentials or minimum educational and experience requirements for selecting and hiring staff and contractors?		Allows for unions*. Continue to discuss	
4b	Does the department have a staff development program that encourages and financially supports educational and training pursuits, including training, courses, webinars and certifications offered by the NAIC?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
4c	Does the department determine the composition of members of an examination team?			
4d	Is the Examiner in charge making progress towards completion of noted designations?		and competency of an exam	
4e	Does the department recognize licenses and other highly technical credentials of actuaries, cybersecurity experts, certified public accountants, information technology (IT) experts and other professionals and specialists as qualified to perform certain market regulation activities?		Do they have the authority to use specialists. Utility versus recognition	
4f	Does the department maintain written procedure manuals to demonstrate a succession plan?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 5				
5a	Does the jurisdiction have laws, regulations or case law that specify how the confidentiality of market conduct examination workpapers is to be handled?			
5b	Has the jurisdiction entered into the Multi-State InformationSharing Agreement with other jurisdictions and the NAIC?			
5c	Does the jurisdiction have written policies and procedures and has communicated such policies and procedures to employees relating to the protection of confidential information which includes PII and PHI, handling of public records requests and requirements for confidentiality agreements when it becomes necessary to share confidential information with other federal and international regulatory or law enforcement agencies, not otherwise covered by the multi-state agreement?			
5d Requirement 6	Does the jurisdiction have a records retention schedule which outlines plans for secure storage and timeline for destruction of work papers?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
6a	<p>Has the department adopted the Market Regulation Handbook and the Market Actions (D) Working Group Policies and Procedures or are the department's policies and procedures consistent with those in the Market Regulation Handbook and the Market Actions (D) Working Group Policies and Procedures?</p>			
6b	<p>If the department identified a potential collaborative action, did the department notify all CADs—via meeting, bulletin board or other communication—of the activities identified that may have the potential for collaboration?</p>		<p>What if state never had one of these situations? ===== Moli: If the state can show that they have a procedure in place that complies with the MRH for when this event happens, I think they should meet the criteria.</p>	

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
6c	If the department received a positive response to its inquiries to other CADs regarding a potential collaborative action, did the department refer the action to Market Actions (D) Working Group using the reporting procedures outlined in the Market Actions (D) Working Group Policies and Procedures, including completing the Request for Review form and submitting the form to the designated NAIC support staff?		What if state never had one of these situations do they get full points by default? Moli: Same as above: if the state can show that they have a procedure in place that complies with the MRH for when this event happens, they should meet the criteria Do they get points if they don't try to get a positive response?	
6d	If the response to item 6a., item 6b., item 6c. or item 6d. is "No," please provide a brief explanation			Provide examples to support. May have situations that do not go to MAWG as an RFR
6e	Does the department have written procedures for reviewing and evaluating its participation in potential collaborative actions brought to its attention, either through the Market Actions (D) Working Group or by another department?			
6f	If the department declined to participate in a collaborative action, has the department provided a response to the Market Actions (D) Working Group regarding its decision?			
6g	If the response to item 6e. or item 6f. is "No," please provide a brief explanation.			Was Paul informed somehow
Requirement 7				

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
7a	Does the department require eligible companies to file the MCAS with the NAIC?			
7b	Does the department require that the MCAS be prepared in accordance with the NAIC MCAS user guides and instructions?			
7c	Does the department require such companies to file the MCAS in an electronic format acceptable to the NAIC?			
7d	Does the department utilize the data obtained from the MCAS for market analysis? (Examples of utilization include, but are not limited to, such activities as performing baseline or Level 1 analysis.)			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 8				
8a	Does the department enter or transmit data at least quarterly into the CDS?			
8b	Does the department enter or transmit data at least quarterly into RIRS?			
8c	Does the department enter continuum actions into the appropriate NAIC database (MATS/RIRS) when initiated and the resulting applicable final status reports or updates (if applicable) at least quarterly?			
8d	Did the department initiate an examination of a regulated entity during the most current certification period?			
8e	If the answer to item 8d. is "Yes," was the examination entered into MATS at least 45 days before the start of the examination or at least 60 days before the start of the on-site examination as set forth in the Market Regulation Handbook? (Note: The start of the examination is the date the department began work on the examination materials received from the examined entity.)			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
8f	If the answer to item 8a., item 8b., item 8c., item 8d. or item 8e. is "No," please provide an explanation.			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 9				
9a	Does the department participate in or monitor the Market Analysis Procedures (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?			
9b	Does the department participate in or monitor the Market Conduct Examination Standards (D) Working Group as a working group member or interested regulator either by conference calls or by attending meetings?			
9c	Who in the department, by functional title, participates in or monitors the Market Analysis Procedures (D) Working Group?			
9d	Who in the department, by functional title, participates in or monitors the Market Conduct Examination Standards (D) Working Group?			
9e	List any other market conduct or market analysis-related working groups and/or task forces that your department participates in or monitors.			
Requirement 10				
10a	Has the department appointed a CAD?			
10b	Has the department appointed a CAD alternate?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
10c	Does the CAD and/or CAD alternate attend at least 50% of all meetings and conference calls of the Market Actions (D) Working Group?			
10d	Does the Market Actions (D) Working Group member, CAD and/or CAD alternate actively monitor the bulletin board discussions?			
Requirement 11				
11a	Does your state participate in the review of national analysis data on an annual basis?			
11b	Who in the department, by functional title, participates in the annual national analysis project?			
11c	Does your state participate in one national analysis team at least every other year? Has the department established procedures to ensure participation on a national analysis team at least every other year?			
11d	Who in the department, by functional title, participates on a national analysis team at least every other year?			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Requirement 12 12a	Has the department established procedures for the market analysis chief (MAC), or appropriate designee, to communicate interdepartmentally with the appropriate staff, either through written channels or by sufficient demonstration of action (such as regularly scheduled department head meetings, department managers' meetings, or information requests to other areas of the department?			
12b	Does the MAC, or appropriate designee provide the appropriate interdepartmental staff with market concerns such as, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct or use of noncompliant forms or rates, related to the following functional areas: i. Consumer Services ii. Enforcement iii. Legal iv. Forms and Filing v. Financial vi. Market Analysis vii. Market Conduct			

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
12c	On a quarterly basis, does the MAC, or appropriate designee, solicit information from the above functional areas regarding adverse patterns on, but not limited to, financial data, consumer complaints, policy termination activity, producer misconduct, or use of noncompliant forms or rates?	Yes		

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
Certification Score Total				
Total Points Possible

Points needed to pass		0		

Question	Text	Mandatory Condition Met	(Primary)	(Secondary)
		<p>12</p> <p>THIS SCORE SHOULD BE THE TOTAL OF MANDATORY ITEMS IDENTIFIED IN THE CHART ABOVE -- its not necessary to assign a score value for meeting expectations</p>	<p>38</p> <p>The PRIMARY GOALS should be given a scorable point basis that is weighted by the total of primary goals inside each REQUIREMENT; this would include the requirements needed of any secondary goals == this would achieve the 100% assigned overall points to each REQUIREMENT;</p>	<p>19</p> <p>Secondary goals that are "working toward" meeting the requirements of the Red Mandatory or Yellow Primary goals should be partial point values that equal up to 75% of the total score value that is assessed for the primary goals in this REQUIREMENT AREA. (All other green tagged secondary goals are designed to be supportive of requirements to meet red and yellow -- so those would not be given a partial score value at all when used to support only).</p>

Draft: 8/4/22

Market Conduct Examination Guidelines (D) Working Group
Virtual Meeting
July 14, 2022

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 14, 2022. The following Working Group members participated: Damion Hughes, Chair, Eleanor Coe, and Dennis Newman (CO); Erica Weyhenmeyer, Vice Chair (IL); Chris Erwin, Donna Lambert, Gwen McClendon, and Crystal Phelps (AR); Maria Ailor and Tolanda Coker (AZ); Steve DeAngelis (CT); Susan Jennette and Frank Pyle (DE); Paula Shamburger (GA); Lori Cunningham and Ron Kreiter (KY); Rebecca Butler and Mary Lou Moran (MA); Maybeth Moses (MN); Cynthia Amann, Camille Anderson-Weddle, Jennifer Hopper, Teresa Kroll, Jo LeDuc, and Win Nickens (MO); Tracy Biehn (NC); Maureen Belanger, Sarah Cahn, and Edwin Pugsley (NH); Erin Porter (NJ); Myra L. Morris (NM); Sylvia Lawson and Elvis Soto (NY); Rodney Beetch (OH); Kevin Foor, Rebecca Ross and Shelly Scott (OK); Sandra Emanuel and Ana K. Pace (OR); Penny Callihan, Gary Jones, Lindsy Swartz, and Paul Towsen (PA); Brett Bache and Segun Daramola (RI); Matthew Tarpley (TX); Kelly Christensen, Heidi Clausen, Ryan Jubber, Tracy Klausmeier, and Shelley Wiseman (UT); Julie Fairbanks, Brant Lyons, and Joy Morton (VA); Mary Block, Nick Marineau, Karla Nuissl, and Marcia Violette (VT); Barb Jones, Jeanette Plitt, and Kim Tocco (WA); Barbara Belling, Diane Dambach, Darcy Paskey, Rebecca Rebholz, and Mary Kay Rodriguez (WI); and Desiree Mauller (WV).

1. Adopted its June 9 Minutes

The Working Group met June 9 and took the following action: 1) adopted its April 21 minutes; 2) discussed a new Chapter 24B—Conducting the Mental Health Parity and Addiction Equity Act (MHPAEA) Related Examination of the *Market Regulation Handbook* (Handbook). The chapter was updated to align more closely with federal guidance on compliance analysis requirements for non-quantitative treatment limitations (NQTLs). The Working Group received numerous comments on the draft Chapter 24B from state insurance regulators and interested parties; 3) discussed revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook, which correspond with the February 2020 revisions adopted by the NAIC to the *Suitability in Annuity Transactions Model Regulation* (#275); 4) received numerous comments on the draft Chapter 23 from state insurance regulators and interested parties; and 5) discussed revisions to Chapter 20—General Examination Standards of the Handbook regarding the *Insurance Holding Company System Regulatory Act* (#440).

Ms. Plitt made a motion, seconded by Ms Amann, to adopt the Working Group's June 9 minutes (Attachment Twelve-A). The motion passed unanimously.

2. Adopted Revisions to the July 6 Draft Chapter 20 of the Handbook

Mr. Hughes said the draft Chapter 20 was first circulated on Oct. 27, 2021, and the Working Group began discussing the draft at its Nov. 4, 2021, meeting. He said the revisions in the draft, which relate to Model #440, were proposed by Mr. Kreiter. The Working Group continued discussion of the Oct. 27, 2021, draft at its March 10, April 21, and June 9 meetings.

Mr. Hughes said Chapter 20 was revised and distributed on July 6 to the Working Group members, interested state insurance regulators, and interested parties. He said all the revisions in the Oct. 27, 2021, draft chapter were removed, except for in Marketing and Sales Examination Standard 1, where a reference to Model #440 was

retained, and a reference to Section 8G of the model was incorporated there. Mr. Hughes said he had proposed making these revisions at the Working Group's June 9 meeting.

Mr. Kreiter made a motion, seconded by Ms. Phelps, to adopt the July 6 draft Chapter 20 of the Handbook (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Three*). The motion passed unanimously.

3. Adopted Draft Revisions to the July 6 Draft Chapter 1 of the Handbook

Mr. Hughes said he proposed revisions to Chapter 1—Introduction of the Handbook at the Working Group's June 9 meeting. The draft Chapter 1, which was distributed on July 6 to Working Group members, interested state insurance regulators, and interested parties, contained Mr. Hughes' proposed revisions in the subsection titled Financial Analysis in Section B—Resources within State Insurance Departments, where the following language was added, "Additionally, market regulators are encouraged to coordinate with a company's domestic financial regulator to obtain information related the company's group capital calculations, liquidity stress test results, corporate governance, and Own Risk and Solvency Assessment (ORSA)."

Ms. Plitt said while the language "it is encouraged" is very appropriate to incorporate in the chapter, numerous state departments of insurance (DOIs) already incorporate this type of coordination across various divisions of the DOI. She said she believes this coordination is a requirement of the NAIC financial accreditation program/process.

Joseph E. Zolecki (Blue Cross Blue Shield Association—BCBSA) thanked Mr. Hughes for incorporating the new language into Chapter 1 for the Working Group's consideration. He said the language will result in better coordination among market regulators and financial regulators, which will lead to avoiding redundancies in state insurance regulators' review of regulated entities. Charles Feinen (State Farm) said he agrees with Mr. Zolecki's comments.

Mr. Kreiter made a motion, seconded by Ms. Jennette, to adopt the July 6 draft Chapter 1 of the Handbook (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Two*). The motion passed unanimously.

4. Adopted an Updated Chapter 24B, July 11 Draft of the Handbook

Ms. Weyhenmeyer, vice chair of the Working Group and chair of the MHPAEA (B) Working Group, said Chapter 24B was updated to be more robust and more consistent with federal guidance on the issue of compliance analysis requirements for NQTLs. She said the draft chapter was first distributed to Working Group members, interested state insurance regulators, and interested parties on April 19, and numerous comments from state insurance regulators and interested parties were received on the draft chapter in late May 2022, which were presented and discussed at the Working Group's June 9 meeting.

Ms. Weyhenmeyer said since the last Working Group meeting on June 9, a subject matter expert (SME) group worked to address the comments presented by state insurance regulators and interested parties at that meeting, and a revised Chapter 24B exposure draft was distributed to the Working Group, interested state insurance regulators, and interested parties on July 11. She said the draft was initially distributed to those individuals on July 6; however, there were some changes she noted that needed to be made to the draft, and the draft chapter was re-distributed to the Working Group, interested state insurance regulators, and interested parties on July 11.

Ms. Weyhenmeyer said the draft was initially discussed and developed in regulator-only meetings of the MHPAEA (B) Working Group prior to exposure at the Market Conduct Examination Guidelines (D) Working Group. Those meetings also included federal representatives of the Tri-Departments.

Ms. Amann said she likes the incorporation of the “Forward” section in the chapter—this Forward section is found in other examination standards chapters of the Handbook as well—as it is a good reminder that Chapter 24B is to outline federal guidance and considerations regarding the MHPAEA, while allowing states to use their state-specific statutes, rules, and regulations regarding the MHPAEA.

Ms. Callihan said upon review of the chapter on the day prior to the July 14 meeting, Pennsylvania noted some additional substantive language changes and suggestions that could be made to the chapter to allow for better consistency with the Consolidated Appropriations Act, and Pennsylvania also noted a correction to a couple of statutory citation errors and a couple of typographical errors in the draft chapter. She said Pennsylvania submitted the comments to the Working Group’s chair/vice chair a half hour prior to the Working Group’s July 14 meeting. Ms. Weyhenmeyer said the correction to the statutory citations and the typographical (spelling) errors can be addressed today because they are editorial (non-substantive) changes, and the substantive changes—i.e., additional language proposed by Pennsylvania—can be incorporated into the chapter later.

Meghan Stringer (America’s Health Insurance Plans—AHIP) said she is appreciative that most of the additional comments AHIP submitted regarding the draft were incorporated into the chapter. She said AHIP still has areas of concern, including: 1) supporting documentation required under the applicable statute should satisfy Examination Standard 5; 2) in Examination Standard 5, AHIP does not agree with the request for all communications listed in that examination standard; and 3) AHIP would still want to review the impact of the scope of review being expanded to contractual arrangement between health carriers and vendors in Examination Standard 7. She said there will be additional federal rulemaking that is scheduled to occur in a few months’ time regarding the MHPAEA, and she suggested that the Working Group postpone the adoption of the draft chapter until such time that federal regulators release the additional guidance. Mr. Zolecki said he agrees with Ms. Stringer’s comments regarding delaying the adoption of Chapter 24B.

Birny Birnbaum (Center for Economic Justice—CEJ) said the issue of delaying adoption of the MHPAEA chapter, while waiting for future federal guidance on MHPAEA, results in no current MHPAEA guidance available to state insurance regulators, which limits their ability to effectively conduct the analysis of NQTLs, which is of concern to insurance consumers.

Pamela Greenberg (Association for Behavioral Health and Wellness—ABHW) said if the Working Group is considering the chapter for adoption at the meeting, the chapter could be updated at a future date to reflect the forthcoming federal guidance to allow for consistency with the guidance.

Tim Clement (American Psychiatric Association—APA) said while forthcoming federal guidance may slightly change or add clarity to MHPAEA statutory requirements, delaying the adoption of the updated MHPAEA chapter currently before the Working Group means the current MHPAEA chapter, which is inconsistent with statutory requirements regarding the MHPAEA, remains in place.

Ms. Rebholz made a motion, seconded by Mr. Kreiter, to adopt the July 11 exposure draft of Chapter 24B of the Handbook (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Five*), as revised during the meeting, which includes the incorporation of the following editorial corrections: 1) inserting a (3) in the reference citations in the Expected Plan Payments and Plan Payments subsections of the section titled “Classifications of benefits used for applying parity rules” and the correction of

spelling errors in that same section. The adopted Chapter 24B will replace the Chapter 24B that is currently in the Handbook. The motion passed unanimously.

5. Discussed Other Matters

Mr. Hughes said an updated exposure draft of a revised Chapter 23 is forthcoming for the Working Group's review and consideration at its next meeting. The revisions to Chapter 23 correspond with the February 2020 revisions adopted by the NAIC to Model #275 and take into consideration some of the comments and changes proposed by state insurance regulators and interested parties at the June 9 meeting. Mr. Hughes said new standardized data requests (SDRs) will also be distributed for consideration at that meeting.

Mr. Hughes said the Working Group will continue to work on its assigned charges, in addition to the current exposure draft before the Working Group. NAIC staff will send out a notice of the next Working Group meeting, which is scheduled for Sept. 8.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

Draft: 6/16/22

Market Conduct Examination Guidelines (D) Working Group
Virtual Meeting
June 9, 2022

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met June 9, 2022. The following Working Group members participated: Damion Hughes, Chair, Eleanor Coe, and Neil A. Derr (CO); Erica Weyhenmeyer, Vice Chair (IL); Chris Erwin and Teri Ann Mecca (AR); Kurt Swan (CT); Susan Jennette (DE); Paula Shamburger (GA); Jared Kirby and Daniel Mathis (IA); Lori Cunningham and Ron Kreiter (KY); Mary Lou Moran (MA); Airic Boyce and Jeff Hayden (MI); Paul Hanson (MN) Cynthia Amann, Jennifer Hopper, Teresa Kroll, and Win Nickens (MO); Teresa Knowles (NC); Sarah Cahn and Edwin Pugsley (NH); Ralph Boeckman and Erin Porter (NJ); Paige Duhamel and Leatrice Geckler (NM); Hermoliva Abejar (NV); Sylvia Lawson (NY); Rodney Beetch (OH); Landon Hubbard (OK); Scott D. Martin and Tashia Sizemore (OR); Paul Towsen (PA); Brett Bache and Matt Gendron (RI); Matthew Tarpley (TX); Andrea Baytop, Julie Fairbanks, Melissa Gerachis, Brant Lyons, and Bryan Wachter (VA); Mary Block and Isabelle Turpin Keiser (VT); Jane Beyer, John Haworth, and Jeanette Plitt (WA); and Barbara Belling, Diane Dambach, Darcy Paskey, Mark Prodoehl, Rebecca Rebholz, Mary Kay Rodriguez, and Jody Ullman (WI).

1. Heard Opening Remarks

Mr. Hughes welcomed Maria Ailor (AZ) and Mr. Hayden to the Working Group.

2. Adopted its April 21 Minutes

The Working Group met April 21 and took the following action: 1) adopted revisions to the April 19 draft Chapter 21—Conducting the Property and Casualty Examination of the *Market Regulation Handbook* (Handbook). The revisions relate to the *Real Property Lender-Placed Insurance Model Act* (#631); 2) discussed revisions to Chapter 24B—Conducting the MHPAEA Related Examination of the Handbook to update the chapter to align more closely with federal guidance on compliance analysis requirements for non-quantitative treatment limits (NQTLs); 3) discussed revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook, which correspond with the February 2020 revisions adopted by the NAIC to the *Suitability in Annuity Transactions Model Regulation* (#275); and 4) discussed revisions to Chapter 20—General Examination Standards of the Handbook regarding the *Insurance Holding Company System Regulatory Act* (#440).

Mr. Kreiter made a motion, seconded by Mr. Haworth, to adopt the Working Group's April 21 minutes (Attachment Twelve-A1). The motion passed unanimously.

3. Discussed Draft Revisions to the Oct. 27, 2021, Draft Chapter 20 of the Handbook

Mr. Hughes said the draft Chapter 20—General Examination Standards was first circulated on Oct. 27, 2021, and the Working Group began discussing the draft at its Nov. 4, 2021, meeting. He said the revisions in the draft, which relate to the *Insurance Holding Company System Regulatory Act* (#440) were proposed by Mr. Kreiter. The Working Group discussed the draft at its March 10 and April 21 meetings. Mr. Hughes said no revisions were agreed upon at the April 21 meeting, and the comment due date was subsequently extended. Comments were received from the American Council of Life Insurers (ACLI) on May 18. Mr. Hughes said the ACLI's May 18 comments were very similar to the ACLI's comments of December 17, 2021.

Gabrielle Griffith (ACLI) said the word “determine” in the Review Procedures and Criteria section of Operations/Management Standard 1 is of concern; she suggested that the Working Group change “determine” to instead read “review or discuss with the domestic should there be an issue with ORSA, LST or GCC-related information.” She also recommended that the references to the group capital calculation (GCC) and liquidity stress test (LST) be removed from Marketing and Sales Standard 1; alternatively, she said the references could instead be made more generic to apply to all prohibited marketing activity for any of the model references listed in Marketing and Sales Standard 1.

Mr. Hughes proposed removing all redlined revisions in the Oct. 27, 2021, exposure draft of Chapter 20, except for the reference to the name of the model in the NAIC Model References section of Marketing and Sales Standard 1. He suggested adding “(Section 8G)” after the model reference since that is the section in Model #440 that sets forth the prohibition of insurers’ use of the GCC and the LST in advertising. He said a revised Chapter 20 containing these changes would be circulated ahead of the next meeting.

Mr. Hughes proposed that language be added to the subsection titled “Financial Analysis” in Section B “Resources Within State Insurance Departments” of Chapter 1—Introduction of the Handbook, stating that the market regulator has the option to review the GCC and the LST. Ms. Amann suggested that wording should be added to that section regarding the need for market regulators to coordinate with the domestic regulator. Mr. Hughes said proposed revisions to Chapter 1 would be distributed prior to the next meeting.

Joe Zolecki (Blue Cross Blue Shield Association—BCBSA) and Ms. Griffith said they would welcome language regarding the coordination of market and financial regulators.

4. Discussed Draft Revisions to the April 19 Draft Chapter 23 of the Handbook

Mr. Hughes said the exposure draft of a revised Chapter 23—Conducting the Life and Annuity Examination was circulated to the Working Group, interested state insurance regulators, and interested parties on April 19. He said Brian Werbeloff (RI), Mr. Swan, Frank Pyle (DE), and other state insurance regulators on their respective teams collaborated to produce the draft for the Working Group’s review and consideration. The revisions to the chapter correspond with the February 2020 revisions adopted by the NAIC to the *Suitability in Annuity Transactions Model Regulation* (#275).

Mr. Hughes said comments were received from Virginia on May 25, Missouri on May 27, and the Insured Retirement Institute (IRI) on May 27.

Ms. Gerachis suggested making changes to the Supplemental Checklists for Marketing and Sales Standards 12, 16, and 17 in the exposure draft:

Supplemental Checklist for Marketing and Sales Standard #12: Change “Ensure the insurer’s and applicable producer’s system of annuity suitability supervision and training include:” to “Ensure the insurer’s and applicable producer’s system of annuity suitability supervision and training include from Model #275.” Also, change the first requirement from “A producer who engages in the sale of annuity products shall complete a one-time four (4) credit training course approved by the department of insurance and provided by the department of insurance-approved education provider” to “A producer who engages in the sale of annuity products shall complete a one-time four (4) credit training course approved by the department of insurance and provided by the department of insurance-approved education provider to comply with Section 7 of this regulation.”

Supplemental Checklist for Marketing and Sales Standard #16: Change the fourth bullet point in the first requirement, “Communicate the basis or basis of the recommendation” to “Communicate the basis or bases of the recommendation.”

Supplemental Checklist for Marketing and Sales Standard #17: To be consistent with Checklist K, change “Ensure the insurer’s and applicable producer’s system of annuity suitability supervision include:” to “Ensure the insurer’s and applicable producer’s system of annuity suitability supervision include from Model #275:” Also, change the first requirement from “The producer has disclosed a description of the scope and terms of the relationship with the consumer and the role of the producer in the transaction.” to “The producer has disclosed to the consumer, on a form substantially similar to Appendix A, a description of the scope and terms of the relationship with the consumer and the role of the producer in the transaction.”

Ms. Hopper presented a high-level overview of some of the comments submitted by Jo LeDuc (MO). Ms. Hopper:

- Asked whether the newly developed checklists will be moved to the end of exposure draft so they appear together with the checklists that are already in Chapter 23.
- Suggested that ambiguity in the Marketing and Sales Standard 10 should be corrected where the words “additional review” are duplicated within the same sentence.
- Requested clarification of the requirement, “shall establish and maintain reasonable procedures to identify and eliminate any sales contests...” in Supplemental Checklist K.
- Requested clarification of the references to “regulation” in Supplemental Checklist L.
- Requested that Marketing and Sales Standard 16 not be phrased in the negative.
- Requested that the word “agency” in Marketing and Sales Standard 16 be changed to “business entity producer.”
- Requested clarification on what requirements are being referenced with, “The requirements apply to the particular annuity...” and “The requirements do not mean...” in Marketing and Sales Standard 16.
- Requested clarification on the references to “Paragraph 1,” “Paragraph 2,” and “Subsection” in Marketing and Sales Standard 16.
- Asked that additional clarification be added to Marketing and Sales Standard 17 regarding what items a producer needs to disclose.

Sarah Wood (IRI) suggested revisions to Marketing and Sales Standards 9 and 10. She suggested that the current Review Procedures and Criteria:

Verify that the insurer has adequate procedures in place for monitoring that sales are made in compliance with Financial Industry Regulatory Authority (FINRA) requirements pertaining to suitability and supervision of annuity transactions. Sales made in compliance with FINRA requirements pertaining to suitability and supervision of annuity transactions shall satisfy the requirements under this regulation. This subsection applies to FINRA broker-dealer sales of variable annuities and fixed annuities if the suitability and supervision is similar to those applied to variable annuity sales. However, nothing in this subsection shall limit the insurance commissioner’s ability to enforce (including investigate) the provisions of this regulation.

Note: Noncompliance with FINRA requirements means that the broker-dealer transaction is subject to compliance with the suitability requirements of the applicable state’s statutes, rules and regulations.

be changed to the following:

Verify that the insurer has adequate procedures in place for monitoring that sales are made in compliance with comparable standards as defined in Section 6(E)(5) of Model #275. Sales made in compliance with comparable standards shall satisfy the requirements under this regulation. This subsection applies to all recommendations and sales of annuities made by financial professionals in compliance with business rules, controls and procedures that satisfy a comparable standard even if such standard would not otherwise apply to the product or recommendation at issue. However, nothing in this subsection shall limit the insurance commissioner's ability to enforce (including investigate) the provisions of this regulation.

Note: Noncompliance with comparable standards means that the recommendation or sale is subject to compliance with the suitability requirements of the applicable state's statutes, rules and regulations.

Mr. Gendron said he would agree with many of the proposed changes presented by Virginia, Missouri, and the IRI. He said regarding the IRI's reference to "comparable standards," it would be his preference to list the comparable standards so the examiner guidance can be more thoroughly outlined in the chapter. He said he and the other subject matter experts (SMEs) who prepared the initial exposure draft will develop a revised exposure draft of Chapter 23 for discussion at an upcoming Working Group meeting.

Birny Birnbaum (Center for Economic Justice—CEJ) said the Working Group should monitor the Annuity Suitability (A) Working Group's current work on a Safe Harbor Provision Frequently Asked Questions (FAQ) document.

5. Discussed Draft Revisions to the April 19 Draft Chapter 24B of the Handbook

Ms. Weyhenmeyer, vice chair of the Working Group and chair of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, said Chapter 24B—Conducting the MHPAEA-Related Examination was updated to more closely align with federal guidance on the issue of compliance analysis requirements for NQTLs. The revised chapter exposure draft was circulated to the Market Conduct Examination Guidelines (D) Working Group, interested state insurance regulators, and interested parties on April 19.

Ms. Weyhenmeyer said the exposure draft was prepared under the guidance of the MHPAEA (B) Working Group since its members have expertise in this area. She said the draft will replace Chapter 24B in the Handbook upon adoption by the Market Conduct Examination Guidelines (D) Working Group, the Market Regulation and Consumer Affairs (D) Committee, and the Executive (EX) Committee and Plenary.

Ms. Weyhenmeyer said comments were received from Wisconsin on May 25, Missouri on May 27, Virginia on May 27, America's Health Insurance Plans (AHIP) on May 27, the Association for Behavioral Health and Wellness (ABHW) on May 27, and the BCBSA on May 27. She asked all parties submitting comments to provide a high-level summary of their comments.

Ms. Belling said the purpose of Wisconsin's comments is to reword the review procedures and criteria sections in the exposure draft to be more consistent with review procedures and criteria sections in other chapters in the Handbook. The Wisconsin proposed changes switch the focus of the review procedures and criteria to what examiners should review, rather than on the requirements for health carriers. Wisconsin also added revisions to the review procedures and criteria sections of the exam standards in the chapter.

Ms. LeDuc submitted comments on the exposure draft, some of which were presented by Ms. Hopper:

- Clarification needs to be added to the chapter that the MHPAEA does not apply to all types of health insurance products.
- There are instances in the chapter where there is a lengthy list of documents to review, which do not necessarily align with the review procedures and criteria, and there is no information provided in the review procedures and criteria to instruct examiners why they need to review the documents.
- To shorten Standard 1 and remove some of the language from the standard itself into the Review Procedures and Criteria section of Standard 1.
- Standard 6 is lengthy and Missouri suggests that it be broken up into four separate examination standards.
- Standards 6 and 7 should cite back to other standards from relevant chapters, such as Chapter 20 Operations/Management Standard 6 and Chapter 24 Utilization Review Standards 1, 2, and 5.

Ms. Fairbanks presented comments submitted by Virginia. She said Virginia comments were essentially similar to those of Wisconsin, and the Virginia comments were addressed by the proposed changes to the exposure draft submitted by Wisconsin.

Meghan Stringer (AHIP) presented the AHIP comments. She said the legal requirements of the new draft are generally consistent with the MHPAEA, with a few exceptions. She said some of the documents that are requested in several of the exam standards fall outside of what is required under federal MHPAEA guidance (e.g., in Standard 5, there is a very large volume of documents requested), which is directly contrary to federal guidance that directs carriers to avoid the production of a large volume of documents without a clear explanation of how each document is relevant to the comparative analysis to which it is attached. She said the submission of the comparative analysis alone should satisfy Standard 5, and she recommended that the additional documents can be flagged as documents that might be needed when additional information is necessary.

Ms. Stringer recommended that the Handbook include allowable sub-classifications to make state insurance regulators aware of them and the parity rules that then apply. Regarding Standard 7, she said it is standard for health carriers to require within their contracts that vendors and third-party service providers be compliant with relevant laws, which makes Standard 7 unnecessary. She said the requirement in Standard 7 to provide all written communication between the health carrier and the third-party service provider would be cumbersome (e.g., thousands of emails and random communications not relevant to the issue of compliance). She suggested that additional language pertaining to resource documentation be incorporated into Standard 7 instead to provide an explanation for how third-party service providers and health carriers can coordinate to achieve MHPAEA compliance.

Pamela Greenberg (ABHW) submitted comments, some of which were presented by Maeghan Gilmore (ABHW). Ms. Gilmore said one of the ABHW's main objectives regarding MHPAEA implementation is to have uniformity among state insurance regulators at both the federal and state level, which benefits consumers, health care providers, employers, health carriers, and state insurance regulators. She said the proposed documents to be submitted for review in the exposure draft go well beyond the current U.S. Department of Labor (DOL) Self-Compliance Tool and Consolidated Appropriations Act (CAA) requirements, and she asked that any unnecessary or contrary items be removed from the exposure draft. She said a proposed rule/report is anticipated to be released later this year by the DOL, the U.S. Department of Health and Human Services (HHS), and the U.S. Department of the Treasury (Treasury Department), collectively known as the Tri-Departments, and she asked that the NAIC wait to finalize the proposed updates to the exposure draft until that time so the reporting template and DOL Self-Compliance Tool can be in complete alignment with federal MHPAEA guidance.

Randi Chapman (BCBSA) presented the BCBSA comments. She said she agrees with AHIP's comments on Standard 7 regarding health carriers and vendors/third-party service providers, as outlined by Ms. Stringer. She said the proposed documents to be submitted in the exposure draft go beyond federal guidance. She suggested that the exposure draft instead be aligned with the federal standards for required documents and any additional documentation be provided at the request of state insurance regulators. She suggested that Standard 5 be changed to identify a subset of NQTLs so state insurance regulators can have a more targeted approach. She said the Tri-Departments will set forth additional guidance on MHPAEA compliance and a second report to the U.S. Congress (Congress) this year, and she requested that the NAIC delay finalizing this exposure draft until that time so the guidance in the exposure draft can better align with federal MHPAEA guidance.

Ms. Beyer, the vice chair of the MHPAEA (B) Working Group, said the Working Group should not delay implementation of this exposure draft. Ms. Weyhenmeyer said the draft was discussed and developed in regulator-only meetings of the MHPAEA (B) Working Group prior to exposure at the Market Conduct Examination Guidelines (D) Working Group. Those meetings also included federal representatives of the Tri-Departments, and the federal regulators involved did not raise any objections regarding the documentation requested in the exposure draft. Ms. Weyhenmeyer reminded the Working Group that the whole Handbook is a guide, and the intent of this exposure draft of Chapter 24B is to outline federal guidance and considerations regarding the MHPAEA, while allowing states to use their state-specific statutes, rules, and regulations regarding the MHPAEA.

Ms. Weyhenmeyer said a revised Chapter 24B exposure draft will be developed and circulated for discussion at the next Working Group meeting.

6. Discussed Other Matters

The Working Group will continue to work on its assigned charges, in addition to the current exposure drafts before the Working Group. NAIC staff will send out a notice of the next Working Group meeting, which is scheduled for July 14.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

Draft: 5/10/22

Market Conduct Examination Guidelines (D) Working Group
Virtual Meeting
April 21, 2022

The Market Conduct Examination Guidelines (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 21, 2022. The following Working Group members participated: Damion Hughes, Chair, and Eleanor Coe and Neil A. Derr (CO); Erica Weyhenmeyer, Vice Chair (IL); Chris Erwin, Teri Ann Mecca, and Crystal Phelps (AR); Sarah Borunda (AZ); Kurt Swan (CT); Sharon Shipp (DC); Susan Jennette and Frank Pyle (DE); Elizabeth Nunes and Paula Shamburger (GA); Lori Cunningham and Ron Kreiter (KY); Mary Lou Moran (MA); Jeff Hayden (MI); Cynthia Amann, Jennifer Hopper, Jo LeDuc, and Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger and Edwin Pugsley (NH); Ralph Boeckman and Erin Porter (NJ); Leatrice Geckler (NM); Hermoliva Abejar (NV); Sylvia Lawson (NY); Rodney Beetch (OH); Landon Hubbart (OK); Ana K. Pace (OR); Paul Towsen (PA); Brett Bache, Jack Broccoli, Segun Daramola, Matt Gendron, and Brian Werbeloff (RI); Matthew Tarpley (TX); Kelly Christensen, Tracy Klausmeier, Tanji J. Northrup, and Shelley Wiseman (UT); Andrea Baytop, Julie Fairbanks, Will Felvey, Joy Morton, and Bryan Wachter (VA); Mary Block, Isabelle Turpin Keiser, and Karla Nussl (VT); Jeanette Plitt (WA); and Barbara Belling, Diane Dambach, Darcy Paskey, Mark Prodoehl, Rebecca Rebholz, and Jody Ullman (WI).

1. Adopted Revisions to the April 19 Draft Chapter 21 of the *Market Regulation Handbook*

Mr. Hughes said the Working Group began discussing the draft Chapter 21—Conducting the Property and Casualty Examination of the *Market Regulation Handbook*, initially circulated on Oct. 27, 2021, at its Nov. 4, 2021, meeting. He said Ms. Shipp reviewed the *Real Property Lender-Placed Insurance Model Act* (#631) and recommended revisions to various areas of the chapter for the Working Group’s consideration. He said since the last Working Group meeting on March 10, the industry trade associations’ edits were incorporated into the April 19 draft, shown in yellow highlight, as Patrice Garnette (DC) had indicated on the March 10 call that all the revisions proposed by the industry trade associations—i.e., comments dated Nov. 11, 2021, and sent to the NAIC on Nov. 23, 2021—were acceptable. Mr. Hughes said Ms. Garnette also revised the language of the examination standard in Marketing and Sales Examination Standard 8 to revert to the language that existed prior to all the District of Columbia’s proposed revisions.

Mr. Gendron made a motion, seconded by Ms. Weyhenmeyer, to adopt the April 19 draft Chapter 21 of the *Market Regulation Handbook* (see *NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Four*). The motion passed unanimously.

2. Discussed Draft Revisions to the April 19 Draft Chapter 24B of the *Market Regulation Handbook*

Mr. Hughes said Chapter 24B—Conducting the MHPAEA-Related Examination was updated to align with federal guidance more closely on the issue of compliance analysis requirements for non-quantitative treatment limitations (NQTLs). He said he mentioned at the March 10 Working Group meeting that the draft chapter would be forthcoming, to be distributed to the Working Group after the Spring National Meeting. The revised chapter exposure draft was circulated to the Working Group, interested state insurance regulators, and interested parties on April 19.

Ms. Weyhenmeyer, vice chair of the Working Group and chair of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group, said the Market Conduct Examination Guidelines (D) Working Group had been

asked to review and update the chapter. The April 19 exposure draft was developed under the guidance of the MHPAEA (B) Working Group, as that is where the subject matter experts (SMEs) in this area reside. Ms. Weyhenmeyer said the exposure draft is before the Market Conduct Examination Guidelines (D) Working Group for review and comment, so the guidance therein can be organized and further developed in a market conduct examination-related context. The comment due date on the draft is May 20.

Ms. Dambach said the exposure draft should be modified to contain language as shown in other *Market Regulation Handbook* chapters (e.g., the ACA-related chapter). The exposure draft, as currently written, contains the language, "... the health carrier shall ..." Ms. Dambach said the language should be changed to read, "... the market conduct examiner should verify that ..." She said she will submit comments regarding this language change.

In response to Kris Hathaway's (America's Health Insurance Plans—AHIP) inquiry during the Working Group meeting asking for a redlined version of the draft, Ms. Weyhenmeyer said the exposure draft will completely replace the current Chapter 24B in the *Market Regulation Handbook*; therefore, there is no redlined version of the current Chapter 24B to provide. Mr. Hughes said the initial comment period on the exposure draft is for 30 days; the comment due date on the draft is May 20. Petra Wallace (NAIC) asked state insurance regulators and interested parties to email her a request for a Word version of the chapter for the purpose of providing comments/suggested edits in Microsoft Word track changes format.

3. Discussed Draft Revisions to the April 19 Draft Chapter 23 of the *Market Regulation Handbook*

Mr. Hughes said the exposure draft of a revised Chapter 23—Conducting the Life and Annuity Examination was circulated to the Working Group, interested state insurance regulators and interested parties on April 19. He said Mr. Werbeloff, Mr. Swan, Mr. Pyle, and other state insurance regulators on their respective teams collaborated to produce the draft for the Working Group's review and consideration. The revisions to the chapter correspond with the February 2020 revisions adopted by the NAIC to the *Suitability in Annuity Transactions Model Regulation* (#275).

Mr. Werbeloff said in 2010, the NAIC introduced Model #275, which outlined an insurance producer's responsibilities when recommending an annuity to a client. In 2020, the NAIC updated Model #275 to require an insurance producer to work in his/her client's best interests. The then Nebraska Department of Insurance Director Bruce R. Ramage reviewed the updated Model #275 in early 2020 to determine what changes may need to be made to the *Market Regulation Handbook*, and he created an initial redlined draft of Chapter 23. Mr. Werbeloff said the group of state insurance regulator SMEs previously mentioned expanded upon that draft by reinserting relevant examination standards that were not present in the former Director Ramage's draft. The SMEs also developed additional Marketing and Sales examination standards and accompanying checklists to the chapter.

Additional proposed changes not directly found in Model #275 were added, including: 1) a note that examiners should ensure a company is reviewing all transactions that have been flagged for internal review, rather than just using sampling techniques; and 2) a note that internal suitability reviews should consider all internal transactions for a customer, even if those transactions occur in multiple jurisdictions. Additional minor changes to the chapter include the removal of references to the *Disclosure for Small Face Amount Life Insurance Policies Model Act* (#605), due to only five states having adopted that model, and the removal of the *Suitability of Sales of Life Insurance and Annuities* white paper, due to the white paper not being currently publicly accessible on the NAIC web page.

Mr. Hughes said the comment due date on the draft is May 20. Ms. Wallace asked state insurance regulators and interested parties to email her a request for a Word version of the chapter for the purpose of providing comments/suggested edits in Microsoft Word track changes format.

4. Discussed Draft Revisions to the Oct. 27, 2021, Draft Chapter 20 of the *Market Regulation Handbook*

Mr. Hughes said the draft Chapter 20—General Examination Standards was first circulated on Oct. 27, 2021, and the Working Group began discussing the draft at its Nov. 4, 2021, meeting. He said the draft was provided by Mr. Kreiter for the Working Group’s consideration. Mr. Kreiter reviewed the *Insurance Holding Company System Regulatory Act* (#440) in 2021 and recommended corresponding revisions to the chapter. Since the March 10 Working Group meeting, comments were received on the draft from Nevada on April 14 and AHIP/Blue Cross Blue Shield Association (BCBSA) on April 15. These comments were circulated to the Working Group, interested state insurance regulators, and interested parties on April 19.

Ms. Abejar presented Nevada’s comments dated April 14, and she indicated that she reviewed Operations/Management Standard 1 and Marketing and Sales Standard 1. Her April 14 comments reflected new language shown in pink and deleted language shown in gray. In Operations/Management Standard 1, she recommended deleting the sentence, “Determine if the NAIC liquidity Stress Test Framework needs to be utilized for a specified data year,” and replacing it with, “Determine if there any liquidity issues by reviewing the latest Insurer Profile Summary or Group Profile Summary from the domicile state’s assigned financial analyst.”

Ms. Abejar said the reason for the change is because if there are any liquidity issues present, they would have been identified by a domicile state’s assigned financial analyst, so the change in language is needed to avoid the duplication of effort; i.e., there is no need for a market conduct examiner to re-do what financial examiners or financial analysts have already performed.

In Operations/Management Standard 1, Ms. Abejar recommended deleting the language:

Determine if there is a holding company system in place. And if so, whether there should be a group capital calculation request from the U.S. Federal Reserve or whether a lead state commissioner should require a group capital calculation for U.S. operations of any non-U.S. based insurance holding company system.

She then recommended replacing it with:

Determine if there are any contagion risks that could affect the examined company’s market conduct associated with how the holding company system is set up by reviewing the latest Group Profile Summary issued by assigned financial analyst of the financial lead state and the latest financial examination report and management letter. If a group capital calculation was not initiated or completed by the financial lead state to determine potential risk to policyholders; specially for holding company systems with member companies outside of U.S., consult your state assigned financial analyst if requesting a group capital calculation to the Commissioner of the financial lead state is appropriate.

The reason for the change is because a holding company system is not something that is formally instituted all the time; therefore, the language should be removed. Determining the relationships between the entities within a holding company system, whether the holding company system formally instituted or not, is a more relevant examiner review procedure, but that should form part of a larger mission, which is to determine if there are any contagion risks within the holding company system that could affect the examined company’s market conduct. The group capital calculation (GCC) is intended to provide additional analytical information to the financial lead state for use in assessing group risks and capital adequacy to complement the current holding company analysis in the U.S. It includes information on potential risks to policyholders emanating from outside an insurance

company, as well as the location and sources of capital within a group. The calculation of which and determination of when to perform a GCC is part of the responsibilities of an insurance financial regulator, not a market examiner.

In Operations/Management Standard 1, Ms. Abejar also recommended the deletion of:

Determine if the confidentiality of any group capital contribution or group capital ratio is maintained and if the confidentiality of the liquid stress test results and supporting disclosure are maintained which includes any Federal Reserve Board filings and information.

The reason for the change is the group capital ratio and any GCC is to be kept confidential by state insurance regulators. The question as to whether the insurers who own the information can keep this information confidential is a matter of law within the state of domicile or the state the insurer is doing business with. If an insurer is displaying in their marketing materials, on their website, or elsewhere, a false or misleading misrepresentation of its financial condition, that issue is technically covered by financial regulation examiners. In this instance, Ms. Abejar said it is easier for a market examiner to get the opinion of financial examiners regarding this issue, rather than market examiners performing a review procedure that is not part of their designated expertise.

In Marketing and Sales Standard 1, Ms. Abejar recommended the deletion of two review procedures:

For the review of group capital calculation, resulting group capital ratio and liquidity stress test:

Review the making, publishing, disseminating, circulating or placing before the public, or causing directly or indirectly to be made, published, disseminated, circulated or placed before the public in a newspaper, magazine or other publication, or in the form of a notice, circular, pamphlet, letter or poster, or over any radio or television station or any electronic means of communication available to the public, or in any other way as an advertisement, announcement or statement containing a representation or statement with regard to the group capital calculation, group capital ratio, the liquidity stress test results, or supporting disclosures for the liquidity stress test of any insurer or any insurer group, or of any component derived in the calculation by any insurer, broker, or other person engaged in any manner in the insurance business because it would be misleading and is therefore prohibited; and

Review if any materially false statement with respect to the group capital calculation, resulting group capital ratio, an inappropriate comparison of any amount to an insurer's or insurance group's group capital calculation or resulting group capital ratio, liquidity stress test result, supporting disclosures for the liquidity stress test, or an inappropriate comparison of any amount to an insurer's or insurance group's liquidity stress test result or supporting disclosures is published in any written publication and if the insurer is able to demonstrate to the commissioner with substantial proof the falsity of such statement or the inappropriateness, as the case may be, then the insurer may publish announcements in a written publication if the sole purpose of the announcement is to rebut the materially false statement.

Ms. Abejar recommended replacing the language of the two deleted procedures with:

In reviewing the capital calculation, resulting group capital ratio, and liquidity stress test performed by the assigned financial analyst of the financial lead state, note the risks identified by the assigned financial analyst and determine if the risks are directly or indirectly affecting policyholders and whether risk mitigations in place are also documented by the assigned financial analysts. If they are directly affecting

policyholders of a company within the holding company system that is currently under market conduct examination, determine if the risk is imminent. If it is, determine the extent of injury to the policyholders. If the documented risk mitigations do not resolve the market conduct risks, request additional information from the company being examined.

Note that most financial risks have an equivalent market conduct risk that may or may not be obvious to the assigned financial analyst, therefore, request a copy of the Group Insurer Profile and not just a confirmation from the assigned financial analyst that there are no market conduct risks.

The purpose of the change is to direct the market examiner as to where to look, which document to look for, and whom to contact, since market conduct examiners do not perform the referenced financial calculations, these are performed by financial examiners/analysts.

Joe Zolecki (BCBSA) presented the AHIP/BCBSA comments dated April 15. He said the review of insurer GCCs, the Own Risk and Solvency Assessment (ORSA), etc. is performed by financial regulators as part of the risk focused approach. He said he would agree with the revisions proposed by Ms. Abejar, and he supports financial regulators reaching out at any time to market conduct regulators for information and vice versa. This collaboration between financial and market regulators avoids creating a siloed approach, and the result of this collaboration between financial and market conduct examiners is a more effective and comprehensive regulatory review of insurers.

Mr. Zolecki asked the Working Group to consider including references from various sections (e.g., where noted in the portable document format (PDF) excerpts from the *Financial Analysis Handbook* pages provided in the AHIP/BCBSA April 15 comments), where appropriate, in the *Market Regulation Handbook*, not necessarily in Chapter 20. He said he will submit formal comments containing the specific suggested changes to be incorporated from the *Financial Analysis Handbook* into the *Market Regulation Handbook*.

Ms. LeDuc, Ms. Geckler, Ms. Plitt, and Mr. Swan recommended an extension of the comment due date so the draft can be discussed at the next call along with the additional comments to be received. Mr. Hughes said the comment due date will be extended for that purpose, and he is hopeful that the Chapter 20 exposure draft will be able to be adopted at the next scheduled Working Group meeting.

5. Discussed Other Matters

The Working Group will continue to work on its assigned charges, in addition to the current exposure drafts before the Working Group. NAIC staff will send out a notice of the next scheduled Working Group call, which is tentatively scheduled for June 9.

Having no further business, the Market Conduct Examination Guidelines (D) Working Group adjourned.

[04-21.docx](#)

Draft: 7/27/22

Speed to Market (D) Working Group
Virtual Meeting
July 12, 2022

The Speed to Market (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 12, 2022. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Sian Ng-Ashcraft (AK); Erick Wright (AL); Jimmy Harris (AR); Frank Pyle (DE); Julie Rachford (IL); Brenda Johnson and Craig VanAalst (KS); Tammy Lohmann (MN); Camille Anderson-Weddle and Jo LeDuc (MO); Ted Hamby, Tracy Biehn, and Timothy Johnson (NC); Chris Aufenthie (ND); Cuc Nguyen (OK); Sharalyn Taylor (TX); Tracy Klausmeier (UT); Gail Jones (WA); and Barry Haney and Mary Kay Rodriguez (WI). Also participating was: Danie Capps (WY).

1. Adopted its April 20 Minutes

The Working Group met April 20 and took the following action: 1) adopted its Nov. 16, 2021, minutes; 2) received an update on the status of the System for Electronic Rates & Forms Filing (SERFF) Modernization Project; 3) received an update on edits to the *Product Filing Review Handbook* (Handbook); and 4) discussed the annual review of the product coding matrix (PCM) and uniform transmittal document (UTD) suggestions.

Ms. Rachford made a motion, seconded by Mr. Wright, to adopt the Working Group's April 20 minutes (Attachment Thirteen-A). The motion passed unanimously.

2. Discussed and Considered Suggestions Received on the PCM and UTD

Ms. Motter stated that the first suggestion to discuss is regarding the property/casualty (P/C) PCM. She stated that a suggestion was received to add a sub-type of insurance (TOI) under the inland marine TOI to allow for the filing of personal lines cyber insurance. The reason for this suggestion is that this is a new product, and customers have been asking about it. Ms. Motter stated that when these suggestions are being evaluated, ideas and thoughts are brought to everyone's attention for consideration. She stated that there was recently a sub-TOI for cyber liability products added that is lined up with the annual statement instructions, where it advises companies to put any standalone comprehensive cyber liability coverages under TOI 17, but if it is an endorsement attached to the policy, there is a note similar to the lines of business in the annual statement to report those premiums and losses. For example, she stated that if a cyber liability endorsement was being added to an existing homeowners product, the endorsement would be filed with the homeowners product. She stated that a consideration to keep in mind is how many states would implement this suggested change, as it is not helpful from a speed to market standpoint to add additional TOIs that will not be adopted by a majority of jurisdictions. She asked if anyone on the call has been filing personal lines standalone cyber insurance products, and there were no responses. She asked that if anyone has an issue with following the annual statement instructions and the current PCM, they should place such products if they come into existence under TOI 17 for now and reevaluate them in the future if needed.

Theresa Boyce (ACE Group) stated that she believes TOI 17 would only be used for standalone, and if it is just an endorsement to another line of business, then the ACE Group would not need to use TOI 17. Ms. Motter confirmed that as correct and stated that she has not heard anyone express concerns about getting any personal lines standalone products filed. She stated that cyber coverage on a personal basis thus far has been an endorsement and gone under the proper TOI to the policy it is attached to. She stated that if state insurance regulators and industry representatives are not seeing standalone personal lines cyber insurance products at this time, creating a TOI for it may not be helpful, as it may not be utilized. Ms. Rachford asked if it would be possible to get more

information from the person that made this suggestion. Ms. Motter stated that if the need arises, this suggestion could be brought up again, but this consideration is time sensitive, as it would have to be decided on prior to the national meeting in order to receive filings for it next year.

Ms. Rachford made a motion, seconded by Ms. Klausmeier, to not consider the creation of an additional TOI to the P/C PCM for personal lines cyber and to table it for future discussion as needed. The motion passed unanimously.

Ms. Motter stated that the next suggestion to discuss is regarding the life and health UTD. A suggestion was made to update the form actions list on the form schedule to include “withdrawn” in addition to initial, revised, and other. She stated that this would bring it in line with what is already present on the P/C side, where a form can be indicated as new, revised, withdrawn, or other, which includes a freeform text box. This suggestion also included a request to have a date of when this will take over or be inactivated. Ms. Motter stated that on the P/C side, when new, withdrawn, or replaced, the date trigger is the requested effective date that is indicated on the entire filing submission. She stated that it is unclear in the suggestion if the requester is expecting to have a different date other than the requested effective date, and a possible solution would be asking filers to use the other box to enter that different date in the text field box. She asked that if the requester is on the call, and they are not. She asked if anyone has concerns with aligning the life and health UTD with the P/C document and allowing the choice of withdrawn in addition to initial, revised, and other. No concerns were expressed. Ms. Motter asked if anyone has concerns with the suggestion that if the requester is expecting the ability to indicate a date other than the requested effective date, that it be provided in the other text field box. No concerns were expressed.

Mr. VanAalst made a motion, seconded by Ms. Lohmann, to amend the life and health UTD to include an option for withdrawn, without an additional date field. The motion passed unanimously.

Ms. Motter stated that the next suggestion to discuss is adding a TOI for multi-line health other in the life and health PCM. She stated that her understanding is this is unique to just a few jurisdictions, as only a few states have a separate instance for health and a separate instance for life filing submissions. She stated that because of this, these states can only use a multi-line health other in their health instance, and they do not have that available in their life instance. The reason provided for the suggestion is that the TOI would be used for health insurance coverages that are considered excepted benefits, such as hospital indemnity, accident only, etc. and would assist with such SERFF filing searches. The other reason given is that the addition of this TOI would be for states that have life and health as separate instances because TOI ML02 cannot be used for both. Ms. Motter stated that the additional thoughts provided for consideration are that this concern will be resolved with the SERFF modernization, and it only affects a handful of jurisdictions. She stated that the recommendation is to continue use of the H21 TOI health other until the SERFF modernization is in place. She stated that perhaps using additional benefit fields, labels, and filing descriptions might help locate these types of filings in the interim. Ms. Jones stated that if this will be resolved in the SERFF modernization, a new TOI does not seem necessary at this time.

Ms. Nguyen made a motion, seconded by Ms. Lohmann, to not add a TOI for multi-line health other. The motion passed unanimously.

Ms. Motter stated that the next suggestion to discuss is adding a sub-TOI in the life and health PCM under TOI NA01 network access provider contract for a provider contract incentive-based program with the description, “A written contract between a carrier, accountable care organization (or similar entity), provider, or group of providers that establishes an incentive-based program.” A reason was not provided for this suggestion. Ms. Motter asked if these are currently accepted under NA01.004 other and if a filing label could be utilized to differentiate these types of filings. Ms. Jones stated that Washington’s network oversight person, Jennifer Kreidler, recommended not accepting this suggestion because: 1) incentive-based programs are not a unique type of

provider contract, but a type of reimbursement that is already captured in sub-TOIs that have been previously adopted, including NAO1.000 and NAO1.003; and 2) accountable care organizations, per the description request, are federally regulated programs, and states have no jurisdiction over such programs; therefore, Washington does not require submission of them unless incorporated into a commercial marketplace or Medicaid plan. She stated that if adopted, Washington would not turn on this code.

Ms. Lohmann made a motion, seconded by Mr. Wright, to not implement the suggestion to add a sub-TOI for provider contract incentive-based programs. The motion passed unanimously.

Ms. Motter stated that the next suggestion to discuss is adding sub-TOIs in the life and health PCM for long term care (LTC) to account for limited long-term care insurance (LTCI) filings to align with the *Limited Long-Term Care Insurance Model Act* (#642) and the *Limited Long-Term Care Insurance Model Regulation* (#643). The reason provided for this suggestion is that it would accurately identify the appropriate TOI reflective of the coverage. The requester noted that some jurisdictions have allowed these filings under H13, and a request was made to consider adding or referencing limited LTC in this description, but it was decided that this could cause confusion, as the product is a type of LTC and should be within that TOI description. Ms. Motter stated that questions to consider are how many states would implement these sub-TOIs, where filings for this are currently being received, how many policies are being filed as a standalone product, and how this is different from those items filed under H13 short-term care group and individual. She stated that potentially adding another sub-TOI to H13 for other or implementing additional benefit flags for the sub-TOI may be better than adding another sub-TOI under LTC. She stated that her recollection when this was previously discussed is that because there is a difference between LTC and short-term care, the desire is not to include sub-TOIs for short-term care under the LTC and to leave them under H13. Ms. Jones stated that this was discussed in Washington, and it does not see the need to add a new sub-TOI, as these products appear to meet the definition of short-term care. She stated that Washington would support the addition of a sub-TOI under H13, and she added that limited LTC is not allowed under Washington's current regulations. Ms. Motter asked if adding 13.004 for short-term care other under TOI H13G would be a possible solution. Ms. Jones confirmed this since that would not fall under LTC. Mr. VanAalst stated that Kansas would not adopt this since it made changes to its Long-Term Care Partnership Program to account for these types of filings, but if a change were made, Kansas agrees with Washington that it would make the most sense to add a sub-TOI under H13. Ms. Motter stated that under H13, there are sub-TOIs for home health care, which could incorporate the first suggestion and sub-TOIs for nursing home and adult day care. She stated that there is not a sub-TOI for other for short-term care, and she asked if there is an interest in adding a sub-TOI to H13G and H13I of 13.004 other to incorporate additional filings. Ms. Jones asked if the request is to add sub-TOIs under LTC, and Ms. Motter confirmed this but said this would be a possible alternative solution if needed. Ms. Motter stated that adding these sub-TOIs under H13 for other should only be considered if the Working Group feels the need. No comments were expressed indicating a need to add these additional sub-TOIs under H13G and H13I.

Mr. VanAalst made a motion, seconded by Ms. Lohmann, to not amend the life and health PCM to include additional sub-TOIs for LTC. The motion passed unanimously.

Ms. Motter summarized that effective Jan. 1, 2023, the Working Group has decided that the only change from the suggestions made this year is to amend the life and health UTD to include an option for withdrawn as a status option and that no changes to the PCM would be implemented.

3. Discussed Other Matters

Ms. Jones asked if the requesters for these suggestions are invited to these calls so they can participate in these discussions and answer questions. Ms. Motter stated that NAIC staff have historically reached out to them with

the call information. Brandy Woltkamp (NAIC) confirmed this and stated that a couple of the requesters are Working Group members and are aware of this call.

Ms. Nichols stated that details for the next call would be shared once it has been scheduled.

Having no further business, the Speed to Market (D) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/S2M WG/July 12 Call/S2M WG Minutes July 12

Draft: 4/28/22

Speed to Market (D) Working Group
Virtual Meeting
April 20, 2022

The Speed to Market (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met April 20, 2022. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Jimmy Gunn represented by Erick Wright (AL); Jimmy Harris represented by Becky Harrington (AR); Frank Pyle (DE); Julie Rachford (IL); Tammy Lohmann (MN); Camille Anderson-Weddle and Jo LeDuc (MO); Ted Hamby (NC); Cuc Nguyen (OK); Mark Worman (TX); Tanji J. Northrup (UT); and Lichiou Lee (WA). Also participating was: Danie Capps (WY).

1. Adopted its Nov. 16, 2021, Minutes

The Working Group met Nov. 16, 2021, and took the following action: 1) adopted its June 30 and June 29, 2021, minutes; 2) adopted the *Regulatory Review of Predictive Models* white paper edits to the *Product Filing Review Handbook* (Handbook); and 3) discussed the Product Requirements Locator (PRL) contacts.

Ms. Northrup made a motion, seconded by Ms. Motter, to adopt the Working Group's Nov. 16, 2021, minutes (see *NAIC Proceedings – Fall 2021, Innovation and Technology (EX) Task Force, Attachment Two*). The motion passed unanimously.

2. Heard an Update on SERFF

Joy E. Morrison (NAIC) stated that there will be a report provided at each Working Group meeting regarding the status of the System for Electronic Rates & Forms Filing (SERFF) Modernization Project. Bridget Kieras (NAIC) discussed the key capabilities that will be delivered with the SERFF Modernization Project. The first capability discussed was user managed customization, which will provide more customization of the system for all users. This improvement will include everything from expanded user preferences to the implementation of state business rules that guide the process of making filings, which should help with compliance. The next two capabilities discussed were: 1) filing preparation and submittal; and 2) consistent and efficient filing review. Ms. Kieras stated that more state business rules will be built up front to ensure the industry filings are very compliant, which should reduce intake objections and post-submission updates. The next capability discussed was communication and collaboration tools. Ms. Kieras stated that tools and functions are being worked on for industry and state users to communicate better with each other. The next capability discussed was Application Programming Interface (API) integration with business partners and NAIC products. Ms. Kieras stated that the existing web services that are used by states, companies, and vendors will be built out, and better integration with NAIC systems is being looked at as well. The last two capabilities discussed were: 1) workload management; and 2) robust search and reporting. Ms. Kieras stated that a lot of tools are being worked on to enhance and improve searches and exports.

Ms. Kieras discussed the business objectives being considered for the SERFF Modernization Project. She stated that the business objectives are to: 1) deliver incremental value; 2) minimize production disruption; 3) ensure preservation of existing data; 4) support integration partners; 5) build staff capabilities; 6) practice good financial stewardship; 7) design for ease of use; and 8) provide a seamless user experience. She explained the timeline and phases of the SERFF Modernization Project. There are seven phases that began in March 2022 and are planned to go through December 2024. Ms. Kieras stated that the work is focused on improving the search capabilities and rebuilding the core platform. The tool will be tested through the Interstate Insurance Product Regulation

Commission (Compact) first since it is the smallest group of users, but there will be outreach to companies and states not involved in the Compact to ensure the system is being built in a way that will work for the Life, Property/Casualty (P/C), Health, and Plan Management modules.

Ms. Kieras stated that some of the things being done right now are building out the infrastructure, as all the new tools need to be installed, and servers and development environments need to be put in place. She stated that the NAIC is also working on login and landing pages, including the implementation of the single sign-on (SSO), as well as putting in instances, companies, and contacts that will be used on filings. She stated that the NAIC is beginning module development for state business rules related to filing fees, and it plans on introducing the calculation of filing fees. The NAIC is also building a module for states to map licensing lines of business to their SERFF type of insurance (TOI) so a more thorough licensing check can be done before filing is submitted. She stated that the NAIC is also rebuilding the filing rules module, which will be vastly streamlined and updated and leverage the product coding matrix (PCM) in a way that will reduce a lot of manual entry and provide better reporting.

Ms. Kieras stated that focus groups would be created to get input on the Portable Document Format (PDF) Pipeline, including when and why it is used. She stated that the NAIC suspects that there are some uses that could be better served by improved tools. She stated that the NAIC will also be seeking input on a synonym list. She stated that the NAIC would like to improve the search feature so when a keyword is entered, the system returns results for a synonym that may be relevant. She provided an example of a drone and an unmanned aircraft.

Ms. Kieras stated that an update on the SERFF Modernization Project will be given at each Working Group meeting, and she invited anyone that is not on the SERFF Product Steering Committee (PSC) to join and attend meetings if they are interested.

3. Received an Update on Edits to the Handbook

Ms. Nichols reminded everyone that reviewing updates of the Handbook is underway, and this is one of the Working Group's charges. She stated that some of the updates are technical edits that are just corrections and only a matter of correcting outdated information, updating current uniform resource locators (URLs), making formatting edits, etc. She stated that these types of technical changes will not need to go through the Working Group for adoption, as they are not content related; however, the areas that need substantive or nontechnical content edits will be considered by the Working Group.

Petra Wallace (NAIC) said that the last publication of the Handbook was in 2016 and she is in the process of reviewing the Handbook for technical (non-substantive) edits. She stated there is an NAIC style guide that needs to be followed and a lot of what she is doing is cleaning up the publication to be compliant with the NAIC style guide and provided examples of this. She stated that once the updates are completed, the Handbook will be republished, with the updated NAIC logo, and the publication will not be available as a hard copy, it will instead be available in an electronic version. Ms. Wallace stated she has reached out to SERFF and the Compact staff to get updated information concerning various areas in the Handbook that contain inaccurate information. Ms. LeDuc asked if a track changes Word version of the technical updates Ms. Wallace is performing will be provided to the Working Group. Ms. Nichols stated since the technical edits are non-substantive, the plan is not to bring those back to the Working Group in a track changes format since adoption is not required for technical edits, however content-related and substantive changes will be brought to the Working Group for review and consideration.

Ms. Nichols asked that Working Group members willing to volunteer to review some of the substantive content in Chapter Two—The Filing Process, Chapter Four—The Basics of Life and Annuity Regulation, Chapter Five—The

Basics of Health Rate Regulation, Chapter Six—The Federal Affordable Care Act (ACA) and Plan Management, and Chapter Seven—Policy Form Filings let Leana Massey (NAIC) know. She stated that these reviews would be done behind the scenes and later brought to the Working Group for discussion and consideration. She stated that the goal for completion of this review is to have it ready to present at the Fall National Meeting in December. Ms. Motter stated that when volunteers worked on Handbook updates in the past, it involved reaching out to peers and staff that were subject matter experts (SMEs) in certain areas, so staff members should be asked if assistance is needed with these efforts.

4. Discussed the Annual Review of the PCM and UTD Suggestions

Ms. Motter stated that now is the time of year when suggestions or changes to the PCM and Uniform Transmittal Document (UTD) are solicited. She stated that an alert regarding this was sent in SERFF, and any suggestions are requested by May 31. The suggestions will then be compiled, and it will be determined how many calls to schedule to discuss and consider the suggestions. Ms. Motter stated that these discussions sometimes lead to suggestions on how to better create a solution with a filing label rather than a new TOI when only one state will use a potential new TOI for example or verbiage is changed where needed. She stated that the Working Group calls to discuss the suggestions will take place in June to allow enough time to present the information at the Fall National Meeting for possible implementation in January 2023.

5. Discussed Other Matters

Ms. Nichols stated that during the Spring National Meeting, the decision was made to move the Working Group from the Innovation, Cybersecurity, and Technology (H) Committee to the Market Regulation and Consumer Affairs (D) Committee. She stated that this would not affect any of the work to be done by the Working Group. She stated that the SERFF Advisory Board was also disbanded during the Spring National Meeting, and the Working Group charges will be updated to reflect this.

Having no further business, the Speed to Market (D) Working Group adjourned.

SharePoint/Market Regulation - Home/D Working Groups/Speed to Market/2022/April 20 Call

ANTIFRAUD (D) TASK FORCE

Antifraud (D) Task Force June 30, 2022, Minutes..... 8-145

Draft: 10/3/22

Antifraud (D) Task Force
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
June 30, 2022

The Antifraud (D) Task Force conducted an e-vote that concluded June 30, 2022. The following Task Force members participated: Trinidad Navarro, Chair (DE); John F. King, Vice Chair, represented by Martin Sullivan (GA); Lori K. Wing-Heier represented by Alex Romero (AK); Alan McClain represented by Crystal Phelps (AR); Evan G. Daniels represented by Paul Hill (AZ); Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Karima M. Woods represented by Brian Bressman (DC); David Altmaier represented by Simon Blank (FL); Vicki Schmidt represented by John Eichkorn (KS); Sharon P. Clark represented by Juan Garrett (KY); James J. Donelon represented by Matthew Stewart (LA); Kathleen A. Birrane represented by Jeff Gross and Steve Wright (MD); Anita G. Fox represented by Michele Riddering and Randall Gregg (MI); Grace Arnold represented by Paul Hanson (MN); Chlora Lindley-Myers (MO); Mike Chaney represented by Sharon Womack (MS); Mike Causey represented by Angela Hatchet and Tracy Biehn (NC); Eric Dunning and Martin Swanson (NE); Chris Nicolopoulos represented by Heather Silverstein (NH); Russel Toal represented by Devin Chapman (NM); Judith French represented by Michelle Rafeld (OH); Glen Mulready represented by Rick Wagnon (OK); Jon Pike represented by Armand Glick (UT); Scott A. White represented by James Young (VA); and Kevin Gaffney represented by Isabelle Turpin Keiser (VT).

1. Adopted the Antifraud Plan Repository Workflow Recommendation

Commissioner Navarro said the purpose of today's call is to review the NAIC Antifraud Plan Repository workflow recommendation provided from the Antifraud Technology (D) Working Group. He said the Working Group's charge was to "Review and provide recommendations for the development of an Antifraud Plan Repository to be used by insurers to create and store an electronic fraud plan for distribution among the states/jurisdictions." He said the Working Group used the newly updated *Antifraud Plan Guideline* (#1690) to create the recommendation and workflow document. He said the draft workflow document was exposed for comment by the Task Force; however, no comments have been received to date.

Ms. Rafeld said the Working Group finalized the revisions of the Antifraud Plan Repository option in 2020. The Antifraud Plan Repository possibility was introduced to the Task Force following an industry representative explanation of how cumbersome it is to stay in compliance with all state law requirements and the fact that insurance companies have had to manually create antifraud plans and submit into the states. Ms. Rafeld said to assist with the industry concerns and promote uniformity, the Task Force determined that it would be beneficial to create an NAIC Antifraud Plan Repository. A charge was given to the Working Group to create a recommendation. Ms. Rafeld said the Working Group used the revised Model #1690, which included the key elements insurance companies needed to consider for developing an antifraud plan. Ms. Rafeld finalized the Working Group's charge and provided a recommendation for the creation of an Antifraud Plan Repository. She said the Working Group created a workflow document to assist with finalizing this charge. She said it was adopted by the Working Group in May and presented to the Task Force for review.

Mr. Blank made a motion, seconded by Ms. Rafeld, to adopt the Antifraud Plan Repository workflow document (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Eight*). The motion passed unanimously.

Having no further business, the Antifraud (D) Task Force adjourned.

[AFTF 6.30.22 Minutes](#)

MARKET INFORMATION SYSTEMS (D) TASK FORCE

Market Information Systems (D) Task Force June 16, 2022, Minutes..... 8-147

Draft: 6/28/22

Market Information Systems (D) Task Force
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
June 16, 2022

The Market Information Systems (D) Task Force met June 16, 2022. The following Task Force members participated: Michael Conway, Chair (CO); Dana Popish Severinghaus, Vice Chair (IL); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Pam O’Connell (CA); Andrew N. Mais represented by Kurt Swan (CT); Vicki Schmidt represented by Tate Flott (KS); Sharon P. Clark represented by Ron Kreiter (KY); James J. Donelon represented by Jeff Zewe (LA); Chlora Lindley-Myers represented by Jo LeDuc and Brent Kabler (MO); Marlene Caride represented by Ralph Boeckman (NJ); Judith L. French represented by Rodney Beetch (OH); Cassie Brown represented by Rachel Cloyd (TX); Nathan Houdek represented by Rebecca Rebholz (WI); and Allan L. McVey represented by Jeannie Tincher (WV). Also participating was: Erica Weyhenmeyer (IL).

1. Adopted its Spring National Meeting Minutes

The Task Force met March 25 and took the following action: 1) considered the Market Information Systems Research and Development (D) Working Group’s report on incorporating artificial intelligence (AI) abilities in the NAIC market information systems (MIS); and 2) adopted the MIS Data Analysis Metrics and Recommendations for 2020.

Mr. Flott made a motion, seconded by Director Severinghaus, to adopt the Task Force’s March 25 minutes (*see NAIC Proceedings – Spring 2022, Market Information Systems (D) Task Force*). The motion passed unanimously.

2. Adopted AI Recommendations

Commissioner Conway said the five recommendations in the report are broken down between the first two, which address making improvements to the current MIS data, and the final three, which address moving forward with incorporating AI in the MIS. He said state insurance regulators have supported industry use of AI because of its benefits; if state insurance regulators are comfortable with industry use of AI, they should move forward with determining the best ways to use AI for insurance regulation as well. He said he supports moving forward with all five recommendations in the report.

Ms. O’Connell agreed and said state insurance regulators should be working hard to keep pace with industry. Commissioner Conway also expressed concern that if state insurance regulators do not move forward collaboratively with exploring AI through the NAIC, they risk a lack of uniformity and consistency as larger states pursue AI and smaller states without the resources do not. He noted that Texas is using AI in reviewing form filings.

Ms. Cloyd confirmed that Texas uses machine learning (ML)/AI techniques in reviewing property/casualty (P/C) form filings. She said Texas is not opposed to AI, but its biggest concern is the unknown time, money, and resource cost if the Task Force commits to all five of the recommendations. She suggested adopting only the first two recommendations and then getting feedback on whether the NAIC systems are capable of effectively using some type of AI. If so, a proof of concept could be developed.

Mr. Kabler said he does not think the cost of incorporating AI in the MIS would necessarily be that expensive. He said there are plenty of modules in the marketplace. For example, he said SAS has software that will perform many sophisticated analytical techniques. He said if it becomes too expensive, the Task Force could pull back or readjust its ambitions. Commissioner Conway suggested an amendment to recommendations 4 and 5 to assess the cost prior to incorporating AI.

Birny Birnbaum (Center for Economic Justice—CEJ) said the MIS is still working within a 20th century regulatory framework regarding the use and analysis of data. He said the recommendations do not move the framework much further along. He said recommendation 5 should be the highest priority. He noted that industry has aggressively used AI and predictive models for 30 years; they did so without any cost-benefit analysis because the benefits were obvious. He said the application of advanced analytics to more granular data will dramatically improve the ability of state insurance regulators to address issues in a timely and effective manner. He said AI requires granular data, and the current summary data in the MIS is not useful for AI. He said AI analytics is not very expensive once you have the data; it just requires the right skillset. He said he was not aware of any cost-benefit analysis being done on any NAIC data collection initiative. He noted that AI techniques would reduce costs for state insurance regulators because the collection of granular data reduces the need for other collection activities, and state insurance regulators would spend less time identifying issues. He said the qualitative benefits outweigh any potential costs.

Andrew Pauley (National Association of Mutual Insurance Companies—NAMIC) said if the Task Force adopts the recommendations, there will be pressure to move quickly on them; yet, the state insurance regulators are still looking into the industry usage of AI and establishing guardrails for industry. He said the report itself noted that incorporating AI would result in pursuing false positives that will not only be costly for the state insurance regulators and industry but could also result in missing real issues. He also cautioned that the accumulation of granular data will result in confidentiality and cybersecurity concerns. He said the accumulation of transactional data without proper guardrails is a concern. He said these types of concerns require a cost-benefit analysis. Commissioner Conway noted that Colorado passed a law to regulate insurers' use of big data algorithms, which was fought aggressively by NAMIC. He said he could not accept NAMIC now saying that state insurance regulators should not use AI due to not having guardrails in place. He asked Mr. Pauley how AI has benefited industry. Mr. Pauley said industry and state insurance regulators have two different datasets. He said the industry has benefited consumers through timely responses, matching rates to risk, claims triaging, and combatting fraud. However, the incorporation of AI to regulate industry has not yet been shown to be superior to the current analytical tools. Mr. Pauley said the five recommendations are too broad and do not have discernible goals; the ramifications of adopting them should be considered. He said AI is evolving quickly, and the broad recommendations may be obsolete in a year, so he recommended a more deliberate step-by-step approach.

Commissioner Conway said the possibility of false positives is not concerning. Any new process would have false positives, and this would improve as market analysts learn more. He said one of the benefits of ML is that the tools would improve as time goes on and more data and results are input.

Director Severinghaus said the conversation is getting into the details, and she suggested that the Task Force first decide whether to adopt the recommendations and then develop the details and scope after the recommendations are adopted. Commissioner Conway agreed. Ms. Weyhenmeyer suggested adopting the recommendations as they are and asking the Market Information Systems Research and Development (D) Working Group to come up with recommendations for implementation. Commissioner Conway agreed and said he would like to adopt the recommendations and ask the Working Group to put together a work plan that includes an analysis of costs for recommendations 4 and 5.

Ms. Cloyd said she believes it is possible that some Task Force members may be in favor of the first two recommendations but not the last three recommendations. By splitting the vote, the Task Force could at least adopt a portion of the recommendations.

Commissioner Conway said he does not believe adopting recommendations 1 and 2 on their own would fulfill the charge to develop recommendations for the incorporation of AI into the MIS.

Mr. Birnbaum said state insurance regulators lag behind all financial service regulators in the use of AI for analysis. He said by voting only for the first two recommendations, the Task Force would be saying it is okay with that.

Ms. Cloyd made a motion, seconded by Ms. LeDuc, to first vote on recommendations 1 and 2 and then vote on recommendations 3 through 5. A roll call vote was taken. Texas voted in favor of the motion. Arizona, California, Connecticut, Illinois, Kansas, Kentucky, Louisiana, Missouri, New Jersey, Ohio, Wisconsin, and West Virginia voted against the motion. The motion failed 12 to 1. After the vote, the chair voted no.

Director Severinghaus made a motion, seconded by Ms. LeDuc, to adopt all five recommendations (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Six*). The motion passed with Texas dissenting.

3. Received an Update on MIS Projects and USER Forms

Chris Witt (NAIC) said the Market Conduct Annual Statement (MCAS) data collection due date was April 30, and the Health line of business is still due June 30.

Mr. Witt said Uniform System Enhancement Request (USER) Form 10071 is to enhance iSite+ reports using visualization and adding data analytics, and USER Form 10047 is to add data by group code. He said the group code data is only accessible in the Tableau dashboards. He said USER Form 10055 is to provide ad hoc data access to state insurance regulators. He said this is being provided through a tool called Snowflake, and the NAIC Information Technology (IT) Department is working with several states to open access to data.

Mr. Witt said the next large project is separating the MCAS and Financial Data Repository (FDR) systems. He said now that the MCAS has grown so much, it is requiring much more maintenance. The separation will allow the FDR to be modernized, and it will be easier to add new lines of business and features to the MCAS system.

Having no further business, the Market Information Systems (D) Task Force adjourned.

PRODUCER LICENSING (D) TASK FORCE

Producer Licensing (D) Task Force May 5, 2022, Minutes 8-151
2022 Revised Charges (Attachment One) 8-155

Draft: 10/3/22

Producer Licensing (D) Task Force
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
May 5, 2022

The Producer Licensing (D) Task Force met May 5, 2022. The following Task Force members participated: Larry D. Deiter, Chair (SD); Sharon P. Clark, Vice Chair (KY); Lori K. Wing-Heier represented by Kayla Erickson (AK); Jim L. Ridling represented by Jimmy Gunn (AL); Alan McClain represented by Peggy Dunlap (AR); Ricardo Lara represented by Charlene Ferguson (CA); Andrew N. Mais represented by Jill Marocchini and Kurt Swan (CT); Trinidad Navarro represented by Frank Pyle and Susan Jennette, and Robin David (DE); David Altmaier represented by Matt Guy and Matt Tamplin (FL); Doug Ommen represented by Jackie Russo (IA); Vicki Schmidt represented by Monica Richmeier (KS); James J. Donelon represented by Lorie Gasior (LA); Kathleen A. Birrane represented by Mary Kwei (MD); Anita G. Fox represented by Michele Riddering (MI); Chlora Lindley-Myers represented by Carrie Couch and Jo LeDuc (MO); Mike Chaney represented by Vanessa Miller (MS); Troy Downing represented by Mary Arnold (MT); Jon Godfread represented by Chris Aufenthie and John Arnold (ND); Eric Dunning (NE); Chris Nicolopoulos represented by Joan LaCourse and Christie Rice (NH); Marline Caride represented by Joe McDougal (NJ); Barbara D. Richardson represented by Jacob Roberts (NV); Judith L. French represented by Tynesia Dorsey (OH); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Carter Lawrence represented by Kim Biggs (TN); Cassie Brown represented by Randall Evans (TX); Jon Pike represented by Heidi Petermann (UT); Scott A. White represented by Mike Beavers and Richard Tozer (VA); Michael S. Pieciak represented by Mary Block (VT); Mike Kreidler represented by Jeff Baughman and Todd Dixon (WA); Nathan Houdek represented by Rebecca Rebholz (WI); Allan L. McVey represented by Greg Elam and Robert Grishaber (WV); Jeff Rude represented by Bryan Stevens (WY). Also participating were: Michael Conway represented by Steven Giampaolo (CO); and Barbara D. Richardson represented by Jacob Roberts (NV).

1. Adopted its 2021 Fall National Meeting Minutes

Mr. Boughman made a motion, seconded by Ms. Dunlap, to adopt the Task Force’s Nov. 29, 2021, minutes (*see NAIC Proceedings – Fall 2021, Producer Licensing (D) Task Force*). The motion passed unanimously.

2. Adopted its 2022 Revised Charges

Director Deiter said the next item is to consider the appointment of a new Adjuster Licensing (D) Working Group, which requires some minor edits to the Producer Licensing Task Force charges. He said the proposed revisions move the existing charge of the Task Force to a new Adjuster Licensing (D) Working Group. This charge is to “monitor state implementation of adjuster licensing and reciprocity and update, as necessary the NAIC adjuster licensing standards.” Director Deiter said adjuster licensing uniformity and reciprocity were being discussed prior to the COVID-19 pandemic but have not been discussed due to other priorities during the pandemic.

Director Deiter said the focus of this new Working Group would be on the licensing standards for independent adjusters, which 34 jurisdictions license. He said the following states do not license independent adjusters: Colorado, the District of Columbia, Illinois, Iowa, Kansas, Maryland, Massachusetts, Missouri, Nebraska, New Jersey, North Dakota, Ohio, Pennsylvania, South Dakota, Tennessee, Virginia, and Wisconsin. Director Deiter said the new Working Group would research ways to leverage electronic efficiencies to improve reciprocal adjuster licensing; explore effective options to reduce the number of variations in lines of authority that are not part of the independent adjuster guidelines; and, where necessary, open the independent adjuster guidelines for review and amendment. Prior to consideration by the Task Force, Director Deiter said he asked Rachel Chester (RI) to chair the new Working Group and is deferring to Ms. Chester on the selection of a vice chair.

Mr. Stevens made a motion, seconded by Commissioner Clark, to adopt the revised charges (Attachment One) and appoint a new Adjuster Licensing (D) Working Group. The motion passed unanimously.

3. Adopted Guidelines for Amending the NAIC Uniform Applications

Director Deiter said the Guideline for Amending the Uniform Licensing Application was circulated with the notice for this meeting. He said there were technical edits made to the draft discussed during the Task Force's Nov. 29, 2021, meeting. Director Deiter said substantive edits were made to subpoint 6 to clarify that NAIC staff for the Producer Licensing (D) Task Force will coordinate with the National Insurance Producer Registry (NIPR) and all states, which will include back-office system support vendors, during the next 45-day period to provide a time and cost estimate for the Task Force to review. The time frame of this coordination was extended from 30 days to 45 days. The Market Regulation and Consumer Affairs (D) Committee should consider the adoption of any revisions by Oct. 15 rather than Oct. 1. The Producer Licensing Uniformity (D) Working Group and the Producer Licensing (D) Task Force should still adopt any changes to the uniform applications by the close of the Summer National Meeting.

Ms. Ferguson questioned how the Producer Licensing (D) Task Force would address the proposed edits from 2018. Director Deiter said those proposed edits would be considered within the Guideline being considered today. Mr. Mullen explained that the Market Regulation and Consumer (D) Committee, the Executive (EX) Committee, and NAIC Plenary will need to adopt the Guideline, and he said he believes their consideration and adoption could occur by the close of the Summer National Meeting. To proceed with some initial work, Director Deiter requested Mr. Mullen to begin outreach to jurisdictions that requested the proposed amendments in 2018 to assess whether the amendments are still necessary.

Mr. Tozer made a motion, second by Ms. Ferguson, to adopt the Guideline for Amending the Uniform Licensing Applications (*see NAIC Proceedings – Summer 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven*). The motion passed unanimously.

4. Received a Report from the NIPR Board of Directors

Director Deiter said he serves as the president of the 2022 NIPR Board of Directors. He said NIPR began offering the processing of appointments and terminations for Massachusetts. With the addition of Massachusetts, NIPR is now processing appointments and terminations for all states. Massachusetts is now offering the full array of NIPR's online licensing services to all its producers, public adjusters, and auto damage appraisers, as well as several other license types. Director Deiter said NIPR continues to implement the Contact Change Request (CCR) application for business entities. To date, NIPR has 31 states in production and has processed more than 20,000 transactions on behalf of those states. The CCR application provides an additional electronic solution for the states and industry streamlining the licensing process. Director Deiter said NIPR continues to have another successful year, with revenues 5.8% over budget through the end of March.

5. Discussed the Status of the Draft NAIC Pet Insurance Model Act

Director Deiter said Commissioner Clark and he met with the leadership of the Property & Casualty (C) Committee and the Pet Insurance (C) Working Group regarding next steps regarding the provisions of the model act addressing producer licensing and training requirements. Director Deiter said the Pet Insurance (C) Working Group and the Property and Casualty Insurance (C) Committee would be taking the lead on making some minor edits to the draft model law and finalizing the model law for future consideration by the NAIC Members. Director Deiter encouraged any Task Force members or interested parties following this issue to engage directly with the Pet Insurance (C) Working Group and the Property and Casualty Insurance (C) Committee.

6. Discussed Other Matters

Director Deiter said NAIC staff have been working with representatives at Prudential to clarify industry's request and potential next steps regarding simplification of the 1033 waiver process. John Feeney (Prudential) said Prudential wants to enhance access to the 1033 waiver process and create more uniformity among states on how individuals obtain access to 1033 waiver forms. Mr. Feeney said the goal is to simplify the 1033 waiver process and not to have states issue more 1033 waivers or lower the standards for review.

Mr. Tozer said Virginia incorporates the review of 1033 waivers into its licensing process and does not require the submission of a separate form. He said many applicants are not aware of the need to request a waiver and suggested eliminating the use of a separate form.

Director Deiter said he understands Prudential has discussed this issue with Connecticut, Missouri, Pennsylvania, and Virginia and requested Mr. Mullen to coordinate with Prudential and a small group of regulator subject matter experts (SMEs) to develop some suggested next steps or proposal for the Producer Licensing (D) Task Force to review during its next meeting. Director Deiter said the Producer Licensing (D) Task Force will coordinate with the Antifraud (D) Task Force since the Antifraud (D) Task Force was responsible for the development of the *NAIC's Guidelines for State Insurance Regulators to the Violent Crime Control and Law Enforcement Act of 1994*.

Director Deiter said the American Council of Life Insurers (ACLI) and National Association of Insurance and Financial Advisors (NAIFA) submitted a comment letter focusing on the 1033 waiver process, eliminating mandatory pre-licensing education, the process that exam vendors use to set exam difficulty and pass rates of different demographic groups, and encouraging the use of online examinations. In addition, Director Deiter said Financial Security for All (Finseca) submitted a comment letter focusing on eliminating mandatory pre-licensing education, eliminating any cultural bias in exams, and encouraging states to award continuing education (CE) credit for a producer's mentoring in the first five years of licensure.

David Leifer (ACLI) said the ACLI comments are not focused on changing the underlying standards states use to license individuals and are focused on exam accessibility and availability. The ACLI encourages further discussion on changes to the 1033 waiver process, the continuing use of online examinations, the elimination of mandatory pre-licensing education, and offering of examinations in languages other than English.

Mr. Leifer said the elimination of unnecessary licensing barriers can benefit underserved communities and lead to greater diversity in the insurance marketplace. Mr. Leifer said the ACLI supports further discussion of these issues with the Producer Licensing (D) Task Force and suggested the NAIC *State Licensing Handbook* could be reviewed and updated to include best practices on the issues raised in the ACLI letter.

Melissa Bova (Finseca) said Finseca would like to work with the Producer Licensing (D) Task Force to address the low retention rate of insurance producers, which is 14% after the first five years of licensure. Ms. Bova said Finseca has seen a higher retention rate in companies that have mentoring and training programs for newly licensed producers.

Commissioner Clark questioned what parameters are being suggested for the state insurance departments to award CE credits for mentoring during the first five years of licensure. Commissioner Clark said there would need to be more discussion, including who could be qualified to be a mentor. Ms. Bova said Finseca would welcome the opportunity to work with the Producer Licensing (D) Task Force on the issues outlined in the comment letter.

Mr. Tozer said he would like to have further discussions about states receiving producer applications with errors or misstatements completed by authorized third-party submitters. Mr. Tozer suggested the development of best practices and a national solution to these issues. Ms. Ferguson agreed with Mr. Tozer and suggested the NAIC

uniform applications could possibly be amended to help address this issue. Director Deiter recognized states have different views on this issue and agreed this could be a topic for discussion during a future meeting.

Having no further business, the Producer Licensing (D) Task Force adjourned.

[ProdLic Min 5.5.22](#)

Draft: 3/12/22

Adopted by the Executive (EX) Committee and Plenary, XX, 2022

Adopted by the Market Regulation and Consumer Affairs (D) Committee, XX, 2022

Adopted by the Producer Licensing (D) Task Force, May 5, 2022

2022 Proposed Revised Charges

PRODUCER LICENSING (D) TASK FORCE

The mission of the Producer Licensing (D) Task Force is to: 1) develop and implement uniform standards, interpretations, and treatment of producer and adjuster licensees and licensing terminology; 2) monitor and respond to developments related to licensing reciprocity; 3) coordinate with industry and consumer groups regarding priorities for licensing reforms; and 4) provide direction based on NAIC membership initiatives to the National Insurance Producer Registry (NIPR) Board of Directors regarding the development and implementation of uniform producer licensing initiatives, with a primary emphasis on encouraging the use of electronic technology.

Ongoing Support of NAIC Programs, Products or Services

1. The **Producer Licensing (D) Task Force** will:
 - A. Work closely with NIPR to encourage the full utilization of NIPR products and services by all the states and producers, and encourage accurate and timely reporting of state administrative actions to the NAIC's Regulatory Information Retrieval System (RIRS) to ensure that this data is properly reflected in the State Producer Licensing Database (SPLD) and the Producer Database (PDB).
 - B. Facilitate roundtable discussions, as needed, with the state producer licensing directors for the exchange of views, opinions, and ideas on producer licensing activities in the states and at the NAIC.
 - C. Discuss, as necessary, state perspectives regarding the regulation and benefit of the activities of the federal Affordable Care Act (ACA), established enrollment assisters (including navigators and non-navigator assisters and certified application counselors), and the activities of producers in assisting individuals and businesses purchasing in the health insurance marketplaces. Coordinate with the Health Insurance and Managed Care (B) Committee and the Antifraud (D) Task Force, as necessary.
 - D. Monitor the activities of the National Association of Registered Agents and Brokers (NARAB) in the development and enforcement of the NARAB membership rules, including the criteria for successfully passing a background check.
 - E. Coordinate through NAIC staff to provide guidance to NIPR on producer licensing-related electronic initiatives. Hear a report from NIPR at each national meeting.
 - F. Coordinate with the Market Information Systems (D) Task Force and the Antifraud (D) Task Force to evaluate and make recommendations regarding the entry, retention, and use of data in the NAIC's Market Information Systems (MIS).
 - G. Coordinate with the Special (EX) Committee on Race and Insurance on referrals affecting insurance producers.
 - H. Discuss how criminal convictions may affect producer licensing applicants and review the NAIC's *Guidelines for State Insurance Regulators to the Violent Crime Control and Law Enforcement Act of 1994* to create a more simplified and consistent approach in how states review 1033 waiver requests.
2. The **Producer Licensing Uniformity (D) Working Group** will:
 - A. Work closely with state producer licensing directors and exam vendors to ensure that: 1) the states achieve full compliance with the standards in order to achieve greater uniformity; and 2) the exams test the qualifications for an entry-level position as a producer.
 - B. Provide oversight and ongoing updates, as needed, to the *State Licensing Handbook*.
 - C. Monitor and assess the state implementation of the Uniform Licensing Standards (ULS) and update the standards, as needed.
 - D. Review and update, as needed, the NAIC's uniform producer licensing applications and uniform appointment form. Provide any recommended updates to the Producer Licensing (D) Task Force by the NAIC Summer National Meeting.

3. The **Uniform Education (D) Working Group** will:
 - A. Update, as needed, the reciprocity guidelines, the uniform application forms for continuing education (CE) providers, and the process for state review and approval of instructors and courses. Provide any recommended updates to the Producer Licensing (D) Task Force by the 2022 Fall National Meeting.
 - B. Coordinate with NAIC parent committees, task forces, and/or working groups to review and provide recommendations, as necessary, on prelicensing education and CE requirements that are included in NAIC model acts, regulations, and/or standards.

4. The **Adjuster Licensing (D) Working Group** will:
 - A. Monitor state implementation of adjuster licensing and reciprocity; update, as necessary, the NAIC adjuster licensing standards.

NAIC Support Staff: Tim Mullen/Greg Welker

Financial Condition (E) Committee
Portland, Oregon
August 12, 2022

The Financial Condition (E) Committee met in Portland, OR, Aug. 12, 2022. The following Committee members participated: Scott A. White, Chair (VA); Elizabeth Kelleher Dwyer, Vice Chair (RI); Michael Conway represented by Rolf Kaumann (CO); David Altmaier (FL); Doug Ommen (IA); Timothy N. Schott and Vanessa Sullivan (ME); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers and John Rehagen (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Adrienne A. Harris represented by Bob Kasinow (NY); Michael Wise (SC); Cassie Brown represented by Jamie Walker (TX); Nathan Houdek and Amy Malm (WI); and Jeff Rude (WY). Also participating was: Dale Bruggeman (OH).

1. Adopted its July 21, May 20, and Spring National Meeting Minutes

The Committee met July 21 and took the following action: 1) adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act (#540)*; 2) adopted a document entitled of *Regulatory Considerations Applicable to (But Not Exclusive to) Private Equity (PE) Insurers*; and 3) adopted the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation (GCC)*. During its May 20 e-vote, the Committee adopted a memorandum of support for certain work performed related to various workstreams created because of the low interest rate environment and ongoing pressure from certain assets.

Commissioner Caride made a motion, seconded by Commissioner Ommen, to adopt the Committee's July 21 (Attachment One), May 20 (Attachment Two), and April 5 (*see NAIC Proceedings – Spring 2022, Financial Condition (E) Committee*) minutes. The motion passed unanimously.

2. Adopted the Reports of its Task Forces and Working Groups

Commissioner White stated that the Committee usually takes one motion to adopt the Committee's task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards; i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial. He reminded Committee members that subsequent to the Committee's adoption of its votes, all the technical items included within the reports adopted will be sent to the NAIC members for review shortly after the conclusion of the Summer National Meeting as part of the Financial Condition (E) Committee Technical Changes report. Pursuant to the Technical Changes report process previously adopted by the NAIC Plenary, the members will have 10 days to comment. Otherwise, the technical changes will be considered adopted by the NAIC and effective immediately. With respect to the task force and working group reports, Commissioner White asked the Committee: 1) whether there were any items that should be discussed further before being considered for adoption and sent to the Members for consideration as part of the Financial Condition (E) Committee Technical Changes report; and 2) whether there were other issues not up for adoption that are currently being considered by task forces or working groups reporting to this Committee that require further discussion. The response to both questions was no.

In addition to presenting the reports for adoption, Commissioner White also noted that the Financial Analysis (E) Working Group met July 22, July 6, June 29, and June 15 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses and financial results. Additionally, the Valuation Analysis (E) Working Group met Aug. 9, March 23, and Feb. 8 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies

Commissioner Caride made a motion, seconded by Ms. Malm, to adopt the following task force and working group reports: Accounting Practices and Procedures (E) Task Force; Capital Adequacy (E) Task Force; Examination Oversight (E) Task Force; Financial Stability (E) Task Force; Receivership and Insolvency (E) Task Force; Reinsurance (E) Task Force; Valuation of Securities (E) Task Force; Group Capital Calculation (E) Working Group (Attachment Three); Group Solvency Issues (E) Working Group (Attachment Four); Mutual Recognition of Jurisdictions (E) Working Group (Attachment Five); and National Treatment and Coordination (E) Working Group (Attachment Six). The motion passed.

3. Adopted Agenda Item 2021-21 and Blanks Proposal 2021-22BWG

Mr. Bruggeman said that included in the materials were agenda item 2021-21: Related Party Reporting, which adds reporting codes to identify related party transactions in several investment schedules, from the Statutory Accounting Principles (E) Working Group and blanks proposal 2021-22BWG from the Blanks (E) Working Group. Both proposals were previously summarized to the Committee during its July 21 meeting. They had now been unanimously adopted by the Accounting Practices and Procedures (E) Task Force and were ready for the Committee's consideration.

Ms. Walker made a motion, seconded by Mr. Kaumann, to adopt agenda item 2021-21: Related Party Reporting and blanks proposal 2021-22BWG (Attachment Seven). The motion passed.

4. Heard a Presentation from the Federal Reserve on their Supervisory Framework

Matt Walker (Federal Reserve Board—FRB) provided a summary of some of the updates the FRB has made recently to its supervisory framework (Attachment Eight) as it relates to insurance groups. The summary included discussion of how the revised framework recognizes differences with the banking industry and more specifically the role of state insurance regulators and the role of the FRB in such situations where a depository institution is also included within the holding company structure. In particular, the new guidance emphasizes the importance of collaborating with state insurance regulators and describes how FRB supervisory teams do this. The summary also discussed how the guidance distinguishes between complex groups and non-complex groups and how the guidance for each differs. Finally, the update describes how supervisory teams coordinate with state insurance regulators in order to minimize supervisory burden without sacrificing effective oversight.

Having no further business, the Financial Condition (E) Committee adjourned.

Draft: 7/28/22

Financial Condition (E) Committee
Virtual Meeting
July 21, 2022

The Financial Condition (E) Committee met July 21, 2022. The following Committee members participated: Scott A. White, Chair (VA); Elizabeth Kelleher Dwyer, Vice Chair (RI); Doug Ommen represented by Kevin Clark (IA); Timothy N. Schott represented by Robert Wake (ME); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers and John Rehagen (MO); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Adrienne A. Harris represented by Bob Kasinow (NY); Michael Wise represented by Daniel Morris (SC); Cassie Brown represented by Jamie Walker (TX); Nathan Houdek represented by Amy Malm (WI); and Jeff Rude (WY). Also participating were: James J. Donelon (LA); and Dale Bruggeman (OH).

1. Heard Opening Comments

Commissioner White highlighted the last agenda items related to the bond proposal project as a project that has been extensive and in existence for some time. He noted that the Statutory Accounting Principles (E) Working Group has made considerable progress, and he is pleased with that given that it is related to the elevated asset risk topic resulting from lower interest rates, which has been a priority of the Committee.

2. Adopted a Request for NAIC Model Law Development

Commissioner White noted that this model law request was from the Receivership and Insolvency (E) Task Force, but it was related to the work Superintendent Dwyer has been leading at the Restructuring Mechanisms (E) Working Group, and he asked for a summary of the model law request. Commissioner Donelon summarized the model law request before the Committee by noting that on June 2, the Task Force adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Guaranty Insurance Association Model Act* (#540). This model law request was originally proposed by the Working Group, who is charged with reviewing state laws regarding insurance business transfers (IBTs) and corporate divisions (CDs). Commissioner Donelon described that one area that was identified where model laws need to be amended is regarding how policyholders retain guaranty fund coverage after such transactions. He noted that the Receivership Law (E) Working Group and the Task Force sought input from state insurance regulators and industry, including the National Conference of Insurance Guaranty Funds (NCIGF) and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA). The model law request seeks to make amendments to address possible technical gaps that may exist in states that have adopted Model #540 within certain definitions to ensure there is guaranty fund coverage after the IBTs and CD transaction. Commissioner Donelon noted that the model law request was exposed by the Task Force for a 30-day public comment period. He noted that there was no opposition at either the Working Group or the Task Force to amend Model #540. He indicated that there was discussion on whether similar amendments are needed for the Life and Health Insurance Guaranty Association Model Act (#520), but it was decided that Model #520 does not require amendment.

Director Lindley-Myers made a motion, seconded by Commissioner Caride, to adopt the Request for NAIC Model Law Development (Attachment One-A). The motion passed unanimously.

3. Adopted Regulatory Considerations Applicable to (But Not Exclusive to) PE Insurers

Commissioner White noted that this item received a great deal of attention, including from Senator Sherrod Brown (D-OH), and he asked for a summary of the work. Commissioner Caride summarized the work leading to

consideration of adoption of the proposed document, which includes the “Regulatory Considerations Applicable to (But Not Exclusive to) Private Equity (PE) Insurers.” She reminded the Committee that the Financial Stability (E) Task Force previously charged the Macroprudential (E) Working Group with coordinating all NAIC efforts related to PE ownership of insurers. She noted that the Working Group quickly put together a list of 13 considerations state insurance regulators need to address after being charged with such work, noting that some NAIC committee groups were already working on issues related to some of the considerations. These considerations include activities frequently attributed to PE firms, but the Working Group members clearly specified that the list of 13 considerations is not limited to any specific ownership structure, PE or otherwise.

Commissioner Caride stated that once the list of 13 considerations was adopted by the Task Force, the Working Group proposed ways to address each consideration, including referrals to various NAIC committee groups with current related work or at least with charges encompassing the work involved. The document was titled the “Proposed Regulator Responses to the List of MWG Considerations,” and it was released for a 45-day public comment period. Commissioner Caride indicated that five comment letters were received by the June 13 deadline from Risk & Regulatory Consulting LLC; the American Council of Life Insurers (ACLI); the American Investment Council (AIC); UNITE HERE, a labor union for the hospitality industry; and Northwestern Mutual. She stated that from the five comment letters, the Working Group identified the items specifically affecting one or more of the 13 considerations. These were inserted into the exposed document along with state insurance regulators’ suggestions for how to respond to the comments, resulting in a new document. She noted that only key comments from the five comment letters are included in the new document. For example, the state insurance regulators appreciated the general comments of support but did not include them in the new document. Similarly, some high-level comments were excluded because the Working Group members did not see them as viable or actionable. On June 27, the Task Force held a joint meeting with the Working Group. The primary purpose of this joint meeting was to address comments received on the “Proposed Regulator Responses to the List of MWG Considerations” and consider adoption of a finalized plan for addressing the “List of MWG Considerations.” During the meeting, each of the five entities were offered the opportunity to speak to their comment letters. Additionally, during the meeting, each specific comment included in the new document was presented one at a time, and all parties were offered the chance to provide any concerns, suggestions, etc. While some comments were provided, none included concerns with moving forward with the current concepts or suggested any language changes. After reviewing all the comments inserted into the new document, a final opportunity to express any concerns with the overall document and its content was offered. There were no comments. The Working Group and the Task Force both adopted the new document unanimously. Commissioner Caride noted that upon adoption of the new document, NAIC staff finalized the language as the “Plan for List of MWG Consideration.”

Director Lindley-Myers made a motion, seconded by Mr. Kasinow, to adopt the “Plan for List of MWG Considerations” (Attachment One-B). The motion passed unanimously.

4. Adopted the *List of Jurisdictions that Recognize and Accept the Group Capital Calculation*

Commissioner White noted that this item is timely, as there are several states that made the group capital calculation (GCC) effective for year-end 2022, and this list being presented provides a pathway for some non-U.S. groups to obtain an exemption for that filing, and he asked Mr. Wake to summarize it. Mr. Wake said on June 29, the Mutual Recognition of Jurisdictions (E) Working Group met and adopted the draft *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*. He reminded the Committee that on Dec. 9, 2020, the Executive (EX) Committee and Plenary adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450), which establish the GCC framework. The Working Group was directed to create the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation*, which was adopted by the Executive (EX) Committee and Plenary on Dec. 16, 2021. Included in the *Process for Evaluating Jurisdictions that Recognize and*

Accept the Group Capital Calculation is a requirement for the Working Group to evaluate non-U.S. jurisdictions in accordance with the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation*, which would then be included on the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*, which is to be published through the NAIC committee process.

Mr. Wake noted that the draft *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation* includes the five reciprocal jurisdictions, which are the European Union (EU) and United Kingdom (UK) through their covered agreements, the following separately approved by the Working Group: Bermuda, Japan, and Switzerland. He also described that Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the GCC for U.S. operations of any non-U.S.-based insurance holding company system based in a Recognize and Accept Jurisdiction if after any necessary consultation with other supervisors or officials, the commissioner deems such a subgroup calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation* will also identify whether a listed jurisdiction requires a group capital filing for any U.S.-based insurance group's operations in that jurisdiction. He noted that the Working Group believes that the best source of this information will come from industry, as they will have direct exposure to the practices in these jurisdictions. He noted that the Working Group has asked the industry to provide any information related to this topic to their lead state insurance regulators, Jake Stultz (NAIC), and Dan Schelp (NAIC), who will bring this information to the Working Group to assess.

Mr. Wake made a motion, seconded by Commissioner Caride, to adopt the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation* (Attachment One-C). The motion passed unanimously.

5. Received an Update on Related Party Disclosures

Commissioner White noted the last two items both originated at the Statutory Accounting Principles (E) Working Group, and he asked Mr. Bruggeman, chair of the Working Group, to summarize the two products and their status. Mr. Bruggeman summarized an update to the Committee (Attachment One-D) on related party disclosures. The update included a statement that both the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group recently unanimously adopted new disclosures for related party reporting on the detail investment schedules. Specifically, the Statutory Accounting Principles (E) Working Group adopted clarifying language within *Statement of Statutory Accounting Principles (SSAP) No. 25—Affiliates and Other Related Parties* to better link Model #440 and Model #450 with the definitions of "Affiliate" and "Control." Mr. Bruggeman noted that the changes were done in conjunction with recent recommendations from the Macroprudential (E) Working Group regarding the risk of certain investments that involve related parties. The submission of the adopted statutory accounting and blanks revisions is planned to come before the Accounting Practices and Procedures (E) Task Force and the Committee at the Summer National Meeting.

Mr. Bruggeman provided a summary of the revisions and key discussion elements with the intent of understanding the information in advance of being asked to consider action. He noted that the primary goal of the adopted changes is to incorporate new reporting requirements for investment transactions to provide more transparency into the involvement of related parties. The intent is to provide information to state insurance regulators on whether an investment involves: 1) actual credit exposure to related parties; or 2) whether an investment involves a related party in the origination, servicing, or some other involvement with the investment. He noted that the revisions will affect all insurance reporting entities and will be effective Dec. 31. He stated that they affect all investment schedules except for Schedule A: Real Estate and will require the identification of related party involvement, for every investment, including investments captured on the affiliate reporting line. Note that an affiliate is a related party relationship for which there is control, either direct or indirect. Mr. Bruggeman stated

that there are six different codes that insurers will use to identify the type of related party involvement, or there is no related party relationship. The code is required for all investments to prevent “null” answers in which there is ambiguity on whether a response indicates no related party relationship or an inadvertent omission in reporting. Mr. Bruggeman noted that it is his experience that databases work better when they do not have to account for null fields. He noted that in addition to those new reporting codes, the Statutory Accounting Principles (E) Working Group adopted clarifications to make it clear that the existing affiliate definition applies to all types of entities and investment structures, including securitizations. He also noted that the current definition of “control” from Model #440 is already explicit that control can exist through arrangements besides voting interests. He stated that the clarifications add specificity around the application of this existing guidance to other types of non-voting entities. For example, securitization entities are typically controlled through non-voting arrangements. In addition, to the extent that such control is held by the reporting entity or its affiliates, then the securitization entity and any investments in it would be deemed affiliated.

Mr. Bruggeman summarized that most industry comments received on the disclosure part of the proposal pertained to the classification of investments as “affiliated.” Although the definition and guidance for “control” and “affiliate” distinction have not changed, the discussion highlighted that those differing interpretations seem to exist when an investment should be reported as affiliated. He also noted that the key discussion elements were noted in the memorandum at the bottom of page 2 and the top of page 3, but it is anticipated that the clarifying guidance should improve application, with an increase in reporting of affiliated investments by some insurers, and the new reporting codes will identify the nature of the related party relationship.

6. Received an Update on the Bond Proposal Project

Mr. Bruggeman summarized an update to the Committee (Attachment One-E) on the bond proposal project. He noted that during the Spring National Meeting, he provided the background and history of this project and therefore would not repeat that type of information, but he instead provided a high-level overview of the two categories for bond classification, issuer obligations (IOs), and asset-backed securities (ABS). The over-layering principle is that a bond is a creditor relationship in substance. The next level is an IO where repayment is primarily supported by the general creditworthiness of an operating entity, such as U.S. Treasuries or corporate debt. The other side is an ABS, which has the primary purpose of raising debt capital backed by collateral that provides cash flows to service the debt. Whether the collateral is a financial or non-financial asset, it must have substantive credit enhancement or put the investor in a different economic position than holding the collateral directly, usually done via overcollateralization. He noted that if the collateral is a non-financial asset, the guidance requires meaningful cash flows to service the debt; although, the guidance includes a practical expedient.

Mr. Bruggeman summarized the progress on the project by noting that state insurance regulators and key industry representatives have been working on this project as a top priority to improve accounting and reporting and ensure that regulators have transparency to the investment risks held by insurers. At this time, the key state insurance regulator and industry individuals involved in the project believe that the main principles are set. Mr. Bruggeman noted that during a Statutory Accounting Principles (E) Working Group call on July 18, a representative from the main interested party group reiterated comments that state insurance regulators and industry are aligned with key concepts. As a result, NAIC staff were asked to prepare documents for changes to *SSAP No. 26R—Bonds* and *SSAP No. 43R—Loan-Backed and Structured Securities* so those can hopefully be exposed during the Summer National Meeting. He noted that this is a key next step, as the statutory guidance reflects the authoritative literature for investment classification and accounting concepts. Also from the July 18 call, the Working Group exposed documents until Oct. 7, proposing significant revisions to the reporting of bond investments to improve the granularity of investment reporting. This is a significant change from the current reporting approach, but it will provide valuable information to state insurance regulators on the actual investments held by insurers.

Mr. Bruggeman highlighted key aspects of this exposure. He noted that the bond detail list schedule, known as Schedule D Part 1, is proposed to be expanded from one to two separate schedules. He noted that Schedule D Part 1 Section 1 will include issuer obligations, and Schedule D Part 1 Section 2 will include ABS. The sum of the two schedules will still roll up to the Bonds line on the Assets page. He stated that rather than classifying all bonds into one of four generic reporting groups, new reporting groups have been proposed to separate investments based on underlying characteristics. To provide examples, instead of classifying all ABS as either residential mortgage-backed securities (RMBS), commercial mortgage-backed securities (CMBS), or other ABS, reporting lines are proposed to identify collateralized loan obligations (CLOs), equity-backed ABS, and lease-backed ABS. He noted that with the separation of the schedules, different data columns can be designed based on the broad investment classification. A review of the reporting instructions has been completed, and several revisions are proposed to streamline reporting, eliminate elements not applicable to certain securities, and propose new columns to capture desired information. Mr. Bruggeman stated that the revisions should result in an improvement to state insurance regulators on provided information and eliminate inconsistency or uncertainty for industry in compliance.

Mr. Bruggeman noted that with the steady progress by the Working Group and the exposure of statutory accounting revisions, one of the key questions received pertains to the effective date and transition. He noted that based on time parameters for incorporating blanks reporting changes, the earliest the guidance could be effective would be Jan. 1, 2024. This would require that the reporting revisions be adopted by the Blanks (E) Working Group by May 2023. Mr. Bruggeman noted that as that deadline is quickly approaching, it is likely that revisions will be effective Jan. 1, 2025. For transition, it should be important to note that investments that do not qualify as bonds after the guidance is adopted will not be permitted to be reported as bonds under statutory accounting principles. There is no grandfathering planned for investments to continue to be reported as bonds that do not comply. This approach is necessary to ensure consistency with reporting across reporting entities. Although grandfathering guidance is not expected, some practical transition assessments will be considered. For example, it is recognized that historical “time of acquisition” assessments may not be feasible for existing investments; therefore, reasonable accommodations are anticipated to prevent undue hardship for reporting entities in complying with the guidance. Mr. Bruggeman summarized that he is pleased to share the progress on this key project and encourage Committee members, as well as all state insurance regulators and interested parties, to actively follow this project as we move forward with key statutory accounting and reporting revisions.

Having no further business, the Financial Condition (E) Committee adjourned.

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force to complete the drafting. Referred by the Restructuring Mechanisms (E) Working Group.

2. NAIC staff support contact information:

Jane Koenigsman
jkoenigsman@naic.org
816-783-8145

Dan Daveline
ddaveline@naic.org
816-783-8134

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

- ***Property and Casualty Insurance Guaranty Association Model Act (#540)***

In 2019, the Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group who was charged with the following:

1. Evaluate and prepare a white paper that:
 - a. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
 - b. Summarizes the existing state restructuring statutes.
 - c. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
 - d. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
 - e. Identifies and addresses the legal issues associated with restructuring using a protected cell.

Background for Proposed Change

This proposed change is being precipitated by discussions within the NAICs Restructuring Mechanisms (E) Working Group initiative, which is focused on documenting in the form of a White Paper, the various issues related to insurance business transfers (IBT) and corporate division (CD) transactions. The number of states adopting laws that permit either of these transactions is still relatively low; however, one of the most significant issues that has been discussed during the meetings of the Working Group is the need for policyholders subject to such transactions to retain guaranty fund coverage. Representatives of the National Conference of Insurance Guaranty Funds (NCIGF) have suggested that an amendment to a state's guaranty fund act, or other related law, is necessary to address this issue. They have specifically suggested that the NAIC update the Property and Casualty Insurance Guaranty Association Model Act, and they have developed specific language to address this issue. An amendment will better enable those states that have incorporated #540 into their laws to update their laws for this important issue, to ensure policyholders in all states

retain their coverage. Because guaranty association coverage follows the state of licensure rather than the state of domicile, adequately addressing these concerns is necessary regardless of the type of transfer and regardless of how few states adopt changes to their laws to allow IBT and CD transactions.

Scope of the Proposed Revisions to Model 540

The scope of the request is limited to addressing the issue of continuity of guaranty fund coverage when a policy is transferred from one insurer to another. The request is therefore to the specific proposal to revise the definition of “Covered Claim” within #540, or other language determined to be appropriate to address the need for continuity of protection. The following is the additional language (underlined language) that has been proposed to be added to Section 5, Definitions, within #540.

H. “Covered claim” means the following:

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.
- (d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why:

This proposed change is needed to ensure policyholders in all states retain their guaranty fund coverage, which is necessary regardless of how few states adopted changes to their laws to allow IBT and CD transactions.

It should be noted that with respect to guaranty fund coverage for life and health insurance, the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) is suggesting a different approach to address the same issue in the life and health context. NOLHGA’s proposal centers around the need for such transaction to require the assuming or resulting insurer to be licensed in all states where the issuing insurer was licensed or ever was licensed to retain the needed coverage for policyholders.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: See previous discussion.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

Not referenced in Accreditation Standards.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.

Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers

A summary of currently identified regulatory considerations follows with no consideration of priority or importance (green underlined font indicates current or completed work by another NAIC committee group). Most of these considerations are not limited to PE owned insurers and are applicable to any insurers demonstrating the respective activities. A summary of the regulatory process has been added to this document since it is being used by individuals less familiar with the state insurance regulatory system, and the results of regulator discussions on how to move forward have been added to specific considerations in blue font. **The proposed regulator responses are exposed for a 45-day comment period.**

State insurance regulators monitor the solvency of each legal entity insurer, including assessing risks from the broader holding company when an insurer is part of a group, making use of routinely required disclosures, both public, such as the statutory financial statements, and confidential, such as the Risk-Based Capital (RBC) supplemental filing and Holding Company form filings. Regulators also use many analysis and examination tools and procedures for each insurer and/or insurance group. Regulatory responses to the analysis and examination work depend upon the results of those reviews. One specific area of solvency monitoring work focuses on potential acquisitions of a US legal entity insurer, involving a Form A filing. In 2013, guidance was added to the NAIC Financial Analysis Handbook for Form A reviews when a private equity owner was involved, although these considerations are not limited to PE acquisitions. The guidance provides examples of stipulations, both limited time and continuing, regulators could use when approving the acquisition to address solvency concerns, as well as for use in ongoing solvency monitoring. Examples follow:

Limited Time Stipulations:

- Requiring RBC to be maintained at a specified amount above company action level/trend test level. Because capital serves as a buffer that insurers use to absorb unexpected losses and financial shocks, this would better protect policyholders.
- Requiring quarterly RBC reports rather than annual reports as otherwise required by state law.
- Prohibiting any dividends, even ordinary.
- Requiring a capital maintenance agreement or prefunded trust account.
- Enhancing the scrutiny of operations, dividends, investments, and reinsurance by requiring material changes in plans of operation to be filed with the commissioner (including revised projections), which, at a minimum, would include affiliated/related party investments, dividends, or reinsurance transactions to be approved prior to such change.
- Requiring a plan to be submitted by the group that allows all affiliated agreements and affiliated investments to be reviewed, despite being below any materiality thresholds otherwise required by state law. A review of agreements between the insurer and affiliated entities may be particularly helpful to verify there are no cost-sharing agreements that are abusive to policyholder funds assessment.

Continuing Stipulations:

- Requiring prior commissioner approval of material arms-length, non-affiliated reinsurance treaties or risk-sharing agreements.
- Requiring notification within 30 days of any change in directors, executive officers or managers, or individuals in similar capacities of controlling entities, and biographical affidavits and such other information as shall reasonably be required by the commissioner.

- Requiring filing of additional information regarding the corporate structure, controlling individuals, and other operations of the company.
- Requiring the filing of any offering memoranda, private placement memoranda, any investor disclosure statements or any other investor solicitation materials that were used related to the acquisition of control or the funding of such acquisition.
- Requiring disclosure of equity holders (both economic and voting) in all intermediate holding companies from the insurance company up to the ultimate controlling person or individual but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of audit reports/financial statements of each equity holder of all intermediate holding companies but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of personal financial statements for each controlling person or entity of the insurance company and the intermediate holding companies up to the ultimate controlling person or company. Controlling person could include for example, a person who has a management agreement with an intermediate holding company.

Among many other concepts, regulators are considering the need for any additional stipulations, if there are some stipulations that should be required instead of used subjectively, and use of some stipulations beyond the Form A acquisition process (e.g., for insurers acquired in the past).

RRC Comments “In a Form A transaction” (7 bullet points) – Suggest including these in the referrals to the NAIC Group Solvency Issues (E) Working Group and the NAIC Risk-Focused Surveillance (E) Working Group for consideration when addressing Consideration numbers 1, 2, 4 and 5.

1. Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Items discussed:
 - Instead of requiring for all Form A acquisitions to provide additional disclosures, structure an optional disclosure requirement that can be used when unresolved regulatory concerns exist with the acquisition. For example:
 - Disclosures to allow regulators to assess the goal of the potential owner in acquiring the insurer, how the potential owner will be paid and in what amounts, and the ability of the potential owner to provide capital support as needed.
 - Copies of disclosures provided to the potential owner’s investors.
 - Provide training as needed to states with less experience reviewing complex Form A transactions and refer those states to more experienced states for live help.

- These options include highlighting the need to use external expertise for complex transactions, especially to understand non-U.S. affiliations and when assessing multiple complex Form A applications, and at the expense of the Form A applicant.

AIC Comment (recommended 2 items) – Suggest including this recommendation in the referral to the NAIC Group Solvency Issues (E) Working Group for its work on Consideration #1.

- Recommendation: The Working Group should assess, among other items: (i) the need to provide regulatory certainty *vis a vis* when and on what basis additional disclosures could be required; and (ii) whether the additional disclosures would extend approval timelines. We believe such items are critical to insurers being able to access the capital markets effectively and efficiently.
2. Control is presumed to exist where ownership is $\geq 10\%$, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation. Asset-management services may need to be distinguished from ownership when assessing and considering controls and conflicts.

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Regulators recognized the integral connection of the first two considerations. Items discussed:
 - An emphasis on training and providing detailed examples to address the complexity and creativity involved in some of these Form A agreements and holding company structures.
 - It is not practical to get copies of operating agreements from every entity in a group to assess control impacts to the insurers. Consider ways of better targeting the pertinent agreements to assess, including a potential list of questions about less than 10% owners for use when considering Form A applications and/or ongoing analysis.
 - Consider if Form B (Insurance Holding Company System Annual Registration Statement) disclosure requirements should be modified to address these considerations.

AIC Comment (2 primary concerns) – Suggest asking the AIC to follow the work of the NAIC Group Solvency Issues (E) Working Group on Consideration #2 and make comments on specific recommendations if needed.

- Concerns: The 10% presumption of control needs to remain; and contractual terms contained in service agreements that are negotiated on an arm's length basis are not sufficient to convey the power to direct or cause the direction of an insurer, so long as they are subject to the ultimate supervision and control by the insurer.
3. The material terms of the IMA and whether they are arm's length or include conflicts of interest — including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and

the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

Regulator discussion results:

- Refer this item to the NAIC Risk-Focused Surveillance (E) Working Group. Regulators recognized similar dynamics to the first two considerations, but this Working Group was selected because it is already currently focused on a project involving affiliated agreements and Form D filings. Items discussed:
 - o Consider training and examples, such as unique termination clauses and use of sub-advisors with the potential for additive fees, and strategies to address these.
 - This included addressing pushback on obtaining sub-advisor agreements as Form D disclosures and some optional disclosures for the Form A.
 - o Given the increasing prevalence of bespoke agreements, does it make sense to tie this work in to the work of the NAIC Valuation of Securities (E) Task Force and/or the NAIC Securities Valuation Office? If yes, how best to do so?
 - o Surplus Notes and appropriate interest rates given their special regulatory treatment, including whether floating rates are appropriate; follow any Statutory Accounting Principles (E) Working Group projects related to this topic and provide comments needed.

RRC Comments “With respect to an Investment Management Agreement (IMA” (3 bullet points) - Suggest including these in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for Consideration #3.

AIC Comments on “Conflict of Interest, Fees, Termination” (3 individual comments) – Suggest including these comments in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for its work on Consideration #3.

4. Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.
 - a. Life Actuarial (A) Task Force (LATF) work addresses this – helping to ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.

Regulator discussion results:

- In addition to LATF’s work, refer this item to the NAIC Risk-Focused Surveillance (E) Working Group, as it is already looking at some of this work related to affiliated agreements and fees. Items discussed:
 - o Capital maintenance agreements, suggesting guidance for the appropriate entities to provide them and considering ways to make them stronger.

5. Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs due to the acquiring firm's lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.
 - a. The NAIC Financial Analysis Handbook includes guidance specific to Form A consideration and post approval analysis processes regarding PE owners of insurers (developed previously by the Private Equity Issues (E) Working Group).

Regulator discussion results:

- Regulators considered referring this consideration to the NAIC Risk-Focused Surveillance (E) Working Group but opted to keep developing more specific suggestions for now. Items discussed:
 - o Consider optional Form A disclosures and guidance for less experienced states; review EU conduct of business language and consider if similar concepts would help target the optional use.
 - o Consider more detailed guidance for financial examinations.
 - o Besides just inexperience, the consideration also includes intentional actions that ignore known concerns to achieve owner's results; might need to consider Market Conduct group(s).
6. No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers' material relationships with PE firms. (UCAA (National Treatment WG) dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

Regulator discussion results:

- Regulators do not believe a PE definition is needed, as the considerations are activity based and apply beyond PE owners.
7. The lack of identification of related party-originated investments (including structured securities). This may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure, as assets created and managed by affiliates may include fees at different levels of the value chain. For example, a CLO which is managed or structured by a related party.
 - a. An agenda item and blanks proposal are being re-exposed by SAPWG. Desire for 2022 year-end reporting to include disclosures identifying related-party issuance/acquisition.

Regulator discussion results:

- Regulators are comfortable the SAPWG's work is sufficient as a first step since it involves code disclosures to identify various related party issues. They also recognize that existing and/or referred work at the Risk-Focused Surveillance (E) Working Group may address some items in this consideration. Once regulators work with these SAPWG disclosures and other regulatory enhancement, further regulatory guidance may be considered as needed.

8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments. Additionally, transactions may be excluded from affiliated reporting due to nuanced technicalities. Regulatory disclosures may be required to identify underlying related party investments and/or collateral within structured security investments. This would include, for example, loans in a CLO issued by a corporation owned by a related party.
- a. An agenda item and blanks proposal are being re-exposed by SAPWG. The concept being used for investment schedule disclosures is the use of code indicators to identify the role of the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments.

Regulator discussion results:

- Like the previous consideration, regulators are looking forward to using these code disclosures to help target areas for further review. However, specific to CLO/structured security considerations, regulators support a referral to the Examination Oversight (E) Task Force. Specific items discussed include:
 - o Since investors in CLOs obtain monthly collateral reports, regulators should consider asking for such reports when concerns exist regarding a company's potential exposure to affiliated entities within their CLO holdings.
 - o Regulators would like to have more information regarding the underlying portfolio companies affiliated with a CLO manager to help quantify potential exposure between affiliates and related parties.
 - o Regulators request NAIC staff to consider their ability to provide tools and/or reports to help regulators target CLOs/structured securities to consider more closely.

RRC Comments on "collateralized loan obligations (CLOs)" (2 bullets) – Suggest including these in the referrals to the NAIC Examination Oversight (E) Task Force and the NAIC Risk-Focused Surveillance (E) Working Group for Consideration numbers 7, 8 and 9, but also sending to the NAIC Statutory Accounting Principles (E) Working Group for its existing work related to these Considerations.

9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. A new Schedule Y, Pt 3, has been adopted and is in effect for year-end 2021. This schedule will identify all entities with greater than 10% ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party.
- a. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to use principles to determine what reflects a qualifying bond and to identify different types of investments more clearly. For example, D1 may include issuer credits and traditional ABS, while a sub-schedule of D1 could be used for additional disclosures for equity-based issues, balloon payment issues, etc. This is a much longer-term project, 2024 or beyond.

Regulator discussion results:

- Regulators recognize the new Schedule Y, Part 3, will give them more insights for owners of greater than 10%, but it does not provide insights for owners of less than 10%. However, regulators also

recognize that existing and/or referral work of the Risk-Focused Surveillance (E) Working Group may help with some of this dynamic. Additionally, since the SAPWG 2022 code project and its longer-term Schedule D revamp project will help provide further disclosures that will assist with this consideration, regulators are comfortable waiting to see if further regulatory guidance is needed after using the resulting disclosures and other enhancements from these projects.

- Specific to owners of less than 10%, regulators discussed the April 19, 2022, Insurance Circular Letter No. 5 (2022) sent by the New York Department of Financial Services to all New York domiciled insurers and other interested parties. This letter highlights that avoiding the levels deemed presumption of control, e.g., greater than 10% ownership, does not create a safe harbor from a control determination and the related regulatory requirements. The circular letter was distributed to all MWG members and interested regulators.

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)
 - a. LATF's exposed AG includes disclosure requirements for these risks as well as how the insurer is modeling the risks.
 - b. SVO staff have proposed to VOSTF a blanks proposal to add market data fields (e.g., market yields) for private securities. If VOSTF approves, a referral will be made to the Blanks WG.

Regulator discussion results:

- Regulators focused on the need to assess whether the risks of these investments are adequately included in insurers' results and whether the insurer has the appropriate governance and controls for these investments. Regulators discussed the potential need for analysis and examination guidance on these qualifications.
- To assist regulators in identifying concerns in these investments, regulators expressed support for the VOSTF proposal to obtain market yields to allow a comparison with the NAIC Designation. Once such data is available, regulators ask NAIC staff to develop a tool or report to automate this type of initial screening. Also, regulators again recognized the SAPWG Schedule D revamp work will help in identifying other items for initial screening.
- The regulators discussed LATF's exposed AG, noting the Actuarial Memorandum disclosures that would be required for these privately structured securities along with the actuarial review work, and recognizing how those would be useful for analysts and examiners when reviewing these investments. Additionally, the Valuation and Analysis (E) Working Group would be able to serve as a resource for some of these insights for states without in house actuaries.
- As a result of the above discussions, regulators agreed to a referral to the Examination Oversight (E) Task Force to address the disclosures that will be available from LATF's exposed AG. They agreed to wait for any further work or referral until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project.

RRC Comments on “privately structured securities” (2 bullets, 1 with 2 sub-bullets) – Suggest including these in the referral to the NAIC Examination Oversight (E) Task Force for Consideration #10 but also sending to the NAIC Valuation of Securities (E) Task Force for its existing work related to this Consideration.

AIC Comment on “Privately Structured Securities” (6 bullets) – Suggest asking the AIC to follow the work of the NAIC Examination Oversight (E) Task Force and the NAIC Valuation of Securities (E) Task Force and provide comments on specific recommendations if needed.

RRC Comment on the work by the NAIC Life Actuarial (A) Task Force (LATF) – Suggest adopting this recommendation as an addition to the Regulatory Discussion results and sending the referral.

- Recommendation: Since reserves are not intended to capture tail risk, refer this item to the NAIC RBC Investment Risk and Evaluation (E) Working Group and monitor the Working Group’s progress.

11. The level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency).
 - a. VOSTF has previously addressed and will continue to address this issue. A small ad hoc group is forming (key representatives from NAIC staff, regulators, and industry) to develop a framework for assessing rating agency reviews. This will be a multi-year project, will include discussions with rating agencies, and will include the inconsistent meanings of ratings and terms.

Regulator discussion results:

- Regulators agreed to monitor the work of the ad hoc group in lieu of any specific recommendations at this time. Recognizing this will likely be a multi-year project, regulators reserve the right to raise specific concerns that may arise as the various NAIC committee groups work to address this list of considerations.

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above. (Enhanced reporting in 2021 Separate Accounts blank will specifically identify assets backing PRT liabilities.) Considerations have also been raised regarding the RBC treatment of PRT business.
 - a. LATF has exposed an Actuarial Guideline to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets (note – LATF’s considerations are not limited to PRT). Comment period for the 2nd exposure draft ends on May 2.

Regulator discussion results:

- Regulators focused on the need to have disclosures on the risks to the General Account from the Separate Account PRT business – for guarantees but also reporting/tracking when the Separate Account is not able to support its own liabilities. Regulators noted the need to address the differences between buy in PRT transactions and buy out.
- Regulators are comfortable LATF is addressing the reserve considerations. To address the disclosure considerations, regulators support sending a referral to the Statutory Accounting Principles (E) Working Group since regulators suggested it be an item in the Notes to

Financial Statements. (Regulators noted it might help to discuss such disclosure concepts with LATF's Valuation Manual 22 (A) Working Group.)

- While the exposed AG is not limited to PRT, and general disclosures may be helpful, regulators recognized additional and/or more specific disclosures may be needed for PRT business.

- b. Review applicability of Department of Labor protections resulting for pension beneficiaries in a PRT transaction.

Regulator discussion results:

- Regulators discussed concerns regarding potential differences between the pension benefit and the group annuity benefit in the PRT transaction.
- Regulators directed NAIC staff to further research this item for the MWG to address in the near future, including potential discussions with Department of Labor representatives.

- c. Review state guaranty associations' coverage for group annuity certificate holders (pension beneficiaries) in receivership compared to Pension Benefit Guaranty Corporation (PBGC) protection.

- i. NOLHGA provided 2016 study of state guaranty fund system vs. PBGC.

Regulator discussion results:

- Regulators recognized the difficulty in comparing the state guaranty system to the Pension Benefit Guarantee Corporation, as detailed in the NOLHGA study. However, they agreed policyholders should appreciate the benefit of having solvency regulators actively monitoring and working with the insurance companies in an attempt to prevent the need for any guaranty fund usage, as standard corporations holding pension liabilities have significantly less regulatory oversight.
- Regulators found the NOLHGA study responsive to this consideration, thus they suggested no further action.

- d. "Considerations have also been raised regarding the RBC treatment of PRT business."

Regulator discussion results:

- Regulators recognized the work of the Longevity Risk Transfer (LRT) Subgroup of the Life Risk-Based Capital (E) Working Group covers PRT business. A new LRT charge was included in the 2021 Life Risk-Based Capital (LRBC) formula. Regulators agreed the results of this new charge should be monitored.
- While regulators agreed to follow the work of the LRT Subgroup, they suggested no further action at this time.

13. Insurers' use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency, reduce reserves, increase investment risk, and introduce complexities into the group structure.

- a. LATF's exposed AG was modified to require the company to provide commentary on reinsurance collectability and counterparty risk in the asset adequacy analysis memorandum.

The original concept of requiring life insurers to model the business itself even if it uses these mechanisms to share/transfer risk was deferred to allow time to consider and address concerns over potential violations with EU/UK covered agreements and the 2019 revisions to NAIC Models 785 and 786.

Regulator discussion results:

- Regulators held candid conversations about the need to understand why insurers are using these types of offshore reinsurers. If there are problems in the U.S. regulatory system that are driving insurers to utilize offshore reinsurers (e.g., “excess” reserves), we should know of those problems so we can consider if there are appropriate changes to make.
- If there are other drivers, per the common theme in the regulators’ review of this list of considerations, there isn’t a presumption that the use of these transactions is categorically bad. Rather, there is a need to understand the economic realities of the transactions so the regulators can effectively perform their solvency monitoring responsibilities.
 - o Regulators discussed the potential concept of additional Holding Company Act requirements if these are affiliated reinsurers, disclosing the insurer benefits (reserves, capital, etc.).
- Regulators deferred specifying action on this item at this time, instead noting the desire to have meetings with industry representatives using these transactions and regulators from some of the offshore jurisdictions to gain more insights.

Northwestern Mutual Comment (2 cautions) – Suggest including these cautions as part of the MWG’s future discussions and work for this Consideration.

- Caution: Reinsurance transactions can and often do serve a valuable function by reallocating risk. However, offshore reinsurance can also result in lower total reserves and capital, reduced state regulatory oversight, and diminished stakeholder transparency from what would be required by the statutory accounting and risk-based capital requirements the NAIC has established to protect policyholders in the United States.
- Caution: Without progress and action on the item pertaining to offshore reinsurance, the Working Group’s progress on other MWG Considerations could further incentivize even more utilization of offshore reinsurance transactions and undercut the NAIC’s efforts to close other solvency regulatory gaps domestically. In the long run, a system that encourages companies to transfer business to a related offshore entity in order to alter their reserves and capital from uniform standards diminishes the strength of reserve and capital regulation in the United States. If capital standards are deemed to be too conservative in the US, they should be addressed transparently and uniformly through the NAIC and not through the alternate means of offshore reinsurance.

• **Additional regulator discussion result:**

- Similar to the result of discussions for the 13th consideration, regulators expressed a desire to meet with various industry representatives to discuss the incentives behind private equity ownership of insurers and conversely the concerns other industry members may have with such ownership. Regulators believe the insights from these conversations will benefit their ability to monitor and, when necessary, contribute to the work occurring in the various NAIC committee groups regarding these considerations.

NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation

Reciprocal Jurisdictions (Model #440, Section 4L(2)(c)

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
Member States of the European Union	Respective Member State Supervisory Authorities	January 1, 2022	
United Kingdom (UK)	Prudential Regulation Authority of the Bank of England (PRA)	January 1, 2022	
Bermuda	Bermuda Monetary Authority (BMA)	January 1, 2022	
Japan	Financial Services Agency (FSA)	January 1, 2022	
Switzerland	Financial Market Supervisory Authority (FINMA)	January 1, 2022	

Recognize and Accept Jurisdictions (Model #440, Section 4L(2)(d)

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
None currently			

Group Capital Calculation. On December 9, 2020, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC's GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions detailed in the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation*) if its groupwide supervisor "recognizes and accepts" the GCC for U.S. groups doing business in that jurisdiction.

List of Jurisdictions that Recognize and Accept the GCC. The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with the "Recognize and Accept" Process. A list of "Recognize and Accept" Jurisdictions is published through the NAIC committee process. Sections 21D and 21E of Model #450 provide a general framework for how the process to identify "Recognize and Accept" Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process.

NAIC Listing Process. Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

- (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction "recognizes the U.S. state regulatory approach to group supervision and group capital" (Model #440, Section 4L(2)(c)); or
- (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Evaluation of Reciprocal Jurisdictions. Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a "recognize and accept" evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as "Recognize and Accept" Jurisdictions. Likewise, in view of the terms of the EU and UK Covered Agreements, all EU Member States and the UK are automatically designated "Recognize and Accept" Jurisdictions. If there is a material change to the terms of the U.S.-EU or U.S.-UK Covered Agreement, or if the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will consider, and will consult with FIO and USTR regarding, whether and how the applicability of the procedures in this document may apply.

Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

The specific details of the GCC Recognize and Accept process can be found in the [Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation.](#)

MEMORANDUM

TO: Financial Condition (E) Committee
 FROM: Statutory Accounting Principles (E) Working Group
 DATE: July 21, 2022
 RE: Related Party Reporting

This memorandum intends to provide information to the Financial Condition (E) Committee on recent adoptions by the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group regarding the identification of related party involvement with investments. This is preliminary communication to the Committee, as the revisions will impact all insurance reporting entities and the discussion included affiliate identification. Submission of the statutory and blanks revisions for adoption consideration to the Accounting Practices and Procedures (E) Task Force and Financial Condition (E) Committee will occur at the Summer National Meeting. The intent is to provide information on the action as well as key discussion elements to allow Committee members to receive this information prior to considering action during the Summer National Meeting.

In conjunction with recent recommendations from the Macroprudential (E) Working Group regarding the risk of certain investments that involve related parties, in May 2022, the Statutory Accounting Principles (E) Working Group adopted its agenda item *2021-21: Related Party Reporting*.

The primary goal of this agenda item was to incorporate new reporting requirements for investment transactions with related parties in order to provide more transparency into the nature of the involvement of related parties. For example, it allows regulators to understand whether the investment involves credit exposure to related parties or whether the investment involves a related party in the origination or servicing of the investment. This reporting applies to all investments involving related parties, regardless of whether they meet the definition of an affiliate per Model #440.

With an effective date of Dec. 31, 2022, schedules: B – Mortgage Loans, D – Long-Term Bonds, DB – Derivatives, BA – Other Long-Term Invested Assets, DA – Short-Term Investments, E2 – Cash Equivalents, and DL – Securities Lending Collateral Assets will require the identification of related party involvement for every investment.

Investments Involving Related Parties:

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control / affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a **direct credit exposure**.

EXECUTIVE OFFICE • 444 North Capitol Street NW, Suite 700 • Washington, DC 20001-1509

p | 202 471 3990 f | 816 460 7493

CENTRAL OFFICE • 1100 Walnut Street, Suite 1500 • Kansas City, MO 64106-2197

p | 816 842 3600 f | 816 783 8175

CAPITAL MARKETS & INVESTMENT ANALYSIS OFFICE • One New York Plaza, Suite 4210 • New York, NY 10004

p | 212 398 9000 f | 212 382 4207

www.naic.org

2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies **involving a relationship with a related party** as sponsor, originator, manager, servicer, or other similar influential role **and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.**
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies **involving a relationship with a related party** as sponsor, originator, manager, servicer, or other similar influential role and **for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.**
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

[Commentary – While feedback from interested parties indicated that most investments do not involve a related party, the Statutory Accounting Principles (E) Working Group communicated support to make the related party identification field **mandatory**, thus a “blank” indication will not be permitted. This eliminates ambiguity on whether an investment does not have a related party involvement or whether the component of the investment schedule was inadvertently not completed.]

In addition to the new reporting granularity, the agenda item also adopted clarifications to SSAP No. 25 and *SSAP No. 43R—Loan-Backed and Structured Securities* to make clear that the existing affiliate definition applies to all types of entities, including securitizations. Existing guidance already made clear that control may exist through arrangements other than voting interests, such as in the case of a limited partnership where control is typically held by the general partner. The adopted clarifications simply add specificity around the application of this existing guidance to other types of non-voting entities. For example, securitization entities are typically controlled through non-voting arrangements. To the extent that such control is held by the reporting entity or its affiliates, then the securitization entity and any investments in it would be deemed affiliated.

While both the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group have adopted the revisions, with a Dec. 31, 2022, effective date, consideration by the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee will occur during the Summer National Meeting. Although industry comments were submitted and considered by the Statutory Accounting Principles (E) Working Group on the proposed statutory accounting changes, the statutory revisions and support for the reporting revisions were unanimously adopted with limited changes from the exposure. No industry comments were presented at the Blanks (E) Working Group, and the reporting revisions were also adopted unanimously by that Group.

Key discussion elements in response to comments considered at the Statutory Accounting Principles (E) Working Group are summarized below.

- **There are no revisions that changes the current definition of an affiliate or reporting on the affiliate reporting line.** Although industry comments suggested that the statutory additions require a “look through” exercise that did not exist, existing statutory guidance and the holding company act already state that control includes “possession, directly or **indirectly**, of the power to direct or cause the direction of the management and policies of the investee” and that “control shall be presumed to exist if a reporting entity **and its affiliates** directly or **indirectly**, own, control, hold the power to vote, or hold proxies **representing 10% or more** of the voting interest of the entity”. The added statutory guidance did not change this existing guidance, and therefore should not introduce any new burden or requirement on

reporting entities.

- Although industry comments on what should be captured on the affiliate reporting line were submitted, that discussion was beyond the scope of the current statutory revisions and the new reporting codes to identify the involvement of related parties with investments. **The new electronic columns to capture related party relationships is applicable to all reporting lines regardless of affiliate determination.**
- **Information within submitted industry comments indicating that affiliation determination under the holding company act is based solely on the voting rights of an equity holder were incorrect under existing guidance.** The definition of an affiliate and control per the Holding Company Act (Model 440) and SSAP No. 25 are consistent and detailed below. An affiliate is determined through control, and control can occur through other means besides ownership of voting securities. **Although ownership of 10% of voting securities results in a presumption of control, voting securities are clearly not the sole basis for determining control.** For many types of entities, control is not typically held through voting securities which has long been recognized under both GAAP and statutory accounting principles. As has always been the case, determination of the affiliation of an investment is based on an evaluation of control of the investee, whether through voting interests or other means. The adopted statutory revisions do not change this guidance in any way.
- Verbal comments received during the call also indicated even when an entity has been appropriately identified as an affiliate (and reported on Schedule Y), that some reporting entities may not be reporting debt investments issued by those affiliates as affiliated investments. While Working Group members stated that this is not an appropriate application of the reporting guidance, it directed staff to evaluate any further clarifications or examples that may be warranted to make clear that all investments in affiliates (including debt investments) should be reported as affiliated, and/or to provide more specificity on how to evaluate whether non-voting arrangements result in control.

Excerpts from the Holding Company Act as well as SSAP No. 25 are provided to further detail the existing guidance regarding determination of control.

Excerpt from Holding Company Act:

A. "Affiliate." An "affiliate" of, or person "affiliated" with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

C. "Control." The term "control" (including the terms "controlling," "controlled by" and "under common control with") **means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise,** unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

Excerpt from SSAP No. 25—Affiliates and Other Related Parties

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint

ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in *SSAP No. 48*, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. **Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise.** Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

In summary, this memorandum intends to provide preliminary information to the Financial Condition (E) Committee on revisions to improve reporting of investments that involve related parties. Questions on the adopted revisions or discussions that occurred can be directed to Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group or Kevin Clark, Vice-Chair of the Statutory Accounting Principles (E) Working Group. Submission of the adopted statutory accounting and blanks revisions for adoption consideration will be presented to the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee during the Summer National Meeting.

MEMORANDUM

TO: Financial Condition (E) Committee
 FROM: Statutory Accounting Principles (E) Working Group
 DATE: July 21, 2022
 RE: Principles Based Bond Definition

This memo has been prepared to update the Committee on the SAPWG agenda item #2019-21, commonly referred to as the Principles Based Bond Definition Project, which will result in principally defining investments permitted to be reported on *Schedule D-1: Long-Term Bonds*. The Statutory Accounting Principles (E) Working Group, and key industry representatives, have been working dedicatedly on this project since 2020. Significant progress has been achieved, and the Working Group anticipates having adopted guidance in effect for year-end 2024 or year-end 2025. The project is robust and will include significant revisions to the existing guidance for bond reporting as well as significant revisions to the reporting of bond investments on Schedule D-1.

History / Reason to Change

Several factors have led to increased innovation in insurers' investment portfolios. This includes the low-interest rate environment that has increased pressure to seek higher yields, as well as increasing partnerships between insurers and asset originators that has enabled insurers access to more innovative asset types and structures. Often, these innovative asset structures involve the securitization of an increasing variety of collateral, which transforms the underlying collateral into a bond. Although there are benefits from increased yields, the evolution has created challenges for regulators to understand the risks, and underlying sources of cash flows, involved in bond portfolios.

The current statutory accounting bond definition allows any security that represents a creditor relationship to qualify for bond reporting as a bond or loan-backed or structured security. The current focus is on legal form, rather than substance. As a result, the opportunity exists to report any asset as a bond by acquiring it through a special purpose vehicle (SPV) as a debt instrument from the SPV. The insurer may or may not be in a different economic position as if they held the underlying assets directly. In addition to the opportunity, there is also an RBC incentive to classify otherwise non-qualifying assets as bonds. Underlying assets may be inadmissible or may receive worse RBC charges (equities) if held directly on the insurer's balance sheet. Regulators currently have little transparency into whether assets classified as bonds incorporate risks that do not reflect traditional bond risk.

The intent of this project is to establish principle-based guidance for determining bonds, with a focus of substance over form, in such a manner so that the framework will be more "futureproof." In other words, that the principles established will be able to work for an increasingly innovative market and will provide regulators and other financial statement users with the transparency to understanding the risks present in an insurer's investment portfolio.

Proposed Principles-based Bond Definition

Under the proposed definition, a bond shall be defined as any security representing a creditor relationship, whereby there is a fixed schedule for one or more future payments, and which qualifies as either an issuer credit obligation or an asset backed security. Although this definition may seem like existing guidance, the proposed definition is

EXECUTIVE OFFICE • 444 North Capitol Street NW, Suite 700 • Washington, DC 20001-1509

p | 202 471 3990 f | 816 460 7493

CENTRAL OFFICE • 1100 Walnut Street, Suite 1500 • Kansas City, MO 64106-2197

p | 816 842 3600 f | 816 783 8175

CAPITAL MARKETS & INVESTMENT ANALYSIS OFFICE • One New York Plaza, Suite 4210 • New York, NY 10004

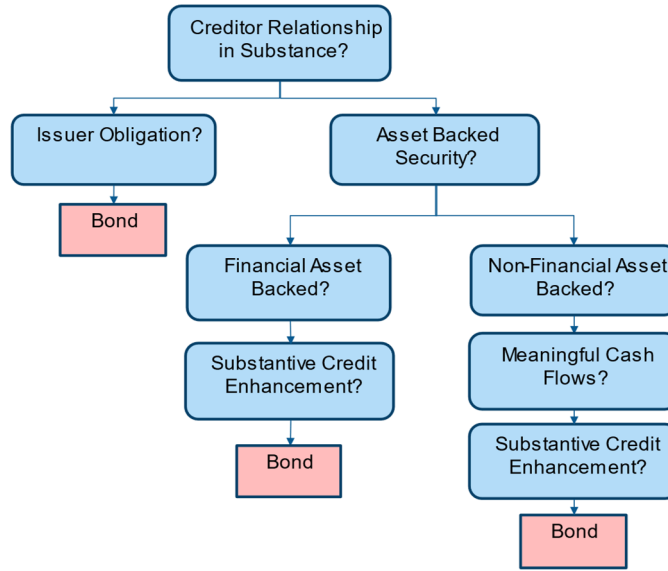

p | 212 398 9000 f | 212 382 4207

www.naic.org

explicit that the investment shall represent a creditor relationship in substance, not just legal form. Furthermore, it specifies that investments with equity-like characteristics or that represent ownership interests in substance, are not bonds.

Application of the bond definition is described below, however, may best be visualized in the following simplified flowchart. This simplified visual collapses certain steps in the decision for simplicity but showcases the overarching concepts of the principles-based bond definition.

Bond Principles Flowchart

Issuer Obligations or Asset Backed Securities:

Bonds are either issuer obligations or asset-backed securities. Investments that do not fit within either category or that are not named as specific non-bond inclusions shall not be reported as bonds. (Examples of non-bond named inclusions would include certificates of deposit and SVO-Identified Bond ETFs which have historically been reported on Schedule D-1.)

- **Issuer Obligation:** A bond will be classified as an **issuer obligation** if the investment represents an instrument where the repayment is primarily supported by the general creditworthiness of an operating entity (an entity with underlying operations), and the note is an obligation that has direct or indirect recourse to the operating entity. (Examples of Issuer Obligations include U.S. Treasuries, corporate debt, or securities where repayment is supported by an underlying contractual obligation of an operating entity.)

- **Asset Backed Security:** A bond will be classified as an **asset backed security (ABS)**, if the instruments are issued by entities that have a primary purpose of raising debt capital backed by collateral (financial assets or non-financial assets) that provides cashflows to service debt. All ABS are required to have substantive credit enhancement.
 - **Substantive Credit Enhancement:** All ABS securities (regardless of backed by financial or non-financial assets) must result in the holder being in a different economic position than had they held the underlying collateral directly. If the holder would be in the same economic position if they held the underlying collateral directly, the investment is not an ABS and not a bond. Rather, the characteristics are more aligned with that of the collateral itself. This requirement will ensure RBC arbitrage will be curtailed as

the security must explicitly possess bond-like risks. In order to support that an insurer is in a different economic position, there must be substantive credit enhancement, through overcollateralization / subordination or other form of guarantee or recourse, to support that the underlying collateral risks have been recharacterized to bond risk. In essence, in a securitization, there must be a level of subordination that is expected to absorb losses **before** the debt instrument being evaluated would be expected to absorb losses.

There are additional assessments required for ABS based on whether the ABS is backed by financial or non-financial assets:

- **Financial assets** are cash, evidence of an ownership interest in an entity, or a contract that conveys a right to receive cash or another financial instrument or exchange other financial instruments on potentially favorable terms. Loans or receivable-backed securities (RMBS, CMBS, CLOs, etc.) are financial asset-backed as the collateral represents rights to payment without any further performance obligation of any other party.
- **Non-financial assets** reflect collateral assets that are expected to generate a meaningful source of cash flows for repayment of the bond through use, licensing, leasing, servicing or management fees, or other similar cash flow generation. When a performance obligation exists, the assets represent non-financial assets, or a means through which non-financial assets produce cash flows once the performance obligation has been satisfied. Examples include cash flows from leases, royalties, licensing, etc.

Meaningful Cashflow Determination for Non-Financial Collateral backed ABS:

Non-financial assets backing ABS must be expected to generate meaningful cash flows to service the debt, other than through the sale or refinancing of assets. However, reliance on cash flows from the sale or refinancing of does not preclude an ABS from being classified as a bond as long as the meaningful cash flow requirement is met. The bond definition includes a practical expedient so if less than 50% of contractual principle and interest relies on refinance or sale of the collateral assets, then it qualifies as producing meaningful cash flows. The intent of the meaningful cash flow requirement is so that the nature of the non-financial assets must lend itself to the production of fixed income-like cash flows in order to meet the definition of a bond. Reliance on the residual value of non-cash producing assets to either sell or refinance to service the debt, is reflective of valuation or equity risk of the underlying assets, not bond risk.

Current Status and Next Steps

As initially noted, the Statutory Accounting Principles (E) Working Group, and key industry representatives, have been working dedicatedly on this project since 2020. Significant progress has been achieved with the development and exposure of the Principles-Based Bond Definition and an Issue Paper documenting discussion and rationale. The most recent exposure ended May 6 and a conference call is scheduled July 18 to consider comments received. Although additional comments will continue to be considered as the principles are incorporated into the SSAPs, key individuals involved in the project believe that the main principles are substantially set. The following actions are expected July 18, as part of the call, or shortly thereafter at the Summer National Meeting:

- Exposure of proposed reporting concepts to significantly revise Schedule D-1 to improve the granularity of investment reporting and improve the transparency to regulators of the investments held by reporting entities. The proposed concepts include adding a new schedule to separately capture issuer credit obligations and asset-backed securities, with several new reporting lines to separate investments based on underlying characteristics. (Exposure consideration occurred July 18.)
- Exposure of statutory accounting revisions to reflect the principles-based bond definition in SSAP No. 26R and SSAP No. 43R. These SSAPs are proposed to be significantly revised so that investments that qualify as issuer credit obligations are captured in SSAP No. 26R and investments that qualify as asset-

backed securities are captured in SSAP No. 43R. (The existing SSAPs will be renamed accordingly.)
(This exposure is anticipated at the Summer National Meeting.)

- Re-exposure of the principles-based bond definition and issue paper to reflect any revisions directed from the July 18 conference call. (This exposure is anticipated at the Summer National Meeting.)

Additional revisions to statutory accounting to provide accounting and reporting guidance for items that no longer qualify for Schedule D-1 reporting are anticipated to be assessed in early fall with exposure later in 2022.

Potential Effective Date: A key question often received is when the guidance will be effective. The earliest the guidance could be effective (with both accounting and reporting revisions in place) would be Jan. 1, 2024. This would require that the reporting revisions are adopted in May 2023. As that deadline is quickly approaching, it is likely that the revisions will be effective Jan. 1, 2025.

Questions on the principles-based bond definition and related reporting revisions can be directed to Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group or Kevin Clark, Vice-Chair of the Statutory Accounting Principles (E) Working Group.

Draft: 5/23/22

Financial Condition (E) Committee
E-Vote
May 20, 2022

The Financial Condition (E) Committee conducted an e-vote that concluded May 20, 2022. The following Committee members participated: Scott A. White, Chair (VA); Michael Conway (CO); Doug Ommen represented by Carrie Mears (IA); Timothy N. Schott represented by Vanessa Sullivan (ME); Grace Arnold represented by Kathleen Orth (MN); Adrienne A. Harris represented by My Chi To (NY); Cassie Brown represented by Jamie Walker (TX); Nathan Houdek represented by Amy Malm (WI); and Jeff Rude (WY).

1. Adopted a Draft Memorandum of Support

The Committee considered adoption of a draft memorandum (Attachment Two-A) of support for certain work performed related to various workstreams created because of the low interest rate environment and ongoing pressure from certain assets as a result. A majority of the Committee voted in favor of adopting that draft memorandum. The motion passed.

Having no further business, the Financial Condition (E) Committee adjourned.

MEMORANDUM

TO: Interested Parties of the Financial Condition (E) Committee

FROM: Financial Condition (E) Committee

DATE: May 23, 2022

RE: Memorandum of Support

Since the great financial crisis, interest rates have generally been in a downward trend for nearly 15 years, resulting in reduced spreads for life insurers and otherwise putting pressure on many members of the industry that depend upon longer-dated, lower risk debt instruments. In addition, recent inflationary pressures and increasing uncertainty resulting from the Russia/Ukraine crisis are exacerbating other challenges for the industry. Members of the Committee remain particularly concerned that macro-economic trends are likely to continue to drive an increase in asset risk for at least some members of the industry.

This memorandum is being issued by the Committee to express its support for several current, interrelated initiatives focused on asset risk or spread risk within the task forces and working groups of the Committee as well as other related work within the task forces and working groups of other Committees, including the Life Insurance and Annuities (A) Committee. The Committee recognizes the range of risk management practices within the industry and the critical importance of maintaining a fair and competitive marketplace by establishing standards if necessary to address issues that could translate into material risks if not properly and timely considered within the NAIC solvency framework.

Although the Committee has not yet reviewed specific proposals from these various groups, it is aware of the underlying objectives of many of the proposals under discussion, including, without limitation:

- A more risk-sensitive Life Risk Based Capital (RBC) charge for certain structured securities and other asset-backed securities that carry a greater tail risk;
- Clarification of investments permitted to be reported on Schedule D-1: Long-Term Bonds, particularly focused on improved transparent accounting and RBC reporting for certain loan-backed and structured securities to capture the more risk-sensitive features of these types of assets;
- Consideration of changes to the current policies of the Valuation of Securities (E) Task Force as they pertain to possible use of or reduction of reliance on rating agencies, where deemed appropriate, and possible use of other risk identifiers such as market data;
- A modified economic scenario generator that more appropriately captures the low interest rates experienced during the past few years; and
- Consideration of certain “high-yielding” assets within the annual asset adequacy analysis testing.

The Committee is grateful to all the States and staff members that are currently participating in the important work of these groups and welcomes the input of industry and other stakeholders in the development of proposals. Although this work is ongoing, the Committee encourages all States and the Securities Valuation Office (SVO) to continue to take all appropriate actions under existing rules and standards.

Draft: 5/2/22

Group Capital Calculation (E) Working Group
Virtual Meeting
May 2, 2022

The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met May 2, 2022. The following Working Group members participated: John Rehagen, Chair (MO); Kathy Belfi, Vice Chair (CT); Kim Hudson (CA); Philip Barlow (DC); Ray Spudeck (FL); Susan Berry (IL); Carrie Mears (IA); Susan Berry (IL); Roy Eft (IN); Chris Joyce (MA); Judy Weaver (MI); Lindsey Crawford (NE); David Wolf (NJ); Bob Kasinow (NY); Jackie Obusek (NH); Dale Bruggeman and Tim Biler (OH); Melissa Greiner (PA); Trey Hancock (TN); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Discussed Comments Received on the Exposed 2022 GCC

Mr. Rehagen reminded participants of the call that the 2022 Group Capital Calculation (GCC) template and instructions were exposed for public comment. He noted the Working Group received one comment from the American Council of Life Insurers (ACLI). He stated NAIC staff received an additional change after the materials were distributed for the call that in short, he considers editorial, as the changes simply prevent the preparer from double counting the operational risk charge within the GCC when they are including amounts for each of the U.S. insurers in their group. Mr. Rehagen noted that editorial changes were made to the GCC instructions on Inventory C Col 2 in paragraph 64 and the table at the bottom of page 32.

Mr. Rehagen noted that with respect to the ACLI's first comment, they suggest revisit the NAIC staff proposal made back in Nov 2021, which was an increase and then reversal of the debt allowance under certain circumstances. He reminded working group members that the industry was split on that issue, and for that reason the Working Group voted against including such a flexible capital allowance in the instructions. Mr. Rehagen noted the ACLI is now proposing instead a 3-year reversal and directed the Working Group to the language in the revised instructions that would implement that proposal change. Kristin Abbott (ACLI) stated their responsiveness to their comments and supported the staff draft of proposed changes to address their comments. Mr. Rehagen stated his concern was that the proposal would add complexity in certain situations. He stated that currently interest rates have started increasing but that it's very possible we could then turn to another recession over the next couple of years and rates will be forced down again. The increase and reversal of the debt allowance driven by changes in interest rates would potentially cause some whiplash/volatility in the GCC ratio and that caused Mr. Rehagen some concern.

Mr. Rehagen noted with respect to the ACLI's second comment, they suggest a change in how to calculate gross revenues for entities without regulatory capital requirements such as asset managers. He noted with respect to this comment, which is the difference in calculations between the aggregation method and the GCC. He noted that he personally would prefer not to veer away from the aggregation method. Ms. Belfi stated she thought it was important to stay as close to the aggregation method as possible. She stated how the Working Group had already deviated from the aggregation method where they felt it made sense and noted how NAIC staff could likely comment on that, but she feared too much more deviation. Mr. Spudeck and Mr. Hudson both agreed with Ms. Belfi. Mr. Rehagen asked for clarification from NAIC staff on what that means for the proposal changes from the ACLI. Dan Daveline (NAIC) stated they had drafted language to address the ACLI comments and it's up to the Working Group to decide whether they support those changes, but that it appears both changes proposed by the ACLI are being rejected by the Working Group. Martin Mair (Met Life) reminded the Working Group that the reason they were proposing to modify the GCC debt limit was to address a concern regarding procyclicality and so the debt limit becomes more binding during those times of stress and the GCC would automatically decrease

during those periods of stress without a change. He said the ACLI proposal was to get back to the core issue and put back that needed flexibility. Mr. Rehagen stated he thought what was being suggested by the ACLI on the debt issue could be further studied, but that there is currently a need to finalize the 2022 instructions and template for use but could be addressed in the future. Ms. Belfi agreed with Mr. Rehagen and suggested keeping the instructions as is without the change and see how things develop. Hearing no other comments in favor of making the changes, Mr. Rehagen stated he would accept a motion to adopt the 2022 GCC Instructions and template with the editorial change previously noted during the call related to operational risk, but without the changes proposed by the ACLI.

Ms. Belfi made a motion to adopt the 2022 GCC Instructions and template as described by Mr. Rehagen (Attachment Three-A). The motion was seconded by Mr. Hudson and unanimously adopted.

2. Discussed Other Matters

Mr. Rehagen stated with the 2022 GCC Instructions and Template adopted, he wanted NAIC staff to indicate when they planned to have training available to the industry. Mr. Daveline responded NAIC staff intended to have industry training by the end of July, before the GCC is effective for the first time in August for one state but noted the regulator training would be later closer to when it is filed with most states.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

GROUP CAPITAL CALCULATION

2022 INSTRUCTIONS

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers, and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting

Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information

Important answers to common questions about auto, home, health, and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation

Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal

Comprehensive collection of NAIC model laws, regulations, and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation

Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities

NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies

Studies, reports, handbooks, and regulatory research conducted by NAIC members on a variety of insurance-related topics.

Statistical Reports

Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health, and life insurance.

Supplementary Products

Guidance manuals, handbooks, surveys, and research on a wide variety of issues.

Capital Markets & Investment Analysis

Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers

Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

I. Background

1. In 2015, the ComFrame Development and Analysis (G) Working Group held discussions regarding developing a group capital calculation (GCC) tool. The discussions revealed that developing a GCC was a natural extension of work state insurance regulators had already begun, in part driven by lessons learned from the 2008 financial crisis which include better understanding the risks to insurance groups and their policyholders. While insurance regulators currently have authorities to obtain information regarding the capital positions of non-insurance affiliates, they do not have a consistent analytical framework for evaluating such information. The GCC is designed to address this shortcoming and will serve as an additional financial metric that will assist regulators in identifying risks that may emanate from a holding company system.
2. More specifically, the GCC and related reporting provides more transparency to insurance regulators regarding the insurance group and makes risks more identifiable and more easily quantified. In this regard, the tool assists regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies may be supporting the operations of non-insurance entities, potentially adversely impacting the insurance company's financial condition or policyholders. This calculation provides an additional analytical view to regulators so they can begin working with a group to resolve any concerns in a manner that will ensure that policyholders of the insurers in the group will be protected. The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide Lead State Regulators with further insights to allow them to reach informed conclusions on the financial condition of the group and the need for further information or discussion.
3. State insurance regulators currently perform group analysis on all U.S. insurance groups, including assessing the risks and financial position of the insurance holding company system based on currently available information; however, they do not have the benefit of a consolidated statutory accounting system and financial statements to assist them in these efforts. It was noted prior to development that a consistent method of calculating group capital for typical group risks would provide a useful tool for state financial regulators to utilize in their group assessment work. It was also noted that a GCC could serve as a baseline quantitative measure to be used by regulators in to compliment the view of group-specific risks and stresses provided by the Own Risk and Solvency Assessment (ORSA) Summary Report filings and in Form F filings that may not be captured in legal entity filings.
4. During several open meetings and exposure periods, the ComFrame Development and Analysis (G) Working Group considered a discussion draft which included three high-level methodologies for the GCC: a risk-based capital (RBC) aggregation approach; a statutory accounting principles (SAP) consolidated approach; and a generally accepted accounting principles (GAAP) consolidated approach. On Sept. 11, 2015, Working Group members unanimously approved a motion to move forward with developing a recommendation for a GCC and directed an appropriate high-level methodology for the recommendation.

5. At a ComFrame Development and Analysis (G) Working Group meeting held Sept. 24, 2015, pros and cons for each methodology were discussed, and a consensus quickly developed in support of using an RBC aggregation approach if a GCC were to be developed. The Executive (EX) Committee and Plenary ultimately adopted the following charge for the Financial Condition (E) Committee:

“Construct a U.S. group capital calculation using an RBC aggregation methodology; liaise as necessary with the ComFrame Development and Analysis (G) Working Group on international capital developments and consider group capital developments by the Federal Reserve Board, both of which may help inform the construction of a U.S. group capital calculation.”

6. The RBC aggregation approach is intended to build on existing legal entity capital requirements where they exist rather than developing replacement/additional standards. In selecting this approach, it was recognized as satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions’ existing capital regimes. To capture the risks associated with the entire group, including the insurance holding company, RBC calculations would need to be developed in those instances where no RBC calculations currently exist.
7. In early 2016, the Financial Condition (E) Committee appointed the Group Capital Calculation (E) Working Group, which began to address its charge and various details of the items suggested by the ComFrame Development and Analysis (G) Working Group. The instructions included herein represent the data, factors, and approaches that the Working Group believed were appropriate for achieving such an objective. The GCC instructions and template are intended to be modified, improved, and maintained by the NAIC in the future as are the *Accounting Practices and Procedures Manual*, the *Annual Statement Instructions* and the *Risk-Based Capital Formula and Instructions*. This includes, but is not limited to, future disclosure of additional items developed or referred to by other NAIC committees, task forces and/or working groups.
8. In December 2020, amendments to NAIC Model Law (#440) and Model Regulation (#450) were adopted to provide States with legislative language to fully implement the GCC as an annual filing. The Model specifies what groups are exempted from the GCC filing requirement and the circumstance under which a limited filing may be submitted. For such information reference should be made not to these instructions, rather to the models and, more specifically, to how they are implemented into laws and regulations of a Lead State.

II. Definitions

9. **Affiliate**: As defined in the NAIC Model Insurance Holding Company System Regulatory Act in Model #440, an “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified. The Model #440 defines “Control” (including the terms “controlling,” “controlled by” and “under common control with”) as the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. Model #440 provides that the presumption may be rebutted by showing that control does not exist in fact. The commissioner may determine, after furnishing

all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect. Any entities that would otherwise qualify as Schedule BA affiliates as described above but are owned by other entities (e.g., foreign insurers or other types of Parent entity) should be treated in the same way.

10. **Broader Group:** The entire set of legal entities that are controlled by the Ultimate Controlling Person of insurers within a corporate group. When considering the use of this term, all entities included in the Broader Group should be included in Schedule 1 and the Inventory, but only those that are denoted as “included” in Schedule 1 will be considered in the actual GCC.
11. **Control:** As used in the Model #440, the term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K of Model #440 that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.
12. **Cross-Support Mechanism:** A cross-support mechanism is an agreement or transaction that creates a financial interdependence. Depending on the nature of the transaction and the specific circumstances, these mechanisms may pose material risk. These may include corporate guarantees, capital maintenance agreements (regulatory or ratings based), letters of credit, intercompany indebtedness, bond repurchase agreements, securities lending or other agreements or transactions that create a financial interdependence or link between entities in the group.
13. **Entity Not Subject to A Regulatory Capital Requirement:** This is a financial entity other than an entity that is subject to a specified regulatory capital requirement.
14. **Financial Entity:** A non-insurance entity that engages in or facilitates financial intermediary operations (e.g., accepting deposits, granting of credits, or making loans, managing, or holding investments, etc.). Such entities may or may not be subject to specified regulatory capital requirements of other sectoral supervisory authorities. For purposes of the GCC, entities that are not regulated by an insurance or banking authority [e.g., the U.S. Securities and Exchange Commission (SEC) or the Financial Industry Regulatory Authority (FINRA)] will be considered as not subject to a specified regulatory capital requirement.

The primary examples of financial entities are commercial banks, intermediation banks, investment banks, saving banks, credit unions, savings and loan institutions, swap dealers, and the portion of special purpose and collective investment entities (e.g., investment companies, private funds, commodity pools, and mutual funds) that represents the Broader Group’s aggregate ownership in such entities, whether or not any member of the Broader Group is involved in that entity’s management responsibilities (e.g., via investment advisory or broker-dealer duties) for those entities.

For purposes of this definition, a subsidiary of an insurance company whose predominant purpose is to manage or hold investments or act as a broker-dealer for those investments on behalf of the insurance company and its affiliated insurance (greater than 90% of all such investment subsidiaries' assets under management or held are owned by or for the benefit of these insurance affiliates) should NOT be considered a Financial Entity. In the case where an insurer sets up multiple subsidiaries for this purpose, the 90% may be measured in the aggregate for all such entities. Similarly, in the case of collective investment pools (e.g., private funds, commodity pools, and mutual funds) the 90% may be measured individually, or in the aggregate for each subtype (e.g., private funds, commodity pools, and mutual funds).

In addition, other financial entities without a regulatory capital requirement include those which are predominantly engaged in activities that depending on the nature of the transaction and the specific circumstances, could create financial risks through the offering of products or transactions outside the group such as a mortgage, other credit offering or a derivative.

15. **Insurance Group:** For purposes of the GCC, a group that is comprised of two or more entities of which at least one is an insurer, and which includes all insurers in the Broader Group. Another (non-insurance) entity may exercise significant influence on the insurer(s); i.e., a holding company or a mutual holding company; in other cases, such as mutual insurance companies, the mutual insurer itself may be the Ultimate Controlling Person. The exercise of significant influence is determined based on criteria such as (direct or indirect) participation, influence and/or other contractual obligations; interconnectedness; risk exposure; risk concentration; risk transfer; and/or intragroup agreements, transactions and exposures.

An Insurance Group may include entities that facilitate, finance or service the group's insurance operation, such as holding companies, branches, non-regulated entities, and other regulated financial institutions. An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control and includes all members of the Broader Group that exercise significant influence on the insurance entities and/or facilitate, finance or service the insurance operations.

An Insurance Group could be headed by:

- An insurance legal entity;
- A holding company; or
- A mutual holding company.

An Insurance Group may be:

- A subset/part of bank-led or securities-led financial conglomerate; or
- A subset of a wider group.

An Insurance Group is thus comprised of the head of the Insurance Group and all entities under its direct or indirect control.

16. **Insurance Subgroup/U.S. Operations:** Refers to all U.S. insurers within a Broader Group where the groupwide supervisor is in a non-U.S. jurisdiction. It includes all the directly and indirectly held subsidiaries of those U.S. insurers. For purposes of subgroup reporting, capital instruments, loans, reinsurance, guarantees would only include those that exist within the U.S. insurers. Amounts included for the U.S. insurers shall include all amounts contained within the financial statements of those entities included in the subgroup reporting, whether those amounts are directly attributable or allocated to a company in the subgroup from an affiliate outside of the U.S. insurers and its direct or indirect subsidiaries.

17. **Lead State Regulator:** As defined in the Financial Analysis Handbook; i.e., generally considered to be the one state that “takes the lead” with respect to conducting and coordinating groupwide supervision within the U.S. solvency The determination of a lead state is affected by the following factors: (i) The state with the insurer/affiliate with largest direct written premiums (ii) Domiciliary state/country of top-tiered insurance company in an insurance holding company system (iii) Physical location of the main corporate offices or largest operational offices of the group (iv) Knowledge in distinct areas of various business attributes and structures (v) Affiliated arrangements or reinsurance agreements (vi) Lead state must be accredited by the NAIC.
18. **Group-wide supervisor:** The regulatory official authorized to engage in conducting and coordinating group-wide supervision activities who is determined or acknowledged by the commissioner under Section 7.1 to have sufficient significant contacts.
19. **Internationally active insurance group:** An insurance holding company system that (1) includes an insurer registered under Section 4; and (2) meets the following criteria: (a) premiums written in at least three countries, (b) the percentage of gross premiums written outside the United States is at least ten percent (10%) of the insurance holding company system’s total gross written premiums, and (c) based on a three year rolling average, the total assets of the insurance holding company system are at least fifty billion dollars (\$50,000,000,000) or the total gross written premiums of the insurance holding company system are at least ten billion dollars (\$10,000,000,000).”
20. **Limited Group Capital Filing:** Refers to a GCC filing that includes sufficient data or information to complete the “Input 4 Analytics” tab and the “Summary 3 – Analytics” tab of the GCC template. This includes Schedule 1 of the template and may include limited data from other input tabs as deemed necessary for purposes of the analytics.
21. **Material Risk:** Risk emanating from a non-insurance/non-financial entity not owned by an insurer in the Insurance Group or is part of the Broader Group that is of a magnitude that could adversely impact the financial stability of the group as a whole, that the ability of insurers within a group to pay policyholder claims or make other policy related payments (e.g., policy loan requests or annuity distributions) may be impacted.

To determine whether an entity within the Broader Group poses material risks to the Insurance Group, the totality of the facts and circumstances must be considered. The determination of whether risk posed by an entity is material requires analysis of various aspects pertaining to the subject entity. A determination that a non-insurance/non-financial entity does not pose material risk allows the filer to request exclusion of that entity from the calculation of the GCC ratio in the “Inventory” tab. Several items as listed below should be considered in making such a determination, to the extent they apply.

Caution is necessary, however. The fact that one or more of these items may apply does not necessarily indicate risk to the Insurance Group is, or is not, material. The group should be able to support its determination of material risk if requested by the Lead State Regulator. This should not be used as a checklist or as a scorecard. Rather, the list is intended to illuminate relevant facts and circumstances about a subject entity, the risk it poses, how the Insurance Group might be exposed to that risk and means to mitigate that risk.

Primary Considerations:

- Past experience (i.e., the extent to which risk from the entity has impacted the Insurance Group over prior years/cycles).

- The degree to which capital management across the Broader Group has historically relied on funding by the Insurance Group to cover losses of the subject entity.
- The existence of intragroup cross-support mechanisms (as defined below) between the entity and the Insurance Group.
- The means by which risk can be transmitted; i.e., the existence of sufficient capital within the entity itself to absorb losses under stress and/or if adequate capital is designated elsewhere in the Broader Group for that purpose.
- The degree of risk correlation or diversification between the subject entity and the Insurance Group (e.g., where risks of one or more entities outside the Insurance Group are potentially offset (or exacerbated) by risks of other entities) and whether the corporate structure or agreements allow for the benefits of such diversification to protect the Insurance Group.
- The existence and relative strength or effectiveness of structural safeguards that could minimize the transmission of risk to the Insurance Group (e.g., whether the corporate shell can be broken).

Other Considerations (*if primary considerations suggest exclusion may be reasonable, these can be used to further support exclusions*):

- The location of the entity in relation to the Insurance Group within the Broader Group's corporate structure and how direct or indirect the linkage, if any, to the Insurance Group may be.
- The activities of the entity and the degree of losses that the entity could pose to the group under the current economic environment or economic outlook

The guidance above recognizes that there are diverse structures and business models of insurers that make it impracticable to apply a one-size-fits-all checklist that would work for materiality determinations across all groups. Strict or formulaic quantitative measures based on size of the entity, or its operations of a non-insurance affiliate are an insufficient proxy for materiality of risk to the insurance operations. The GCC Instructions thus consider the unique circumstances of the relevant entity and group and uses an interactive process whereby the group brings forward its suggestions as to entities that should be excluded from the scope of application for a discussion with the lead state, ultimately culminating in an agreement on the scope of application. The guidance in this section helps to facilitate that process and discussion with criteria for cross-support mechanisms that can potentially transmit material risk, as defined, to the Insurance Group as well as safeguards that can mitigate such risk or its transfer.

22. **Person:** As used in Model #440, a “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.
23. **Reciprocal Jurisdiction:** As defined in the *Credit for Reinsurance Model Law* (#785).
24. **Scope of Application:** Refers to the entities that meet the criteria listed herein for inclusion in the GCC ratio. The application of material risk criteria may result in the Scope of Application being the same as, or a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s).

NOTE: U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator, otherwise in as much as they are already included in a reporting legal entity, they are already in the scope of application and there is no need for any additional reporting.

25. **Ultimate Controlling Person:** As used in the *Insurance Holding Company System Regulatory Act* (#440). This is the entity that exercises control directly or indirectly over all entities within the Broader Group.

III. Determining the Scope of Application

A. Groups Exempted from the GCC

26. Refer to changes to Model #440 for guidance on groups that are exempted from filing a GCC. Instead, instructions are provided to ensure Lead State Regulators receive the information necessary to evaluate the Scope of Application.

B. Scope of Application – Legal Entity Inventory

27. When considering the scope of application, preparers of the GCC must first understand the information to be included in Schedule 1 of the template. When developing an initial inventory of all potential entities, the preparers of the GCC shall complete Schedule 1, which, except in the case of an Insurance Subgroup (as defined in Section II), requests data for all of the entities within the Broader Group that are directly or indirectly owned by the Ultimate Controlling Person (including the Ultimate controlling Person) that are listed in the insurer's most recent Schedule Y or in relevant Holding Company Filings. GCC preparers should provide basic information about each entity in Schedule 1, including its total assets, and total revenue and net income for this specific year identified. Additionally, the initial filing will require some further information for the prior year (e.g., prior year equity or surplus to policyholders). The primary purpose of the Schedule 1 is to: 1) assist the lead state in making an assessment on the entities within the group that should be included in the Scope of Application; and 2) provide the lead state with valuation information to better understand the group. This valuable information produces various ratios and other financial metrics that will be used in the analysis of the GCC and the group by the lead state for their holding company analysis.

With regard to Schedule A and Schedule BA affiliates, for purposes of the data input on the Schedule 1 and Inventory tabs, only include Schedule A and Schedule BA affiliates which are insurers or other financial entities reported as, or owned indirectly through, Schedule A or Schedule BA affiliates. All other Schedule A and Schedule BA investments will remain as investments of a Parent insurer will be reported as part of the value and capital calculation of the Parent insurer. A full list of Schedule A and BA entities shall be reported in the Input 6 - Questions tab. Any insurer or financial entities that would otherwise qualify as Schedule BA affiliates if owned by a U.S. insurer, but which are owned by other entities (e.g., foreign insurers or other type of Parent entity) should be reported in the Schedule 1 and Inventory tabs.

28. To assist the Lead State Regulator in assessing the Scope of Application, the Schedule 1 and the "Inventory" tab of the template will be completed by each preparer to provide information and certain financial data on all the entities in the group. Each preparer will also use the include/exclude column in Schedule 1 to request its own set of entities to be excluded from the calculation after applying criteria for material risk (as defined in Section II). The requests for exclusion will be described by the preparer in the template and evaluated by the Lead State Regulator. A second column will be used by the regulator to reflect entities that the regulator agrees should be excluded.

29. Although all entities must be listed in Schedule 1 and in the “Inventory” tab, the preparer is allowed to group data for certain financial entities not subject to a regulatory capital requirement and certain non-insurance and non-financial entities. Thus, while the Schedule 1 would include the full combined financial results/key financial information (for all entities directly or indirectly owned by the Ultimate Controlling Person, such data may be reported based on major groupings of entities to maximize its usefulness, reduce the number of numeric entries, and allow the Lead State Regulator to better understand the group, its structure, and trends at the sub-group as well as group level. Criteria for grouping are further described in Section V, paragraph 57. Prior to completing the GCC annually, the Insurance Group should determine if the proposed grouping is satisfactory to the lead state or if there are certain non-insurance and non-financial entities (such entities are required to be broken out and reported separately) that should be broken out and reported separately.

C. General Process for Determining the Scope of Application

30. The starting point for “Scope of Application” (i.e., for purposes of the GCC specifically) is the entire group except in the case of an Insurance Subgroup (as defined in Section II). However, in the case of groups with material diverse non-insurance/non-financial activities isolated from the financial/Insurance Group and without cross-support mechanisms as defined in Section II, the preparer may request a narrower scope starting at the entity that controls all insurance and financial entities within the group [i.e., comprise a subset of, the entities controlled by the Ultimate Controlling Person of the insurer(s) (Broader Group)]. However, the adjustments as to the Scope of Application suggested by the preparer in consultation and in agreement with the Lead State Regulator should include consideration of guidance in paragraph 31 (“Identify and Include all Financial Entities”) the totality of the facts and circumstances, as described in paragraph 21 (“Definition of material risk”). The rationale and criteria applied in allowing the reduced scope should be documented and made available to non-lead states if requested. The decision on reduced scope should be revisited when changes in the group structure or activities occur.

The fundamental reason for state insurance regulation is to protect American insurance consumers. Therefore, the objective of the GCC is to assess quantitatively the collective risks to, and capital of, the entities within the Scope of Application. This assessment should consider risks that originate within the Insurance Group along with risks that emanate from outside the Insurance Group but within the Broader Group. The overall purpose of this assessment is to better understand the risks that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims consistent with the primary focus of insurance regulators.

D. Guiding Principles and Steps to Determine the Scope of Application

31. For most groups, the Scope of Application is initially determined by the preparer in a series of steps, listed here and then further explained as necessary in the text that follows:
- Develop a full inventory of potential entities using the Inventory of the Group template (Schedule 1). This should correspond to Annual Statement Schedule Y, Part 1A
 - Denote in Schedule 1 for each non-financial entity whether it is to be “included in or excluded from” the Scope of Application” using the criteria in the “Identify Risks from the Broader Group” subsection below.
 - All non-financial entities, whether to be included in or excluded from the Scope of Application are to be reported in the “Inventory” tab of the template. Information to be provided for excluded entities will be limited to Schedule 1B and the corresponding

columns in the Inventory tab. See paragraph 57 for additional information on treatment of non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity.

- Non-financial entities may qualify for grouping on this Inventory tab as described elsewhere in these instructions.

E. Steps for Determining the Scope of Application

32. Identify and list all entities in the Insurance Group or Insurance Subgroup (where required).

Include all entities that meet the definition of an affiliate in Section II, above and that fit the criteria identified in the definition of the Insurance Group or Insurance Subgroup (if applicable), in Section II, above except as modified in paragraph 34 (Identify Risks from the Broader Group), below. All insurance entities and entities owned directly or indirectly by the insurance entities in the group shall be included in the Scope of Application and reported in the Schedule 1 and Inventory of the Group template. Other non-insurance/nonfinancial entities within the Insurance Group may be designated as “exclude” as described in paragraph 30.

33. Identify and include all Financial Entities.

Financial Entities (as defined in Section II) within the Inventory of the Group template shall be included in (i.e., may not be designated as “excluded from”) the Scope of Application, regardless of where they reside within the Broader Group.

As learned from the 2008 financial crisis, U.S. insurers were not materially impacted by their larger group issues; however, materiality of either equity or revenue of an entity might not be an adequate determinant of potential for risk transmission within the group. Furthermore, risks embedded in financial entities are not often mitigated by the activities of the insurers in the group and may amplify their (the insurers’) risks.

Any discretion in evaluating the ultimate risk generated by a defined financial entity that is not subject to a regulatory capital requirement should be applied via review of the material risk definitions/principles included in paragraph 21 to set the level of risk as low, medium or high and **not** to exclude such entities from the calculation. The rationale should be documented, and all data required in Schedule 1 must be provided for the entity for purposes of analysis and trending.

34. Identify Risks from the Broader Group

An Insurance Group or Insurance Subgroup may be a subset of a Broader Group, such as a larger diversified conglomerate with insurance legal entities, financial entities, and non-financial entities. In considering the risks to which the Insurance Group or Insurance subgroup is exposed, it is important to take account of those material risks (as defined in Section II) to the Insurance Group from the Broader Group within which the Insurance Group operates. All non-insurance/non-financial entities included within the Insurance Group or Insurance Subgroup that pose material risk to the insurers in the group should be included within (i.e., may not be designated as “excluded from”) the Scope of the Application. Similarly, all non-financial entities within the Broader Group but outside the Insurance Group that pose material risks to the Insurance Group should be included within (i.e., may not be designated as “excluded from”) the Scope of Application; non-material non-insurance/non-financial entities within the Broader Group or within the Insurance Group (as both terms are defined in Section II) other

than those entities owned by entities subject to a specified regulatory capital requirement should be reported as “excluded.” However, no such entities outside an Insurance Subgroup (as defined in Section II) should be included in the GCC. When determining which non-financial entities from the Broader Group to include in the Scope of Application, the preparer must include any entity that could adversely impact the ability of the entities within the Scope of Application to pay policyholder claims or provide services to policyholders consistent with the primary focus of insurance regulators.

35. Review of Submission

The Lead State Regulator should review the inventory of entities provided in the Group template to determine if there are entities excluded by the preparer using the criteria above that the Lead State Regulator agrees do not pose material risk (as defined herein) to its insurance operations. Additional information may be requested by the Lead State Regulator to facilitate this analysis. For entities where the Lead State Regulator agrees with the request to exclude, the GCC may exclude the data for such entities. Ultimately, the decision to include or exclude entities from the GCC will occur based on the Lead State Regulator’s knowledge of the group and related information or filings available to the Lead State and whether they believe an applicable entity would not adversely impact the entities within the Scope of Application to pay policyholder claims.

The template’s Summary 2 - Top Level tab includes a calculation to reflect the impact of excluded entities requested, but not approved for exclusion by the lead state. (See instructions for Summary 2 herein).

36. The preparer, together with the Lead State Regulator, would use the above steps, which includes considering the Lead State Regulator’s understanding of the group, including inputs such as Form F, ORSA and other information from other involved regulators, to determine the reasonableness of the suggested Scope of Application.

37. Updating the Scope of Application

The Scope of Application could be re-assessed by the preparer and the Lead State Regulator each successive annual filing of the GCC provided there has been substantial changes in corporate structure or other material changes from the previous year’s filing. Any updates should be driven by the assessment of material risk and changes in group structure as they impact the exclusion or inclusion of entities within the Scope of Application based on material risk considerations.

IV. General Instructions

38. The GCC template consists of a number of tabs (sections) within one workbook. Input amounts must be in USD \$000s. The following provides general instructions on each of these tabs.
39. **Attestation:** This tab is intended to work similar to the annual financial statement and RBC attestations, which are both intended to give the regulator greater comfort that the company has completed in accordance with its (these) instructions. It will also indicate whether the group consists of predominantly life, P/C, or health insurers and whether the submission is a full or limited group capital filing.
40. **Input 1 – Schedule 1:** This tab is intended to provide a full inventory of the group, including the designation by the filer of any non-financial entities to be included in, or excluded from, the Scope of Application and include sufficient data or information on each affiliated entity (see Schedule A and Schedule BA exception as described in paragraph 27) within the group so

as to allow for analyzing multiple options for scope, grouping and sensitivity criteria, as well as, allowing the Lead State Regulator to decide as to whether the entities to be included in the scope of application or excluded from the scope of application meet the aforementioned criteria. This tab is also used to maximize the value of the calculation by including various information on the entities in the group that allow the lead state to better understand the group, the risks of the group, capital allocation, and overall strengths and weaknesses of the group.

41. Except as noted, equity method investments reported in the Section 1B in the Inventory tab that are accounted for based on *Statement of Statutory Accounting Principles (SSAP) No. 48—Joint Ventures, Partnerships and Limited Liability Companies* are not required to be de-stacked (separately listed) in Schedule 1; i.e., their value would be included in amounts reported by the Parent insurer within the calculation. The basis for this approach is predicated on the purpose of the entire GCC, which is to produce an expected level of capital and a corresponding level of available capital that are derived by aggregating the amounts reported of capital of the individual entities under the GCC methodology. The available capital for such joint ventures, partnerships and limited liability companies is already considered in Schedule 1 by its inclusion in its Parent’s financial statements and can be excluded from an inventory (not separately listed) because the Parent also already receives a corresponding capital charge within its RBC.

NOTE: Data for this tab is required for a Limited Group Capital filing.

42. **Input 2 – Inventory:** This tab is intended to be used by the consolidated group to provide information on the value and capital calculation for all the entities in the group before any de-stacking of the entities. While some of this information is designed to “pull” information from Schedule 1, other cells (blue cells) require input from the group. This tab will then apply the adjustments for investment in subsidiary other than where an exception is described in these instructions and adjust for intragroup arrangements. This tab is set up to subtract those adjustments from capital and therefore should be entered as: 1) a positive figure if the adjustment currently has a positive impact on the available capital or the capital calculation; or 2) a negative figure if the adjustment currently has a negative impact on the available capital or the capital calculation. It will also be used to add relevant insurance or other financial entities included as equity investments in Schedule A and Schedule BA and to aggregate the resulting adjusted values for use in the actual GCC.

NOTE: For a Limited Group Capital filing, data should be presented in the summarized format below in lieu of completing the full “Inventory” tab.

Limited Group Capital Filing Only: Input 2 – Inv Limited: Manually enter data in Adjusted Carrying Value (Inventory B, Column 8) and Adjusted Capital Calculation (Inventory C, Column 8) to report a single aggregated value for each entity category in the group. This will require that eliminations and adjustments normally found in a “full” Inventory B, Column 2 through Column 7 and Inventory C, Column 2 through Column 7 to be addressed offline.

43. **Input 3 – Capital Instruments:** This tab is intended to be used to gather necessary information to that will be used to calculate an allowance for additional available capital based on the concept of structural subordination applied to senior or other subordinated debt issued by a holding company that is within the scope of application of the GCC filing. It will also provide information on all debt issued by entities within the scope of application.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

44. **Input 4 – Analytics:** In recognizing a primary purpose of the GCC is to enhance groupwide financial analysis, this tab includes or draws from entity-category-level inputs reported in the tab or elsewhere in the GCC template to be used in GCC analytics. Separate guidance for Lead

State Regulators to reference in analyzing the data provided in the GCC template (reference applicable location of the guidance; e.g., *Financial Analysis Handbook*).

NOTE: Data for this tab is required for a Limited Group Capital filing.

45. **Input 5 – Sensitivity Analysis:** This tab includes inputs and/or describes informational sensitivity analysis for other than XXX/AXXX captives, permitted and prescribed practices and other Regulator discretion. The inputs are intended to simply be a disclosure, similar to the disclosure required under Note 1 of the statutory financial statements. The analysis will be applied in the “Summary 2” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

46. **Input 6 – Questions:** This tab will provide space for participants to describe or explain certain entries in other tabs. Examples include the materiality method applied to exclude entities in Schedule 1 and narrative on adjustments for intragroup debt and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab.

NOTE: Data for this tab is NOT required for a Limited Group Capital filing.

47. **Calc 1 – Scaling (Ins):** This tab list countries predetermined by NAIC and provides the necessary factors for scaling available and required capital from non-US insurers to be used in in sensitivity analysis to a comparable basis relative to the U.S. RBC figures. It also allows for set scaling options (which vary by insurance segment such as life, P/C, and health).

NOTE: This tab is NOT required for a Limited Group Capital filing.

48. **Calc 2 – Scaling (Non-Ins):** This tab is used to determine calculated capital for non- insurance entities.

NOTE: This tab is NOT required for a Limited Group Capital filing.

49. **Summary 1 – Entity Level:** This tab provides a summary of aggregated available capital and calculated capital for each entity category before the application of capital instruments.

NOTE: This tab is NOT required for a Limited Group Capital filing.

50. **Summary 2 – Top Level:** This tab calculates various informational GCC ratios resulting from applying “on top” and entity level adjustments to adjusted carrying value and adjusted calculated capital. This “what if” scenario analysis will not be part of the GCC ratio.

NOTE: This tab is NOT required for a Limited Group Capital filing.

51. **Summary 3 – Analytics:** Provides a summary of various GCC analytics.

NOTE: This tab is required for a Limited Group Capital filing.

52. **Summary 4 – Grouping Alternatives:** This tab currently calculates and displays a selected grouping option for organizing the structure of the group consistent with the way that the entities are managed.

NOTE: This tab is NOT required for a Limited Group Capital filing.

53. All cells in the template are color-coded based on the chart below. Inputs should only be made in blue cells. Do not add/delete rows, columns or cells or change the structure of the template in any way. If there appears to be an error in the formulas in the template, contact the NAIC.

The following set of colors is used to identify cells:	Colors used

V. Detailed Instructions

Input 1 – Schedule 1

54. Schedule 1A indicates the version of the template being prepared.
55. More detailed information on each legal entity should be reported in Schedule 1B through Schedule 1D. The order of the entries in Schedule 1 should match that in the “Inventory” tab. The first entity listed should be the ultimate controlling party.
56. U.S. branches of foreign insurers should be listed as separate entities when they are subject to capital requirements imposed by a U.S. insurance regulator. They should be reported under the appropriate entity category in **[Sch 1B Col 6]**.
57. Entries are required for every entity within the scope of the group. However, while recognizing that Lead State Regulator retains the discretion to ask for greater detail, the following simplifications **may** be applied as long as information for every entity is listed in Schedule 1B:
- A single numerical entry for like Financial Entities would be allowed at the intermediate holding company level, assuming that the like entities are owned by a common Parent that does not own other entity types, all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. The entity at which the total data is provided must be assigned an “Entity Category” in Schedule 1 that corresponds to the instructed carrying value and capital calculation for which the entry is made (e.g., an entity that would otherwise be categorized as a non-operating holding company but holds asset managers would be categorized as an asset manager). Entries for the remaining individual entities in the grouping will be reported in Schedule 1B only as “included.”
 - In addition, a single numerical entry would be allowed for all “included” non-insurance/non-financial entities at the intermediate holding company level assuming that the intermediate holding company owns only non-insurance/non-financial entities (i.e., does not own other entity types), all use the same accounting rules (e.g., all GAAP), and are at least consistent with the way the group manages their business. This would include any positive residual value of the holding company itself. Entries for all individual

entities in the grouping will be reported in Schedule 1B only as “included.”, but no stand-alone values for each entity would be required.

- Values for, non-insurance/non-financial subsidiaries of U.S. RBC filers or such subsidiaries owned by other financial entities with regulatory capital requirements for which the non-insurance/non-financial entity is included in the capital charges for the Parent entity may remain with their Parent insurers and will not be de-stacked. Entries for these individual entities in the grouping will be reported individually in Schedule 1B Columns 1 and 2 only as “included.” along with other required entries in Schedule 1B, but no stand-alone values for each entity would be required in Schedules 1C or 1D. These should be reported as “included” in Schedule 1.
- Mutual Insurance Groups may use the Total Adjusted Capital and amount of required capital from the top-level Insurer’s RBC Report at 200% x ACL RBC further adjusted to de-stack foreign insurers and other financial entities owned directly or indirectly (on a look-through basis) via RBC filing subsidiaries. Such foreign insurance subsidiaries or other financial subsidiaries shall be reported at the carrying values and capital calculations as described later herein.
- Data for U.S. Branches of Foreign insurers may be omitted from Schedule 1 if they are otherwise included in the entries, values, and capital requirements of a foreign insurer in the group.

NOTE: These simplifications will be treated in a similar manner in Input 2 – Inventory.

58. Any financial entity owned by a Parent insurer and listed in Schedule A or Schedule BA, and any insurance or financial entity that is owned indirectly through a Schedule BA affiliate should be listed in Schedule 1 and in the Inventory and assigned the appropriated identifying information. (See also the instructions for Part B of the Inventory). These entities will be de-stacked from the values for the Parent insurer. The same treatment for these entities will be afforded when they are owned by a foreign insurer or other non-insurance entities.
59. Schedule 1B contains descriptions of each entity. Make selections from the drop-down menu where available.
- **[Sch 1B Col 1] Include/Exclude (Company)** – This column is to select entities where a request is made for exclusion. The filer will indicate which non-insurance/non-financial entities not owned directly or indirectly by an insurer should be excluded from the GCC as not posing material risk to the group.
 - **[Sch 1B Col 2] Include/Exclude (Supervisor)** – Column to be filled in by supervisor. These are entities where the Supervisor agrees with the filer’s assessment of material risk and these entities will be excluded from the GCC and may be included in a sensitivity analysis later in the template.

NOTE: This column may also be completed by the filer after advance consultation with the Lead State Regulator.

- **[Sch 1B Col 3] Include/Exclude (Selected)** – Formula to determine treatment of data for later sensitivity analysis. If supervisor has made a determination of include/exclude in the prior column, that will be used. If not, the company’s selection will be used.

- **[Sch 1B Col 4] Entity Grouping** – Column denotes whether this is an insurance or non-insurance/non-financial entity and is also automatically populated based on the entry in Column 8.
- **[Sch 1B Col 5] Entity Identifier** – Provide a unique string for each entity. This will be used as a cross-reference to other parts of the template. If possible, use a standardized entity code such as NAIC Company Code (CoCode) or Insurance Services Office (ISO) Legal Entity Identifier. CoCode should be entered as text and not number (e.g., if CoCode is 01234, then the entry should be “01234” and not “1234”). If there is a different code that is more appropriate (such as a code used for internal purposes), please use that instead. If no code is available, then input a unique string or number in each row in whatever manner is convenient (e.g., A, B, C, D, ... or 1, 2, 3, 4...). Do not leave it blank.
- **[Sch 1B Col 6] Entity Identifier Type** – Enter the type of code that was entered in the “Entity Identifier” column. Choices include “NAIC Company Code,” “ISO Legal Entity Identifier,” “Reporting Entity Defined” and “Other.”
- **[Sch 1B Col 7] Entity Name** – Provide the name of the legal entity.
- **[Sch 1B Col 8] Entity Category** – Select the entity category that applies to the entity from the following choices (all U.S. life captives shall select the option for “RBC Filing Captive,” complete the calculation using the life RBC formula in accordance with instructions below regarding “Additional clarification on capital requirements where a U.S. formula (RBC) is not required,” regardless of whether the company is required by their captive state to complete the RBC formula. Insurers or financial entities that are de-stacked from an insurer’s Schedule A or Schedule BA should be assigned the corresponding insurer or financial entity category:

RBC Filing U.S. Insurer (Life)	UK Solvency II – Life	Colombia
RBC Filing U.S. Insurer (P/C)	UK Solvency II – Composite	Indonesia
RBC Filing U.S. Insurer (Health)	Australia – All	Thailand
RBC Filing U.S. Insurer (Other)	Switzerland – Life	Barbados
U.S. Mortgage Guaranty Insurers	Switzerland – Non-Life	Regime A (Participant Defined)
U.S. Title Insurers	Hong Kong – Life	Regime B (Participant Defined)
Other Non-RBC Filing U.S. Insurers	Hong Kong – Non-Life	Regime C (Participant Defined)
RBC filing (U.S. Captive)	Singapore – All	Regime D (Participant Defined)
Canada – Life	Chinese Taipei – All	New Zealand
Canadian – P/C	South Africa – Life	Bank (Basel III)
Bermuda – Other	South Africa – Composite	Bank (Other)
Bermuda – Commercial Insurers	South Africa – Non-Life	Financial Entity with a Regulatory Capital Requirement
Japan – Life	Mexico	Asset Manager/Registered Investment Advisor – High Risk
Japan – Non-Life	China	Asset Manager/Registered Investment Advisor – Medium Risk
Japan – Health*	South Korea	Other Financial Entity without a Regulatory Capital Requirement – High Risk
Solvency II – Life	Malaysia	Other Financial Entity without a Regulatory Capital Requirement – Medium Risk
Solvency II – Composite	Chile	Other Financial Entity without a Regulatory Capital Requirement – Low Risk
Solvency II – Non-Life	India	Other Non-Ins/Non-Fin with Material Risk
Solvency II – Non-Life	Brazil	Other Non-Ins/Non-Fin without Material Risk
UK Solvency II – Non-Life	Argentina	Non-Operating Holding Co.

* If the GCC group’s Japanese insurer health business (referred to as “Third Sector”) is greater than 60% of total life business (referred to as “First Sector”) and health business combined, as reflected by annualized premium for the year reported, then that group may elect to use the Japan health scalar set rather than the life scalar set.

NOTE: All U.S. captives are required to complete the applicable RBC formula template. In addition, any insurer, other than U.S. captive, that submits an RBC filing to either the state of domicile or the NAIC will be considered an RBC filer.

- **[Sch 1B Col 9] Alternative Grouping** – This is an optional input field. This field should be used if you wish to show similar entities aggregated into a single line in Summary 4-Alternative Grouping. Exhibit. For example, if you have a dozen small dental HMO businesses, you may wish to show them as a single line called “Dental HMOs,” as opposed to listing each entity separately. This is a level of granularity below “Entity Category” but above individual entities. No entity should be put in the same “Alternative Grouping” as its Parent. It is acceptable to put only one entity in a grouping. If any entries are left blank then, in Column 17, the “Entity Name” will be selected as the grouping. This will not impact the order of the entities for which data is entered in Schedule 1 or the “Inventory” tab.
- **[Sch 1B Col 10] Parent Identifier** – Provide the Entity Identifier of the immediate Parent legal entity for each entity, as applicable. If there are multiple Parents, select the Parent entity with the largest ownership percentage. Only include one entry. For the top holding company, enter “N/A.”
- **[Sch 1B Col 11] Parent Name** – This will be populated by a formula, so input is not required.
- **[Sch 1B Col 12] % Owned by Parent** – Enter the percentage of the entity that is owned by the Parent identified earlier in the worksheet. Percentages of ownership should be based on the percentage of voting class securities (unless ownership is maintained other than by control of voting securities) consistent with what is reported pursuant to state holding company regulation filings (Form B or equivalent).
- **[Sch 1B Col 13] % Owned within Group Structure** – Enter the percentage of the entity that is owned in the aggregate by any affiliate within the Group.
- **[Sch 1B Col 14] State/Country of Domicile** – Enter state of domicile for U.S. insurance entities and country of domicile for all other entities. (Use references that are consistent with those used on Schedule Y, where available.)
- **[Sch 1B Col 15] Zero Valued and Not Admitted Entities – Report for U.S. Insurers Only.** Select the treatment of the entity from the following options: “Zero Valued for RBC” or “Nonadmitted for Accounting and RBC (Direct or Indirect).”

Zero Valued for RBC are affiliated insurance and financial entities that are otherwise reported in the RBC filer’s annual financial statement at their accounting value (i.e., per SAP) but are reported at zero value and zero capital requirements for RBC purposes. Examples include non-Canadian foreign insurers directly owned by U.S. life RBC filers. The carrying value and capital calculation specified in these instructions for the specific insurance or financial entity type should be reported in Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column.

Nonadmitted for Accounting and RBC (Direct or Indirect) are insurance or other financial affiliates that are owned directly or indirectly by an RBC filer via a downstream non-financial entity or holding companies that are reported at zero value per SAP and are also reported at zero value and zero capital requirements for RBC purposes. Examples include U.S. insurers indirectly owned by a U.S. RBC filer through a nonadmitted holding company that has not been subject to an independent audit. The carrying values and capital calculations specified herein associated with the specific insurance or financial

indirectly owned entity type should be reported Inventory B, Column 2 and Inventory C, Column 2, respectively.

NOTE: Do not report zero values in Column 2 of Inventory B and Inventory C for these affiliates. Only RBC filing entities with this type of affiliate will report in this column. The excess value in the nonadmitted Parent entity may be reported at zero value.

No entry is required in this column for any nonadmitted directly or indirectly owned non-insurance/non-financial subsidiary. Report zero for these affiliates in Column 2 of Inventory B and Inventory C.

- **[Sch 1B Col 16] Is Affiliate on Schedule A or Schedule BA an Insurer or Other Financial Entity?** – Column is meant to identify an entity with an insurer or financial entity identifier in Column 8 that is reported on Schedule A or Schedule BA but is being de-stacked and also reported on the Inventory tab. Provide a “Y” response where that is applicable. Otherwise leave it blank.
- **[Sch 1B Col 17] Selected Alternative Grouping** – This will be populated by a formula, so input is not required. If there are any blank entries in Column 9 (Alternative Grouping), this column will set them equal to the name of the entity.

60. Schedule 1C contains financials for each entity:

- **[Sch 1C Col 1] Basis of Accounting** – Enter basis of accounting used for the entity’s financial reporting.
- **[Sch 1C Col 2 and Col 3] Gross and Net Written Premium** – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (life, P/C, and health). Use equivalent local source for non-U.S. insurers or company records when available.
- **[Sch 1C Col 4] Reinsurance Assumed from Affiliates** – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 1 and life and health Schedule S, Part 1, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available.
- **[Sch 1C Col 5] Reinsurance Ceded to Affiliates** – Report for all U.S. and non-U.S. insurers. Use applicable entity annual financial statement data source for U.S. insurers (assumed premiums from P/C Schedule F, Part 3 and life and health Schedule S, Part 3, Section 1, and Section 2). Use equivalent local source for non-U.S. insurers or company records when available.
- **[Sch 1C Col 6] Book Assets** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total assets as reported in the basic financial statements before eliminations (because that is presumed to be less burdensome on the insurance holding company). Other financial data should similarly be prepared using financial data before eliminations. However, insurance holding companies are allowed to present such figures after eliminations if they do so for all figures and consistently for all years.
- **[Sch 1C Col 7] Book Liabilities** – This should be valued based on the applicable basis of accounting reported under the entity’s local regime and represents the total liabilities as reported in the basic financial statements.

- **[Sch 1C Col 8] Gross Paid-in and contributed Capital and Surplus (U.S. Insurers Only)** – For U.S. insurers, report the current year end amounts from annual financial statement Page 3 as follows:
 - a. Life Insurers: lines 29, 30 and 33.
 - b. P/C Insurers: lines 30, 31 and 34.
 - c. Health Insurers: lines 26, 27 and 28.

61. Generally, Schedule 1D will include entries from regulatory filings or entity specific GAAP financial statements as of the reporting date. The amounts reported should be the entity value on a stand-alone (fully de-stacked) or grouped basis (where applicable). This may require use of company records in certain cases. The amounts should be reported at 100% for the entity listed. Any required adjustments for percentage of ownership will be applied later, if necessary, to calculate a capital charge.

- **[Sch 1D Col 1] Prior Year Entity Identifier** – Report the Legal Entity Identifier, NAIC company code or other identifier used for the entity in the prior year GCC filing for the prior calendar year.
- **[Sch 1D Col 2] Prior Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone balance sheet. This will generally be the same as what is reported in the current year column in the prior year GCC filing. Where grouping is permitted, the balance reported may be on a grouped basis.
- **[Sch 1D Col 3] Net Income** – The final reported income figure from the income statement, and therefore is the figure reported after interest, taxes, extraordinary items, etc. For entities with accounting and reporting requirements that specify that dividends paid or received will be part of “net income,” report the dividends received in this column. Report dividends to policyholders here as a reduction to net income if required by local accounting or reporting requirements.
- **[Sch 1D Col 4] Dividends Paid and Received (Net)** – All entity types report the net amount of dividends paid and received in reporting year to/from and affiliate, a Parent shareholder, public shareholders, or policyholders (if not required to be a reduction/increase in net income by local accounting or reporting requirements). Net dividend payments will be reported as a negative value. All entity types that are subject to accounting and reporting requirements that specify that dividends paid or received will be reported as a surplus adjustment, will report dividends received in the reporting year from affiliates in this column.
- **[Sch 1D Col 5] Capital and Surplus Contributions Received from Affiliates** – All entity types. Report the sum of capital contribution (other than via surplus notes) during the reporting year received from any affiliated entity.
- **[Sch 1D Col 6] All Other Changes in Capital and Surplus** – Include totals for all adjustments not listed above. This would include any investment income not already reported in Column 3 or Column 5. Also, report all stock repurchases or redemptions in this column.

NOTE: Greater detail may be made available upon request.

- **[Sch 1D Col 7] Current Year Equity or Capital and Surplus** – Report the value based on net equity reported in the entity stand-alone Balance Sheet for the current year. This will generally be the same as what is reported for the entity in Inventory B, Column 2. Where grouping is permitted, the balance reported may be on a grouped basis.
- **[Sch 1D Col 8] Capital and Surplus Contributions Paid to Affiliates** – All entity types report the total of capital contributions (other than via surplus notes) during the reporting year paid to any affiliated entity.
- **[Sch 1D Col 9] Dividends Declared and Unpaid** – For all applicable entities report the amount of dividends declared or approved but not yet distributed.
- **[Sch 1D Col 10] Dividends Received and Not Retained** – All holding companies, insurers and financial entities with regulatory capital requirements indicate by “Y” or “N” if part or all of dividends received reported in Column 5 have been paid (passed through) to a Parent company, to public shareholders, or used to repurchase or redeem shares of stock.

Input 2 – Inventory

62. Columns in Inventory A are being pulled from Schedule 1:

- [Column 1] Insurance/Non-Insurance
- [Column 2] Entity Identifier
- [Column 3] Entity Identifier Type
- [Column 4] Entity Name
- [Column 5] Entity Category
- [Column 6] Parent Identifier
- [Column 7] Parent Name
- [Column 8] Basis of Accounting

Columns Requiring Input

63. Enter information on adjustments to carrying value. Considerations specific to different types of entities are located at the end of this subsection.

- **[Inv B Col 1] Carrying Value (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. In general, carrying values utilized should represent: 1) the subsidiary valuation required by the insurance or other sectoral regulator if the Parent is a regulated entity; or 2) in the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then a subsidiary valuation-based U.S. GAAP or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. No entry is required for the Ultimate Controlling Person (UCP)

The value in this column will include a zero value for entities not admitted per SAP or other jurisdictional regulatory rules. A single entry for all entities that qualify under the grouping criteria described in Input 1, herein may be made in lieu of individual entries on the line for the affiliate that holds the qualifying entities. This column will include double counting.

The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group.

- **[Inv B Col 2] Carrying Value (Local Regime)** – Record the carrying value recognized by the legal entity's jurisdictional insurance or other sectoral supervisor. This will include the value of capital instruments (e.g., U.S. insurer issued surplus notes) that are specifically recognized by statute, regulation or accounting rule and included in the carrying value of the entity. In the case where the entity is not subject to insurance or other sectoral regulatory valuation, the carrying value will be U.S. GAAP equity (including OCI) or other International GAAP as used in the ordinary course of business by the ultimate controlling party in their financial statements. If the group is comprised entirely of U.S.-based entities under a U.S.-based Parent company, the entries in this column will be the same as in Column 1 except in cases where the Parent owns not admitted (or otherwise zero valued financial affiliates that would be reported as not admitted in the Parent Regime column but fully admitted (per SAP valuation) in the Local Regime column). (See instructions for [Sch 1B Col 15].) However, if such an entity has been listed in the [Sch 1B Col 2] **Include/Exclude (Supervisor)** column, indicating that the Lead State

Regulator agrees that the entity does not pose material risk, then a value will be reported here, but the ultimate calculation will show the results without the excluded entity's value. Directly or indirectly owned **non-insurance / non-financial** entities that were not admitted or otherwise carried at a zero value in the Parent Regime, should be reported at zero value in this column. The carrying value for affiliates that are U.S. RBC filers will be the amount reported TAC on entity's RBC report. A change is recommended to allow the carrying value for Canadian insurers to be calculated on a net of reinsurance basis. This column will include double counting. The values recorded for all subsidiaries should be the full value of the subsidiary regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the full value of the subsidiary adjusted to reflect total percentage of ownership within the group. The entry here should generally be the same as the value reported in Inventory B, Column 1, except where TAC for RBC filers differs from their BACV. A single entry for all entities that qualify under the grouping criteria described exceptions described herein under Paragraph 57 in the Input 1 section, above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries.

A sensitivity analysis is included to calculate the impact of excluded entities requested but not approved for exclusion by the lead state.

Parent Entity	INVENTORY B – Accounting Valuation to be Used			Parent Entity Line Inv B, Column 3
	Entity	Inv B, Column 1	Inv B, Column 2	
U.S. RBC filer	U.S. RBC filer	BACV Per Statutory Accounting	RBC TAC	BACV Per Statutory Accounting
U.S. RBC filer	Other U.S. Insurer	BACV Per Statutory Accounting	BACV Per Statutory Accounting	BACV Per Statutory Accounting
U.S. RBC filer	Foreign Insurer or Other Regulated w/ Capital Reqmt	BACV Per Statutory Accounting	Per Local Regulatory Accounting	BACV Per Statutory Accounting
U.S. RBC filer	Financial w/o Capital Reqmt	BACV Per Statutory Accounting	BACV Per Statutory Accounting	BACV Per Statutory Accounting
U.S. RBC filer	Non-Financial	BACV Per Statutory Accounting	No entry Required	No entry Required - Do not de-stack
Other U.S. Insurer	U.S. RBC filer	BACV Per Statutory Accounting	RBC TAC	BACV Per Statutory Accounting
Other U.S. Insurer	Any Other Entity Type	BACV Per Statutory Accounting	BACV Per Statutory Accounting	BACV Per Statutory Accounting
Foreign Insurer or Other Regulated w/ Capital Reqmt	U.S. RBC filer	Per Local Regulatory Accounting	RBC TAC	Per Local Regulatory Accounting
Foreign Insurer or Other Regulated w/ Capital Reqmt	Other U.S. Insurer	Per Local Regulatory Accounting	BACV Per Statutory Accounting	Per Local Regulatory Accounting
Foreign Insurer or Other Regulated w/ Capital Reqmt	Foreign Insurer or Other Regulated w/ Capital Reqmt	Per Local Regulatory Accounting	Per Local Regulatory Accounting	Per Local Regulatory Accounting
Foreign Insurer or Other Regulated w/ Capital Reqmt	Financial w/o Capital Reqmt	Per Local Regulatory Accounting	Per risk level factor x 3-year avg revenue	Per Local Regulatory Accounting
Foreign Insurer or Other Regulated w/ Capital Reqmt	Non-Financial	Per Local Regulatory Accounting	No entry Required	No entry Required – Do not de-stack
Financial w/o Capital Reqmt or Non-Financial	U.S. RBC filer	Per Local Public Accounting	RBC TAC	Per Local Public Accounting
Financial w/o Capital Reqmt or Non-Financial	Other U.S. Insurer	Per Local Public Accounting	BACV Per Statutory Accounting	Per Local Public Accounting
Financial w/o Capital Reqmt or Non-Financial	Foreign Insurer or Other Regulated w/ Capital Reqmt	Per Local Public Accounting	Per Local Regulatory Accounting	Per Local Public Accounting
Financial w/o Capital Reqmt or Non-Financial	Financial w/o Capital Reqmt	Per Local Public Accounting*	Per Local Regulatory Accounting*	Per Local Public Accounting
Financial w/o Capital Reqmt or Non-Financial	Non-Financial	Per Local Public Accounting*	Per Local Public Accounting*	Per Local Public Accounting

*Subject to Grouping

In cases where a U.S. life RBC filer owns a foreign insurer and the BACV value reported for the foreign insurer in the Parent U.S. insurers financial statement is adjusted to zero for RBC purposes, then report zero in Inventory B, Column 1 and Column 3 for that foreign insurance entity.

- **[Inv B Col 3] Investment in Subsidiary** – Enter an adjustment to remove the investment carrying value of any directly owned subsidiary(ies) from Parent’s carrying value. This is intended to prevent double counting of available capital when regulated entities are stacked. The carrying value to be removed should be the investment value carried by the Parent from which the entity is being de-stacked (i.e., the value in Column 1 in Inventory B adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at zero value by the Parent. Where entities are owned partially by entities outside of the group, then the Parent’s percentage of ownership will be calculated based on the value owned within the group.

Generally, for all non-financial affiliates, Schedule A and Schedule BA assets will remain in the value of the Parent insurer and not entered in this column. However, if the Schedule A or Schedule BA asset is an insurance or financial entity as described herein, the value of that entity will be included in this column. For indirectly owned Schedule A or Schedule BA insurance or financial entities, only the value of that entity will be included in this column and the remaining value of the downstream Schedule BA Parent will remain with the Parent insurer. Similarly, the carrying value of U.S. branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the value of the foreign insurer so that the Parent entity may eliminate double counting of that available capital which will now be reported by the stand-alone Branch listed in the inventory.

NOTE: The “Sum of Subsidiaries” column may provide a useful check against this entry, but it will not necessarily be equal.

When utilizing public accounting (e.g., GAAP) equity values that differ from regulatory values (e.g., SAP), it is **the GAAP equity** of the insurers that must be eliminated from the GAAP Parent in this column, not the SAP value (regulator value). This is necessary in order to allow the calculation to appropriately represent SAP available capital of regulated entities and GAAP equity of non-regulated entities. Data on the accounting differences between Parent and Local carrying values will be collected in **[Inventory B, Column 9]** and further detail provided in the “Input 6 - Questions” tab.

NOTE: Values for Schedule A and Schedule BA affiliates that are required to be reported in the “Inventory” tab will be adjusted out of the value reported by the U.S. insurer in this column.

[Inv B Col 4] Intragroup Capital Instruments – This column is automatically calculated from inputs to the “Capital Instruments” tab. It reflects an adjustment to remove carrying value for intragroup financial instruments that that are treated as capital by the issuer and consequently create additional capital within the group upon issuance (most notably U.S. surplus notes). Example for surplus notes: In both intragroup and unaffiliated transactions, treat the assets transferred to the issuer of the surplus note as available capital. If the purchaser is an affiliate, eliminate the investment value from the affiliated purchaser of the surplus note in this column. If the purchaser is an insurer or other regulated entity, eliminate the purchaser’s capital charge (e.g., RBC charge) on the surplus note investment in the corresponding adjustment column for the capital calculation. No adjustments are made for any intragroup capital instrument that is treated as a liability by the issuer.

- **[Inv B Col 5] Reported Intragroup Guarantees, LOCs and Other** – If there is an impact on the available capital / carrying value of an entity that is reported in Column 2, other than an XXX/AXXX captive, enter an adjustment to reflect the notional value weighted for expected utilization for reported intragroup guarantees (including solvency insurance and capital maintenance agreements). Enter the notional value for letters of credit, or other intragroup financial support mechanisms. Explain each intragroup arrangement in the “Input 6 - Questions” tab.
- **[Inv B Col 6] Other Intragroup Assets** – Enter the amounts to adjust for and to remove double-counting of carrying value reported in Column 2 for other intragroup assets, which could include intercompany balances, such as (provide an explanation of each entry in the “Input 6 - Questions” tab):
 - a. Loans, receivables and arrangements to centralize the management of assets or cash;
 - b. Derivative transactions;
 - c. Purchase, sale or lease of assets; and
 - d. Other (describe).
- **[Inv B Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Input 6 - Questions” tab. This column should adjust for externally issued LOCs or other SAP adjustments included in available capital in Column 2 but not otherwise recognized in these instructions. This will not apply to XXX/AXXX captives.
- **[Inv B Col 8] Adjusted Carrying Value** – Stand-alone value of each entity per the calculation to eliminate double-counting. This value includes permitted and prescribed practices.
- **[Inv B Col 9] Accounting Adjustments (e.g., GAAP to SAP)** – Report the total difference for all entities owned by a common parent between the carrying value reported in Column 1 and the value reported in Column 2 for those entities. This column will generally apply to regulated entities where the stand-alone carrying value is based on regulatory accounting (e.g., SAP) while the value reported for that entity by the Parent is carried at a financial accounting (e.g., GAAP) value. Further detail is reported in the “Input 6 - Questions” tab. The total difference in values should be reported in this column on the Parent line.
- **[Inv B Col 10] Gross Revenue 2nd Prior Year (Financial Entities without Regulatory Capital Requirements and Non-financial Entities)** – Report gross revenue (excluding ~~data~~ from subsidiaries and affiliates).
- **[Inv B Col 11] Gross Revenue Prior Year (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities)** – Report gross revenue (excluding ~~data~~ from subsidiaries and affiliates).
- **[Inv B Col 12] Gross Revenue Current Year (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities)** – Report gross revenue (excluding ~~data~~ from subsidiaries and affiliates).
- **[Inv B Col 13] Average Revenue over 3-years (Financial Entities without Regulatory Capital Requirements and Non-Financial Entities)** – This column is populated from data in Column 10, Column 11 and Column 12.

This column will support the capital calculation for asset managers, broker-dealers and other Financial Entities without Regulatory Capital Requirements.

64. “Adjusted Capital Calculation” is reported in a similar manner to the “Adjusted Carrying Value” above. The columns are in the same order, although it is likely that fewer entries will be needed for Column 4 through Column 7. Further guidance is below.
- **[Inv C Col 1] Entity Required Capital (Immediate Parent Regime)** – This column is included to accommodate participants with either a U.S. or a non-U.S. based Parent company. No entry is required for the Ultimate Controlling Person. In general, the entity required capital should represent the capital requirements of the Parent’s insurance or other sectoral regulator:
 - a. For subsidiaries of foreign insurers or other non-U.S. financial entities, the unscaled capital required by the Parent’s regulator of the regulated entity based on the equivalent of a Prescribed Capital Requirement (PCR) level.
 - b. For subsidiaries, including applicable Schedule A and Schedule BA subsidiaries, of U.S. insurance entities that are subject to RBC, except where the subsidiary is also an RBC filer, the entry should be equivalent of what would be required in the Parent’s RBC, adjusted for covariance where applicable (calculated by the preparer) reported at company action level (or two times authorized control level RBC) for that entity. Where the subsidiary is also an RBC filer, then the amount reported will be at company action level RBC (or two times authorized control level RBC) after covariance.
 - c. For subsidiaries of U.S. insurers that do not file RBC, report the actual amount of capital required in the Parent’s capital requirement (if any) for the subsidiary entity.
 - d. In the case where the Parent is not subject to insurance or other sectoral regulatory valuation, then use zero where applicable. This column will include double counting. The values recorded for all subsidiaries should be 100% of the specified capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group. A single entry for all entities that qualify under the grouping criteria described in Section V, herein may be made on the line for the affiliate that holds the qualifying entities in lieu of individual entries.
 - **[Inv C Col 2] Entity Required Capital (Local Regime)** – Enter required capital for each de-stacked entity, as applicable entity description below. For U.S. RBC filing subsidiaries under a U.S. RBC filing Parent the amounts will be the same in both the Parent and Local Regime columns. For some entity types this will result in entries for the entities under a U.S.-based insurance Parent to be different from what U.S. RBC would dictate. In addition, where a U.S. insurer directly or indirectly owns notadmitted (or otherwise zero valued) financial affiliates, those affiliates would be reported with zero value in the Parent Regime column but at the specified regulatory value described below for that financial entity type in this column. However, if such an entity has been listed in **[Sch1B Col 2] Include/Exclude (Supervisor)** column, indicating that the Lead State Regulator agrees that the entity does not pose material risk, then report the capital calculation in accordance with entity instructions in paragraph 65 below, but the

ultimate calculation will show the results without the excluded entity's capital calculation. Directly or indirectly owned non-financial entities that were not admitted or otherwise carried at a zero value in the Parent Regime, should be reported at zero value in this column. The column allows the entity required capital for Canadian insurers to be calculated on a net of reinsurance basis. For non-risk-based regimes (e.g. Barbados-domiciled operating companies) the required capital will be 50% of available capital, although groups are also allowed to utilize an amount that is derived from U.S. RBC (with simplifications allowed) if that is preferred by the group. Note, this 50% factor is an interim factor to be used until a more thorough analysis can be complete. A single entry for all entities that qualify under the grouping criteria described herein under Paragraph 57 in the Input 1 section above may be made in the line for the affiliate that holds the qualifying entities in lieu of individual entries. This column will include double counting. The values recorded for all subsidiaries should be 100% of the capital requirements regardless of percentage of ownership by entities within the group. Where entities are owned partially by entities outside of the group, then report the capital requirements of the subsidiary adjusted to reflect total percentage of ownership within the group.

65. Additional clarification on capital requirements where a formula is required:

- **U.S. RBC filing Insurers:** Report RBC at Company Action Level including operational risk (200% x ACL)
- **Foreign Insurance Entities:** The local capital requirement as specified below for each jurisdiction should be reported by a legal entity at a Prescribed Capital Requirement (PCR) level. This treatment is different than what U.S. RBC would require and recognizes other regulators view of adequate capital for insurers within another jurisdiction. It is more reflective of risk within the group context. A sensitivity analysis will be included in the "Summary 2 - Top Level" tab using the jurisdictional PCR scaled per the Excess Relative Ratio method (see Appendix 1) for insurers in foreign jurisdictions that are subject to scaling.
- **European Union subsidiaries:** Use the Solvency II Solo Solvency Capital Requirement (SCR) as the PCR.
- **U.S. RBC filing subsidiaries:** The RBC Company Action Level including operational risk of each insurer should be reported.
- **Australia subsidiaries:** The PCR is the target capital as set by the insurer/group in accordance with APRA requirements. Effectively, this would be "Target capital under ICAAP." PCR is not a set multiple of MCR.
- **Bermuda subsidiaries:** The Legal Entity PCR in Bermuda for medium and large commercial insurers is called the "Enhanced Capital Requirement" (ECR) and is calibrated to Tail VaR at 99% confidence level over a one-year time horizon.
- **Hong Kong subsidiaries:** Under the current rule-based capital regime, if applied similar to the concept of PCR, the regime's PCR would be 150% of MCR for life insurers and 200% of MCR for non-life insurers.
- **Japan subsidiaries:** The PCR is the solvency margin ratio of 200%.
- **Korea subsidiaries:** The PCR is 100% of risk-based solvency margin ratio.

- **Singapore subsidiaries:** The PCR is 120% of total risk requirement (i.e., capital requirement).
 - **China Taipei subsidiaries:** The PCR is 200% of RBC ratio.
 - **Canada life entities:** The baseline PCR should be stated to be “100% of the LICAT Base Solvency Buffer.” The carrying value should include surplus allowances and eligible deposits.
 - **Canada P/C entities:** The PCR should be the MCT capital requirement at the target level.
 - **South Africa subsidiaries:** The PCR is 100% of the SAM SCR.
 - For any entities that cannot be mapped to the above categories excluding those in non-risk-based regimes, scaling will be at 100%
66. Additional clarification on capital requirements where a U.S. formula (RBC) is not required:
- For those U.S. insurers that do not have an RBC formula, the minimum capital per state law should be used as the basis for what is used for that insurer in the GCC. This may differ from what U.S. RBC would require. It is more reflective of the regulatory view of risk in the group context. The following requirements should be used in other specified situations where an RBC does not exist:
 - **Mortgage Guaranty Insurers:** The minimum capital requirement shall be based on the NAIC’s requirements set forth in the *Mortgage Guaranty Insurance Model Act* (#630).
 - **Financial Guaranty Insurers:** The minimum capital requirement shall be based on the NAIC’s requirements set forth in the *Financial Guaranty Insurance Guideline* (#1626), specifically considering Section 2B (minimum capital requirements) and Section 3 (Contingency, Loss and Unearned Premium Reserves) and the other requirements of that guideline that impact capital (e.g., specific limits).
 - **Title Companies:** The minimum capital requirement shall represent 200% of the required level of reserves carried by the insurance company.
 - **Other Companies:** A selected basis for minimum capital requirements derived from a review of state laws. Where there is a one-off treatment of a certain type of insurer that otherwise would file RBC (e.g., HMOs domiciled in California), the minimum capital required by their respective regulator could be considered in lieu of requiring the entity to complete an RBC blank.
 - **Captives:** U.S. insurers that have captives should complete the applicable RBC formula regardless of whether the captive is required to complete it in their captive state. The amounts input into RBC by the captive shall be based on the actual assets and liabilities utilized in the regulatory reporting used by the captive. Captives used exclusively for self-insurance (either by U.S. life insurers or any other type of insurer) or insurance provided exclusively to its own employees and/or its affiliates, should not complete an RBC calculation and the entire entity should be treated as non-insurers and receive the same charge as a non-regulated entity.
67. Non-insurance financial entities subject to a specified regulatory capital requirement:
- All banks and other depository institutions – The unscaled minimum required by their regulator. For U.S. banks, that is the Office of the Comptroller of the Currency (OCC)

Tier 1 or other applicable capital requirement. This is understood to be consistent with how the Federal Reserve Board would apply its Building Block Approach.

- Any other financial entity that is determined to be subject to a specified regulatory capital requirement will bring that requirement in the GCC at the first level of regulator intervention (if applicable). Application of regulatory capital requirements not specifically described in this paragraph must be approved for use by the lead state prior to their use. Otherwise, the entity will be subject to the capital calculation described in Paragraph 68.
- This differs from what U.S. RBC would require. It recognizes the sectoral regulator's view of risk for a particular financial entity type. It is more reflective of risk in the group context.

68. Non-insurance financial entities NOT subject to a specified regulatory capital requirement:

- All asset managers and registered investment advisors and all other financial entities as defined in Section II: Use the capital calculation specified below based the level of risk assigned to the entity by applying the material risk principles defined in Section II. However, asset managers and investment affiliates (not qualifying to be treated as non-financial entities per paragraph 9) will be reported at either medium or high risk. In certain cases, these entities may be subject to a layer of regulation (e.g., SEC or FINRA) but are not generally subject to a specified capital requirement.

High Risk: 10% x 3-year average revenue

NOTE: A Basel Charge of 15% will be used for the IAIS ICS.

Medium Risk: 5.0% x 3-year average revenue.

Low Risk: 2.5% x 3-year average revenue

NOTE: Medium risk could be used as a starting point while the stratified methodology is further developed.

69. Other non-insurance, non-financial entities with material risk:

- Non-insurance, non-financial entities may not be as risky as financial entities. For non-insurance, non-financial entities not owned by RBC filers or other such entities where there is not a regulatory capital charge for the entity in the capital formula, use an equity charge of 10.5% (post tax) for predominantly life Insurance Groups 9.5% for predominantly P/C Insurance Groups and 3.5% for predominantly health Insurance Groups x BACV. If the entity is not subject to a capital charge or is included in the capital charge of another financial entity, then enter zero in Column 1 and the charge specified in this paragraph in Column 2. These factors are based on average after covariance RBC charges for the respective insurer types and are calibrated at 200% x ACL RBC. This is meant to be consistent with how the entity would be treated if owned by an RBC filer while recognizing that the entity may be excluded from the GCC if it does not pose material risk to the insurers in the group.

Non-insurance/non-financial entities owned by RBC filing insurers (or owned by other entities where a regulatory capital charge applied to the non-insurance/non-financial affiliate) will remain in the Parent's capital charge and reported at that value in Column 1 but will be reported as zero in Column 2. These non-financial entities may not be excluded from the GCC and should be reported under this entity category as "included".

One additional informational capital calculation for all non-financial entities will be applied in the Summary 2 - Top Level tab using current year gross revenue from Inventory B, Column 12 with the calculation occurring and results available in the “Calc 2” tab as follows: 5% of reporting year gross revenue based on a medium level risk for a financial entity.

70. Non-operating holding companies:

- Non-operating holding companies will be treated the same as other non-insurance/non-financial entities with material risk. Unless reported on a grouped basis (see paragraph 57), for purposes of applying the capital calculation, the carrying value of stand-alone positive valued and negative valued non-operating holding companies will be netted. If the net value is zero or less (floored at zero for purposes of applying a charge), the charge applied will be zero. If the filer chooses to designate the non-operating holding company as a non-insurance/non-financial entity without material risk and requests exclusion, then no allowance for debt issued by that holding company may be included in the calculation.

71. Non-insurance, non-financial entities without material risk:

Only entities not owned directly or owned by RBC filing insurers (or by other entities where a regulatory capital charge applied to the non-insurance/non-financial affiliate) should be reported in this category. In general, these entities should be “excluded” from the GCC in Schedule 1B, Column 1, subject to review and decisions to report as “include” by the lead-State regulator in Schedule 1B Column 2.

INVENTORY C – Capital Calculation to be Applied				
Parent Entity	Entity	Entry on Entity's Own Line		Impact on Investment in Subsidiary in Parent's Line
		Inv C, Column 1	Inv C, Column 2	Inv C, Column 3
U.S. RBC filer	U.S. RBC filer	RBC ACL (including op Risk) x 2	RBC ACL (incl. op risk) x 2	RBC ACL (including op Risk) x 2
U.S. RBC filer	Other U.S. Insurer	Affiliate risk RBC	Per GCC Entity Instructions	Affiliate risk RBC
U.S. RBC filer	Foreign Insurer or Other Regulated w/ Capital Reqmt	Affiliate risk RBC	Jurisdictional or Sectoral PCR Level Capital Reqmt	Affiliate risk RBC
U.S. RBC filer	Financial w/o Capital Reqmt	Asset risk RBC	Per risk level factor x 3-year avg revenue	Asset risk RBC
U.S. RBC filer	Non-Financial	Asset risk RBC -Post covariance	No entry Required	No entry Required - Do not de-stack
Other U.S. Insurer	U.S. RBC filer	Zero	RBC ACL (incl. op risk) x 2	Zero
Other U.S. Insurer	Any Other Entity Type	Zero	Per GCC Entity Instructions	Zero
Foreign Insurer or Other Regulated w/ Capital Reqmt	U.S. RBC filer	Per Local Capital Reqmt	RBC ACL (incl. op risk) x 2	Per Local Capital Reqmt
Foreign Insurer or Other Regulated w/ Capital Reqmt	Other U.S. Insurer	Per Local Capital Reqmt	Per GCC Instructions	Per Local Capital Reqmt
Foreign Insurer or Other Regulated w/ Capital Reqmt	Foreign Insurer or Other Regulated w/ Capital Reqmt	Per Local Capital Reqmt	Jurisdictional or Sectoral PCR Level Per Local Capital	Foreign Insurer or Other Regulated w/ Capital Reqmt
Foreign Insurer or Other Regulated w/ Capital Reqmt	Financial w/o Capital Reqmt	Per Local Capital Reqmt	Per risk level factor x 3-year avg revenue	Per Local Capital Reqmt
Foreign Insurer or Other Regulated w/ Capital Reqmt	Non-Financial	Per Local Capital Reqmt	No entry Required	No entry Required - Do not de-stack
Financial w/o Capital Reqmt or Non-Financial	U.S. RBC filer	Zero	RBC ACL (incl. op risk) x 2	Zero
Financial w/o Capital Reqmt or Non-Financial	Other U.S. Insurer	Zero	Per GCC Entity Instructions	Zero
Financial w/o Capital Reqmt or Non-Financial	Foreign Insurer or Other Regulated w/ Capital Reqmt	Zero	Jurisdictional or Sectoral PCR Level Capital Reqmt	Zero

Financial w/o Capital Reqmt or Non-Financial	Financial w/o Capital Reqmt	Zero	Per risk level factor x 3-year avg revenue*	Zero
Financial w/o Capital Reqmt or Non-Financial	Non-Financial	Zero	Per GCC Instructions*	Zero

Capital Calculation Adjustments

- **[Inv C Col 3] Investment in Subsidiary** – Enter an adjustment to remove the required capital of the directly owned subsidiary(ies) from Parent’s required capital. The capital requirement to be removed should be the capital requirement carried by the Parent from which the entity is being de-stacked (i.e., the value reported in Column 1 in Inventory C adjusted for ownership percentage). Thus, there will be no adjustment to the Parent’s value in this column for entities that are reported at a capital calculation of zero value by the parent. This is intended to prevent double counting required capital when regulated entities are stacked. [Example: When de-stacking an RBC filer from another RBC filer, the amount entered on the Parent line would be the RBC of the subsidiary. When de-stacking financial entities that are subject to diversification in a capital formula (e.g., RBC) the amount entered on the Parent line is the post-diversified capital requirement as calculated by the preparer (which is also the amount to be reported for the de-stacked entity on the entity’s line.

Generally the capital requirements for Schedule A and BA affiliates and other non-financial affiliates will remain in the capital requirements of the Parent insurer and not entered in this column, except that the capital requirements for any financial entity reported in a Parent’s Schedule A and BA, any financial entity indirectly owned through another Schedule A or BA affiliate listed in Schedule 1 and in this section should be entered in this column in the row of the entity that directly or indirectly owns that Schedule A and BA affiliate so that the parent entity may eliminate double counting of that capital requirement capital which will now be reported by the stand-alone Schedule A or BA affiliate listed in in the inventory.

For indirectly owned Schedule A and BA financial entities, only the capital requirements for that entity will be included in this column and the remaining capital requirement of the downstream BA Parent will remain with the Parent insurer. Similarly, the capital requirement for any U.S. Branch of a foreign insurer that is listed in Schedule 1 and in this section should be entered in this column in the row of the foreign insurer if it is already included in the capital requirement of the foreign insurer so that the parent entity may eliminate double counting of that capital requirement which will now be reported by the stand-alone Branch listed in the inventory. The amounts entered in this column for a Parent must correspond to the capital required by the parent entity which is being de-stacked from that Parent.

Capital calculations for Schedule A and Schedule BA indirectly owned financial entities that are owned by Schedule A or Schedule BA assets are reported in the Inventory Tab and will be adjusted out of the value reported by the U.S. insurer in this column (since the non-financial direct parent Schedule A or BA affiliate is not listed in the Inventory Tab.

In the “Input 6 - Questions” tab, a capital requirement should be reported for the value of the indirectly owned insurance of other financial entity based on the insurers Schedule A or Schedule BA charge rather than a charge (which would be zero) attributable to the Schedule A or Schedule BA entity that directly owns the insurance or other financial entity. As indicated earlier, the remaining capital requirement of the entity that directly owns the insurance or other financial entity will remain with the Parent insurer.

- **[Inv C Col 4] Intragroup Capital Instruments** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on surplus notes purchased by an affiliated U.S. insurer from a U.S. insurer issuer).
- **[Inv C Col 5] Reported Intragroup Guarantees, LOCs and Other** – This column would generally be used if there is potential double-counting of capital requirements (e.g., RBC charges on guarantees or LOCs).

- **[Inv C Col 6] Other Intragroup Assets** – This column is not intended to be used for required capital but is included in case an entity believes it is necessary from reporting an inaccurate required capital figure.
 - a. Loans, receivables and arrangements to centralize the management of assets or cash.
 - b. Derivative transactions.
 - c. Purchase, sale or lease of assets.
 - d. Other (describe in “Input 6 - Questions” tab).
- **[Inv C Col 7] All Other Adjustments** – Include a brief explanation in the “Description of ‘Other Adjustments’” in the “Input 6 - Questions” tab. Use this column is for adjustments related to required capital that correspond to adjustments in Inventory B, Column 7 and in cases where an entity believes it is necessary to adjust an inaccurate regulatory required capital figure (e.g., the RBC calculation applied as a permitted practice).

NOTE: Consider whether this column should be used rather than Column 2 for zero value entities.

- **[Inv C Col 8] Adjusted Capital Calculation** – Stand-alone capital calculation for each entity per the calculation to eliminate double-counting. This value includes the impact of permitted and prescribed practices.
- Inventory D is for “Reference Calculations Checks.” These are calculations that can serve as checks on the reasonability/consistency of entries.
 - a. **[Inv D Col 1 – 3] Sum of Subsidiaries (Carrying Value)** – This automatically generated column calculates the value of the carrying value of the underlying subsidiaries. It is provided for reference when filling out the “Investment in Subsidiary” column. This sum will often, but not always, be equal to the “Investment in Subsidiary” column.
 - b. **[Inv D Col 4 – 6] Sum of Subsidiaries (Calculated Capital)** – Similar to above but for calculated capital.
 - c. **[Inv D Col 7 – 8] Carrying Value/Adj Calc Cap** – This is a capital ratio on the adjusted and unadjusted figures. Double-check entities with abnormally large/small/negative figures to make sure that adjustments were made correctly.
 - d. **[Inv D Col 9 – 11] Equity & Carrying Value** – This is to compare Equity from Schedule 1 to the Carrying Value in Column L on Inv D.

Input 3 – Capital Instruments

72. Provide all relevant information pertaining to paid-up (i.e., any receivables for non-paid-in amounts would not be included for purposes of calculating the allowance) financial instruments issued by the Group (including senior debt issued by a holding company), except for common or ordinary shares and preferred shares. This worksheet aims to capture all financial instruments such as surplus notes, senior debt, hybrid instruments and other subordinated debt. Where a Reporting Entity’s Group has issued multiple instruments, the Group should not use a single row to report that information; one instrument per row should be reported (multiple instruments issued under the same terms may be combined on a single line). All qualifying debt should be reported as follows.
73. Debt issued by U.S.-led groups:

- Surplus Notes – Report the outstanding value of all surplus notes in Column 8 whether issued to purchasers within or outside the group. The outstanding value of surplus notes issued to entities outside the group and that is already recognized by state insurance regulators and reported 100% as capital in the carrying value of U.S. insurer issuers in “Inventory B” will not be included in the calculation for an additional capital allowance. Surplus notes issued within the group generally result in double-counting and will not be included in the additional capital allowance. (See instructions below.)
- Subordinated Senior Debt and Hybrid Debt Issued (e.g., debt issuances that receive an amount of equity credit from rating agencies) – The outstanding value will be reported in Column 8. Recognition for structurally subordinated debt will be allowed to increase available capital. For purposes of qualifying for recognition as additional capital, both of the following criteria must be met:
 - a. The instrument has a fixed term (a minimum of five years at the date of issue or refinance, including any call options other than making whole provisions¹). However, if the instrument is callable within the first five years from the date of issue it may be considered qualifying debt if any such call is at the option of the issuer only (the instrument is not retractable by the holder) AND it is the intent of management to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument.
 - b. Supervisory review or approval is required for any ordinary* or extraordinary dividend respectively or distribution from any insurance subsidiary to fund the repurchase or redemption of the instrument. Supervisory approval of ordinary dividends is met if the supervisor has in place direct or indirect supervisory controls over distributions, including the ability for the supervisor to limit, defer and/or disallow the payment of any distributions should it find that the insurer is presently, or may potentially become, financially distressed. There shall be no expectation, either implied or through the terms of the instrument, that such approval will be granted without supervisory review.

*The concept of approval for ordinary dividends is for GCC purposes and is met as described in subparagraph b, above. It is not intended to require explicit regulatory approval or in any way alter current provisions of Model #440 or the *Insurance Holding Company System Model Regulation* (#450).

- “Other” Debt – The outstanding value will be reported in Column 12 and will be reported in a manner that is consistent with Senior Subordinated Debt, as described above. Such debt will not be included in the additional capital allowance for the GCC.

¹ NAIC staff have been informed that make whole provisions are a form of a call feature that can be exercised by the issuer at any time; that they nonetheless are most frequently utilized near the end of the term of the instrument, generally in connection with refinancing; and that the cost to the issuer to exercise the make whole provision and associated financial reporting impacts, combined with the very low interest rate environment, make it much less likely that such provisions will be triggered, particularly within five years of issuance. Staff will continue their research, and assuming these observations are confirmed, the referenced criteria will continue to scope out make whole provisions.

74. Please fill in columns in Section 3A as follows for all capital instruments:

- **[Sec 3A Col 1] Name of Issuer** – Name of the company that issued the capital financial

instrument.² Will populate automatically from the “Entity Identifier” column in this subsection.

- **[Sec 3A Col 2] Entity Identifier** – Provide the reference number that was input in Schedule 1.
 - **[Sec 3A Col 3] Type of Financial Instrument** – Select type from the drop-down menu. Selections include Senior Debt, Surplus Notes (or similar), Hybrid Instruments and “Other” Subordinated Debt.
 - **[Sec 3A Col 4] Instrument Identifier** – Provide a unique security identifier (such as CUSIP). ALL debt instruments must include an internal identifier if an external identifier is not available.
 - **[Sec 3A Col 5] Entity Category** – Links automatically to selection made on the “Inventory” tab worksheet.
 - **[Sec 3A Col 6] Year of Issue** – Provide the year in which the financial instrument was issued or refinanced.
 - **[Sec 3A Col 7] Year of Maturity** – Enter the year in which the financial instrument will mature.
 - **[Sec 3A Col 8] Balance as of Reporting Date** – Enter the principal balance outstanding as reported in the general-purpose financial statements of the issuer.
 - **[Sec 3A Col 9] Intragroup Issuance** – Select whether the instrument was issued on an intragroup basis (that is, issued to a related entity within the group). This column will be used to remove “double-counting.” This column is a drop-down menu box with options “Y” and “N.”
 - **[Sec 3A Col 10] Treatment in Inventory B** – Select option that applies:
 - a. **Capital** – This instrument is recognized by the applicable regulator or credited as capital in local regulatory regime and reported as part of the adjusted carrying value of the issuer and was not purchased by an affiliate. This includes the value of qualifying senior and hybrid debt instruments (if recognized as capital) and U.S. surplus notes (or similar local regime instruments) that are issued to entities outside the group and included in the issuing entity’s value in the “Inventory B” tab. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital.
-

- b. **Liability** – This instrument is reflected by the issuer as a liability in the adjusted carrying value in the “Inventory B” tab and was not purchased by an affiliate. This would apply to all qualifying senior and hybrid debt issued to purchasers outside the group that is not recognized as capital by the local regulator and therefore is not included in the issuing entity’s value in the “Inventory B” tab. The value will be included in the calculation of a proxy allowance for additional capital.
- c. **Liability designation** would also apply to all non-qualifying senior and hybrid instruments and all debt categorized as “Other” issued to purchasers outside the group that is not recognized as capital by the local regulator. The value of these instruments will NOT be included in the calculation of a proxy allowance for additional capital.
- d. **Intragroup** – This would apply to all qualifying instruments purchased by an affiliate within the group. The outstanding value of those debt instruments will not be included in the calculation of a proxy allowance for additional capital. If the financial instrument is recognized or credited as part of the issuer’s available capital in Inventory B, then an adjustment for intragroup capital instruments is made in Inventory B, Column 4 and Inventory C adjustments (if necessary to eliminate an associated capital requirement). If the financial instrument is treated as a liability by the issuer, then no intragroup capital instrument adjustment is required in Inventory B or Inventory C.
- e. The outstanding value of all non-qualifying senior and hybrid instruments and financial instruments categorized as “Other Debt” whether issued to purchasers inside or outside the group will not be included in the calculation of a proxy allowance for additional capital and no other adjustments are required in the template. However, in the unlikely event that the instrument is treated as available capital to the issuer in Inventory B, an adjustment in Inventory B, Column 4 to remove the available capital would be required.

For intragroup surplus notes, the adjustment will impact the carrying value and associated capital calculation of the purchasing affiliated entity.

- **[Sec 3A Col 11] Intragroup Purchaser Identifier** – Enter the entity identify for the affiliate entity that purchased the instrument.
- **[Sec 3A Col 12] Description of Other Debt Instruments** – Provide a description of instruments designated as “Other”.
- **[Sec 3A Col 13] Call Provisions Criteria** – Respond “Y” or “N” as to whether the instrument is subject to a call provision (other than a make whole provision) in the first five years AND it is management’s intent to replace the called instrument in full before or at redemption by a new issuance of the same or higher quality instrument. Respond “X” if the instrument has a maturity of greater than five years including any call provisions.
- **[Sec 3A Col 14] Potentially Recognized Instrument** – This is an automatic calculation to determine if this is instrument that has potential to be recognized as additional capital in the GCC and/or in sensitivity analysis. The column will show “Y” if each of the

following is true: 1) it is Senior Debt, Hybrid or Other instrument; 2) the instrument is not intragroup; and 3) the instrument is treated as liability on Inventory B. These are calculated using Column 3, Column 9, and Column 10, respectively.

- **[Sec 3A Col 15] Other Criteria Met**– This is an automatic calculation to determine if instrument qualifies due to criteria beyond those in Column 14. The column will show “Y” if: 1) the instrument has initial maturity of greater than five years including any call provision (i.e., “X” is reported in Column 13); and 2) it meets the “Call provisions criteria” in Column 13 (i.e., “Y” is reported in Column 13).
- **[Sec 3A Col 16] Qualified Debt** – This column is calculated automatically using data from the entries in Column 14 and Column 15. To qualify, an instrument needs a “Y” in both columns. It represents the amount of qualifying debt that will be used in the calculation of an allowance for additional capital under the alternate subordination method and the proxy allowance method. This amount will be carried into Section 3C, Column 1, Line 3.

75. Section 3C will be auto filled, with the exception of Column 1, Line 2.

- **[Sec 3C Col 1, Line 1] Total Paid-In and Contributed Capital and Surplus** – This is the amount reported on Page 3 of the annual financial statement submitted to regulators by a U.S. insurer.
- **[Sec 3C Col 1, Line 2] Alternate Subordination Calculation** – This manual entry is the excess of qualifying debt issued over liquid assets held by the issuing consolidated holding company as reported in the consolidated financial statements. Liquid assets generally include cash, short-term investments (including bonds held by the hold co). In most cases the excess of liquid assets will be made up of the value of all subsidiaries owned by the consolidated hold co. No entry is expected for a mutual group.
- **[Sec 3C Col 1, Line 4] Downstream Estimate** -The total reported under the alternate subordination approach will be compared to the total amount of gross paid-in or contributed capital and surplus reported by the insurance entities within the group as reported in Schedule 1. The greater value will be carried into the calculation for an additional capital allowance.

NOTE: No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 5] Proxy Calculation for Additional Capital Allowance** – A calculation will be made in this tab in Section 3B that will apply 30% of available capital plus the value of all qualifying debt to become part of the proxy allowance for additional capital for qualifying senior subordinated. An additional amount of 15% of available capital plus the value of all qualifying debt will be calculated to become part of a proxy allowance for additional capital be for hybrid debt.

Summary Formula: Proxy Amount = (30% x (Available Capital + Qualifying Senior and Hybrid Debt)) + (15% x (Available Capital + Qualifying Senior and Hybrid Debt)).

NOTE: No more than 100% of the total outstanding value of qualified senior and hybrid debt will be allowed into the calculation.

- **[Sec 3C Col 1, Line 6 through Line 8]** – The greater of the proxy calculation or the larger of paid in capital or alternate subordination calculation will be allowed as additional capital in **[Sec 3C Line 6]**. However, an overall limit of no more than 75% of the total adjusted carrying value in Inventory B will be applied in **[Sec 3C Line 7]**. Adjustments to increase available capital will be calculated from data on this page. The summary results of the components of the calculation (paid in capital and surplus, alternate subordination, proxy calculation and limitations) are populated as titled in the calculation columns in this section. The final amount recognized as additional capital is shown in **[Sec 3C Line 8]**.
- The additional capital allowance recognized for capital instruments will be shown as an “on-top” adjustment in the “Summary 1 – Entity Level” tab.

Summary Calculation for Debt Allowed as Additional Capital:

Step 1: Calculate the following amounts:

- a) The greater of Total paid-in capital and surplus of U.S. insurers or the alternative subordination calculation (defined above)
- b) A proxy value (defined above)

Step 2: Take the greater of a) or b) from Step 1, and subject that amount to two limitations:

- First, the total amount to qualify as capital cannot exceed 100% of the total outstanding value of qualified senior and hybrid debt.
- Second, the total amount to qualify as capital cannot exceed 75% of the total adjusted carrying value in Inventory B.

After applying the two limitations in Step 2, the remaining amount is allowed as additional capital.

Input 4 – Analytics

76. The entity type information supporting analytics summarized in Summary 3 – Analytics are pulled into this tab from data or information reported in other tabs in the GCC template. That data is exported into summaries in the “Summary 3 – Analytics” tab. Only 2022 data is currently to be populated. However, it is contemplated that going forward, data for prior years will also be populated by the group such that it will provide the Lead State Regulator with metrics to identify trends over time.

Input 5 – Sensitivity Analysis

77. This tab shows inputs required for **Analysis 3 - Permitted practices, Analysis 4 - Prescribed Practices, Analysis 7 - Captives other than XXX/AXXX and Analysis 8 – Regulatory Discretion** on tab Summary 2. Sensitivity Analysis is intended to provide the Lead State Regulator additional information that helps them better understand the financial condition of the group. Similar to the sensitivity analysis included in the legal entity RBC, it provides the regulator with additional information and allows them to consider “what-if” scenarios to better understand the impact of such items. The results of this analysis will not impact the GCC ratio.

- **[Analysis 3 and Analysis 4]: Permitted and Prescribed Practices** – Report values from annual financial statement Note 1 (excluding those pertaining to XXX/AXXX captives). Values of permitted or prescribed practices that decrease available capital should be reported as negative values:
 - a. Entity identifier
 - b. Value of permitted practice
 - c. Capital Requirement attributable to permitted practice (if any)
 - d. Description of permitted practice
 - e. Value of prescribed practice
 - f. Capital requirement attributable to permitted practice (if any)
 - g. Description of prescribed practice

- **[Analysis 7]: Captives other than XXX/AXXX** – all other U.S. captives shall make an asset adjustment as described below.

Asset Impact

78. For the asset impact, it is ONLY required for the assets included in a captive or an entity not required to follow the statutory accounting guidance in the *Accounting Practices and Procedures Manual*. It is not required for assets for those groups that retain such business in a non-captive traditional insurance company(ies) already required to follow the *Accounting Practices and Procedures Manual*.

NOTE: Variations for state prescribed and permitted practices are captured in the separate sensitivity analysis.

79. The asset impact amount shall be determined based on a valuation that is equivalent to what is required by the *Accounting Practices and Procedures Manual* (SAP). For this purpose, “equivalent” means that, at a minimum the listed adjustments (as follows) be made with the intent of deriving a valuation materially equivalent to what is required by the *Accounting Practices and Procedures Manual*, however, without requiring adjustments that are overly burdensome (e.g., mark-to market bonds used by some captives under U.S. GAAP versus full SAP that considers NAIC designations). To be more specific, the asset impact shall be developed by accumulating the impact on surplus because of an accumulation of all the following in paragraph 80 and paragraph 81 combined.

NOTE: Letters of credit or other financial instruments that operate in a manner like a letter of credit, which are not designated as an asset under either SAP or U.S. GAAP and are required to be adjusted out of the available assets (i.e., the asset reduction is recorded as a negative figure in the template).

80. To achieve the above, accumulate the effect of making the following impact and record as a negative figure in the template, an asset adjustment for all the following explicit assets not allowed to be admitted under SAP:
- Assets *specifically* not allowed under the *Accounting Practices and Procedures Manual* in accordance with paragraph 9 of *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.
 - *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers*.
 - *SSAP No. 16R—Electronic Data Processing Equipment and Software*.
 - *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements*.
 - *SSAP No. 20—Nonadmitted Assets*.
 - *SSAP No. 21—Other Admitted Assets* (e.g., collateral loans secured by assets that do not qualify as investments are nonadmitted under SAP).
 - *SSAP No. 29—Prepaid Expenses*.
 - *SSAP No. 105—Working Capital Finance Investments*.
 - Expense costs that are capitalized in accordance with GAAP but are expensed pursuant to statutory accounting as promulgated by the NAIC in the *Accounting Practices and Procedures Manual* (e.g., deferred policy acquisition costs, pre-operating, development and research costs, etc.).
 - Depreciation for certain assets in accordance with the following SSAPs:
 - *SSAP No. 16R—Electronic Data Processing Equipment and Software*.
 - *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements*.
 - *SSAP No. 68—Business Combinations and Goodwill*.
 - The amount of goodwill of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
 - The amount of the net deferred tax assets (DTAs) of the SCA more than 10% of the audited U.S. GAAP equity of the SCA’s last audited financial statements.
 - Any surplus notes held by the SCA issued by the reporting entity.

81. In addition, record as a negative figure, an asset impact for any assets that are not recognized as an admitted asset under the principles of *SSAP No. 4—Assets and Nonadmitted Assets*, including:
- Letters of credit, or other similar instruments, that operate in a manner like a letter of credit and, therefore, do not meet the definition of “asset” as required under paragraph 2.
 - Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets that are unavailable due to encumbrances or other third-party interests, should not be recognized on the balance sheet and are, therefore, considered nonadmitted.
 - Assets of an insurance entity pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, such assets shall not be recognized as an admitted asset on the balance sheet.
 - **[Analysis 8]: Regulatory Discretion** – This will be a post-submission item completed by the Lead State Regulator. Enter the following information here:
 - a. Entity identifier.
 - b. Amount of adjustment.
 - c. Description of regulatory issue.

NOTE: This column may also be completed by the filer after advance consultation with the Lead State Regulator.

Input 6 – Questions

82. This tab provides space for participants to describe or provide greater detail for specified entries in other tabs (as noted in the instructions for the columns in those tabs) or additional relevant information not captured in the template. Examples include adjustments for intragroup debt, description of permitted practices; and adjustments to available capital or capital calculations that are included in the “other adjustment” column in the “Inventory” tab. Specified items are included in the tab. Other information that the filer believes is relevant should be added freeform in this tab.

Information or Detail for Items Not Captured in the Template

- Intercompany Guarantees – Provide requested information:
 - a. Entity identifier issuing the guarantee.
 - b. Entity identifier of entity or entities that are covered by the guarantee.
 - c. Indicate the notional or fixed value of the guarantee.
 - d. Describe the nature of the guarantee.

- Capital Maintenance Agreements – Provide requested information:
 - a. Entity identifier obligated under the agreement.
 - b. Entity identifier for entity or entities that are covered by the guarantee.
 - c. Indicate the notional or fixed value of the agreement.
 - d. Describe the nature of the agreement.

- Value of intangible assets included in non-insurance Holding Companies – Provide the requested information for all entities designated in the non-operating holding company entity category.
 - a. Entity identifier.
 - b. All goodwill.
 - c. All intangibles related to health care services acquisitions included in local carrying value column in Inventory B. Examples include, but are not limited to, customer relationships (policy retention, long-term health services contracts) and technology/patents/trade names and provider network contracts.
 - d. All other intangible assets included in the local carrying value column in Inventory B.
 - e. Total of line b, line c and line d.*
 - f. A description of each intangible asset included in line d.

* Auto populated.

Further details on amounts reported for specific intangibles other than goodwill may be requested by the Lead State Regulator during review of the GCC template.

Information or Detail for Items Captured in the Template

- Currency Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 2 is different than the amount in Inventory B, Column 1 due to currency conversion. If an entity is reported at zero value in Column 1, but a value is required in Column 2, then enter the information for the conversion rate used in Column 2.
 - a. Entity identifier.
 - b. Currency type reported in Inventory B, Column 1 and Inventory C, Column 1 (foreign currency).
 - c. Conversion rate applied.
 - d. Source of conversion rate applied.

- Intragroup Assets – Description of Adjustments for intragroup assets reported in Inventory B, Column 6 and Inventory C, Column 6. Provide the following information:
 - a. Entity identifier.
 - b. Amount reported in Inventory B, Column 6.
 - c. Description of adjustment.

- Other Adjustments – Description of adjustments reported in Inventory B, Column 7 and Inventory C, Column 7. Provide the following information:
 - a. Entity identifier.
 - b. Amount reported in Inventory B, Column 7.
 - c. Description of adjustment.

- Accounting Adjustments – Provide requested information only for entities where the amount reported for an entity in Inventory B, Column 1 is different than the amount in Inventory B, Column 2 due to differences in accounting basis
 - a. Entity identifier.
 - b. Value reported in Inventory B, Column 1.*
 - c. Value reported in Inventory B, Column 2.*
 - d. Total amount of adjustments related to difference in accounting basis.*
 - e. Nature of adjustment (e.g., GAAP to SAP).

* Auto populated.

- The tab also includes a listing of all Schedule A and Schedule BA affiliates, along with the following information:
 - a. Parent identifier (if available) – This is the same information as is included in Schedule 1 [**Sch 1B Col 3**] as would be entered for non-Schedule A/Schedule BA affiliates.
 - b. Parent Name – Enter the Name of the Parent.
 - c. Is Parent a Schedule A or Schedule BA Asset? – Entities directly owned by Schedule A / BA affiliates are not normally independently reported in Schedule A and Schedule BA. These downstream entities, if financial in nature, must be listed per previous instructions herein. However, entries for downstream non-insurance / non-financial entities may be required for a full reconciliation with Schedule Y
 - d. Financial? (Y/N) – If the entity meets the criteria as being a financial entity, indicate with a “Yes” response. A “No” response is not required for other entities listed. “Yes” entries should correspond to “Yes” entries in Schedule 1 [**Sch 1B Col 16**].
 - e. Carrying Value of Immediate Parent – Report the value listed in Schedule A and Schedule BA of the Parent insurer. For those cases where an indirect financial entity is reported use the value used by the direct Parent.
 - f. Capital Requirement for Immediate Parent – Report the value listed in the RBC report of the Parent insurer (pre-tax where applicable). For those cases where an indirect financial entity is listed, report the value of the capital requirement attributable to the Insurer rather than the direct non-financial Schedule BA Parent. The capital

requirement reported in this column for the immediate Schedule BA Parent should be adjusted to deduct the amount moved to Schedule 1 and Inventory C.

Calc 1 – Scaling (Ins)

83. All entries in this tab are calculation cells populated using data from within the tab or using data from elsewhere in the template. Scaled values for calculated capital will become part of the GCC ratio. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab. The concept of a scalar was first introduced to address the issue of comparability of accounting systems and capital requirements between insurance regulatory jurisdictions. The idea is to scale capital requirements imposed on non-U.S. insurers to be comparable to an RBC-based requirement. Two approaches for scaling related to foreign insurers were presented, and others are being explored and will be reviewed. A decision on the scaling methodology to be adopted into the GCC template will be made at the end of the review. In the interim a scalar of 100% of the jurisdictional PCR will be applied to all jurisdictions where a risk-sensitive capital requirement is in place.
84. Information on the Excess Relative Ratio (ERR) scalar methodology will be collected and applied in the “Summary 2 - Top Level” tab.
- NOTE:** See Appendix 1 for more information and examples on how the ERR scalars are calculated.
85. For jurisdictions without risk-sensitive capital requirements a 50% charge will be applied to adjusted carrying value.

Calc 2 – Scaling (Non-Ins)

86. All entries in this tab are either calculation cells using data from within the tab or using data populated from elsewhere in the template. Calculated capital for all entities except insurers will be reported in this tab. The calculated values will be summarized by entity type in the “Summary 1 – Entity Level” tab.
87. In addition, one informational option for calculated capital for financial entities without an existing regulatory capital requirement and one informational option for calculated capital for non-financial entities will be reported in this tab. Those calculation will not be carried into the “Summary 1 – Entity Level” tab and will not be part of the GCC ratio.
88. Only amounts for entities that the filer and the Lead State Regulator agree should **not** be excluded [Sch 1B Col 2] will be brought into the calculation in this tab and the “Summary 1 – Entity Level” tab. Entities where the Lead State Regulator does not agree with the filer’s request to exclude an entity will be part of the GCC ratio.

Summary 1 – Entity Level

89. Summarized results by entity type for the GCC ratio will be reported in this tab. An on top adjustment for debt allowed as additional capital will be added at the bottom of the table. All informational sensitivity analysis will be reported in Summary 2 and will not impact the GCC ratio.

Summary 2 – Top Level

90. Each sensitivity analysis will be shown on a stand- alone basis. It is expected that each informational sensitivity analysis will run automatically inthe background and the results for each displayed in this tab. The results for the informational sensitivity analysis will not be included in the “Summary 1 - Entity Level” tab.
- **[Analysis 1]: GCC with RBC at 300% of ACL** – No additional data is needed in the tab. The overall GCC ratio will be presented at 300% x ACL level. This calculation will increase the calculated capital for most entity types by a factor of 1.5. However, entities with existing regulatory capital requirements (e.g., foreign insurers and banks) will be reported at the same level specified in these instructions for both the GCC and the sensitivity analysis (i.e., at 100% of the jurisdictional or sectoral PCR requirements).
 - **[Analysis 2]: Excluded non-insurance/non-financial entities without material risk** – No additional data is needed in the tab. The data for entities where exclusion has been requested by the filer and the lead state does not agree (and changes to “include” in Schedule 1B, Column 2) will be populated based on entries in **[Sch 1B Col 3]** and data in Inventory B, Column 2 and Inventory C, Column 2. It will provide the regulator with the impact of excluding entities where the lead-State changes the status from “exclude” to “include” on the GCC ratio.
 - **[Analysis 3 and Analysis 4]:** This information shows the impactof excluding the amount of U.S. permitted and prescribed practices as described in the Preamble of the *Accounting Practices and Procedures Manual* and the sensitivity analysis allows the state to understand the size of the practices related to the overall group capital position and their impact on the GCC ratio.
 - **[Analysis 5]: Foreign Insurer Capital Requirements Scaled** – No additional data is needed in the tab. This information shows the amount of foreign insurer capital calculations scaled by applying scalars using the Excess Relative Ratio approach at a 200% x ACL RBC calibration level and at 300% x ACL for all non-U.S. jurisdictions where scalar data is available (see Appendix 1). The sensitivity analysis allows the state to understand the impact of this specific scaling method on the GCC ratio. This information is populated from the “Scalar” tab.
 - **[Analysis 6]: Alternative Capital Calculation for Non-Financial Entities** – No additional data is needed in the tab. The values reported will represent the alternative revenue-based values for capital calculation that are being captured in the template. The data will be populated from Schedule 1 and Inventory B and the analysis will be applied and reported in the “Calc 2 - Scaling (Non-Ins)” tab.
 - **[Analysis 7]: Captives other than XXX/AXXX** – all other U.S. captives shall make an asset adjustment as described on tab Input 5.
 - **[Analysis 8]: Regulatory Discretion** – This analysis is designed to reflect other regulator adjustments including for transactions other than XXX/AXXX reinsurance where there are differences in regulatory regimes exist and there is a desire to fully reflect U.S. Statutory Accounting treatment or to reflect the lead state’s view of risk posed by financial entities without specified regulatory capital requirements or risk posed by non-insurance/non-financial entities that have been included in the GCC.

Summary 3 – Analytics

91. Summary results for metrics described in the Analytics Guidance and utilizing data collected in

the “Input 4 – Analytics” tab or other tabs in the GCC will be calculated and presented here.

Summary 4 – Grouping Alternative

92. One sample alternative structure for grouping by entity type or jurisdiction in the GCC is displayed based on a suggested method. It can be modified, or other suggestions can be accommodated based on combining data from **Schedule 1 and the Inventory** in defined ways.

This tab is intended to be an additional analytical tool. The tool summarizes the GCC based on how a reporting entity views its organization, and provides regulators that view, to align it with regulatory information, other than what is reported elsewhere in the GCC template, that the reporting entity has submitted such as current filings, communications, etc. In this summary view, entities are organized into like regimes (e.g., RBC filers, foreign insurers, banks, financial, or non-financial entities) and multiple entities may be grouped together, in order to create a view of capital that is easy to review and analyze within each grouping. The intent of this approach is to provide an additional analytical tool designed to enhance dialogue between the Lead State Regulator and the company contemplated by the GCC filing. This view is transparent (no scalars, no adjustments, no de-stacking) so that financial information may be cross checked to other financial submissions such as RBC filings. However, it does contain double counting of available and required capital “(i.e., intra-company investments and transactions are not eliminated) and cannot be used to create a GCC ratio.

93. The results are dependent on how the reporting entity populated. Input 1 – Schedule 1, Column 9 Alternative Grouping. For example, if you have a dozen small dental HMO businesses, you may wish to collapse the results to a single line called “Dental HMOs,” by populating Input 1 – Schedule 1, Column 9 Alternative Grouping for each dental HMO as “Dental HMOs.” Then right-click and select “Refresh” to see the results with the “Dental HMOs” combined.
94. For reference, the data for the Summary 4 – Grouping Alternative is from Calc 1 – Scaling (Ins), which is fed by the inputs made in Input 1 – Schedule 1, Input 2 – Inventory, etc

Appendix 1 – Explanation of Scalars

- 95. The concept of a scalar is to equate the local capital requirement to an adjusted required capital level that is comparable to U.S. levels. The purpose of a scalar is to address the issue of comparability of accounting systems and capital requirements between jurisdictions. The following provides details on how the scalars were calculated by the NAIC, or how they are to be used when the NAIC has not developed a scalar for a country due to lack of public data.

Excess Relative Ratio Approach

- 96. Included below are various steps to be taken in calculating the excess relative ratio approach to developing jurisdiction-specific scalars. In order to numerically demonstrate how this approach could work, hypothetical capital requirements and financial amounts have been developed for Country A. Based on preliminary research that has been performed by NAIC staff, it appears that the level of conservatism built into accounting and capital requirements within a jurisdiction may differ significantly for life insurers and non-life insurers. Therefore, ideally each jurisdiction would have two different scalars based on the type of business. The example below includes information related to life insurers in the U.S. and Country A.

Step 1: Understand the Jurisdiction’s Capital Requirements and Identify the First Intervention Level

- a. The first step in the process is to gain an understanding of the jurisdiction’s capital requirements. This can be done in a variety of ways including reviewing publicly available information on the regulator’s website, reviewing the jurisdiction’s Financial Sector Assessment Program (FSAP) reports and discussions with the regulator.

In Country A, it assumes that the capital requirements for life insurers are based on a capital ratio, which is calculated as follows:

$\text{Capital ratio} = \frac{\text{Total available capital}}{\text{Base required capital (BRC)}}$
--

In the U.S., capital requirements are related to the insurer’s RBC ratio. For purposes of the Relative Ratio Approach, an Anchor RBC ratio is used and calculated as follows:

$\text{Anchor RBC ratio} = \frac{\text{Total adjusted capital}}{100\% \text{ Company Action Level RBC}^*}$
--

* 100% Company Action Level RBC is equal to the Total RBC After Covariance including operational risk, without adjustment or 200% Authorized Control Level RBC.

- b. Similar to legal entity RBC requirements in the U.S., Country A utilizes an early intervention approach by establishing target capital levels above the prescribed minimums that provide an early signal so that intervention will be timely and for there to be a reasonable expectation that actions can successfully address difficulties. Presume that this target capital level is similar to the U.S. Company Action Level (CAL) event, both of which can be considered the first intervention level in which some sort of action—either on the part of the insurer or the regulator—is mandated. A separate sensitivity calculation will be applied in the GCC template using trend test level RBC.

- c. For Country A, the target capital level is presumed to be a capital ratio of 150%. That is, the insurer's ratio of total available capital to its BRC should be above 150% to avoid the first level of regulatory intervention. Again, this is similar to the U.S. CAL event, which is usually represented as an RBC ratio of 200% of Authorized Control Level (ACL) RBC (ignoring the RBC trend test). In the Relative Ratio approach, the Anchor RBC ratio represents the Company Action Level event (or first level of regulatory intervention) as 100% CAL RBC (instead of 200% ACL RBC), because CAL RBC is the reference point that is used to calibrate against other regimes. The Anchor RBC Ratio (Total Adjusted Capital ÷ 100% CAL RBC) tells us how many "multiples of trigger level capital" that the company holds. Conceptualizing the CAL event as 100% CAL RBC allows the consistent definition of local capital ratios that are calibrated against a "multiples of the trigger level" approach, to ensure an "apples-to-apples" comparison.³

Step 2: Obtain Aggregate Industry Financial Data

97. The next step is to obtain aggregate industry financial data, and many jurisdictions include current aggregate industry data on their websites. Included below are the financial amounts for use in this exercise.

U.S. Life Insurers – Aggregate Data
 Total Adjusted Capital = \$495B
 Authorized Control Level RBC = \$51B
 Company Action Level RBC = \$102B

Country A Life Insurers – Aggregate Data
 Total Available Capital = \$83B
 BRC = \$36B

Step 3: Calculate a Jurisdiction's Industry Average Capital Ratio

98. To calculate a jurisdiction's average capital ratio, the aggregate total available capital for the industry would be divided by the minimum or base capital requirement for the industry in computing the applicable capital ratio. In Country A, this would be the BRC. In the U.S., this base or minimum capital requirement is usually seen as the ACL RBC, but because the Relative Ratio Approach is using 100% CAL RBC as a reference point to calibrate other regimes to, the Relative Ratio formula uses 100% CAL RBC as the baseline and the first-intervention level to calculate the Average Capital Ratio and Excess Capital Ratio. As a result, the scaled ratio of a non-U.S. company should inform regulators how many multiples of first-intervention level capital the non-U.S. company holds. Included below is the formula to calculate a jurisdiction's industry average capital ratio:

While it is mathematically equivalent to use 200% ACL RBC as the denominator, the Approach is designed to use the representation of first-intervention level capital levels as the conceptual underpinning of the Relative Ratio Approach, where 100% CAL RBC is the reference point to calibrate against other regimes.

<i>Calculation of U.S. Industry Average Capital Ratio – Life Insurers</i>		
<u>\$495B (Total Adjusted Capital)</u>		
\$102B (CAL RBC)	=	485%

<i>Calculation of Country A Industry Average Capital Ratio – Life Insurers</i>		
<u>\$83B (Total Available Capital)</u>		
\$36B (BRC)	=	231%

Step 4: Calculate a Jurisdiction’s Excess Capital Ratio

99. The next step is to understand the level of capital the industry is holding above the first intervention level. Therefore, to calculate a jurisdiction’s excess capital ratio, one would first need to calculate the amount of the capital ratio carried in excess of the capital ratio required at the first intervention level. This amount would then need to be divided by the capital ratio required at the first intervention level.

<i>General Excess Capital Ratio Formula</i>		
<u>Average Capital Ratio – Capital Ratio at the First Intervention Level</u>		
Capital Ratio at the First Intervention Level		

100. Based on the formula above and information provided in Step 2 and Step 3, included below are how to calculate each jurisdiction’s excess capital ratio.

NOTE: The first intervention level in the U.S. is defined in the Relative Ratio Approach as 100% CAL RBC, while the first intervention level in Country A is a capital ratio of 150%.⁴

<i>Calculation of U.S. Excess Capital Ratio – Life Insurers</i>		
<u>485% (Average Capital Ratio) – 100% (Capital Ratio at the First Intervention Level)</u>		
100% (Capital Ratio at the First Intervention Level)	=	385%

<i>Calculation of Country A Excess Capital Ratio – Life Insurers</i>		
<u>231% (Average Capital Ratio) – 150% (Capital Ratio at the First Intervention Level)</u>		
150% (Capital Ratio at the First Intervention Level)	=	54%

⁴ 100% CAL RBC translates to an ACL RBC level of 200%, but for conceptual purposes, the Relative Ratio Approach refers to the U.S. first intervention level as 100% CAL RBC, as 100% CAL RBC is the reference point to which the Relative Ratio Approach calibrates other regimes. In other words, 100% CAL RBC ensures that the scaled ratio of Country A results in a ratio that determines how many multiples of first-intervention level capital that the company in Country A is holding.

Step 5: Compare a Jurisdiction's Excess Capital Ratio to the U.S. Excess Capital Ratio to Develop the Scalar

101. Based on the information above, the U.S. excess capital is 385%. In other words, life insurers in the U.S. carry approximately 385% more capital than what is needed over the first intervention level. Country A's excess capital ratio is 54%. That is, life insurers in Country A carry approximately 54% more capital than what is needed over the first intervention level.
102. To calculate the scalar, one would divide a jurisdiction's excess capital ratio by the U.S. excess capital ratio. Therefore, the calculation of Country A's scalar for life insurers would be $54\% \div 385\% = 14\%$. Therefore, Country A's scalar for life insurers would be 14%.

Step 6: Apply to the Scalar to the Non-U.S. Insurer's Amounts in the GCC

103. In order to demonstrate how the calculation of the scalar works, it would be best to provide a numerical example. For the purposes of this memo, it assumes that a life insurer in Country A reports required capital of \$341,866 and total available capital of \$1,367,463. (These are the amounts previously used in a hypothetical calculation example that was discussed by the Working Group during its July 20, 2016, conference call.) As noted previously, the above information and calculation suggests that U.S. life insurers carry capital far above the minimum levels, while life insurers in Country A carry capital far closer to the minimum. Therefore, to equate the company's \$341,866 of required capital, we must first calibrate the BRC to the first regulatory intervention level by multiplying it by 150%, or Country A's capital ratio at the first intervention level. The resulting amount of \$512,799 is then multiplied by the scalar of 14% to get a scaled minimum required capital of \$71,792.
104. Further, the above rationale suggests that the available capital might also be overstated (because it does not use the same level of conservatism in the reserves) by the difference between the calibrated required capital of \$512,799 and the required capital after scaling of \$71,792, or \$441,007. Therefore, we should now deduct the \$441,007 from the total available capital of \$1,367,463 for a new total available capital of \$926,456. These two recalculated figures of required capital of \$71,792 and total available capital of \$926,456 is what would be included in the group's capital calculation for this insurer. These figures are further demonstrated below.

*Calculation of Scaled Amounts for GCC*Amounts as Reported by the Insurer in Country A

Total available capital = 1,367,463

Minimum required capital (BRC) = 341,866

Calibration of BRC to 1st Regulatory Intervention Level

341,866 (BRC) * 150% = 512,799

Scaling of Calibrated Minimum Required Capital

512,799 (Calibrated BRC) * 14% (Scalar) = 71,792 (Difference of 441,007)

Scaled Total Available Capital

1,367,463 (Total Available Capital) – 441,007 (Difference in scaled required capital) = 926,456

105. Given these scaled amounts, one can calculate the numerical effect on the company’s relative capital ratio by using the unscaled and scaled amounts included below.

	<i>Unscaled Amounts from Table Above</i>	<i>Scaled Amounts from Table Above</i>
Total Available Capital (TAC)	1,367,463	926,456
<u>Base Required Capital (BRC)</u>	<u>341,866</u>	<u>71,792</u>
Capital Ratio (= TAC ÷ BRC)	400%	1290%

106. Considering the fact that life insurers in Country A hold much lower levels of capital over the first intervention level as compared to U.S. life insurers, the change in the capital ratio from 400% (unscaled) to 1290% (scaled) appears reasonable and consistent with the level of conservatism that we understand is built into the U.S. life RBC formula driven primarily from the conservative reserve valuation.

Note: In the above example, the company has an unscaled ratio (400%) that is above the industry average in Country A (231%) and a scaled ratio (1290%) that is higher than the US life industry average (485%). If the company had an unscaled ratio that was lower than the industry average in Country A, its scaled ratio would be lower than the US life industry average. company with an unscaled ratio equal to its own country’s industry average will have a scaled ratio equal to the anchor RBC ratio.”

Data for industrywide U.S RBC ratios is sourced from the aggregate RBC Statistics maintained by the NAIC. Data for industrywide capital ratios for foreign insurance jurisdictions was derived from publicly available aggregate industry data. If this scalar methodology is retained, then the data will require periodic updating.

Draft: 8/17/22

Group Solvency Issues (E) Working Group
Portland, Oregon
August 11, 2022

The Group Solvency Issues (E) Working Group of the Financial Condition (E) Committee met in Portland, OR, Aug. 11, 2022. The following Working Group members participated: Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Kim Hudson and Susan Bernard (CA); William Arfanis and Michael Shanahan (CT); Charles Santana (DE); Virginia Christy (FL); Kim Cross and Mike Yanacheak (IA); Susan Berry (IL); Roy Eft (IN); John Turchi (MA); Judy Weaver (MI); Debbie Doggett (MO); David Wolf (NJ); Bob Kasinow (NY); Dale Bruggeman (OH); Melissa Greiner and Matt Milford (PA); Greg Chew (VA); and Amy Malm (WI).

1. Adopted its June 6 Minutes

Mr. Schrader said the Working Group met June 11 to receive an overview of proposed revisions to the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* (ORSA Guidance Manual) and the *Financial Condition Examiners Handbook* to incorporate elements of the International Association of Insurance Supervisors' (IAIS's) Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) deemed appropriate for the U.S. system of solvency regulation. During the meeting, the Working Group agreed to expose the proposed changes for a public comment period ending July 8.

Ms. Walker made a motion, seconded by Ms. Bernard, to adopt the Working Group's June 6 minutes (Attachment Four-A). The motion passed unanimously.

2. Discussed Comments Received on Proposed Revisions to the ORSA Guidance Manual

Mr. Schrader stated that the second agenda item for the meeting today is to discuss the comments received on proposed revisions to the ORSA Guidance Manual. As a result of the recent exposure period, comment letters were received from the American Council of Life Insurers (ACLI), the American Property Casualty Insurance Association (APCIA), the National Association of Mutual Insurance Companies (NAMIC), and the Travelers Companies Inc.

After reviewing the letters, the ORSA Drafting Group, consisting of state insurance regulators from Connecticut, Illinois, Iowa, Missouri, Ohio, and New York met to discuss and address the comments received. Mr. Shanahan provided an overview of the comments received and the drafting group's proposed responses, which were presented in an updated draft of the ORSA Guidance Manual.

Mr. Shanahan stated that comments were primarily received on the nature of ORSA filings for internationally active insurance groups (IAIGs), updated liquidity risk guidance, flexibility for centralized versus decentralized forms of insurer governance, and IAIG recovery plans. He stated that the drafting group incorporated clarifying language into the updated draft to address the comments received in these areas. Mr. Schrader thanked the drafting group for its work in this area.

Mr. Arfanis stated that Connecticut identified one issue since the drafting group met and would like to propose a friendly amendment to address the issue. He stated that language on page 5 of the ORSA Guidance Manual discusses that the acceptance of ORSA reports prepared for a foreign jurisdiction is contingent on whether the foreign requirements are consistent with standards in IAIS Insurance Core Principle (ICP) 16. He stated that Connecticut's concern is that the reference to ICP 16 could result in a situation where the ICP is amended, and the

ORSA Guidance Manual could then be incorporating amendments without an opportunity for state insurance regulators to review. Therefore, Connecticut recommended inserting the wording, “to the extent included in this Manual” after the reference to ICP 16 to address this concern. Other members of the Working Group stated their support for this friendly amendment.

Robert Neill (ACLI) thanked the drafting group for incorporating many of the comments made by interested parties, and he asked state insurance regulators to continue to work with interested parties as the new guidance is being implemented. Mr. Schrader stated that the intention of the Working Group is to closely monitor the implementation and work with interested parties to address any issues or concerns identified.

3. Discussed Comments Received on Proposed Revisions to the *Financial Condition Examiners Handbook*

Mr. Schrader stated that the third agenda item is to discuss the comments received on proposed revisions to the *Financial Condition Examiners Handbook*. As a result of the recent exposure period, comment letters were received from the ACLI, the APCIA, NAMIC, and the Travelers Companies Inc.

After reviewing the letters, the Exam Drafting Group, consisting of state insurance regulators from California, Connecticut, Missouri, and Nebraska met to discuss and address the comments received. Ms. Bernard provided an overview of the comments received and the drafting group’s proposed responses, which were presented in an updated draft of the *Financial Condition Examiners Handbook*.

Ms. Bernard stated that comments were primarily received on guidance related to applying ComFrame considerations to exam repository risks, consistency with other NAIC publications, and guidance associated with the examination of ORSA information. She stated that the drafting group incorporated language and clarifications recommended by interested parties, other than in cases where the recommendations would create conflicts with other NAIC publications. Mr. Schrader thanked the drafting group for its work in this area.

Stephen Broadie (APCIA) stated that interested parties appreciated the work of the drafting group to address their comments, but they identified one area where comments related to references to international standards did not appear to be adequately addressed. He stated that guidance in the introductory section of the *Financial Condition Examiners Handbook* could be interpreted as requiring examiners to review additional IAIS ComFrame guidance before conducting any exam procedures in this area. The sentence in question states, “Information from [IAIS ComFrame] has been utilized in developing this guidance and regulators are encouraged to reference source documents as necessary to gather additional insight.”

Mr. Yanacheak stated that the sentence following the one referenced by Mr. Broadie stating, “IAIS materials are not deemed authoritative and should not be viewed as official NAIC guidance if they are not directly incorporated herein” should make it clear that the reference to IAIS material is meant to provide optional background information. Mr. Bruggeman recommended replacing “are encouraged to” with “may” in the sentence in question to clarify that any review of IAIS ComFrame guidance prior to conducting exam procedures is optional. Other Working Group members stated their support for this friendly amendment.

4. Discussed Comments Received on Proposed Revisions to the *Financial Analysis Handbook*

Mr. Schrader stated that the next agenda item is to discuss comments received on proposed revisions to the *Financial Analysis Handbook*. He stated that revisions to the *Financial Analysis Handbook* were exposed for public comment two different times in 2021 with various recommendations being discussed and addressed by the Working Group. As such, the re-exposure of the *Financial Analysis Handbook* in 2022 was focused on ensuring

consistency with changes made to the ORSA Guidance Manual and the *Financial Condition Examiners Handbook*, as opposed to reviewing all proposed ComFrame revisions again.

As a result of the recent exposure period, comment letters were received from the ACLI, the APCA, NAMIC, and the Travelers Companies Inc. After reviewing the letters, the Analysis Drafting Group, consisting of state insurance regulators from California, Connecticut, Missouri, and Nebraska met to discuss and address the comments received. Bruce Jenson (NAIC) provided an overview of the comments received and the drafting group's proposed responses, which incorporated a clarification to the definition of "Head of the IAIG" and other edits for consistency with changes made to the ORSA Guidance Manual. Mr. Schrader thanked the drafting group for its work in this area.

5. Adopted Revisions to the ORSA Guidance Manual

Ms. Malm made a motion, seconded by Mr. Yanacheak, to adopt the proposed changes to the ORSA Guidance Manual (Attachment Four-B). The motion passed unanimously.

6. Referred Guidance to Respective Working Groups

Ms. Bernard made a motion, seconded by Ms. Doggett, to refer the proposed revisions to the *Financial Condition Examiners Handbook*, including the friendly amendment proposed by Ohio, to the Financial Examiners Handbook (E) Technical Group for consideration of adoption. The motion passed unanimously.

Ms. Bernard made a motion, seconded by Ms. Doggett, to refer the proposed revisions to the *Financial Analysis Handbook* to the Financial Analysis Solvency Tools (E) Working Group for consideration of adoption. The motion passed unanimously.

7. Discussed Other Matters

Mr. Schrader stated that the Working Group recently received a referral from the Macroprudential (E) Working Group on private equity (PE) issues. He stated that the Working Group plans to schedule meetings as needed in the coming months to address the issues raised in the referral.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/

Draft: 6/7/22

Group Solvency Issues (E) Working Group
Virtual Meeting
June 6, 2022

The Group Solvency Issues (E) Working Group of the Financial Condition (E) Committee met June 6, 2022. The following Working Group members participated: Jamie Walker, Vice Chair (TX); Kim Hudson and Susan Bernard (CA); Kathy Belfi (CT); Charles Santana (DE); Virginia Christy (FL); Kim Cross (IA); Cindy Andersen, Susan Berry, and Eric Moser (IL); Roy Eft (IN); Judy Weaver (MI); Lindsay Crawford (NE); Bob Kasinow (NY); Dale Bruggeman and Tim Biler (OH); Melissa Greiner (PA); Doug Stolte (VA); and Amy Malm (WI).

1. Discussed Proposed Revisions to the *Financial Condition Examiners Handbook*

Ms. Walker stated that the first agenda item for the call today is to discuss the work of the Financial Exam Drafting Group in developing proposed revisions to the *Financial Condition Examiners Handbook* to incorporate elements of the International Association of Insurance Supervisors' (IAIS's) Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) deemed appropriate for the U.S. system of solvency regulation. The Financial Exam Drafting Group consists of state insurance regulators from California, Connecticut, Missouri, and Nebraska, which met several times over the last six months to develop proposed revisions. The Financial Exam Drafting Group referenced and utilized work completed by the Financial Analysis Drafting Group in 2021 to guide its efforts, and it focused on those ComFrame considerations most relevant to onsite examination efforts in drafting its *Financial Condition Examiners Handbook* revisions. Ms. Walker thanked the drafting group and NAIC support staff for its efforts in developing proposed revisions for the Working Group to consider.

Bailey Henning (NAIC) provided an overview of the proposed *Financial Condition Examiners Handbook* revisions, and she noted that many of the topics addressed in ComFrame are already covered in the *Financial Condition Examiners Handbook* but may need to be addressed at a different level for internationally active insurance groups (IAIGs). This is because financial examinations traditionally have a legal entity focus, whereas ComFrame is focused on the governance, risk management, and control processes at the Head of the IAIG level. As such, Ms. Henning stated that proposed revisions are incorporated into various sections of the *Financial Condition Examiners Handbook* to indicate topics that the examination team should consider addressing at a different level or perspective—i.e., Ultimate Controlling Person or Head of the IAIG—when conducting IAIG examinations. She stated that the proposed revisions reference and utilize existing guidance developed by the Financial Analysis Drafting Group to promote consistency wherever possible. In addition, she stated that the Financial Exam Drafting Group coordinated with the Own Risk and Solvency Assessment (ORSA) Drafting Group in developing examination guidance for validating information provided in IAIG ORSA Summary Reports to ensure consistency in that area.

Ms. Walker thanked Ms. Henning for the overview, and she stated that the Working Group will discuss the exposure period and process for finalizing the proposed revisions after discussing the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* (ORSA Guidance Manual) revisions.

2. Discussed Proposed Revisions to the ORSA Guidance Manual

Ms. Walker stated that the second agenda item for the call is to discuss the work of the ORSA Drafting Group in developing proposed revisions to the ORSA Guidance Manual to incorporate IAIS ComFrame elements deemed appropriate for the U.S. system of solvency regulation. The ORSA Drafting Group consists of state insurance regulators from Connecticut, Illinois, Iowa, Missouri, Ohio, and New York, which met several times over the last six months to consider revisions to the ORSA Guidance Manual. The ORSA Drafting Group referenced and utilized

the work completed by the Financial Analysis Drafting Group to guide its efforts, including the proposed revisions to Appendix C of the ORSA Review Template included in the *Financial Analysis Handbook*. Ms. Walker thanked the drafting group and NAIC support staff for its efforts in developing proposed revisions for the Working Group to consider.

Elisabetta Russo (NAIC) provided an overview of the proposed changes to the ORSA Guidance Manual, and she noted that most of the additions are only applicable to IAIGs where the U.S. is the groupwide supervisor. However, she stated that three minor updates are being proposed for all ORSA filers based on updated IAIS guidance:

- Clarification that non-insurance operations that present material and relevant risks to the insurer should be included in the scope of the ORSA Summary Report.
- Clarification that the ORSA Summary Report should cover the main goals and objectives of the insurers' business strategy.
- Additional expectations for the insurer to demonstrate its resilience to liquidity stresses, as well as a description of policies and procedures in place to manage liquidity risks.

For IAIG ORSAs, the proposed revisions indicate that one ORSA Summary Report should be provided to the U.S. groupwide supervisor covering all material groupwide insurance operations. In addition, a new Section V—Additional Expectations for Internationally Active Insurance Groups, is proposed to incorporate additional enterprise risk management expectations applicable to IAIG ORSAs, including enhanced liquidity considerations, expectations for integration between legal entity and group risk exposures, economic capital model expectations, and recovery options for severe stress scenarios. Finally, Ms. Russo stated that additional definitions were proposed for the glossary to define IAIG and reverse stress test, as both concepts are now addressed in Section V.

Ms. Belfi stated her support for the proposed revisions, including the minor clarifications being added for all ORSA filers, as well as the additional expectations for IAIG ORSAs. Ms. Walker thanked the ORSA Drafting Group for its efforts, and she stated that she would propose a 30-day public comment period for both sets of revisions. She stated that she would also ask NAIC staff to repost the proposed revisions to the *Financial Analysis Handbook* so they could be reviewed for consistency with the newly proposed revisions to the other publications.

Tom Finnell (America's Health Insurance Plans—AHIP) stated his agreement for exposing the changes to all publications together, but he stated that the volume of revisions could be difficult to review in 30 days. Ms. Walker stated that the only changes to the *Financial Analysis Handbook* from what was previously exposed would be to Appendix C of the ORSA Review Template, which should reduce the time necessary to review. Mr. Finnell asked if the re-exposure of the *Financial Analysis Handbook* would be limited to Appendix C. Ms. Walker stated that this should be the focus of reviewers, but the Working Group would be open to receiving comments on other consistency issues noted during the review. Hearing no other objections, Ms. Walker instructed NAIC staff to expose the proposed revisions to the publications for a 30-day public comment period ending July 8.

3. Received an Update on IAIS Activities

Ms. Walker stated that the IAIS Executive Committee recessed the activities of the IAIS Insurance Groups Working Group for 2022 to allow other IAIS subcommittees to advance the work related to the ComFrame. She stated that there are several other group-related projects ongoing, and NAIC representatives continue to monitor ongoing efforts in this area and will report on major initiatives to the Working Group as needed.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.

NATIONAL ASSOCIATION OF
INSURANCE COMMISSIONERS

NAIC OWN RISK AND SOLVENCY ASSESSMENT (ORSA) GUIDANCE MANUAL

**Maintained by the
Group Solvency Issues (E) Working Group
of the Financial Condition (E) Committee**

As of December 2022

Date: August 11, 2022

To: Users of the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual*

From: Group Solvency Issues (E) Working Group

This edition of the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* has been revised from the previous edition. The following summarizes the most significant changes since the December 2017 edition:

1. Added various updates throughout the Guidance Manual to incorporate additional elements deemed appropriate by state regulators including additions from International Association of Insurance Supervisors (IAIS) guidance to incorporate:
 - a. Enhancements related to the treatment and disclosure of liquidity and business strategies within the ORSA; and
 - b. Enhancements related to additional considerations relevant to Internationally Active Insurance Groups (IAIGs) as outlined in the Common Framework for the Supervision of IAIGs (ComFrame).

This page intentionally left blank.

The requirements outlined in this Manual are based on the requirements of the *Risk Management and Own Risk and Solvency Assessment Model Act* (#505). An insurer using this Manual should refer to the laws adopted by the insurer’s state of domicile when determining its requirements for risk management, its Own Risk and Solvency Assessment (ORSA) and for preparing its ORSA Summary Report.

I. INTRODUCTION

The purpose of this Manual is to provide guidance to an insurer and/or an insurance group of which the insurer is a member (hereinafter referred to as “insurer” or “insurers”) with regard to reporting on its Own Risk and Solvency Assessment (ORSA) [as required by the domestic state’s version of the *Risk Management and Own Risk and Solvency Assessment Model Act* (#505)].

The ORSA, which is a component of an insurer’s enterprise risk management (ERM) framework, is a confidential internal assessment appropriate to the nature, scale and complexity of an insurer conducted by that insurer of the material and relevant risks identified by the insurer associated with an insurer’s current business plan and the sufficiency of capital resources to support those risks. As described below, an insurer that is subject to the ORSA requirements will be expected to:

- (1) Regularly, no less than annually, conduct an ORSA to assess the adequacy of its risk management framework, and current and estimated projected future solvency position;
- (2) Internally document the process and results of the assessment; and
- (3) Provide a confidential high-level ORSA Summary Report annually to the lead state commissioner if the insurer is a member of an insurance group and, upon request, to the domiciliary state regulator.

The ORSA has two primary goals:

1. To foster an effective level of ERM at all insurers, through which each insurer identifies, assesses, monitors, prioritizes and reports on its material and relevant risks identified by the insurer, using techniques that are appropriate to the nature, scale and complexity of the insurer’s risks, in a manner that is adequate to support risk and capital decisions; and
2. To provide a group-level perspective on risk and capital, as a supplement to the existing legal entity view.

An insurer that is subject to the ORSA requirement should consider the guidance provided in this Manual when conducting its ORSA and compiling its ORSA Summary Report. As the process and results are likely to include proprietary and forward-looking information, any ORSA Summary Report submitted to the commissioner shall be confidential by state law.

A. Exemption

An insurer shall be exempt from maintaining a risk management framework, conducting an ORSA and filing an ORSA Summary Report, if:

- a. The individual insurer's annual direct written and unaffiliated assumed premium, including international direct and assumed premium but excluding premiums reinsured with the Federal Crop Insurance Corporation and the National Flood Insurance Program, is less than \$500 million; and
- b. If the insurer is a member of an insurance group and the insurance group's (all insurance legal entities within the group) annual direct written and unaffiliated assumed premium, including international direct and assumed premium but excluding premiums reinsured with the Federal Crop Insurance Corporation and the National Flood Insurance Program, is less than \$1 billion.

If the insurer does not qualify for exemption, upon the commissioner's request, and no more than once each year, an insurer shall submit to the commissioner an ORSA Summary Report that contains the information described in this Manual. If the group is an IAIG with a U.S. global group-wide supervisor, a group ORSA Summary Report should be filed, otherwise a single or combination of reports may be used by the insurer to represent the group perspective. For example, the property/casualty insurers within a group could be included in one ORSA Summary Report or combination of reports, and the life insurers within the same group could be included in another ORSA Summary Report or combination of reports, if those groups operate under different ERM frameworks. Notwithstanding any request from the commissioner, if the insurer is a member of an insurance group, the insurer shall submit the ORSA Summary Report(s) required by this Manual to the lead state commissioner of the insurance group. The lead state is determined by the procedures within the *Financial Analysis Handbook*.

If an insurer qualifies for exemption pursuant to paragraph a., but the insurance group of which the insurer is a member does not qualify for exemption pursuant to paragraph b., then the insurer may supply an ORSA Summary Report in any combination, as long as every insurer within the group is covered by the ORSA Summary Report(s).

If an insurer does not qualify for exemption pursuant to paragraph a., but the insurance group of which it is a member qualifies for exemption under paragraph b., then the only ORSA Summary Report that may be required is the report of that insurer. However, such exemption does not eliminate the requirement for any insurer that is subject to Model #505 to complete Section III – Group Assessment of Risk Capital and Prospective Solvency Assessment.

Notwithstanding the above exemptions, the commissioner may require the insurer to maintain a risk management framework, conduct an ORSA and file an ORSA Summary Report based on unique circumstances including, but not limited to, the type of business written, ownership and organizational structure, federal agency requests, international supervisor requests, regulatory concerns about rapidly growing concentration of risk or risk exposure.

A commissioner also may require the insurer to maintain a risk management framework, conduct an ORSA and file an ORSA Summary Report if the insurer has triggered an RBC company action level event, meets one or more of the standards of an insurer deemed to be in hazardous financial condition, or otherwise exhibits qualities of a troubled insurer, as determined by the commissioner.

If an insurer that qualifies for an exemption subsequently no longer qualifies for that exemption due to changes in premium, as reflected in the insurer's most recent annual financial statement or in the most recent annual financial statements of the insurers within the insurance group of which the insurer is a member, the insurer shall have one (1) year following the year the threshold is exceeded to comply with the ORSA requirements.

B. Application for Waiver

An insurer that does not qualify for exemption may apply to the commissioner for a waiver from the requirements of the ORSA based upon unique circumstances. The commissioner may consider various factors including, but not limited to, the type of business entity, and volume of business written and material reduction in risk or risk exposures. If the insurer is part of a non-exempted insurance group, the commissioner shall coordinate with the lead state commissioner and the other domiciliary commissioners in considering the request for a waiver.

C. General Guidance

The ORSA should be one element of an insurer's ERM framework. The ORSA and the ORSA Summary Report link the insurer's risk identification, assessment, monitoring, prioritization and reporting processes with capital management and strategic planning. Each insurer's ORSA and ORSA Summary Report will be unique, reflecting the insurer's business, strategic planning and approach to ERM. The commissioner will utilize the ORSA Summary Report to gain a high-level understanding of the insurer's ORSA. The ORSA Summary Report will be supported by the insurer's internal risk-management materials.

To allow the commissioner to achieve a high level understanding of the insurer's ORSA, the ORSA Summary Report should discuss three major areas, which will be referred to as the following sections:

- **Section 1** – Description of the Insurer's Risk Management Framework
- **Section 2** – Insurer's Assessment of Risk Exposure
- **Section 3** – Group Assessment of Risk Capital and Prospective Solvency Assessment

When developing an ORSA Summary Report, the content should be consistent with the ERM information that is reported to senior management and/or the board of directors or appropriate committee. While some of the format, structure and content of the ORSA Summary Report may be tailored for the regulator, the content should be based on the insurer's internal reporting of its ERM information. The ORSA Summary Report itself does not need to be the medium of reporting its ERM to the board of directors or appropriate committee, and the report to the board of directors or appropriate committee may not be at the same level of detail as the ORSA Summary Report.

In order to aid the commissioner's understanding of the information provided in the ORSA Summary Report, it should include certain key information. The ORSA Summary Report should identify the basis(es) of accounting for the report (e.g., generally accepted accounting principles, statutory accounting principles or international financial reporting standards) and the date or time period that the numerical information represents. The ORSA Summary Report should also explain

the scope of the ORSA conducted such that the report identifies which insurer(s) are included in the report. This may be accomplished by including an organizational chart. In subsequent years, the ORSA Summary Report should also include a short summary of material changes to the ORSA from the prior year, including supporting rationale, as well as updates to the sections listed above, if applicable.

The commissioner may develop a deeper understanding of the insurer's ERM framework upon examination or an annual risk-focused update. Additionally, as part of the risk-focused analysis and/or examination process, the commissioner may also request and review confidential supporting materials to supplement his/ her understanding of information contained in the ORSA Summary Report. These materials may include risk management policies or programs, such as the insurer's underwriting, investment, claims, asset-liability management (ALM), reinsurance counterparty and operational risk policies.

This Manual is intended to provide guidance for completing each section of the ORSA Summary Report. The depth and detail of information is likely to be influenced by the nature and complexity of the insurer and should be updated at least annually for the insurer. The insurer is permitted discretion to determine how best to communicate its ERM processes. An insurer may avoid duplicative information and supporting documents by referencing other documents, provided those documents are available to the regulator upon examination or upon request. In order to ensure that the commissioner is receiving the most current information from an insurer, the timing for filing the ORSA Summary Report during the calendar year may vary from insurer to insurer, depending on when an insurer conducts its internal strategic planning process. In any event, the ORSA Summary Report shall be filed once each year, with the insurer apprising the commissioner as to the anticipated time of filing.

The ORSA Summary Report shall include a signature of the insurer's chief risk officer or other executive having responsibility for the oversight of the insurer's ERM process attesting to the best of his/her belief and knowledge that the insurer applies the ERM process described in the ORSA Summary Report and that a copy of the ORSA Summary Report has been provided to the insurer's board of directors or the appropriate committee.

An insurer may comply with the ORSA requirement by providing the most recent report(s)¹ filed by the insurer or another member of an insurance group of which the insurer is a member to the commissioner of another state or to a supervisor or regulator of a foreign jurisdiction, if that report provides information that is comparable to the information described in this Manual. If a U.S. state insurance commissioner is the global group-wide supervisor of an IAIG, the U.S. state insurance commissioner should receive the ORSA Summary Report covering all material group-wide insurance operations. In addition, the insurer should work with U.S. global group-wide supervisor to identify the scope of the group, whether the group is an IAIG, identify the Head of the IAIG (using the guidance contained in the NAIC's Financial Analysis Handbook) and determine which non-insurance operations (if any) within the group should be included within the scope of the group, and therefore the ORSA Summary Report. However, for all ORSA filers, the non-insurance operations that present material and relevant risks to the insurer should be included in the scope of the ORSA Summary Report.

¹Reports filed to foreign jurisdictions that are a report on an insurer's ORSA shall henceforth for purposes of this Manual be referred to as an "ORSA Summary Report,"

If the U.S. is not the global group-wide supervisor, the insurer may file ORSA Summary Reports encompassing, at a minimum, the U.S. insurance operations, as long as the lead state receives ORSA Summary Reports encompassing the non-U.S. insurance operations from the global group-wide supervisor. If an ORSA Summary Report encompassing the non-U.S. insurance operations is not provided by the global group-wide supervisor, it should be provided by the insurer. If the insurer files an ORSA Summary Report encompassing only the U.S. insurance operations, and in it the insurer states that the U.S. ERM framework is based on the insurers' global ERM framework, then the global ERM framework should be explained either within the U.S. ORSA Summary Report or in an ORSA Summary Report encompassing the non-U.S. insurance operations and be provided to the lead state at a time agreed to by the insurer and the lead state. If the report is in a language other than English, it must be accompanied by a translation into the English language. The commissioner should discuss with the global group-wide supervisor from the relevant foreign jurisdiction(s) the report received to inquire of any concerns and to either confirm that the report was compliant with the foreign jurisdiction's requirements or consistent with the applicable principles outlined in the International Association of Insurance Supervisors (IAIS) Insurance Core Principle (ICP) 16: Enterprise Risk Management (ERM) to the extent included in this Manual, as well as this Manual to determine if additional information is needed. The commissioner will, where possible, avoid creating duplicative regulatory requirements for internationally active insurers.

In analyzing an ORSA Summary Report, the commissioner will expect that the report represents a work product of the ERM framework that include all of the material risks identified by the insurer to which an insurer or insurers (if applicable) is exposed.

The ORSA Summary Report may assist the commissioner in determining the scope, depth and minimum timing of risk-focused analysis and examination procedures. For example, insurers may have varying ERM frameworks, ranging from a business plan to a combination of investment plans and underwriting policies to more complex risk-management processes and sophisticated modeling. Insurers with ERM frameworks appropriate to their risk profile may not require the same scope or depth of review upon examination and analysis as those with less relatively comprehensive ERM frameworks. Therefore, the insurer should consider whether the ORSA Summary Report demonstrates the strengths of its framework, including how it meets the guidelines within this Manual for the relative risk of the insurer.

In addition to the ORSA Summary Report, the insurer should internally document the ORSA results to facilitate a more in-depth review by the commissioner through analysis and examination processes. Such review may depend on several factors, such as the nature and complexity, financial position and/or prioritization of the insurer, as well as external considerations such as the economic environment. These factors may result in the commissioner requesting additional information about the insurer's ERM framework through the financial analysis or examination processes. The information requested may include, but is not limited to, risk management policies and programs, such as the insurer's underwriting, investment, claims, duration or asset-liability management, as well as reinsurance counterparty or operational risk policies.

D. Maintenance Process

The following establishes procedures of the Group Solvency Issues (E) Working Group or its designated subgroup (collectively referred to as “Working Group”) for proposed changes, amendments and/or modifications to the Manual.

1. The Working Group may consider relevant proposals to change the Manual at any conference call, interim or national meeting (“the meeting”) throughout the year as scheduled by the Working Group.
2. If a proposal for suggested changes, amendments and/or modifications is submitted to, or filed with NAIC staff support, it may be considered at the next regularly scheduled meeting of the Working Group.
3. The Working Group publishes a formal submission form and instructions that can be used to submit proposals and is available on the Group’s webpage. However, proposals may also be submitted in an alternate format provided that they are stated in a concise and complete format. In addition, if another NAIC committee, task force or working group is known to have considered this proposal, that committee, task force or working group should provide any relevant information.
4. Any proposal that would change the Manual will be effective January 1 following the NAIC Summer National Meeting (i.e. of the preceding year) in which it was adopted by the Working Group (e.g., a change proposed to be effective January 1, 2018 must be adopted by the Working Group no later than the 2017 Summer National Meeting) and the Fall National Meeting in which it was adopted by the NAIC.
5. Upon receipt of a proposal, the Working Group will review the proposal at the next scheduled meeting and determine whether to consider the proposal for adoption. If the proposal is to be considered by the Working Group it will be exposed for public comment. The public comment period shall be no less than thirty days and may be extended by the Working Group. The Working Group will consider comments received on each proposal at its next meeting and take action to revise, adopt, reject, refer or continue the consideration of the proposal and comments thereto. Proposals under consideration may be deferred by the Working Group until the following scheduled meeting. The Working Group may form an ad hoc group to study the proposal, if needed. The Working Group may also refer proposals to other NAIC committees for technical expertise or review. If a proposal has been referred to another NAIC committee, the proposal will temporarily be removed from the Working Group’s agenda until a response has been received. At that time, it will be added back to the Working Group’s agenda.
6. NAIC staff support will prepare an agenda inclusive of all proposed changes. The agenda and relevant materials shall be sent via e-mail to each member of the Working Group, interested regulators and interested parties and posted to the Working Group’s webpage approximately 5-10 business days prior to the next regularly scheduled meeting during which the proposal would be considered.

7. In rare instances, or where emergency action may be required, suggested changes and amendments can be considered as an exception to the above stated process and timeline based on a two-thirds majority consent of the Working Group members present. Notwithstanding the foregoing, in no event may a proposal be adopted without an exposure for public comment.
8. NAIC staff support will publish the Manual on or about December 15 each year. NAIC staff will post to the Group Solvency Issues (E) Working Group and the NAIC Publications Web sites the current versions and any material subsequent corrections to these publications.

II. SECTION 1 – DESCRIPTION OF THE INSURER’S ENTERPRISE RISK MANAGEMENT FRAMEWORK

An effective ERM framework should, at a minimum, incorporate the following key principles:

- **Risk Culture and Governance** – Governance structure that clearly defines and articulates roles, responsibilities and accountabilities; and a risk culture that supports accountability in risk-based decision-making.
- **Risk Identification and Prioritization** – Risk identification and prioritization process that is key to the organization; responsibility for this activity is clear; the risk management function is responsible for ensuring that the process is appropriate and functioning properly at all organizational levels; key risks of the insurer are identified, prioritized and clearly presented.
- **Risk Appetite, Tolerances and Limits** – A formal risk appetite statement, and associated risk tolerances and limits are foundational elements of risk management for an insurer; understanding of the risk appetite statement ensures alignment with risk strategy by the board of directors.
- **Risk Management and Controls** – Managing risk is an ongoing ERM activity, operating at many levels within the organization.
- **Risk Reporting and Communication** – Provides key constituents with transparency into the risk-management processes and facilitate active, informal decisions on risk-taking and management.

Section 1 of the ORSA Summary Report should provide a high-level summary of the aforementioned ERM framework principles, if present. The ORSA Summary Report should describe the main goals and objectives of the insurers’ business strategy (for all insurance and non-insurance operations in scope) and how the insurer identifies and categorizes relevant and material risks and manages those risks as it executes its business strategy. The ORSA Summary Report should also describe risk-monitoring processes and methods, provide risk appetite statements, and explain the relationship between risk tolerances and the amount and quality of risk capital. The ORSA Summary Report should identify assessment tools (feedback loops) used to monitor and respond to any changes in the insurer’s risk profile due to economic changes, operational changes or changes in business strategy. Finally, the ORSA Summary Report should describe how the insurer incorporates new risk information in order to monitor and respond to changes in its risk profile due to economic and/or operational changes and changes in strategy.

The manner and depth in which the insurer addresses these principles is dependent upon its own risk-management processes. Any strengths or weaknesses noted by the commissioner in evaluating this section of the ORSA Summary Report will have relevance to the commissioner’s ongoing supervision of the insurer, and the commissioner will consider the entirety of the risk management program and its appropriateness for the risks of the insurer.

III. SECTION 2 – INSURER ASSESSMENT OF RISK EXPOSURES

Section 2 of the ORSA Summary Report should provide a high-level summary of the quantitative and/or qualitative assessments of risk exposure in both normal and stressed environments for each material risk category in Section 1. This assessment process should consider a range of outcomes using risk assessment techniques that are appropriate to the nature, scale and complexity of the risks. Examples of relevant material risk categories may include, but are not limited to, credit, market, liquidity, underwriting and operational risks.

Section 2 may include detailed descriptions and explanations of the material and relevant risks identified by the insurer, the assessment methods used, key assumptions made, risk-mitigation activities and outcomes of any plausible adverse scenarios assessed. The assessment of each risk will depend on its specific characteristics. For some risks, quantitative methods may not be well established and, in these cases, a qualitative assessment may be appropriate. Examples of these risks may include certain operational and reputational risks. In addition, each insurer's quantitative methods for assessing risk may vary; however, insurers generally consider the likelihood and impact that each material and relevant risk identified by the insurer will have on the firm's balance sheet, income statement and future cash flows. Methods for determining the impact on future financial position may include simple stress tests or more complex stochastic analyses. When evaluating a risk, the insurer should analyze the results under both normal and stressed environments. Lastly, the insurer's risk assessment should consider the impact of stresses on capital, which may include consideration of risk capital requirements, available capital, as well as regulatory, economic, rating agency and/or other views of capital requirements.

The analysis should be conducted in a manner that is consistent with the way in which the business is managed, whether on a group, legal entity or other basis. Stress tests for certain risks may be performed at the group level. Where relevant to the management of the business, some group-level stresses may be mapped into legal entities. The commissioner may request additional information to map the results to an individual insurance legal entity.

Any risk tolerance statements should include material quantitative and qualitative risk tolerance limits and how the tolerance statements and limits are determined, taking into account relevant and material categories of risk and the risk relationships that are identified.

Because the risk profile of each insurer is unique, each insurer should utilize assessment techniques (e.g., stress tests, etc.) applicable to its risk profile. U.S. insurance regulators do not believe there is a standard set of stress conditions that each insurer should test. The commissioner may provide input regarding the level of stress that the insurer's management should consider for each risk category. The ORSA Summary Report should provide a general description of the insurer's process for model validation, including factors considered and model calibration. Unless a particular assumption is stochastically modeled, the group's management should set assumptions regarding the expected values based on its current anticipated experience, what it expects to occur during the next year or multiple future years, and consideration of expert judgment. The commissioner may provide input to an insurer's management on the assumptions and scenarios to be used in its assessment techniques. For assumptions that are stochastically modeled, the commissioner may provide input on the level of the measurement metric to use in the stressed condition or specify particular parameters used in the economic scenario generator. Commissioner

input will likely occur during the financial analysis process and/or the financial examination process.

By identifying each material risk category independently and reporting results in both normal and stressed conditions, insurer management and the commissioner are better placed to evaluate certain risk combinations that could cause an insurer to fail. One of the most difficult exercises in modeling insurer results is determining the relationships, if any, between risk categories. History may provide some empirical evidence of relationships, but the future is not always best estimated by historical data.

IV. SECTION 3 – GROUP ASSESSMENT OF RISK CAPITAL AND PROSPECTIVE SOLVENCY ASSESSMENT

Section 3 of the ORSA Summary Report should describe how the insurer combines the qualitative elements of its risk management policy with the quantitative measures of risk exposure in determining the level of financial resources needed to manage its current business and over a longer term business cycle (e.g., the next one to three years). The group risk capital assessment should be performed as part of the ORSA regardless of the basis (group, legal entity or other subset basis) and in a manner that encompasses the entire insurance group. The information provided in Section 3 is intended to assist the commissioner in assessing the quality of the insurer's risk and capital management.

A. Group Assessment of Risk Capital

Within the Group Assessment of Risk Capital, aggregate available capital is compared against the various risks that may adversely affect the enterprise. The insurer should consider how the group capital assessment is integrated into the insurer's management and decision-making culture, how the insurer evaluates its available capital and how risk capital is integrated into its capital-management activities.

The insurer should have sound processes for assessing capital adequacy in relation to its risk profile and those processes should be integrated into the insurer's management and decision-making culture. These processes may assess risk capital through myriad metrics and future forecasting periods, reflecting varying time horizons, valuation approaches and capital management strategies (e.g., mix of capital). While a single internal risk capital measure may play a primary role in internal capital adequacy assessment, insurers may evaluate how risk and capital interrelate over various time horizons, or through the lens of alternative risk capital or accounting frameworks (i.e., economic, rating agency, and/or regulatory frameworks). This section is intended to assist the commissioner in understanding the insurer's capital adequacy in relation to its aggregate risk profiles.

The group capital assessment should include a comparative view of risk capital from the prior year, including an explanation of the changes, if not already explained in another section of the ORSA Summary Report. This information may also be requested by the commissioner throughout the year, if needed (e.g., if material changes in the macroeconomic environment and/or

microeconomic facts and circumstances suggest the information is needed for the ongoing supervisory plan).

The analysis of an insurer’s group assessment of risk capital requirements and associated capital adequacy description should be accompanied by a description of the approach used in conducting the analysis. This should include key methodologies, assumptions and considerations used in quantifying available capital and risk capital. Examples might include:

Considerations	Description of Methodologies and Assumptions	Examples (not exhaustive)
Definition of Solvency	Describe how the insurer defines solvency for the purpose of determining risk capital and liquidity requirements.	Cash flow basis; balance sheet basis
Accounting or Valuation Regime	Describe the accounting or valuation basis for the measurement of risk capital requirements and/or available capital.	GAAP; statutory; economic or market consistent; IFRS; rating agency model
Business Included	Describe the subset of business included in the analysis of capital.	Positions as of a given valuation date; New business assumptions
Time Horizon	Describe the time horizon over which risks were modeled and measured.	One-year, multi-year; lifetime; run-off
Risks Modeled	Describe the risks included in the measurement of risk capital, including whether all relevant and material risks identified by the insurer have been considered.	Credit; market; liquidity; insurance; operational
Quantification Method	Describe the method used to quantify the risk exposure.	Deterministic stress tests; stochastic modeling; factor-based analysis
Risk Capital Metric	Describe the measurement metric utilized in the determination of aggregate risk capital.	Value-at-risk (VAR), which quantifies the capital needed to withstand a loss at a certain probability; tail-value-at-risk (TVAR), which quantifies the capital needed to withstand average losses above a certain probability; probability of ruin, which quantifies the probability of ruin given the capital held

Considerations	Description of Methodologies and Assumptions	Examples (not exhaustive)
Defined Security Standard	Describe the defined security standard utilized in the determination of risk capital requirements, including linkage to business strategy and objectives.	AA solvency; 99.X% 1-year VAR; Y% TVAR or CTE; X% of RBC
Aggregation and Diversification	Describe the method of aggregation of risks and any diversification benefits considered or calculated in the group risk capital determination.	Correlation matrix; dependency structure; sum, full/partial/no diversification

The approach and assessment of group-wide capital adequacy should also consider the following:

- Elimination of intra-group transactions and double-gearing where the same capital is used simultaneously as a buffer against risk in two or more entities;
- The level of leverage, if any, resulting from holding company debt;
- Diversification credits and restrictions on the fungibility of capital within the holding company system, including the availability and transferability of surplus resources created by holding company system level diversification benefits;
- The effects of contagion risk, concentration risk and complexity risk in the group assessment of risk capital.

The goal of the group capital assessment is to provide an overall determination of risk capital needs for the insurer, based upon the nature, scale and complexity of risk within the group and its risk appetite, and to compare that risk capital to available capital to assess capital adequacy. Group assessment of risk capital should not be perceived as the minimum amount of capital before regulatory action will result (e.g., the triggers in the *Risk-Based Capital (RBC) for Insurers Model Act* (#312)); rather, it should be recognized that this is the capital needed within a holding company system to achieve its business objectives.

The insurer should also monitor the effect of liquidity risk, including calls on the insurer's cash position, due to micro-economic factors (i.e., internal operational) and/or macro-economic factors (i.e., economic shifts). The insurer should assess its resilience against severe but plausible liquidity stresses and whether the current liquidity position is within any liquidity risk appetite and/or limits. The insurer should describe in the ORSA the policies and processes in place to manage liquidity risk, as well as contingency funding or other plans to mitigate potential liquidity stresses.

B. Prospective Solvency Assessment

The insurer's capital assessment process should be closely tied to business planning. To this end, the insurer should have a robust capital forecasting capability that supports its management of risk over the planning time horizon in line with its stated risk appetite. The forecasting process should consider material and relevant changes identified by the insurer to the insurer's internal operations and the external business environment. It should also consider the prospect of operating in both normal and stressed environments.

The insurer's prospective solvency assessment should demonstrate it has the financial resources necessary to execute its multi-year business plan in accordance with its stated risk appetite. If the insurer does not have the necessary available capital (in terms of quantity and/or quality) to meet its current and projected risk capital requirements then it should describe the management actions it has taken (or will take) to remedy any capital adequacy concerns. These management actions may include or describe any modifications to the business plan or identification of additional capital resources.

The prospective solvency assessment is, in effect, a feedback loop. The insurer should project its future financial position, including its projected economic and regulatory capital to assess its ability to meet the regulatory capital requirements. Factors to be considered are the insurer's current risk profile, its risk management policy, and its quality and level of capital, including any changes to its current risk profile caused by executing the multi-year business plan. The prospective solvency assessment should also consider both normal and stressed environments.

While the prospective solvency assessment includes capital projections, the prospective solvency assessment should also include a discussion of prospective risks impacting the capital projections. This discussion should address whether risk exposures are expected to increase or decrease in the future and what steps the insurer plans to take that may change its risk exposures. The term "prospective" should pertain to both existing risks likely to intensify and emerging risks with the potential to impact the insurer in the future.

If the prospective solvency assessment is performed for each individual insurer, the assessment should take into account any risks associated with group membership. Such an assessment may involve a review of any group solvency assessment and the methodology used to allocate group capital across insurance legal entities, as well as consideration of capital fungibility; i.e., any constraints on risk capital or the movement of risk capital to legal entities.

V. ADDITIONAL EXPECTATIONS FOR INTERNATIONALLY ACTIVE INSURANCE GROUPS

This section identifies additional enterprise risk management expectations that are applicable to IAIGs and should be discussed in the ORSA Summary Report. These expectations are generally consistent with elements outlined in the IAIS ComFrame and have been incorporated into this manual to the extent deemed appropriate by state insurance regulators.

As stated earlier in this document, an aggregated ORSA Summary Report should be filed at the Head of the IAIG level. The Head of the IAIG should ensure that the risk management strategy and framework described in the ORSA, whether located at the Head of the IAIG or within another legal entity of the IAIG, encompass both the Head of the IAIG and the legal entities within the IAIG to promote a sound risk culture across the group.

The risk management strategy should be approved by the IAIG Board with regular risk management reporting provided to the IAIG Board or one of its committees.

The risk management framework should be integrated with the organizational structure of the IAIG and within its legal entities as appropriate to ensure that the decision making processes, business operations and risk culture of the IAIG are implemented. In addition, the framework should allow for the measurement of risk exposures of the IAIG against established risk limits on an ongoing basis in order to identify potential concerns as early as possible. This framework should cover, at a minimum:

- The diversity and geographical reach of IAIG activities;
- The nature and degree of risks in individual legal entities and business lines;
- The aggregation of risks across entities within the IAIG;
- The interconnectedness of legal entities within the IAIG;
- The level of sophistication and functionality of information and reporting systems in addressing key risks;
- The applicable laws and regulations of the jurisdictions where the IAIG operates.

The risk management framework should promote a sound risk culture across all legal entities of the IAIG by having policies and processes that include risk management training, address independence, create appropriate incentives for staff involved in risk management and encourage timely evaluation and open communication of emerging risks that may be significant to the IAIG and its legal entities.

The risk management framework of the IAIG should be reviewed at least annually to ensure that existing and emerging risks as well as changes in structure and business strategy are taken into account. Necessary modifications and improvements to the risk management framework should be made in a timely manner.

The IAIG's ORSA should explain how the risk management function, the actuarial function and the internal audit function are involved in the risk management of the IAIG. The ORSA should explain the main activities of each of these functions. Furthermore, the ORSA should describe how the risk management function remains independent from risk taking activities. The ORSA should describe how the actuarial function is involved in the risk assessment and management of the risks emanating from the legal entities, in determining the IAIG's solvency position, in any actuarial-related modeling in the ORSA and in the annual reporting to the IAIG Board of Directors on the risks posed to the IAIG. Finally, the ORSA should describe how the audit function provides an independent assessment and assurance to the IAIG Board of Directors of the operational effectiveness of the internal controls incorporated into the risk management framework.

The risk management strategy and framework of an IAIG should be generally consistent –and any material differences should be described in the ORSA. strategic risk. The investment policies should ensure that assets are properly diversified and asset concentration risk is mitigated across the IAIG;

- Mechanisms to keep track of intra-group transactions that have a significant impact on the IAIG, the risks arising from these transactions and the qualitative and quantitative restrictions on these risks. These intra-group transactions may include for example, loans, guarantees, dividend payments, reinsurance, transactions across different financial services entities within the IAIG and any activity undertaken by individual legal entities that may change the risk profile of the IAIG;

- An economic capital model to measure all relevant and material risks that the IAIG faces in different sectors, jurisdictions and economic environments. The model should estimate the amount of capital needed in reasonably foreseeable adverse situations. The results of the model, how the risks were aggregated in the model, how the diversification benefit was estimated and the underlying assumptions used in the model should be presented in the ORSA. The ORSA should show both the economic and the regulatory capital at the Head of the IAIG level. A discussion of the fungibility of capital and the transferability of assets within the group should also be included;
- Risk measurements that include stress and reverse stress testing and scenario analysis deemed relevant to the risk profile of the IAIG,
- Risk measurements of the resilience of its total balance sheet against plausible macroeconomic stresses;
- Risk measurements that assess the aggregate investment counterparty exposures and the effect of severe but plausible stress events on those exposures. In addition, the IAIG should have an investment counterparty risk appetite statement to determine if the current exposures are within the risk appetite and this should be presented in the ORSA.

The risk management framework should include a series of mechanisms to manage the IAIG’s liquidity risk and demonstrate the IAIG’s resilience against severe but plausible liquidity stresses. These mechanisms include:

- A liquidity risk appetite statement and liquidity risk limits to determine if the current liquidity position of the IAIG is within the risk appetite and the limits;
- Strategy, policies and processes to manage liquidity risk;
- Liquidity stress testing;
- An adequate level of unencumbered highly liquid assets;
- Contingency funding to mitigate potential liquidity stresses.

The IAIG may be asked by the group wide supervisor to develop a recovery plan, if warranted. A recovery plan identifies in advance options to restore the financial position and viability of the group if it comes under severe stress. The full recovery plan is not expected to be included in the ORSA Summary Report; however the ORSA Summary Report should discuss at a high-level the severe stresses that could trigger a recovery plan and should summarize the recovery options available .

The risk management framework should be reviewed by the insurer at least once every three years, in order to ascertain that it remains fit for purpose based on the risk profile, structure and business strategy of the IAIG. The review may be carried out by an internal or external body as long as it is not responsible nor involved in the risk management framework that it reviews.

VI. APPENDIX – GLOSSARY

Term	Definition
Available Capital	The amount of resources that an enterprise has at a given point in time under a defined valuation or accounting basis (e.g., economic, statutory, GAAP, or a combination) to support its business and under the defined valuation represents the insurers assessment of the types of capital required to support its business.

Term	Definition
Conditional Tail Expectation (CTE) [Also known as Tail Value at Risk or TVaR]	A measure of the amount of risk that exists in the tail of a distribution of outcomes, expressed as the probability weighted average of the outcomes beyond a chosen point in the distribution. Typically expressed as CTE (1-x), which would be calculated as the probability weighted average of the worst x% of outcomes. For example, CTE 95 is calculated as the probability weighted average of the worst 5% of outcomes, CTE 97 is the probability weighted average of the worst 3% of outcomes, etc. CTE can be used as a way of defining a particular <i>security standard</i> .
Correlation Matrix	A symmetric matrix specifying pairwise interactions between a set of variables or data. A correlation matrix is commonly applied to risks or capital amounts and is an important determinant of calculated <i>risk capital</i> , including levels of <i>diversification</i> .
Deficit Capital	If the amount of <i>available capital</i> is less than the determined <i>risk capital</i> of an enterprise, then the enterprise is said to have <i>deficit capital</i> .
Defined Security Standard	Minimum threshold of <i>available capital</i> that a company wishes to achieve or maintain, consistent with the company's business strategy, <i>risk appetite</i> and <i>risk tolerance</i> .
Dependency Structure	Specification of the relationship between different variables. Commonly specified in a <i>correlation matrix</i> .
Diversification	The extent to which the combined impact of risks inherent to assets and liabilities is less than the sum of the impacts of each risk considered in isolation.
Double Gearing	Used to describe situations where multiple companies (typically parent and subsidiary) are using shared capital to buffer against risk occurring in separate entities.
Economic Capital	The amount of capital that an insurer required to absorb unexpected losses based on its risk profile and risk appetite.
Excess Capital	If the amount of <i>available capital</i> is greater than the determined <i>risk capital</i> of an enterprise, the enterprise is said to have <i>excess capital</i> .
Fungibility	Within a group context, the ability to redeploy <i>available capital</i> from one entity to another. Fungibility is reduced where the movement of <i>available capital</i> within the group is constrained or regulation prohibits it.
Group Capital	Group capital represents the aggregate <i>available capital</i> or <i>risk capital</i> for the entire group. It will be impacted by the interaction of the risks and capital of the individual entities within the group, with properties such as <i>diversification</i> , <i>fungibility</i> and the quality and form of capital being important drivers.
Internationally Active Insurance Group	An insurance holding company system meeting the following criteria: <ol style="list-style-type: none"> 1. Premiums written in at least three countries; 2. The percentage of gross premiums written outside the home country is at least ten percent (10%) of the insurance

Term	Definition
	<p>holding company system’s total gross written premiums; and</p> <p>3. Based on a three-year rolling average, the total assets of the insurance holding company system are at least fifty billion dollars (\$50,000,000,000) or the total gross written premiums of the insurance holding company system are at least ten billion dollars (\$10,000,000,000).</p>
Probability of Ruin	Likelihood of liabilities exceeding assets for a given time horizon.
Reverse Stress Test	Analysis of those scenarios that would render the insurer insolvent.
Risk Appetite	Documents the overall principles that a company follows with respect to risk-taking, given its business strategy, financial soundness objectives and capital resources. Often stated in qualitative terms, a risk appetite defines how an organization weighs strategic decisions and communicates its strategy to key stakeholders with respect to risk-taking. It is designed to enhance management’s ability to make informed and effective business decisions while keeping risk exposures within acceptable boundaries.
Risk Capital	An amount of capital calculated to be sufficient to withstand adverse outcomes associated with various risks of an enterprise, up to a pre-defined <i>security standard</i> .
Risk Capital Metric	Quantitative variable used to gauge risk.
Risk Exposure	For each risk listed in the company’s <i>risk profile</i> , the amount the company stands to lose due to that particular risk at a particular time, as indicated by a chosen metric.
Risk Limit	Typically quantitative boundaries that control the amount of risk that a company takes. Risk limits are typically more granular than <i>risk tolerances</i> and may be expressed at various levels of aggregation: by type of risk, category within a type of risk, product or line of business, or some other level of aggregation. Risk limits should be consistent with the company’s overall <i>risk tolerance</i> .
Risk Profile	A delineation and description of the material risks to which an organization is exposed.
Risk Tolerance	The company’s qualitative and quantitative boundaries around risk-taking, consistent with its <i>risk appetite</i> . Qualitative risk tolerances are useful to describe the company’s preference for, or aversion to, particular types of risk, particularly for those risks that are difficult to measure. Quantitative risk tolerances are useful to set numerical limits for the amount of risk that a company is willing to take.
Security Standard	The level of a <i>measurement metric</i> used to determine <i>risk capital</i> . It signifies the strength of capital, and in practice, should be chosen to be consistent with the <i>risk appetite</i> and <i>risk tolerance</i> .
Solvency	For a given accounting basis, the state where, and extent to which, assets exceed liabilities.

Term	Definition
Stochastic Analysis	A methodology designed to attribute a probability distribution to a range of possible outcomes. May use closed form solutions, or large numbers of scenarios in order to reflect the shape of the distribution.
Scenario Analysis	Analysis of the impact of possible future outcomes, based on alternative projected assumptions. This can include changes to a single assumption or combination of assumptions.
Stress Test	A type of scenario analysis in which the change in parameters is considered significantly adverse or even extreme.
Time Horizon	In the context of risk capital calculations, the period over which the impact of changes to risks is tested.
Value-at-Risk (VaR)	An estimate of the maximum loss over a certain period of time at a given confidence level.

Mutual Recognition of Jurisdictions (E) Working Group
Virtual Meeting
June 29, 2022

The Mutual Recognition of Jurisdictions (E) Working Group of the Financial Condition (E) Committee met June 29, 2022. The following Working Group members participated: Robert Wake, Chair (ME); Monica Macaluso, Vice Chair (CA); Jack Broccoli and Kathy Belfi (CT); Anoush Brangaccio (FL); Scott Sanders (GA); Tom Travis (LA); Shelley Woods (MO); Lindsay Crawford (NE); John Tirado (NJ); Bob Kasinow (NY); Melisa Greiner (PA); and Mike Arendall (TX). Also participating was: Vincent Tsang (IL).

1. Adopted the GCC Recognize and Accept List

Mr. Wake stated that on Dec. 9, 2020, the Executive (EX) Committee and Plenary adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation With Reporting Forms and Instructions* (#450), which established the group capital calculation (GCC) framework. He stated that the Working Group was assigned a new charge in 2021 to oversee the process for evaluating the jurisdictions and to maintain a listing of jurisdictions that meet the NAIC requirements for recognizing and accepting the NAIC GCC.

Mr. Wake stated that the Working Group adopted the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation* (GCC Recognize and Accept Process), which the Executive (EX) Committee and Plenary adopted on Dec. 16, 2021. He noted that the GCC Recognize and Accept Process includes a requirement for the Working Group to evaluate non-U.S. jurisdictions in accordance with the GCC Recognize and Accept Process. This would then be included on the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation* (GCC Recognize and Accept List), which is to be published through the NAIC committee process.

Mr. Wake stated that under Model #440 and the GCC Recognize and Accept Process, a jurisdiction may meet the standards for its insurance groups to be exempt from the GCC in one of two ways. First, it can be a reciprocal jurisdiction that recognizes the U.S. state regulatory approach to group supervision and group capital. Second, it can be a jurisdiction that has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Mr. Wake stated that there are currently five reciprocal jurisdictions on the list, which are the European Union (EU) and the United Kingdom (UK) through their covered agreements, and then separately the Working Group has approved Bermuda, Japan, and Switzerland. He stated that all reciprocal jurisdictions designated by the NAIC through the reciprocal jurisdiction review process are also automatically designated as recognize and accept jurisdictions. He noted that the five reciprocal jurisdictions are included in the draft GCC Recognize and Accept List, and clarified that the listing for the EU is not a single jurisdiction, but rather a blanket recognition for each of the EU Member States. He noted that the Working Group has not received any other applications from other jurisdictions.

Mr. Wake stated that on May 19, the Working Group met in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss the draft GCC Recognize and Accept List. He stated that the Working Group directed NAIC staff to expose the draft document for a 30-day public comment period and that no comments were received from this exposure.

Mr. Wake stated that Model #440, Section 4L(2)(e) directs a lead state insurance commissioner to require the GCC for U.S. operations of any non-U.S. based insurance holding company system based in a GCC Recognize and Accept List jurisdiction if, after any necessary consultation with other supervisors or officials, the insurance commissioner deems such a subgroup calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. He noted that Model #450, Section 21E(1) provides that to assist with such a determination, the GCC Recognize and Accept List will also identify whether a listed jurisdiction requires a group capital filing for any U.S.-based insurance group's operations in that jurisdiction. He stated that the best source of this information will be from industry since they will have direct exposure to the practices in the GCC Recognize and Accept List jurisdictions. Mr. Wake asked that industry provide any information related to this topic to Jake Stultz (NAIC) and Dan Schelp (NAIC), who will bring this information to the Working Group to assess. Ms. Woods added that industry should also provide this information directly to their lead state insurance regulator in the U.S.

Mr. Tirado made a motion, seconded by Ms. Woods, to adopt the GCC Recognize and Accept List (Attachment Five-A). The motion passed unanimously.

Mr. Wake stated that NAIC staff have created a point-of-contact list that is included on the *Certified and Reciprocal Jurisdiction Reinsurer* web page, which includes a single best contact for each state for any issues regarding reciprocal jurisdiction reinsurers and certified reinsurers. He requested that each state provide its point of contact person to Mr. Stultz. Mr. Tsang asked if this list was only for this Working Group or for all U.S. states, and Mr. Wake verified that the list is for all states.

Having no further business, the Mutual Recognition of Jurisdictions (E) Working Group adjourned.

Draft: 5/12/2022

NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation

Reciprocal Jurisdictions (Model #440, Section 4L(2)(c)

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
Member States of the European Union	Respective Member State Supervisory Authorities	January 1, 2022	
United Kingdom (UK)	Prudential Regulation Authority of the Bank of England (PRA)	January 1, 2022	
Bermuda	Bermuda Monetary Authority (BMA)	January 1, 2022	
Japan	Financial Services Agency (FSA)	January 1, 2022	
Switzerland	Financial Market Supervisory Authority (FINMA)	January 1, 2022	

Recognize and Accept Jurisdictions (Model #440, Section 4L(2)(d)

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
None currently			

Group Capital Calculation. On December 9, 2020, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC’s GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions detailed in the *Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation*) if its groupwide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction.

List of Jurisdictions that Recognize and Accept the GCC. The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with the “Recognize and Accept” Process. A list of “Recognize and Accept” Jurisdictions is published through the NAIC committee process. Sections 21D and 21E of Model #450 provide a general framework for how the process to identify “Recognize and Accept” Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process.

NAIC Listing Process. Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

- (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction “recognizes the U.S. state regulatory approach to group supervision and group capital” (Model #440, Section 4L(2)(c)); or
- (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Evaluation of Reciprocal Jurisdictions. Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a “recognize and accept” evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as “Recognize and Accept” Jurisdictions. Likewise, in view of the terms of the EU and UK Covered Agreements, all EU Member States and the UK are automatically designated “Recognize and

Accept” Jurisdictions. If there is a material change to the terms of the U.S.-EU or U.S.-UK Covered Agreement, or if the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will consider, and will consult with FIO and USTR regarding, whether and how the applicability of the procedures in this document may apply.

Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

The specific details of the GCC Recognize and Accept process can be found in the [Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation.](#)

Draft: 6/16/22

National Treatment and Coordination (E) Working Group
Virtual Meeting
June 13, 2022

The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met June 13, 2022. The following Working Group members participated: Jay Buschmann, Co-Chair (MO); Cameron Piatt, Co-Chair (OH); Cindy Hathaway (CO); William Mitchell (CT); Alison Sterett (FL); Kari Leonard (MT); Ursula Almada (NM); Doug Hartz (OR); Karen Feather (PA); Amy Garcia (TX); Jay Sueoka (UT); Ron Pastuch and Mark Durphy (WA); Amy Malm and Mark McNabb (WI); and Doug Melvin (WY). Also participating was: Cristy Dunlap (WV).

1. Adopted Proposal 2022-1 (Biographical Affidavit Addendum Pages)

Mr. Piatt said the purpose of the addendum pages is to provide a template for providing additional information that would not fit on the biographical affidavit form. Two options were provided during the exposure period, and Mr. Piatt asked if anyone wants to elaborate on the options.

Gina Hudson (Liberty Mutual) said she prefers Option 1 because Option 2 requires an additional signature that would already be provided at the end of the form. She added that numbering the pages at the bottom of the addendum pages is not necessary. Jane Barr (NAIC) explained that addendum pages may be added after a bio is prepared, and if there is a possibility that they would not be in a portable document format (PDF) all together, pages could get separated; and it will let the state know exactly how many pages should be provided with additional information. Ms. Hudson asked if all addendum pages would be numbered together or by section. Ms. Barr said that would depend on the state's preference. She added that one comment made after the comment period mentioned that one option is more conducive to holding company information. Karen Fallstrom (UnitedHealth Group—UHG) said the UHG provides numerous biographical affidavits on a yearly basis, and the blank page option works better for holding company information.

Mr. Piatt said the better option would be Option 1 and include the blank pages for those affiants that hold numerous positions on a holding company level. Ms. Barr said Frequently Asked Questions (FAQ) would be posted, clarifying the intent of the addendum pages.

Mr. Buschmann made a motion, seconded by Ms. Feather, to adopt the biographical affidavit addendum template (Option 1) (Attachment Six-A). The motion passed unanimously.

2. Received Referrals

Mr. Buschmann said the first referral regarding Form A applications was sent from the Chief Financial Regulator Forum in reference to non-traditional ownership structures, which makes it difficult to determine the ultimate controlling party. Since the Working Group is tasked with the development of the Form A application, the Form A database, and the *Company Licensing Best Practices Handbook* (Handbook), this referral can be sent to the development ad hoc group for further discussion and development.

Mr. Melvin made a motion, seconded by Ms. Garcia, to request that the Form A ad hoc group incorporate the requests of this referral during its development of the Form A application. The motion passed unanimously.

Mr. Buschmann explained that the purpose of the second referral from the Financial Analysis (E) Working Group is to: 1) request that the National Treatment and Coordination (E) Working Group consider developing enhanced

regulatory guidance in the Handbook involving communication to other licensed states regarding troubled insurers that are seeking to redomesticate; and 2) consider tools or functionality for communication between states during the development of the electronic redomestication application.

Ms. Garcia made a motion, seconded by Mr. Sueoka, to keep this referral at the working group level for further development. The motion passed unanimously.

3. Exposed Proposal 2022-02 (Primary and Redomestication Form Revisions)

Ms. Barr said proposal 2022-02 includes suggested changes to the primary and redomestication application forms that were adopted by the Working Group last year. At the time of adoption, it was noted that further modifications could be made during development. Those changes included:

1. Removal facsimile from both application forms.
2. Adding type of business to the primary application form.
3. Removing the witness from the certification and attestation page for both application forms. With the use of DocuSign, the company application coordinator would identify the officer/director and their name for signature request; therefore, a witness signature is no longer necessary.
4. Rewording question 1 of the questionnaire for ease of providing the position at the end of the sentence instead of the middle of the sentence.
5. Resorting the questions on Form 8 by category of holding company, life insurance, and specify if the insurer is intending to write separate accounts.

Ms. Barr suggested exposing for proposal 2022-02 for a 45-day public comment period ending July 29. The Working Group agreed.

4. Discussed Letters of Good Standing

Mr. Buschmann asked if any states want to consider modifying the letter of good standing templates based on requests from specific countries. Mr. Sueoka said Utah has not received any recent requests and does not use this template. Ms. Dunlap said West Virginia receives numerous requests but uses its own form or certificate of compliance.

Ms. Barr said the templates are available for use and can be modified for their specific needs on the collaboration site for company licensing, and there are plans to create a SharePoint site and place regulatory-only tools there.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.

DESCRIPTION OF CHANGE(S)

Addendum pages were removed from the Biographical Affidavit (Form 11). No changes were made to the revision date of Form 11.

Addendum templates were created for Employment History, Education, Licenses, Professional Memberships/Associations, General and Blank. These templates were developed as Form 11b.

FAQs have been updated to reflect the addendum pages.

REASON OR JUSTIFICATION FOR CHANGE **

The templates were developed to provide a more uniform approach to provide carry over information from the biographical affidavit. These templates are optional and would only need to be utilized if there is not enough space on the biographical affidavit.

Any changes to the addendum pages will have an impact on the background reports including the Best Practices and Guidelines.

Each template will be posted to the webpage separately to allow users flexibility and utilize only those templates needed for the affiant.

Additional Staff Comments:

Employment Addendum Page – two separate options are provided for the structure of the Employment Addendum page. When providing comments please indicate a preference for Option 1 or Option 2.

** This section must be completed on all forms.

Revised 01-2019

Frequently Asked Questions:

The formatting of the NAIC biographical affidavit, addendum templates and accompanying cover letter should **NOT** be altered, for lengthy or detailed responses refer to Question 22 below.

Q5: Can the Applicant Company use the same biographical affidavit previously submitted by an affiliate within the same group for a new UCAA application filing?

A5: Yes, if the [NAIC biographical affidavit group cover letter](#) is submitted with biographical affidavits for officer/director changes and for expansion and corporate amendment applications. The affidavit and addendum templates can be reused for companies listed on the NAIC biographical affidavit group cover letter and are under the same group code if the affiant and notary signatures on the biographical affidavit and addendum templates are within 6 months of the date of submission and no information on the affidavit or addendum templates have been altered, amended or changed for any reason. Only the NAIC forms can be submitted, individual company cover letters will not be accepted. Refer to the [Fingerprint and Biographical Affidavit Requirements chart](#) for state specific requirements.

Q6: Can a biographical affidavit, addendum templates and third-party background report more than six months old be used in a new application?

A6: No, affidavits, addendum templates and background reports more than six (6) months old are not acceptable. A newly completed biographical affidavit and addendum templates (if needed) with a current date must be submitted. A new background report would be required for the newly completed affidavit. Biographical affidavits signed within six months of the application submission date may be used for new applications for the same Applicant Company and/or affiliated companies that are under the same group code accompanied with a group cover letter.

Completing the Biographical Affidavit

Q20: Is it acceptable to leave a question or item blank if I don't know the answer, or if the question or item does not apply, or that the answer is none?

A20: No, you must answer **each** and **every** question or item. If the answer is no or none, state "No" or "None". By not responding to each question or item, the various State Insurance Departments may request an updated affidavit regarding the missing question or item. A deficient or incomplete biographical affidavit submitted for a Background Report could result in a delay of the application review process.

Q22: The form does not allow enough space to respond to the questions or items. What should I do?

A22: Addendum pages are available as Form 11b and are to be used for additional responses carried over from the affidavit. There are **six** addendum templates: Employment History, Education, **Licenses, Professional Societies**, General and Blank. Cross-reference and label your responses to the biographical affidavit question or item number when utilizing the General or Blank addendum templates. Addendum pages should be signed by the affiant. Addendum pages are not required to be submitted with the affidavit if they are not utilized.

Biographical Affidavit Questions:**Item 5****Q32: I do not recall the exact dates that I attended college. Can I just guess?**

A32: No, because if you guess and are wrong, when the state department of insurance or independent third-party vendor completing the background report, verifies the information and submits their findings to the State Insurance Departments, a discrepancy will be noted. You may be required by the various State Insurance Departments to submit a notarized affidavit explaining the discrepancy; an unnecessary request had you researched the matter before guessing. If there is not enough space to list all colleges/universities attended on the affidavit, you may add the additional schools to the addendum Form 11b – Education.

NEW QUESTION:

Q: How are multiple schools listed in the Education and Training section for: undergraduate, graduate, and other training?

A: If the affiant has attended more than one school, additional information should be provided on Form 11b – Education. The affiant can enter “See Form 11b-Education” on question 5 of the biographical affidavit.

Applicant Company Name: _____
 NAIC No.: _____ FEIN: _____

**Uniform Certificate of Authority Application (UCAA)
 BIOGRAPHICAL AFFIDAVIT**

To the extent permitted by law, this affidavit will be kept confidential by the state insurance regulatory authority. The affiant may be required to provide additional information during the third-party verification process if they have attended a foreign school or lived and worked internationally.

Specify Purpose for Completion:

Form A: _____ **UCAA Type:** _____ **Other:** _____

Full name, address and telephone number of the present or proposed entity under which this biographical statement is being required (Do Not Use Group Names).

Applicant Company Name: _____

Address: _____ City: _____

State/Province: _____ Postal Code: _____ Phone: _____

In connection with the above-named entity, I herewith make representations and supply information about myself as hereinafter set forth. (Attach addendum or separate sheet if space hereon is insufficient to answer any question fully.) IF ANSWER IS "NO" OR "NONE," SO STATE. ALL FIELDS MUST HAVE A RESPONSE. INCOMPLETE FORMS COULD DELAY THE APPLICATION PROCESS or RESULT IN REJECTION OF THE APPLICATION.

1. Affiant's Full Name (Initials Not Acceptable): First: _____ Middle: _____ Last: _____

2. a. Are you a citizen of the United States?

Yes No

b. Are you a citizen of any other country?

Yes No

If yes, what country? _____

3. Affiant's occupation or profession: _____

4. Affiant's business address: _____

Business telephone: _____ Business Email: _____

5. Education and training:

<u>College/University</u>	<u>City/State</u>	<u>Dates Attended (MM/YY)</u>	<u>Degree Obtained</u>
---------------------------	-------------------	-------------------------------	------------------------

<u>Graduate Studies</u>	<u>College/University</u>	<u>City/State</u>	<u>Dates Attended (MM/YY)</u>	<u>Degree Obtained</u>

DISCLOSURE AND AUTHORIZATION CONCERNING BACKGROUND REPORTS
(California)

This Disclosure and Authorization is provided to you in connection with a pending application of _____ [company name] (“Company”) for licensure or a permit to organize (“Application”) with a department of insurance in one or more states within the United States. Company desires to procure a consumer or investigative consumer report (or both) (“Background Reports”) regarding your background for review by any department of insurance in such states where Company is currently pursuing an Application, because you are either functioning as, or are seeking to function as, an officer, member of the board of directors or other management representative (“Affiant”) of Company or of any business entities affiliated with Company (“Term of Affiliation”) for which a Background Report is required by a department of insurance reviewing any Application. Background Reports will be obtained through _____ [name of CRA, address] (“CRA”). Background Reports requested pursuant to your authorization below may contain information bearing on your character, general reputation, personal characteristics, mode of living and credit standing. The purpose of such Background Reports will be to evaluate the Application and your background as it pertains thereto. To the extent required by law, the Background Reports procured under this Disclosure and Authorization will be maintained as confidential.

You may request more information about the nature and scope of Background Reports produced by any consumer reporting agency (“CRA”) by submitting a written request to Company. You should submit any such written request for more information, to _____ [company’s designated person, position, or department, address and phone].

Attached for your information is a “Summary of Your Rights Under the Fair Credit Reporting Act.” You will be provided with a copy of any Background Report procured by Company if you check the box below.

- By checking this box, I request a copy of any Background Report from any CRA retained by Company, at no extra charge.

Under section 1786.22 of the California Civil Code, you may view the file maintained on you by the CRA listed above. You may also obtain a copy of this file, upon submitting proper identification and paying the costs of duplication services, by appearing at the CRA in person or by mail; you may also receive a summary of the file by telephone. The CRA is required to have personnel available to explain your file to you and the CRA must explain to you any coded information appearing in your file. If you appear in person, you may be accompanied by one other person of your choosing, provided that person furnishes proper identification.

AUTHORIZATION: I am currently an Affiant of Company as defined above. I have read and understand the above Disclosure and by my signature below, I consent to the release of Background Reports to a department of insurance in any state where Company files or intends to file an Application, and to the Company, for purposes of investigating and reviewing such Application and my status as an Affiant. I authorize all third parties who are asked to provide information concerning me to cooperate fully by providing the requested information to CRA retained by Company for purposes of the foregoing Background Reports, except records that have been erased or expunged in accordance with law.

I understand that I may revoke this Authorization at any time by delivering a written revocation to Company and that Company will, in that event, forward such revocation promptly to any CRA that either prepared or is preparing Background Reports under this Disclosure and Authorization. In no event, however, will this authorization remain in effect beyond six (6) months following the date of my signature below.

A true copy of this Disclosure and Authorization shall be valid and have the same force and effect as the signed original.

Refer to the FAQ's on the UCAA webpage for additional questions.

List any professional, occupational and vocational licenses (including licenses to sell securities) issued by any public or governmental licensing agency or regulatory authority or licensing authority that you presently hold or have held in the past. For any non-insurance regulatory issuer, identify and provide the name, address and telephone number of the licensing authority or regulatory body having jurisdiction over the license (s) issued. If your professional license number is your Social Security Number (SSN) or embeds your SSN or any sequence of more than five numbers that are reasonably identifiable as your SSN, then write SSN for that portion of the professional license number that is represented by your SSN. (For example, "SSN", "12-SSN-345" or "1234-SSN" (last 6 digits)). Attach additional pages if the space provided is insufficient.

Revised 02/24/2022

MEMORANDUM

TO: Accounting Practices and Procedures (E) Task Force
Financial Condition (E) Committee

FROM Statutory Accounting Principles (E) Working Group

DATE August 2, 2022

RE: Related Party Reporting

This memorandum intends to provide information to the Financial Condition (E) Committee and the Accounting Practices and Procedures (E) Task Force on recent adoptions by the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group regarding the identification of related party involvement with investments and request adoption consideration. This item has been separated for individual consideration as the revisions will impact all insurance reporting entities and the discussion included affiliate identification.

In conjunction with recent recommendations from the Macroprudential (E) Working Group regarding the risk of certain investments that involve related parties, in May 2022, the Statutory Accounting Principles (E) Working Group adopted its agenda item *2021-21: Related Party Reporting* (**See details in the Appendix**).

The primary goal of this agenda item was to incorporate new reporting requirements for investment transactions with related parties in order to provide more transparency into the nature of the involvement of related parties. For example, it allows regulators to understand whether the investment involves credit exposure to related parties or whether the investment involves a related party in the origination or servicing of the investment. This reporting applies to all investments involving related parties, regardless of whether they meet the definition of an affiliate per Insurance Holding Company System Regulatory Act (Model #440).

With an effective date of Dec. 31, 2022, Blanks (E) Working Group agenda item 2021-22BWG requires new reporting codes for the following investment schedules: B – Mortgage Loans, D – Long-Term Bonds, DB – Derivatives, BA – Other Long-Term Invested Assets, DA – Short-Term Investments, E2 – Cash Equivalents, and DL – Securities Lending Collateral Assets. The reporting changes will require the identification of related party involvement for every investment using codes (**See code details in the Appendix**). While feedback from interested parties indicated that most investments do not involve a related party, the Statutory Accounting Principles (E) Working Group communicated support to make the related party identification field mandatory, thus a “blank or null” field will not be permitted. This eliminates ambiguity on whether an investment does not have a related party involvement or whether the component of the investment schedule was inadvertently not completed.

In addition to the new reporting granularity, the statutory accounting revisions included adopted clarifications to *SSAP No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R—Loan-Backed and Structured Securities* to make clear that the existing affiliate definition applies to all types of entities, including securitizations. Existing guidance already made clear that control may exist through arrangements other than voting interests, such as in

www.naic.org

the case of a limited partnership where the general partner typically holds control. The adopted revisions add specificity around the application of this existing guidance to other types of non-voting entities. For example, securitization entities are typically controlled through non-voting arrangements. To the extent that such control is held by the reporting entity or its affiliates, then the securitization entity and any investments in it would be deemed affiliated.

Excerpts from the Holding Company Act are provided in the **Appendix** to detail the existing guidance regarding determination of control.

Both the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group unanimously adopted the revisions, with a Dec. 31, 2022, effective date. The Statutory Accounting Principles (E) Working Group reviewed industry comments and incorporated limited revisions to the initially exposed statutory accounting changes and stated support for the exposed blanks reporting revisions with their adoption. No industry comments were presented at the Blanks (E) Working Group. Therefore, the Working Group recommends adoption of these revisions by the Task Force and the Committee.

Appendix

SAPWG Revisions (Agenda Item 2021-21)

Adopted revisions to SSAP No. 25: (New paragraph 9. Remaining paragraphs would be renumbered.)

This new paragraph 9 clarifies the application of the existing affiliate and control definitions to limited partnerships, trusts and other special purpose entities when control is held by an affiliated general partner, servicer or other arrangement. (The proposed deletion of FIN 35 is discussed earlier in the agenda item, but is noted as not necessary with the existing statutory accounting guidance.)

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participation rights¹ as a shareholder to the investee.

¹ The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in EITF 96-16, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

Appendix

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.
9. For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company², indirect control shall be presumed to exist unless the presumption of control can be overcome as detailed in paragraph 7. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

Adopted revisions SSAP No. 43R:

These revisions move the existing guidance in paragraph 4.a. to paragraph 6 and notes the requirement to identify related party investments in the investment schedules. (Note Footnote 5 is just moved to a new paragraph.)

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor only has direct recourse to the issuer’s assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.
- 5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise³ or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool

² Consistent with SSAP No. 97, footnote 1, investments in an exchange traded fund (ETF) or a mutual fund (as defined by the SEC) does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF or mutual fund unless ownership of the ETF actually results in “control” with the power to direct or cause the direction of management of an underlying company. ETFs and mutual funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws.

³ Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

Appendix

of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

- 6. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements of SSAP No. 25. In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. Loan-backed and structured securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.
 - a. Although a loan-backed or structured security may be acquired from a non-related issuer, if the assets held in trust predominantly⁴ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as affiliates, these securities shall be identified as related party investments in the investment schedules.
 - b. A loan-backed or structured security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the loan-backed or structured security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, which include but are not limited to control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with *SSAP No. 25—Affiliates and Other Related Parties*.

⁴ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in *SSAP No. 25—Affiliates and Other Related Parties*, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

Appendix**Blanks Reporting Changes Agenda Item 2021-22BWG****Investments Involving Related Parties:**

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control / affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a **direct credit exposure**.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies **involving a relationship with a related party** as sponsor, originator, manager, servicer, or other similar influential role **and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.**
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies **involving a relationship with a related party** as sponsor, originator, manager, servicer, or other similar influential role and **for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.**
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

Excerpt from Holding Company Act (Bolding and underlining for emphasis):

A. "Affiliate." An "affiliate" of, or person "affiliated" with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

C. "Control." The term "control" (including the terms "controlling," "controlled by" and "under common control with") **means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise,** unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

Presentation to the NAIC's Financial Condition (E) Committee

August 12, 2022

1

Supervisory Framework Background

- The Federal Reserve released a draft insurance supervisory framework on January 28 for public comment. The comment period closed on May 5.
- The proposed framework describes the Federal Reserve's proposed approach to supervising depository institution holding companies significantly engaged in insurance activities (supervised insurance organizations or SIOs).
- The Board recognizes and has developed the framework to reflect the role of state insurance regulators and that the risks arising from the insurance activities of SIOs are materially different from traditional banking risks.

Structure of Proposed Framework

- Proportional application of supervisory guidance and activities
 - Risk-based classified of SIOs to guide the application of supervisory guidance, the allocation of supervisory resources, and the assignment of supervisory activities
- Supervisory ratings
 - Ratings definitions tailored to SIOs emphasize the ability of the holding company to serve as a source of strength for the depository
 - Ratings assigned for Governance and Controls, Capital Management, and Liquidity Management
- Incorporating the work of other supervisors
 - Emphasizes the importance of collaborating with state insurance regulators and describes how supervisory teams do this

Proportionality

- SIOs would be classified as either complex or noncomplex based on their risk profiles. Their classification affects the frequency and intensity of supervisory activities.
 - Complex SIOs:
 - More challenging to assess and typically larger
 - Assigned a dedicated supervisory team (DST), whose composition and activities would be based on the SIO's risk profile
 - Noncomplex SIOs:
 - Simpler risk profiles and typically smaller
 - No dedicated supervisory team
 - Supervisory activities outside of an annual full scope exam would be atypical and based on the firm's risk profile
- The framework describes how the application of existing supervisory guidance is tailored for SIOs and emphasizes that supervisory activities focus on material risks that could threaten the holding company's ability to support the depository institution

SIO Ratings

- SIOs have been subject to indicative RFI ratings since 2011 and have been excluded from recent rating framework updates.
- The proposal leverages the existing LFI rating framework to take advantage of existing internal processes, but rating definitions are tailored for SIOs.
- One of four ratings assigned for each component (Governance & Controls, Capital Management, Liquidity Management):
 - Broadly Meets Expectations
 - Conditionally Meets Expectations
 - Deficient-1
 - Deficient-2
- The primary consideration for assigning a rating is the safety and soundness of the SIO and its ability to serve as a source of strength for its depository institution(s).

Incorporating the Work of Other Supervisors

- In addition to working with other financial supervisors, supervisory teams must rely as much as possible on the work of state insurance regulators.
- The framework describes how supervisory teams coordinate with state insurance regulators in order to minimize supervisory burden without sacrificing effective oversight, including:
 - Routine discussions with greater frequency during times of stress;
 - Discussion of the supervisory plan with the potential for participation by either side on the other's activities;
 - Consideration of the work done by the state when scoping activities;
 - Sharing and discussing the annual roll-up letter and relevant documents from supervisory activities; and
 - the states sharing the firm's Own Risk Self Assessment (ORSA), their assessment of the ORSA, results from their supervisory activities, and other supervisory material.

Draft: 8/23/22

Accounting Practices and Procedures (E) Task Force
Portland, Oregon
August 11, 2022

The Accounting Practices and Procedures (E) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Jamie Walker (TX); Mike Causey, Vice Chair, represented by Jackie Obusek (NC); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis (AL); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by William Arfanis (CT); Karima M. Woods represented by Rebecca Davis (DC); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Virginia Christy (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Jessie Adamson (ID); Vicki Schmidt represented by Tish Becker and Levi Nwasoria (KS); Sharon P. Clark represented by Bill Clark (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Timothy N. Schott represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by Debbie Doggett (MO); Troy Downing represented by Kari Leonard (MT); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Russell Toal represented by Patrick Zeller (NM); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Michael Humphreys represented by Melissa Greiner and Matt Milford (PA); Elizabeth Kelleher Dwyer represented by Michael Estabrook and Ted Hurley (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Joy Little (TN); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Greg Chew, David Smith, and Doug Stolte (VA); Kevin Gaffney represented by Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Nathan Houdek represented by Amy Malm (WI); Allan L. McVey represented by Jamie Taylor (WV); and Jeff Rude represented by Doug Melvin (WY).

1. Adopted its Spring National Meeting Minutes

Ms. Walker directed the members to the Task Force's 2022 Spring National Meeting minutes. Ms. Doggett made a motion, seconded by Ms. Travis, to adopt the Task Force's April 5 minutes (*see NAIC Proceedings – Spring 2022, Accounting Practices and Procedures (E) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Statutory Accounting Principles (E) Working Group

Mr. Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which met Aug. 10. During this meeting, the Task Force adopted its July 18, May 24, and Spring National Meeting minutes. During its July 18 meeting, the Working Group exposed agenda item 2019-21: Bond Proposal Reporting Revisions. The exposure included proposed reporting changes to Schedule D-1: Long-Term Bonds, including a proposal for a new schedule to separate issuer obligations and asset-backed securities and revised reporting lines and instructions for investment classification for a public comment period ending Oct 7.

During its May 24 meeting, the Working Group adopted the following statutory accounting principles (SAP) clarifications to statutory accounting guidance:

- A. *Statement of Statutory Accounting Principles (SSAP) No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R—Loan-Backed and Structured Securities*: Revisions clarify application guidance for the existing affiliate definition and incorporate reporting codes within the investment schedules to identify investments that involve related parties. (Ref #2021-21)

- B. Blanks Proposal: Adoption expressed support for a blanks proposal (2022-10BWG) that included instructional changes to Schedule T, the State Page, and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. The instructions clarify that all premium adjustments shall be allocated as premium in the respective jurisdiction. This agenda item did not result in statutory revisions. (Ref #2022-03)
- C. *Interpretation (INT) 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates*: The interpretation clarified that an investment in a Freddie Mac “When Issued K-Deal” (WI) Program is in scope of SSAP No. 43R from acquisition. (Ref #2022-08)

Mr. Bruggeman stated that during its Aug. 10 meeting, the Working Group adopted one new SAP concept, *SSAP No. 86—Derivatives*: Revisions adopt elements from Financial Accounting Standards Board (FASB) *Accounting Standards Update (ASU) 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* for determining hedge effectiveness. The revisions also incorporate statutory-specific measurement methods for excluded components in hedging instruments. The revisions were adopted with a Jan. 1, 2023, effective date, with early adoption permitted. A subsequent blanks proposal will incorporate new electronic-only reporting fields for Schedule DB and note disclosures. (Ref #2021-20)

Mr. Bruggeman stated that the Working Group adopted the following clarifications to statutory accounting guidance:

- A. *SSAP No. 4—Assets and Nonadmitted Assets and the Preamble to the Accounting Practices and Procedures Manual (AP&P Manual)*. Revisions incorporate chapter reference updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* and Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*. These updates revise the definition of an asset. The Working Group adopted *Issue Paper 166 – Definition of Assets* to document the SAP clarifications to SSAP No. 4. (Ref #2022-01)
- B. *SSAP No. 22R—Leases*: Revisions reject *ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities* for statutory accounting. (Ref #2022-05)
- C. *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*: Revisions incorporate disclosures from *ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance*. (Ref #2022-04)
- D. *SSAP No. 47—Uninsured Plans and SSAP No. 68—Business Combinations and Goodwill*: Revisions reject *ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers* for statutory accounting. (Ref #2022-07)
- E. *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*: Revisions clarify that the U.S. tax basis equity audit shall occur at the investee level. (Ref #2022-02)
- F. *SSAP No. 104R—Share-Based Payments*: Revisions incorporate the practical expedient for the current price from *ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards*. (Ref #2022-06)

Mr. Bruggeman stated that the Working Group exposed one new SAP concept to statutory accounting guidance regarding *SSAP No. 26R—Bonds* and *SSAP No. 43R*: Revisions incorporate concepts to principally define what is eligible for reporting as bond on Schedule D-1. The exposure included proposed revisions to *SSAP No. 26R* and *43R*, as well as an updated bond definition and issue paper. (Ref #2019-21)

Mr. Bruggeman stated that the Working Group exposed the following clarifications to statutory accounting guidance for a public comment period ending Oct. 7:

- A. *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets: Revisions incorporate Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, to revise the definition of a liability. The Working Group exposed a related draft issue paper to detail these SAP clarifications. (Ref #2022-01)
- B. *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements* and *SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities*: Revisions clarify that leasehold improvements shall be immediately expensed upon lease termination, unless limited exclusions are met. (Ref #2021-25)
- C. *SSAP No. 21R—Other Admitted Assets*: Revisions clarify that an asset pledged as collateral must qualify as an admitted invested asset in order for a collateral loan to be admitted. (Ref #2022-11)
- D. *SSAP No. 25 and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*: Revisions identify foreign open-end investment funds as a fund in which ownership percentage is not deemed to reflect control unless the entity actually controls with the power to direct the underlying company. (Ref #2022-13)
- E. *SSAP No. 36—Troubled Debt Restructuring*: Revisions propose to reject *ASU 2022-02, Troubled Debt Restructurings and Vintage Disclosures* for statutory accounting. (Ref #2022-10)
- F. *SSAP No. 86*: Revisions incorporate derivative guidance from *ASU 2017-12* and *ASU 2022-01, Fair Value Hedging – Portfolio Layer* to include guidance for the portfolio layer method and partial-term hedges. (Ref #2022-09)
- G. *INT 03-02: Modification to an Existing Intercompany Pooling Arrangement*: Exposure proposes to nullify INT 03-02, as it is inconsistent with *SSAP No. 25*. (Ref #2022-12)

Mr. Bruggeman stated that the Working Group received updates on the following items:

- A. Received an update on U.S. generally accepted accounted principles (GAAP) exposures, noting that pending items will be addressed during the normal maintenance process. In addition, NAIC staff are monitoring developments regarding the *Inflation Reduction Act of 2022* for any items that may affect insurers.
- B. Received an update regarding amendments made to the *Valuation Manual* by the Life Actuarial (A) Task Force since the 2021 Summer National Meeting.
- C. Received a referral from the Macprudential (E) Working Group.

Mr. Bruggeman made a motion, seconded by Mr. Chew, to adopt the report of the Statutory Accounting Principles (E) Working Group, except for agenda item 2021-21: Related Party Reporting, which would have a separate vote of the Task Force (Attachment One). The motion passed unanimously.

3. Adopted the Report of the Blanks (E) Working Group

Mr. Hudson provided the report of the Blanks (E) Working Group, which met June 8 and May 25. During these meetings, the Working Group took the following action:

Mr. Hudson stated the Working Group conducted an e-vote that concluded June 8 to adopt 2022-13BWG, which modifies life blank Five-Year Historical Data questions 68 and 69 to reference group comprehensive and questions 70 and 71 to reflect the inclusion of all health lines of business other than group comprehensive. The crosschecks for these questions are being modified accordingly. Interested parties requested an annual 2022 effective date.

Mr. Hudson stated the during its May 25 meeting, the Working Group adopted its Spring National Meeting minutes, adopted its editorial listing, and adopted the following proposals:

- A. 2021-22BWG – Add a new reporting requirement in the investment schedules for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor/originator along with whether the underlying investment is in a related party.
- B. 2022-01BWG – Add new questions to General Interrogatories Part 1 asking if the reporting entity accepts cryptocurrency for payment of premiums, which cryptocurrencies are accepted, and whether they are held for investment or immediately converted to U.S. dollars (2021-24 SAPWG).
- C. 2022-02BWG – Add four new electronic-only columns to Schedule D, Part 6, Section 1, for Prior Year Book/Adjusted Carrying Value (BACV) (Column 16), Prior Year Nonadmitted Amount (Column 17), Prior Year Sub-2 Verified Value (Column 18), and Prior Year VISION Filing Number (Column 19) (2021-22 SAPWG).
- D. 2022-03BWG – Split Line 5 of the Quarterly Part 1 – Loss Experience and Part 2 – Direct Premiums Written into Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion).
- E. 2022-04BWG – Add a new supplement to capture premium and loss data for Annual Statement Line 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business.
- F. 2022-05BWG – Add line numbers to the status data points in the Life/Fraternal, Health, and Property/Casualty (P/C) Schedule T footnote.
- G. 2022-06BWG – Revise the Health Annual Statement Test language in the annual statement instructions.
- H. 2022-07BWG – Modify the Health Actuarial Opinion Instructions. Add definitions of “actuarial asset” and “actuarial liability.” Modify Section 4 – Identification, Section 5 – Scope, and Section 7 – Opinion to clarify that the actuary’s opinion covers actuarial assets, as well as actuarial liabilities. Modify Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.
- I. 2022-08BWG – Modify the instructions in Section 1, Section 3, and Section 8 of the Property/Casualty (P/C) Actuarial Opinion Instructions to reflect the changes adopted by the Actuarial Opinion (C) Working Group.
- J. 2022-09BWG – Changes to the Life/Fraternal VM-20, Requirements for Principle-Based Reserves for Life Products, Reserves Supplement blank.

- K. 2022-10BWG – Add instructions to Schedule T, State pages and the Accident and Health (A&H) Policy Experience Exhibit to clarify guidance for reporting premium adjustments by jurisdiction.
- L. 2022-11BWG Modified – Update the life/fraternal blank asset valuation reserve (AVR) factors to correspond with the adopted risk-based capital (RBC) factors for the expanded bond designation categories.

Mr. Hudson stated the Working Group deferred proposal 2021-18BWG – Modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages.

Mr. Hudson stated the Working Group exposed two new proposals for a public comment period ending Oct. 25.

Mr. Hudson stated the Working Group received a Property and Casualty Risk-Based Capital (E) Working Group memorandum.

Mr. Hudson made a motion, seconded by Ms. Doggett, to adopt the report of the Blanks (E) Working Group, except for agenda item 2021-22BWG: Related Party Reporting Codes, which would have a separate vote of the Task Force (Attachment Two). The motion passed unanimously.

4. Adopted Accounting and Reporting Revisions Regarding Related Parties

Mr. Bruggeman summarized recent adoptions by the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group regarding the identification of related party involvement with investments. He noted that items have been separated for individual consideration as the revisions will affect all insurance reporting entities, and the discussion included affiliate identification.

Mr. Bruggeman stated the agenda items were adopted in conjunction with recent recommendations from the Macroprudential (E) Working Group regarding the risk of certain investments that involve related parties.

Mr. Bruggeman noted that in May, the Statutory Accounting Principles (E) Working Group adopted agenda item 2021-21: Related Party Reporting. He stated that the primary goal of the agenda item was to incorporate new reporting requirements for investment transactions with related parties in order to provide more transparency into the nature of the involvement of related parties. For example, it allows state insurance regulators to understand whether the investment involves credit exposure to related parties or whether the investment involves a related party in the origination or servicing of the investment. He stated the reporting applies to all investments involving related parties, regardless of whether they meet the definition of an affiliate per *Insurance Holding Company System Regulatory Act* (#440).

Mr. Bruggeman stated that the Blanks (E) Working Group agenda item 2021-22BWG requires new reporting codes for the following investment schedules: B – Mortgage Loans, D – Long-Term Bonds, DB – Derivatives, BA – Other Long-Term Invested Assets, DA – Short-Term Investments, E2 – Cash Equivalents, and DL – Securities Lending Collateral Assets. The reporting changes, which are effective Dec. 31, 2022, will require the identification of related party involvement for every investment using codes. He stated that feedback from interested parties indicated that most investments do not involve a related party. The Statutory Accounting Principles (E) Working Group communicated support to make the related party identification field mandatory. Therefore, a “blank or null” field will not be permitted. He stated that this requirement eliminates ambiguity on whether an investment does not have a related party involvement or whether the component of the investment schedule was inadvertently not completed.

Mr. Bruggeman stated that in addition to the new reporting granularity, the statutory accounting revisions included adopted clarifications to SSAP No. 25 and SSAP No. 43R to make clear that the existing affiliate definition applies to all types of entities, including securitizations. Existing guidance already made clear that control may exist through arrangements other than voting interests, such as in the case of a limited partnership where the general partner typically holds control. He noted that the adopted revisions add specificity around the application of this existing guidance to other types of non-voting entities. For example, securitization entities are typically controlled through non-voting arrangements. He stated that to the extent that such control is held by the reporting entity or its affiliates, then the securitization entity and any investments in it would be deemed affiliated.

Mr. Bruggeman stated that the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group unanimously adopted the revisions, with a Dec. 31, 2022, effective date. He noted that the Statutory Accounting Principles (E) Working Group reviewed industry comments and incorporated limited revisions to the initially exposed statutory accounting changes and stated support for the exposed blanks reporting revisions with their adoption. He stated that no industry comments were presented at the Blanks (E) Working Group.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the accounting and reporting revisions regarding related parties in agenda item 2021-21 (*see NAIC Proceedings – Summer 2022, Accounting Practices and Procedures (E) Task Force, Attachment One-B5*) and 2021-22BWG (*see NAIC Proceedings – Summer 2022, Accounting Practices and Procedures (E) Task Force, Attachment Two-B1*). The motion passed unanimously.

5. Adopted its 2023 Proposed Charges

Ms. Walker directed the Task Force to its 2023 proposed charges, noting that the proposed charges were unchanged from last year.

Ms. Obusek made a motion, seconded by Ms. Malm, to adopt the Task Force's 2023 proposed charges (Attachment Three). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.

Draft: 8/17/22

Statutory Accounting Principles (E) Working Group
Portland, Oregon
August 10, 2022

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met in Portland, OR, Aug. 10, 2022. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson and Susan Bernard (CA); William Arfanis (CT); Rylynn Brown (DE); Susan Berry (IL); Melissa Gibson (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Melissa Greiner, Matt Milford, and Diana Sherman (PA); Amy Garcia and Jamie Walker (TX); Greg Chew, Doug Stolte, and David Smith (VA); and Amy Malm (WI).

1. Adopted its July 18, May 24, and Spring National Meeting Minutes

The Working Group met July 18 and May 24. During its July 18 meeting, the Working Group exposed proposed reporting changes to Schedule D-1: Long-Term Bonds, which included a proposal for separate schedules for issuer obligations and asset-backed securities (ABS), proposed to be named Schedule D-1-1 and Schedule D-1-2, respectively. The exposure also included granular reporting lines, column additions, and instructional changes to improve consistency and transparency in the information reported.

During its May 24 meeting, the Working Group adopted statutory accounting principle (SAP) clarifications to: 1) *Statement of Statutory Accounting Principles (SSAP) No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R—Loan-Backed and Structured Securities* to clarify the identification and reporting requirements for affiliated transactions and incorporate new reporting codes in various investment schedules to identify investments that involve related parties; and 2) *Interpretation (INT) 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates* to clarify that from that date of origination, investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of SSAP No. 43R. Additionally, the Working Group adopted agenda item 2022-03: Premium Adjustments Allocated to Jurisdictions, which did not result in statutory revisions but expressed support for a corresponding blanks proposal—2022-10BWG—that included instructional changes to Schedule T, the State Page, and Accident and Health Policy Experience Exhibit (AHPEE), clarifying guidance for premium adjustments.

The Working Group also met Aug. 4 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings to discuss its Summer National Meeting agenda.

Ms. Walker made a motion, seconded by Ms. Malm, to adopt the Working Group’s July 18 (Attachment One-A), May 24 (Attachment One-B), and April 4 (see *NAIC Proceedings – Spring 2022, Accounting Practices and Procedures (E) Task Force, Attachment One*) minutes. The motion passed unanimously.

2. Adopted Non-Contested Positions

The Working Group held a public hearing to review comments (Attachment One-C) on previously exposed items.

Mr. Hudson made a motion, seconded by Mr. Clark, to adopt the SAP clarifications detailed below as non-contested statutory accounting revisions. The motion passed unanimously.

a. Agenda Item 2022-04

Mr. Bruggeman directed the Working Group to agenda item 2022-04: ASU 2021-10, Government Assistance (Attachment One-D). Jim Pinegar (NAIC) stated that this agenda item reviews *Accounting Standard Update (ASU) 2021-10, Government Assistance: Disclosures by Business Entities about Government Assistance*, which increases transparency on certain types of government assistance by increasing disclosures in the financial statements. He stated that due to the rarity of such disclosures, this agenda item proposed SAP clarifications to SSAP No. 24—*Discontinued Operations and Unusual or Infrequent Items*, incorporating limited disclosures from ASU 2021-10. The proposed additions will require identification and the terms and provisions of assistance received.

b. Agenda Item 2022-05

Mr. Bruggeman directed the Working Group to agenda item 2022-05: ASU 2021-09, Leases, Discount Rate for Lessees (Attachment One-E). Jake Stultz (NAIC) stated that this agenda item reviews *ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities*, which states that when the rate implicit in the lease is readily determinable for any individual lease, the lessee should use that rate, rather than a risk-free rate or an incremental borrowing rate, regardless of whether it has made the risk-free rate election. As statutory accounting generally requires that all leases be classified as operating leases, this agenda item proposed SAP clarifications to reject ASU 2021-09 in SSAP No. 22R—*Leases* for statutory accounting.

c. Agenda Item 2022-06

Mr. Bruggeman directed the Working Group to agenda item 2022-06: ASU 2021-07, Compensation – Stock Compensation (Attachment One-F). Mr. Pinegar stated that this agenda item reviews *ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards*, which offers nonpublic companies a practical expedient to one of the inputs necessary—current price input—for option-price modeling. He stated that when equity share options or similar instruments are granted in a share-based payment transaction, the fair value, which is used to determine expense recognition at inception and during any subsequent award modifications, is estimated using an option-pricing model valuation technique. ASU 2021-07 provides a third practical expedient for nonpublic companies, and it is the third practical expedient permitted under U.S. generally accepted accounting principles (GAAP), of which the two other practical expedients are currently permitted under SSAP No. 104R—*Share-Based Payments*. Accordingly, this agenda item proposed SAP clarifications to SSAP No. 104R to incorporate this third new practical expedient.

d. Agenda Item 2022-07

Mr. Bruggeman directed the Working Group to agenda item 2021-07: ASU 2021-08, Business Combinations (Attachment One-G). Mr. Pinegar stated that this agenda item reviews *ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers*, which requires acquiring entities to apply the “Revenue from Contracts with Customers” guidance (Topic 606) when valuing and recognizing contract-related assets and liabilities in a business combination. Prior to the issuance of ASU 2021-08, acquirers would generally recognize items using the fair value on the date of acquisition; however, that approach would generally result in lower liability recognition than required under Topic 606. Mr. Pinegar stated that in keeping with historical precedent, this agenda item proposed SAP clarifications to reject ASU 2021-08 in SSAP No. 47—*Uninsured Plans*. However, as ASU 2021-08 is related to business combinations, the agenda item also proposes to reject ASU 2021-08 in SSAP No. 68—*Business Combinations and Goodwill*, noting that rejection does not impact the determination of U.S. GAAP book value in an acquired entity.

3. Reviewed Comments on Exposed Items – Minimal Discussion

a. Agenda Item 2021-20

Mr. Bruggeman directed the Working Group to agenda item 2021-20: Effective Derivatives – ASU 2017-12. Julie Gann (NAIC) stated that during the 2021 Fall National Meeting, the Working Group exposed an agenda item that summarized the key changes detailed in *ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* with a request for comments on the extent revisions were needed in *SSAP No. 86—Derivatives*. She stated that ASU 2017-12 was originally reviewed in 2017; however, the Working Group only adopted certain disclosure provisions with the intent to review the full ASU subsequently. During the Spring National Meeting, the Working Group exposed additional guidance from ASU 2017-12, proposing a new SSAP No. 86, Exhibit A on assessing hedge effectiveness, which would replace the current Exhibit A and Exhibit B. Ms. Gann stated that these proposed revisions would align U.S. GAAP guidance with statutory accounting so there would be consistency in the determination of hedge effectiveness. In addition, the exposure included revisions to what is permitted as excluded components and explicit measurement methods for each type of excluded component. She stated that the proposed revisions would be considered an adoption, with modification, from U.S. GAAP on the hedge effectiveness guidance from ASU 2017-12, as statutory specific measurement guidance is needed for excluded components due to the different measurement concepts between U.S. GAAP and SAP. She stated that NAIC staff recommended adoption of the exposed revisions to SSAP No. 86, along with guidance to detail an effective date of Jan. 1, 2023, with early adoption permitted, and the guidance adopted from U.S. GAAP. She stated that companies that elect to early adopt would have different financial results for year-end 2022 from those that adopt in 2023; however, most companies are anticipated to early adopt, and the 2023 time frame is only for companies that need additional time for system changes. In addition, it was recommended that the Working Group sponsor a blanks proposal to incorporate new disclosures and electronic column reporting fields in Schedule DB for year-end 2023. However, as the new data-captured elements will not be available until 2023, any company electing to adopt these provisions in 2022 will be required to complete the disclosures in narrative form. She stated that as the modifications to SSAP No. 86 are new SAP concepts, NAIC staff recommend drafting an issue paper to document the revisions captured in this agenda item, as well as other derivative revisions from the review of ASU 2017-12, as certain elements from the ASU are still pending statutory accounting review.

Mr. Hudson made a motion, seconded by Mr. Kasinow, to adopt the exposed new SAP concept revisions to SSAP No. 86, incorporating the Jan. 1, 2023, effective date, with early adoption permitted, and relevant literature language proposed by NAIC staff. The motion included direction to sponsor a blanks proposal and draft an issue paper to document the revisions (Attachments One-H, One-I, and One-J). The motion passed unanimously.

b. Agenda Item 2022-02

Mr. Bruggeman directed the Working Group to agenda item 2022-02: SSAP No. 48 – Alternative Valuation of Minority Ownership Interests. Mr. Pinegar stated that this agenda item reviews the audited U.S. tax equity exception provided in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. He stated that this agenda item arose trying to address questions regarding at which level the audited U.S. tax basis should apply, as there was ambiguity on whether the insurer’s audit would suffice or if the audit should reside at the investee level. He stated that informal comments from a representative of the American Institute of Certified Public Accountants (AICPA) indicated that they were not aware of anyone using the audited U.S. tax basis method, which is permitted as an exception if audited U.S. GAAP basis financial statements were not available. They further indicated that they were not aware of anyone issuing U.S. tax basis equity audits. Mr. Pinegar stated that this agenda item proposed two options for consideration. The first option sought input as to whether the audited U.S. tax basis exception was being used, and if not, whether it should be removed as a permissible exception to audited U.S. GAAP basis in SSAP No. 48. The second option proposed an SAP clarification that if the audited U.S. tax basis

exception is retained, the audit is required at the investee (investment) level. He stated that in response to comments received from interested parties, which indicated that insurers are using the audited U.S. GAAP basis exception, NAIC staff recommended the retention of the audited U.S. tax equity exception in SSAP No. 48 but also clarification that the audit is required at the investee level.

Mr. Clark made a motion, seconded by Mr. Chew, to adopt the exposed SAP clarification to retain the U.S. tax equity exception permitted in SSAP No. 48 but also to clarify that the audit is required to occur at the investee level (Attachment One-K). The motion passed unanimously.

4. Reviewed Comments on Exposed Items

a. Agenda Item 2022-01

Mr. Bruggeman directed the Working Group to agenda item 2022-01: Conceptual Framework – Updates. Mr. Pinegar stated that this agenda item reviews Financial Accounting Standards Board (FASB) Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* (Chapter 4) and Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* (Chapter 7) for their impact on statutory accounting. He stated that the final topic reviewed Chapter 7 and proposed a minor SAP clarification to the Preamble, updating a paragraph reference to *Statement of Financial Accounting Concept 5*, which was superseded by Chapter 7. He stated that Chapter 7 describes what information should be included in the financial statements and how appropriate presentation can contribute to the objective of financial reporting. However, Chapter 7 concepts were not expected to modify current guidance, other than to update references to superseded accounting concepts.

Mr. Pinegar stated that Chapter 4 introduced revised definitions for the terms “asset” and “liability,” simplifying their descriptions and redefining their essential characteristics. He stated that the historical definitions no longer include the term “probable” or the phrase “as the result of past transactions or events,” citing that the rationale for their removal has been documented in the agenda item and the related issue papers. He stated that as statutory accounting references these definitions, this agenda item proposed SAP clarifications to SSAP No. 4—*Assets and Nonadmitted Assets* and SSAP No. 5R—*Liabilities, Contingencies and Impairments of Assets* to reflect the FASB’s updated definitions. He stated that in addition, the Working Group exposed two issue papers, each articulating the changes for SSAP No. 4 and SSAP No. 5R, the FASB’s rationale for the changes, and discussion as to why the updates are proposed to be SAP clarifications in nature. He stated that while interested parties did not have any comments on the asset definitional change, or its related issue paper, they did offer comments on the recommended changes to the definitional change of a liability. He stated that interested parties recommended an SSAP-by-SSAP review to ensure that there would not be any unintended consequences, specifically the requirement to now recognize a liability for an item that had not previously been recognized as such. He stated that in response, NAIC staff are of the opinion that combined with the concept of conservatism as detailed in the Preamble, an item meeting the definition of a liability, either under the current or new proposed definition, should likely be reported as a liability for statutory accounting. If there are specific circumstances or instruments that do not warrant recognition as a liability, those should be identified by industry with a request for an individual evaluation by the Working Group. To permit time for a further assessment by industry before considering adoption of the exposed revisions, Mr. Pinegar stated that NAIC staff would recommend a re-exposure of the proposed liability revisions and its related issue paper.

Mr. Bruggeman stated that as statutory accounting integrates these terms at the standard level, they have a higher authority level than U.S. GAAP, as they only reference the terms in concept statements; thus, there is a differentiation in the accounting hierarchy. In response to interested parties requesting an SSAP-by-SSAP review, he said he would be supportive of a re-exposure of the liability portion of the agenda item so interested parties

can present specific instruments or items of consideration. Michael M. Monahan (American Council of Life Insurers—ACLI) stated that interested parties support the re-exposure so they can review for specific instances that may warrant the Working Group’s review.

Mr. Hudson made a motion, seconded by Ms. Walker, to adopt the exposed SAP clarifications to the Preamble and the updated definition of an asset in SSAP No. 4 and its related issue paper, *Statutory Issue Paper No. 166—Updates to the Definition of an Asset* (Attachments One-L and One-M). The motion passed unanimously.

In a separate action, Mr. Hudson made a motion, seconded by Ms. Walker, to re-expose the proposed definition change of a liability in SSAP No. 5R and its related issue paper. The motion passed unanimously.

5. Considered Maintenance Agenda – Pending Listing – Exposures

Mr. Hudson made a motion, seconded by Ms. Malm, to move agenda items 2022-09 through 2022-13 to the active listing and expose all items for a public comment period ending Oct. 7. The motion passed unanimously.

a. Agenda Item 2022-09

Mr. Bruggeman directed the Working Group to agenda item 2022-09: ASU 2022-01: Fair Value Hedging – Portfolio Layer Method. Ms. Gann stated that ASU 2017-12 incorporated a “last-of-layer” method to make portfolio fair value hedge accounting more accessible for specific assets. Under a last-of-layer approach, for a closed portfolio of prepayable financial assets or one or more beneficial interests secured by a portfolio of payable financial instruments, entities were allowed to hedge a stated amount of the assets or assets in a closed portfolio that is anticipated to be outstanding for the designated hedge period. However, since the issuance of ASU 2017-12, the FASB has issued another update in *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method* to expand the last-of-layer approach for additional instruments. Ms. Gann stated that this agenda item proposed new SAP concepts to incorporate portfolio layer method hedging for statutory accounting. She stated that this guidance would be limited to recognized assets, which is consistent with U.S. GAAP. In addition, this agenda item would permit partial term hedging, a method that permits entities to enter fair value hedges of interest rate risk for only a portion of the term of the hedged financial instrument. She stated that while this is proposed to be allowed for statutory accounting, it is proposed to be limited to recognized assets. While U.S. GAAP permit this approach for both assets and liabilities, if permitted for statutory accounting, partial term hedges for liabilities may reduce the carrying cost of the liability when in fact the liability has not been extinguished. Ms. Gann stated that industry suggested the difference to U.S. GAAP to permit the partial term hedging approach to be incorporated for statutory accounting for recognized assets. Subsequent consideration to expand the partial term approach to liabilities could occur as part of a broader topic to review how basis adjustments are reflected under the existing derivative guidance. Ms. Gann stated that the proposed revisions would introduce additional new SAP concepts into SSAP No. 86, and if adopted, they would be integrated into the issue paper being drafted to encompass all revisions to SSAP No. 86.

b. Agenda Item 2022-10

Mr. Bruggeman directed the Working Group to agenda item 2022-10: ASU 2022-02: Troubled Debt Restructuring and Vintage Disclosures. Ms. Gann stated that this agenda item reviews *ASU 2022-02: Troubled Debt Restructurings and Vintage Disclosures*, which effectively eliminated prior U.S. GAAP guidance for troubled debt restructurings in support of using an allowance for credit losses pursuant to *ASU 2016-13: Measurement of Credit Losses on Financial Instruments*. She stated that this agenda item proposes rejecting ASU 2022-03 in *SSAP No. 36—Troubled Debt Restructuring* to maintain the current guidance. She stated that although the guidance is retained, the exposure includes revisions in SSAP No. 36 to detail U.S. GAAP versus SAP differences for the

accounting of troubled debt restructurings for creditors, and the SSAP would no longer converge with authoritative U.S. GAAP guidance.

c. Agenda Item 2022-11

Mr. Bruggeman directed the Working Group to agenda item 2022-11: Collateral for Loans. Robin Marcotte (NAIC) stated that this agenda item proposes revisions to *SSAP No. 21R—Other Admitted Assets* to clarify that the invested assets pledged as collateral for admitted collateral loans must qualify as admitted assets. She noted that the proposed revisions would address consistency differences between *SSAP No. 20—Nonadmitted Assets* and *SSAP No. 21R*.

d. Agenda Item 2022-12

Mr. Bruggeman directed the Working Group to agenda item 2022-12: Review of INT 03-02: Modification to an Existing Intercompany Pooling Arrangement. Ms. Marcotte stated that this agenda item proposes to nullify *INT 03-02: Modification to an Existing Intercompany Pooling Arrangement*, as it contains historical guidance that conflicts with *SSAP No. 25*. She stated that INT 03-02 directs certain transfers, including economic transfers, between affiliates to be recorded at book value, rather than fair value, as is directed in *SSAP No. 25*. Mr. Bruggeman stated that INTs are typically issued for specific situations, and while this INT was issued in 2003, the rationale for having this accounting direction has likely lapsed, and review of INT 03-02 is warranted.

e. Agenda Item 2022-13

Mr. Bruggeman directed the Working Group to agenda item 2022-13: Related Parties – Footnote Updates. Mr. Stultz stated that this agenda item was drafted in response to comments received on agenda item 2021-21: Related Party Reporting, which was adopted by the Working Group on May 24. During that meeting, interested parties suggested extending the exemption to foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction, which are within the scope of *SSAP No. 30R—Unaffiliated Common Stock*. Mr. Stultz stated that in response to comments received, the Working Group directed NAIC staff to draft an agenda item to propose footnote revisions to *SSAP No. 25* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*, which would make these items consistent with *SSAP No. 30R*.

6. Considered Maintenance Agenda – Active Listing

a. Agenda Item 2021-25

Mr. Bruggeman directed the Working Group to agenda item 2021-25: Leasehold Improvements After Lease Termination. Mr. Stultz stated that this agenda item proposed SAP clarifications to *SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements* and *SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities* to address questions about the treatment of leasehold improvements in situations where a leased property is purchased by the lessee during the lease term. He stated that the revisions propose to clarify that in any scenario in which a lease terminates early, all remaining leasehold improvements shall be immediately expensed, even if the lessee purchases the leased property. This proposed guidance was initially exposed at the 2021 Fall National Meeting, from which interested parties provided comments requesting consideration of an exception in specific circumstances. Mr. Stultz stated that in response, the Working Group directed staff to further work with interested parties on this guidance. He stated that NAIC staff have updated the proposed language to allow companies that provide direct health care to exclude situations where the real estate lease agreement has a purchase option that contains language that allows leasehold improvements necessary for

the functionality of specific health care delivery assets to be excluded from the purchase price of the real estate. In these limited scenarios, after purchase, the leasehold improvements necessary for the functionality of health care delivery assets would follow existing guidance for health care delivery assets in SSAP No. 73.

Mr. Hudson made a motion, seconded by Ms. Travis, to expose agenda item 2021-25 for a public comment period ending Oct. 7. The motion passed unanimously.

b. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: Proposed Bond Definition. Ms. Gann stated that this agenda item reflects efforts between industry and state insurance regulators to principally define a bond for reporting on Schedule D-1. She stated that this agenda contains several items for exposure, summarized as follows:

- An updated principles-based bond definition, which has been revised to reflect limited changes as directed by the Working Group during its July 18 meeting.
- An updated issue paper, which reflects the overall discussion from the Working Group's July 18 meeting, as well as noted edits to the guidance. For example, the draft issue paper includes discussion on feeder funds and how the assessment of these funds, for reporting purposes, should focus on the substance of the underlying investments in determining bond classification.
- Proposed revisions to SSAP No. 26R—*Bonds* and SSAP No. 43R to incorporate the principles-based bond definition in authoritative accounting guidance. SSAP No. 26R is proposed to contain the principal bond definition; however, SSAP No. 43R contains several proposed revisions, including a name change to "Asset Backed Securities."

Ms. Gann stated that this agenda item also has a current exposure of proposed reporting changes to Schedule D-1 and related instruction revisions. She stated that although the current items reflect the bulk of the anticipated edits for the principles-based bond definition, additional revisions will be necessary, specifically to restrict ABS from the scope of SSAP No. 2R—*Cash, Cash Equivalents, Drafts and Short-Term Investments* and other various references in SSAP No. 103R—*Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. Mr. Bruggeman stated that NAIC staff have spent considerable time evaluating the proposed modifications, including the option to combine SSAP No. 26R and SSAP No. 43R into one SSAP. However, due to distinct differences, maintaining two separate SSAPs appears to be the best approach. In addition, due to the extent of the revisions, and the blanks deadlines, the earliest these revisions are likely to be in effect is Jan. 1, 2025; although, the potential still exists for Jan. 1, 2024. Mr. Bruggeman reminded the Working Group that these revisions are focused on accounting and reporting changes, and elements pertaining to NAIC designations or risk-based capital (RBC) charges would be addressed by the respective groups. In a response to an inquiry from Mr. Monahan, Mr. Bruggeman stated that the comment deadline is Oct. 7; however, due to the extent of the revisions, an extension could be requested, if needed.

Ms. Weaver made a motion, seconded by Mr. Clark, to expose agenda item 2019-21, which includes the updated principle-based bond definition, updated issue paper, and proposed revisions to SSAP No. 26R and SSAP No. 43R for a public comment period ending Oct. 7. The motion passed unanimously.

7. Discussed Other Matters

a. Review of U.S. GAAP Exposures

Ms. Marcotte stated that there were two current FASB exposures; however, NAIC staff recommend reviewing the final ASUs under the SAP Maintenance Process, as detailed in *Appendix F—Policy Statements*. Ms. Gann stated that NAIC staff are monitoring the Inflation Reduction Act of 2022 for any potential impact to insurers, specifically its impact on deferred tax assets/liabilities and subsequent events for financial reporting purposes. Mr. Monahan stated that industry is also monitoring the Inflation Reduction Act of 2022 closely, as it will likely affect several insurers. Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) stated that NAMIC is attempting, either through legislation or an interpretation from the U.S. Department of the Treasury (Treasury Department), that the financial statements of record, which are used to determine a minimum tax per the act, should be statutory statements, rather than U.S. GAAP financial statements. He stated that if changes are needed in *SSAP No. 101—Income Taxes* because of this legislation, NAMIC would request an effective date to occur no earlier than the fourth quarter of 2023.

b. Update for Life Actuarial (A) Task Force Coordination

Ms. Marcotte stated that the Working Group was provided with a listing of the amendments made to the *Valuation Manual* by the Life Actuarial (A) Task Force since the 2021 Summer National Meeting. She stated that there were not any items identified that require Working Group action (Attachment One-N).

c. Received a Referral from the Macroprudential (E) Working Group

Mr. Bruggeman stated that the Working Group has received a referral from the Macroprudential (E) Working Group (Attachment One-O), which includes its work plan (see *NAIC Proceedings – Summer 2022, Financial Stability (E) Task Force, Attachment One-B*). He stated that the referral has several items, some of which are in progress.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

[https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member meetings/e cmte/apptf/2022summernm/1_sapwg/minutes/sapwg minutes 8.10.22 - after tpr.docx](https://naiconline.sharepoint.com/sites/naicsupportstaffhub/member%20meetings/e%20cmte/apptf/2022summernm/1_sapwg/minutes/sapwg%20minutes%208.10.22%20-%20after%20tpr.docx)

Draft: 7/27/22

Statutory Accounting Principles (E) Working Group
Virtual Meeting
July 18, 2022

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met July 18, 2022. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears and Kevin Clark, Co-Vice Chairs (IA); Sheila Travis (AL); Kim Hudson and Susan Bernard (CA); William Arfanis and Michael Estabrook (CT); Tom Hudson and Rylynn Brown (DE); Cindy Andersen and Eric Moser (IL); Melissa Gibson (LA); Judy Weaver (MI); Doug Bartlett and Pat Gosselin (NH); Bob Kasinow (NY); Melissa Greiner (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm and Elena Vetrina (WI).

1. Considered Maintenance Agenda – Active Listing

The Working Group held a public hearing to review comments (Attachment One-A1) on the bond definition and issue paper exposed March 2.

a. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: Proposed Bond Definition. Julie Gann (NAIC) provided an overview of the project stating that an updated principles-based bond definition and a draft issue paper were exposed March 2 for a public comment period ending May 6. She stated that comments were received from interested parties as well as the industry named Lease-Backed Securities Working Group. She identified that the materials provide a review of comments received, with an NAIC staff recommended response to each comment. Ms. Gann summarized each item as follows:

- Interested parties proposed to remove the footnote that details U.S. Treasury Inflation-Indexed Securities are in scope of *Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds*. The footnote was originally proposed to clarify that TIPS shall be considered bonds for statutory accounting reporting. Ms. Gann stated that these investments have returns that may vary based on an outside variable (inflation), and rather than delete the footnote, she would recommend revising the footnote to detail why these investments should remain in scope of SSAP No. 26R, despite them having the possibility of varied returns. She stated proposed revisions identify that these investments possess plain vanilla inflation adjustment mechanisms and are not intended to be captured within the provisions that restrict bond classification to securities that have principal and interest payments that vary based on an underlying reference variable. In addition, Ms. Gann noted that the bond definition referred to “equity-interests” for situations in which varying contractual principal or interest had to be assessed. She stated that this provision is not intended to be limited to certain types of debt investments, and the principle concept should be applied broadly. She noted that the recommendation is to revise the guidance to reflect “referenced variables.” Michael Reis (Northwestern Mutual), representing interested parties stated that interested parties are supportive of U.S. Treasury Inflation-indexed securities remaining in scope of SSAP No. 26R; however, they have not had an opportunity to review the proposed guidance in detail, so they will submit further comments in conjunction with the updated exposure, which is anticipated to occur at the Summer National Meeting.
- Interested parties recommended changes to the proposed bond definition to include reference that Securities Valuation Office (SVO)-identified credit tenant loans (CTLs) are bonds. Ms. Gann stated that SVO-identified CTLs are, by definition, not bonds; however, they are proposed to be specifically named in

scope of SSAP No. 26R and remain eligible for bond reporting. She stated that SVO-identified CTLs are mortgage loans, not securities, and are therefore initially captured in *SSAP No. 37—Mortgage Loans*. However, if the mortgage loan meets certain criteria after review by the SVO, the investment is captured in scope of SSAP No. 26R. Ms. Gann stated that separating items that qualify as bonds within the bond definition and named inclusions for bond reporting, such as SVO-identified exchange-traded funds (ETFs) or CTLs, is purposeful to prevent inadvertent inference to other investments. Mr. Bruggeman stated that this distinction was previously addressed, as SVO-identified CTLs are not securities, they are mortgage loans, and while the bond definition requires investments in scope to be securities, this named inclusion to SSAP No. 26R will ensure that qualifying non-security CTLs remain in scope. Mr. Reis, representing interested parties, stated that the inclusion of SVO-identified CTLs by name meets the needs of industry, and they do not recommend additional changes at this time. John Garrison (Lease-Backed Securities Working Group) stated agreement with Mr. Reis and inquired for clarification that SVO-identified CTLs, as well as lease-backed securities that meet the safe harbor rule, which allows up to a 5% balloon payment, qualify for reporting in scope of SSAP No. 26R as an issuer obligation. Mr. Clark stated that the nuance being discussed is that the principles-based bond definition applies to securities. As it is currently written, a lease-backed security where the full repayment of principal is supported by a lease to a single operating entity, which allows up to a 5% balloon payment, would qualify as an issuer obligation under the bond definition. Lease-backed securities that do not meet the safe harbor provision are required to be assessed as asset-backed securities (ABS) and only reported as bonds if they qualify. These bond definition components do not apply to SVO-identified CTLs, which are mortgage loans, as these items are reported as bonds only after verification from the SVO that set criteria has been obtained.

- Interested parties proposed to clarify that the assessment of “all returns” in excess of principal repayments are required to be considered interest should only apply to equity-backed ABS. Ms. Gann stated that the inclusion of excess returns as interest should not be limited, as restricting the analysis based on naming convention or broad security classifications would likely result in the misapplication of the guidance. Accordingly, the interested parties’ proposed change to restrict consideration of “all returns” to equity-backed ABS was not recommended, but revisions were proposed to clarify that the restrictions for variations in principal or interest payments applies to any debt investment in scope and can be in response to any underlying reference variable.
- Interested parties’ proposed revisions to clarify that a first loss position, and not just issued tranches, can be considered when assessing substantive credit enhancements. Ms. Gann stated that the initial read of the interested parties’ proposed edits could be interpreted to impact the residual guidance previously adopted, which requires residual tranches to be reported on Schedule BA—Other Long-Term Invested Assets. However, NAIC staff agree that whether a loss position is issued as a separate tranche or retained by the issuer does not impact the assessment of whether the loss position provides substantive credit enhancement to debt tranche holders. Ms. Gann stated that the interested parties’ revisions were reflected, with modifications to clarify that debt tranches are required to have contractual principal and interest payments to be considered for bond reporting. Mr. Reis, on behalf of interested parties, stated that NAIC staff’s proposed modification encompasses the spirit of their request; however, they will review in detail in conjunction with the upcoming exposure. Mr. Bruggeman stated that the proposed modification clarifies that the first issued debt tranche may not necessarily represent the first loss tranche, but there must be substantive credit enhancement to ensure that any issued tranche is eligible for bond reporting.
- Interested parties recommended guidance to address feeder funds, specifically a clarification that explicitly states that reporting entities should determine the source and terms of collateral in determining

whether an investment represents a creditor relationship and qualifies for bond reporting. A feeder fund is an arrangement where debt is issued from one fund (feeder fund), but that fund has an equity interest in another fund (secondary fund) that holds the underlying collateral. If the secondary fund holds qualifying debt instruments generating bond cash flows that are passed through to the holder, then the investment held from the feeder fund could in-substance be considered debt. However, if the underlying collateral in the secondary fund is equity interests, the reporting entity would have to: 1) consider the substance of the equity interests in the secondary fund in supporting the debt from the feeder fund; 2) assess whether the creditor relationship criteria is met; and 3) conclude that the investment does not reflect an in-substance equity relationship. Ms. Gann recommended that the issue paper guidance be expanded to address feeder funds. Mr. Bruggeman stated that the basic structure of feeder funds is described in the interested parties' comments, and the revisions proposed by NAIC staff capture the particularities of these structures. Mr. Clark stated that in response to comments received by industry, their proposed edits went beyond the intent and outcomes of the small group discussions and could be read to imply that the fund intermediary could be ignored as long as the ultimate collateral were fixed income. As a result, revisions to the industry proposed language are proposed by staff to make it clear that the investor should consider the terms of the structure to ensure that the passthrough of underlying cash flows is supported. If the insertion of a feeder fund would alter the amount or timing of cashflows, that would need to be assessed in determining bond classification. Mr. Reis stated that the proposed edits appear to agree with industry requests; however, they will review in detail during the next exposure.

- Interested parties recommended that Appendix I of the bond definition, which has been reduced to two examples that do not reflect in-substance creditor relationships, be codified within the guidance instead of in an appendix. The Working Group directed NAIC staff to work with interested parties on the best approach to integrate the examples into the body of the guidance.
- Interested parties provided comments on the exposed guidance to restrict the reporting of ABS as short-term or cash equivalent investments. Ms. Gann stated support for the reporting of all ABS on the bond schedule to ensure that an avenue is not created that allows investments to bypass the bond assessments and still be reported as a short-term or cash equivalent bond. She stated that short-term and cash equivalent investments receive favorable treatment, as there is a minimal risk-based capital (RBC) factor and there is no need to obtain an NAIC designation or credit rating provider (CRP) rating. She stated that this favorable reporting is in line with a concept that there is insignificant risk for short-term and cash equivalent investments due to the time acquired in proximity to the maturity date. However, as ABS could have elements of principal repayment contingent on sale or refinancing at maturity, or other performance factors, these securities should not be permitted to be reported as short-term or cash equivalent investments regardless of how close the maturity date is after the reporting entity acquires the investment. She stated that there is a perception that short-term ABS are not prevalent, and the only example provided so far is "Asset-Backed Commercial Paper" (ABCP). She informed that although these designs have "commercial paper" in their name, it would be erroneous to assume that these ABS resemble "commercial paper" investments. ABCP structures are very different and represent a short-term vehicle issued by a bank or other financial institution that is backed by the company's physical assets and issued on a discount or interest-bearing basis. She said that an ABCP can be created from any type of asset-backed security, including subprime mortgages or other high-risk performing assets. She stated that it is recommended that all ABS be excluded from the short-term or cash equivalent schedules. This will require that all ABS be assessed under the bond principles and reported, if qualifying, on the bond schedule in the appropriate ABS category.

Ms. Gann stated that the industry Lease-Backed Securities Working Group letter was consistent with its July 15, 2021, comment letter, and the ultimate request is to allow “simple secured loans” issued in security form to be in scope of SSAP No. 26R as issuer credit obligations. She stated that this would likely permit all such designs, regardless of structure, contingent factors, or residual/balloon payments, to be afforded bond treatment without further analysis. She stated that if permitted, investments would likely be in scope of SSAP No. 26R that may not be in line with the goals of the principles-based bond definition. In addition, the comment letter stated a perceived inequity between municipal revenue bonds and non-municipal revenue (project finance) bonds issued by operating entities and other lease-backed structures.

Ms. Gann stated that despite the concern noted by the industry Lease-Backed Securities Working Group, NAIC staff did not believe revisions were required due to the differentiation of these investments already detailed in the draft issue paper. However, if the Working Group agreed that project finance bonds issued by operating entities and lease-backed securities with balloon payments are too similar to warrant classification differences between issuer credit obligations and ABS, then NAIC staff would recommend that the Working Group identify that project finance bonds are not considered to be issued by operating entities for bond reporting purposes. If a structure is not considered to be issued by an operating entity, then the investment would be required to follow the guidance for an ABS classification, including assessments for substantive credit enhancement and meaningful cash flows.

Mr. Clark stated that the distinction between an issuer obligation and ABS is that issuer obligations have repayment that is supported by the creditworthiness of an operating entity. However, for lease-backed securities, the ultimate repayment is generally reliant upon other avenues – generally liquidation or refinancing of the underlying collateral. Mr. Clark stated that those that are not fully supported by an operating entity would be required to review the ABS criteria. However, in terms of project finance, while the investment may appear similar to an ABS, many times, the debt is issued from a standalone operating entity. He stated that the guidance differentiates between the two types of investments; however, if the distinction is too difficult to apply, then all project finance would need to be evaluated using the ABS criteria.

Mr. Garrison stated that the Lease-Backed Securities Working Group’s comments intend to request that simple, structured loans be considered issuer credit obligations. He stated that the repayment of these investments is primarily dependent upon the contractual obligation of a single rated payer, which closely mimics the proposed guidance in the principle-based bond definition. These investments may either be unsecured or secured by a claim on an asset. If these investments are issued in the form of a security, they do not represent structured securities, as they reflect debt instruments that pass through unaltered contractual cashflows to investors. Mr. Garrison stated that even if issued from a trust, the asset owned is the debt instrument, not the underlying collateral. In essence, the debt is a form of security that is not altered by the presence or the attachment to underlying collateral. Additionally, these investments do not create a structured security or transfer equity risk into debt risk. Mr. Garrison stated that classifying some unstructured investments as ABS because of a claim on an asset will cause confusion in the market. He stated that structured investments mean the underlying cashflow of an investment has been structured so that cashflows have been redistributed and that credit has been altered by creating priority and subordinate classes. These investments are primarily supported by the credit worthiness of an operating entity and do not reflect typical structured finance investments. Mr. Garrison stated that certain investments, with similar characteristics, appear to have different treatment and recommend that all credit obligations, which rely primarily on an obligation of an operating entity, be held to the same standard. He stated that as an example, lease-backed securities are typically issued by a special purpose entity and are based on the cashflows from nonfinancial assets backed by a lease or other contract with an operator. If these contractual payments, which are secured by a lien on the asset, do not at least cover 100% of the interest and 95% of the contractual principal payment, they are not considered issuer credit obligations; however, no other investments are subject to these requirements. Mr. Garrison stated that all similar asset types (project finance, equipment

trust certificates, etc.) should all be treated similarly. He clarified that the comment letter was intended to be limited to simple unstructured debt, which relies primarily on a contractual repayment obligation of a single credit rated obligor and was not intended to open the door to other investments falling into scope of SSAP No. 26R. These investments are what many lenders consider to be optimal debt structures, as they offer the most protections to lenders. However, if state insurance regulators wish to have these investments subject to the ABS standard, then they would request a clarification that the ABS standard applies to both ABS and simple secured loans. In a response to an inquiry from Mr. Bruggeman, Mr. Garrison stated that project finance should be treated similar to other assets with comparable risks, and he added that rating agencies state that revenue bonds are also not to be considered debt of the municipality, which is a further example of disparate treatment of similar asset types.

Mr. Reis, representing interested parties, stated that the exposed bond guidance represents the prior discussions with the small group involving interested parties; however, Mr. Garrison's discussion represents asset classification between issuer obligations and ABS, not the determination of what a bond. He stated that interested parties support the previously exposed language, as they believe it best represents assets that fall along a continuum, ones that do not cleanly fit in one particular category.

Mr. Clark stated that Mr. Garrison's comments that categorization as ABS occurs because a loan is secured by assets is not a correct statement. He stated that the reason many of these investments are considered ABS is because recourse of the debt instrument to the operating entity does not provide full repayment of the debt. Even if the operating entity fully performs on its payment obligations, there would still be remaining principal outstanding that relies on the underlying collateral to repay. This is why these investments require review under the ABS criteria because repayment of the debt generally requires reliance on the underlying collateral. Mr. Clark stated that the other types of issuer obligations like corporate bonds or treasuries are issued directly from with full recourse to the issuing operating entities. Lease-backed investments are issued by special purpose vehicles (SPVs), with the repayment obligation being shifted to an operating entity through a lease contract. However, if repayment is not fully shifted to an operating entity through the lease, they should be precluded from being considered issuer credit obligations. Mr. Clark stated that it is his view that it makes perfect sense for this to be where the distinguishing line is drawn between issuer obligations and ABS. Ms. Gann stated that NAIC staff recommend retaining the guidance as previously exposed and not direct that project finance bonds that are issued by operating entities be required to follow the ABS criteria.

Ms. Gann stated that interested parties also provided comments on the classification of non-bond investments to Schedule BA and the appropriate measurement method for those investments. She stated that NAIC staff request direction from the Working Group to develop statutory accounting revisions to incorporate principles-based guidance for the measurement and admittance of different types of investments. Additionally, she stated that interested parties had proposed to capture New Markets Tax Credit (NMTC) investments in scope of the bond project. She recommended that NMTCs be reviewed in a sperate agenda item. Mr. Bruggeman stated that he views the NMTCs similarly to federal Low-Income Housing Tax Credits (LIHTCs), and a separate discussion for these investments is most appropriate. Mr. Reis stated that interested parties support drafting guidance for investments that move to Schedule BA and support a NMTC agenda item to clarify the accounting and reporting requirements.

Mr. Clark made a motion, seconded by Mr. Bartlett, to direct NAIC staff to: 1) draft revisions as discussed during the meeting to the principles-based bond definition and issue paper, where applicable, regarding TIPS and varying contractual principal and interest payments, clarifying guidance for first loss positions in providing substantive credit enhancement; and 2) add guidance for feeder funds. It is anticipated that a revised packet, which includes the updated bond definition, issue paper, and proposed revisions to incorporate the bond concepts in SSAP No. 26R and *SSAP No. 43R—Loan-Backed and Structured Securities* (to be renamed "Asset Backed Securities") will be presented for exposure at the Summer National Meeting. Additionally, the motion included direction for NAIC

staff to: 1) draft measurement and admittance guidance for investments that will move from the bond schedule to Schedule BA; and 2) consider NMTCs in a separate agenda item. The motion passed unanimously.

2. Considered Maintenance Agenda – Pending Listing – Exposures

a. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: Bond Proposal Reporting Revisions. Ms. Gann stated that a key element of the principles-based bond project is to improve transparency and granularity to the state insurance regulators regarding investment types and investment structure. This aspect of this agenda item includes two documents for exposure summarized as follows:

- **Proposed Reporting Lines** – This document proposes annual statement general instructions (reporting line descriptions) for suggested reporting lines to capture issuer credit obligations and ABS on Schedule D-1. The general classifications that currently exist are proposed to be deleted, and new granular reporting lines are suggested. This document shows tracked changes to the current “Annual Statement General Instructions”; however, the document only includes revisions related to Schedule D-1. It is anticipated that other schedules are likely to be impacted by these new reporting lines, and those revisions will be drafted after considering the comments from this initial exposure.
- **Schedule D-1 Annual Statement Instructions** – This document details the overall approach to add a new bond reporting schedule to expand Schedule D-1 into two components. Schedule D-1-1 would reflect issuer credit obligations (items proposed to be captured in scope of SSAP No. 26R) and Schedule D-1-2 would reflect ABS (items proposed to be captured in scope of SSAP No. 43R). This separation of schedules is supported to enable different reporting columns based on the type of security. Columns that are proposed to be specific to issuer obligations and ABS are noted within the document. In addition to creating new columns, this document also details revisions to existing columns and instructions.

Ms. Gann stated that at this time, NAIC staff are not recommending a referral to the Blanks (E) Working Group, as the intent of this exposure is to gather initial feedback regarding the proposed direction, specifically adding a new schedule specific to ABS investments. Mr. Bruggeman stated that separate schedules for issuer credit obligations and ABS was the result of ongoing discussions with interested parties regarding the most efficient way to capture information elements specific to each investment type. Tip Tipton (Thrivent) stated that interested parties have been working behind the scenes to understand the goals of state insurance regulators and the changes proposed. He stated that interested parties look forward to collaborating with state insurance regulators and NAIC staff in the ultimate adoption of this proposal.

Mr. Hudson made a motion, seconded by Mr. Clark, to move agenda item 2019-21 to the active listing and expose it for a public comment period ending Oct. 7. Also included in the motion was direction to NAIC staff to notify all working groups and task forces of use of Schedule D-1 for any analysis of this exposure, so that any group affected will have an opportunity to offer input regarding the proposed revisions. The motion passed unanimously.

3. Discussed Other Matters

a. Memorandum of Support from the Financial Condition (E) Committee

Ms. Gann stated that Financial Condition (E) Committee distributed a memorandum of support (Attachment One-A2) for several current, interrelated initiatives focused on asset risk or spread risk within the task forces and

working groups of the Committee. She stated that the clarification of investments permitted to be reported as long-term bonds, with improved transparent accounting and RBC reporting, was specifically identified. Mr. Bruggeman identified that the memorandum would be noted as received by the Working Group.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

RE: Principles-Based Bond Definition and Draft Issue Paper – Comments Due May 6, 2022

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposed Principles-Based Bond Definition (the Proposed Bond Definition) and Draft Issue Paper that were released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group).

Interested parties believe this effort is resulting in a workable and high-quality bond definition and we look forward to our continued collaborative effort as the project proceeds toward finalization. Interested parties also would like to commend NAIC staff for a well thought out and documented Draft Issue Paper.

The interested parties' comments are organized in two sections – 1) Comments on the Proposed Bond Definition and Draft Issue Paper and 2) Comments on the Specific Questions Posed in the Draft Issue Paper.

Comments on the Proposed Bond Definition and Draft Issue Paper

- 1) Interested parties suggest a slight modification to paragraph 2a, on page 2, of the Proposed Bond Definition. While interested parties are supportive of proposed edits to include U.S. Treasury Inflation-Indexed Securities in paragraph 2a, we do not believe the following subscript is appropriate or warranted.

The inclusion of U.S. Treasury Inflation-Indexed Securities identifies these securities as an explicit exception to the principles-based bond definition that prohibits securities from being reported on Schedule D-1 that have variable principal or interest due to the underlying equity appreciation or depreciation, or an equity-based derivative.

Interested parties believe U.S. Treasury Inflation-Indexed Securities are more accurately adjusted for inflation rather than adjusted for “underlying equity appreciation or depreciation, or an equity-based derivative.”

- 2) Interested parties believe a small change is need on Page 2, paragraph 2g of the Proposed Bond Definition, to be consistent with both regulator intent, and current practice, related to loan form CTLs, that would otherwise be reported on Schedule B, Mortgage Loans, under SSAP No. 37. Paragraph 2g, as written, is only inclusive of security form CTLs which excludes certain loan form CTLs currently permitted to be reported on Schedule D in guidance adopted by the NAIC during 2021. Specifically, interested parties propose the following changes (underlined) to paragraph 2g:

Investments in the form of securities for which repayment is fully supported by an underlying contractual obligation of a single operating entity (e.g., Credit Tenant Loans (CTLs), Equipment Trust Certificates (ETCs), other lease backed securities, Funding Agreement Backed Notes (FABNs), etc.). For purposes of applying this principle-based concept, repayment is fully supported by the underlying operating entity obligation if it provides cash flows for the repayment of all interest and at least 95% of the principal of the security. In addition, mortgage loans in scope of SSAP No. 37 that qualify under a SVO structural assessment are in scope of this statement as CTLs.

- 3) Interested parties note there is new language included within paragraph 3b, on page 3, of the Proposed Bond Definition. Interested parties agree with what we believe to be the intent (i.e., close a potential “loophole” related to equity backed securities). We therefore propose the following technical edit (underlined) to ensure it is not potentially interpreted more broadly:

For clarification purposes, all returns from an equity backed ABS in excess of principal repayment are required to be considered as interest. Therefore, investments with “stated” interest and then “additional returns” to which the holder of the debt instrument is entitled are collectively considered as interest and shall be assessed together in determining whether the investment has variable principal or interest due to underlying equity interests.

- 4) Interested parties propose the following changes (underlined) to the Substantive Credit Enhancement Language included within the glossary of the Proposed Bond Definition. The proposed changes are meant to clarify that there could be a first loss tranche, owned by an insurer, where there is a substantial credit enhancement that still qualifies the first loss tranche for Schedule D reporting (e.g., a Single Asset Single Borrower (SASB) CMBS security with substantial overcollateralization). For example, a SASB could be collateralized

by a single real estate asset (e.g., \$100 collateral value) where the loan being collateralized is only a fraction of the collateral value (e.g., \$60). In such an instance, the first loss tranche security may be owned by an insurance company, but the first loss position is borne by the sponsor (i.e., the first \$40 of losses). Interested parties believe the below proposed edits will help provide clarity for such a security, or other similar securities, and is consistent with the spirit of the proposed principles included therein.

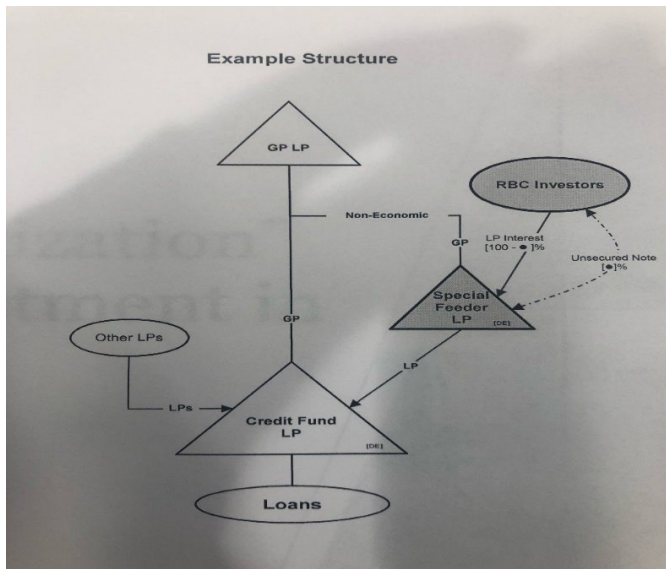

The first loss tranche position ~~(or tranches if the first tranche is not itself substantive)~~ may be issued as part of the securitization in the form of debt or equity interest, or it may be retained by the sponsor and not issued as part of the securitization. If the first loss tranche position ~~(or a more senior position(s), if the first loss position(s) lack a substantive credit enhancement)~~ is issued as part of the securitization, and does not have a substantive credit enhancement and is held by a reporting entity, the accounting should follow the guidance applicable to the type of instrument (i.e., debt vs. equity); however, regardless of the type of instrument, it does not qualify as a Schedule D bond and should be reported on Schedule BA.

Additionally, interested parties question whether the accounting (highlighted above) for Schedule BA Assets should be codified within the Substantive Criteria of the Bond Definition. In principle it doesn't seem appropriate there and it may also conflict with, or add confusion around, any accounting guidance determined to be appropriate for such assets (see interested party comments in section 2 of this letter).

- 5) Interested parties note that “feeder funds” were a focal point of discussions during development of the Proposed Bond Definition. In large part, this was in the context of the “stapling” concern, which was de-escalated, as residual tranches have been moved to Schedule BA with the desire of regulators to assess appropriate capital charges. The below is a representative structure of a feeder fund, structured for various legal reasons, which we understand is not viewed as problematic. To ensure the Draft Issue Paper is wholly inclusive of discussions held on feeder funds, and further clarify the principle-based approach, we suggest the following language, and example structure, be included in the Draft Issue Paper. An appropriate spot might be right after paragraph 26.

The assessment of equity backed securities should be looked at, not only in form, but in substance. For example, a feeder fund arrangement where the debt is issued from the feeder fund, that has an equity interest in another fund that holds debt instruments, should not be viewed as holding one equity interest (i.e., in this case a pass-through entity) if the substance is the debt is backed by debt instruments. Similarly, if the “credit” fund were an “equity” fund, backed by equity interests, the debt of the feeder fund would have to meet the requirements of paragraph 26 while looking at the substance of equity interests supporting the debt. Of course, such an arrangement would have to meet the other

relevant parts of the standard (e.g., have a substantive credit enhancement, etc.). Substance over form should be the determining factor in these and similar situations.

- 6) Interested parties note that examples 1 & 2 of Appendix I are less explicit, as they have evolved over time, than the examples in Appendix II. For example, example 2 has many variables and really doesn't address a specific debt instrument, rather it lays out principles. Using a specific security in the example would not be particularly helpful as there are too many variables and any one example would therefore be of limited use. Interested parties therefore suggest the standard might have better flow if examples 1 & 2 become codified as part of the standard itself, with potentially minor edits for purposes of flow only. Instead of referencing Appendix 1, in paragraph 1, it might make sense to codify these examples at the end of paragraph 1. The end of paragraph 3 would potentially be another area to embed these principles within the standard itself. If regulators agree that there is value in this suggestion, interested parties would be more than willing to work with regulators and NAIC staff in that regards.
- 7) Interested parties note that paragraph 67 of the Draft Issue Paper includes a concept that is not in the Proposed Bond Definition, and which interested parties do not recall being discussed in any meaningful way. Therefore, interested parties question the appropriateness of its inclusion in the Draft Issue Paper. The stated concern appears to be "to allow for full assessment of the extent of ABS by regulators." The proposed solution is to remove all such investments from within the Scope of SSAP No. 2R, *Cash, Cash Equivalents, Drafts and Short-Term Investments*. Interested parties believe a less disruptive solution would be to just disclose, or have a separate reporting line, of any ABS short-term investments (e.g., ABS Commercial Paper) on the Short-Term investment schedules. If there is a broader concern that regulators feel needs to be addressed, interested parties believe that should be a separate

project, as it appears outside of the Proposed Bond Definition Project, and should be addressed separately and therefore not included in the Draft Issue Paper for the Proposed Bond Definition.

Comments on the Specific Questions Posed in the Draft Issue Paper

Paragraph 105 of the Draft Issue Paper notes that it is anticipated that guidance will be drafted to recommend the use of Schedule BA for most investments that do not qualify as bonds under the Proposed Bond Definition, with comments requested in three areas. Interested parties' comments are immediately following each of the three questions asked and enumerated below:

- 1) Are there investments that will not qualify as bonds that should be considered for reporting on a different schedule other than Schedule BA? Comments on key investment characteristics that would appropriately distinguish these investments are requested.

Interested parties have not identified anything to date, that will not qualify as a bond under the Proposed Bond Definition, for which we have identified an alternative reporting schedule to Schedule BA.

- 2) For investments that are captured on Schedule BA, should consideration occur to permit an amortized cost approach rather than a lower of cost or fair value measurement? For investments in which an amortized cost approach is supported, what characteristics can be used to identify / support this measurement method? Should use of NAIC designations be permitted to drive the Schedule BA measurement method for these securities?

Interested parties note that there are likely investments that do not qualify as Schedule D, Bonds (e.g., non-agency guaranteed pass-through mortgage-back securities) that are not considered bad investments (i.e., they are considered good investments, by both interested parties and regulators, just not appropriate as bonds on Schedule D). Further, in the case of non-agency guaranteed pass-through mortgage-backed securities, the securities are not considered bonds because they have no substantive credit enhancement, which therefore are akin to mortgages that have a designated reporting schedule. While this example, in theory, could be reported on the Schedule B – Mortgage Loans, it may not be practical to report them on Schedule B because Schedule B RBC formulas would need to substantially be revised. Further, revisions to SSAP No. 37 would be necessary since securities are not permitted as mortgage loans. The question implies that the default measurement method on Schedule BA would be lower of cost or fair value, which itself seems to imply they are “bad” investments. Interested parties therefore recommends taking a close look at this assumption for all investments that may have to be reported on Schedule BA simply because they do not meet the definition of a bond under the Proposed Bond Definition. For example, specifically related to non-agency guaranteed pass-through mortgage-backed securities, like mortgages, amortized cost seems to be the appropriate accounting.

In addition to amortized cost, fair value or lower of cost or fair value may be appropriate in other situations. For example, fair value may be appropriate for equity-linked bonds as they exhibit equity like characteristics. Lower of cost or fair value may be appropriate for Principal Protected Notes, if regulators believe lower of cost or fair value appropriately captures the non-payment risk they have identified as a concern.

Also, as noted in the “feeder fund example”, and previously discussed in this letter, the “residual tranche” is in a limited partnership form. In general, limited partnership interests are accounted for under the equity method of accounting, and subject to impairment. It may be that such accounting is determined to be appropriate in this instance. If not, interested parties would like to discuss with regulators and NAIC staff any distinctions which may need to be made when a limited partnership interest is a residual tranche or the equity component of a SSAP No. 48/97 investment that issues debt.

Lastly, interested parties are very supportive of the SVO’s outstanding exposure, and shared (with interested parties) objective, on designating additional Schedule BA assets, that exhibit fixed income characteristics, with the goal of obtaining commensurate risk-based-capital charges. With that said, interested parties do not necessarily see the connection for having NAIC designations drive the measurement method (accounting) of investments on Schedule BA.

SSAP No. 26R *Bonds* includes in its scope debt instruments issued by Certified Capital Companies (CAPCOs). As defined in INT 06-02 *Accounting and Reporting for Investments in a Certified Capital Company*, CAPCOs are state legislated venture capital firms for which investors who invest cash to acquire an equity interest or qualified debt instrument receive state premium tax credit or income tax credit.

As currently exposed, the Proposed Bond Definition will continue to include debt investments in CAPCOs in the scope of SSAP No. 26R. Therefore, it is expected that these investments will continue to be reported on Schedule D as bonds.

This question has also raised a question on debt investments whose returns are earned solely through federal tax credits – should they be reported on Schedule D since these investments are similar to debt investments in CAPCOs?

For example, there is a program referred to as the New Markets Tax Credit (NMTC) program whose goal is to stimulate regeneration of low-income and impoverished communities across the United States. Capital raised by NMTC programs is used to drive expansion of investment, job creation and economic opportunities in distressed communities. The NMTC program provides federal tax credits to reporting entities that invest in the development entities which make direct investments in these communities. An investor is required to make a debt and equity investment into the development entity. We believe that debt investments in this program are akin to debt investments in CAPCOs. The only differences of which we are aware is that CAPCOs benefit from state tax credits whereas NMTC programs benefit from federal tax credits and CAPCOs do not require investors to also make

an equity investment. Some of the similarities between CAPCOs and NMTC programs are as follows:

1. **Fixed schedule for one or more future payments** – The schedule and timing of tax credits to be earned is fixed from day 1. In addition, the par amount of the notes is paid back in cash upon maturity of the deal.
2. **Return is based on tax credits** – The return on NMTC investments is earned solely through tax credits. Similar to CAPCOs, where there is usually no cash interest earned on the debt investment, NMTC deals do not pay cash interest.
3. **Significant premiums** – These investments are purchased at significant premiums. Premiums are amortized pro-rata throughout the life of the deal in proportion to the tax credits earned.
4. **Operating entity guarantee** – It is common for debt investments in these deals to have a guarantee by an operating entity such as a financial institution. The guarantee would ensure that if the tax credits do not emerge, the investor gets its investment back.

Based on these similarities, we believe that debt investments in NMTC programs and other similar programs should also qualify for Schedule D reporting. Interested parties would like to discuss these investments with regulators and NAIC staff as to whether they qualify for Schedule D reporting and/or if specific language should be added to paragraph 2.k.iii with CAPCOs.

- 3) Revisions are also expected to SSAP No. 2R, to address the ABS restrictions, as well as SSAP No. 103R, to clarify that only beneficial interests that qualify as ABS will be accounted for under SSAP No. 43R. Comments are requested on whether other SSAPs will also be impacted and need to be revised.

Please see our comments above related to SSAP No. 2R on ABS restrictions. In relation to any changes to SSAP No. 103R, interested parties think this potentially relates to proposed changes being drafted in SSAP No. 43R, which are not part of the Draft Issue Paper, and believe it is appropriate to see such proposed changes prior to commenting. It may be appropriate to develop the accounting guidance for securities discussed in question 2 above and/or securities not meeting the substantive criteria of the Proposed Bond Definition (see also the interested party response 4 in section I of this comment letter). It may be appropriate to include this guidance in another SSAP such as SSAP No. 21, *Other Admitted Assets*.

One further comment relates to adoption of the standard, specifically as it relates to the meaningful and/or substantive credit enhancement requirements, which require stepping back in time “as if” one was looking forward at that time. Upon adoption, this could require looking back for a considerable period, perhaps decades. It may be necessary, for example, to allow an insurance entity to use hindsight in instances in which assumptions in a prior period are unobservable or otherwise unavailable and cannot be independently substantiated. Interested

parties would like to continue discussions with regulators on this topic which, while discussed, the issue of a “practical expedient” was never fully discussed through to full resolution.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Rose Albrizio

The Lease-Backed Securities Working Group

May 5, 2022

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Ref #2019-24 – SSAP No. 26R & 43R, Proposed Bond Definition

Dear Mr. Bruggeman:

Our group, the *Lease-Backed Securities Working Group*, would like to thank the Statutory Accounting Principles Working Group (SAPWG) for the opportunity to comment on the exposure Reference #2019-24 – SSAP No. 26R & 43R, Proposed Bond Definition (the “Proposed Bond Definition” or “Exposure”) as well the attached Statutory Issue Paper No. 1XX (the “Issue Paper”).

We fully support the attempt to clarify the accounting standards for bonds and structured assets, and we appreciate the immense effort that has gone into this project by both the regulators and various industry groups. While we believe much work remains to be done, our group looks forward to assisting in any way we can as this project continues to evolve. We also anticipate the opportunity to comment on the draft revisions to the two SSAPs when the language is submitted for exposure later this year. At this point, we are limiting our comments to several ‘high-level’ observations:

In particular, we worry that the designation of *some* simple unstructured single-borrower securities backed by secured loans as 26R “issuer credit obligations” and *others* as 43R “asset-backed securities” will cause confusion in the markets and will result in inconsistent filing by insurance company investors.

Our group was involved over twelve years ago when investments were originally separated between 26R and 43R. At that time, a decision was made -- which we did not agree with -- that even simple un-structured single-borrower securities should be included in 43R, along with “structured securities”, if they had been issued by a trust or SPV. For that reason, it was determined that 43R would include “Loan-Backed *and* Structured Securities” (“LBASS”). However, as the Issue Paper notes, that decision led to confusion in the markets as “many insurers had different interpretations of the adopted 2010 revisions.”

This is because market participants distinguish between two basic types of transactions, based on the source of the credit:

- 1.) Simple unstructured debt transactions where the credit depends primarily on the contractual obligation of *a single rated-credit payor*. These transactions may either be “unsecured” or “secured” by a lien on an asset. If issued in security form by a Trust or special-purpose issuer, the cash flows from the underlying loan are simply “passed-through” unaltered to investor, and the credit risk of the securities is identical to that of the underlying loan.

and

- 2.) “Asset-Backed” or “Structured Securities” where the credit of each security is not based fundamentally on the credit characteristics of the underlying collateral -- which is typically unrated -- but instead is determined by the “structure” that has been imposed on the transaction, & which

The Lease-Backed Securities Working Group

fundamentally alters the cash-flows to investors. In these transactions, determining the “credit” of each security depends on a detailed analysis of the structure.

For this reason, the 2010 revisions were confusing to market participants, and many, assuming that 43R was meant to be for “structured securities”, continued to file simple single credit-based transactions under SSAP 26R. Other investors filed anything issued by an SPE Trust -- even if backed by a single loan to a single borrower -- under 43R. This led to inconsistent filing of transactions.

Seeking to address this confusion, the current Proposed Bond Definition seeks once again to clarify for investors which types of transactions should be reported in scope of 26R (now to be designated as “issuer credit obligations”) and which fall more properly into 43R, (now labeled as “asset-backed securities”) -- or even potentially what types of investments would not be admitted as “bonds” under either Schedule and would be have to be reported on Schedule BA, “Other Admitted Assets”.

This determination would be made first based on whether the issuer was considered to be an ‘operating entity’ or an SPE “ABS Issuer”. If the transaction was determined to be issued by an “ABS Issuer”, there would be a second distinction based on the degree of “asset risk” implicit in the transaction. Those with very little “asset risk” could still qualify as an “issuer credit obligations”; while those with higher exposures, would be either designated as “asset-backed securities” -- or even potentially was as “non-bond” BA assets. For simple secured loans, “asset risk” would be measured by the size of the unamortized residual or final “balloon” payment supported by a lien on the asset -- as a proportion of the original principal balance.

The implied concept behind this framework seems to be that being secured by a lien on an asset implies a level of “equity risk” for the lender. We disagree, for several reasons:

As every lender knows, having a lien on an asset does not convey an “equity” or ownership interest in that asset.

The lien securing the loan is in almost all cases represents a “first priority” claim on the asset, and the final payment secured by that lien is typically only a fraction of the total estimated value of the asset at the maturity of the loan. The correct metric for assessing the risk of that priority claim is the size of the claim relative to the value of the asset (and the predictability of that value), not the size of the final payment as a proportion of the total loan. Determining this risk is an essential part of the credit analysis that all secured lenders -- and rating agencies -- undertake, and is definitely not equivalent to the risk associated with owning the asset outright.

From an accounting standpoint, the only proper time to assign “equity risk” to a lender is when the lender becomes the owner of the asset, via foreclosure or otherwise depending on the terms of the credit agreement.

The result of applying this framework is that *some* simple secured single-borrower loans such as those listed in 1.) above -- even if issued by an SPV Trust or “ABS Issuer” -- would now be designated to be “issuer credit obligations” while *others* would be “asset-backed securities” -- or, depending on the degree of “asset risk”, even potentially BA assets:

Some simple secured transactions supported by cash flows from a non-financial asset via a lease or other form of contract with the credit payor -- for example, project finance loans or municipal lease-revenue bonds -- even if they were issued as securities through a “trust” or “SPV” by an “ABS Issuer” -- would now be re-classified as “issuer credit obligations” *regardless of the size of the residual asset exposure in the transaction.*

The Lease-Backed Securities Working Group

Other identical structures, i.e. loans secured by leases to corporate entities, equipment trust certificates, funding agreement notes, etc. would either be classified as “issuer credit obligations” or “asset backed securities” depending on the amount of residual “asset risk” in the transaction. Those with minimal residual asset exposure (less than 5%) would now qualify as “issuer credit obligations”. Those with higher exposures would be designated as either “asset backed securities” or even, depending on the size of the exposure, potentially as Schedule BA assets. (That determination would depend on the specifics of each individual transaction.)

Those secured loans designated as “asset backed securities” would have additional credit requirements regarding “credit enhancement” and the demonstration of a “meaningful” level of cash flows to service the debt (if supported by “non-financial assets” - see below) -- requirements which would not apply to those designated as issuer credit obligations.

This framework is bound to create confusion for investors and lead once again to inconsistencies and errors in reporting. The confusion is made worse by the two additional requirements for a transaction to qualify as a Schedule D-1 asset backed security:

The first requirement is that in order to qualify as an asset-backed security, a transaction must benefit from “Substantive Credit Enhancement” sufficient to place the holder of the debt *“in a different position than if the holder owned the ABS Issuer’s assets directly”*. (Paragraph 41 of the Issue Paper states that “To qualify as a bond under this standard, there is a requirement that there are *substantive credit enhancements within the structure that absorb losses before the debt instrument being evaluated would be expected to absorb losses.*”) [emphases added]

To begin with, the determination of “expected losses” is a subjective determination which is an essential part of credit analysis, not an accounting distinction.

More fundamentally, there are many simple secured loan transactions where the issuer of the securities (the ABS Issuer) has no equity or ownership interest in the asset being financed. In these transactions the “asset” held by the issuer is the loan itself, a financial instrument that unambiguously represents a “creditor relationship” with the borrower, not an equity interest. In these simple “pass-through securities”, there is no intervening structure and the cashflows from the underlying loan are simply passed-through *unaltered* to the holders of the securities. In other words, the holder of the securities is in *exactly* the same position “as if it owned the ABS Issuer’s assets (underlying loan) directly”. While this may not be the intent of the drafters, interpreted literally, it would disqualify all simple pass-through secured loans as ABS securities - and implicitly, as bonds.

The second requirement to qualify as an “asset backed security” is that those deals secured by “cash-generating non-financial assets” must demonstrate a “meaningful” source of cash flows for the repayment of the bond (i.e.: other than through the sale or re-financing of the assets). However, as the exposure itself admits, determining what constitutes a “meaningful” source of cash flows is once again subjective, depending largely on the specifics of each individual transaction, requiring numerous “examples” to serve as guidance, but no firm metrics.

Conclusion:

Secured lending is as old as lending itself, and does not represent a new or exotic innovation. Simple secured loans, even if issued in security form by a trust or SPV -- allowing investors to participate *pari-*

The Lease-Backed Securities Working Group

passu in the underlying loan -- have long been accepted insurance company investments, as codified in SSAP 43R for many years -- and indeed before that, as 26R “bonds”.

While in one sense every secured loan issued in security form can be considered an “asset-backed security”, this not the common understanding in the market. The term “Asset-Backed Security” is broadly used by market participants (including the SEC and organizations such as SIFMA) to refer to “structured securities”: pools of assets which have been carved-up, or “tranching” into multiple securities, and for which the payments received by investors are not “directly proportional” to the payments flowing from the underlying assets.

The current version of 43R states clearly that it covers both “loan-backed” and “structured” securities. (It appears that the term “asset-backed security is not used in the current 43R.) If the current terminology is dropped, and some simple secured loans are now to be designated as “asset-backed securities”, we feel it is important that additional language be added to the standard making it clear that they are not subject to the same requirements as “structured securities” -- the most common use of the term “asset-backed securities”.

Our group continues to believe that a much clearer division between the two SSAPs, 26R and 43R – one which would avoid much of the ambiguity in the current Exposure – would be to assign *all* single-credit payor/single obligor transactions – whether secured or unsecured – to be in scope of SSAP 26R as “issuer credit obligations”. This would allow for SSAP 43R to be used exclusively for true *structured securities*, where the credit is not based on the underlying loans or assets – which are frequently not rated entities – but instead credit is determined by the structure of the transaction.

This reflects the common understanding in the market, which draws a fundamental distinction between simple (i.e.: unstructured) debt relying primarily on the creditworthiness of a single rated-credit payor, and “structured securities”, where the credit has been modified through the introduction of multiple classes of securities, each with its own credit characteristics, and where the underlying cash flows have been altered by the structure, thus putting investors in a different economic position from having direct credit exposure to the underlying loans or assets backing the transaction (the most common use of the term “Asset-Backed Securities”).

If the current framework is adopted, we would suggest that additional language needs be supplied to 43R making it clear -- as does the current version of 43R -- that it covers simple secured loan-backed transactions as well as “structured securities”.

We thank you for the opportunity to offer these comments, and are happy to answer any questions or discuss our comments further with the regulator community.

Thank you for considering our comments,

John Garrison
On behalf of The Lease-Backed Securities Working Group

MEMORANDUM

TO: Interested Parties of the Financial Condition (E) Committee

FROM: Financial Condition (E) Committee

DATE: May 23, 2022

RE: Memorandum of Support

Since the great financial crisis, interest rates have generally been in a downward trend for nearly 15 years, resulting in reduced spreads for life insurers and otherwise putting pressure on many members of the industry that depend upon longer-dated, lower risk debt instruments. In addition, recent inflationary pressures and increasing uncertainty resulting from the Russia/Ukraine crisis are exacerbating other challenges for the industry. Members of the Committee remain particularly concerned that macro-economic trends are likely to continue to drive an increase in asset risk for at least some members of the industry.

This memorandum is being issued by the Committee to express its support for several current, interrelated initiatives focused on asset risk or spread risk within the task forces and working groups of the Committee as well as other related work within the task forces and working groups of other Committees, including the Life Insurance and Annuities (A) Committee. The Committee recognizes the range of risk management practices within the industry and the critical importance of maintaining a fair and competitive marketplace by establishing standards if necessary to address issues that could translate into material risks if not properly and timely considered within the NAIC solvency framework.

Although the Committee has not yet reviewed specific proposals from these various groups, it is aware of the underlying objectives of many of the proposals under discussion, including, without limitation:

- A more risk-sensitive Life Risk Based Capital (RBC) charge for certain structured securities and other asset-backed securities that carry a greater tail risk;
- Clarification of investments permitted to be reported on Schedule D-1: Long-Term Bonds, particularly focused on improved transparent accounting and RBC reporting for certain loan-backed and structured securities to capture the more risk-sensitive features of these types of assets;
- Consideration of changes to the current policies of the Valuation of Securities (E) Task Force as they pertain to possible use of or reduction of reliance on rating agencies, where deemed appropriate, and possible use of other risk identifiers such as market data;
- A modified economic scenario generator that more appropriately captures the low interest rates experienced during the past few years; and
- Consideration of certain “high-yielding” assets within the annual asset adequacy analysis testing.

The Committee is grateful to all the States and staff members that are currently participating in the important work of these groups and welcomes the input of industry and other stakeholders in the development of proposals. Although this work is ongoing, the Committee encourages all States and the Securities Valuation Office (SVO) to continue to take all appropriate actions under existing rules and standards.

Draft: 5/27/22

Statutory Accounting Principles (E) Working Group
Virtual Meeting
May 24, 2022

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 24, 2022. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark and Carrie Mears, Co-Vice Chairs (IA); Sheila Travis (AL); Kim Hudson (CA); Michael Estabrook (CT); Rylynn Brown and Tom Hudson (DE); Eric Moser (IL); Judy Weaver (MI); Doug Bartlett and Pat Gosselin (NH); Bob Kasinow (NY); Melissa Greiner (PA); Jamie Walker and Shawn Frederick (TX); David Smith (VA); and Amy Malm (WI).

1. Reviewed Comments on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-B1) on previously exposed items.

a. Agenda Item 2022-03

Mr. Bruggeman directed the Working Group to agenda item 2022-03: Premium Adjustment Allocated to Jurisdictions. Robin Marcotte (NAIC) stated that while this agenda item does not propose statutory revisions, it proposes blanks instructional changes to Schedule T, the State Page, and the Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. She stated that NAIC staff received inquiries regarding a minor number of entities that primarily wrote health business related to the federal Affordable Care Act (ACA), who did not properly allocate premium adjustments by jurisdiction but instead reported the adjustments on the “aggregate other alien line” in the statutory financial statements. The proposed instruction changes clarify that all premium adjustments, both increases and decreases, including but not limited to, ACA premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction and are effective for year-end 2022 reporting.

Ms. Malm made a motion, seconded by Mr. Hudson, to adopt agenda item 2022-03 (Attachment One-B2), noting that the agenda item did not result in statutory revisions; however, it expressed support for the sponsored Blanks (E) Working Group proposal 2022-10BWG. The motion passed unanimously.

b. Agenda Item 2022-08

Mr. Bruggeman directed the Statutory Accounting Principles (E) Working Group to agenda item 2022-08: Treatment of Freddie Mac WI Certificates and the related *Interpretation (INT) 22-01T: Freddie Mac When-Issued K-Deal (WI Trust) Certificates*. Julie Gann (NAIC) stated that this sponsored agenda item is to address the accounting and reporting for Freddie Mac When-Issued K-Deal (WI Trust) Certificates. This program, in essence, creates an additional trust where the investor buys certificates in the WI trust, which is initially backed by cash; and within 90 days, the WI trust uses the cash to purchase the mortgage securities from the real estate mortgage investment conduit trust. Ms. Gann stated that although there is a short delay in acquiring the mortgage-backed securities, the performance of the investment is guaranteed by Freddie Mac. The tentative statutory accounting interpretation clarifies that investments in the Freddie Mac WI Program shall be captured in scope of *Statement of Statutory Accounting Principles (SSAP) No. 43R—Loan-Backed and Structured Securities* from initial acquisition.

Mr. Hudson made a motion, seconded by Ms. Greiner, to adopt the exposed INT 22-01 to clarify that Freddie Mac When-Issued K-Deal (WI Trust) Certificates are in scope of SSAP No. 43R from acquisition (Attachments One-B3 and One-B4). The motion passed unanimously.

c. Agenda Item 2021-21

Mr. Bruggeman directed the Working Group to agenda item 2021-21: Related Party Reporting. Jake Stultz (NAIC) stated that this agenda item was drafted in response to recent discussions on the reporting and disclosure requirements for investments that involve related parties. He stated that the agenda item proposes revisions to *SSAP No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R*, clarifying related party and affiliate guidance, as well as requiring new reporting information for investments that are acquired from a related party, regardless of whether the investment is captured on the affiliate reporting line. He stated that the main goals are to: 1) clarify the reporting of affiliate transactions within existing reporting lines in the investment schedules; and 2) incorporate new reporting requirements for investment transactions with related parties using new reporting codes. He stated that interested parties requested the deletion of a proposed addition to *SSAP No. 43R*; i.e., an addition that seeks to clarify that investments with arrangements that result in a direct or indirect control shall be reported as affiliated. He stated that in response to these comments, pursuant to existing guidance in the *Insurance Holding Company System Regulatory Act (#440)* and *SSAP No. 25*, affiliation is determined through direct or indirect control, and that control can be based on voting rights, management and policies, contract, or otherwise. He also stated that the addition to *SSAP No. 43R* does not modify the current affiliation designation process. He stated that NAIC support staff recommended retaining the sentence requested for deletion; however, they modified it slightly to clarify that these scenarios are examples and not limitations in the determination of control. He stated that NAIC staff recommended that the Working Group adopt this agenda item and confirm that:

1. The new disclosures are effective for year-end 2022 reporting, as this date is in line with other state insurance regulators' initiatives, including the Macroprudential (E) Working Group.
2. The related party new electronic code column is effective for all noted investment schedules: B—Mortgage Loans, D—Long-Term Bonds, DB—Derivatives, BA—Other Long-Term Invested Assets, DA—Short-Term Investments, E2—Cash Equivalents, and DL—Securities Lending Collateral Assets.
3. The related party new electronic code column shall be completed for all investments on any reporting line.
4. The Statutory Accounting Principles (E) Working Group supports the inclusion of Code 6 (no related party relationship), as exposed by the Blanks (E) Working Group (2021-22 BWG), to eliminate potential confusion on whether the absence of a code represents incomplete reporting or a non-related party relationship.

Mr. Stultz stated that information contained in the interested parties' comment letter regarding the determination of affiliation under Model #440, and that it is solely based on voting rights of an equity holder, is incorrect. He stated that although ownership of 10% of voting securities results in a presumption of control, voting securities are not the sole basis for determining control. Determination of the affiliation of an investment is based on an evaluation of control of the investee, whether through voting interests or other means; accordingly, this agenda item does not propose to change the affiliate determination or definition. Mr. Stultz stated that interested parties also recommended other revisions to *SSAP No. 25* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* to include open-ended foreign regulated investments that are currently captured in *SSAP No. 30R—Unaffiliated Common Stock*; however, it was recommended that any other changes to the exposed language be considered in a separate agenda item.

Angelica Tamayo-Sanchez (New York Life), representing interested parties, stated that there remain interpretation questions regarding the objectives of the agenda item versus what reporting will result upon adoption. She stated that while interested parties agree that guidance states that control can be achieved through means other than ownership, specific questions remain regarding collateral loan obligations (CLOs). She stated that language being proposed for adoption implies that CLOs managed by an affiliated party would be deemed to be an affiliated transaction; i.e., an interpretation that differs from industry's interpretation of current reporting requirements.

She stated that most insurance companies would not have reported CLOs as affiliated investments if the underlying investments do not have affiliated credit exposure, despite it being managed or originated by a related party. She stated that while the agenda item states that it is not intended to change current affiliated reporting requirements, if these investments should be deemed affiliated, most insurers have likely misinterpreted the guidance regarding their reporting. Discussions among industry indicate that if it is the will of the Statutory Accounting Principles (E) Working Group to classify these investments as affiliated, it will be a change from current, prevalent practice. In addition, there is a presumption that affiliated investments are required to be reviewed by the NAIC Securities Valuation Office (SVO), and if certain CLOs are required to be reported as affiliated, they could lose their filing exempt (FE) status. If FE status is lost, the SVO may need to develop additional procedures, as it does not currently have a methodology to designate this type of asset-backed security investment structure.

Mr. Clark stated that there is a mistaken interpretation that affiliation designation based on securitizations should be based on the affiliated credit exposure of the underlying collateral. He stated this interpretation is not consistent with Model #440 or SSAP No. 25. The affiliate designation is determined based on the ability to direct activities, not credit exposure. If an entity can control the activities of another entity, then all transactions, regardless of credit exposure, should be deemed affiliated. Mr. Clark stated that there is nothing in Model #440 that would scope out securitizations, and to exclude them for any purpose, including through the insertion of an unaffiliated intermediary, is incorrect. He stated that investments without an affiliated credit exposure that are originated or managed through an affiliated entity should be deemed affiliated. The need to distinguish between affiliated and unaffiliated credit exposure, despite being on an affiliated reporting line, is an important goal of this agenda item and is achieved through the new, supplemental reporting codes. Currently, since affiliation is based on control, without the use of these reporting codes, there is no way to differentiate between various types of credit exposure. In addition, some investments could be structured in a manner that the control threshold is not met, thus an investment would not be classified as affiliated; however, it does have underlying affiliated investment involvement; i.e., affiliated origination. This agenda item would assist state insurance regulators in the identification of such circumstances. Mr. Clark stated that the specificity proposed for SSAP No. 25 does not imply that any affiliated involvement causes an investment to become affiliated; it only clarifies that a control evaluation is still required by the insurer. He stated that as an example, for affiliated investment managers who originate investments that are ultimately determined not to be affiliated, the fee structure is certainly an affiliated transaction and should have been reviewed by the state of domicile through an appropriate Model #440 filing. He stated that he would support a referral to the Valuation of Securities (E) Task Force to address FE questions regarding CLOs, as the intent was not to modify FE status of these investments.

Keith Bell (Travelers), representing interested parties, stated that the language as proposed will likely not yield the results desired by state insurance regulators, specifically the reporting of certain investments as affiliated if they are managed by an affiliated asset manager. He stated that Model #440 was drafted prior to the prevalence of securitizations, and the emphasis of the model is on equity investments, not debt investments. He stated that debt investments are the rights to contractual cashflows, which do not represent equity investments; thus, determining control based on a debt investment for the determination of affiliate classification is not consistent with current practice. He stated that interested parties do not disagree with the objectives of state insurance regulators, but they believe the added language changes the scope of affiliated transactions, and if that is the ultimate wish of state insurance regulators, alternate guidance should be considered. Mr. Bruggeman stated that the spirit of the model is that if the underlying entity is affiliated, all associated transactions should also be deemed affiliated. However, increased reporting granularity of underlying credit exposure would be achieved through the new proposed reporting codes. The proposed language is only to clarify control, and it is not modifying Model #440, nor modifying affiliated reporting requirements. Mr. Clark stated that he agrees with Mr. Bruggeman in that if a company is deemed to be affiliated, all transactions, debt, equity, or other should also be reported as affiliated transactions. He also stated that the proposed language only clarifies when control exists, not necessarily how to determine if control exists. He stated that if there is a desire to further clarify how to determine control, that

would need to be in a project separate from this agenda item. Ms. Weaver stated that the interpretive disconnect of industry could leave open the possibility of other investments to not be reported as affiliated, and she inquired if interested parties have suggestions to the proposed revisions. Mr. Bell stated that interested parties do not have any suggestions but believe the current language is not sufficient to meet the needs of state insurance regulators, as there will still be ambiguity in reporting requirements. Rose Albrizio (Equitable), representing interested parties, stated that she concurs with Mr. Bell, and there will be difficulty for industry with applying the clarified affiliated reporting standard.

In response to Mr. Clark's comments regarding determination of control for consolidated reporting purposes, Ms. Tamayo-Sanchez stated that U.S. generally accepted accounting principles (GAAP) generally require the determination of who controls the significant activities or economics in the initial determination of control for consolidated reporting purposes. She stated that if U.S. GAAP were used as a basis to determine if a CLO should be reported as affiliated due to exercising control, they would likely not be deemed as affiliates; however, industry struggles with how to define control of these instruments for statutory reporting purposes. As the insurer likely has a very passive involvement in the underlying investment and is only involved in the investment in the event of certain default situations, an affiliated designation for statutory accounting purposes is not consistent with current processes. Accordingly, many insurers will likely need to now move many debt investments to affiliated reporting lines.

Mr. Bruggeman stated that the challenge is that the intent of the agenda item is not to change affiliated reporting requirements; however, as many insurers believe this is a change, this likely represents an interpretation disconnect between insurers and state insurance regulators. He stated that this agenda will likely: 1) communicate the scope of affiliation determination and the associated reporting desires of state insurance regulators; and 2) supplement the reporting of all investments with the proposed reporting codes. The agenda item is not changing related party or affiliation determination pursuant to Model #440, especially as some states have adopted slight variations to the model. Mr. Clark stated that he agrees with Mr. Bruggeman, and he added that the determination of control has not changed. If detailed guidance regarding the evaluation of control were desired, it should be considered in a separate agenda item; however, insurers should continue to consult with their domestic regulators in the determination of affiliation designation. Mr. Bell stated that Mr. Bruggeman's summation of the challenge was accurate; however, many in industry would not report affiliated debt investments as affiliated transactions, as they interpret Model #440 to be limited to equity interests. He stated that the interpretation of state insurance regulators is that investments originated through, or debt issued by, an affiliated entity is an approach not commonly interpreted by industry. Mr. Clark stated that his interpretation is that if an entity is determined to be affiliated, all transactions—i.e., debt or equity issued by an affiliate—would also be classified as affiliated; and to the extent that this has not been done previously, he supports corrected reporting going forward. Ms. Tamayo-Sanchez stated that the interpretation of industry based on today's discussion was wrong, as they believe Model #440 only requires affiliated reporting if the investment has underlying affiliated credit exposure or if the insurer has control in the underlying investment, not an asset manager who originates the investment. Ms. Albrizio stated that the guidance should be supplemented using examples to clarify which investments should be reported as affiliated, as interested parties do not believe the current guidance is adequate to ensure that the reporting desired by state insurance regulators will be achieved. Mr. Bruggeman stated he appreciates the comments of industry to help articulate the interpretation differences; however, state insurance regulators believe that if an entity is deemed to be affiliated, all investments—debt or equity—should be reported as affiliated, regardless of underlying affiliated credit exposure. With the agenda item, the investments would have supplemental reporting to help further differentiate those with varying degrees of underlying related party credit exposure. Ms. Tamayo-Sanchez, not speaking on behalf of interested parties, stated that the interpretation of applying the affiliated designation to debt instruments only when there was an underlying affiliated credit exposure was incorrect and not in line with state insurance regulator expectations. She stated that for insurers who have not been a party to

the discussions related to this agenda item, they would likely continue existing practices for the determination of affiliation designation.

Mr. Clark made a motion, seconded by Mr. Smith, to:

1. Adopt the exposed revisions in SSAP No. 25; exposed revisions, with minor edits, in SSAP No. 43R; and new reporting disclosures for investments acquired from a related party, regardless of whether the investment is captured on an “affiliate” reporting line (Attachment One-B5).
2. Confirm that the new reporting codes applicable for investment schedules B, D, DB, BA, DA, E2, and DL shall apply to all investments on any reporting line and are effective for year-end 2022 reporting.
3. Confirm support for the inclusion of Code 6 (no related party relationship), as exposed by the Blanks (E) Working Group (2021-22 BWG) to eliminate potential confusion on whether the absence of a code represents incomplete reporting or a non-related party relationship.
4. Direct NAIC staff to draft the following for future Statutory Accounting Principles (E) Working Group discussion: 1) possible footnote revisions pursuant to interested parties’ comments; and 2) examples for possible inclusion in SSAP No. 43R to further clarify investments that should be classified as affiliated.
5. Send a referral to the Valuation of Securities (E) Task Force, notifying of this adopted agenda item, and assess whether corresponding edits are needed to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) regarding CLO investments that may now be classified as affiliated.

The motion passed unanimously.

Ms. Gann stated that as a reminder, the Blanks (E) Working Group has a public call scheduled for May 25, and the Statutory Accounting Principles (E) Working Group has a public call scheduled for July 18 to hear comments on the exposed bond definition and related issue paper.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on April 4, 2022, with Comments due May 6th.

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group) during its meeting on April 4 in Kansas City.

We offer the following comments:

Ref #2019-21: Proposed Bond Definition

Pursuant to the direction from the Working Group in October 2020, a small group of regulators and industry have been meeting regularly to draft a bond definition for consideration. The intent of this project is to clarify what should be considered a bond (whether captured in SSAP No. 26R—*Bonds* or SSAP No. 43R—*Loan-Backed and Structured Securities*) and reported on Schedule D-1: Long-Term Bonds. This exposure is specific to the proposed bond definition included in the exposed Form A, along with the glossary (page 5) and appendices (pages 6-12), but comments on future developments (such as reporting changes, accounting and reporting guidance for items that do not qualify as bonds, transition guidance, etc.) may also be submitted to assist in the development of these items.

Interested parties are providing comments in a separate letter for this item due to the number of issues involved.

Statutory Accounting Principles Working Group
May 6, 2022
Page 2

Ref #2022-03: *Premium Adjustments Allocated to Jurisdictions*

The Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal (2022-10BWG) which would modify the instructions for Schedule T, the State Page and Accident and Health Policy Experience Exhibit (AHPEE). The proposed revisions clarify that all premium adjustments shall be allocated as premium in each respective jurisdiction. This agenda item did not propose statutory revisions. This item was exposed with a shortened comment period ending May 6 to permit consideration for a year-end 2022 effective date of the reporting revisions.

Interested parties have no comment on this item.

Ref #2022-08: *Treatment of Freddie Mac WI Certificates*

The Working Group moved this agenda item to the active listing and exposed a tentative interpretation INT 22-01: Freddie Mac When-Issued K-Deal (I Trust) Certificates to clarify that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of SSAP No. 43R. This item has a shortened comment deadline of May 6.

Interested parties support the conclusions reached on this interpretation.

Ref #2021-21: *Related Party Reporting*

The Working Group exposed this agenda item, incorporating proposed revisions after considering comments from interested parties shown highlighted in gray below. The changes from the prior exposure only clarify previous components of the proposed revisions. Similar changes to the blanks proposal are also concurrently exposed by the Blanks (E) Working Group in their corresponding agenda item (2021-22BWG) to allow for a year-end 2022 effective date. This item was exposed with a shortened comment period ending May 6.

Interested parties appreciate the opportunity to provide additional comments for this item regarding Related Party Reporting (the “Related Party Exposure”), which was re-exposed by the Working Group (the “SAPWG”) on April 4, 2022.

As stated in our original comment letter on this item, we understand that one of the goals of the proposal is to identify investments that are originated, managed, sponsored, or serviced by an affiliate or related party of the insurer (referred to as managed by affiliates for the remainder of this letter). Interested parties agree that this information can be useful for the regulators, but we continue to stress that it is critical to differentiate investments where there is direct credit exposure to an affiliate from those investments that are only managed by affiliates with no underlying credit exposure to the affiliate of the insurer.

In addition to the above, we have the following additional comments on the re-exposure:

Statutory Accounting Principles Working Group
May 6, 2022
Page 3

1. **SSAP No. 25** - The Related Party Exposure is proposing to add the paragraph below, which would require a look through of affiliated investment structures to identify entities over which the insurer may have indirect control. To address Interested Parties' comments, the Working Group has added the footnote in red below to clarify that the look-through requirement is not required for SEC-registered mutual funds and ETFs.

“For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company (FN10), indirect control shall be presumed to exist. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.”

FN10 Consistent with SSAP No. 97, footnote 1, investments in an exchange traded fund (ETF) or a mutual fund (as defined by the SEC) does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF or mutual fund unless ownership of the ETF actually results in “control” with the power to direct or cause the direction of management of an underlying company. ETFs and mutual funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws.

Interested parties' comments on the amendments are as follows:

- We agree that the look-through requirement should not extend to SEC registered mutual funds and ETFs as those investments are subject to many regulatory requirements. However, the exemption should also extend to foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction, which are within the scope of SSAP No. 30 - *Unaffiliated Common Stock* and which are very similar to open-end mutual funds in the United States.
- As stated on our previous comment letter, doing a look-through of the underlying investments of investment funds managed by affiliates to determine if there is indirect control will be a significant operational change as information will need to be requested from affiliated funds regarding their underlying investments along with percentage ownership. Once the information is obtained, insurers will need to go through each investment where the affiliated fund owns more than 10% of the equity of another company to document whether the presumption of control is

Statutory Accounting Principles Working Group
May 6, 2022
Page 4

overcome or not. We kindly request again for a 2023 implementation date to be considered.

- Interested parties would like to confirm our understanding of the look through proposal. We believe an insurer would be required to look through to the underlying investments only in the situation where the entity (managed by an affiliate) in which the insurer owns equity instruments (e.g., private equity funds and CFOs). For example, if the insurer owns debt tranches of a CFO managed by an affiliate, we assume the look through analysis would be applied since the underlying investments of the CFO are equities. However, if the insurer owns an interest (debt or equity) in a CLO investment where the underlying assets are loans, we would not expect the look through to be applied since the CLO loans do not usually give an investor any control. As the look through paragraph is being inserted into SSAP 25 (which applies to all types of instruments), we believe clarification may be needed.
 - We also suggest adding the new footnote that was added to the new proposed paragraph 9 of SSAP No. 25 to the new codes being proposed to the investment schedules so that there is consistency regarding the types of assets for which the insurer would have to do a look-through of underlying investments of an affiliated fund.
2. ***Proposed changes to SSAP No. 43R to clarify that investments managed by affiliates are viewed as affiliated even if the underlying assets in the structure do not have any credit exposure to an affiliate*** – As stated above and in our previous comment letter, many insurers own asset management subsidiaries which manage securitization transactions. There is no question that the asset manager itself is a Subsidiary, Controlled and Affiliate (SCA) of the insurer and such asset managers are reported on Schedule Y as affiliates of the insurer and in the related party disclosures. However, when any debt tranches purchased from those securitization vehicles do not have any credit exposure to SCAs of the insurer, the debt tranches are not reported in the affiliated section of Schedule D and not filed as affiliated debt investments with the Securities Valuation Office (SVO) since they do not have affiliated credit risk exposure, even if the securitization vehicle is managed by a related party.

It is very important to interested parties that this distinction is understood for Schedule D bond investments. Schedule D bond investments should not be reported in the affiliated section of Schedule D if they do not have affiliated credit exposure. We believe that the new codes that are being proposed should provide the regulators with information regarding investments that have credit risk exposure to affiliates versus those investments that are only managed by affiliates or other related parties. If the intent is to change how investments are actually reported between affiliated and non-affiliated lines in the schedules, additional changes would need to be made to the current guidance, including the annual statement instructions and the SVO Purposes and Procedures (P&P) Manual, so that this is clear to all insurers. If all unaffiliated investments which are managed by

Statutory Accounting Principles Working Group
May 6, 2022
Page 5

an affiliate were required to be reported as affiliated, updates would have to be made to the SVO P&P manual to clarify that those investments continue to be Filing Exempt since the SVO does not provide designations on asset-backed securities and the manual requires filing for all affiliated debt investments. Furthermore, our understanding of the definition of affiliates and control under the Holding Company act is that they are based on voting rights of an equity holder. Therefore, asset managers that meet the definition of affiliates under the Holding Company Act are reported as affiliates on Schedule Y and any agreements with those affiliates are reported in the related party disclosure. However, investments that are simply managed by such affiliate with no credit risk exposure to an affiliate and where the underlying borrowers are not affiliates, would not meet the definition of an affiliate under the Holding Company Act.

All the language included in the exposure with the exception of the last sentence in the new paragraph 6b being proposed in SSAP No.43R support the view that unaffiliated investments managed by an affiliate shall be reported as unaffiliated. The last sentence in 6b indicates that “any arrangement that results in direct or indirect control, including control through a servicer” should be considered affiliated. While this statement is meant to make it clear, it is confusing as it relates to unaffiliated investments (where the insurer has no credit risk exposure to the underlying borrower), that are managed by an affiliate (either a subsidiary of the insurer or an entity under common control with the insurer). Interested parties request that the final sentence be removed as this sentence will only add confusion and will create inconsistency in reporting depending on how each insurer interprets these rules. As stated throughout the letter, the presence of certain arrangements such as an affiliated servicer do not usually mean that the investments managed are affiliated. A determination of direct or indirect control over the ultimate obligor pursuant to SSAP No. 25 is still required.

b. A loan-backed or structured security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the loan-backed or structured security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, including control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with SSAP No. 25 — Affiliates and Other Related Parties.

Statutory Accounting Principles Working Group
May 6, 2022
Page 6

As stated above, we are more than happy to provide the transparency that the regulators are looking for, which we believe will be accomplished through the new codes that will flag these investments as being managed by related parties.

3. ***Proposed annual statement changes to add a new electronic-only column to the investment schedules to identify investments involving related parties*** –The new codes being proposed in the related party exposure are as follows:

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships, and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

Interested parties offer the following additional comments on the proposed codes:

- We understand that the codes will be required on all investment schedules. However, most of the codes appear to be more applicable to Schedule D and Schedule BA investments where investments can be made through an investment vehicle. For example, when we think of the relevancy of the codes to the mortgage loan schedule, it would appear that the only code that may potentially apply is code No. 1 if the insurer has issued a mortgage loan to a related party. Codes 2-5 do not seem applicable since mortgage loans reported on Schedule B can only be reported on Schedule B if the insurer has issued the mortgage loan directly to a borrower. The same would likely be true for Schedule DB.
- It is unclear to interested parties what “in-substance” related party transactions are referred to in code 4. Perhaps some examples can be provided as to the types of

Statutory Accounting Principles Working Group
May 6, 2022
Page 7

structures this is referring to so that insurers know what to report under this category.

- When reviewing the Blanks exposure on this item, we noted that the Blanks exposure added an additional code 6 for investments that have no related party relationship. We question the need for such code as a significant majority of insurers' investments will probably be coded as such. There are other columns that are populated only if the code applies to that investment (e.g., Column 3 – Code; Column 5 – Bond Characteristics). Perhaps leaving the code blank will accomplish the same objective.

* * *

Thank you for considering interested parties' comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Rose Albrizio

Issue: Premium Adjustments Allocated to Jurisdictions

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

This agenda item has been drafted to propose blanks instructional changes primarily to Schedule T which reflects premiums, allocated by states and territories. NAIC staff received inquiries from 3 states in the fourth quarter of 2021 regarding a minor number of entities that primarily wrote health business related to the Affordable Care Act (ACA) which are believed to have not properly allocated premium adjustments by jurisdiction on the statutory financial statement. The states identified that a minority of entities reported some portion of their U.S.-based premium in the category of “aggregate other alien.” The aggregate other alien line is for non-U.S. premium therefore, reporting U.S.-based ACA premium as alien is problematic. The purpose of this agenda item is to add additional annual statement instructions to address this reporting inconsistency. Regardless of the cause of this specific issue, the proposed revisions intend to clarify that premium adjustments (both increases and decreases) shall be reflected in the appropriate jurisdiction. This proposal is to address this current issue as well as future situations.

The specific premium identified is understood to be ACA premium written in the U.S. and its territories. Based on the descriptions provided, most of the amounts are presumed to be from premium redistribution as a result of the risk adjustment program of the ACA. All of the premium adjustments from the ACA risk adjustment program, and the risk corridor program, are noted as premium in *SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act*. (Although the risk corridor program ended in 2016, distributions related to 2015-2016 plan years have been received in the last two years due to a U.S. Supreme Court decision.)

The ACA risk adjustment premium redistribution calculations are calculated by plan and by jurisdiction. Therefore, the jurisdictions are known. The ACA risk adjustment program redistributes premium from plans that have relatively healthier insureds and gives to plans with relatively less healthy insureds based on risk scores. SSAP No. 107 directs reporting the premium adjustments in the ACA risk adjustment program as premium subject to redetermination, which requires accruing the adjustments based on policy experience as described in the authoritative literature section below.

NAIC staff understanding is that most states would treat the premium after adjustments (both increases and decreases) as the amount subject to premium tax. However, preliminary conversations some health entities have asserted that they believe their state only subjects the premium prior to adjustment to premium tax. In the statutory annual statement, the premium including adjustments should be reported as premium subject to redetermination as identified in SSAP No. 107. If a jurisdiction treats premium differently for tax purposes, that would be addressed on the jurisdiction’s premium tax return.

Because of the way the ACA risk adjustment program premium adjustments calculation works, an insurer can have both payables and receivables in different plans in the same jurisdiction. For example, they could be a receiver in the bronze plan in state A and a payer in the silver plan in state A. Total premium in the state is redistributed among

plans at the same level in the state, no new funds are added. In the examples below the total premium columns are what is reported in the state A and B lines of Schedule T.

State A	Initial Premium	Premium Adjustments/Redistribution	Total Premium	State B	Initial Premium	Premium Adjustments/Redistribution	Total Premium
Bronze	\$ 100	\$ 40	\$ 140	Bronze	\$ 100	\$ 20	\$ 120
Silver	\$ 100	\$ (25)	\$ 75	Silver	\$ 100	\$ (25)	\$ 75
<u>Gold</u>	<u>\$ 100</u>	<u>\$ -</u>	<u>\$ 100</u>	<u>Gold</u>	<u>\$ 100</u>	<u>\$ (15)</u>	<u>\$ 85</u>
total	\$ 300	\$ 15	\$ 315	total	\$ 300	\$ (20)	\$ 280

Existing Authoritative Literature (bolding added for emphasis):

- *Uniform Deposit Law Model 300:*

“Alien insurer” means an insurer incorporated or organized under the laws of any country other than the United States.

- *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities:*

8.b.iv. Investments in foreign insurance SCA entities shall be recorded based on the underlying U.S. GAAP equity from the audited U.S. GAAP basis financial statements, adjusted to a limited statutory basis of accounting in accordance with paragraph 9, if available. If the audited U.S. GAAP basis financial statements are not available, the investment can be recorded on the audited foreign statutory basis financial statements of the respective entity adjusted to a limited statutory basis of accounting in accordance with paragraph 9 and adjusted for reserves of the foreign insurance SCA with respect to the business it assumes directly and indirectly from a U.S. insurer using the statutory accounting principles promulgated by the NAIC in the *Accounting Practices and Procedures Manual*. The audited foreign statutory basis financial statements must include an audited footnote that reconciles net income and equity on the foreign statutory basis of accounting to the U.S. GAAP basis. **Foreign insurance SCA entities are defined as alien insurers formed according to the legal requirements of a foreign country.**

- *SSAP No. 107—Risk-Sharing Provisions of the Affordable Care Act:*

Risk Adjustment Program – Accounting Treatment

14. Premium adjustments pursuant to the risk adjustment program will be based upon the risk scores (health status) of enrollees, participating in risk adjustment covered plans rather than the actual loss experience of the insured. This program bears some similarities to the Medicare Advantage risk adjustment program¹ under which the plan receives additional funding (or pays additional amounts)

¹ The ACA program also has significant differences from the Medicare Advantage risk adjustment program, which is retrospective, administered as a single national program, with most enrollees administered by the federal government. By contrast, the ACA risk adjustment is not retrospective, and is administered by each entity by state and by plan.

based on adjustments to risk scores of enrollees (see *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage*).

15. The risk adjustment payables and receivables shall be accounted for as premium adjustments subject to redetermination as specified in this statement. Effective beginning with 2018 benefit plan years, the risk adjustment assessments and distributions are calculated including the high-cost risk pool aspect of this program and should be reported on a net basis.

- a. Risk adjustment payables meet the definition of liabilities as set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. Risk adjustment receivables meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.
- b. Risk adjustment payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk adjustment program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient data to determine a reasonable estimate. Ensuring sufficient data requires that the reporting entity's estimate is based on demonstrated knowledge of the marketplace and annual information which includes patient encounter and diagnosis code data to determine the differences in the actuarial risk profile of the reporting entity's insureds versus the market participants in the particular market and state risk pool. Sufficient data shall incorporate patient default scores, if applicable, under the terms of the risk adjustment program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.
- c. Premium revenue adjustments for the risk adjustment program are estimated for the portion of the policy period that has expired and shall be reported as an immediate adjustment to premium. Accrued risk adjustment receivables shall be recorded in premium and considerations receivable, with a corresponding entry to written premiums. Accrued risk adjustment payables shall be recorded as a liability² with a corresponding entry to written premiums. Reporting entities shall record additions or reductions to revenue resulting from the risk adjustment program in the period in which the changes in risk scores of enrollees result in reasonably estimable additions or reductions. The risk adjustment program receivables shall be reported gross of payables.
- d. The risk adjustment receivables are administered through a federal governmental program. Once amounts are collected by the governmental entity, there is an obligation to distribute the funds. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.
- e. Provided that the risk adjustment receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the

² The annual statement liability lines will vary by the type of annual statement the reporting entity files. Managed care/accident and health reporting entities report as aggregate health policy reserves; life and accident and health reporting entities report as aggregate reserves for accident and health contracts; and property and casualty reporting entities report as aggregate write-ins for liabilities.

program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

- f. Evaluation of the collectibility of all amounts receivable from the risk adjustment program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk adjustment receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

Risk Adjustment Program – High-Cost Risk Pool – Accounting Treatment

16. The individual and small group high-cost risk pools of the ACA risk adjustment program shall be accounted for consistent with the rest of the ACA risk adjustment program. Reporting entity issuers in the individual or small group markets need to account for the following risk adjustment payables and receivables including the impairment and aging guidance reflected in paragraph 15 and paragraph 16:

- a. **The high-cost risk pool assessment payable by the reporting entity, which is the percent-of-premium charge to the issuer in order to fund reimbursements across all issuers of claims above the high cost risk pool threshold, shall be accounted for as decreases to written premium subject to redetermination.**
- b. **High-cost risk pool distributions, which represent proportionate reimbursement for the issuer's claims above the high cost risk pool threshold, would be accounted for as increases to written premium subject to redetermination.**
- c. As the risk adjustments and distributions described in paragraphs 4-9 are calculated after excluding the percentage of costs above the threshold specified in the high-cost risk pool aspect of this program, the payments described in paragraphs 4-9 will continue to be accounted for consistent with guidance in paragraph 15 and paragraph 16 (i.e., as a premium adjustment subject to redetermination).

Note that Schedule T, part 1 has slightly different names by annual statement type, but it reflects premiums, allocated by states and territories. Schedule T, Part 2 Interstate Compact- Exhibit of Premiums Written Allocated By States and Territories is the same name for all annual statement types.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not applicable

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and concurrently expose an annual statement blanks proposal for 2022 annual reporting. The sponsored blanks proposal has been forwarded to the Blanks (E) Working Group to modify the instructions for Schedule T, the State Page and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments to ensure that entities are reporting premium by jurisdiction. This agenda item does not result in SSAP revisions. The proposed additions to the blanks instructions are shown below.

1. Schedule T, part 1 annual statement instructions for Health (This revision will make Health instructions consistent with the property casualty and life fraternal annual statement instructions.)

[Line 58 – Aggregate Other Alien](#)

Enter the total of the write-ins listed in schedule “Details of Write-ins Aggregated at Line 58 for Other Alien.” All U.S. business shall be allocated by state regardless of license status.

Details of Write-ins Aggregated at Line 58 for Other Alien

List separately each alien jurisdiction for which there is no pre-printed line on Schedule T.

If the premium from an alien jurisdiction is due to relocation of current policyholders, the amount may be aggregated and reported as “Other Alien.” Premiums from jurisdictions in which there is active writing must be reported by jurisdiction and include premium from relocated policyholders residing in the respective jurisdiction.

Identify each alien jurisdiction by using a **three-character (ISO Alpha 3) country code followed by the name of the country (e.g., DEU Germany)**. For premium that can be aggregated and reported as “Other Alien” as stated in the previous paragraph, use “ZZZ” for the country code and “Other Alien” for the country name. A comprehensive listing of country codes is available in the appendix of these instructions.

2. Schedule T, part 1 annual statement instructions for Health; Life and Fraternal and Property and Casualty

Add to general instructions:

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

3. Schedule T, Part 2 Uniform instructions:

Line 58 – Aggregate Other Alien

Enter the total of all alien business in the appropriate columns. Details by countries are not required.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

4. Add additional instructions to line 58 - Aggregate Other Alien to the annual statement instructions for Health; Life and Fraternal and Property and Casualty

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

5. State Page - general instructions to the annual statement instructions for Health; Life and Fraternal and Property and Casualty

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

6. Accident and Health Policy Experience Exhibit (AHPEE) to the annual statement instructions for Health; Life and Fraternal and Property and Casualty

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

Staff Review Completed by: Robin Marcotte– NAIC Staff, February 2022

Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and concurrently expose an annual statement blanks proposal for 2022 annual reporting. The sponsored blanks proposal has been forwarded to the Blanks (E) Working Group to modify the instructions for Schedule T, the State Page and Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. This agenda item does not result in SSAP revisions. The proposed additions to the blanks instructions are shown in the agenda item, but the primary instructional revision is as follows:

All premium adjustments (both increases and decreases), including but not limited to Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this item to the active listing and exposed proposed revisions to be incorporated into a Blanks (E) Working Group proposal (2022-10BWG) which would modify the instructions for Schedule T, the State Page and Accident and Health Policy Experience Exhibit (AHPEE). The proposed revisions clarify that all premium adjustments shall be allocated as premium in each respective jurisdiction. This agenda item did not propose statutory revisions. This item was exposed with a shortened comment period ending May 6 to permit consideration for a year-end 2022 effective date of the reporting revisions.

On May 24, 2022, the Statutory Accounting Principles (E) Working Group adopted this agenda item, which did not result in statutory accounting revisions, however the adoption expressed support for the corresponding Blanks (E) Working Group exposure (2022-10BWG), which modifies the instructions for Schedule T, the State Page and the Accident and Health Policy Experience Exhibit (AHPEE), clarifying the guidance for premium adjustments.

Issue: Treatment of Freddie Mac WI Certificates

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
New Issue or SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

Freddie Mac “When Issued K-Deal” certificates (“WI”) are backed by an asset pool held in trust, but those assets do not initially include any mortgages or mortgage-backed assets. Rather these assets include cash from the sale of the WI certificates and a commitment by Freddie Mac to deliver one or more structured pass through certificates (SPCs) in exchange for the WI trust’s cash within approximately 90 days of settlement. The date on which this delivery occurs is referred to as the “Subsequent Transfer Date.”

Prior to the Subsequent Transfer Date, the WI trusts pay fixed coupons to certificate holders which are funded from a Freddie Mac guarantee on the WI certificates. After the Subsequent Transfer Date the WI trust will hold the promised SPCs which are backed by mortgages and guaranteed by Freddie Mac. Additionally, after this date the WI trust becomes a pass-through of the underlying trust. The WI certificates have an optional exchange right where they can be exchanged for the underlying SPCs, but if not exchanged, the WI certificates after the Subsequent Transfer Date will still be backed by the SPCs.

The issue is the statutory accounting treatment of WI certificates prior to the Subsequent Transfer Date.

Existing Authoritative Literature:

SSAP No. 43R—Loan-Backed and Structured Securities, paragraphs 2-4:

2. Loan-backed securities are defined as securitized assets not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the payments received by the issuer from the underlying assets, including but not limited to pass-through securities, lease-backed securities, and equipment trust certificates.
3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to payments received by the issuer from the underlying assets.
4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor only has direct recourse to the issuer’s assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

SSAP No. 86—Derivatives. Key excerpts from SSAP No. 86 are as follows:

The definition of a derivative instrument and forwards from SSAP No. 86, paragraph 4 and 5d:

4. “Derivative instrument” means an agreement, option, instrument or a series or combination thereof:
 - a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or
 - b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.
- 5.d. “Forwards” are agreements (other than futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument.

Guidance on TBAs from the Annual Statement Instructions:

““To Be Announced” securities (commonly referred to as TBAs) are to be reported in Schedule D unless the structure of the security more closely resembles a derivative, as defined within *SSAP No. 86—Derivatives*, in which case the security should be reported on Schedule DB. The exact placement of TBAs in the investment schedules depends upon how a company uses TBA.

Excerpt from Annual Statement Instructions, Schedule D, Part 3 and 4 on Disposals / Acquisitions:

This schedule should include a detailed listing of all securities that were purchased/acquired during the current reporting year that are still owned as of the end of the current reporting year (amounts purchased and sold during the current reporting year are reported in detail on Schedule D, Part 5 and only in subtotal in Schedule D, Part 3). This should include all transactions that adjust the cost basis of the securities. **Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes.**

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Reporting entity has filed a RTAS with the NAIC SVO.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:

The inaugural offering was the WI-K132 transaction (CUSIP: 3137H2NM2) which settled on September 28th, 2021 with the promised K-deal certificates being the K-132’s AM class. The K-132 class AM certificates (CUSIP: 3137H3EW8) were settled and delivered to the WI-K132 trust on October 14th, 2021. The purpose of this request is to evaluate the structure of the WI offering more broadly but the WI-K132 transaction may serve as a helpful example for evaluation. To that end the offering documents for both the WI-K132 and the related K-132’s certificate offerings are linked below. The webpage housing the base offering documents for the WI and K-Deal programs are also linked for ease of reference along with informational materials further detailing the WI program.

Recommended Conclusion or Future Action on Issue:

Sponsoring entity requests statutory accounting guidance to confirm that WI Trust SPCs shall be reported in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* and not as a forward contract under *SSAP No. 86—Derivatives*.

Recommending Party:

State Farm Mutual Automobile Insurance Company

Mark Ludy, Staff Finance Analyst

Mark.E.Ludy.GC98@StateFarm.Com

March 8, 2022

Staff Recommendation:

NAIC staff recommends that the Working Group expose a tentative statutory accounting interpretation to clarify that investments in the Freddie Mac WI Program shall be captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* from initial acquisition. Key elements for this recommendation include:

- The WI Program is fully guaranteed by Freddie Mac and ensures that the investor will receive pass-through certificates, backed by mortgage loans held in trust, that reflect the terms of the investment set at original acquisition. In the event that the K-Deal certificates cannot be acquired, Freddie Mac is guaranteed to provide payment to the investor that reflects the full principal and interest per the original terms of the agreement, which reflects the payments that would have been received overtime if K-Deal certificates had been acquired.
- The definition of a forward contract in *SSAP No. 86* reflects an agreement between two parties that commit one party to purchase and another party to sell the instrument underlying the contract at a specified future date. With the WI Trust Program, the investor does not have a future commitment to acquire securities, as the investor acquires the WI Trust certificate on day one of the transaction and the investor is not required to convert the WI Trust certificates at any time. This WI Trust certificate is not a derivative instrument, as at the time of acquisition, the certificate reflects a tradeable investment in a trust structure backed by cash and a Freddie Mac guarantee of cash flows in accordance with terms established at original acquisition. In addition to having no variation to the investor as a result of an underlying interest, there is no requirement on the investor to take delivery of a different investment. The ability to convert the WI Trust certificate to a K-Deal certificate is strictly an election to the investor and is not a requirement to receive the pass-through cash flows per the terms of the initial investment.
- The WI Program, and resulting obligation of Freddie Mac, ultimately reflects an investment where the investor receives pass-through cash flows generated from mortgage loans acquired and held in trust. This is within the scope of *SSAP No. 43R—Loan-Backed and Structured Securities*, paragraphs 2-4.
- The WI Program, and treatment as a *SSAP No. 43R* security, is consistent with the current guidance for TBA securities when an insurer intends to take possession of the resulting mortgage-backed security. A TBA security reflects the pre-purchase of mortgage-backed securities prior to the finalization of the security issuance. Pursuant to the annual statement instructions, TBA securities are to be reported on Schedule D-1: Long-Term Bonds unless the structure more closely resembles a derivative. This determination depends

on how a company uses the TBA. (For example, if a company intended to assume the mortgage-backed security once issued, the TBA would be captured on Schedule D-1 at initial acquisition. If a reporting entity was to continually trade/roll TBA exposures, this would be more characteristics of a derivative and would be captured on Schedule DB as a derivative.)

Staff Review Completed by: Julie Gann, NAIC Staff – March 14, 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing and exposed a tentative interpretation *INT 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates* to clarify that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of SSAP No. 43R. This item has a shortened comment deadline of May 6.

On May 24, 2022, the Statutory Accounting Principles (E) Working Group adopted *INT 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates* to clarify that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* from the date of initial acquisition.

Interpretation of the Statutory Accounting Principles (E) Working Group

INT 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates

INT 22-01 Dates Discussed

April 4, 2022; May 24, 2022

INT 22-01 References

SSAP No. 43R—Loan-Backed and Structured Securities

SSAP No. 86—Derivatives

INT 22-01 Issue

1. This interpretation is to address questions on the accounting and reporting for Freddie Mac “When-Issued K-Deal (WI Trust) Certificates” (WI Program). Ultimately, the question is whether the structure should be initially captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* or as a forward contract in scope of *SSAP No. 86—Derivatives*.
2. The design of the WI Program is summarized as follows:
 - a. Investor acquires WI Trust certificates, which are backed by cash held in the WI Trust and pay a fixed coupon amount funded from a Freddie Mac guarantee.
 - b. Within 90 days, the trust uses the cash to acquire newly issued K-Deal structured pass-through certificates (SPCs) meeting certain pooling parameters laid out in the respective WI Offering Circular Supplement. K-Deal SPC (s) are Freddie Mac-issued structured pass-through certificates backed by the corresponding class of certificates issued by a separate REMIC trust that holds multifamily fixed-rate mortgage loans. The cash flows from the mortgage loans held by the REMIC trust provide pass-through payments to holders of the K-Deal SPCs.
 - c. An investor can choose to continue to hold the WI Trust certificates or exchange dollar-for-dollar their WI-securities into the underlying K-Deal SPCs. In either case, the investor receives a pass-through of cash flows generated by the mortgages held in the REMIC trust and the performance of the K-Deal SPCs is guaranteed by Freddie Mac. If continuing to hold the WI Trust certificates – rather than convert the certificates to K-deal SPCs – the K-Deal SPCs are held by the WI Trust, who in turn passes the cashflows to WI Trust investors. The WI Trust certificates benefit from Freddie Mac payment guarantee which guarantees that any cashflows collected from the K-Deal SPCs will be paid to the WI certificate holders.
3. Additional characteristics on this program include the following:
 - a. The WI Trust certificates are public securities and tradeable shortly after pricing.
 - b. The WI Trust certificates are backed by a Freddie Mac guarantee from acquisition.
 - c. From acquisition of the WI Trust certificates, the investor receives fixed coupon amounts reflective of the investment terms of the K-Deal SPCs.

- d. The WI Trust is obligated to acquire, and Freddie Mac is required to sell, the K-Deal SPCs at the amount stated at the time of initial investment. Meaning, the investor is not at a risk of loss, nor will experience any variation in outcome due to underlying variables that occur from the time of initial investment in the WI Trust until the K-Deal SPCs are acquired. If market forces change the purchase price of the K-Deal SPCs during the 90-days after initial acquisition of the WI Trust certificates, then Freddie Mac is still required to sell the K-Deal certificates at the terms agreed to at original investment. Ultimately, the investor is guaranteed an investment in K-Deal SPCs that reflects the notional value of the WI Trust-certificates and coupon terms at initial acquisition. (For example, if the investor acquired \$100 million of WI Trust certificates at acquisition, when the K-Deals are subsequently acquired, the entity will receive \$100 million of K-Deal SPCs with the same payment terms regardless of any market impacts.)
 - e. In the event that Freddie Mac is unable to acquire the K-Deal SPCs within the 90-day period, Freddie Mac is required to return the principal to the investor as well as provide a yield maintenance payment calculated using the full coupon payments that would have been received over the course of the investment.
 - f. In the event that the investor elects to exchange the WI Trust certificates to the K-Deal SPCs, the investor receives an equivalent principal amount of the K-Deal SPCs of the same class. Although the investment will have a change in CUSIP, any such exchange is not deemed to be a taxable event as described in the respective Offering Circular Supplements for the WI Certificates. As such investors will not recognize a gain or loss on the exchange and investors will be treated as continuing to own the interests that were owned immediately prior to the exchange. Stated differently, any gains or losses on the exchanged WI-Certificates are “rolled into” the investors’ new K-Deal Certificate position.
4. The question of whether the structure is a loan-backed or structured security, or a derivative is primarily focused on the initial acquisition and the 90-day (or less) timeframe before the WI Trust acquires K-Deal certificates. The question is whether the initial 90-day acquisition of the WI Trust certificate, prior to the trust’s acquisition of the K-Deal certificates, represents a forward contract required to be accounted for under *SSAP No. 86—Derivatives*. Key excerpts from SSAP No. 86 are as follows:
- a. The definition of a derivative instrument from SSAP No. 86, paragraph 4:
 - 4. “Derivative instrument” means an agreement, option, instrument or a series or combination thereof:
 - a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or
 - b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.
 - b. The definition of a forward contract from SSAP No. 86, paragraph 5.d.:
 - 5.d. “Forwards” are agreements (other than futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the

initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument.

5. This interpretation intends to clarify whether investments in the Freddie Mac WI Program shall be initially captured in scope of *SSAP No. 86—Derivatives* or captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities*.

INT 21-01 Discussion

6. This interpretation clarifies that investments in the Freddie Mac WI Program shall be captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* from initial acquisition, and not as a derivative forward contract, for the following reasons:

- a. The WI Program is fully guaranteed by Freddie Mac and ensures that the investor will receive pass-through certificates, backed by mortgage loans held in trust, that reflect the terms of the investment set at original acquisition. In the event that the K-Deal certificates cannot be acquired, Freddie Mac is guaranteed to provide payment to the investor that reflects the full principal and interest per the original terms of the agreement, which reflects the payments that would have been received overtime if K-Deal certificates had been acquired.
- b. The definition of a forward contract in *SSAP No. 86* reflects an agreement between two parties that commit one party to purchase and another party to sell the instrument underlying the contract at a specified future date. With the WI Trust Program, the investor does not have a future commitment to acquire securities, as the investor acquires the WI Trust certificate on day one of the transaction and the investor is not required to convert the WI Trust certificates at any time. This WI Trust certificate is not a derivative instrument, as at the time of acquisition, the certificate reflects a tradeable investment in a trust structure backed by cash and a Freddie Mac guarantee of cash flows in accordance with terms established at original acquisition. In addition to having no variation to the investor as a result of an underlying interest, there is no requirement on the investor to take delivery of a different investment. The ability to convert the WI Trust certificate to a K-Deal certificate is strictly an election to the investor and is not a requirement to receive the pass-through cash flows per the terms of the initial investment.
- c. The WI Program, and resulting obligation of Freddie Mac, ultimately reflects an investment where the investor receives pass-through cash flows generated from mortgage loans acquired and held in trust. This investment dynamic is within the scope of *SSAP No. 43R—Loan-Backed and Structured Securities*, paragraphs 2-4:
 2. Loan-backed securities are defined as securitized assets not included in structured securities, as defined below, for which the payment of interest and/or principal is directly proportional to the payments received by the issuer from the underlying assets, including but not limited to pass-through securities, lease-backed securities, and equipment trust certificates.
 3. Structured securities are defined as loan-backed securities which have been divided into two or more classes for which the payment of interest and/or principal of any class of securities has been allocated in a manner which is not proportional to payments received by the issuer from the underlying assets.
 4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-

backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer's obligation has been fully satisfied. The investor only has direct recourse to the issuer's assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

- d. The WI Program, and treatment as a SSAP No. 43R security, is consistent with the current guidance for TBA securities when an insurer intends to take possession of the resulting mortgage-backed security. A TBA security reflects the pre-purchase of mortgage-backed securities prior to the finalization of the security issuance. Pursuant to the annual statement instructions, TBA securities are to be reported on Schedule D-1: Long-Term Bonds unless the structure more closely resembles a derivative. This determination depends on how a company uses the TBA. (For example, if a company intended to assume the mortgage-backed security once issued, the TBA would be captured on Schedule D-1 at initial acquisition. If a reporting entity was to continually trade/roll TBA exposures, this would be more characteristics of a derivative and would be captured on Schedule DB as a derivative.)

INT 22-01 Consensus

5. The Statutory Accounting Principles (E) Working Group reached a consensus that investments in the WI Trust Program shall be captured in scope of *SSAP No. 43R—Loan-Backed and Structured Securities* from initial acquisition.

6. If a reporting entity elects to convert WI Trust SPC securities into K-Deal SPC securities, the guidance in the Annual Statement Instructions, Schedule D, Part 3 and Part 4 shall be followed. Per that guidance, the transition from a WI Trust to a K-Deal shall not be reported as a disposal or acquisition. As the terms and cost basis of the SPC certificates would be identical, and the change would only reflect a CUSIP number change, a disposal and reacquisition shall not be recorded.

7. Excerpt from Annual Statement Instructions, Schedule D, Part 3 and 4:

This schedule should include a detailed listing of all securities that were purchased/acquired during the current reporting year that are still owned as of the end of the current reporting year (amounts purchased and sold during the current reporting year are reported in detail on Schedule D, Part 5 and only in subtotal in Schedule D, Part 3). This should include all transactions that adjust the cost basis of the securities. Thus, it should not be used for allocations of TBAs to specific pools subsequent to initial recording in Schedule D, Part 3 or other situations such as CUSIP number changes.

INT 22-01 Status

8. No further discussion is planned.

 Maintenance Agenda Submission Form
 Form A**

Issue: Related Party Reporting

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item has been drafted in response to recent discussions on the reporting and disclosure requirements for investments with related parties. This agenda item intends to encompass two main goals:

1. Clarify the reporting of affiliate transactions within existing reporting lines in the investment schedules. This clarification intends to be consistent with the definition of an “affiliate” pursuant to the *Insurance Holding Company System Regulatory Act (Model #440)*, SSAP No. 25—*Affiliates and Other Related Parties* and SSAP No. 97—*Investments in Subsidiary, Controlled and Affiliated Entities*.
2. Incorporate new reporting requirements for investment transactions with related parties. Pursuant to recent discussions, regulators desire additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to Model #440. To preserve the affiliate definition and reporting categories, these additional proposed reporting elements will be captured outside of the current affiliate reporting requirements.

Affiliate Definition and Identified Reporting Issues:

The *Insurance Holding Company System Regulatory Act (Model #440)* defines “affiliate” and “control” as:

- **Affiliate:** An “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.
- **Control:** The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption may be rebutted by a showing made in the manner provided by Section 4K that control does not exist in fact. The commissioner may determine, after furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination, that control exists in fact, notwithstanding the absence of a presumption to that effect.

The guidance / concepts from Model #440 are reflected in SSAP No. 25, paragraphs 5-7 and SSAP No. 97, paragraphs 5-7 and are summarized as follows:

- An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.
- Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.
- Control shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:
 1. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
 2. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
 3. An entity where the insurer has given up participation rights as a shareholder to the investee.

The Annual Statement Instructions identifies what is captured in the reporting lines for “Parent, Subsidiary and Affiliates” as “Defined by *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.”

Under the existing guidance, the following investments would likely not be reported as affiliated unless a domiciliary state has directed otherwise:

- Qualifying affiliated investments for which the domiciliary state has approved a disclaimer of affiliation or disclaimer of control from the affiliated entity. Once a disclaimer has been granted, the qualifying affiliate relationship is no longer considered an affiliate and any investments issued or held from the entity would not be reported as affiliated.
- Investments held from entities that do not qualify as affiliates, even if the entity qualifies as a related party. The determination of an affiliate is based on direct or indirect control. If the control determinants are not met, investments held from related parties are not reported as affiliated.

- Any investments acquired that were sponsored / originated by an affiliate, but the actual investment is not in the affiliate or other companies within the controlled holding company structure.

Model #440 explicitly excludes the purchase of securities solely for investment purposes from the determination of a change in control, so long as the securities are not used by voting or otherwise to cause or attempt to cause the substantial lessening of competition in any insurance market in the state. This guidance further states that if the purchase of securities results in a presumption of control, then the acquisition of securities would not be considered solely for investment purposes unless the commissioner of the insurer's state of domicile accepts a disclaimer of control of affirmatively finds that control does not exist.

Proposed Related Party Revisions

Although the affiliate definition may preclude certain investments from being captured in the “affiliated” reporting lines, there is a regulator desire to have improved information on investments with non-affiliated related parties as well as investments acquired from affiliates and non-affiliated related parties that do not reflect an investment within the affiliate/related party. For example, if the affiliate/related party was to sponsor or originate the investment, such investment would likely not be captured in the designated affiliate reported lines. This agenda item proposes revisions to SSAP No. 25 and SSAP No. 43R, as well as proposed concepts for an annual statement reporting change to capture information on these investments. Additionally, the proposed revisions would provide clarity, consistent with the existing affiliate definition, on scenarios that would qualify as affiliated transactions.

As an additional item, the existing reference in SSAP No. 25 to *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18* (FIN 35) has been proposed to be removed. Although the intent was to originally update the U.S. GAAP reference to reflect the current Accounting Standards Codification (ASC) citations, it was noted that the original provisions in FIN 35 (captured now in ASC 323-10-15-8, 323-10-15-10 and 323-10-15-11) only reiterate that the presumption that the investor has the ability to exercise significant influence over the investee's operating and financial policies based on ownership of voting stock stands until overcome by prominent evidence to the contrary. The ASC includes the following indicators originally in FIN 35 for when investors would be unable to exercise significant influence over the operating and financial policies of an investee:

- Opposition by the investee, such as litigation or complaints to government regulatory authorities, challenges the investor's ability to exercise significant influence.
- The investor and investee sign an agreement (such as a standstill agreement) under which the investor surrenders significant rights as a shareholder.
- Majority ownership of the investee is concentrated among a small group of shareholders who operate the investee without regards to the views of the investor.
- The investor wants or needs more financial information to apply the equity method than is available to the investee's other shareholders, tries to obtain that information, and fails. (The ASC example is a request for quarterly info when the investee only provides public information annually.)
- The investor tries and fails to obtain representation on the investee's board of directors.

The ASC also notes that these situations are just indicators and are not all-inclusive and that none of the individual circumstances are necessarily conclusive that the investee is unable to exercise significant influence over the investee's operating and financial policies. Rather, if any of these situations exist, an investor with controlling voting ownership shall evaluate all facts and circumstances related to the investment to reach a judgment about

whether the presumption that the investor has the ability to exercise significant influence over the investee's operating and financial policies is overcome. Furthermore, the guidance indicates that it may be necessary to evaluate the facts and circumstances over a period of time before reaching a judgment.

After a review of the ASC / FIN 35 guidance, it is proposed that the reference be deleted from SSAP No. 25. The general concepts for a review of all facts and circumstances, as well as example indicators, are already reflected directly in SSAP No. 25. Lastly, the reference to FIN 35 / ASC could be confusing as U.S. GAAP utilizes a different (higher) percentage of voting ownership than statutory accounting.

Existing Authoritative Literature:

- *Insurance Holding Company System Regulatory Act (Model #440)* – This model is an accreditation standard and is adopted by all states in a substantially similar manner. Only the territories of America Samoa, Guam and the Northern Mariana Islands do not have this model adopted.
- *SSAP No. 25—Affiliates and Other Related Parties* establishes statutory accounting principles and disclosure requirements for related party transactions. This statement shall be followed for all related party transactions, even if the transaction is also governed by other statutory accounting principles. As detailed in paragraph 1, related party transactions are subject to abuse as reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. The guidance in paragraphs 4-8 include the definition of related parties and affiliates:

4. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:
 - a. Affiliates of the reporting entity, as defined in paragraph 5;
 - b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;
 - c. The principal owners, directors, officers of the reporting entity;
 - d. Any immediate family member of a principal owner, director or executive officer of the reporting entity, which means any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law, or sister-in-law, or individual related by blood or marriage whose close association is equivalent to a family relationship of such director, executive officer or nominee for director, or any person (other than a tenant or employee) sharing the household of such director, executive officer or nominee for director;
 - e. Companies and entities which share common control, such as principal owners, directors, or officers, including situations where principal owners, directors, or officers have a controlling stake in another reporting entity;
 - f. Any direct or indirect ownership greater than 10% of the reporting entity results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation;
 - g. The management of the reporting entity, its parent or affiliates (including directors);

- h. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;
 - i. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;
 - j. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;
 - k. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;
 - l. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and
 - m. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.
5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.
6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.
7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:
- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
 - b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

- c. An entity where the insurer has given up participation rights¹ as a shareholder to the investee.
- d. Agreements where direct or indirect non-controlling ownership interest is less than 10% where the parties have structured the arrangement in this structure to avoid the 10% threshold in paragraph 4.f. and paragraph 8.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

- *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* establishes guidance for these investments. The guidance in this SSAP provides different guidance when there is a “more than minor” or “minor ownership interest.” Pursuant to existing guidance, reporting entities must also identify whether the investment is a related-party transaction.

9. Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest¹, shall be reported using an equity method as defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*, paragraphs 8.b.i. through 8.b.iv. (The equity method calculation may result with a negative valuation of the investment; therefore, the SSAP No. 97 equity method calculation shall occur regardless of whether the investment is supported by an audit and the reporting entity will nonadmit the investment.) A reporting entity whose shares of losses in a SSAP No. 48 entity exceeds its investment in the SSAP No. 48 entity shall disclose the information required by SSAP No. 97, paragraph 35.a.

Footnote: With the identification of whether the reporting entity has a minor ownership interest, reporting entities must also identify whether the investment is a related-party transaction. Pursuant to the concepts reflected in *SSAP No. 25—Affiliates and Other Related Parties*, consideration shall be given to the substance of the transaction and the parties whose action or performance materially impacts the insurance reporting entity holding the security. For example, if the underlying assets within a SSAP No. 48 entity represent assets issued by an affiliate, then the SSAP No. 48 entity shall be considered a related party (affiliate) investment, with the transaction subject to the accounting and reporting provisions of SSAP No. 25. As identified in SSAP No. 25, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

- *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* establishes statutory accounting principles for investments in subsidiaries, controlled and affiliated entities. The guidance in paragraphs 3-6 include the definitions for parent, subsidiary, and affiliate. (The definition for an affiliate and control is identical

¹ The term “participating rights” refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee’s ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in EITF 96-16, *Investor’s Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in this EITF.

to SSAP No. 25.) (As noted, the Annual Statement reporting lines for “Parent, Subsidiary and Affiliates” refers to the definition within SSAP No. 97. If an investment is held for an entity that does not meet the SSAP No. 97 definitions, or for which a disclaimer of control or affiliation has been received, then the investment would not be captured within the Parent, Subsidiary or Affiliate reporting line.)

3. Parent and subsidiary are defined as follows:
 - a. Parent—An entity that directly or indirectly owns and controls the reporting entity;
 - b. Subsidiary—An entity that is, directly or indirectly, owned and controlled by the reporting entity.
4. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments.
5. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity².
6. Control as defined in paragraph 5 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. An investment in an SCA entity may fall below the level of ownership described in paragraph 5, in which case, the reporting entity would discontinue the use of the equity method, as prescribed in paragraph 13.g. Additionally, through an increase in the level of ownership, a reporting entity may become qualified to use the equity method of accounting (paragraph 8.b.), in which case, the reporting entity shall add the cost of acquiring additional interest to the current basis of the previously held interest and shall apply the equity method prospectively, as of the date the investment becomes qualified for equity method accounting. Examples of situations where the presumption of control may be in doubt include the following:

² Investments in an exchange traded fund (ETF) or a mutual fund (as defined by the SEC) does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF or mutual fund unless ownership of the ETF actually results in “control” with the power to direct or cause the direction of management of an underlying company. ETFs and mutual funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws. ETFs and mutual funds held by a reporting entity shall be reported as common stock, unless the ETF qualifies for bond or preferred stock treatment per the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. Reporting entities are not required to verify that SCAs (subject to SSAP No. 97) are represented in the portfolio of securities held in ETFs or mutual funds or to adjust the value of SCAs as a result of investments in ETFs or mutual funds.

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participating rights³ as a shareholder to the investee.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In March 2021, the Statutory Accounting Principles (E) Working Group adopted revisions to SSAP No. 25 pursuant to agenda item 2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities. Additionally, a new reporting Schedule Y, Part 3 was adopted by the Blanks (E) Working Group in proposal 2020-37BWG, with an initial effective date of Dec. 31, 2021, to capture information on all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls.

The adopted revisions to SSAP No. 25 from agenda item 2019-34 are summarized as follows:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Rejected several U.S. GAAP standards addressing variable interest entities.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): Not applicable.

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a nonsubstantive change, and expose revisions to SSAP No. 25 and SSAP No. 43R to clarify application of the existing affiliate definition as well as to incorporate new disclosure requirements for investments acquired through, or in, related parties, regardless of if they meet the affiliate definition. (Staff Note: Pursuant to the

³ The term “participating rights” refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee’s ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in *EITF 96-16, Investor’s Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in this EITF.

NAIC Policy Statement on Maintenance of Statutory Accounting Principles, new disclosures and modifications to existing disclosures are considered nonsubstantive changes.)

Proposed edits to SSAP No. 25: (New paragraph 9. Remaining paragraphs would be renumbered.)

This new paragraph 9 clarifies the application of the existing affiliate and control definitions to limited partnerships, trusts and other special purpose entities when control is held by an affiliated general partner, servicer or other arrangement. (The proposed deletion of FIN 35 is discussed earlier in the agenda item, but is noted as not necessary with the existing statutory accounting guidance.)

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment ~~based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee.~~ The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participation rights⁴ as a shareholder to the investee.

⁴ The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in EITF 96-16, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

9. For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company, indirect control shall be presumed to exist. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25

Proposed edits to SSAP No. 43R:

These revisions move the existing guidance in paragraph 4.a. to paragraph 6 and notes the requirement to identify related party investments in the investment schedules. (Note Footnote 5 is just moved to a new paragraph.)

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor only has direct recourse to the issuer’s assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

~~a. In determining whether a loan-backed structure is a related party investment, consideration shall be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. For example, although a loan-backed security may be acquired from a non-related issuer, if the assets held in trust predominantly⁵ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment, and the transaction shall also be subject to the accounting and reporting provisions in SSAP No. 25—Affiliates and Other Related Parties.~~

⁵In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—Affiliates and Other Related Parties, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise⁶ or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

6. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements of SSAP No. 25. In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security if the SSAP No. 43R transaction is a related party arrangement⁷. Loan-backed and structured securities meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.

a. Although a loan-backed or structured security may be acquired from a non-related issuer, if the assets held in trust predominantly⁸ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as affiliates, these securities shall be identified as related party investments in the investment schedules.

b. A loan-backed or structured security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the loan-backed or structured security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, including control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with SSAP No. 25—Affiliates and Other Related Parties.

⁶ Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

~~⁷ As discussed in paragraph 4.a. of this statement, a SSAP No. 43R security may still be considered a related party transaction even if the asset trustee or security issuer is a non-related party.~~

⁸ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—Affiliates and Other Related Parties, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

Proposed Annual Statement Reporting Changes: *(These will be captured in a blanks proposal.)*

These reflect a new electronic-only column for the investment schedules and the related instructions.

Column XX: Investments Involving Related Parties:

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control / affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

Staff Review Completed by: Julie Gann, NAIC Staff – October 2021

Status:

On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 25 and SSAP No. 43R, as illustrated above, to clarify application of the existing affiliate definition and incorporate disclosure requirements for all investments that involve related parties, regardless of if they meet the affiliate definition. In addition, draft annual statement reporting revisions were also exposed, in anticipation of incorporating those revisions into a Blanks (E) Working Group proposal.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group exposed this agenda item, incorporating proposed revisions after considering comments from interested parties shown highlighted in gray below. The changes from the prior exposure only clarify previous components of the proposed revisions. Similar changes to the blanks proposal are also concurrently exposed by the Blanks (E) Working Group in their corresponding agenda item (2021-22BWG) to allow for a year-end 2022 effective date. This item was exposed with a shortened comment period ending May 6.

Proposed edits to SSAP No. 25: (New paragraph 9. Remaining paragraphs would be renumbered.)

This new paragraph 9 clarifies the application of the existing affiliate and control definitions to limited partnerships, trusts and other special purpose entities when control is held by an affiliated general partner, servicer or other arrangement. (The proposed deletion of FIN 35 is discussed earlier in the agenda item, but is noted as not necessary with the existing statutory accounting guidance.)

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment ~~based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee.~~ The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participation rights⁹ as a shareholder to the investee.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for

⁹ The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in EITF 96-16, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

9. For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company¹⁰, indirect control shall be presumed to exist unless the presumption of control can be overcome as detailed in paragraph 7. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

Proposed edits to SSAP No. 43R:

These revisions move the existing guidance in paragraph 4.a. to paragraph 6 and notes the requirement to identify related party investments in the investment schedules. (Note Footnote 5 is just moved to a new paragraph.)

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor only has direct recourse to the issuer’s assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

~~a.—In determining whether a loan-backed structure is a related party investment, consideration shall be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. For example, although a loan-backed security may be acquired from a non-related issuer, if the assets held in trust predominantly¹⁴ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction~~

¹⁰ Consistent with SSAP No. 97, footnote 1, investments in an exchange traded fund (ETF) or a mutual fund (as defined by the SEC) does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF or mutual fund unless ownership of the ETF actually results in “control” with the power to direct or cause the direction of management of an underlying company. ETFs and mutual funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws.

¹⁴ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—*Affiliates and Other Related Parties*, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

~~shall be considered an affiliated investment, and the transaction shall also be subject to the accounting and reporting provisions in SSAP No. 25—Affiliates and Other Related Parties.~~

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise¹² or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

6. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements of SSAP No. 25. In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security ~~if the SSAP No. 43R transaction is a related party arrangement¹³~~. Loan-backed and structured securities meet the definition of assets as defined in SSAP No. 4—*Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.

- a. Although a loan-backed or structured security may be acquired from a non-related issuer, if the assets held in trust predominantly¹⁴ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as affiliates, these securities shall be identified as related party investments in the investment schedules.
- b. A loan-backed or structured security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the loan-backed or structured security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect

¹² Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

~~¹³ As discussed in paragraph 4.a. of this statement, a SSAP No. 43R security may still be considered a related party transaction even if the asset trustee or security issuer is a non-related party.~~

¹⁴ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—*Affiliates and Other Related Parties*, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

control, including control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with SSAP No. 25—Affiliates and Other Related Parties.

Proposed Annual Statement Reporting Changes: (These in a blanks proposal 2021-22BWG.)

These reflect a new electronic-only column for the investment schedules and the related instructions.

Column XX: Investments Involving Related Parties:

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control / affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.

On May 24, 2022, the Statutory Accounting Principles (E) Working Group took the following actions:

1. Adopted, as final, the exposed revisions to SSAP No. 25 and SSAP No. 43R, as illustrated below, to clarify application of the existing affiliate definition and incorporate disclosure requirements for all investments that involve related parties, regardless of if they meet the affiliate definition. The revisions to SSAP No. 43R also included additional minor edits to paragraph 6.b., clarifying that the investments from any arrangements that results in direct or indirect control, which include but are not limited to control through a servicer, shall be reported as affiliated investments.
2. In addition, to the adopted revisions, the Statutory Accounting Principles (E) Working Group expressed support for the corresponding Blanks (E) Working Group proposal (2021-22BWG), which will incorporate 6 reporting codes to identify the role of the related party in any investment, on any reporting line, in

schedules: B – Mortgage Loans, D – Long-Term Bonds, DB – Derivatives, BA – Other Long-Term Invested Assets, DA – Short-Term Investments, E2 – Cash Equivalents, and DL – Securities Lending Collateral Assets, with an effective date of December 31, 2022.

3. Direct NAIC staff to draft the following for future Working Group discussion: 1) possible footnote revisions pursuant to interested parties' comments, and 2) examples for possible inclusion in SSAP No. 43R, to further clarify investments that should be classified as affiliated. and
4. Send a referral to the Valuation of Securities (E) Task Force, notifying of this adopted agenda item, and to assess whether corresponding edits are needed to the *Practices and Procedures Manual of the NAIC Investment Analysis Office* regarding CLO investments that may now be classified as affiliated.

Adopted revisions to SSAP No. 25: (New paragraph 9. Remaining paragraphs would be renumbered.)

This new paragraph 9 clarifies the application of the existing affiliate and control definitions to limited partnerships, trusts and other special purpose entities when control is held by an affiliated general partner, servicer or other arrangement. (The proposed deletion of FIN 35 is discussed earlier in the agenda item, but is noted as not necessary with the existing statutory accounting guidance.)

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment ~~based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee.~~ The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participation rights¹⁵ as a shareholder to the investee.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

9. For entities not controlled by voting interests, such as limited partnerships, trusts and other special purpose entities, control may be held by a general partner, servicer, or by other arrangements. The ability of the reporting entity or its affiliates to direct the management and policies of an entity through such arrangements shall constitute control as defined in paragraph 6. Additionally, a reporting entity or its affiliates may have indirect control of other entities through such arrangements. For example, if a limited partnership were to be controlled by an affiliated general partner, and that limited partnership held greater than 10% of the voting interests of another company¹⁶, indirect control shall be presumed to exist unless the presumption of control can be overcome as detailed in paragraph 7. If direct or indirect control exists, whether through voting securities, contracts, common management or otherwise, the arrangement is considered affiliated under paragraph 5. Consistent with paragraph 8, a disclaimer of affiliation does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

Adopted revisions SSAP No. 43R:

These revisions move the existing guidance in paragraph 4.a. to paragraph 6 and notes the requirement to identify related party investments in the investment schedules. (Note Footnote 5 is just moved to a new paragraph.)

4. Loan-backed securities are issued by special-purpose corporations or trusts (issuer) established by a sponsoring organization. The assets securing the loan-backed obligation are acquired by the issuer and pledged to an independent trustee until the issuer’s obligation has been fully satisfied. The investor only has direct recourse to the issuer’s assets, but may have secondary recourse to third parties through insurance or guarantee for repayment of the obligation. As a result, the sponsor and its other affiliates may have no financial obligation under the instrument, although one of those entities may retain the responsibility for servicing the underlying assets. Some sponsors do guarantee the performance of the underlying assets.

¹⁵ The term “participating rights” refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee’s ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in EITF 96-16, *Investor’s Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in this EITF.

¹⁶ Consistent with SSAP No. 97, footnote 1, investments in an exchange traded fund (ETF) or a mutual fund (as defined by the SEC) does not reflect ownership in an underlying entity, regardless of the ownership percentage the reporting entity (or the holding company group) has of the ETF or mutual fund unless ownership of the ETF actually results in “control” with the power to direct or cause the direction of management of an underlying company. ETFs and mutual funds are comprised of portfolios of securities subject to the regulatory requirements of the federal securities laws.

~~a. In determining whether a loan-backed structure is a related party investment, consideration shall be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security. For example, although a loan-backed security may be acquired from a non-related issuer, if the assets held in trust predominantly¹⁷ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment, and the transaction shall also be subject to the accounting and reporting provisions in SSAP No. 25—Affiliates and Other Related Parties.~~

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise¹⁸ or by a special purpose trust in a transaction sponsored by a government sponsored enterprise in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages and the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

6. Investments within the scope of this statement issued by a related party or acquired through a related party transaction or arrangement are also subject to the provisions, admittance assessments and disclosure requirements of SSAP No. 25. In determining whether a security is a related party investment, consideration should be given to the substance of the transaction, and the parties whose action or performance materially impacts the insurance reporting entity holding the security if the SSAP No. 43R transaction is a related party arrangement¹⁹. Loan-backed and structured securities meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement and SSAP No. 25.

a. Although a loan-backed or structured security may be acquired from a non-related issuer, if the assets held in trust predominantly²⁰ reflect assets issued by affiliates of the insurance reporting entity, and the insurance reporting entity only has direct recourse to the assets held in trust, the transaction shall be considered an affiliated investment. In such situations where the underlying collateral assets are issued by related parties that do not qualify as

~~¹⁷ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—Affiliates and Other Related Parties, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.~~

¹⁸ Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that either directly issue qualifying mortgage-referenced securities or sponsor transactions in which a special purpose trust issues qualifying mortgage-reference securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of mortgage credit risk.

~~¹⁹ As discussed in paragraph 4.a. of this statement, a SSAP No. 43R security may still be considered a related party transaction even if the asset trustee or security issuer is a non-related party.~~

²⁰ In applying this guidance, a reporting entity is not required to complete a detailed review of the assets held in trust to determine the extent, if any, the assets were issued by related parties. Rather, this guidance is a principle concept intended to prevent situations in which related party transactions (particularly those involving affiliates) is knowingly captured in a SSAP No. 43R structure and not identified as a related party transaction (or not reported as an affiliated investment on the investment schedule) because of the involvement of a non-related trustee or SSAP No. 43R security issuer. As identified in SSAP No. 25—Affiliates and Other Related Parties, it is erroneous to conclude that the inclusion of a non-related intermediary, or the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to identify and assess the investment transaction as a related party arrangement.

affiliates, these securities shall be identified as related party investments in the investment schedules.

- b. A loan-backed or structured security may involve a relationship with a related party but not be considered an affiliated investment. This may be because the relationship does not result in direct or indirect control of the issuer or because there is an approved disclaimer of control or affiliation. Regardless of whether investments involving a related party relationship are captured in the affiliated investment reporting lines, these securities shall be identified as related party investments in the investment schedules. Examples of related party relationships would include involvement of a related party in sponsoring or originating the loan-backed or structured security or any type of underlying servicing arrangement. For the avoidance of doubt, investments from any arrangement that results in direct or indirect control, which include but are not limited to control through a servicer or other controlling arrangement, shall be reported as affiliated in accordance with SSAP No. 25—Affiliates and Other Related Parties.

Supported Annual Statement Reporting Changes: (Reflected in 2021-22BWG.)

These reflect a new electronic-only column for the investment schedules and the related instructions.

Column XX: Investments Involving Related Parties:

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control / affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on
April 4, 2022, with Comments due June 3

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group).

We offer the following comments:

Ref #2021-20: Effective Derivatives – ASU 2017-12

The Working Group exposed two documents for public comment. The first document (labeled 21-20 SSAP No. 86 – Exhibit A 3-2-22), proposes revisions in the form of a new Exhibit A (which will replace both Exhibit A and Exhibit B of SSAP No. 86 that adopts with modification U.S. GAAP guidance in determining hedge effectiveness. The second document (labeled 21-20 SSAP No. 86 – Excluded Components - 3-17-22), proposes measurement methods for excluded components in hedging Ref # 2021-20. The Working Group also directed staff to continue to work with industry representatives on other elements within ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities.

Interested parties support the changes and we look forward to working with the staff on the further updates.

Ref #2022-01: Conceptual Framework – Updates

The Working Group moved this agenda item to the active listing, categorized as a SAP

Statutory Accounting Principles Working Group
June 3, 2022
Page 2

clarification, and exposed revisions to the Preamble, SSAP No. 4—*Assets and Nonadmitted Assets* and SSAP No. 5R—*Liabilities, Contingencies and Impairment of Assets* to incorporate 1) updates from FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 7, Presentation which identifies factors to consider when deciding how items should be displayed on the financial statements, and 2) Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements, which updates the definitions of an asset and a liability. The Working Group also exposed two draft issue papers for historical documentation of these SAP clarifications.

Interested parties request an additional 30 days to review this item.

Ref #2022-02: SSAP No. 48 – Alternative Valuation of Minority Ownership Interests

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed two possible options for the U.S. GAAP audit exception in SSAP No. 48—*Joint Ventures, Partnerships and Limited Liability Companies*. The options are described below:

Option #1 proposes to delete the audited U.S. tax basis equity as a permissible valuation method as this method does not appear to be utilized by insurers.

Option #2 proposes to retain the audited U.S. tax basis equity valuation method but clarifies that the audit must reside at the investee level.

Interested parties recommend that Option #2 be adopted as there are insurers who use this approach for investments in some partnerships.

Ref #2022-04: ASU 2021-10, Government Assistance

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 24—*Discontinued Operations and Unusual or Infrequent Items* which incorporate certain disclosures from ASU 2021-10 to supplement existing disclosures regarding unusual or infrequent items.

Interested parties have no comment on this item.

Ref #2022-05: ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities

The Working Group moved this item to the active listing, categorized as a SAP clarification, and exposed revisions to reject ASU 2021-05 in SSAP No. 22R—*Leases*.

Interested parties have no comment on this item.

Statutory Accounting Principles Working Group
June 3, 2022
Page 3

Ref :2022-06: ASU 2021-07, Compensation – Stock Compensation

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 104R—*Share-Based Payments* to incorporate a practical expedient for the current price input, a required component for option-pricing models which are utilized in the determination of fair value for share-based payments.

Interested parties have no comment on this item.

Ref #2022-07: ASU 2021-08, Business Combinations

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 47—*Uninsured Plans* and SSAP No. 68—*Business Combinations and Goodwill* to reject ASU 2021-08 for statutory accounting. In addition, the proposed revisions to SSAP No. 68 include notations that the rejection of ASU 2021-08 does not impact the determination of U.S. GAAP book value in an acquired entity.

Interested parties have no comment on this item.

RE: Ref# 2022-01: Conceptual Framework – Updates

Dear Mr. Bruggeman:

Interested parties appreciate the extension of the comment deadline and the opportunity to comment on Ref# 2022-01 that was released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group) during its meeting on April 4 in Kansas City.

We offer the following comments:

Ref #2022-01: Conceptual Framework – Updates

Liability

Interested parties are concerned with the change for the liability definition as the FASB notes it will change the definition of a liability, expanding the population of liabilities and it will need to be reviewed on a standard basis. On expanding the population of liabilities, paragraph 12 states that the FASB recognized “the revised definition potentially expands the population of liabilities to include certain obligations to issue or potentially issue an entity’s own shares rather than settle an obligation exclusively with assets. In essence, clarifying that instruments with characteristics of both liabilities and equity may in fact be classified as liabilities in certain situations.”

We noted that there is not an analysis by the SAPWG of the impact on the various SSAP’s of incorporating the guidance. The FASB states that *needs* to be done “Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SSAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.” Please see the shaded text from the FASB

Statutory Accounting Principles Working Group
July 19, 2022
Page 2

excerpts below.

From the Liability Paper:

9. The updated liability definition from Concept Statement No. 8 no longer includes the term *probable* or the phrase *in the future and as a result of past transactions or events*. The FASB concluded that the term *probable* has historically been misunderstood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with “present obligation”), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. The FASB concluded that while certain businesses have a risk that a future event will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

10. However, the FASB also stated that situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SSAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

12. When reviewing the substance of the revisions, the FASB concluded that the updated definition resulted in a clearer and more precise definition. Furthermore, while it did not fundamentally change the historical concept of a liability, the revised definition potentially expands the population of liabilities to include certain obligations to issue or potentially issue an entity’s own shares rather than settle an obligation exclusively with assets. In essence, clarifying that instruments with characteristics of both liabilities and equity may in fact be classified as liabilities in certain situations.

13. In general, the FASB did not anticipate that the liability definition revisions would result in any material changes in instrument reclassification (e.g., items now being classified as a liability when previously they were not considered liabilities). Again, FASB Concept Statements are not authoritative and thus the guidance in any specific standard will still be utilized for instrument measurement and classification. For statutory accounting purposes, the updated definition should be viewed similarly, that is it does not change fundamental concepts, change current practices, or introduce a new, original or a

Statutory Accounting Principles Working Group
July 19, 2022
Page 3

modified accounting principle. The revisions to the definition of a liability clarify the definitional language and do not modify the original intent of SSAP No. 5R and thus the changes are deemed to be a statutory accounting principle clarification.

Consistent with the FASB approach that an evaluation needs to be done at the standards level, interested parties recommend that for the case of statutory accounting the Working Group complete an SSAP-by-SSAP analysis to identify potential effects prior to amending the definition of liability to avoid unintended consequences.

**Statutory Accounting Principles (E) Working Group
 Maintenance Agenda Submission Form
 Form A**

Issue: ASU 2021-10, Government Assistance

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In November 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update (ASU) 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance* to increase financial statement transparency regarding certain types of government assistance by increasing the disclosure of such information in the notes to the financial statements.

The new disclosure aims to increase transparency by enhancing the identification of 1) the types of assistance received, 2) an entity’s accounting for said assistance, and 3) the effects of the assistance in an entity’s financial statements. The disclosures will contain information about the nature of the transactions, which includes a general description of the transaction and identification of the form (cash or other) in which the assistance was received. In terms of the effects on the financial statement, disclosure will include identification of the specific line items in both the balance sheet and income statement and a description of the extent to which they have been impacted by any government assistance. In addition, an entity will be required to disclose information about any significant terms of the transaction with a government entity, with items including durations of such agreements and any provisions for potential recapture.

ASU 2021-10 defines “government assistance,” in a comprehensive manner to capture most types of assistance and includes examples of tax credits, cash grants or grants of other assets. The scope of this ASU is narrow as it does not apply to not-for-profit entities or benefit plans. Further narrowing in scope, the new disclosure requirements in this ASU only apply to transactions that are accounted for by analogizing either a grant or contribution model. As such, these enhanced disclosures do not apply to government transactions that are accounted for in accordance with other codification topics, such as classifying the transactions as debt in ASC 470, income taxes in ASC 740, or as revenue from contracts with customers in ASC 606.

With the specificity of these additional disclosures only applying in certain circumstances (only applicable in cases where the government assistance is not accounted for in accordance with other accounting standards – i.e., revenue in the normal course of business or debt), NAIC staff believe the occurrence of such items requiring disclosure per ASU 2021-10 will likely be relatively infrequent.

NAIC staff also note that consistent with ASU 2021-10, had the assistance been accounted for in a differing manner (e.g., as debt per *SSAP No. 15—Debt and Holding Company Obligations*), that the required identification and disclosures for the applicable SSAP would apply. As a final note, it is anticipated that for most entities who qualified for and received Paycheck Protection Program (PPP) loans, as authorized by the CARES Act, that the additional disclosures in this ASU still would not apply. It is believed that most insurance reporting entities accounted for PPP transactions as liabilities per SSAP No. 15. [For reference, in accordance with SSAP No. 15, debt may only be derecognized if the reporting entity was legally released from the liability (SSAP No. 15, paragraph 11), at which time the extinguishment of debt was reported as a capital gain (SSAP No. 15, paragraph 25).]

Existing Authoritative Literature:

NAIC Staff Note – as mentioned above, NAIC staff believe that as these additional disclosures are not applicable for transactions that are in scope of other accounting standards, and only apply when the transaction is accounted for by analogy using the grant or contribution model, the prevalence of such items will be infrequent. As such, the most appropriate location for these items is reflected in SSAP No. 24.

SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items**Unusual or Infrequently Occurring Items**

9. A material event or transaction that an entity considers to be of an unusual nature or of a type that indicates infrequency of occurrence or both shall be reported consistently with the reporting entity's reporting of continuing operations (i.e., no separate line item presentation in the balance sheet or statement of operations). Such items shall not be charged directly to surplus unless specifically addressed elsewhere within the *Accounting Practices and Procedures Manual*.

a. "Unusual Nature" shall be defined as the underlying event or transaction that should possess a high degree of abnormality and be of a type clearly unrelated to, or only incidentally related to, the ordinary and typical activities of the entity, taking into account the environment in which the entity operates.

b. "Infrequency of Occurrence" is defined as the underlying event or transaction that would not reasonably be expected to recur in the foreseeable future, taking into account the environment in which the entity operates.

Disclosures [Unusual/Infrequent Items]

16. The nature and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): NA

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*, incorporating certain disclosures from ASU 2021-10. The proposed additions will supplement existing disclosures to require that if the unusual or infrequent item is as the result of government assistance, the transaction will require identification as well as a description of the terms and provisions of the assistance received.

NAIC staff recommend incorporating the new disclosures in ASU 2020-10, modified only to require the supplemental disclosures for all entity types (as SAP disclosures do not differentiate between entity type – i.e., not-for-profit vs. other). As a final note, existing disclosures for unusual/infrequent items (captured in financial

statement note #21) already contains the requirement to identify the specific line items which have been affected by the events or transactions considered to be unusual and/or infrequent - thus that specific portion of ASU 2021-10 is not included in the proposed additions below.

Proposed Revisions to SSAP No. 24

Disclosures [Unusual/Infrequent Items]

16. The nature, including a general description of the transactions, and financial effects of each unusual or infrequent event or transaction shall be disclosed in the notes to the financial statements. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. If the unusual or infrequent item is as the result of government assistance (as defined in ASU 2021-10, *Government Assistance, Disclosures by Business Entities about Government Assistance*) disclosure shall additionally include the form in which the assistance has been received (for example, cash or other assets), and information regarding significant terms and conditions of the transaction, with items including, to the extent applicable, the duration or period of the agreement, and commitments made by the reporting entity, provisions for recapture, or other contingencies.

Relevant Literature

24. This statement adopts ASU 2021-10, *Government Assistance: Disclosure by Business Entities about Government Assistance*, with modification to require disclosure by all entity types.

Staff Review Completed by: Jim Pinegar - NAIC Staff, January 2022

Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*, incorporating certain disclosures from ASU 2021-10. The proposed additions will supplement existing disclosures to require that if the unusual or infrequent item is as the result of government assistance, the transaction will require identification as well as a description of the terms and provisions of the assistance received.

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*, as illustrated above, which incorporate certain disclosures from ASU 2021-10 to supplement existing disclosures regarding unusual or infrequent items.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*. The revisions incorporate certain disclosures, adopted with modification from ASU 2021-10, to supplement existing disclosures regarding unusual or infrequent items.

Issue: ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In November 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standard Update (ASU) 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities*. This ASU was issued as part of FASB’s post-implementation review to address issues that have been found during the implementation of the new lease guidance from *ASU 2016-02, Leases (Topic 842)*. Topic 842 generally requires the capitalization of leases, which is calculated by discounting the lease payments utilizing the implicit rate in the lease, or if not determinable, the lessee’s incremental borrowing rate. However, the standard also provides nonpublic entities with a practical expedient, permitting the use of a risk-free rate (e.g., U.S. Treasury Rate) for the capitalization calculation. As the risk-free rate is generally lower than anyone’s incremental borrowing rate, stakeholders expressed concerns that the calculation of present value (utilizing the practical expedient) often results in recognition of lease liabilities and right-of-use assets that are greater than those recognized by their public counterparts. To alleviate this concern, the guidance in ASU 2021-09 broadens the practical expedient so nonpublic lessees may make the risk-free rate election by class of underlying asset, rather than at the entity-wide level – thus the entity more able to apply the practical expedient when beneficial. An entity that makes the risk-free rate election is required to disclose which asset classes it has elected to apply a risk-free rate. The guidance provided in this ASU is specific to the financing lease treatment under U.S. GAAP, and since *SSAP No. 22R—Leases* requires nearly all leases to be treated as operating leases for statutory accounting, adoption of this guidance would be unnecessary.

Existing Authoritative Literature:

The ASUs related to Topic 842 have previously been rejected in *SSAP No. 22R—Leases*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): ASC Topic 842 was the result of a joint project between FASB and the International Accounting Standards Board.

Recommendation: NAIC staff recommends the Working Group move this agenda item to the active listing, categorized as a SAP clarification and expose revisions to reject ASU 2021-05 in *SSAP No. 22R—Leases*. Under statutory accounting almost all leases are classified as operating leases, thus this U.S. GAAP guidance is not necessary. Proposed Revision to SSAP No. 22R (Relevant Literature section – paragraph 52):

- j. [ASU 2021-09, Leases \(Topic 842\), Discount Rate for Lessees That Are Not Public Business Entities \(Rejected in its entirety.\)](#)

Issue: ASU 2021-07, Compensation – Stock Compensation

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In October 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update (ASU) 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards* to offer nonpublic companies a practical expedient to one of the several inputs necessary for option-priced modeling. When equity share options or similar instruments are granted in a share-based payment transaction, the fair value (which is used to determine expense recognition at inception and during any subsequent award modification) is estimated using an option-pricing model valuation technique.

In terms of option-priced models, the Black-Scholes-Merton model is considered to be one of the most widely used as it has less complexity than other pricing models. However, despite its reduced complexity, it (and various other pricing models) requires numerous inputs which typically include exercise price, expected dividend rate, risk-free interest rate, expected term, expected share price volatility, and current share price. For public entities, the determination of these values is generally readily available, however for nonpublic entities, many of these inputs are not easily determinable.

Of these inputs, private company stakeholders have indicated that three of these inputs (exercise price, expected dividend rate, and risk-free interest rate) are easy to obtain. However, stakeholders indicated that the remaining three inputs (expected share price volatility, expected term, and current share price) can be costly and difficult to estimate. Topic 718 already provides nonpublic entities with practical expedients for expected share price volatility and expected term. However, prior to ASU 2021-07, a practical expedient was not available for estimating the current price input. The current price input is often considered the most costly and complex input to determine and audit for nonpublic entities, primarily because an active market for those entities’ shares does not exist and therefore a readily determinable market price is not available.

ASU 2021-07 provides a practical expedient for nonpublic entities to determine the current price by utilizing a “reasonable application of a reasonable valuation method.” The practical expedient describes several characteristics of a reasonable valuation method and will include 1) consideration of the value of all tangible and intangible assets, 2) the present value of future anticipated cash flows, 3) the market value of similar entities, 4) recent arm’s-length transactions involving the sale or transfer of stock/equity interests, and 5) other relevant factors that affect the valuation or have a material economic effect on the entity. The calculation of share price must be timely in it cannot be more than 12 months stale, and all available information after the date of calculation that may materially affect the valuation of the entity must be considered for any value updates.

One final note - this ASU provides a practical expedient (not an accounting alternative) to one of the inputs used for nonpublic companies in their option-pricing modeling. Also, as mentioned previously, this is the third such practical expedient permitted in Topic 718, of which the previous two (expected share price volatility and expected

term) have previously been adopted and are currently permissible for use in *SSAP No. 104R—Share-Based Payments* (further detailed in the “Existing Authoritative Literature” section).

Existing Authoritative Literature: ASU 2021-07 offers a third practical expedient for the inputs utilized in option-pricing models. As previously mentioned, the prior two practical expedients are permissible in SSAP No. 104R and are included herein for reference:

Practical Expedient Regarding Volatility: Topic 718 (paragraph 718-10-30-20) recognizes nonpublic entities may not be able to reasonably estimate the fair value as it is not practicable to estimate share volatility, a component of the fair value calculation. Adoption of this first practical expedient to address this circumstance occurred through the Working Group's adoption of *FAS 123R, Share-Based Payment*. The applicable paragraph in SSAP No. 104R has been included with relevant guidance bolded.

52. **A reporting entity may not be able to reasonably estimate the fair value of its equity share options, nonemployee awards and similar instruments because it is not practicable for the reporting entity to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options, nonemployee awards and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value).** A reporting entity's use of calculated value shall be consistent between employee share-based payment transactions and nonemployee share-based payment transactions. Throughout the remainder of this statement, provisions that apply to accounting for share options, nonemployee awards and similar instruments at fair value also apply to calculated value.

Practical Expedient Regarding Expected Term: Topic 718 (paragraph 718-10-30-20A) recognizes nonpublic entities may not be able to reasonably account for the expected term of a share-based payment. Adoption of a second practical expedient to address this circumstance occurred through the Working Group's adoption, with modification, of *ASU 2016-09, Improvements to Employee Share-Based Payment Accounting*. The applicable paragraphs from SSAP No. 104R have been included below:

53. For an award that meets the conditions in paragraph 54, a reporting entity may make an entity-wide accounting policy election to estimate the expected term using the following practical expedient:

- a. If vesting is only dependent upon a service condition, a reporting entity shall estimate the expected term as the midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term of the award.
- b. If vesting is dependent upon satisfying a performance condition, an entity first would determine whether the performance condition is probable of being achieved.
 - i. If the reporting entity concludes that the performance condition is probable of being achieved, the entity shall estimate the expected term as the midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term.
 - ii. If the reporting entity concludes that the performance condition is not probable of being achieved, the reporting entity shall estimate the expected term as either:
 - (a) The contractual term if the service period is implied (that is, the requisite service period or the nonemployee's vesting period is not explicitly stated but inferred based on the achievement of the performance condition at some undetermined point in the future).

- (b) The midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term if the requisite service period is stated explicitly.

54. A reporting entity that elects to apply the practical expedient in paragraph 53 shall apply the practical expedient to a share option or similar award that has all of the following characteristics:

- a. The share option or similar award is granted at the money.
- b. The grantee has only a limited time to exercise the award (typically 30-90 days) if the grantee no longer provides goods or terminates service after vesting.
- c. The grantee can only exercise the award. The grantee cannot sell or hedge the award.
- d. The award does not include a market condition.

A reporting entity that elects to apply the practical expedient in paragraph 53 may always elect to use the contractual term as the expected term when estimating the fair value of a nonemployee award as described in paragraph 42. However, a reporting entity must apply the practical expedient in paragraph 53 for all nonemployee awards that have all the characteristics listed in this paragraph if that reporting entity does not elect to use the contractual term as the expected term and that reporting entity elects the accounting policy election to apply the practical expedient in paragraph 53.

ASU 2021-07 also supplements existing disclosure requiring that if this new practical expedient is utilized, its use shall be disclosed. NAIC staff have determined that additional disclosures in SSAP No. 104R are likely not necessary as existing SAP disclosures reference the disclosures in FASB Codification 718-10-50-2 as required – which is the location for FASB's new disclosure regarding use of this practical expedient.

Disclosures

113. An entity with one or more share-based payment arrangements shall disclose information that enables users of the financial statements to understand all of the following:

- a. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders;
- b. The effect of compensation costs arising from share-based payment arrangements on the income statement;
- c. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period; and
- d. The cash flow effects resulting from share-based payment arrangements.

114. The disclosures in paragraph 113 are for annual audited statutory financial statements only. **This statement adopts FASB Codification 718-10-50-2 for the minimum disclosure information needed to achieve the objective in paragraph 113 of this statement, noting that a reporting entity may need to disclose additional information to achieve the objectives.**

As final reference, SSAP No. 104R has predominantly adopted, with modification from U.S. GAAP guidance regarding share-based payment guidance, as detailed below.

126. This statement adopts with modification the U.S. GAAP guidance for share-based payment transactions reflected in FASB *Accounting Standards Codification (ASC) Topic 718, Compensation – Stock*

Compensation, as modified by the ASUs listed in paragraphs 126.a through 126.e, excluding the guidance in *ASC Subtopic 718-40, Employee Stock Ownership Plans (ESOPs)*. Statutory accounting guidance for ESOPs is addressed in *SSAP No. 12—Employee Stock Ownership Plans*. This adoption with modification includes the related implementation guidance reflected within the FASB Codification Topic 718 not reflected within this standard. The U.S. GAAP guidance adopted with modification reflects the adoption with modification of the following ASUs:

- a. *ASU 2018-07, Improvements to Nonemployee Share-Based Payment Accounting*. The revisions from ASU 2018-07 expand the scope of ASC 718 to include share-based payment transactions for acquiring goods and services from nonemployees. With ASU 2018-17, *ASC 505-50, Equity – Equity Payments to Nonemployees* was superseded.
- b. *ASU 2017-09, Scope of Modification Accounting*
- c. *ASU 2016-09, Improvements to Employee Share-Based Payment Accounting*
- d. *ASU 2014-12, Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period*
- e. *ASU 2010-13, Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades*

127. The statutory accounting guidance for share-based payments is intended to be consistent with U.S. GAAP. Adopted modifications to U.S. GAAP guidance are as follows:

- a. GAAP references to “public and nonpublic” guidance have been eliminated. However, entities that report share-payment transactions under U.S. GAAP as “public” entities shall not report different amounts between U.S. GAAP and SAP. (For example, if a reporting entity reports “fair value” under U.S. GAAP, that entity shall not utilize a “calculated or intrinsic” amount under statutory accounting.
- b. Prepaid assets are nonadmitted.
- c. GAAP references are revised to reference applicable statutory accounting guidance.
- d. GAAP reporting line items (either explicitly provided in the statement or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable statutory annual statement line items. (For example, GAAP references to “other comprehensive income” shall be reflected within “Surplus - Unassigned Funds”).
- e. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and has not been included within the statement.
- f. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this statement.
- g. Inclusion of guidance specific to statutory for consolidated/holding company plans.

128. The adoption with modification of FASB Codification Topic 718 detailed in paragraph 126 of this statement reflects adoption with modification of the following pre-codification GAAP standards:

- a. *FAS 123R, Share-Based Payment (FAS 123R)*;

- b. *FAS 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150) – (Adopted only to the extent referenced in FAS 123R for classifying instruments as equity or liability for application in this statement. Adopted guidance is reflected in Exhibit A);
- c. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1);
- d. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2);
- e. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4);
- f. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5);
- g. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6);
- h. *FASB Emerging Issues Task Force 97-14: Accounting for Deferred Compensation Arrangements Where Amounts Earned Are Held in a Rabbi Trust and Invested* (EITF 97-14);
- i. *FASB Emerging Issues Task Force 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16);
- j. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01)

129. The adoption with modification of FASB Codification Topic 718 in this statement reflects rejection of the following pre-codification GAAP standards:

- a. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3); and
- b. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 104R—Share-Based Payments* to incorporate the practical expedient for the current price input, a required component for the option-pricing models – models in which are utilized in the determination of fair value for share-based payments. Integration of this third practical expedient is consistent with previous decisions by the Working Group to adopt the prior two practical expedients

regarding option-pricing modeling input permitted by FASB. The language proposed by NAIC staff directs that the practical expedient is only available when a reporting entity is not able to reasonable estimate the current fair value. While this language is technically broader than what was adopted by FASB (as ASU 2021-07 directly references non-public companies), the proposed language is consistent with prior Working Group adoptions and by default, should not be utilized by public entities – as they would be able to reasonable estimate fair value, which is likely the publicly traded share price.

Proposed Revisions to SSAP No. 104R

52. A reporting entity may not be able to reasonably estimate the fair value of its equity share options, nonemployee awards and similar instruments because it is not practicable for the reporting entity to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options, nonemployee awards and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value). A reporting entity's use of calculated value shall be consistent between employee share-based payment transactions and nonemployee share-based payment transactions. Throughout the remainder of this statement, provisions that apply to accounting for share options, nonemployee awards and similar instruments at fair value also apply to calculated value.

53. For an award that meets the conditions in paragraph 54, a reporting entity may make an entity-wide accounting policy election to estimate the expected term using the following practical expedient:

- a. If vesting is only dependent upon a service condition, a reporting entity shall estimate the expected term as the midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term of the award.
- b. If vesting is dependent upon satisfying a performance condition, an entity first would determine whether the performance condition is probable of being achieved.
 - i. If the reporting entity concludes that the performance condition is probable of being achieved, the entity shall estimate the expected term as the midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term.
 - ii. If the reporting entity concludes that the performance condition is not probable of being achieved, the reporting entity shall estimate the expected term as either:
 - (a) The contractual term if the service period is implied (that is, the requisite service period or the nonemployee's vesting period is not explicitly stated but inferred based on the achievement of the performance condition at some undetermined point in the future).
 - (b) The midpoint between the employee's requisite service period or the nonemployee's vesting period and the contractual term if the requisite service period is stated explicitly.

54. A reporting entity that elects to apply the practical expedient in paragraph 53 shall apply the practical expedient to a share option or similar award that has all of the following characteristics:

- a. The share option or similar award is granted at the money.
- b. The grantee has only a limited time to exercise the award (typically 30-90 days) if the grantee no longer provides goods or terminates service after vesting.

- c. The grantee can only exercise the award. The grantee cannot sell or hedge the award.
- d. The award does not include a market condition.

A reporting entity that elects to apply the practical expedient in paragraph 53 may always elect to use the contractual term as the expected term when estimating the fair value of a nonemployee award as described in paragraph 42. However, a reporting entity must apply the practical expedient in paragraph 53 for all nonemployee awards that have all the characteristics listed in this paragraph if that reporting entity does not elect to use the contractual term as the expected term and that reporting entity elects the accounting policy election to apply the practical expedient in paragraph 53.

55. If a reporting entity is not able to reasonably estimate the current share price (fair value), as a practical expedient, a reporting entity may use a value determined by the reasonable application of a reasonable valuation method as the current price of its underlying share for purposes of determining the fair value of an award that is classified as equity at grant date or upon a modification. The determination of whether a valuation method is reasonable, or whether an application of a valuation method is reasonable, shall be made on the facts and circumstances as of the measurement date. Factors to be considered under a reasonable valuation method include, as applicable:

- a. The value of tangible and intangible assets
- b. The present value of anticipated future cash flows
- c. The market value of stock or equity interests in similar corporations and other entities engaged in trades or businesses substantially similar to those engaged by the entity for which the stock is to be valued, the value of which can be readily determined through nondiscretionary, objective means (such as through trading prices on an established securities market or an amount in an arm's length transaction)
- d. Recent arm's length transactions involving the sale or transfer of stock or equity interest
- e. Other relevant factors such as control premiums or discounts for lack of marketability and whether the valuation method is used for other purposes that have a material economic effect on the entity, its stockholders, or its creditors
- f. The entity's consistent use of a valuation method to determine the value of its stock or assets for other purposes, including for purposes unrelated to compensation of service providers.

Effective Date and Transition

130. This statement was effective January 1, 2013, with interim and annual financial reporting thereafter. Early adoption was permitted for December 31, 2012, financial statements with interim and annual reporting thereafter. At the time of initial adoption of this statement, reporting entities with existing share-based payment instruments that applied the guidance in *SSAP No. 13—Stock Options and Stock Purchase Plans* were to apply the requirements of *SSAP No. 104* prospectively to new awards and to awards modified, repurchased or cancelled after the required effective date. Those reporting entities were to continue to account for any portion of awards outstanding at the date of initial application using the statutory accounting principles originally applied to those awards (e.g., *SSAP No. 13*).

131. Since the initial adoption of *SSAP No. 104*, subsequent revisions were effective as follows:

- a. *ASU 2021-07, Compensation – Stock Compensation, Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards. This SAP clarification is effective.*

- a.b. ASU 2018-07, *Improvements to Nonemployee Share-Based Payment Accounting*: Nonsubstantive revisions effective January 1, 2020, with early application permitted.
- b.c. ASU 2017-09, *Scope of Modification Accounting*: Nonsubstantive revisions effective January 1, 2018, applicable to modifications that occur on or after the effective date, with early application permitted.
- e.d. ASU 2016-09, *Improvements to Employee Share-Based Payment Accounting*: Nonsubstantive revisions effective December 31, 2017, with early adoption permitted. The adoption included the transition provisions from ASU 2016-19, although not duplicated within this statement.
- d.e. ASU 2014-12, *Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period*: Nonsubstantive revisions effective January 1, 2016, with early adoption permitted.
- e.f. ASU 2010-13, *Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security Trades*: Captured in the original adoption of SSAP No. 104, effective January 1, 2013.

Staff Review Completed by: Jim Pinegar– NAIC Staff, February 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to *SSAP No. 104R—Share-Based Payments* to incorporate a practical expedient for the current price input, a required component for option-pricing models which are utilized in the determination of fair value for share-based payments.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to *SSAP No. 104R—Share-Based Payments* to incorporate a practical expedient for the current price input, a required component for option-pricing models which are utilized in the determination of fair value for share-based payments.
