Finally, we also include in the attachment recommendations to conform certain defined terms and phrases to the Working Group’s chosen terminology, along with a few other corrections of a minor nature to Sections 2(K), 12(E), 13(A)(2), 14(A), 14(B), and 16.

The Industry Group supports the Working Group’s efforts to update the Model Act, and we would be pleased to make representatives of each company available for a telephonic conference to discuss the comments in this letter if that would be of assistance to you.

Respectfully submitted on behalf of the Industry Group companies below,

**Arch Mortgage Insurance Company,  
Enact Mortgage Insurance Corporation,  
Essent Guaranty, Inc.,  
Mortgage Guaranty Insurance Corporation,  
National Mortgage Insurance Corporation, and  
Radian Guaranty Inc.**

March 13, 2023

Chief Deputy Commissioner Jackie Obusek, Chair  
Mortgage Guaranty Insurance (E) Working Group  
National Insurance Commissioners  
c/o Mr. Andy Daleo  
Senior Manager – Financial Regulatory Services  
Via email [adaleo@naic.org](mailto:adaleo@naic.org)

**Re: RAA Comments regarding proposed changes to the Mortgage Guaranty Insurance Model Act**

Dear Chief Deputy Commissioner Obusek:

The Reinsurance Association of America (RAA) appreciates the opportunity to submit comments to the Mortgage Guaranty Insurance (E) Working Group regarding the exposure draft of the *Mortgage Guaranty Insurance Model Act (#630)*. The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates.

The RAA appreciates the Working Group's continued thoughtful engagement with updating the model act. While the RAA had issues with the previous draft, we believe these concerns have now been addressed. The RAA was concerned that Section 11(B) of the Model was potentially in conflict with the *Credit for Reinsurance Model Law (#785)*, but the deletion of the concerning language in the new draft has removed this potential conflict. The RAA now no longer believes there is any concern of a conflict and support this deletion of the potentially conflicting language.

The RAA understands the efforts to amend this model have been on going or quite some time and appreciates the NAIC's willingness to listen and address the RAA's concerns. The RAA appreciates the opportunity to share the thoughts of our members and looks forward to further discussions about them.

Sincerely,

A handwritten signature in black ink that reads 'Karalee C. Morell'.

Karalee C. Morell  
SVP and General Counsel  
Reinsurance Association of America

**Comments of the Center for Economic Justice**

**To the NAIC Mortgage Guaranty Insurance Working Group**

**Regarding Revisions the Mortgage Guaranty Insurance Model Act**

**March 14, 2023**

The Center for Economic Justice submits the following comments on the most recent exposure draft of revisions to NAIC Model 630. We strongly object to the insertion of the new Section 21 prohibiting a private right of action based on any provision of the model law and urgently request the removal of this new section.

The rationale offered by industry for this profoundly anti-consumer provision is their “belief” that the model represents a “complete statutory scheme” intended “to be enforced exclusively by the respective commissioners who have the expertise to administer the act.” As is typically the case with industry arguments to curtail consumer or business access to civil justice, industry argues that absent such a prohibition, frivolous litigation will result.

History tells a different story. With great respect for state insurance regulators – those who have had and continue to have responsibility for various aspects of private mortgage insurance oversight – the failure of private mortgage insurers to pursue sound risk management practices in the lead-up to the financial crisis occurred because of

- 1) the structural nature of the private mortgage insurance markets (reverse competition) and,
- 2) insurance regulators’ lack of understanding of the dangers posed by the mechanisms used by private mortgage insurers to compete for business.

PMI is sold by insurers to mortgage lenders who, in turn, sell PMI with certain mortgages to borrowers. Unlike a normally competitive market in which purchasers exert market pressure on sellers and can discipline sellers on price and terms, PMI insurers compete for the lenders’ business since the lenders are the gatekeepers for access to the premium-paying borrowers.

CEJ Comments to NAIC Mortgage Guaranty Insurance Working Group  
March 14, 2023  
Page 2

The NAIC has defined reverse competition as follows:

“Reverse competition” means competition among insurers that regularly takes the form of insurers vying with each other for the favor of persons who control, or may control, the placement of the insurance with insurers. Reverse competition tends to increase insurance premiums or prevent the lowering of premiums in order that greater compensation may be paid to persons for such business as a means of obtaining the placement of business. In these situations, the competitive pressure to obtain business by paying higher compensation to these persons overwhelms any downward pressures consumers may exert on the price of insurance, thus causing prices to rise or remain higher than they would otherwise.

In the case of PMI leading up to the financial crisis, the reverse competition led to abandonment of sound risk management by PMI insurers as they sought the lenders’ business with ever-greater kickbacks and considerations. PMI insurers invented various mechanisms to kick back PMI premium to lenders. One glaring example was the use by PMI insurers of lender-affiliated reinsurance (“captive reinsurance”). Far from being a risk management tool, as concluded by at least one senior insurance regulator, this was a blatant kickback mechanism and part of an overall abdication of effective risk management by both the insurers and regulators. Captive reinsurance was only one method of inducement.

There is simply no proven track record of state insurance regulators providing a comprehensive consumer protection capability regarding private mortgage insurance and certainly no track record to justify a prohibition on a private right of action. Given the variety of market conduct features now included in the model – prohibitions on rebates, undue contractual preference, inducements and captive reinsurance – it is critical that regulators have assistance in identifying market and compliance problems by consumer and business exercising of a right of action

The prohibition on a private right of action is hypocritically one-sided. PMI insurers face no prohibition against suing a lender, despite lenders being part of a comprehensive statutory scheme. Further, industry has offered no evidence of any significant amount of “frivolous” litigation. The prohibition against a private right of action is not only a solution in search of a problem, but also incredible chutzpah by an a sector of the insurance industry with a history of consumer abuses that contributed to the collapse of the mortgage and real estate market leading to the Great Recession.

CEJ urges the working group to remove new Section 21 from the revised model.

Draft: 3/15/23

National Treatment and Coordination (E) Working Group  
Virtual Meeting  
February 14, 2023

The National Treatment and Coordination (E) Working Group of the Financial Condition (E) Committee met Feb. 14, 2023. The following Working Group members participated: Debbie Doggett and Kelly Hopper, Co-Chair (MO); Cameron Piatt, Co-Chair (OH); Jacline Nguyen (CO); William Mitchell (CT); Sherry Wilson (DE); Alison Sterett (FL); Tangela Byrd (LA); Doug Hartz (OR); Karen Feather (PA); John Carter (TX); Jay Sueoka (UT); Ron Pastuch (WA); Christopher Martin (WI); and Doug Melvin (WY).

1. Adopted Proposal 2022-03

Doggett said the proposal was exposed for a 30-day comment period ending Dec. 12, 2022. There were no comments received. Doggett reminded the Working Group that the proposal adopted today is subject to change once the electronic format is developed to accommodate for electronic modifications.

Hartz made a motion, seconded by Wilson, to adopt proposal 2022-03 (Domestic Corporate Amendment Application and Instructions) (Attachment Two-A). The motion passed unanimously.

2. Adopted Proposal 2023-01

Piatt explained the modifications to proposal 2023-01 (Redomestication Form 2R) were to remove information that pertained to the primary (start-up) application now that the previous Form 2P has been split into two separate applications and is determined to not be necessary for a redomestication application. Piatt said that the edits to this form are self-explanatory and suggested adopting the proposal instead of exposing it for comment.

Sueoka made a motion, seconded by Pastuch, to adopt proposal 2023-01 (Redomestication Form 2R) (Attachment Two-B). The motion passed unanimously.

3. Discussed Other Matters

Jane Barr (NAIC) said that the electronic primary application is available for testing in production. Any company interested in participating should contact Barr, as the link has not been posted on the website. The developers will begin working on the Redomestication application. It has yet to be determined if that application will be available to pilot test. Barr anticipates that both applications will be ready for public use by July 1.

Barr also mentioned that the Uniform Certificate of Authority Application (UCAA) logo is being rebranded. A sample is provided on the redomestication form. Once the logo is approved, the application forms and website will be updated to coincide with the new application release. Barr will keep the Working Group updated on the timeline for that change. The intent is to update every UCAA form and content on the website. Karen Fallstrom (UnitedHealthcare) asked if that applied to form 11 and the addendum pages. Barr confirmed it did include form 11 and the addendum page.

Barr said the ad hoc groups will resume in March with a slight change to the domestic state applications. Ad hoc groups will meet on Thursday afternoons every two weeks to coincide with the enhancement release schedule.

The Form A and Biographical Database Ad Hoc Groups will meet on alternate Monday afternoons beginning in March. Anyone interested in participating should email Barr.

Having no further business, the National Treatment and Coordination (E) Working Group adjourned.

**QUESTIONNAIRE**

**For Adding Lines of Business to an Existing Certificate of Authority**

**Directions:** Complete **Section I** (questions 1 – 21) for adding new lines of business. Complete **Section II** (questions 22 through 25) for deleting lines of business. Each "Yes" or "No" question is to be answered by marking an "X" in the appropriate space. All questions should be answered. If the Applicant Company denotes a question as "Not Applicable" (N/A) an explanation must be provided. Other answers and additional explanations or details may be attached to the affidavit. Please complete this form and file it with the Applicant Company's application to change lines of business to its Certificate of Authority.

**Section I**

1. Has the Applicant Company merged or consolidated with any other company within the last five years?  
 Yes \_\_\_ No \_\_\_
  
2. Have any of the following taken place since the date of the Applicant Company's most recent Annual Statement?
  - A. Is the Applicant Company presently negotiating for or inviting negotiations for any transaction as described in question 1 above?  
 Yes \_\_\_ No \_\_\_
  - B. A change of management or control?  
 Yes \_\_\_ No \_\_\_
  - C. Does the Applicant Company contemplate a change in management or any transaction which would normally result in a change of management within the next 12 months?  
 Yes \_\_\_ No \_\_\_

If the answer to any question is yes, provide the details in writing and attach to the Questionnaire.
  
3.
  - A. Has the Applicant Company's certificate of authority to do business in any state been suspended or revoked within the last five years?  
 Yes \_\_\_ No \_\_\_
  - B. Has the Applicant Company's application for admission to any state been denied within the last five years?  
 Yes \_\_\_ No \_\_\_
  - C. Has the Applicant Company's application to add lines of business to its Certificate of Authority in any state been denied within the last five years?  
 Yes \_\_\_ No \_\_\_

If the answer to any of the above question is yes, provide the details in writing and attach to the Questionnaire.
  
4. Since the date of the most recent Annual Statement, has any person who is presently an officer, director, or shareholder of the Applicant Company, been convicted of, or pleaded guilty, or nolo contendere to, a felony charge for theft, larceny or mail fraud, or of violating any corporate securities statute or any insurance statute?  
 Yes \_\_\_ No \_\_\_

Revised 08/18/2014

Applicant Name: \_\_\_\_\_

NAIC No. \_\_\_\_\_

FEIN: \_\_\_\_\_

If yes, provide the details in writing and attach to the Questionnaire.

5. Is the Applicant Company presently engaged in a dispute with any state or federal regulatory agency?

Yes \_\_\_ No \_\_\_

If yes, provide the details in writing and attach to the Questionnaire.

6. Is the Applicant Company a plaintiff or defendant in any legal action other than one arising out of policy claims?

Yes \_\_\_ No \_\_\_

If yes, provide a summary of each case and attach to the Questionnaire.

7. Has the Applicant Company, within 18 months last preceding the date of this affidavit, entered into any material transactions, as defined in the NAIC Model Law on Material Transactions, with any affiliate, officer, director, trustee, or shareholder which has not been approved in writing by the state of domicile? Material transactions include: loans, transfers of assets, purchases of assets, reductions of liabilities, or reinsurance transactions.

Yes \_\_\_ No \_\_\_

If yes, provide the details in writing and attach to the Questionnaire.

8. Please explain the Applicant Company's Management's experience, expertise or background regarding the requested lines of business. This explanation should be specific and include documentation which shows the amount of time management was involved in producing the requested lines and other information that demonstrates the experience level of management.

9. Provide a list of any affiliated parties that will be involved in the marketing, underwriting, servicing, administration, premium financing, claims adjustment or claims payment for the requested lines of business.

10. Provide a detailed description of the Applicant Company's sales techniques for the requested lines of business. The description should include:

- A. Information regarding recruitment and training of sales representatives.
- B. Identification as to whether the Applicant Company will be a direct writer or will use agents, brokers, or a combination thereof.
- C. Explanation of the compensation and control to be provided by the Applicant Company to its agents, brokers or sales personnel.
- D. Identification of any specific agency, third party administrator, or managing general agent, and a copy of the agreement. Including verification that such is properly licensed as needed.(would this be a follow-up request or due at submission?)

11. Provide the following for the requested lines of business:

- A. The product lines to be sold by the Applicant Company,
- B. The Applicant Company's marketing plan, including a description of the financial, corporate, or other connections productive of insurance,
- C. The Applicant Company's current and expected competition (both regionally and nationally) and

Revised 12/12/2022

Applicant Name: \_\_\_\_\_

- D. Include a detailed explanation as to how the Applicant Company will develop, purchase, control and supervise its advertising.

A general description of the classes to be transacted is not an adequate response. For example, if the Applicant Company plans to market credit life and disability products tailored for use by credit unions, simply stating that it will transact credit life and disability is inadequate.

- 12. If a parent, subsidiary, and/or affiliated insurer is already admitted for the classes of insurance requested in the pending application, differentiate the products and/or markets of the Applicant Company from those of the admitted insurer(s).

- 13. Explain in detail how (a) the Applicant Company’s policies will be underwritten, including the issuance of policies and endorsements (b) policies will be cancelled and (c) premiums and other funds will be handled, including:

- A. Identify the entity that will perform each of these functions.
- B. If personnel performing these functions will be shared with another entity, or if another entity will be performing these functions, provide an explanation of this arrangement.

- 14. Explain in detail how the Applicant Company will adjust and pay claims.

- A. Identify the entity that will perform the Applicant Company’s claims adjusting and claims payment functions.
- B. If personnel for claims adjusting or claims payment will be shared with another entity, or another entity will be performing the Applicant Company’s claims adjusting and claims payment, please explain this arrangement, including any affiliation with the Applicant Company.
- C. Provide detailed information as to how and by whom claim reserves will be set and modified.
- D. Does the Applicant Company pay any representative given discretion as to the settlement or adjustment of claims under life or disability policies, whether in direct negotiation with the claimant or in supervision of the person negotiating, a compensation which is in any way contingent upon the amount of settlement of such claims?

Yes \_\_\_ No \_\_\_

If yes, please provide a detailed explanation and attach to Questionnaire.

- 15. Is the Applicant Company a member of a group of companies that shares any of the following:

- A. Common facilities with another company or companies  
 Yes \_\_\_ No \_\_\_
- B. Services (e.g. accounting personnel for financial statement preparation)  
 Yes \_\_\_ No \_\_\_

If the answer to any of the above is yes please provide a detailed explanation and attach to Questionnaire.

- 16. Provide a company-wide, three-year pro forma balance sheet and income statement. For the lines being requested, provide (3) year premium and loss projections by line Projections should support all aspects of the proposed plan of operation, including reinsurance arrangements and any delegated function agreements. Include the assumptions used to arrive at these projections.

- 17. Provide an explanation of any reinsurance that will be entered into, or that is currently in place covering the requested lines of business. Provide details and attach to the Questionnaire.  
 For affiliated reinsurer – submit Form D for approval.

18. Are any of the Applicant Company's policies being sold in connection with mutual funds or investments in securities?  
Yes \_\_\_ No \_\_\_ Not Applicable \_\_\_
- If yes, supply details including all sales literature which refers to the insurance and mutual fund or other investment plan connection.
19. If the Applicant Company is applying for authority to write Variable Annuities, provide the following:
- A. Copy of any third-party management or service contracts
  - B. Commission schedules
  - C. Five-year sales and expense projections
  - D. A statement from the Applicant Company's actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract
  - E. Statement of the investment policy of the separate account
  - F. Copy of the variable annuity contract and application
  - G. A description of any investment advisory services contemplated relating to Separate Accounts
  - H. Board of Directors resolution authorizing the creation of the separate account.
20. If the Applicant Company is applying for authority to write Variable Life Insurance, provide the following:
- A. Copy(ies) of variable life policy(ies) the Applicant Company intends to issue
  - B. Name and experience of person(s) or firm(s) proposed to supply consulting, investments, administrative, custodial or distribution services to the Applicant Company
  - C. Disclose whether each investment advisor, 1) is registered under the Investment Advisers Act of 1940, or 2) is an investment manager under the Employee Retirement Income Security Act of 1974, or 3) whether the Applicant Company will annually file required information and statements concerning each investment advisor as required by its domiciliary state.
  - D. Statement of the investment policy of any separate account, and the procedures for changing such policy
  - F. A statement from the Applicant Company's actuary describing reserving procedures including the mortality and expense risks which the Applicant Company will bear under the contract.
  - G. Standards of suitability or conduct regarding sales to policyholders
  - H. Statement authorizing the creation of the separate account (i.e. Board resolution)
  - I. Statement specifying the standards of conduct with respect to the purchase or sale of investments of separate accounts (i.e. Board resolution)
21. If the Applicant Company is applying for authority to write Life Insurance, has the Applicant Company at any time within the last five years, irrespective of changes in management, taught or permitted its agents to sell insurance by using any of the following devices, or representations resembling any of the following:
- A. "Centers of influence" and "advisory board"

- # For the forwarding of Service of Process received by a State Officer complete Exhibit B listing by state the entities (one per state) with **full name and address where service of process is to be forwarded**. Use additional pages as necessary. Colorado will forward Service of Process to the Secretary of the Applicant Company and requires a resident agent for foreign entities. Exhibit not required for New Jersey, and North Carolina. Florida accepts only an individual as the entity and requires an email address. New Jersey allows but does not require a foreign insurer to designate a specific forwarding address on Exhibit B. SC will not forward to an individual by name; however, it will forward to a position, e.g., Attention: President (or Compliance Officer, etc.). Washington requires an email address on Exhibit B.
- \* Attach a completed Exhibit B listing the Resident Agent for the Applicant Company (one per state). Include state name, Resident Agent’s **full name and street address**. Use additional pages as necessary. (DC\* requires an agent within a ten-mile radius of the District), (MT requires an agent to reside or maintain a business in MT).
- ^ Initial pleadings only.
- @ Form accepted only as part of a Uniform Certificate of Authority application.  
MA will send the required form to the Applicant Company when the approval process reaches that point.
- ~ Minnesota does not forward Service of Process. To effectively serve the Commissioner of Commerce, use the process under Minn. Stat. § 45.028. Applicant Company may complete Exhibit B to provide a Service of Process address that Commerce may keep on file.

**Statement of Voluntary Dissolution  
 Summary of License Status in Non-Domicile States**

This statement is submitted to the Company’s domestic state regulator to summarize how the Company has addressed its licensure in other states. Limit the information to those states in which a Certificate of Authority has been held within the last 10 years.

Certificate of Authority has been held from the states selected:

1. Provide date of approval of surrender of Certificate of Authority for the selected state(s).  
 If surrender is not in effect, please explain. (states listed should match Sch T) (a surrender date or explanation is required)

(State)	Tracking	(Date of Surrender)	Explanation

2. Do any policyholder obligations or contingent liabilities of the dissolving company exist in the selected state?

If Yes, an explanation is required:

3. Have all premium taxes, fees and other monetary obligations owed to the selected state(s) been paid?

If no, an explanation is required:

4. Does a state regulatory deposit exist in the selected state(s)?

If Yes, provide the amount and explain its purpose.

Applicant Name \_\_\_\_\_ NAIC No. \_\_\_\_\_

## DOMESTIC STATE CORPORATE AMENDMENTS

Existing insurers use the Uniform Certificate of Authority Corporate Amendment Application for requesting amendments to its Certificate of Authority. A Uniform State is one that is committed to using the Uniform Certificate of Authority (UCAA) review process for company licensing and admissions.

The Applicant Company can use the Corporate Amendment Application to file more than one change for the domiciliary state submission. The Applicant Company should select all applicable changes and submit all items required for those changes.

The following instructions contain a detailed explanation of the various requirements designed to assist in the completion and submission of the necessary documentation to obtain regulatory approval. The state's review process will be a comprehensive and detailed operational and financial review of the Applicant Company's business.

### Corporate Amendments Application Review Process

The Corporate Amendment Application of the UCAA provides a uniform process for gaining the necessary regulatory approvals for modifications to an Applicant Company's Certificate of Authority. It is the goal of the Uniform State to process the Corporate Amendments Application within 60 calendar days of receipt.

### Proprietary Information

Both regulators and the Applicant Company should note that the Applicant Company might deem confidential any communications with insurance regulatory agencies in conjunction with the Corporate Amendment Application concerning proprietary information about the Applicant Company. States may only share information determined to be confidential with other persons as authorized by law. By law, the state will not disclose to the public any information determined to be proprietary and trade secret. The Applicant Company needs to expressly identify all information in the application and in any subsequent correspondence that the Applicant Company considers proprietary or trade secret.

The [UCAA homepage](#) contains the requirements and filing process for the Corporate Amendment Application. Contact the appropriate state regulators with any questions before filing any Uniform Application. State contact information can be found on the [Addresses and Contact Information for Submission of Application chart](#). The UCAA webpage will be reconfigured, once completed the file locations will be updated.

**Step One: Filing the Application****Processing Goal: 2 Weeks**

An Applicant Company may submit Corporate Amendment Applications anytime during the year. The state immediately reviews the application to ensure that all required information is provided as outlined in the instructions.

Generally, within two weeks from the date that the application is received, the state will update the status in the electronic application and assign the application to a lead reviewer. The lead reviewer will be identified on the summary detail of the application.

The state will contact the Applicant Company if it does not accept the application for filing due to a deficiency in the application via a Request for Information (RFI) in the electronic application. Depending upon the nature of the deficiency, the state may give the Applicant Company two weeks from the date of the RFI to correct the deficiency. Some states may notify the Applicant Company of any applications that are deficient and not accepted for filing. Electronic applications that are not accepted by the state should be withdrawn by the Applicant Company.

**Step Two: Application Review****Processing Goal: 60 Days**

A Corporate Amendment Application will undergo a rigorous financial and operational review in the application state. While the goal of each state is to complete this review in 60 days, the state cannot guarantee this time frame. Due to varying levels of resources available in each state or if the state needs additional information, the 60-day goal may not be attainable. The purpose of the Corporate Amendment Application is to streamline the application process and the states will make every effort to process a Corporate Amendment Application as quickly as possible.

At the conclusion of the substantive review the domiciliary state will grant the Applicant Company an amendment to the Certificate of Authority, allow the Applicant Company to withdraw the application, or will deny the application.

If the state deems the application incomplete, the Applicant Company will be automatically notified when the states provides a status and a detailed explanation via the RFI. The Applicant Company can amend or withdrawal their application, a detailed explanation is required for either option. If withdrawn, the Applicant Company may wish to re-file a Corporate Amendment Application at a later date. A new application and filing fee will be required for the new filing.

**How to File**

Refer to the [State-Specific Information](#). States that have provided their state specific requirements for domestic companies will be incorporated into the electronic application.

1. [Communication Between Applicant Company and Agency](#)

A PRODUCT OF THE **NAIC**

2. [Questions](#)
3. [Application and Supporting Documents](#)
4. [Updates/Changes](#)
5. [Filing Fee](#)
6. [State-Specific Information](#)

## 1. **Communication Between Applicant Company and Agency**

Once a state accepts a Corporate Amendment Application for filing, the filing will be forwarded to the assigned analyst (Lead Reviewer).

Before receiving the name of the lead reviewer, an Applicant Company may contact, via the (RFI) link, before assignment all RFI's will be automatically directed to the state application coordinator or company licensing manager to obtain information regarding the status of a Corporate Amendment Application.

## 2. **Questions**

Section I through Section IX, Filing Requirements, provide detailed guidelines regarding the information required for the Corporate Amendment Application. For additional information, or clarification, the Applicant Company should review the [State Requirement charts](#) and [FAQs](#) prior to contacting the state.

## 3. **Application and Supporting Documents**

- All applicable forms are provided for the change type(s) selected.

## 4. **Updates/Changes**

The Applicant Company is responsible for informing states of any significant changes that occur or that the Applicant Company discovers during the application review period. Examples of significant changes include changes in officers and directors, material acquisition or disposal of assets, changes in reinsurance, acquisition of the insurer, regulatory actions taken against the insurer, change in current business plan or corporate structure, etc.

The Applicant Company must supply amended forms promptly if any changes occur which materially affect the accuracy of the forms originally submitted in the application. The updated attachments can be submitted via an RFI or an amended application. .

## 5. **Filing Fee**

Please see [Filing Fees - Corporate Amendments chart](#) and [Filing Fees Matrix - Corporate Amendments chart](#), located on the UCAA website, to determine the correct fee and filing instructions for the application state. Where indicated, checks will need to be mailed directly to

A PRODUCT OF THE **NAIC**

the application state. Refer to the appropriate state chart for mailing instructions. Include a copy of the completed Checklist for reference to the electronic application tracking number.

## 6. State-Specific Information

Some jurisdictions may have additional requirements that the Applicant Company must meet before the state can issue an amended Certificate of Authority. Before completing a UCAA Corporate Amendment Application the Applicant Company should be familiar with its domiciliary state requirements which are located under [State-Specific Requirements](#) on the UCAA website. Some states may have their state specific requirements incorporated into the electronic application.

### Electronic Portal

The Applicant Company must first obtain a User ID and password. The individual completing the application on behalf of the Applicant Company must obtain approval from either the Corporate Secretary or General Counsel of the Applicant Company. If the Applicant Company is part of a Holding Company Structure, the User may associate multiple companies within the group to their User ID. Only one ID is allowed per individual.

A [User Guide](#) is provided as a guide for utilizing the electronic application. Tooltips are incorporated into the electronic application.

The UCAA Corporate Amendment Application has nine domiciliary change types (sections) designed to guide the Applicant Company through the licensing process.

- I. [Adding Lines of Business Filing Requirements](#)
- II. [Deleting Lines of Business Filing Requirements](#)
- III. [Name Change Filing Requirements](#)
- IV. Change of Company Structure Filing Requirements
- V. [Change of Statutory Home Office Address Filing Requirements](#)
- VI. [Amended Articles of Incorporation](#)
- VII. [Amended Bylaws](#)
- VIII. [Change of Administrative Address/Contact Notification Filing Requirement](#)
- IX. Statement of Voluntary Dissolution

### Corporate Amendments Application Section I Filing Requirements - Adding Lines of Business

This section provides a guide to understanding the focus of each change type of the Corporate Amendment Application. However, there typically are multiple purposes for documents. Therefore, it is important that applications be complete.

All required forms are provided for the application change type selected, therefore it is important to read the instructions prior to starting an electronic filing to ensure the necessary corporate amendment change type is selected and the appropriate forms are provided.

### Table of Contents/ Application Requirements

1. [Application Form and Attachments](#)
2. [Filing Fee](#)
3. [Articles of Incorporation](#)
4. [Bylaws](#)
5. [Minimum Capital and Surplus Requirements](#)
6. [Plan of Operation](#)
7. [Statutory Membership\(s\)](#)
8. [State-Specific Information](#)

#### 1. Application Form and Attachments

The application must identify all lines of insurance (Form 3) that the Applicant Company is currently authorized to transact and specify the lines of authority to add to an existing Certificate of Authority, as identified in the plan of operation (Form 8, Form 13 and Narrative). A cover letter may be included and if required, the Applicant Company's original Certificate of Authority or an Affidavit of Lost Certificate of Authority (Form 15),

#### 2. Filing Fee

The application will generate an invoice based on the change type selected and state specific requirements provided and be submitted to the application state, unless specified that the state prefers to send a separate invoice. The payee name and the instructions for submitting the filing fee are included in the [Filing Fees - Corporate Amendments](#) chart. Upload a copy of the Applicant Company's check and reference the electronic application tracking number.

#### 3. Articles of Incorporation

Indicate the location of the language within the Articles of Incorporation that allows the Applicant Company to write this line (e.g., page number, section number, etc., of the Articles of Incorporation). In addition:

- If the Articles of Incorporation have changed because of this application, file the amended Articles of Incorporation.  
If the Articles of Incorporation most recently filed in the application state have not changed because of this application, do not file the Articles of Incorporation. Simply state that the current Articles of Incorporation are already on file in the application state.

#### 4. **Bylaws**

The Applicant Company should have previously filed the most current version of their bylaws.

- If the bylaws have changed because of this application, file the amended bylaws.
- If the bylaws most recently filed in the application state have not changed because of this application, do not file the bylaws. Simply state that the current bylaws are already on file in the application state.

#### 5. **Minimum Capital and Surplus Requirements**

The application will need to show that the Applicant Company meets the state's statutory minimum capital and surplus requirements for the requested amendment to its Certificate of Authority. In some states, the minimum capital and surplus requirements are determined by the classes of insurance that the Applicant Company is requesting authority to transact. The state will determine the level of surplus required after considering the Applicant Company's product line, operating record and financial condition. Compliance with the statutorily prescribed minimum surplus requirement may not be sufficient for all Applicant Companies. The [Minimum Capital and Surplus Requirements](#) chart identifies the minimum capital and surplus requirements for each Uniform State. This chart also provides a contact person or a link to a state-specific format or RBC requirements and instructions. Submit an explanation of the Applicant Company's compliance with the capital and surplus requirements.

#### 6. **Plan of Operation**

The Plan of Operation has three components, a brief narrative, proforma financial statements/projections (Form 13) and a completed Questionnaire ([Form 8D](#)). The narrative should include significant information not captured as a part of the Questionnaire that the Applicant Company submits in support of the application. The proforma is one of three (3) components in the Plan of Operation. The forms are located under the Corporate Amendment tab. There is a proforma for Life, Property/Casualty, Health and Title companies. Provide a company-wide, three-year proforma balance sheet and income statement. The proforma workbook should be the same business type as the financial statement blank filed with the NAIC. For the lines requested, provide three-year premium and loss projections by line of business for the application state. Projections must support all aspects of the proposed Plan of Operation, including reinsurance arrangements and any delegated function agreements. Include the assumptions used to arrive at these projections.

The proforma when applied to the Corporate Amendment application is projected data. As such, the projected amounts need not balance with historical NAIC financial filings. The projected data, however, should be relevant to the Company's history of growth and losses as contemplated by the NAIC *Accounting Practices and Procedures Manual*.

A PRODUCT OF THE **NAIC**

The proforma should be completed by statutory accounting and financial reporting professionals that should be available to answer any questions or concerns from reviewing regulatory staff. The proforma is completed on an annual basis, typically for a three-year time period, however, some state may require five years. The proforma balance sheet should also include the authorized control level amount to calculate the Risk-Based Capital ratio for each projected year. The proforma should start with the first full year of operation that the Applicant Company anticipates actively writing business in the state receiving the application. When preparing a five-year projection, two proforma excel workbooks can be submitted.

The proforma (Form 13) is also located in the Forms Section under each application tab on the UCAA website. Submit the narrative and completed proforma and all attachments.

#### 7. **Statutory Memberships**

In some states, the Applicant Company is required to join one or more rating, guarantee or other organizations before transacting insurance. Generally, the Applicant Company's authorized lines of insurance govern statutorily mandated memberships. The [Statutory Membership Requirements](#) chart provides the list of statutory memberships that may be required before transacting insurance. Submit documentation supporting membership application(s), in states where required.

#### 8. **State-Specific Information**

Some jurisdictions may have additional requirements that the Applicant Company must meet before the state can amend a Certificate of Authority. Before completing a UCAA Corporate Amendment Application, the Applicant Company should review the listing of requirements on the [State-Specific requirements](#) for its state of domicile. Some states may include their state specific requirements into the electronic application. Statutory Deposit may be increased due to a change in the lines of business, the state will notify the Applicant Company if deposit adjustments are required.

If your domiciliary state requires that the certificate of authority be returned, mail that directly to the state and provide a copy in the jurisdiction requirement section of the electronic application or upload an affidavit of lost certificate of authority.

Some jurisdictions may require a copy of the Form D, post licensure for affiliated parties involved in the marketing, underwriting, servicing, administration, premium financing, claims adjustment or claims payment.

Some jurisdictions may require a copy of the variable annuity prospectus expected to be filed with the SEC.

## Corporate Amendments Application Section II Filing Requirements Deleting Lines of Business

This section provides a guide to understanding the focus of each change type of the Corporate Amendment Application. However, there typically are multiple purposes for documents. Therefore, it is important that applications be complete.

All required forms are provided for the application change type selected, therefore it is important to read the instructions prior to starting an electronic filing to ensure the necessary corporate amendment change type is selected and the appropriate forms are provided.

### Table of Contents/ Application Requirements

1. [Application Form and Attachments](#)
2. [Filing Fee](#)
3. [Articles of Incorporation](#)
4. [Bylaws](#)
5. [Minimum Capital and Surplus Requirements](#)
6. [Plan of Operation](#)
7. [Statutory Membership\(s\)](#)
8. [State-Specific Information](#)

#### 1. Application Form and Attachments

The application must identify all lines of insurance that the Applicant Company is currently authorized to transact and specify the lines of authority to delete from an existing Certificate of Authority, as identified in the plan of operation. [The Applicant Company should also provide the lines of authority for its foreign states to ensure that the requested lines to be deleted are not currently being written in a foreign state. A cover letter may be included and if required, the Applicant Company's original Certificate of Authority or an Affidavit of Lost Certificate of Authority \(Form 15\).](#)

#### 2. Filing Fee

The application will generate an invoice based on the change type selected and state specific requirements submitted to the application state, unless specified that the state prefers to send a separate invoice. The payee name and the instructions for submitting the filing fee are included in the [Filing Fees - Corporate Amendments](#) chart. Upload a copy of the Applicant Company's check and reference the electronic application tracking number.

#### 3. Articles of Incorporation

Indicate the location of the language within the Articles of Incorporation that allows the Applicant Company to write this line (e.g., page number, section number, etc., of the Articles of Incorporation). In addition:

- If the Articles of Incorporation have changed because of this application, file the amended Articles of Incorporation.

If the Articles of Incorporation most recently filed in the application state have not changed because of this application, do not file the Articles of Incorporation. Simply state that the current Articles of Incorporation are already on file in the application state.

#### 4. **Bylaws**

The Applicant Company should have previously filed the most current version of their bylaws.

- If the bylaws have changed because of this application, file the amended bylaws.
- If the bylaws most recently filed in the application state have not changed because of this application, do not file the bylaws. Simply state that the current bylaws are already on file in the application state.

#### 5. **Minimum Capital and Surplus Requirements**

The application will need to show that the Applicant Company meets the state's statutory minimum capital and surplus requirements for the requested amendment to its Certificate of Authority. In some states, the minimum capital and surplus requirements are determined by the classes of insurance that the Applicant Company is requesting authority to transact. The state will determine the level of surplus required after considering the Applicant Company's product line, operating record and financial condition. Compliance with the statutorily prescribed minimum surplus requirement may not be sufficient for all Applicant Companies. The [Minimum Capital and Surplus Requirements](#) chart identifies the minimum capital and surplus requirements for each Uniform State. This chart also provides a contact person or a link to a state-specific format or RBC requirements and instructions. Submit an explanation of the Applicant Company's compliance with the capital and surplus requirements.

A PRODUCT OF THE **NAIC**

## 6. Plan of Operation

The Plan of Operation has three components, a brief narrative, proforma financial statements/projections (Form 13) and a completed Questionnaire ([Form 8D](#)).

Complete [Form 8D](#) documenting the following:

- a. Utilizing the information contained in [Form 3](#), list all of the lines of business that the Applicant Company is requesting to delete from its Certificate of Authority.
- b. Provide a detailed explanation for the Applicant Company's request to delete these lines of business.
- c. For the state, indicate the number of policyholders by line of business that will be non-renewed or cancelled if the state approves the Applicant Company's request to delete lines of business.

The UCAA website contains a [Deleting Lines of Business Requirements](#) chart of individual state requirements. Provide documentation that complies with all requirements for removal of lines of business from the Certificate of Authority. The Applicant Company should notify the foreign state(s) if a line of business has been requested to be deleted from their domiciliary state's certificate of authority. **The domiciliary state will not approve the removal of any lines of business that are currently being written in a foreign state.**

The [Narrative](#) should include significant information not captured as a part of the Questionnaire that the Applicant Company submits in support of the application. The proforma is one of three (3) components in the Plan of Operation. The forms are located under the Corporate Amendment tab. There is a proforma for Life, Property/Casualty, Health and Title companies. Provide a company-wide, three-year proforma balance sheet and income statement. The proforma workbook should be the same business type as the financial statement blank filed with the NAIC. For the lines requested, provide three-year premium and loss projections by line of business for the application state. Projections must support all aspects of the proposed Plan of Operation, including reinsurance arrangements and any delegated function agreements. Include the assumptions used to arrive at these projections.

The proforma when applied to the Corporate Amendment application is projected data. As such, the projected amounts need not balance with historical NAIC financial filings. The projected data, however, should be relevant to the Company's history of growth and losses as contemplated by the NAIC *Accounting Practices and Procedures Manual*.

The proforma should be completed by statutory accounting and financial reporting professionals that should be available to answer any questions or concerns from reviewing regulatory staff. The proforma is completed on an annual basis, typically for a three-year time period, however, some state may require five years. The proforma balance sheet should also include the authorized control level amount to calculate the Risk-Based Capital ratio for each projected year. The proforma should start with the first full year of operation that the Applicant Company anticipates

A PRODUCT OF THE **NAIC**

actively writing business in the state receiving the application. When preparing a five-year projection, two proforma excel workbooks can be submitted.

The proforma (Form 13) is also located in the Forms Section under each application tab on the UCAA website. Submit the narrative and completed proforma and all attachments.

#### 7. **Statutory Memberships**

In some states, the Applicant Company is required to join one or more rating, guarantee or other organizations before transacting insurance. Generally, the Applicant Company's authorized lines of insurance govern statutorily mandated memberships. The [Statutory Membership Requirements](#) chart provides the list of statutory memberships that may be required before transacting insurance. Submit documentation supporting membership application(s), in states where required.

#### 8. **State-Specific Information**

Some jurisdictions may have additional requirements that the Applicant Company must meet before the state can amend a Certificate of Authority. Before completing a UCAA Corporate Amendment Application, the Applicant Company should review the listing of requirements on the [State-Specific requirements](#) for its state of domicile. Some states may include their state specific requirements into the electronic application.

[If required, the certificate of authority should be returned and a copy provided in the Jurisdiction Requirements, or attach an Affidavit of Lost Certificate of Authority \(Form 15\).](#)

### **Corporate Amendments Application Section III Filing Requirements (Name Change)**

All required forms pertaining to a name change are automatically provided when this change type is selected.

#### **Table of Contents/ Application Requirements**

1. [Application Form and Attachments](#)
2. [Filing Fee](#)
3. [Articles of Incorporation](#)
4. [Bylaws](#)
5. [Service of Process](#)
6. [State-Specific Information](#)
7. [Name Approval](#)

#### **1. Application Form and Attachments**

A cover letter may be included and if required, the Applicant Company's original Certificate of Authority or an Affidavit of Lost Certificate of Authority (Form 15),

## 2. Filing Fee

The application will generate an invoice based on the change type selected and state specific requirements provided and submit to the domiciliary state, unless the state prefers to send a separate invoice. . The payee name and the instructions for submitting the filing fee are included in the [Filing Fees - Corporate Amendments](#) chart. Attach a copy of the Applicant Company's check if the state does not accept electronic filing fees. Reference the electronic application tracking number with the payment.

## 3. Articles of Incorporation

Indicate the location of the language within the Articles of Incorporation that reflects the new name (e.g., page number, section number, etc., of the Articles of Incorporation). In addition:

- If the Articles of Incorporation have changed because of this application, file the amended Articles of Incorporation.
- If the Articles of Incorporation most recently filed in the application state have not changed because of this application, do not file the Articles of Incorporation. Simply state that the current Articles of Incorporation are already on file in the application state.

## 4. Bylaws

The Applicant Company should have previously filed the most current version of their bylaws.

- If the bylaws have changed because of this application, file the amended bylaws.
- If the bylaws most recently filed in the application state have not changed because of this application, do not file the bylaws. Simply state that the current bylaws are already on file in the application state.

## 5. Service of Process

An electronically executed UCAA Service of Process ([Form 12](#)) may be required for this change type or see [state-specific requirements](#).

## 6. State-Specific Information

Some jurisdictions may have additional requirements that the Applicant Company must meet before the state can amend a Certificate of Authority. Before completing a UCAA Corporate Amendment Application, the Applicant Company should review a listing of requirements for its

A PRODUCT OF THE **NAIC**

domiciliary state.. [State-specific requirements](#) are located on the UCAA website. Some states may incorporate those state specific requirements into the electronic application.

## 8. Name Approval

Each state has different guidelines and procedures for name approval. The [Name Approval Requirements](#) chart is intended to serve as a guide for the various name approval requirements of each Uniform State. The Applicant Company should check with each state separately to ensure compliance with all applicable name approval requirements. Where applicable, submit evidence of the name approval request.

Automatic notification will be provided to the NAIC once the domiciliary state approves the name change. Verify that the NAIC has completed the name change prior to preparation of any foreign state(s) electronic application. Email confirmation to: [jheinz@naic.org](mailto:jheinz@naic.org).

### Corporate Amendments Application Section IV Filing Requirements (Change of Company Structure)

#### Table of Contents/ Filing Requirements

1. [Application Form and Attachments](#)
2. [Filing Fee](#)
3. [Articles of Incorporation](#)
4. [Bylaws](#)
5. [State-Specific Information](#)

#### 1. Application Form and Attachments

A cover letter may be included with the Applicant Company's original Certificate of Authority or an Affidavit of Lost Certificate of Authority ([Form 15](#)), if required. All required forms and attachment buttons will be provided in the electronic application for the change type selected.

#### 2. Filing Fee

The application will need to include a filing fee for the application state. The payee name and the instructions for submitting the filing fee are included in the [Filing Fees - Corporate Amendments](#) chart. Checks will need to be mailed directly to the application state, if your domiciliary state does not accept electronic fees. Reference the electronic application tracking number with your payment.

### 3. Articles of Incorporation

Indicate the location of the language within the Articles of Incorporation that reflects the change to the corporate structure of the Applicant Company. (e.g., page number, section number, etc., of the Articles of Incorporation). In addition:

- If the Articles of Incorporation have changed because of this application, file the amended Articles of Incorporation.
- If the Articles of Incorporation most recently filed in the application state have not changed because of this application, do not file the Articles of Incorporation. Simply state that the current Articles of Incorporation are already on file in the application state.

### 4. Bylaws

The Applicant Company should have previously filed the most current version of their bylaws.

- If the bylaws have changed because of this application, file the amended bylaws.
- If the bylaws most recently filed in the application state have not changed because of this application, do not file the bylaws. Simply state that the current bylaws are already on file in the application state.

### 5 Jurisdiction Requirements

Some jurisdictions may have [State-Specific Requirements](#) that the Applicant Company must meet before the state can amend a Certificate of Authority. Before completing a UCAA Corporate Amendment Application, the Applicant Company should review a listing of requirements for their domiciliary state. Completed the optional Form 14, if contact address information has changed because of this application.

A PRODUCT OF THE **NAIC**

Some jurisdictions may have additional requirements that must be met before a Certificate of Authority can be amended. Before completing a UCAA Corporate Amendment Application, the Applicant Company should review a list of requirements for the state in which application is being made.

**The following applications are considered stand-alone applications.**

**Corporate Amendments Application Section VIII  
Filing Requirements (Change of Mailing/Administrative Office Address/Contact Notification)**

**Instructions**

The Applicant Company should complete the Corporate Amendment Application Section VII as a courtesy filing in conjunction with other changes or to notify regulatory officials of an administrative office or mailing address changes or contact person changes applicable to the Applicant Company. For electronic filings, this change is submitted separately (stand-alone) or in conjunction with any other change type.

**Table of Contents / Filing Requirements**

1. [Application Form and Attachments](#)
2. [State-Specific Information](#)

**1. Application Form and Attachments - Item 1 of Application**

The Change of Administrative Office Address/Contact Notification is used to update contact information or administrative office address information and does not require an approval. Submit a completed Change of Mailing/Administrative Office Address/Contact Notification ([Form 14](#)).

**2. State-Specific Information - Item 2 of Application**

The Applicant Company should review the [State-specific requirements](#) for the application state.

**Corporate Amendments Application Section IX  
Filing Requirements (Uniform Consent to Service of Process)**

This section provides a guide to understanding the focus of a stand-alone Uniform Consent to Service of Process Application. It is important that the application be complete.

Please [contact the states individually](#) if there are questions about a specific document that is not noted under the state specific instructions on the UCAA website.

A PRODUCT OF THE **NAIC**

The electronic stand-alone application is located under the [Electronic Application](#) link on the UCAA web site and requires a user ID and password to access.

Please read the following Instructions before proceeding in completing Corporate Amendment Application Section IX.

### **Instructions**

The Applicant Company can complete the Uniform Consent to Service of Process Application as a stand-alone filing or in conjunction with any other Corporate Amendment Application via the electronic application where a service of process form is required to notify regulatory officials of service of process changes to the Applicant Company.

### **Table of Contents /Filing Requirements**

1. [Application Form and Attachments](#)
2. [Filing Fee](#)
3. [State-Specific Information](#)

#### **1. Uniform Consent to Service of Process Form**

The Uniform Consent to Service of Process is located on the UCAA website. Submit a completed Uniform Consent to Service of Process ([Form 12](#)) via the electronic stand-alone application process.

#### **2. Filing Fee**

The application will need to include a filing fee if required by the application state. Check the Corporate Amendment Filing Fee chart /Filing Fee Matrix on the UCAA website or contact the application state for filing requirements. If retaliatory, verify fee information via the State [Retaliatory Information](#) link. Submit a copy of the Applicant Company's check. For electronic filings, the fees should reference the electronic filing's tracking number.

#### **3. State-Specific Information**

Some jurisdictions may have additional requirements that the Applicant Company must meet before the state can accept the amended Consent to Service of Process form. Before completing a UCAA Uniform Consent to Service of Process Application, the Applicant Company should review the listing of [State-Specific Requirements](#) for the application state.

A PRODUCT OF THE **NAIC**

**Corporate Amendments Application Section X  
Filing Requirements (Statement of Voluntary Dissolution)**

This section provides a guide to understanding the purpose of completing the statement of voluntary dissolution. This courtesy filing does not require approval but should be provided when the Applicant Company is exiting the marketplace. This form is also available for [Risk Retention Group registrations](#).

This form should be completed by those reporting entities that are ending their existence in all states. The Applicant Company should complete Form 16a or 16b and submit to the domicile state when requesting dissolution or cancellation of the Certificate of Authority and may also be requested by non-domiciliary states when requesting cancellation of the foreign Certificate of Authority (Form 17 Statement of Withdraw). The purpose of the form is to provide information about the status of all foreign Certificates of Authority and any obligations that are still present in those states.

**Table of Contents /Filing Requirements/Columns**

- [1. List state\(s\) where certificate of authority has been held.](#)
- [2. Approval date for the surrender of the Certificate of Authority.](#)
- [3. Policyholder obligations or contingent liabilities.](#)
- [4. Status of premium taxes, fees and other monetary obligations to the foreign state.](#)
- [5. State deposits, amount and purpose.](#)

**1. Certificate of Authority has been held from the states listed below**

List each state from which the entity has held a certificate of authority during the last 10 years. Include states where a certificate of authority had been issued and surrendered within the 10-year period. For Risk Retention Groups-list each state from which the entity has registered during the last 10 years. Include states where a registration had been issued and surrendered within the 10-year period.

**2. Approval date of surrender of Certificate of Authority by state**

Report the date that the state department of insurance approved the surrender or cancellation of the Certificate of Authority in that state. For Risk Retention Groups – report the date of registration cancellation by state.

**3. Policyholder obligations or contingent liabilities**

Report any kind of obligation that exists on the date of the signature on this form which is related to the policies or contracts issued by the entity or RRG. Include claim obligations, loss adjustment expenses, involuntary reinsurance pool obligations and any other unpaid charges that arise from policies or contracts written in that state or that are expected to arise from the policy or contract activities of the entity or RRG in that state. Estimate the amount if the actual amount is not known.

**4. Premium taxes, fees and other monetary obligations owed to the foreign state**

Report any other obligations that exist on the date of the signature on this form. Include taxes, fees, assessments, creditor obligations and any other unpaid charges that arise from that state or that are expected to arise from the operations of the entity or RRG in that state. Estimate the amount if the actual amount is not known.

#### **5. State Deposit**

Report the amount of any statutory or regulatory deposit that exists in the state on the date of the signature on this form. Explain the reason for the deposit, if known.

Draft: 3/28/23

Risk-Focused Surveillance (E) Working Group  
Louisville, Kentucky  
March 23, 2023

The Risk-Focused Surveillance (E) Working Group of the Financial Condition (E) Committee met March 23, 2023. The following Working Group members participated: Amy Malm, Chair (WI); Lindsay Crawford, Vice Chair (NE); Blase Abreo and Sheila Travis (AL); Susan Bernard and Michelle Lo (CA); Michael Shanahan (CT); Virginia Christy (FL); Daniel Mathis (IA); Cindy Andersen (IL); Roy Eft (IN); Stewart Guerin (LA); Dmitriy Valekha (MD); Vanessa Sullivan (ME); Judy Weaver (MI); Debbie Doggett (MO); Monique Smith (NC); Pat Gosselin (NH); David Wolf (NJ); Mark McLeod (NY); Dwight Radel (OH); Eli Snowbarger (OK); Doug Hartz (OR); Diana Sherman and Matt Milford (PA); Ted Hurley and John Tudino (RI); Johanna Nickelson (SD); Amy Garcia (TX); Jake Garn (UT); Greg Chew, David Smith, and Doug Stolte (VA); Dan Petterson (VT); and Steve Drutz (WA).

1. Discussed and Exposed Updated Guidance for Reviewing Transactions/Services with Affiliates

Malm stated that the first agenda item is to discuss an updated draft of proposed edits to NAIC handbooks to provide additional guidance for state insurance regulators in reviewing and monitoring transactions and service agreements between insurers and their affiliates. Revisions to the NAIC's *Financial Analysis Handbook* and its *Financial Condition Examiners Handbook* were prepared for review by the Affiliated Services Drafting Group. This issue was originally brought to the Working Group through a referral from the Chief Financial Regulator Forum in 2021 due to the growing prevalence of market-based expense allocations in affiliated service agreements. Because the issue is important to both financial analysis and financial examinations, the topic was referred to the Working Group so that guidance for both functions could be developed together.

Malm stated that initially, a small volunteer group of state insurance regulators with experience in reviewing affiliated services developed guidance for the Working Group's consideration, which was then exposed for public comment in the fall of 2021. As a result of the exposure period, comment letters were received that raised various issues the Working Group determined were important to address. As such, the Working Group formed a joint drafting group of state insurance regulators and interested parties to work on updating the proposed guidance for the issues identified.

The Affiliated Services Drafting Group consists of state insurance regulators from Connecticut, Idaho, Maine, North Carolina, Pennsylvania, Texas, Virginia, and Wisconsin. In addition, the Drafting Group includes industry representatives from the America Council of Life Insurers (ACLI), America's Health Insurance Plans (AHIP), the American Property Casualty Insurance Association (APCIA), the Blue Cross Blue Shield Association (BCBSA), Equitable, The Travelers Companies (Travelers), and the UnitedHealth Group (UHG).

Bruce Jenson (NAIC) provided an overview of the updated guidance, which is intended to provide additional considerations for regulators in reviewing service agreements between insurers and their affiliates, particularly those that incorporate market-based reimbursement for services performed. Such considerations include expanded guidance for reviewing the fairness and reasonableness of reimbursement rates on an ongoing basis during financial examinations as warranted, based on communications with the financial analysis department. Jenson stated that the proposed revisions also incorporate additional guidance from the 2021 revisions to the *Insurance Holding Company System Regulatory Act (#440)* that are focused on ensuring the continuity of services provided by an affiliate when an insurer is placed into receivership.

Malm stated that while the proposed revisions will assist both financial analysts and examiners in evaluating the fairness and reasonableness of services with affiliates on both an initial and ongoing basis, there is one area in which the drafting group found it difficult to develop guidance. This has to do with situations where the services an affiliate provides are not directly comparable to services offered in the open market, making it challenging to assess the fairness and reasonableness of the proposed reimbursement rate. Often, the rate proposed for these services is structured as “cost-plus” reimbursement, whereby the affiliate charges the insurer for the cost to provide the service plus a profit margin to account for the risk the affiliate is assuming in providing the service.

Malm stated that the drafting group recognizes that “cost-plus” reimbursement rates are already being used in some insurance service agreements but was reluctant to develop and expose guidance in this area before receiving input from a larger number of states and industry participants. Malm proposed that the Working Group requests comments on whether to include guidance on reviewing “cost-plus” agreements and how to address that topic. For example, some questions to ask during the exposure period include:

1. Should guidance on reviewing “cost-plus” reimbursement rates be added to the handbooks?
2. In which situations or for what types of services might “cost-plus” reimbursement be appropriate?
3. What rationale should the insurer provide to justify the profit margin included within the cost-plus rate, particularly if there is no comparable market data?
4. What tools or benchmarks could regulators use in evaluating the fairness and reasonableness of the profit margin included in the cost-plus rate?

Malm asked for comments from Working Group members on whether to request input on “cost-plus” guidance during the exposure period. Shanahan stated his support for requesting input on this topic as it represents a complex issue that is becoming more prevalent in service agreements. Andersen agreed that regulators could benefit from additional guidance in this area. Hartz stated that additional guidance for “cost-plus” agreements could be beneficial but that regulators also need to carefully review the details of cost allocations to ensure they are appropriate.

Tom Finnell (representing AHIP) stated that a joint group of interested parties agree with the request for input on the development of “cost-plus” guidance but would have concern if no guidance is placed within NAIC handbooks on this topic. Finnell stated that “cost-plus” agreements exist and have been approved in several state insurance departments, even if they are not approved in all states. Therefore, NAIC members and the industry would benefit from some consistent guidance in this area. Finnell also stated that some international service agreements are required to be prepared under a “cost-plus” approach to ensure that profits are accounted for correctly to facilitate tax reporting.

Finnell also stated that the revisions the Working Group exposed in the fall of 2021 raised concerns about financial examiners reopening agreements that state insurance departments had already approved. While the updated draft still includes considerations and suggested procedures for financial examinations, the regulators and interested parties were able to come to some agreement regarding how and when to review the fairness and reasonableness of reimbursement rates during an examination. Of key importance is the communication and coordination between the financial examiner and the financial analyst who conducted the initial review and approval.

Radel made a motion, seconded by Crawford, to expose the proposed guidance for a 45-day public comment period ending May 5. The motion passed unanimously.

## 2. Discussed Plans for Financial Analyst/Examiner Salary Survey

Malm stated that recommended salary ranges for financial analysts and examiners were first added to the NAIC's handbooks in 2020 based on the efforts and research of this Working Group. At that time, the Working Group committed to reviewing and updating the ranges as needed, with a minimum review period of every other year. As the ranges were last reviewed and updated in 2021 through a simplified review process, the Working Group is expected to conduct a more detailed review in 2023.

An all-state salary survey was conducted in 2019 to pave the way for the initial salary ranges to be adopted in 2020. As a result of that survey, data was collected from 43 different states for commonly held analysis and exam positions. This data was then compared against external market data for comparable industry positions, as well as salary rates for federal and state banking regulators.

Malm proposed a similar process for 2023, whereby a salary survey would be sent to all state insurance departments. Participation in the survey would be voluntary and state-specific responses would be kept confidential and only published at an aggregated level. The survey would request information on actual salaries paid (aggregated at the average salary per position), along with the number of individuals employed at that level and recent turnover statistics. In addition to the quantitative data, the survey could ask some qualitative questions regarding staffing levels, retention, and recruitment to assist regulators in evaluating how states are performing in these areas. Malm stated that the Working Group's leadership plans to finalize the survey questions in the coming weeks before releasing the survey in late spring or early summer for state insurance departments to complete.

Milford asked whether the survey could collect data on salaries paid to contract regulators, as state insurance departments often compete against contract firms for staffing services. Jenson responded that the NAIC maintains a listing of contract firms to which a salary survey could be distributed but noted that external firms might view their salary data, even when aggregated, as proprietary and confidential. Hartz indicated that although the data might be viewed as proprietary, the contractors generally work on behalf of state insurance departments and might be willing to provide the information upon request. Hartz also stated that information on examination billing rates could also be beneficial.

Malm indicated that the Working Group's leadership would work with NAIC staff to incorporate contract regulators into the salary survey as deemed appropriate.

## 3. Discussed Plans for 2023 Peer Review Sessions

Crawford stated that the NAIC Peer Review Program provides the opportunity for a group of experienced financial analysts and examiners to participate in reviewing recently completed analysis and examination files to identify best practices and opportunities for improvement within individual files and on an aggregate level.

Crawford reported that a financial analysis session was held in February, with 10 different states participating just ahead of the annual statement filing deadline to help prepare them for annual analysis work. The session received excellent participation and feedback from all participants.

Crawford stated that the Working Group has scheduled and filled a financial exam session for May, which will involve both contract examiners and the department employees overseeing their work for each of the files being reviewed. This should be an excellent opportunity to identify best practices and opportunities for improvement in overseeing contract examination work.

Crawford stated that an Own Risk and Solvency Assessment (ORSA)-themed financial analysis session is being scheduled for this summer and that the focus of the review will be on the analyst's assessment and use of an insurer's ORSA Summary Report to inform their ongoing financial analysis activities. The session is planned for six different states to participate. Additional information will be provided to chief financial regulators following the Spring National Meeting.

Crawford stated that the Working Group plans to offer one more traditional financial analysis peer review session this fall, with additional details to be announced in the coming months. As the risk-focused financial analysis process is still relatively new, the Working Group continues to see more demand for financial analysis sessions and will continue to schedule sessions, when possible, to meet demand.

#### 4. Discussed Other Matters

Malm reminded Working Group members that a referral was received from the Macroprudential (E) Working Group in 2022 on various issues in affiliated service agreements. The first issue relates to the development of guidance around the regulatory review of investment management agreements between an insurer and an investment manager affiliate. The second issue relates to capital maintenance agreements between an insurer and a parent company or affiliate. Malm stated that the Working Group plans to move forward in finalizing its general affiliated services guidance before getting into the more specific issues raised in the referral. As such, it plans to work on guidance related to investment management agreements and other topics raised in the referral later this year.

Having no further business, the Risk-Focused Surveillance (E) Working Group adjourned.

RE: Referral on Additional Market and Analytical Information for Bond Investments

DATE: February 13, 2023

**Summary** – The Investment Analysis Office (IAO) staff recommended in its Feb. 25, 2022, memorandum to the Valuation of Securities (E) Task Force (VOSTF) (attached hereto, Blanks Market Data Disclosure v2.pdf) that it would like additional market-data fields added to the annual statement instructions for bond investments. This was, in part, based upon the NAIC's adoption in 2010 of the recommendations of

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

www.naic.org

the Rating Agency (E) Working Group (RAWG), which was formed following the Great Financial Crisis of 2007-2008 to study the NAIC's reliance on rating agencies, and the IAO staff's recent findings in its Nov. 2021 memo regarding disparities between rating agencies. RAWG recommended that: 1) regulators explore how reliance on rating agencies can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk; and 2) consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and 3) VOSTF should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending on the specific regulatory process under consideration.

The NAIC's need for alternative measures of investment risk has only increased since RAWG made its recommendations, as privately issued and rated complex structured finance transactions have become commonplace without adequate ways of identifying them. The SVO recommended the following market data fields to be added to the annual statement instructions: Market Yield, Market Price, Purchase Yield, Weighted Average Life, Spread to Average Life UST, Option Adjusted Spread, Effective Duration, Convexity and VISION Issue ID. Please refer to the attached memo for more detail on each data field.

In comments received from industry there were question as to how the SVO, VOSTF and/or other regulators who would receive the analytic data included in the proposal would utilize that information and why it is of value to them. The SVO was also asked to consider industry's recommendation that the NAIC be responsible for calculating this analytical information by utilizing commercially available data sources and investment models instead of having each individual insurance company incur the costs to implement system changes. The SVO shared their thoughts on the alternatives in the Jul. 14, 2022, memorandum to the VOSTF (attached, Blanks\_Market\_Data\_Options\_v3.pdf).

Capabilities like this within the SVO would permit it to calculate for regulators all the analytic values previously mentioned for any Schedule D investment along with additional measures such as key rate duration (a measure of interest rate sensitivity to maturity points along the yield curve), sensitivity to interest rate volatility, principal and interest cash flow projections for any security or portfolio for any given interest rate projection, loss estimates for any security for any given scenario and many others measures.

**Referral** – VOSTF refers this matter to the above referenced Committees, Task Forces and Working Groups for consideration and requests a response from you by May 15<sup>th</sup> outlining:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

Please contact Charles Therriault or Marc Perlman with any questions.

RE: Additional Market Data Fields for Bond Investments

DATE: February 25, 2022

---

The SVO proposes adding additional market-data fields for bond investments to the annual statement instructions based on 2010 adopted recommendations of the Rating Agency (E) Working Group (RAWG) and the IAO staff's findings regarding the discrepancies between ratings, presented in its Nov. 2021 memo.

The RAWG was formed after the Financial Crisis of 2008 and was charged with gathering and assessing information on:

1. *The problems inherent in reliance on ratings, including impact on the filing exempt ("FE") process and Risk-Based Capital ("RBC");*
2. *The reasons for recent rating shortcomings, including but not limited to structured security and municipal ratings;*
3. *The current and potential future impact of ratings on state insurance financial solvency regulation; and*
4. *The effect of the use of NRSRO ratings on public confidence and public perception of regulatory oversight of the quality of insurance.*

The RAWG made the following summary recommendations in their Apr. 28, 2010, report that was adopted by the Financial Condition (E) Committee (emphasis added):

1. **Regulators explore how reliance on ARO (Approved Ratings Organization) ratings can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk;**
2. **Consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and**

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

[www.naic.org](http://www.naic.org)

3. *When considering continuing the use of ratings in insurance regulation, the **steps taken by the NRSROs in correcting the causes that led to recent rating shortfalls**, including the NRSROs' efforts in implementing the recommended structural reforms, should be taken into account.*

As the IAO staff demonstrated with the analysis in its Nov. 29, 2021, memo regarding ratings discrepancies, not all credit rating provider (CRP) ratings reflect a reasonable assessment of a security's risk, indicating that rating shortfalls persist today. The NAIC has not made additional progress in reducing reliance on CRPs and the IAO proposed several steps in its memo to accomplish that objective. As noted by the RAWG and reflected in the IAO's memo, there persists a situation where "... ratings are neither consistent nor uniform for individual securities, nor across different types and classes of securities..." However, the role of the SVO has not been expanded to include "... evaluating credit and other risks of securities."<sup>1</sup>

One step towards introducing alternative ways to measure a security's risk would be to require insurers to report various analytical measures about each security including metrics such as its current market yield, interest rate sensitivity, spread relative to risk-free securities such as United States Treasuries and average remaining life. The more a security's market yield and spread differ from similarly rated securities, the more likely it is that the implied market-perceived risk of that security differs from the risk indicated by the credit rating assigned to it. The yield difference or spread in basis points can potentially help identify securities whose risk assessment warrants further review by the SVO, examiners or other regulatory groups, for example, a AAA rated security with a yield of 5%. Other fields that measure a security's price sensitivity to interest rate movements may also help to identify market-perceived risk inconsistent with the assigned credit rating. These additional market data fields would align with the RAWG's referral to the Task Force and SVO Initiatives (EX) Working Group, as noted in their following detailed recommendations (emphasis added):

1. *Referral to the NAIC Valuation of Securities (E) Task Force: VOS should continue to **develop independent analytical processes to assess investment risks**. These mechanisms can be tailored to address unique regulatory concerns and should be developed for **use either as supplements or alternatives to ratings**, depending on the specific regulatory process under consideration.*
2. *Referral to the NAIC Valuation of Securities (E) Task Force: ARO ratings have a role in regulation; however, since **ratings cannot be used to measure all the risks that a single investment or a mix of investments may represent in an insurer's portfolio**, NAIC policy on the use of ARO ratings should be **highly selective and incorporate both supplemental and alternative risk assessment benchmarks**.*
3. *Referral to the NAIC's SVO Initiatives (EX) Working Group: NAIC should evaluate whether to **expand the use of SVO and increase regulator reliance on the SVO for evaluating credit and other risks of securities**.*

**Recommendation:** The SVO recommends the following market data fields and related descriptions be added to all the annual statement instructions, through a referral to the Blanks (E) Working Group, for all bonds reported on Schedule D, Part 1 (those within scope of SSAP No. 26R – Bonds and SSAP No. 43R – Loan-Backed and Structured Securities). To allow sufficient time for insurers to update their systems, the SVO further recommends that the changes be implemented as electronic only fields effective beginning with the reporting year ending December 31, 2023.

- Market Yield – The Market Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis. Therefore, Fair

---

<sup>1</sup> Evaluating the Risks Associated with NAIC Reliance on NRSRO Credit Ratings – Final Report of the RAWG to the Financial Conditions (E) Committee, April 28, 2010

Value, which is already reported, is the present value (PV) of all expected cash flows discounted at the Market Yield.

- Market Price – The Market Price per unit of Par Value, which is already reported, is reflected in the Fair Value as of the financial statement date. The Market Price, which excludes accrued interest, when multiplied by Par Value and divided by 100 will be equal to the Fair Value.
- Purchase Yield – The Purchase Yield is the internal rate of return discount rate that makes the net present value (NPV) of all expected cash flows equal to zero in a discounted cash flow analysis as of the Acquired Date. Therefore, Actual Cost is the present value (PV) of all expected cash flows discounted at the Purchase Yield as of the Acquired Date.
- Weighted Average Life – The Weighted Average Life is the average length of time that each dollar of unpaid principal remains outstanding. The time weightings used in weighted average life calculations are based on payments to the principal. The calculation is "weighted" because it considers when the payments to the principal are made—if, for example, nearly all of the principal payments are made in five years, WAL will be close to five years. Weighted average life does not consider payments to interest on the loan. This value is recalculated at each statement date for the remaining principal payments.
- Spread to Average Life UST - The spread is the difference between the interpolated U.S. Treasury bond yield that matches the reported debt security's Weighted Average Life. Spreads between interpolated U.S. Treasuries and other bond issuances are measured in basis points, with a 1% difference in yield equal to a spread of 100 basis points.
- Option Adjusted Spread - The option-adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return (typically U.S. Treasury yield), which is then adjusted to take into account an embedded option and expressed in basis points. The spread is added to the fixed-income security price to make the risk-free bond price the same as the bond. The option-adjusted spread considers historical data such as the variability of interest rates and prepayment rates. These calculations are complex since they attempt to model future changes in interest rates, prepayment behavior of mortgage borrowers, and the probability of early redemption.
- Effective Duration - This is a duration calculation for bonds that have embedded options. This measure of duration takes into account the fact that expected cash flows will fluctuate as interest rates change and is, therefore, a measure of risk given the security's Fair Value. As a formula, Effective Duration =  $(P(1) - P(2)) / (2 \times P(0) \times Y)$ , where  $P(0)$  = the bond's Market Price per \$100 worth of par value,  $P(1)$  = the price of the bond if the yield were to decrease by Y percent,  $P(2)$  = the price of the bond if the yield were to increase by Y percent, and Y = the estimated change in yield used to calculate  $P(1)$  and  $P(2)$ .
- Convexity - This is a measure of the curvature, or the degree of the curve, in the relationship between bond prices and bond yields. Convexity demonstrates how the duration of a bond changes as the interest rate changes.
- VISION ISSUE ID: The NAIC VISION system security ID reported in AVS+.

RE: Possible Options for Additional Market Data Fields for Bond Investments

DATE: July 14, 2022

---

**Summary** - The SVO proposed adding additional market-data fields for bond investments to the annual statement instructions in its memo dated Feb. 25, 2022, titled “Additional Market Data Fields for Bond Investments” that was discussed at the 2022 Spring National Meeting. The recommendation was based, in part, on 2010 adopted recommendations of the Rating Agency (E) Working Group (RAWG) and the NAIC Investment Analysis Office’s (IAO) staff’s findings regarding the discrepancies between ratings, presented in its Nov. 29, 2021 memo, “Rating Issues and Proposed Changes to the Filing Exemption Process.” In this memo the SVO further outlines the regulatory benefits and proposes two possible approaches.

The benefits of collecting additional market-data for each insurer bond investment are several:

- Assist in SVO identification of securities with credit rating provider (CRP) ratings which may be inconsistent with a security’s actual overall risk.
- Greater transparency for regulators into the risks and characteristics of insurer investments.
- Incorporation of insurer investment portfolio analysis into the examination process.
- Availability of more Level 1 and 2 Inputs which will be included in the AVS+ pricing data for all securities compared to the mostly Level 3 Inputs for only some securities today.
- Allow state insurance regulators to assess the capabilities of an insurer’s investment management or risk management processes by reviewing the quality and accuracy the market data fields.
- Provide NAIC staff with the capability to run cash flow simulations on insurer investments.

Regarding the first bullet, the SVO would use this market-data information to help identify securities with credit rating provider (CRP) ratings that may be inconsistent with the security’s actual overall risk. The SVO and SSG have raised concerns over the years about a number of asset classes (e.g. residential

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509	p   202 471 3990	f   816 460 7493
Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197	p   816 842 3600	f   816 783 8175

[www.naic.org](http://www.naic.org)

mortgage backed securities (RMBS), commercial mortgage backed securities (CMBS), public and private fund investments, principal protected securities (PPS) including CLO Combo Notes, regulatory transactions, residual interests, and now collateralized loan obligations (CLO), and structure equity and funds) and specific securities in other asset classes where a rating agency rating often does not adequately reflect the investment risk for NAIC purposes. The SVO needs this analytical information so that it can identify and take potential action on investment risk assessment inaccuracies. Without this data and potentially other information in the future, coupled with some level of discretion over NAIC Designations derived from ratings, the SVO and regulators will remain in the dark about these risks. Additionally, the incentive for significant risk-based capital arbitrage utilizing CRP ratings will likely continue to increase and rating agencies will effectively remain a de-facto “super regulator” in that any investment they assign a rating to is automatically accepted by the NAIC without any regulatory discussion, analysis, oversight or consideration as to how the rating agency’s decisions align to the NAIC’s statutory framework.

Inconsistent and potentially inaccurate assessments of investment risk is a critical issue not only for the Valuation of Securities (E) Task Force but for other state insurance regulatory groups that are interested in identifying and analyzing investment risks, whether it be at the individual security, asset class, legal entity or industry level. The following are just a few groups that have active work streams involving investment risk: Life Actuarial (A) Task Force, Capital Adequacy (E) Task Force and its Working Groups, Statutory Accounting Principles (E) Working Group, Financial Stability (E) Task Force, Macroprudential (E) Working Group and Financial Analysis (E) Working Group. The proposed market data fields will benefit each of these groups in their work assessing insurer investments and portfolio risks.

The requested market data fields other than purchase yield, which should be available from any investment accounting system, are all at the security issue level (i.e. CUSIP). Any insurer system that can receive security issue level data such as a market prices, credit ratings, bond factors, cashflows, or NAIC Designations should be able to accommodate these proposed security issue-level data fields. The SVO acknowledges this change will require time for insurer system providers to accommodate these new data fields into their data structures and Schedule D reporting applications. However, these data fields are very common in the management of a bond portfolio, and it would be a significant enterprise risk deficiency if an insurer’s investment managers did not have them.

Some alternate measures of risk (e.g. Sharpe Ratio and Sortino Ratio) were mentioned during the Task Force discussion. These metrics, however, would require insurers to calculate the total return and the standard deviation of those returns for each security they own in order to produce and report these metrics which would be significantly more costly and more appropriate for assessing relative value and less applicable for assessing investment risk.

**Alternatives** – The SVO was asked to consider industry’s recommendation that the NAIC produce these fields. Below are our thoughts on each alternative.

- **NAIC Produced Analytics** – The SVO can take on the responsibility for producing the analytical data elements requested in this proposal. To do so it would require enhancements to the SVO’s existing systems (VISION, AVS+ and STS), and vendor pricing data, investments in new systems to provide the modeling, more staff for the incremental and on-going support of these systems and processes, new data feeds to support the modeling software, and new data bases and reporting capabilities to provide the information to regulators. Enhancements would also

need to include the ability for insurers to provide electronically to the SVO the full security structure of any security that the modeling software does not know about. We strongly believe that the benefits to be gained by state regulators, the SVO and other NAIC groups with interests in investment risk of bringing this modelling capability in-house greatly outweigh, in the long run, the initial costs and effort to make these capabilities operational.

- **Pros:**

- Market analytical information would be independently and consistently produced.
- The SVO's pricing data would need to include more Level 1 and 2 Inputs for all securities versus primarily Level 3 Inputs for only some securities today.
- Regulators would eventually be able to ask NAIC staff to model the risks or cash flows of any bond security or insurer bond portfolio, including, stress testing those securities and portfolios.
- Regulators would have significantly greater transparency into the risks and characteristics of insurer investments.
- Analytical analysis of insurer investment portfolios could be incorporated into the examination process.
- The overall cost to insurers through any increased fee would likely be much less than each insurer building out its own capability to provide the data.

- **Cons:**

- The NAIC would need to make significant enhancements to VISION, AVS+, and STS, and develop new reporting data bases.
- The NAIC will need to license a security analytic modelling system and provide it with the data it requires, some of which may require new data licenses. This includes full access to vendor applications like Bloomberg or Aladdin.
- The NAIC will incur additional fees for higher level of security pricing data. The NAIC will also need additional staff to develop and support the technology enhancements and to support the on-going modeling of securities and portfolios.
- It may take longer for the NAIC to build this capability.
- Insurers would still need to report some of this information on their Schedule D filings from data published through AVS+.
- Insurers would need to provide the SVO with full security structure modeling and supporting data (e.g. collateral, payments, actions) for any security the analytic modelling system does not have within its data base.

- **Insurer Produced Analytics** – Insurer investment managers should already have the market data fields requested in this proposal. Insurers would need to get this information into their systems that produce their Schedule D filings. This option would require more up-front work on the part of the insurers and less by the NAIC. The uses of the data, however, whether by regulators, the SVO or other interested

NAIC groups, could be significantly more limited than in the first option, because of the inconsistency in data between insurers.

- **Pros:**
  - Insurers already have this information as part of their investment management or risk management processes.
  - State insurance regulators could assess the capabilities of an insurer’s investment management or risk management processes by reviewing the quality and accuracy the market data fields.
  - The timeframe to implement would likely be shorter than the SVO having to build out this capability.
- **Cons:**
  - Insurer security pricing is very inconsistent today which will lead to a high degree of variability in these analytical values.
  - The modeling software and assumptions used by insurers to produce these analytical value can vary significantly which will also lead to a high degree of variability in the values.
  - Insurers and their system providers will need to develop new interfaces to ingest this data and produce it in their Schedule D filing. That time frame could vary significantly by vendor and insurer.
  - State insurance regulators would not be able to request the modeling of any investment security or portfolio.
  - Insurers would directly bear the expense of these changes which will likely be greater than it would be if the NAIC produced this information.

**Next Steps** – The SVO continues to strongly believe that these market data fields are an important first step in finding alternative ways to measure insurers investment risk and reducing the NAIC reliance rating agency ratings. As noted by the RAWG and reflected in the IAO’s memo, there persists a situation where “... ratings are neither consistent nor uniform for individual securities, nor across different types and classes of securities...” yet the role of the SVO has not been expanded to include using these alternatives in “... evaluating credit and other risks of securities.” The objective of this request is to begin addressing these investment risk issues but this may not be the only information needed.

Both alternatives will involve a commitment of resources either by the NAIC or industry. The major question before the Task Force is whether it has a preferred source for these market data fields: the NAIC’s SVO or insurer reporting? The SVO believes that the first option would provide the most standardization in data and utility to regulators, the SVO and other interested NAIC groups and would be worth the slightly longer time and cost needed to develop the capabilities.

If, as the SVO recommends, the Task Force prefers the NAIC’s SVO as the source of this analysis, then the next step would be a referral to the Financial Condition (E) Committee to request their sponsorship for this initiative and, if provided, begin a fiscal request. If Financial Condition (E) Committee declines to sponsor the initiative or if insurer reporting is the preferred source, we would recommend reverting to insurer reporting and directing the SVO staff to prepare the Blanks referral.

Members of the Valuation of Securities (E) Task Force

FROM: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau  
Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)  
Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office (SVO)

RE: Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office  
(the “P&P Manual”) to Include Collateralized Loan Obligations (CLO) as a Financially Model  
Security in Part Four

DATE: September 16, 2022 (**Updated: December 20, 2022**)

**Summary** – A collateralized loan obligation (CLO) is type of structured security backed by a pool of debt, typically corporate loans with low credit ratings. An insurer that purchases every tranche of a CLO holds the exact same investment risk as if it had directly purchased the entire pool of loans backing the CLO. The aggregate risk-based capital (RBC) factor for owning all of the CLO tranches should be the same as that required for owning all of the underlying loan collateral. If it is less, it means there is risk-based capital (RBC) arbitrage. As noted in the Investment Analysis Office’s (IAO) memo of May 25, 2022, “Risk Assessment of Structured Securities – CLOs”, it is currently possible to materially (and artificially) reduce C1 capital requirements just by securitizing a pool of assets.

**Recommendation** – The Investment Analysis Office recommends the Task Force assign the Structured Securities Group (SSG) the responsibility of financially modeling CLO investments. SSG can model CLO investments and evaluate all tranche level losses across all debt and equity tranches under a series of calibrated and weighted collateral stress scenarios to assign NAIC Designations that create equivalency between securitization and direct holdings, thereby eliminating RBC arbitrage.

The Task Force sent a referral to the Capital Adequacy (E) Task Force (CATF) and its Risk-Based Capital Investment Risk and Evaluation (E) Working Group (RBCIREWG) requesting those groups consider adding two new RBC factors. These recommended new RBC factors would account for the tail risk in any structured finance tranche. Staff also recommends adding NAIC Designation Categories (e.g. 6.A, 6.B and 6.C) with possible interim RBC factors of 30%, 75% and 100%, respectively, until those groups can further study structured securities. Staff request approval to draft a Blanks proposal for the new NAIC Designation Categories.

**Proposed Amendment** - The proposed text changes to P&P Manual are shown below with additions in red underline, deletions in ~~red strikethrough~~ as it would appear in the 2022 P&P Manual format. Changes made on December 20, 2022 are highlighted in **yellow**.

From: Jackie Obusek (NC), Chair, Mortgage Guaranty Insurance (E) Working Group

Date: March 1, 2023

Re: Request for Extension – Mortgage Guaranty Insurance Model Act (#630)

---

The Mortgage Guaranty Insurance (E) Working Group is in the process of fulfilling its charge to update the *Mortgage Guaranty Insurance Model Act* (Model #630). The Working Group anticipated completion of its Charge by the 2023 Spring National Meeting. As Chair, I would like to update that request to the Financial Condition (E) Committee in accordance with NAIC procedures.

The Working Group exposed for public comment the Draft Mortgage Guaranty Insurance Model Act (#630) during its October 6, 2022 interim meeting. The exposure ended on November 7 and several comments were received and discussed during the 2022 Fall National Meeting. During January and February 2023, the drafting group discussed and addressed each comment. As a result, several revisions were made to draft Model #630. The drafting group exposed the Model for a secondary public comment period just prior to the 2023 Spring National Meeting. It is anticipated that following discussion of additional comments received as a result of the exposure, the Working Group will be in a better position to vote to adopt draft Model #630 following review and discussion on any additional comments.

At this time, we believe we can complete this work by the 2023 Fall National Meeting. The request for additional time is to allow the necessary time to address comments and ensure that a comprehensive regulatory framework is in place to effectively regulate these complex insurance entities. We are aware that we have been unable to complete our work within the one-year time period expected under the NAIC model law process and request an extension until the 2023 Fall National Meeting in order to finalize a product that can be adopted by the domestic states of the mortgage insurers, as well as any other state also wishing to adopt the same.

## Updates to 2023 Charges

10. The **Restructuring Mechanisms (E) Working Group** will:

- A. Evaluate and prepare a white paper that:
  - 1. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
  - 2. Summarizes the existing state restructuring statutes.
  - 3. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
  - 4. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
  - 5. Identifies and addresses the legal issues associated with restructuring using a protected cell.
- B. Consider requesting approval from the Executive (EX) Committee on developing changes to specific NAIC models as a result of findings from the development of the white paper.
- C. Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer, along with the adequacy of long-term liquidity needs. Also, develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration.
- D. Consider the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff.
- ~~C.E.~~ Review the various restructuring mechanisms, and develop, if deemed needed, accounting and reporting requirements for referring to the Statutory Accounting Principles (E) Working Group.

~~11. The **Restructuring Mechanisms (E) Subgroup** of the Restructuring Mechanisms (E) Working Group will:~~

- ~~A. Develop best practices to be used in considering the approval of proposed restructuring transactions, including, among other things, the expected level of reserves and capital expected after the transfer, along with the adequacy of long term liquidity needs. Also, develop best practices to be used in monitoring the companies after the transaction is completed. Once completed, recommend to the Financial Regulation Standards and Accreditation (F) Committee for its consideration.~~
- ~~B. Consider the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff.~~
- ~~C. Review the various restructuring mechanisms, and develop, if deemed needed, accounting and reporting requirements for referring to the Statutory Accounting Principles (E) Working Group.~~

Accounting Practices and Procedures (E) Task Force  
Louisville, Kentucky  
March 23, 2023

The Accounting Practices and Procedures (E) Task Force met in Louisville, KY, March 23, 2023. The following Task Force members participated: Cassie Brown, Chair, represented by Jamie Walker (TX); Mike Causey, Vice Chair, represented by Jackie Obusek (NC); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis and Todrick Burks (AL); Alan McClain represented by Chris Erwin (AR); Ricardo Lara represented by Kim Hudson; Andrew N. Mais represented by William Arfanis and Michael Shanahan (CT); Karima M. Woods represented by N. Kevin Brown (DC); Trinidad Navarro represented by Rylynn Brown (DE); Michael Yaworsky represented by Jason Reynolds (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Eric Fletcher and Jessie Adamson (ID); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary D. Anderson represented by John Turchi (MA); Timothy N. Schott represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver and Steve Mayhew (MI); Grace Arnold represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Troy Downing represented by Kari Leonard (MT); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Andrea Johnson (NE); Marlene Caride represented by John Sirovetz (NJ); Chris Nicolopoulos represented by Pat Gosselin and Doug Bartlett (NH); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Michael Humphreys represented by Diana Sherman and Matt Milford (PA); Elizabeth Kelleher Dwyer represented by John Tudino and Ted Hurley (RI); Michael Wise represented by Thomas Baldwin (SC); Larry D. Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Trey Hancock (TN); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Kevin Gaffney represented by Dan Petterson (VT); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Walker directed the members to the Task Force's 2022 Fall National meeting minutes. Obusek made a motion, seconded by Doggett, to adopt the Task Force's Dec. 14, 2022, minutes (see *NAIC Proceedings – Fall 2022, Accounting Practices and Procedures (E) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Statutory Accounting Principles (E) Working Group

Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which met March 22. During this meeting, the Working Group adopted its 2022 Fall National Meeting minutes.

Bruggeman stated that during its March 22 meeting, the Working Group also adopted *Issue Paper No. 167—Derivatives and Hedging*, which historically documents new Statutory Accounting Principles (SAP) concept revisions to the documentation and assessment of hedge effectiveness, measurement method guidance for excluded components, and modified incorporation of the U.S. generally accepted accounting principles (GAAP) portfolio layer method and the partial-term hedging method in *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives*. (Ref #2017-33)

Bruggeman stated that the Working Group adopted the following clarifications to statutory accounting guidance:

- A. *SSAP No. 25—Affiliates and Other Related Parties*: Revisions clarify that any invested asset held by a reporting entity that is issued by an affiliated entity, or which includes the obligations of an affiliated entity, is an affiliated investment. (Ref #2022-15)

- B. *SSAP No. 34—Investment Income Due and Accrued*: Revisions add and data-capture additional disclosures. Directed NAIC staff to submit a corresponding blanks proposal to the Blanks (E) Working Group for year-end 2023. (Ref #2022-17)
- C. *SSAP No. 100R—Fair Value*: Revisions adopt, with modification, *Accounting Standards Update (ASU) 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sales Restrictions*, with modification to reject the contractual sales restrictions disclosures. (Ref #2022-16)
- D. *SSAP No. 105R—Working Capital Finance Investments*: Rejects guidance from *ASU 2017-12, Derivatives and Hedging* and *ASU 2022-04, Disclosure of Supplier Finance Program Obligations*, as the disclosures are for borrowers, not insurance entity investors. (Ref #2022-18)

Bruggeman stated that the Working Group exposed the following SAP clarifications to statutory accounting guidance for a public comment period ending June 9, except for agenda items 2023-03 and 2023-11EP, which have a public comment period ending May 5:

- A. *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* and *Issue Paper No. 16X—Updates to the Definition of a Liability*: Exposure includes revisions that defer to topic-specific SSAP guidance that varies from the liability definition. (Ref #2022-01)
- B. *SSAP No. 20—Nonadmitted Assets* and *SSAP No. 21R—Other Admitted Assets*: Exposed revisions clarify that pledged collateral must qualify as an admitted invested asset for a collateral loan to be admitted. The revisions require audits and the use of net equity value for valuation assessments when the pledged collateral is in the form of partnerships, limited liability companies, or joint ventures. (Ref #2022-11)
- C. *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*: Exposed revisions to SSAP No. 24 to clarify rejection of *ASU 2021-10, Government Assistance*, and the incorporation of disclosures regarding government assistance. (Ref #2023-06)
- D. *SSAP No. 43R—Loan-Backed and Structured Securities*: Exposed revisions to incorporate changes to add collateralized loan obligations (CLOs) to the financial modeling guidance and to clarify that CLOs are not captured as legacy securities. (Ref #2023-02)
- E. *SSAP No. 104R—Share-Based Payments* and *SSAP No. 95—Nonmonetary Transactions*: Exposed revisions to adopt with modification *ASU 2019-08, Compensation—Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*. The revisions add guidance to include share-based consideration payable to customers. (Ref #2023-07)
- F. *Interpretation (INT) 03-02: Modification to an Existing Intercompany Pooling Arrangement*: Exposed the intent to nullify INT 03-02, as it is inconsistent with SSAP No. 25. (Ref #2022-12)
- G. *INT 20-01: ASU 2020-04 and 2021-01 – Reference Rate Reform*: Exposed revisions to revise the expiration date of INT 20-01 to Dec. 31, 2024. (Ref #2023-05)
- H. *Schedule D Reporting*: Exposed revisions to *SSAP No. 26R—Bonds*, *SSAP No. 21R*, *SSAP No. 43R*, and other impacted SSAPs to refine guidance for the principles-based bond project. Directed NAIC staff to continue interim discussions with interested parties. (Ref #2019-21)

- I. Review Annual Statement Instructions for Accounting Guidance: Exposed a proposed new project to review the annual and quarterly statement instructions to ensure that accounting guidance is reflected within the SSAPs. (Ref #2023-01)
- J. C-2 Mortality Risk Note: Exposed revisions to *SSAP No. 51R—Life Contracts*, *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts*, and *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* providing new disclosures, which provide net amount at risk detail needed to support updates to the life risk-based capital (RBC) C-2 mortality risk charges. This item was exposed with a shortened comment deadline of May 5. (Ref #2023-03)
- K. *Accounting Practices and Procedures Manual (AP&P Manual)* Editorial Updates: Exposed editorial revisions. This item was exposed with a shortened public comment period ending May 5. (Ref #2023-11EP)
- L. Appendix D—Nonapplicable GAAP Pronouncements: The following U.S. GAAP standards were exposed with revisions to reject, as they are not applicable to statutory accounting:
  - i. *ASU 2019-07—Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates* (Ref #2023-08)
  - ii. *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)* (Ref #2023-09)
  - iii. *ASU 2022-05, Transition for Sold Contracts*, as not applicable for statutory accounting. (Ref #2023-10)

Bruggeman stated that the Working Group directed NAIC staff on the following items:

- A. Tax Credits: Directed NAIC staff to proceed with drafting revised accounting guidance and a related issue paper for both *SSAP No. 93—Low-Income Housing Tax Credit Property Investments* and *SSAP No. 94R—Transferable and Non-Transferable State Tax Credits*. Revisions will consider final Financial Accounting Standards Board (FASB) guidance on tax equity investments and interested party feedback. (Ref #2022-14)
- B. *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*: Directed NAIC staff regarding the consideration of negative interest maintenance reserve (IMR) with an intent to work on both a 2023 solution and a long-term solution as follows:
  - i. Recommend a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within asset adequacy testing (AAT); 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT (and documentation), as well as any liquidity stress test (LST) considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data (sales of bonds because of excess withdrawals should not use the IMR process); and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.
  - ii. Recommend a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from total adjusted capital (TAC) and the consideration of sensitivity testing with and without negative IMR.

- iii. Develop guidance for future Working Group consideration that would allow the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if the RBC ratio is less than 300.
  - iv. Review and provide updates on any annual statement instructions for excess withdraws, related bond gains/losses, and non-effective hedge gains/losses to clarify that those related gains/losses are through asset valuation reserve (AVR), not IMR.
  - v. Develop accounting and reporting guidance to require the use of a special surplus (account or line) for net negative IMR.
  - vi. Develop governance-related documentation to ensure sales of bonds are reinvested in other bonds.
  - vii. Develop a footnote disclosure for quarterly and annual reporting. (Ref #2022-19)
- C. Corporate Alternative Minimum Tax (CAMT): Directed NAIC staff to continue work with industry and the Working Group on developing guidance for the reporting of the CAMT for interim Working Group discussion. (Ref #2023-04)

Bruggeman stated that the Working Group received updates on the following items:

- A. Received a referral from the Valuation of Securities (E) Task Force to inquire about the NAIC Securities Valuation Office (SVO) obtaining the ability to calculate analytical information.
- B. Announced that copyrighted PDF copies of the AP&P Manual will be made available through Account Manager upon purchase of the 2023 AP&P Bookshelf subscription.
- C. Received a request from the American Academy of Actuaries (Academy) for clarification on observed diversity across issuers regarding long-term care (LTC) AAT under *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51)* and *SSAP No. 54R—Individual and Group Accident and Health Contracts and Appendix A-010, Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts*.
- D. Received an update on international activity as discussed by the International Association of Insurance Supervisors (IAIS) Accounting and Auditing Working Group (AAWG). This discussion noted that public consultations of *Insurance Core Principle (ICP) 14: Valuation* and *ICP 17: Capital Adequacy* are expected in July 2023.
- E. Received an update on U.S. GAAP exposures, noting that pending items will be addressed during the normal maintenance process.

Bruggeman made a motion, seconded by Kasinow, to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

### 3. Adopted the Report of the Blanks (E) Working Group

Gosselin provided the report of the Blanks (E) Working Group, which met March 7. During this meeting, the Working Group adopted its Nov. 17, 2022, minutes (see *NAIC Proceedings – Fall 2022, Accounting Practices and Procedures (E) Task Force, Attachment Two*).

Gosselin stated that during its March 7, 2023, meeting, the Working Group also adopted its editorial listing and the following proposals:

- A. 2022-14BWG Modified – Modify Exhibit 1, Part 1 and 2, and Exhibit 8, Part 1 and 2, in the life and accident and health/fraternal blank, to include the line of business detail reported on the Analysis of Operations by Lines of Business pages.
- B. 2022-15BWG – In the life, accident and health/fraternal, and property/casualty (P/C) blanks, revise the language of the Schedule H, Part 5 to remove the 5% of premiums filing exemption.
- C. 2022-16BWG – Remove Supplemental Health Care Exhibit Part 3 and Supplemental Health Care Exhibit's Expense Allocation Report.
- D. 2022-18BWG – For the life and accident and health/fraternal blank, instructional corrections on the handling of exchange traded funds (ETFs) and/or SVO identified funds within the IMR and the AVR.
- E. 2022-20BWG – Modify the instructions and blanks for various health exhibits to change the order of the Vision and Dental lines of business to be consistent with all other statement types.

Gosselin stated that the Working Group re-exposed proposal 2022-17BWG – Add new disclosure paragraph for Note 8 – Derivative Instruments and illustration to new disclosure to be data captured. Add electronic-only columns related to derivatives with excluded components to Schedule DB, Part A and Part B for both Section 1 and Section 2. Add new code column instructions for Schedule DB, Part A and B (SAPWG 2021-20). Re-exposed for a public comment period ending April 28.

Gosselin stated that the Working Group exposed nine new proposals for a public comment period ending April 28 for eight of the proposals and June 30 for proposal 2023-06BWG addressing Schedule D, Part 1, reporting.

Gosselin made a motion, seconded by Travis, to adopt the report of the Blanks (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.

Draft: 4/11/23

Statutory Accounting Principles (E) Working Group  
Louisville, Kentucky  
March 22, 2023

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met in Louisville, KY, March 22, 2023. The following Working Group members participated: Dale Bruggeman, Chair (OH); Kevin Clark, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); William Arfanis (CT); Rylenn Brown (DE); Cindy Andersen (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Bob Kasinow (NY); Diana Sherman and Matt Milford (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating were: Blase Abreo and Todrick Burks (AL); Michael Shanahan (CT); Bill Carmello (NY); Tom Botsko (OH); Doug Hartz (OR); and Rachel Hemphill (TX).

1. Adopted its 2022 Fall National Meeting Minutes

The Working Group met March 16, Feb. 22, Jan. 20, and Jan. 17 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings. No actions were taken during these meetings, as the discussion previewed the Spring National Meeting agendas and discussed other items with NAIC staff pursuant to the NAIC Policy Statement on Open Meetings.

Malm made a motion, seconded by Sherman, to adopt the Working Group's Dec. 13, 2022, minutes (*see NAIC Proceedings – Fall 2022, Accounting Practices and Procedures (E) Task Force, Attachment One*). The motion passed unanimously.

2. Adopted Non-Contested Positions

The Working Group held a public hearing to review comments (Attachment One-A) on previously exposed items.

Walker made a motion, seconded by Weaver, to adopt the revisions detailed below as non-contested statutory accounting revisions. The motion passed unanimously.

a. Agenda Item 2017-33

Bruggeman directed the Working Group to agenda item 2017-33: ASU 2022-01, *Issue Paper No. 167—Derivatives and Hedging* (Attachment One-B). Julie Gann (NAIC) stated that this agenda item is for an issue paper that provides historical documentation of the revisions adopted to *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives* from the review of *Accounting Standards Update (ASU) 2017-22, Derivatives and Hedging* and *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method*. Interested parties had no comments on the exposure.

b. Agenda Item 2022-15

Bruggeman directed the Working Group to agenda item 2022-15: *Affiliate Reporting Clarification* (Attachment One-C). Jake Stultz (NAIC) stated that during the 2022 Fall National Meeting, the Working Group exposed statutory accounting principle (SAP) clarifications to *SSAP No. 25—Affiliates and Other Related Parties* to clarify that any invested asset held by a reporting entity, which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment. Interested parties had no comments on the exposure.

c. Agenda Item 2022-16

Bruggeman directed the Working Group to agenda item 2022-16: *ASU 2022-03, Fair Value Measurement of Restricted Securities* (Attachment One-D). Stultz stated that revisions to *SSAP No. 100R—Fair Value* were exposed for adoption with modifications to ASU 2022-03 to be consistent with existing statutory accounting guidance, but the revisions do not incorporate the new ASU disclosures on sales restrictions. He noted that the items restricted as to sale would be captured as restricted assets per *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*. He noted that ASU 2022-03 provides updated guidance for two specific scenarios: 1) the restriction is based on the entity holding the equity security; and 2) the restriction is a characteristic of equity security. Interested parties had no comments on the exposure.

d. Agenda Item 2022-18

Bruggeman directed the Working Group to agenda item 2022-18: *ASU 2022-04, Disclosure of Supplier Finance Program Obligations* (Attachment One-E). Robin Marcotte (NAIC) stated that this agenda item is a clarification to *SSAP No. 105R—Working Capital Finance Investments* to reject ASU 2022-04 for statutory accounting, as these disclosures are for borrowers in these programs and, as such, are not relevant for insurance reporting entities that may invest in these programs. Interested parties had no comments on the exposure.

3. Reviewed Comments on Exposed Itemsa. Agenda Item 2019-21

Bruggeman directed the Working Group to agenda item 2019-21: Principles-Based Bond Definition. Gann stated that in November 2022 and at the 2022 Fall National Meeting, the Working Group exposed revisions to *SSAP No. 26R—Bonds*, *SSAP No. 43R—Loan-Backed and Structured Securities*, and other SSAPs, as necessary, to update statutory accounting guidance for the principles-based bond project. These revisions also included edits to *SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments* to restrict asset-backed securities (ABS) from being captured in scope and *SSAP No. 21R—Other Admitted Assets* to include new guidance for the debt securities that do not qualify within the bond definition. In addition to the revisions, an updated issue paper detailing the discussions and revisions, as well as proposed reporting changes, were also exposed.

Gann stated that interested parties provided detailed comment letters included in the meeting materials. She stated that NAIC staff reviewed the comments and made several changes to the proposed guidance. She stated that one change pertains to nominal interest rate adjustments in the prior guidance. Under the prior exposure, if the principal or interest can fluctuate based on non-bond related variables, it would preclude the security from being a bond. Gann stated that NAIC staff included guidance to have a very limited exception for nominal interest related adjustments, mostly pertaining to sustainability type bonds, but not limited in scope to that specific instance. Also included was guidance in *SSAP No. 21R* for residual tranche securities. Gann stated that interested parties highlighted that the guidance for residual tranche securities was still in *SSAP No. 26R* and *SSAP No. 43R*, but residual tranche securities do not technically qualify as bonds. Gann stated that *SSAP No. 21R* also reflects additional revisions to the guidance proposed for non-bond debt securities. She stated that there are questions for interested parties regarding the method that is being used to amortize residual tranche securities, as well as for the assessments of other-than-temporary impairment (OTTI) and how that has occurred historically. She stated that NAIC staff recommend that the Working Group expose the revised SSAPs. She stated that *SSAP No. 21R* has been broken out so that it is its own stand-alone document, so the documents for exposure include *SSAP No. 26R*, *SSAP No. 43R*, *SSAP No. 21R*, and the other SSAP revisions. In addition to the SSAP guidance revisions, NAIC staff also proposed Schedule BA reporting line changes very similar to what was done in the past for the broader bond changes. Gann stated that NAIC staff recommended exposing the proposed reporting changes as a conceptual

change at the Working Group, and after considering comments, a blanks proposal could then be submitted to the Blanks (E) Working Group.

Michael Reis (Northwestern Mutual), representing interested parties, expressed his appreciation of the dialogue with NAIC staff and state insurance regulators, as well as support for the nominal interest rate adjustment that Gann discussed. He stated that interested parties continue to look forward to working with the NAIC staff and state insurance regulators on this project.

Gann stated that there were two additional items to highlight: 1) the issue paper detailing discussions and decisions for the principles-based bond project will be updated after this meeting for subsequent exposure; and 2) the Blanks (E) Working Group exposed the broad bond reporting changes (2023-06BWG) with a public comment period ending June 30.

Clark made a motion, seconded by Walker, to expose the above agenda items. The motion passed unanimously. After the Spring National Meeting, the chair agreed to extend the exposure deadline for the Schedule BA reporting changes to June 30 to mirror the exposure deadline for the blanks reporting changes. The SSAP exposures were not extended and have a public comment period ending June 9.

b. Agenda Item 2022-01

Bruggeman directed the Working Group to agenda item 2022-01: Conceptual Framework – Updates. Marcotte stated that during the 2022 Fall National Meeting, the Working Group re-exposed revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* and *Issue Paper No. 16X—Updates to the Definition of a Liability*. The revisions incorporate the definition of a liability from Financial Accounting Standards Boards (FASB) *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 7, Presentation and Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definition of an asset and definition of a liability.

Marcotte stated that NAIC staff recommend exposure of additional clarifications, deferring to SSAP guidance, which provides topic-specific variations from the definition of a liability and SSAP No. 5R, and the related issue paper, as illustrated in the proposed revisions in the meeting materials. These clarifications are recommended because of the authoritative treatment that statutory accounting provides to the definition of an asset and liability in *SSAP No. 4—Assets and Nonadmitted Assets* and SSAP No. 5R. Marcotte stated that for U.S. generally accepted accounting principles (GAAP), the FASB conceptual framework definitions are not authoritative, but they are concepts to consider when developing and applying guidance. Particularly for liabilities, this is needed because of the existing variations in SSAPs, such as asset valuation reserve (AVR) and interest maintenance reserve (IMR) and the provision for reinsurance and other post-retirement benefits. Marcotte stated that the proposed footnote defers to other topic-specific guidance in other SSAPs when appropriate. She stated that due to prior interested parties' comments, NAIC staff have also prepared a new agenda item 2023-01: Review Annual Statement Instructions for Accounting Guidance—which proposes a project to ensure that accounting guidance from the annual statement instructions are incorporated in the SSAPs, as needed.

Walker made a motion, seconded by Malm, to expose the additional clarifications deferring to SSAP guidance. The motion passed unanimously.

c. Agenda Item 2022-11

Bruggeman directed the Working Group to agenda item 2022-11: Collateral for Loans. Marcotte stated that during the 2022 Fall National Meeting, the Working Group re-exposed revisions to SSAP No. 21R to clarify that assets

pledged as collateral for admitted collateral loans must qualify as admitted invested assets. She stated that interested parties proposed a footnote on audit requirements allowing a third-party-determined fair value to be used in the place of an audited valuation.

NAIC staff recommended revisions to SSAP No. 21R, illustrated in the agenda item, proposing the clarification of guidance, along with the addition of a new footnote. This footnote, originating from state insurance regulators, noted that it was imperative to uphold and maintain audit requirements of joint ventures, limited liability companies (LLCs), or investments that would qualify as a subsidiary controlled entity if they were pledged as collateral for a loan. State insurance regulators had concerns that allowing these investments to qualify as acceptable collateral without an audit would lower the collateral requirement standard and allow for potential arbitrage within risk-based capital (RBC) and the admissibility of assets.

Marcotte stated that NAIC staff's recommendation is to continue to require audits for joint ventures, limited LLCs, and partnerships, as well as investments that would qualify as subsidiary, controlled, and affiliated (SCA) entities if these items are pledged as collateral to support the admittance of a collateral loan. Furthermore, the recommendation proposes to revise the standard to note that a fair value comparison is required unless the collateral is an *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* or *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* investment, in which case the comparison to the loan is to the audited net equity value of the pledged collateral. Marcotte stated that this is closer to what the day two value would be in the event that the loan defaulted and the collateral was assumed by the insurance reporting entity. In addition, NAIC staff are recommending that the words “admitted” and “investment” be inserted into paragraph 4.b. of *SSAP No. 20—Nonadmitted Assets* for consistency. Marcotte recommended exposing the proposed edits to SSAP No. 21R and SSAP No. 20.

Bruggeman stated that the concept that nonadmitted assets cannot find their way into an admitted asset balance sheet came up several years ago. He stated there are some fair value considerations, but with SSAP No. 48 and SSAP No. 97 entities that almost always require an audit, and if that audit is the support to admit the loan receivable, the Working Group must ensure that if there are nonadmitted assets being pledged as collateral, they are not being moved up to the regulated entity balance sheet in a different way.

Andrew Morse (Global Atlantic Financial Group), representing interested parties, stated his appreciation of the collaborative and clear process on this topic. He stated that interested parties made a comment at the 2022 Fall National Meeting on this topic and have read the proposed exposure, and they believe it is significantly clearer in terms of what is needed. He added that interested parties' ability to comment and engage in dialogue with state insurance regulators is appreciated.

Clark made a motion, seconded by Weaver, to expose the revisions to SSAP No. 21R proposing the addition of a new footnote and minor consistency edits to SSAP No. 20. The motion passed unanimously.

d. Agenda Item 2022-12

Bruggeman directed the Working Group to agenda item 2022-12: Review of INT 03-02: Modifications to an Existing Intercompany Pooling Arrangement. Marcotte stated that during the 2022 Fall National Meeting, the Working Group re-exposed the intent to nullify *Interpretation (INT) 03-02: Modification to an Existing Intercompany Pooling Arrangement*. With this re-exposure, the Working Group requested industry provide comments on specific instances in which the interpretation was being applied and specific staff-identified items were noted in the agenda.

Marcotte stated that interested parties provided comments that were included in the meeting materials. She stated that NAIC staff continue to recommend nullification of INT 03-02, as it is inconsistent with SSAP No. 25 guidance regarding economic and non-economic transactions between related parties. She stated that after speaking with interested parties, NAIC staff do not believe there is a compelling need to be different when valuing these types of intercompany transactions. She stated that the recommendation is exposure with an effective nullification date of Dec. 31, 2023. She stated that interested parties requested another exposure to allow for further discussion.

Bruggeman stated that there may be a need to review the guidance in *SSAP No. 62R—Property and Casualty Reinsurance* transactions, particularly with pooling and netting arrangements as part of this exposure and discussion to ensure SSAP No. 62R is not in conflict, and requested comments from state insurance regulators and industry on this dynamic during the exposure period.

Keith Bell (Travelers), representing interested parties, commented that while INT 03-02 is in conflict with SSAP No. 25, there is consistency and comparability of accounting because of the interpretation. He stated that there is concern that the nullification of INT 03-02 is going to cause a high risk of inconsistency of interpretation by companies, state insurance regulators, and auditors on the issue of economic versus non-economic transactions. He also stated that the nullification will end up with different reinsurance accounting depending on whether interest rates are going up or going down and for bonds with an unrealized gain versus unrealized loss position. He stated that there is also going to be inconsistency within an intercompany pooling arrangement depending on whether investments are in an unrealized gain or loss position. For example, the same company group could trigger both gains and losses, meaning some companies would end up with prospective reinsurance because of the change, and other companies within the same group would end up with retroactive reinsurance. Bell noted that there is going to be some inconsistency within a group based on the ownership chain of companies. If there is a single insurer at the top of the ownership chain, there will be a different set of rules on the economic distinction, versus having multiple companies at the top of the ownership chain. Bell stated that interested parties will look at the re-exposure, and they may present language that could narrow this down even further to be included in SSAP No. 62R as permanent guidance rather than be part of an INT.

Bruggeman requested that interested parties include specific wording or economic versus non-economic situations, as well as the unrealized gain/loss scenario he discussed for bonds. He stated that specificity or examples that could be provided, rather than a theoretical discussion, would help the Working Group understand how to incorporate necessary guidance within SSAP No. 62R. Bell stated that the response will include these details.

Malm made a motion, seconded by Walker, to re-expose INT 03-02 with an effective nullification date of Dec. 31, 2023. The motion passed unanimously.

e. Agenda Item 2022-14

Bruggeman directed the Working Group to agenda item 2022-14: New Market Tax Credits. Gann stated that this agenda item addresses new market tax credits, but more broadly, overall tax credit accounting. She stated that at the 2022 Fall National Meeting, the Working Group exposed both the agenda item and a discussion document that walked through proposed SSAP changes, and it requested feedback from state insurance regulators and interested parties. The Working Group received a very detailed comment letter from interested parties that addressed all the discussion document questions. Interested parties also provided two general key theme comments. One comment asked for a reconsideration of the existing guidance to have both the amortization of the investments and the use of the tax credits go through the same income statement line, consistent with U.S. GAAP. Gann stated that statutory accounting intentionally took a different approach when the guidance was

originally adopted. NAIC staff will research this to understand why the divergence from U.S. GAAP was undertaken and determine if there is a reason to change to be consistent with U.S. GAAP. The second comment pertained to the classification of tax credit investments that are in the form of debt on Schedule D and not Schedule BA. Gann stated that NAIC staff have received comments from state insurance regulators that they are more appropriate to be on Schedule BA and should not be reported as bonds. She stated that NAIC staff are requesting feedback from state insurance regulators if that is an incorrect assessment. She stated that NAIC staff are recommending that the Working Group direct NAIC staff to continue moving forward with drafting SSAP guidance, noting that the FASB has a pending issuance regarding the proportional amortization method. NAIC staff will also review comments received from interested parties, as well as the new U.S. GAAP ASU once it has been issued, and move forward with proposing SSAP revisions for exposure at a later date. She stated that NAIC staff also recommend direction to work with interested parties directly during the interim.

Bruggeman stated that there are currently only line items for low-income housing tax credits in Schedule BA of the financial statements and RBC calculations. He stated that there may come a time that if there are differentiations, the Working Group will inform interested state insurance regulators and interested parties of those and will pass that information along to the Capital Adequacy (E) Task Force.

Gann stated that it is anticipated that this project will continue to sponsor blanks and RBC reporting changes since current reporting is specific to low-income housing tax credits, and the project is expanding to encompass more types of tax credits.

Bruggeman stated that the Working Group does not need to make a motion for this agenda item, and NAIC staff have been directed based on these recommendations.

f. Agenda Item 2022-17

Bruggeman directed the Working Group to agenda item 2022-17: Interest Income Disclosure Update. Stultz stated that this agenda item came from the larger principles-based bond project. He stated that during one of the earlier exposures, interested parties suggested revisions to further enhance reporting for interest income. He stated that there are two distinct items that came from the original interested parties' comments addressed in this agenda item. First, interested parties suggest data-capturing the gross nonadmitted and admitted amounts of interest income due and accrued. Second, interested parties suggested that a data element for paid-in-kind (PIK) interest mirror the definition included in the bond proposal project and reflect the cumulative amount of PIK interest included in the current principal balance. Stultz stated that from the original exposure of this agenda item, interested parties provided some revisions that are shown in the agenda. Interested parties also asked to have an effective date that is consistent with the bond project. He stated that because this disclosure is unrelated to that project overall, NAIC staff recommend that this be adopted for 2023 year-end reporting. He stated that NAIC staff's recommendation is to adopt the agenda item with the interested parties' suggested revisions but keep the 2023 year-end date. He stated that there is a corresponding Blanks (E) Working Group proposal that will be exposed, and NAIC staff will work closely with the interested parties to ensure that the language in the proposal is consistent with their suggested revisions.

Tip Tipton (Thrivent), representing interested parties, stated that they are appreciative of the changes made. He stated that these are just aggregate total amounts of deferred interest and PIK interest. He noted that beginning in 2025 with the bond project, the expectation is these will be identified separately for each investment, but for now, at least for 2023 and 2024, this will be just a total aggregate amount. He stated that is interested parties' understanding, and they support this effort. He stated interested parties look forward to the opportunity to comment on the Blanks (E) Working Group proposal.

Clark made a motion, seconded by Walker, to adopt the agenda item with the interested parties' suggested revisions but keep the 2023 year-end effective date (Attachment One-F). The motion passed unanimously.

g. Agenda Item 2022-19

Bruggeman directed the Working Group to agenda item 2022-19: Negative IMR. Gann stated during the 2022 Fall National Meeting, the Working Group exposed the agenda item as a new SAP concept. She stated that it detailed the current guidance and the history of negative IMR, but there were no actual recommendations included. She stated that the Working Group also had regulator-only discussions in January and February to hear company presentations regarding negative IMR. She stated that the Working Group also received a comment letter from the American Council of Life Insurers (ACLI) during the exposure period, which was included in the meeting materials. She stated that NAIC staff are requesting the Working Group to provide feedback and direction.

Brown stated that it is important to help state insurance regulators understand the impact of negative IMR and to have special reporting so it can be easily identified. She expressed support for a referral to the Capital Adequacy (E) Task Force in regard to RBC. She suggested an admittance limitation of 1% of capital and surplus. She stated that there are a variety of things for the Working Group to consider and discuss.

Hudson stated that the Working Group has a number of items that should be directed to NAIC staff. First, he suggested a referral to the Life Actuarial (A) Task Force on the asset adequacy implications of negative IMR, and he directed NAIC staff to help with the template for reporting asset adequacy. Secondly, he reiterated Brown's comments for a referral to the Capital Adequacy (E) Task Force to consider the elimination of any net negative IMR from total adjusted capital (TAC) and consideration of sensitivity testing with and without negative IMR. Thirdly, he said he supports separate surplus reporting for the admitted negative IMR. Fourth, he recommended a cap on admitted negative IMR as a percentage of surplus, such as what exists for goodwill, and consideration of a downward adjustment when RBC reaches below 300%. Fifth, he suggested the consideration of an update to the instructions for excess withdrawal and related capital gains and loss to ensure that it is clear on the division between AVR and IMR. Sixth, he said there should be additional footnote disclosure.

Walker agreed with Hudson and emphasized that the Working Group is trying to find a solution quickly on this topic. She stated that the prior discussion of negative IMR was a multi-year long discussion that got nowhere. So, the Working Group may have to do an interim solution until feedback is received in response to the referrals to the task forces and other groups involved in this issue get a permanent solution. She stated that the Working Group should try to address the current issue while also establishing a robust and well-thought-out overall policy related to negative IMR.

Malm agreed with Walker, and she stated that the Working Group should not close the issue until a solution is reached to prevent this dynamic from reoccurring after another 10 years. She stated that the issues should be well documented, with full understanding of the pros and cons, and a conclusion reached.

Clark stated support for the comments that Walker and Malm made and the direction that Hudson laid out. He stated that he would add one element, which is one of the things that interested parties recommended in their comment letter, to include an opt-in approach that would come with documentation around asset-liability matching (ALM) policies. He stated that having an approach where there might be differences between companies may not be desirable, but he noted that there are elements of the opt-in idea that could be applied across the board. He stated that he is not sure that the current guidance specifies that sales of assets for other than reinvestment purposes cannot be deferred; therefore, that could be the presumption for why negative IMR should be admitted. He stated that explicitly spelling out what is permitted for IMR might be needed, as well as potentially

some form of attestation from the company that any deferred losses were in fact for reinvestment purposes and not for non-reinvestment purposes.

Bruggeman stated the need to ensure the discussion and conclusions, with the final accounting guidance fully documented. He stated that this is one topic where there are instructions in the NAIC *Annual Statement Instructions* and generic instructions in *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. He stated the Working Group needs to ensure that those are consistent with the hierarchy, so statutory accounting comes first. He stated that blanks instructions cannot change the accounting guidance. He stated that the Working Group needs to ensure that the language between the instructions, SSAP No. 7, and SSAP No. 86 are lined up as best as possible when discussing types of assets, such as bonds and interest rate-related impacts, especially with derivatives that have yet to be discussed. He stated that the whole idea with bonds is they are being carried at amortized cost. With amortized cost measurement, there is no recording of an unrealized gain or loss fluctuation during the life of the asset, and that is why IMR was established. He stated that where there are already assets, whether they are bonds or derivatives that are recorded at fair value, those items should probably not end up in IMR. He stated that there are instructional elements that are not laid out exactly right that should be addressed as part of this project.

Reis stated that the ACLI would like to thank the NAIC for picking up this issue with urgency. He stated that the ACLI would like to acknowledge that there was a prior Working Group discussion, a regulator-to-regulator session with the Life Actuarial (A) Task Force, a discussion at the Financial Condition (E) Committee, a discussion here today, and many state insurance regulator discussions with individual ACLI companies, and all of those efforts are very much appreciated. He stated that he wants to start with maybe the main thrust of the ACLI letter and try to address a few key points. He stated that the ACLI brought forth the opt-in approach in its letter because it believed it was something that would best address state insurance regulator concerns. He stated that it would be intended to be a very structured process that had many potential appropriate safeguards, such as proving reinvestments, ALM objectives being met, a recommendation of asset adequacy testing (AAT) tightening attestation, potentially tethering to RBC, and significant transparency. He stated that throughout state insurance regulator and individual member company discussions, the ACLI has been hearing a lot of different thoughts. Some participants really like the opt-in approach; some, perhaps Delaware, may want segregating surplus through a special surplus account, and they appreciate the detailed consideration that has been going into this. He stated that he believes the ACLI would support, maybe along the lines of what Clark suggested, either of those approaches or some combination of these approaches, certainly with the requisite safeguards mentioned. He stated that one common theme that the ACLI has heard from state insurance regulators is that they do not want to disincentivize prudent behavior transactions. At the same time, the ACLI has heard that state insurance regulators do not want to incentivize imprudent behavior or transactions. He stated that the ACLI certainly shares those objectives and welcomes any specific concerns that state insurance regulators have so they can help to address those. He stated that higher interest rates are generally positive for life insurance companies, and for all the reasons that IMR was developed, ACLI companies believe that it is important that financial strength be accurately reflected. Current interest rates, or even higher rates, will only exacerbate the negative IMR issue as companies look to make decisions throughout 2023 and beyond and likely many years down the road. Therefore, ACLI companies are hopeful that they can work with state insurance regulators and NAIC staff toward a year-end resolution if possible, and they are here to support that effort in any way they can. He stated that the ACLI is thankful for all the consideration, and it is certainly willing to discuss or take questions as well.

Bruggeman asked if there were any questions for Reis, and he stated that the options hint at incorporating governance within accounting, but there are, as Clark described, ways to do that. Bruggeman stated that he agrees with Clark that an opt-in is probably not the best way to get consistency; therefore, if something like that is supported by the Working Group, it would have to be across the board. He stated that asset adequacy testing is done through the Life Actuarial (A) Task Force, and with the actuarial assumptions, there are certain things that

perhaps do not have as many guardrails. There are a lot of cash flow assessments to consider, and there is a bigger picture for the whole industry and the Financial Stability (E) Task Force on liquidity stress testing (LST). He stated that he does not know if that is part of AAT testing, and that it is kind of indirect. However, because these are deferred losses, if there is a liquidity stress within one company, which may not be in the whole industry, those create different kinds of issues, going to the heart of reinvestment.

Bruggeman stated that there is already a requirement for excess withdrawals, and if there are excess withdrawals and a company is forced to sell bonds, the loss that happens in that situation does not currently go through IMR. If the Working Group needs to tighten up that language, it may help ensure that reinvestment occurs. Bruggeman stated that in situations where losses go to IMR and reinvestment does not occur, then the Working Group and state insurance regulators need to understand to verify that it was because of the excess withdrawal. He stated that the state insurance regulators want to prevent any gamesmanship going on with that scenario.

Bruggeman stated that he is trying to ensure that the Working Group is addressing all components of this topic, and at the end of the discussion, the intent is to give directions to NAIC staff to move forward. He stated that he heard a percentage of surplus admittance limitation from Brown at 1%. He stated that NAIC staff have done an overall analysis by company, which was shared with state insurance regulators, on the percentage of net negative IMR that is currently nonadmitted compared to capital and surplus. He also noted that state insurance regulators received a five-year history of net negative IMR by reporting entity. He stated that there are individual circumstances where companies go from positive to negative, but there are several reporting entities that have been in a net negative IMR position for all five years. He stated there could be a lot of reasons why those companies have been in a net negative position, but recognizing this dynamic goes back to the key components of the original ACLI letter and what guardrails should exist before permitting an admitted asset for net negative IMR.

Reis stated that the ACLI letter does not oppose looking at the excess withdrawal guidance. He identified that certain liabilities with market value adjustments are believed to be excluded from the excess withdrawal guidance, and there are questions on why those were excluded. Regarding the data that details ongoing years of negative IMR by some reporting entities, he stated that the economy has been in a 30-year period of declining interest rates; therefore, the five-year historical data may not be the most useful assessment. He stated the results for net negative IMR could go back for an extended period.

Reis stated that an admittance limit of 1% of surplus is a small number compared to what companies are anticipating. He stated that the ACLI's position is that an arbitrary safeguard of 1% is too low. He also stated concern with the view that IMR creates an intangible asset of prior realized losses that cannot be used to pay claims. He stated it is very important to understand the presence of the intangible asset with the current reporting of bonds at amortized cost, and he provided an example, noting that it is an oversimplification of the theory behind IMR. He stated that if a reporting entity has a bond that was bought for \$100 on the balance sheet and because of rising interest rates, the fair value of the bond is \$80, a reporting entity effectively has \$80 of claims paying ability or liquidity, on the balance sheet has an intangible asset on the balance sheet of \$20. This is because the bond is reporting at amortized cost (100), so there is an intangible asset reported with the bond, which is the difference between the fair value and the amortized cost. Reis stated that if a reporting entity was to sell the bond at fair value, predicated on reinvestment, the reporting entity would acquire a new bond for \$80. As such, the reporting entity still has the same \$80 liquid asset, and with the allocation to IMR for the \$20 loss from the sale—\$100 to \$80—the reporting entity still has the same \$20 in intangible assets they had when the bond was reported at \$100. As such, in terms of financial position and a reporting entity's claims paying ability from liquidity, a reporting entity would be in the same position pre- and post-bond sale with reinvestment. Reis stated that he has been asked why reporting entities do these transactions, and he noted that there are many reasons. He stated that a reporting entity could be doing it to shorten or lengthen portfolios to either affect disintermediation risk or

ensure that guarantees do not get hit in the long term. He stated that the duration of the sold bond and reinvested bond could be different, but that change does not affect claims paying ability or liquidity, and it could put reporting entities in a better spot in the long term. He stated that it has also been inquired as to whether the reporting entities reinvest with different credit-rated bonds, and he advised that entities do not necessarily think linearly, and if they are going to sell a AAA bond, then they are going to reinvest in another AAA bond. He noted that if the credit rating were different, higher or lower, that would be picked up in RBC. In conclusion, he stated that he wanted to be sure to make the point that liquidity and claims paying ability is not affected, as that is an important point.

Bruggeman requested discussion on how to direct NAIC staff to prepare guidance for exposure, and he opened the floor to begin with the admittance limit as a percentage of surplus. He stated that Brown has proposed a 1% limit, and goodwill is limited to 10% of surplus, noting that could be perceived as a large range between limits. Brown stated that it is a compromise to allow the admittance of even a small amount, but the 1% proposal is open to negotiation. She stated some think it should be 10%, but she believes it should be 1%, so perhaps somewhere in the middle would be a good place to start.

Bruggeman stated that he had heard potential support closer to the 15% used for the deferred tax asset (DTA), but he noted that there is a secondary guardrail there with the three-year limit, so that is why he believes maybe closer to the goodwill 10% limit may be more appropriate.

Brown stated that some states use 5% of capital and surplus in determining materiality, and if the amount is considered material, it is a big deal. However, she said she is certainly willing to hear what everyone else has to say.

Bruggeman suggested starting at 5% of capital and surplus as an admittance limit with an elimination of admittance if RBC goes below 300%. He asked if anyone objects to the 5% limit as the initial direction to staff. Reis asked if it makes sense to focus on the broader conceptual direction that seemingly makes sense and is without controversy and leave open a specific percentage in the exposure as something to debate further. Bruggeman stated his preference to have a percentage limit in the exposure. He stated that he is not aware of the support for the 10% goodwill limit, and he requested NAIC staff research that historical discussion. He stated support for 10%, but he is sensitive to Brown's comments that materiality assessments are at 5%, noting that there could be a secondary guardrail where asset adequacy testing is the primary guardrail.

Clark stated that he is not opposed to an admittance limit for exposure, as the point of the exposure is to get comments before having additional discussion, and getting industry feedback will be important. He stated that the desire for an admittance limit makes logical sense from a conservatism perspective. But given the size of insurers' balance sheets in comparison to surplus and the size of their fixed income portfolios, even a 10% allowance is going to be very small in comparison to what interest rates have done to some reporting entity's fixed income portfolios. He stated that is an issue the Working Group should explore, but he believes it is going to be kind of a difficult one to meaningfully address the IMR impact of the significant rise in interest rates and what that has done to asset values with a 5% limit.

Malm stated that the analysis needs to be done before a percentage is set. She stated that industry should do an analysis as well because they know their investment portfolios and their surplus, and it would be beneficial for them to provide the Working Group with what they are projecting. Bruggeman stated that individual company analysis is key to understanding the potential impact if sales are planned for investments held at amortized cost.

Hartz stated that getting input from industry and considering the type of transaction that is giving rise to the negative IMR might be more important than a target rate or target percentage of surplus.

Walker stated that if the Working Group takes too much time for analysis, they will not arrive at a solution by year-end. As such, there is a give and take from a short-term solution versus a long-term solution. If there is a desire to have the long-term solution conversation, then it will likely take more time than what is available to have a solution this year. She stated that although it is only the first quarter, the Working Group already has a limited amount of time for a year-end solution. Bruggeman agreed with these comments.

Hudson stated support for a numerical cap even if it ends up not being the perfect solution. The Working Group needs to get something in place, and the initial limit can always be changed. He stated the Working Group should start off with the cap, if it is 5% of surplus, to start the discussion process. Weaver agreed to put in a percentage limitation, also acknowledging that it is under negotiation. Walker and Weaver both stated support for a 5% admittance limit to capital and surplus. Hartz also noted that 5% is between the 1% and 10% options being considered, so it is a good place to begin as an initial direction to NAIC staff.

Brown stated that once other safeguards are in place, the Working Group could consider raising the admittance limit. Bruggeman and Walker agreed with these comments.

Reis stated that the admittance limit is important and supports the idea that it will be subject to additional discussion.

Bruggeman then discussed providing direction to NAIC staff to provide referrals to both the Life Actuarial (A) Task Force and the Capital Adequacy (E) Task Force. For the referral to the Life Actuarial (A) Task Force, he requested further consideration of asset adequacy implications of negative IMR. He directed NAIC staff to assist in developing a template for AAT disclosures, noting that he is aware of the current initiative for an *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53) documentation enhancement. He stated that it is important to consider the actual amount of admitted negative IMR that is being used within the asset adequacy testing, because the higher the negative IMR, the more potential there is for an AAT liability. He requested the referral also address the considerations of cash flows within AAT with liquidity stress testing considerations to ensure that excessive withdrawal considerations are consistent with the actual data. He stated that it is important for the assumptions of cash flows and liquidity stress testing to be consistent, and he referred to the existing guidance for tax planning strategies, where it is noted that tax planning strategies cannot be inconsistent with other company assertions. He stated that the referral should request guardrails within AAT that are reasonable and consistent with other aspects.

Bruggeman stated that for the referral to the Capital Adequacy (E) Task Force, he requested consideration to remove any admitted net negative IMR from total adjusted capital (TAC) with inclusion of any other sensitivity testing that may be needed for IMR. He stated that RBC is supposed to be a weakness indicator and is a state insurance regulator tool, not a strength indicator for other uses. He stated that he knows it gets used for other things, but the state insurance regulator use and tool is the first priority. Brown and Walker agreed with this recommended referral.

In response to an inquiry from Reis asking whether the referral will remove admitted negative IMR from TAC for the RBC calculation, or just for sensitivity testing, Bruggeman confirmed that the referral is to remove admitted negative IMR from TAC in determining the RBC percentage. Bruggeman noted that the discussion on this aspect will occur at the Capital Adequacy (E) Task Force. He stated that this change may not be viable for year-end, so that is why other points and guardrails need to be considered.

Bruggeman directed NAIC staff to proceed with guidance to allocate the admitted negative IMR to special surplus. He stated that this allocation will make it easier to identify in the quarterly financials, as the IMR schedule is only completed for the annual reporting.

Bruggeman requested that NAIC staff review the annual statement instructions for excess withdrawals and for bonds and derivatives reported at fair value to ensure those gains and losses are not going through IMR. He also noted a need to review the AVR guidance, which is intended for credit losses, to ensure that the division between IMR and AVR is clear. He requested NAIC staff to also consider additional disclosure reporting that would help state insurance regulators identify or summarize aggregate activity, especially with quarterly reporting.

Bruggeman reiterated that the Working Group is trying to provide guidance quickly as an interim step, but it needs to have a long-term solution so that this is not a pending issue in another 10 years. Although it is unlikely to be fully done by year-end, he would like to work towards June 30 for the interim solution, as that allows the other affected groups to receive the interim guidance in a timely manner before it is applicable for year-end.

In response to an inquiry from Brown on a potential blanks referral, Bruggeman stated that the Working Group would consider a disclosure first as part of the interim discussion and then sponsor a blanks proposal.

In response to Weaver's comments on the lengthy list of action items, items to consider, and the time that may be needed, Bruggeman stated he already had several of these identified, and he has given NAIC staff a preview, contingent on the discussion of the Working Group from this meeting. He stated that NAIC staff will move forward on this quickly as directed by the Working Group. He stated that the approach is trying to identify a good solution for industry but also ensure appropriate financial reporting and regulatory tools. Bruggeman stated that it would have been easier if a resolution to this topic had been established 20 years ago, but there were other urgent issues. He stated when interest rates increase more than 4% in a year, some weird circumstances happen.

Carmello asked for clarity on the referral to the Life Actuarial (A) Task Force, specifically on the topic of reasonable guardrails. He stated that there are no guardrails now on AAT other than in New York. He asked whether the Working Group will ask for guardrails to be established on a national basis. Bruggeman responded that the request to the Task Force is to look at the guardrails in place in New York, as well as other options, to see if there are any that can be incorporated. Carmello stated that Minnesota made a proposal for AG 53 guardrails last year, and it was voted down. As such, he does not believe the Working Group should be relying on AAT.

Hemphill stated that the question of whether there is a need for AAT guardrails dovetails with other work the Life Actuarial (A) Task Force and the Valuation Analysis (E) Working Group is going to be doing with AG 53. She stated that it might be a heavy change to make, but they may indeed find that there are guardrails needed, and if those changes are made, then that would provide actuaries more comfort with applying AAT to a greater extent. She stated that without guardrails, she would also be uncomfortable in relying on AAT, and it makes sense for the Life Actuarial (A) Task Force to review what could be established.

Walker stated that her message to industry is that there are going to be three groups that will be working on this negative IMR issue. While the Statutory Accounting Principles (E) Working Group is going to consider an interim solution, the longer-term resolution may be contingent on what the other groups decide. Walker stated that the solutions of those other groups may allow the state insurance regulators of the Working Group to decide whether to allow a higher admitted asset on the balance sheet. As such, it is going to be a balancing act, and there may be tough discussions on a long-term solution if there are no guardrails on AAT or changes to TAC, or other RBC calculation revisions. Without those revisions, the long-term solution may have a far less admitted amount than what industry might prefer.

Smith stated that the Working Group keeps talking about a long-term solution, but he believes it is important to highlight that this will be a new long-term solution. He stated the long-term solution that has been in place for 31 years is that negative IMR is nonadmitted. He stated that the recent discussion has implied that the Working

Group did not address this issue, and that is incorrect. He reiterated that since 1992, negative IMR has been required to be nonadmitted, and that long-term process should speak for itself.

Hartz stated that the long-term solution may be to leave the existing guidance as it is, as nonadmittance is more conservative. He stated not allowing negative IMR and leaving it nonadmitted is consistent with statutory accounting, but even in that circumstance, there may be special circumstances that state insurance regulators may need to consider.

Smith stated that he does not disagree with the discussion or the proposed actions, but he wants to be clear that the admittance of negative IMR will be a change to the long-time existing guidance. He noted that the existing guidance was an intentional decision.

Bruggeman expressed appreciation for the detailed discussion, and he requested that NAIC staff have the minutes explicitly detailed for historical purposes. He stated that the Working Group does not generally take a vote to direct NAIC staff, but for this topic, he would like to have a vote.

Malm made a motion, seconded by Walker, to direct NAIC staff to work on both a 2023 solution and a long-term solution as follows:

- i. Recommend a referral to the Life Actuarial (A) Task Force on further consideration of the asset adequacy implications of negative IMR. Items to include: 1) developing a template for reporting within AAT; 2) considering the actual amount of negative IMR that is admitted to be used in the AAT; 3) better consideration of cash flows within AAT and documentation, as well as any LST considerations; 4) ensuring that excessive withdrawal considerations are consistent with actual data—sales of bonds because of excess withdrawals should not use the IMR process; and 5) ensuring that any guardrails for assumptions in the AAT are reasonable and consistent with other aspects.
- ii. Recommend a referral to the Capital Adequacy (E) Task Force for the consideration of eliminating any admitted net negative IMR from TAC and the consideration of sensitivity testing with and without negative IMR.
- iii. Develop guidance for future Working Group consideration that would allow for the admission of negative IMR up to 5% of surplus using the type of limitation calculation similar to that used for goodwill admittance. The guidance should also provide for a downward adjustment if the RBC ratio is less than 300%.
- iv. Review and provide updates on any annual statement instructions for excess withdrawals, related bond gains/losses, and non-effective hedge gains/losses to clarify that those related gains/losses are through AVR, not IMR.
- v. Develop accounting and reporting guidance to require the use of a special surplus—account or line—for net negative IMR.
- vi. Develop governance-related documentation to ensure sales of bonds are reinvested in other bonds.
- vii. Develop a footnote disclosure for quarterly and annual reporting.

The motion passed unanimously.

#### 4. Considered Maintenance Agenda – Active Listing

Walker made a motion, seconded by Weaver, to expose the following agenda items for a public comment period ending June 9, except for agenda item 2023-03: New C-2 Mortality Risk Note and agenda item 2023-11-EP: AP&P Manual Editorial Updates, which will be exposed for a public comment period ending May 5. The motion passed unanimously.

##### a. Agenda Item 2023-01

Bruggeman directed the Working Group to agenda item 2023-01: Review Annual Statement Instructions for Accounting Guidance. Gann stated that this agenda item has been developed to establish a project to review the annual and quarterly statement instructions to ensure that primary accounting guidance is reflected within the SSAPs. Although the duplication or reference of accounting guidance may occur for ease in applying the reporting guidance, the focus of this project is to ensure that the annual or quarterly statement instructions are not the primary source of statutory accounting guidance. For the purposes of this agenda item, accounting guidance is intended to refer to measurement, valuation, admittance/nonadmittance, as well as when assets and liabilities should be recognized or derecognized within the statutory financial statements.

This agenda item and project is proposed to address limited situations in which the annual statement instructions have been identified to reflect more detailed accounting guidance than the SSAPs. Under the statutory hierarchy, the SSAPs are Level 1 and the authoritative source for accounting provisions. If guidance does not exist in the SSAPs, then other sources of guidance can be considered based on the statutory hierarchy, but it is not intended that guidance purposely be captured in the annual statement instructions (which are level 3,) in lieu of the inclusion of guidance in the SSAPs.

Although it is anticipated that only limited situations will be identified, this agenda item proposes a broad project to review the instructions and identify where accounting guidance may need to be captured in the SSAPs.

##### b. Agenda Item 2023-02

Bruggeman directed the Working Group to agenda item 2023-02: SSAP No. 43R – CLO Financial Modeling. Gann stated that this agenda item proposes revisions to SSAP No. 43R to incorporate edits to reflect changes adopted by the Valuation of Securities (E) Task Force on Feb. 21 to include collateralized loan obligations (CLOs) in the Securities Valuation Office (SVO) financial modeling process.

This agenda item has been drafted to ensure the financial modeling guidance summarized in SSAP No. 43R reflects the practices, as directed by the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual). The *Accounting Practices and Procedures Manual* (AP&P Manual) is higher in the statutory hierarchy than the P&P Manual, but the primary source of authoritative guidance for financial modeling is the P&P Manual. Only a general description of the modeling process is included in SSAP No. 43R. The methodology to model CLOs is still being developed, but guidance that permits the SVO to model CLOs has been adopted and should be followed once CLOs begin to be financially modeled.

##### c. Agenda Item 2023-03

Bruggeman directed the Working Group to agenda item 2023-03: New C-2 Mortality Risk Note. Marcotte stated that the Life Risk-Based Capital (E) Working Group is working on a project to modify its C-2 mortality risk charges. The Life Risk-Based Capital (E) Working Group, in cooperation with the C-2 Mortality Work Group of the American Academy of Actuaries (Academy), developed structural updates to the life RBC treatment of group permanent life

and miscellaneous other instruction updates. The proposal assigns the same factors to group permanent life as individual permanent life for policies with and without pricing flexibility.

A new financial statement note will provide the development of net amounts at risk in the categories needed for the Life C-2 mortality risk charges. These categories are designed to create a direct link to a financial statement source and accompanying life RBC C-2 mortality risk updates.

As the notes to the financial statements are maintained by the Statutory Accounting Principles (E) Working Group, this agenda item is to add the requirement for the new proposed note into the *Accounting Practices and Procedures Manual*. An annual statement blanks proposal is being simultaneously exposed at the Life Risk-Based Capital (E) Working Group, which has requested year-end 2023 as the effective date for the note.

d. Agenda Item 2023-04

Bruggeman directed the Working Group to agenda item 2023-04: Corporate Alternative Minimum Tax Guidance. Marcotte stated that the Inflation Reduction Act (IRA) was enacted on Aug. 16, 2022, and it included a new corporate alternative minimum tax (CAMT), which goes into effect for the 2023 tax year. In December 2022, the Working Group adopted temporary guidance to address the CAMT in *INT 22-02: Third Quarter 2022 through First Quarter 2023 Reporting of the Inflation Reduction Act - Corporate Alternative Minimum Tax*.

This agenda item is to begin the project of providing guidance regarding the CAMT for periods after the first quarter of 2023. Interested parties have submitted initial informal recommendations to assist with preparing the guidance. The CAMT is more complex than the prior alternative minimum tax, and it is assessed at the consolidated return level using book income. She noted that the Working Group will need to have interim small group discussions and may also need to consider extending INT 22-02.

e. Agenda Item 2023-05

Bruggeman directed the Working Group to agenda item 2023-05: ASU 2022-06, Reference Rate Reform (Topic 848), Deferral of the Sunset Date of Topic 848. Stultz stated that the FASB issued ASU 2022-06 to extend the sunset date of the reference rate reform guidance that was included in *ASU 2020-04, Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and *ASU 2021-01, Reference Rate Reform (Topic 848), Scope*.

Stultz stated that reference rate reform refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it would no longer require banks to continue rate submissions after 2021, thus likely sunsetting both the use and publication of LIBOR. An important item to note is that while LIBOR is the primary IBOR, other similar rates are potentially affected by reference rate reform. For simplicity, LIBOR will be the sole IBOR referenced throughout this agenda item.

With a significant number of financial contracts referencing LIBOR, its discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of IBORs that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications and typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is

often the case, a change to the critical terms, including reference rate modifications, typically requires the remeasurement of the contract, or in the case of a hedging relationship, a redesignation of the transaction.

To address ASU 2020-04, the Working Group issued *INT 20-01: ASU 2020-04 – Reference Rate Reform*, and this interpretation was then revised to incorporate guidance from ASU 2021-01. This agenda item recommends revisions to INT 20-01 to include the updated sunset date of Dec. 31, 2024.

f. Agenda Item 2023-06

Bruggeman directed the Working Group to agenda item 2023-06: Additional Updates on *ASU 2021-10, Government Assistance*. Marcotte stated that on Aug. 10, 2022, the Working Group adopted revisions to *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items* in agenda item 2022-04: *ASU 2021-10, Government Assistance*. The revisions incorporate certain disclosures, adopted with modification from ASU 2021-10, to supplement existing disclosures regarding unusual or infrequent items.

This agenda item is to provide additional clarifications to *SSAP No. 24*, regarding follow-up questions that NAIC staff received regarding the adoption of the disclosures about government assistance in ASU 2021-10. The primary questions were regarding whether the adoption with modification of the ASU disclosures intended to allow insurers to use the grant and contribution model. If the intent was not to allow for the use of the grant and contribution model, then the question becomes in what situation these disclosures would be required. Because NAIC staff understanding is that the grant and contribution model was not intended to be permitted for statutory accounting, additional modifications to clarify this point have been proposed that reject ASU 2021-10 but still incorporate when the government assistance disclosures from ASU 2021-10 were adopted.

g. Agenda Item 2023-07

Bruggeman directed the Working Group to agenda item 2023-07: *ASU 2019-08, Codification Improvements to Topic 718 and Topic 606*. Stultz stated that in November 2019, the FASB issued *ASU 2019-08 Compensation, Stock Compensation (Topic 718) and Revenue from Contracts with Customers (Topic 606): Codification Improvements—Share-Based Consideration Payable to a Customer*, which includes amendments to Topics 718 and 606. The changes to Topic 718 include share-based payment transactions for acquiring goods and services from non-employees, and in doing so, superseded guidance in Subtopic 505-50, *Equity—Equity-Based Payments to Non-Employees*. The changes to Topic 606 expand the scope of the codification to include share-based payment awards granted to a customer in conjunction with selling goods or services.

The amendments in ASU 2019-08 require an entity measure and classify share-based payment awards granted to a customer by applying the guidance in Topic 718. The amount recorded as a reduction of the transaction price is required to be measured on the basis of the grant-date fair value of the share-based payment award in accordance with Topic 718. The grant date is the date at which a grantor (supplier) and a grantee (customer) reach a mutual understanding of the key terms and conditions of a share-based payment award. The classification and subsequent measurement of the award are subject to the guidance in Topic 718 unless the share-based payment award is subsequently modified, and the grantee is no longer a customer.

For statutory accounting assessments, prior U.S. GAAP guidance related to share-based payments has been predominantly adopted with modification in *SSAP No. 104R—Share-Based Payments*. Statutory accounting modifications to the U.S. GAAP guidance have mostly pertained to statutory terms and concepts.

h. Agenda Item 2023-08

Bruggeman directed the Working Group to agenda item 2023-08: ASU 2019-07, Codification Updates to SEC Sections. Stultz stated that the FASB issued *ASU 2019-07, Codification Updates to SEC Sections: Amendments to SEC Paragraphs Pursuant to SEC Final Rule Releases No. 33-10532, Disclosure Update and Simplification, and Nos. 33-10231 and 33-10442, Investment Company Reporting Modernization, and Miscellaneous Updates*, which amends and supersedes certain U.S. Securities and Exchange Commission (SEC) sections in Topic 942, 944, and 946 to align codification guidance with SEC Releases No. 33-10532, 33-10231, and 33-10442. These SEC Releases amend a wide range of disclosure requirements, which were determined to be redundant, duplicative, overlapping, outdated, or superseded by other relevant literature. Additionally, the SEC Releases include several miscellaneous updates and corrections intended to clarify SEC guidance. SEC guidance from ASUs have generally been rejected as not applicable for statutory accounting in Appendix D, but all ASUs are reviewed for statutory accounting purposes to determine if the guidance should be considered for statutory accounting.

i. Agenda Item 2023-09

Bruggeman directed the Working Group to agenda item 2023-09: ASU 2020-09, Amendments to SEC Paragraphs. Stultz stated that the FASB issued *ASU 2020-09, Amendments to SEC Paragraphs Pursuant to SEC Release No. 33-10762—Debt (Topic 470)*, which amends and supersedes certain SEC sections in Topic 470 to align codification guidance with SEC Release No. 33-10762, which amends the SEC financial disclosure requirements for guarantors and issuers of guaranteed securities registered or being registered, and issuers' affiliates whose securities collateralize securities registered or being registered in Regulation S-X to improve those requirements for both investors and registrants. The changes are intended to provide investors with material information, given the specific facts and circumstances, make the disclosures easier to understand, and reduce the costs and burdens to registrants. SEC guidance from ASUs have generally been rejected as not applicable for statutory accounting in Appendix D, but all ASUs are reviewed for statutory accounting purposes to determine if the guidance should be considered for statutory accounting.

j. Agenda Item 2023-10

Bruggeman directed the Working Group to agenda item 2023-10: ASU 2022-05, Transition for Sold Contracts. Stultz stated that this agenda item has been drafted to consider *ASU 2022-05, Transition for Sold Contracts* for statutory accounting. He noted that the FASB issued the ASU in December 2022 to amend specific sections of *ASU 2018-12, Targeted Improvements for Long-Durations Contracts*. The amendments made by the ASU are intended to reduce the implementation costs and complexity associated with the adoption of long-duration contracts (LDTI) for contracts that have been derecognized in accordance with the ASU before the LDTI effective date. The revisions captured in the ASU are summarized as follows: The amendments in the ASU amend the LDTI transition guidance to allow an insurance entity to make an accounting policy election on a transaction-by-transaction basis. An insurance entity may elect to exclude contracts that meet certain criteria from applying the amendments in the LDTI.

k. Agenda Item 2023-11EP

Bruggeman directed the Working Group to agenda item 2023-11EP: AP&P Manual Editorial Updates. Gann stated that this agenda item details editorial updates for the *Accounting Practices and Procedures Manual*. These revisions are captured in three broad categories:

- SSAP No. 86: Change a disclosure category from “intrinsic value” to “volatility value.”

- Various – Streamline references to the P&P Manual.
- Various – Changes to consistently reference percent (with % sign and not “percent”) throughout SSAPs.

## 5. Discussed Other Matters

### a. Received and Discussed Valuation of Securities (E) Task Force Referral

Gann stated that the Working Group was one of several groups that received a referral from the Valuation of Securities (E) Task Force (Attachment One-G) to inquire about the NAIC SVO obtaining the ability to calculate analytical information by utilizing commercially available data sources and investment models instead of requesting individual insurance companies to incur the costs to implement system changes. The referral identifies that if the SVO had the capabilities, it could calculate for state insurance regulators various measures, including key rate duration, sensitivity to interest rate volatility, principal and interest cash flow projections for any security or portfolio for any given interest rate projection, loss estimates, and many other measurements. The referral asks each group to respond to the following questions by May 15:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

Bruggeman requested that the Working Group provide comments to NAIC staff by April 15 so a referral response could be submitted to the Valuation of Securities (E) Task Force.

### b. 2023 NAIC Accounting Practices and Procedures Manual

Gann stated that on Jan. 9, interested parties provided comments to the NAIC Chief Executive Officer and the Chief Operating Officer/Chief Legal Officer on the Bookshelf product limitations and the need for industry to have a searchable and printable portable document format (PDF) of the AP&P Manual (Attachment One-H).

On Feb. 6, a response letter was provided (Attachment One-I) informing that for the 2023 AP&P Manual, the NAIC is proud to announce that a copyrighted PDF will be made available, at no additional charge, to those who purchase a subscription to the AP&P Manual. Similar to the current subscription process, access will be restricted to the individual level; however, the PDF will be searchable and printable like any other PDF document. This process is specific to the 2023 AP&P Manual only, and for the 2024 AP&P Manual, the NAIC is dedicated to finding an amicable, long-term solution that will result in ease of access for industry users.

The process to obtain the PDF is anticipated to be automatic upon purchase of the 2023 AP&P Bookshelf subscription through Account Manager. Acquiring it through Account Manager is key to obtaining the PDF download, and manual processing will not be available.

### c. American Academy of Actuaries Request

Marcotte stated that on Feb. 23, the Financial Reporting and Solvency Committee of the Health Practice Council

of the American Academy of Actuaries, submitted a request to the Long-Term Care Actuarial (B) Working Group and the Statutory Accounting Principles (E) Working Group that requests clarifications regarding some observed diversity in practice across issuers of long-term care insurance (LCTI) regarding how the new guidance in *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long Term Care Insurance Reserves* (AG 51), and specifically Section 4C, on determining when additional reserves may be necessary, interacts with existing guidance on accident and health (A&H) insurance reserve adequacy, as found in paragraph 24 of *SSAP No. 54R—Individual and Group Accident and Health Contracts* and paragraph 26 of *Appendix A-010—Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts* (Attachment One-J). NAIC staff will work with the American Academy of Actuaries representatives and NAIC support staff of the Long-Term Care Actuarial (B) Working Group and the Valuation Analysis (E) Working Group to develop an agenda item for future Statutory Accounting Principles (E) Working Group discussion.

d. Update on International Activity – IAIS AAWG

Gann stated that she participates on behalf of the NAIC in the International Association of Insurance Supervisors (IAIS) Accounting and Auditing Working Group (AAWG). The AAWG focuses on developing, or providing input on, IAIS high-level principles-based supervisory and supporting material related to the accounting, auditing, valuation, reporting, and public disclosures of insurers. The AAWG monitors international developments and prepares comments letters and other papers in relation to the above focus, as deemed appropriate.

Recent discussions of the AAWG have focused on updates to Insurance Core Principle (ICP) 14: Valuation. Gann advised that public consultation of the draft revised ICP 14, as well as ICP 17: Capital Adequacy, is expected to occur in July 2023.

Other discussions of the AAWG have focused on the implementation of International Financial Reporting Standard (IFRS) 17: Insurance Contracts by other jurisdictions, and future discussions are expected to review the International Auditing and Assurance Standards Board (IAASB) proposed strategy and work plan for 2024–2027, as well as the proposed International Standard on Auditing (ISA) 500: Audit Evidence. NAIC staff are monitoring these discussions and requesting comments from state insurance regulators or industry if there are positions or concerns that should be communicated to the AAWG. NAIC staff anticipate including regular updates as any other matter within national meeting agendas.

e. Review of U.S. GAAP Exposures

Stultz identified two items with disclosure deadlines from January to February that will be reviewed by the Working Group in the normal maintenance process (Attachment One-K).

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman  
Statutory Accounting Principles Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group with Comments due February 10th

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the NAIC Statutory Accounting Principles (E) Working Group (the Working Group) on December 13, 2022, with comments due February 10th.

We offer the following comments:

### **Principles-Based Bond Definition**

The Working Group exposed changes that include proposed revisions to reflect the bond definition in SSAP No. 26R—Bonds and SSAP No. 43R—Asset Backed Securities. Exposure also includes corresponding revisions to other SSAPs, which includes guidance restricting asset-backed securities (ABS) from SSAP No. 2R and guidance for debt instruments that do not qualify as bonds in SSAP No. 21R.

Interested parties have submitted a separate comment letter on these proposed changes.

### **Ref #2019-21: Proposed Bond Definition**

The Working Group also exposed reporting changes for bonds under the principles-based bond project. In addition to a new schedule and granular reporting lines, the exposure includes proposed revisions to other schedules and instructions that reference bond reporting. The exposure also includes a revised issue paper to detail discussions and decisions on the bond

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 2

project.

Interested parties have not provided any comments on these exposures during this comment period as we have provided comments previously on similarly exposed items. Also, based on conversations with NAIC staff, interested parties believe that our comments can be optimized once the official Blanks items are exposed from the Blanks Working Group in March.

### **Issue Paper: SSAP 86, Derivatives and Hedging**

The Working Group proposed a new issue paper to detail revisions previously adopted with the review of ASU 2017-12, Derivatives and Hedging and ASU 2022-01 Fair Value Hedging – Portfolio Layer Method.

Interested parties have no comments on this item.

### **Ref #2022-01: Conceptual Framework – Updates**

The Working Group re-exposed revisions to the definition of a liability and issue paper to incorporate the concepts from Financial Accounting Standards Boards (FASB) Concepts Statement No. 8.

Interested parties are currently reviewing the additional materials provided by NAIC staff and will comment at a later date.

### **Ref #2022-11: Collateral for Loans**

The Working Group re-exposed revisions to SSAP No. 21R to clarify that invested assets pledged as collateral for admitted collateral loans must qualify as admitted invested assets.

The impact of the new exposed language can be interpreted to affect requirements for collateral loans which are backed by investments in joint ventures, partnerships, and LLCs. As commented during the 2022 NAIC National Fall Meeting, we believe that audits of joint ventures, partnerships, and LLCs, while required under SSAP No. 97 and SSAP No. 48 for those assets held directly, are not necessarily suited for the task of assessing sufficiency of collateral, because an audit does not validate fair value of the investment, which is a core standard of collateral guidance, and audits may be unreasonably costly for this narrow purpose.

Interested parties noted that regulators indicated concern over arrangements in which the collateral asset or the collateral loan itself may be related to or affiliated with the reporting entity. We believe that this concern is more directly addressed in recent industry exposures and adoptions over related party reporting; a collateral loan involving a related party is required to be labeled as such in annual statement filings. A collateral loan which is backed by a related joint venture, partnership, or LLC, is expected to be disclosed as such under existing SSAP No. 25 guidance. It is our view that in cases where an audit is not performed, allowing an unrelated third party to perform a fair value assessment would address objectivity concerns for this narrow

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 3

purpose, noting that primary guidance over related party transactions is addressed elsewhere outside of SSAP No. 21R.

Interested parties propose that the following footnote be included in SSAP No. 21R which would effectively permit companies with these investments to obtain a third-party valuation assessment in place of an audit, where the third-party assessment would satisfy both the admitted asset requirement as well as the fair value sufficiency requirement applicable to collateral assets.

Footnote:

Because an audit, which is required for certain investments in joint ventures, partnerships, and LLCs to be admitted assets, does not necessarily provide assurance over the fair value of such an investment which is collateral for a loan, companies are permitted to obtain a fair value assessment provided by an unrelated third party in place of an audit, in order for a collateral asset which is a joint venture, partnership, or LLC to qualify as an admitted asset under this standard.

**Ref #2022-12: Review of INT 03-02: *Modification to an Existing Intercompany Pooling Arrangement***

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and re-exposed the intent to nullify INT 03-02. This re-exposure requested industry to provide comments on specific instances in which the interpretation was being applied. In addition, the following key points were noted for consideration during the exposure in response to some of the comments received.

Staff provided the following comments regarding some of the key points from industry. Interested parties' response to each comment is provided in italics below following each comment:

1. In the current interest rate environment, the fair value of many bonds is below book value. For example, a bond with an amortized cost of \$100 with a fair value of \$85. The way INT 03-02 is written a bond with a fair value of 85 could be used to settle an intercompany reinsurance pooling obligation of \$100. If the reporting entity paid with cash, they would be required to pay \$100. The actual cash value of obligations when they are extinguished is a relevant measure of the transaction.

*If a bond was transferred at market value in order to settle the \$100 pooling obligation as proposed by NAIC staff in the example above, a bond with a fair value of \$100 would have to be used to settle the obligation. In the event that the bond was in an unrealized loss position at the time of the transfer, a realized loss would be recognized on the transferring entity's books and the combined pool's books. To avoid this situation, a legal entity could use cash to settle the obligation, but the use of such cash may not be the most efficient use of the transferring entity's resources.*

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 4

*If the bond was transferred at FV as proposed by NAIC staff but the bond was in an unrealized gain position, a more significant issue would arise. Realized gains would be recorded in the financial statements of the transferring entity, thus resulting in an initial gain in surplus at the legal entity level of reporting as part of the intercompany pooling modification **and requiring the intercompany pooling reinsurance to be accounted for as retroactive reinsurance.***

*There are extreme anomalies with transferring bonds at market value, as illustrated above.*

- Using book value for measurement of payments between affiliates can result in either unrecognized [gains or losses] of in effect dividend or losses. SSAP No. 25 requires such transfers of assets between affiliates to use fair value. If a subsidiary can pay the parent with assets that have a lower fair value than book value (ex, owes \$100 but pays with a bond of 85), this has a similar effect as an unrecognized capital contribution to the subsidiary. SSAP No. 72 requires a capital contribution to be valued using fair value.

*The hypothetical capital contribution noted by NAIC staff is mitigated by the fact that, in actual practice, the transferring company would likely have two options if it did not transfer the bond:*

- The company could sell the bond, recognize a realized loss, and reinvest in a higher interest-bearing bond which would offset the realized loss over time.*
- The company could hold the bond until maturity, at which point it is redeemed at the \$100 par value.*

*We also note that modifications to intercompany pooling arrangements are subject to prior regulatory review and approval, and if the example noted by NAIC staff were part of a planned intercompany pooling transaction, the regulator could address it before granting approval to the intercompany pooling modification.*

- Staff agrees that at the ultimate parent level such transfer of assets (in accordance with SSAP No. 25 guidance) may be noneconomic in that the parent continues to hold an interest in the same assets. Therefore, at the parent level, such transfers of assets may result in the deferral of gains. Staff believes that losses would not be deferred at the ultimate parent level.

*The issue noted by interested parties is not that the bond transaction may be economic at the subsidiary level but non-economic at the parent level. Rather, the interested parties letter notes that the transfer of reserves in an intercompany pooling modification is a non-economic transfer, and INT-03-02 treats the transfer of bonds consistently (i.e., non-economic) with the transfer of the liabilities.*

- Staff notes that while it may be more expedient to pay intercompany reinsurance pooling transactions with assets, the valuation used should be similar to if the obligation was extinguished with cash. Therefore, an entity can still choose to pay with assets, they just need to be valued consistently with SSAP No. 25 guidance.

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 5

*This comment seems to imply that staff disagrees with the views of the Statutory Accounting Principles Working Group, which deliberated this issue in 2003 and decided that the appropriate guidance is SSAP No. 62 and not SSAP No. 25.*

5. SSAP No. 62R, paragraph 36d provides an exception to retroactive reinsurance accounting guidance which allows for prospective accounting treatment for intercompany reinsurance among 100% owned affiliated provided there is no gain to the ceding entity. If there is a gain to the ceding entity, there is guidance in SSAP No. 62R, paragraph 37 which requires a more punitive method of accounting than either prospective or retroactive reinsurance accounting. Therefore, NAIC staff comment is that the statutory accounting objective is to provide different treatment for retroactive reinsurance contracts if there is a gain to the ceding entity. This is another reason that the guidance in INT 03-02 is problematic. The object is to correctly measure the effects of the contract, which drives the accounting. The objective is not to obscure whether there is a gain to the ceding entity, which can happen in the event that the assets used in payment are not measured correctly.

*INT 03-02 avoids the gain in surplus issue by requiring that the transfer of bonds be at book value. This avoids inconsistent accounting of intercompany pooling modifications between prospective reinsurance accounting and retrospective reinsurance accounting. INT 03-02 provides consistent accounting for all such modification transactions.*

*Interested parties believe that INT 03-02 was not meant to address whether assets used as payments in an intercompany pooling modification are measured correctly, but rather the INT was meant to address which accounting is appropriate given the facts and circumstances of the transaction. We still believe that INT 03-02 provides a reasonable approach with respect to accounting for intercompany pooling modifications and provides consistency in reporting across companies.*

6. Interested parties noted that modifications to intercompany pooling arrangements are typically effective retroactive to the beginning of the year. Staff notes that the payment value when the transaction is settled should be equivalent to the cash value of what is owed on the date of extinguishment of the liability.

*This view raises the question of whether the “fair value” of the reserves need to be considered. That would be unprecedented and not consistent with any statutory accounting guidance.*

7. Many of the interested parties’ comments regarding GAAP use of book value are more relevant to consolidated basis accounting which is not consistent with the legal entity basis of statutory accounting.

*Interested parties respectfully disagree. The interested parties comment letter references the example of accounting for mergers, which is not the same as consolidation accounting.*

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 6

8. Interested parties' comments noted that there is a difference in treatment for intercompany pooling participants who are not 100% owned by a common parent. NAIC staff notes that retroactive pooling agreement changes with participants that are not 100% under common control do not meet the exception to retroactive accounting provided in SSAP No. 62R, paragraph 36d. NAIC staff notes that SSAP No. 62R, paragraph 37 provides guidance for retroactive reinsurance agreements among affiliates where there is a gain to the ceding entity.

*This comment appears to conflate the issue of being under the control of a common parent versus under 100% common control of a group. The interested parties comment letter was distinguishing between intercompany pool entities which have a common parent versus intercompany pool entities which do not have a common parent. All of the intercompany pool entities are under 100% common control, but not necessarily under the same common parent.*

*As an example, there may be downstream insurance subsidiaries of two top-tier insurance entities. The downstream insurance subsidiaries do not have common parents but are under 100% common control of the group.*

We believe that nullification of the existing INT will likely result in inconsistent interpretation of the guidance by both companies and regulators and will result in inconsistent accounting treatment.

#### **Ref #2022-14: New Market Tax Credits**

The Working Group moved this agenda item to the active listing, categorized as a new SAP concept, and exposed a discussion document to expand current statutory accounting guidance for low-income housing tax credits to capture all tax equity investments that provide general federal business tax credit and state premium tax credits if they meet specified criteria.

Interested parties agree with having uniformity in accounting and reporting for equity investments for which the return is earned primarily through tax credits. Interested parties agree that the proportional amortization method is an appropriate method to use for any type of investment (debt or equity) where the return is primarily earned through tax credits. We are providing responses to the questions exposed in the Discussion Paper in this document. There are two key take aways from our responses summarized as follows:

1. Interested parties ask the Working Group to consider allowing for the reporting of both the amortization of the investments and the use of the tax credits themselves in the same income statement line similar to what is required under U.S. GAAP.
2. Interested parties have concerns regarding tax credit investments that are issued in debt form and requiring those investments to be reported on Schedule BA instead of Schedule D. Interested parties believe that tax credit investments issued in debt form are better suited for Schedule D reporting.

We have provided responses to the questions in the Discussion Paper below for your

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 7

consideration.

- 1) Paragraph 1 – The scope intends to include programs that provide general business federal tax credits, which are income tax credits, and programs that meet the criteria that provide for state premium tax credits. This would be an extension from the FASB exposure that only permits income tax credits but is in line with comments received by the FASB that insurers receive credits for state premium tax. Comments are requested on the proposed inclusion for programs that meet the criteria in paragraph 3 that generate state premium tax credits.

*Interested Parties Response:* Interested parties agree that all investments, no matter what legal form, for which the return is earned primarily through tax credits should follow the proportional amortization method.

The proposal seems to only scope in equity investments in tax credit structures and a very limited set of debt tax credit investments. Interested parties note that there are also other types of debt investments for which the return is primarily earned through tax credits with many structures including cash payments as well. We have listed examples of such debt structures in the Appendix. We have the following comments specifically related to these debt investments for which the return is earned primarily through tax credits if the intent is to scope those investments as well into the proposal:

- a. Currently, debt investments in CAPCOs which provide state tax credits follow the SSAP No. 26 guidance and reporting, including INT 06-02 *Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*. It is unclear from the exposure whether these investments will continue to be reported on Schedule D and/or whether new investments under this program should follow the new revised guidance. See the Appendix for more information on these investments.
- b. For companies that currently invest in bonds for which the return is primarily earned through tax credits, moving these investments to Schedule BA causes concerns since there are limitations on the amount of assets that can be reported on Schedule BA. These investments are sound and of high credit quality because the tax credits are highly probable and any contractual cash payments are typically escrowed in cash. Interested parties would also note that these programs are aimed at promoting the development and growth of distressed communities and moving them to Schedule BA may deter insurers from investing in these structures since the level of risk perceived from Schedule BA assets would not be commensurate with the return on these investments (more like debt returns versus more risky Schedule BA returns). Interested parties ask the Working Group to consider allowing for debt tax credit investments to be reported on Schedule D. Although tax credits in the legal form of debt may not result in a direct payment of cash from the borrower to the investor, there is a reduction in cash payments by the investor for income tax expenses, premium tax expenses, or state income taxes, depending on the nature of the tax credit investment. Interested parties note that cash is fungible so whether in the form of direct payments of cash from the borrower to the insurer for principal and interest or reduced insurer payments of taxes, the investment results in increased cash

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 8

available to the insurer. The debt form of tax credit investments has contractual fixed payments of principal and interest in the form of reduced cash payments as noted. From this perspective, these instruments may meet the proposed principle-based bond definition.

- c. Companies currently report tax credit debt investments on Schedule D with an NAIC designation, which usually comes from the SVO. If the intent is for these investments to move to Schedule BA, it is imperative that these investments are allowed to be reported with an NAIC designation (see high credit quality referenced in prior paragraph). We would like to stress the fact that the risk profile of tax credit investments is not commensurate with equity-type risk as these investments tend to be of high credit quality with a very good history of performance. It is very important to take into consideration any potential RBC impacts when making any accounting or reporting changes.
  - d. Interested parties also note that if the proposal intends to scope in all tax credit investments in debt form, which we would be supportive of, this needs to be clarified in the exposure as the exposure may be interpreted to only include equity investments. For example, the criteria currently included in the exposure to apply the proportional amortization method is very specific to investments made in equity form. If the proposal is scoping in debt investments as well, the criteria need to be updated so that it is tailored to debt investments as well.
- 2) Paragraph 3 – The criteria mirror the concepts included in the proposed FASB guidance. Under U.S. GAAP, the use of the portfolio allocation method is an election, but under SAP, the guidance would be required if the criteria are met. (This would be consistent with the existing guidance in SSAP No. 93 for LIHTC.) Based on the FASB comment letters reviewed, the criteria are expected to be met for most state premium-based tax equity investments. Should other criteria be considered or are there concerns with requiring application if the criteria are met?

*Interested Parties Response:* Interested parties agree that the same criteria currently required under U.S. GAAP should apply to SAP for application of the proportional amortization method. Interested parties do not have an issue with the proportional amortization method being a requirement, as opposed to an option, if the criteria are met. We have two observations regarding the criteria:

- a. Criteria “d” requires that “substantially all of the projected benefits are from tax credits and other tax benefits, determined on a discounted basis using a discount rate that is consistent with the cash flow assumptions utilized by the reporting entity for the purpose of making a decision to invest in the project.” Interested parties would like to confirm that this criterion along with the rest of the criteria are assessed at the time of purchase of the investment and not at every reporting period. This is consistent with the Bond project proposals for the principles-based bond definition also. For certain tax credit investments such as renewable energy tax credit investments, this criterion is usually met at origination. However, if the project does

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 9

not produce the actual amount of production tax credits expected at origination, the investee may be contractually required to make cash distributions from operations in excess of what was originally anticipated to compensate investors for the reduction in expected tax credits. In this case, substantially all of the projected benefits may end up not being from tax credits and other tax benefits. This is why it is important for the criteria to be assessed at origination.

- b. As explained under question #1 if the intent is to also scope in debt investments, the criteria need to be modified so that both types of investments are addressed. We have included some examples of tax credit investments issued in debt form in the Appendix.
- 3) Paragraphs 5-8 – The information details IRS provisions to qualify for the tax credit and overall information on the use of tax credits investments. Under the IRS rules, the federal business tax credits are not transferable, as only the entity that has a true equity interest can take the tax credit. Furthermore, the designs are most often established to have provisions to liquidate the equity investment (through a put/call) at the end of the timeframe. Comments are requested on whether other designs are prevalent as well as inclusion of this guidance in the SSAP and/or the Issue Paper.

*Interested Parties Response:* We agree with the discussion topics in paragraphs 5-8 regarding federal and premium tax credit programs with a few exceptions. As explained in the Appendix, there are other forms of debt investments for which the return is primarily earned through tax credits that do not seem to be addressed in the Discussion paper. Interested parties would also like to clarify that debt tax credit investments are usually transferrable, but for debt tax credit investments that require the purchase of an equity interest, they would have to be transferred along with the equity investment. Therefore, although the debt piece may not be transferable on its own for those types of deals, it is transferable along with the equity.

In addition, the Discussion paper states “a guarantee of return disqualifies the investor as obtaining a tax credit for federal income tax purposes. A limited exception to this structure can exist for NMTC using a financial institution syndicating a NMTC in which the financial institution guarantees the credit or returns.” Interested parties note that guarantees exist in structures other than New Market Tax Credit (NMTC) structures. For example, there are at least 2 financial institution syndicators actively offering LIHTC transactions with an 80% tax credit guarantee for which tax opinions have been obtained to ensure this still qualifies the investor as a “true partner.” There are also various guarantees offered in the Renewable Energy Tax Credit space where guarantees may be issued by financial institutions to provide for a dollar-for-dollar guarantee for the first 25% of tax credits recaptured or disallowed. Any guarantees issued by financial institutions on the tax credits are done in a way that still ensures the eligibility of the credits. Our reason for bringing this up is that the Discussion Paper seems to limit the existence of such guarantees to NMTC deals and we want to clarify that guarantees exist in other tax credit transactions. At the same time, for the debt deals where these guarantees exist, the risk profile is even stronger since the insurer will get a return of all or a portion of its initial investment if the tax credits do not emerge and as a

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 10

result, we believe whether a guarantee exists or not, should be irrelevant to the use of the proportional method and the proposed reporting.

- 4) Paragraphs 10-14 – This information mirrors guidance from the proposed ASU with SAP clarifications. Comments are requested on whether SAP modifications should be considered.

*Interested Parties Response:* Interested parties request that SAPWG consider applying the same geography requirements under U.S. GAAP to SAP. Currently under SAP for Low Income Housing Tax Credit Investments, the amortization of the investment is reported in net investment income (NII) and the tax credits are reported in the tax expense line for federal tax structures and in state premium tax or state income tax for state tax structures. Under U.S. GAAP, both the amortization and the tax credits are reported together in the income tax line. We believe that reporting both the amortization and the tax credits in tax expense for federal programs and in the state premium tax or state income tax lines for state programs more faithfully represents the intent of the credits, which is to reduce the expenses and thus is a much better presentation of these investments. When the amortization is reported in net investment income, these investments are reported as if they had a negative return since the amortization is divorced from the tax credits, which is not a true representation of the return on these investments. If the tax credits allow state income tax or premium tax credits to be taken by an insurer, the expense line of the income statement will result in much more volatility when the amortization of the credits is not matched with the tax credits themselves in the same income statement line item. Not matching could have an indirect impact on insurers “rate setting” process on P&C business.

Interested parties would be happy to work with the Working Group to determine the best way to present tax credit investments on the investment schedules with amortization being reported in the same income statement line item as the tax credits themselves. One item that would have to be addressed for federal tax programs is whether a deferred tax asset (DTA) would still be recorded for any tax credit carryforwards. Under U.S. GAAP, DTAs are not recorded for LIHTC investments accounted for under the proportional amortization method since both the amortization and the tax credits are reported in income tax expense.

- 5) Paragraphs 15-16 - This guidance details the application of the proportional amortization method for statutory accounting. It is more detailed, but generally consistent with SSAP No. 93. The existing SAP guidance was driven from EITF 94-1 and refers to recognition at the time a tax credit can be included in a tax return. However, that guidance is contradictory with the recognition of tax credit carryforwards under both current SAP and U.S. GAAP. The proposed guidance in paragraph 11 reflects the new GAAP guidance for recognition in the year in which the credit arises, and the guidance in paragraph 16 identifies how carryforwards would be considered a DTA.

*Interested Parties Response:* Interested parties agree that DTAs would be set up for any tax credits that can be carried over. As stated above, we understand that under U.S. GAAP, there are no DTAs set up for tax credit carryovers since the amortization and the tax credits are reported in the same line.

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 11

- 6) Paragraphs 17-20 – These paragraphs provide explicit SAP provisions for admittance. If the program does not generate tax credits or if the reporting entity cannot use the tax credits, the guidance requires nonadmittance. Consideration was given as to whether admittance should be permitted based on the ability to liquidate the investment, but that is not proposed. As detailed in the scope criteria, substantially all of the projected benefits from the investment should be from tax credits or other tax benefits. From information gathered for the federal tax credit programs, liquidation may be restricted for set periods of time or be contingent on finding a buyer for the equity interest. Although a put/call provision may be in place to revert the equity interest at the end of the life for the investment, such amounts are nominal to the original investment amount. With the guidance, if the tax credits will not be received or cannot be utilized, then the investment shall be nonadmitted. If an entity cannot obtain or utilize tax credits from the investment, and can liquidate the investment, then a reporting entity should consider liquidating the investment to have cash for reinvestment / admittance purposes. Until then, the investment is proposed to be nonadmitted.

*Interested Parties Response:* Interested parties believe that it is too punitive to require non-admission of the whole investment if an entity does not have taxable income in a given year. As stated above, insurers may be able to utilize the tax credits through carryback to the prior year. If not, insurers would usually set up a DTA for any tax credit carryforwards if there is an expectation that the credits will be utilized in future years. Therefore, interested parties believe that if there is no valuation allowance on the tax credit DTA and the DTA is admitted under the three-year turnaround criteria, then the investment should be fully admitted. This would not preclude impairment analysis on the investment itself.

The Discussion Paper also includes discussion about requiring a tax opinion for admissibility purposes. Interested parties would like to confirm that the tax opinion is required upon acquisition of the investment by the insurer and not at every reporting date.

It is also important to clearly distinguish between non-admission and impairment. Question #6 makes reference to the program not generating tax credits or the reporting entity not obtaining the tax credits. Under these circumstances, it seems that the guidance would point to impairment and not non-admission.

- 7) Paragraphs 21-24 – This guidance is generally consistent with SSAP No. 93, except the recognition of a liability for a future contribution follows the loss contingency guidance in SSAP No. 5R. This is consistent with the ‘probable’ threshold reflected under U.S. GAAP.

*Interested Parties Response:* Interested parties agree that the guidance in SSAP No. 5R regarding contingencies needs to be evaluated to determine if a commitment related to future contributions gives rise to a liability.

- 8) Paragraphs 25- Paragraph 25 is consistent with SSAP No. 93, except it incorporates fair value as the compared value. Current SSAP No. 93 uses the present value calculation, so it is retained as a proxy of fair value. U.S. GAAP uses fair value, and the existing disclosure in SSAP No. 93 also references fair value.

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 12

*Interested Parties Response:* Interested parties do not have an objection with incorporating fair value in the assessment of impairment. Since these investments do not trade frequently, most companies are probably already doing a present value calculation to determine fair value so this should not change what reporting entities are currently doing.

- 9) Paragraph 26 - This guidance incorporates concepts on whether the structure will continue to produce qualifying tax credits. The guidance specific to LIHTC from SSAP No. 93 is not retained. The guidance has divided the guidance for nonadmittance to reflect situations that impact a reporting entity's use of tax credits and OTTI to reflect issues with the actual investment in generating qualified tax credits. Comments are requested on this approach and the principle concepts for OTTI.

*Interested Parties Response:* As stated under question #6, non-admitting the entire investment appears too punitive for companies that expect to utilize the credits in a later year. Interested parties agree that impairment would occur when the credits will not emerge at all. Question #6 needs to be clarified to explain these concepts since the way it is currently written, it seems to scope in the impairment criteria into the non-admission review.

- 10) Paragraph 27 – Disclosures in 27a-b are from U.S. GAAP.

*Interested Parties Response:* Interested parties do not have an objection with disclosing information about the nature of investments for which tax credits are earned. 27(b) seems repetitive with the other information that is being required under paragraph 28 regarding the amount of tax credits and other tax benefits during the years presented. If different information is being requested under 27b, it would be helpful for industry to get more clarity on what specifically is being requested under that item.

- 11) Paragraph 28 - Disclosures in paragraph 28 a-c come from U.S. GAAP. The disclosures in paragraphs 28d-e are based on concepts previously included SSAP No. 93. Comments are requested on whether those disclosures (or other disclosures from SSAP No. 93) should be included. (For 28d, the prior SSAP No. 93 disclosure was for a number of remaining years of unexpired tax credits and the required holding period, but since that is an individual investment disclosure, it has been modified to reflect an aggregate investment disclosure.)

*Interested Parties Response* The proposed disclosures in paragraph 28 a-c are similar to what is already required under SSAP No. 93 so they should not be a concern. 28e will require additional work to be done since the requirement is to disclose the aggregate amount of tax credits to be earned each year on all tax credit investments for the next fifteen years, which is not currently disclosed. Such detail is not required for other investments. As a result, we would encourage SAPWG to evaluate whether it is needed.

- 12) Paragraph 30 – This disclosure is in SSAP No. 93 and comments are requested on whether it should be retained.

*Interested Parties Response:* This disclosure requires detailed balance sheet and income statement information for tax credit investments if, in the aggregate, tax credit investments exceed 10% of the total admitted assets of the reporting entity. It is probably rare for insurers

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 13

to hold tax credit investments that represent such a significant amount of total admitted assets. In addition, detailed balance sheet and income statement information for the underlying investees does not seem to provide very relevant information about these investments since the return on these investments is primarily through tax credits and not related to the earnings of the underlying investees. Interested parties believe that this disclosure requirement should be removed.

### **Other Interested Party Comments**

Although the Discussion paper is focused on SSAP No. 93 and equity investments for which the return is primarily through tax credits, we provide the following observations regarding SSAP No. 94 as we understand that the Working Group may add another project to its agenda regarding this standard:

1. We believe that one of the key differences between SSAP No. 93 and SSAP No. 94 is that SSAP No. 93 relates to tax credit structures where the insurer is an actual investor (i.e. equity owner) whereas SSAP No. 94 addresses certificated state tax credits that are purchased outright without the insurer owning an equity or debt security. More clarity on the difference between both standards is welcomed especially since we understand that under the Inflation Reduction Act, there will be certificated federal tax credits available for purchase as well.
2. We note that the accounting under SSAP No. 94 requires for the certificates purchased to be reported as “other-than-invested” assets. Therefore, these certificates are not currently reported on Schedule BA. They are reported in the “Aggregate Write-Ins for Other Than Invested Assets” balance sheet line. We would like to make sure that the Working Group is aware of this difference in reporting.
3. The accounting for the certificates laid out in SSAP No. 94 requires that the carrying value of the tax credits be reduced as the credits are redeemed through a reduction of an insurer’s tax payable. Therefore, the way of amortizing the asset is similar to the proportional amortization method, except that under SSAP No. 94, the amortization and the tax credits are only reflected in the balance sheet. Any gains on these deals, which are usually related to the fact that they are purchased at a discount, are required to be reported in other income per SSAP No. 94, not NII. Interested parties look forward to further discussing the income statement presentation of these gains if changes are made to SSAP No. 93 regarding income statement presentation to ensure consistency in reporting.

**Some of the feedback received from interested parties is that in practice, the offset to the tax liability account usually occurs in the year when the credit is available for use regardless of when the tax return is filed. Clarification may be needed on this point in the standard.**

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 14

**Ref #2022-15: SSAP No. 25 – Affiliate Reporting Clarification**

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 25 to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

Interested parties have no comments on this item.

**Ref #2022-16: *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions***

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 100R to adopt *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* with modification to be consistent with statutory language in the respective statutory accounting statements, as illustrated above. Note that this agenda item does not recommend incorporating the new proposed GAAP disclosures on sales restrictions, but identifies those items restricted as to sale would be captured as restricted assets per SSAP No. 1 and subject to admittance considerations under SSAP No. 4.

Interested parties have no comments on this item.

**Ref #2022-17: Interest Income Disclosure Update**

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34, to add additional disclosures, and to data-capture the disclosures.

Interested parties propose that the exposed changes which are an outgrowth of the Bond project should share the same effective date. This will also allow companies to make the system changes needed to provide this information.

Interested parties also suggest the following editorial revisions to the disclosures contained in SSAP No. 34 for clarification and to be consistent with the proposed Blanks changes:

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)
  - a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
  - b. Disclose total amount excluded;

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 15

- c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued.
- d. Disclose aggregate deferred interest ~~and cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.~~
- e. Disclose cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.

**Ref #2022-18: ASU 2022-04, Disclosure of Supplier Finance Program Obligations**

The Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 105R to reject ASU 2022-04 for statutory accounting as the disclosures are not relevant for insurance entity preparers.

Interested parties have no comment on this item.

**Ref #2022-19: Negative IMR**

The Working Group moved this agenda item to the active listing, categorized as a New SAP Concept and exposed the agenda item with a request for comments by industry on potential guardrails and details on unique considerations. The Working Group directed NAIC staff to coordinate with the Life Actuarial (A) Task Force and request regulator-only sessions with industry to receive specific company information.

ACLI will submit a separate comment letter on February 17, 2023.

\* \* \*

Thank you for considering interested parties' comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

## **Appendix A – Examples of Debt Tax Credit Structures**

These are some of the debt tax credit structures of which industry is aware:

- i. Bonds Issued by CAPCOs - Although the peak of these investments was in 2003, there has been a resurgence in functionally equivalent forms of this structure starting in 2010. Connecticut, Mississippi, Pennsylvania, Utah and Ohio have recently issued these bonds and legislative vehicles for these bonds are growing increasingly popular to address rural economic development. The bond is usually issued at a premium ranging from 50-90%. A material portion of the return in these structures is earned through cash payments (generally ranging from 40-60%). CAPCO and CAPCO-like deals are different from other state tax credit deals for a few reasons: (1) these entities have more time to invest the capital they receive than other state or federal deals; (2) they may have a smaller acquisition premium; (3) there is no equity investment required. Tax credit bonds issued by CAPCOs are usually only transferrable to affiliates of the reporting entity.
- ii. Other State Tax Credits issued in Bond Form – Any state can issue debt investments where the investor earns tax credits outside of the CAPCO structures. Some of these are referred to as New Market Tax Credits (NMTC), which are different from the federal NMTC program. These programs multiplied as states saw the positive impact of the federal program on low-income communities. Unlike federal credits, these credits may be specially allocated by a partnership. In these deals, an issuer creates a special purpose vehicle (SPV), which purchases equity investments in entities that make investments in distressed communities. The SPV then issues securities to investors composed of tax credit debt and a small equity component (typically 1%) to be admitted as a partner and receive an allocation of credits. The tax credit debt has a higher acquisition premium than CAPCO and CAPCO-like structures (typically 90%). Although most of the return is earned through state tax credits, these investments earn about 10% of their return in cash. The tax credits earned by the SPV are passed on to the investors based on the SPV's partnership agreement. This structure may be used in other contexts where credits can be specially allocated (e.g. state historic tax credits, low-income housing tax credits and other economic development tax credit programs). In order to transfer the bond investment, a sale of the equity interest must take place simultaneously to the same investor.
- iii. State or Municipal Tax Credit Bond Strips – These include bonds issued by state or municipalities for certain projects such as school construction (i.e. Build America bonds). The bonds are stripped into a principal amount and the tax credit amount. Investors in the tax credit strips only earn a return through the tax credits provided by the municipality or state. These strips are transferable. There are no cash payments on the tax credit strips as the return is solely earned through tax credits.
- iv. Federal NMTC programs – These are already addressed in the exposure. To summarize, an investor must purchase a pro rata share of the equity and the debt in these structures. Federal tax credits are earned as long as the investor is an equity investor as well. In order to transfer the bond investment, a sale of the equity interest must take place simultaneously to the same investor. The return on these investments is earned solely through tax credits. The investor

Statutory Accounting Principles Working Group  
February 10, 2023  
Page 17

receives cash for the principal on the bond, which is usually less than 10% of the original investment since these investments are issued at a significant premium.

Statutory Accounting Principles Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

**RE: Interested Parties Comments on the SSAP No. 26R, SSAP No. 43R, and Other SSAP exposures related to the Principle-Based Bond Definition Project**

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the above-mentioned documents that were exposed for comment by the Statutory Accounting Principles Working Group (Working Group) on November 16, 2022.

Interested parties also appreciate the collaborative effort on this project, the receptivity to our comments in our previous letter(s), and the disciplined thought that has gone into this project. We continue to believe this effort is headed in the right direction and look forward to continued collaboration on what undoubtedly is a complex and wide-ranging project.

In that spirit, interested parties would like to provide the following comments.

**Paragraph 6d of SSAP No. 26**

Paragraph 6d is arguably one of the more complex concepts within the principle-based bond definition. This paragraph attempts to define non-debt variables that are or could be embedded within a financial instrument, that call into question the overall instrument's debt or bond like characteristics, while not also capturing embedded derivatives commonly found within debt instruments that do not call into question their overall debt or bond like characteristics. Interested parties believe this paragraph generally captures regulator concerns, while appropriately recognizing instances where such embedded derivatives are or should not be of concern. The following focuses on two instances where interested parties believe regulators did not intend to capture (and should not want to capture) embedded derivatives within financial instruments that

could be considered non-debt variables, and thus where the overall financial debt instruments would not be considered bonds for reporting on schedule D.

#### Credit Rating-Related Interest Rate Adjustments

Paragraph 6d, includes an exclusion that prevents certain embedded derivatives from “tainting” the host financial instrument and thereby preventing it from being reported as a bond where the embedded derivative does not call into question its bond-like characteristics. This exclusion includes “credit-rating related interest rate adjustments” where a bond coupon rate could be adjusted upward if the entity issuing the debt is down-graded by a rating agency. Such adjustments align the interests of debtholders and issuing entities by incentivizing the issuing entity to keep its financial house in order and compensating the debtholder if it does not.

Interested parties agree with this exclusion but suggest it be modified from “credit-rating related” to “credit-quality related” to encompass the broader range of such adjustments that align interests of debtholders and issuing entities (e.g., debt to EBITDA ratio, interest coverage ratio, debt service coverage ratio, etc.). Such bonds are very prevalent in insurer portfolios.

#### Sustainability-Linked Bonds (SLBs) With De Minimis Interest Rate Adjustments

Interested parties believe paragraph 6d also would inappropriately capture certain bonds with an interest coupon rate linked to sustainability goals. For example, the debt may have coupon interest equal to either a fixed or floating rate (e.g., SOFR) that is adjusted based on one or more sustainability goals or variables (e.g., the company’s CO2 emissions or workplace injury record). That is, the company’s performance against the metrics, in this example, could cause the interest rate to either decrease or increase 5 basis points for a total range off the potential base interest rate of 10 basis points. Both the CO2 emissions and workplace injury record are metrics of the borrower’s operation of physical assets owned by the company.

Interested parties understand that the NAIC wants to focus on solvency when developing standards, and not necessarily make special accommodation for social causes at solvency’s expense. Though insurers are increasingly focused on environmental, social, and governance attributes of investments they make, risk/reward remains an overriding consideration. In the case of SLBs, the contingent coupon adjustments generally do not factor into the insurer’s risk/reward calculations as they are uniformly de minimis. Interested parties do not believe SLBs, which are somewhat prevalent, warrant non-schedule D reporting and potentially punitive risk-based capital treatment.

Interested parties therefore suggest either a special exclusion for these type of debt instruments such as “SLB-linked bonds with de minimis interest rate adjustments” or “SLB-linked bonds with interest rate adjustments with the potential to adjust the total return from interest by no more than 10%”. Quite possibly, it may be more appropriate for such a “de minimis” exclusion to be applied to other non-debt variables more broadly so there is not an abrupt cliff effect for non-schedule D reporting due to the potentially punitive risk-based capital treatment, for de minimis non-debt variables in general.

Interested parties look forward to working with regulators and NAIC staff on this issue to appropriately thread the needle between preventing concerns of regulators while also not capturing de minimis types of adjustments that are potentially both prevalent and not the primary concern of regulators.

### **Paragraph 22 of SSAP No. 21 and Other Debt Securities That do not Qualify as Bonds**

SSAP No. 21 has proposed changes for Debt Securities That Do Not Qualify as Bonds and is meant to capture any security which does not qualify as either an issuer credit obligation (ICO) or asset back security (ABS) and addresses the accounting and reporting for such securities. Such securities in scope would be limited to:

- a. Debt securities for which the investment does not reflect a creditor relationship in substance,
- b. Debt securities that do not qualify for bond reporting due to a lack of substantive credit enhancement, or
- c. Debt securities that do not qualify for bond reporting due solely to a lack of meaningful cash flows.

These categories reflect instances where a debt instrument does not meet the principle-based bond definition as laid out in SSAP No. 26R. However, there may be further instances where a security does not meet the definition of a bond such as with paragraphs 5 and 7 of SSAP No. 26R (e.g., not meeting the definition of a security or not meeting the primary source of repayment requirements, respectively, etc.). Further, condition a. above is a potentially broad category inclusive of non-qualifying equity backed securities all the way toward financial instruments with embedded derivatives that are potentially de minimis. Interested parties would like to think this through with Staff if further refinement is necessary especially if the intent of these categories is to feed risk-based capital factors where additional refinement may be necessary.

Securities solely not meeting condition c. shall use the same accounting and measurement basis described in SSAP 43R – Asset-Backed Securities, including using a carrying value method determined by NAIC designation. Reporting entities that are reporting an amortized cost measurement shall obtain an NAIC designation in accordance with the parameters of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and report the designation on Schedule BA. It is unclear if the NAIC designation required for accounting purposes would also be used for risk-based capital. Interested parties would like to think this through with Staff to understand the intent. For example, if the NAIC designation is not used for risk-based capital purposes, is it appropriate to require an NAIC designation for purely accounting purposes?

All other debt securities that do not meet conditions a. and b. shall be reported at acquisition cost, including brokerage and other related fees on Schedule BA. These securities are permitted as admitted assets, with subsequent measurement at the lower of amortized cost or fair value. Changes in measurement to reflect the lower value or to reflect changes in fair value shall be recorded as unrealized gains or losses.

Paragraph 22 includes the following:

*Debt securities in scope for which the source of repayment is derived through rights to underlying collateral, qualify as admitted assets only to the extent they are secured by admitted invested assets. Any amounts in excess of the fair value of the underlying admitted invested assets shall be nonadmitted.*

Interested parties believe we understand the rationale for why this was drafted. That is, if an ABS security does not meet either the substantive credit enhancement or meaningful cash flows criteria, the security in question is potentially very similar to a collateral loan. Nonetheless, this is a meaningful penalty (i.e., from bond treatment to non-admission) and interested parties would like a little more time to think through and discuss with Staff. This paragraph ultimately only came into our focus late in our review and we would like the opportunity to further think through the appropriateness of the abrupt cliff effect. For example, it is even conceivable, that a securitization would have the residual tranche be reported as an admitted asset while a more senior tranche would be a non-admitted asset.

Paragraph 10 (b) of SSAP No. 26R

Interested Parties noted that there is an inconsistency with the treatment of residual tranches between SSAP No. 43R and SSAP No. 26. SSAP No. 26 refers the reader to SSAP No. 21 to determine the accounting for residual tranches whereas SSAP No. 43R states that residuals are to be reported on Schedule BA as other invested assets at the lower of cost or market (SSAP No. 43R, paragraph 11.c). Since the revised SSAP No. 21 guidance only addresses debt securities (and does not address residual tranches) and we understand that the Working Group does not view residual tranches as debt instruments, we have the following proposed wording changes to SSAP No. 26 to address this inconsistency:

The first loss position may be issued as part of a securitization in the form of a debt or equity interest, or it may be retained by the sponsor and not issued as part of the securitization. If the first loss position (or a more senior position(s), if the first loss position(s) lacks contractual payments along with a substantive credit enhancement) is issued as part of the securitization, and does not have contractual principal and interest payments along with substantive credit enhancement and is held by a reporting entity, the investment(s) does not qualify for reporting as a bond and should be reported on Schedule BA: Other Long-Term Invested Assets at the lower of amortized cost or fair value consistent with the accounting treatment for residuals. ~~as a non-bond security pursuant to SSAP No. 21R—Other Admitted Assets.~~

**Paragraphs 43 – 46 of SSAP No. 26R**

Paragraphs 43 - 46 of SSAP No 26R are related to effective date and transition. Interested parties believe the transition guidance is appropriate under the circumstances but propose some minor editorial adjustments which we believe provide more granular meaning to what we believe was

the intent. These proposed adjustments related to the second and third sentences of paragraph 44 as follows:

*The bond definition requires assessments at the time of Acquisition (as of the origination date), and it is recognized that reporting entities may not have the means to complete historical assessments for securities held at the time of transition. For these instances, if information is not readily available for reporting entities to assess a security as of the date at ~~acquisition~~ origination, reporting entities may utilize current or acquisition information in concluding that a security qualifies for reporting as a bond as either an issuer obligation or asset-backed security.*

Interested parties believe the transition guidance should also indicate that the disclosures should reflect that the revised bond categories from the annual statement prospectively beginning with the first year of adoption and not result in a restatement of the prior year's reporting.

### **Further Clarification on RSATs**

Replication Synthetic Assets (RSATs) are nuanced types of transactions, which must be approved by the Securities Valuation Office (SVO). Interested parties propose the following edits to ensure that RSATs, which have been historically allowed, continue to meet the replication accounting requirements regardless of changes to the definition of a Schedule D Bond. Besides the edits proposed below, as a result of the accounting convention for certain bonds being other than amortized cost, interested parties would like to work with Staff on the specific paragraphs of SSAP No. 86 that currently address the accounting for replication transactions as changes may be needed to coincide with the effective date of the principles-based bond definition.

Provide a Footnote after the first sentence of the structured note definition in paragraph 6di of SSAP No. 26R to clarify that one needs to also look to SSAP No. 86:

*A replication (synthetic asset) transaction addressed in SSAP No. 86-Derivatives may reproduce the investment characteristics of an otherwise permissible investment that would not meet the principles-based bond definition (e.g., is distinct from a “structured note” as defined here); the admissibility, classification and measurement of a replication (synthetic asset) transaction are not preemptively determined by the principles-based bond definition, and should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within SSAP No. 86- Derivatives.*

Propose further clarification in SSAP No. 86 by adding the following to the end of Footnote 5 within the exposure:

*A replication (synthetic asset) transaction addressed within this standard may reproduce the investment characteristics of an otherwise permissible investment that would not meet the principles-based bond definition (e.g., is distinct from a “structured note” as defined here); the admissibility, classification and measurement of a replication (synthetic asset) transaction are not preemptively determined by the principles-based bond definition, and*

*should be evaluated in accordance with the guidance on replication (synthetic asset) transactions within this standard.*

## **SSAP No. 43R – Example 2**

Interested parties appreciate the proposed changes to Example 2 within SSAP No. 26R as they provide an example where recourse to assets can be outside of a securitization. This is a good clarification and makes the examples in aggregate more broadly instructive. Interested parties have two suggested changes, which we believe are editorial in nature that provide a nuanced technical clarification and a more formal conclusion within the example rationale.

**Example 2:** *A reporting entity invested in a debt instrument issued by a SPV. Payments under the instrument are secured by a note, a legal assignment from the borrower of a lease for real property and an assignment of the lease payments from an operating entity tenant. Additional security is provided by a mortgage on the leased property (the “underlying collateral”). The leased property is owned by the borrower under the note -- the SPV does not have any ownership interest in the underlying collateral, though it has legal recourse to it through the mortgage. The tenant makes contractually-fixed payments over the life of the lease to the borrower, who has assigned both the lease and the lease payments to the SPV as security for the debt. While the debt is outstanding, the lease, the lease payments, and the mortgage all serve as security for the debtholders. Should a default occur, the debtholders can foreclose on and liquidate the real property as well as submit an unsecured lease claim in the lessee’s bankruptcy for ~~any~~ all or a portion of the defaulted lease payments. The loan-to-value (as a percentage of property value) at origination is 100%.*

**Example 2 Rationale:** *The reporting entity determined that the debtholder was in a fundamentally different position than if the real estate was owned directly. The lease is a cash generating non-financial asset which is expected to generate a meaningful level of cash flows for the repayment of the bonds which covers all interest payments and 50% of the principal payments. The level of reliance on the collateral value for sale or refinancing is just over the cutoff for using the practical expedient (<50%), so a full analysis is required. In reaching its determination, the reporting entity considered the predictable nature of the cash flows, which are contractually fixed for the life of the debt instrument, as well as the ability of the underlying collateral value to provide for the balloon payment through sale or refinancing in light of its characteristics. While the real property may have some market value volatility and periods of lower liquidity at points in time, the cash flows produced by the lease were concluded to reduce the loan balance to a level (50% loan-to-value) that would be able to be recovered by sale or refinancing at the maturity of the loan.*

\*\*\*\*\*

Interested parties continue to support the development of high-quality bond standards and believe they are headed in the right direction. Staff has tackled this project with appropriate rigor and their

collaboration with us has been greatly appreciated. We stand ready to continue to assist as this project gets nearer the finish line.

Sincerely,

D. Keith Bell

Rose Albrizio

Mr. Dale Bruggeman, Chairman  
Statutory Accounting Principles Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

Dear Mr. Bruggeman:

**Re: Exposure Ref #2022-19: SSAP No. 7 - IMR**

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments on the above referenced exposure as well as the thoughtful and timely attention this important topic is receiving from SAPWG and LATF.

The ACLI stands ready to continue working with the NAIC to create sufficient, yet practical, safeguards to ensure that the most appropriate treatment of Interest Maintenance Reserve (IMR) can be applied, and a company's surplus and financial strength are properly reflected, while not disincentivizing prudent investment and risk management in the best interest of all.

A rising interest rate environment from historically low rates is generally favorable to the financial health of the life insurance industry. However, ACLI is concerned that without a change to the current treatment of negative IMR, the environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital ratios. This problem will only be exacerbated if interest rates remain at or near their current levels or increase further; therefore, it is imperative that we work together toward developing an industry-wide solution for implementation by year-end 2023.

Upon the sale of and subsequent reinvestment in a fixed income instrument, the reflection in surplus of either a gain or loss is not reflective of the true economics, as there is no change to solvency, liquidity, or claims paying ability because the difference between the reported amortized cost value and fair value is equal to the IMR. This letter addresses our assessment of the suitability of the five potential guardrails proposed at the SAPWG fall national meeting and raises two additional proposals for consideration.

## Background

While this letter will focus on potential additional safeguards, as suggested at the SAPWG fall national meeting, this is a complex topic and we want to summarize, review, and expand on relevant background information largely included in our previous letter dated October 31, 2022.

The NAIC's statutory accounting framework is largely an "amortized cost framework" in that fixed income investments are generally reported at amortized cost and long-term insurance liabilities are generally reported with locked and conservative assumptions.

We strongly support the NAIC framework, as it facilitates the issuance of long-term insurance products in the US market by not overly focusing on current market fluctuations. This is unlike many market valuation regimes where over-reliance or misapplication of current market conditions often distorts the financial solvency of insurance companies and can lead and has led to the decrease or elimination of such long-term product issuances in those regimes.

However, an amortized cost framework could also potentially distort the financial solvency of insurance companies through the misrepresentation of surplus. The IMR was developed as a safeguard to ensure surplus is properly reflected within the NAIC's framework.

Specifically, in a declining interest rate environment, an insurance company could sell its fixed income investment portfolio, recognize gains, increase surplus and show increased financial strength. This increase in surplus would largely be illusory as the increased surplus would be offset by a lower yielding investment portfolio.

IMR requires deferrals of those gains from surplus, and the gains are amortized through income over the remaining life of the bonds sold to:

- Ensure accurate representation of a company's reported surplus by eliminating the potential for overstatement of surplus, and
- Keep the relationship of anticipated investment yield consistent with that needed to support the liabilities.

But without IMR, a rising interest rate environment could result in similarly misleading surplus (in this case an illusory lack of surplus) because a company would be investing in higher yielding bonds.

When IMR was developed, it was anticipated that the IMR would work consistently for both net realized gains and losses; however, the allowance of a net negative IMR was not initially adopted upon implementation in 1992. It was expected that the issue would be addressed in subsequent years and remained on the SAPWG agenda at least until 2005 but was never addressed in any substantive way. This was largely because of a lack of urgency due to the decades-long declining interest rate environment where IMR was largely positive for life insurance companies.

This issue had been referred to SAPWG from the AVR/IMR working group which believed the basic rationale for the IMR would conclude that neither a maximum nor minimum is appropriate. It was fully

expected that the IMR, whether negative or positive, would be included in asset adequacy testing and addressed by the actuarial opinion.

We are very appreciative that SAPWG and LATF are looking to substantively revisit the negative IMR issue as anticipated during its original development. The current interest rate environment has changed circumstances in a meaningful way. While rising interest rates from historically low levels are beneficial to insurance companies, the recent rapid rise of interest rates has increased the urgency to address the negative IMR issue to avoid the misrepresentation of capital positions of insurance companies.

The current interest rate environment or a further rise in interest rates would only exacerbate the urgency as losses from bond sales could result in a significantly inappropriate portrayal of surplus that would be inconsistent with the rationale for which IMR was initially developed. In this case, insurers would show a significant illusory lack of surplus because they would be investing in higher yielding bonds.

IMR is an important construct that effectively adjusts liabilities so that the balance sheet liabilities net of IMR remain on the same basis as the reported balance sheet assets, limiting artificial volatility within surplus. As discussed above, negative IMR, from an asset-liability perspective, represents either high future income from reinvestments or future reserve releases that will be available to pay claims from an asset liability perspective.

Although the status quo use of permitted practices may grant relief for specific companies, it may lead to an unlevel playing field. Consequently, the ACLI wants to emphasize the importance of developing a uniform national standard for consistently ensuring the appropriate theoretical and practical treatment of IMR (e.g., symmetrical treatment of both gains and losses).

The ACLI would like to work with the NAIC to fulfill the original intent of IMR that ensures surplus and financial strength are properly reflected and do not disincentivize prudent investment and risk management. At the same time, we want to work with regulators to ensure IMR cannot somehow be circumvented in a rising interest rate environment, whether intentionally or inadvertently, to misrepresent financial strength.

### **Common Interest to not Disincentivize Prudent Behavior**

We want to reiterate the importance of not disincentivizing prudent portfolio and asset liability management.

In addition to prudent portfolio management and managing credit/investment risk exposure, insurance companies manage duration. These prudent risk management processes all require on-going transactions that impact the IMR, such as whether it is sales and reinvestment in fixed income investments, which we discussed in our previous letter dated October 31, 2022, or use of derivatives to achieve the same appropriate end. We would note that bond sales may trigger derivative terminations that offset in IMR; however, derivatives settlements can impact IMR without an offset impact from a bond sale.

Hedging strategies are used to address product risks like contract guarantees, disintermediation, and reinvestment risks as part of prudent risk management practices utilized by life insurance companies.

These hedging strategies may involve interest rate swaps, caps, floors, swaptions, interest rate futures, among others, that also may generate IMR gains and losses.

For example, negative IMR can be generated by hedging strategies utilized for pension risk transfers. Once the contract is executed, insurers will enter hedging contracts to ensure interest rate certainty while awaiting cash and assets in-kind and/or the right investment opportunities to meet the long-term goals for the accounts. As the hedges are unwound to meet pricing and investment targets, immediate losses and negative IMR may be generated as interest rates rise, but the losses are ultimately offset over time with higher fixed instrument yields.

Further, many life insurance and annuity products have significant long term reinvestment risk, where premiums are received for many decades before benefit payments may be made. Companies may use interest rate futures, swaps, or bond forwards, to reduce reinvestment risk by locking in interest rates at which the future premiums will be invested. When interest rates rise, these hedging transactions may settle, roll-over, or be terminated, leading to expected IMR losses but are ultimately offset by future higher reinvestment yields. Without these hedging transactions, returns might not be equivalent to policyowner obligations, exposing the company to significant interest rate risk.

Similarly, life insurance companies may utilize stochastic asset liability modeling to establish asset duration targets that may include setting different asset duration targets by product if appropriate, through an asset segmentation plan. This considers scenarios where interest rates increase rapidly (where there is potential for disintermediation risk) and very low interest rates (considering product guarantees). Such analysis is refreshed on a regular basis to update the duration target based both on the liability in force characteristics and the economic environment. Portfolio asset duration is managed to the target on an ongoing basis and requires asset sales /purchases or use of derivatives that affect IMR. These are but several distinct examples of the types of prudent risk management practices utilized by life insurance companies.

A rising interest rate environment is generally favorable to the financial health of the life insurance industry. Without a change to the treatment of negative IMR, a rising interest rate environment will give the inappropriate perception of decreased financial strength through lower surplus and risk-based capital ratios, which is both counterintuitive and not reflective of the economics. It may create undesirable incentives for companies to deviate from prudent investment/risk management to avoid creating negative IMR.

It essentially creates two equally objectionable alternatives for insurers and their policyowners.

- Applying the current statutory guidance will improperly reflect financial strength through understating surplus,
- Insurers could take steps to manage their current capital position by limiting trading of fixed income investments and/or usage of derivatives, which would diminish significant economic value or worse, create a mismatch between assets and liabilities and prevent the ability to fulfil long-term contract obligations. Insurers may avoid hedging or trading to ensure future reinvestment risks are mitigated, by being incentivized to overly focus on managing misrepresented short-term

financial position by effectively keeping asset duration shorter than their liabilities and taking on interest rate risk.

We do not believe this is in the best interest of insurance companies or their policyowners and believe it is a common interest we share with regulators. Consequently, developing a national standard for allowing negative IMR with appropriate safeguards should be a common goal for all.

### **Existing Safeguards**

As noted above, IMR itself is a safeguard for the NAIC's amortized cost framework that accomplishes two main objectives:

- Addresses the risk of misrepresentation of surplus, and
- Keeps the relationship of anticipated investment yield consistent with that needed to support the liabilities.

### Excess Withdrawal Safeguard

An Excess Withdrawal safeguard is already embedded in the IMR framework for the situations in which asset sales are “forced”, either due to reputational or disintermediation events, and the liability that the assets supported no longer exists. At such a point, deferring gains and losses to IMR ceases.

While we believe this safeguard was primarily developed to address troubled companies or potential disintermediation in a rising interest rate environment, we understand regulators may want to re-assess the safeguard's robustness. The ACLI supports such a re-assessment and looks forward to working with the NAIC.

### Asset Adequacy Testing (AAT)

AAT is an additional safeguard that helps protect against further unintended consequences when IMR goes negative. Reflecting all admitted negative IMR in AAT would replace assets that generate investment income in AAT, where the starting point is statutory assets are equal to statutory liabilities. Unless the remaining assets can earn a sufficient yield due to reinvestment, there will be negative impacts to the results, which could lead to additional asset adequacy reserves and hence a reduction in statutory surplus. AAT provides a framework to ensure that there are sufficient margins to support claims alongside a negative IMR asset that eventually amortizes to zero, hence ensuring adequate reserves and proper representation of surplus. A simplified example of how AAT works with negative IMR in different reinvestment scenarios is included in Appendix I of this letter.

While we believe that AAT provides a robust safeguard that prevents a misuse of allowable negative IMR, we understand the NAIC wants to contemplate additional safeguards, as AAT may not be applied uniformly across states and practitioners and is only shared with regulators annually.

### **Additional Potential Safeguards**

At the SAPWG fall national meeting the following five potential safeguards were discussed:

- 1) Ensure there is reinvestment in fixed income securities (see below),
- 2) Enhancement to asset adequacy testing (see below),
- 3) Shorten the amortization period for negative IMR (see Appendix II),
- 4) Limit negative IMR as a percentage of surplus, assets, etc. (see Appendix II), or
- 5) Restrict surplus via the special surplus funds (see Appendix II).

ACLI proposes two additional possibilities:

- 1) Limit based on the risk-based capital framework (see below), or
- 2) Create an “Opt-in Framework” with structured governance (see below).

The remainder of this letter outlines a broad framework of the aforementioned additional safeguards that we believe are responsive to regulators’ specific concerns. Redundant or more arbitrary potential safeguards are further discussed in Appendix II attached to this letter.

#### Ensure there is reinvestment in fixed income securities

IMR theory assumes sales of fixed income investments are reinvested in new fixed income investments. When doing so, the reinvestment is done in the current interest rate environment, and the difference in earnings arising from the reinvestment is roughly equal in magnitude, but opposite in direction, to the gain or loss realized on the old investment.

In a rising interest rate environment, a sale essentially transforms the loss to negative IMR. There is essentially no difference in balance sheet economics pre- and post-trade, related to liquidity or claims paying ability, as the difference between the reported amortized cost value, and fair value, upon sale, is equal to the negative IMR.

While AAT would arguably address any deficit in reinvestment as illustrated in our example in Appendix I, ACLI is open to supporting additional demonstrations of reinvestment in fixed income investment. This could be done, for example, by generally requiring the sum of the proceeds from the sale and maturity of bonds (line 12.1) and mortgage loans (line 12.3) are less than the sum of the cost of bonds acquired bonds (line 13.1) and mortgage loans (line 13.3) from the cash flow statement ultimately submitted to regulators in the annual statement.

Such a requirement would provide the following benefits:

- 1) It is objective, easily verifiable, and ultimately rolls up into the audited financial statements,
- 2) It eliminates the issue surrounding the “fungibility of cash” – that is “proving” reinvestment of each sale, which would be difficult and potentially inappropriate, if on a macro basis there was a major shift to equities for example, and
- 3) It demonstrates on a macro basis significant reinvestment is occurring.

We note that even if there were a significant shift to equities, in theory, this should be captured by AAT with equity investments being appropriately stressed, but it would also significantly reduce risk-based capital ratios which would provide significant dis-incentivization for this to occur.

Lastly, such a metric could be coupled with the “Opt-in Approach” proposed below, that would provide additional structure by requiring documentation and controls on prudent strategies for investment management, asset liability management or hedging deemed appropriate and against which future transactions could subsequently be verified as appropriate by the company’s domiciliary regulator.

### Enhancement to Asset Adequacy Testing

We propose that negative IMR should only be allowed if it is included in AAT. This would replace assets that generate investment income in AAT when starting with statutory assets equal to statutory liabilities. Unless the remaining assets can earn a higher yield through reinvestment at higher rates, there will be negative impacts to the results, which could lead to additional asset adequacy reserves and a reduction in statutory surplus.

Fixed income investments that sit in surplus or non-product portfolios could be sold generating IMR. Therefore, we recommend the allowance of negative IMR only if it is included in AAT. This would further prevent any potential balance sheet manipulation, whether intentional or unintentional, through shifting assets with losses to non-insurance portfolios and admitting losses on assets that are not offset by matched liabilities.

This concept could also be coupled with the “Opt-in Approach” proposed below.

### Limit based on the risk-based capital framework

One potential safeguard that was not mentioned by SAPWG at the fall national meeting is to allow negative IMR only if a company’s risk-based capital threshold showed that they were financially strong. This would have the following benefits:

- 1) Address regulator concerns on allowing negative IMR if a company was or was nearing being financially troubled,
- 2) Would not be arbitrary and would be based on an objective and verifiable threshold that would be available to regulators, potentially quarterly, and provide early warning to any concerns they may have in this regard, and
- 3) Would essentially achieve the same ends as shortening the amortization period, restricting capital, or creating an arbitrary limit.

We are willing to work with the NAIC to think through an appropriate threshold as well as what would occur if that threshold was subsequently crossed so there would not be inappropriate cliff effects.

This concept could also be coupled with the “Opt-in Approach” proposed below.

### Create an “Opt-in Framework” with Structured Governance

An “Opt-in Framework”, similar to the framework included within SSAP No. 108 – Derivative Hedging Variable Annuity Guarantees (SSAP No. 108), could be developed.

SSAP No. 108 recognizes the prudence of hedging guarantees embedded within variable annuity contracts while also recognizing the non-economic volatility created (and therefore inappropriate under/overstatement of surplus). It also recognized that this volatility was created because derivatives used in a dynamic hedging approach were required to be reported at fair market value, as they would not meet the strict hedge accounting requirements, while the liabilities did not require marking to market of the hedged guarantees.

To not disincentivize this prudent dynamic hedging, SSAP No. 108 requires additional structure and governance to avoid misrepresentation. The allowance of negative IMR has similar parallels.

Key provisions of SSAP No. 108 that could be considered for a framework for negative IMR allowability include:

- Explicit approval of a company’s domiciliary regulator prior to implementation,
- A clearly defined portfolio and asset liability management strategy (with documentation; analogous to SSAP No. 108 but tailored more appropriately for portfolio and asset liability management strategies),
- Actuarial certification of the asset liability management strategy, and
- Certification by a financial officer of the company (CFO, treasurer, CIO, or designated person with authority over the actual portfolio and asset liability management strategies).

This framework provides sufficient tools that allow for timely and appropriate regulatory review; additional tools could be specifically tailored for IMR.

In the context of a negative IMR, the approach could be tailored to incorporate documentation and controls of prudent strategies for investment management, asset liability management, and hedging strategies deemed appropriate and against which future transactions could subsequently be verified as necessary by the company’s domiciliary regulator.

Achieving the “opt-in” in the context of negative IMR could require satisfying these documentation requirements, in addition to incorporating and complying with a combination of one or more of the other potential safeguards mentioned above. This package of requirements and safeguards would constitute a national standard for allowing negative IMR that can be consistently applied across all companies.

\*\*\*\*\*

In the current interest rate environment, and with additional interest rate increases potentially on the horizon, the disallowance of negative IMR has become a serious and pressing issue for industry as we seek to execute prudent portfolio and risk management strategies that align with our economic realities. The ACLI looks forward to working with the NAIC to expedite a reasonable, permanent solution that fulfills the original intent of IMR and work on the appropriate additional safeguards that may be needed

for year-end 2023 implementation. Lastly, ACLI recalls a specific question raised by regulators at the NAIC's fall national meeting. We would like to understand this question and/or concern more fully and discuss with regulators or NAIC staff.

If you have any questions regarding this letter, please do not hesitate to contact us.

**Appendix I****Simplified Example – How AAT Works With Negative IMR in Different Reinvestment Scenarios**

This example illustrates the effectiveness of the AAT safeguard in ensuring company solvency even with an admitted negative IMR. In particular, the Appendix also illustrates how AAT bolsters the reinvestment guardrail.

## Assumptions:

- A 10-year zero-coupon bond with a par value of \$1,000 and interest rate of 3%.
- A 10-year endowment liability with a rate of 3% maturing for \$1,344.
- The corresponding formulaic reserves at “time zero” would be \$1,000 assuming a valuation rate of 3%.
- The assets and liabilities are cashflow matched and no AAT deficiencies are assumed. Investment income of \$344 earned over ten years is sufficient to cover the increase in liability in the same period.

<b>Balance Sheet</b>	<b>12/31/22</b>	<b>12/31/32</b>
<b>Assets</b>		
Bonds	1,000	1,344
<b>Total Assets</b>	<b>1,000</b>	<b>1,344</b>
<b>Liabilities</b>		
Policy Reserves	1,000	1,344
IMR Liability	0	0
<b>Total Liabilities</b>	<b>1,000</b>	<b>1,344</b>

Income Statement	12/31/22 – 12/31/32
<b>Income</b>	
Net Investment Income before IMR	344
IMR Amortization	0
<b>Benefits and Expenses</b>	
Benefits	0
Addition to Reserves	344
<b>Net Income (Loss)</b>	<b>0</b>

Rate Increase Scenario (with reinvestment opportunity)

If interest rates immediately rise to 4%, the insurer could sell the bond and reinvest (assume no policy surrenders):

- Formulaic reserves remain unchanged at \$1,000 due to the valuation rate being locked in at 3% and no surrenders.
- The original bonds would be sold at a capital loss of \$92 and would be reinvested in a higher yielding asset (earning 4%).
- The capital loss of \$92 would be transferred into a negative IMR and amortized over ten years (remaining life).

In this scenario, even though the newly purchased bonds are recorded at \$908, appearing lower than before the sale, the higher investment income of \$436 is sufficient to cover the increase in liability and IMR amortization over ten years. No asset adequacy reserves would need to be established as part of the asset adequacy analysis<sup>1</sup>.

Balance Sheet	12/31/22 Before Asset Sale	12/31/22 After Asset Sale	12/31/32
<b>Assets</b>			
Bonds	1,000	908	1,344
<b>Total Assets</b>	1,000	908	1,344
<b>Liabilities</b>			
Policy Reserves	1,000	1,000	1,344
IMR Liability	0	(92)	0
<b>Total Liabilities</b>	1,000	908	1,344

<sup>1</sup> Asset adequacy testing requires that assets included in testing be no greater than the reserves and liabilities being tested. Even if there were other assets in addition to the \$908 bonds, a robust AAT safeguard would require that admitted negative IMR be reflected in AAT, effectively constraining the income generating assets that can be used in AAT to support liabilities when testing for deficiencies. AAT pressures to set up asset adequacy reserves will increase unless reinvestment into higher yielding assets occurs.

Income Statement	12/31/22 – 12/31/32
<b>Income</b>	
Net Investment Income before IMR	436
IMR Amortization	(92)
<b>Benefits and Expenses</b>	
Benefits	0
Addition to Reserves	344
<b>Net Income (loss)</b>	<b>0</b>

Rate Increases, and Surrenders Scenario (No reinvestment opportunity)

Assume rates immediately rise to 4% and 50% of liabilities are immediately surrendered<sup>2</sup>:

- 50% of the liability surrenders, with a surrender value of \$500.
- Bonds are sold to fund withdrawals. Due to the rate increase, the book value of bonds sold (\$551) is higher than their market value of (\$500), resulting in a capital loss of \$51.
- As withdrawal activity is not deemed to be excessive, the capital loss of \$51 is transferred into negative IMR which is amortized over ten years.
- The remaining \$449 of bonds would continue to earn their original interest rate of 3%.

In this scenario, the total assets included in asset adequacy analysis are \$449 of original bonds (yielding 3%) and negative IMR at \$51. However, these would be insufficient to cover the total remaining liability requirement of \$672 after 10 years. Therefore, an AAT reserve of \$51 would be established to cover this inadequacy, resulting in a P&L impact and ultimately a reduction to statutory surplus. Inclusion of the negative IMR in AAT accurately portrays the company's surplus and results in additional reserves of \$51. The additional assets (assumed to also earn 3% like the original bonds) backing the AAT reserves combined with the \$449 of original bonds are now sufficient to cover the remaining liability requirement of \$672 after 10 years.

Balance Sheet	12/31/22 Before Asset Sale and Surrender	12/31/22 After Asset Sale and Surrender, but before AAT	12/31/22 After Asset Sale, Surrender, and AAT	12/31/32
<b>Assets</b>				
Bonds	1,000	449	449	672
Extra Assets for AAT	0	0	51 <sup>3</sup>	0
<b>Total Assets</b>	1,000	449	500	672
<b>Liabilities</b>				
Policy Reserves	1,000	500	500	672
AAT Reserves	0	0	51	0
IMR Liability	0	(51)	(51)	0
<b>Total Liabilities</b>	1,000	449	500	672

<sup>2</sup> Assumes that a 50% surrender does not constitute Excess Withdrawal Activity as defined in the Life, Accident & Health/Fraternal Annual Statement Instructions. If it did constitute Excess Withdrawal Activity, deferring losses to IMR would cease and result in an instant hit to statutory surplus.

<sup>3</sup> Extra assets of \$51 would be a reduction to surplus in the year of testing when the additional AAT reserves are recorded.

<b>Income Statement</b>	<b>12/31/22 – 12/31/32</b>
<b>Income</b>	
Net Investment Income before IMR	172
IMR Amortization	(51)
<b>Benefits and Expenses</b>	
Benefits	0
Addition to Reserves	121
Addition to AAT Reserves on 12/31/22	51
<b>Net Income (loss)</b>	<b>(51)</b>

**Appendix II****Other Potential Safeguards****Shorten Amortization Period**

As negative IMR is included in AAT, shortening the amortization period arguably would not be needed but also contradicts the theory of IMR. We believe that shortening the amortization period asymmetrically would obviate one of the objectives of IMR – to keep the relationship of anticipated investment yield consistent with that needed to support the liabilities. Further it would introduce a host of practical challenges.

Examples of practical challenges from shortening the amortization period include:

- Shorten the amortization period only when net negative balances occur?
- If so, in what discrete period?
- For the year?
- What happens when the balance switches from negative to positive (or vice versa) during the year and amortization had already been shortened at the start of the year?

We also wanted to address a further potential concern that has been raised and is best illustrated in the following example:

- There is a \$1 billion IMR gain with a 20-year amortization period
- Subsequently it is offset to zero by a \$1 billion loss with a 1-year amortization period.
- Does this accelerate the gain recognition which was really the impetus behind IMR in the first place?

This would not be the case as gains and losses are amortized separately regardless of whether the gross balances offset one another. While it is true that on day 1, there would be an offset to zero, both the gains and losses are amortized separately, and in this case, in year two approximately \$950 million (assuming straight line amortization for simplicity) would be the total credit IMR balance representing the gains that still need to be amortized.

As shortening the amortization period:

- contradicts the theory and objectives of IMR,
- is arbitrary,
- would create practical challenges to implement,
- would penalize strong companies the same as weakly capitalized companies, and
- would be unduly punitive to companies with strong and weak AAT practices alike.

We do not believe this solution to be appropriate, or in line with prudent best practices.

Limit as a percentage of surplus, etc.

Limiting negative IMR to a percentage of surplus would again be an arbitrary limit that contradicts the theory of IMR and would penalize strong and weak companies alike, similar to shortening the amortization period, and we believe it does not best serve an appropriate safeguard.

While we are not against further safeguards, we believe any additional safeguards should address a very specific concern of regulators and/or a concern that is not already adequately addressed by existing safeguards or are more tailored to specific concerns such as with the “Opt-in Approach” recommended.

Restrict Surplus via the special surplus fund

The effect of AAT requiring additional reserves is equivalent to restricting surplus available for dividends to stockholders or participating policyowners. Thus, restricting surplus (the special surplus fund) for an amount equal to allowable negative IMR would be redundant when AAT requires additional reserves. Further, because dividends are governed by varying state laws, restricting surplus would provide inconsistent treatment, which is a suboptimal solution. The same ends could be achieved elsewhere such as with a limit based on the risk-based capital framework in combination with the “Opt-in Approach” recommended.

## Statutory Issue Paper No. 167

### Derivatives and Hedging

#### STATUS

Finalized March 22, 2023

#### Original SSAP and Current Authoritative Guidance: SSAP No. 86

#### Type of Issue:

Common Area

#### SUMMARY OF ISSUE

1. Statutory accounting guidance for derivatives is in *SSAP No. 86—Derivatives*. Although SSAP No. 86 indicates “adoption of the framework” of specific U.S. GAAP guidance, the accounting and reporting guidance for derivatives, particularly with regards to the four U.S. GAAP derivative cornerstones, is distinctly different between SSAP No. 86 and FAS 133/ASC 815. For example, under U.S. GAAP, assessment effectiveness under U.S. GAAP is largely an income statement management tool (to offset variations consistently through net income or other comprehensive income – OCI), but as SAP uses an amortized cost measurement method for a number of hedged items, the criteria for hedge effectiveness and the measurement approach for derivatives must be adjusted accordingly.

2. In August 2017, the FASB issued *ASU 2017-12, Derivatives and Hedging (Topic 815): Targeted Improvements to Accounting for Hedging Activities* to improve the financial reporting of hedging relationships to better portray the economic results of an entity’s risk management activities in its financial statements. In addition, the amendments incorporated certain targeted improvements to simplify the application of the hedge accounting guidance in current U.S. GAAP. ASU 2017-12 included a new concept for a ‘last of layer’ approach to make portfolio fair value hedge accounting more accessible for specific assets. With the issuance of the last-of-layer guidance, a number of questions were received. After considering those questions, *ASU 2022-01 Fair Value Hedging – Portfolio Layer Method* was issued. This ASU expanded the original guidance and provided additional specifications and guidance.

3. The Statutory Accounting Principles (E) Working Group has considered several revisions to SSAP No. 86 in response to the review of ASU 2017-12 and ASU 2022-01. This issue paper has been drafted to detail the revisions incorporated into statutory accounting. These revisions, except for those initially adopted in 2018, are considered new SAP concepts.

#### DISCUSSION

##### *Topic 1: Hedge Documentation and Initial Assessment Efficiencies (Agenda Item 2018-30)*

4. The overall intent of ASU 2017-12 was to reduce cost and complexity of applying hedge accounting by simplifying the way assessments of hedge effectiveness may be performed. It was noted that the efficiencies gained from the revisions in the ASU for U.S. GAAP filers would be lost if corresponding provisions were not considered for statutory accounting. Pursuant to a July 9, 2018, interested parties’ comment letter, three elements were requested to be considered by the Statutory Accounting Principles (E) Working Group in a nonsubstantive (SAP clarification) proposal. Interested parties noted that these elements will reduce the costs associated with hedge accounting, while neither changing the underlying accounting, nor creating any additional regulatory risks or concerns:

**Ref #2017-33**

- a. Allow companies to perform subsequent assessments of hedge effectiveness qualitatively if certain conditions are met.
- b. Allow companies more time to perform the quantitative hedge effectiveness assessment.
- c. Clarify that companies may apply the “critical terms match” method for a group of forecaster transactions if the transactions occur and the derivatives mature within the same 31-day period or fiscal month, and the other requirements for applying the critical match method are satisfied.

5. On August 4, 2018, the Working Group exposed revisions to incorporate hedge documentation and assessment efficiencies from ASU 2017-12. This item was exposed with a shortened comment period to allow for potential revisions and re-exposure if needed, to permit adoption and application prior to year-end 2018. On November 15, 2018, the Working Group adopted the exposed revisions as final. The revisions were adopted with an effective date of January 1, 2019, with early adoption permitted for year-end 2018. U.S. GAAP filers could only early adopt if they had also early adopted ASU 2017-12.

6. Additionally, in ASU 2017-12, in response to comments requesting a more flexible approach to hedging interest rate risk, the FASB decided to amend the guidance for hedging interest rate risk of financial instruments for both fair value and cash flow hedges. With the revisions, the FASB decided to redefine the term interest rate risk and eliminate the benchmark interest rate concept for variable-rate financial instruments. With the changes, the FASB incorporated the SIFMA rate in the list of eligible rates for fixed income instruments and noted that the FASB will add to the list of eligible benchmark rates as necessary. The revisions adopted to SSAP No. 86 are detailed in Exhibit A.

7. With the inclusion of revisions, certain elements from the U.S. GAAP guidance were not duplicated within statutory accounting. The elements were considered part of the prior adoption of the “FAS 133 / technical guidance” originally reflected in SSAP No. 86:

- a. Exceptions from the initial prospective quantitative assessment were not captured in the statutory guidance as they were not necessarily new under ASU 2017-12. The following overview details when an initial prospective quantitative assessment would not be required:
  - i. In a cash flow or fair value hedge, the entity applies the short-cut method.
  - ii. In a cash flow or fair value hedge, the entity determines that the critical terms of the hedging instrument and the hedged item match.
  - iii. In a cash flow hedge, the hedging instrument is an option and it meets specific criteria detailed in the U.S. GAAP guidance
  - iv. In a cash flow hedge, a private company that is not a financial institution applies the simplified hedge accounting approach.
  - v. In a cash flow hedge, the entity assesses hedge effectiveness under the change in variable cash flows method permitted under U.S. GAAP, with all noted conditions being met.
  - vi. In a cash flow hedge, the entity assesses hedge effectiveness under the hypothetical derivative method permitted under U.S. GAAP and all the critical terms of the hypothetical derivative and the hedging instrument are the same.

**Ref #2017-33**

- vii. In a net investment hedge, the entity assesses hedge effectiveness using a method based on changes in spot exchange rates, and the conditions noted under U.S. GAAP are met.
  - viii. In a net investment hedge, the entity assesses hedge effectiveness using a method based on changes in forward exchange rates and the noted condition under U.S. GAAP are met.
- b. The short-cut method and critical terms match method are current method permitted under U.S. GAAP retained under ASU 2017-12. Under these methods, an entity may qualitatively assume, in very limited circumstances, that

8. Ultimately, the revisions incorporated in 2018, effective January 1, 2019, with early application permitted, from ASU 2017-12 were limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness: 1) provisions allowing more time to perform the initial qualitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut method for assessing hedge effectiveness. With the adoption of the limited provisions, it was identified that the remaining provisions of ASU 2017-12 would be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is completed, with a conclusion to adopt the U.S. GAAP guidance.

9. The revisions adopted in November 2018 included revisions to both SSAP No. 86 as well as Exhibit B – Assessment of Hedging Effectiveness. The subsequent revisions adopted in 2022 eliminated Exhibit B as well as incorporated new guidance through the SSAP. Ultimately, the final adopted guidance, as reflected in the AP&P Manual, is the authoritative guidance.

***Topic 2: Hedge Effectiveness and Measurement Methods for Excluded Components (Ref #2021-20)***

10. In December 2011, consideration began on revisions to facilitate effective hedge assessments consistently between statutory accounting and U.S. GAAP. The Working Group exposed a concept agenda item to solicit comments and directed NAIC staff to work with regulators and industry in developing revisions for consistent hedge effectiveness assessments and with the treatment of excluded components.

11. After working with industry, on April 4, 2022, the Working Group exposed two documents for public comment. The first document proposed revisions in the form of a new exhibit A to SSAP No. 86, which would replace both Exhibit A and Exhibit B. This new exhibit A would adopt with modification U.S. Guidance in determining hedge effectiveness. The second document proposed revised guidance to SSAP No. 86 to update the permitted excluded components to mirror U.S. GAAP but establish statutory-specific measurement methods for the excluded components.

12. The new Exhibit A intends to reflect the position that the assessment of hedge effectiveness for derivatives should be consistent between U.S. GAAP and SAP. In other words, transactions identified to be highly effective hedges under U.S. would be identified as highly effective hedged under statutory accounting. If a hedging instrument results with offsetting changes (or other permitted aspects) to a hedged item pursuant to the guidelines under U.S. GAAP to qualify as a highly effective hedge, the same assessment as a highly effective hedge should occur under SAP.

13. The Exhibit A would adopt, with modification U.S. GAAP guidance pertaining to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12.

**Ref #2017-33**

Although the U.S. GAAP guidance for the assessment and determination of hedge effectiveness is proposed to be adopted, statutory modifications are captured to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adopt from U.S. GAAP only extends to revisions incorporated through ASU 2017-12, as such, any subsequent U.S. GAAP edits would require statutory accounting consideration before they were considered adopted.

14. In addition to new Exhibit A to SSAP No. 86, the Working Group also exposed proposed revisions to SSAP No. 86, paragraphs 23, 40-41 and Exhibit C, to expand the list of permitted excluded components in assessing derivative effectiveness to match U.S. GAAP and to establish statutory specific measurement requirements for each type of excluded component.

15. The prior SSAP No. 86 guidance reflected the list of permitted excluded components originally adopted from U.S. GAAP. Since the original inclusion in SSAP No. 86, and within ASU 2017-12, U.S. GAAP had expanded the list, and it was noted that the statutory accounting treatment of excluded components related to foreign currency transactions were hindering the ability to engage in those transactions. It was also identified that current measurement guidance within the SSAP was conflicting between the guidance and specific hedge procedures detailed in Exhibit C. Through the discussions with industry, it was identified that different measurement or recognition provisions should be considered to properly reflect the type of excluded component with the financial statements, with specific guidance included in SSAP No. 86 accordingly:

- a. If the excluded component pertains to the difference between a foreign currency spot price and the forward or future price (e.g., a forward spot rate), then this premium/discount shall be amortized into income over the life of the contract or hedged program. (This guidance addresses the excluded component in Exhibit A, paragraph 8.d.)
- b. If the excluded component pertains to a foreign currency swap cross-currency basis spread, the impact of fair value changes shall be reflected as a component of the foreign currency swap's periodic interest accrual. (This guidance addresses the excluded component in Exhibit A, paragraph 8.e.)
- c. For all other excluded components, the excluded component shall be measured and reported at fair value, with changes in fair value recognized as unrealized gains or losses. (This guidance shall be applied to excluded components detailed in Exhibit A, paragraphs 8.a. through 8.c.)

16. On August 10, 2022, after the exposure timeframe, in which interested party comments were received supporting the proposed revisions, the Working Group adopted the exposed revisions. This adoption resulted with both the new Exhibit A that adopts with modification U.S. GAAP guidance in determining hedge effectiveness and the revisions to SSAP No. 86 to incorporate measurement method guidance for excluded components. These revisions were adopted with a January 1, 2023, effective date, with early adoption permitted. With the action to adopt, the Working Group directed a blanks proposal to incorporate Schedule DB reporting fields and templates to capture the new disclosures for excluded components. These disclosure and investment schedule changes will be in effect for year-end 2023. Companies that early adopt the revisions are directly to complete the required disclosures in a narrative format for year-end 2022.

**Topic 3: Portfolio Layer Method and Partial Term Hedging (Ref #2022-09)**

17. In August 2022, considerations began to expand statutory accounting guidance to incorporate the portfolio layer method detailed in *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method*. The guidance in ASU 2022-01 reflects an expansion of the last-of-layer method detailed in ASU 2017-12.

18. Under the last-of-layer approach captured in ASU 2017-12, for a closed portfolio of prepayable financial assets or one or more beneficial interests secured by a portfolio of prepayable financial instruments, entities were allowed to hedge a stated amount of the asset or assets in the closed portfolio that is anticipated to be outstanding for the designated hedged period. If the requirements for the last-of-layer method were met, prepayment risk is not incorporated into the measurement of the hedged item. With the application of this guidance, a number of questions were received. After considering those questions, FASB issued *ASU 2022-01, Fair Value Hedging – Portfolio Layer Method*, which expanded the guidance and provided additional specifications for application. Ultimately, for a closed portfolio of financial assets or one of more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers if the following criteria is met:

- a. As part of the initial hedge documentation, an analysis is completed and documented to support the entity's expectation that the hedged item or items (that is, the hedged layer or layers in aggregate) is anticipated to be outstanding for the designated hedge period. That analysis shall incorporate the entity's current expectations of prepayments, defaults, and other factors affecting the timing and amount of cash flows associated with the closed portfolio.
- b. For purposes of its analysis, the entity assumes that as prepayments, defaults, and other factors affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio that is not hedged.
- c. The entity applies the partial-term hedging guidance to the assets or beneficial interests used to support the entity's expectation. An asset that matures on a hedged layer's assumed maturity date meets this requirement.

19. Similar to concepts supporting the adoption of prior U.S. GAAP revisions, there is a general assessment that determination of effective hedges shall be consistent between statutory accounting and U.S. GAAP. As such, new SAP concepts revisions to reflect the portfolio layer method in establishing effective hedge dynamics was proposed to be consistent with U.S. GAAP. With the U.S. GAAP guidance limiting the application of this guidance to hedges of recognized financial assets, a consistent scope threshold was established for statutory accounting.

20. The review of the portfolio layer method identified that U.S. GAAP prevents basis adjustments directly to assets hedged in a portfolio and it was considered on whether statutory revisions would be necessary to address similar basis adjustment revisions under statutory accounting. However, after further assessments, it was identified that the fair value measurement method under U.S. GAAP, which results in ongoing basis adjustments from changes in fair value over the derivative term, would not be a prominent issue under statutory accounting, which predominantly uses an amortized cost approach for effective hedges. With the use of amortized cost, basis adjustments do not occur until hedge termination or at designation of the hedge, therefore this was identified as not a key statutory accounting impact.

21. In addition to considering guidance for the portfolio layer method, representatives from interested parties proposed to also capture concepts for partial term hedges from ASU 2017-12. (As detailed in the

**Ref #2017-33**

FASB criteria above in paragraph 18 for portfolio layer method hedges, application of a the partial-term hedging guidance is used to support the entity's expectation.) Prior review of partial term hedge concepts noted concern as how interim adjustments to hedged items, particularly for hedged liabilities, would be reflected in the financial statements. With the statutory accounting guidance to reflect derivative gains or losses as basis adjustments on the hedge item, if a hedge to a recognized liability resulted in a reduction to the presentation of the liability, this could misrepresent the financial statements as the liability itself had not been reduced. In considering these concerns and recognizing that a broader project would likely be needed to address these basis adjustments, representatives from industry recommended incorporated the U.S. GAAP guidance for partial term hedges, with a statutory modification to limit the application to hedges of recognized assets.

22. Although the proposal to limit partial term hedges to recognized assets is a modification from the overarching concept to mirror hedge effectiveness assessments between U.S. GAAP and SAP, it was identified as an approach that would be consistent with the U.S. GAAP scope application for the portfolio layer method and would reflect how industry currently uses partial term hedge transactions. As such, although the modification created a U.S. GAAP and SAP difference, the modification satisfies the current need for statutory guidance and prevents significant concerns on how the guidance could impact the presentation of liabilities. With this discussion, it was identified that subsequent consideration of the limitation to recognized assets could occur, with potential expansion to hedges of recognized liabilities as part of a broader discussion on how derivative gains and losses are recognized as basis adjustments.

23. The proposed revisions exposed to incorporate the portfolio layer method and the partial-term hedging method are summarized as follows:

- a. Revisions to SSAP No. 86, predominantly in paragraph 26.d., 26.f., and 26.g., to detail the ability to hedge recognized assets under the portfolio layer method and partial-term hedge. Also, revisions to paragraph 62 for a new disclosure for portfolio layer derivatives that no longer qualify for hedge accounting and the circumstances that led to the breach, as well as guidance in paragraphs 65.c. and 74.f. to detail relevant U.S. GAAP literature and the effective date.
- b. Revisions to SSAP No. 86 – Exhibit, Exhibit A – Assessment of Hedge Effectiveness, to add a new section on the assessment of portfolio layer method for hedge effectiveness. (Note – This exhibit was the new exhibit adopted in agenda item 2021-20 which replaced the prior Exhibit A and Exhibit B within SSAP No. 86.)
- c. Revisions to SSAP No. 86 – Exhibit C, paragraph 2.d., for which a portfolio layer method is discontinued to detail how the basis adjustment shall be allocated to the remaining individual assets in the closed portfolio. (Note – With the adoption of agenda item 2021-20, this Exhibit was renamed as Exhibit B.)

24. The proposed revisions reflect adoption of U.S. GAAP for the criteria for the portfolio layer method detailed in ASU 2022-01, criteria to only consider how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity date in ASC 815-20-25-6B, adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate components of the contractual cash flows detailed in FASB ASC 815-25-35-13, and the partial-term hedging method detailed in FASB ASC 815-25-35-13B. The adoption of the partial term hedging method reflects statutory modifications that limits its use only when the hedged item is a recognized asset. This is different than U.S. GAAP, which permits the partial term method for hedged liabilities. The statutory limitation is established to prevent interim basis adjustments to hedged liabilities

Ref #2017-33

that could present a reduction of reported liabilities on the financial statements when the actual liability has not been reduced. Reconsideration of this statutory limitation may occur after a broader project to consider how derivative basis adjustments to hedged liabilities shall be reflected in the financial statements.

25. On December 13, 2022, the Working Group adopted the exposed revisions. This adoption resulted with the revisions identified in paragraph 23 above. These revisions were adopted with a January 1, 2023 effective date, with early adoption permitted. The revisions shall be applied prospectively to qualifying new hedges.

~~25:~~26. An updated version of this Issue Paper was exposed on December 12, 2022, and adopted on March 22, 2023. The purpose of this Issue Paper is to document the historical actions resulting in new SAP concepts within SSAP No. 86—Derivatives. As issue papers are not represented in the statutory hierarchy, the adoption of this Issue Paper does not change the effective date of the previously adopted authoritative literature.

**Exhibit 1 – Revisions adopted to SSAP No. 86 on November 15, 2018 (Agenda Item 2018-30)**

38. At inception of the hedge, documentation must include:

- a. A formal documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument's effectiveness in offsetting the exposure to changes in the hedged item's fair value or variability in cash flows attributable to the hedged risk will be assessed, including whether an entity will perform subsequent effectiveness assessments on a qualitative basis (per paragraph 42) and how it intends to carry out that qualitative assessment. There must be a reasonable basis for how the entity plans to assess the hedging instrument's effectiveness;
- b. An entity's defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative's change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 37 and Exhibit B;
- c. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions; and
- d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

39. At inception, if an entity is required to perform an initial prospective assessment of hedge effectiveness on a quantitative basis (using information applicable as of the date of hedge inception<sup>FN</sup>), the assessment is considered to be performed concurrently at hedge inception if it completed by the earliest of the following: (815-20-25-3)

- a. The first quarterly hedge effectiveness assessment date.
- b. The date that financial statements that include the hedged transaction are available to be issued.

Ref #2017-33

- c. The date that the hedging instrument and hedged item no longer qualify for hedge accounting.
- d. The date of expiration, sale, termination or exercise of the hedging instrument.
- e. The date of dedesignation of the hedging relationship.
- f. For a cash flow hedge of a forecasted transaction, the date that the forecasted transaction occurs.

New Footnote – Entities are required to perform an initial prospective assessment unless qualifying for an exception in accordance with ASU 2017-12, paragraph 815-20-25-3.

40. For all derivatives terminated, expired, or exercised during the year:
- a. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions;
  - b. A description, for each instrument, of the nature of the transaction, including:
    - i. The date of the transaction;
    - ii. A complete and accurate description of the specific derivative, including description of the underlying securities, currencies, rates, indices, commodities, derivatives, or other financial market instruments;
    - iii. Number of contracts or notional amount;
    - iv. Date of maturity, expiry or settlement;
    - v. Strike price, rate or index (termination price for futures contracts);
    - vi. Counterparty, or exchange on which the transaction was traded; and
    - vii. Consideration paid or received, if any, on termination.
  - c. Description of the reporting entity's methodology to verify that derivatives were effective hedges; and
  - d. Identification of any derivatives that ceased to be effective as hedges.
41. For derivatives open at quarter-end:
- a. A description of the methodology used to verify the continued effectiveness of hedges, and whether the entity is using qualitative assessments pursuant to paragraph 42<sup>FN</sup>;
  - b. An identification of any derivatives that have ceased to be effective as hedges;
  - c. A description of the reporting entity's methodology to determine fair values of derivatives;
  - d. Copy of Master Agreements, if any, where indicated on Schedule DB Part D.

Ref #2017-33

New Footnote: For purposes of this requirement, this statement adopts the guidance for effectiveness assessment after initial designation reflected in ASU 2017-12, including the concepts and restrictions for use of the short-cut method and the critical terms match method.

42. An entity may subsequently qualitatively assess hedge effectiveness, on a hedge-by-hedge basis, if both the conditions in paragraphs 42.a. and 42.b. were initially met. When an entity performs subsequent qualitative assessments of hedge effectiveness, it shall verify and document whenever financial statements or earnings are reported and at least every three months that the facts and circumstances related to the hedging relationship have not changed such that it can assert qualitatively that the hedging relationship was and continues to be highly effective. An entity may perform a quantitative assessment in any reporting period to validate whether qualitative assessments remain appropriate. When facts and circumstances change such that an entity no longer can assert qualitatively that the hedging relationship continue to be highly effective, then the entity shall begin performing quantitative assessments. (815-20-35-2A, 2C and 2D abbreviated)

- a. An entity performs an initial quantitative test of hedge effectiveness on a prospective basis (that is, it is not assuming that the hedging relationship is perfectly effective at hedge inception) and the results of that quantitative test demonstrate highly effective offset.
- b. At hedge inception, an entity can reasonably support an expectation of high effectiveness on a qualitative basis in subsequent periods.

## RELEVANT LITERATURE

~~6059~~. This statement adopts the framework established by FAS 133, FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133 (FAS 137) and FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133 (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5: Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No.45 and Clarification of the Effective Date of FASB Statement No. 161 (FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects FSP FIN 39-1, Amendments of FASB Interpretation No. 39, and ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach.

61 This statement adopts certain revisions to ASC 815-20 included in ASU 2017-12. This adoption is limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of

Ref #2017-33

[the critical terms and short-cut methods for assessing hedge effectiveness. The remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.](#)

~~6260~~. This statement adopts with modification revisions to ASC 815 as reflected within ASU 2016-05, Effect of Derivative Contract Novations on Existing Hedge Accounting Relationships. This guidance is modified to require prospective application, as such it is only applicable to future counterparty changes in derivative instruments, and this guidance cannot be used to adjust derivative transactions previously terminated. This statement adopts revisions to ASC 815-20-25-15 as reflected within ASU 2010-08, Technical Corrections to Various Topics. This statement adopts revisions to ASC 815-10-50-4K as reflected within ASU 2010-11, Derivatives and Hedging (Topic 815), Scope Exception Related to Embedded Credit Derivatives, but rejects all other GAAP revisions from ASU 2010-11 and ASU 2014-16, Derivatives and Hedging, Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share is More Akin to Debt or to Equity and ASU 2016-06, Derivatives and Hedging, Contingent Put and Call Options in Debt Instruments. These GAAP revisions are rejected as embedded derivatives are not separated from the host contract and recognized as derivatives under SSAP No. 86. Revisions are also incorporated to SSAP No. 86 to require disclosures on embedded credit derivatives that expose the holder of a financial instrument to the possibility of being required to make future payments. This disclosure is a modification to the GAAP disclosures specific to statutory accounting as embedded credit derivatives are not separately recognized under statutory accounting. It should be noted that the conclusions reached in this statement are not intended to usurp the rules and regulations put forth by states in their respective investment laws. The contents of this statement are intended to provide accounting guidance on the use of derivatives as allowed by an insurer's state of domicile. It is not intended to imply that insurers may use derivatives or cash instruments that the insurer's state of domicile does not allow under the state's insurance regulatory requirements, e.g., in replication transactions.

~~6364~~. This statement adopts revisions to ASC 815-20 as reflected within ASU 2013-10, Derivatives and Hedging, Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a benchmark interest rate for Hedge Accounting Purposes. These revisions define a benchmark interest rate, clarify what can be used in the U.S. for a benchmark interest rate, and eliminate the prior restriction on using different benchmark rates for similar hedges.

### **Effective Date and Transition**

~~6765~~. This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used. Revisions adopted to paragraph 59 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.) Revisions adopted in paragraph 15 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.) [Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness \(detailed in paragraph 61\) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.](#)

**SSAP NO. 86 - EXHIBIT B – ASSESSMENT OF HEDGING EFFECTIVENESS**

The following is based on paragraphs 62-70 of FAS 133 to offer additional guidance on assessing hedging effectiveness. The intent of such is to remain consistent with ~~FAS 133~~[U.S. GAAP](#) with respect to assessing hedge effectiveness, [including guidance in ASU 2017-12 that outlines when an entity may perform subsequent assessments of hedge effectiveness qualitatively](#).

1. This statement requires that an entity define at the time it designates a hedging relationship the method it will use to assess the hedge's effectiveness in achieving offsetting changes in fair value or offsetting cash flows attributable to the risk being hedged. It also requires that an entity use that defined method consistently throughout the hedge period to assess at inception of the hedge and on an ongoing basis whether it expects the hedging relationship to be highly effective in achieving offset. If the entity identifies an improved method and wants to apply that method prospectively, it must discontinue the existing hedging relationship and designate the relationship anew using the improved method. Although this statement suggests a method for assessing whether a hedge is expected to be highly effective or measuring hedge ineffectiveness, the appropriateness of a given method of assessing hedge effectiveness can depend on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, however, an entity should assess effectiveness for similar hedges in a similar manner; use of different methods for similar hedges should be justified.

2. In defining how hedge effectiveness will be assessed, an entity must specify whether it will include in that assessment all of the gain or loss on a hedging instrument. As discussed in paragraph 33, this statement permits (but does not require) an entity to exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows:

- a. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the change in the time value of the contract would be excluded from the assessment of hedge effectiveness.
- b. If the effectiveness of a hedge with an option contract is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract would be excluded from the assessment of hedge effectiveness.
- c. If the effectiveness of a hedge with a forward or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price would be excluded from the assessment of hedge effectiveness.

In each circumstance above, changes in the excluded component would be included in unrealized gains or losses. As noted in paragraph 1 of this Exhibit, the effectiveness of similar hedges generally should be assessed similarly; that includes whether a component of the gain or loss on a derivative is excluded in assessing effectiveness. No other components of a gain or loss on the designated hedging instrument may be excluded from the assessment of hedge effectiveness.

3. In assessing the effectiveness of a cash flow hedge, an entity generally will need to consider the time value of money if significant in the circumstances. Considering the effect of the time value of money is especially important if the hedging instrument involves periodic cash settlements. An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts

## Ref #2017-33

used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

4. ~~Whether a hedging relationship qualifies as highly effective sometimes will be easy to assess.~~ If the critical terms of the hedging instrument and of the ~~entire~~ hedged ~~item~~ asset or liability (as opposed to ~~selected cash flows~~) or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be ~~highly~~ perfectly effective if:

- a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase.
- b. The fair value of the forward contract at inception is zero.
- c. Either the change in the discount or premium on the forward contract is excluded from the assessment of effectiveness and included directly in unrealized gains and losses pursuant to paragraph 22.B. or the change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

5. In a cash flow hedge of a group of forecasted transactions, an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month. (815-20-25-84A)

~~56.~~ However, assessing hedge effectiveness can be more complex. For example, hedge effectiveness would be reduced by the following circumstances, among others:

- a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction (such as a Deutsche mark-based hedging instrument and Dutch guilder-based hedged item), to the extent that those bases do not move in tandem
- b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in notional amounts, maturities, quantity, location, or delivery dates.

Hedge effectiveness also would be reduced if part of the change in the fair value of a derivative is attributable to a change in the counterparty's creditworthiness.

~~67.~~ A hedge that meets the effectiveness test specified in paragraphs 19.b. and 20.b. (that is, both at inception and on an ongoing basis, the entity expects the hedge to be highly effective at achieving offsetting changes in fair values or cash flows) also must meet the other hedge accounting criteria to qualify for hedge accounting. If the hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test. If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. The discussions of measuring hedge effectiveness in the examples in the remainder of this Exhibit assume that the hedge satisfied all of the criteria for hedge accounting at inception.

**Exhibit 2 – Revisions adopted to SSAP No. 86 on August 10, 2021 (Agenda Item 2021-20)****Derivatives Used in Hedging Transactions**

22. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting)<sup>1</sup>.

23. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. [Derivative instruments classified as effective with excluded components in determining hedge effectiveness pursuant to Exhibit A, paragraph 8, shall account for the derivative and excluded components pursuant to the guidance in paragraph 40.](#) Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. A change in the counterparty to a derivative instrument that has been designated as the hedging instrument in an existing hedging relationship would not, in and of itself, be considered a termination of the derivative instrument. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

- a. Any criterion in paragraphs 26-38 is no longer met;
- b. The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 24);
- c. The entity removes the designation of the hedge; or
- d. The derivative is deemed to be impaired in accordance with paragraph 18. A permanent decline in a counterparty's credit quality/rating is one example of impairment required by paragraph 18, for derivatives used in hedging transactions.

**Hedge Effectiveness**

39. The measurement of hedge effectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 41.

40. The gain or loss on a derivative designated as a hedge and assessed to be effective is reported consistently with the hedged item. [\(Therefore, if the hedged item is reported at amortized cost, and the hedging instrument is consistent with that measurement method, fluctuations in fair value would not be](#)

---

<sup>1</sup> Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.

Ref #2017-33

recognized as unrealized gains or losses for either the hedging item or hedging instrument.) If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness (as discussed in Exhibit BA, paragraph 8), specific accounting treatment shall be followed for the that excluded component: ~~of the gain or loss shall be recognized as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in unrealized gains or losses. Time value is equal to the fair value of the option less its intrinsic value.~~

- a. If the excluded component pertains to the difference between a foreign currency spot price and the forward or future price (e.g., a forward spot rate), then this premium/discount shall be amortized into income over the life of the contract or hedged program. (This guidance addresses the excluded component in Exhibit A, paragraph 8.d.)
- b. If the excluded component pertains to a foreign currency swap cross-currency basis spread, the impact of fair value changes shall be reflected as a component of the foreign currency swap's periodic interest accrual. (This guidance addresses the excluded component in Exhibit A, paragraph 8.e.)
- c. For all other excluded components, the excluded component shall be measured and reported at fair value, with changes in fair value recognized as unrealized gains or losses. (This guidance shall be applied to excluded components detailed in Exhibit A, paragraphs 8.a.-8.c.)

41. Hedging instruments with excluded components shall be identified in the financial statement investment schedule (Schedule DB) and shall be disclosed pursuant to paragraph 41.g.

*Proposed New Disclosure Paragraph (This is proposed as a new paragraph 41.g. with reordering of subsequent paragraphs.)*

- g. For hedging instruments with excluded components for determining hedge effectiveness:
  - i. In the investment schedule, identify hedging instruments with excluded components, and report the current fair value of the excluded component, the fair value of the excluded component that is reflected in the reported BACV for the hedging instrument (this item would not be applicable for foreign-currency forwards and currency swaps where the forward points or cross-currency basis, respectively, are the excluded component), and the change in fair value reported as an unrealized gains/loss. (Note – These items will be proposed in electronic columns to Schedule DB.)
  - ii. In the notes to the financial statements, provide information on the aggregate excluded components by category: Time Value, Intrinsic Value, Forward Points and Cross Currency Basis Spread. The aggregate amounts reported should include the following (as applicable): current fair value, recognized unrealized gain/loss, the fair value reflected in BACV, and for the excluded forward points (e.g., forward spot rates), the aggregate amount owed at maturity, along with current year and remaining amortization. (Note – These items will be captured in a blanks proposal/template.)

**Relevant Literature**

64. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. [\(The adoption from FAS 149 on the assessment of hedge effectiveness is impacted by the adoption with modification of guidance from ASU 2017-12 as detailed in paragraph 65.b., with the guidance from ASU 2017-12 superseding the prior adoption to the extent applicable.\)](#) All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5: *Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45 and Clarification of the Effective Date of FASB Statement No. 161* (FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39*, and *ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

65. This statement adopts [with modification](#), certain revisions to ASC 815-20 included in ASU 2017-12. [Remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.](#)

- a. [Revisions effective January 1, 2019, with early adoption permitted, ~~This adoption is~~are](#) limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness.
- b. [Revisions effective January 1, 2023, with early adoption permitted, are limited to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification \(ASC\) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. This adoption reflects statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in the statement. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adoption of the referenced ASC paragraphs only extends to revisions incorporated through ASU 2017-12; therefore, any subsequent U.S. GAAP edits would require statutory accounting consideration before considered adopted.](#)

Ref #2017-33

~~The remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.~~

### Effective Date and Transition

~~74.73~~ This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used.

- a. Revisions adopted to paragraph 64 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)
- b. Revisions adopted in paragraph 16 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.)
- c. Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 65) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.
- d. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define “derivative premium,” require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2021.
- e. Revisions adopted August 2022 that adopt with modification the criteria for initial and subsequent hedge effectiveness detailed in the FASB ASC paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12 and that incorporate statutory accounting revisions for the accounting and reporting of excluded components are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively for all new and existing hedges. Entities shall detail the adoption of this guidance as a change in accounting principle pursuant to SSAP No. 3—Accounting Changes and Corrections of Errors

*With the adoption of the new Exhibit A as detailed in the subsequent section, Exhibit C will be renamed Exhibit B. Due to the details of Exhibit A (including the FASB ASC paragraphs not duplicated in the SSAP), the following Exhibit B section is included before the new Exhibit A in this issue paper for ease of readability.*

**EXHIBIT ~~C~~B – SPECIFIC HEDGE ACCOUNTING PROCEDURES FOR DERIVATIVES**

Specific hedge accounting procedures for derivative instruments are outlined below.

1. Call and Put Options, Warrants, Caps, and Floors:
  - a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, warrant, cap or floor shall either be (i) recorded as an asset (purchase) or liability (written) on the Derivative line on the Assets (or) Liabilities pages or (ii) combined with the hedged item(s) individually or in the aggregate;
  - b. Statement Value:
    - i. Open derivatives hedging items recorded at amortized cost:
      - (a) Options, warrants, caps, and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item. (Components of a hedging instrument excluded from the determination of hedge effectiveness shall be recognized at fair value, with changes in fair value recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.);
      - (b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items, the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change). Specific treatment includes:
        - (1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;
        - (2) For hedges of forecasted transactions or firm commitments, the derivative may be recorded at cost until the hedged transaction occurs or it is determined that the hedge was not effective (see (d) in this section 1.b.i.);
        - (3) For other derivatives, the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program.
      - (c) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;
      - (d) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (when the derivative is valued in accordance with (e) in this section);

**Ref #2017-33**

- (e) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or the designated portion of the derivative shall be valued at its current fair value with gains and losses recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.
- d. Gain/Loss on Termination of an option, warrant, cap or floor accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):
- i. Exercise of an Option: The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;
  - ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. For hedging instruments with excluded components in determining hedge effectiveness, the unrealized gain/loss from the change in fair value of the excluded component shall be realized upon the closing transaction. This gain/loss shall not be used to adjust the basis or proceeds of the hedged item.
  - iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.
  - iv. Upon the redesignation of a derivative from a currently effective hedging relationship:
    - (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.
    - (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.
    - (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.
2. Swaps, Collars, and Forwards (see also discussion in Introduction above):
- a. Accounting at Date of Opening Position:
    - i. Any premium paid or received at date of opening shall either be (a) recorded on the Derivative line on the Assets (or) Liabilities pages or (b) combined with the hedged item(s), individually or in the aggregate;

Ref #2017-33

## b. Statement Value:

## i. Open derivatives hedging items recorded at amortized cost:

- (a) Swaps, collars, and forwards shall be valued at amortized cost in a manner consistent with hedged item. (Components of a hedging instrument excluded from the determination of hedge effectiveness not addressed in 2.b.iii. shall be recognized at fair value, with changes in fair value of the excluded component recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.);
- (b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:
  - (1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;
  - (2) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (a) the hedged transaction occurs or (b) it is determined that the hedge was not effective (see (5) in this section 2.b.i.);
  - (3) For other derivatives the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program;
  - (4) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;
  - (5) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or a designated portion of the derivative shall be valued at its current fair value with gains and losses recorded in unrealized gains or unrealized losses to the extent that it ceased to be an effective hedge. Upon redesignation into an effective hedging relationship, the derivative's mark to fair value through unrealized gain or loss shall be reversed.

## Ref #2017-33

- ii. Open derivatives hedging items recorded at fair value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus):
  - (a) Swaps, collars, or forwards shall be valued at current fair value with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);
  - (b) For hedges where the derivative is combined with the hedged item, the fair value of the derivative and hedge item shall be determined and reported separately, either individually or in the aggregate. The cost (book value) basis used to figure gain/loss on the derivative is zero.
- iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where fair value accounting is not being used:
  - (a) ~~The foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract or hedge program.~~ The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened. For forward contracts, an excluded component representing a foreign exchange premium (discount) (forward points) on the currency contract shall be amortized into income over the life of the contract or hedge program. Amortization is not required if the contract was entered into within a year of maturity. For foreign currency swaps, an excluded component representing a cross-currency basis spread, is recognized into income through the foreign currency swap's periodic interest accruals.  
  
~~Amortization is not required if the contract was entered into within a year of maturity;~~
    - (b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;
    - (c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;
    - (d) The statement value of the derivative equals the amortized cost plus:
      - 1. For forward contracts, the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract.
      - 2. For foreign currency swaps, ~~T~~the cumulative unrealized gain/(loss) on the contract. The cross-currency basis spread is recorded through the Investment Income Due and Accrued or Other Liabilities, as a component of the foreign currency swap's periodic interest accrual.

## Ref #2017-33

The cumulative unrealized gain/loss equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened;

- (e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;
- (f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value on Schedule DB is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;

- (g) ~~If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge, The derivative shall be recorded at fair value and valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge,~~ a cumulative unrealized gain/loss (surplus adjustment) ~~will~~ shall be recognized equal to the difference between the carrying value of the derivative on the balance sheet and the fair value of the derivative if either of the following occur:

1. During the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge.
2. The entity decides to terminate the derivative in advance of scheduled maturity.

~~notional amount or designated notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.~~

- iv. Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: swaps, collars and forwards shall be valued at current fair value with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.
  - (a) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative shall continue to be valued at its current fair value, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.

c. Cash Flows and Income:

- i. Where the cost of the derivative is not combined with the hedged item:

**Ref #2017-33**

- (a) Amortization of premium paid or received on derivatives is an adjustment to net investment income or another appropriate caption within operating income consistent with the reporting of the hedged item;
  - (b) Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as net investment income or another appropriate caption within operating income.
- ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB is zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.
- d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):
    - i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;
    - ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination.<sup>5</sup>
    - iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.
    - iv. Upon the redesignation of a derivative from a currently effective hedging relationship-
      - (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.
      - (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.
      - (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

*The following new Exhibit A replaces both Exhibit A and Exhibit B within the existing SSAP No. 86. This is new guidance within SSAP No. 86, and the tracked changes shown in the section below reflect the modifications from U.S. GAAP. References to the FASB ASC are included in this issue paper for historical reference and will not be duplicated within the SSAP.*

**EXHIBIT A – DISCUSSION OF HEDGE EFFECTIVENESS**

The guidance within this exhibit reflects the adoption, with modification, of *FASB Accounting Standards Codification (ASC) 815-20-25-72 through 815-20-35-20*, as revised through the issuance of *ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* (ASU 2017-12) (issued on August 28, 2017). This adoption captures the U.S. GAAP guidance for the assessment and determination of hedge effectiveness, with modification to require the accounting and reporting of hedging instruments, including excluded components of hedging instruments to follow specific statutory accounting guidance in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument and derivative transaction qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement and reporting of effective hedge transactions shall follow statutory specific provisions. The adoption only extends to revisions incorporated to the FASB ASC through ASU 2017-12, therefore any subsequent U.S. GAAP edits to the ASC would require statutory accounting adoption before application. The guidance within this Exhibit reflects excerpts from the U.S. GAAP ASC, but do not reflect the full U.S. GAAP guidance referenced in the adopted language. The exclusion of cited guidance is to manage the extent of detail included within SSAP No. 86. Excerpts not duplicated within from the cited U.S. GAAP guidance are considered adopted unless subject to the specific accounting and reporting statutory exclusion. This Exhibit intends to supplement the guidance in SSAP No. 86 on hedge effectiveness. In any event in which this Exhibit could be interpreted as conflicting with the SSAP No. 86 guidance, the guidance in the body of SSAP No. 86 shall be followed.

*Hedge Effectiveness Criteria Applicable to Both Fair Value Hedges and Cash Flow Hedges*

1. This guidance addresses hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges. (815-20-25-74)
2. To qualify for hedge accounting, the hedging relationship, both at inception of the hedge and on an ongoing basis, shall be expected to be highly effective in achieving either of the following: (815-20-25-75)
  - a. Offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated (if a fair value hedge)
  - b. Offsetting cash flows attributable to the hedged risk during the term of the hedge (if a cash flow hedge), unless the hedging instrument is used to modify the contractually specified interest receipts or payments associated with a recognized financial asset liability from one variable rate to another variable rate. ~~except as indicated in paragraph 815-20-25-50~~
3. If the hedging instrument (such as an at-the-money option contract) provides only one-sided offset of the hedged risk, either of the following conditions shall be met: (815-20-25-76)
  - a. The increases (or decreases) in the fair value of the hedging instrument are expected to be highly effective in offsetting the decreases (or increases) in the fair value of the hedged item (if a fair value hedge).
  - b. The cash inflows (outflows) from the hedging instrument are expected to be highly effective in offsetting the corresponding change in the cash outflows or inflows of the hedged transaction (if a cash flow hedge).

**Ref #2017-33**

4. There would be a mismatch between the change in fair value or cash flows of the hedging instrument and the change in fair value or cash flows of the hedged item or hedged transaction in any of the following circumstances, among others: (815-20-25-77)

- a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction, to the extent that those bases do not move in tandem
- b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in any of the following:
  - i. Notional amounts
  - ii. Maturities
  - iii. Quantity
  - iv. Location (not applicable for hedging relationships in which the variability in cash flows attributable to changes in a contractually specified component is designated as the hedged risk)
  - v. Delivery Dates

5. An entity shall consider hedge effectiveness in two different ways—in prospective considerations and in retrospective evaluations: (815-20-25-79)

- a. Prospective considerations. The entity's expectation that the relationship will be highly effective over future periods in achieving offsetting changes in fair value or cash flows, which is forward looking, must be assessed on a quantitative basis at hedge inception unless one of the exceptions [detailed in ASU 2017-12](#), paragraph 815-20-25-3(b)(2)(iv)(01)<sup>2</sup> is met. Prospective assessments shall be subsequently performed whenever financial statements or earnings are reported and at least every three months. The entity shall elect at hedge inception ~~in accordance with paragraph 815-20-25-3(b)(2)(iv)(03)~~ whether to perform subsequent [retrospective and prospective hedge effectiveness](#) assessments on a quantitative or qualitative basis. ~~See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of hedge effectiveness.~~ A quantitative assessment can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. The quantitative prospective assessment of hedge effectiveness shall consider all reasonably possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the period used to assess whether the requirement for expectation of highly effective offset is satisfied. The quantitative prospective assessment may not be limited only to the likely or expected changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument or the hedged items. Generally, the process of formulating an expectation regarding the effectiveness of a proposed hedging relationship involves a probability-weighted analysis of the possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the hedge period. Therefore, a probable future change in fair value will

<sup>2</sup> Reference to this ASU 2017-12 guidance is consistent with the guidance in SSAP No. 86, paragraph 42, footnote 5.

Ref #2017-33

be more heavily weighted than a reasonably possible future change. ~~That calculation technique is consistent with the definition of the term expected cash flow in FASB Concepts Statement No. 7, Using Cash Flow Information and Present Value in Accounting Measurements.~~

- b. Retrospective evaluations. An assessment of effectiveness may be performed on a quantitative or qualitative basis on the basis of the entity's election at hedge inception ~~in accordance with paragraph 815-20-25-3(b)(2)(iv)(03).~~ That assessment shall be performed whenever financial statements or earnings are reported, and at least every three months. ~~See paragraphs 815-20-35-2 through 35-4 for further guidance.~~ At inception of the hedge, an entity electing a dollar-offset approach to perform retrospective evaluations on a quantitative basis may choose either a period-by-period approach or a cumulative approach in designating how effectiveness of a fair value hedge or of a cash flow hedge will be assessed retrospectively under that approach, depending on the nature of the hedge initially documented in accordance with paragraph 815-20-25-3. ~~For example, an entity may decide that the cumulative approach is generally preferred, yet may wish to use the period-by-period approach in certain circumstances. See paragraphs 815-20-35-5 through 35-6 for further guidance.~~

*(ASC paragraph 815-20-25-79A not included in Exhibit A.)*

6. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship. An entity shall use the quantitative effectiveness assessment method defined at hedge inception consistently for the periods that the entity either elects or is required to assess hedge effectiveness on a quantitative basis. *(815-20-25-80)*

7. This Subtopic guidance does not specify a single method for assessing whether a hedge is expected to be highly effective. The method of assessing effectiveness shall be reasonable. The appropriateness of a given method of assessing hedge effectiveness depends on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, an entity shall assess effectiveness for similar hedges in a similar manner, including whether a component of the gain or loss on a derivative instrument is excluded in assessing effectiveness for similar hedges. Use of different methods for similar hedges shall be justified. The mechanics of isolating the change in time value of an option discussed beginning in paragraph 13 815-20-25-98 also shall be applied consistently. *(815-20-25-81)*

8. In defining how hedge effectiveness will be assessed, an entity shall specify whether it will include in that assessment all of the gain or loss on a hedging instrument. An entity may exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows: *(815-20-25-82)*

- a. If the effectiveness of a hedge with an option is assessed based on changes in the option's intrinsic value, the change in the time value of the option would be excluded from the assessment of hedge effectiveness.
- b. If the effectiveness of a hedge with an option is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract shall be excluded from the assessment of hedge effectiveness.

**Ref #2017-33**

- c. An entity may exclude any of the following components of the change in an option's time value from the assessment of hedge effectiveness:
  - i. The portion of the change in time value attributable to the passage of time (theta)
  - ii. The portion of the change in time value attributable to changes due to volatility (vega)
  - iii. The portion of the change in time value attributable to changes due to interest rates (rho).
- d. If the effectiveness of a hedge with a forward contract or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price shall be excluded from the assessment of hedge effectiveness.
- e. An entity may exclude the portion of the change in fair value of a currency swap attributable to a cross-currency basis spread.

9. No other components of a gain or loss on the designated hedging instrument shall be excluded from the assessment of hedge effectiveness nor shall an entity exclude any aspect of a change in an option's value from the assessment of hedge effectiveness that is not one of the permissible components of the change in an option's time value. For example, an entity shall not exclude from the assessment of hedge effectiveness the portion of the change in time value attributable to changes in other market variables (that is, other than rho and vega). (815-20-25-83)

*Note – The following ASC Paragraphs 815-20-25-83A and 83B are not adopted within SSAP No. 86 as they address measurement and recognition. Measurement and recognition guidance shall follow the provisions detailed in SSAP No. 86.*

For fair value and cash flow hedges, the initial value of the component excluded from the assessment of effectiveness shall be recognized in earnings using a systematic and rational method over the life of the hedging instrument. Any difference between the change in fair value of the excluded component and amounts recognized in earnings under that systematic and rational method shall be recognized in other comprehensive income. Example 31 beginning in paragraph 815-20-55-235 illustrates this approach for a cash flow hedge in which the hedging instrument is an option and the entire time value is excluded from the assessment of effectiveness. (815-20-25-83A)

For fair value and cash flow hedges, an entity alternatively may elect to record changes in the fair value of the excluded component currently in earnings. This election shall be applied consistently to similar hedges in accordance with paragraph 815-20-25-81 and shall be disclosed in accordance with paragraph 815-10-50-4EEEE. (815-20-25-83B)

10. If the critical terms of the hedging instrument and of the hedged item or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be perfectly effective if all of the following criteria are met:

## Ref #2017-33

- a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase. Location differences do not need to be considered if an entity designates the variability in cash flows attributable to changes in a contractually specified component as the hedged risk and the requirements in paragraphs 815-20-25-22A through 25-22B of the FASB Codification are met. (815-20-25-84)
- b. The fair value of the forward contract at inception is zero.
- c. Either of the following criteria is met:
  - i. The change in the discount or premium on the forward contract is excluded from the assessment of effectiveness pursuant to paragraphs 7-9~~815-20-25-81 through 25-83~~.
  - ii. The change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

11. In a cash flow hedge of a group of forecasted transactions in accordance with paragraph 28.a. of the SSAP guidance~~815-20-25-15(a)(2)~~, an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 10.a. ~~815-20-25-84(a)~~ if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month. (815-20-25-84A)

12. If all of the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met, an entity shall still perform and document an assessment of hedge effectiveness at the inception of the hedging relationship and, ~~as discussed beginning in paragraph 815-20-35-9~~, on an ongoing basis throughout the hedge period. No quantitative effectiveness assessment is required at hedge inception if the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met ~~(see paragraph 815-20-25-3(b)(2)(iv)(01))~~. (815-20-25-85)

*(ASC paragraphs 815-20-25-86 to 815-20-25-97 not included in Exhibit A.)*

#### *Computing Changes in an Option's Time Value*

13. In computing the changes in an option's time value that would be excluded from the assessment of hedge effectiveness, an entity shall use a technique that appropriately isolates those aspects of the change in time value. Generally, to allocate the total change in an option's time value to its different aspects—the passage of time and the market variables—the change in time value attributable to the first aspect to be isolated is determined by holding all other aspects constant as of the beginning of the period. Each remaining aspect of the change in time value is then determined in turn in a specified order based on the ending values of the previously isolated aspects. (815-20-25-98)

14. Based on that general methodology, if only one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta), that aspect shall be the first aspect for which the change in time value is computed and would be determined by holding all other parameters constant for the period used for assessing hedge effectiveness. However, if more than one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta and vega), an entity shall determine the amount of that change in time value by isolating each of those two aspects in turn in a prespecified order (one first, the other second). The second aspect to be isolated would be based

## Ref #2017-33

on the ending value of the first isolated aspect and the beginning values of the remaining aspects. The portion of the change in time value that is included in the assessment of effectiveness shall be determined by deducting from the total change in time value the portion of the change in time value attributable to excluded components. (815-20-25-99)

*(ASC paragraphs 815-20-25-100 and 815-20-25-101 not included in Exhibit A.)*

*Assuming Perfect Hedge Effectiveness in a Hedge with an Interest Rate Swap*

15. The conditions for the shortcut method do not determine which hedging relationships qualify for hedge accounting; rather, those conditions determine which hedging relationships qualify for a shortcut version of hedge accounting that assumes perfect hedge effectiveness. If all of the applicable conditions in the list in paragraph ~~17 815-20-25-104~~ are met, an entity may assume perfect effectiveness in a hedging relationship of interest rate risk involving a recognized interest-bearing asset or liability (or a firm commitment arising on the trade [pricing] date to purchase or issue an interest-bearing asset or liability) and an interest rate swap (or a compound hedging instrument composed of an interest rate swap and a mirror-image call or put option as discussed in paragraph ~~17.e. 815-20-25-104[e]~~) provided that, in the case of a firm commitment, the trade date of the asset or liability differs from its settlement date due to generally established conventions in the marketplace in which the transaction is executed. The shortcut method's application shall be limited to hedging relationships that meet each and every applicable condition. That is, all the conditions applicable to fair value hedges shall be met to apply the shortcut method to a fair value hedge, and all the conditions applicable to cash flow hedges shall be met to apply the shortcut method to a cash flow hedge. A hedging relationship cannot qualify for application of the shortcut method based on an assumption of perfect effectiveness justified by applying other criteria. The verb *match* is used in the specified conditions in the list to mean *exactly the same* or *correspond exactly*. (815-20-25-102)

16. Implicit in the conditions for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. In applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. (815-20-25-103)

17. All of the following conditions apply to both fair value hedges and cash flow hedges: (815-20-25-104)

- a. The notional amount of the interest rate swap matches the principal amount of the interest-bearing asset or liability being hedged.
- b. If the hedging instrument is solely an interest rate swap, the fair value of that interest rate swap at the inception of the hedging relationship must be zero, with one exception. The fair value of the swap may be other than zero at the inception of the hedging relationship only if the swap was entered into at the relationship's inception, the transaction price of the swap was zero in the entity's principal market (or most advantageous market), and the difference between transaction price and fair value is attributable solely to differing prices within the bid-ask spread between the entry transaction and a hypothetical exit transaction. The guidance in the preceding sentence is applicable only to transactions considered *at market* (that is, transaction price is zero exclusive of commissions and other transaction costs, ~~as discussed in paragraph 820-10-35-9B~~). If the hedging instrument is solely an interest rate swap that at the inception of the hedging relationship has a positive or negative

**Ref #2017-33**

fair value, but does not meet the one exception specified in this paragraph, the shortcut method shall not be used even if all the other conditions are met.

- c. If the hedging instrument is a compound derivative composed of an interest rate swap and mirror-image call or put option as discussed in (e), the premium for the mirror-image call or put option shall be paid or received in the same manner as the premium on the call or put option embedded in the hedged item based on the following:
- i. If the implicit premium for the call or put option embedded in the hedged item is being paid principally over the life of the hedged item (through an adjustment of the interest rate), the fair value of the hedging instrument at the inception of the hedging relationship shall be zero (except as discussed previously in (b) regarding differing prices due to the existence of a bid-ask spread).
  - ii. If the implicit premium for the call or put option embedded in the hedged item was principally paid at inception-acquisition (through an original issue discount or premium), the fair value of the hedging instrument at the inception of the hedging relationship shall be equal to the fair value of the mirror-image call or put option.
- d. The formula for computing net settlements under the interest rate swap is the same for each net settlement. That is, both of the following conditions are met:
- i. The fixed rate is the same throughout the term.
  - ii. The variable rate is based on the same index and includes the same constant adjustment or no adjustment. The existence of a stub period and stub rate is not a violation of the criterion in (d) that would preclude application of the shortcut method if the stub rate is the variable rate that corresponds to the length of the stub period.
- e. The interest-bearing asset or liability is not prepayable, that is, able to be settled by either party before its scheduled maturity, or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable, in accordance with paragraph 815-25-35-13B, with the following qualifications:
- i. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to an embedded call option (put option) if the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option (put option).
  - ii. The call option embedded in the interest rate swap is considered a mirror image of the call option embedded in the hedged item if all of the following conditions are met:
    - (a) The terms of the two call options match exactly, including all of the following:
      - (1) Maturities

Ref #2017-33

- (2) Strike price (that is, the actual amount for which the debt instrument could be called) and there is no termination payment equal to the deferred debt issuance costs that remain unamortized on the date the debt is called
  - (3) Related notional amounts
  - (4) Timing and frequency of payments
  - (5) Dates on which the instruments may be called.
- (b) The entity is the writer of one call option and the holder (purchaser) of the other call option.
- f. Any other terms in the interest-bearing financial instruments or interest rate swaps meet both of the following conditions:
- i. The terms are typical of those instruments.
  - ii. The terms do not invalidate the assumption of perfect effectiveness.
18. All of the following incremental conditions apply to fair value hedges only: *(815-20-25-105)*
- a. The expiration date of the interest rate swap matches the maturity date of the interest-bearing asset or liability or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable~~in accordance with paragraph 815-25-35-13B.~~
  - b. There is no floor or cap on the variable interest rate of the interest rate swap.
  - c. The interval between repricings of the variable interest rate in the interest rate swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).
  - d. For fair value hedges of a proportion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument ~~(see (a) in paragraph 815-20-25-104)~~ matches the portion of the asset or liability being hedged.
  - e. For fair value hedges of portfolios (or proportions thereof) of similar interest-bearing assets or liabilities, both of the following criteria are met:
    - i. The notional amount of the interest rate swap designated as the hedging instrument matches the aggregate notional amount of the hedged item (whether it is all or a proportion of the total portfolio).

Ref #2017-33

- ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual assets or liabilities in the portfolio.
  - f. The index on which the variable leg of the interest rate swap is based matches the benchmark interest rate designated as the interest rate risk being hedged for that hedging relationship.
19. All of the following incremental conditions apply to cash flow hedges only: (815-20-25-106)
- a. All interest receipts or payments on the variable-rate asset or liability during the term of the interest rate swap are designated as hedged.
  - b. No interest payments beyond the term of the interest rate swap are designated as hedged.
  - c. Either of the following conditions is met:
    - i. There is no floor or cap on the variable interest rate of the interest rate swap.
    - ii. The variable-rate asset or liability has a floor or cap and the interest rate swap has a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. For purposes of this paragraph, comparable does not necessarily mean equal. For example, if an interest rate swap's variable rate is based on LIBOR and an asset's variable rate is LIBOR plus 2 percent, a 10 percent cap on the interest rate swap would be comparable to a 12 percent cap on the asset.
  - d. The repricing dates of the variable-rate asset or liability and the hedging instrument must occur on the same dates and be calculated the same way (that is, both shall be either prospective or retrospective). If the repricing dates of the hedged item occur on the same dates as the repricing dates of the hedging instrument but the repricing calculation for the hedged item is prospective whereas the repricing calculation for the hedging instrument is retrospective, those repricing dates do not match.
  - e. For cash flow hedges of the interest payments on only a portion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument (~~see paragraph 815-20-25-104(a)~~) matches the principal amount of the portion of the asset or liability on which the hedged interest payments are based.
  - f. For a cash flow hedge in which the hedged forecasted transaction is a group of individual transactions (as permitted by [paragraph 28.a. of the SSAP guidance](#) ~~paragraph 815-20-25-15(a)~~), if both of the following criteria are met:
    - i. The notional amount of the interest rate swap designated as the hedging instrument (~~see paragraph (a)~~) matches the notional amount of the aggregate group of hedged transactions.
    - ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual transactions that make up the group. For example, the interest rate repricing dates for the variable-rate assets or liabilities whose interest

Ref #2017-33

payments are included in the group of forecasted transactions shall match (that is, be exactly the same as) the reset dates for the interest rate swap.

- g. The index on which the variable leg of the interest rate swap is based matches the contractually specified interest rate designated as the interest rate being hedged for that hedging relationship.

20. The shortcut method may be applied to a hedging relationship that involves the use of an interest rate swap-in-arrears provided all of the applicable conditions are met. (815-20-25-107)

21. Any discount or premium in the hedged debt's carrying amount (including any related deferred issuance costs) is irrelevant to and has no direct impact on the determination of whether an interest rate swap contains a mirror-image call option under paragraph 17.e.i.(e). Typically, the call price is greater than the par or face amount of the debt instrument. The carrying amount of the debt is economically unrelated to the amount the issuer would be required to pay to exercise the call embedded in the debt. (815-20-25-108)

22. The fixed interest rate on a hedged item need not exactly match the fixed interest rate on an interest rate swap designated as a fair value hedge. Nor does the variable interest rate on an interest-bearing asset or liability need to be the same as the variable interest rate on an interest rate swap designated as a cash flow hedge. An interest rate swap's fair value comes from its net settlements. The fixed and variable interest rates on an interest rate swap can be changed without affecting the net settlement if both are changed by the same amount. That is, an interest rate swap with a payment based on LIBOR and a receipt based on a fixed rate of 5 percent has the same net settlements and fair value as an interest rate swap with a payment based on LIBOR plus 1 percent and a receipt based on a fixed rate of 6 percent. (815-20-25-109)

23. Comparable credit risk at inception is not a condition for assuming perfect effectiveness even though actually achieving perfect offset would require that the same discount rate be used to determine the fair value of the swap and of the hedged item or hedged transaction. To justify using the same discount rate, the credit risk related to both parties to the swap as well as to the debtor on the hedged interest-bearing asset (in a fair value hedge) or the variable-rate asset on which the interest payments are hedged (in a cash flow hedge) would have to be the same. However, because that complication is caused by the interaction of interest rate risk and credit risk, which are not easily separable, comparable creditworthiness is not considered a necessary condition for assuming perfect effectiveness in a hedge of interest rate risk. (815-20-25-111)

*(ASC paragraphs 815-20-25-112 through 815-20-25-143 not included in Exhibit A.)*

#### *Hedge Effectiveness – After Designation*

24. If a fair value hedge or cash flow hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test on either a quantitative basis (using either a dollar-offset test or a statistical method such as regression analysis) or a qualitative basis. ~~See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of effectiveness.~~ If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. At least quarterly, the hedging entity shall determine whether the hedging relationship has been highly effective in having achieved offsetting changes in fair value or cash flows through the date of the periodic assessment.) (815-20-35-2)

*Effectiveness Assessment on a Qualitative Basis*

25. An entity may qualitatively assess hedge effectiveness if both of the following criteria are met: (815-20-35-2A)

- a. An entity performs an initial quantitative test of hedge effectiveness on a prospective basis (that is, it is not assuming that the hedging relationship is perfectly effective at hedge inception ~~as described in paragraph 815-20-25-3(b)(2)(iv)(01)(A) through (H)~~), and the results of that quantitative test demonstrate highly effective offset.
- b. At hedge inception, an entity can reasonably support an expectation of high effectiveness on a qualitative basis in subsequent periods.

26. An entity may elect to qualitatively assess hedge effectiveness in accordance with paragraph 25-815-20-35-2A on a hedge-by-hedge basis. If an entity makes this qualitative assessment election, only the quantitative method specified in an entity's initial hedge documentation must comply with paragraph 7-815-20-25-81. (815-20-35-2B)

27. When an entity performs qualitative assessments of hedge effectiveness, it shall verify and document whenever financial statements or earnings are reported and at least every three months that the facts and circumstances related to the hedging relationship have not changed such that it can assert qualitatively that the hedging relationship was and continues to be highly effective. While not all-inclusive, the following is a list of indicators that may, individually or in the aggregate, allow an entity to continue to assert qualitatively that the hedging relationship is highly effective: (815-20-35-2C)

- a. An assessment of the factors that enabled the entity to reasonably support an expectation of high effectiveness on a qualitative basis has not changed such that the entity can continue to assert qualitatively that the hedging relationship was and continues to be highly effective. ~~This shall include an assessment of the guidance in paragraph 815-20-25-100 when applicable.~~
- b. There have been no adverse developments regarding the risk of counterparty default.

28. If an entity elects to assess hedge effectiveness on a qualitative basis and then facts and circumstances change such that the entity no longer can assert qualitatively that the hedging relationship was and continues to be highly effective in achieving offsetting changes in fair values or cash flows, the entity shall assess effectiveness of that hedging relationship on a quantitative basis in subsequent periods. In addition, an entity may perform a quantitative assessment of hedge effectiveness in any reporting period to validate whether qualitative assessments of hedge effectiveness remain appropriate. In both cases, the entity shall apply the quantitative method that it identified in its initial hedge documentation ~~in accordance with paragraph (b)(2)(iv)(03)~~. (815-20-35-2D)

29. When an entity determines that facts and circumstances have changed and it no longer can assert qualitatively that the hedging relationship was and continues to be highly effective, the entity shall begin performing subsequent quantitative assessments of hedge effectiveness as of the period that the facts and circumstances changed. If there is no identifiable event that led to the change in the facts and circumstances of the hedging relationship, the entity may begin performing quantitative assessments of effectiveness in the current period. (815-20-35-2E)

Ref #2017-33

30. After performing a quantitative assessment of hedge effectiveness for one or more reporting periods as discussed in paragraphs ~~28-29~~~~815-20-35-2D through 35-2E~~, an entity may revert to qualitative assessments of hedge effectiveness if it can reasonably support an expectation of high effectiveness on a qualitative basis for subsequent periods. ~~See paragraphs 815-20-55-79G through 55-79N for implementation guidance on factors to consider when determining whether qualitative assessments of effectiveness can be performed after hedge inception.~~ (815-20-35-2F)

*Quantitative Hedge Effectiveness Assessments After Hedge Designation*

31. Quantitative assessments can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. (815-20-35-2G)

32. If an entity elects at the inception of a hedging relationship to use the same regression analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness, then during the term of that hedging relationship both of the following conditions shall be met: (815-20-35-3)

- a. Those regression analysis calculations shall generally incorporate the same number of data points.
- b. That entity must periodically update its regression analysis (or other statistical analysis).

33. Electing to use a regression or other statistical analysis approach instead of a dollar-offset approach to perform retrospective evaluations of assessing hedge effectiveness may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-4)

34. In periodically (that is, at least quarterly) assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows) under a dollar-offset approach, an entity shall use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges): (815-20-35-5)

- a. Period-by-period approach. The period-by-period approach involves comparing the changes in the hedging instrument's fair values (or cash flows) that have occurred during the period being assessed to the changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged that have occurred during the same period. If an entity elects to base its comparison of changes in fair value (or cash flows) on a period-by-period approach, the period cannot exceed three months. Fair value (or cash flow) patterns of the hedging instrument or the hedged item (or hedged transaction) in periods before the period being assessed are not relevant.
- b. Cumulative approach. The cumulative approach involves comparing the cumulative changes (to date from inception of the hedge) in the hedging instrument's fair values (or cash flows) to the cumulative changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged.

35. If an entity elects at inception of a hedging relationship to base its comparison of changes in fair value (or cash flows) on a cumulative approach, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Electing to utilize a period-by-period approach instead of a cumulative approach (or vice versa) to perform retrospective evaluations of assessing

Ref #2017-33

hedge effectiveness under the dollar-offset method may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-6)

*Assessing Effectiveness Based on Whether the Critical Terms of the Hedging Instrument and the Hedged Items Match*

36. If, at inception, the critical terms of the hedging instrument and the hedged forecasted transaction are the same (see paragraphs [10-11815-20-25-84 through 25-84A](#)), the entity can conclude that changes in cash flows attributable to the risk being hedged are expected to be completely offset by the hedging derivative. Therefore, subsequent assessments can be performed by verifying and documenting whether the critical terms of the hedging instrument and the forecasted transaction have changed during the period in review. (815-20-35-9)

37. Because the assessment of hedge effectiveness in a cash flow hedge involves assessing the likelihood of the counterparty's compliance with the contractual terms of the derivative instrument designated as the hedging instrument, the entity must also assess whether there have been adverse developments regarding the risk of counterparty default, particularly if the entity planned to obtain its cash flows by liquidating the derivative instrument at its fair value. (815-20-35-10)

38. If there are no such changes in the critical terms or adverse developments regarding counterparty default, the entity may conclude that the hedging relationship is perfectly effective. In that case, the change in fair value of the derivative instrument can be viewed as a proxy for the present value of the change in cash flows attributable to the risk being hedged. (815-20-35-11)

39. However, the entity must assess whether the hedging relationship is expected to continue to be highly effective using a quantitative assessment method (either a dollar-offset test or a statistical method such as regression analysis) if any of the following conditions exist: (815-20-35-12)

- a. The critical terms of the hedging instrument or the hedged forecasted transaction have changed.
- b. There have been adverse developments regarding the risk of counterparty default.

*Possibility of Default by the Counterparty to Hedging Derivative*

40. For an entity to conclude on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. In complying with the requirements of paragraph [2.b.815-20-25-75\(b\)](#), the entity shall assess the possibility of whether the counterparty to the derivative instrument will default by failing to make any contractually required payments to the entity as scheduled in the derivative instrument. In making that assessment, the entity shall also consider the effect of any related collateralization or financial guarantees. The entity shall be aware of the counterparty's creditworthiness (and changes therein) in determining the fair value of the derivative instrument. Although a change in the counterparty's creditworthiness would not necessarily indicate that the counterparty would default on its obligations, such a change shall warrant further evaluation. (815-20-35-14)

41. If the likelihood that the counterparty will not default ceases to be probable, an entity would be unable to conclude that the hedging relationship in a cash flow hedge is expected to be highly effective in achieving offsetting cash flows. (815-20-35-15)

Ref #2017-33

42. In contrast, a change in the creditworthiness of the derivative instrument's counterparty in a fair value hedge would have an immediate effect because that change in creditworthiness would affect the change in the derivative instrument's fair value, which would immediately affect both of the following: (815-20-35-16)

- a. The assessment of whether the relationship qualifies for hedge accounting
- b. The amount of mismatch between the change in the fair value of the hedging instrument and the hedged item attributable to the hedged risk recognized in earnings under fair value hedge accounting.

43. Paragraph ~~16815-20-25-103~~ states that, in applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. That paragraph explains that implicit in the criteria for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. (815-20-35-18)

*Change in Hedge Effectiveness Method When Hedge Effectiveness is Assessed on a Quantitative Basis*

44. If the entity identifies an improved method of assessing hedge effectiveness in accordance with the guidance in paragraph ~~6815-20-25-80~~ and wants to apply that method prospectively, it shall do both of the following: (815-20-35-19)

- a. Discontinue the existing hedging relationship
- b. Designate the relationship anew using the improved method.

45. The new method of assessing hedge effectiveness shall be applied prospectively and shall also be applied to similar hedges unless the use of a different method for similar hedges is justified. A change in the method of assessing hedge effectiveness by an entity shall not be considered a change in accounting principle as defined in ~~Topic 250~~ [SSAP No. 3—Accounting Changes and Corrections of Errors](#). (815-20-35-20)

Ref #2017-33

### U.S. GAAP ASC Excerpts Excluded from Exhibit A

This information is included to illustrate the guidance within the adopted ASC references that are not captured in Exhibit A. The guidance within these paragraphs is considered part of the statutory adoption unless they include specific accounting and reporting guidance.

**815-20-25-79A** See paragraphs 815-20-25-139 through 25-142 about the timing of hedge effectiveness assessments required by paragraph 815-20-25-79 for a private company that is not a financial institution or a not-for-profit entity (except for a not-for-profit entity that has issued, or is a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market).

**815-20-25-86** The remainder of this guidance on hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges is organized as follows:

- a. Hedge effectiveness when the hedging instrument is an option or combination of options
- b. Hedge effectiveness when hedged exposure is more limited than hedging instrument
- c. Hedge effectiveness during designated hedge period
- d. Assuming perfect effectiveness in a hedge with an interest rate swap (the shortcut method).

#### Hedge Effectiveness When the Hedging Instrument Is an Option or Combination of Options

**815-20-25-87** The hedge effectiveness criteria applicable to options and combinations of options are organized as follows:

- a. Determining whether a combination of options is net written
- b. Hedge effectiveness of written options
- c. Hedge effectiveness of options in general.

#### Determining Whether a Combination of Options Is Net Written

**815-20-25-88** This guidance addresses how an entity shall determine whether a combination of options is considered a net written option subject to the requirements of paragraph 815-20-25-94. A combination of options (for example, an interest rate collar) entered into contemporaneously shall be considered a written option if either at inception or over the life of the contracts a net premium is received in cash or as a favorable rate or other term. Furthermore, a derivative instrument that results from combining a written option and any other non-option derivative instrument shall be considered a written option. The determination of whether a combination of options is considered a net written option depends in part on whether strike prices and notional amounts of the options remain constant.

#### Strike Prices and Notional Amounts Remain Constant

**815-20-25-89** For a combination of options in which the strike price and the notional amount in both the written option component and the purchased option component remain constant over the life of the respective component, that combination of options would be considered a net purchased option or a zero

Ref #2017-33

cost collar (that is, the combination shall not be considered a net written option subject to the requirements of paragraph 815-20-25-94) provided all of the following conditions are met:

- a. No net premium is received.
- b. The components of the combination of options are based on the same underlying.
- c. The components of the combination of options have the same maturity date.
- d. The notional amount of the written option component is not greater than the notional amount of the purchased option component.

**815-20-25-90** If the combination of options does not meet all of those conditions, it shall be subject to the test in paragraph 815-20-25-94. For example, a combination of options having different underlying indexes, such as a collar containing a written floor based on three-month U.S. Treasury rates and a purchased cap based on three-month London Interbank Offered Rate (LIBOR), shall not be considered a net purchased option or a zero cost collar even though those rates may be highly correlated.

#### **Strike Prices and Notional Amounts Do Not Remain Constant**

**815-20-25-91** If either the written option component or the purchased option component for a combination of options has either strike prices or notional amounts that do not remain constant over the life of the respective component, the assessment to determine whether that combination of options can be considered not to be a written option under paragraph 815-20-25-88 shall be evaluated with respect to each date that either the strike prices or the notional amounts change within the contractual term from inception to maturity.

**815-20-25-92** Even though that assessment is made on the date that a combination of options is designated as a hedging instrument (to determine the applicability of paragraph 815-20-25-94), it shall consider the receipt of a net premium (in cash or as a favorable rate or other term) from that combination of options at each point in time that either the strike prices or the notional amounts change, such as either of the following circumstances:

- a. If strike prices fluctuate over the life of a combination of options and no net premium is received at inception, a net premium will typically be received as a favorable term in one or more reporting periods within the contractual term from inception to maturity.
- b. If notional amounts fluctuate over the life of a combination of options and no net premium is received at inception, a net premium or a favorable term will typically be received in one or more periods within the contractual term from inception to maturity.

**815-20-25-93** In addition, a combination of options in which either the written option component or the purchased option component has either strike prices or notional amounts that do not remain constant over the life of the respective component shall satisfy all of the conditions in paragraph 815-20-25-89 to be considered not to be a written option (that is, to be considered to be a net purchased option or zero cost collar) under paragraph 815-20-25-88. For example, if the notional amount of the written option component is greater than the notional amount of the purchased option component at any date that the notional amount changes within the contractual term from inception to maturity, the combination of options shall be considered to be a written option under paragraph 815-20-25-88 and, thus, subject to the criteria in the following paragraph.

### Hedge Effectiveness of Written Options

**815-20-25-94** If a written option is designated as hedging a recognized asset or liability or an unrecognized firm commitment (if a fair value hedge) or the variability in cash flows for a recognized asset or liability or an unrecognized firm commitment (if a cash flow hedge), the combination of the hedged item and the written option provides either of the following:

- a. At least as much potential for gains as a result of a favorable change in the fair value of the combined instruments (that is, the written option and the hedged item, such as an embedded purchased option) as exposure to losses from an unfavorable change in their combined fair value (if a fair value hedge)
- b. At least as much potential for favorable cash flows as exposure to unfavorable cash flows (if a cash flow hedge).

**815-20-25-95** The written-option test in the preceding paragraph shall be applied only at inception of the hedging relationship and is met if all possible percentage favorable changes in the underlying (from zero percent to 100 percent) would provide either of the following:

- a. At least as much gain as the loss that would be incurred from an unfavorable change in the underlying of the same percentage (if a fair value hedge)
- b. At least as much favorable cash flows as the unfavorable cash flows that would be incurred from an unfavorable change in the underlying of the same percentage (if a cash flow hedge).

**815-20-25-96** The time value of a written option (or net written option) may be excluded from the written-option test if, in defining how hedge effectiveness will be assessed, the entity specifies that it will base that assessment on only changes in the option's intrinsic value. In that circumstance, the change in the time value of the options would be excluded from the assessment of hedge effectiveness in accordance with paragraph 815-20-25-82(a).

**815-20-25-97** When applying the written-option test to determine whether there is symmetry of the gain and loss potential of the combined hedged position for all possible percentage changes in the underlying, an entity is permitted to measure the change in the intrinsic value of the written option (or net written option) combined with the change in fair value of the hedged item.

### Hedge Effectiveness When Hedged Exposure Is More Limited Than Hedging Instrument

**815-20-25-100** An entity may designate as the hedging instrument in a fair value hedge or cash flow hedge a derivative instrument that does not have a limited exposure comparable to the limited exposure of the hedged item to the risk being hedged. However, to make that designation, in accordance with paragraph 815-20-25-75, the entity shall establish that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period that the hedge is designated. See paragraph 815-20-25-79(a) for additional guidance on prospective considerations of hedge effectiveness in this circumstance.

Ref #2017-33

**Hedge Effectiveness during Designated Hedge Period**

**815-20-25-101** It is inappropriate under this Subtopic for an entity to designate a derivative instrument as the hedging instrument if the entity expects that the derivative instrument will not be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period that the hedge is designated, unless the entity has documented undertaking a dynamic hedging strategy in which it has committed itself to an ongoing repositioning strategy for its hedging relationship.

**>>>> Application of Prepayable Criterion**

**815-20-25-112** An interest-bearing asset or liability shall be considered prepayable under the provisions of paragraph 815-20-25-104(e) if one party to the contract has the right to cause the payment of principal before the scheduled payment dates unless either of the following conditions is met:

- a. The debtor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always greater than the then fair value of the contract absent that right.
- b. The creditor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always less than the then fair value of the contract absent that right.

**815-20-25-113** However, none of the following shall be considered a prepayment provision:

- a. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event related to the debtor's credit deterioration or other change in the debtor's credit risk, such as any of the following:
  1. The debtor's failure to make timely payment, thus making it delinquent
  2. The debtor's failure to meet specific covenant ratios
  3. The debtor's disposition of specific significant assets (such as a factory)
  4. A declaration of cross-default
  5. A restructuring by the debtor.
- b. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event that meets all of the following conditions:
  1. It is not probable at the time of debt issuance.
  2. It is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.
  3. It is related either to the debtor's or creditor's death or to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

Ref #2017-33

- c. Contingent acceleration clauses that permit the debtor to accelerate the maturity of an outstanding note only upon the occurrence of a specified event that meets all of the following conditions:
1. It is not probable at the time of debt issuance.
  2. It is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.
  3. It is related to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

**815-20-25-114** Furthermore, a right to cause a contract to be prepaid at its then fair value would not cause the interest-bearing asset or liability to be considered prepayable because that right would have a fair value of zero at all times and essentially would provide only liquidity to the holder.

**815-20-25-115** Application of this guidance to specific debt instruments is illustrated in paragraph 815-20-55-75.

#### **Application of the Shortcut Method to a Portfolio of Hedged Items**

**815-20-25-116** Portfolio hedging cannot be used to circumvent the application of the shortcut method criteria beginning in paragraph 815-20-25-102 to a fair value hedge of an individual interest-bearing asset or liability. A portfolio of interest-bearing assets or interest-bearing liabilities cannot qualify for the shortcut method if it contains an interest-bearing asset or liability that individually cannot qualify for the shortcut method.

**815-20-25-117** The fair value hedge requirements of paragraph 815-20-25-12(b)(1) ensure that the individual items in a portfolio share the same risk exposure and have fair value changes attributable to the hedged risk that are expected to respond in a generally proportionate manner to the overall fair value changes of the entire portfolio. That requirement restricts the types of portfolios that can qualify for portfolio hedging; however, it also permits the existence of a mismatch between the change in the fair value of the individual hedged items and the change in the fair value of the hedged portfolio attributable to the hedged risk in portfolios that do qualify. As a result, the assumption of perfect effectiveness required for the shortcut method generally is inappropriate for portfolio hedges of similar assets or liabilities that are not also nearly identical (except for their notional amounts). Application of the shortcut method to portfolios that meet the requirements of paragraph 815-20-25-12(b)(1) is appropriate only if the assets or liabilities in the portfolio meet the same stringent criteria in paragraphs 815-20-25-104(e), 815-20-25-104(g), and 815-20-25-105(a) as required for hedges of individual assets and liabilities.

#### **Application of Whether the Shortcut Method Was Not or No Longer Is Appropriate**

**815-20-25-117A** In the period in which an entity determines that use of the shortcut method was not or no longer is appropriate, the entity may use a quantitative method to assess hedge effectiveness and measure hedge results without dedesignating the hedging relationship if both of the following criteria are met:

- a. The entity documented at hedge inception in accordance with paragraph 815-20-25-3(b)(2)(iv)(04) which quantitative method it would use to assess hedge effectiveness and

**Ref #2017-33**

measure hedge results if the shortcut method was not or no longer is appropriate during the life of the hedging relationship.

- b. The hedging relationship was highly effective on a prospective and retrospective basis in achieving offsetting changes in fair value or cash flows attributable to the hedged risk for the periods in which the shortcut method criteria were not met.

**815-20-25-117B** If the criterion in paragraph 815-20-25-117A(a) is not met, the hedging relationship shall be considered invalid in the period in which the criteria for the shortcut method were not met and in all subsequent periods. If the criterion in paragraph 815-20-25-117A(a) is met, the hedging relationship shall be considered invalid in all periods in which the criterion in paragraph 815-20-25-117A(b) is not met.

**815-20-25-117C** If an entity cannot identify the date on which the shortcut criteria ceased to be met, the entity shall perform the quantitative assessment of effectiveness documented at hedge inception for all periods since hedge inception.

**815-20-25-117D** The terms of the hedged item and hedging instrument used to assess effectiveness, in accordance with paragraph 815-20-25-117A(b), shall be those existing as of the date that the shortcut criteria ceased to be met. For cash flow hedges, if the hypothetical derivative method is used as a proxy for the hedged item, the value of the hypothetical derivative shall be set to zero as of hedge inception.

**Hedge Effectiveness Criterion Applicable to Fair Value Hedges Only—Effectiveness Horizon**

**815-20-25-118** In documenting its risk management strategy for a fair value hedge, an entity may specify an intent to consider the possible changes (that is, not limited to the likely or expected changes) in value of the hedging derivative instrument and the hedged item only over a shorter period than the derivative instrument's remaining life in formulating its expectation that the hedging relationship will be highly effective in achieving offsetting changes in fair value for the risk being hedged. The entity does not need to contemplate the offsetting effect for the entire term of the hedging instrument.

**Consideration of Prepayment Risk Using the Last-of-Layer Method**

**815-20-25-118A** In a fair value hedge of interest rate risk designated under the last-of-layer method in accordance with paragraph 815-20-25-12A, an entity may exclude prepayment risk when measuring the change in fair value of the hedged item attributable to interest rate risk.

**Hedge Effectiveness Criteria Applicable to Cash Flow Hedges Only**

**815-20-25-119** The hedge effectiveness criteria applicable to cash flow hedges only are organized as follows:

- a. Consideration of the time value of money
- b. Consideration of counterparty credit risk
- c. Additional considerations for options in cash flow hedges
- d. Assuming perfect hedge effectiveness in a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap recorded under the simplified hedge accounting approach.

Ref #2017-33

### Consideration of the Time Value of Money

**815-20-25-120** In assessing the effectiveness of a cash flow hedge, an entity generally shall consider the time value of money, especially if the hedging instrument involves periodic cash settlements.

**815-20-25-121** An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

### Consideration of Counterparty Credit Risk

**815-20-25-122** For a cash flow hedge, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative instrument that require the counterparty to make payments to the entity. Paragraph 815-20-35-14 states that, for an entity to conclude on an ongoing basis that a cash flow hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. See paragraphs 815-20-35-14 through 35-18 for further guidance.

### Additional Considerations for Options in Cash Flow Hedges

**815-20-25-123** When an entity has documented that the effectiveness of a cash flow hedge will be assessed based on changes in the hedging option's intrinsic value pursuant to paragraph 815-20-25-82(a), that assessment (and the related cash flow hedge accounting) shall be performed for all changes in intrinsic value—that is, for all periods of time when the option has an intrinsic value, such as when the underlying is above the strike price of the call option.

**815-20-25-124** When a purchased option is designated as a hedging instrument in a cash flow hedge, an entity shall not define only limited parameters for the risk exposure designated as being hedged that would include the time value component of that option. An entity cannot arbitrarily exclude some portion of an option's intrinsic value from the hedge effectiveness assessment simply through an articulation of the risk exposure definition. It is inappropriate to assert that only limited risk exposures are being hedged (for example, exposures related only to currency-exchange-rate changes above \$1.65 per pound sterling as illustrated in Example 26 [see paragraph 815-20-55-205]).

**815-20-25-125** If an option is designated as the hedging instrument in a cash flow hedge, an entity may assess hedge effectiveness based on a measure of the difference, as of the end of the period used for assessing hedge effectiveness, between the strike price and forward price of the underlying, undiscounted. Although assessment of cash flow hedge effectiveness with respect to an option designated as the hedging instrument in a cash flow hedge shall be performed by comparing the changes in present value of the expected future cash flows of the forecasted transaction to the change in fair value of the derivative instrument (aside from any excluded component under paragraph 815-20-25-82), that measure of changes in the expected future cash flows of the forecasted transaction based on forward rates, undiscounted, is not prohibited. With respect to an option designated as the hedging instrument in a cash flow hedge, assessing hedge effectiveness based on a similar measure with respect to the hedging instrument eliminates any difference that the effect of discounting may have on the hedging instrument and the hedged transaction.

Ref #2017-33

Pursuant to paragraph 815-20-25-3(b)(2)(iv), entities shall document the measure of intrinsic value that will be used in the assessment of hedge effectiveness. As discussed in paragraph 815-20-25-80, that measure must be used consistently for each period following designation of the hedging relationship.

### Assessing Hedge Effectiveness Based on an Option's Terminal Value

**815-20-25-126** The guidance in paragraph 815-20-25-129 addresses a cash flow hedge that meets all of the following conditions:

- a. The hedging instrument is a purchased option or a combination of only options that comprise either a net purchased option or a zero-cost collar.
- b. The exposure being hedged is the variability in expected future cash flows attributed to a particular rate or price beyond (or within) a specified level (or levels).
- c. The assessment of effectiveness is documented as being based on total changes in the option's cash flows (that is, the assessment will include the hedging instrument's entire change in fair value, not just changes in intrinsic value).

**815-20-25-127** This guidance has no effect on the accounting for fair value hedging relationships. In addition, in determining the accounting for seemingly similar cash flow hedging relationships, it would be inappropriate to analogize to this guidance.

**815-20-25-128** For a hedging relationship that meets all of the conditions in paragraph 815-20-25-126, an entity may focus on the hedging instrument's terminal value (that is, its expected future pay-off amount at its maturity date) in determining whether the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge. An entity's focus on the hedging instrument's terminal value is not an impediment to the entity's subsequently deciding to dedesignate that cash flow hedge before the occurrence of the hedged transaction. If the hedging instrument is a purchased cap consisting of a series of purchased caplets that are each hedging an individual hedged transaction in a series of hedged transactions (such as caplets hedging a series of hedged interest payments at different monthly or quarterly dates), the entity may focus on the terminal value of each caplet (that is, the expected future pay-off amount at the maturity date of each caplet) in determining whether each of those hedging relationships is expected to be highly effective in achieving offsetting cash flows. The guidance in this paragraph applies to a purchased option regardless of whether at the inception of the cash flow hedging relationship it is at the money, in the money, or out of the money.

**815-20-25-129** A hedging relationship that meets all of the conditions in paragraph 815-20-25-126 may be considered to be perfectly effective if all of the following conditions are met:

- a. The critical terms of the hedging instrument (such as its notional amount, underlying, maturity date, and so forth) completely match the related terms of the hedged forecasted transaction (such as the notional amount, the variable that determines the variability in cash flows, the expected date of the hedged transaction, and so forth).
- b. The strike price (or prices) of the hedging option (or combination of options) matches the specified level (or levels) beyond (or within) which the entity's exposure is being hedged.
- c. The hedging instrument's inflows (outflows) at its maturity date completely offset the change in the hedged transaction's cash flows for the risk being hedged.

Ref #2017-33

- d. The hedging instrument can be exercised only on a single date—its contractual maturity date.

The condition in (d) is consistent with the entity's focus on the hedging instrument's terminal value. If the holder of the option chooses to pay for the ability to exercise the option at dates before the maturity date (for example, by acquiring an American-style option), the hedging relationship would not be perfectly effective.

**815-20-25-129A** In a hedge of a group of forecasted transactions in accordance with paragraph 815-20-25-15(a)(2), an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 815-20-25-129(a) if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month.

### **Hedge Effectiveness of a Net-Purchased Combination of Options**

**815-20-25-130** The guidance in the following paragraph addresses a cash flow hedging relationship that meets both of the following conditions:

- a. A combination of options (deemed to be a net purchased option) is designated as the hedging instrument.
- b. The effectiveness of the hedge is assessed based only on changes in intrinsic value of the hedging instrument (the combination of options).

**815-20-25-131** The assessment of effectiveness of a cash flow hedging relationship meeting the conditions in the preceding paragraph may be based only on changes in the underlying that cause a change in the intrinsic value of the hedging instrument (the combination of options). Thus, the assessment can exclude ranges of changes in the underlying for which there is no change in the hedging instrument's intrinsic value.

### **Hedge Accounting Provisions Applicable to Certain Private Companies**

#### **Assuming Perfect Hedge Effectiveness in a Cash Flow Hedge of a Variable-Rate Borrowing with a Receive-Variable, Pay-Fixed Interest Rate Swap Recorded under the Simplified Hedge Accounting Approach**

**815-20-25-133** Paragraphs 815-10-35-1A through 35-1C, 815-10-50-3, 815-20-25-3A, 815-20-25-119, 815-20-25-134 through 25-138, 815-20-55-79A through 55-79B, 825-10-50-3, and 825-10-50-8 provide guidance for an entity electing the simplified hedge accounting approach. See paragraph 815-10-65-6 for transition guidance on applying the simplified hedge accounting approach.

**815-20-25-134** The conditions for the simplified hedge accounting approach determine which cash flow hedging relationships qualify for a simplified version of hedge accounting. If all of the conditions in paragraphs 815-20-25-135 and 815-20-25-137 are met, an entity may assume perfect effectiveness in a cash flow hedging relationship involving a variable-rate borrowing and a receive-variable, pay-fixed interest rate swap.

**815-20-25-135** Provided all of the conditions in paragraph 815-20-25-137 are met, the simplified hedge accounting approach may be applied by a **private company** except for a financial institution as described in paragraph 942-320-50-1. An entity may elect the simplified hedge accounting approach for any receive-variable, pay-fixed interest rate swap, provided that all of the conditions for applying the simplified hedge

**Ref #2017-33**

accounting approach specified in paragraph 815-20-25-137 are met. Implementation guidance on the conditions set forth in paragraph 815-20-25-137 is provided in paragraphs 815-20-55-79A through 55-79B.

**815-20-25-136** In applying the simplified hedge accounting approach, the documentation required by paragraph 815-20-25-3 to qualify for hedge accounting must be completed by the date on which the first annual **financial statements are available to be issued** after hedge inception rather than concurrently at hedge inception.

**815-20-25-137** An eligible entity under paragraph 815-20-25-135 must meet all of the following conditions to apply the simplified hedge accounting approach to a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap:

- a. Both the variable rate on the swap and the borrowing are based on the same index and reset period (for example, both the swap and borrowing are based on one-month London Interbank Offered Rate [LIBOR] or both the swap and borrowing are based on three-month LIBOR).
- b. The terms of the swap are typical (in other words, the swap is what is generally considered to be a “plain-vanilla” swap), and there is no floor or cap on the variable interest rate of the swap unless the borrowing has a comparable floor or cap.
- c. The repricing and settlement dates for the swap and the borrowing match or differ by no more than a few days.
- d. The swap’s fair value at inception (that is, at the time the derivative was executed to hedge the interest rate risk of the borrowing) is at or near zero.
- e. The notional amount of the swap matches the principal amount of the borrowing being hedged. In complying with this condition, the amount of the borrowing being hedged may be less than the total principal amount of the borrowing.
- f. All interest payments occurring on the borrowing during the term of the swap (or the effective term of the swap underlying the forward starting swap) are designated as hedged whether in total or in proportion to the principal amount of the borrowing being hedged.

**815-20-25-138** A cash flow hedge established through the use of a forward starting receive-variable, pay-fixed interest rate swap may be permitted in applying the simplified hedge accounting approach only if the occurrence of forecasted interest payments to be swapped is probable. When forecasted interest payments are no longer probable of occurring, a cash flow hedging relationship will no longer qualify for the simplified hedge accounting approach and the General Subsections of this Topic shall apply at the date of change and on a prospective basis.

### **Timing of Hedge Documentation for Certain Private Companies If Simplified Hedge Accounting Approach Is Not Applied**

#### **Concurrent Hedge Documentation**

**815-20-25-139** Concurrent with hedge inception, a **private company** that is not a financial institution as described in paragraph 942-320-50-1 shall document the following:

Ref #2017-33

- a. The hedging relationship in accordance with paragraph 815-20-25-3(b)(1)
- b. The hedging instrument in accordance with paragraph 815-20-25-3(b)(2)(i)
- c. The hedged item in accordance with paragraph 815-20-25-3(b)(2)(ii), including (if applicable) firm commitments or the analysis supporting a last-of-layer designation in paragraph 815-20-25-3(c), or forecasted transactions in paragraph 815-20-25-3(d)
- d. The nature of the risk being hedged in accordance with paragraph 815-20-25-3(b)(2)(iii).

**815-20-25-140** A private company that is not a financial institution is not required to perform or document the following items concurrent with hedge inception but rather is required to perform or document them within the time periods discussed in paragraph 815-20-25-142:

- a. The method of assessing hedge effectiveness at inception and on an ongoing basis in accordance with paragraph 815-20-25-3(b)(2)(iv) and (vi)
- b. Initial hedge effectiveness assessments in accordance with paragraph 815-20-25-3(b)(2)(iv)(01) through (04).

**815-20-25-141** Example 1A beginning in paragraph 815-20-55-80A illustrates hedge documentation when the critical terms of the hedging instrument and hedged forecasted transaction match. Although that Example illustrates the documentation of the method of assessing hedge effectiveness, private companies that are not financial institutions may complete hedge documentation requirements in accordance with paragraphs 815-20-25-139 through 25-140.

### **Hedge Effectiveness Assessments**

**815-20-25-142** For a private company that is not a financial institution, the performance and documentation of the items listed in paragraph 815-20-25-140, as well as required subsequent quarterly hedge effectiveness assessments, may be completed before the date on which the next interim (if applicable) or annual financial statements are available to be issued. Even though the completion of the initial and ongoing assessments of effectiveness may be deferred to the date on which financial statements are available to be issued the assessments shall be completed using information applicable as of hedge inception and each subsequent quarterly assessment date when completing this documentation on a deferred basis. Therefore, the assessment should be performed to determine whether the hedge was highly effective at achieving offsetting changes in fair values or cash flows at inception and in each subsequent quarterly assessment period up to the reporting date.

### **Hedge Accounting Provisions Applicable to Certain Not-for-Profit Entities**

**815-20-25-143** Not-for-profit entities (except for not-for-profit entities that have issued, or are a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market) may apply the guidance on the timing of hedge documentation and hedge effectiveness assessments in paragraphs 815-20-25-139 through 25-142. Specifically, those entities shall document the items listed in paragraph 815-20-25-139 concurrent with hedge inception, but they may perform and document the items listed in paragraph 815-20-25-140 and perform the required subsequent quarterly hedge effectiveness assessments in accordance with paragraph 815-20-25-142 within the time periods discussed in paragraph 815-20-25-142.

Ref #2017-33

**Exhibit 3 – Revisions adopted to SSAP No. 86 on December 12, 2022 (Agenda Item 2022-09)****Fair Value Hedges** (Note – Paragraphs 26.a. through 26.c. are not affected and are omitted for brevity.)

26. Fair value hedges qualify for hedge accounting if all of the following criteria are met:

- d. The hedged item is specifically identified as either all ~~or~~ a specific portion, or the partial term of a recognized asset, or all or a specific portion of ~~or~~ a recognized liability or of an unrecognized firm commitment. The hedged item is a single asset or liability (or a specific portion or partial term thereof) or is a portfolio of similar assets or a portfolio of similar liabilities (or a specific portion thereof) or a closed portfolio of assets (pursuant to paragraph 26.f. and Exhibit A, paragraph 46) where assumed layer or layers is anticipated to be outstanding (or a specific portion thereof)<sup>3</sup>. For a partial term hedge of one or more consecutive selected contractual cash flows where the hedged item begins when the first hedge cash flow begins to accrue and ends at the end of the designation hedge period, the assumed maturity of the hedged item occurs at the end of the designated hedge period; (ASC 815-25-35-13B Partial Term Hedging.)
- e. If similar assets or similar liabilities are aggregated and hedged as a portfolio, the individual assets or individual liabilities must share the risk exposure for which they are designated as being hedged. The change in fair value attributable to the hedged risk for each individual item in a hedged portfolio must be expected to respond in a generally proportionate manner to the overall change in fair value of the aggregate portfolio attributable to the hedged risk; and
- f. For a closed portfolio of financial assets or one or more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers (this designation is referred to throughout as the “portfolio layer method” (detailed in Exhibit A). (ASC 815-20-25-12A Portfolio Layer Method)
- ~~f.g.~~ If the hedged item is a financial asset or liability, a recognized loan servicing right, or a nonfinancial firm commitment with financial components, the designated risk being hedged is:
- i. The risk of changes in the overall fair value of the entire hedged item;
  - ii. The risk of changes in its fair value attributable to changes in benchmark interest rate;
  - iii. The risk of changes in its fair value attributable to changes in the related foreign currency exchange rates; or
  - iv. The risk of changes in its fair value attributable to both changes in the obligor’s creditworthiness and changes in the spread over the benchmark interest rate with respect to the related financial asset’s or liability’s credit sector at inception of the hedge (referred to as credit risk).

<sup>3</sup> For clarity, partial-term hedges and portfolio hedges addressed in paragraph 26.f. are limited to the situations in which the hedged item(s) is a recognized asset or a closed portfolio of financial assets. These hedging accounting methods are not permitted to hedge liabilities.

**Ref #2017-33**

If the risk designated as being hedged is not the risk in paragraph 26.f.i., two or more of the other risks (benchmark interest rate risk, foreign currency exchange risk, and credit risk) may simultaneously be designated as being hedged.

The benchmark interest rate being hedged in a hedge of interest rate risk must be specifically identified as part of the designation and documentation at the inception of the hedging relationship. In calculating the change in the hedged item's fair value attributable to changes in the benchmark interest rate, the estimated coupon cash flows used in calculating fair value shall must be based on either all of the full contractual cash flows of the entire hedged item or the benchmark rate component of the contractual coupon cash flows of the hedged item determined at hedge inception. An entity may designate a fair value hedge of interest rate risk in which the hedged item is a prepayment instrument. The entity may consider only how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity (for example, an entity may consider only how change in the benchmark interest rate affect an obligor's decision to call a debt instrument when it has the right to do so.) The entity need not consider other factors that would affect this decision (for example, credit risk) when assessing hedge effectiveness. (ASU 815-25-35-13 & 815-20-25-6B) Excluding some of the hedged item's contractual cash flows (for example, the portion of the interest coupon in excess of the benchmark interest rate) from the calculation is not permitted.<sup>4</sup>-An entity may not simply designate prepayment risk as the risk being hedged for a financial asset. However, it can designate the option component of a prepayable instrument as the hedged item in a fair value hedge of the entity's exposure to changes in the fair value of that "prepayment" option, perhaps thereby achieving the objective of its desire to hedge prepayment risk. The effect of an embedded derivative of the same risk class must be considered in designating a hedge of an individual risk. For example, the effect of an embedded prepayment option must be considered in designating a hedge of benchmark interest rate risk.

**Disclosure Requirements**

62. Reporting entities shall disclose the following for all derivative contracts used:
- a. General disclosures:
    - vii. The net gain or loss recognized in unrealized gains or losses during the perioding period resulting from derivatives that no longer qualify for hedge accounting. For portfolio layer method hedges, disclose circumstances that led to the breach. (ASC 815-10-50-5C.)

**Relevant Literature**

64. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges.

<sup>4</sup>~~The first sentence of paragraph 26.d. that specifically permits the hedged item to be identified as either all or a specific portion of a recognized asset or liability or of an unrecognized firm commitment is not affected by the provisions in this subparagraph.~~

**Ref #2017-33**

With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. (The adoption from FAS 149 on the assessment of hedge effectiveness is impacted by the adoption with modification of guidance from ASU 2017-12 as detailed in paragraph 65.b., with the guidance from ASU 2017-12 superseding the prior adoption to the extent applicable.) All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5: *Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45 and Clarification of the Effective Date of FASB Statement No. 161* (FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39, and ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

65. This statement adopts, with modification, certain revisions to ASC 815-20 included in ASU 2017-12. Remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.
- a. Revisions effective January 1, 2019 with early adoption permitted, are limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness.
  - b. Revisions effective January 1, 2023, with early adoption permitted, are limited to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. This adoption reflects statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in the statement. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adoption of the referenced ASC paragraphs only extends to revisions incorporated through ASU 2017-12; therefore, any subsequent U.S. GAAP edits would require statutory accounting consideration before considered adopted.
  - c. [Revisions effective January 1, 2022, with early adoption permitted, are limited to the criteria for the portfolio layer method detailed in ASU 2022-01, criteria to only consider how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity date in 815-20-25-6B, adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate components of the contractual cash flows detailed in FASB ASC 815-25-35-13, and the partial-term hedging method detailed in FASB ASC 815-25-35-13B. The adoption of the partial term hedging method reflects statutory modifications that limits its use only when the hedged item is a recognized asset. This is different than U.S.](#)

Ref #2017-33

GAAP, which permits the partial term method for hedged liabilities. The statutory limitation is established to prevent interim basis adjustments to hedged liabilities that could present a reduction of reported liabilities on the financial statements when the actual liability has not been reduced. Reconsideration of this statutory limitation may occur after a broader project to consider how derivative basis adjustments to hedged liabilities shall be reflected in the financial statements.

### Effective Date and Transition

~~74.73~~ This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used.

- a. Revisions adopted to paragraph 64 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)
- b. Revisions adopted in paragraph 16 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.)
- c. Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 65) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.
- d. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define “derivative premium,” require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2021.
- e. Revisions adopted August 2022 that adopt with modification the criteria for initial and subsequent hedge effectiveness detailed in the FASB ASC paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12 and that incorporate statutory accounting revisions for the accounting and reporting of excluded components are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively for all new and existing hedges. Entities shall detail the adoption of this guidance as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors*.
- f. Revisions adopted December 12, 2022 that adopt U.S. GAAP guidance for the portfolio layer method, U.S. GAAP guidance to only consider how changes in the benchmark

Ref #2017-33

interest rate affect the decision to settle the hedged item before its scheduled maturity, U.S. GAAP guidance adding option in calculating the change in the hedged item's fair value attributed to changes in the benchmark interest rate based on the benchmark rate component of the contractual coupon cash flows, that and adopt with modification U.S. GAAP guidance for partial term hedging are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively to qualifying new hedges.

### Edits to New Exhibit A – Discussion of Hedge Effectiveness

17. All of the following conditions apply to both fair value hedges and cash flow hedges: (815-20-25-104)
- e. The interest-bearing asset or liability is not prepayable, that is, able to be settled by either party before its scheduled maturity, or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable ends at the end of the designated hedge period. in accordance with paragraph 815-25-35-13B, with the following qualifications:
    - i. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to an embedded call option (put option) if the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option (put option).
    - ii. The call option embedded in the interest rate swap is considered a mirror image of the call option embedded in the hedged item if all of the following conditions are met:
18. All of the following incremental conditions apply to fair value hedges only: (815-20-25-105 & 815-25-35-13B)
- a. The expiration date of the interest rate swap matches the maturity date of the interest-bearing asset or liability or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items ends at the end of the designated hedge period occur on the date in which the last hedged cash flow is due and payable in accordance with paragraph 815-25-35-13B.

Portfolio Layer Method (New paragraphs at the end of Exhibit A.)

46. For a closed portfolio of financial assets or one or more beneficial interests secured by a portfolio of financial instruments, an entity may designate as the hedged item or items a hedged layer or layers (this designation is referred to throughout as the “portfolio layer method.”) (ASU 815-20-25-12A)

- a. As part of the initial hedge documentation, an analysis is completed and documented to support the entity's expectation that the hedged item or items (that is, the hedged layer or layers in aggregate) is anticipated to be outstanding for the designated hedge period. That analysis shall incorporate the entity's current expectations of prepayments, defaults, and other factors affecting the timing and amount of cash flows associated with the closed portfolio.

Ref #2017-33

- b. For purposes of its analysis in paragraph 46.a., the entity assumes that as prepayments, defaults, and other factors affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio that is not hedged; and
- c. The entity applies the partial-term hedging guidance to the assets or beneficial interest used to support the entity's expectation in paragraph 46.a. An asset that matures on a hedged layer's assumed maturity date meets this requirement.

47. After a closed portfolio is established in accordance with paragraph 46, and entity may designate new hedging relationships associated with the closed portfolio without dedesignating any existing hedging relationships associated with the closed portfolio if the criteria of paragraph 46 are met for those newly designated hedging relationships. (ASU 815-20-25-12B)

48. For the portfolio layer method if both of the following conditions exist, the quantitative test described for similar assets (shared risk exposure) may be performed qualitatively on a hedge-by-hedge basis and only at hedge inception:

- a. The hedged item is a hedged layer in a portfolio layer hedge and designated in accordance with paragraph 26.f. of SSAP No. 86.
- b. An entity measures the change in fair value of the hedged item based on the benchmark rate component of the contractual coupon cash flows.

Using the benchmark rate component of the contractual coupon cash flows when all assets have the same assumed maturity date and prepayment risk does not affect the measurement of the hedged item results in all hedged items having the same benchmark rate component coupon cash flows. (ASU 815-20-55-14A)

49. For one or more hedging relationships designated under the portfolio layer method, an entity shall discontinue (or partially discontinue) hedge accounting in the following circumstances: (ASU 815-25-40-8)

- a. If the entity cannot support on a subsequent testing date that the hedged layer or layers are anticipated to be outstanding for the designated hedge (that is, a breach is anticipated), it shall discontinue (or partially discontinue) hedge accounting for one or more hedging relationships for the portion of the hedged item that is no longer anticipated to be outstanding for the designated hedge period.
- b. If on a subsequent testing date the outstanding amount of the closed portfolio of financial assets or one or more beneficial interests is less than the hedged layer or layers (that is, a breach has occurred), the entity shall discontinue (or partially discontinue) hedge accounting for one or more hedging relationships for the portion of the hedged item that is no longer outstanding.

50. In the event of either an anticipated breach (as described in paragraph 49.a.) or a breach that has occurred (as described in paragraph 49.b.) for portfolio layer method, if multiple hedged layers are associated with a closed portfolio, an entity shall determine which hedge or hedges to discontinue (or partially discontinue) in accordance with an accounting policy election. That accounting policy election shall specify a systematic and rational approach to determining which hedge or hedges to discontinue (or partially discontinue). An entity shall establish its accounting policy no later than when it first anticipates

Ref #2017-33

a breach or when a breach has occurred (whichever comes first). After an entity establishes its accounting policy, it shall consistently apply its accounting policy to all portfolio layer method breaches (anticipated and occurred). (ASU 815-25-40-8A)

**U.S. GAAP references not pulled into Exhibit will also be updated as follows:**

***Consideration of Prepayment Risk Using the ~~Last-of-Layer~~ Portfolio Layer Method***

**815-20-25-118A** In a fair value hedge of interest rate risk designated under the portfolio layer ~~last-of-layer~~ method in accordance with paragraph 815-20-25-12A, an entity may exclude prepayment risk when measuring the change in fair value of the hedged item attributable to interest rate risk.

**Edits to Exhibit ~~C~~B – Specific Hedge Accounting Procedures for Derivatives**

2. Swaps, Collars, and Forwards (see also discussion in Introduction above):
  - d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):
    - i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;
    - ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. If a portfolio layer method hedging relationship is discontinued (or partially discontinued) in a voluntary dedesignation or in anticipation of a breach, the basis adjustment associated with the dedesignated amount as of the discontinuation date shall be allocated to the remaining individual assets in the closed portfolio that supported the dedesignated hedged layer using a systematic and rational method. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. (ASU 815-25-40-9)
    - iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.
    - iv. Upon the redesignation of a derivative from a currently effective hedging relationship,
      - (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.
      - (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.

**Ref #2017-33**

- (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii.) above.

Form A**

**Issue: SSAP No. 25 – Affiliate Reporting Clarification**

**Check (applicable entity):**

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Description of Issue:**

At its May 24, 2022, meeting, the Statutory Accounting Principles (E) Working Group adopted agenda item 2021-21: Related Party Reporting, which included revisions to clarify application of the existing affiliate definition as well as to incorporate new disclosure requirements for investments acquired through, or in, related parties, regardless of if they meet the affiliate definition. During the meeting discussion, it was suggested that there needs to be a clarification of when an investment is considered to be and affiliated investment and reported on the affiliated line in the investment schedules. When agenda item 2021-21 was adopted, it included a recommendation that NAIC staff look to further clarify when investments should be classified as affiliated in the reporting schedules. This agenda item intends to clarify that an investment held from an affiliate is considered an affiliated investment.

**Existing Authoritative Literature:**

The *Insurance Holding Company System Regulatory Act* (Model #440) establishes the laws for holding company structures. The Act also establishes the concept of an affiliate in Section 1A, and this definition is used for statutory accounting purposes.

A. "Affiliate." An "affiliate" of, or person "affiliated" with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

*SSAP No. 25—Affiliates and Other Related Parties* establishes statutory accounting principles for affiliates and related parties. This definition is the language that is used to help define when an investment is affiliated or nonaffiliated for reporting in the various investment schedules.

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in *SSAP No. 48*, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):**

In March 2021, the Statutory Accounting Principles (E) Working Group adopted revisions to *SSAP No. 25* pursuant to agenda item 2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities. Additionally, a new reporting Schedule Y, Part 3 was adopted by the Blanks (E) Working Group in proposal 2020-37BWG, with

an initial effective date of Dec. 31, 2021, to capture information on all entities with ownership greater than 10%, the ultimate controlling parties of those owners and other entities that the ultimate controlling party controls.

On May 24, 2022, the Working Group adopted revisions to SSAP No. 25 and *SSAP No. 43R—Loan-Backed and Structured Securities*, to clarify application of the existing affiliate definition as well as to incorporate new disclosure requirements for investments acquired through, or in, related parties, regardless of if they meet the affiliate definition, and included a new disclosure that was adopted by the Blanks (E) Working Group in proposal 2021-22BWG, which adds a new electronic-only column for the investment schedules and the related instructions which describes the nature of any related party relationship that exists related to the investment.

**Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:**  
None

**Convergence with International Financial Reporting Standards (IFRS):** None

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 25 to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment. Staff also recommend that Working Group direct the Blanks (E) Working Group to modify the Annual Statement Instructions as illustrated below.

**Proposed edits to SSAP No. 25:**

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity. [Any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.](#)

**Proposed Annual Statement Reporting Changes: (These will be captured in a blanks proposal.)**

This will be included in the Investment Schedules General Instructions in several places covering several different types of investment, and this revision is proposed to be included in each place under the header “Parent, Subsidiaries and Affiliates.”

Parent, Subsidiaries and Affiliates:

Defined by *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*. [Any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.](#)

**Staff Review Completed by:** Jake Stultz—NAIC Staff, November 2022

**Status:**

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 25 to clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions illustrated above to SSAP No. 25 which clarify that any invested asset held by a reporting entity which is issued by an affiliated entity, or which includes the obligations of an affiliated entity is an affiliated investment.

**Issue:** *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions*

**Check (applicable entity):**

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Description of Issue:**

In June 2022, the Financial Accounting Standards Board (FASB) issued *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* to 1) clarify the guidance in Topic 820, Fair Value Measurement, when measuring the fair value of an equity security subject to contractual restrictions that prohibit the sale of an equity security, 2) amend a related illustrative example, and 3) add a new disclosure of the fair value of equity securities subject to contractual sale restrictions, nature and remaining duration of the restrictions, and circumstances that could cause a lapse in the restrictions, in accordance with Topic 820.

These amendments do not change the principles of fair value measurement. They provide clarity in situations involving equity securities that have restrictions related to the sale of the asset. This ASU provides updated guidance for two specific scenarios, one where the restriction is based on the entity holding the equity security and one where the restriction is a characteristic of the equity security.

- First, it clarifies situations where an equity security cannot be sold on the measurement date because of a contractual sale restriction where the entity is not allowed to sell an asset. An example of this would be lock-up periods, where the assets cannot be sold for a set period but can be readily priced based on a public security exchange.
- Second, it provides guidance for situations where the restriction is based on characteristics of the asset that limits if it can be sold in regular markets. An example would be an equity security issued through a private placement and not SEC registered and are legally restricted from being sold on a national securities exchange or an over-the-counter market. These assets would be available to be sold on an existing market (not on the public exchange) but would have a fair value based on the market price of the similar unrestricted equity security adjusted to reflect the effect of the restriction.

Guidance for restricted assets is in *SSAP No. 4—Assets and Nonadmitted Assets*, and additional guidance specific to securities in ASU 2022-03 are included in *SSAP No. 30R—Unaffiliated Common Stock*, *SSAP No. 32R—Preferred Stock*, and *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Under these SSAPs, restricted securities are generally considered to be admitted assets to the extent that they can be used to cover policyholder obligations.

**Existing Authoritative Literature:**

The primary guidance for fair value is in *SSAP No. 100R—Fair Value*. *SSAP No. 30R—Unaffiliated Common Stock* and *SSAP No. 32R—Preferred Stock*, include some guidance on restricted investments involving common and preferred stock, but neither goes into detail on the specific guidance discussed in ASU 2022-03. Additionally, *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures* and *SSAP No. 4—Assets and Nonadmitted Assets* include references to restricted assets, primarily related to disclosures.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None  
**Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** None

**Staff Recommendation:**

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 100R—Fair Value* to adopt *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* with modification to be consistent with statutory language in the respective statutory accounting statements. Proposed revisions are illustrated below.

**Proposed edits to SSAP No. 100R:**

**Equity Securities Subject to Contractual Sale Restrictions**

15. An equity security that an entity cannot sell on the measurement date because of a contractual sale restriction shall be measured at fair value on the basis of the price in the principal (or most advantageous) market<sup>FN</sup>. A contractual sale restriction does not change the market in which that equity security would be sold. A discount applied to the price of an equity security because of a contractual sale restriction is not a characteristic of the equity security. A contractual sale restriction is a characteristic of the reporting entity holding the equity security rather than a characteristic of the asset and, therefore, is not considered in measuring the fair value of an equity security. A contractual sale restriction prohibiting the sale of an equity security is a characteristic of the reporting entity holding the equity security and shall not be separately recognized as its own unit of account.

16. The effect on a fair value measurement arising from a restriction on the sale or use of an asset by a reporting entity will differ depending on whether the restriction would be taken into account by market participants when pricing the asset. When the restriction is a characteristic of the asset, the restriction ~~is a characteristic of the asset and~~ should be considered in measuring the fair value of the asset. For example, an equity security issued through a private placement is not registered and is legally restricted from being sold on a national securities exchange or an over-the-counter market until the shares are registered or the conditions necessary for an exemption from registration have been satisfied. A market participant would sell the private placement equity securities in a different market than the market used for registered equity securities on the measurement date. Because that restriction would be a characteristic of the equity security, a market participant would consider the inability to resell the security on a national securities exchange or an over-the-counter market when pricing the equity security; therefore, the reporting entity that holds the Class A shares acquired through a private placement transaction would consider that restriction a characteristic of the asset, and the reporting entity should measure the fair value of the equity security on the basis of the market price of the similar unrestricted equity security adjusted to reflect the effect of the restriction<sup>FN</sup>.

FN—Refer to *SSAP No. 4—Assets and Nonadmitted Assets* for admissibility guidance for restricted equity securities.

60. For equity securities that are subject to contractual sales, disclose the fair value of equity securities subject to contractual sale restrictions.

65. This standard adopts ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions, with modification to be consistent with statutory language in the respective statutory accounting statements.

**Staff Review Completed by:** Jake Stultz– NAIC Staff, November 2022

**Status:**

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 100R to adopt *ASU 2022-03, Fair Value Measurement of Equity Securities Subject to Contractual Sale Restrictions* with modification to be consistent with statutory language in the respective statutory accounting statements, as illustrated above. Note that this agenda item does not recommend incorporating the new proposed GAAP disclosures on sales restrictions, but identifies that items restricted as to sale would be captured as restricted assets per SSAP No. 1 and subject to admittance considerations under SSAP No. 4.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to SSAP No. 100R to adopt ASU 2022-03 with modification to be consistent with statutory language in the respective statutory accounting statements. The adoption does not incorporate the new GAAP disclosures on sales restrictions, as items restricted as to sale would be captured as restricted assets per SSAP No. 1 and subject to admittance considerations under SSAP No. 4.

**Issue: ASU 2022-04, Disclosure of Supplier Finance Program Obligations**

**Check (applicable entity):**

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Description of Issue:**

In September 2022, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update 2022-04, Liabilities—Supplier Finance Programs (Subtopic 405-50) Disclosure of Supplier Finance Program Obligations*. The Board issued ASU 2022-04 to enhance the transparency of supplier finance programs. ASU 2022-04 is effective for fiscal years beginning after December 15, 2022.

The amendments in ASU 2022-04 apply to all entities that use supplier finance programs in connection with the purchase of goods and services (described as buyer parties). Supplier finance programs, which also may be referred to as reverse factoring, payables finance, or structured payables arrangements, allow a buyer to offer its suppliers the option to access payment in advance of an invoice due date through a third-party finance provider or intermediary on the basis of invoices that the buyer has confirmed as valid.

Typically, a buyer in a program 1) enters into an agreement with a finance provider or an intermediary to establish the program, 2) purchases goods and services from suppliers with a promise to pay at a later date, and 3) notifies the finance provider or intermediary of the supplier invoices that it has confirmed as valid. Suppliers may then request early payment from the finance provider or intermediary for those confirmed invoices. Suppliers generally agree to accept an amount less than owed to receive payment from the intermediary timelier than the invoice due date. The full amount owed by the buyer is then paid to the intermediary, resulting in a spread income to the financing intermediary.

The ASU amendments require that a buyer in a supplier finance program disclose sufficient information about the program to allow a user of financial statements to understand the program’s nature, activity during the period, changes from period to period, and potential magnitude. These disclosures were supported as buyers who utilize these programs are getting a form of financing, but the amounts owed to the financial intermediaries have been reported differently, with some entities reporting as trade payables and others reporting as debt. As such, users of the financial statements do not have clear information on the use of these financing structures. ASU 2022-04 requires the buyer to make the following annual disclosures of qualitative and quantitative information about its supplier finance programs:

1. The key terms of the program, including a description of the payment terms (including payment timing and basis for its determination) and assets pledged as security or other forms of guarantees provided for the committed payment to the finance provider or intermediary
2. For the obligations that the buyer has confirmed as valid to the finance provider or intermediary:
  - a. The amount outstanding that remains unpaid by the buyer as of the end of the annual period (the outstanding confirmed amount)

- b. A description of where those obligations are presented in the balance sheet
- c. A rollforward of those obligations during the annual period, including the amount of obligations confirmed and the amount of obligations subsequently paid.

In each interim reporting period, the buyer should disclose the amount of obligations outstanding that the buyer has confirmed as valid to the finance provider or intermediary as of the end of the interim period.

*SSAP No. 105R—Working Capital Finance Investments* addresses programs similar to some of the ones described in ASU 2022-04, however it addresses such programs from the perspective of evaluating investments in such programs for admissibility for the **investor** in such programs. That is, the insurers tend to act as a finance provider or an investor in the supplier chain finance program, not the “buyer.” Insurers are not typically “buyers” in such programs as they are described in ASU 2022-04. The guidance in SSAP No. 105R would describe the “buyer” in the ASU 2022-04 as an obligor of the working capital finance program. Therefore, since the disclosures in ASU 2022-04 are for buyers/obligors of supplier finance programs, not for providers of liquidity – the investors, the disclosures do not seem relevant to require of the investors in such programs for statutory accounting.

Note that if an insurer were to sell its premium receivables, existing guidance in *SSAP No. 42—Sale of Premium Receivables* and *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishment of Liabilities* provide guidance which distinguishes sales from financing transactions. Therefore, the new GAAP disclosures in ASU 2022-04 are not recommended for incorporation into statutory accounting.

#### **Existing Authoritative Literature:**

*SSAP No. 105R—Working Capital Finance Investments*

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

#### **Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):**

The Working Group most recently updated SSAP No. 105R with substantive revisions which were effective June 30, 2020. Revisions to SSAP No. 105R were from agenda item 2019-25: Working Capital Finance Notes which also resulted in *Issue Paper No. 163—Working Capital Finance Investment Updates*. In agenda item 2019-25 the Working Group reviewed ten industry requests and incorporated 7 out of 10 revisions to SSAP No. 105R.

#### **Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:**

None

#### **Convergence with International Financial Reporting Standards (IFRS):** None

#### **Staff Recommendation:**

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to SSAP No. 105R to reject ASU 2022-04 as illustrated below. As insurance reporting entities are not the buyers (obligors) of supplier chain finance programs, the disclosures in ASU 2022-04 are not relevant. Reporting entities that invest in working capital finance programs are the providers of capital (investors) not the buyers (obligors) of such programs. Revisions to SSAP No. 105R:

[33. ASU 2022-04, Disclosure of Supplier Finance Program Obligations is rejected.](#)

**Staff Review Completed by:** Robin Marcotte– NAIC Staff, November 2022

**Status:**

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 105R to reject ASU 2022-04 for statutory accounting as the disclosures are not relevant for insurance entity preparers.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 105R, as illustrated above, to reject ASU 2022-04 for statutory accounting.

**Issue: Interest Income Disclosure Update**

**Check (applicable entity):**

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Description of Issue:**

This agenda item is the result of comments received from interested parties from the Principles-Based Bond Project. In the Oct. 7, 2022, comment letter, which provided comments on the Aug. 10 exposure by the Working Group, interested parties suggested some revisions to further enhance reporting of interest income on Schedule D-1-1 Bonds, and recommended that NAIC staff look further at if this should be added to any of the other reporting schedules where interest income is reported in accordance with *SSAP No. 34—Investment Income Due and Accrued*.

There were two distinct items noted in the interested parties’ comments that are addressed by this agenda item. First, they suggested data capturing the gross, nonadmitted and admitted amounts for interest income due and accrued. Second, they suggested that a data element that is included in the bond proposal project be changed to reflect the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance.

With this agenda item, the Working Group will sponsor a proposal at the Blanks (E) Working Group to expand disclosures, with data capturing, to include gross, nonadmitted and admitted amounts for interest income due and accrued. The blanks proposal will also include cumulative amounts of paid-in-kind (PIK) interest included in the current principal balances.

**Existing Authoritative Literature:**

The guidance for disclosure of interest income is included in *SSAP No. 34—Investment Income Due and Accrued*.

**Disclosures**

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)
  - a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
  - b. Disclose total amount excluded.
8. Refer to the Preamble for further discussion regarding disclosure requirements.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):**

As noted above, this agenda item comes from a suggestion from interested parties, which was included in their Oct. 7, 2022, comment letter.

**Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:**  
None

**Convergence with International Financial Reporting Standards (IFRS):** None

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to *SSAP No. 34—Investment Income Due and Accrued* to add additional disclosures to data capture the gross, nonadmitted and admitted amounts for interest income due and to add disclosure of the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. Adoption of this agenda item will also signify support for a corresponding Blanks (E) Working Group proposal to add these disclosures to Note 7 of the annual statement blanks.

**Proposed edits to SSAP No. 34:**

#### Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

- a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
  - b. Disclose total amount excluded;
  - c. Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued.
  - d. Disclose aggregate deferred interest and cumulative amounts of paid-in-kind (PIK) interest included in the current principal balance.
8. Refer to the Preamble for further discussion regarding disclosure requirements.

**Staff Review Completed by:** Jake Stultz—NAIC Staff, November 2022

#### Status:

On December 13, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to SSAP No. 34, to add additional disclosures, as illustrated above, and to data-capture the disclosures.

On March 22, 2023, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, with minor edits as illustrated below, to SSAP No. 34 to add additional disclosures to data capture the gross, nonadmitted and admitted amounts for interest income due and to add disclosure of the cumulative amount of paid-in-kind (PIK) interest included in the current principal balance. These disclosures are effective for year-end 2023 reporting.

#### Disclosures

7. The following disclosures shall be made for investment income due and accrued in the financial statements. (SSAP No. 37 captures disclosures for mortgage loans on nonaccrual status pursuant to paragraph 6.)

- a. The bases by category of investment income for excluding (nonadmitting) any investment income due and accrued;
- b. Disclose total amount excluded;
- c. [Disclose the gross, nonadmitted and admitted amounts for interest income due and accrued;](#)
- d. [Disclose aggregate deferred interest;](#)
- e. [Disclose cumulative amounts of paid-in-kind \(PIK\) interest included in the current principal balance.](#)

RE: Referral on Additional Market and Analytical Information for Bond Investments

DATE: February 13, 2023

---

**Summary** – The Investment Analysis Office (IAO) staff recommended in its Feb. 25, 2022, memorandum to the Valuation of Securities (E) Task Force (VOSTF) (attached hereto, Blanks Market Data Disclosure v2.pdf) that it would like additional market-data fields added to the annual statement instructions for bond investments. This was, in part, based upon the NAIC's adoption in 2010 of the recommendations of

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

[www.naic.org](http://www.naic.org)

the Rating Agency (E) Working Group (RAWG), which was formed following the Great Financial Crisis of 2007-2008 to study the NAIC's reliance on rating agencies, and the IAO staff's recent findings in its Nov. 2021 memo regarding disparities between rating agencies. RAWG recommended that: 1) regulators explore how reliance on rating agencies can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk; and 2) consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and 3) VOSTF should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending on the specific regulatory process under consideration.

The NAIC's need for alternative measures of investment risk has only increased since RAWG made its recommendations, as privately issued and rated complex structured finance transactions have become commonplace without adequate ways of identifying them. The SVO recommended the following market data fields to be added to the annual statement instructions: Market Yield, Market Price, Purchase Yield, Weighted Average Life, Spread to Average Life UST, Option Adjusted Spread, Effective Duration, Convexity and VISION Issue ID. Please refer to the attached memo for more detail on each data field.

In comments received from industry there were question as to how the SVO, VOSTF and/or other regulators who would receive the analytic data included in the proposal would utilize that information and why it is of value to them. The SVO was also asked to consider industry's recommendation that the NAIC be responsible for calculating this analytical information by utilizing commercially available data sources and investment models instead of having each individual insurance company incur the costs to implement system changes. The SVO shared their thoughts on the alternatives in the Jul. 14, 2022, memorandum to the VOSTF (attached, Blanks\_Market\_Data\_Options\_v3.pdf).

Capabilities like this within the SVO would permit it to calculate for regulators all the analytic values previously mentioned for any Schedule D investment along with additional measures such as key rate duration (a measure of interest rate sensitivity to maturity points along the yield curve), sensitivity to interest rate volatility, principal and interest cash flow projections for any security or portfolio for any given interest rate projection, loss estimates for any security for any given scenario and many others measures.

**Referral** – VOSTF refers this matter to the above referenced Committees, Task Forces and Working Groups for consideration and requests a response from you by May 15<sup>th</sup> outlining:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

Please contact Charles Therriault or Marc Perlman with any questions.

RE: Request for Accounting Practices and Procedures Manual PDF

Dear Messrs. Consedine and Beal:

We would like to like to raise an issue that has become an impediment for industry and others that need access to the guidance in the *NAIC Accounting Practices and Procedures Manual* (the “AP&P Manual”). The current product offered by the NAIC, i.e., the BookShelf® Online Subscription AP&P Manual, does not provide an effective search capability or print function, the two most important functionalities needed by users of the product.

For the reasons discussed below, we respectfully request that the NAIC make available for purchase by industry a licensed PDF version of the AP&P Manual that is both searchable and printable. There is great frustration with our current online product as evidenced by a survey of companies that we conducted during 2022. The dissatisfaction with the online system was exacerbated when in 2022 the hard copy manual was no longer available and the online Bookshelf became the sole source for authoritative guidance. This has resulted in the overwhelming support from insurance companies for a PDF version of the AP&P Manual.

What would be the usage of the PDF by companies?

1. The desire for a searchable PDF (outside of bookshelf) rather than hardcopy printing as the feedback reflected difficulty printing from bookshelf as well as limited search capability.
2. If a license for a PDF was provided, we expect the majority will print by SSAP, some will print out the full AP&P Manual and require multiple copies.
3. Insurers are looking at this on a group basis (providing access to insurers within an insurance group in one license) as insurers have centralized accounting functions.
4. If acquiring a PDF with searchable and printing capability, some insurers may still want bookshelf licenses. It will depend on the functionality of PDF (searchable and printable PDF) and the ability to access updates. The lack of functionality in the online bookshelf product is driving the need for a searchable and printable PDF

As mentioned above, we sent out a request to industry as to provide feedback to the NAIC on industry’s interest in an alternative to the online version of the AP&P Manual asking, *if* the NAIC would be willing to sell a licensed PDF version of the AP&P Manual that is printable, would you be interested? We

received a very strong response from 52 companies who supported a printable and searchable PDF version of the accounting manual. We have included the comments provided by member companies below, unedited. Note that several comments, notably a request to publish newly adopted revisions in PDF format, have been addressed already by NAIC Staff. However, the responses highlight the difficulties that companies have experienced using the Bookshelf software overall and suggest that a PDF version of the AP&P Manual would provide substantial benefit to industry.

Response
<p>Bookshelf is a product for individuals who read materials by flipping pages as if they are holding a hardcopy; however, the functionality is slow and unreliable. Sometimes pages of text take a long time to load or fail to load. As a result “flipping” back and forth between the electronic pages in cumbersome. Finance professionals are looking for an accounting and reporting research tool that requires functionality to search for terms and viewing pertinent sections in streaming form, allowing readers to quickly scroll through multiple pages of text. A softcopy solution, like a PDF file, that enables searching all standards with ability to scroll through each standard would greatly improve our efficiency and effectiveness in researching accounting and reporting matters.”</p>
<p>I’d be willing to buy anything more convenient than the current Bookshelf version. And that goes for all NAIC manuals, including the Annual Statement Instructions.</p>
<p>Using the APPM has been a pain point for us ever since the introduction of the Bookshelf product.</p> <p>We would also suggest that SAPWG make PDF copies of newly adopted changes available on the website (similar to how Blanks operates), as this practice appears to have been discontinued along with hard copy manuals. Implementation of new guidance routinely involves distribution of new guidance to different areas of our company that do not have reason to access the APPM in the normal course. Carving out these changes and printing from the Bookshelf product is unnecessarily difficult and time-consuming.</p>
<p>Yes, I feel very strongly that they need an alternative online version and prefer they provide an option for a manual copy. The current Bookshelf program is not user friendly, too slow, and stalls out frequently. For example, if you know you need something in SSAP No. 54, but don’t know what specific page it is on, the program is very inefficient if you are trying to flip the pages quickly to find the section needed. We would buy a licensed, printable version of the Manual. We had actually budgeted for two copies this year because of the remote environment and the hindrances of the program.</p>
<p>When we say printable – are we talking about that bookshelf version (which only lets you download 10 pages at a time) or something else. We like the printed version too so that we can share in our office but if it was a PDF version that wasn’t on that bookshelf system that would interest us. We will say that the bookshelf system is horrible and incredible hard to read with the watermark on it and to download the entire more than 10 pages is VERY time consuming.</p>
<p>I would love to be able to access a PDF version of the NAIC Accounting P&amp;P manual. The online tool that we were accessing the manual through is an impediment, my team has generally reverted to using old paper copies of the manual. Having it in PDF would be ideal, given so many folks in Accounting are now working remotely. This would make citations of the manual as easy as snipping and pasting.</p>

<p>To the best of my knowledge, XXX has one subscription to the on-line manual for which I am the (lucky?) user. I question how lucky I am, because I find it a huge pain in the rear to use, print, share somehow (no matter how infrequent even with others at XXX who are paying for the service). And the subscription process itself is a disaster. So, yes, I would be interested in a sane alternative.</p>
<p>The Vital Source web-based tool is not good and our IT department wouldn't approve the desktop version.</p>
<p>Would be very much interested in more manageable, printable and searchable document.</p>
<p>Would be very supportive of getting a licensed PDF version back. We have a ton of technical difficulties in accessing the online manual. Further, it seems like their licenses expire before they are supposed to so it feels like we've had to buy extra licenses to make sure we can access the content. In short, it's not a user-friendly tool.</p>
<p>Yes, I would be interested. It needs to be "searchable". At a minimum, encourage them to move away from Bookshelf.</p>
<p>We would be 100% interested. A PDF version would be very useful for us. Perhaps there could be an all-company license paid per year. We have a handful of active users, but we have countless requests where a single person may request to read a single SSAP on an ad-hoc basis. So making the guidance widely available, even at a cost, would be beneficial for us, and I would think it would good for the NAIC as well.</p>
<p>I would be very interested in a *.pdf version of the APP Manual. The current online version al is terrible with seemingly intentionally poor functionality.</p>
<p>Yes, we would be interested as it may be a more usable version than what we have today.</p>
<p>I would definitely be interested. I have a number of years of experience with the online version and it is very slow and clunky. The hardcopy version is no longer relevant in today's day and age. Not to mention, the individuals who utilize the manual for reference across a Company is continuing to grow and is not confined to only a couple individuals like it used to be a number of years ago.</p>
<p>This has been extremely challenging to manage the cost/availability of the AP&amp;P since it moved to online.</p>
<p>Any way to make the APPM more accessible would be appreciated! Bookshelf is so cumbersome and limiting.</p>
<p>The NAIC <b>should</b> have a system where it could easily be maintained via loose-leaf (as a compromise between bound/on-line) . We'd keep it in a couple 3-ring binders, the NAIC could issue updates via new pages properly sequenced, and we'd just hole punch/ replace and move on.</p>
<p>We would definitely be interested in a licensed .pdf version or another way to print/source the Manual. As of right now, it is cumbersome to only be able to print 20 pages at a time and at times, the watermark used (to not distribute) makes parts difficult to read depending upon the printer.</p>

We would be interested in a printable pdf version of the manual if the cost makes sense. I like the online version, but I have been disappointed that access is only provided on a per person basis. We have a large number of people that may have a need to look at the AP&P manual, but many of those people may only need it for a short period of time, making it cost prohibitive for everyone that may have a need for it. In addition, as people rotate through our different Finance areas for development purposes, the people that need access to the AP&P manual can change frequently throughout the year. For these reasons, a site license for a set number of concurrent users or a printable pdf version that can be shared would work better than the current arrangement.

It would also be good if the NAIC would not put the watermark across every page when printing from the online version to a pdf. It just makes it hard to read and seems overkill.

We appreciate your consideration of this matter. This is very important to our companies in complying with the statutory accounting requirements and in supporting the NAIC in their initiatives to keep the guidance current.

Thank you for considering our request. If you have any questions, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Rose Albrizio

Re: Accounting Practices and Procedures Manual PDF

On Jan. 9, the NAIC received a comment letter from D. Keith Bell and Rose Albrizio, representing interested parties of the Statutory Accounting Principles (E) Working Group (SAPWG), requesting a product enhancement, specifically a PDF, to the *NAIC Accounting Practices and Procedures Manual* (AP&P Manual). As further detailed herein, due to system limitations of our third-party distributor, many purchasers are not able to effectively research or quickly reference certain key aspects of the manual – specifically users could not efficiently search for references or key phrases. This difficulty, along with the inability to quickly reference differing sections of the manual, sections in which reference complementary statutory guidance, made use of the manual overly burdensome. This memorandum summarizes the NAIC’s action plan to promptly resolve the issue presented.

### **Brief Background**

Organized under the Financial Condition (E) Committee, SAPWG is responsible for developing and adopting revisions and interpretations to the AP&P Manual, the manual which details and provides the accounting basis for insurers to prepare financial statements for financial regulation purposes. Updates to the manual take place quite often, generally occurring several times a year and are made to address new statutory issues or generally accepted accounting principles (GAAP) pronouncements. Accordingly, the SAPWG and its support staff take pride in the manual being complete and relevant to today’s overall accounting issues and to address specific, unique circumstances that are of concern to regulators.

In addition to completeness, transparency and usability are essential characteristics supported by the Financial Condition (E) Committee and SAPWG. Every proposed accounting revision undergoes a rigorous and methodical exposure process, providing an opportunity for regulators and interested parties to comment on any proposed revision. In many cases, regulators and interested parties (along with NAIC support staff) work in conjunction to ensure drafted language is understandable and operationally functional all while addressing the needs of regulators. In the same vein, transparency must go beyond the amendment process and must remain in place so that users have an efficient and effective method in which to access the manual. Compliance with the guidance is not only mandatory, but vitally important to ensure regulators have access to accurate, representative financial information so ease of use is critical.

[www.naic.org](http://www.naic.org)

**Access to the AP&P Manual**

Subscribers to the AP&P Manual have two avenues to access the publication. (One brief note, the printing and distribution of a hardcopy manual ended in 2021 as demand for such a product greatly declined.)

1. **Avenue 1:** The first is to download a desktop application. When this avenue is utilized, the manual is nearly as searchable and usable as an unrestricted PDF. However, we have found that many organizations, through their information technology security controls, do not allow for the installation of this type of software, so this preferred avenue is likely not often utilized.
2. **Avenue 2:** The second option is to access the manual through our vendor's web portal. While the initial impression is that the desktop versus the web portal should act in identical manners, unfortunately the two methods operate differently. As a simple example, a search of a particular phrase will produce different results between the two methods. The NAIC has reached out to the vendor on numerous occasions to correct this issue, but it is unlikely this issue will be addressed quickly due to system limitations.

The NAIC understands that as most industry users are likely utilizing the second avenue to access the manual, that the ability to search for specific phraseology, quickly reference or cross reference various guidance is less than optimal. The AP&P Manual, by its very design, is a highly technical document and the ability to search for guidance quickly and efficiently – guidance that is sometimes reflected in multiple locations, is recognized by the NAIC as an important use characteristic.

**Recent Steps Taken and Action Plan**

Recognizing the need for users to have ready and immediate access to newly adopted accounting guidance, starting in 2022, the NAIC began posting adoptions on the SAPWG website as a free PDF publication. These documents will be available for one year and include a summary of the revisions as well as the maintenance agenda submission form (Form A), which includes a description of the accounting issue, interim exposure drafts as well as the final adopted guidance. Posting of these documents was a welcome change as it provided further transparency for interested parties as well as quick and easy access to recent accounting developments. The comment letter also noted that this process change did address several of industry's prior concerns.

However, moving beyond recent adoptions, the AP&P Manual is a complex and frequently referenced publication thus the ability to efficiently search and reference its contents is critical. Accordingly for the 2023 manual, the NAIC is proud to announce that a copyrighted PDF will be made available, at no additional charge, to those who purchase a subscription to the manual. Similar to the current subscription process, access will be restricted to the individual level, however the PDF will be as searchable and printable as any other PDF document. We trust that this offering will be well received.

Moving forward to the 2024 manual, the NAIC is dedicated to finding an amicable, long-term solution that will result in ease of access for industry users.

If you have any questions in the interim, please feel free to reach out to Jim Pinegar, Assistant Director of Strategic Business Initiatives at [jpinegar@naic.org](mailto:jpinegar@naic.org).

February 23, 2023

Paul Lombardo, Co-Chair  
Fred Andersen, Co-Chair  
Long-Term Care Actuarial (B) Working Group  
National Association of Insurance Commissioners (NAIC)

Re: Accounting Interpretation Request: Interaction Between *Actuarial Guideline LI* (AG 51) and Appendix A-010

Dear Mr. Lombardo and Mr. Andersen,

On behalf of the Financial Reporting and Solvency Committee (“the committee”) of the Health Practice Council of the American Academy of Actuaries,<sup>1</sup> we are reaching out to you to ascertain whether the Long-Term Care Actuarial (B) Working Group might issue an accounting interpretation for the interaction between *Actuarial Guideline LI* (AG 51) and Appendix A-010.

In 2017, the National Association of Insurance Commissioners (NAIC) adopted AG 51, “The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves.” Subsequent to the adoption of AG 51, the committee has observed some diversity in practice across issuers of long-term care insurance with regard to how the new guidance in AG 51, and specifically Section 4.C thereof, interacts with existing guidance on accident & health insurance reserve adequacy, as found in paragraph 24 of the Statement of Statutory Accounting Principles (SSAP) No. 54R, “Individual and Group Accident and Health Contracts,” and paragraph 26 of Appendix A-010, “Minimum Reserve Standards for Individual and Group Accident and Health Insurance Contracts.”

To our knowledge, the Long-Term Care Actuarial (B) Working Group has not previously been made aware that a diversity of practice has developed, subsequent to the adoption of AG 51, regarding how AG 51 interacts with Appendix A-010.

It would be helpful for Long-Term Care Actuarial (B) Working Group to review the attached Form A, and issue an interpretation to clarify the intended interaction between AG 51 and Appendix A-010, along the lines of one of the suggested interpretation statement wording options contained in the form. Note that we are not advocating for one of these options over the other; instead, our interest is in having the NAIC provide greater clarity to actuaries to understand its underlying intent.

---

<sup>1</sup> The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

We appreciate the opportunity to reach out to you on an accounting interpretation request for the interaction between *Actuarial Guideline LI* and Appendix A-010. We would welcome the opportunity to speak with you to provide more detail regarding these comments or on other issues. If you have any questions or would like to discuss further, please contact Matthew Williams, the American Academy of Actuaries senior health policy analyst, at [williams@actuary.org](mailto:williams@actuary.org).

Sincerely,

David Hutchins, MAAA, FSA  
Chairperson, Financial Reporting and Solvency Committee  
American Academy of Actuaries

Attachment: Statutory Accounting Principles (E) Working Group Maintenance Agenda Submission Form—Form A

**Spring National Meeting - Review of GAAP Exposures for Statutory Accounting:**

Pursuant to a 2014 direction from the SAPWG chair, there is a desire for the Statutory Accounting Principles (E) Working Group to be more proactive in considering FASB exposures that may be significant to statutory accounting and reporting. Historically, the SAPWG has commented on limited, key FASB exposures – mostly pertaining to insurance contracts and financial instruments. To ensure consideration of all FASB exposures, staff has prepared this memorandum to highlight the current exposures, comment deadlines, and to provide a high-level summary of the exposed item’s potential impact to statutory accounting. It is anticipated that this information would assist the Working Group in determining whether a comment letter should be submitted to the FASB on the issues. Regardless of the Working Group’s election to submit comments to the FASB on proposed accounting standards, under the NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process, issued US GAAP guidance noted in the hierarchy within Section V of the Preamble to the *Accounting Practices and Procedures Manual* must be considered by the Statutory Accounting Principles (E) Working Group.

FASB Exposures: [Exposure Documents and Public Comment Documents \(fasb.org\)](https://www.fasb.org/exposures)

Exposed FASB Guidance	Comment Deadline & Initial Staff Comments
Proposed Statement of Financial Accounting Concepts No. 8— <i>Conceptual Framework for Financial Reporting—Chapter 2: The Reporting Entity</i>	January 16, 2023
Proposed Statement of Financial Accounting Concepts No. 8— <i>Conceptual Framework for Financial Reporting—Chapter 5: Recognition and Derecognition</i>	February 21, 2023

**Proposed Statement of Financial Accounting Concepts No. 8—*Conceptual Framework for Financial Reporting—Chapter 2: The Reporting Entity***

The Financial Accounting Standards Board (FASB or Board) issued its first Concepts Statement in 1978 and issued six more by 2000. In 2004, the International Accounting Standards Board (IASB) and the FASB (the Boards) began a joint project to revise and converge their conceptual frameworks. The result of that joint project was FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 1, The Objective of General Purpose Financial Reporting*, and *Chapter 3, Qualitative Characteristics of Useful Financial Information*. In late 2010, the Boards decided to postpone further action on their respective conceptual frameworks until after the completion of several joint projects and ultimately agreed to discontinue the effort to work on their frameworks on a joint basis.

In January 2014, the FASB reactivated its Conceptual Framework project. This proposed Concepts Statement, which would become Chapter 2 of Concepts Statement 8, describes a reporting entity.

This chapter of Concepts Statement 8 would be similar to the rest of the framework in that it establishes concepts that the Board would use in developing standards of financial accounting and reporting. In particular, this chapter would provide the Board with a framework for matters relating to the identification of a reporting entity. This chapter would provide the Board with a framework for developing standards that meet the objective of financial reporting and enhance the understandability of information for existing and potential investors, lenders, donors, and other resource providers of a reporting entity.

**Staff Review and Commentary:**

Comment deadline was January 16, 2023

NAIC staff recommend that ASU be reviewed under the SAP Maintenance Process as detail in *Appendix F—Policy Statements*.

**Proposed Statement of Financial Accounting Concepts No. 8—*Conceptual Framework for Financial Reporting—Chapter 5: Recognition and Derecognition***

The Financial Accounting Standards Board (FASB or Board) issued its first Concepts Statement in 1978 and issued six more by 2000. In 2004, the International Accounting Standards Board (IASB) and the FASB (the Boards) began a joint project to revise and converge their conceptual frameworks. The result of that joint project was FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 1, The Objective of General Purpose Financial Reporting, and Chapter 3, Qualitative Characteristics of Useful Financial Information. In late 2010, the Boards decided to postpone further action on their respective conceptual frameworks until after the completion of several joint projects and ultimately agreed to discontinue the effort to work jointly on their frameworks.

In January 2014, the FASB reactivated its conceptual framework project. This Exposure Draft, which would become Chapter 5 of Concepts Statement 8, addresses matters relating to the recognition and derecognition of an item in financial statements.

Paragraph 105-10-05-3 of the FASB Accounting Standards Codification® states that FASB Concepts Statements are not authoritative. Some standards are inconsistent with the Concepts Statements. This Concepts Statement or other Concepts Statements do not override authoritative standards. If accounting for a transaction or event is not specified in authoritative generally accepted accounting principles (GAAP), an entity first must consider accounting principles for similar transactions or events within authoritative GAAP and then consider nonauthoritative guidance from other sources (including Concepts Statements).

This chapter of Concepts Statement 8 would be similar to the rest of the framework in that it establishes concepts that the Board would use in developing standards of financial accounting and reporting. In particular, this chapter would provide the Board with a framework for conceptual matters relating to the recognition and derecognition of an item in financial statements. This chapter would provide the Board with a framework for developing standards in meeting the 2 objective of financial reporting that enhances the understandability of information to existing and potential investors, lenders, donors, and other resource providers of a reporting entity.

**Staff Review and Commentary:**

Comment deadline was February 21, 2023

NAIC staff recommend that ASU be reviewed under the SAP Maintenance Process as detail in *Appendix F—Policy Statements*.

[https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member Meetings/E CMTE/APPTF/2023-1 Spring/Summary and Minutes/SAPWG/S - Review of GAAP Exposures.docx](https://naiconline.sharepoint.com/sites/NAICSupportStaffHub/Member%20Meetings/E%20CMTE/APPTF/2023-1%20Spring/Summary%20and%20Minutes/SAPWG/S%20Review%20of%20GAAP%20Exposures.docx)

Draft: 3/15/23

Blanks (E) Working Group  
Virtual Meeting  
March 7, 2023

The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met March 7, 2023. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); David Phifer (AK); Michael Shanahan (CT); N. Kevin Brown (DC); Tom Hudson (DE); Carolyn Morgan (FL); Carrie Mears (IA); Roy Eft (IN); Kristin Hynes (MI); Debbie Doggett (MO); Lindsay Crawford (NE); John Sirovetz (NJ); Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Diana Sherman (PA); Shawn Frederick (TX); Jake Garn (UT); Steve Drutz (WA); Adrian Jaramillo (WI); and Mary Jo Lewis (WV).

1. Adopted its Nov. 17, 2022, Minutes

Gosselin referenced the Blanks (E) Working Group's Nov. 17, 2022, minutes. During that meeting, the Working Group took the following action: 1) adopted the following proposals: a) 2022-12BWG – Combine the Health Analysis of Operations by Lines of Business Supplement page and the Health Care Receivable Supplement pages (Exhibits 3 and 3A) into one supplement filing set for health blank pages filed as a supplement by life/fraternal companies; b) 2022-19BWG Modified – modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Adds definitions for life and annuity products to the lines of business definitions in the health appendix; 2) adopted its editorial listing; 3) exposed six new proposals; 4) approved language added to the blanks proposal form to address duplication of reporting; 5) reviewed its 2023 proposed charges; 6) received a memorandum from the Statutory Accounting Principles (E) Working Group regarding disclosures required as part of *Interpretation (INT) 22-02: Third Quarter 2022 Reporting of the Inflation Reduction Act – Corporate Alternate Minimum Tax*; and 8) reviewed State Filing Checklists.

Crawford made a motion, seconded by Doggett, to adopt the Working Group's Nov. 17, 2022, minutes (see *NAIC Proceedings – Fall 2022, Accounting Practices and Procedures (E) Task Force, Attachment Two*). The motion passed unanimously.

2. Adopted Items Previously Exposed

a. Agenda Item 2022-14BWG – Effective 12/31/2023

Hudson stated that this proposal modifies Exhibit 1, Parts 1 and 2, and Exhibit 8, Parts 1 and 2, in the life, accident and health/fraternal blank to include the lines of business detail reported on the Analysis of Operations by Lines of Business pages for consistency. There was a modification made to update crosscheck references on Summary of Operations, Analysis of Operations, Five-Year Historical, and Schedule S. This comment was received during the comment period and is highlighted in gray in the proposal. After discussions with interested parties, they agreed to support the annual 2023 effective date.

Hudson made a motion, seconded by Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Hudson made a motion, seconded by Drutz, to adopt the modified proposal (Attachment Two-A). The motion passed unanimously.

b. Agenda Item 2022-15BWG

Doggett stated that this proposal impacts the life, accident and health/fraternal, and property/casualty (P/C) blanks. It revises the language of Schedule H, Part 5, to remove the 5% of premiums filing exemption. Before Schedule H was updated for Annual 2022 to bring uniformity in the accident and health lines of business, the P/C instructions for Schedule H, Part 5 had the “less than 5% filing exemption,” and the life/fraternal instructions did not have the 5% filing exemption. The removal of the 5% exemption would require both P/C and life/fraternal filers to file Schedule H, Part 5. There were no comments received.

Doggett made a motion, seconded by Garn, to adopt the proposal (Attachment Two-B). The motion passed unanimously.

c. Agenda Item 2022-16BWG

Drutz stated that this proposal removes Supplemental Health Care Exhibit Part 3 and Supplemental Health Care Exhibit’s Expense Allocation Report from the life, accident and health/fraternal, health and P&C blanks as they are no longer used regularly by regulators. Interested parties asked that the health care quality expenses definitions be added to the Appendix. These definitions pertain specifically to the Supplemental Health Care Exhibit as part of the federal Affordable Care Act (ACA) adoption, which has an April 1 filing deadline. Therefore, the most appropriate location for these definitions is with the supplemental exhibit.

Demetria Tittle (Blue Cross Blue Shield Association—BCBSA) stated that interested parties appreciate the nature of this proposal to remove information that regulators no longer frequently use, stating further that interested parties further support the new working group charge to consider proposals that address duplication in the financial reporting. She indicated that interested parties have begun to discuss and analyze the annual statement and other supplemental filings for similar additional opportunities to support this important project. She stated that examples would be shared in the near future, proposing recommendations for the Working Group to consider after the interested parties’ full vetting process. She stated that they share the goal of providing regulators with pertinent information in a form that creates mutual efficiencies while reducing redundancy where possible.

Tom Finnell (America’s Health Insurance Plans—AHIP) stated that AHIP members support the initiative of reducing redundancies within the reporting blank.

Gosselin stated that the Blanks (E) Working Group members would continue to appropriately assess redundancies and information that regulators no longer need through any proposals that are presented to the Working Group. This is with the understanding that before any such proposals are presented to the Working Group for consideration, the related policymaking task forces and working groups are made aware of the proposal. The discussions regarding any change and possible impact should be addressed with the policymaking groups. The process is consistent with the Working Group’s 2023 adopted charges.

Drutz made a motion, seconded by Shanahan, to adopt the proposal (Attachment Two-C). The motion passed unanimously.

d. Agenda Item 2022-18BWG

Gosselin stated that this proposal impacts the life, accident and health/fraternal blank, addressing instructional corrections on the handling of exchange-traded funds (ETFs) and/or Securities Valuation Office (SVO) identified funds within the interest maintenance reserve (IMR) and the asset valuation reserve (AVR). This relates to the classification of bond mutual funds being no longer used in statement reporting within the *Accounting Practices*

and Procedures Manual (AP&P Manual) or within the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual).

Interested parties suggested changes to line 2, for unaffiliated common stocks-private to exclude money market mutual funds appropriately reported on Schedule E, Part 2. However, NAIC staff supporting the Statutory Accounting Principles (E) Working Group indicated that paragraph 8 in the *Statement of Actuary Accounting Principles (SSAP) No. 2R—Cash, Cash Equivalents, Drafts, and Short-Term Investments* references this issue. In order for money market mutual funds (MMMFs) to be reported as cash equivalents, they must be registered with the U.S. Securities and Exchange Commission (SEC) as an MMMF and regulated under the 1940 Act. It is not permissible to apply the cash equivalent guidance to non-registered funds that may resemble an MMMF. As such, they should all be public.

Gosselin made a motion, seconded by Garn, to adopt the proposal (Attachment Two-D). The motion passed unanimously.

e. Agenda Item 2022-20BWG

Mary Caswell (NAIC) stated that this proposal modifies the instructions and blanks for various health exhibits to change the order of the vision and dental lines of business to be consistent with all other statement types. To address interested parties' comments, a "life (health supplement)" check box option has been added to the proposal form to identify changes that impact the health supplements in the life blank.

Hudson made a motion, seconded by Shanahan, to adopt the proposal (Attachment Two-E). The motion passed unanimously.

3. Re-Exposed Items

a. Agenda Item 2022-17BWG

Bruggeman stated that this proposal adds a new disclosure paragraph for Note 8 – Derivative Instruments and an illustration of new disclosure to be data captured. It adds electronic-only columns related to derivatives with excluded components to Schedule DB, Part A and Part B for both Section 1 and Section 2. It adds new code column instructions for Schedule DB, Part A and Part B. The purpose of the proposal is to reflect changes and disclosures adopted by the Statutory Accounting Principles (E) Working Group to *SSAP No. 86—Derivatives* in agenda item 2021-20. Interested parties have provided comments proposing to clarify certain aspects of the disclosure. The statutory accounting principles (SAP) guidance was permitted for early adoption at year-end 2022, so the proposed disclosure has had the benefit of being reviewed by companies as they initially applied the SAP guidance. NAIC staff supporting the Statutory Accounting Principles (E) Working Group have discussed the comments with interested parties' representatives and have come to an agreement on the current proposed clarifications. Although it is anticipated that the clarifications will address the interested parties' concerns, it is recommended that the blanks proposal be exposed with the revisions to allow for an additional public comment period. It is requested that the exposure timeframe continue to allow for adoption consideration during the Blanks (E) Working Group meeting in May for an annual 2023 effective date.

Bruggeman made a motion, seconded by Eft, to adopt the modifications to the proposal. The motion passed unanimously. Bruggeman made a motion, seconded by Eft, to re-expose the proposal for a public comment period ending April 28.

#### 4. Exposed New Items

##### a. Agenda Item 2023-01BWG

Doggett stated that this proposal removes pet insurance from the inland marine line of business and adds a new line of business to Appendix – Property and Casualty (P/C) Lines of Business definitions. It adds a pet insurance line within the existing P/C blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. It adds new Schedule P, Parts 1 through 4, specific to pet insurance.

The primary reason for this proposal is that there is currently no public or regulatory visibility into the vast amount of pet insurance industry financial reporting other than one monoline insurer that writes pet insurance. The rest of the industry's business is buried within the inland marine line of business. The pet insurance industry has grown rapidly, and this high growth rate continues. The industry's self-reported data shows growth in annual gross written premiums from \$836.5 million in 2016 to \$2.59 billion in 2021, including more than 30% annual growth from 2020 to 2021. This growth rate makes the absence of visibility into each participating company's financial information more of an acute challenge with each passing year.

Doggett stated that getting information related to pet insurance currently relies on data calls, which is a very time-consuming process for all involved parties. The NAIC's Market Regulation and Consumer Affairs (D) Committee is proceeding to identify pet insurance on the Market Conduct Annual Statement (MCAS). Doing so on the financial statement appears to be appropriate at this time.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

##### b. Agenda Item 2023-02BWG

Teresa Cooper (NAIC) stated that this proposal adds an exhibit to identify premiums that are reportable for MCAS purposes. The addition of MCAS premium reporting will allow accurate identification of required MCAS filing submissions. The request is to require the data by state. This would be in the life, accident and health/fraternal, health and property statements. This will eliminate industry and regulator work to submit and review annual waiver requests.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

##### c. Agenda Item 2023-03BWG

Caswell stated that this proposal removes life, accident and health/fraternal blank crosschecks for Columns 2, 6, and 10 on the Accident & Health Policy Experience Exhibit. The life, accident and health/fraternal blank crosschecks are not working correctly because Columns 2, 6, and 10 on the Accident & Health Policy Experience Exhibit are on a direct basis, and Exhibit 6 is on an assumed basis.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

d. Agenda Item 2023-04BWG

Angela McNabb (NAIC) stated that this proposal adds instructions for the appointed actuary and qualified actuary contacts to the jurat electronic-only section. In working with the principles-based reserving and the mortality experience data collection, staff has had instances where they needed to communicate directly with either the appointed actuary or qualified actuary. Currently, these are not identified in the blank. The additional contact information will help regulators in locating the appropriate actuaries to address any actuarial questions.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

e. Agenda Item 2023-05BWG

Sara Robben (NAIC) stated that the cybersecurity supplement has been in effect since 2016. Staff have reviewed the information that has been collected on identity theft and concluded that the information was not beneficial. This is because there are a lot of non-insurance companies that write identity theft coverage. This proposal is requesting to discontinue collecting the identity theft information which would require removing the introductory questions along with additional changes.

Robben stated that the proposal removes the Identity Theft Insurance column from Parts 2 and 3. It removes the claims-made and occurrence breakdown, as well as first-party and third-party breakdown, from data collection. A cybersecurity insurance policy generally is written on a claims-made basis for the liability sections of the policy; therefore, the breakdown is unnecessary. It removes the question in the interrogatories regarding tail policies. This has provided no meaningful information due to the way cybersecurity insurance policies are written. Therefore, it is considered no longer needed.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

f. Agenda Item 2023-06WG

Bruggeman stated that this proposal is in line with the Statutory Accounting Principles (E) Working Group bond project. Pursuant to that project, enhanced granularity and transparency of the bond investments held are proposed. To achieve that goal, the Statutory Accounting Principles (E) Working Group is proposing to split Schedule D, Part 1, into two sections: one for Issuer Credit Obligations and the other for Asset-Backed Securities. Additionally, the proposal removes the broad investment categories and incorporates new reporting lines for both schedules as well as instructions as to what should be captured in each reporting line. The proposal is very detailed, as the expansion of the schedule and the changes to the reporting lines impact a number of other schedules. The proposed concepts have previously been exposed by the Statutory Accounting Principles (E) Working Group with comments considered prior to sponsoring the blanks proposal. The anticipated effective date of the bond changes is Jan. 1, 2025. Therefore, the Blanks (E) Working Group is working to ensure that the blanks and accounting changes can be fully considered and adopted to allow reporting entities time to make any necessary system changes and assess the impact on their investment holdings.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 115-day public comment period ending June 30.

g. Agenda Item 2023-07BWG

Bruggeman stated that this proposal has also been drafted in response to discussions that have occurred under the bond project to make the investment schedules consistent with the changes to Schedule D, Part 1, within proposal 2023-06BWG. Ultimately, this proposal recommends revisions to investment schedules to improve and streamline overall reporting. Specifically, this proposal updates the code column and deletes the Legal Entity Identifier (LEI) column for the following investment schedules: A, B, BA, D, Part 2, D, Part 6, and E, Part 1.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

h. Agenda Item 2023-08BWG

Bruggeman stated that this proposal has been drafted to add language to clarify that mutual companies are to be included in Schedule Y, Part 3. This has been a consistent question that NAIC staff have received since Schedule Y, Part 3 was added, and this revision should clear that up for the companies.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

i. Agenda Item 2023-09BWG

Bruggeman stated that this proposal has been drafted because the American Academy of Actuaries (Academy) and the Life Risk-Based Capital (E) Working Group developed and recommended an annual statement note to be used when updating the Life C-2 mortality changes. The new financial statement note will develop the net amounts at risk in the categories needed for the Life C-2 worksheet to create a direct link to a financial statement source. Because this impacts the annual statement notes, a corresponding proposal is planned for exposure at the Spring National Meeting to allow for 2023 year-end adoption.

Hearing no objection, Gosselin stated that the proposal will be considered exposed for a 52-day public comment period ending April 28.

5. Adopted the Editorial Listing

Hudson made a motion, seconded by Snow, to adopt the editorial listing (Attachment Two-F). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Modify Exhibit 1, Part 1 and 2, and Exhibit 8, Part 1 and 2, in the life and accident and health (A&H)/fraternal blank, to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Update crosscheck references on Summary of Operations, Analysis of Operations, 5-Year Historical and Schedule S.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of this proposal is to make the lines of business reported on Exhibit 1 and Exhibit 8 consistent with the lines of business being reported on the Analysis of Operations by Lines of Business pages.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

Other Comments:

\*\* This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

**EXHIBIT 1 – PART 1 – PREMIUMS AND ANNUITY CONSIDERATIONS FOR LIFE AND ACCIDENT AND HEALTH CONTRACTS**

Amounts reported should be reflected in U.S. dollars based on the foreign currency exchange rate. Refer to *SSAP No. 23—Foreign Currency Transactions and Translations* for accounting guidance. Any foreign currency exchange gain or loss is reported as a realized capital gain or loss.

The separation into first-year, single and renewal is required only for Columns ~~3~~2 and 4.

- Include: Contract, membership and other fees whether or not retained by agents.  
 Experience rating refunds and accrued return retrospective premiums. Refer to *SSAP No. 66—Retrospectively Rated Contracts* for accounting guidance.
- Exclude: Amounts attributable to uninsured plans and the uninsured portions of partially insured plans.
- Deduct: Refunds to policyholders for direct payment of industrial premiums.  
 Premiums and annuity considerations returned.
- Do not deduct: Commissions and allowances on reinsurance premiums assumed and ceded.

The reporting entity shall not omit the columns for any lines of business in which it is not engaged. All figures for the ordinary variable life insurance business of the reporting entity, excluding separate accounts items, shall be included in Column ~~3~~2.

Include premiums and annuity considerations that are transferred to the Separate Accounts Statement. They are also to be reported as premiums and annuity considerations in the Separate Accounts Statement.

~~Column 9 — Credit Accident and Health (Group and Individual)~~

~~Include: — Business not exceeding 120 months.~~

~~Column 10 — Other Accident and Health~~

~~Include: — All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.~~

Column ~~12~~7 – Fraternal

Transactions related to the fraternal mission.

Line 1 – Uncollected Premiums and Considerations First Year (Other Than Single) and }  
 Line 11 – Uncollected Premiums and Considerations Renewal }

These are premiums and considerations on contracts in force which were due before the end of the year and unpaid on the valuation date or have not been recorded in the premium or consideration account.

The ~~sum of~~ Column ~~8, 9 and 10~~6 should be included on Page 2, Line 15.1, Column 1.

- Line 2 – Deferred and Accrued Premiums and Considerations First Year (Other Than Single) and }
- Line 12 – Deferred and Accrued Premiums and Considerations Renewal }

Include: Change in experience rating refund liability and accrued return retrospective premiums.

These are premiums and considerations on policies in force that were due on policies in force extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date when annualized premium was assumed to be collected in the reserve valuation.

- Line 4 – Advance Premiums and Considerations First Year (Other Than Single) and }
- Line 14 – Advance Premiums and Considerations Renewal }

Include: Premiums and considerations on certificates in force received by the reporting entity prior to the valuation date but that are due on or after the next certificate anniversary date.

Reporting entities may include here unearned premiums on accident and health business.

The total of these lines, excluding A&H unearned premium reserve, must balance to Page 3, Line 8, or to this item prior to deduction of discount depending upon the basis used for crediting advance premiums to the premium account.

The ~~sum of~~ Columns ~~68 through 10~~ should equal Schedule H, Part 2, Line A2, Column 1.

- Line 6 – Collected During Year – First Year (Other Than Single)

Include: All premiums and considerations (other than single premiums) pertaining to the first contract year.

Experience rating refunds and return retrospective premiums received.

Deduct: Experience rating refunds and return retrospective premiums paid.

- Line 10 – Single Premiums and Considerations – Single

Include: All single premiums and considerations and dividends/refunds, coupons, guaranteed annual pure endowments and similar benefits applied to provide paid-up additions and annuities.

- Line 16 – Collected During Year - Renewal

Include: All other premiums and considerations, including dividends/refunds, coupons, guaranteed annual pure endowments and similar benefits applied to pay renewal premiums and to shorten the endowment or premium-paying period.

Experience rating refunds and return retrospective premiums received.

Deduct: Experience rating refunds and return retrospective premiums paid.

- Line 20.4 – Net Total Premiums and Annuity Considerations – Total

Column 1 less Column ~~84~~ should agree with Summary of Operations, Line 1, and all appropriate columns should agree with Line 1 of Analysis of Operations by Lines of Business – [Summary \(Column 9 – YRT Mortality Risk Only on the Analysis of Operations by Lines of Business - Summary is not included in Exhibit 1, Part 1\)](#).

**EXHIBIT 1 – PART 2 – POLICYHOLDERS’ DIVIDENDS, REFUNDS TO MEMBERS AND COUPONS APPLIED, REINSURANCE COMMISSIONS AND EXPENSE ALLOWANCES AND COMMISSIONS INCURRED**

The separation into first-year, single and renewal is required only for Columns ~~3~~2 and 4.

~~Column 9 – Credit Accident and Health (Group and Individual)~~

~~Include: – Business not exceeding 120 months.~~

~~Column 10 – Other Accident and Health~~

~~Include: – All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.~~

Column ~~12~~7 – Fraternal

Transactions related to the fraternal mission.

Line 22 – Dividends and Coupons Applied All Other

Include: Coupons, guaranteed annual pure endowments and similar benefits.

Line 26.1 – Reinsurance Ceded

The ~~sum of~~ Columns ~~8 through 10~~6 should equal Schedule H, Part 4, Line B4, Column 1.

Line 26.2 – Reinsurance Assumed

The ~~sum of~~ Columns ~~8 through 10~~6 should equal Schedule H, Part 4, Line A4, Column 1.

**EXHIBIT 8 – CLAIMS FOR LIFE AND ACCIDENT AND HEALTH CONTRACTS**

Amounts relating to uninsured accident and health plans and the uninsured portion of partially insured accident and health plans should be excluded from this exhibit.

Do not include amounts for loss/claims adjusting expenses.

**PART 1 – LIABILITY END OF CURRENT YEAR**

This part of the exhibit provides an analysis of the contract liability reported in the balance sheet.

A reporting entity shall not omit the columns for any lines of business in which it is not engaged. All figures for the ordinary variable life insurance business of the reporting entity, excluding separate accounts items, shall be included in Column ~~3~~2. ~~Fraternal benefit societies do not need to complete Columns 2, 6, 7, 8, 9 and 10 since the columns reflect lines of business not written by fraternal.~~

Exclude liabilities reported in the Separate Accounts Statement.

For each item:

Net = Direct + Reinsurance Assumed – Reinsurance Ceded

~~Column 6 – Credit Life (Group and Individual) and~~

~~Column 10 – Accident and Health Credit (Group and Individual)~~

~~Include: – Business not exceeding 120 months duration.~~

~~**These columns are not applicable to Fraternal Benefit Societies.**~~

~~Column 11 – Other Accident and Health~~

~~Include: – All Medicare Part D Prescription Drug Coverage, whether sold on a stand-alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.~~

Line 1 – Due and Unpaid

Include: Only claims which are complete except for the payment of the amount due, or the recording of the amount paid in the appropriate claims accounts.

Line 2 – In Course of Settlement

Include: Other contract claims that have been reported and are pending at the end of the year. They represent cases that are at different stages of completion of claim processing; ranging from the time of initial receipt of claims or notification of claims to the time where the cases are nearly complete, but not complete enough to be shown in Line 1. Claims in course of settlement are segregated between Resisted, Line 2.1 and Other, Line 2.2.

Line 2.1 – Resisted

Include: Resisted claims on life and annuity contracts. A claim is considered resisted when it is in dispute and not resolved on the statement date.

Line 2.2 – Other

Include: Claims in course of settlement, not shown in Line 2.1, including resisted accident and health claims.

Line 3 – Incurred but Unreported

Report all contract claims incurred on or prior to December 31 of the statement year but not reported to the company until after that date. Only the portion of disability benefits which pertain to disability periods prior to January 1 of the year following the statement year should be reported; for example, the amount which would be payable for the elapsed period if disability were approved. The liability for unaccrued benefits is included in the Certificate and Contract Reserves liability (Page 3, Lines 1 and 2 and Exhibits 5 and 6).

Line 4 – Totals

Line 4.1 = Line 1.1 + Line 2.11 + Line 2.21 + Line 3.1

Line 4.2 = Line 1.2 + Line 2.12 + Line 2.22 + Line 3.2

Line 4.3 = Line 1.3 + Line 2.13 + Line 2.23 + Line 3.3

Line 4.4 = Line 1.4 + Line 2.14 + Line 2.24 + Line 3.4

Line 4.4, Column 1 should agree with Page 3, the sum of Lines 4.1 and 4.2

**EXHIBIT 8 – CLAIMS FOR LIFE AND ACCIDENT AND HEALTH CONTRACTS**  
**PART 2 – INCURRED DURING THE YEAR**

A reporting entity shall not omit the columns for any lines of business in which it is not engaged. ~~Fraternal benefit societies do not need to complete Columns 2, 6, 7, 8, 9 and 10 since these columns reflect lines of business not written by fraternal.~~

Include benefits and withdrawals that are transferred from the Separate Accounts Statement. They are also to be reported as benefits and withdrawals in the Separate Accounts Statement.

~~Column 6 – Credit Life (Group and Individual) and  
Column 10 – Accident and Health Credit (Group and Individual)~~

~~Include: – Business not exceeding 120 months duration.~~

~~Column 11 – Other Accident and Health~~

~~Include: – All Medicare Part D Prescription Drug Coverage, whether sold on a stand alone basis or through a Medicare Advantage product and whether sold directly to an individual or through a group.~~

For Lines 1, 2, 4, and 6: Net = Direct + Reinsurance Assumed – Reinsurance Ceded

Line 1 – Settlements During the Year

Include: Contract claim amounts retained under supplementary contracts.

Line 3 – Amounts Recoverable from Reinsurers December 31, Current Year and }  
Line 5 – Amounts Recoverable from Reinsurers December 31, Prior Year }

Include Reinsurance recoveries billed on paid losses but not received.

These amounts should agree to the amounts reported in Schedule S, Part 2, Column 6.

Line 6 – Incurred Benefits

Line 6.1 = Line 1.1 + Line 2.1 – Line 4.1

Line 6.2 = Line 1.2 + Line 2.2 – Line 4.2

Line 6.3 = Line 1.3 + Line 2.3 + Line 3 – Line 4.3 – Line 5

Line 6.4 = Line 1.4 + Line 2.4 – Line 3 – Line 4.4 + Line 5

**ANALYSIS OF OPERATIONS BY LINES OF BUSINESS – SUMMARY**

**=====  
Detail Eliminated to Conserve Space  
=====**

Column 8 – Other Lines of Business

A company that is engaged in one or more insurance businesses (other than life business e.g., workers’ compensation, aviation reinsurance) that cannot be reported in the columns on pages for Individual Life Insurance, Group Life Insurance, Individual Annuities, Group Annuities and Accident and Health shall add the amounts for each additional line of business and shall enter the total in Column 8.

Include Any Business that is not reported in Columns 2 through 7 or Column 9.

Column 8, Line 21 should agree with Exhibit 1 Part 2, Line 31, Column 418.

## QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

**EXHIBIT 1****DIRECT PREMIUMS AND DEPOSIT-TYPE CONTRACTS**

Report the Total Direct Life and Accident and Health Premiums, Annuity Considerations and Deposit-Type Contracts on a gross basis.

- Include: Contract, membership and other fees, whether or not retained by agents.
- Exclude: Amounts attributable to uninsured plans and the uninsured portions of partially insured plans.
- Deduct: Refunds to policyholders for direct payment of industrial premiums.  
Premiums and annuity considerations returned.

Column 2 – Prior Year to Date

Amounts in Lines 1 through ~~13~~7 should agree with the prior year's corresponding quarterly statement Exhibit 1, Column 1.

Column 3 – Prior Year Ended December 31

Line 1 – Amount should agree with the prior year's annual statement Exhibit 1, Part 1, Line 20.1 (Direct), Column 2.

**~~This line is not applicable to Fraternal Benefit Societies.~~**

Line 2 – Amount should agree with the prior year's annual statement Exhibit 1, Part 1, Line 20.1 (Direct), Column 3.

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Revise the language of the Schedule H, Part 5 to remove the 5% of premiums filing exemption (FE).

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of the proposal is to remove the 5% of premium filing exemption on the Schedule H, Part 5. Before Schedule H was updated for Annual 2022 to bring uniformity in the accident and health lines of business, the Property/Casualty instructions for Schedule H, Part 5 had the less than 5% filing exemption and the Life/Fraternal instructions did not have the 5% filing exemption. The removal of the 5% exemption would require both Property/Casualty and Life/Fraternal filers to file the Schedule H, Part 5.

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Remove Supplemental Health Care Exhibit Part 3 and Supplemental Health Care Exhibit’s Expense Allocation Report

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of this proposal is to remove parts of the Supplemental Health Care Exhibit that are no longer used regularly as part of a review of the Annual Statement for duplication or items not regularly used by regulators.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

Other Comments:

\*\* This section must be completed on all forms.

Revised 7/18/2022

**ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, AND PROPERTY****SUPPLEMENTAL HEALTH CARE EXHIBIT – PARTS 1 AND 2 AND 3**

The purpose of this supplemental exhibit is to assist state and federal regulators in identifying and defining elements that make up the medical loss ratio as described in Section 2718(b) of the Public Health Service Act (PHSA) and for purposes of submitting a report to the HHS Secretary, as required by Section 2718(a) of the PHSA. The supplemental exhibit is also intended to track and compare financial results of health care business as reported in the annual financial statements. Thus, the numbers included in this supplemental exhibit are not the exact numbers that will be utilized for rebate purposes due to possible revisions for claim reserve run-off subsequent to year-end, statistical credibility concerns and other defined adjustments.

A schedule must be prepared and submitted for each jurisdiction in which the company has written direct comprehensive major medical health business, or has direct amounts paid, incurred or unpaid for provisions of health care services. In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company. However, insurers that have no business that would be included in Columns 1 through 9 or 12 of Part 1 for ANY of the states are not required to complete this supplement at all. If an insurer is required to file the supplement, then the insurer must complete Parts 1 and 2 for each state in which the insurer has any health business, even if a particular state will show \$0 earned premiums reported in Columns 1 through 9 or 12 of Part 1. ~~Also, Part 3 must be completed for any state in which there are non zero amounts in Columns 1 through 9 of Part 1. Companies should contact their domiciliary regulator to obtain a waiver of the filing if the only reportable business in Columns 1 through 9 are comprised of closed blocks of small group, large group or individual business that, if totaled across all states, does not equal 1,000 lives in total.~~

**Detail Eliminated to Conserve Space**

**Improving Health Care Quality Expenses – General Definition:**

Quality Improvement (QI) expenses are expenses, other than those billed or allocated by a provider for care delivery (i.e., clinical or claims costs), for all plan activities that are designed to improve health care quality and increase the likelihood of desired health outcomes in ways that are capable of being objectively measured and of producing verifiable results and achievements.

The expenses must be directed toward individual enrollees or may be incurred for the benefit of specified segments of enrollees, recognizing that such activities may provide health improvements to the population beyond those enrolled in coverage, as long as no additional costs are incurred due to the non-enrollees other than allowable QI expenses associated with self-insured plans.

Qualifying QI expenses should be grounded in evidence-based medicine, widely accepted best clinical practice or criteria issued by recognized professional medical societies, accreditation bodies, government agencies or other nationally recognized health care quality organizations.

They should not be designed primarily to control or contain cost, although they may have cost-reducing or cost-neutral benefits, as long as the primary focus is to improve quality.

Qualifying QI activities are primarily designed to achieve the following goals set out in Section 2717 of the PHSA and Section 1311 of the PPACA:

- Improve health outcomes including increasing the likelihood of desired outcomes compared to a baseline and reducing health disparities among specified populations;
- Prevent hospital readmissions;
- Improve patient safety and reduce medical errors, lower infection and mortality rates;
- Increase wellness and promote health activities; or
- Enhance the use of health care data to improve quality, transparency and outcomes.

NOTE: Expenses that otherwise meet the definitions for QI but were paid for with grant money or other funding separate from premium revenues shall NOT be included in QI expenses.

**SUPPLEMENTAL HEALTH CARE EXHIBIT – PART 1**

(To Be Filed By April 1 – Not for Rebate Purposes – See Cautionary Statement at [www.naic.org/cmt\\_e\\_app\\_blanks.htm](http://www.naic.org/cmt_e_app_blanks.htm).)

**=====  
Detail Eliminated to Conserve Space  
=====**

Line 4 – Deductible Fraud and Abuse Detection/Recovery Expenses

This amount is ~~the lesser of the expense reported in Part 3, Column 7, Lines 1.11, 2.11, 3.11, 4.11, 5.11, 6.11, 7.11, 8.11 and 9.11, and the fraud and abuse recoveries reported in Part 2, Line 3, Columns 1, 2, 3, 4, 5, 6, 7, 8 and 9, respectively.~~

**=====  
Detail Eliminated to Conserve Space  
=====**

Line 6.1 – Improve Health Outcomes

Include expenses meeting the definition of Improve Health Outcomes in [Improving Health Care Quality Expenses – General Definition](#) ~~Part 3, Column 1~~ that are not health information technology expenses.

- ~~Part 1, Column 1, Line 6.1 should tie to Part 3, Column 1, Line 1.10~~
- ~~Part 1, Column 2, Line 6.1 should tie to Part 3, Column 1, Line 2.10~~
- ~~Part 1, Column 3, Line 6.1 should tie to Part 3, Column 1, Line 3.10~~
- ~~Part 1, Column 4, Line 6.1 should tie to Part 3, Column 1, Line 4.10~~
- ~~Part 1, Column 5, Line 6.1 should tie to Part 3, Column 1, Line 5.10~~
- ~~Part 1, Column 6, Line 6.1 should tie to Part 3, Column 1, Line 6.10~~
- ~~Part 1, Column 7, Line 6.1 should tie to Part 3, Column 1, Line 7.10~~

~~Part 1, Column 6, Line 6.4 should tie to Part 3, Column 4, Line 6.10~~

~~Part 1, Column 7, Line 6.4 should tie to Part 3, Column 4, Line 7.10~~

~~Part 1, Column 8, Line 6.4 should tie to Part 3, Column 4, Line 8.10~~

~~Part 1, Column 9, Line 6.4 should tie to Part 3, Column 4, Line 9.10~~

Line 6.5 – Health Information Technology Expenses related to Health Improvement

Include expenses meeting the definition of HIT Expenses for Health Care Quality Improvements in [Improving Health Care Quality Expenses – General Definition Part 3, Column 5](#) that are health information technology expenses.

~~Part 1, Column 1, Line 6.5 should tie to Part 3, Column 5, Line 1.10~~

~~Part 1, Column 2, Line 6.5 should tie to Part 3, Column 5, Line 2.10~~

~~Part 1, Column 3, Line 6.5 should tie to Part 3, Column 5, Line 3.10~~

~~Part 1, Column 4, Line 6.5 should tie to Part 3, Column 5, Line 4.10~~

~~Part 1, Column 5, Line 6.5 should tie to Part 3, Column 5, Line 5.10~~

~~Part 1, Column 6, Line 6.5 should tie to Part 3, Column 5, Line 6.10~~

~~Part 1, Column 7, Line 6.5 should tie to Part 3, Column 5, Line 7.10~~

~~Part 1, Column 8, Line 6.5 should tie to Part 3, Column 5, Line 8.10~~

~~Part 1, Column 9, Line 6.5 should tie to Part 3, Column 5, Line 9.10~~

Line 8.1 – Cost Containment Expenses not Included in Quality of Care Expenses in Line 6.6

Include: Expenses that actually serve to reduce the number of health services provided or the cost of such services. Exclude cost containment expenses that improve the quality of health care (reported in Line 6.6). The following are examples of items that shall be considered “cost containment expenses” only if they result in reduced levels of costs or services (see the instructions for [Improving Health Care Quality Expenses – General Definition Part 3](#) of this supplement for items that qualify for Quality Improvement instead of “cost containment”):

**Detail Eliminated to Conserve Space**

**SUPPLEMENTAL HEALTH CARE EXHIBIT – PART 3**

~~This exhibit is intended to provide disclosure of expenses by major type of activity that improves health care quality, as defined below, as well as the amount of those expenses that is used for other activities and reported separately for the comprehensive health coverage (individual, small group and large group business), mini-med plans (individual, small group and large group business), expatriate plans (small group and large group business) and student health plans.~~

~~This exhibit also shows the amount of qualifying HIT expenses, reported separately for the comprehensive health coverage (individual, small group and large group business), mini-med plans (individual, small group and large group business), expatriate plans (small group and large group business) and student health plans, broken down into the four categories of Quality Improvement expenses (see below); similarly, the Other than HIT qualifying Quality Improvement expenses are disclosed for each of the four categories of Quality Improvement expenses.~~

~~The definitions of Individual, Small Group and Large Group are found in the instructions for Parts 1 and 2 of this supplement exhibit.~~

**Improving Health Care Quality Expenses – General Definition:**

~~Quality Improvement (QI) expenses are expenses, other than those billed or allocated by a provider for care delivery (i.e., clinical or claims costs), for all plan activities that are designed to improve health care quality and increase the likelihood of desired health outcomes in ways that are capable of being objectively measured and of producing verifiable results and achievements.~~

~~The expenses must be directed toward individual enrollees or may be incurred for the benefit of specified segments of enrollees, recognizing that such activities may provide health improvements to the population beyond those enrolled in coverage, as long as no additional costs are incurred due to the non-enrollees other than allowable QI expenses associated with self-insured plans.~~

~~Qualifying QI expenses should be grounded in evidence-based medicine, widely-accepted best clinical practice or criteria issued by recognized professional medical societies, accreditation bodies, government agencies or other nationally recognized health care quality organizations.~~

~~They should not be designed primarily to control or contain cost, although they may have cost-reducing or cost-neutral benefits, as long as the primary focus is to improve quality.~~

~~Qualifying QI activities are primarily designed to achieve the following goals set out in Section 2717 of the PHS Act and Section 1311 of the PPACA:~~

- ~~• Improve health outcomes including increasing the likelihood of desired outcomes compared to a baseline and reducing health disparities among specified populations;~~
- ~~• Prevent hospital readmissions;~~
- ~~• Improve patient safety and reduce medical errors, lower infection and mortality rates;~~
- ~~• Increase wellness and promote health activities; or~~
- ~~• Enhance the use of health care data to improve quality, transparency and outcomes.~~

~~NOTE: Expenses that otherwise meet the definitions for QI but were paid for with grant money or other funding separate from premium revenues shall NOT be included in QI expenses.~~

~~Column 1 — Improve Health Outcomes~~

~~Expenses for the direct interaction of the insurer (including those services delegated by contract for which the insurer retains ultimate responsibility under the insurance policy), providers and the enrollee or the enrollee's representatives (e.g., face to face, telephonic, Web-based interactions or other means of communication) to improve health outcomes as defined above.~~

~~This category can include costs for associated activities such as:~~

- ~~● Effective case management, care coordination and chronic disease management, including:
 
  - ~~○ Patient-centered intervention, such as:
 
    - ~~▪ Making/verifying appointments;~~
    - ~~▪ Medication and care compliance initiatives;~~
    - ~~▪ Arranging and managing transitions from one setting to another (such as hospital discharge to home or to a rehabilitation center);~~
    - ~~▪ Programs to support shared decision-making with patients, their families and the patient's representatives; and~~
    - ~~▪ Reminding insured of physician appointment, lab tests or other appropriate contact with specific providers;~~~~
  - ~~○ Incorporating feedback from the insured to effectively monitor compliance;~~
  - ~~○ Providing coaching or other support to encourage compliance with evidence-based medicine;~~
  - ~~○ Activities to identify and encourage evidence-based medicine;~~
  - ~~○ Use of the medical homes model as defined for purposes of Section 3602 of PPACA;~~
  - ~~○ Activities to prevent avoidable hospital admissions;~~
  - ~~○ Education and participation in self-management programs; and~~
  - ~~○ Medication and care compliance initiatives, such as checking that the insured is following a medically effective prescribed regimen for dealing with the specific disease/condition and incorporating feedback from the insured in the management program to effectively monitor compliance;~~~~
- ~~● Accreditation fees by a nationally recognized accrediting entity directly related to quality of care activities included in Columns 1 through 5;~~
- ~~● Expenses associated with identifying and addressing ethnic, cultural or racial disparities in effectiveness of identified best clinical practices and evidence-based medicine;~~
- ~~● Quality reporting and documentation of care in non-electronic format; and~~
- ~~● Health information technology expenses to support these activities (report in Column 5—see instructions) including:
 
  - ~~○ Data extraction, analysis and transmission in support of the activities described above; and~~
  - ~~○ Activities designed to promote sharing of medical records to ensure that all clinical providers have access to consistent and accurate records from all participants in a patient's care.~~~~

~~Column 2 — Activities to Prevent Hospital Readmission~~~~Expenses for implementing activities to prevent hospital readmissions as defined above, including:~~

- ~~● Comprehensive discharge planning (e.g., arranging and managing transitions from one setting to another, such as hospital discharge to home or to a rehabilitation center) in order to help ensure appropriate care that will, in all likelihood, avoid readmission to the hospital;~~
- ~~● Personalized post-discharge counseling by an appropriate health care professional;~~
- ~~● Any quality reporting and related documentation in non-electronic form for activities to prevent hospital readmission; and~~
- ~~● Health information technology expenses to support these activities (report in Column 5—see instructions) including:
 
  - ~~○ Data extraction, analysis and transmission in support of the activities described above; and~~
  - ~~○ Activities designed to promote sharing of medical records to ensure that all clinical providers have access to consistent and accurate records from all participants in a patient's care.~~~~

~~Column 3 — Improve Patient Safety and Reduce Medical Errors~~~~Expenses for implementing activities to improve patient safety and reduce medical errors (as defined above) through:~~

- ~~● The appropriate identification and use of best clinical practices to avoid harm;~~
- ~~● Activities to identify and encourage evidence-based medicine in addressing independently identified and documented clinical errors or safety concerns;~~
- ~~● Activities to lower risk of facility-acquired infections;~~
- ~~● Prospective prescription drug utilization review aimed at identifying potential adverse drug interactions;~~
- ~~● Any quality reporting and related documentation in non-electronic form for activities that improve patient safety and reduce medical errors; and~~
- ~~● Health information technology expenses to support these activities (report in Column 5—see instructions), including:
 
  - ~~○ Data extraction, analysis and transmission in support of the activities described above; and~~
  - ~~○ Activities designed to promote sharing of medical records to ensure that all clinical providers have access to consistent and accurate records from all participants in a patient's care.~~~~

~~Column 4 — Wellness & Health Promotion Activities~~~~Expenses for programs that provide wellness and health promotion activity as defined above (e.g., face-to-face, telephonic or Web-based interactions or other forms of communication), including:~~

- ~~● Wellness assessment;~~
- ~~● Wellness/lifestyle coaching programs designed to achieve specific and measurable improvements;~~
- ~~● Coaching programs designed to educate individuals on clinically effective methods for dealing with a specific chronic disease or condition; and~~
- ~~● Public health education campaigns that are performed in conjunction with state or local health departments.~~

- ~~• Actual rewards/incentives/bonuses/reductions in co-pays, etc. (not administration of these programs) that are not already reflected in premiums or claims should be allowed as QI with the following restrictions:~~
  - ~~○ Only allowed for small and large employer groups, not individual business; and the expense amount is limited to the same percentage as the HIPAA incentive amount limit;~~
- ~~• Any quality reporting and related documentation in non-electronic form for wellness and health promotion activities;~~
- ~~• Coaching or education programs and health promotion activities designed to change member behavior (e.g., smoking, obesity); and~~
- ~~• Health information technology expenses to support these activities (Report in Column 5—See instructions).~~

#### ~~Column 5—HIT Expenses for Health Care Quality Improvements~~

~~The PPACA also contemplates “Health Information Technology” as a function that may in whole or in part improve quality of care or provide the technological infrastructure to enhance current QI or make new QI initiatives possible. Include HIT expenses required to accomplish the activities reported in Columns 1 through 4 that are designed for use by health plans, health care providers or enrollees for the electronic creation, maintenance, access or exchange of health information, consistent with Medicare/Medicaid meaningful use requirements, in the following ways:~~

- ~~1. Monitoring, measuring or reporting clinical effectiveness, including reporting and analysis costs related to maintaining accreditation by nationally recognized accrediting organizations, such as NCQA or URAC; or costs for public reporting of quality of care, including costs specifically required to make accurate determinations of defined measures (e.g., CAHPS surveys or chart review of HEDIS measures) and costs for public reporting mandated or encouraged by law;~~
- ~~2. Advancing the ability of enrollees, providers, insurers or other systems to communicate patient-centered clinical or medical information rapidly, accurately and efficiently to determine patient status, avoid harmful drug interactions or direct appropriate care—this may include electronic health records accessible by enrollees and appropriate providers to monitor and document an individual patient’s medical history;~~
- ~~3. Tracking whether a specific class of medical interventions or a bundle of related services leads to better patient outcomes;~~
- ~~4. Reformatting, transmitting or reporting data to national or international government-based health organizations for the purposes of identifying or treating specific conditions or controlling the spread of disease; or~~
- ~~5. Provision of electronic health records and patient portals.~~

~~Exclude:—Costs associated with establishing or maintaining a claims adjudication system, including costs directly related to upgrades in HIT that are designed primarily or solely to improve claims payment capabilities or to meet regulatory requirements for processing claims (e.g., costs of implementing new administrative simplification standards and code sets adopted pursuant to the Health Insurance Portability and Accountability Act (HIPAA), 42 U.S.C. 1320d 2, as amended.~~

- ~~NOTE: a. Health Care Professional Hotlines: Expenses for health care professional hotlines should be included in Claims Adjustment Expenses to the extent they do not meet the criteria for the above defined columns of Improve Health Outcomes, Activities to Prevent Hospital Readmissions, Improve Patient Safety and Reduce Medical Errors, and Wellness & Health Promotion Activities.~~
- ~~b. Prospective Utilization Review: Expenses for prospective utilization review should be included in Claims Adjustment Expenses to the extent they do not meet the criteria for the above defined columns of Improve Health Outcomes, Activities to Prevent Hospital Readmissions, Improve Patient Safety and Reduce Medical Errors, and Wellness & Health Promotion Activities, AND the prospective utilization review activities are not conducted in accordance with a program that has been accredited by a recognized accreditation body.~~

The following items are broadly excluded as not meeting the definitions above:

- ~~• All retrospective and concurrent utilization review;~~
- ~~• Fraud prevention activities (all are reported as cost containment, but Part 1, Line 4 includes MLR recognition of fraud detection/recovery expenses up to the amount recovered that reduces incurred claims);~~
- ~~• The cost of developing and executing provider contracts and fees associated with establishing or managing a provider network;~~
- ~~• Provider credentialing;~~
- ~~• Marketing expenses;~~
- ~~• Any accreditation fees that are not directly related to activities included in Columns 1 through 5;~~
- ~~• Costs associated with calculating and administering individual enrollee or employee incentives; and~~
- ~~• Any function or activity not expressly included in Columns 1 through 5.~~

~~NOTE: The NAIC will review requests to include expenses for broadly excluded activities and activities not described under Columns 1 through 5 above. Upon an adequate showing that the activity's costs support the definitions and purposes therein, or otherwise support monitoring, measuring, or reporting health care quality improvement, the NAIC may recommend that the HHS Secretary certify those expenses as Quality Improvement.~~

~~The sections for comprehensive health coverage (individual, small group and large group business), mini-med plans (individual, small group and large group business) and expatriate plans (small group and large group business) are defined as per the comprehensive health coverage (individual, small group and large group business), mini-med plans (individual, small group and large group business), expatriate plans (small group and large group business) and student health plans columns in Parts 1 and 2 of this supplement.~~

~~For questions on definitions, refer to the instructions for the Annual Statement Expenses Schedule (i.e., the Underwriting and Investment Exhibit, Part 3 for P/C and Health, and Exhibit 2 for Life and Fraternal), for the line references provided below. **DIFFERENT FROM A/S EXPENSE REPORTING:** For non-affiliated management agreements/outsourced services, report all amounts in the supplement's Line 1.2, 2.2, 3.2, 4.2, 5.2, 6.2, 7.2, 8.2 or 9.2 for Outsourced Services (not just those amounts less than 10% of total expenses). Continue to allocate all affiliated management agreements/outsourced services to the appropriate expense lines as if the costs had been borne directly by the insurer.~~

~~Lines 1.1, 2.1,  
3.1, 4.1, 5.1,  
6.1, 7.1, 8.1  
& 9.1 ——— Salaries~~

Life/Fraternal Statement:

~~Include: Fraud and abuse detection and recovery expenses as well as prevention expenses.~~

**EXPENSE ALLOCATION SUPPLEMENTAL FILING**

~~A single (not state by state), separate, regulator only supplemental filing must be made by the insurer to provide a description of the method utilized to allocate QI expenses to each state and to each line and column on Part 3.~~

~~Additionally, companies reporting QI expenses in Part 3, Columns 1 through 5 must include a detailed description of such expense elements, including how the specific expenses meet the definitions above.~~

~~The definitions established in the Supplemental Health Care Exhibit apply to this supplemental filing, as well. For a **new initiative** that otherwise meets the definition of QI above but has not yet met the objective, verifiable results requirement, include an “X” in the “New” column of the supplement and include in the description the expected time frame for the activity to accomplish the objective, verifiable results.~~

~~Expenses for prospective utilization review and the costs of reward or bonuses associated with wellness and health promotion that are included in QI should include an “E” in the “New” column. These will be reviewed for adherence to the definition and standards of QI and may be specifically incorporated into, or excluded from, the instructions for QI for future reporting purposes.~~

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Instructional corrections on the handling of Exchange Traded Funds (ETFs) and/or Securities Valuation Office (SVO) Identified Funds within the Interest Maintenance Reserve (IMR) and the Asset Valuation Reserve (AVR).

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The classification of Bond Mutual Funds is no longer used in statement reporting, within the *Accounting Practices and Procedures Manual* nor within the *Purposes and Procedures Manual of the NAIC's Investment Analysis Office*. However, the IMR/AVR instructions have not been updated to reflect the new terminology.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

\*\* This section must be completed on all forms.

Revised 7/18/2022

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

**INTEREST MAINTENANCE RESERVE**

This exhibit is designed to capture the realized capital gains/(losses) that result from changes in the overall level of interest rates and amortize them into income over the approximate remaining life of the investment sold.

=====  
Detail Eliminated to Conserve Space  
=====

Line 2 – Current Year’s Realized Pre-tax Capital Gains/(Losses) of \$ \_\_\_\_\_ Transferred into the Reserve Net of Taxes of \$ \_\_\_\_\_

=====  
Detail Eliminated to Conserve Space  
=====

Include realized capital gains/(losses) on:

Debt securities (excluding loan-backed and structured securities) and preferred stocks whose National Association of Insurance Commissioners (NAIC)/Securities Valuation Office (SVO) designation at the end of the holding period is **NOT** different from its NAIC designation at the beginning of the holding period by more than one NAIC designation. Exclude any such gains/(losses) exempt from the IMR.

~~Bond Mutual Funds—as Identified by the SVO. Exchange Traded Funds (ETFs) as listed on the SVO Identified Bond ETF List (thereafter subject to bond IMR guidelines) and the SVO Identified Preferred Stock ETF List (thereafter subject to preferred stock IMR guidelines). Include any capital gains/(losses) realized by the Company, whether from sale of the Fund-ETF or capital gains distributions by the Fund-ETF. If, during the course of the year, the SVO removes the designation of “NAIC 1” from a Bond Mutual Fund—as Identified by the SVO, the company shall not report capital gains/(losses) in this schedule. If the ETF is removed from either SVO ETF list, the ETF is reported and treated as common stock, with any capital gains/(losses) excluded from the IMR. Any such removal of the “NAIC 1” designation will cause the Fund to be reported as common stock on the applicable schedules.~~

SVO Identified Funds designated for systematic value

Called bonds, tendered bonds, and sinking fund payments.

=====  
Detail Eliminated to Conserve Space  
=====

Additional Provisions for Including/Excluding Gains (Losses) from IMR:

Mortgage loan prepayment penalties are not included in IMR. Treat them as regular investment income.

Interest-related gains/(losses) realized on directly held capital and surplus notes reported on Schedule BA should be transferred to the IMR in the same manner as similar gains and losses on fixed income assets held on Schedule D. A capital gain/(loss) on such a note is classified as an interest rate gain if the note is eligible for amortized-value accounting at both the time of acquisition and the time of disposition.

Determination of IMR gain/(loss) on multiple lots of the same securities should follow the underlying accounting treatment in determining the gain/(loss). Thus, the designation, on a purchase lot basis, should be compared to the designation at the end of the holding period to determine IMR or AVR gain or loss.

Realized capital gains/(losses) on any debt security (excluding loan-backed and structured securities) that has had an NAIC/SVO designation of 6 at any time during the holding period should be excluded from the IMR and included as a non-interest-related gain/(loss) in the AVR.

Realized capital gains/(losses) on any preferred stock that had an NAIC/SVO designation of RP4, RP5 or RP6 or P4, P5 or P6 at any time during the holding period should be reported as non-interest-related gains/(losses) in the AVR.

The holding period for debt securities (excluding loan-backed and structured securities) and preferred stocks is defined as the period from the date of purchase to the date of sale. For the end of period classification, the most recent available designation should be used. For bonds acquired before Jan. 1, 1991, the holding period is presumed to have begun on Dec. 31, 1990. For preferred stocks acquired before Jan. 1, 1993, the holding period is presumed to have begun on Dec. 31, 1992. For ~~Bond Mutual Fund — as Identified by the~~ SVO Identified ETFs, the holding period is defined as one calendar year to expected maturity. For SVO Identified Funds designated for systematic value, the holding period is the weighted-average life of the underlying bonds.

**Detail Eliminated to Conserve Space**

**AMORTIZATION**

This supporting schedule calculates the amount of the Interest Maintenance Reserve to be amortized in each year.

Column 1 – Reserve as of December 31, Prior Year

Enter the amount from Column 4 of the prior year’s schedule.

Column 2 – Current Year’s Realized Capital Gains/(Losses) Transferred into the Reserve Net of Taxes

**Detail Eliminated to Conserve Space**

**Expected Maturity Date**

The presence of sinking fund payments, amortization schedules, expected prepayments, and adjustable interest rates complicate the determination of the number of calendar years to expected maturity. The expected maturity date is:

- For fixed income instruments with fixed contractual repayment dates and amounts (including bonds, preferred stock, callable or convertible bonds and preferred(s)), the expected maturity is defined as the contractual retirement date which produces the lowest amortization value for annual statement purposes (lowest internal rate of return or “yield to worst”). Potential retirement dates include all possible call dates, and the contractual maturity date. However, where a convertible bond or convertible preferred stock is sold while its conversion value exceeds its book/adjusted carrying value and the gain is included in IMR, the expected maturity date is defined as the next conversion date. Conversion value is defined to mean the number of shares of common stock available currently or at next conversion date, multiplied by the stock’s current market price. When the instrument’s contractual terms include scheduled sinking fund payments of fixed amounts, an additional calculation of yield to average life should be included in the analysis where average life is defined

as the date at which the instrument is 50% repaid. For puttable instruments, where the exercise option rests with the investor, expected maturity is the put or maturity date that produces the highest internal rate of return. For ~~Bond Mutual Funds—as Identified by~~ SVO [Identified ETFs](#), use one calendar year to expected maturity. For SVO Identified Funds designated for systematic value, the expected maturity is the weighted-average life of the underlying bonds. For perpetual instruments, the expected maturity is 30 years from the current date.

### Detail Eliminated to Conserve Space

For purposes of the grouped method, the following additional assumptions are applicable:

- For fixed income investments, other than residential mortgages and residential mortgage pass-throughs, without a maturity date or sinking fund schedule, a maturity date 30 years from the current year should be used.
- For mortgage-backed/asset-backed securities, use the remaining weighted average life of principal and interest payments consistent with the prepayment assumptions that would have been used to value the security had the security been repurchased at its sale price.
- For ~~Bond Mutual Funds—as Identified by the~~ SVO [Identified ETFs](#), use one calendar year to expected maturity.

**ASSET VALUATION RESERVE**

**DEFAULT COMPONENT –  
BASIC CONTRIBUTION, RESERVE OBJECTIVE AND MAXIMUM RESERVE CALCULATIONS**

This supporting form is used to calculate the basic contribution, reserve objective and maximum reserve amount for the bond, preferred stock, derivative instruments and mortgage loan sub-components of the default component of the AVR. Instructions apply to the general account and the separate accounts, if applicable.

**Detail Eliminated to Conserve Space**

Lines 1  
through 7 – Long-Term Bonds

Report the book/adjusted carrying value of all bonds and other fixed income instruments owned in Columns 1 and 4. “Book/Adjusted Carrying Value,” when applied to ~~Bond Mutual Funds—as Identified by the SVO, equals the “Fair Value” shown in Column 9 of Schedule D, Part 1. “Bond Mutual Fund—as Identified by the SVO”~~ [ETFs on the SVO Identified Bond ETF List](#) shall have the same meaning as set forth in the instructions to Schedule D, Part 1. Categorize the bonds and other fixed income instruments into NAIC designations 1 through 6 as directed by the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, except that, exempt obligations should be reported separately. Multiply the amount in Column 4 for each designation by the reserve factors provided in Columns 5, 7 and 9, and report the products by designation in Columns 6, 8 and 10, respectively.

**Detail Eliminated to Conserve Space**

**ASSET VALUATION RESERVE**

**EQUITY AND OTHER INVESTED ASSET COMPONENT –  
BASIC CONTRIBUTION, RESERVE OBJECTIVE AND MAXIMUM RESERVE CALCULATIONS**

This supporting form is used to calculate the basic contribution, reserve objective and maximum reserve targets for the common stock, real estate and other invested assets sub-components of the equity component of the AVR. Instructions apply to the general account and to the separate accounts, if applicable.

**↓** **====** **Detail Eliminated to Conserve Space** **====** **↓**

Line 1 – Unaffiliated Common Stocks – Public

Report the book/adjusted carrying value of all publicly issued common stock, including mutual funds ~~(except money market mutual funds appropriately reported on Schedule E, Part 2)~~, unit investment trusts, closed-end funds and ETFs (reported as common stock) in unaffiliated companies in Columns 1 and 4. Exclude money market mutual funds appropriately reported on Schedule E, Part 2. Multiply Column 4 by the reserve factor calculated for Columns 5, 7 and 9, and report the products in Columns 6, 8 and 10, respectively.

**↓** **====** **Detail Eliminated to Conserve Space** **====** **↓**

Line 2 – Unaffiliated Common Stocks – Private

Report the book/adjusted carrying value of all privately held common stocks, including mutual funds, unit investment trusts, closed-end funds and ETFs (reported as common stock) owned in unaffiliated companies in Columns 1 and 4. Multiply Column 4 by the reserve factor provided in Columns 5, 7 and 9 and report the products in Columns 6, 8 and 10, respectively.

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

\*\*\*See next page for details\*\*\*

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of this proposal is to reorder the listing of Vision and Dental lines of business in the Health Annual/Quarterly Statement Instructions and Blank to be consistent with all other statement types.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

Other Comments:

\*\* This section must be completed on all forms.

Revised 7/18/2022

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Modify the instructions and blanks for the following Health exhibits to change the order of the Vision and Dental lines of business to be consistent with all other statement types. *(The detailed instructions are not shown in this proposal, but the instructions will also be updated with the column header changes.)*

## Annual Health

Capital Adequacy (E) Task Force  
Louisville, Kentucky  
March 23, 2023

The Capital Adequacy (E) Task Force met March 23, 2023. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko and Dale Bruggeman (OH); Grace Arnold, Vice Chair, represented by Fred Andersen (MN); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Todrick Burks (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Virginia Christy (FL); Doug Ommen represented by Carrie Mears and Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Levi Nwasoria (KS); Sharon P. Clark represented by Vicki Lloyd (KY); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by John Rehagen (MO); Troy Downing represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Andrea Johnson and Lindsay Crawford (NE); Marlene Caride represented by David Wolf (NJ); Glen Mulready represented by Andrew Schallhorn (OK); Michael Wise represented by Daniel Morris (SC); Cassie Brown represented by Rachel Hemphill (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek and Amy Malm (WI).

1. Adopted its Feb. 3 and 2022 Fall National Meeting Minutes

Botsko said the Task Force conducted an e-vote that concluded Feb. 3 to adopt proposal 2022-12-CR (2022 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Chou made a motion, seconded by Yanacheak, to adopt the Task Force's Feb. 3, 2023 (Attachment One) and Dec. 14, 2022 (*see NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force*) minutes. The motion passed unanimously.

2. Adopted the Reports of its Working Groups

a. Health Risk-Based Capital (E) Working Group

Drutz said the Health Risk-Based Capital (E) Working Group met March 21 and took the following action: 1) adopted its Feb. 7 minutes, which included the following action: a) adopted its 2022 Fall National Meeting minutes; b) adopted proposal 2022-14-H (Trend Test Info Only Instruction), which the Working Group exposed for a 30-day public comment period ending Dec. 7, 2022; c) referred the runoff company response letter to the Task Force; d) exposed proposal 2022-16-CA (Underwriting Risk Factors – Investment Income Adjustment) for a 30-day public comment period ending March 9; and e) received an update from the American Academy of Actuaries (Academy) on the H2 – Underwriting Risk Review project; 2) adopted proposal 2022-15-H (Re-number XR008); 3) referred proposal 2022-16-CA to the Task Force for it to expose on a late April call; 4) adopted its working agenda; 5) exposed proposal 2023-01-CA (Stop Loss Instructions) for a 20-day public comment period ending April 10; 6) discussed the stop loss data and factors; 7) received an update on the Health Test Ad Hoc Group and the draft proposal with revisions to the health test language and general interrogatories; 8) discussed the effects of the COVID-19 pandemic and the pandemic risk on the Health Risk-Based Capital (RBC) formula; and 9) received an update that the Academy continues its work on the review of the H2 – Underwriting Risk component.

b. Life Risk-Based Capital (E) Working Group

Barlow said the Life Risk-Based Capital (E) Working Group met March 22 and took the following action: 1) adopted its Jan. 26 minutes, which included the following action: a) exposed the Academy's C-2 Mortality Risk Work Group's proposal for a 30-day public comment period ending March 1; b) exposed proposed revisions to the CM6 and CM7 mortgage RBC factors and formula, which the Working Group exposed for a 45-day public comment period ending March 16; and c) exposed proposed revisions to remove the dual presentation of the trend test, which the Working Group exposed for a 15-day public comment period ending Feb. 14; 2) adopted its 2022 Fall National Meeting minutes; 3) discussed C-2 mortality risk; 4) discussed its 2023 working agenda; 5) discussed runoff companies and agreed that no change is needed in the Life RBC formula; and 6) heard the status on the formation of the Economic Scenarios (E/A) Subgroup.

c. RBC Investment Risk and Evaluation (E) Working Group

Barlow said the RBC Investment Risk and Evaluation (E) Working Group met March 23 and took the following action: 1) adopted its Feb. 27 minutes, which included the following action: a) discussed the Academy follow-up to the presentation on collateralized loan obligations (CLOs); and b) discussed comment letters; 2) adopted its 2022 Fall National Meeting minutes; 3) received updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group; 4) continued discussion of CLOs; 5) discussed a residual tranche structure change; and 5) discussed factors and next steps.

d. Property and Casualty Risk-Based Capital (E) Working Group

Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met March 22 and took the following action: 1) adopted its Jan. 30 minutes, which included the following action: a) adopted proposal 2022-12-CR, which the Working Group exposed for a seven-day public comment period ending Jan. 25; 2) adopted its 2022 Fall National Meeting minutes; 3) adopted the report of the Catastrophe Risk (E) Subgroup, which took the following action: a) adopted its Jan. 30 and 2022 Fall National Meeting minutes; b) discussed its working agenda; c) received a status update from its Catastrophe Model Technical Review Ad Hoc Group; d) heard a presentation from Travelers on the climate overview and scenario analysis; and e) discussed the wildfire peril impact analysis; 4) exposed proposal 2023-02-P (Underwriting Risk Line 1 Factors) for a 30-day public comment period ending April 21; 5) discussed the annual statement proposal 2023-01BWG, which removes pet insurance from the inland marine line of business and adds new schedule P parts to pet insurance; 6) discussed the annual statement proposal 2022-15BWG, which removes the 5% premium filing exemption (FE) on Schedule H, Part 5; 7) discussed its 2023 working agenda; 8) heard an update on current property/casualty (P/C) RBC projects from the Academy; and 9) discussed the possibility of reviewing or analyzing the P/C RBC charges that have not been reviewed since developed.

Phifer made a motion, seconded by Nwasoria, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Two), the Life Risk-Based Capital (E) Working Group (Attachment Three), the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Four), the Catastrophe Risk (E) Subgroup, and the RBC Investment Risk and Evaluation (E) Working Group (Attachment Five). The motion passed unanimously.

3. Adopted Proposal 2022-09-CA

Botsko said the Task Force referred proposal 2022-09-CA (Revised Affiliated Investments Structure and Instructions) to the Blanks (E) Working Group and the Statutory Accounting Principles (E) Working Group at the 2022 Fall National Meeting. There were no comments received from either group.

Crawford made a motion, seconded by Lloyd, to adopt proposal 2022-09-CA (Attachment Six). The motion passed unanimously.

#### 4. Adopted Proposal 2022-13-CA

Botsko said the purpose of proposal 2022-13-CA (Health Premiums and Underwriting Risk Premium References) is to modify the following line references to be consistent with the changes in the Annual Statement, Schedule H, which was adopted under Blanks proposal 2021-14BWG MOD: 1) Life RBC formula LR019 and LR020; and 2) P/C RBC formula PR019 and PR020. There were no comments received during the exposure period.

Rehagen made a motion, seconded by Andersen, to adopt proposal 2022-13-CA (Attachment Seven). The motion passed unanimously.

#### 5. Adopted Proposal 2022-14-H

Drutz said the purpose of proposal 2022-14-H is to remove the sentence, “The calculation is informational-only until state statutes are implemented so that the trend test would trigger a Company Action Level RBC regulatory action per the statute,” given that all states have adopted the trend test. He stated that the Health Risk-Based Capital (E) Working Group exposed this proposal for a 30-day comment period ending March 9, and no comments were received during the exposure period. The Working Group adopted this proposal on Feb. 7.

Drutz made a motion, seconded by Chou, to adopt proposal 2022-14-H (Attachment Eight). The motion passed unanimously.

#### 6. Adopted Proposal 2022-15-H

Drutz said the purpose of proposal 2022-15-H is to renumber all the lines on page XR008 as the line numbers carry over from the bond page. He also stated that the renumbering of the lines on page XR008 will allow for easier updates in the future for any adjustments to the bonds. He said the Health Risk-Based Capital (E) Working Group was exposed for a 30-day comment period ending Feb. 28. There were no comments received during the exposure period. The Working Group adopted this proposal at the Spring National Meeting.

Drutz made a motion, seconded by Chou, to adopt proposal 2022-15-H (Attachment Nine). The motion passed unanimously.

#### 7. Adopted its Working Agenda

Botsko summarized the changes to the 2023 working agenda. He said there is no change on the Life Risk-Based Capital (E) Working Group and RBC Investment Risk and Evaluation (E) Working Group sections in the working agenda. He also stated that the Property and Casualty Risk-Based Capital (E) Working Group eliminated the following items: 1) evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the catastrophe model losses; and 2) evaluate the possibility of enhancing the independent model instructions. He also indicated that three new items were added to the new items section: 1) review and analyze the P/C RBC charges that have not been reviewed since developed; 2) quantify the R5 ex-catastrophe factors for wildfire peril (for informational purposes only); and 3) evaluate the impact of flood peril on the insurance market. He also said the revisions to the Health RBC working agenda items are editorial in nature: 1) Line X1 was updated to: a) remove the reference to the 0.05% factor adjustment; and b) add the related proposal to the comments column; 2) the expected completion date column was updated for Lines X4, X6, X7, X8, and X9; 3) Line X5 was updated to remove the reference to “review possible annual statement changes for reporting health business in the Life and P/C blanks”; and 4) Line X10 was removed from the “New Items” section to the

“Carryover Items Currently being Addressed” section. In addition, he stated that the Task Force working agenda was updated as follows: 1) the exposure and referral comments were added in the item CA1 “comments” column; 2) the item CA5 was moved from the “New Items” section to the “Carryover Items Currently being Addressed” section; and 3) item CA6 was added to the “New Items” section.

Nwasoria made a motion, seconded by Burks, to adopt the Task Force’s revised 2023 working agenda (Attachment Ten). The motion passed unanimously.

#### 8. Discussed the Response from the Health Risk-Based Capital (E) Working Group Regarding Runoff Companies

Drutz said the Health Risk-Based Capital (E) Working Group received a request from the Task Force last year regarding the runoff companies. He stated that a response for the request (Attachment Eleven) was sent to the Task Force on Dec. 12, 2022, which indicated the Working Group’s agreement with the recommendations included in the Property and Casualty Risk-Based Capital (E) Working Group’s response letter as well as the definition of a health runoff company. The letter was exposed for a 30-day public comment period, and no comments were received. Botsko said he appreciated the prompt response from the Health Risk-Based Capital (E) Working Group. He said the Task Force will forward the responses to the Restructuring Mechanisms (E) Subgroup after receiving all the responses from the working groups.

#### 9. Discussed Referrals from the Valuation of Securities (E) Task Force

Mears said the Valuation of Securities (E) Task Force sent two referrals to the Capital Adequacy (E) Task Force last month. She stated that the first referral, which is regarding a proposed *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)* amendment to define and add guidance for structured equity and funds (Attachment Twelve). She indicated that this is an informational referral, and no direct action is required by the Capital Adequacy (E) Task Force. She also said another referral is regarding additional market and analytical information for bond investments. She asked the Task Force members to review the items listed in the referral and provide responses by May 15. Botsko said the Task Force and RBC Investment Risk and Evaluation (E) Working Group exposed this referral jointly and requested comments from the interested party by March 31. He stated that discussion on this item will be continued at the next meeting.

#### 10. Discussed The Current Turmoil in the Banking Sector, Including Fallout and Possible Implications

Ed Toy (Risk & Regulatory Consulting LLC—RRC) provided a brief overview of the current turmoil in the banking sector. He stated that the current situation continues to evolve. Also, the problems at the regional banks and Credit Suisse Group may be separated, but the current underlying issues might have led to or exacerbated what happened. This eventually may affect the insurance industry, as the current interest rates are significantly higher, and the market volatility, including risks that may be idiosyncratic across different markets, which are also much higher. Toy said he anticipated that it would affect the life industry more since the regional banks provided over 60% of lending to the commercial real estate developers, and the values of commercial real estate were already hitting a dip since the end of last year. Botsko thanked Toy for providing this useful information to the Task Force. He said the Task Force will monitor this issue closely, and it welcomes Toy to provide constant updates regarding this issue.

#### 11. Discussed Other Matters

##### a. Health Test Exposure Updates

Drutz said the Health Test Ad Hoc Group has been working on drafting a proposal that would revise the premium and the reserve ratio calculation by using a net basis in the health test. He stated that this proposal will create

greater transparency in the calculation of both the numerator and denominator of the ratio formula, as the amounts in the formula will be pulling from the same schedule. He also said the Ad Hoc Group plans to: 1) implement the changes across each statement type; and 2) consider re-evaluating the data in a few years after the implementation. He said he anticipated that this proposal will be finalized and considered for exposure by the Health Risk-Based Capital (E) Working Group in April.

- b. Forwarded a Statutory Accounting Principles (E) Working Group Referral for Negative IMR to the Life Risk-Based Capital (E) Working Group

Botsko said the Task Force expects to receive a referral from the Statutory Accounting Practices (E) Working Group on the potential to permit admittance of negative interest maintenance reserve (IMR) shortly after the Spring National Meeting. Since this is primarily a life RBC issue, Botsko suggested forwarding the referral to the Life Risk-Based Capital (E) Working Group after the Task Force receives it. Without hearing objection, the Task Force agreed to forward the Statutory Accounting Practices (E) Working Group referral to the Life Risk-Based Capital (E) Working Group after receiving it.

- c. Revised a Proposal Form

Botsko said the 2023 RBC proposal form was modified to: 1) include working group and subgroup proposal status in the “disposition” section; 2) include each line of business formula in the “identification of source and form(s)/instructions to be changed” section; and 3) combine the description/reason or justification of changes into one section. Without hearing objection, the Task Force agreed with the modifications in the proposal form.

- d. Established an Ad Hoc Group to Review and Analyze the RBC Charges that Have Not Been Reviewed Since Their Development

Botsko said some of the Task Force members may be aware that some of the RBC formulas, factors, and methodologies have never been reviewed since developed. He asked the Task Force to consider establishing an ad hoc group to: 1) re-evaluate some of the missing risks to determine if the Task Force should now include them in the RBC calculation or whether it appropriately handle those risks utilizing other regulatory methods; and 2) review those factors and instructions that have never been reviewed since developed to determine if modifications should be made. He encouraged all parties to contact NAIC staff if interested in joining the new ad hoc group.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

Draft: 2/7/23

Capital Adequacy (E) Task Force  
E-Vote  
February 3, 2023

The Capital Adequacy (E) Task Force conducted an e-vote that concluded Feb. 3, 2023. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Charles Hale (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); TBD represented by Christina Huff (FL); Amy L. Beard represented by Roy Eft (IN); Doug Ommen, Vice Chair, represented by Mike Yanacheak (IA); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Kathleen Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by John Rehagen (MO); Troy Downing represented by Bob Biskupiak (MT); Eric Dunning represented by Lindsay Crawford (NE); Glen Mulready represented by Andrew Schallhorn (OK); Cassie Brown represented by Rachel Hemphill (TX); Mike Kreidler represented by Steve Drutz (WA) and Nathan Houdek represented by Amy J. Malm (WI).

1. Adopted the Updated 2022 U.S. and Non-U.S. Catastrophe Risk Event Lists

The Task Force conducted an e-vote to consider adoption of proposal 2022-12-CR (2022 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Chou made a motion, seconded by Hemphill, to adopt the 2022 U.S. and non-U.S. catastrophe risk event lists (Attachment One-A). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

Health Risk-Based Capital (E) Working Group  
Louisville, Kentucky  
March 21, 2023

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Louisville, KY, March 21, 2023. The following Working Group members participated: Steve Drutz, Chair, and David Hippen (WA); Matthew Richard, Vice Chair, Aaron Hodges, Allison Eberhart, Caroline Choi, R. Michael Markham, and Vicki Wang (TX); Wanchin Chou, Jennifer Dowty, and Philip Barrett (CT); Carolyn Morgan, Kyle Collins, Leean Chojnowski, and Margaret McCrary (FL); Tish Becker (KS); Danielle Smith (MO); Michael Muldoon (NE); Tom Dudek, Gail Ross, Richard Ramos, Shing Yuen, and Sylvia Lawson (NY); and Lorraine Badarzynski (PA). Also participating were: David Wolf (NJ); Tom Botsko (OH); and Andrew Schallhorn (OK).

1. Adopted is Feb. 7 Minutes

The Working Group met Feb. 7 and took the following action: 1) adopted its 2022 Fall National Meeting minutes; 2) adopted proposal 2022-14-H (Trend Test Instructions); 3) referred the Runoff Company Response letter to the Capital Adequacy (E) Task Force; 4) exposed proposal 2022-16-CA (Underwriting Risk – Experience Fluctuation Risk – Investment Income Adjustment); and 5) received an update from the American Academy of Actuaries (Academy) on the H2 – Underwriting Risk review.

Muldoon made a motion, seconded by Chou, to adopt the Working Group’s Feb. 7 minutes (Attachment Two-A). The motion passed unanimously.

2. Adopted Proposal 2022-15-H

Drutz said the purpose of proposal 2022-15-H (XR008 Renumbering) is to renumber all the lines on page XR008. The line numbers on page XR008 currently carry over from the bond page (XR007). Drutz said renumbering the lines will allow for easier updates in the future. The proposal was exposed for a 30-day public comment period that ended Feb. 28, and no comments were received.

Chou made a motion, seconded by Muldoon, to adopt proposal 2022-15-H (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Nine*). The motion passed unanimously.

3. Referred Proposal 2022-16-CA

Drutz said the purpose of proposal 2022-16-CA is to update the underwriting risk factors for the annual investment income adjustment to the comprehensive medical, Medicare supplement, and dental and vision factors. The proposal was originally exposed for a 30-day public comment period that ended March 9, and no comments were received. Drutz said this proposal affects all three lines of business, and it will need to be referred to the Capital Adequacy (E) Task Force for exposure. He said the \$0–3 million tier factors will decrease by 4–6%, and Medicare supplement will decrease by approximately 9% in the \$3–25 million tier. He said overall, the changes will result in a decrease of 4–9% for comprehensive medical, Medicare supplement, and dental and vision.

Hearing no objections, the Working Group referred proposal 2022-16-CA to the Capital Adequacy (E) Task Force for exposure during its late April call.

#### 4. Adopted its 2023 Working Agenda

Drutz said the 2023 working agenda was updated for the following editorial changes: 1) Line X1 was updated to remove the reference to the 0.5% factor adjustment and add the related proposal to the Comments column; 2) the expected completion date column was updated for Lines X4, X6, X7, X8, and X9; 3) Line X5 was updated to remove the reference to “review possible annual statement changes for reporting health business in the Life and P/C blanks”; and 4) Line X10 was moved from the New Items section to the Carryover Items Currently being Addressed section.

Becker made a motion, seconded by Chou, to adopt the Working Group’s 2023 working agenda (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Ten*). The motion passed unanimously.

#### 5. Exposed Proposal 2023-01-CA

Drutz said NAIC staff received several questions during the year-end reporting period related to the reporting of stop loss premiums and the stop loss electronic-only interrogatories. He said the purpose of proposal 2023-01-CA (Stop Loss Instructions) is to clarify the instructions for stop loss business in the risk-based capital (RBC) formulas; i.e., health, life, and property/casualty (P/C). The health RBC instructions were clarified for: 1) Other Health Coverages reported in Column 5 on page XR013; 2) reporting stop loss premiums on a net basis on Line 25 on page XR015; and 3) calendar year reporting on the stop loss electronic Table 1 if the contract year does not follow a calendar year. Drutz said this proposal will affect all three lines of business, and he suggested first exposing it at the Working Group level and then referring it to the Capital Adequacy (E) Task Force for exposure during its late April call for all lines of business.

Hearing no objections, the Working Group exposed proposal 2023-01-CA (Attachment Two-B) for a 20-day public comment period ending April 10.

#### 6. Discussed Stop Loss Data and Factors

Drutz said the stop loss factors were updated in 2017 based on 1998–2008 data, and a tiered risk factor was applied to stop loss premium. The electronic-only stop loss tables proposal was adopted in 2018 and added three tables for stop loss data to each of the RBC formulas. The purpose of these interrogatories was to collect this information for six years and then re-evaluate the stop loss factors with more current data that would reflect the implementation of the federal Affordable Care Act (ACA). Drutz said the 2022 year-end filing period marks year five of the data collection. He said the Working Group has reached out to the Academy to begin discussions on the review and analysis process for evaluating the stop loss data.

Drutz said stop loss business has evolved quite a bit in just the last five years, and he noted that stop loss is not broken out by type in the annual statement, whereas RBC breaks it out by type in the RBC electronic-only tables. He said the Working Group will continue to work with the Academy on this project.

#### 7. Received an Update on the Health Test Ad Hoc Group and Health Test Language

Drutz said the Health Test Ad Hoc Group is reaching a completion point on its work on the health test language and instructions. He said the Ad Hoc Group last met March 8 to review the final draft of the proposed changes, which includes revisions to the General Interrogatories, Part 2, Health Test Premium and Reserve Ratio calculations for life, property, and health (Attachment Two-C). He said the changes clarify and create greater transparency in the calculation of both the numerator and the denominator in both the premium and reserve

calculation. For both the premium and reserve ratios, the numerator and the denominator were calculated using separate schedules. These changes align the denominator to pull from the same schedules as the numerator when possible. For example, the denominator of the reserve ratio for the life general interrogatories is calculated using the Liabilities page, but the numerator utilizes Exhibits 6 and 8. He said the proposed change creates greater transparency by utilizing Exhibits 5, 6, and 8 to now calculate the denominator.

Drutz said the Ad Hoc Group found that the current calculation of the life reserve ratio utilizes both gross and net amounts, creating inconsistencies in the calculation. He said the Ad Hoc Group performed a thorough analysis and comparison to refine the calculation to be on an all-net or all-gross basis. He said the Ad Hoc Group concluded that the net basis is the best way to move forward, thus allowing the premium and reserve ratio to be calculated on a net basis.

Drutz said the Ad Hoc Group also discussed whether the 95% ratio should be lowered, but it determined that there should be no change at this time due to extensive changes to the life and property annual statement filings for capturing health data. The Ad Hoc Group concluded that all health data and proposed health test changes should be fully implemented and then the ratios re-evaluated in a few years.

Drutz said the Ad Hoc Group will meet again April 12, and it plans to complete its final review of the proposal and consider asking the Working Group to expose it, with the intent to also include the Life Risk-Based Capital (E) Working Group and Property and Casualty Risk-Based Capital (E) Working Group in that exposure.

#### 8. Discussed the Effect of the COVID-19 Pandemic and Pandemic Risk on the Health RBC Formula

Drutz said the working agenda item on the effect of the COVID-19 pandemic and the pandemic risk was added to the health RBC formula in 2020 at the height of the pandemic. He said the Working Group has touched on it briefly over the course of the last few years; however, it has not discussed it in detail due to the limited information available.

Drutz said the Working Group was previously tasked with looking at catastrophic risks, such as pandemic and biological risks, back in 2011. He said at that time, the Working Group added interrogatory questions for informational purposes only. The interrogatories were included in the formula for several years; however, the Working Group found that only a handful of companies indicated that they allocated a component of surplus for pandemic and biological risks; therefore, the interrogatories were removed. Drutz suggested that the Working Group begin discussing how to address pandemic risk in the health RBC formula.

#### 9. Discussed Other Matters

Drutz said the Academy continues to work on the H2 – Underwriting Risk review. Botsko asked if there is a timeframe for its completion. Crystal Brown (NAIC) said it will likely be at least 2024.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Draft: 2/14/23

Health Risk-Based Capital (E) Working Group  
Virtual Meeting  
February 7, 2023

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 7, 2023. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard, Vice Chair, and Aaron Hodges (TX); Wanchin Chou and Jack Broccoli (CT); Carolyn Morgan and Benjamin Ben (FL); Tish Becker (KS); Danielle Smith and Debbie Doggett (MO); Michael Muldoon and Margaret Garrison (NE); and Tom Dudek (NY).

1. Adopted its 2022 Fall National Meeting Minutes

Muldoon made a motion, seconded by Chou, to adopt the Working Group's Dec. 12, 2022, minutes (*see NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force, Attachment Three*). The motion passed unanimously.

2. Adopted Proposal 2022-14-H

Drutz said the purpose of proposal 2022-14-H (Trend Test Instructions) is to remove the sentence, "The calculation is informational-only until state statutes are implemented so that the trend test would trigger a Company Action Level RBC regulatory action per the statute," given that all states have adopted the trend test. The proposal was exposed for a 30-day public comment period that ended on Dec. 7, 2022, and no comments were received.

Muldoon made a motion, seconded by Chou, to adopt proposal 2022-14-H (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Eight*). The motion passed unanimously.

3. Referred a Runoff Company Response Letter to the Capital Adequacy (E) Task Force

Drutz said the Working Group previously exposed its response letter to the Capital Adequacy (E) Task Force on health companies in runoff. The letter outlined the Working Group's agreement with the recommendations included in Property and Casualty Risk-Based Capital (E) Working Group's response letter, as well as a definition of a health runoff company. The letter was exposed for a 30-day public comment period, and no comments were received.

Muldoon made a motion, seconded by Dudek, to refer the letter to the Capital Adequacy (E) Task Force. The motion passed unanimously.

4. Exposed Proposal 2022-16-CA

Drutz said the investment yield for the six-month U.S. Treasury bond in January 2023 ranged from 4.77% to 4.83% (Attachment Two-A1). Given the increase in the investment yield, the Working Group reached out to the American Academy of Actuaries (Academy) to get updated factors that would reflect an adjustment up to a 6% yield on a 0.5% incremental basis. The health risk-based capital (RBC) instructions round the factors up to the nearest 0.5%.

Drutz said proposal 2022-16-CA reflects the updated factors for comprehensive medical, Medicare Supplement, and dental and vision, and they would apply to all lines of business to reflect the 5% investment adjustment. He said the change from the prior year to this year is interesting, given that the investment yield in 2021 was less than a 0.5 percentage point. Muldoon asked if there is an expected impact on RBC. Drutz said it would probably

be about a 5-10% reduction in the underwriting risk charge for the comprehensive line where the charge goes from 15% to 14.34% in the higher tier. Ray Nelson (America's Health Insurance Plans—AHIP) said the reduction would be closer to 3-4%. Drutz said ultimately, with a decrease in the underwriting risk charge, and all other components held constant, one would see the RBC ratios improving. The idea is that the higher investment income being earned helps to offset the underwriting charges. Derek Skoog (Academy) said the operative number that is probably worth looking at the most is the adjustment of the 9% factor to 8.38% for comprehensive medical. He said this is where the majority of the premium in the industry lies; therefore, regarding impact, that is probably the most important comparison. He said the base factor is about 9% for the lower tier compared to the 8.38%; therefore, there may be a slightly larger impact on those premiums in the lower tier than in the higher tier.

Hearing no objections, proposal 2022-16-CA (Underwriting Risk Factors – Investment Income Adjustment) was exposed at the Working Group level for a 30-day public comment period ending March 9.

#### 5. Received an Update from the Academy on the H2 – Underwriting Risk Review

Skoog said the Academy is beginning to imagine and mockup how the actual underwriting risk tabs and formula will look and work. He said they are also working to articulate their key questions, as well as the subsequent or related data analysis that would be needed to answer those questions. Some questions identified to date include “to what extent does diversification help or hurt from a risk perspective,” “what are the relevant size points,” and “where does the risk seem to change based on company size.” Skoog said the Academy is continuing to work through the analysis, data, and structure, and he would be able to provide an update to the Working Group at the Spring National Meeting.

#### 6. Discussed Other Matters

Drutz said proposal 2022-15-H (XR008 Renumbering) was exposed for a 30-day public comment period ending Feb. 28.

Drutz said the Working Group is tentatively scheduled to meet at the Spring National Meeting in Louisville, KY, on March 21.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

**UNDERWRITING RISK - L(1) THROUGH L(21)**

XR013

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column (1) through (3) have incorporated an investment income yield of 5.40.5%.

	\$0 - \$3 Million	\$3 - \$25 Million	Over \$25 Million
Comprehensive Medical & Hospital	0.143493	0.143493	0.083893
Medicare Supplement	0.09804043	0.060363	0.060363
Dental & Vision	0.114895	0.071155	0.071155
Stand-Alone Medicare Part D Coverage	0.251	0.251	0.151
Other Health	0.130	0.130	0.130
Other Non-Health	0.130	0.130	0.130

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will identify the yield of the 6-month Treasury bond ([U.S. Department of the Treasury](https://www.treasury.gov)) on each Monday through the month of January and determine if further modifications to the 5.40.5% adjustment ~~is~~ needed. Any adjustments will be rounded up to the nearest 0.5%.

**DESCRIPTION OF CHANGE(S)**

Clarify the instructions for stop loss premiums in the Underwriting Risk – Experience Fluctuation Risk, Other Underwriting Risk and Stop Loss Interrogatories.

**REASON OR JUSTIFICATION FOR CHANGE \*\***

Provide clarity on reporting stop loss premiums in the RBC formula.

**Additional Staff Comments:**

\*\* This section must be completed on all forms.

Revised 7-2022

  
 Detail Eliminated to Conserve Space
   
**UNDERWRITING RISK - L(1) THROUGH L(21)**
  
 XR013

Underwriting Risk is the largest portion of the risk-based capital charge for most reporting entities. The Underwriting Risk page generates the RBC requirement for the risk of fluctuations in underwriting experience. The credit that is allowed for managed care in this page comes from the Managed Care Credit Calculation page.

Underwriting risk is present when the next dollar of unexpected claim payments comes directly out of the reporting entity’s capital and surplus. It represents the risk that the portion of premiums intended to cover medical expenses will be insufficient to pay such expense. For example, a reporting entity may charge an individual \$100 in premium in exchange for a guaranty that all medical costs will be paid by that reporting entity. If the individual incurs \$101 in claims costs, the reporting entity’s surplus will decline because it did not charge a sufficient premium to pick up the additional risk for that individual.

There are other arrangements where the reporting entity is not at risk for excessive claims payments, such as when an HMO agrees to serve as a third-party administrator for a self-insured employer. The self-insured employer pays for actual claim costs, so the risk of excessive claims experience is borne by the self-insured employer, not the reporting entity. The underwriting risk section of the formula, therefore, requires some adjustments to remove non-underwriting risk business (both premiums and claims) before the RBC requirement is calculated. Appendix 1 contains commonly used terms for general types of health insurance. Refer to INT 05-05: Accounting for Revenue under Medicare Part D Cover for terms specifically used with respect to Medicare Part D coverage of prescription drugs.

**Claims Experience Fluctuation**

The RBC requirement for claims experience fluctuation is based on the greater of the following calculations:

A. Underwriting risk revenue, times the underwriting risk claims ratio, times a set of tiered factors. The tiered factors are determined by the underwriting risk revenue volume.

or

B. An alternative risk charge that addresses the risk of catastrophic claims on any single individual. The alternative risk charge is equal to multiple of the maximum retained risk on any single individual in a claims year. The maximum retained risk (level of potential claim exposure) is capped at \$750,000 per individual and \$1,500,000 total for medical coverage; \$25,000 per individual and \$50,000 total for all other coverage except Medicare Part D coverage and \$25,000 per individual and \$150,000 total for Medicare Part D coverage. Additionally, for multi-line organizations (e.g., writing more than one coverage type), the alternative risk charge for each subsequent line of business is reduced by the amount of the highest cap. For example, if an organization is writing both comprehensive medical (with a cap of \$1,500,000) and dental (with a cap of \$50,000), then only the larger alternative risk charge is considered when calculating the RBC requirement (i.e., the alternative risk charges for each line of business are not cumulative).

For RBC reports to be filed by a health organization commencing operations in this reporting year, the health organization shall estimate the initial RBC levels using operating (revenue and expense) projections (considering managed care arrangements) for its first full year (12 months) of managed care operations. The projections, including the risk-based capital requirement, should be the same as those filed as part of a comprehensive business plan that is submitted as part of the application for licensure. The Underwriting, Credit (capitation risk only), and Business Risk sections of the first RBC report submitted shall be completed using the health organization’s actual operating data for the period from the commencement of operations until year-end, plus projections for the number of months necessary to provide 12 months of data. The affiliate, asset and portions of the credit risk section that are based on balance sheet information shall be reported using actual data. For subsequent years’ reports, the RBC results for all of the formula components shall be calculated using actual data.

**L(1) through L(21)**

There are six lines of business used in the formula for calculating the RBC requirement for this risk: (1) Comprehensive Medical and Hospital; (2) Medicare Supplement; (3) Dental/Vision; (4) Stand-Alone Medicare Part D Coverage; (5) Other Health; and (6) Other Non-Health. Each of these lines of business has its own column in the Underwriting Risk – Experience Fluctuation Risk table. The categories listed in the columns of this page include all risk revenue and risk revenue that is received from another reporting entity in exchange for medical services provided to its members. The descriptions of the items are described as follows:

**Column (1) - Comprehensive Medical & Hospital.** Includes policies providing for medical coverages including hospital, surgical, major medical, Medicare risk coverage (but NOT Medicare Supplement), and Medicaid risk coverage. This category DOES NOT include administrative services contracts (ASC), administrative services only (ASO) contracts, or any non-underwritten business. These programs are reported in the Business Risk section of the formula. Neither does it include Federal Employees Health Benefit Plan (FEHBP) or TRICARE, which are handled in Line 24 of this section. Medicaid Pass-Through Payments reported as premiums should also be excluded from this category and should be reported in Line 25.2 of this section. The alternative risk charge, which is twice the maximum retained risk after reinsurance on any single individual, cannot exceed \$1,500,000. Prescription drug benefits included in major medical insurance plans (including Medicare Advantage plans with prescription drug coverage) should be reported in this line. These benefits should also be included in the Managed Care Credit calculation.

**Column (2) - Medicare Supplement.** This is business reported in the Medicare Supplement Insurance Experience Exhibit of the annual statement and includes Medicare Select. Medicare risk business is reported under comprehensive medical and hospital.

**Column (3) - Dental & Vision.** This is limited to policies providing for dental-only or vision-only coverage issued as a stand-alone policy or as a rider to a medical policy, which is not related to the medical policy through deductibles or out-of-pocket limits.

**Column (4) - Stand-Alone Medicare Part D Coverage.** This includes both individual coverage and group coverage of Medicare Part D coverage where the plan sponsor has risk corridor protection. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. Medicare drug benefits included in major medical plans or benefits that do not meet the above criteria are not to be included in this line. Supplemental benefits within Medicare Part D (benefits in excess of the standard benefit design) are addressed separately on page XR015. Employer-based Part D coverage that is in an uninsured plan as defined in *SSAP No. 47—Uninsured Plans* is not to be included here.

**Column (5) – Other Health Coverages.** This includes other health coverages such as other stand-alone prescription drug benefit plans, that have not been specifically addressed in Columns (1) through (4) listed above and those lines of business addressed separately on page XR015, such as stop loss. Stop loss premiums are addressed separately in Line (25) on page XR015.

**Column (6) - Other Non-Health Coverages.** This includes life and property and casualty coverages.

The following paragraphs explain the meaning of each line of the table for computing the experience fluctuation underwriting risk RBC.

**Line (1) Premium.** This is the amount of money charged by the reporting entity for the specified benefit plan. It is the earned amount of prepayments (usually on a per member per month basis) made by a covered group or individual to the reporting entity in exchange for services to be provided or offered by such organization. However, it does not include receipts under administrative services only (ASO) contracts; or administrative services contracts (ASC); or any non-underwritten business. Nor does it include federal employees health benefit programs (FEHBP) and TRICARE. Report premium net of payments for stop-loss or other reinsurance. The amounts reported in the individual columns should come directly from Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. For Stand-Alone Medicare Part D Coverage the premium includes beneficiary premium (standard coverage portion), direct subsidy, low-income subsidy (premium portion), Part D payment demonstration amounts and risk corridor payment adjustments. See INT 05-05: Accounting for Revenue under Medicare Part D Coverage for definition of these terms. It

does not include revenue received for reinsurance payments or low-income subsidy (cost-sharing portion), which are considered funds received for uninsured plans in accordance with Emerging Accounting Issues Working Group (EAIWG) INT. No. 05-05. Also exclude the beneficiary premium (supplemental benefit portion) for Stand-Alone Medicare Part D coverage.

**NOTE:** Where premiums are paid on a monthly basis, they are generally fully earned at the end of the month for which coverage is provided. In cases where the mode of payment is less frequent than monthly, a portion of the premium payment will be unearned at the end of any given reporting period.

Line (2) Title XVIII Medicare. This is the earned amount of money charged by the reporting entity (net of reinsurance) for Medicare risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicare subscribers. This includes the beneficiary premium and federal government's direct subsidy for prescription drug coverage under MA-PD plans. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement.

Line (3) Title XIX Medicaid. This is the earned amount of money charged by the reporting entity for Medicaid risk business where the reporting entity, for a fee, agrees to cover the full medical costs of Medicaid subscribers. The total of this line will tie to the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 of the annual statement. Stand-Alone Medicare Part D coverage of low-income enrollees is not included in this line.

Line (4) Other Health Risk Revenue. This is earned amounts charged by the reporting entity as a provider or intermediary for specified medical (e.g., full professional, dental, radiology, etc.) services provided to the policyholders, or members of another insurer or health entity. Unlike premiums, which are collected from an employer group or individual member, risk revenue is the prepaid (usually on a capitated basis) payments, made by another insurer or health entity to the reporting entity in exchange for services to be provided or offered by such organization. Payments to providers under risk revenue arrangements are included in the RBC calculation as underwriting risk revenue and are included in the calculation of managed care credits. Exclude fee-for-service revenue received by the reporting entity from another reporting entity. This revenue is reported in the Business Risk section of the formula as non-underwritten and limited risk revenue. The amounts reported in the individual columns will come directly from Page 7, Line 4 of the annual statement.

Line (5) Medicaid Pass-Through Payments Reported as Premiums. Medicaid Pass-Through Payments that are included as premiums in the Analysis of Operations by Lines of Business, Page 7, Lines 1 and 2 should be reported in this line.

Line (6) Underwriting Risk Revenue. The sum of Lines (1) through (4) minus Line (5).

Line (7) Net Incurred Claims. Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the reporting entity. Paid claims include capitation and all other payments to providers for services to members of the reporting entity, as well as reimbursement directly to members for covered services. Paid claims also include salaries paid to reporting entity employees that provide medical services to members and related expenses. Do not include ASC payments or federal employees health benefit program (FEHBP) and TRICARE claims. These amounts are found on Page 7, Line 17 of the annual statement.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in INT 05-05: Accounting for Revenue under Medicare Part D Coverage). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claims liabilities should reflect expected recoveries from the reinsurance coverage, for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS. Exclude the beneficiary incurred claims (supplemental benefit portion) for Stand-Alone Medicare Part D coverage and report the incurred claims amount (supplemental benefit portion) on Line (25.1) of page XR015.

Line (8) Medicaid Pass-Through Payments Reported as Claims. Medicaid Pass-Through Payments that are included as claims in the Analysis of Operations by Lines of Business, Page 7, Line 17 should be reported in this line.

Line (9) Total Net Incurred Claims Less Medicaid Pass-Through Payments Reported as Claims, Line (7) minus Line (8).

Line (10) Fee-for-Service Offset. Report fee for service revenue that is directly related to medical expense payments. The fee for service line does not include revenue where there is no associated claim payment (e.g., fees from non-member patients where the provider receives no additional compensation from the reporting entity) and when such revenue was excluded from the pricing of medical benefits. The amounts reported in the individual columns should come directly from Page 7, Line 3 of the annual statement.

Line (11) Underwriting Risk Incurred Claims, Line (9) minus Line (10).

Line (12) Underwriting Risk Claims Ratio, For Columns (1) through (5), Line (11) / Line (6). If either Line (6) or Line (11) is zero or negative, Line (12) is zero.

Line (13) Underwriting Risk Factor. A weighted average factor based on the amount reported in Line (6), Underwriting Risk Revenue. The factors for Column (1) through (3) have incorporated an investment income yield of 0.5%.

	\$0 – \$3 Million	\$3 – \$25 Million	Over \$25 Million
Comprehensive Medical & Hospital	0.1493	0.1493	0.0893
Medicare Supplement	0.1043	0.0663	0.0663
Dental & Vision	0.1195	0.0755	0.0755
Stand-Alone Medicare Part D Coverage	0.251	0.251	0.151
Other Health	0.130	0.130	0.130
Other Non-Health	0.130	0.130	0.130

The investment income yield was incorporated into the Comprehensive Medical & Hospital, Medicare Supplement and Dental & Vision lines of business. The purpose was to incorporate an offset to reduce the underwriting risk factor for investment income earned by the insurer. The Working Group incorporated a 0.5% income yield that was based on the yield of a 6-month US Treasury Bond. Each year, the Working Group will identify the yield of the 6-month Treasury bond (U.S. Department of the Treasury) on each Monday through the month of January and determine if further modifications to the 0.5% adjustment are needed. Any adjustments will be rounded up to the nearest 0.5%.

Line (14) Base Underwriting Risk RBC, Line (6) x Line (12) x Line (13).

Line (15) Managed Care Discount. For Comprehensive Medical & Hospital, Medicare Supplement (including Medicare Select) and Dental/Vision, a managed care discount, based on the type of managed care arrangements an organization has with its providers, is included to reflect the reduction in the uncertainty about future claim payments attributable to the managed care arrangements. The discount factor is from Column (3), Line (17) of the Managed Care Credit Calculation page. An average factor based on the combined results of these three categories is used for all three.

For Stand-Alone Medicare Part D Coverage, a separate managed care discount (or federal program credit) is included to reflect only the reduction in uncertainty about future claims payments attributable to federal risk arrangements. The discount factor is from Column (4), Line (17) of the Managed Care Credit Calculation page.

There is no discount given for the Other Health and Other Non-Health lines of business.

Line (16) RBC After Managed Care Discount, Line (14) x Line (15).

Line (17) Maximum Per-Individual Risk After Reinsurance. This is the maximum after-reinsurance loss for any single individual. Where specific stop-loss reinsurance protection is in place, the maximum per-individual risk after reinsurance is equal to the highest attachment point on such stop-loss reinsurance, subject to the following:

- Where coverage under the stop-loss protection (plus retention) with the highest attachment point is capped at less than \$750,000 per member, the maximum retained loss will be equal to such attachment point plus the difference between the coverage (plus retention) and \$750,000.
- Where the stop-loss layer is subject to participation by the reporting entity, the maximum retained risk as calculated above will be increased by the reporting entity's participation in the stop-loss layer (up to \$750,000 less retention).

If there is no specific stop-loss or reinsurance in place, enter \$9,999,999.

Examples of the calculation are presented below:

**EXAMPLE 1 (Reporting entity provides Comprehensive Care):**

Highest Attachment Point (Retention) Reinsurance Coverage	\$ 100,000
Maximum reinsured coverage	90% of \$500,000 in excess of \$100,000 \$600,000 (\$100,000 + \$500,000)
Maximum Ret. Risk =	\$100,000 deductible + \$150,000 (\$750,000 – \$600,000) + \$ 50,000 (10% of (\$600,000 – \$100,000) coverage layer) = \$300,000

**EXAMPLE 2 (Reporting entity provides Comprehensive Care):**

Highest Attachment Point (Retention) Reinsurance Coverage	\$75,000
Maximum reinsured coverage	90% of \$1,000,000 in excess of \$75,000 \$1,075,000 (\$75,000 + \$1,000,000)
Maximum Ret. Risk =	\$ 75,000 deductible + 0 (\$750,000 – \$1,075,000) + \$ 67,500 (10% of (\$750,000 – \$75,000)) coverage layer = \$142,500

Line (18) Alternate Risk Charge. This is twice the amount in Line (17) for columns (1), (2), (3) and (5) and Column (4) is six times the amount in Line (17), subject to a maximum of \$1,500,000 for Column (1), \$50,000 for Columns (2), (3) and (5) and \$150,000 for Column (4). Column (6) is excluded from this calculation.

Line (19) Alternate Risk Adjustment. This line shows the largest value in Line (18) for the column and all columns left of the column. Column (6) is excluded from this calculation.

Line (20) Net Alternate Risk Charge. This is the amount in Line (18), less the amount in the previous column of Line (19), but not less than zero. Column (6) is excluded from this calculation.

Line (21) Net Underwriting Risk RBC. This is the maximum of Line (16) and Line (20) for each of columns (1) through (5). This is the amount in Line (14), Column (6). The amount in Column (7) is the sum of the values in Columns (1) through (6).

#### **OTHER UNDERWRITING RISK – L(22) THROUGH L(45) XR015–XR017**

In addition to the general risk of fluctuations in the claims experience, there is an additional risk generated when reporting entities guarantee rates for extended periods beyond one year. If rate guarantees are extended between 15 and 36 months from policy inception, a factor of 0.024 is applied against the direct premiums earned for those guaranteed policies. Where a rate guaranty extends beyond 36 months, the factor is increased to 0.064. This calculation only applies to those lines of accident and health business, which include a medical trend risk, (i.e., Comprehensive Medical, Medicare Supplement, Dental/Vision, Stand-Alone Medicare Part D Coverage, Supplemental benefits within Medicare Part D Coverage, Stop-Loss, and Minimum Premium). Premiums entered should be earned premium for the current calendar year period and not for the entire period of the rate guarantees. Premium amounts should be shown net of reinsurance only when the reinsurance ceded premium is also subject to the same rate guarantee.

A separate risk factor has been established to recognize the reduced risk associated with safeguards built into the Federal Employees Health Benefit Program (FEHBP) created under Section 8909(f)(1) of Title 5 of the United States Code and TRICARE business. Claims incurred are multiplied by two percent to determine total underwriting RBC on this business.

The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group in 2016 to apply a tiered risk factor approach to the Stop-Loss Premium. The premiums for this coverage should not be included within Comprehensive Medical or Other Health Coverages (Page XR013) It is not expected that the transfer of risk through the various managed care credits will reduce the risk of stop-loss coverage. Medical Stop-Loss exhibits a much higher variability than Comprehensive Medical. A factor of 35 percent will be applied to the first \$25,000,000 in premium and a factor of 25 percent will be applied to premium in excess of \$25,000,000. Stop loss premiums should be reported on a net basis.

Line (25.1) Supplemental Benefits within Stand-Alone Medicare Part D Coverage. A separate risk factor has been established to recognize the different risk (as described in INT 05-05: Accounting for Revenue under Medicare Part D Coverage) for the incurred claims associated with the beneficiaries for these supplemental drug benefits.

Line (25.2) Medicaid Pass-Through Payments Reported as Premium. The treatment of Medicaid Pass-Through Payments varies from state to state, and in some instances is treated as premium. The Health Risk-Based Capital Working Group however, determined that the risk associated with these payments is more administrative in nature and similar to uninsured plans. As such, the Working Group determined that the charge should follow that of the uninsured plans (ASC and ASO) and apply a 2 percent factor charge to those Medicaid Pass-Through Payments reported as premiums. This amount should be equal to the amount reported on page XR013, Column (1), Line (5).

Lines (26) through (32) Disability Income. Disability Income Premiums are to be separately entered depending upon category (Individual and Group). For Individual Disability Income, a further split is between noncancellable (NC) or other (guaranteed renewable, etc.). For Group Disability Income, the further splits are between Credit Monthly Balance, Credit Single Premium (with additional reserves), Credit Single Premium (without additional reserves), Group Long-Term (benefit periods of two years or longer) and Group Short-Term (benefit periods less than two years). The RBC factors vary by the amount of premium reported such that a higher factor is applied to amounts below \$50,000,000 for similar types. In determining the premiums subject to the higher factors, Individual Disability Income NC and Other are combined. All types of Group and Credit Disability Income are combined in a different category from Individual.

#### **STOP LOSS ELECTRONIC ONLY TABLES**

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life-time maximum amounts included in the Federal Affordable Care Act.

**Electronic Table 1 – Stop Loss Interrogatories**

The interrogatories are designed to gather the information by product type and will be reviewed on a go-forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end 2019, will reflect the incurred data for calendar year 2018 run-out through December 31, 2019.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer’s total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

**Product Type**

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.

Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.

HMO Reinsurance = specific reinsurance of an HMO’s commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.

Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.

Medical Excess Reinsurance = specific reinsurance of an insurance company’s medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

**Do not include quota share or excess reinsurance written on Stop Loss business.**

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed, e.g., the RBC report filed for 2019 should provide experience information for calendar year 2018 with run-out through December 31, 2019. If the contract year does not follow a calendar year (i.e. 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and the applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018. Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018 AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims – These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.  
+

Expenses – These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance – This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =  
Total Net Claims – These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.  
 +  
Expenses – These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio – This is equal to (Total Net Claims + Expenses)/Premiums Net of Reinsurance.

**Electronic Table 2a – Calendar Year Specific Stop Loss Contracts by Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contracts by Group Size**

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer’s total gross premium written are exempt from completing Table 2.

Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31<sup>st</sup> of the calendar (reporting) year. If the contract does not follow a calendar year (i.e. 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, total number of lives insured, including dependents).

Number of Groups – list the number of groups for each stop-loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (Table 2a) – The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =  
 (Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives		Reason to Exclude	
			Include	Exclude	Include	Exclude
1	\$200,000	115%	90		Include	
2	\$100,000	120%	60		Include	
3	\$50,000	140%	40		Exclude	Not in Group Size Band

4                    \$120,000                    N/A                    50                    Include  
 Calculation:                     $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50) = \$150,000$

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the expected claims within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) =  $(\text{Sum of Expected Claims} \times \text{Attachment Percentage} \%) / (\text{Sum of Expected Claims})$

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Expected Claims	Number of Lives	Reason to	
					Exclude	Exclude
1	\$200,000	115%	\$ 500,000	90	Include	
2	\$100,000	120%	\$ 300,000	60	Include	
3	\$50,000	140%	\$ 200,000	40	Exclude	Not in Group Size Band
4	\$120,000	N/A	\$ 400,000	50	Exclude	Aggregate not purchased by group

Calculation:  $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000) = 116.7\%$

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1<sup>st</sup> filing) in Column 13, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

**APPENDIX 1 – COMMONLY USED TERMS**

The Definitions of Commonly Used Terms are frequently duplicates from the main body of the text. If there are any inconsistencies between the definitions in this section and the definitions in the main body of the instructions, the main body definition should be used.

Detail Eliminated to Conserve Space

**Stop-Loss Coverage** – Coverage for a self-insured group plan, a provider/provider group or non-proportional reinsurance of a medical insurance product. Coverage may apply on a specific basis, an aggregate basis or both. Specific coverage means that the stop-loss carrier's risk begins after a minimum of at least \$5,000 of claims for any

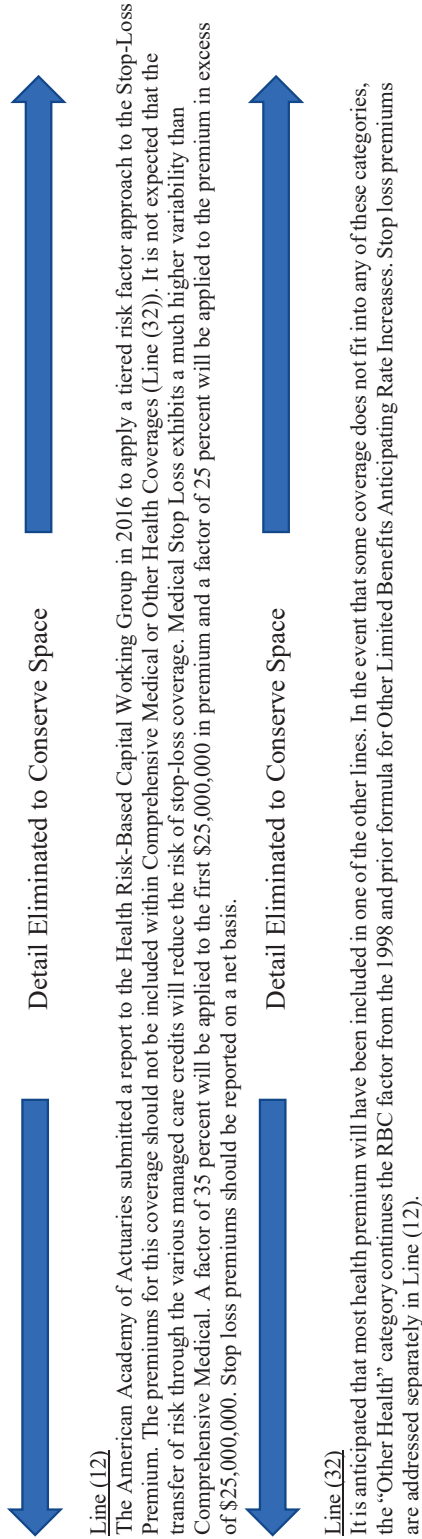

one covered Life has been covered by the group plan, provider/provider group or direct writer. Aggregate coverage means that the stop-loss carrier's risk begins after the group plan, provider/provider group or direct writer has retained at least 90 percent of expected claims, or the economic equivalent.

LR019, LR023 and LR024

Stop Loss Electronic Only Tables

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life time maximum amounts included in the Federal Affordable Care Act.

Electronic Table 1 – Stop Loss Interrogatories

The interrogatories are designed to gather the information by product type and will be reviewed on a go forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end 2018, will reflect the incurred data for calendar year 2017 run-out through December 31<sup>st</sup>, 2018.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

Product Type

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.  
Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.

HMO Reinsurance = specific reinsurance of an HMO’s commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.  
 Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.  
 Medical Excess Reinsurance = specific reinsurance of an insurance company’s medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

Please do not include quota share or excess reinsurance written on Stop Loss business.

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed; e.g., the RBC report filed for 2018 should provide experience information for calendar year 2017 with run-out through December 31<sup>st</sup>, 2018. If the contract year does not follow a calendar year (i.e. 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and the applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018. Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018 AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims - These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.

+

Expenses – These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance – This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =

Total Net Claims - These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.

+

Expenses – These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio – This is equal to I(Total Net Claims + Expenses)/Premiums Net of Reinsurance.

Table 2a – Calendar Year **Specific** Stop Loss Contracts By Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contracts by Group Size

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 2.

**Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.**

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31<sup>st</sup> of the calendar (reporting) year. If the contract does not follow a calendar year (i.e. 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, **total number of lives insured, including dependents**).

Number of Groups – list the number of groups for each stop loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (**Table 2a**) – The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =  
(Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives	Reason to	
				Include	Exclude
1	\$ 200,000	115%	90	Include	
2	\$ 100,000	120%	60	Include	
3	\$ 50,000	140%	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	50	Include	

Calculation:  $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50) = \$150,000$

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the count of covered lives within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) =  
(Sum of Expected Claims x Attachment Percentage %) / (Sum of Expected Claims)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Expected Claims	Number of Lives	Reason to	
					Include	Exclude
1	\$ 200,000	115%	\$ 500,000	90	Include	
2	\$ 100,000	120%	\$ 300,000	60	Include	

3	\$ 50,000	140%	\$ 200,000	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	\$ 400,000	50	Exclude	Aggregate not purchased by group

Calculation:  $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000) = 116.7\%$

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1<sup>st</sup> filing) in Column 6, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

**LRBC FORMULA APPLICATION FOR P&C COMPANY'S A&H BUSINESS  
PR019 – PR026**

PR019 - Health Premiums

Detail Eliminated to Conserve Space

Line (9)

The American Academy of Actuaries submitted a report to the Health Risk-Based Capital Working Group in 2016 to apply a tiered risk factor approach to the Stop-Loss Premium. The premiums for this coverage should not be included within Comprehensive Medical or Other Health Coverages (Line (25)). It is not expected that the transfer of risk through the various managed care credits will reduce the risk of stop-loss coverage. Medical Stop Loss exhibits a much higher variability than Comprehensive Medical. A factor of 35 percent will be applied to the first \$25,000,000 in premium and a factor of 25 percent will be applied to the premium in excess of \$25,000,000. Stop loss premiums should be reported on a net basis.

Detail Eliminated to Conserve Space

Line (25)

Most Health Premium will have been included in one of the prior lines. In the event that some coverage does not fit into any of these categories, "Other Health" category is applied with a 12% factor, which is from 1998 formula for Other Limited Benefits Anticipating Rate Increases. Stop loss premiums are addressed separately in Line (9).

Stop Loss Electronic Only Tables

The Health Risk-Based Capital (E) Working Group revised the stop loss factors in 2017. The American Academy of Actuaries submitted a report to the Health Risk-Based Capital (E) Working Group and suggested that the factors be revised based on data from 1998-2008. The Health Risk-Based Capital (E) Working Group agreed to continue analyzing the stop loss factors as a result of the changes to life-time maximum amounts included in the Federal Affordable Care Act.

Electronic Table 1 – Stop Loss Interrogatories

The interrogatories are designed to gather the information by product type and will be reviewed on a go-forward basis. The data will be used in the continued evaluation of the factors. The data collected will be collected on a one-year run-out basis. For example, the RBC filed at year-end **18**, will reflect the incurred data for calendar year **2017** run-out through December 31, **2018**.

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 1.

The categories used in the interrogatories are separated as follows:

Product Type

Specific Stop Loss = (including aggregating specific). This coverage was included in the 1998 to 2008 factor development.  
 Aggregate Stop Loss = This coverage was included in the 1998 to 2008 factor development.  
 HMO Reinsurance = specific reinsurance of an HMO's commercial, Medicare, Medicaid or Point of Service products. This coverage was not included in the 1998 to 2008 factor development.  
 Provider Excess = specific excess written on Providers including IPAs, hospitals, clinics. This coverage was not included in the 1998 to 2008 factor development.  
 Medical Excess Reinsurance = specific reinsurance of an insurance company's medical business (first dollar or self-insured). This coverage was not included in the 1998 to 2008 factor development.

Please do not include quota share or excess reinsurance written on Stop Loss business.

Calendar Year - Submit experience information for the calendar year preceding the year for which the RBC report is being filed; e.g., the RBC report filed for **2019** should provide experience information for calendar year **2018** with run-out through December 31, **2019**. If the contract year does not follow a calendar year (i.e. 7/1-6/30), the impact on the interrogatories would be spread across two years in the same manner it would be reported in two annual statements (i.e., half of premium and the applicable portion of the liability/expense would hit the first year, the remainder would hit the second year). Report based on the calendar year even if the calendar year includes two separate contracts (For example: Contract 1 started on 7/1/2017 and ran through 6/30/2018. Contract 2 started on 7/1/2018 and ran through 6/30/2019. The 2018 calendar year experience information would be comprised of the experience information in Contract 1 from 1/1/2018 through 6/30/2018 AND Treaty 2 from 7/1/2018 to 12/31/2018.). Contracts that do not follow a calendar year should NOT be excluded.

Total [Gross/Net] Premium - This is the [gross/net] premium revenue, [before/after] ceded reinsurance and including commissions. Report the data as reported for the prior calendar year including amounts paid for the prior year through the end of the current calendar year. Do not adjust for any anomalies in the experience.

Total Gross Claims + Expenses =

Total Gross Claims - These are the gross incurred claims, before ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining gross claim liability.

+

Expenses - These are the gross incurred expense during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Gross Combined Ratio - This is equal to (Total Gross Claims + Expenses) / Total Gross Premium.

Premiums Net of Reinsurance - This is the net premium revenue, net of reinsurance. Report data as reported in the annual statement and do not adjust for any anomalies in the experience.

Total Net Claims + Expenses =

Total Net Claims - These are the net incurred claims after ceded reinsurance. Do not adjust for any anomalies in the experience. Claims are defined as claims incurred during prior calendar year and paid through the end of the current calendar (reporting) year, plus any remaining net claim liability.

+

Expenses - These are the net incurred expenses during the prior calendar year and paid through the end of the current reporting year plus any incurred expenses that are unpaid as of the end of the run-out period. Premium tax amounts should be included in the expense amounts; however, income taxes would be excluded.

Net Combined Ratio - This is equal to (Total Net Claims + Expenses)/Premiums Net of Reinsurance.

Table 2a – Calendar Year Specific Stop Loss Contracts by Group Size and Table 2b – Calendar Year Aggregate Stop Loss Contract by Group Size

For those insurers where the stop loss gross premium written is both under \$2,000,000 and is less than 10% of the insurer's total gross premium written are exempt from completing Table 2.

Table 2a should reflect the specific stop loss data and Table 2b should reflect the aggregate stop loss data.

Report the number of groups, average specific attachment point and average aggregate attachment as of December 31<sup>st</sup> of the calendar (reporting) year. If the contract does not follow a calendar year (i.e. 7/1-6/30), report the policies written during the year of the annual statement and in effect at the end of the calendar year.

The number of covered lives in a group (group size) should be based on the size of the group as of December 31 of the calendar year. The number of covered lives counted should include all enrolled members (that is, total number of lives insured, including dependents).

Number of Groups – list the number of groups for each stop loss contract based on the number of covered lives in the group.

Average Specific Attachment Point (Table 2a) - The average should be weighted by the number of covered lives in the respective group size bracket, excluding the count of covered lives within the denominator where specific/aggregate coverage was not provided.

Example: Average Specific Attachment Point (\$) (Table 2a, 50-99 Covered Lives in Group) =  
(Sum of Specific Attachment Points X Reported Lives) / (Sum of Reported Lives)

Insured Group	Specific Att Point (\$)	Aggregate Att (%)	Number of Lives	Reason to	
				Include	Exclude
1	\$ 200,000	115%	90	Include	
2	\$ 100,000	120%	60	Include	
3	\$ 50,000	140%	40	Exclude	Not in Group Size Band
4	\$ 120,000	N/A	50	Include	

Calculation:  $(200,000 \times 90 + 100,000 \times 60 + 120,000 \times 50) / (90 + 60 + 50)$   
= \$150,000

Average Aggregate Attachment Percentage (Table 2b) – Is based on expected claims. Subgroups that have separate stop loss contracts should be aggregated in terms of determining the group size. The average should be weighted by expected claims in the respective group size bracket, excluding the expected claims within the denominator where aggregate coverage was not provided.

Example: Average Aggregate Attachment Percentage (%) (Table 2b, 50-99 Covered Lives in Group) =  
(Sum of Expected Claims x Attachment Percentage %) / (Sum of Expected Claims)

Insured	Specific	Aggregate	Expected	Number	Include
---------	----------	-----------	----------	--------	---------

Group	Att Point (\$)	Att (%)	Claims	of Lives	Exclude
1	\$ 200,000	115%	\$ 500,000	90	Include
2	\$ 100,000	120%	\$ 300,000	60	Include
3	\$ 50,000	140%	\$ 200,000	40	Exclude
4	\$ 120,000	N/A	\$ 400,000	50	Exclude

Calculation:  $(500,000 \times 115\% + 300,000 \times 120\%) / (500,000 + 300,000)$   
= 116.7%

Footnote – The number of covered lives for stop loss coverage is reported in the Accident and Health Policy Experience Exhibit for Year (April 1<sup>st</sup> filing) in Column 13, Section C. Other Business, Line 2.

If stop loss policies are sold on a Per Employee Per Month basis and the actual number of covered lives is unknown, it would be reasonable to estimate the number of covered lives if the exact information is not administratively available to the reporting entity. This method of estimation may be similar to estimations provided for the Accident and Health Policy Experience Exhibit for Year. If estimated, an explanation of the method used to estimate the number of covered lives should be provided in the footnote.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Revise the Health Test Language and General Interrogatories.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of this change is to clarify and create better transparency in the calculation of the premium and reserve ratios in the health test.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

Other Comments:

\*\* This section must be completed on all forms.

Revised 7/18/202

**INSTRUCTIONS****For Completing Health Annual Statement Blank****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

**1. Health Statement Test:**

If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

**Passing the Test:**

A reporting entity is deemed to have passed the Health Statement Test if the values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year and will continue to report on the Health Statement

**Failing the Test:**

If a reporting entity, licensed as a life, accident and health or property and casualty insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it will revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of the second year following the reporting year. If a reporting entity, licensed as a health insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it should continue to file the health annual statement.

**Variances from following these instructions:**

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**INSTRUCTIONS****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

**1. Health Statement Test:**

If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

**Passing the Test:**

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

If a reporting entity is a) licensed as a life and health insurer; b) completes the Life, Accident and Health annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter's statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end.

**Variations from following these instructions:**

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**INSTRUCTIONS****For Completing Property and Casualty Annual Statement Blank****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

**1. Health Statement Test:**

If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Protected Cell Statement is not subject to the results of the Health Statement Test and should continue to complete the property blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

**Passing the Test:**

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

If a reporting entity is a) licensed as a property and casualty insurer; b) completes the property and casualty annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter's statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end.

**Variances from following these instructions:**

If a reporting entity's domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

**PART 2 – HEALTH INTERROGATORIES**

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

All reporting entities should file the test.

Premium and reserve information is obtained from the annual statement sources referenced on the form ~~or from the related risk-based capital report for the corresponding premium descriptions~~ relating to the current and prior reporting periods. The premium and reserve ratios are calculated on the net basis reporting.

DRAFT

Draft: 4/3/23

Life Risk-Based Capital (E) Working Group  
Louisville, Kentucky  
March 22, 2023

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 22, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Sanjeev Chaudhuri (AL); Thomas Reedy (CA); Lei Rao-Knight (CT); Carolyn Morgan (FL); Mike Yanacheak (IA); Vincent Tsang and Bruce Sartain (IL); Fred Andersen and Ben Slutsker (MN); William Leung (MO); Michael Muldoon (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andy Schallhorn (OK); Aaron Hodges (TX); and Tomasz Serbinowski (UT). Also participating was: Tom Botsko (OH).

1. Adopted its Jan. 26, 2023, and 2022 Fall National Meeting Minutes

The Working Group met Jan. 26, 2023, and took the following action: 1) exposed the American Academy of Actuaries (Academy) C2 Mortality Risk Work Group's proposal for a 30-day public comment period ending March 1; 2) exposed proposed revisions to the CM6 and CM7 mortgage risk-based capital (RBC) factors and formula for a 45-day public comment period ending March 16; and 3) exposed proposed revisions to remove the dual presentation of the trend test for a 15-day public comment period ending Feb. 14.

Yanacheak made a motion, seconded by Schallhorn, to adopt the Working Group's Jan. 26, 2023 (Attachment Three-A) and Dec. 13, 2022 (see *NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force, Attachment Four*) minutes. The motion passed unanimously.

2. Discussed C-2 Mortality Risk

Chris Trost (American Academy of Actuaries—Academy), chair of the Academy's C2 Mortality Risk Work Group, reminded the Working Group that the updates that the Academy proposed were to add a new category for group permanent life and to add a new financial statement note that would include the information necessary to populate the risk-based capital (RBC) schedule. Dave Fleming (NAIC) said the proposed structural change will be considered for adoption in a meeting to be scheduled in April. He said the Blanks (E) Working Group has exposed the new financial note for a public comment period.

2. Discussed its Working Agenda and Priorities

Nancy Bennett (Academy) said her comments would be at a higher level as opposed to discussing specific changes on where some formula enhancements could be put in place with the purpose of getting feedback from the Working Group on its priorities. She discussed the individual risk components and the current status of work being done on them. With respect to the C1 risk component, she noted the recent updating of the bond factors along with the current discussion of updating other asset factors by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group and asked about the interest in having a similar discussion in this Working Group. Noting the update on the work being done on C2, Bennett discussed the C3 risk component. She said this has been a carryover item on the working agenda for several years, and the Academy is looking to see when the Working Group is interested in restarting the project and discussing possible convergence among the different phases, which involve different methods that have been implemented over different time periods. She said there was a field study conducted in 2014, which, ultimately, had no action taken on it. While work in this area may be somewhat stalled due to the current work on the economic scenario generator (ESG), she said there are other concepts that have to be worked through irrespective of the generator that is used in the calculations. With the

current interest rate environment, she said it is probably a good time to start looking at this area again to ensure that the methodology is capturing the interest rate risk as intended, so the Academy would appreciate the Working Group's input.

Bennett said another possible area of work is the covariance adjustment, and apart from a change made to separate the common stock component, there really has not been any update to the adjustment made to reflect the correlation of risks. She said things to consider could include the correlation of risks within a component, such as mortality and longevity, and whether the original square root formula still makes sense or if there is a reason to make a change to that. This would be a large project, and she said it could have a material impact, so the Academy would like to see if there is interest in moving forward in this area.

Bennett said there may be an opportunity to have a discussion on the aggregate effectiveness of the life RBC formula in actually identifying weakly capitalized companies. While that is its often-stated purpose, she said it is well known that the actual purposes extend far beyond that and include use by rating agencies and use in the investment decisions made by insurers. She suggested it might be useful to have analysis to provide insight as to where the formula is, or more importantly, is not working, which would then drive the appropriate enhancements. She said it is known that there are inconsistencies that exist within the formula, as well as inconsistencies between RBC and statutory reserves and other parts of the balance sheet. In looking at the effectiveness of the formula or the overarching solvency framework, she said the Academy is looking to see if there is an appetite in trying to eliminate those inconsistencies or move some of these topics onto the Working Group's priority list.

Barlow said the work being done by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group would eventually come to the individual RBC working groups but asked the Working Group how much update it believes is needed. Slutsker said the Working Group has many initiatives to focus on while that work is ongoing and believes some brief updates would be adequate until something comes to the Working Group. With respect to C-3, Barlow asked how much of this work can be done solely through this Working Group and how much has ramifications for the Life Actuarial (A) Task Force on the reserve side. Slutsker said he chairs the Valuation Manual (VM)-22 (A) Subgroup, and there is a lot of work on the principle-based reserve methodology for non-variable annuities that would potentially connect to any update for C-3 Phase I. He said he is not necessarily concerned about pursuing any specific C-3 projects right now but believes it would be good to get things in motion as it is likely a multiyear process, and there is probably enough progress on the reserve side that there can be some work done on the RBC side.

Slutsker and Eom noted different field tests, and Barlow asked if these would assist with the C-3 working agenda item, which he believes is more comprehensive. Bennett said she believes so and said she believes there are some basic threshold decisions that need to be made based upon the Working Group's discussion of the various aspects. She said she agrees that it is a good time to get this work started.

Brian Bayerle (American Council of Life Insurers—ACLI) agreed that it is critical to determine what questions there are and let the Working Group determine what direction it wishes to pursue. He suggested approaching this work as holistically as possible because there are so many inter-dependencies. If possible, Barlow said he would like to have an all-encompassing approach.

With respect to the covariance adjustment, Barlow said this is something he has been in favor of reviewing for a long time. He said he believes the ability to properly reflect covariance, and the understanding of how to do that in the RBC calculation has probably improved significantly since the inception of the formula. He asked if this was an item for the Capital Adequacy (E) Task Force as each of the RBC formulas has a covariance adjustment. Botsko said the Task Force is going to recommend starting ad hoc groups to look at different aspects of RBC, and this could be one. Barlow asked if the Academy has a group looking at this and if there is input from the Working Group

it would like. Bennett said the Academy has formed a group that is developing some conceptual ideas about correlation and higher-level considerations. Barlow said it would be helpful for the Academy to provide something for consideration whether it be for this Working Group or the Task Force.

With respect to reviewing the overall effectiveness of the formula, Barlow said several Working Group members have been working on reviewing the RBC statistics to attempt to determine better ways to evaluate formula results. He said there has been some good work done in this area, and while it has stalled a bit due to other projects, he would like to see that work continue.

### 3. Discussed Runoff Companies

Barlow said the Working Group discussed this previously, and he believes the consensus of the Working Group is that nothing specific to life insurance companies is needed for RBC. The Working Group agreed that no changes were needed to the life formula specific to runoff companies.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Draft: 3/15/23

Life Risk-Based Capital (E) Working Group  
Virtual Meeting  
January 26, 2023

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met Jan. 26, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Hannah Howard (FL); Vincent Tsang (IL); Mike Yanacheak and Carrie Mears (IA); Laura Rickbell (MN); William Leung (MO); Michael Muldoon (NE); Seong-min Eom (NJ); Bill Carmello (NY); Jennifer Li (TX); and Tomasz Serbinowski (UT).

1. Exposed the Academy's C2 Mortality Risk Work Group's Proposal

Chris Trost (American Academy of Actuaries—Academy), chair of the Academy's C2 Mortality Risk Work Group, said there are two updates identified as additional items needed as part of the implementation of the Academy's work. The first relates to structural changes and instruction updates to address the treatment of group permanent life policies, as well as some additional instructional changes to provide clarity. The second relates to a new financial statement note that will develop the net amounts at risk (NAR) in the categories needed for the Life C-2 schedule to create a direct link to a financial statement source. Ryan Fleming (Academy) detailed the changes. He noted one of the changes to the instructions is to remove what was labeled as the permanent and term flexibility factors as they may have created some confusion with the actual capital factors when they were intended to represent the difference between categories. The Working Group discussed how to coordinate with other NAIC groups with respect to the financial statement note for 2023 implementation.

The Working Group agreed to expose the Academy's proposal for a 30-day public comment period ending March 1.

2. Exposed Proposed Revisions to CM6 and CM7 Mortgage RBC Factors and Formula

John Waldeck (Pacific Life) presented an update from the Mortgage Bankers Association (MBA) and the American Council of Life Insurers (ACLI) in response to the questions that the Working Group raised with respect to the proposed revisions.

The Working Group agreed to expose the proposal for a 45-day public comment period ending March 16.

3. Exposed Proposed Revisions to Remove the Dual Presentation of the Trend Test

Dave Fleming (NAIC) said the dual presentation was no longer needed as all states have adopted the higher trend test threshold.

The Working Group agreed to expose the proposal for a 15-day public comment period ending Feb. 14.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Draft: 3/23/23

Property and Casualty Risk-Based Capital (E) Working Group  
Louisville, Kentucky  
March 22, 2023

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Louisville, KY, March 22, 2023. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair (CT); Charles Hale (AL); Rolf Kaumann (CO); Virginia Christy (FL); Judy Mottar and Bruce Sartain (IL); Sandra Darby (ME); Will Davis (SC); Miriam Fisk (TX); and Amy Malm (WI). Also participating were: Kevin Dyke (MI); Michael Muldoon (NE); and Michael McKenney (PA).

1. Adopted its Jan. 30, 2023, and 2022 Fall National Meeting Minutes

Botsko said the Working Group conducted an e-vote that concluded Jan. 30, 2023, to adopt proposal 2022-12-CR (2022 U.S. and Non-U.S. Catastrophe Risk Event Lists), which the Working Group had exposed for a seven-day public comment period ending Jan. 25, 2023.

Chou made a motion, seconded by Darby, to adopt the Working Group's Jan. 30, 2023 (Attachment Four-A) and Dec. 13, 2022 (see *NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force, Attachment Five*) minutes. The motion passed unanimously.

2. Adopted the Report of the Catastrophe Risk (E) Subgroup

Chou said the Catastrophe Risk (E) Subgroup met March 21, 2023, and took the following action: 1) adopted its Jan. 30, 2023, and 2022 Fall National Meeting minutes; 2) discussed its working agenda; 3) received a status update from its Catastrophe Model Technical Review Ad Hoc Group; 4) heard a presentation from Travelers on climate overview and scenario analysis; and 5) discussed the wildfire peril impact analysis.

Chou made a motion, seconded by Christy, to adopt the report of the Catastrophe Risk (E) Subgroup (Attachment Four-B). The motion passed unanimously.

3. Exposed Proposal 2023-02-P (Underwriting Risk Line 1 Factors)

Botsko said proposal 2023-02-P (Attachment Four-C) provided a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He indicated that, as the Working Group discussed during the last April 2022 meeting, in some lines of business with smaller populations, such as the international line of business, both reserve and premium are driven by a handful of companies and could fluctuate or be biased due to different factors. Botsko also stated that the American Academy of Actuaries (Academy) is in the process of reviewing the Line 1 calculation methodology. Based on the Working Group's last discussion, the new methodology may not completely fix this issue entirely. He encouraged all the interested parties to participate in the discussion after receiving recommendations from the Academy in the near future.

The Working Group agreed to expose proposal 2023-02-P for a 30-day public comment period ending April 21.

#### 4. Discussed Annual Statement Blanks Proposal 2023-01BWG

Botsko said this proposal (Attachment Four-D) removes pet insurance from the inland marine line of business and adds a pet insurance line within the existing P/C Annual Statement Blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. It also adds new Schedule P, Parts 1 through 4, specific to pet insurance for 2024 reporting. He also stated that the primary reason for this proposal is that the pet insurance industry has grown rapidly, and there is currently no public or regulatory visibility into the vast amount of pet insurance industry financial reporting. Botsko indicated that the Blanks (E) Working Group is currently exposing this proposal for a 52-day public comment period ending April 28. He encouraged the industry to: 1) review the proposal and provide feedback to the Blanks (E) Working Group; and 2) determine how to quantify this line of business in the RBC formula. Kaumann suggested that the Working Group may want to reach out to the Property and Casualty (C) Committee and the Market Regulation and Consumer Affairs (D) Committee to gain more information related to this proposal before the next meeting. Botsko said the Working Group will continue this discussion during its upcoming meeting.

#### 5. Discussed Annual Statement Blanks Proposal 2022-15BWG

Botsko said the Blanks (E) Working Group adopted proposal 2022-15BWG (Attachment Four-E) during its March 7 meeting. He stated that the proposal's purpose is to remove the current 5% of premium filing exemption on the Schedule H, Part 5 for P/C annual statement filing to be consistent with the life annual statement since the life annual statement does not have 5% of premium file exemption in the Schedule H, Part 5. Botsko raised a question on whether the 5% rule should be removed in the P/C RBC formula to be consistent with the change in the annual statement, Schedule H, Part 5. He urged the interested parties to review this proposal and provide comments to the Working Group during its upcoming meeting.

#### 6. Discussed its Working Agenda

Botsko summarized the changes to the Working Group's 2023 working agenda. He said the Working Group eliminated the following items: 1) evaluate the possibility of allowing additional third-party models or adjustments to the vendor models to calculate the catastrophe (CAT) model losses; and 2) evaluate the possibility of enhancing the independent model instructions. He also indicated that the following three items were added to the new items section: 1) review and analyze the P/C RBC charges that have not been reviewed since being developed; 2) quantify the R5 Ex-CAT factors for wildfire peril (for informational purposes only); and 3) evaluate the impact of flood peril to the insurance market.

Chou made a motion, seconded by Kaumann, to adopt the revised 2023 working agenda (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Ten*). The motion passed unanimously.

#### 7. Heard Updates on Current P/C RBC Projects from the Academy

Botsko said the American Academy of Actuaries' (Academy's) Property and Casualty Risk-Based Capital Committee (Academy Committee) continues its effort to recalibrate portions of the reserve and premium risk of the R4 and R5 components. Ronald Wilkins (Academy) said this presentation (Attachment Four-F) includes the following items: 1) background of the components of the P/C RBC formula; 2) the need for the new present value methodology due to the 2022 interest rate increases; 3) investment income offset and adjustment for loss runoff risk horizon; 4) safety level for the reserve and premium charges of the formula; and 5) year-over-year capping approaches. Wilkins stated that the Academy Committee would like to receive feedback from the Working Group regarding: 1) present value methodology; 2) adjustment to match loss runoff horizon to risk horizon; 3) statistical

safety level; and 4) minimum risk charge and year-over-year capping approaches. Botsko said he agrees with the assumption that the Academy provided in this presentation, and the Working Group will provide further evaluation after final reports become available. He also said the Working Group appreciates Wilkins providing updates on their projects and is looking forward to reviewing the detailed report for each project.

8. Discussed the Possibility of Reviewing or Analyzing the P/C RBC Charges

Botsko said the P/C RBC formula, factors, and methodology have been in development for almost 30 years. He stated that some of the risks, such as underwriting risks and some of the investment risks, have been continuously evaluated over the years. However, some of them have never been reviewed since being developed. Botsko said the Capital Adequacy (E) Task Force is considering establishing an ad hoc group to: 1) re-evaluate some of the missing risks to determine if it should now include them in the RBC calculation, or whether it appropriately handles those risks utilizing other regulatory methods; and 2) review those factors and instructions that have never been reviewed since development to determine if modifications should be made. Botsko encouraged all the parties to contact NAIC staff if anyone interested is in joining the new ad hoc group.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Draft: 1/31/23

Property and Casualty Risk-Based Capital (E) Working Group  
and Catastrophe Risk (E) Subgroup  
E-Vote  
January 30, 2023

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force that concluded Jan. 30, 2023. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair (CT); Rolf Kaumann (CO); Judy Mottar (IL); Sandra Darby (ME); Anna Krylova (NM); Alexander Vajda (NY); Miriam Fisk (TX); and Adrian Jaramillo (WI). The following Subgroup members participated: Wanchin Chou, Chair (CT); Laura Clements (CA); Rolf Kaumann (CO); Travis Grassel (IA); Judy Mottar (IL); Sandra Darby (ME); Anna Krylova (NM); Alexandra Vajda (NY); Tom Botsko (OH); Andrew Schallhorn (OK); Will Davis (SC) and Miriam Fisk (TX).

1. Adopted the Updated 2022 U.S. and Non-U.S. Catastrophe Risk Event Lists

The Working Group and the Subgroup conducted an e-vote to consider adoption of proposal 2022-12-CR (2022 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Darby made a motion, seconded by Mottar, to adopt the 2022 U.S. and Non-U.S. Catastrophe Risk Event Lists (see *NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment One-A*). The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/ Member Meetings/E Cmte/CADTF/2023-1-Spring/Cat Risk Email Vote 013023

Draft: 3/22/23

Catastrophe Risk (E) Subgroup  
Louisville, Kentucky  
March 21, 2023

The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met March 21, 2023. The following Subgroup members participated: Wanchin Chou, Chair (CT); Virginia Christy, Vice Chair (FL); Rolf Kaumann (CO); Susan Berry and Judy Mottar (IL); Sandra Darby (ME); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk (TX). Also participating were: Travis Grassel (IA); Julie Lederer (MO); Liz Ammerman (RI); and Steve Drutz (WA).

1. Adopted its Jan. 30, 2023, and 2022 Fall National Meeting Minutes

Chou said the Subgroup conducted an e-vote that concluded Jan. 30, 2023, to adopt proposal 2022-12-CR (2022 U.S. and Non-U.S. Catastrophe Risk Event Lists), which the Subgroup had exposed for a seven-day public comment period ending Jan. 25, 2023.

Schallhorn made a motion, seconded by Botsko, to adopt the Subgroup's Jan. 30, 2023 (*see NAIC Proceedings – Spring 2023, Capital Adequacy (E) Task Force, Attachment Four-A*) and Dec. 12, 2022 (*see NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force, Attachment Five-B*) minutes. The motion passed unanimously.

2. Received an Update from its Catastrophe Model Technical Review Ad Hoc Group

Chou said that the Catastrophe Model Technical Review Ad Hoc Group met once a month with different modeling vendors to gain a better understanding of different vendor models. He invited Shaveta Gupta (NAIC) to provide an update for the Ad Hoc Group at the meeting. Gupta said the Ad Hoc Group was re-established in late 2022 to conduct a more in-depth review of various severe convective storm catastrophe (CAT) vendor model assumptions, limitations, and impact analysis. Ultimately, recommendations will be provided to the Subgroup for consideration. She stated that so far, four model vendors have given presentations to the ad hoc group on their respective severe convective storm models. She said the ad hoc group is in the process of collecting technical questions from its members based on the materials that modeling vendors presented. Also, she anticipated that follow-up meetings with each modeling vendor to provide further responses and explanations would be scheduled after the Spring National Meeting.

3. Discussed the Wildfire Peril Impact Analysis

Chou said in order to ease the CAT modelers' concerns regarding their proprietary information while evaluating the impacts and determining the appropriate risk-based capital (RBC) catastrophe risk charge for wildfire peril, the Subgroup members will be required to sign nondisclosure agreements (NDAs) with the vendor modeling companies. He encouraged all the Subgroup members to sign the NDAs, which will be distributed shortly after the Spring National Meeting. Chou said he will continue providing updates during the Subgroup's next meeting.

4. Discussed its Working Agenda

Chou summarized the changes to the Working Group's 2023 working agenda, which included the following substantial changes: 1) moving item 1 from the "carryover items currently being addressed" section to the "ongoing items" section; 2) eliminating "evaluate the possibility of allowing additional third-party models or

adjustments to the vendor models to calculate the CAT model losses” and “evaluate the possibility of enhancing the independent model instructions”; and 3) adding “quantify the R5 ex-cat factors for wildfire peril (for informational purposes only)” and “evaluate the impact of flood peril to the insurance market.” Chou said the working agenda will be forwarded to the Property and Casualty Risk-Based Capital (E) Working Group for consideration.

5. Heard a Presentation from Travelers on the Climate Overview and Scenario Analysis

Chou said the Subgroup appreciates Travelers Insurance providing a climate overview and scenario analysis presentation to the Subgroup. Eric Nelson (Travelers) said this presentation includes the following items: 1) industry loss trends; 2) catastrophe risk management; 3) climate change overview; 4) market disclosure landscape; 5) vendor capabilities; 6) climate scenario analysis; 7) mitigation and resiliency; and 8) observations. Chou urged the interested parties to review the materials and provide feedback to the Subgroup during its next meeting.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

Anticipated Effective Date: January 1, 2024

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Remove Pet Insurance from Inland Marine line of business and add a new line of business to Appendix – P/C Lines of Business. Add Pet Insurance line within the existing P/C Blank for the Underwriting and Investment Exhibits, Exhibit of Premiums and Losses (State Page), and Insurance Expense Exhibit. Add new Schedule P Parts 1 through 4 specific to Pet Insurance.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

See Page 2 for detailed reason and justification for change.

**\*\*\*IF THE DATA IS AVAILABLE ELSEWHERE IN THE ANNUAL/QUARTERLY STATEMENT, PLEASE NOTE WHY IT IS REQUIRED FOR THIS PROPOSAL\*\*\***

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: \_\_\_\_\_

Other Comments:

\*\* This section must be completed on all forms.

Revised 11/17/2022

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Pet insurance is reported today as an Inland Marine product. Separating Pet Insurance from Inland Marine for financial reporting purposes within the existing Blank is warranted for a number of reasons, including:

- There is no public or regulator visibility into the vast majority of the pet insurance industry's financial reporting. Other than for a monoline insurer that writes only pet insurance, the rest of the industry's pet insurance business financial reporting is included in Inland Marine, along with anything else in that broadly-defined line that the respective insurer has written. In short, regulators do not have clear visibility into even the most basic information about pet insurers and the pet insurance market, such as who is underwriting pet coverage, the volume being sold, losses, and who is selling it.
- The pet insurance industry has grown rapidly, and this high growth rate continues. The industry's self-reported data shows growth in annual gross written premium from \$836.5 M in 2016 to \$2.59 B in 2021, including more than 30% annual growth from 2020 to 2021. This growth rate makes the absence of visibility into each participating company's financial information more an acute challenge with each passing year.
- Relying on regulator data calls to gather basic information such as premium written and loss information is time-consuming for all involved, and prone to inconsistencies and errors.
- The NAIC's D Committee is proceeding with MCAS for pet insurance. It would be inapposite and have potential for inconsistent data, to require MCAS reporting while not requiring dedicated pet insurance financial reporting. In addition, separate financial reporting will be a useful complement to MCAS reporting, both to supplement the MCAS information and to validate it.
- Dedicated financial reporting of pet insurance will be helpful to state regulators' assessment of the appropriate amount of surplus insurers writing this business should hold. It is anticipated that once sufficient history is obtained, a separate RBC factor for pet insurance can be established.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY/CASUALTY

APPENDIX

PROPERTY AND CASUALTY LINES OF BUSINESS

These definitions should be applied when reporting all applicable amounts for the following schedules: Underwriting and Investment Exhibit Parts 1, 1A, 1B, 2, and 2A; Exhibit of Premiums and Losses (Statutory Page 14); and the Insurance Expense Exhibit. Policy fees, service charges or membership charges are to be included with the line of business or in Other Income, as determined by *SSAP No. 53—Property and Casualty Contracts – Premiums*.

**Detail Eliminated to Conserve Space**

Line 9.1 – Inland Marine

Coverage for property that may be in transit, held by a bailee, at a fixed location, a movable good that is often at different locations (e.g., off-road construction equipment) or scheduled property (e.g., Homeowners Personal Property Floater), including items such as live animals, property with antique or collector’s value, etc. This line also includes instrumentalities of transportation and communication, such as bridges, tunnels, piers, wharves, docks, pipelines, power and phone lines, and radio and television towers.

Animal Mortality

Coverage that provides a death benefit to the owner of a policy in the event of the death of the insured livestock.

EDP Policies

Coverage to protect against losses arising out of damage to or destruction of electronic data processing equipment and its software.

Communication Equipment (Cellular Telephones)

Provides insured subscribers of Communications Equipment Service Provider replacement coverage for loss of and damage, theft or mechanical breakdown to communications equipment. Communications equipment means wireless telephones and pagers, and any other devices incorporating wireless phone and pager capabilities, including but not limited to personal digital assistants (PDA) and wireless aircards.

Line 9.2 – Pet Insurance Plans

Veterinary care plan insurance policy providing care for a pet animal (e.g., dog or cat) of the insured owner in the event of its illness or accident.

**SCHEDULE P**

**SCHEDULE P – PART 1**

Part 1 – Summary is the total of the Schedule P lines. For the property lines, it is necessary to supplement the data in the individual sections of Schedule P in order to complete the Part 1 – Summary for all lines for all years. Non-proportional assumed reinsurance – Property, Liability and Financial Lines can be summed together as reported.

↓  
===== **Detail Eliminated to Conserve Space** =====  
↑

**Non-proportional assumed reinsurance –Property Reinsurance**

Includes all the following lines: Fire, Allied Lines, Ocean Marine, Inland Marine, Pet Insurance Plans, Earthquake, Group Accident and Health, Credit Accident and Health, Other Accident and Health, Auto Physical Damage, Boiler and Machinery, Burglary and Theft and International (of the foregoing).

↓  
===== **Detail Eliminated to Conserve Space** =====  
↑

**SCHEDULE P – PARTS 1A THROUGH 1U**

Reporting entities should complete Schedule P in thousands only but must report all claim counts in whole numbers.

Anticipated Effective Date: Annual 2023

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Revise the language of the Schedule H, Part 5 to remove the 5% of premiums filing exemption (FE).

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE\*\***

The purpose of the proposal is to remove the 5% of premium filing exemption on the Schedule H, Part 5. Before Schedule H was updated for Annual 2022 to bring uniformity in the accident and health lines of business, the Property/Casualty instructions for Schedule H, Part 5 had the less than 5% filing exemption and the Life/Fraternal instructions did not have the 5% filing exemption. The removal of the 5% exemption would require both Property/Casualty and Life/Fraternal filers to file the Schedule H, Part 5.

### Property and Casualty Risk-Based Capital Committee Recent Activities

Ronald Wilkins, MAAA, FCAS  
Vice Chairperson  
Property and Casualty Risk-Based Capital Committee

Discussion of Preliminary Results—For Discussion Only

March 22, 2023

### Agenda

1. Background
2. 2022 interest rate increases—need for new present value methodology
3. Investment income offset and adjustment for loss runoff risk horizon (preliminary figures)
4. Safety Level Options (preliminary figures)
5. Year-over-year capping approaches (preliminary figures)

### Background: Importance of R4 and R5

- The committee (“we”, within this presentation) has been working to recalibrate the R4 and R5 components of risk-based capital (RBC) with certain small exceptions (e.g., excessive premium growth charge). These are particularly important for companies with an RBC ratio of 3 or less (see highlighted figures).

RBC Charge	2021 Company Action Level Amounts (\$B)			
	P&C Industry		Cos. w/ RBC Ratio <= 3.0	
	Amount	%	Amount	%
R0 Subsidiary	84.1	6%	2.2	
R1 Asset - Fixed Income	19.5	6%	0.9	6%
R2 Asset - Equity	192.1	59%	1.4	9%
R3 Credit	11.4	4%	1.1	8%
R4 Reserve	145.5	46%	1.8	12%
R5 Premium	81.1	25%	1.8	12%
Rcat Catastrophe	54.5	17%	1.8	12%
Total	407.6		17.1	
Total ex. R0	323.5	100%	14.9	100%

**Notes:**  
Figures in this chart are aggregate company action level amounts for the industry and for companies with an RBC Ratio of 3 or less.  
The totals in the last two rows of the chart are before Basic Operational Risk. The totals are less than the sum of the preceding rows because they are the result of the covariance adjustment for each company (i.e., square root of sum of squares).  
For the companies with an RBC Ratio of 3 or less, the RBC Ratio for each company is calculated as Authorized Control Level RBC including Basic Operational Risk, divided by Total Adjusted Capital.

### Background: Calculation of Premium Risk and Reserve Risk

- For each line of business, premium risk and reserve risk are calculated as
  - Basic Risk Factor, excluding **Rcat overlap**
  - Adjustment for 10-Yr company experience in relation to industry
  - Adjustment for company expenses (premium risk only)
  - **Adjustment for investment income (IIA)**
  - Adjustment for loss sensitive discount
- Risk charges for each line are summed and a **diversification factor** is applied to calculate the all-lines risk charge.
- We provided indicated basic risk factors before the adjustment to remove the Rcat overlap to the working group in April 2021.
- We are working on updating the highlighted portions of R4 and R5.

### Background: Investment Income Adjustment (IIA)

- The IIA reduces the risk charge for anticipated investment income earned on losses prior to payout at the risk-free rate. This credit gets applied to both Reserve Risk and Premium Risk.
- Two elements go into the calculation of the IIA
  - Payment patterns—time between when ultimate losses are incurred and losses are paid out.
    - We used industry total paid loss triangles from Schedule P part 2 and RBC filings to calculate payment patterns.
    - Previous methodology was similar to IRS tax methodology and used a single point along the diagonal from Schedule P part 1.
    - Also new is a method to determine loss payouts beyond year ten. Previous method was similar to IRS and generally repeated last payout percent in each subsequent years (up to year 15) until losses were 100% paid.
    - New method exponentially decays unpaid losses (up to year 40). The decay rate gets selected from runoff in development years 8-10. Generally, the decay rate is the losses that get paid in the next development year as a percentage of unpaid losses at the beginning of the year.
  - Interest rates—these have varied extensively across the experience period used to calibrate risk charges (starting in 1987). See next slide.

### Historical Interest Rates

Observation:  
Interest rates have declined from above 8% in the late '80s to below 2% in 2012–17. In the past year, rates increased to about 4%.

### Investment Income Adjustment (IIA)

- Year-by-year variation in nominal risk charges (calculated from Schedule P and RBC data for this analysis) has generally followed the variation in US Treasury rates.
- 
- Hence, we utilize a new method, the present value method, that discounts individual company datapoints in the dataset based on historical interest rates and then chooses the 87.5 percentile.
  - This approach produces a more consistent measure of risk because it removes a systematic source of variation in results across the experience period. What remains is a better reflection of true risk inherent in the lines, at present values.
  - We will still calculate an investment income adjustment factor for use in the RBC formula. We will essentially divide this factor from the 87.5 percentile discounted datapoint so that the final risk charge is not affected.

### IIA—Risk Horizon for Loss Runoff

- The premium and reserve risk datapoints used in the analysis come from Schedule P or RBC filings, generally at 10 years development.
  - Premium risk factors have a development time horizon of ten years. We generally capture the loss ratio for the most mature accident year at age ten. Hence the development time horizon for premium risk is ten years.
  - Reserve risk factors have a development time horizon of nine years. We generally capture the most mature incurred losses at age ten and calculate the change from the initial reading at age 1. Hence, this reflects a development horizon of nine years.
- Payout patterns run off for up to 40 years. Premium and reserve risk still exist after age 10 and this is not captured in the analysis. Hence, we recommend adjusting the investment income discount to match the risk horizon. Specifically, we do not recommend providing credit for investment income beyond the time horizon period for which risk is captured.
- We accomplish this by adjusting the 87.5th percentile present value risk factors based on how much investment income can be earned in a period limited to 10 or nine years compared to how much can be earned over full runoff of the line of business.
  - We calculated these adjustments factors using current risk-free rates.
  - The adjustments increase with the level of interest rates.

### Impact of Adjustments to Loss Runoff Horizon – Preliminary Figures

LOB	Premium Risk Charge			Reserve Risk Charge		
	Unadj. Incr.	Adjus. Incr.	% Chg.	Unadj. Incr.	Adjus. Incr.	% Chg.
HO	0.213	0.213	0.1%	16.4%	16.6%	0.9%
PPA	0.137	0.138	0.3%	12.8%	12.8%	1.4%
CA	0.201	0.201	0.4%	25.7%	25.9%	0.9%
MC	0.095	0.121	27.0%	1.6%	4.9%	213.2%
CMP	0.173	0.176	1.5%	31.4%	32.6%	3.7%
MPL-O	0.345	0.363	5.2%	8.0%	9.5%	19.0%
MPL-C	0.230	0.244	2.1%	-1.5%	-0.8%	-45.8%
IL	0.200	0.204	1.7%	21.5%	24.0%	11.8%
DL	0.125	0.136	8.5%	27.4%	29.3%	7.0%
SP	0.094	0.095	0.1%	21.3%	21.3%	0.3%
APD	0.054	0.054	0.0%	11.2%	11.2%	-0.1%
Pd/Sur	0.105	0.106	0.9%	43.7%	44.0%	0.7%
Emer	0.143	0.143	0.2%	14.6%	14.7%	0.6%
Inf	0.934	0.944	1.0%	81.2%	83.3%	5.1%
Re-Prop	0.296	0.299	0.9%	19.6%	20.5%	4.7%
Re-Liab	0.196	0.231	18.0%	19.9%	26.7%	34.3%
PL	0.266	0.287	8.0%	97.7%	101.5%	3.9%
PC/MG	1.532	1.524	-0.1%	-5.1%	-5.0%	-1.9%
Wrtty	0.216	0.216	0.0%	30.2%	30.2%	0.0%

Negative changes are generally increases. Here, the negative risk charge decreases, hence the negative change.

### Development of Reserve Risk Ratio as Risk Horizon Expands from 1 to 9 Years

	87.5 percentile incurred loss change as a percentage of reserves at year 1								
	1 yr	2 yr	3 yr	4 yr	5 yr	6 yr	7 yr	8 yr	9 yr
HO	18.8%	22.2%	23.1%	23.8%	25.2%	25.8%	26.1%	26.8%	26.8%
change		3.5%	1.0%	-0.1%	1.7%	0.6%	0.0%	0.3%	0.5%
MPL	15.6%	22.0%	30.4%	34.5%	37.9%	38.2%	40.0%	40.0%	43.1%
change		6.0%	7.9%	4.1%	3.3%	0.4%	0.0%	-3.1%	3.1%
Re-Liab	25.3%	43.8%	65.4%	96.9%	110.8%	128.2%	152.6%	171.3%	187.3%
change		18.6%	21.7%	31.0%	14.4%	18.4%	20.4%	19.7%	16.1%

- Ultimate incurred losses at the 87.5th percentile increase as risk horizon increases from one to nine years.
- We conclude risk will continue to increase beyond year nine.
- We apply this conclusion to both reserve and premium risk factors. Both depend on how ultimate incurred losses can change over time.

### Statistical Safety Level in RBC—Preliminary Figures

- Part of the recent analysis we have completed is looking at the impacts of using various safety levels in RBC.
- The indicated company action level risk charges in the report are based on an 87.5th percentile safety level. We seek direction from working group members on what safety level to use.
- Considerations for not changing the safety level:
  - Capital required for a loss development runoff time horizon of nine years is more than that required by some regulatory solvency formulas which utilize a one-year development horizon.
  - Past analysis has shown that larger companies, who cover most policyholders, have lower indicated risk charges than smaller and mid-sized companies, implying a higher safety level for most policyholders.
- Considerations for increasing the safety level:
  - 87.5% is lower than the safety level in any other component of the RBC formula or, to our knowledge, in regulatory capital formulas in other countries (e.g., Rca=99%, Bond Factors=95%).
  - Risk charges have declined over time, concurrent with interest rates. But there is no reason to expect a continuation of the downward trend in risk.
  - Years prior to 1988, with poor experience, have been excluded from the analysis and deserve some consideration.
  - Captives and runoff companies may now rely on regulatory capital requirements more, making the setting of regulatory capital more important.
- Preliminary impacts of higher safety levels on indicated risk charges (compared to 87.5 percentile):
  - 90th percentile safety level increases premium risk charges about 25%, reserve risk charges about 42%.
  - 95th percentile safety level increases premium risk charges about 110% and reserve risk charges about 180%.

### Minimum Risk Charges/Year-Over-Year Capping Approaches

- We have considered a minimum risk charge of 5%, consistent with the current lowest risk charge.
- We looked at various capping approaches to limit changes in risk charge over one year to +/- 10%, 20%, or 35%, values which the committee has reviewed in the past.
- These risk charges limits are calculated line by line assuming a company with LOB expense ratio equal to the industry expense ratios and assuming no company loss experience adjustment.
- What capping level approach would working group members prefer?

### Academy P&C RBC Next Steps

- Obtain P&C RBC Working Group Feedback
  - On present value methodology
  - On adjustment to match loss runoff horizon to risk horizon
  - On statistical safety level
  - On minimum risk charge and year-over-year capping approaches
- Complete Revised Investment Income Report—Targeting May–June 2023.
- Report to working group on analysis of line of business diversification factors.

Draft: 4/4/23

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group  
Virtual Meeting  
March 23, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met March 23, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Virginia Christy (FL); Vincent Tsang (IL); Roy Eft (IN); Carrie Mears and Kevin Clark (IA); Debbie Doggett (MO); Lindsay Crawford (NE); Bob Kasinow (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill (TX); Steve Drutz (WA); and Amy Malm (WI). Also participating was: Doug Stolte (VA).

1. Adopted its Feb. 27, 2023, and 2022 Fall National Meeting Minutes

The Working Group met Feb. 27, 2023, and took the following action: 1) discussed comments received on the American Academy of Actuaries' (Academy's) presentation on collateralized loan obligations (CLOs); 2) discussed comments received on the referral from the Valuation of Securities E) Task Force; and 3) discussed potential structure change to address residual tranches.

Eft made a motion, seconded by Chou, to adopt the Working Group's Feb. 27, 2023 (Attachment Five-A) and Dec. 14, 2022 (*see NAIC Proceedings – Fall 2022, Capital Adequacy (E) Task Force, Attachment Six*) minutes. The motion passed unanimously.

2. Received Updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group

Mears said a newly created ad hoc group of the Valuation of Securities (E) Task Force is looking for participation from a variety of stakeholders with technical expertise in this area to dig into some of the more granular areas of the modeling process. Ultimately, the group would have participation from the American Academy of Actuaries (Academy). She said the other item on the agenda of the Task Force is to review the structured equity or rated feeder fund type structures and have a proposal to ensure transparency into those types of structures.

Bruggeman said the Statutory Accounting Principles (E) Working Group is moving forward with the principle-based bond definition in their its reporting, which includes the new Schedule D1.1 and D1.2 and new reporting categories with the planned effective date of Jan. 1, 2025. He said the Working Group exposed limited revisions to bond classification and accounting in addition to detailed accounting and reporting guidance for debt securities that do not qualify as bonds. The Working Group also exposed proposed reporting changes to capture new Schedule BA reporting lines for non-bond debt securities. The bond reporting changes to Schedule D1 and other related schedules were exposed by the Blanks (E) Working Group. A referral is expected to the Capital Adequacy (E) Task Force and the risk-based capital (RBC) groups to assess whether the blanks reporting changes will necessitate RBC revisions. Bruggeman said the Working Group discussed negative interest maintenance reserve (IMR) amounts and directed NAIC staff to move forward with referrals and drafting language for possible exposure. He said one of the referrals will be to the Capital Adequacy (E) Task Force, requesting that it consider removing admitted negative IMR as a direct reduction to total adjusted capital in the RBC formula along with consideration of sensitivity testing. He said there are a number of other considerations, including a referral to the Life Actuarial (A) Task Force. He said the Working Group also adopted clarifying language on invested assets issued by an affiliated entity or that include the obligations of an affiliated entity.

### 3. Continued Discussion of CLOs

Stephen Smith (Academy), chair of the Academy's C1 Work Group, said the Academy is focused on a couple of main priorities that it is trying to understand better. He said one ongoing project is that the Academy is trying to come up with a hypothetical model specification document to model CLOs for RBC purposes or provide a blueprint to check any other proposed model against. He said the Academy is also doing more work on the concept of RBC arbitrage. He said the Academy has observed that regulators, interested parties, and the industry have differing definitions of RBC arbitrage. He said the Academy is working on a document that will more clearly lay out the different definitions, along with some views on definitions that would be useful in terms of driving RBC. Mears asked Smith about the time frame. Smith said the Academy is trying to get the RBC arbitrage document out as quickly as possible, perhaps in a couple of months, and model specifications will be on a longer time frame.

### 4. Discussed Residual Tranche Structural Change

Barlow said his understanding of the charge received from the Financial Condition (E) Committee is to look at residual tranches for all structured assets, not just CLOs, and that this is intended to be an interim solution. As work continues on CLOs, as Smith just discussed, Barlow said he hopes to get a structure and a methodology that can be applied to other types of assets as well as CLOs. While CLOs may no longer be included in this interim solution, it could be that it stays in place for some categories of assets that do not have enough volume to warrant developing a methodology specifically for them.

Clark said a key point in taking an interim step would be the magnitude of the population and whether it is a pressing enough issue that an interim step is needed. Until regulators hold a meeting to look at the data, he said he is not sure a decision can be made. Barlow said he believes the guidance received for the Working Group's charge is to develop an interim proposal. Although the 2022 year-end data might inform the necessity of an interim proposal, he said he does not believe the Working Group should be deciding if an interim proposal is needed. However, if that is the will of the Working Group after reviewing the 2022 year-end data in the upcoming April meeting, it can be taken back to the Financial Condition (E) Committee. Clark said he is fine with the structural change to accommodate the timeline, as it keeps the Working Group's options open as to whether a change in factors is needed at this time.

Stolte said Virginia is supportive of the interim solution on residuals. He expressed concern about being out of step with other financial service regulators in the U.S. and internationally. Bruggeman said he supports looking at the data and waiting for a decision on a charge but expressed concern about waiting for all the data to be available because of the number of different structures and the materiality to individual companies.

Clark said he shared these concerns but said there is currently some ambiguity in the accounting guidance regarding what constitutes a residual tranche, and there will be some continued inconsistency in reporting until the definition is further refined. Therefore, the Working Group may not be looking at the full population, and that may inform the RBC decision. He expressed concern about implementing an interim step that does not have the usual level of analysis unless there is a material concern. Barlow said these are the issues the Working Group is to address and why there is representation from the other groups—so there is coordination from start to finish. He said his goal is to make RBC a non-factor when companies make investment decisions.

Hemphill said she does not think it is appropriate to just think of materiality from an overall industry perspective since the concern is from a solvency perspective. She said the Working Group needs to be willing to make incremental changes and improvements, and it is appropriate to consider making the change even if there is a concern that the average materiality across companies may not be high.

## 5. Discussed Next Steps

In line with many of the comments received, Barlow said it seems that the Working Group is supportive of having one category and one factor for the interim proposal on residual tranches. He said there were also several comments supporting sensitivity tests. He said he does not believe this would be a substitute for what the Working Group was asked to do but had suggested that if a proposal for sensitivity tests was received, the Working Group could consider that as an additional item. He said the American Council of Life Insurers (ACLI) has submitted a proposed sensitivity test.

Steve Clayburn (ACLI) said the ACLI believes there should be some quantitative analysis before a final factor is determined and thinks the sensitivity testing could be an additional tool for the state insurance regulators. Barlow said the structural change was exposed by the end of January, but the sensitivity test change was not exposed. He said that work will be done to get it ready for exposure and that this would include a request for input from RBC vendors as to the possibility of having this included for yearend 2023. He said there will be a regulator-only meeting in April to look at the 2022 year-end data on residual tranches and then an open meeting to continue discussions on the interim proposal.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

Draft: 3/17/23

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group  
Virtual Meeting  
February 27, 2023

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met Feb. 27, 2023. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Ray Spudeck (FL); Carrie Mears and Kevin Clark (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Lindsay Crawford (NE); Bob Kasinow and Bill Carmello (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill (TX); Tim Hays (WA); and Amy Malm (WI).

1. Discussed the Academy Follow-Up to the Presentation on CLOs

Stephen Smith (American Academy of Actuaries—Academy), chair of the Academy's C1 Work Group, presented the Academy's letter (Attachment Five-A1). He said the intersection of collateralized loan obligations (CLOs) and RBC creates a unique challenge for the purpose of purely modeling credit risk. He said the Academy is looking for regulatory guidance on the statistical safety level in terms of how the risk should be measured. Historically, factors for bonds have been based on the 96th percentile of losses. The Academy suggested in its October report that a conditional tail expectation (CTE) type of measure would be more appropriate due to the cliff risk embedded in CLOs, and the Academy is seeking regulator input. Smith said the Academy is also seeking input on where to set the statistical safety level, as well as the concept of RBC arbitrage. As the Academy previously indicated, he said structuring does not eliminate risks, but it changes the nature of the risk, especially among the tranches, for several reasons.

Smith said the Academy's view is that the total C-1 requirement for adding up all the underlying loans inside of a CLO does not necessarily have to equal the sum of the capital charges on a vertical slicing of a CLO. The Academy is asking if state insurance regulators have a strong view on this; if so, the Academy is going to incorporate state insurance regulators' views into their work. Otherwise, the Academy would like to know what it can share to help inform these views. The Academy has expressed the view that the materiality is low enough that a short-term solution may not be needed, so more time can be given to a longer-term solution. If state insurance regulators' judgement is different, the Academy would like to know what they can do to be supportive. Barlow said the first question is whether there is an urgency in updating the C-1 factors for CLOs. He said the Working Group is working on two projects, and the first one is updating the C-1 factors for CLOs. He said he understands that the risk may not be sufficiently material overall right now, but there may be some companies for which it is material, so the Working Group wants to address that. He said the two projects are to get solutions for the CLOs and an interim solution to address residual tranches before a more long-term solution can be developed for structured assets. He said the Working Group would like the Academy's Work Group to do a diligent review of the CLOs and develop recommendations as quickly as it can, but this is separate from the short-term interim solution for the residual tranches.

Barlow said the Working Group is looking to the Academy to provide some recommendations on the statistical safety level. Because of the level of tail risk involved, he said he believes the Working Group would feel more comfortable with a CTE type measure. In terms of the time horizon, he said he believes the Working Group would benefit from the Academy's perspective. Carmello said he believes using CTE makes sense, but he expressed concern with just using historical information. He said he believes it is more appropriate for RBC to have some modeling of potential market situations that are worse than the historical experience. Mears agreed on using CTE as opposed to using percentile just because it was used for other types of investments, as long as it does not introduce too much complexity. Tsang questioned whether it would be confusing to change the C-1 factor from

the 96th percentile to the CTE measure. Barlow said RBC has percentile and CTE measures in various components, and there are ways to determine consistency. Smith said the Academy would work on a reconciliation between the CTE and percentile measures to make them comparable.

With respect to the Academy's question on RBC arbitrage, Barlow said he believes this is more of a topic for the Capital Adequacy (E) Task Force because it affects more than the asset side of the RBC. Mears and Botsko agreed. With respect to the C3 implications, Barlow said once the structure for C1 is in place, this could be addressed if it is material enough.

With respect to whether active management within the CLO structure should be considered in developing C-1 factors, Barlow said the Working Group would look to the Academy for a recommendation. He said he believes assuming an active management adds a lot of complexity, and no active management sounds more conservative. Smith said the first kind of active management is around credit selection, and it would be more conservative not to model active management for this kind. He said the other kind of active management is that the manager makes active decisions especially in terms of whether it is extending and refinancing debt tranches or shifting risks around among the tranches. He said this gets a lot more complicated to model. Mears said implications of not including the active management need to be understood. Chou said he would support the more complicated study on the active management. Tsang expressed concern, and he said he is not sure whether it adds any value. Barlow said it appears that there is agreement on being conservative on the first kind of active management, and there is an interest in identifying how material the second kind of active management could potentially be. Smith said the Academy will take this feedback and do some work on the risks shifting between tranches of the active management.

## 2. Discussed Comment Letters

Paul Graham (American Council of Life Insurers—ACLI) presented the ACLI's comment letter (Attachment Five-A2), and he said the ACLI would like to have some analysis supporting the interim solution while the ACLI is proposing one factor for now. He said the ACLI is proposing boundaries on the factor because it should not have more of an impact than completely non-admitting the assets. This is different for every company depending upon where their RBC level is. In addition, the ACLI is proposing sensitivity tests.

Debra Casey (Global Atlantic Financial Group), representing a group of companies, presented their comment letter (Attachment Five-A3). She said they commended the Working Group for engaging the Academy to prepare the report on CLOs and agreed with the summary observations from that study. She said they do not understand the sense of urgency with the need for the interim solution, but they need to do something for structured securities. She agreed with the ACLI on sensitivity analysis that would provide state insurance regulators with more transparency as to the holdings and the impact on the RBC of CLOs versus other types of asset-backed securities (ABS). She said the main point of their comment letter is that they believe there needs to be a data-driven solution, and they support the model used for the update of the bond factors with an expert engaged, as well as engaging the industry to perform field testing. At least for CLOs, she said they believe there can be a streamlined process that can produce new factors or a new methodology that could be implemented at the same time as the new bond standards.

Christopher Halldorson (Prudential), representing a group of companies, presented their comment letter (Attachment Five-A4). He said there have been several comments concerned about the arbitrary nature of an interim solution, and the arbitrary charge of 30% should have already been recognized, which is based on the analysis of public equity losses under stress, and there is no analysis to connect that to residual tranches of structured securities. He said the residual tranches of structured securities are highly leveraged to the underlying, typically high-yield collateral, and that is not the same risk as holding Standard & Poor's 500 index (S&P 500). He

said they support an interim charge of at least 45%, which is the highest current factor for high-beta equity holdings. He also said this is a fast-growing asset class, and there are some material concentrations. They think a single charge that has some analysis supporting it, which is more than what currently exists, is a good first step and can lead to more robust transparency.

Eric C. DuPont (Guardian Life) said he spoke for his company and partnered closely with MassMutual on its comment letter (Attachment Five-A5). He said they appreciate the thoughtful approach taken, and they would suggest continuing that and finding a data-driven solution. They think the sensitivity testing provides an opportunity to provide what-if scenarios. DuPont said there is some concern about individual companies that may have high concentrations of risk, and they believe what-if scenarios can identify those so state insurance regulators can address those companies rather than taking a broad brush that would apply to the entire market.

Barlow said he does not believe the charge from the Financial Condition (E) Committee can be addressed solely by sensitivity testing, but proposed approaches to sensitivity testing can be submitted. He said the original referral of three factors from the Valuation of Securities (E) Task Force can be simplified to one factor at least for the interim solution. Mears said it would be fine if the Working Group wants to move forward with a single factor for an interim solution.

Mears said 2022 reporting is the first time to have residuals reported separately, and the definition of what should go in that category may need to be more explicit. She suggested that the Working Group consider a referral to the Statutory Accounting Principles (E) Working Group to review that definition.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

*Objective. Independent. Effective.™*

January 31, 2023

Mr. Philip Barlow  
Chair, Risk-Based Capital Investment Risk and Evaluation (E) Working Group (RBCIRE WG)  
National Association of Insurance Commissioners (NAIC)

Re: Follow-up to Academy Presentation on CLOs given to RBCIRE WG

Dear Mr. Barlow,

On behalf of the American Academy of Actuaries<sup>1</sup> C1 Work Group (C1WG), thank you for the opportunity to present early findings on collateralized loan obligations (CLOs) risk-based capital (RBC). As the work group continues to research the issue, it aims to produce analysis that is relevant for regulators. To that end, this letter seeks clarification on several issues raised in the [December CLO report](#) to the RBCIRE WG that needs regulatory judgment.

1. Given the exposure statistics that the C1WG shared with RBCIRE, what is the urgency of updating C-1 factors for CLOs? Is the risk sufficiently material to warrant a short-term solution before a long-term solution can be determined?
2. What information does the RBCIRE need to establish the statistical safety level (SSL)? The SSL specifies the statistical measure for the capital requirement, including the choice of risk measure (percentile vs. conditional tail expectation vs. other) and the level, and the time horizon. For reference, the C1 bond factors are set at the 96<sup>th</sup> percentile over a ten-year period.
3. Does RBCIRE believe that the “no RBC arbitrage” principle should be applied to the C-1 factor methodology?
4. Would RBCIRE like to follow up on exploring possible C-3 implications of the optionality embedded in CLOs (including callability, resets, or other choices available to the equity tranche vis-à-vis the debt tranches)?
5. Should active management within the CLO structure be considered when developing C-1 factors?

The C1WG appreciates your attention to the issues raised in this letter and looks forward to discussing them further with you. Should you have any questions or comments in response to

**Re: Residual Tranches - Interim Solution**

Dear Mr. Barlow:

ACLI appreciates the opportunity to provide comments on the exposure of the Valuation of Securities (E) Task Force (VoSTF) referral to RBC Investment Risk & Evaluation (E) Working Group (RBC IRE WG) on a proposed “interim solution” for additional RBC factor categories for securitized residuals.

**Executive Summary**

The ACLI supports the efforts to assess the potential need for determining capital charges associated with CLO investments that better reflects the actual risk of the various tranches. We also understand that the additional RBC factors (75% and 100%, in addition to the existing 30% factor) recommended by the SSG are intended to support an interim solution until structured finance securities can be studied and modeled more fully by the NAIC.

While we understand some regulators’ desire to develop an interim solution with some level of expediency, we do have concerns that these factors were recommended without the normal level of rigor provided when making RBC changes. As such, it is important to understand the impact that the recommended changes will have. If the NAIC finds it prudent to adopt an interim approach to RBC factors for residual tranches of structured securities reported through Schedule BA, we recommend that the interim approach be simple and in place for as short of a time as possible.

Thus, we urge the RBC IRE WG to transition quickly from the work on the interim solution to the development of factors based on actual loss experience of the securities in question. We also

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

[accli.com](http://accli.com)

suggest for simplicity purposes that such tranches of structured securities be mapped to a single factor, as they are today. We have some suggested paths for the interim solution below.

### Comments on Exposure

Understanding that some regulators desire an interim solution, we have some observations, concerns, questions, and suggestions for your consideration as outlined further in our comments.

### **One Factor for Interim Solution**

The goal of an interim solution should be “do no harm” when compared to what the ultimate solution will be, especially given the “rough justice” nature of RBC. Neither the VoSTF referral nor the structural exhibit change proposal provides a rationale for setting temporary RBC factors at 30%, 75%, and 100%, nor how a reporting entity would distinguish among the three. In considering an interim solution, we recommend the use of only one factor for residual tranches reported on Schedule BA, as is the case currently. Because the factor may be chosen without the normal quantitative analysis that goes into RBC factor development, ACLI members have a variety of views on the selection of the single factor. Some companies believe that a higher factor is appropriate. Some companies recommend that the single factor continue to be 30%, augmented with a higher factor within the Sensitivity Testing exhibit on Pages LR038 and LR039. This sensitivity testing would allow regulators to determine whether any companies have a material risk from their residual tranches as well as be the basis for an analysis of other factors.

Since the factor does not need to be adopted until June 30, 2023, ACLI would like to see consideration by the NAIC to do additional quantitative analysis before the single factor is chosen. We believe that whatever factor is chosen, it should not be materially more conservative than complete non-admittance of the asset for the average industry participant, and likely a little less so, given the risk premium already contained in policy reserves. We recommend that the RBC IRE WG use information gathered from the year-end 2022 RBC reports to help identify a rational factor, and, if possible, review of any available experience data on CLO residual tranches to help check for reasonableness.

To prepare for the potential for a variety of solutions, ACLI recommends that the structural changes to the RBC forms accommodate a single factor and additional sensitivity testing. ACLI would be happy to support NAIC staff in developing these structural changes.

### **Scope of Application**

It is not clear from the VoSTF referral memorandum as well as the exposed RBC exhibit form whether the proposal is intended to apply to the residual tranches of collateralized loan obligations (CLOs) or a broader application to all residual tranches for the variety of structured finance securities. We recommend that any future exposure draft clarify specifically to what types of investments the interim solution is intended to apply.

### **Define Timeframe of Use**

The VoSTF referral does not mention any proposed implementation timeframe. Reviewing an RBC structural change during the first quarter of the year implies the possibility of implementation for year-end 2023 financial statements. Is this the intent or expectation? Furthermore, will this be in conjunction with review of the recent updates to Schedule BA for residual tranches which are to have the 30% RBC factor? Will the proposed factor, if any, be exposed for comment? And finally, how long would the interim solution remain in place?

Conclusion

Thank you for the opportunity to continue to participate and comment on this issue. We understand some regulators feel the need to do something additional to the 30% charge that has been applied to residual tranches for year-end 2022; however, we believe that appropriate review and analysis to provide a basis for factor selection is necessary for the stability of the NAIC's RBC framework. We look forward to future discussions and continued collaboration with the NAIC on this important initiative.

Sincerely,

Steve Clayburn

Kansas City, MO 64106-2197

**Re: The American Academy of Actuaries C1 Work Group Presentation to the Risk-Based Capital Investment Risk and Evaluation Working Group (RBCIRE WG) on collateralized loan obligations (CLOs) (the “AAA Report”) and the Valuation of Securities Task Force (“VOSTF”) Referral on the Risk Assessment of Structured Securities- CLOs and Risk-based capital (RBC) structural proposal addressing residual tranches, together, the “Exposures”)**

Dear Mr. Barlow:

We are a group of insurance companies concerned about the proposal to adopt an interim solution for residual tranches of securitized assets that is not supported by the thoughtful analysis and field testing that the NAIC has implemented in the past. We believe such thoughtful analysis is the hallmark of any responsible regulatory regime. We appreciate the opportunity to provide comments on the Valuation of Securities Task Force (“VOSTF”) proposed interim solution as well as the American Academy of Actuaries’ (“the Academy”) presentation on CLOs.

Our group of companies agrees that the RBC treatment of the investments commonly referred to as “structured securities” is important and deserving of review and analysis. Our view is that:

- RBC factors for structured securities should be thoughtfully analyzed and developed following a similar process to the successful C-1 bond factor development project.
- Calculating RBC using factors developed without sufficient analysis and due diligence risks presenting a misleading assessment of a company’s financial position to users of a company’s statutory financial information, including the public.
- A rushed approach, without appropriate analytical rigor disincentivizes companies from investing in an important asset class, has the potential of causing market disruption, and negatively impacts the liquidity of these assets and the markets that rely on insurance company investments.
- The Academy’s report stating that CLOs are not a current risk to insurance industry solvency builds a strongly constructive case for having the NAIC perform thorough and thoughtful quantitative analysis and field testing.
- A more rational and less disruptive approach is to have companies provide RBC sensitivities to regulators that will enable regulators to risk assess company balance sheets along with the baseline RBC measurement. It should be understood that any such assessment would be measured against factors that were developed without sufficient analysis and due diligence, as discussed in this letter, and therefore should be viewed as indicative only and not meant to be a definitive quantification of the risk associated with the sensitivities.

RBC factors currently applicable to the senior tranches of structured securities are based on the review of default and loss experience of corporate bonds. Based on a long track record of available data, it is clear that corporate bonds have higher default and loss experience than equivalently rated structured securities, making comparable structured securities' RBC factors overly conservative as they currently stand. Further, the RBC factors currently applicable to residual tranches of structured securities were developed based on a study of unaffiliated common stock over a two-year time horizon and we are not aware of any analysis completed in connection with the Exposures that evaluates whether these RBC factors are conservative or aggressive. Given the current state of both conservative and untested RBC factors, we believe, and the Academy agrees, that an arbitrary interim charge is not appropriate and that any new factors should be developed using the proven, collaborative process that was used during the changes to the C-1 bond factors. We are confident that this could be done in an expedited manner to produce rational and predictable results that regulators and industry alike would support as long-term rather than interim solutions. Like the C-1 process, we propose that the plan should be to engage an expert consultant or consulting actuary with the relevant expertise and significant resources to perform the necessary quantitative analysis. That expert should also work with industry to propose changes, perform field testing, and then promulgate appropriate charges to ensure "equal capital for equal risk across different asset classes." We expect that a streamlined process to develop appropriate factors could be performed in time to be released concurrently with the principle-based bond definition currently being worked on by the Statutory Accounting Principles Working Group.

Additional specific comments on the two exposures recently released by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group ("the Working Group") are provided in the balance of this document.

First, we commend you for engaging the Academy to prepare a report on CLOs. The Academy report is thoughtfully prepared and enlightening, and we agree with the Academy's summary observations. With respect to residual tranches, we found the Academy's observation about the lack of quantitative analysis to support the current 30% capital charge or the Investment Analysis Office's ("IAO") proposed sub-categories of NAIC 6 particularly insightful. We agree with the Academy that justification of a CLO residual tranche charge or new sub-categories of NAIC 6 will require substantial analysis.

The Academy report made the point that CLOs do not present a danger to the solvency of the insurance industry. In fact, the NAIC Capital Markets Bureau's special report, released on January 5, 2023, states: "Based on the NAIC's stress test results, U.S. insurer investments in CLOs remain an insignificant risk." Based on the work of the Academy and the NAIC Capital Markets Bureau, NAIC has ample time to conduct the necessary quantitative analysis to develop a solution that can be supported with data, is properly field tested, and would result in a capital charge that is based on sufficient analysis and due diligence so that it is not misleading to the public or other users of a company's financial information. An interim solution not grounded in quantitative analysis is unnecessary and potentially harmful because a temporary increase in the capital charge that is unrelated to the actual risk of the investment, and which may ultimately be reversed, could be difficult for a company to manage and for stakeholders to

understand. As we stated above, a more appropriate course of action would be to add sensitivity analysis information to the 2023 RBC submission designed to target the risks and populations important to regulators. This approach would have the added benefit of time to incorporate impact analysis required by the Capital Adequacy Task Force for any RBC factor changes. Industry partners would be willing to assist in the development of the information regulators are targeting, such as the impact of increased factors applied to CLO residual tranches.

We also note that given changes in blanks guidance for YE 2022 requiring residual tranches to be moved to schedule BA, regulators and other key stakeholders will have more transparency into the holdings related to this asset class.

Second, we strongly object to the proposal from VOSTF to use three new sub-categories of NAIC 6 as the interim solution for residual tranches of any structured finance security for the reasons stated above. To our knowledge, no proposed framework for sorting investments into these sub-categories currently exists, and no rationale has been offered as to why these respective proposed capital charges are appropriate, adding confusion to the implementation of this proposed treatment. Further detail as to the rationale behind the charges and clarity as to what would be required to differentiate the 3 sub-categories would be needed before they could be implemented by the industry. Without quantitative analysis and field testing, we risk misleading the public, policyholders, regulators, and other users of the financial statements as to the risk inherent in these structures. Additionally, if the charges are driven by inherent risk specific to CLO residuals rather than all structured finance residuals (which is not entirely clear based on the release), time should be taken to understand the differences in those structures and the potential that the “regulatory capital arbitrage” normalization might not be easily calculated.

Furthermore, we agree with the observation in the Academy report that CLO structures can transform the risk such that vertical ownership versus ownership of the underlying loans can have different RBC values. Factors such as active trading of loans, excess spread being used to cover principal losses and strict reinvestment criteria that ensures diversity, and reduced concentration risk can alter CLO risks as compared to underlying loans. We think it is appropriate to stress structured securities in an analytical way which includes both a fundamental analysis of the underlying asset risk as well as the way the structure will absorb those losses. As the Academy suggests, analyzing the tail risk embedded in any structure ensures that the structures themselves can absorb (or not) the losses that may occur under different scenarios. Ignoring the structural protections in a transaction is not a transparent method to stress these assets

Finally, we note that the IAO proposal states that the proposed interim solution is intended to be applied to all structured securities, but only CLOs have been the focus of recent discussions. Any interim rule must clearly state with specificity which securities are covered. If the scope includes other types of investments, then we believe a cohesive plan, including a similar analytical approach should be employed with respect to those other investments consistent with the work done on RMBS, CMBS and CLOs and must be exposed. If, against the best advice of this industry group, an interim solution is adopted, we request a concrete, definitive timeframe

for the interim solution so that industry has time to plan and ensure that a robust and transparent process is achieved.

We appreciate that the Working Group is focused on these issues with the goal of ensuring that RBC is appropriate for the risk that insurance companies are taking. We look forward to engaging with the Working Group in a transparent process to develop a new framework for residual tranches that incorporates appropriate quantitative analytics based on their historical performance of defaults and losses and aligns with other asset classes ensuring “equal capital for equal risk.”

RE: Referral on the Risk Assessment of Structured Securities - CLOs

Dear Mr. Barlow,

On behalf of the undersigned life insurance companies (“the companies”), we are writing to express our strong support for the steps the NAIC is taking to model collateralized loan obligations (CLO) for risk-based capital (RBC) purposes. The companies are also supportive of the Valuation of Securities Task Force (VOSTF) recommendation that the Risk-Based Capital and Investment Risk and Evaluation (RBC IRE) Working Group develop interim RBC factors for the NAIC 6 designation. Aligning RBC with the underlying investment risk of the residual tranches of structured securities is a critical component of minimizing RBC arbitrage in securitized assets, a regulatory objective that we also support.

Structured securities, including CLOs, are material to insurer solvency. Structured credit has become a core asset strategy in US Life General Accounts, similar in size to Commercial Mortgages. CLOs in particular are a fast-growing asset class that are highly correlated to other credit exposures within insurers’ asset management portfolios and have indirect implications for other insurer capital holdings under stress.

Structured securities are important financial products, but they also have unique “cliff risks” not present in most financial assets. While small levels of default will not translate into immediate losses within a transaction’s rated tranches, once the first loss protection is depleted small additional collateral losses will result in large losses within those tranches. Residual tranches are the first loss protection layer shielding the rest of the structure but are not themselves protected.

The companies recognize the significant progress made to date by the RBC IRE Working group and VOSTF to develop an appropriate modeling methodology and accompanying RBC framework. As this work progresses, we agree that it is critical for regulators to enact interim RBC factors for the residual tranches while NAIC fulsomely evaluates more permanent changes to its RBC framework for structured securities. The current capital factor of 30% was designed for more traditional equity holdings, not the highly levered residual tranches of structured securities. A practicable interim solution could address the risks of investing in residual tranches while providing regulators with additional information for that long-term solution.

The companies agree with ACLI that there is no need to pursue three new NAIC 6 designation categories (i.e., 6.A, 6.B, and 6.C) in the interim. Instead, the companies recommend use of a single interim RBC factor for structured securities tranches with an NAIC 6 designation. **We support an interim RBC factor for the residual tranches of at least 45%, which is the highest current factor for high beta equity holdings.**

There have also been industry discussions about maintaining the current 30% factor and using a higher factor in sensitivity testing to help regulators assess risk. While sensitivity testing or impact analysis can provide regulators with valuable information on materiality and solvency of the residual tranches, sensitivity testing alone will not provide data on what appropriate RBC factors should be nor will it meet the regulators' goals of reducing RBC arbitrage while more refined charges are developed. As such, should the regulators decide to employ sensitivity testing, the companies believe a higher factor for residual tranches is also needed.

\*\*\*\*\*

Thank you in advance for your consideration of our comments. We are committed to working with NAIC and regulators to enact reasonable RBC factors for structured securities that reflect the underlying risk for all tranches. The companies join ACLI in urging the RBC IRE Working Group to transition quickly from the work on the interim solution to the development of permanent RBC factors.

**Re: Residual Tranches - Interim Solution**

Dear Mr. Barlow:

We, the undersigned companies, appreciate the opportunity to provide comments on the NAIC's exposure of the Valuation of Securities (E) Task Force (VoSTF) referral to Risk-Based Capital Investment Risk and Evaluation (E) Working Group (RBC IRE) on a proposed "interim solution" for additional RBC factor categories for securitized residuals.

Overall, we are supportive of the NAIC's efforts to further model and understand the complexities of structured securities and ensure that life insurers are holding the appropriate levels of capital to support the risk on their books. Some have raised concerns about the potential for capital arbitrage specific to collateralized loan obligations (CLOs). However, we believe this is premature. We are not aware of underlying facts which would call for an immediate modification to Risk-Based Capital (RBC) prior to completing a comprehensive analysis. We believe it would be unwise to set a precedent for disruptive intra-year changes to what is a stable long-term capital framework and ignore what has been a successful data-driven approach historically.

Accordingly, we do not believe the proposed interim factors should be applied to CLO holdings. Instead, an expeditious undertaking of information gathering through disclosures of the Residual Tranche portion of AVR (already in place for YE 2022 reporting) and adding structure to existing sensitivity testing would provide transparency regarding the scope and reach of individual company CLO or other residual tranche holdings. Such a process would avoid unnecessary and potentially uneconomic volatility in company reported financial strength while still addressing the Task Force's concerns in a timely manner.

**Recent Independent Experts State an Immediate RBC Correction is Not Needed or Necessarily Appropriate**

We support swift information gathering in advance of taking action to modify a company's reported RBC. Our view is based on recent reports from the American Academy of Actuaries (Academy) and the NAIC Capital Markets Bureau, which both state that on an aggregate basis, CLOs do not present a material solvency risk to our industry as noted in:

- 1) The January 2023, NAIC Capital Markets Bureau Special Report on Collateralized Loan Obligations (NAIC Report) states "Based on the NAIC's stress test results, U.S. insurer investments in CLOs *remain an insignificant risk.*" (Emphasis added)
- 2) The Academy's C1 Work Group's (C1WG) December 14, 2022, presentation to the NAIC's RBC IRE states on Slide 12: "In the C1WG's view, *CLOs do not present a material risk to the aggregate solvency of the life insurance industry currently.*" (Emphasis added)

Mr. Philip Barlow  
February 6, 2023  
Page 2

- 3) Slide 21 of the C1WG’s presentation states: “While a CLO’s total collateral and a vertical slice of its tranches have the same *risk* at a point in time, it does not follow that they must have the same total C-1 requirement.”
- Noting in support of this statement:
- a. Each of corporate bonds, bank loans, and CLOs have unique structures and risk profiles.
  - b. C-1 corporate bond factors are not appropriate for bank loans or for CLOs due to different assumptions and models (e.g., secured vs. unsecured, time horizon, etc.)
  - c. It would not be appropriate to force equivalence using the current C-1 corporate bond factors.

**Sensitivity Testing is More Appropriate than Applying an Interim Capital Charge to Residual Tranche Holdings**

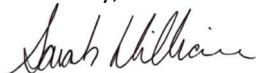

Following other recent examples of a non-urgent nature (such as RBC sensitivity tests or Group Capital Calculation calibration), we propose the sensitivity testing section of the Life RBC Exhibits (Pages LR038 and LR039) as the interim solution. Doing so, the NAIC could apply one or more sensitivity factors to residual results to get a sense of impact to each company, without modifying the reported result. This alternative interim solution will accomplish multiple goals:

- 1) It is expedient, without damaging the integrity of a company’s RBC calculation.
- 2) It allows regulators to see the impacts to their respective domestic companies in a “what if” scenario, helping to identify companies with potential material risk from residual tranches of CLOs.
- 3) It allows the RBC IRE WG time to undertake extensive analysis and testing of CLO experience, without having a hurried approach for YE 2023.
- 4) It allows regulators and industry to review the sensitivity testing results, to discuss the advantages and disadvantages of alternatives, and to understand the broad, long-term impacts to industry and reinsurance counterparties, and the impact to availability and pricing in the risk transfer marketplace.
- 5) It does not create the same potential for disruption in the structured securities market.
- 6) Disclosure, identification of material ownership, and sensitivity testing would dissuade material owners from significantly increasing exposure.

In conclusion, the proposal to collect sensitivity testing data rather than apply an interim RBC charge in 2023 is based on (i) recent independent reports that conclude CLOs do not present material risk to the life insurance industry and (ii) the Academy report which notes forcing the sum of capital charges for all CLO tranches to equal a C-1 bond charge is inappropriate. Moreover, sensitivity testing presents an expeditious information gathering opportunity to allow regulators to target needed adjustments while avoiding a threat of unneeded market disruptions.

We look forward to the opportunity to discuss our proposed solution and answer any questions you may have.

Sincerely,

Sarah Williams

 Health RBC Instructions       Property/Casualty RBC Instructions       Life and Fraternal RBC Blanks  
 OTHER \_\_\_\_\_

**DESCRIPTION OF CHANGE(S)**

The proposed change would revise the instructions and structure for the Affiliated Investments for all lines.

**REASON OR JUSTIFICATION FOR CHANGE \*\***

The proposed revisions will improve the risk-based capital formulas and provide consistency to the treatment of affiliates for all lines of business.

**Additional Staff Comments:**

8/11/22 - The Task Force exposed this proposal for a 60-day public comment period ending Oct, 10.  
 3/23/23 – The Task Force adopted the proposal on 3/23/23

\*\* This section must be completed on all forms.

**AFFILIATED/SUBSIDIARY STOCKS**  
**XR002 – XR004**

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Health Insurance Companies and Health Entities Not Subject to RBC
  - b. Property and Casualty Insurance Companies Not Subject to RBC
  - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Entities with a capital requirement imposed by a regulatory body
  - b. Other Financial Entities without regulatory capital requirements
  - c. Other Non-financial entities

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be crosschecked, and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

Line 10 of XR003 – Fair Value Excess Subsidiary Common Stock equals the total of type codes 1.a. through 2.c., Column 13 of the Subsidiary Companies Risk – Details Page. The program will automatically calculate this figure.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and 93999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall primarily into two broad categories: (a) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (b) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. A third category of Affiliates/Subsidiaries, publicly traded insurance affiliates/subsidiaries held at market value, has characteristics of both broader categories. As a result, it has a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliate/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (9), the total outstanding common stock in Column (7) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliates/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Affiliate/Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR025, Line (37)).
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68)).
- c. For a Life affiliate/subsidiary RBC filing, the sum of
  - i. Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
  - ii. Primary Security shortfalls for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of a directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted for financial reporting purposes. The value reported in annual statement Schedule D, Part 6, Section 1 will be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted capital for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

**Equity method Insurance Affiliates/Subsidiaries:** Equity method is defined in SSAP 97, Paragraph 8b, as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those insurance Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the  $H_0$  charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried

**Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.):** If the affiliate/subsidiary's common stock is publicly traded and the reporting company carries the affiliate/subsidiary at market value, after any "discount," there are generally two components to the reporting company's RBC generated by the affiliate/subsidiary. The prorated portion is the percentage of ownership of total common and preferred stock. The smaller of the prorated portion of the affiliate/subsidiary's own statutory surplus or the prorated portion of its RBC after covariance is added to the  $H_0$  component of the reporting company. In the normal case, the common and preferred stock book/adjusted carrying value of the affiliate/subsidiary exceeds the prorated portion of the larger of its statutory surplus and its RBC after covariance. In this case, the addition to the  $H_1$  component is the larger of a) 22.5 percent of the affiliate/subsidiary's common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate's/subsidiary's statutory surplus or b) the prorated portion of the affiliate's/subsidiary's RBC after covariance in excess of the prorated portion of its statutory surplus. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of its RBC after covariance, but greater than the prorated portion of its statutory surplus, 100 percent of the common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate/subsidiary's statutory surplus is added to the reporting company's  $H_1$  component. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of the affiliate/subsidiary statutory surplus, there is no addition to the  $H_1$  component.

## 2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary companies. This involves drilling down to the first RBC filing insurance subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its

RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA Health Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

		Balance Sheet		
		Holder, Inc.		
		12/31/XXXX		
Cm Stk:	ABC Life Company	10,000,000	Long Term Debt	5,000,000
	XYZ Casualty Company	15,000,000	Other Liabilities	2,000,000
	ANH Health Company	3,000,000		
	Other Common Stock	17,000,000	Total Liabilities	7,000,000
	Cash	7,000,000	Equity	50,000,000
	Other Assets	5,000,000		
	Total Assets	57,000,000	Total Liabilities & Equity	57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates/subsidiaries is as follows:

<u>Company</u>	<u>Stat. Book value</u>	<u>Source:</u>
Holder, Inc.	50,000,000	MEGA Health Sch D - Part 6, Section 1
<i>Holder, Inc. aff/subs subject to RBC</i>		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	<u>3,000,000</u>	Holder, Inc. Stat. balance sheet
Subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	
		<i>(amount subject to the 30.0% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)</i>

The following table shows the XR002 entries that MEGA Health Insurance Company (which owns 100% of Holder, Inc.) would report for the indirectly owned insurance affiliates/subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these affiliates/subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

		XR002 Column					
Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	4 100% RBC	5 Book Adjusted Carrying Value	7 Total Value of Affiliates/Subsidiaries	8 Statutory Surplus of Affiliates/Subsidiaries	11 % Owned	12 RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 30 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate's RBC After Covariance).

Affiliates/Subsidiaries that are Not Subject to RBC

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term investment subsidiary is defined in the annual statement instructions as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital for an investment in an investment subsidiary is 30 percent of the carrying value of the common and preferred stock.

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the Risk-Based Capital (RBC) of each directly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate multiplied by 1.000. Enter information for any non-U.S. insurance affiliate/subsidiary: life, property and casualty, and health insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's common and preferred stock columns (7) and (10), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the Alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between, and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line **XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance affiliate/subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate/subsidiary multiplied by 1.0 and adjusted to reflect the reporting company's ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the alien insurance affiliate/subsidiary would be \$5,000,000 (0.500 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 30 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$5,000,000 (1.0 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

		XR002 Column				
Affiliate/Subsidiary	Affiliate/Subsidiary Type	4 100% RBC	5 Book Adjusted Carrying Value	7 Total Value of Affiliate/Subsidiary	11 % Owned	12 RBC Required
Alien Insurance Company	Indirect Alien Life Affiliate/Subsidiary	5,000,000	10,000,000	20,000,000	50%	5,000,000

For each affiliate/subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's Common and preferred stock column.

7. Investment in Upstream Affiliate (Parent)  
The risk-based capital (RBC) for an investment in an upstream parent is 30.0 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (10).
- For each affiliate, enter the following information:
- Company Name,
  - Affiliate Type Code,
  - NAIC Company Code,
  - Book Adjusted carrying value of common stock
  - Book Adjusted carrying value of preferred stock,
  - Total Outstanding value of common and preferred stock.
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
- a. Health Insurance Companies and Health Entities Not Subject to RBC
  - b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guarantee insurers
  - c. Life Insurance Companies Not Subject to RBC, such as life insurance subsidiary exempted from RBC
- The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula is 30 percent of the book/adjusted carrying value of the common and preferred stock.
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
- a. Financial entities with a capital requirement imposed by a regulatory body (e.g., a bank)
  - b. Other financial entities without regulatory capital requirements
  - c. Other non-financial entities
- The risk-based capital for entity types a, b, and c is 30 percent of the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurer Affiliates/Subsidiaries Not Subject to RBC is "9". Reported amounts use Schedule D, Part 6, Section 1, Line 0899999, and Line 1799999 as the basis of reporting.

**APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS**

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

<u>Subsidiary Insurance Company</u>	<u>Owner's Book / Adjusted Carrying Value</u>	<u>Percentage Ownership</u>	<u>Total Stock Outstanding</u>
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

**AFFILIATED/SUBSIDIARY STOCKS**  
**LR042 – LR044**

There are ten categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those ten categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Health Insurance Companies and Health Entities Not Subject to RBC
  - b. Property and Casualty Insurance Companies Not Subject to RBC
  - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Entities with a capital requirement imposed by a regulatory body
  - b. Other Financial Entities without regulatory capital requirements
  - c. Non-financial entities
10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be cross-checked and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall into two broad categories: (A) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (B) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. Investment subsidiaries are a subset of category A in that they are subject to a risk-based capital charge that includes the life RBC risk factors applied only to the investments held by the investment subsidiary for its parent insurer. Publicly traded insurance affiliates/subsidiaries held at market value have characteristics of both broader categories. As a result, there is a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliates/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (7), the total outstanding common stock in Column (6) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred stock and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliate/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the affiliate/subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR024, Line (37));
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68)); and
- c. For a Life affiliate/subsidiary RBC filing, the sum of
  - (a) Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
  - (b) Primary Security shortfall for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted. The value reported in annual statement Schedule D, Part 6, Section 1 should be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted carrying value for RBC purposes, in order to appropriately balance the numerator with the addition of the denominator value. Enter the carrying value of the insurer on **Line XXXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

**Equity method Insurance Affiliates/Subsidiaries:** Equity method is defined in SSAP No. 97, Paragraph 8b. as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those insurance Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the C<sub>0</sub> charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried.

**Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.):** See 10 below.

2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary company. This involves drilling down to the first RBC filing insurance affiliate/subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries :

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance affiliate/subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the

corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA Life Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

	Balance Sheet Holder, Inc. 12/31/XXXX	
Cm Slt:		
ABC Life Company	10,000,000	Long Term Debt
XYZ Casualty Company	15,000,000	Other Liabilities
ANH Health Company	3,000,000	
Other Common Stock	17,000,000	Total Liabilities
Cash	7,000,000	
Other Assets	5,000,000	Equity
Total Assets	57,000,000	Total Liabilities & Equity
		57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates is as follows:

Company	Stat. Book	
	value	Source:
Holder, Inc.	50,000,000	MEGA Life Sch D - Part 6, Section 1
Holder, Inc. aff/subs subject to RBC		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	3,000,000	Holder, Inc. Stat. balance sheet
Subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	(amount subject to the 30.0% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)

The following table shows the LR044 entries that MEGA Life Insurance Company (which owns 100% owns of Holder, Inc.) would report for the indirectly owned insurance subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	LR044 Column				
		4 100% RBC	5 Book Adjusted Carrying Value	6 Total Value of Affiliates/Subsidiaries	9 % Owned	10 RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 30.0 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate’s RBC After Covariance).

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term “investment subsidiary” is defined in the NAIC’s *Annual Statement Instructions* as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital charge for the ownership of an investment subsidiary is based on the risk-based capital of the underlying assets, pro-rated for the degree of ownership. The basis for this calculation is the assumption that the charge should be the same as it would be if the life insurer held the assets directly.

Report information regarding any investment subsidiaries. Subsidiaries reported in this section will be assigned an affiliate code of “4” for investment subsidiaries. The amount of reported common stock should be the same as Schedule D, Part 6, Section 1, Line 1699999. Preferred stock information should be the same as Schedule D, Part 6, Section 1, Line 0799999.

Affiliates/Subsidiaries that are Not Subject to RBC

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the risk-based capital of each alien insurance affiliate/subsidiary is zero. Report information for any non-U.S. insurance affiliate/subsidiary, both life and property and casualty.

For each affiliate/subsidiary, report the name and alien insurer identification number. For purposes of this formula, the statement value of common and preferred stock and the total outstanding value of common and preferred stock for alien insurance affiliates/subsidiaries should be entered as zero. Companies reported in this section will be assigned an affiliate/subsidiary code of “5” for alien insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,

- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's/Subsidiary's common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries  
 Consistent with the treatment of Directly Owned Alien Insurance Subsidiaries / Affiliates, for purposes of this formula, the carrying value and risk-based capital charge of each alien insurance affiliate is zero.

For each affiliate/Subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Lines 1499999 and 0599999. If no value is reported in the Total Value of Affiliate's/Subsidiary's Common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.

7. Investment in Upstream Affiliate (Parent)

The pre-tax Risk-Based Capital (RBC) for an investment in an upstream parent is 30.0 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (6).

For each affiliate, enter the following information:

- Company Name,
- Affiliate Type,
- NAIC Company Code,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock.

8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Health Insurance Companies and Health Entities Not Subject to RBC
- b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guarantee insurers
- c. Life Insurance Companies Not Subject to RBC, such as life insurance affiliate/subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute, regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula Investment is 0.300 times the book/adjusted carrying value of the common and preferred stock.

9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Financial entities with a capital requirement imposed by a regulatory body (e.g. a bank)
- b. Other financial entities without regulatory capital requirements
- c. Other Non-financial entities

The risk-based capital for entity types a, b, and c. is 0.300 times the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurance Affiliates/Subsidiaries Not Subject to RBC is "g." Reported amounts use Schedule D, part 6, Schedule 1, Line 0899999, and Line 1799999 as the basis of reporting.

10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

The risk-based capital for a publicly traded insurance affiliate/subsidiary held at market value after any "discount," is calculated in two parts. First, calculate and report the risk-based capital of the affiliate/subsidiary according to the relevant instructions above for Insurance Affiliates/Subsidiaries that are Subject to a RBC-look-through Calculation. Second, calculate the additional risk-based capital charge as 34.6 percent pre-tax of any excess of the market (statement) value over the book value of the affiliate/subsidiary. The result of the second calculation will be added to the C-1a component.

Report information regarding any publicly traded insurance affiliate/subsidiary held at market value. The reported market value of common stock should be the same as shown in Schedule D, Part 2, Section 2, Column 8, Line 5919999999 plus Line 5929999999. The market value of preferred stock should be the same as shown in Schedule D, Part 2, Section 1, Column 10, line 4319999999 plus 4329999999. The reported book value of common stock should be the same as shown in Schedule D, Part 2, Section 2, Column 6, Line 5919999999 plus Line 5929999999. The reported book value of preferred stock should be the same as Schedule D, Part 2, Section 1, Column 8, Line 4319999999 plus 4329999999.

**APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS**

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

Subsidiary Insurance Company	Owner's Book / Adjusted Carrying Value	Percentage Ownership	Total Stock Outstanding
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

#REF!

**AFFILIATED/SUBSIDIARY STOCKS**  
**PR003 – PR005**

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirement for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
  - a. Health Insurance Company or Health Entity
  - b. Property and Casualty Insurance Company
  - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Health Insurance Companies or Health Entities Not Subject to RBC
  - b. Property and Casualty Insurance Companies Not Subject to RBC
  - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
  - a. Entities with a capital requirement imposed by a regulatory body
  - b. Other Financial Entities without regulatory capital requirements
  - c. Other Non-financial entities

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be cross-checked and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall primarily into two broad categories: (a) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (b) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. A third category of Affiliates/Subsidiaries, publicly traded insurance affiliates/subsidiaries held at market value, has characteristics of both broader categories. As a result, it has a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliates/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (9), the total outstanding common stock in Column (7) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliates/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Affiliate/Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR025, Line (37).
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68).
- c. For a Life affiliate/subsidiary RBC filing, the sum of
  - i. Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
  - ii. Primary Security shortfalls for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of a directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted for financial reporting purposes. The value reported in annual statement Schedule D, Part 6, Section 1 will be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted capital for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

**Equity method Insurance Affiliates/Subsidiaries:** Equity method is defined in SSAP 97, Paragraph 8b, as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those insurance

Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the  $R_0$  charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried

**Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a):** If the affiliate/subsidiary's common stock is publicly traded and the reporting company carries the affiliate/subsidiary at market value, after any "discount," there are generally two components to the reporting company's RBC generated by the affiliate/subsidiary. The prorated portion is the percentage of ownership of the total common and preferred stock. The smaller of the prorated portion of the affiliate/subsidiary's own statutory surplus or the prorated portion of its RBC after covariance is added to the  $R_0$  component of the reporting company. In the normal case, the common and preferred stock book/adjusted carrying value of the affiliate/subsidiary exceeds the prorated portion of the larger of its statutory surplus and its RBC after covariance. In this case, the addition to the  $R_2$  component is the larger of a) 22.5 percent of the affiliate/subsidiary's common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate/subsidiary's statutory surplus or b) the prorated portion of the affiliate/subsidiary's RBC after covariance in excess of the prorated portion of its statutory surplus. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of its RBC after covariance, but greater than the prorated portion of its statutory surplus, 100 percent of the common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate/subsidiary's statutory surplus is added to the reporting company's  $R_2$  component. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of the affiliate/subsidiary's statutory surplus, there is no addition to the  $R_2$  component.

## 2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary companies. This involves drilling down to the first RBC filing insurance affiliate/subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held

downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

**3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries**

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA P&C Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

	Balance Sheet	
	Holder, Inc.	
	12/31/XXXX	
Cm Stk:		
ABC Life Company	10,000,000	Long Term Debt
XYZ Casualty Company	15,000,000	Other Liabilities
ANH Health Company	3,000,000	
Other Common Stock	17,000,000	Total Liabilities
Cash	7,000,000	
Other Assets	5,000,000	Equity
Total Assets	57,000,000	Total Liabilities & Equity
		57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates/subsidiaries is as follows:

<u>Company</u>	<u>Stat. Book value</u>	<u>Source:</u>
Holder, Inc.	50,000,000	MEGA P&C Sch D - Part 6, Section 1
<i>Holder, Inc. Aff/subs subject to RBC</i>		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	<u>3,000,000</u>	Holder, Inc. Stat. balance sheet
subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	<i>(amount subject to the 22.5% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)</i>

The following table shows the PR003 entries that MEGA P&C Insurance Company (which owns 100% of Holder, Inc.) would report for the indirectly owned insurance Affiliates/subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these affiliates/subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	PR003 Column					
		4	5	7	8	9	13
		100% RBC	Book Adjusted Carrying Value	Total Value of Affiliates/Subsidiaries	Statutory Surplus of Affiliates/Subsidiaries	% Owned	RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 22.5 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate's RBC After Covariance).

Affiliates/Subsidiaries that are Not Subject to RBC

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term investment subsidiary is defined in the annual statement instructions as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital for an investment in an investment subsidiary is 22.5 percent of the carrying value of the common and preferred stock.

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the Risk-Based Capital (RBC) of each directly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate multiplied by 0.500. Enter information for any non-U.S. insurance affiliate/subsidiary: life, property and casualty, and health insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's common and preferred stock columns (7) and (11), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurers may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance Affiliate/Subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate/subsidiary multiplied by 0.500 and adjusted to reflect the reporting company's ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$5,000,000 (0.500 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 22.5 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$2,500,000 (0.500 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	PR003 Column			RBC Required
		4 100% RBC	5 Book Adjusted Carrying Value	7 Total Value of Affiliates/Subsidiaries	
Alien Insurance Company	Indirect Alien Life Aff/Sub	5,000,000	10,000,000	20,000,000	50%
					2,500,000

For each affiliate/subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's Common and preferred stock column.

7. Investment in Upstream Affiliate (Parent)

The Risk-Based Capital (RBC) for an investment in an upstream parent is 22.5 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (10).

For each affiliate, enter the following information:

- Company Name,
  - Affiliate Type Code,
  - NAIC Company Code,
  - Book Adjusted carrying value of common stock
  - Book Adjusted carrying value of preferred stock,
  - Total Outstanding value of common and preferred stock.
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
- a. Health Insurance Companies and Health Entities Not Subject to RBC
  - b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guaratee insurers
  - c. Life Insurance Companies Not Subject to RBC, such as life insurance subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula is 22.5 percent of the book/adjusted carrying value of the common and preferred stock.

9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
- a. Financial entities with a capital requirement imposed by a regulatory body (e.g., a bank)
  - b. Other financial entities without regulatory capital requirements
  - c. Other Non-financial entities

The risk-based capital for entity types a, b, and c is 22.5 percent of the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurance Affiliates/Subsidiaries Not Subject to RBC is “9”. Reported amounts use Schedule D, part 6, Schedule I, Line 0899999, and Line 1799999 as the basis of reporting.

**APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS**

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

<u>Subsidiary Insurance Company</u>	<u>Owner's Book / Adjusted Carrying Value</u>	<u>Percentage Ownership</u>	<u>Total Stock Outstanding</u>
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

**DESCRIPTION OF CHANGE(S)**

The proposed changes would modify the line references in LR019, 020, PR019 and 020.

**REASON OR JUSTIFICATION FOR CHANGE \*\***

The proposed changes in Health Premiums and Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision pages would update the references to provide consistency categories used in the Annual Statement, Schedule H, Part 1.

**Additional Staff Comments:**

- 12/14/22 – The CADTF exposed this proposal for a 45/day public comment period ending Jan. 28, 2023.  
 12/20/22 – Updated to include LR019, the page was inadvertently excluded from the proposal package.  
 12/22/22 – Updated A/S Source Column to reference Col. 5 for Line 7 on page PR019 and Line 10 on page LR019.  
 3/23/23 – The TF adopted the proposal on 3/23/23

\*\* This section must be completed on all forms.

51	C(1), L(26) should equal Schedule H Part 1 Column 1 Line 2			Company records	0	§				0	
52	Additional Reserves for Credit Disability Plans			Company records	0	§				0	
53	Additional Reserves for Credit Disability Plans, prior year				0					0	
54					0					0	
55	†			The premium amounts in these lines are transferred to PR020 Underwriting Risk - Premium Risk for Comprehensive Medical, Medicare Supplement, Dental & Vision and Stand-Alone Medicare Part D Coverage Lines (1.1) and (1.2) for the calculation of risk-based capital. The premium amounts are included here to assist in the balancing of total health premium. If managed care arrangements have been entered into, the company may also complete PR021 Underwriting Risk - Managed Care Credit. In which case, the company will also need to complete PR012 Health Credit Risk in the formula. If there are amounts in any of lines (1), (2), (3), (7), (8) or (10) on page PR019 Health Premiums, the company will also be directed to complete the Health Administrative Expense portion of PR023.							
56	‡			The two tiered calculation is illustrated in the risk-based capital instructions for PR019 Health Premiums.							
57	‡ ‡			The balance of the RBC requirement for Long Term Care - Morbidity Risk is calculated on Page PR023. The premium is shown to allow totals to check to Schedule H.							
58	‡ ‡ ‡			If there is premium included on either or both of these lines, the RBC value in Column (2) will include 3.5% of such premium and \$50,000 (included in the line with the larger premium).							
59	**			The factor applies to all Noncancelable premium.							
60	**			These amounts are used to adjust the premium base for single premium credit disability plans that carry additional tabular reserves.							
61	**			A factor of .350 will be applied to the first \$25,000,000 in Column (1), Line (9) and a factor of .250 will be applied to the remaining premium in excess of \$25,000,000.

PR019 – PR026

**Detail Eliminated to Conserve Space**

Line (1)  
Health premiums for ~~usual and customary major comprehensive (medical and hospital), which (including comprehensive major medical and expense reimbursement hospital/medical coverage)~~ written on individual contracts are entered in Column (1) for this line, but no RBC Requirement is calculated in Column (2). The premiums are carried forward to page PR020 Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision, Column (1) Line (1.1). Medicaid Pass-Through Payments reported as premium in the annual statement filing should be excluded from the premium amounts reported in Line 1 and reported in Line (3.3) and (10.3), respectively.

Line (2)  
Health premiums for Medicare supplement written on individual contracts are entered in Column (1) for this line, but no RBC Requirement is calculated in Column (2). The premiums are carried forward to page PR020 Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision, Column (2) Line (1.1).

Line (3)  
Health premiums for dental or vision coverage written on individual contracts are entered in Column (1) for this line, but no RBC Requirement is calculated in Column (2). The premiums are carried forward to page PR020 Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision, Column (3) Line (1.1).

Line (3.1)  
~~Health premium for~~ Health premium for Stand-Alone Medicare Part D coverage written on individual contracts - includes beneficiary premium (standard coverage portion), direct subsidy, low-income subsidy (premium portion), Part D Payment Demonstration amounts and risk corridor payment adjustments. See Appendix 2 for definition of these terms. This does not include Medicare-Advantage prescription drug coverage (MA-PD) premiums which are to be included in Line (1). No RBC requirement is calculated in Column (2). The premium is carried forward to page PR020 Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision, Column (4) Line (1.1).

**Detail Eliminated to Conserve Space**

Line (7)  
Health premiums for ~~usual and customary major comprehensive (medical and hospital), which (including comprehensive major medical and expense reimbursement hospital/medical coverage)~~ written on group contracts are entered in Column (1) for this line, but no RBC Requirement is calculated in Column (2). The premiums are carried forward to page PR020 Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental & Vision, Column (1) Line (1.2).

**Detail Eliminated to Conserve Space**

Line (10.3) Medicaid pass-through payments reported as premium and excluded from Line (4.7) should be reported in Line (10.3).

**Detail Eliminated to Conserve Space**

Lines (15) through (24)

Disability income premiums are to be separately entered depending on category (Individual and Group). For Individual, a further split is between noncancellable (NC) or other (GR, etc.) For Group, the further splits are between Credit Monthly Balance, Credit Single Premium (with additional reserves), Credit Single Premium (without additional reserves), Group Long-Term (benefit periods of two years or longer) and Group Short-Term (benefit periods less than two years). For long-term care insurance, premiums are reported separately for Individual noncancellable, Individual (other than NC) and Group LTCL. The RBC factors vary by the amount of premium reported such that a higher factor is applied to amounts below \$50,000,000 for similar types. Starting in 2001, in determining the premiums subject to the higher factors, individual disability income noncancellable and other is combined. All types of Group and Credit are combined in a different category from Individual. For long-term care, all types (Individual and Group) are combined.

The following table describes the calculation process used to assign RBC charges to disability income business. The reference to line numbers (e.g., Line 15) represent the actual line numbers used in the formula page, but the subdivisions of those lines [e.g., a), b), etc.] do not exist in the formula page. The total RBC Requirement shown in the last (Total) subdivision of each line will be included in Column (2) for that line in the formula page.

<u>Line</u>	<u>Disability Income Premium</u>	<u>Annual Statement Source</u>	<u>Statement Value</u>	<u>Factor</u>	<u>RBC Requirement</u>

Line (25)

Most Health Premium will have been included in one of the prior lines. In the event that some coverage does not fit into any of these categories, “Other Health” category is applied with a 12% factor, which is from 1998 formula for Other Limited Benefits Anticipating Rate Increases.

 **Detail Eliminated to Conserve Space** 

PR020 - Underwriting Risk – Premium Risk for Comprehensive Medical, Medicare Supplement and Dental and Vision

 **Detail Eliminated to Conserve Space** 

Line (6) Net Incurred Claims

Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the insurer. Paid claims include capitation and all other payments to providers for services to covered lives, as well as reimbursement directly to insureds (or their providers) for covered services. Paid claims also include salaries paid to company employees that provide medical services to covered lives and related expenses. This line does not include ASC payments or Federal Employees Health Benefit Program (FEHBP) claims.

Column (1) claims come from Annual Statement, Schedule H, Part 5 Column 1+2+7+8 Line D13, less the amounts reported as incurred claims for Administrative Services Contracts (ASC) in Line (8) of PR013 and Federal Employee Health Benefit Plan (FEHBP) in Line (3) of PR022. ~~(Note that Medicare supplement claims could be double-counted if included in Column 1 of Schedule H, Part 5 rather than Column (3)).~~ Column (2) claims come from [General Interrogatories Part 2, Line 1.5](#), [Schedule H, Part 5, Column 3, Line D1](#). Column (3) dental and vision claims come from Schedule H, Part 5, Columns 4+52, Line D113.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in Appendix 2). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claim liabilities should reflect expected recoveries from the reinsurance coverage – for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS.

**Detail Eliminated to Conserve Space**

PR021 – Underwriting Risk – Managed Care Credit

Line (10.6)

Total Paid Claims – The total of Column (1) paid claims should equal the total claims paid for the year as reported in Schedule H, Part 5, Columns 1+2+3+4+5+~~6+7~~, Line D16 D4 of the annual statement.

Line (10)

Health premiums for ~~self and customary major comprehensive~~ (medical and hospital) ~~which, including comprehensive major medical and expense reimbursement hospital/medical coverage~~ written on group contracts are entered in Column (1) for this line, but no RBC Requirement is calculated in Column (2). The premiums are carried forward to LR020 Underwriting Risk – Experience Fluctuation Risk, Column (1), Line (1.2).

**Detail Eliminated to Conserve Space**

Lines (21) through (27)

Disability income premiums are to be separately entered depending upon category (individual and group). For Individual, a further split is between noncancellable (NC) or other (GR, etc.). For group, the further splits are between Credit Monthly Balance, Credit Single Premium (with additional reserves), Credit Single Premium (without additional reserves), Group Long-Term (benefit periods of two years or longer) and Group Short-Term (benefit periods less than two years). The RBC factors vary by the amount of premium reported such that a higher factor is applied to amounts below \$50,000,000 for similar types. Starting in 2001, in determining the premiums subject to the higher factors, individual disability income noncancellable and other is combined. All types of group and credit are combined in a different category from individual.

The following table describes the calculation process used to assign RBC charges to disability income business. The reference to line numbers (e.g., Line 19) represent the actual line numbers used in the formula page, but the subdivisions of those lines [e.g., a), b) etc.] do not exist in the formula page. The total RBC Requirement shown in the last (Total) subdivision of each line will be included in Column (2) for that line in the formula page.

	<u>Disability Income Premium</u>	<u>Annual Statement Source</u>	<u>(1) Statement Value</u>	<u>Factor</u>	<u>(2) RBC Requirement</u>

**UNDERWRITING RISK – EXPERIENCE FLUCTUATION RISK**  
LR020

**Detail Eliminated to Conserve Space**

Line (6) Net Incurred Claims  
Claims incurred (paid claims + change in unpaid claims) during the reporting year (net of reinsurance) that are arranged for or provided by the insurer. Paid claims includes capitation and all other payments to providers for services to covered lives, as well as reimbursement directly to insureds (or their providers) for covered services. Paid claims also include salaries paid to company employees that provide medical services to covered lives and related expenses. Line (6) does not include ASC payments or Federal Employees Health Benefit Program (FEHBP) claims.

Column (1) claims come from Schedule H, Part 5, Columns ~~1-4~~1-2+7+8 Line ~~4+5~~4+5 less the amounts reported as incurred claims for administrative services contracts (ASC) in Line (54) of LR029 Business Risk and Federal Employee Health Benefit Program (FEHBP) in Line (3) of LR021 Underwriting Risk – Other. Column (2) for Medicare supplement should be net of reinsurance, the same as the other columns. Column (2) for Medicare supplement ~~should use the direct claims from General Interrogatories Part 2, Line 1-5 after adjusting them for reinsurance~~ comes from Schedule H, Part 5, Column 3, Line D1. Column (3) dental and vision claims come from Schedule H, Part 5, Columns ~~4+5~~, Line ~~4+5~~.

For Stand-Alone Medicare Part D Coverage, net incurred claims should reflect claims net of reinsurance coverage (as defined in Appendix 3). Where there has been prepayment under the reinsurance coverage, paid claims should be offset from the cumulative deposits. Unpaid claim liabilities should reflect expected recoveries from the reinsurance coverage – for claims unpaid by the PDP or for amounts covered under the reinsurance coverage that exceed the cumulative deposits. Where there has not been any prepayment under the reinsurance coverage, unpaid claim liabilities should reflect expected amounts still due from CMS.

Revised 7-2022

**Overview of the NAIC Health Risk-Based Capital Report**

Negative values can sometimes appear in the value column or RBC Subtotal column of this report. These negative values are retained to facilitate crosschecking of amounts reported in the annual statement against amounts reported in the RBC filing. However, when a negative number appears in the value column, that value will be converted to zero before determining the RBC Requirement. For example, a negative \$10,000 for cash [XR008, Col (1), Line ~~(28)~~] will produce a zero (\$0 times 0.003) in Column (2), RBC Requirement, rather than a negative \$30 (-\$10,000 times 0.003).

**Fixed Income Assets  
 XR007 AND XR008**

The RBC requirement for fixed income assets is largely driven by the default risk on those assets. There are two major subcategories: Bonds and Miscellaneous. Bonds include items that meet the definition of a bond, regardless if the bond is long-term (reported on Schedule D-1), short-term (reported on Schedule DA), or a cash equivalent (reported on Schedule E-2). Miscellaneous fixed income assets include non-bond items reported on the cash equivalent and short-term schedules, derivatives, mortgage loans, collateral loans, and other items reported on Schedule BA: Other Long-Term Invested Assets.

**Bonds (XR007)**

The bond factors for investment grade bonds (NAIC Designation (1.A-2.C) are based on cash flow modeling. Each bond of a portfolio was annually tested for default (based on a “roll of the dice”) where the default probability varies by NAIC Designation Category and that year’s economic environment. The default probabilities were based on historical data intended to reflect a complete business cycle of favorable or unfavorable credit environments. The risk of default was measured over a five-year time horizon, based on the duration of assets held for health companies.

The factors for NAIC Designation Category 3.A to 6 recognize that these non-investment grade bonds are reported at the lower of amortized cost or fair value. These bond risk factors are based on the market value fluctuation for each of the NAIC Designation Category compared to the market value fluctuation of stocks during the 2008-2009 financial crisis.

While the life and property/casualty formulas have a separate calculation for the bond size factor (based on the number of issuers in the RBC filer’s portfolio), the health formula does not include a separate calculation, instead a bond size component was incorporated into the bond factors. A representative portfolio of 382 issuers was used in calculating the bond risk factors.

There is no RBC requirement for bonds guaranteed by the full faith and credit of the United States, Other U.S. Government Obligations, and securities on the NAIC U.S. Government Money Market Fund List because it is assumed that there is no default risk associated with U.S. Government issued securities.

The book/adjusted carrying value of all bonds should be reported in Columns (1), (2) or (3). The bonds are split into twenty-one different risk classifications. These risk classifications are based on the NAIC Designation Category as defined and permitted in the *Purposes and Procedures Manual of the Investment Analysis Office*. The subtotal of Columns (1), (2), and (3) will be calculated in Column (4). The RBC requirement will be automatically calculated in Column (5).

### Miscellaneous Fixed Income Assets (XR008)

The factor for cash is 0.3 percent. It is recognized that there is a small risk related to possible insolvency of the bank where cash deposits are held. This factor was based on the original unaffiliated NAIC 01 bond risk factor prior to the increased granularity of the NAIC Designation Categories in 2021 and reflects the short-term nature of this risk. The required risk-based capital for cash will not be less than zero, even if the company's cash position is negative.

The Short-Term Investments to be included in this section are those short-term investments not reflected elsewhere in the formula. The 0.3 percent factor is equal to the factor for cash. The amount reported in Line ~~(835)~~ reflects the total from Schedule DA: Short-Term Investments (Line ~~(633)~~), less the short-term bonds (Line ~~(734)~~). (The short-term bonds reported in Line ~~(734)~~ should equal Schedule DA, Part 1, Column 7, Line 2509999999.)

Mortgage loans (reported on Schedule B) and Derivatives (reported on Schedule DB) receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.

The following investment types are captured on Schedule BA: Other Long-Term Invested Assets. Specific factors have been established for certain Schedule BA assets based on the nature of the investment. Those Schedule BA assets not specifically identified below receive a 20 percent factor (Line ~~(1643)~~).

- Collateral Loans reported on Line ~~(1340)~~ receive a factor of 5 percent, consistent with other risk-based capital formulas studied by the Working Group.
- Working Capital Finance Investments: The book adjusted carrying value of NAIC 01 and 02 Working Capital Finance Investments, Lines ~~(1444)~~ and ~~(1549)~~, should equal the Notes to Financial Statement, Lines 5M(01a) and 5M(01b), Column 3 of the annual statement.
- Low-income housing tax credit investment are reported on Column (1) in accordance with *SSAP No. 93—Low Income Housing Tax Credit Property Investments*.
  - Federal Guaranteed Low-Income Housing Tax Credit (LIHTC) investments are to be included in Line ~~(1744)~~. There must be an all-inclusive guarantee from an ARO-rated entity that guarantees the yield on the investment.
  - Federal Non-Guaranteed LIHTC investments with the following risk mitigation factors are to be included in Line ~~(1845)~~:
    - a) A level of leverage below 50 percent. For a LIHTC Fund, the level of leverage is measured at the fund level.
    - b) There is a tax credit guarantee agreement from general partner or managing member. This agreement requires the general partner or managing member to reimburse investors for any shortfalls in tax credits due to errors of compliance, for the life of the partnership. For an LIHTC fund, a tax credit guarantee is required from the developers of the lower-tier LIHTC properties to the upper-tier partnership.
  - State Guaranteed LIHTC investments that at a minimum meet the federal requirements for guaranteed LIHTC investments are to be included in Line ~~(1946)~~.
  - State Non-Guaranteed LIHTC investments that at a minimum meet the federal requirements for non-guaranteed LIHTC investments are to be included on Line ~~(2047)~~.
  - All Other LIHTC investments, state and federal LIHTC investments that do not meet the requirements of Lines (44) through (47) would be reported on Line ~~(2148)~~.

## MEMORANDUM

TO: Tom Botsko, Chair, and Members of the Capital Adequacy (E) Task Force

FROM: Steve Drutz, Chair, and Members of the Health Risk-Based Capital (E) Working Group

DATE: Dec. 12, 2022

RE: Request for Response for Input Regarding Runoff Companies

At the Summer National Meeting, the Capital Adequacy (E) Task Force requested that the Health Risk-Based Capital (E) Working Group review and discuss the request from the Restructuring Mechanisms (E) Subgroup for input regarding runoff companies. The request was originally sent to the Property and Casualty Risk-Based Capital (E) Working Group. In its response, it suggested that the best course of action is to monitor these companies through state analysis and exam functions.

The Health Risk-Based Capital (E) Working Group discussed both the Restructuring Mechanisms (E) Subgroup and Property and Casualty Risk-Based Capital (E) Working Group letters on its Sept. 9 call. The Health Risk-Based Capital (E) Working Group drafted and requested comments on the following questions from its members, interested state insurance regulators, and interested parties. The Working Group received no comments.

- 1) What is the process for running off a health company? Are there any specific considerations to address for health companies?
- 2) Are there concerns with the functionality of the current health risk-based capital (RBC) formula for a health company in run-off? Are changes needed to the health RBC formula for a runoff company?
- 3) Could a company in run-off trigger the trend test or an excessive growth charge? If so, should the instructions be modified to include an exemption of these calculations if a company is in run-off?
- 4) Are there concerns with handling this process for health companies in the same manner as outlined by the Property and Casualty Risk-Based Capital (E) Working Group?
- 5) The Property and Casualty Risk-Based Capital (E) Working Group defined a runoff company as one that, "voluntary or involuntary, should include the following characteristics: 1) no renewing of policies for at least 12 months; 2) no new direct or new assumed business; and 3) no additional runoff blocks of business. In addition, the amount of renewal premium to reserves has also been identified as a characteristic of these types of companies when this ratio is de minimis."

For health companies, a similar definition could be considered with some modification due to differences in the type of business and distinguish a runoff company from a start-up company or shell. A health runoff company, voluntary or involuntary, should include the following characteristics: 1) no renewing of policies for at least 12 months; 2) no plans or intentions to write new direct or new assumed business; 3) no

[www.naic.org](http://www.naic.org)

additional runoff blocks of business; and 4) reserves reported for the remaining runoff business.

The health RBC formula sufficiently addresses runoff companies through the underwriting risk component when the RBC charge of a runoff company is reduced as premiums are reduced. The company would still have to maintain a minimum amount of surplus as it continues its run-off. However, as the premiums are reduced, the RBC requirement within the authorized control level (ACL) would also be reduced.

The Working Group agrees with the suggested recommendations of the Property and Casualty Risk-Based Capital (E) Working Group that monitoring these companies would be best accomplished through the state analysis and exam functions.

If a definition of a health runoff company is necessary, the Working Group recommends that it would be defined as one that, “voluntary or involuntarily, should include the following characteristics: 1) no renewing of policies for at least 12 months; 2) no plans or intentions to write new direct or new assumed business; 3) no additional runoff blocks of business; and 4) reserves reported for the remaining runoff business.”

RE: Referral regarding a Proposed Purposes and Procedures Manual (P&P Manual) Amendment to Define and Add Guidance for Structured Equity and Funds

DATE: February 3, 2023

**Summary** – The SVO has processed several private letter rating (PLR) filings for investments in notes issued by special purpose vehicles or other legal entities that operate as feeder funds which themselves then invest, directly or indirectly, in one or more funds or other equity investments. The SVO proposes defining these investments as Structured Equity and Fund investments.<sup>1</sup> The SVO proposed at the 2022 Fall National Meeting the removal of Structured Equity and Fund investments from Filing Exemption, the reliance upon a credit rating provider (CRP) ratings for the assignment of NAIC Designations. The SVO is concerned about this general structure for the following reasons:

<sup>1</sup> Proposed Definition: A Structured Equity and Fund investment is a note issued by, or equity or limited partnership interest in, a special purpose vehicle, trust, limited liability company, limited partnership, or other legal entity type, as issuer, the contractually promised payments of which are wholly dependent, directly or indirectly, upon payments or distributions from one or more underlying equity or fund investments. The inclusion of an intervening legal entity or entities between the Structured Equity and Fund investment issuer and the underlying equity or fund(s), does not change the risk that the insurer investment is ultimately dependent, in whole or in part, upon an investment in equity or one or more funds and its underlying investments. Any design that circumvents this definition, and related examples, through technical means but which in substance achieves the same ends or poses the same risk, shall be deemed a Structured Equity and Fund.

- 1) Circumvent Regulatory Guidance - The introduction of an intervening entity as debt issuer, when the underlying investment is in substance an equity investment, circumvents regulatory guidance established by the Valuation of Securities (E) Task Force, the Statutory Accounting Principles (E) Working Group and the Capital Adequacy (E) Task Force for the reporting of equity investments because, according to the P&P Manual (i) equity and fund investments are ineligible to use credit rating provider (CRP) ratings in the assignment of an NAIC Designation and (ii), in the case of funds, only the SVO is tasked with determining whether a fund produces fixed-income like cash flows and is therefore eligible for specific classification.

**All non-SEC registered funds are required to be reported on Schedule BA. Life insurance entities are permitted to file investments in non-SEC registered private equity funds, partnerships, limited liability companies and joint ventures with the SVO for specific classification on Schedule BA;**

- 2) Reliance on Ratings - These investments are being reported as bonds and receiving bond risk-based capital (RBC) factors based upon the mechanical assignment of NAIC Designations that rely upon CRP ratings through the filing exempt process. The use of CRP ratings would not be permitted for the fund or equity investments which underly these notes if the equity or fund investments were held directly;
- 3) RBC / Investment Limit Arbitrage - The structure may permit in-substance equity and fund investments to obtain better RBC treatment than would otherwise be received if the investments had been directly reported. In addition to improved RBC treatment, the structures could permit entities to hold more underlying equity / fund investments than would be permitted under state investment law; and
- 4) Transparency - The structures typically use two or more interconnected private entities through which the privately rated “bond” securities are issued that are backed by investments in non-public assets. The many non-public layers deny regulators, and possibly insurer investors, transparency into the true underlying risks, credit exposure and nature of the investment. The notes issued are described generically as a “senior note” or “term loan” further obscuring their actual structure and complexity. These structures can invest in any asset including affiliate investments, non-fixed income investments, derivatives, borrowings for the purpose of leverage and non-admitted assets.

It is possible that many of the transactions the SVO has processed would not qualify as bonds eligible for Schedule D-1 reporting according to the principles-based bond definition currently being drafted by the Statutory Accounting Principles (E) Working Group, while others likely will qualify. The bond definition requires a review of the substance of the investment to determine whether it has the substance of a bond; significantly, that the ultimate underlying collateral has fixed income cash flows. In either case, however, the use of a fund intermediary has the potential to be abused and requires significant judgment to understand the substance and nature of the ultimate underlying risk. This has already been recognized by the establishment of processes for the SVO to provide NAIC Designations for fixed-income-like funds. It would then follow that debt instruments backed by the types of funds that would ordinarily be required to be filed with the SVO, should follow the same process.

**Informational Referral** – Given the magnitude of the multiple regulatory arbitrage opportunities, the judgment involved in assessing the nature of the ultimate risk, the lack of transparency, circumvention of regulatory guidance and the reliance on CRP ratings to accomplish these ends, the SVO proposed amending the P&P Manual to include a definition for Structured Equity and Fund and to exclude such investments from Filing Exemption eligibility. The proposed amendment would not change how the investment is classified for reporting by the insurer but it would ensure that the NAIC Designation and Category assigned are appropriate for the risk. This is an informational referral and no direct action is required by the Capital Adequacy (E) Task Force, Life Actuarial (A) Task Force or Risk-based Capital Investment Risk and Evaluation (E) Working Group unless those groups wish to comment on the proposal.

Please contact Charles Therriault or Marc Perlman with any questions.

 Eva Yeung, Sr. P/C RBC Analyst/Technical Lead, NAIC Financial Regulatory Affairs

RE: Referral on Additional Market and Analytical Information for Bond Investments

DATE: February 13, 2023

**Summary** – The Investment Analysis Office (IAO) staff recommended in its Feb. 25, 2022, memorandum to the Valuation of Securities (E) Task Force (VOSTF) (attached hereto, Blanks Market Data Disclosure v2.pdf) that it would like additional market-data fields added to the annual statement instructions for bond investments. This was, in part, based upon the NAIC's adoption in 2010 of the recommendations of

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Kansas City 1100 Walnut Street NW, Suite 1500, Kansas City, MO 64106-2197 p | 816 842 3600 f | 816 783 8175

New York One New York Plaza, Suite 4210, New York, NY 20004 p | 212 398 9000 f | 212 382 4207

[www.naic.org](http://www.naic.org)

the Rating Agency (E) Working Group (RAWG), which was formed following the Great Financial Crisis of 2007-2008 to study the NAIC's reliance on rating agencies, and the IAO staff's recent findings in its Nov. 2021 memo regarding disparities between rating agencies. RAWG recommended that: 1) regulators explore how reliance on rating agencies can be reduced when evaluating new, structured, or alternative asset classes, particularly by introducing additional or alternative ways to measure risk; and 2) consider alternatives for regulators' assessment of insurers' investment risk, including expanding the role of the NAIC Securities Valuation Office ("SVO"); and 3) VOSTF should continue to develop independent analytical processes to assess investment risks. These mechanisms can be tailored to address unique regulatory concerns and should be developed for use either as supplements or alternatives to ratings, depending on the specific regulatory process under consideration.

The NAIC's need for alternative measures of investment risk has only increased since RAWG made its recommendations, as privately issued and rated complex structured finance transactions have become commonplace without adequate ways of identifying them. The SVO recommended the following market data fields to be added to the annual statement instructions: Market Yield, Market Price, Purchase Yield, Weighted Average Life, Spread to Average Life UST, Option Adjusted Spread, Effective Duration, Convexity and VISION Issue ID. Please refer to the attached memo for more detail on each data field.

In comments received from industry there were question as to how the SVO, VOSTF and/or other regulators who would receive the analytic data included in the proposal would utilize that information and why it is of value to them. The SVO was also asked to consider industry's recommendation that the NAIC be responsible for calculating this analytical information by utilizing commercially available data sources and investment models instead of having each individual insurance company incur the costs to implement system changes. The SVO shared their thoughts on the alternatives in the Jul. 14, 2022, memorandum to the VOSTF (attached, Blanks\_Market\_Data\_Options\_v3.pdf).

Capabilities like this within the SVO would permit it to calculate for regulators all the analytic values previously mentioned for any Schedule D investment along with additional measures such as key rate duration (a measure of interest rate sensitivity to maturity points along the yield curve), sensitivity to interest rate volatility, principal and interest cash flow projections for any security or portfolio for any given interest rate projection, loss estimates for any security for any given scenario and many others measures.

**Referral** – VOSTF refers this matter to the above referenced Committees, Task Forces and Working Groups for consideration and requests a response from you by May 15<sup>th</sup> outlining:

1. Indicate if your group is supportive of creating this capability within the SVO.
2. List the investment analytical measures and projections that would be most helpful to support the work performed by your respective group.
3. Describe how your group would utilize the data and why it would be of value.
4. Are there other investment data or projection capabilities that would be useful to your group that could be provided by commercially available data sources or investment models? And if so, please list them.
5. Any other thoughts you may have on this initiative.

Please contact Charles Therriault or Marc Perlman with any questions.

## **EXAMINATION OVERSIGHT (E) TASK FORCE**

The Examination Oversight (E) Task Force did not meet at the Spring National Meeting.

**FINANCIAL STABILITY (E) TASK FORCE**

Valuation Analysis (E) Working Group Memorandum to the Financial Stability (E) Task Force (Attachment Four) .....	9-528

Draft: 4/3/23

Financial Stability (E) Task Force  
and the Macroprudential (E) Working Group  
Louisville, Kentucky  
March 22, 2023

The Financial Stability (E) Task Force met in Louisville, KY, March 22, 2023, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Marlene Caride, Chair (NJ); Nathan Houdek, Vice Chair (WI); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Michael Shanahan (CT); Karima M. Woods represented by Philip Barlow (DC); Michael Yaworsky represented by Carolyn Morgan (FL); Amy L. Beard represented by Roy Eft (IN); Doug Ommen represented by Carrie Mears (IA); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by Debra Kaplan (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott (ME); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Andrew R. Stolfi represented by Doug Hartz (OR); Michael Humphreys represented by Diana Sherman (PA); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Michael Wise represented by Tom Baldwin (SC); Cassie Brown represented by Jamie Walker (TX); and Scott A. White (VA). The following Working Group members participated: Bob Kasinow, Chair (NY); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Michael Shanahan (CT); Philip Barlow (DC); Tom Hudson (DE); Ray Spudeck (FL); Roy Eft (IN); Timothy N. Schott (ME); Lynn Beckner (MD); John Turchi (MA); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); David Wolf (NJ); Doug Hartz (OR); Diana Sherman (PA); Ted Hurley (RI); Jamie Walker (TX); Greg Chew (VA); and Amy Malm (WI). Also participating was: Mark Fowler (AL).

1. Heard Opening Remarks

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. Adopted the Task Force’s Fall National Meeting Minutes

Eft made a motion, seconded by Obusek, to adopt the Task Force’s Dec. 13, 2022, minutes (*see NAIC Proceedings – Fall 2022, Financial Stability (E) Task Force*). The motion passed unanimously.

3. Heard an Update on FSOC Developments

Commissioner Caride reported on a few Financial Stability Oversight Council (FSOC) discussions identified publicly that are most directly related to the NAIC’s work because Superintendent Dwyer was unable to attend:

- The FSOC continues to be focused on climate risk, the digital asset space, hedge funds, Treasury market resilience, and cloud service providers (CSPs).
- The FSOC formed a new staff-level committee, called the Climate-Related Financial Risk Committee (CFRC), with representation from all 15 FSOC members. The CFRC began meeting regularly in February 2022, and it serves as an active forum for interagency information-sharing, coordination, and capacity-building. The NAIC, as one of the 15 members, continues its leading role in assessing climate-related risks in the insurance sector and weighing in on any discussion or effort that might affect state insurance regulators, insurers, or policyholders.

- The FSOC established the Climate-Related Financial Risk Advisory Committee (CFRAC) on Oct. 3, 2022, which includes stakeholders from a wide range of backgrounds such as the financial services industry, non-governmental research institutions, climate-related data and analytics providers, non-profit organizations, and academia.
- The CFRAC’s goal is to leverage members’ climate data and analytical expertise to support the CFRC’s efforts to translate climate-related risks into economic and financial impacts. The CFRAC is up and running; it held its first meeting on March 7, and it is now in the process of prioritizing its charges.
- President Joe Biden’s Executive Order on climate-related financial risks also directed the Office of Financial Research (OFR) to assist the U.S. Secretary of the Treasury and the FSOC to identify and assess climate-related financial stability risk. The OFR is setting up a climate data and analytics hub with climate data most likely being obtained through federal governmental agencies.
- The OFR hub will also provide tools to access and analyze the datasets included. The rollout of this data hub is in the process of beginning with user acceptance testing with the goal of providing access to all FSOC members, including the NAIC, later this year.
- In February, the FSOC also received a briefing on a Treasury report assessing the benefits and challenges of CSP’s use in the financial sector. The Treasury report includes a number of recommendations for financial institutions and financial regulators to consider closing data gaps to better understand regulated entities’ linkages to CSPs. As more processes are moved to the cloud, and with a relatively small number of CSPs dominating the market, understanding how an outage or disruption at a particular provider could affect customers should be a priority for state insurance regulators.
- The FSOC also discussed the existing process and guidance for designating non-bank financial companies for enhanced supervision, which is of great interest to the NAIC, given the prior use of the authority to designate American International Group Inc. (AIG), MetLife, and Prudential.
- The FSOC also convened over the weekend of March 12 to discuss the rapid collapse of Silicon Valley Bank and Signature Bank and actions taken to restore confidence in the banking sector. The insurance sector experienced only a minimal impact from the two banks’ failures, with less than \$2 billion in investments and deposits across both banks. Total insurer deposits at both banks amounted to roughly \$200 million, and the bridge banks created to assume the obligations of Silicon Valley Bank and Signature Bank will continue to meet insurer, and by extension, policyholder commitments.

#### 4. Received a Working Group Update

Kasinow said the Working Group revitalized its Counterparty Exposure Initiative, which is the identification and aggregation of interconnected exposures that will help state insurance regulators identify risk both to and from other financial sectors. He added that the Counterparty Exposure Initiative was one of the original four macroprudential initiatives started in 2017 to assess the NAIC’s reporting structure, aggregate data and analysis, and determine if any reporting and/or disclosure gaps exist. He said NAIC staff are working on identifying and aggregating all counterparty exposure data within the current investment schedules and annual statements, as well as conducting a thorough academic literature review on the topic of counterparty risk assessment to assist methodology development and better understand the uniqueness of counterparty credit risk in the insurance market. He concluded that the Counterparty Exposure Initiative dovetails nicely with the Risk Assessment framework, and it will assist state insurance regulators in assessing interconnectedness risk and credit risk.

Kasinow reported that with respect to the liquidity stress test (LST), Working Group members agreed to ask lead states to follow up with their insurers subject to the LST regarding the impact on liquidity from the significant increase in interest rates in 2022. He added that the primary objective was to determine if interest rate increase assumptions used in the insurer’s LST scenarios in last year’s June 30 filings were large enough compared to actual increases in 2022, and for that purpose:

- NAIC staff developed a back-testing questionnaire that was used by the states to collect data from their LST eligible insurers, and responses were then submitted by the states to the NAIC and summarized by NAIC staff.
- One key objective was to understand if potential asset sales that were reported in the LST scenarios materialized or differed from actual experience in 2022.
- Overall, the actual asset sales in 2022 from back-testing questionnaire respondents were comparable to their June 30, 2022, LST submissions.
- Insurers were also asked to determine how the rise in interest rates may have affected the value and availability of assets for sale, as well as collateral calls on derivative contracts.
- Insurers reported a decrease in market values and an increase in unrealized losses in their bond portfolios due to a large increase in interest rates, but not to a degree to materially affect their liquidity profile.
- Insurers reported little to no impact on their liquidity profile due to collateral posting on derivative contracts.
- While some insurers reported additional collateral requirements for interest rate hedges, most respondents had other derivative hedges, whereby they were on the receiving end of additional collateral (e.g., equity and foreign exchange hedges). Therefore, due to collateral netting agreements, net collateral pledged, if any, was minimal.

Kasinow reported that the 2022 Liquidity Stress Testing Framework (LST Framework) with lead state guidance has been finalized and posted to the Task Force's web page, which was later due to Moody's Investors Service's (Moody's) delayed publishing of its default tables, which is included in the Annexes of the LST Framework.

Kasinow referred to an update on the referrals of the Working Group's list of 13 private equity (PE) and related considerations (Attachment One), and he only summarized reinsurance that remained with the Working Group:

- The Working Group met Jan. 18, Feb. 23, and Feb. 27 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
- On Jan. 18, the Working Group met with the Cayman Islands Monetary Authority (CIMA) to discuss its regulatory regime.
- On Feb. 23, the Working Group met with the Bermuda Monetary Authority (BMA) to hear an overview of its recently released public consultation on proposed enhancements to its regulatory regime, with comments by interested parties due April 30.
- On Feb. 27, the Working Group discussed a reinsurance comparison worksheet designed for state insurance regulators to assess cross-border reinsurance treaties where there are different regulatory systems involved, which will enhance state insurance regulators' ability to monitor these transactions.

Kasinow concluded that the Working Group would appreciate any feedback from interested parties, and he requested that the Task Force expose the cross-border reinsurance worksheet. Rehagen requested that the Working Group keep the Reinsurance (E) Task Force informed with respect to its work. Mears suggested that the worksheet be sent as a referral to the Reinsurance (E) Task Force.

Rehagen made a motion, seconded by Mears, to send a referral (Attachment Two) to the Reinsurance (E) Task Force and expose the cross-border reinsurance worksheet (Attachment Three) for a 30-day public comment period. The motion passed unanimously.

##### 5. Received a Valuation Analysis (E) Working Group Update

Andersen reported that starting in 2019, the Valuation Analysis (E) Working Group began a continued effort to address a request from the Task Force to assess a potential concern that the American Academy of Actuaries'

(Academy's) economic scenario generator (ESG) may not adequately consider a very low or negative interest rate environment, which raises a material risk at the macroprudential level in the U.S., particularly for variable annuities. He added that during the interim period, until a new ESG is in place, the Working Group was asked to assess this concern and provide assurance that any issues have either been addressed or will be able to be addressed.

Andersen said the Working Group's most recent effort to address this request was a stress test to assess the impact of persistently low interest rates on variable annuity reserves and risk-based capital (RBC), which used a modified set of scenarios, including many interest rate scenarios that sustained low rates for much of the projection period. He added that the stress test scenarios were used to calculate reserves and RBC as of year-end 2021, and the results were compared to a baseline of reported reserves and RBC.

Andersen summarized the results:

- Twenty-four companies completed the stress test. In total, the guaranteed benefit reserves on a pre-reinsurance basis increased by 6%, and RBC increased by 24%.
- To address the risk of prolonged low interest rates, the Working Group found that many companies have already taken action and are also considering future actions for the near term, including performing testing, additional analysis, implementing product changes, or adjusting hedging.

Andersen reported that the implementation of a new ESG is in progress:

- The Life Actuarial (A) Task Force has conducted an industry field test, and the results are being reviewed. There is an expectation of recalibrating the ESG for a second field test, and implementation is anticipated to be no sooner than 2025.
- In the interim, the Working Group can look to those field tests as a way to monitor the impacts of negative and prolonged low interest rates.
- The change in the guaranteed benefit reserve on a pre-reinsurance basis ranged from approximately a 75% decrease to a 500% increase, for an overall average of a 6% increase.
- The change in RBC ranged from approximately a 100% decrease to a 250% increase, for an overall average of a 24% increase.

Andersen reported that insurers provided comments to explain their results:

- Most companies used the Academy's ESG for their baseline, so the stress test scenarios generally had lower interest rates, leading to an increase in the reserves and RBC.
- Some companies used a proprietary ESG for their baseline and noted that the stress test scenarios were less conservative than their baseline scenarios.
- More scenario reserves exceeded the cash surrender value (CSV) floor.
- There were equity scenarios in the stress test that offset some of the lower interest rate effects.
- Hedging generally improved results.

Andersen reported that to address low interest rates in 2021, many insurers took at least one of the following actions for their variable annuity block of business:

- Performed additional testing and analysis.
- Made efforts to adjust the sales mix.
- Redesigned the products for new business.
- Repriced for new business.

- Discontinued products.
- Adjusted hedging.
- Added or amended reinsurance.

Becker made a motion, seconded by Obusek, to receive the Valuation Analysis (E) Working Group update (Attachment Four). The motion passed unanimously.

#### 6. Heard an International Update

Tim Nauheimer (NAIC) reported that the International Association of Insurance Supervisors (IAIS) has launched the Global Monitoring Exercise (GME), which involves:

- Data calls in connection with the individual insurer monitoring (IIM) and the sector-wide monitoring (SWM) exercises.
- The deadline for insurers to submit IIM data to the IAIS in coordination with the Federal Insurance Office (FIO) is May 10.
- Lead state regulators may wish to request a copy of the insurer's submission to the IAIS.
- This year's IIM and SWM include an additional request for data on reinsurance and climate.
- Climate data was added to the IIM, because of a lack of SWM data outside the U.S.

Nauheimer stressed that the NAIC continues to highlight to the IAIS the need to strike a balance with respect to the burden for insurers and supervisors by removing data items that do not provide sufficient value and limiting additional data requests that are more closely tied to specific objectives. He added that the IAIS has started the work on potential revisions of the IIM systemic risk assessment methodology, which will be completed this year as part of a three-year cycle.

Nauheimer reported that the Climate Risk Steering Group (CRSG) has completed its research and recommendations on data and scenario analysis to be considered this year as part of the GME:

- The IAIS continues to attempt to gauge transition risk in insurers' investment portfolios by requesting investment data in six climate categories, as outlined in the 2021 Global Insurance Market Report (GIMAR) Special Topic Edition on investments.
- The NAIC has the ability to apply the six-category classification system to corporate bonds and stocks, and is in the process of applying it to other asset classes, such as municipal bonds, U.S. Treasuries and Government agency bonds, real estate, and mortgages.
- Last year, the IAIS requested the six-category split as part of the SWM, and it is being requested for the first time this year as part of the IIM.
- The CRSG will also be drafting an Application Paper providing guidance for applying scenario analysis within the context of the Insurance Core Principle (ICP) 16 on enterprise risk management (ERM) and ICP 24 on macroprudential supervision.

Nauheimer said the IAIS has completed the GIMAR Special Topic on Cyber, which includes both resilience and underwriting data from both the IIM and SWM. He added that the Macroprudential Supervision Working Group (MSWG) has organized into three separate working groups that cover the following topics: cross-border reinsurance, allocation of alternative assets, as well as interest rates and inflation. The MSWG made recommendations for additional data requests for the GME that include Level 3 assets and cross-border reinsurance activity and will analyze these topics going forward.

## 7. Discussed Other Matters

Commissioner Caride said the NAIC and state insurance regulators are closely monitoring developments in the banking sector subsequent to the takeover of Silicon Valley Bank and Signature Bank:

- U.S. insurance industry investment and deposit exposure to Silicon Valley Bank and Signature Bank is relatively small, and the NAIC does not expect an adverse impact on policyholders.
- The U.S. insurance sector remains well capitalized, but state insurance regulators and companies must remain vigilant as the situation develops, including any contagion effects in the banking sector.
- The IAIS monitors overall exposure to the banking sector as part of its SWM and the NAIC as part of its macroprudential risk assessment process.
- The Counterparty Exposure Initiative, which was already underway prior to these events, will also enhance the NAIC's supervisory oversight of financial sector-related exposure.
- The impact of rising interest rates, which led to the problems at Silicon Valley Bank, is being closely monitored through the NAIC's regulatory reporting system and actuarial analysis requirements.
- The Federal Reserve Board enacted a quarter percentage point interest rate increase today.
- The LST Framework is one example of how state insurance regulators assess liquidity scenarios similar to the scenario that played out with Silicon Valley Bank.

Commissioner Caride noted that state insurance regulators have a few other tools and requirements, such as cash flow testing, asset adequacy analysis, and actuarial guidelines to assess the adequacy of life reserves. She said state insurance regulators expect companies to continually assess their risks and proactively raise concerns with their domestic regulator. She stressed that state insurance regulators must carefully monitor any vulnerabilities of the insurance market and insurers.

Having no further business, the Financial Stability (E) Task Force and Macroprudential (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2023 Spring National Meeting/

## Plan for the List of MWG Considerations – PE Related and Other

Some of these Working Group projects will continue for several years. The status of the 13 MWG Considerations is as follows as of **March 22, 2023**:

1. Holding Company Structures:

Sent a referral for new work to the Group Solvency Issues (E) Working Group.

**GSIWG Update:** *The GSIWG plans to discuss this issue at its Dec. 14 meeting to determine next steps in addressing the referral.*

2. Ownership and Control:

Sent a referral for new work to the Group Solvency Issues (E) Working Group.

**GSIWG Update:** *The GSIWG plans to discuss this issue at its Dec. 14 meeting to determine next steps in addressing the referral.*

3. Investment Management Agreements (IMAs):

Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and Form D filings. Also sent a referral to the Valuation of Securities (E) Task Force (VOSTF) to highlight the regulatory discussion involving topics it administers.

**RFSWG Update:** *The RFSWG received and discussed this referral during its Nov. 1 interim meeting. During the meeting, the RFSWG agreed to defer further work on this issue until its ongoing project to update general guidance in NAIC handbooks related to affiliated service agreements is completed in early 2023.*

4. Owners of Insurers with Short-Term Focus and/or Unwilling to Support a Troubled Insurer:

Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and fees. Also sent a referral to the Life Actuarial (A) Task Force recognizing its existing work to ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.

**RFSWG Update:** *The RFSWG received and discussed this referral during its Nov. 1 interim meeting. During the meeting, the RFSWG agreed to defer further work on this issue until its ongoing project to update general guidance in NAIC handbooks related to affiliated service agreements is completed in early 2023.*

**LATF Update:** *Asset adequacy analysis requirements in NAIC Model #820 and VM-30 require that company Appointed Actuaries perform testing to ensure that the reserves held for the company's liabilities are adequate in light of the assets supporting the business. Regulators review associated company Statements of Actuarial Opinion periodically.*

5. Operational, Governance and Market Conduct Practices:

The MWG will keep developing more specific suggestions before likely referring this consideration to the Risk-Focused Surveillance (E) Working Group.

**MWG Update:** *No new action has occurred for this consideration as the regulators have focused on the reinsurance consideration.*

6. Definition of Private Equity (PE):

No action was deemed necessary for this consideration.

**No update.**

7. Identifying Related Party-Originated Investments (Including Structured Securities):

Sent a referral to the Statutory Accounting Principles (E) Working (SAPWG) Group recognizing its existing work regarding disclosures for related-party issuance/acquisition. Once MWG regulators work with these SAPWG disclosures and regulatory enhancements from referrals to other groups, further regulatory guidance may be considered as needed.

**SAPWG Completed Actions:**

- *Ref #2021-21 included revisions that clarified guidance for related parties and developed a blanks proposal which provided new investment schedule column with reporting codes to identify investments that involve related parties. (Adopted May 2022)*

- *Ref #2021-22BWG added six related party reporting codes effective for year-end 2022. The investment schedule disclosures include codes that identify the role of the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments. (Adopted May 2022)*

8. Identifying Underlying Affiliated/Related Party Investments and/or Collateral in Structured Securities:

Sent a referral to the Statutory Accounting Principles (E) Working Group in recognition of existing work to develop disclosures to identify the role of the related party in the investment and codes for relationships in securitizations or similar investment. Also sent a referral for new work to the Examination Oversight (E) Task Force for the CLO/structured security considerations.

**SAPWG Completed Actions:**

- *See above descriptions (Ref # 2021-21 and Ref #2021-22 BWG) on investment reporting codes for year end 2022 reporting.*
- *Ref #2019-34 included revisions that clarify: 1) identification of related parties; 2) a non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or affiliation; 3) a disclaimer of control or affiliation does not eliminate the classification as a “related party” and the disclosure of material transactions. This agenda item also resulted in the creation of a new Schedule Y Part 3, which was effective for year-end 2021. This schedule identifies all entities with greater than 10% ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation and identifies the ultimate controlling party. (Ref #2019-34 and Ref #2020-37BWG, both adopted March 2021)*

**EOTF Update:** *The EOTF delegated work on this referral to its Financial Analysis Solvency Tools (E) Working Group and its Financial Examiners Handbook (E) Technical Group. Both groups developed new guidance for inclusion in 2023 NAIC handbooks related to the new related party investment disclosures developed by SAPWG and the AG 53 standards developed by LATF that will be in place for 12/31/22 reporting. The groups may develop additional guidance for NAIC handbooks, as well as supporting regulatory reports and tools, as work proceeds in this area.*

9. Asset Manager Affiliates and Disclaimers of Affiliation:

MWG regulators are comfortable waiting to realize the benefits of the recently implemented Schedule Y, Part 3, along with the changes other NAIC committee groups will make for several of the previously listed referrals, before determining if additional work is needed. Also, a referral was sent to the Statutory Accounting Principles (E) Working Group recognizing its existing work to

revamp Schedule D reporting along with the previously mentioned code disclosures will assist with this consideration.

**SAPWG Completed Actions:**

- See above descriptions of Schedule Y Part 3. (Ref #2019-34 and Ref #2020-37BWG).

**SAPWG Ongoing Work:**

- Ref #2022-15, which clarifies affiliated investment reporting, is planned for adoption consideration at the Spring National Meeting . It adds guidance on reporting of affiliated investments.
- As part of a project known as the bond project, the SAPWG is developing a proposal to revise Schedule D reporting, which intends to determine what is considered a qualifying bond and to identify different types of investments more clearly. For example, the current bond proposal would divide Schedule D-1 into a Schedule D-1-1 for issuer credit obligations and a Schedule D-1-2 for asset-backed securities. The proposal includes more detailed reporting lines to provide more granularity on the actual types of investments held. The effective date of the bond proposal, and the reporting changes, is anticipated for January 1, 2025. Reporting changes to reflect the Schedule D-1 proposed changes were exposed by the Blanks (E) Working Group on March 7, 2023. Updated revisions to the statutory accounting guidance are planned for exposure by the Statutory Accounting Principles (E) Working Group at the 2023 Spring National Meeting.
- Ref #2022-17, which clarifies interest income disclosures, is planned for adoption consideration at the Spring National Meeting.

10. Privately Structured Securities:

Sent a referral to the Life Actuarial (A) Task Force recognizing its existing work on an Actuarial Guideline including disclosure requirements for the risks of privately structured securities and how the insurer is modeling the risks. Sent a referral to the VOSTF highlighting the MWG regulators' support for the blanks proposal to add market data fields for private securities being considered by the Valuation of Securities (E) Task Force (VOSTF). MWG regulators will wait on any further work or referrals until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project. Sent a referral for new work to the RBC

Investment Risk and Evaluation (E) Working Group to address the tail risk concerns not captured by reserves.

**LATF Update:** *Actuarial Guideline 53 (AG 53) has been adopted by the NAIC’s Executive (EX) Committee and Plenary and was effective for year-end 2022 reporting. Starting in Spring 2023, regulators on the Valuation Analysis (E) Working Group will be conducting AG 53 reviews. This will involve a targeted review of asset adequacy analysis related to modeling of business supported with projected high net yield assets.*

**VOSTF Update:** The VOSTF sent referrals to the Financial Condition (E) Committee, Financial Stability (E) Task Force, Macroprudential (E) Working Group, Capital Adequacy (E) Task Force, Risk-Based Capital Investment Risk and Evaluation (E) Working Group, Life Actuarial (A) Task Force, Financial Analysis (E) Working Group, Statutory Accounting Principles (E) Working Group and Valuation Analysis (E) Working Group requesting feedback on a proposal to have the NAIC’s SVO develop the analytical capability to produce risk metrics for bond investments, and model measures of interest rate sensitivity and project investment cash flows and estimated losses for any given interest rate or economic scenario for regulator use. These groups were asked if they support the proposal and to describe different ways they envision being able to take advantage of such a capability within the NAIC.

**SAPWG Ongoing Work:**

- *As discussed above, the Schedule D bond proposal is planned for 2025 reporting.*

**RBCIREWG Update:** *The Risk-Based Capital Investment Risk and Evaluation (E) Working Group added this item to its working agenda. While not specifically addressing privately structured securities, the Working Group’s current work on collateralized loan obligations may contribute to addressing this item.*

11. Reliance on Rating Agencies:

Sent a referral to the VOSTF indicating the MWG regulators’ agreement to monitor the work of its ad hoc group addressing various rating agency considerations.

**VOSTF Update:**

- The Task Force adopted an amendment at its Feb. 21 meeting that effective Jan. 1, 2024, financially modeled collateralized loan obligations (CLO) will not be eligible to use credit rating provider ratings to determine an NAIC Designation.
- The Task Force has drafted a list of questions to discuss with each rating agency in future regulatory-only meetings. The questions are in the materials for the Spring National Meeting and will likely be exposed for public comment.
- The Securities Valuation Office (SVO) has proposed an amendment to remove Structured Equity and Funds transactions from being eligible to use credit rating provider (CRP) ratings to assign an NAIC Designation. The SVO has proposed defining Structured Equity and Funds investments as investments which, through the insertion of an intervening entity such as a special purpose vehicle (SPV) or limited partnership, enable underlying assets that may not qualify as ‘bonds’ or be eligible to receive an NAIC Designation under the current regulatory guidance, to be reported as ‘bonds’ because the intervening entity issues notes and those notes receive a credit rating provider rating. The SVO identified multiple regulatory reporting arbitrage opportunities with these investments that circumvent regulatory guidance using a CRP rating to accomplish that result.
- The Task Force adopted a new charge for 2023 to establish criteria to permit staff’s discretion over the assignment of NAIC designations for securities subject to the FE process (the use of CRP ratings to determine an NAIC designation) to ensure greater consistency, uniformity, and appropriateness to achieve the NAIC’s financial solvency objectives. The criteria have not yet been proposed.

12. Pension Risk Transfer (PRT) Business Supported by Complex Investments.a. LATF’s Actuarial Guideline:

Sent a referral to the LATF recognizing its work on an Actuarial Guideline which should address the reserve considerations of pension risk transfer (PRT) business. Sent a referral to the SAPWG to address the related disclosure considerations as the goal was to have them in the Notes to Financial Statements.

**LATF Update:** *The PRT Drafting Group of the VM-22 SG is considering the development of PRT/longevity risk mortality factors. The DG hopes to share data with the Longevity Risk*

*Subgroup of LATF that the Subgroup could consider for C-2 RBC for PRT products and longevity risk transactions.*

**SAPWG Completed Actions:**

- *Ref #2020-37: Separate Account – Product Identifiers and Ref #2020-38: Pension Risk Transfer - Separate Account Disclosure, which did not result in statutory accounting revisions but instead resulted in modifications to the reporting of PRT transactions in the annual financial statements, was adopted by the SAPWG May 2021. Ref #2021-03BWG was adopted by Blanks (E) Working Group in 2021.*

**Comment** – *The 2022 review of the initial 2021 disclosures noted that although the instructions were clarified to require by product reporting including the use of a distinct disaggregated product identifier for each product represented; most entities are still broadly grouping PRT activity in the disclosures. Review of 2022 data is planned to be completed in the first half of 2023.*

b. Department of Labor Protections:

**MWG Update:** *NAIC staff are continuing to hold discussions with Department of Labor representatives.*

c. State Guaranty Funds Compared to PBGC Protection – NOLHGA 2016 Study:

No further action was deemed necessary.

**MWG Update:** *However, NAIC staff have contacted PBGC representatives to inquire if they have any items they wish to address with the MWG.*

d. RBC Treatment of PRT Business:

Sent a referral to the Longevity Risk (E/A) Subgroup recognizing its work will also address PRT business and indicating the MWG regulators will monitor this work.

**LATF Update:** *The Longevity Risk (E/A) Subgroup will review the currently exposed VM-22 PBR methodology once it is finalized and adopted. The Subgroup will consider whether to develop and recommend longevity risk factor(s) for the product(s) that were excluded from the application of the current longevity risk factors.*

13. Offshore/Complex Reinsurance:

**MWG Update:** *MWG regulators are wrapping up the confidential discussions with industry participants and other jurisdictions regarding the use of offshore reinsurers and complex affiliated reinsurance vehicles. They are continuing discussions to identify the best mechanism to ensure reviewing/approving regulators can identify the true economic impacts of the reinsurance transaction. MWG regulators will consider further work and/or referrals once they have concluded these discussions.*

**Date:** March 31, 2023

**Re:** Referral to review the Reinsurance Worksheet

---

The NAIC Macroprudential (E) Working Group (MWG) of the Financial Stability (E) Task Force (FSTF) requests comments and feedback from the Reinsurance (E) Task Force on the Reinsurance Worksheet.

The MWG was charged with coordinating the various NAIC activities related to private equity (PE) owned insurers. As an initial step, the MWG developed a list of 13 regulatory considerations. These considerations are frequently referenced as private equity (PE) concerns, but the Working Group developed the list with an activities-based frame of mind, recognizing that any ownership type and/or corporate structure could participate in these activities, including but not limited to PE owned insurers. The MWG and FSTF adopted a final plan for addressing each of the 13 considerations, including many referrals to other NAIC committee groups.

The Financial Condition (E) Committee adopted this plan with no changes during its virtual meeting on July 21, 2022. NAIC staff support drafted this referral letter to accomplish the actions captured in the adopted plan.

The Reinsurance Worksheet was created to address reinsurance activities in item 13 of the list of considerations. Please see a brief timeline of relevant discussions below.

NAIC staff support for the MWG will follow the work your group performs and summarize your activities for reporting up to the FSTF. If you have any questions or need further direction, please contact Tim Nauheimer (tnauheimer@naic.org).

www.naic.org

Background:

The MWG itself has been tasked with addressing item 13 on the list of PE considerations (whereas most of the other items have been referred to other WG's). In its research efforts, MWG regulators have been engaged in confidential discussions with industry participants and other jurisdictions regarding the use of cross-border reinsurers and complex affiliated reinsurance vehicles. The MWG identified the reinsurance worksheet as a mechanism to assist regulators in reviewing reinsurance transactions.

Key points for the proposed reinsurance worksheet:

- Use by regulators is **optional**, it is **not required**,
- The worksheet originated from states currently using a similar form,
- May be used however a state sees fit-for any type of transaction or not at all,
- Is **not** being incorporated into the Financial Analysis Handbook,
- Is separate and apart from any other analysis, i.e., asset adequacy analysis, AG 53, cash flow testing, covered agreement impact, etc.

**MWG Regulator discussion recap:**

- The MWG met Jan. 18, Feb. 23, and Feb. 27 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
- On Jan. 18, the MWG met with the Cayman Islands Monetary Authority (CIMA) to discuss its regulatory regime.
- On Feb. 23, the MWG met with the Bermuda Monetary Authority (BMA) to hear an overview of its recently released public consultation on proposed enhancements to its regulatory regime, with comments by interested parties due April 30.
- On Feb. 27, the MWG discussed the attached reinsurance comparison worksheet designed for state insurance regulators to assess cross-border reinsurance treaties where there are different regulatory systems involved, which will enhance state insurance regulators' ability to monitor these transactions.
- On Mar. 22, the FSTF exposed the cross-border reinsurance worksheet for a 30-day public comment period.
- On Mar. 22, the FSTF made a motion to refer the Reinsurance Worksheet to the Reinsurance Task Force.

**The worksheet is an option for regulators to require.** The regulator will inform the insurer if it is needed and provide the insurer the version of the worksheet to be completed.

**As such, the initial Worksheet's categories are listed generically to allow for variations.** For example, regulators may wish to use more than 3 Asset Categories to get more detailed data for specific risk characteristics, liquidity characteristics, etc. Similarly, different/more granular liability categories may wish to be used (e.g., one for annuities and another for life insurance). For the capital categories, if there is no rating agency involved, then the categories would be reduced to one line for "required capital" and another line for "additional capital." Similarly, the worksheet includes an "Other Jurisdiction" column as well as an "Alternate Method" column to allow for jurisdictions with optionality (e.g., Bermuda); if the jurisdiction has no optionality, only the single column is needed.

**When should regulators use this worksheet?** It is probably most valuable to new treaties when regulators are considering approvals, but it could be helpful for treaties already in place where there are significant and material questions/concerns. The worksheet is meant to be a tool to help the regulator understand the impacts of the reinsurance transaction; so if the regulator fully understands these impacts, a completed worksheet would not be necessary.

**For which product types?** Again, the worksheet is generic and can be used for whichever product(s) for which the regulator needs clarity. The "Total Asset Requirement" is more explicit/understood for annuities through C-3 Phases 1 and 2, so the concept might need to be clarified for life insurance.

**This worksheet should be completed at the individual block of business level.**

**Cross-border or U.S. to U.S. as well?** The worksheet was designed for cross-border reinsurance treaties where there are regulatory differences involved.

However, if a regulator would find this information useful for a U.S. to U.S. transaction, there is no reason for the regulator to not pursue its completion.

**Who should provide the responses in this worksheet?** It is expected the insurer will complete the worksheet initially. However, in situations where a consultant is engaged and/or there are concerns with information being provided by the insurer, it may be appropriate for the consultant to generate the completed worksheet.

**To:** Commissioner Marlene Caride, Chair of the Financial Stability (E) Task Force  
**From:** Fred Andersen, Chair of the Valuation Analysis (E) Working Group  
**Date:** December 12, 2022  
**Re:** Response to Request from the Financial Stability (E) Task Force

## I. Executive Summary

In 2019, the Financial Stability (E) Task Force (FSTF) made a request to the Valuation Analysis (E) Working Group (VAWG) to assess a potential concern related to Economic Scenario Generators (ESGs) developed by the American Academy of Actuaries (Academy). It was suggested that there is a deficiency in the current ESG in that it doesn't adequately consider a very low or negative interest rate environment, and more specifically that this raises a material risk at the macro prudential level in the U.S., particularly for variable annuities. To allay any concerns during the interim period until a new ESG is in place, the FSTF asked the VAWG to assess this concern and provide assurance that any issues either have been addressed, or will be able to be addressed.

VAWG previously responded to the FSTF in 2019 and 2021 and has continued to assess the materiality of variable annuity interest rate risk and the approaches companies have taken to measure and manage it. The current report involves a request to 24 companies to perform a stress test for disclosure as of year-end 2021 (2021 VA Stress Test). The purpose of the 2021 VA Stress Test was to assess, at an industry level, the impact of a continuation of persistently low interest rates on VA reserves and risk-based capital (RBC). This report provides details and key findings from the 2021 VA Stress Test as well as an update on the development of the new ESG.

For the 2021 VA Stress Test, companies were asked to repeat the calculations for reserves and RBC as of 12/31/2021, after replacing the economic scenarios used for year-end reporting with a modified set of scenarios. The modified set included many interest rate scenarios that sustained low rates for much of the projection period.

Results from the 2021 VA Stress Test were compared against the baseline of actual 12/31/21 reported reserves and RBC. For the 24 companies combined:

- Pre-reinsurance ceded guaranteed benefit reserves increased \$1.8 billion (6%) from \$30.0 billion to \$31.8 billion
- RBC increased \$1.5 billion (24%) from \$6.4 billion to \$7.9 billion

The VAWG has found that, to address the risk of prolonged low interest rates, many companies took actions in 2021 as well as in one or more prior years. Many companies are also considering potential future actions for the near term. These are similar to past actions, such as performing testing and additional analysis, implementing product changes, or adjusting hedging.

The implementation of a new ESG is in progress. The results of an industry field test are currently under review. A recalibration of the ESG is expected, followed by a second field test. Ultimately, *Valuation Manual* amendments and RBC instruction changes will be necessary to incorporate prescription of the new ESG, which is now anticipated to be no sooner than 1/1/25.

Additional VA stress tests will be considered as needed prior to adoption of the new ESG. However, the ESG field tests enable VAWG to monitor the impacts of negative and prolonged low interest rates. Thirty-one VA writers participated in the ESG field test, representing a high percentage of the industry. Participants include most of the 24 companies that performed the 2021 VA stress test.

## II. 2021 VA Stress Test

### A. Background

Twenty-four VA writers, representing a majority of U.S. VA business inforce, were contacted in February 2022 and asked to perform a stress test for disclosure by 4/30/2022 and to respond to a series of related questions. The purpose of the test was for VAWG to assess, at an industry level, the impact of a continuation of persistently low interest rates on VA reserves and RBC.

### B. Instructions

Companies were asked to perform the 2021 VA Stress Test according to the following instructions:

After calculating 12/31/21 variable annuity reserves and capital as normal, repeat the calculations, replacing the economic scenarios with a modified set of scenarios which will be emailed to you [separately]. These scenarios were developed by modifying the Academy ESG to better reflect the risk of low for long scenarios. This was done by changing the mean reversion parameter (MRP) in the Academy ESG to 1.5% and lowering the soft floor on long-term rates from 1.15% to 0.01%. Additionally, the Academy’s Scenario Picking Tool was used to select a representative subset of 1,000 scenarios, and this subset should be used for the Stress Test (whether or not the company used 1,000 scenarios for 12/31/21 annual statement reporting). If the company used scenarios as of a date prior to 12/31/21 for annual statement reporting, the company should use the Stress Test scenarios as of that date.

For the Stress Test, all components of the modeling other than the ESG-generated economic scenarios and scenario selection should remain the same (e.g., the same investment strategy, CDHS modeling, etc. should be used for the stress test).

### C. Summary of Results

Results for the 2021 VA Stress Test were calculated in comparison to a baseline of actual 12/31/21 reported reserves and RBC. Shown below, for the 24 companies combined, is the increase in total reserves for guaranteed benefits (which excludes the cash surrender value) plus RBC over the baseline.

	Baseline	Increase over Baseline	% Increase over Baseline
Pre-Reinsurance Ceded Reserve for Guaranteed Benefits	\$30.0 B	\$1.8 B	6%
Risk-Based Capital	\$6.4 B	\$1.5 B	24%
Total	\$36.4 B	\$3.3 B	9%

At the company level, changes to the pre-reinsurance ceded reserve for guaranteed benefits ranged from approximately a 75% decrease to a 500% increase. Changes to RBC ranged from approximately a 100% decrease to a 250% increase. Additional details about the distribution of results are shown below.

	Approximate % of Companies that showed:		
	More than a 20% increase over baseline	An increase over baseline of 0% to 20%	A decrease from the baseline
Pre-Reinsurance Ceded Reserve for Guaranteed Benefits	35%	25%	40%
Risk-Based Capital	20%	35%	45%

Companies explained their stress test results. Many noted offsetting effects of different calculation elements. The scenarios used for the 2021 VA Stress Test (Stress Test Scenarios) and the scenarios used for the baseline (Baseline Scenarios) were often compared to provide additional insight. The following general observations were made:

- For most companies, the interest rates in the Stress Test Scenarios were generally lower than those in the Baseline Scenarios, and had the effect of raising reserves and RBC.
- In contrast, the equity returns in the Stress Test Scenarios were generally more favorable than those in the Baseline Scenarios, which improved results significantly for many companies. The favorable equity scenarios reflect a limitation of the methodology currently used to select scenario subsets (out of a total of 10,000 scenarios). A 1,000 scenario subset was selected for the stress test since this is what VA writers typically use to calculate reserves and RBC. The current scenario selection process relies on the 20-year UST and therefore may not be effective at selecting subsets for products sensitive to equity performance (i.e., they may not be representative of the full set of 10,000 equity scenarios produced by the ESG). A newly formed VM-20/VM-21 ESG Drafting Group will be reviewing the existing methodology used to select scenario subsets.
- Hedging generally improved results. Some companies noted an increase in hedging gains or a decrease in hedging losses due to lower or less volatile interest rates in the Stress Test Scenarios.
- Some of the companies used a proprietary ESG for their baseline results. A subset of these companies noted that the Stress Test Scenarios were less conservative than their Baseline Scenarios.
- Some companies noted that the stress test resulted in more scenario reserves exceeding the cash surrender value floor.

#### D. Summary of Responses to Questions

Companies were asked to respond to a series of questions, summarized below.

1. **View of moderately adverse:** Many companies viewed the Stress Test Scenarios as beyond moderately adverse. However, given the low interest rate environment as of 12/31/2021, some companies commented that the Stress Test Scenarios were in the range of being moderately adverse.
2. **Other stress tests:** Many companies have conducted their own stress test using low interest rates for a prolonged period of at least 10 years. Some companies have been using a stress test focused on a shorter period of low interest rates or with an immediate shock scenario.
3. **Negative interest rates:** Many companies can calculate reserves and RBC using scenarios with negative interest rates. Some companies have conducted stress tests using negative interest rates. Some companies view the use of negative interest rates as beyond moderately adverse. Many companies indicated that actions considered if interest rates remain low for a prolonged period would also be considered if interest rates become negative.

4. **Actions taken in 2021 for the VA block of business:** Many companies took at least one action in 2021.

Other actions included changing fees for inforce business, adjusting investment strategies, implementing ESG changes, and adjusting asset/liability management.

5. **Potential future actions:** When asked about the timing of potential future actions if interest rates continue to remain low, many companies indicated that at least one action was likely within the next two years.

Potential Future Actions	Company Count* of Action:	
	Likely within 2 years	Likely in 3-5 years
Perform additional testing and analysis	17	
Reprice for new business	13	1
Redesign product(s) for new business	11	2
Make efforts to adjust the sales mix	12	
Discontinue product(s)	6	4
Adjust hedging	9	
Change fees for inforce business	2	5
Adjust investment strategy	4	2

\*If multiple time periods were selected as likely for an action, only the first time period was counted

Other potential actions included adjusting asset/liability management, adding or amending reinsurance, and implementing ESG changes (prior to potentially required ESG changes).

### III. Update on the Economic Scenario Generator

The implementation of a new ESG is in progress. An ESG Drafting Group, consisting of members of the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group, the selected ESG vendor (Conning), representatives of the Academy and American Council of Life Insurers, and other subject matter experts, developed specifications for an industry field test. Review of field test results is currently underway. This is expected to lead to a recalibration of the ESG, followed by a second industry field test. Ultimately, *Valuation Manual* amendments and RBC instruction changes will be necessary to incorporate prescription of the new ESG, which is now anticipated to be no sooner than 1/1/25.

### IV. VAWG Plans for Future VA Stress Tests

Additional VA stress tests will be considered as needed prior to adoption of the new ESG. However, the ESG field tests enable VAWG to monitor the impacts of negative and prolonged low interest rates. Thirty-one VA writers participated in the ESG field test, representing a high percentage of the industry. Participants include most of the 24 companies that performed the 2021 VA stress test.

**RECEIVERSHIP AND INSOLVENCY (E) TASK FORCE**

Receivership and Insolvency (E) Task Force March 23, 2023, Minutes .....	9-533
Receiver’s Handbook (E) Subgroup Dec. 21, 2022, Minutes (Attachment One) .....	9-536
Chapters 3–5 of the <i>Receiver’s Handbook for Insurance Company Insolvencies</i> (Receiver’s Handbook) (Attachment One-A) .....	9-537
Proposed Receivership Tabletop Overview (Attachment Two) .....	9-673

Draft: 3/28/23

Receivership and Insolvency (E) Task Force  
Louisville, Kentucky  
March 23, 2023

The Receivership and Insolvency (E) Task Force met in Louisville, KY, March 23, 2023. The following Task Force members participated: James J. Donelon, Chair, and Stewart Guerin (LA); Glen Mulready, Vice Chair, represented by Donna Wilson and Jamin Dawes (OK); Mark Fowler represented by Ryan Donaldson (AL); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jon Arsenault (CT); Doug Ommen represented by Daniel Mathis (IA); Dana Popish Severinghaus represented by Kevin Baldwin and Bruce Sartain (IL); Vicki Schmidt represented by Levi Nwasoria (KS); Sharon P. Clark represented by Rodney Hugle (KY); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by Shelley Forrest (MO); Troy Downing represented by Steve Matthews (MT); Mike Causey represented by Monique Smith (NC); Jon Godfread represented by Colton Schulz (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by David Wolf (NJ); Andrew R. Stolfi represented by Doug Hartz (OR); Michael Humphreys represented by Laura Lyon Slaymaker and Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Michael Wise represented by Ryan Basnett (SC); Cassie Brown represented by Brian Riewe (TX); and Nathan Houdek represented by Mark McNabb (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Smith made a motion, seconded by Donaldson, to adopt the Task Force’s Dec. 14, 2022, minutes (*see NAIC Proceedings – Fall 2022, Receivership and Insolvency (E) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Receiver’s Handbook (E) Subgroup

Baldwin said the Receiver’s Handbook (E) Subgroup met Dec. 21, 2022, and took the following action: 1) adopted revisions to Chapters Three, Four, and Five of the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook); and 2) exposed Chapters Six and Seven of the Receiver’s Handbook for a 45-day public comment period ending Feb. 6, 2023. The Subgroup received helpful clarifications.

The Subgroup plans to schedule a meeting to adopt Chapters Six and Seven. The drafting groups are continuing their work to complete the remaining chapters. The Subgroup is expected to complete the Receiver’s Handbook project by the fall of 2023.

Hartz made a motion, seconded by Slaymaker, to adopt the report of the Receiver’s Handbook (E) Subgroup, including its Dec. 21, 2022, minutes (Attachment One). The motion passed unanimously.

3. Adopted the Report of the Receivership Financial Analysis (E) Working Group

Wilson said the Receivership Financial Analysis (E) Working Group plans to meet March 23 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership.

Matthews made a motion, seconded by Crawford, to adopt the report of the Receivership Financial Analysis (E) Working Group. The motion passed unanimously.

#### 4. Adopted the Report of the Receivership Law (E) Working Group

Slymaker said the Receivership Law (E) Working Group exposed amendments to the *Property and Casualty Insurance Guaranty Association Model Act* (#540) related to the coverage of policies that are subject to restructuring mechanisms, specifically insurance business transfers (IBTs) and corporate divisions (CDs). The Working Group received comments and alternative amendments. The comments raised some additional considerations and scenarios specifically around novation and assumptions, as well as which sections of the model may also be affected. A drafting group comprised of Working Group members, the National Conference of Insurance Guaranty Funds (NCIGF), and interested parties was formed. The drafting group met March 6 to discuss a revised draft of amendments. There is a remaining item to resolve, therefore, the drafting group plans to meet again before sending the draft to the Working Group.

Slymaker said if the Executive (EX) Committee approves the Request for NAIC Model Law Development related to cybersecurity insurance at its meeting on March 23, the Working Group will also schedule a call to discuss and expose draft amendments to Model #540 for cybersecurity insurance.

Hartz made a motion, seconded by Kaumann, to adopt the report of the Receivership Law (E) Working Group. The motion passed unanimously.

#### 5. Heard an Update on International Activities

Wake said the International Association of Insurance Supervisors (IAIS) Resolution Working Group released for public consultation the application paper on policyholder protection schemes. Comments on the public consultation are due to the IAIS on April 14. The International Insurance Relations (G) Committee will hold a meeting on April 13 to consider comments from the NAIC. Anyone wishing to submit comments for the Committee to consider should send them to NAIC staff by March 27.

Wake said in follow-up to the IAIS's Targeted Jurisdictional Assessment (TJA) for which the U.S. participated and was assessed, the IAIS will conduct a follow-up to assess each jurisdiction's progress in addressing the findings where a jurisdiction did not receive a "fully observed" assessment.

Wake said the IAIS is expected to begin a project to update the IAIS Insurance Core Principles (ICPs) and Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) provisions related to resolution and recovery issues. The ICPs and the related issue papers will be discussed at the IAIS meeting in May 2023.

#### 6. Heard a Presentation on a Proposed Receivership Tabletop Exercise

Peter G. Gallanis (National Organization of Life and Health Insurance Guaranty Associations—NOLHGA) presented a tabletop receivership proposal. He said the NOLHGA and the NCIGF conducted a tabletop exercise on how to respond to the insolvencies of hypothetical insurance carriers. He said there has been a lot of turnover in the receivership community, and many have not had hands-on experience with how troubled insurers are identified by the financial regulators, how the domiciliary commissioner determines remediation steps, developing a rehabilitation plan, liquidation, developing a response to a nationally significant company that triggers the guaranty associations, and management of an insolvency case. The tabletop is a hands-on interactive participatory exercise to talk through various issues. Gallanis said the NOLHGA membership found it to be a very helpful training exercise. He said he spoke with Commissioner Donelon and Tom Travis (LA) about this exercise. State insurance regulators have also seen some turnover. He said he discussed with Commissioner Donelon about the tabletop being an exercise that could provide training to financial regulators, commissioners, and states' receivership staff who may wish to participate and who attend other educational programs or the NAIC national meetings.

Gallanis said he was asked by Louisiana to develop a timeline, provide more details on how to move forward with the proposal, provide more details on who from the financial regulators, receivership staff, and possibly industry would participate, and work with the NAIC to identify a date and time for a presentation such as this (Attachment Two).

Roger Schmelzer (NCIGF) said this is a time of relative strong agreement between state insurance regulators, guaranty funds, and receivers. He said it would be important to go through issues and figure out where the disagreement is before having a real insolvency scenario where stakes become extremely high. The recent banking industry issues with Silicon Valley Bank and others and the actions of the federal banking regulators indicate an inclination for the federal government to be more involved in financial services that are regulated at the state level. This program is a way to take that seriously and be more prepared for what might come.

Bill O’Sullivan (NOLHGA) said as more practical knowledge is gained from the program, as well as a better understanding of the tools, relationships and collegiality are built to be able to better share information and strategies and agree on a common approach to protect policyholders. This program builds the foundation for those kinds of critical relationships.

Schmelzer said the NCIGF is doing more work to plan what a program would look like and get input. Connecting this program with an NAIC meeting or event would facilitate attendance by the state insurance regulators. Regarding timing, Schmelzer said some time in the fall would work if everything can be pulled together. He said the NCIGF welcomes the Task Force’s support in this effort.

Guerin said he agrees that this training would be beneficial for the reason of staff turnover. He said Louisiana had not had a receivership for over 15 years and suddenly had multiple receiverships due to a hurricane. He said this training would have been beneficial and allowed Louisiana to work more expeditiously through some of the issues.

Commissioner Donelon said the receiverships in Louisiana over the past year have the Louisiana legislature and industry looking at modifications to its guaranty fund law and, in particular, the assessments and recoupment of those assessments. He said he agrees with Guerin, and he said Louisiana has been able to contract with receivership experts that have decades of experience doing receiverships. He said the banking challenge Schmelzer referenced is one that state insurance regulators need to gear-up for to be prepared.

Guerin said as the program is still in development, he requested an update at a future time. He said to let the Task Force know if the NOLGHA or the NCIGF have any requests of the Task Force.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

Draft: 3/29/23

Receiver's Handbook (E) Subgroup  
Virtual Meeting  
Dec. 21, 2022

The Receiver's Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force met Dec. 21, 2022. The following Subgroup members participated: Kevin Baldwin, Chair (IL); Miriam Victorian, Vice Chair (FL); Jared Kosky (CT); James Gerber (MI); Donna Wilson and Jamin Dawes (OK); Laura Lyon Slaymaker and Crystal McDonald (PA); and Brian Riewe (TX).

1. Adopted its July 19 Minutes

The Subgroup met Dec. 21 and took the following action: 1) adopted its July 19 minutes; 2) adopted Chapters 3–5 of the *Receiver's Handbook for Insurance Company Insolvencies* (Receiver's Handbook); and 3) exposed Chapters 6 and 7 of the Receiver's Handbook.

Wilson made a motion, seconded by Kosky, to adopt the Subgroup's July 19 minutes (*see NAIC Proceedings – Summer 2022, Receivership and Insolvency (E) Task Force, Attachment Two*). The motion passed unanimously.

2. Adopted Revised Chapters 3–5 of the Receiver's Handbook

Baldwin thanked the volunteers who had participated in the drafting groups for the chapters of the Receiver's Handbook.

Slaymaker made a motion, seconded by Victorian, to adopt Chapters 3–5 of the Receiver's Handbook (Attachment One-A). The motion passed unanimously.

3. Exposed Revised Chapters 6 and 7 of the Receiver's Handbook

Chapters 6 and 7 had extensive revisions that were presented in the meeting materials as a clean copy.

The Subgroup reviewed changes to Chapter 7 by Patrick Hughes (Faegre Baker Daniels & Reath LLP) and Caryn M. Glawe (Faegre Drinker Biddle & Reath LLP). Additionally, it was noted that to view the original Receiver's Handbook, the current Receiver's Handbook version is posted on the Subgroup's website under the documents tab.

Slaymaker made a motion, seconded by Victorian, to expose Chapters 6 and 7 of the Receiver's Handbook for a 45-day public comment period ending Feb. 6, 2023. The motion passed unanimously.

Having no further business, the Receiver's Handbook (E) Subgroup adjourned.

*Chapter 3—Accounting and Financial Analysis***I. INTRODUCTION: OBJECTIVES OF THE ACCOUNTING FUNCTION**

The purpose of this chapter is to identify and explain the various objectives of the accounting function for an insurer in receivership and provide guidelines for the preparation of reports summarizing the financial position of the receivership.

It is important to highlight the context or perspective from which this chapter was prepared. Any accountant serving a receiver is, by necessity, an integral part of a team of regulatory, legal, actuarial, and other professionals working together to achieve common goals. The nature of these goals is described at length in Chapter 1—Takeover & Administration. In most receivership situations, the duties of the receiver's accountants, investigators, and attorneys will overlap when information about a common topic such as a reinsurance treaty is needed by staff members. While these other individuals have a legitimate interest in accounting and financial information, this chapter has been prepared from the perspective of the accountant serving the receiver.

This chapter will deal with the following issues:

- The objectives of the receiver and how they may vary from the traditional accounting objectives of a going concern.
- The need to gain an understanding and control of the impaired or insolvent company's bank accounts and assets.
- The importance of evaluating the impaired or insolvent company's accounting staffing and consulting needs early on in the receivership, as well as the need for assistance from certified public accountant (CPA) or actuarial firms to do projections, forensic accounting, and tax reporting.
- The need to inventory and safeguard documents, ledgers, contracts, and other financial items that will shed light on the financial position of the insolvent insurer and provide support to the receiver in collecting assets, settlement of balances, litigation, and other matters.
- The need to focus on the corporate structure of the enterprise, the importance of analyzing related-party transactions and intercompany accounts, and consideration of restructuring certain transactions.
- The need to identify and scrutinize tax issues, including necessary informational filings with the IRS (such as 1099s), various areas of tax exposure, premium and payroll tax consequences, and other taxes.
- Considerations related to the nature of the insolvent insurer's investments and safeguarding and valuing the investment portfolio.
- Considerations relating to direct and assumed reinsurance premium receivables, including the need to identify and control treaties, to determine if in-force treaties should be maintained or cancelled, and to quantify setoffs and other issues. Consideration should also be given to ceded reinsurance receivables and the identity of the various lines of business and policies ceded to other insurers. Insurers often have excess of loss or stop-loss reinsurance where recoveries of amounts due the health maintenance organization (HMO) should be investigated.
- The need to prepare financial statements and related information in a format that will support the receiver directly in managing the affairs of the estate and in responding to the needs of various third parties, such as state insurance departments, the courts, guaranty funds, policyholders and other creditors, attorneys, and other parties.
- The need to review and understand the various cost centers and associated expenses and contracted services.

*Receiver's Handbook for Insurance Company Insolvencies*

The overall objective of the accounting function in receivership can be expressed as follows:

**To assist the receiver in securing control of the insurer's assets and to provide timely, relevant, and accurate financial information as to the assets, liabilities, surplus (deficit), and cash flow of the insolvent insurer to support the duties of the receiver, and to assist in making economic decisions.**

The sections that follow will discuss the points above in more detail as they relate to the overall objective of the accounting function in a receivership.

## II. OBJECTIVES DIFFERENT THAN GOING CONCERN

In many respects, the overall accounting function objective discussed above is equally fitting for the accounting function of a going concern. However, the important phrase that distinguishes this objective for receivership is “to support the duties of the receiver.”

For solvent insurers, the accounting function is generally designed to support management and to fulfill the insurer's responsibility to report information to shareholders, creditors, taxing authorities such as the IRS, regulatory authorities such as state insurance departments, and others. The purpose of this information is to allow these parties to monitor the insurer's financial operations and protect their interests (e.g., investment, loan, or tax obligations). The accounting system may be designed to support reporting on the basis of both U.S. generally accepted accounting principles (GAAP) and statutory accounting principles (SAP) prescribed or permitted by the insurer's state of domicile.

For an insurer in receivership, the situation is different. The state insurance regulator has already determined that the insurer is in an impaired or insolvent financial position. A receiver has been appointed. For an insurer in rehabilitation, the objective may be to identify the causes of the impairment, eliminate them, and work to return the insurer to a solvent position. Alternatively, it may be determined that a successful rehabilitation is not achievable, in which case an order of liquidation will be sought. For the insurer in liquidation, the objectives are to identify and marshal the assets of the insurer; identify and evaluate liabilities and determine the appropriate class of each creditor in accordance with the domiciliary state's priority of distribution statute; and liquidate the insurer in a manner that minimizes the cost to policyholders, state guaranty funds, and other creditors.

Thus, the new and important user of the financial information is the receiver. In rehabilitation, pro forma reporting is often used to help the receiver assess the feasibility of potential transactions that have been proposed to mitigate the surplus deficit. Additionally, liquidation-basis accounting becomes an important form of reporting to help the receiver assess the realizable value of the assets of the insurer and the extent such assets will be available and sufficient to cover approved claims of policyholders and other creditors.

It is important to understand the difference between the responsibilities of the receiver and those of former management. In a going concern, management has the responsibility to develop internal controls and procedures covering a variety of items such as payroll, transfers to affiliates, reinsurance balances, etc. However, the receiver will review and perhaps revise these internal control procedures. The receiver will approve disbursements; revise wage and salary schedules (especially for excessive amounts payable to officers); streamline the organizational structure if needed; and place a moratorium on payments to reinsurers, related parties such as the insurer's affiliates and others, pending a complete analysis of the insurer's financial position.

In some instances, the duties of the receiver and that of management will differ in subtle ways. For example, consider an insurer that has been placed in rehabilitation: The insurer is a wholly owned subsidiary of a publicly held insurance holding corporation. The receiver, by statute and court order, has responsibility and authority only for the affairs of the insolvent insurer/company subsidiary. Thus, the accountant working with the receiver may assist in or direct the preparation of financial information relating to the insurer/subsidiary that may ultimately be provided to and used by management of the holding company/parent to prepare its filings with the U.S. Securities and Exchange Commission (SEC) or consolidated tax returns for the IRS. However, it is generally not the

*Chapter 3—Accounting and Financial Analysis*

responsibility of the receiver or his or her accountant to prepare or file such documents that relate to the holding company.

It is not uncommon for the receiver to maintain certain of the insurer's key management personnel on staff because of their knowledge of the insurer and their familiarity with its business, reinsurance treaties, data processing systems, and various other matters. The receiver should ensure that such staff be sensitive to the new responsibilities created by the order of rehabilitation or liquidation. It is unlikely that these individuals have ever been through a receivership before and may unknowingly perform their duties as if it were business as usual, not realizing that the receiver now must be informed of, and approve, procedures and disbursements. Additionally, the receiver should identify those individuals who may conceivably have an interest in concealing or altering information because of their concern about their role in the events that may have precipitated or contributed to the insolvency.

The principal responsibility of the accountant is to the receiver. However, the accountant should be aware that the receiver must provide certain financial information to other parties, including (in no particular order of importance):

- Domiciliary state insurance department.
- Other insurance departments in states where the insurer is licensed.
- The receivership court, other state courts, or federal courts.
- Creditors, including banks, premium finance companies, providers of health care (if an HMO), and reinsurers.
- Shareholders.
- Federal, state, and local taxing authorities.
- State guaranty funds, the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA), or the National Conference of Insurance Guaranty Funds (NCIGF)
- Policyholders.
- Prospective investors.
- Other regulatory agencies, such as the SEC.
- Legislatures (state and federal).
- State and federal agencies responsible for Medicaid/Medicare (if an HMO).
- Reinsurers.
- Agents.

Financial information for a receivership is similar to that of an ongoing enterprise with some important differences. These include the following:

- The need to identify and provide for various classes of creditors pursuant to the domiciliary state's receivership priority statute. The receiver's accounting system should be capable of capturing information provided by creditors on proofs of claim in order to review and adjust those claims and to aggregate them by creditor class.
- Reinsurance recoverables must be viewed from a different perspective, particularly ceded unearned premium for property and liability companies. In a going concern, a ceding insurer would not expect to

*Receiver's Handbook for Insurance Company Insolvencies*

receive ceded unearned premium. However, when reinsurance is not renewed, the ceded unearned premium recoverable can be quite substantial if the termination clause of the contract is written on a cut-off basis. In a runoff situation, the insurer would have reinsurance until the ceded premium ran off.

- Setoffs are another reinsurance issue that should be identified and reviewed to determine if they are acceptable under the applicable state receivership statutes. Setoffs (often referred to as “net accounting” in going-concern accounting) frequently occur in reinsurance transactions and may involve setoff of amounts within a contract. These may include premiums due to the reinsurer from the ceding insurer set off against recoverables for paid losses owed by the reinsurer to the insurer, setoff of balances under two or more contracts with the same two entities, or setoff of amounts owed to or from different ceding insurers and/or reinsurers that have been set off by a reinsurance intermediary or broker, usually on a monthly or quarterly net reporting basis to the insurer. If necessary, setoff transactions will need to be recast or set aside. (Note: Identification of setoffs is an accounting function. The receiver’s counsel should address the legality of identified transactions. See Chapter 9—Legal Considerations for discussion of setoffs.)
- The need to separate any commingled assets and liabilities of the insurer from entities affiliated with the insurer, such as the parent corporation, other subsidiaries or affiliates, and employee benefit plans.
- The need to identify transactions that are significant to the receiver because of the potential for recovery from third parties, as well as the possible institution of criminal proceedings. Generally, these may include transactions with affiliates or officers and directors, for example, and preferential payments made within statutorily prescribed periods. (See Chapter 9—Legal Considerations.)
- The need for a clear cutoff date in the accounting records to establish a beginning balance sheet that represents the point at which the receiver has become accountable for the financial affairs of the insurer.
- Payments for pre-receivership transactions may be suspended pending review by the receiver. It is also important to immediately change company procedures and implement controls to assure that the insurer’s assets are not disbursed unless approved by the receiver or his representative. The receiver may wish to consider placing a stop order on outstanding checks, both claims-related and administrative.
- The need to recognize differences between liquidation accounting and statutory accounting practices followed by the insurer as a going concern. For example, certain assets of the insurer—such as furniture, equipment, and overdue agent balances—may not be admitted for statutory accounting. An HMO’s membership may also have potential value that is not admitted for statutory accounting purposes. Nonetheless, in a receivership, they should be considered for possible collection or sale, even if they are not considered in evaluating the solvency of the insurer.
- The need for preliminary assessment of the causes of the impairment or insolvency, with an analysis of whether any parties have potential civil or criminal liability for their role in causing the insolvency. (See Chapter 4—Investigation and Asset Recovery.)
- The need to challenge, with an appropriate degree of professional skepticism, the adequacy of the insurer’s personnel who may be retained by the receiver, and assess skills, loyalties, and potential conflicts of interest that they may have because of their roles in, or knowledge of, events that precipitated or contributed to the receivership.

*Chapter 3—Accounting and Financial Analysis***III CASH AND LIQUID INVESTMENTS****A. Cash**

The receiver must determine the existence, location, and amount of all cash, cash equivalents, and short-term investments through direct confirmation with financial institutions, investment managers, and other parties thought to be holding cash, cash equivalent, or short-term investments. The insolvent company's financial management should be able to provide a listing of financial institutions and contacts.

The receiver should immediately determine who has access to the cash and investments and should consider changing or restricting this access. In this era of electronic banking, Internet banking access should be closely scrutinized. Administrative controls of Internet banking should be evaluated by the receiver as soon as possible and modified as necessary. If the company holds cryptocurrencies, access to the cryptocurrency wallet and any associated hardware should be restricted. Large amounts of cash can be removed from an estate via wire transfer. Procedures should be established with the financial institutions to curtail or limit access regarding wire transfers. Wire transfer capabilities must be limited to receivership staff immediately upon receipt of a receivership order. Operations of the insurer may be affected temporarily, but that situation pales in comparison to allowing large amounts of money to be wired out of an estate.

All financial institutions should be notified immediately of the receivership order. A receivership order should be faxed or emailed to the contact person at each financial institution, and a proof of service should be signed by an appropriate financial institution representative as corroboration that the financial institution received the order. Some receivers, especially in liquidation, advocate immediately closing all existing bank accounts to ensure complete control of cash. The receiver should also consider whether to continue relationships with the banks used by the insurer or to establish new accounts with only the receiver or their designated representatives having signatory authority to disburse funds. The receiver must decide whether to allow certain checks to clear, as a disruption in payments to claimants may cause hardship, lead to complaints, and would be viewed negatively by regulators. Another consideration associated with account closure is the magnitude of penalties and interest that would accompany any substantial delay in payments.

A letter should be sent that gives the bank or other financial institution instructions with regard to allowing or not allowing checks to clear the account. As soon as possible, signatories on bank accounts should be changed to the receiver's designated personnel.

All check stock should be inventoried and bank accounts reviewed to determine which accounts are related to the insurer's business and which accounts, if any, are still needed. If bank accounts are closed, the related check stock should be voided and destroyed. If the accounts are required, an appropriate protocol needs to be established between the banking institution and the receiver. The normal practice would be to freeze all accounts or, at a minimum, the signatories should be changed to individuals on the receiver's staff.

The receiver may consider moving out-of-state assets into the domiciliary state to improve control and lessen the chance they may be subject to attachment by creditors. This step should be completed as soon as possible after the liquidation order is filed with the court. If an ancillary receivership is established, the receiver should work in conjunction with the ancillary receiver when moving assets out of the ancillary state.

Special care should be applied to the identification of accounts not held in the insurer's name but to its benefit. Bank statements, investment statements, cash ledgers, and cash-flow statements should be reviewed. This process should also include any funds held as collateral, letters of credit (LOCs), or other restricted cash.

Credit or debit cards in the company name should be gathered and secured in the same manner as cash. Determine if there are recurring charges on the card and if those recurring charges need to be continued or can be canceled. If the cards are no longer needed, consider canceling the cards. Credit or debit cards are often kept in the accounting or human resources department but could exist in other areas of the company.

*Receiver's Handbook for Insurance Company Insolvencies*

A company may also have recurring charges set up as Automated Clearing House (ACH) transactions. Review all accounts for recurring charges so they can be canceled as appropriate.

Some companies will have gift cards or prepaid debit cards (for example Visa- or American Express-branded prepaid cards) that have been purchased for agent/broker incentives, employee incentives, or wellness incentives. These cards may not be accounted for in the company's general ledger and could potentially be kept by many different departments of the company. They should be gathered and treated in the same manner as cash.

**B. Liquid Investments**

Determine the existence, location, amount, and type of liquid securities (bonds, stocks, mortgage loans, etc.) through direct confirmation with financial institutions, investment managers, and other parties thought to be holding securities. Investment statements from financial institutions, portfolio statements from investment managers, and other similar reports should be secured and used to establish a balance as of the receivership date.

As with cash, company personnel should provide a list of brokerage houses, financial institutions that have custody of investments, and related contact names. All institutions having custody of the insurer's investments should be sent a copy of the receivership order. The brokerage house or financial institution should be given instructions by cover letter that only receivership staff is authorized to buy or sell investments. The receiver should be aware of who has access to the investments and who had the authority to direct the investment managers/brokers. Once again, the investment managers/brokers should only take direction from the receiver.

The receiver should determine whether any of the liquid investments are hedged and who the counterparties are, as well get a description of the entity's hedging program.

Sometimes it is easier for the receiver to transfer securities to a financial institution with which they are familiar. Doing so facilitates transactions, as sales can be efficiently executed to maximize the value to the estate, after obtaining the appropriate advice about the most advantageous time to liquidate a security.

**IV. INITIAL REVIEW OF FINANCIAL STATEMENTS AND PROJECTIONS**

It is imperative that the receiver's accountants perform an initial review of the financial statements that had been produced by the company as soon as possible. Obviously, these financial statements should be viewed with a heavy dose of professional skepticism. However, the receiver's accountants can usually garner a lot of information from company accounting personnel. The receiver's accountants must use professional judgment in determining the accuracy of the information provided by the company or whether further investigation/confirmation is required. In either case, it is critical that the receiver's accounting staff perform an evaluation of the company's surplus and cash position in the first few months (or sometimes weeks) of a receivership. The receiver's accountants must provide this information to the receiver so that objective decisions regarding the company's rehabilitation or liquidation may be made.

The receiver's accountants should obtain the last published statutory quarterly or annual statement that the company filed. If the company is an unauthorized entity or it did not file financial statements, internal financial statements will have to suffice (preferably financial statements that were audited or reviewed by an outside CPA firm). The receiver's accounting staff can use these statements as a starting point for surplus and cash projections. Another source for financial statements is those prepared by insurance department examiners. If the entity is publicly traded, get copies of the latest 10-K and 10-Q at <https://www.sec.gov/edgar.shtml>.

Admittedly, the analysis of a company's cash or surplus position in the early stages of a receivership is not an exact science. In addition to calculating anticipated receiver administrative expenses, the following measures should be incorporated to make projections and analysis more meaningful:

*Chapter 3—Accounting and Financial Analysis*

- Confirm that bank reconciliations are brought up to date.
- Review anticipated premium income. Look at recent premium written reports, and review the timing of any anticipated policy cancellations or non-renewals.
- Review any capitation arrangements, contracts with hospitals and doctors, and the federal Centers & Medicare and Medicaid Services (CMS) for all approved plans.
- Review recent claims and loss adjustment expense (LAE) payment history to use as an estimate for the future claims liability of insurers in receivership.
- Claims payments should begin to decrease after policies are cancelled (if applicable).
- Review all active reinsurance treaties, especially for the current treaty year. Ceded reinsurance is especially important for property and liability companies.
- Review recent large expense payments such as rent, commissions, legal expenses, etc.
- Review potential voidable preferences.
- Review monthly investment income and sources generating the income.

**V. INVENTORY AND DESCRIPTION OF ACCOUNTING RECORDS****A. Inventory of Accounting Records**

As soon after the takeover of an insurer as is practicable, the receiver should identify and secure the books, records, systems, and documents that are necessary to maintain and review the accounting functions of the insurer. Familiarity with the preexisting accounting processes and related accounting records and their location will help the receiver prepare for the many other tasks that will follow. The receiver may find that accounting processes should be consolidated, streamlined, or simplified, particularly for insurers in liquidation. A thorough knowledge of the preexisting accounting systems is an integral step in identifying those systems that can be eliminated or simplified. Furthermore, such knowledge will greatly assist in the investigation and asset recovery processes, which are discussed in the next chapter.

This section summarizes and describes the preexisting accounting records that are typically maintained at various locations of the insurer and/or at affiliated and nonaffiliated entities. This chapter should be read in conjunction with Chapter 1—Takeover and Administration, Chapter 2—Information Systems, and Chapter 4—Investigation and Asset Recovery, which may identify additional records and functions that may be useful to the receiver.

Types of documentation vary, but one thing is certain: The records of an insurer that has been placed into receivership will be, or at least may seem to be, incomplete, confusing, and, in many cases, inaccurate. To the extent systems and account balances are undocumented, some documentation may have to be recreated. Work papers of state insurance examiners, outside auditors, and actuaries may be useful in reconstructing records. In addition, existing personnel may be retained by the receiver to assist in this process because of their knowledge of the insurer's operations and systems.

**B. Records at the Administrative Office of the Insurer**

The administrative or “home” office of the company will, most likely, be the location from which the domiciliary receiver will direct the receivership. The bulk of the insurer's financial and accounting records usually are located and maintained at the home office. However, the domiciliary receiver should be aware

*Receiver's Handbook for Insurance Company Insolvencies*

that the company records may also be located at third-party administrator (TPA), managing general agent (MGA) and branch offices.

The following is an overview and brief description of accounting records that the receiver should attempt to locate and secure. If documentation of this nature does not exist or cannot be located, special effort may be required to understand how the financial data was compiled.

1. Organizational Chart of the Accounting Department, Flowchart of Accounting Process, Procedure Manuals, and Chart of Accounts

An organizational chart may give the receiver an overview of the organization, including the accounting department. It may identify the various functions (e.g., cash accounting, underwriting accounting, reinsurance accounting, etc.) of the accounting department and the individuals responsible for those functions. It can also indicate the reporting hierarchy and help assess the adequacy of segregation of duties consistent with sound internal control practices.

A flowchart of the accounting process might describe what action is taken for the significant functions or accounting processes. The flowchart may summarize the route of the original accounting documentation. Most importantly, the flowchart may well identify the key records relied upon to record financial information; when, how, and by whom it is entered into the accounting records; and how and by whom the resulting balance is verified by reconciliation or other procedures. The flowchart may also identify the responsibilities of each significant function in the accounting department. The flowchart may identify controls. The public CPA firm will normally have a process flowchart for the accounting function of the insurer and the controls within that process if not available directly from the insurer. If a flowchart is not available, the receiver may wish to request that one be created to assist in assessing the adequacy of internal controls over the significant accounting processes.

Procedure manuals may exist that describe the duties and functions to be performed by the accounting department. If the accounting system is computerized, the procedure manual of the computer system may describe the process and controls for specific job functions. Procedure manuals may be detailed by job function or by department function. If available, these manuals will assist the receiver in understanding the accounting process. Care should be taken by the receiver, however, because procedure manuals possibly will be incomplete or out-of-date, and they may be unintentionally misleading as to the actual processes currently in place. A walk-through documentation from CPAs/exams/internal audit of the key systems and/or inquiry of the insurer's personnel will help to confirm the accuracy of such documentation. The degree of the walk-through depends on judgment and internal controls of the insurer.

The chart of accounts should detail the description and purpose of all general ledger accounts. The chart (a manual) of accounts may be a useful tool, especially to an external auditor. Again, care should be taken because account titles and descriptions may not reflect their true nature or use in practice by management. Typically, accounts are numbered in sequential order using the following convention:

- Assets.
- Liabilities.
- Surplus accounts.
- Income accounts.
- Expense accounts.

*Chapter 3—Accounting and Financial Analysis***2. Accounting Records, Including the General Ledgers and Supporting Schedules**

The receiver should find a complete set of records at the home office. The general ledger provides a listing of the dollar amounts in each of the accounts in the chart of accounts. The amounts in the general ledger may be posted on a monthly or quarterly basis. Automated and interfaced systems may post to the general ledger on a daily basis.

Depending on the size of the company and the type of reporting system, the general ledger listing may include:

- A transactional listing that reflects, by account, the items posted to that account by period entered. The period entered and supporting schedule may allow the receiver to locate the “support” or underlying documentation for the entry. This information will be valuable in the audit procedures.
- A journal entry listing that specifies, by period, the accounts and amounts affected by the entry. When a transaction from one particular account has been identified for investigation, this listing will allow the receiver to determine the other accounts affected and the amount.

The accounting records will provide details of balances that are summarized and posted in the general ledger. Some of specific detailed schedules that may be found at the insurer are:

- Investments.
- Agents and/or insured balances.
- Funds held.
- Premiums written.
- Reinsurance recoverables.
- Fixed assets (e.g., furniture and equipment).
- Claims paid.
- Claims outstanding (case reserves).
- Contingent commissions.
- Amounts retained for accounts of others.

Accounting records detail the daily accounting activity of the company. The daily cash activity of the insurer is maintained in the accounting records.

**3. Accounting Files**

Generally, accounting files are maintained by an insurer based on the various accounting functions. Accounting files usually contain original accounting source documentation (check remittance advices, invoices, and purchase orders) or images files of the documentation. The records are all important. The more crucial accounting records are:

- Certificate of deposit files and investment.
- Cash.

*Receiver's Handbook for Insurance Company Insolvencies*

- Agents' and producers'.
- Contingent commission.
- Claim.
- Reinsurance.
- Federal, state, and local tax.
- Accounts payable.

The insurer may have several years of accounting files on the premises and keep the older accounting files/backups at a warehouse location. A records retention policy for the insurer may be available from the chief accounting officer. It is important to suspend any document destruction.

The investment accounting should support the investment transactions of the insurer. Included in the files should be broker slips, bank advices, and custodian statements. If the investment accounting is held by a custodian or asset management firm, the receiver should notify them of the receiver and request records. Monthly reconciliations of the custodian statements/files to the related general ledger account balances may also be found here. For more information on investment files, see Section IX on investments in this chapter.

Cash contains records often from bank lock boxes of cash receipt and disbursement that support the cash entries made on a daily basis. Deposit records, checks or checks images, wire transfer information, and records of disbursements may also be found in these files. In addition, banking records—such as authorized signatory lists, wire transfer instructions, sweep account information (bank orders to transfer daily receipts from depository accounts to investment accountings), and agreements with banks regarding custodial and other matters—may also be found here.

Agents' and producers' records should contain copies/images of the statements and billings to those entities for premiums written. Statements may be gross or net of commissions. Advance commissions statements and copies of agreements with the agents or producers that detail the rate of commission and the authority of the agent may also be found in these files.

Contingent commission records should contain the computations for any contingent commission or profit-sharing commission paid to agents and producers and the associated agent/producer agreements.

The accounting records for reinsurance ceded by the insolvent insurer prior to receivership should contain the details for any of the insurer's reinsurance transactions. The supporting schedules should contain summaries of reinsurance premiums and loss calculations for each treaty or reinsurer. The records should include: account statements; the reinsurance treaty; and endorsements thereto, including the interest and liability (the percentage participation) endorsement that each reinsurer has signed or a digest or summary thereof.

The documentation that an insurer maintains with respect to reinsurance assumed by the insolvent insurer prior to receivership depends on whether it was acquired directly from the cedent or through a reinsurance intermediary.

The direct method of acquiring assumed reinsurance may generate more documentation on the insolvent's end because the direct method generally requires an internal function to solicit or accept business from cedents. On the other hand, the broker market method may not require maintenance of an in-house reinsurance underwriting function because this role is assumed by the intermediaries. Therefore, only bordereaux or other summary information may be found at the reinsurer's offices.

*Chapter 3—Accounting and Financial Analysis*

Nonetheless, the receiver may want to determine that the documentary information maintained by the ceding company or intermediary supports the bordereau.

Tax records (federal, state, local, and payroll) should contain the tax returns that have been filed with each jurisdiction. The records may contain reference to the original source information. The tax issues section of this chapter (Section VIII) has more information on taxes. Copies of filed returns may also be found in the general corporate records, with independent accountants or legal counsel, or can be obtained from the IRS.

Accounts payable records should contain vendor invoices, identification, invoice date, date approved, and date paid.

#### 4. Contracts and Agreements

The accounting, underwriting, or corporate legal department may be the custodian of agreements or copies of contracts into which the insurer has entered for insurance and general business operations. The agreements frequently may be referred to by the accounting department to assure that related transactions are authorized, recorded correctly, reported between the parties, and reconciled.

The contracts and agreements may include: real estate leases, furniture and equipment leases and maintenance agreements, information technology (IT) equipment leases, software licensing agreements, bank custodial agreements, hedging agreements, real estate management agreements, mortgage loan servicing agreements, trust funds, investment service, payroll service, management service, and allocation of federal income tax and expenses with affiliates. Other contracts related more to the insurance business may include agency contracts (general or managing), claims administration services, producer contracts, reinsurance contracts, interest and liability endorsements, and LOC agreements. For HMOs, it is important that the receiver have a complete inventory of all provider agreements, as well as a listing of all commercial groups with renewal dates and coverages.

Chapter 1—Takeover and Administration has more information on contracts, and Chapter 7—Reinsurance has more information on reinsurance treaties and LOCs.

#### 5. Financial Reports, Filings, and Other Records

The accounting department is the originating department and custodian of financial reports, both for internal use and external compliance. The department may also be the originating department for many analytical reports that are used by management, although such reports may also originate from other departments, such as claims or underwriting. Filings for compliance with governing jurisdictions may also be the responsibility of the accounting department.

A list of reports that are produced periodically and a schedule of required filings may be available from the controller. Otherwise, the receiver should discuss what reports and filings are produced and available with the chief financial officer (CFO).

The financial reports that the insurer should have readily available include: NAIC annual statements, NAIC quarterly statements (if required), and all supplemental exhibits that are part of these documents. The last page of the annual statement under “Supplemental Exhibits and Schedules Interrogatories,” if properly completed, reports the exhibits that should be filed. In addition to the reports, the accounting department maintains records and the supporting schedules that identify sources of data and reconcile the reports to the source.

Other external financial reports that may be found in the accounting department include: insurance department financial examination reports, actuarial reports and opinions, and CPAs’ audit reports. Along with these reports, the receiver should request related correspondence files (CPA management letters and management responses to the reports). If the insurer’s stock is publicly traded on a stock

*Receiver's Handbook for Insurance Company Insolvencies*

exchange, the insurer is required to file an annual report and various interim documents with the SEC; i.e., 10K and 10Q for U.S. markets, which are available at: <https://www.sec.gov/edgar.shtml>. These are complex filings that may require involvement of outside counsel and/or external auditors.

The accounting department may also be involved in periodic rate filings made with insurance departments. Folders may be available that support the rate change requested. Responsibility for rate filings and approvals may rest with the legal or underwriting department.

Some insolvent or financially troubled insurers have internal audit departments. The receiver should request a listing of all internal audit reports issued and any internal control procedure documents.

**C. Accounting Records at Other Locations****1. Branch Offices**

Branch offices of an insurer may operate independently of the home or main administrative office. However, the branch offices usually use the same computer system, or they upload data daily to the main office. Branch authority, method of operation, and procedure manuals should be in place both at the home office and with the branch manager.

The branch may have limited authority to carry out only certain insurance functions; i.e., either underwriting, claims adjusting, or both. In such instances, the accounting records at the branch will be limited. The branch office may have claims folders and underwriting folders with original documents.

**2. Claims Offices**

The claims offices facilitate the adjustment and settlement of claims. As such, each claims office should maintain open claim files for losses in its respective region. The receiver should collect any checkbooks that the claims office has on-site. Closed claim files may have been returned to the administrative office.

**3. Off-Site Storage**

Many insurance departments and/or insurers themselves require that copies or duplicates of essential records be maintained at an off-site location for the purpose of reconstruction in the event the records are lost or destroyed at the primary location. If this procedure is followed by the insurer, duplicates of records that cannot be located at the primary location might be found at the off-site storage. The off-site storage may also be the location of periodically stored computer backups for the same purpose. Old files (e.g., accounting, claims, underwriting, etc.) and other records may also be in storage. The off-site storage may be a branch office of the insurer or a contracted warehouse. An inventory list of records at the off-site storage location may be available from the controller or CFO. Review the inventory and compare with any retention policies.

**D. Records at Offices of Other Parties****1. Managing General Agent**

The types of records to be found at the offices of the MGA will depend on the authority of the MGA. If the MGA has the full powers of the insurer—including accounting, underwriting, rate filings and reinsurance—then all related accounting records, as previously described, may be at the MGA's office. If the MGA has limited authority, then only records that pertain to the specific function will be in the MGA's office. The insurer may have duplicate copies of some of the records at its main administrative office, although these frequently include only summarized reports or bordereaux.

*Chapter 3—Accounting and Financial Analysis***2. Third-Party Administrators**

TPAs should maintain sufficient records to perform their assigned function. Authority from the insurer may be necessary before any action is taken by the TPA. Alternatively, certain limited discretionary authority may be granted in the agreement with the TPA. Copies of written authority granted should be available from the insurer and/or the TPA.

**3. Reinsurance Intermediaries**

The intermediary should have in its office copies of reinsurance treaties, interest and liability agreements, endorsements, lists of reinsurer participations, files on LOCs, and historical records on premiums paid to and losses collected from the reinsurers. Reinsurance intermediaries should also have details to support the balances due, including details of amounts set off.

**4. Agents and Brokers**

Both agents and brokers will have files for policies that have been issued to insureds. Agents and brokers periodically (monthly) submit to the insurer a list of policies that have been issued. The agents and brokers may be responsible for the collection of premiums. In such instances, the insurer will bill them for the premiums due. Otherwise, the insurer bills the insured directly.

Producers are compensated by a commission on the premiums written. If the insurer uses the direct billing method, the agent or broker may have been paid an advance commission until the premium is collected from the insured. Otherwise, the insurer may bill the agent or broker on a basis net of the commission due. The insurer may also require the producers to pay the full amount of the premium. In turn, the insurer will pay the commission. Producers will have records of all business placed with the insurer.

**5. Department of Insurance**

Insurers are required to file numerous documents with the insurance department of the state of domicile and/or other states where the insurer is authorized to transact business. The receiver may consult legal counsel, state statutes, or the department's staff for specific state requirements. In addition to the annual, and possibly quarterly, statements and financial and market conduct examination reports, the following documents may be on file with the insurance department: contracts (reinsurance, agents, management, investments, etc.), dividends payment approvals, holding company and related party transaction approvals, rate filings, minutes of meetings, and biographical affidavits of officers and directors.

The insurance department examiners, as part of the documentation for support of their findings, may have photocopied certain documents, flowcharts, procedure manuals, or other materials that may be of interest to the receiver. The copies would be found in the examination workpapers that are kept by the insurance department.

**6. Certified Public Accounting and Actuarial Firms**

The CPA firm that performed the last financial audit may be a valuable source for copies of many of the insurer's documents. As part of their workpapers, the auditors may have copied pertinent documentation from the various accounting files. The auditors may also have documented and flow-charted the various significant functions of the accounting department and their related controls. Similarly, independent actuarial firms may have copies of insurer documents and/or working papers that document the calculation or evaluation of the carried reserves or pricing of business.

*Receiver's Handbook for Insurance Company Insolvencies*

## 7. Banks

Banks may be able to furnish images of canceled checks, check number sequence issued, bank statements, loan files, collateral files, safe deposit box records, and correspondence (signatories and requirements).

## 8. Internal Revenue Service

The IRS may be a source for the insurer's income tax returns and filed payroll tax forms.

## 9. Securities and Exchange Commission

If the insurer is regulated by the SEC (publicly traded company or public debt offering), then copies of any documents (10K, 10Q, etc.) filed with that agency may be obtained at [SEC.gov | Filings & Forms](https://www.sec.gov/filings).

**E. Internal Controls**

In an increasingly complex business, receivers manage insolvent insurers' investments, accounting systems, and other operations, all of which require close scrutiny and professional care in the safekeeping of the company's resources. If the company under receivership had an internal audit/control department, the receiver should request and review any internal control procedure documents and reports available.

There is currently no requirement that receivers of insolvent insurers prepare a report acknowledging responsibility for establishing and maintaining an adequate internal control structure. Even so, efforts should be made to ensure and promote effective controls. Further, the receiver should determine if, and to what extent, internal controls and other requirements of federal Sarbanes-Oxley Act-type documentation were created and maintained. All such documentation should be reviewed and matched to the processes and procedures observed and analyzed for identification of obvious control weaknesses.<sup>1</sup>

The receiver should consider establishing internal control policies and procedures and then periodically audit to determine compliance with established directives. Documentation of the receiver's accounting staff's evaluation or internal audit will be useful in identifying controls that should be maintained or strengthened, in providing a baseline for ongoing evaluations, and in demonstrating to other interested parties the rationale used in making the assessment.

This section addresses internal controls by identifying the broad functions typically found in a failed insurer.

The evaluation of controls over particular applications depends on the sources of information that flow into the applications and the nature of the processes to which the data are subject. These processes can be viewed as:

**Accounting estimation processes:** Processes that reflect the numerous judgments, decisions, and choices made in preparing financial statements. Examples of this include the actuarial reserve estimates or tax projections.

**Routine data processes:** Accounting applications/systems that process routine financial data (the detailed information about transactions) recorded in the records (e.g., the processing of receipts and disbursement transactions, other transaction processing, and payroll).

---

<sup>1</sup> The federal Sarbanes-Oxley Act of 2002 was in many respects a response to high-profile corporate scandals, but the Act contains corporate governance and accounting regulation concepts that had been proposed even before these scandals became public. Although, in most respects, the Act is directly applicable only to publicly held companies, many Sarbanes-Oxley concepts may eventually be brought to bear on mutual or privately held insurance companies through state regulation, changes in delivery of accounting and auditing services, adaptation of bank lending covenants, insurance and/or reinsurance requirements, and court decisions in state law fiduciary duty litigation.

*Chapter 3—Accounting and Financial Analysis*

**Non-routine data processes:** Other less-frequently applied processes used in conjunction with the preparation of financial statements (e.g., financial statement consolidation procedures, gathering of financial information for special reports, actuarial estimates of reserves, etc.).

In evaluating controls over an application/system, it is important to note that routine data processes generally are subject to a more formalized system of controls because of the objectivity of data and volume of information processed. Conversely, because accounting estimation processes and non-routine data processes typically are more subjective (involving estimates), or because they are performed less often, these processes typically do not have controls at the same level of formality. Consequently, the risk of errors occurring may be greater, and therefore additional scrutiny of the controls may be required.

It is suggested that the approach for evaluating internal controls consider five broad control objectives that affect the reliability of information in the accounts, records and financial statements of the insolvent insurer:

**Segregation of duties:** Are procedures in place to ensure that employees with the responsibility for recording or reporting transactions do not have custody of the assets on which they are reporting?

**Authorization:** Are controls in place to ensure that transactions are executed in accordance with the receiver's general or specific authorization?

**Access to assets:** Are controls in place to ensure that access to assets (including data) is permitted only in accordance with the receiver's authorization?

**Asset accountability:** Are controls in place to ensure that amounts recorded for assets are compared with the existing assets at reasonable intervals, and that appropriate action is taken regarding any differences?

**Recording:** Are controls in place to ensure that all transactions are recorded and that all recorded transactions are real, properly valued, recorded on a timely basis, properly classified, and correctly summarized and posted?

## VI. AUDIT/INVESTIGATION OF FINANCIAL STATEMENTS

The first step in performing an audit/investigation of an insurer's financial statements is to secure the insurer's cash and investment assets (as discussed above), and then obtain the most recently published financial statement. This may be the most recent annual, quarterly, or monthly financial statement submitted to the domiciliary state insurance department. As discussed later in this chapter, control should be obtained over all automated and manual records of the company, including financial, underwriting and claims records.

Computer systems should be secured at the date of takeover, which includes creating a backup to preserve data at the time of takeover, limiting physical access, changing locks and passwords, and obtaining and taking inventory of all computer disks and related backups. (See Chapter 2—Information Systems.)

All manual records of the insurer, including those at off-site locations, should be inventoried. A central location for all records should be established, and all records should be transported to this location. An electronic inventory system should be created to track the location of records/files.

A review of internal controls should identify the nature and extent of significant problems within the insurer and the segregation of duties. This review should ideally be performed by independent auditors at the beginning of the receivership and on a periodic basis thereafter.

An examination of all accounts as of takeover date and a balance sheet as of the date of receivership may be required for reporting purposes or to support litigation. The balance sheet can be prepared using GAAP-basis, statutory-basis, or cash-basis accounting. The accounting department, insurance department personnel, or independent

*Receiver's Handbook for Insurance Company Insolvencies*

accountants may perform this function. The balance sheet should be prepared using the accounts and the general ledger, as well as current bank statements, investment statements, cash reports, and other supporting documents.

The receiver's accountants should obtain workpapers from the last completed audit and/or from the preliminary audit done by an independent accounting firm. These workpapers and any documents or correspondence related to the audit should be reviewed, focusing on restricted assets, related-party transactions, commitments and contingencies, disclosure items, and any other support documentation or unusual items noted. The accountant may be asked to comment on the adequacy of the financial statements opined upon by the insurer's former accountants.

The accountants should also obtain the most recent audited annual statements, SEC reports, 10Ks, 10Qs, filed statutory blanks, and internal audit files and reports, again focusing on restricted asset documentation, related-party transactions, unusual items noted, and internal control studies.

The principal types of assets and liabilities that an insurer could have and the recommended procedures for establishing the balance sheet at the date of receivership and for securing assets on a prospective basis are discussed below.

**A. Cash**

As addressed in Section III, the existence, location, and amount of all cash, cash equivalent, short-term investments, and cryptocurrencies should be verified through direct confirmation with financial institutions, investment managers and other parties thought to be holding cash or investments. Special care should be applied to the identification of accounts not held in the insurer's name but to its benefit. Bank statements, investment statements, cash ledgers and cash-flow statements should be reviewed. This process should also include any funds held as collateral, LOCs, or other restricted cash. The initial procedures established with the financial institutions regarding wire transfers, as well as the identity of all who have access to the cash and investments, should be reevaluated and further consideration given to changing, restricting, or curtailing this access.

**B. Investments**

As with cash, the existence, location, amount, and type of liquid securities (bonds, stocks, mortgage loans, etc.) should be confirmed directly with financial institutions, any joint venture managing partners, investment and real estate managers, and other third parties thought to be holding securities. Investment statements from financial institutions, portfolio statements from investment managers, and other similar reports should be secured and used to establish a balance at the receivership date. Purchases, sales, and transfers of any kind, especially recent transactions, should be reviewed, with special attention to related gains/losses. A focus on related-party or affiliate transactions is important, as it could be helpful to the receiver and attorneys. The receiver should be aware of who has access to the investments and the authority to direct the investment managers/brokers. The receiver should consider changing and restricting this authority.

A review of the investment policies should be made and guidelines and procedures established regarding the future investing of securities. State law(s) should be researched to determine if there are any applicable restrictions. Receivers should take into account how they act in a fiduciary capacity, and any investment decisions and guidelines should reflect that. If an investment management firm is controlling allocations according to the investment policy, the receiver should inform them of any difference in the allocations. Allocation of this function between in-house personnel and independent investment services should take into consideration the current dollar amount of investments, projection of future investments, capability of the company personnel, and the complexity of transactions. The receiver should investigate company ownership of derivative and options instruments (see Schedule DB of the annual statement) and obtain a description of the company's hedging strategy.

The market value of investments as of the date of receivership should be ascertained to determine the realizable value of the assets.

*Chapter 3—Accounting and Financial Analysis*

Examples of the various types of investments that may be recorded on the insurer's books include:

- Stock
- Bonds.
- Mortgage or asset-backed securities (ABS).
- Short-term investments (e.g., money markets, overnight deposits). (See cash above.)
- Government securities.
- High-yield, high-risk bonds.
- Mortgage loans.
- Joint ventures.
- Partnerships.
- Investments in subsidiary, controlled, or affiliated (SCA) entities.
- Real estate.
- Companyowned automobiles.
- Other assets, including health care-related receivables (for health-related receiverships).

The receiver should also be aware of the risks associated with the various investments recorded on the books of the insurer and should consider liquidating high-risk investments in favor of more conservative investments. Certain risks can be defined as:

- Credit risk
  - The risk that default may occur on an obligation.
- Market risk
  - The risk that values are affected adversely by changes in interest rates or similar type price changes.
- Liquidity risk
  - The risk that the ability to sell investments readily has diminished, resulting in an inability to generate cash to pay off obligations.
- Off-balance-sheet risk
  - The risk that a potential loss may occur in excess of the amount recorded on the financial statements. This loss may be related to guarantees or commitments entered into by the insurer with respect to a particular investment.

The insurer may have entered into hedge transactions or other sophisticated investment contracts; the receiver should have an understanding of these arrangements before undertaking any transactions relating to them.

*Receiver's Handbook for Insurance Company Insolvencies***C. Real Estate**

Determine the existence, the location, and the amount of related mortgage/debt and/or income from properties. Obtain any real estate-related management contracts. Consider obtaining current valuation of the properties through an appraiser or based on current market conditions. Transactions should be identified and quantified with related parties or affiliates on recent transactions within the voidable preference period. Management of existing properties should be reviewed by the receiver. The bank/lender holding related mortgage/debt should be notified of the receivership. If any of the real estate is held in a joint venture/partnership, obtain and review the joint venture/partnership agreements.

**D. Reinsurance Recoverables**

A present-day evaluation of the collectibility of reinsurance recoverables should be performed by the receiver based on current balances, aging of recoverables, and valuation of allowance for doubtful accounts by reinsurer. The processing of claims by the guaranty funds and the reporting of paid losses should be monitored by the receiver for adherence to protocols regarding completeness and timeliness and the effect of delays on its ability to collect reinsurance recoverables. (See Chapter 2—Information Systems and Chapter 6—Guaranty Funds.) Further, consideration should be given to whether ceded reinsurance premiums should be paid and the legal effect of refusal to pay. In the context of a life and health receivership, the receiver should be mindful of the guaranty associations' right to elect to continue reinsurance in accordance with Section 612 of the *Insurer Receivership Model Act* (#555) and Section 8(N) of the *Life and Health Insurance Guaranty Association Model Act* (#520), as adopted in the states.

A receiver should, as part of their evaluation of all reinsurance contracts, determine if there is a contingent commission component and if so, find out whether the estate qualified and received any present or future contingent commission.

Most reinsurance contracts reward contingent commission by way of the ceding commission; i.e., if the loss ratios are within the contract terms that trigger the contingent commission, it typically would be reflected in an increase in the percentage on the ceding commission.

**E. Prepaids**

Identify prepaid assets, which could include insurance coverage, taxes, pension benefits, etc. If a prepaid asset relates to property insurance coverage, cross reference the insured property to the real estate section, making sure that the property has been identified and recorded under the real estate section. Focus on any prepaids for services from related parties and affiliates.

**F. Agents' Balances**

Review agents' balances, focusing on additional information that should be recorded on the books of the insurer versus the agents' books. Examine agreements and commissions, and check for unlawful setoffs, evidence of broker funding, and other netting activities. Investigate any advance commissions, or bonus or delayed payment arrangements with agents. Consideration should be given to lags in the reporting of premium (and thus exposures), particularly when MGAs, TPAs, or multiple agents/brokers are involved. Particular attention should be paid to determine if there are any unearned commissions due to the cancellation of policies caused by the liquidation. Often the agency agreement makes the agent responsible for collection of premium. Under those agreements, if the agent is carrying an account receivable for uncollected premium and the amount of the uncollected premium has not already been paid to the insurance company, the receiver can demand that the agent make payment for the premium even though it has not been collected by the agent. Agent agreements also vary as to the terms for collection of audit premium. Some make the agent responsible for collection of audit premium, while some leave audit premium collection to the insurer. If the audit or audit collection responsibility lies with the agent, the receiver will want to enforce that, at least to the extent that the agent actually collects audit premium. Whether premiums

*Chapter 3—Accounting and Financial Analysis*

are to be remitted to the receiver in gross or net of commissions is an issue of state law that should be resolved by the receiver in consultation with counsel.

**G. Loans or Advances to Affiliates or Agents**

Determine whether any receivables have been written off without an effort to collect.

**H. Personal Property**

Obtain a complete inventory of all personal property, such as furniture, fixtures, and equipment, including any depreciation schedule. Care should be taken to verify that the insurer is the owner of these assets as opposed to an affiliate or another entity. For example, some assets may be leased as a form of financing. If the company is a staff model HMO, the receiver should also obtain an inventory of medical equipment and a pharmacy or medical supplies inventory.

**I. Other Assets**

Review other assets, determining existence, location, and amount. Verify expiration dates and adequacy of trust accounts and LOCs posted as collateral by reinsurers, policyholders, and others. Ascertain whether any assets have been sold or transferred for less-than-adequate consideration. Review sales contracts and independent appraisals, and focus on any transactions with related parties and affiliates.

For health care-related receiverships, health care receivables can include items like provider risk sharing receivables, coordination of benefits, provider overpayments, and/or subrogation recoverables among other items.

**J. Accounts Payable and Accrued Expenses; Debt**

Identify and quantify liabilities outstanding for all general and secured creditors and employee-related expenses. Employee-related expenses include payroll and bonus, severance, vacation, and personal time. Obtain pension and deferred compensation program documentation where applicable. These items can be determined by using the payroll register, personnel policies and procedures, and personnel records. Confirm that all personnel receiving monies are currently employed by the insurer, and review all related-party transactions.

Notify any bank/lender of the receivership, and confirm outstanding balances as of the date of receivership. Review debt agreements, loan files, and collateral files to determine that liabilities are properly recorded on the financial statements as to type of debt and classification; i.e., short-term versus long-term.

**K. Claim Reserves and Incurred but Not Reported (IBNR) Claims**

Obtain an understanding of the insurer's policy on booking reserves, and determine whether the policy has been consistently followed. Make any necessary adjustments to the financial statements. Continue to monitor claims for ongoing evaluations and reporting of case reserves.

The receiver must consider the use of in-house actuaries or independent actuaries to determine the adequacy of reserves. Consider commissioning a new actuarial study, as of the liquidation date, to establish ultimate losses in a property/casualty (P/C) receivership or to evaluate blocks of business in life, accident, and health carriers. The additional cost of the study may be justified by the receiver's enhanced ability to finally commute reinsurance or to adjust account balances that involve retrospectively rated policies. (See Chapter 5—Claims.)

Determining the adequacy of claims reserves and incurred but not reported (IBNR) claims is especially critical for HMOs. It is also important to identify the inventory and associated liability for claims that are in-house but have not been processed through the HMO's claims system. The receiver may consider hiring

*Receiver's Handbook for Insurance Company Insolvencies*

a TPA or other outside claims processing service to process the claims and determine the ultimate liability. The receiver may also consider hiring an actuary to establish the medical loss ratio (MLR) for each of the HMO's product lines in order to determine whether a line of business is profitable.

**L. Income and Expense**

Examine any unusual income and expense items, including sales to or purchases from related parties or affiliates, significant gains/losses, and unusually high expenses in relation to the size of the insurer and type of business.

**M. Equity**

Review surplus accounts, and investigate any unusual changes in surplus, statutory to GAAP adjustments, recent capital contributions, recent capital issues, and other activity that appears unusual.

**VII. RELATED PARTY TRANSACTIONS**

Insurers often enter into many different types of transactions with various related-party entities. Each of these transactions should be scrutinized carefully because of the potential that they were not the result of arm's-length bargaining. Further, even fairly negotiated transactions may not have been carried out according to the terms of the agreement. Finally, the transaction may not be exactly as it appears. For example, a sale of an asset at a huge loss may in fact amount to a fraudulent transfer. Related parties may include a parent company, affiliates or subsidiaries, shareholders, directors, officers, and employees. Transactions with affiliates are required to be disclosed in Schedule Y, Part 2 of the annual statement. Related parties may also include entities or individuals that are not as easily identified, as they may be owned by individuals associated with the insurer (such as directors, shareholders, officers, or employees), or they may be entities that have entered into significant transactions with the insurer. These transactions may be significant as to the number of transactions or as to the amount of money involved. Alternatively, the transactions may be immaterial from the standpoint of assets changing hands, but they may be significant because of the nature of the transaction (guarantees, debt forgiveness, etc.).

It is important to identify related parties and transactions between the insurer and any related party as quickly as possible for many reasons, including to preserve the assets. Often, related-party transactions are not appropriately reflected on the insurer's books; sometimes the transactions may not be reflected at all, therefore misstating the insurer's assets or liabilities. The transactions may be accounted for (if at all) on the incorrect entity's books, and funds or entries may be commingled by management, thinking that all the companies are part of a consolidated group or owned by the same parent. However, the legal corporate entities are important, especially when one or more of them become insolvent. Insurers are subject to the jurisdiction of the insurance commissioner. Other entities are governed by bankruptcy law and are generally not subject to the jurisdiction of the commissioner; however, they may be subject to the jurisdiction of the receivership court in certain circumstances. On Aug. 17, 2021, the NAIC adopted a new provision, Section 5A(6), of the *Insurance Holding Company System Regulatory Act* (#440), which provides that the affiliated entity whose sole business purpose is to provide services to the insurance company is subject to the jurisdiction of the receivership court. This applies to affiliates performing services for the insurers that are an integral part of the insurer's operations or are essential to the insurer's ability to fulfil its obligations.<sup>2</sup>

Further, with regard to commingled data and records, the 2021 revisions to Model #440 and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) specify that records and data of the insurer held by an affiliate are identifiable and are segregated or readily capable of segregation at no additional cost to the insurer. The models' reference to "at no additional cost to the insurer" is not intended to prohibit recovery

<sup>2</sup> The full text of Section 5A(6) of the *Insurance Holding Company System Model Act* (#440) is available at [https://content.naic.org/sites/default/files/MO440\\_0.pdf](https://content.naic.org/sites/default/files/MO440_0.pdf). The 2021 NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) may not yet be adopted in every state. Therefore, receivers should refer to the applicable state's law.

*Chapter 3—Accounting and Financial Analysis*

of the fair and reasonable cost associated with transferring records and data to the insurer. Because records and data of the insurer are the property of the insurer, the insurer should not pay a cost to segregate commingled records and data from other data of the affiliate.

Related-party transactions may give rise to culpability on the part of the interested entities or individuals. Preferential transfers, fraudulent transfers, and other bases for liability are discussed further in this chapter and in Chapter 9—Legal Considerations.

Organization charts showing a parent, affiliates, or subsidiaries may be obtained from a schedule within the annual statement (Schedule Y, Part 1), board minutes, or SEC filings. Additionally, relationships with insurance groups and entities that share common ownership can be found on Schedule Y, Part 3. It is more difficult to identify individuals who might have been involved with related-party transactions, and often that list of individuals is much longer. However, the receiver should start with the list of officers and directors of the insolvent insurer; its parent, subsidiaries or affiliates, again listed in the annual statement or SEC documents; and board minutes. Stockholders' names should be listed in shareholder records maintained, possibly, by legal counsel or trustees. Lists of employees may be obtained from payroll registers. When these transactions are reviewed, it may be determined that a significant number or dollar volume of transactions have occurred with one individual or entity. This may indicate that the involved entity or individual is also a related party.

Once an initial list of related parties is established, the types of transactions that may have occurred between these entities can be determined. The types of transactions that may be identified relate to various types of business transactions. An understanding of the related entities and how they are affiliated will help the receiver to identify and formulate the types of transactions that may have occurred between them. Many insurer company groups have established affiliates to act as investment vehicles or managers, brokers, reinsurers, MGAs, TPAs, premium finance companies, and computer service companies, or to accept select types of risks. A parent holding company may have been established. It is important to ascertain the related parties and their affiliation because the insolvent insurer may have claims against affiliates.

The receiver should review the notes to financial statements in the annual statement, the independent auditor's report and the state insurance examiner's report. These reports typically identify and summarize some of the significant related-party transactions. Also, board minutes will frequently contain discussions or resolutions pertaining to specific significant transactions involving related parties.

Brokerage, agency, or management agreements may exist between the insurer and its affiliates. There may also be reinsurance (both assumed and ceded) or pooling arrangements among affiliates. Expense-sharing arrangements may exist. An affiliate may provide data processing services. (The receiver needs to determine immediately if they can continue to obtain these services and how to secure the data.) Leasing arrangements for offices, data processing equipment, and furniture and fixtures may also exist. With respect to all agreements with affiliates, the receiver should be alert to possible differences between the apparent transaction and its real substance.

Holding companies may also provide management expertise for which there is a management agreement and/or expense allocation agreements. Tax-sharing agreements may also exist between all the affiliates and parent.

Insurers may have management agreements with unaffiliated parties, or control may be maintained through interlocking directors of the management company and the insurer. For example, an HMO may be controlled by a provider group such as hospitals. Therefore, these agreements or contracts need to be reviewed to determine if they are arm's-length transactions.

It is important to identify these transactions as quickly as possible, not only for the identification of assets and liabilities that may be recovered by the insurer, but also to determine if alternative data processing, management, facilities, etc., should be obtained, as these services may no longer be available from the affiliate. Alternatively, such services may be available on more favorable terms from nonaffiliated providers.

The types of transactions that may have occurred between the insurer and its directors, officers, employees, and stockholders may be the same as some of the above, but they may also include items such as travel and expense

*Receiver's Handbook for Insurance Company Insolvencies*

advances, unsecured loans, or loans secured by personal or real property. Companies owned by any of these individuals may also be responsible for providing services discussed above, including leases, data processing, brokerage, reinsurance, etc.

To determine the existence of these types of transactions, their validity, and the appropriate accounting for the transactions (both in the books and records of the insurer and in cash flow), the tasks described below should be performed.

**A. Identify Related Parties**

The receiver should obtain or develop organizational charts to identify any and all affiliates and related parties. These affiliates should be identified as: 1) parent companies; 2) subsidiaries; or 3) affiliates (which would be organizations owned or controlled by the same parent company, but not owned by the insolvent insurer). Schedule Y, Part 1 of the annual statements provides an organization chart of the insurance holding company system; Schedule Y, Part 2 includes transactions with affiliates; and Schedule Y, Part 3 includes further information on insurance groups and entities that share common control.

After preliminary identification of these related entities, the receiver should determine the status of these related entities:

- If the related parties are financially troubled, are the parties under the jurisdiction of the insurance regulator of their state of domicile, or are the parties under the jurisdiction of corporate bankruptcy laws?
- Does the insolvent insurer need to file a proof of claim against the related entity to preserve its claim? (The receiver should consult with counsel about the risks of submitting to a foreign court's jurisdiction on issues other than those set forth in the proof of claim.)
- Are the entities affiliated, in which case the insolvent insurer may have access to the assets of the related entities?
- Is cash commingled among the companies?
- Are the entities operating as alter egos?

The receiver should also obtain lists of individuals, as well as their related entities who might also be related parties, beginning with the directors and officers of the insurer listed in its annual statement and the officers and directors of the insurer's subsidiaries and affiliates. The receiver should also obtain a list of all shareholders and employees of the insolvent entity. Each of these individuals may be categorized in a manner similar to that described above for companies that are related entities. Each can be evaluated for the types of transactions that may have occurred between them and the insurer. It should be kept in mind that these individuals may have been involved with other entities that appear not to be related but, in fact, may have had sufficient transactions with the insolvent entity that they, too, become related entities.

**B. Find Supporting Legal Documents for Transactions**

The receiver should obtain all key documents and agreements entered into between the insurer and its various related entities. As discussed above, these agreements may have been collected through the inventory of documents in the takeover period. If these documents have not been located, a search may be made to locate any agreement or documents that indicate arrangements between the insolvent insurer and the various related entities.

As the receiver completes the procedures described below and in Chapter 4—Investigation and Asset Recovery, identified transactions may indicate the advisability of searching for additional documents.

*Chapter 3—Accounting and Financial Analysis***C. Identify Amounts Associated with the Related Party Transactions**

Next, the receiver should review the various accounting records of the insurer, including the chart of accounts, general ledger, journal entry listing, and transaction listings. It must be noted that when dealing with related-party transactions, the receiver should attempt to obtain the corresponding records of related entities to cross-reference transactions and amounts as described in the procedures below.

The chart of accounts may be obtained and reviewed for any accounts that appear to be intercompany receivables, intercompany payables or loans to affiliates, related parties, directors, officers, shareholders, employees, etc. This may be an easier task for some companies than others. Often separate accounts will be established for all related-party transactions. On the other hand, the transactions may be difficult to identify if they were charged to accounts with innocuous titles such as “other assets” or “miscellaneous expense,” or if they were netted with other transactions. Some transactions, particularly insurance-related transactions, may be buried in the normal transactions of the insurer. However, if the receiver reviews the chart of accounts to identify preliminarily the accounts that may be with related entities and individuals, subsequent procedures will help identify buried transactions.

After particular accounts have been identified as possibly containing related-party transactions, the general ledger should be reviewed to ascertain the dollar amount in the identified accounts. The receiver may want to prioritize the items reviewed by the dollar magnitude of the balances. However, caution should be taken at this point, as the dollar magnitude alone may not be indicative of the significance of the transaction. Understanding the types of transactions recorded in the particular account is helpful, especially if there is a high volume of transactions that have been netted. A small balance in an account with a significant volume of transactions may have other implications. No cash may have changed hands in the case of guarantees or debt forgiveness.

The next step is to obtain the transaction register by month to see the actual transactions that have been posted to the account. This will be the beginning of the investigation, or audit phase of the review. As mentioned above, depending on the size and type of systems the insurer used, it is possible that the general ledger listing also will provide the listing of transactions posted to the various accounts, meaning that a separate transaction listing is not necessary or available.

It may be beneficial to obtain a listing of disbursements sorted by payee. This can help identify related-party transactions that, as mentioned above, may not appear significant standing alone and that may be buried in other transactions of the insurer.

The above steps are easily accomplished if the insurer had an efficient, effective accounting system. Unfortunately, this is often not the case with many insurers that become insolvent. Frequently, the accounting system may not have been operational as originally designed due to budgetary concerns, cutbacks of manpower, and other problems during the period immediately preceding the insolvency, or there may have been intentional distortion of the system to hide improper transactions. In any case, it may be necessary to reconstruct information.

**D. Cross-Reference to Affiliates’ Books**

If the receiver has access to the related entities’ books, they should be obtained from those entities. A receiver who does not have ready access should attempt to obtain access promptly. The reciprocal accounts for those entities may then be reviewed and cross-referenced to see that the amounts recorded on the related entities’ books are in fact the reciprocal of the amounts on the insolvent insurer’s books. Differences should be investigated. In addition to the cross-referencing, the receiver may also perform all the analytical procedures discussed above for the related entities’ identified accounts. Through this process, the receiver may find other transactions that need to be evaluated and analyzed. In the absence of a court order, the receiver will usually be unsuccessful in his/her attempt to obtain the books and records of related entities.

*Receiver's Handbook for Insurance Company Insolvencies***E. Analyze All Transactions**

Once related-party transactions have been identified, detailed analyses of most of the transactions can be completed to determine whether they were business transactions entered into at arm's length and for valid business reasons with appropriate support. The arm's-length aspect of some transactions may be difficult to determine (or refute); however, all such transactions should be reviewed with an appropriate degree of skepticism. The analysis of the identified transactions may be completed by the accounting department or by the audit/investigation team.

The receiver may attempt to segregate transactions into types for analysis. Otherwise, the task may seem too large to accomplish. The transaction types may be determined by the accounts that have been identified as including related-party transactions and the relationships of the related parties. For example, if the related-party accounts include advances to or from, or accounts receivable or payable, then one of the transaction types might be cash advances or loans to related parties. The following are some of the transaction types that may be identified for analysis:

- Advances/loans to related parties.
- Reinsurance receivable/payable.
- Premiums due to/from.
- Commissions due to/from.
- Operating expenses receivable/payable (leases, management, computer services, etc.).
- Payment of dividends.
- Purchase or sale of assets from or to related parties.

The receiver should then systematically review the transaction types in each of the identified accounts. This would include noting the description of the transaction in the transaction listing.

It may be necessary for the receiver to search for the underlying documentation for all entries. The journal entry listing and other documents obtained in the document search may be helpful in this effort. Also, the various schedules in the annual statement should be reviewed. In any event, the receiver will have to seek any underlying information that may indicate the substance of the recorded transaction. The receiver may also have access to current or former employees who can shed light on the nature and intent of these transactions, locate documentation, and otherwise interpret such documents. Once the transaction entry has been obtained and the underlying documentation has been obtained and reviewed, the receiver can determine whether the information was recorded appropriately on the insurer's books. At that time, the receiver should add the correct dollar amount of this item to the schedule of items for ultimate determination of action. This schedule should be prepared on a gross basis, without netting of balances, to enable the receiver to see the full impact of the transactions.

The receiver should systematically analyze all significant transactions in all identified accounts, as demonstrated above, until all transactions have been reviewed and scheduled for ultimate disposition.

As each of these transactions is being reviewed and scheduled, it is always necessary to cross-reference to other related parties' books and records, if available.

**F. Evaluate All Identified and Analyzed Transactions**

After all transactions have been reviewed, analyzed, and scheduled, the receiver will have to evaluate the propriety of the transactions and any action necessary. Some of the transactions might not stand depending

*Chapter 3—Accounting and Financial Analysis*

on the type of transaction and when it occurred relative to the date the insurer was declared insolvent. If the related-party transactions result in receivables to the insolvent entity, it may be necessary for the receiver to file a proof of claim in another proceeding if the other party is in some form of receivership. If the related-party transaction resulted in payables from the insurer, the receiver may have creditors that need to be notified of the insolvency.

**G. Potential Reconstruction of Records**

If the insurer does not have the types of records listed above, it may be necessary to use available records to reconstruct the needed information. In such cases, the receiver should begin with the insurer's annual statement. From this, the receiver may find supporting documents for the numbers entered and filed in this statement. If the underlying information does not agree with the annual statement, the discrepancies should be identified and the reason for the discrepancies determined. The receiver may be able to obtain information from the insurance department or outside auditors, which can be of great benefit when reconstructing records.

If a total reconstruction is required, the receiver should start with all the bank statements for the past year (at a minimum). The receiver should review the receipts and disbursements from the most recent year to determine if there are additional types of transactions that were not previously disclosed in the last filed annual statement. This detailed analysis should include a schedule that categorizes disbursements by type and segregates those related to the payment of claims or reinsurance and other underwriting expenses from those that were pure operating expenses. Disbursements that may have been to related entities should also be segregated and identified. The same type of schedule should also be prepared for all cash receipts.

If available, any financial information regarding affiliates, subsidiaries, or the parent company would be useful in this reconstruction.

**H. Data and Records of the Insurer Held by an Affiliate**

The *Insurance Holding Company System Model Act* (Model #440 and *Model Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) contain provisions that address data and records of the insurer that are held by an affiliate. While the models have contained provisions since 2010, on Aug. 17, 2021, the NAIC adopted revisions to further clarify owner of data and records.<sup>3</sup>

Specifically, the Model #440 specifies the following:

- The books, accounts, and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions, including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties.
- All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation, at no additional cost to the insurer, from all other persons' records and data. The affiliate may charge a fair and reasonable cost associated with transferring the records and data to the insurer. However, the insurer should not pay a cost to segregate commingled records and data. Therefore, if records and data belonging to the insurer is held by an affiliate (e.g., on the affiliate's systems), upon request, the affiliate shall provide that the receiver can:

<sup>3</sup> Although in 2021 the NAIC adopted revisions to Model #440 and *Model #450* related to receivership matters including records and data, these revisions may not yet be adopted in every state. Therefore, receivers should refer to the applicable state's law.

*Receiver's Handbook for Insurance Company Insolvencies*

- Obtain a complete set of all records of any type that pertain to the insurer's business.
- Obtain access to the operating systems on which the data is maintained.
- Obtain the software that runs those systems either through assumption of licensing agreements or otherwise.
- Restrict the use of the data by the affiliate if it is not operating the insurer's business.
- The affiliate shall provide a waiver of any landlord lien or other encumbrance to give the insurer access to all records and data in the event of the affiliate's default under a lease or other agreement.
- The revisions to Model #440 and Model #450 also describe that records and data that are otherwise the property of the insurer, in whatever form maintained, include, but are not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records, or similar records within the possession, custody, or control of the affiliate.
- Section 19 of Model #450 lists provisions that should be included in agreements for cost-sharing services and management services between the insurer and an affiliate, which includes certain provisions specific to the insurer being placed in supervision, seizure, conservatorship, or receivership.
  - All of the rights of the insurer under the agreement extend to the receiver or commissioner to the extent permitted by state law.
  - Records and data of the insurer are the property of the insurer, are subject to the control of the insurer, are identifiable, and are segregated from all other person's records and data or are readily capable of segregation at no additional cost to the insurer.
  - If the insurer is placed into receivership, a complete set of records and data of the insurer will immediately be made available to the receiver or the commissioner, shall be made available in a usable format, and shall be turned over to the receiver or commissioner immediately upon the receiver or the commissioner's request, and the cost to transfer data to the receiver or the commissioner shall be fair and reasonable.
  - Specify that the affiliate has no automatic right to terminate the agreement if the insurer is placed into supervision, seizure, conservatorship, or receivership.
  - Specify that the affiliate will provide the essential services for a minimum period of time (specified in the agreement) after termination of the agreement, if the insurer is placed into supervision, seizure, conservatorship, or receivership.
  - Specify that the affiliate will continue to maintain any systems, programs, or other infrastructure, notwithstanding supervision, seizure, conservatorship, or receivership.
  - Specify that if the insurer is placed into supervision, seizure, conservatorship, or receivership, and portions of the insurer's policies or contracts are eligible for coverage by one or more guaranty associations, the affiliate's commitments under certain provisions of Section 19 of Model #450 will extend to such guaranty association(s).<sup>4</sup>

---

<sup>4</sup> The full text of Section 19 of Model #450 is available on the NAIC website at: [https://content.naic.org/sites/default/files/MO450\\_0.pdf](https://content.naic.org/sites/default/files/MO450_0.pdf).

*Chapter 3—Accounting and Financial Analysis***VIII. TAX ISSUES**

In virtually every receivership, federal tax issues must be considered. The insurer cannot be discharged or liquidated without the filing of federal income tax returns. In addition, consideration should be given to the payment of federal corporate income and other taxes. The receiver can be held personally liable for the payment of certain unpaid taxes if specific procedures are not followed.

Because of the complexity of federal income taxation issues, the potential personal liability of the receiver and the additional complexities associated with receiverships—and the significant impact on the estate from items such as forgiveness of debt, consolidation rules, and other matters—the receiver should hire individuals with expertise in these areas. Such experts could include independent CPAs or counsel with experience in such matters. Furthermore, because of the continuously evolving nature of federal income taxation issues, many of the issues addressed in this chapter may have changed. This is a reason that the receiver should hire individuals that will be as up to date as possible in these areas and why receivers should seek updated guidance on tax matters (both federal income and state premium tax issues) in reference to the issues addressed in this Handbook.

The receiver should ascertain the insurer's tax status as part of the takeover procedure, in addition to securing copies of tax returns and company tax payment records. Foremost, the receiver should learn whether all tax returns due have been filed and any amounts owing have been paid. In addition, the receiver should learn whether the insurer was part of a consolidated group filing or party to any tax sharing or similar contractual agreements. The receiver should also obtain and carefully review and understand the provisions of any tax-sharing agreements between the insurer and any related parties. In almost all receiverships, the receiver takes over the insurer but not necessarily its holding company or other affiliated group with which the insurer may be consolidated for tax purposes. In addition, the insurer may own nonregulated subsidiaries that are taxed differently from the insurer.

Prior years' returns and any correspondence with the IRS also should be reviewed. Discussion may be held with any outside CPAs or counsel who may have been involved in filing the returns or in handling any disputes with the IRS. The receiver should be alert to any contingencies that may exist for payment of taxes, penalties, and interest resulting from failure to file on time, failure to pay tax due on the return, inappropriate treatment of income or deductions on the return, etc. Contingency reserves recorded on the balance sheet of the insurer or its parent should be reviewed and analyzed for purposes of determining tax positions taken by the company that are not "more likely than not." The receiver should consider these contingencies when allocating distributable assets of the estate in light of the priority generally alleged by the federal government and accorded by the applicable priority statute. (See Chapter 9—Legal Considerations.)

The receiver may request an account transcript from the IRS for the receivership entity. The transcript, available by type of tax (Form 1120, Form 941, etc.) and year, may be obtained by filing form 4506-T, Request for Transcript of Tax Return. An account transcript typically contains information on tax payments (amounts and dates) and filing of returns (dates).

Income taxation of insurers is somewhat different from conventional corporations, with additional provisions that are applicable to life insurers contained in Part I of Subchapter L of the Internal Revenue Code (IRC) and specific provisions applicable to other insurance companies contained in Part II of Subchapter L of the IRC.

Even though an insurer may have substantial statutory losses, it is possible that based on its taxable income, federal income taxes may be due. See discussion in this chapter of deferred income that may be taxed when a company loses its status as a life insurance company for federal tax purposes. There also exists the possibility that the insurer is entitled to recover prior years' taxes because of the existence of capital losses, operating losses, or tax credits. Operating losses can be carried back two years and carried forward 20 years by P/C insurers. Prior to 2018, life insurers were allowed to carry back ordinary losses for three years and carry forward losses for 15 years. No carryback is allowed for operating losses of insurers other than P/C insurers for taxable years after Dec. 31, 2017, but these insurers are allowed indefinite carryforwards, which are limited to 80% of taxable income in each year to which the operating loss is carried. All insurers are allowed to carry back capital losses three years and carry forward up to five years to offset capital gains. Tax credit carrybacks vary depending upon the type of credit, so you should

*Receiver's Handbook for Insurance Company Insolvencies*

always check with a tax advisor. The insurer may also have made estimated tax payments that can be recovered. Additionally, an insurer may be entitled to a tax recovery because of its inclusion in a consolidated tax filing where its losses were used to set off taxable income from affiliated entities. Tax recovery due to tax sharing agreements will not be recoverable from the IRS but must be recovered from affiliated entities. Therefore, income tax recoverable may not be collectible and, as such, should not be booked. In addition, under Section 848 of the IRC, an insurer must capitalize its estimated acquisition expenses, which are then amortizable (deductible) over the ensuing 10-year period for amounts capitalized prior to through Dec. 31, 2017, and over a 15-year period for amounts capitalized after Dec. 31, 2017 (five years for smaller companies).

The receiver should be aware that IRC Section 6511(a) places a deadline by which claims for credit or refund of taxes must be made. In many instances, this deadline will be three years from the due date of the return for which the claim for refund is being made. However, if the claim for refund results from the carryback of losses to preceding tax years, the deadline will be three years from the due date of the return that generated the loss. Due to the critical nature of properly determining these deadlines, the receiver should consider consulting independent CPAs or counsel with experience with these matters.

In addition to federal corporate income taxes, the receiver also has to be concerned about foreign taxes, state corporate income taxes, federal and state payroll taxes, premium taxes, real estate taxes, federal excise taxes, state franchise and excise taxes, sales taxes, and personal property taxes, along with myriad reporting and filing requirements. The receiver will also need to file final tax returns upon the closing of the receivership estate.

**A. Notice**

Within 10 days from the date a receiver is appointed, Form 56 (Notice Concerning Fiduciary Relationship) must be filed with the IRS. A certified copy of the court appointment should be attached. This form should be filed for all forms of receivership. The receiver should specify that they are to receive notice concerning income, excise, sales and property, and payroll tax matters. The list of tax forms should include Form 1120L (for life companies) or Form 1120PC (for P/C companies), Form 941 (quarterly payroll tax returns), Form 940 (Federal Unemployment Compensation Tax), and Form 720 (Federal Quarterly Excise Tax Return). If the insurer owns subsidiaries, the receiver should also file a Form 56 notice for each subsidiary.

In addition to the federal filing, many states have similar notice requirements. Even without a specific requirement, sending similar notice to the taxing authorities of those states and foreign countries where the insurer did business or had employees should be considered.

Form 56 is not to be used to update the last known address of the receivership entity. The receiver should file form 8822, Change of Address, with the IRS.

**B. Income Taxes**

Under Section 1.6012-3(b)(4) of the federal income tax regulations, a receiver or trustee who, by order of a court of competent jurisdiction, by operation of law or otherwise, has possession of or holds title to all, or substantially all, the property or business of a corporation, must file a return in the same manner and form as the corporation.

The due date for filing federal corporate income tax returns for insurance companies is the 15<sup>th</sup> day of the fourth month (generally April 15) of the year following the year end of the company. (For years beginning prior to 2016, the due date was the 15<sup>th</sup> day of the third month [generally March 15] of the year following the year end of the company.) A six-month extension to Oct. 15 can be obtained for the filing of the return if the extension form is sent to the IRS prior to the April 15 deadline. This extension, however, is only for the filing of the return and not for the payment of tax liabilities. The April 15 deadline is applicable to calendar-year companies only. There may be certain non-insurance companies under the receiver's authority that have fiscal year-ends.

*Chapter 3—Accounting and Financial Analysis*

Once an affiliated group of corporations files a consolidated return, it must continue to do so as long as the group remains in existence. Therefore, consolidated returns must continue to be filed with the insurer’s subsidiaries. In addition, the IRS has ruled under PLR 9246031 that an insurer in liquidation under state law generally is required to be included in its common parent’s consolidated federal income tax return. The receiver may request approval from the IRS to file separate returns. This permission may be granted on a case-by-case basis for good cause shown. Pursuant to the consolidated return regulations (1.1502-75), the parent of the affiliated group must request deconsolidation for good cause. A deconsolidation may weaken the IRS’ position; as such, the granting of a deconsolidation is not guaranteed.

Following is a list of various insurance or insurance-related entities and the federal income tax form that should be filed:

<b>Type of Insurer (Based on Business Written)</b>	<b>Federal Income Tax Form</b>
P/C	1120-PC
Life	1120-L
HMO	1120-PC
Staff Model HMO	1120
501(c)(15)(A) - Tax Exempt	990
Title	1120-PC
Blue Cross Blue Shield Association	1120-PC
Health	1120-PC
Health w/Noncancellable and/or Guaranteed Renewable Contracts	1120-L

For a company to be considered an “insurance company,” at least half of its business during the taxable year must be the issuing of insurance or annuity contracts or the reinsuring of risks underwritten by insurance companies.

For a company to be considered a “life insurance company,” it must be engaged in the business of issuing life insurance and annuity contracts (either separately or combined with accident and health [A&H] insurance), or noncancellable and/or guaranteed renewable contracts of health and accident insurance. Also, its life insurance reserves plus unearned premiums—and unpaid premiums on unpaid losses and on noncancellable life, accident, or health policies not included in life reserves—must make up 50% or more of its total reserves.

In certain special situations, managed care organizations may qualify for tax exempt status; if so, they would file Form 990.

1. Life Insurance Companies

Life insurers (whether stock, mutual, or mutual benefit) that meet certain reserve requirements file Form 1120-L. If a life insurer does not meet the reserve requirements, then it must file Form 1120-PC. If a stock life insurer loses its life insurance tax status because its life insurance reserves fall below the minimum requirement, then taxes that were deferred in earlier years may now become due. In Revenue Procedure 2018-31, Section 26.03 provides for an automatic accounting method change when there is a change in qualification as a life insurance company as defined in Internal Revenue Code (IRC) Section 816(a).

For taxable years ending before Jan. 1, 2018, life insurers with less than \$500 million in assets are entitled to a small life insurer deduction of 60% of their “life insurance company taxable income.” This deduction is available for income up to \$3 million and then is gradually phased out on income from \$3

*Receiver's Handbook for Insurance Company Insolvencies*

million to \$15 million. For taxable years after Dec. 31, 2017, the small life insurer company deduction is repealed, and the alternative minimum tax for corporations is repealed as well.

## 2. Non-Life Insurance Companies

Non-life insurers (stock and mutual) file Form 1120-PC. Non-life companies generally are taxed on their statutory income with certain modifications, including the discounting of loss reserves and the non-deductibility of 20% of the increase of the unearned premium reserves. The non-deductible 20% of the unearned premium reserve (UPR) gives the taxpayer a tax benefit when the UPR is reduced, but the effect of the reversal of the 80% deductible portion has a greater impact and may create taxable income. As previously stated, the receiver should consult their tax consultant regarding the ramifications of these issues.

Non-life insurers whose written premiums for the year do not exceed \$2.2 million (an amount that is inflation-adjusted for each taxable year beginning after 2015) may elect to be taxed only on investment income under Code Section 831(b). The premium limits are based upon the premiums of a “controlled group” of corporations as defined by Code Section 1563(a), with the exception that more than 50% is the definition of control. The fact that an insurer is in receivership does not remove it from a “controlled group.” The company also must meet certain diversification requirements with regard to premiums and owners as prescribed in IRC Section (831(b)(2)(B)). Taxation on investment income may not be advantageous to companies that are currently generating or using net operating losses, as the company may lose the benefit of those losses. IRC Section 831(b)(3) prescribes limitations on the use of net operating losses for insurance companies taxed only on investment income.

Prior to Jan. 1, 2005, small non-life insurers with less than \$350,000 of premium income could qualify to be exempt from income tax under Code Section 501(c)(15). Many receivers took advantage of this provision to exempt liquidation estates from federal income taxation. In 2004, IRC Section 501(c)(15) was amended to provide tax exempt status only to those non-life insurers with gross receipts less than \$600,000, and then only if more than 50% of the gross receipts were from premiums. Because most companies in liquidation have virtually zero premium income after the first couple of years of the liquidation, and because most have annual income exceeding the \$600,000 cap, this amendment to Code Section 501(c)(15) generally eliminated its applicability to insurance receiverships.

The impact upon insurance companies in receivership was considered as Code Section 501(c)(15) was being amended in 2004, and the applicability of the exemption to insurance companies in receivership was specifically extended through calendar year 2007. However, as of Jan. 1, 2008, any insurers in liquidation that may have previously been qualified for exemption under the pre-2005 provisions of Code Section 501(c)(15) became ineligible for such exemption and are subject to federal income tax from that time forward unless they met the new requirements.

## 3. Special Relief

Under Revenue Procedure 84-59, the receiver may apply to the district director of internal revenue for relief from the filing requirements under limited circumstances. In order to request this relief, the insurer has to have ceased operations and no longer have assets or income.

## 4. Prompt Audit

The receiver may request that a prompt determination be made under Revenue Procedure 2006-24 whether the income tax return is being selected for examination by the IRS or is accepted as filed. The receiver will be discharged from any liability upon payment of the tax shown on the return if the IRS does not notify the receiver within 60 days after the request that the return has been selected for examination, or if the IRS does not complete the examination and notify the receiver of any tax due within 180 days after the request. This procedure enables the receiver to proceed with the receivership, or enhances the possible sale of the insurer, by resolving contingencies relating to taxes due for prior

*Chapter 3—Accounting and Financial Analysis*

periods. The prompt audit provisions specifically apply to bankruptcy proceedings, not state liquidations. Certain IRS offices have approved applying the provisions to state liquidations. However, the approval is not automatic. When this is the case, a request for prompt assessment should be made under IRC §6501(d). This will reduce the statute of limitations for assessment to 18 months. The request contemplates a corporate dissolution in 18 months and requires the submission of Form 4810 to the IRS.

## 5. Carrybacks

An insurer often becomes financially troubled because it incurred operating and/or other losses. Such losses may be deductible for income tax purposes. A review may be made of the deductibility of such losses to determine if the losses were deducted in the correct fiscal year and may be carried back to recover previously paid income taxes. If the losses were not deducted in the correct years, prior years' income tax returns may have to be amended. Under the federal Tax Cuts and Jobs Act of 2017 (TCJA), net operating losses of non-life insurance companies can still be carried back two years and carried forward 20 years (IRC Section 172(b)(1)(C)). However, there is no carryback for life insurance company net operating losses arising in 2018 and later years and an unlimited carry forward period (IRC Section 172(b)(1)(A)). Operational losses of life insurers arising in 2017 and earlier are carried back three years and forward 15 years. A non-life insurance company can use the full amount of its net operating losses to offset taxable income (IRC Section 172(f)). A life insurance company is limited to an 80% net operating loss deduction against taxable income (IRC Section 172(a)(2)).

An example of a restructuring technique used in the liquidation of Reliance Insurance Company to address significant net operating loss carryovers is available in Exhibit 3-4.

## 6. Carryovers

To the extent that there is a discharge of indebtedness, any net operating loss carryover may be reduced by the amount of the discharge. If guaranty funds or other creditors are entitled to future funds, there may not have been a complete discharge.

Net operating losses are allowed an indefinite carryover period in taxable years beginning after Dec. 31, 2017. The net operating loss deduction is limited to 80% of taxable income (without regard to the deduction) for losses arising in taxable years beginning after Dec. 31, 2017. Therefore, even when there are net operating loss carryovers available, discharge of indebtedness could still result in income tax liabilities due because of the carryover taxable income limitations.

## 7. Deferred Taxes

The deferred taxes for both deferred tax assets and liabilities should be reassessed. For example, the deferred tax assets that rely on further taxes payable to be realized may no longer be realizable.

**C. Premium Taxes**

If the insurer is in rehabilitation, the receiver may be required to continue paying state and municipal premium taxes. Insurers are usually required to pay premium taxes that are calculated as a percent of direct premiums written. Many state and local tax authorities require insurers to pay estimated premium taxes. In many cases, a financially troubled insurer may experience a decrease in premium volume, or policies in force may be canceled. This may result in a reduction in premiums written and the related premium taxes. A review may be made to determine whether the insurer is entitled to premium tax refunds. It may then be necessary to refile the most recent returns to reflect the reduction in premium income. In addition, the receiver may attempt recovery of any prepaid or estimated premium taxes. If premium taxes are owed in a liquidation, many states may relegate premium tax claims to a lower or general creditor status.

*Receiver's Handbook for Insurance Company Insolvencies***D. Payroll Taxes**

Insurers are required to withhold federal income tax and Social Security tax (as well as state and local income taxes) from the wages and salaries of their employees. All of these taxes are considered trust fund taxes and must be remitted periodically to the various taxing authorities. The receiver should promptly ascertain that all payroll tax payments have been remitted by the insurer. If the receiver finds that taxes have not been paid, the Special Procedures Office of the IRS should be notified. In this way, the taxes or 100% penalty can be assessed against the former officers or persons with the responsibility for paying the taxes. The receiver may be asked to complete Form 4180 or Form 4181, which are questionnaires relating to the payment of trust fund taxes.

If the receiver fails to follow these procedures and funds that could have been used to pay trust fund liabilities are used for other purposes, the receiver may be held personally liable. The receiver should make certain that any plan filed with the court for the distribution of assets provides for the payment of these outstanding federal tax liabilities.

Many states have similar laws relating to withheld payroll taxes, and the receiver should be aware of the responsibilities imposed by these laws. The receiver should continue to file Form W-2, as well as Form 940 and Form 941, for employees of the insolvent insurer.

**E. Other Taxes and Assessments****1. Real Estate and Corporate Personal Property Taxes**

The receiver should ascertain whether all real estate tax payments have been made, including those that the insurer has been collecting on mortgages it holds or services. The tax collector should be notified of the receivership proceeding and instructed to send any notices to the receiver.

**2. Guaranty Fund Assessments**

State guaranty funds assess insurers to cover their administrative and claim costs. If the insurer is operating under supervision or rehabilitation, it remains liable for guaranty fund assessments, though a guaranty fund may defer or abate an assessment, in whole or in part, under certain circumstances. In liquidation, guaranty fund assessments are paid in accordance with the domiciliary state's liquidation priority statute.

**3. Excise Taxes**

Some insurers are required to remit excise taxes to the IRS because of foreign reinsurance premiums. These taxes are also considered trust fund taxes, and the same care should be afforded these taxes as is given to withheld payroll taxes.

**4. Commissions and Other Payments**

At year-end, insurers are required to file Form W-2 and/or Form 1099 for all commissions and other payments to an individual or partnership in excess of \$600 during the year. In addition, the receiver is required to prepare 1099 forms and send them to policyholders of life companies while business is still being serviced by the insolvent insurer. In addition, if the insurer has received interest from mortgages, the receiver is required to prepare and provide Form 1098 to the payer. If more than 250 1099 forms are to be issued, the filing is required to be done electronically. However, relief from this electronic filing may be secured upon request to the IRS. The receiver should be able to demonstrate that an electronic filing would place an undue hardship on the insolvent insurer. The IRS can assess penalties for both the failure to issue the forms to agents and the failure to file the forms with the IRS. If the receiver has not already sought relief and the estate is assessed, the IRS may waive the assessment upon request. Additionally, most states and some localities have filing requirements.

*Chapter 3—Accounting and Financial Analysis*

## 5. Franchise Taxes

Several states have franchise taxes. The tax basis can be the net worth of the insurer, the assets of the insurer, the number of shares of authorized stock, or the amount of paid-in capital. The failure to file and pay these taxes may result in the cancellation of the insurer's corporate certificate of authority.

## 6. Other State Taxes and Licenses

Insurers are subject to numerous state taxes and assessments, including: workers' compensation; second injury funds; firemen's and policemen's pension funds; medical disaster funds; major medical insurance funds; arson, fire, and fraud prevention funds; fire marshal tax; insurance department administrative assessments; federal Fair Access to Insurance Requirements (FAIR) Plan assessments; and motor vehicle insurance funds. In addition, many localities have licenses and taxes unique to insurers. Comprehensive summaries are published by several insurers groups, including the Property Casualty Insurance Association (APCIA) and the American Council of Life Insurers (ACLI). The receiver should also ascertain if the insurer has any responsibility for filing informational returns and/or paying other state or local taxes such as sales and use taxes, water and sewer taxes, business and occupational privilege licenses, and taxes for employment training funds. Before paying these taxes, consideration should be given to the importance or lack of importance of maintaining state corporate certificates of authority and/or licenses.

All taxes should be reviewed to determine how any liability should be included in the priority scheme. The receiver should consider whether the certificate of authority or licenses have value before they are allowed to expire or be cancelled.

**IX. INVESTMENTS**

Investments may represent the largest group of assets on the balance sheet of an insurer. The purpose of the investments is to provide the company with resources and a steady flow of investment income to meet obligations as the obligations become due. A priority of the receiver is to take over full responsibility for all investments. This section will attempt to guide the receiver and identify any hidden elements in the following steps: seizure and control, inventory/identification, balancing, valuation, and other considerations.

The investment management function may be delegated to a bank or other professional manager. Depending on the receiver's evaluation of the company's investment manager, that person or entity may be retained with or without additional restrictions on their discretionary authority. Further, the receiver should consider that prior company investment objectives of high-yield, equity-related gains, and acceptance of reasonable risk may no longer be appropriate. Concerns of safety and liquidity may be foremost.

**A. Seizure and Control of Investments**

To seize investments, the receiver should identify the various custodian institutions, investment brokers or managers, and the pertinent account numbers for the insurer. Most of the essential information may be obtained by review of the annual statement and the workpapers of the last full statutory examination or CPA audit. The examination workpapers will most likely include year-end statements and confirmations from the various institutions that are holding the investments. A review of the last filed annual statement will disclose the brokers that are most frequently used for the purchase and sale of investments.

The receiver may also corroborate all the pertinent information with the chief investment officer of the insurer.

*Receiver's Handbook for Insurance Company Insolvencies*

If the investment managing function has been contracted to an outside institution, the receiver should promptly notify the institution of the receivership action. The external manager may be allowed to continue with their duties at the direction of the receiver, but transfers to other non-managed accounts should be restricted. The manager's discretionary authority should be reviewed to determine if additional restrictions should be placed on the manager to maintain investment balances in safe, liquid, and/or insured securities. The receiver should consider the difference between investment goals related to rehabilitation versus liquidation.

The receiver should notify all banks, custodians, depositories, brokers, and managers of the takeover as soon as possible and by the most expeditious method practicable under the circumstances. Time may be of the essence in preventing insiders from absconding with company funds. The notification should be specific as to account numbers but not limited to those account numbers. (Include any other accounts that bear the name of the insurer.) The notification should be accompanied by a copy of the court order of receivership. The institutions should be instructed as to their continuing duties and what is expected of them.

As part of the notification, the receiver should instruct the institutions to add the receiver's name as a signatory, deleting all others.

A matter that may need priority attention is the immediate suspension of wire transfers. Today, many insurers are electronically connected to financial institutions. Funds can be transferred by use of a personal computer (PC) or by telephone instructions (wire transfers) in a matter of minutes. Until the receiver has had an opportunity to review the process and change access codes and requirements, wire transfers should be suspended.

To avoid the exchange of good quality investments for lower quality investments, the receiver should review the authority for purchases, sales, and reinvestment of securities. The receiver might choose to impose a temporary restriction that only maturing securities may be liquidated to issuing institutions. This will provide the receiver an opportunity to review the quality of the investment portfolio. The receiver may desire the opinion of an outside service company in the evaluation of the portfolio. If the investment function is internally managed, the receiver may want to consider the economies and expertise of an outside investment management company. The receiver may also consider moving out-of-state assets into the domiciliary state to improve control and lessen the chance the assets may be attached by creditors.

**B. Identification and Inventory of Investments**

An inventory will help establish control of the investments. A good initial control list may be the investment schedules of the last annual statement, including Schedule A—Real Estate; Schedule B—Mortgage Loans; Schedule BA—Other Long-Term Invested Assets; Schedule C—Collateral Loans; Schedule D—Long-Term Bonds and Securities (which includes bonds, common and preferred stock, SCAs, etc.); Schedule DA—Short-Term Investments; Schedule DB—Financial Options and Futures; and Schedule E—Cash and Cash Equivalents. Also, the General and Special Deposit Schedules found in the annual statement will identify investments on deposit with various regulatory jurisdictions.

The receiver should confirm investment holdings with the appropriate institutions. The insurer should have detailed listings of investments held, transaction statements, bank notices and advices, and broker slips and statements. These documents will assist the receiver in the identification and inventory of investments.

The insurer's financial statements may not disclose all investments in which the insurer has an interest. Subsidiaries of the insurer accounted for on the equity method will have separate listings of investments owned. The equity method (as opposed to the consolidation method) permits the parent company to report the net value of (or the equity in) the subsidiary as an investment. Therefore, the assets and liabilities of the subsidiary are not evident in the books of the parent company. In the case of a pension plan, the assets are owned by the pension plan and will not be listed on the insurer's statutory annual statement. Even though pension funds may come under the receiver's control, these funds should be maintained in a separate account. The receiver should also be aware of significant restrictions that may exist on the investment and

*Chapter 3—Accounting and Financial Analysis*

use of the funds. Generally, pension funds are subject to the federal Employee Retirement Income Security Act (ERISA), which imposes severe penalties for mishandling funds and governs the dissolution of the pension plan.

Many states require that purchases and sales of investments be approved by the insurer's board of directors. The board minutes may reflect all purchases and sales. A review of the minutes may assist in the identification of investments.

Insurers from time to time may purchase debt obligations directly from the issuing company, without the assistance or the evaluation of a broker. Private placements indicate that the underwriting of the investment was solely the responsibility of the insurer. The insurer should have an underwriting file containing documentation of matters taken into consideration and copies of correspondence regarding the decision to purchase the instrument. The document of indebtedness may be located on the premises of the insurer, rather than with a financial depository or custodian. If securities that are not publicly traded are to be listed in the annual statement as admitted assets, all insurers must submit to the Securities Valuation Office (SVO) of the NAIC documentation to support the market value of the securities. The SVO will evaluate the documentation and assign a market value and a quality grade to the securities. The receiver should check with that agency to determine if management sought such valuations, possibly indicating the existence of additional assets not otherwise apparent from the accounting records.

An insurer should identify those securities with a high risk as to the potential of a loss of principal. While derivative instruments are reported in Schedule DB, the receiver should also be aware of other securities, such as structured securities, included in Schedule D that maintain significant risk. See the section on audit/investigation of financial statements in this chapter for a listing of risks inherent to certain investments. The receiver should determine whether such securities are consistent with the current investment strategy of the insolvent insurer and conclude whether the insolvent insurer should hold or sell the security and the timing of such action. Often, insurers use derivative instruments as a hedge to reduce exposure to other risks incurred by the insurer. With respect to hedge transactions, the receiver should consider whether the hedge transaction effectively reduces the insolvent insurer's exposure to losses arising from other aspects of the insurer's operations or investment portfolio. A common hedge used by insurers is an interest rate swap. The NAIC *Accounting Practices and Procedures Manual* (AP&P Manual) describes an interest rate swap as "a contractual arrangement between two parties to exchange interest rate payments (usually fixed for variable) based on a specific amount of underlying assets or liabilities (known as the notional amount) for a specified period." Insurers have used swaps for various reasons, including matching returns on assets to contractual obligations. The AP&P Manual provides additional examples, for both life and P/C companies, of complex investment arrangements entered into by insurers. The receiver should consider engaging an investment/derivative expert to review the insurer's hedging program and make recommendations.

State insurance laws differentiate between real estate owned and occupied, and real estate owned for investment purposes. Some state laws require that real estate owned for investment purposes be income producing. If no income is generated within a set period of time, the property must be timely and properly disposed of (sold). Non-income-producing real estate should be investigated for possible alternative, non-investment objectives or accommodations. The receiver should review the pertinent statutes and consult with legal counsel regarding possible improprieties.

The insurer may own property in varied capacities. The insurer should have in its possession documentation for each property owned, including the deed (registered with county clerk), appraisal, survey, title policy, lease agreement (if rented), mortgage agreement (if any), schedule of future payments, hazard insurance policy, evidence of real estate tax payments, correspondence, related real estate management agreements, and other pertinent information.

The insurer may own a share of an investment property or may be part sponsor of a capital venture through a limited partnership, and it should have adequate documentation to support the investment. The

*Receiver's Handbook for Insurance Company Insolvencies*

documentation should include the partnership agreement, contracts with project managers, projections of cost and time to complete, projections of future income, expert evaluations and opinions, plans of operation and financing, description of any guarantees or financing commitments, and current status reports from project managers.

The insurer should have an individual file for each mortgage loan that contains the signed mortgage note, trust deed, recorded lien, appraisal report, amortization schedule, documentation of hazard insurance, and evidence of real estate tax payments. The insurer may have mortgage servicing agreements, and the receiver should obtain those servicing agreement documents.

Collateral loans are investments that are covered by other assets of the borrower. For each collateral loan, the insurer should have an instrument securitizing the insurer, a description of the borrower (possibly financial statements of the borrower), description and value of property pledged as collateral, and the repayment schedule.

**C. Balancing and Reconciliation**

The control list of investments that the receiver has developed can be reconciled to certified listings of brokers, custodians, and other depositories. The insurer should have in its investment files the supporting broker slips and bank advices for all investment transactions. A detailed statement of account activity can be obtained from brokers and custodians. The control list should also be reconciled to the general ledger and investment subledger. All discrepancies should be noted and resolved.

Investment transactions should be audited for possible unauthorized transfers. Reference is made to the chapter on investigation and asset recovery in this Handbook.

**D. Location of Investments**

Usually, the bulk of an insurer's investments will be on deposit for safekeeping with a custodian (a financial institution) to facilitate the transfer of securities for purchases and sales. The safekeeping also minimizes and transfers the risk of theft or misplacement to the custodian. Securities in the custodian's possession may include bonds and publicly traded stocks, option and future contracts, and, on occasion, stocks of subsidiaries.

Many states require securities to be deposited with the insurance department or the state treasurer's office as a prerequisite for the insurer to write business in that state. Alien insurers may be required to place various assets in a trust for the protection of U.S. policyholders. Deposits may be held by non-U.S. jurisdictions. The receiver should notify all jurisdictions and, where possible, obtain the return of all deposits to avoid costly jurisdictional battles with creditors.

Investment brokers may also be holding securities that the insurer has purchased and not yet settled or that have been pledged as collateral for options.

Other investments—such as real estate, mortgage loans, collateral loans, private placements, common shares of subsidiaries, etc.—may be held in an in-house safe or vault for safekeeping. The receiver should make a complete detailed list of documents in the in-house safe. If any items are marketable, the receiver should take appropriate steps for the safekeeping of the items. Since the receiver may not be able to ascertain who has access to keys or codes for such safes, consideration should be given to changing locks or setting up a new safe deposit box under sole control of the receiver.

The insurer may have rented a safe deposit box at a financial institution. An inventory of the box will be necessary and appropriate safeguards taken against access by others. The receiver should obtain the access log for the safe deposit boxes. If the boxes have been accessed just prior to the receivership order, the receiver should investigate the reasons for entry.

*Chapter 3—Accounting and Financial Analysis***E. Valuation of Investments**

The determination of value for securities that are publicly and actively traded should not be a problem because prices are published on a daily basis through various data feeds. The receiver should consider the published market value rather than the NAIC value in the evaluation of the liquidation value of assets. Often, a receiver is compelled to sell investments prior to maturity to generate cash flow. The NAIC value, which generally shows stocks and preferred stock at fair value while bonds are usually at amortized cost, will not necessarily reflect the amount the receiver will receive from the sale of investments.

The market value should approximate the amount of cash that may be generated from the sale of investments. The market valuation reflects an adjustment for current market rates as compared to the fixed interest rate on the investment and for the credit-worthiness of the debtor.

Private placements will be the most difficult to value, and the opinion of outside experts may be necessary. The receiver may wish to employ an investment specialist to determine the values and liquidity of below-investment-grade private placements or non-publicly traded stocks. The financial statements of the borrower may be sought. A review of the financial statements may tell whether the company is in sound financial condition and whether it is able to repay the obligation. Prepayment at a discount may be an alternative for both parties.

Several values may be placed on real estate that is occupied by the insurer. The value may be the cost paid less depreciation, construction cost less depreciation, appraisal value, or market value. The receiver may consider the latest appraisal of the property and determine the possible market value. Economies may warrant the sale of the property and rental of other quarters.

Real estate that is held for investment ordinarily should be income-producing. A large negative cash flow may warrant disposal of the property. An appraisal may be necessary to assess the marketability, which will disclose the sale price of similar properties in the area. If comparable sales are not available to estimate market value, the receiver may consider using a discounted cash-flow approach to valuing the real estate. The receiver may wish to obtain outside professional support in determining proper values, methods of valuing, investments in real estate, mortgage loans, and real estate joint ventures or limited partnerships.

The book value of mortgage and collateral loans is usually the unpaid principal balance. The receiver may also assess the value of the property that has been pledged as collateral. Many states' insurance laws require that mortgage loans be first-lien mortgages. A second-lien mortgage is of greater risk and subordinate to the first-lien mortgage. Insurance laws require the amount of the mortgage, at inception, not to exceed a specified percentage of the appraised value of the property. The receiver should research compliance with the statutes. Possible accommodations given to affiliated parties should be investigated.

**F. Other Considerations**

The insurer may be the owner of various tangible and intangible assets that may not be apparent on its statutory balance sheet. The receiver should try to identify and value all possible assets of the insurer, including insurance licenses, the value of the shell of the company, assets that have been previously written off, and any assets that are listed in Schedule X of the annual statement.

**1. Pension and Deferred Compensation Plans**

The insurer's employee benefits may include participation in either a defined-benefit or defined-contribution pension plan. The plan may require or allow that a percentage of the assets of the plan be invested in shares of the insurer. It is not uncommon for the trustees of the plan to be officers of the insurer. Also, the plan administrator may be the insurer itself or an outside financial institution. The regulatory action will create several uncertainties in relation to the plan. The receiver should be familiar with the provisions of the plan and whether a complete liquidation and distribution is required. The provisions of the pension plan agreement and the Employee Retirement Income Security Act of 1974

*Receiver's Handbook for Insurance Company Insolvencies*

(ERISA) may clarify some of these issues. It is recommended that the receiver retain the services of a consultant CPA firm to audit and provide independent opinion regarding compliance with IRS and ERISA requisites.

If the insurer is insolvent and the plan is heavily invested in shares of the insurer, then the plan may be insolvent also. The administrator, therefore, may need to liquidate the plan. If the pension plan is solvent, the administrator must continue with its duties. If the insurer is the plan administrator, the receiver may become the plan administrator by succession. If the plan administrator is a third party, the receiver may wish to evaluate the propriety of changing administrators.

The insurer may have hidden equity in other employee benefit plans. A saving plan that requires the insurer to partially match amounts contributed by the employees may be such a plan. The plan agreement will detail the operation of the plan and when the insurer's contributions vest to the employees. The plan should have provisions for possible employee termination on a voluntary or involuntary basis. Depending upon the terms of the plan, the receiver may recover contributions that have not vested to the employees, or the receiver may amend terms, for example, to eliminate employer matching of contributions.

Pension considerations may be further complicated if an employee benefit plan is established to cover the employees of a parent holding company and its many subsidiaries, of which the receiver has authority only for one or more insurer subsidiaries. The desire of the receiver to terminate the plan and attach excess assets (or reduce additional exposure to underfunding) may be mitigated by excise tax issues on termination, ERISA, and other considerations.

It should be noted that under some state liquidation priority statutes, amounts, and priorities due employees may be limited. Compensation and benefits due officers and directors may also be excluded in their entirety.

## 2. International Considerations

As insurers become part of a global economy, the receiver may be confronted with the issues of investments and other assets held in other countries. The receiver should try to gain control of the investments or assets and bring their value back to the estate. An ancillary receiver may be appointed by a foreign country, which may make that difficult, since the ancillary receiver may need the assets to settle claims in the ancillary jurisdiction. The ancillary receivers will need to cooperate with the domiciliary receiver. The value of the foreign assets will fluctuate with the exchange rate of the foreign currency, and the receiver should try to match in foreign denomination the assets and liabilities (claims) by the foreign country. This should indicate whether any excess assets are held in the foreign country. The receiver should ascertain if the company's Schedule DB contains derivative instruments covering foreign currency exchange risks. Because foreign countries may have currency restrictions for repatriation of assets, the receiver should consult with legal counsel.

Special deposits and general deposits with insurance regulators in other jurisdictions in the U.S. and outside the U.S. may also present problems to the receiver. Many U.S. courts have ruled that the state of domicile has the duty to liquidate the insurer and, therefore, all deposits should be returned to the domiciliary receiver. In the case of a non-U.S. jurisdiction, the foreign receiver may claim the right to the deposits for purpose of distribution in his jurisdiction. In this situation, the receiver should consult legal counsel. The receiver should consider whether they can divest themselves of the responsibility for foreign claims.

## 3. Structured Settlements

In the insolvency of an annuity insurer, special consideration should be given to any single premium immediate annuities that were issued to form the basis of funding periodic or lump sum payments in personal injury settlements, commonly known as "structured settlement annuities."

*Chapter 3—Accounting and Financial Analysis*

These annuities are normally issued to qualified assignment (QA) companies in order to comport with numerous IRS tax codes (primarily 104 (a)(2)) and various revenue rulings in order to preserve the tax benefit to the beneficiary or payee. However, some older annuities (prior to 1986), although not issued to a QA company, may nonetheless enjoy the same tax benefits. Generally, periodic payments are excludable from the recipient's gross income only if the payee is not the legal or constructive owner of the annuity and does not have the current economic benefit of the sum required to purchase the periodic payments.

When these blocks of business are resolved in the insolvency context (typically through assumption reinsurance), extreme care must be taken to ensure that the resolution does not compromise the tax benefits to the payees. It is strongly recommended that competent and experienced tax counsel be retained to guide the receiver through this potentially complicated process.

**X. RECEIVABLES****A. Uncollected Premiums**

The amount of uncollected premiums may vary from company to company, but may be a significant asset.

**1. Methods of Billing**

The billing and recording of insurance premiums differ, depending upon the insurer (e.g., direct billing of policyholders versus billing of agents) and type of insurance (e.g., primary versus reinsurance). Following are four of the more common types of billing methods:

**a. Direct Billing**

Some insurers bill the policyholder directly for the full amount of the premium. A separate liability is established for any commissions allowed to brokers or producers.

**b. Agency Billing**

Insurers that use agency billing send monthly statements to their agents, listing premiums written during the month, including any adjustments and endorsements of previously issued policies. Commissions allowed to the agent are deducted on the statement to arrive at the net amount due to the insurer.

**c. Account Current Billing**

This method is used when the agent submits a statement to the insurer. The account current sets forth premiums written by the producer during the month, less the commissions. This method requires the insurer to maintain a premium difference register to account for differences between the premiums reported by the agent and insurer's records. Differences are usually resolved by communicating with the agent. (Use of the agency billing method will transfer the premium difference reconciliation to the agent.)

**d. Item Basis**

The item basis of billing is generally used when each item is remitted when collected by the producer, as is the case when business is submitted by many independent brokers. The amount of the bill is usually net of the broker's commission.

*Receiver's Handbook for Insurance Company Insolvencies*

## 2. Different Types of Premiums

## a. Property/Casualty Insurance Premiums

Most property and liability policies provide for the payment of a single premium for the entire term of the policy (usually one year). Different types of property and liability premiums include:

- **Installment premiums**—Some insurers issue policies that are payable on an installment basis. Even though the premiums may be payable on an installment basis, the insurer must record the full annual premium when the policy is issued, except for those policies that are recorded or billed monthly because of changing exposures. Premiums that are due currently are billed using any of the foregoing methods. The billing of future installments is deferred until the due date of the installments.
- **Retrospectively rated premiums**—Retrospectively rated policies are used when the ultimate premium is based on the individual policyholder's claim experience. The ultimate claim experience may not be known until several years after the policy has expired. Usually a deposit (estimated) premium is billed using any one of the above methods when the policy is issued. However, the ultimate premium will be developed by applying the retrospective factor set forth in the policy to the policyholder's claim experience. The ultimate premium will not be less than the minimum nor more than the maximum premium set forth in the policy.
- **Audit premiums**—Some premiums are based on the amount of the policyholder's payroll or sales (reporting values). For these policies, the insurer will bill an estimated or deposit premium at the inception of the policy and, upon determining the reporting values, the final premium will be billed. Sometimes insurers send auditors to determine and/or verify the reported values. These premium adjustments are called audit premiums. The billing of the deposit and audit premiums may be done by using any combination of the aforementioned methods.
- An insurer should maintain an inventory of policies with adjustable premium features such as retrospectively rated premiums and audit premiums. Typically, retrospectively rated premiums are popular features of workers' compensation policies and reinsurance treaties. The receiver should be aware of adjustable features included in contracts of the insolvent insurer and ensure that all contracts with such provisions are summarized. In the preparation of financial statements, appropriate accruals should be recognized for these contractual features based on the related claim experience and premiums paid under the agreement as of the date of the financial statements. The receiver should further ensure that appropriate action is taken to collect monies owed the insolvent insurer under these contractual provisions and that proper recognition of liabilities arising from these contractual provisions is provided in the financial statements. If the accrual is significant, a receiver may consider performing a systematic review of the related accounting support, focusing the review on policies with premiums that are substantial to the overall population.

## b. Life and Accident and Health Premiums

Unlike property and liability insurance policies, life and A&H insurance policies can be guaranteed renewable contracts and are generally accounted for as long-term contracts. Premium payment plans for life, annuities, and A&H insurance vary. Some policies may be payable monthly, as is frequently the case with group insurance. Others may be payable quarterly, semiannually, and/or annually. Some may be fully paid up when issued. For HMOs and health insurers, it is important

*Chapter 3—Accounting and Financial Analysis*

for employer groups and government plans like Medicaid that premiums are reconciled monthly to enrollment tapes to ensure that additions and deletion of members are updated promptly.

c. Assumed Reinsurance Premiums

Assumed reinsurance premium billing, recording, and collection methods and procedures primarily depend on the reinsurance treaties, which specify the relationship between the parties.

- Facultative premiums—Facultative reinsurance may be billed and recorded using any combination of the methods described above for direct insurance. It is usually billed and recorded on a direct basis or account current basis.
- Treaty premiums—Premiums due on assumed treaty business are usually reported to the reinsurer either directly by the cedent or by the reinsurance intermediary.

3. Policy Control

An insurer normally prenumbers its policies when printed. A control procedure should be in place routinely to identify and follow up on skipped and missing policy numbers. The receiver should ascertain the insurer's policy control procedures and ensure that missing and skipped policy numbers are properly accounted for because a skipped or missing policy number may represent an unbilled, in-force policy. In the case of multiple offices and multiple agents with policy-issuing authority, there may be several sets of policy numbers.

4. Setoff Against Uncollected Premiums

State insolvency statutes may restrict setoffs that previously were allowed against uncollected premiums due the insurer when it was solvent. In many cases, no setoffs may be allowed, even if:

- a. Agents were previously permitted to: (i) deduct commissions from premium remittances; and (ii) return premium owed to one policyholder from an amount owed to the insurer on another unrelated policy.
- b. Cedents were permitted to: (i) set off ceding commissions and loss payments from premium remittances; and (ii) settle balances for a variety of assumed and ceded contracts on a net basis.

The propriety of recognizing setoffs should always be reviewed with the receiver's legal counsel.

5. Commission Recoverable on Cancellation of Policies In Force

Agents and brokers are usually prepaid their full commission when the premiums are collected, even though the premiums are earned over the life of the policy. They frequently deduct their commissions from their remittances to the insurer.

Upon cancellation of the policies in force by the receiver, the policyholders are entitled to a return of the premiums applicable to the unexpired term of the policy (unearned premium). Such return may be fully or partially paid by a state guaranty fund. The policyholder may file a proof of claim with the receiver for any amounts not paid by the guaranty funds. In any event, the receiver should look to the agents and brokers for the return of prepaid commissions applicable to the refundable unearned premiums.

6. Summary

A variety of methods and procedures are used by insurers to bill, record, and collect premiums. A combination of methods may be used. Since uncollected premiums are usually a significant asset, it is

*Receiver's Handbook for Insurance Company Insolvencies*

important that the receiver become familiar with the insurer's premium billing and recording procedures in order to most effectively marshal these assets. If necessary, new systems and procedures may be required to collect these assets subsequent to liquidation.

Finally, the applicability of federal and state debt collection statutes should be considered by counsel. Receiverships may be entitled to governmental exemption from certain statutes.

**B. Bills Receivable Taken for Premium**

Insurers sometimes accept a promissory note from the policyholder for a portion of the premium due. The promissory note includes a payment schedule and is subject to interest on the unpaid balance. Some companies record the principal amount of the note, plus the total interest to scheduled maturity, as a receivable and set up a contra account for the unearned portion of the interest. Others record only the principal amount of the note as an asset and separately accrue the interest as it is earned. Statutory accounting treats bills receivable differently than agents' balances and notes receivable. (See *Statement of Statutory Accounting Principles (SSAP) No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers.*) The realizable value of these receivables should be ascertained.

**C. Life Insurance Policy Loans**

Policy loans usually are a significant asset to a life insurer that writes permanent plan life insurance. Unlike term insurance, permanent plan life policies build cash surrender values that may be borrowed by the policyholder either as a:

- Conventional loan where the policyholder makes an application to borrow all or part of the policy's available cash surrender value.
- Automatic premium loan (APL) where the policy provides, or the insured has elected in the application for insurance, that the policy shall not terminate (lapse) because of the nonpayment of premiums as long as there is adequate cash value to cover the unpaid premiums and any other amounts owed under the policy.

If the policyholder dies before the policy loan is repaid or the policy is surrendered, the proceeds payable by the insurer should be reduced by any outstanding policy loan.

**D. Salvage and Subrogation (Property/Casualty and Health)**

## 1. Salvage

Salvage is an amount received by an insurer from the sale of damaged property or recovered stolen property for which the insured was indemnified by the insurer. In the claim settlement process, the insurer will obtain title to the property and sell it for its remaining value. This asset needs to be addressed quickly because property often is stored, and storage fees are being incurred. Salvage on surety bonds (e.g., construction performance bonds) may be of considerable amount. Due to the intricacies of the surety line of business, consideration should be given to the hiring of external experts to manage the salvage of uncompleted projects.

## 2. Subrogation

Subrogation is the legal right of an insurer to recover from a third party who was wholly or partially responsible for a loss paid by the insurer under the terms of the policy. In the case of a property accident, where there is a dispute between the parties, an insurer will often pay its policyholder's claim and assume the policyholder's right to pursue the negligent third party.

*Chapter 3—Accounting and Financial Analysis*

## 3. Accounting Practices

Until 1992, under statutory accounting practices, an insurer was not allowed to recognize salvage and subrogation recoverables until they were collected. In 1992, the AP&P Manual began allowing accrual of salvage and subrogation recoverables. However, certain states may still disallow the asset. GAAP requires that an insurer recognize an asset or reduce its liability for unpaid claims for the amount of salvage recoverable on paid and unpaid claims. Therefore, an insurer should have records, systems, and procedures to identify and follow up salvage and subrogation recoverables on both paid and unpaid claims.

## 4. Summary

A receiver should ascertain how an insurer identifies and follows up on its salvage and subrogation recoverables. This becomes more difficult when claim files are turned over to a guaranty fund. Salvage and subrogation practices may vary among the guaranty funds. Salvage and subrogation collected by a receiver or guaranty funds may have to be held in trust for certain beneficiaries (e.g., where the policyholder's claim is subject to a deductible, or the loss is a reinsured loss and the reinsurer previously reimbursed the insurer for the full amount of the claim). The right to the salvage and subrogation proceeds should be discussed with legal counsel.

## 5. Salvage and Subrogation (Property/Casualty – Deductible Recoveries – Only)

## a. Deductible Recoveries

Large-deductible recoveries are amounts received by an insurer from an insured covered under a policy having an endorsement providing that the insured is responsible to indemnify the insurer for losses and certain LAE incurred that are for amounts below the high deductible. The high-deductible definition varies, but it is often for deductibles up to \$100,000. While these policies share some characteristics with retrospectively rated policies, the accounting treatment of recoveries under the two types of policies is different. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk.

## b. Accounting Practices

Under statutory accounting practices, reserves for claims arising under high-deductible plans are established net of the deductible. However, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible. Reimbursement of the deductible is accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity. Therefore, these amounts are not easily identified on the balance sheet. It is important that the receiver examine the records, systems, and procedures to identify and follow up large-deductible recoveries on both paid and unpaid claims. It is also important to understand the insurer's process for obtaining collateral to mitigate credit risk on high-deductible policies. The receiver should examine the scope of the large-deductible business written, as well as the collection and collateral procedures employed by the company. The High Deductible Disclosures, Note 31 in the Annual Statement Disclosure and the related guidance in *SSAP No. 65—Property and Casualty Contracts* should aid the state insurance regulator in this review.

**E. Reinsurance**

For additional information on reinsurance, see Chapter 7—Reinsurance.

*Receiver's Handbook for Insurance Company Insolvencies*

## 1. Reinsurance Recoverables

For P/C insurers, reinsurance recoverables on unpaid losses are not reported in the cedent's financial statement as receivables, but they are accounted for as a reduction of its gross liabilities for unpaid losses and LAEs. Reinsurance recoverables on loss payments and LAEs are, however, recorded as an asset in an insurer's financial statement. However, GAAP reporting now requires reporting reinsurance recoverables on paid as well as unpaid losses as an asset (FASB No. 113). All insurers—both P/C and life—use a variety of internal accounting procedures to bill and record paid loss reinsurance recoverables. Unfortunately, financially troubled insurers do not always have adequate internal controls and procedures in place to properly quantify and identify their recoverables by individual reinsurer. Consequently, a substantial amount of record reconstruction may be necessary by the receiver's staff, not only to identify all present recoverables, but also to install appropriate systems and procedures to bill and monitor future paid recoverables.

## 2. Funds Held By or Deposited With Reinsured Companies

The reinsurance treaty between the reinsurer and its cedent may require the cedent to withhold a portion of the premiums owed to the reinsurer and/or the reinsurer to deposit funds with the cedent. The purpose of such an arrangement is to collateralize the reinsurer's obligations for unpaid losses owed to the cedent. Care should be taken by the receiver to ensure that proper credit is taken against invoices submitted by the cedent for any such deposits.

## F. Health Care-Related Receivables

Insurers and HMOs may have receivables for provider claims overpayments, pharmacy rebates, provider risk sharing recoveries, capitation arrangements, and loans/advances to providers.

**XI. ACCOUNTING AND FINANCIAL REPORTS TO THE RECEIVERSHIP COURT AND THE NAIC**

Accounting and financial reports will be required by the receivership court at the date of the receivership and subsequently to monitor the progress and status of the receivership. To prepare these reports, the receiver will need to continue processing and recording transactions and producing related reports. The results of the accounting transactions described in the preceding sections of this chapter should be incorporated into the company's financial information and subsequently produced financial reports. Exhibit 3-1 is a representative summary of the format required to be input into the NAIC's GRID Global Receivership Information Database (GRID) system.

Additional information is often critical to the daily management of the receivership. Perhaps the most needed additional reports are: 1) daily cash reports (Exhibit 3-2); and 2) a budget to monitor costs (Exhibit 3-3).

**A. Timing of Preparation**

Within 180 days after the entry of an order of receivership by the receivership court, and at least quarterly or annually thereafter, the receiver shall comply with all requirements for receivership financial reporting as specified by existing state receivership laws. The financial reports should include: a statement of the assets and liabilities of the insurer; the changes in those assets and liabilities; and all funds received or disbursed by the receiver during that reporting period. (See Exhibit 3-1.) These reports are also to be filed with the receivership court. Receivers in those states without Model #555 may be required to file some or all of these reports with the receivership court. The receiver may qualify any financial report or provide notes to the financial statement for further explanation. The receivership court may order the receiver to provide such additional information as it deems appropriate. The reports should include claims and expenses submitted from each affected guaranty association.

*Chapter 3—Accounting and Financial Analysis*

For good cause shown, the receivership court may grant relief for an extension or modification of time to file the financial reports by the receiver.

In the early stages of a receivership, especially one involving an insurer with limited liquid assets, daily cash reports are critical to determine whether the insurer should be in conservation, rehabilitation, or liquidation. A budget is useful to manage the costs of the receivership and should be produced in the first year after the initial receivership court order.

**B. Necessary Sources and Records**

The following is a listing of information that may be used to prepare the financial reports:

**1. Trial Balance and Detail Subledgers**

The trial balance normally is produced on a monthly basis and details all assets and liabilities on a cumulative basis, plus income and expenses for the period. The line items on the trial balance can tie directly to the general ledger or can consist of a grouping of several general ledger accounts. The detail subledgers exist for accounts payable and contain more detailed information about an account, such as individual account information, vendor name, and due date of payment. The totals of these subledgers either tie directly to the general ledger account balances, or they are reconciled and differences are identified. If the corporate structure consists of more than one company, then a consolidated trial balance should be produced that consolidates all individual companies.

**2. General Ledger**

The general ledger details the account information, showing the activity in an individual account during the period. Totals tie to the trial balance on an individual basis, and sometimes accounts and subaccounts are detailed and grouped into one line item that ties to the trial balance. The general ledger typically gives more detailed information on the transactions that were recorded during the period. An individual general ledger usually exists for each company/legal entity.

**3. Bank Reconciliations**

Bank reconciliations are useful in reporting on and projecting available cash for the operations of the receivership.

**4. Investment Ledger**

The investment ledger contains investment activity, investment income, types of securities, and realized and unrealized gains and losses. Totals should tie to the general ledger.

**5. Accounts Receivable and Reinsurance Recoverable Aging**

The accounts receivable and/or paid recoverable aging contain detail of accounts receivable and paid recoverable balances by account and ages the receivable based on number of days it has been outstanding. Reinsurance recoverable ledgers will also be kept here. Reinsurance recoverables will be included in the aging. The aging will be used in establishing allowances for uncollectible items.

**6. Reserves**

With respect to P/C insolvencies only, loss and LAE reserves (case, IBNR, and LAE reserves) tend to be the most significant amounts on the balance sheet, as well as the most subjective. If an outside actuary is used to evaluate the existing reserves and to project the ultimate losses, the resulting actuarial studies may be used when preparing the financial statements, and any adjustments should be reflected in the statements. With respect to life insurance insolvencies, there are substantial non-loss reserves for expected future benefit payments on various policies or contracts.

*Receiver's Handbook for Insurance Company Insolvencies*

## 7. Paid Loss Information

Losses paid by the guaranty funds on behalf of the insurer should be recorded as liabilities in the insurer's records.

## 8. Cash Disbursements and Cash Receipts

A check register of all amounts paid during a given month, including payee and amount, should be maintained. Cash receipts are actual cash items received monthly and deposited into the estate's bank accounts.

## 9. Budget Versus Actual Report

A receivership budget for expenses and income by department should be established within 12 months of the date of receivership. On an ongoing basis, a report should be generated detailing budgeted versus actual expenditures for the reporting period. All significant variances should be investigated by the receiver.

**C. Responsibility**

The responsibility of preparing the financial and accounting reports can be assigned to the insurer's accounting and finance departments, the receiver's personnel CPA, or independent CPAs. The use of independent CPAs should be considered if the receiver questions whether the remaining insurer's personnel are capable of completing the report, or the receiver does not have sufficient staff.

A specific individual should be designated as the party responsible for the distribution of the reports to the receiver, attorneys, personnel, applicable state agencies, and other predetermined parties.

The filing of the completed reports with the courts should be assigned to the attorneys handling the receivership.

*Receiver's Handbook for Insurance Company Insolvencies***I. INTRODUCTION**

Insurance receivers generally have two principal duties: 1) marshalling assets; and 2) paying or otherwise disposing of claims. Typically, the marshalling of assets involves selling real and personal property, collecting reinsurance recoverables and/or commuting treaties, collecting earned premium, filing preference and fraudulent conveyance actions, and bringing lawsuits against former owners and management.

In any receivership, the receiver is responsible for maximizing and safekeeping the assets of the insolvent insurer. One of the receiver's early priorities is to examine the insurer's records to identify the insurer's assets, marshal them as necessary or appropriate, and then determine whether litigation should be pursued against any persons or entities liable for causing or contributing to the insurer's financial difficulty.

It is important for the receiver to keep in mind that the receiver's investigation and asset recovery activities may be subject to approval by the receivership court, with notice to guaranty associations and other interested parties. Furthermore, the receiver should take special care to review any applicable state or federal laws.

As a general rule, most state statutes require receivers to seek court approval before they may sell, assign, transfer, or abandon assets having an individual or aggregate value above a threshold dollar amount. Therefore, a receiver seeking to sell an asset or settle a claim of the type described below may need court approval before closing the transaction.

**II. DISPOSITION OF ASSETS ALREADY IN THE ESTATE****A. Title to Assets—Legal Versus Equitable Title**

The first issue to address before a receiver may dispose of an insurer's assets is whether the receiver is vested with title to those assets. The NAIC *Insurer Receivership Model Act* (#555), also known as IRMA, gives possession of all assets of the insurer to all receivers. Title to an asset may be legal or equitable or both. Legal title is ownership of the asset; equitable title is the right to the benefits or possession of the asset. Normally, both titles are held together, but in some cases, they can be divided. In a trust situation, the trustee is the legal owner of the asset, but the beneficiaries receive the benefits of the trust and so are the equitable owners of the asset. A receiver can only transfer the interest the insurer held. If an insurer had both legal and equitable title, the liquidator has the full power to dispose of the asset. If the title was bifurcated, the holders of the legal and equitable titles must join in the transfer in order to pass full ownership of the asset to the purchaser. Counsel should be consulted to assure that all equitable interests are identified prior to attempting to sell any assets.

**B. Payment Terms**

The principal reason for entering into a sale transaction is to generate income for the insolvent insurer, with a view to maximizing the distribution of assets to its policyholders and creditors. If creditor distributions will not occur until a later date, the receiver can entertain installment terms, possibly attracting purchasers or an increased purchase price not attainable in an immediate lump-sum sale.

**C. Tax Consequences of a Disposition**

All disposition of assets will result in tax implications, which will need to be reported on the company's tax returns. Appropriate professional advice should be sought.

**D. Other Terms**

Most assets are sold on an "as is" basis with limited representations and warranties to prevent the receiver from being exposed to liability for matters for which it has limited knowledge. If the buyer is unwilling to

*Chapter 4—Investigation and Asset Recovery*

purchase the asset “as is,” the receiver may consider giving limited representations and warranties, but only subject to the receiver’s “knowledge” and restricted to facts concerning the asset to be sold that the receiver has learned during the conduct of the receivership proceedings.

An asset sale agreement may also contain provisions designed to maintain confidentiality of its terms. Confidentiality is particularly desirable if the receiver subsequently may enter into similar transactions with other third parties on more or less favorable terms. Venue over all disputes should remain in the receivership court. Finally, the breadth of release given by and to the receiver should be carefully considered in light of the transaction being documented and the receivership proceedings as a whole.

**E. Supervising Court Approval**

Court approval may be required prior to disposition of an asset.

**F. Identification and Collection of Statutory/General and Special Deposits**

The receiver should make every effort to identify and collect all estate assets held by other states or entities as statutory/general or special deposits. The receiver should have specific policies and procedures regarding the identification and collection of these assets. These should address:

- Location and current status/value of the deposit.
- Determination of creditors within state holding deposit.
- Discussion with the state insurance department holding the deposit about their intentions regarding:
  - Possible full ancillary receivership.
  - Holding the deposit due to open claims within their state.
  - Releasing the deposit to the receiver.
  - Releasing or assigning the deposit to the guaranty funds.
- Review and execution of release agreement.

**G. Disposal of Assets**

Once the receiver has identified and inventoried all assets, the focus should turn to the process of sale and disposal of assets. Assets should be sold at the most opportune time to recover their maximum value by approved sales and disposal methods that are transparent and avoid any appearance of a conflict of interest.

**III. INVESTIGATION AND PURSUIT OF CLAIMS AGAINST THIRD PARTIES****A. Objectives of Investigation and Asset Recovery**

The goal and the scope of the investigative examination should be tailored to fit the specific situation. In all cases, the examination is crucial to analyzing the insurer’s financial difficulty. The examination also may reveal corrective actions that the receiver should implement for successful rehabilitation. In all cases, the thrust of the investigative examination is to disclose what went wrong, determine what corrective action is necessary, reconstruct critical data/programs to support asset collection, and identify those legally

*Receiver's Handbook for Insurance Company Insolvencies*

responsible for the demise of the insurer. In appropriate cases, life and health guaranty associations may be able to provide support and assistance in connection with asset recovery efforts. In life and health, joint and common interest agreements are commonly used by regulators, receivers, and guaranty associations to preserve protections for privileged communications and work product. Quite often property/casualty (P/C) guaranty funds enter into confidentiality agreements with receivers to exchange information and work towards preparing a company for liquidation if that is the ultimate outcome.

The receiver may retain the services of accountants or examiners who have expertise in determining whether the insurer's financial condition gives rise to any causes of action, as well as marshalling assets and quantifying liabilities. The job of such an examiner goes beyond the role of an auditor. Here, in addition to probing for the cause of the financial difficulty, the examiner must identify for the receiver all transactions or business dealings that may produce assets for the insurer's policyholders and creditors, either by avoidance or rescission of certain transactions or by other legal action. Some state insurance departments may have experts in-house whose services are available to the receiver; otherwise, the receiver should consider retaining appropriate outside consultants.

**B. General Conduct of an Investigation or Post-Receivership Examination**

The receiver and the examiners should make themselves aware of the state statutes governing insurer receiverships. These statutes frequently detail the elements of causes of action that the receiver and examiners should investigate. For example, certain transactions are deemed preferential and may be voidable. Other transactions may be classified as fraudulent and may be set aside as such. The receiver and the examiners should seek advice of legal counsel on such statutes and, in particular, the applicable statutes of limitation. (See Chapter 9—Legal Considerations.) (Counsel also may be helpful by providing guidelines for examiners to follow in conducting the investigation.) It is crucial that the receiver take the requisite legal action in timely fashion to avoid the bar of such statutes.

The investigative examination of an insurer can start with records maintained by the insurance department. These records may include: transcripts and exhibits from administrative proceedings against the insurer; holding company registration statements; market conduct reports rate filings; recent Form A filings; work papers related to the last statutory examination, including the report thereon; annual and quarterly financial statements; and correspondence files. The receiver should also procure a complete set of the audit work papers of the insurer's certified public accounting firm, including the firm's permanent and correspondence files, as well as a complete set of the work papers from the insurer's consulting actuaries. The receiver should also thoroughly review the minutes of meetings of the board(s) of directors and any board or executive committees of the insurer and its subsidiaries. If possible, the minutes of any related holding company should be reviewed.

These records may provide the receiver with specific areas of concentration for the investigative examination. The examination will be broad in scope with a special emphasis on large or unusual transactions. The insurer's files on any suspect transactions must be reviewed completely; the receiver may need to engage a forensic accountant to assist the receiver's counsel in this review.

Once the examination reveals potential causes of action to pursue, a cost-benefit analysis should be conducted. If the potential benefit does not warrant the anticipated cost of the legal action, administrative remedies may be available. In order to conduct such an analysis, the receiver needs a full understanding of the potential claims, including the legal requirements that must be met in order to prevail on them.

**C. Reference to Special Issues Regarding Claims Involving: Federal Home Loan Bank, Life/Health, and Large Deductible**

In Chapter 5, there is a section that discusses special issues regarding particular claims, namely: 1) claims of the Federal Home Loan Bank (FHLB); 2) life and health claims; and 3) claims under large-deductible programs. As large-deductible programs involve both policy claims and the collection of amounts due under those policies, both subjects are covered in that subchapter.

*Chapter 4—Investigation and Asset Recovery***IV. VOIDABLE PREFERENCES**

The receiver of an insolvent insurer faced with the need to gather the assets of the insurer's estate should bear in mind that many state liquidation statutes authorize the receiver to retrieve property transferred by the insolvent insurer to another party if the transaction constituted a "voidable preference" as defined by statute. In general, these statutes permit the receiver to recover assets that the insurer transferred to a creditor to satisfy prior debts and resulted in the creditor receiving a greater percentage of its claims against the insurer than other creditors in the same class. The statutes in various states differ significantly in substance, scope, and form. Some states may not have voidable preference provisions in their insurance receivership statutes. However, provisions regarding voidable preferences may exist in a state's general laws, and there may be applicable case law on the subject. The receiver should consult the statutes and case law in the insurer's state of domicile to ascertain which voidable preference laws may be applicable and to learn the requirements of those statutes.

The concept and general elements of voidable preferences are discussed in detail in Chapter 9—Legal Considerations of this Handbook. In general, a voidable preference may be found if:

- There was a transfer of the insurer's property.
- The transfer was made during a statutorily specified time period.
- The transfer was made to satisfy an "antecedent debt."
- The transfer results in a "preference."

It may be necessary for the receiver to establish that there was intent to create a preference or that the creditor had reason to believe the insurer was insolvent in order for the transfer to be voidable. It may also be possible for the receiver to recover a voidable preference from persons other than the party to whom the insurer's property was transferred, such as "insiders" of the insurer who were involved in the preferential transaction and, in some cases, subsequent holders of the property. In some instances, however, the receiver's right to pursue such remedies may conflict with the rights of other creditors to pursue the same.

Preferences are dealt with in Section 604 of Model #555. This provision delineates the conditions under which a receiver can avoid a preference and attempt to recover the assets that were given to the antecedent creditor. The preference period under Model #555 is two years. Not all preferences can be avoided by the receiver. Subsection 604(B) provides that preferences can be avoided if:

- The insurer was insolvent at the time of the transfer.
- The transfer was made within 120 days before the filing of the petition commencing delinquency proceedings.
- The creditor receiving it or being benefited thereby had, at the time when the transfer was made, reasonable cause to believe that the insurer was insolvent or was about to become insolvent.
- The creditor receiving it was:
  - An officer or director of the insurer.
  - An employee, attorney, or other person who was, in fact, in a position to effect a level of control or influence over the actions of the insurer comparable to that of an officer or director, whether or not the person held that position.
  - An affiliate.

*Receiver's Handbook for Insurance Company Insolvencies*

Subsection 604(C) states which preferences may not be avoided even if they would otherwise be avoidable under Subsection 604(B). Basically, preferences may not be avoided if they were made in exchange for an item of value to the insurer, if they were made in the ordinary course of business in accordance with ordinary business terms, or if they were in the form of an appeal bond.

**V. FRAUDULENT TRANSFERS**

Receivers typically have the authority to recover assets conveyed by the insurer in transactions that constitute fraudulent transfers. The receiver's authority to recover fraudulent transfers may stem from any of the following sources: 1) a specific state statute; 2) the Uniform Fraudulent Conveyance Act to the extent adopted in the particular state; and/or 3) the common law of fraud. Fraudulent transfers are covered by Section 605 of Model #555. The receiver should consult counsel to ascertain which theories are available to recover fraudulently transferred assets.

Like voidable preference statutes, rules against fraudulent transfers authorize the receiver to rescind certain transactions and bring previously transferred assets back into the insolvent insurer's estate. Fraudulent transfer laws vary from state to state, but most permit the receiver to avoid transfers for inadequate consideration or transfers aimed at obstructing or defrauding other creditors.

Receivers may be able to recover fraudulent transfers from the person who received the transfer, "insiders" at the insurer who were involved in the transfer, and, in some cases, subsequent holders of the property transferred. Certain additional requirements may be applicable, and special rules may apply to certain reinsurance transactions, such as commutations. The receiver should consult Chapter 9—Legal Considerations for further details.

**VI. OTHER SIGNIFICANT TRANSACTIONS**

In addition to considering fraudulent transfer laws and voidable preference statutes, a receiver reviewing the reasons for an insurer's financial problems and attempting to marshal its assets should determine whether there have been any suspect transactions. Suspect transactions are unusual transactions that would not normally occur in the ordinary course of business. Some of these transactions may at first glance appear to be ordinary, but upon closer examination, they are found to have not been entered into for the benefit of the insurer. These are transactions that may have deceptively portrayed the insurer's financial condition, delayed discovery of its insolvency, or resulted in actual losses for the insurer. Included in the category of suspect transactions are transactions that did not comply with applicable legal requirements, were not commercially sound, or lacked financial viability.

A receiver may advance various theories to recover funds for the estate regarding losses or damages caused by suspect transactions. For example, causes of action for recovery may be based upon common law fraud, violations of the federal Racketeer Influenced Corrupt Organizations Act (RICO), fraudulent transfers, or breach of fiduciary duty. These and other causes of action are addressed fully in other sections of this Handbook and are not repeated here.

This section focuses on identifying potentially suspect transactions that are not discussed elsewhere in this Handbook. The transactions identified do not frame an exhaustive list of all suspect transactions, nor are the identified transactions necessarily fraudulent. In fact, if properly negotiated and administered, the transactions may be perfectly legitimate. However, the receiver should review the following types of transactions for due diligence. Suspect transactions may be difficult to detect and may consist of combinations or variations of one or more of the transactions described.

**A. Reinsurance**

Reinsurance balances often represent significant assets and liabilities of insolvent companies, whether from assumed or ceded business. It is commonly the case in a P/C insurer insolvency that these balances will represent the largest asset to be marshaled. Because reinsurance transactions are complex and involve large sums that may have a material effect on the balance sheet, these transactions present numerous opportunities

*Chapter 4—Investigation and Asset Recovery*

for fraud, misappropriation, or mismanagement by or upon the insolvent company. The receiver's investigation should, therefore, include a review of the company's reinsurance structure, and especially any extraordinary transactions in the years immediately preceding the company's demise.

### 1. General Considerations

Delegation of the collection of reinsurance recoverables, without proper accounting and management controls, to managing general agents (MGAs) and other third parties has been a common source of large accruing balances. Therefore, the more common asset recovery activity in this area is in record construction and documentation of the accrual of balances due (see Chapter 7—Reinsurance). Aside from the instances covered below, the larger amount of the receiver's reinsurance recovery work usually should focus on the concepts that: 1) reinsurers respond and pay based on a proper accounting and documentation of the balances due; and 2) because of the frequent mismanagement of these transactions by insurers that have become insolvent, reinsurers are skeptical of information from an insolvent insurer. The receiver must dispel this skepticism.

It is often necessary to conduct a full review or reconstruct reinsurance transactions accruing pre-receivership, as well as documenting post-receivership reinsurance balances. Post-receivership balances include reinsurance balances resulting from claims covered by the guaranty funds and adjudication of non-fund covered claims. See Chapter 2—Information Systems (especially the UDS section), Chapter 5—Claims, and Chapter 6—Guaranty Funds for more on the relationship between post-insolvency accruing liability and reinsurance recoverable balances.

In the context of life and health company insolvencies, state laws generally provide the life and health insurance guaranty associations the right to elect to continue reinsurance and to succeed to the rights and obligations of the insolvent ceding insurer with respect to contracts and policies covered, in whole or in part, by the guaranty association. The election must be made within 180 days of the liquidation date and is subject to certain statutory requirements. This right to continue reinsurance is reflected in the Section 8(N) of the NAIC's *Life and Health Insurance Guaranty Association Model Act* (#520), which has been adopted in most states.

Footnote suggestion: Section 612 of Model #555 similarly reflects the rights of life and health guaranty associations to elect continue reinsurance and to succeed to the rights and obligations of the insolvent insurer under reinsurance agreements, subject to the requirements of state receivership and guaranty association laws.

### 2. Secured Reinsurance Balances

Reinsurance balances frequently will be secured to ensure collectability and preserve the insurer's statutory accounting credit. The receiver should identify and closely review these security arrangements early in the receivership. The security often includes letters of credit (LOCs) and trust accounts. Notices to financial institutions or others involved in security arrangements are critical to preserve the security by ensuring compliance with terms of the security arrangements and the exercise of any related rights or obligations.

It may be necessary to establish procedures to monitor the security during the receivership. Some LOCs will require renewal, while others will have an "evergreen clause" providing for automatic renewal. Also, some security arrangements may require that the amounts held be increased by the reinsurer. Pre-receivership transactions regarding these security arrangements should be reviewed to ensure compliance with the related reinsurance agreements, security agreements, and statutes.

### 3. Commutations

A commutation is a mutual release of all obligations between the parties for consideration. Commutations terminate the rights and liabilities between parties, including premiums due, paid losses,

*Receiver's Handbook for Insurance Company Insolvencies*

outstanding losses and incurred but not reported (IBNR) losses, loss adjustment expenses (LAE) where applicable, and present or projected profit. There are many valid reasons for commutations. They may provide immediate cash for the receivership estate, avoid future uncertainties, resolve disputes between insurers and reinsurers, and provide some protection or limitation of exposure from the insolvency of the reinsurer.

Commutations, however, may also give rise to abuses. A commutation may unfairly benefit the reinsurer by relieving the reinsurer of considerable exposure for less than fair consideration. Further, in a rehabilitation proceeding, if the cash payment received from a commutation is less than the loss reserves that must then be recognized by the insurer, then the surplus of the insurer will be reduced.

Statutory accounting principles allow an insurer's reserves to be reduced by authorized reinsurance. If an insurer's net reserves have been carried at nominal value due to a substantial credit for reinsurance recoverable, the elimination of the reinsurance setoff credit as a result of a commutation could have had an adverse impact on the insurer. For example, a related reduction in surplus could have an adverse impact on the insurer's solvency ratios and could exacerbate capacity problems. Under such circumstances, a receiver should carefully review the commutation to determine whether the benefit to the insurer outweighed the disadvantages.

In measuring the surplus impact of a commutation and comparing the assets and liabilities assumed, it should be kept in mind that the assets received are usually easily quantifiable, whereas the reserves are not. Thus, what may appear to be a break-even transaction on the surface may, in fact, result in a large loss to one party because of the way the reserves were determined. It usually is helpful to know if a qualified actuary has reviewed the assumed block of reserves, supplementing case reserve estimates with projections of IBNR development, related LAEs, and use of industry data where necessary. Also, because of the inability of insurers to discount their reserves for statutory purposes, a commutation may appear on the surface to produce a loss to the insurer. The long-term economics of the transaction, however, may be sound when consideration is given to the future investment income to be earned from the commutation process. The receiver should also assess the potential adverse consequences of any commutation. In sum, commutations should be reviewed to determine if they were negotiated at arm's length and were fair and reasonable to the insurer; the receiver may need to engage an independent actuary to assist in this review.

Section 605 of Model #555 addresses the avoidance of reinsurance transactions incurred on or within two years before the date of the initial filing of a petition commencing delinquency proceedings under certain conditions. Section 612 of Model #555 relates to the continuation of life, disability income, and long-term care (LTC) reinsurance in liquidation and the right of the GA to elect within 180 days of the liquidation to continue that reinsurance subject to the requirements of Section 612 of Model #555. Some states' voidable preference and fraudulent transfer statutes include specific sections dealing with commutations that occur within a short period before the filing of a petition for the appointment of a receiver. The receiver should be aware of these special rules, which may allow the rescission of a commutation for the benefit of the insurer and its creditors.

#### 4. Stop-Loss Treaties

A stop-loss treaty, or aggregate excess reinsurance contract, indemnifies an insurer if in any year the losses on retained accounts exceed a specified amount. The determination of whether the specified amount has been exceeded is usually made after the application of all other reinsurance and the benefits or recoveries under surplus, quota share, and catastrophic excess of loss treaties. The premium for a stop-loss treaty can be based on a fixed dollar amount, or it may be a ratio of annual retained premium (calculated by reducing gross premium income by premiums for other reinsurance, such as surplus treaties, quota share treaties, and catastrophic excess of loss contracts). The purpose of a stop-loss treaty is to protect against an aggregation of losses during a particular period of time.

*Chapter 4—Investigation and Asset Recovery*

Stop-loss treaties are also subject to abuse and, consequently, should be carefully evaluated. The amount of loss protected against may be unreasonable in light of the loss experience of the insurer. As a result, there may have been an improper motive in paying a premium for a stop-loss treaty for which the insurer was not likely to receive any real benefit. The premium may have been excessive when compared to similar coverage generally available.

#### 5. Unauthorized Reinsurance

Unauthorized reinsurance is reinsurance placed with non-admitted or unauthorized reinsurers that are not authorized to transact insurance business in the cedent's domiciliary state. Under statutory accounting principles, an insurer's liability for loss reserves is carried net of reinsurance. Generally, unauthorized reinsurance may not be used to reduce loss reserves unless the reinsurer's liability is secured by trust funds, funds held by the cedent, or LOCs. Care should be taken to ensure that these potential estate assets are identified and secured.

Unauthorized reinsurance may be appropriate when placed with a financially sound reinsurer. The placement of reinsurance with unauthorized reinsurers, however, is subject to abuse. For example, it may be a means of diverting funds to an affiliate. The placement of reinsurance with financially weak non-admitted reinsurers may indicate an improper motive for obtaining such reinsurance.

#### 6. Portfolio Transfers/Loss Assumption Reinsurance

Generally, a portfolio is one of the following: 1) an entire book of business; 2) a book of business in force at a certain time; or 3) outstanding losses unpaid at a certain time. Typically, in a portfolio transfer, the reinsurer assumes the reinsureds' obligations to pay losses on the assumed portfolio in return for the payment of a premium and the transfer of related loss reserves and security, as applicable.

Portfolio transfers should be reviewed to ensure that the transfer was entered into for legitimate business reasons and inured to the insolvent insurer's benefit. The receiver should consider whether the business transferred was an integral part of the insolvent insurer's business. Did it represent a highly profitable segment of the business, or was it marginal or even a contributor to operating losses? What were the long-term prospects for the portfolio transferred? How did it fit with the balance of the business retained by the insurer? Did the transfer effect a novation of the underlying insurance policies or reinsurance contracts? Did the transferor's policyholders or reinsureds consent to the novation? Answers to these questions should indicate whether a particular portfolio transfer might be a suspect transaction.

Transfers of a profitable portfolio could temporarily prolong the insurer's life while undermining the long-term financial viability. Transfers between affiliated parties should be carefully reviewed. Because certain bulk transfers require insurance regulatory approval, it should be determined if there was compliance with applicable requirements.

#### 7. Surplus Relief Treaties

Comparing premium income to surplus is a common test of whether an insurer is taking on too much risk. Typically, the desired ratio is 3:1. In other words, annual premium income greater than three times surplus may be a warning signal that the insurer is assuming too much risk. Regardless of the test applied, if an insurer reaches the maximum amount of premium income supportable by its surplus, it either must cease writing new business or shed some of its premium income or liability to maintain its financial health.

One method of reducing premium income is to enter into a reinsurance treaty whereby the insurer cedes premium in exchange for a *pro rata* reduction in its liabilities. This practice allows the insurer to continue to write business. A surplus relief treaty is generally considered to be proper if the liabilities ceded are not set off by commission paid to the reinsurer and if the reinsurer does not protect itself against an adverse loss experience by having the insurer ultimately pay the liabilities. In other words,

*Receiver's Handbook for Insurance Company Insolvencies*

if the insurer has ceded the premium for the business and has transferred the underlying liabilities, the treaty likely will not be a suspect transaction. (See Chapter 9—Legal Considerations.)

If scrutiny of the surplus relief treaty reveals that the insurer superficially ceded premium and the business but in reality provided a stop-loss to the reinsurer or otherwise protected the reinsurer from liabilities, then the transaction may have been improper. It may be difficult to trace such a transaction because it can be accomplished in separate documents. This type of arrangement would give a false picture of the insurer's solvency, as it would mask its true premium-to-surplus ratio by understating premium and, at the same time, not relieve the cedent of the risk of loss associated with the underlying business.

#### 8. Finite Reinsurance

Another way that an insurer occasionally attempts to improve its balance sheet is by entering into financial reinsurance transactions. There are many forms of these, but the potential concern behind these types of transactions is to examine whether they were performed simply to shift liabilities off the books of the insurer onto the books of the reinsurer without any real transfer of risk for those liabilities. Any reinsurance contracts that do not appear to have effectuated a real transfer of risk of loss to a reinsurer should be examined closely by the receiver. These contracts may not only be voidable, but there may be additional recourse against the reinsurer for participating in the financial reinsurance transactions. (See Chapter 7—Reinsurance and Chapter 9—Legal Considerations.)

#### 9. Affiliated Reinsurance

In some cases, the insurer cedes its risks to an affiliated reinsurer. The reinsurer then dividends funds to common ownership. There are also affiliated pooling transactions that may be used to inappropriately transfer funds among the pool participants.

### **B. Large-Deductible Policies**

1. NAIC has adopted a *Guideline to Administration of Large Deductible Policies in Receivership*, and the guideline or similar policy has been adopted in several states. Large-deductible recoveries can represent a significant source of recoveries for insolvent companies, especially those P/C companies that wrote workers' compensation insurance. These recoverables may be a significant amount, and the receiver should examine the scope of the large-deductible business written and the collection and collateral procedures employed by the company.

#### General Considerations

- a. The receiver's recovery of large-deductible recoverables is dependent on the claims handling and reporting of both claims covered and those not covered by guaranty funds.
- b. The key to effective collection and collateral administration is ensuring that the historical records for paid losses under the deductible policies and the program design are maintained and available. Another key is retaining the personnel that have knowledge and history of the insurer's deductible business operations.
- c. Collateral for Large-Deductible Balances.
  - The importance of collateral cannot be overstated; adequate collateral must be established prior to liquidation and maintained throughout the receivership.
  - Large-deductible balances frequently will be secured to ensure collectability and preserve the insurer's statutory accounting credit. The receiver should identify and closely review these security arrangements early in the receivership. Particular attention should be paid to security arrangements where the insured's collateral is held by third parties, especially affiliates of the insurer.

*Chapter 4—Investigation and Asset Recovery*

- Notices to financial institutions or others involved in security arrangements are critical to preserve the security by ensuring compliance with terms of the security arrangements and the exercise of any related rights or obligations

## 2. Communication

Deductible collection, in addition to requiring collateral, is dependent on communication of all parties (i.e., between receiver and insured, receiver and guaranty association, and guaranty association and insured). It must be quickly established with insureds as to the procedure for ongoing claim processing, continuation of their responsibility to reimburse the deductible payments, and responsibility to maintain appropriate collateral. Guaranty associations must also recognize that they will be required at times to communicate with insureds regarding claims handling. All parties should be mindful of security concerns related to communication of sensitive claims data. The SUDS server hosted by the National Conference of Insurance Guaranty Funds (NCIGF) is a useful tool for communication between receivers and guaranty associations. The collection process should proceed with minimal delay as the passage of time will affect the success of collection efforts. In these efforts, it is imperative that the guaranty associations and the receiver work together and offer consistent messages to the insured regarding any collection issues. It should also be noted that the release of collateral from a receiver to a guaranty association may not fully satisfy the policyholder's obligation for costs related to the claim under a state's guaranty association law.

## 3. Deductible Collection Procedure

- A working process must also be established quickly between the receiver and the guaranty associations to provide claim handling, payment information, and all other required claim financials to allow the receiver to bill and collect loss payments.
- The information would include the receiver providing the guaranty associations all pertinent information to establish the policies that are deductibles along with effective dates, deductible limits, treatment of allocated loss adjustment expense (ALAE), and deductible aggregates where available.
- Copies of deductible policies should be made available if required.
- Guaranty associations will provide, through the establishment of a UDS data feed, all financial information regarding deductible claims that they are handling.
- The receiver will collate data from guaranty associations and review historical billing information to invoice the insureds on a monthly or quarterly basis.
- The receiver will calculate and track the payment history pre-liquidation and post-liquidation within the deductible and within a deductible aggregate for the policy if applicable. This ensures that the insured is only billed for amounts that remain within its deductible.
- To assist in the collection process, the receiver and the guaranty association should work to provide sufficient information and explanation to allow the insured to recognize its obligation. In the event where the insured refuses to pay, the receiver will either begin litigation or draw on collateral—or both. This should be coordinated with the guaranty associations.

## 4. Professional Employer Organizations

- Policies issued to professional employer organizations (PEOs) often have large-deductible endorsements.
- Because of the prevalence of abuse in the underwriting of PEOs, post-liquidation collection of deductible payments may be challenging.
- Clients may have been added without notice (or payment) to the insurer. Client class of business may have been misrepresented or expanded to include riskier classes of business—all of which may lead to inadequate or exhausted collateral.

*Receiver's Handbook for Insurance Company Insolvencies*

- d. Client companies of PEOs may not have received notice of cancellation, leading to coverage disputes. If collateral is inadequate and the PEO does not have assets to pay the deductible reimbursement in full, the policy terms might make the client companies liable for the shortfall, either for their own exposure or on a joint-and-several basis. However, this might not be a meaningful source of recovery because it could be impractical, inappropriate, or impossible to collect significant amounts from the clients.
5. Commutations
    - a. Generally, commutations are negotiated terminations of the rights and liabilities between insurers and large-deductible insureds. A commutation is a settlement of all obligations, both current and future, between the parties for a lump sum payment.
    - b. There are many valid reasons for commutations of large deductibles. They may provide immediate cash for the receivership estate, avoid future uncertainties, resolve disputes between the insurer and the insured, and provide some protection or limitation of exposure from the insolvency of the insured. Commutations of long tail business (i.e., workers' compensation) may be essential for the early termination of the receivership.
    - c. Commutations, however, may be a detriment to the receivership if the commutation is consummated for less than fair consideration. A receiver should carefully review the commutation to determine whether the benefit to the insurer outweighs the disadvantages.

**C. Inappropriate Investments**

Inappropriate investments may have the effect of overstating the insurer's assets on its annual statements and, at the same time, result in an actual loss if the investments are poor. In some instances, earnings from investments are less than they should have been. Investments may be inappropriate for four general reasons: 1) the investments are prohibited and not allowed as admitted assets by insurance laws or regulations; 2) while allowed as admitted assets, the investments are too speculative at the time of investment, given their materiality to the insurer's financial condition; 3) the investments did not meet the insurer's need for liquidity; or 4) the assets do not match the corresponding policy liabilities.

While some states' insurance codes prohibit the acquisition of certain assets, many view such acquisitions as non-admitted assets. However, regulators retain the right to order disposal of assets acquired in violation of law. A receiver should determine whether such acquisitions have occurred and whether the assets still are held by the insurer. If so, the receiver must identify the losses that have occurred on previously acquired assets and losses likely to occur on assets currently held by the insurer. Additionally, a separate inquiry should be made to determine whether the insurer was damaged. If such investments were booked as admitted assets, the result may be an inaccurate financial statement.

It is difficult to evaluate the culpability for making investments in admitted assets that are highly speculative or illiquid. While code provisions require all investments to be sound, an analysis of what are sound investments involves the application of the business judgment rule. This rule protects management, who made informed decisions in good faith without self-dealing, from being judged in hindsight. Insurance codes have prohibitions and limitations on the types and amounts of investments both on an individual and aggregate basis. Insurance codes generally enumerate the types of assets permitted, but that is beyond the scope of this discussion. In general, an insurer first must invest its minimum paid-in capital and surplus in certain defined investments, which generally are thought to be safer than other types of investments. Generally, these types of investments are government obligations. Once the insurer has invested its minimum paid-in capital and surplus in these allowed investments, there are other limitations on investment of an insurer's assets (excess funds investments). The codes are quite detailed with numerous descriptions and limitations, including limitations on the amounts that may be invested in real estate (if any), affiliates, and common stock, as well as the relative percentages of certain investments. (Although affiliates are generally admissible, such assets are usually illiquid if not publicly traded. If they make up a significant portion of surplus, then an investigation should be made into their acquisition and value.) Other

*Chapter 4—Investigation and Asset Recovery*

inappropriate investments may include those that, although admitted, are either high-risk, or are not matched properly to the insurer's cash flow needs.

Investments that violate the applicable insurance code or regulations will not qualify as admitted assets on the annual statement. If such investments have been identified, the receiver should determine:

- When the investment occurred.
- Who authorized the investment.
- For what purposes the investment was made.
- The details of the transaction, including cost.
- Whether corporate formalities were followed.
- The broker and other persons involved.
- Whether the investment is with a related party.

It also is important to review how the questionable investments were reflected on the insurer's annual statement. The booking of non-admissible assets as admitted assets may identify a problem affecting the true financial condition of the insurer and may necessitate further investigation of corporate officers and directors. If the investments have already been disposed of, it is important to determine whether this resulted in a gain or loss. If disposed of at a reasonable gain, then a judgment must be made as to whether it is worth proceeding further with the analysis. If losses were incurred or will be incurred, there may be substantial questions of legal responsibility.

A review of recent transactions should reveal realized losses, and an evaluation of investments still held should reveal where unrealized losses exist. In the event that realized or unrealized losses are identified, a case-by-case evaluation should be made as to whether there is any culpability surrounding the acquisition or disposition of these types of investments. Once again, all the details surrounding the acquisitions should be thoroughly reviewed, particularly focusing on any close or suspicious relationships between the insurer's management, officers or directors and the management, officers or directors of the acquired investment, or with any brokers or agents involved in the sales transaction.

To identify investments that violate insurance laws and, consequently, are not admitted assets, a receiver should begin with a review of examination reports and work papers. Examiners tend to be thorough with respect to identifying assets or investments that are not admitted assets. If no examination report has been prepared, accountants or auditors should review the most current annual statements and supporting schedules to identify and list all investments that are not admitted assets. The following exhibits and schedules should be reviewed:

- Exhibit of Net Investment Income.
- Exhibit of Capital Gains (Losses).
- Exhibit of Non-Admitted Assets.
- Schedule A – Real Estate.
- Schedule B – Mortgage Loans.
- Schedule BA – Long-Term Invested Assets.

*Receiver's Handbook for Insurance Company Insolvencies*

- Schedule D – Bonds and Stocks (including valuations of subsidiary, controlled and affiliated companies).
- Schedule DA – Short-Term Investments.
- Schedule DB – Derivatives.
- Schedule E – Cash, Cash Equivalents, and Special Deposits.

General Interrogatories (which could contain information concerning cryptocurrency and other assets). Other sources include internal and external audits, U.S. Securities and Exchange Commission (SEC) periodic reports (such as annual and quarterly reports on Forms 10-K and 10-Q), and investment committee minutes.

**D. Dividends and Intercompany Transactions**

State insurance codes have strict limitations on how much money can be paid out as dividends from insurance companies. Some insurance codes provide for the recovery of dividends paid within a certain time period prior to the insurer's insolvency. Accordingly, all dividends should be reviewed to determine compliance with these statutory limitations. The receiver also should determine whether the financial statements were manipulated to make otherwise impermissible dividends possible. Regulators who had responsibility for reviewing the dividends may be contacted to determine what representations were made by company personnel when the dividends were approved.

As part of this process, intercompany transactions should be reviewed to look for disguised dividends. Many companies will have been part of a holding company structure. Oftentimes, a company will have entered into cost-sharing agreements, tax-sharing agreements, investment management agreements, marketing agreements, and other such transactions with affiliates. These transactions should be reviewed closely. When a company is precluded from paying dividends, it may try to disguise what, in fact, are dividends under transactions pursuant to these agreements.

Illegal dividends may be recovered in fraud actions or breach-of-fiduciary-duty actions. The failure of the company's outside accountants or auditors to detect illegal dividends also may form the basis of an action in negligence against the accountants and/or auditors.

**E. Management by Others**

Another area of suspect transactions is the management of insurers by other entities, including MGAs or third-party administrators (TPAs) acting pursuant to management contracts, as well as corporate or individual attorneys-in-fact. A close examination of the overall relationship, including all contracts, should be made since there is a potential for abuse of these relationships. In some instances, the management contract may be arranged so that, in essence, the insurer fronts for the MGA or the attorney-in-fact, who retains all the profits, and the insurer retains all the liabilities. It may raise a difficult question as to whether there was proper compensation for services or if the MGA or attorney-in-fact misappropriated corporate opportunities. Another abusive practice is causing the insurer to pay the MGA, TPA, or attorney-in-fact for services that it did not provide but were provided by the insurer's employees at the insurer's expense. This, in effect, results in double payment. Detection requires a thorough review of the contracts and an analysis of which entity pays for which function, which may be especially difficult when the operations are all in one facility.

**VII. RECEIVERSHIP INVOLVING QUALIFIED FINANCIAL CONTRACTS**

Section 711—Qualified Financial Contracts (or Similar Provision) of Model #555 addresses stays termination, transfers of netting agreements, or qualified financial contracts (QFCs).

*Chapter 4—Investigation and Asset Recovery*

When financial markets are uncertain, it causes heightened scrutiny in the capital markets and among financial institutions about identifying, managing, and limiting risk, as well as the need for adequate capitalization and for understanding the interdependency of the different financial sectors. One source of risk to financial market participants that rises due to the lack of certainty in the financial markets is the treatment of QFCs and netting agreements in the event of the insolvency of state regulated insurers.

**A. Definition of Qualified Financial Contract**

Model #555 defines a QFC as “any commodity contract, forward contract, repurchase agreement, securities contract, swap agreement and any similar agreement that the commissioner determines by regulation, resolution or order, to be a qualified financial contract for purposes of this Act.”

- Commodity contract is defined by reference to the Commodity Exchange Act (7 U.S.C. § 1) (Commodity Act) and is a contract for the purchase or sale of a commodity for future delivery on or subject to the rules of a board of trade or contract market subject to the Commodity Act; an agreement that is subject to regulation under Section 19 of the Commodity Act commonly known as a margin account, margin contract, leverage account, or leverage contract; an agreement or transaction subject to regulation under Section 4(b) of the Commodity Act that is commonly known as a commodity option; any combination of these agreements or transactions; and any option to enter into these agreements or transactions.
- Forward contract, repurchase agreement, securities contract, and swap agreement shall have the meanings set forth in the Federal Deposit Insurance Act (FDIA), 12 U.S.C. § 1281(e)(8)(D), as amended from time to time.

It should be noted that an insurance contract is not a derivative or a QFC because an insurance contract includes the indemnification against loss. Therefore, reinsurance agreements would not be considered a swap agreement.

**B. Insolvency Treatment of Qualified Financial Contracts Under the *Insurer Receivership Model Act*, Section 711 Provision<sup>1</sup>**

Model #555, Section 711 provides a safe harbor for QFC counterparties of a domestic insurer. The provision largely tracks similar provisions in the Federal Bankruptcy Code and the FDIA, as well as laws of other

---

<sup>1</sup> Except where the state has adopted *Guideline for Stay on Termination of Netting Agreements and Qualified Financial Contracts* (#1556).

**Guideline #1556 Drafting Note:** State receivership and insolvency laws may permit a contractual right to cause the termination, liquidation, acceleration, or close-out obligations with respect to any netting agreement or qualified financial contract (QFC) with an insurer because of the insolvency, financial condition, or default of the insurer, or the commencement of a formal delinquency proceeding. These laws are based upon similar provisions contained in the federal bankruptcy code and the Federal Deposit Insurance Act (FDIA). The FDIA also provides for a 24-hour stay to allow for the transfer of QFCs by the receiver to another entity rather than permitting the immediate termination and netting of the QFC. 12 U.S.C. § 1821(e)(9)-(12). States that permit the termination and netting of QFCs may want to consider adopting a similar stay provision following the appointment of a receiver for certain insurers—generally larger entities that may be significant in size but outside of being subject to a potential federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) receivership.

States that consider the enactment of a stay should take into account the relevant federal rules. In 2017, the Board of Governors of the Federal Reserve System (Federal Reserve), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) each adopted final rules and accompanying interpretive guidance (Final Rules) setting forth limitations to be placed on parties to certain financial contracts exercising insolvency-related default rights against their counterparties that have been designated as a global systemically important banking organization (GSIB). The Final Rules include the definition of master netting agreement that allows netting even though termination of the transaction in the event of an insolvency may be subject to a “stay” under several defined resolution regimes, including Title II of the federal Dodd-

*Receiver's Handbook for Insurance Company Insolvencies*

foreign jurisdictions. These safe harbor provisions for QFCs were adopted to avoid disruptions resulting from judicial intervention that can cause unintended chain reactions and significant systemic impact. Section 711 applies in both rehabilitation and liquidation proceedings.

Section 711 states that a right to terminate, liquidate, or accelerate a closeout under a netting agreement or a QFC with an insurer either due to the insolvency, financial condition, or default of the insurer or the commencement of a formal delinquency proceeding is not prevented by any other provision of Model #555. Section 711 allows a counterparty to net different contracts and realize on collateral without a stay.

Section 711 addresses transfer of a netting agreement or QFC of an insurer to another party. In a transfer, the receiver has to transfer all of the netting agreement or QFC and all of the property and credit enhancements securing claims under the agreement or QFC. This prevents “cherry-picking” and requires the transfer of everything; i.e., all of both the “in-the-money” and “out-of-the-money” positions.

### C. Considerations of Qualified Financial Contracts Held by an Insurer Receivership

- Although the *Investments of Insurers Model Act (Defined Limits Version)* (#280) does not include limits on the amount of collateral an insurer is allowed to post, some states have restrictions on derivatives use, including quantitative limits, and limits on the pledging of collateral, based on type and credit quality. The receiver may also need to determine if a derivative use plan, if required, is in effect and if it dictates any collateral requirements.
- If the ability to net exists and there is no stay requirement, it is important that the regulator understand the QFC portfolio before the insurer's failure, either through a recent or ongoing financial examination or through an assessment made during regulatory supervision that precedes a receivership order, while recognizing that the market value of the derivatives positions can vary substantially over relatively short periods of time. The receiver also needs to have a good understanding of the relationship of the QFC contracts to the rest of the insurer's balance sheet. Because most derivatives transactions are used for hedging purposes, if those contracts are terminated as a result of netting, the assets and liabilities will no longer be hedged. It is important

---

Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and the Federal Deposit Insurance Act (FDIA), as well as comparable foreign resolution regimes. Notwithstanding the NAIC's request for inclusion, stays under the state insurance receivership regime (state receivership stays) were not included as an exemption within the definition. Therefore, unless the Final Rules are amended to recognize state receivership stays, if a state implements a stay as contemplated by the Guideline, insurers would find themselves disadvantaged, potentially resulting in additional costs and/or collateral requirements given the regulatory treatment for contracts that do not meet requirements for qualified financial contracts (QFCs). Therefore, if a state is considering implementation of this Guideline, consideration should be given to whether the rules of the Federal Reserve, the FDIC, and the OCC have been amended to recognize state receivership stays. For example, a state could adopt a stay that would be effective if and when the Final Rules recognize state receivership stays.

*Chapter 4—Investigation and Asset Recovery*

to quantify the effect of the loss of the contracts if possible. The receiver may wish to engage outside resources to assist in evaluating the QFC portfolio.

- The receiver should be aware that there may be areas of contention and disagreement by parties in the netting, termination, and closeout of QFC agreements—for example, disagreement over the valuation or in the resolution of transactions where the parties wait too long to terminate the contract.
- Some counterparties may have been accepting less liquid assets, such as private placements based on the relative financial strength of the insurance company; typically, collateral for a QFC will be cash and U.S. Treasury bonds. The moving of over the counter (OTC) derivatives to centralized clearinghouses (CCHs) will gradually eliminate less liquid assets, as well as assets with more volatile market values being used as collateral. It is also worth noting that it is possible to have non-admitted assets eligible as collateral. Where assets exceed concentration limits, the excess can be collateral without being an admitted asset.
- The impact of CCHs will be to standardize documentation and collateral requirements. The standard rules for collateral will be more restrictive and be applicable to all parties. These rules will generally allow for only high-quality assets that are more liquid and are expected to have less market value volatility. In addition, all parties will be subject to the same rules for both initial margin and variation margin. In the past, it was not uncommon for counterparties to not require initial margin from their higher quality clients. This will not be the case going forward.

**D. Recommended Procedures for State Insurance Regulators/Receivers**

To the extent possible, in a pre-receivership situation:

- To the extent a company has a small number of large QFC contracts that are important to the overall investment portfolio and operations of the insurer, in pre-receivership and in rehabilitation, the state insurance regulator or receiver should reach out to the counterparty to determine if the counterparty is agreeable to continuing the contract and performing on the contract when the insurer enters receivership.
- Consider practical strategies for successfully managing the netting agreements and QFCs, not only at the inception of the receivership, but also ongoing during the receivership process.
- Evaluate if the insurer is engaged in netting agreements and QFCs through a market-facing affiliate or non-affiliate, whereby the insurer's contract is with that market-facing entity and the market-facing entity has the contracts with the counterparties.
- Consider the applicability of any federal master netting agreement rules and regulations to the insurer's netting agreements and QFCs. (See the references to applicable federal rules in the preceding footnote in this chapter <sup>2</sup>.)
- Evaluate the need to consider the use of a bridge financial institution to transfer and manage the netting agreements and QFCs in a pre-receivership proceeding; i.e., administrative supervision. See Chapter 11—State Implementation of Dodd-Frank Receivership of this Handbook for guidance on the use of bridge financial institutions for a federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) receivership.
- Carefully review the most recent financial statement filings and interim company records to identify the netting agreements and QFCs active at the time of receivership; understand the terms of the agreements and the valuation of the QFCs; and identify the securities held as

---

<sup>2</sup> See footnote 1 of this chapter.

*Receiver's Handbook for Insurance Company Insolvencies*

collateral and counterparties to the contract. See the Appendix for a Summary of Statutory Annual Statement Reporting of QFCs or the most current Statutory Annual Financial Statement and Instructions.

- Consider how ongoing hedging of obligations and assets can be accomplished during and following a receivership.

Once a rehabilitation or liquidation order has been entered:

- Provide notice of the receivership to counterparties, as appropriate under state law.
- Consider implementing a 24-hour stay on termination of netting agreements and QFCs, if allowed under state law. (See the *Guideline for Stay on Termination of Netting Agreements and Qualified Financial Contracts* [#1556] and the accompanying drafting note in the preceding footnote in this chapter<sup>3</sup>.)
- It is important for the receiver to keep track of which transactions have been terminated validly and which have not so that appropriate action can be taken when the validity of the termination is contested.
- Once the set off has occurred, if the receiver disagrees with the counterparties' valuation of either the collateral or the QFC transaction, the receiver would take the next steps to try to negotiate the correct amount and, if unsuccessful, pursue legal action.
- Consider engaging an investment expert to assist in the auditing, investigating, and management of the netting agreements and QFCs within the investment portfolio. Refer to Chapter 3.VI of this Handbook for more guidance on auditing and investigating the investments of the receivership estate

#### **E. Exhibit—Qualified Financial Contract Annual Statement Reporting (As of 2021)**

The subsequent information provides a general description of how and where QFCs are reported within the *Accounting Practices and Procedures Manual* (AP&P Manual) and the statutory financial statements.

##### Derivative Instruments—Accounting Practices and Procedures Manual Disclosure

- *Statement of Statutory Accounting Principles (SSAP) No. 27—Off-Balance-Sheet and Credit Risk Disclosures*
- *SSAP No. 86—Derivatives*
- *SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees*

##### Derivative Instruments—Annual Statement Disclosure

- Schedule DB – Part A, Section 1 – *Open Options, Caps, Floors, Collars, Swaps, and Forwards*
- Schedule DB – Part B, Section 1 – *Open Future Contracts*
  - Within Part A and Part B, Section 1 identifies the contracts open as of the accounting date, and Section 2 identifies contracts terminated during the year.
- Schedule DB – Part C – *Replication (Synthetic Asset) Transactions*
  - Section 1 contains the underlying detail of replicated assets open at the end of the year. Section 2 is reconciliation between years of replicated assets.
- Schedule DB – Part D, Section 1 – *Counterparty Exposure for Derivative Instruments Open*
- Schedule DB – Part D, Section 2 – *Collateral for Derivative Instruments Open*
- Schedule DB – Part E – *Derivative Hedging Variable Annuity Guarantees*
  - Specific to derivatives and hedging programs under SSAP No. 108
- Schedule DL – Part 1 & 2 – *Securities Lending Collateral Assets*
- Notes to Financial Statement – *Investments*

<sup>3</sup> See footnote 1 of this chapter.

*Chapter 4—Investigation and Asset Recovery*

- Notes to Financial Statement – *Derivative Instruments*
- Notes to Financial Statement – *Debt (FHLB Funding Agreements)*
- Notes to Financial Statement – *Information about Financial Instruments with Off-Balance Sheet Risk and Financial Instruments with Concentrations of Credit Risk*
- Notes to Financial Statement – *Fair Value Measurements*

On a quarterly basis, the insurer only reports derivative instruments that are open as of the current statement date. Schedule DB – Part A – Section 1 lists the insurer’s open options, caps, floors, collars, swaps, and forwards. Open futures are reported in Schedule DB – Part B – Section 1, replications are reported in Schedule DB – Part C – Section 1, and counterparty exposure for derivatives instruments are reported in Schedule DB – Part D.

Repurchase Agreements—AP&P Disclosure

- *SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*

Repurchase Agreements—Annual Statement Disclosure

- Notes to Financial Statement– *Investments*
- Notes to Financial Statement – *Debt*
- Repurchase agreements are disclosed in various investment schedules within the Annual Financial Statement depending on the type of investment (Schedule D, DA, E, Supplemental Investment Risk Interrogatories). The Investment Schedule General Instructions provide the following list of codes to use in the appropriate investment schedule code column regarding investments that are not under the exclusive control of the reporting entity, and also including assets loaned to others. For example, a bond subject to a repurchase agreement would be detailed in Schedule D Part 1 – *Long-Term Bonds Owned* and use a code of RA in Code Column.

Codes

LS – Loaned or leased to others

RA – Subject to repurchase agreement

RR – Subject to reverse repurchase agreement

DR – Subject to dollar repurchase agreement

DRR – Subject to dollar reverse repurchase agreement

C – Pledged as collateral – excluding collateral pledged to FHLB

CF – Pledged as collateral to FHLB (including assets backing funding agreements)

DB – Pledged under an option agreement

DBP – Pledged under an option agreement involving “asset transfers with put options”

R – Letter stock or otherwise restricted as to sale – excluding FHLB capital stock (Note: Private placements are not to be included unless specific restrictions as to sale are included as part of the security agreement.)

RF – FHLB capital stock

SD – Pledged on deposit with state or other regulatory body

M – Not under the exclusive control of the reporting entity for multiple reasons

SS – Short sale of a security

O – Other

**VIII. POTENTIAL RECOVERY FROM THIRD PARTIES**

As noted above, a number of persons inside and outside of the insolvent insurer may have caused or contributed to the reasons for the insurer’s insolvency. Such acts or omissions may be unintentional, but the result is harm to the insurer and thus its policyholders, claimants, and creditors. This section and the next identify by category the acts and omissions of such persons, the causes of action that may be brought, and the foundation that the receiver must establish to prevail in such causes of action.

Not all actions listed here may have contributed directly in the insurer’s problems, and inclusion of an action in the following list does not necessarily indicate that a receiver will find a basis for seeking legal remedies from identified persons. Each situation must be evaluated on its own merits and circumstances. For example, the facts may clearly indicate that an agent wrongfully withheld funds due the insurer, but an investigation of the agent’s financial condition might show that there would be little hope of collecting any judgment resulting from successful civil

*Receiver's Handbook for Insurance Company Insolvencies*

litigation. Therefore, the cost to the estate of pursuing this particular agent may outweigh the ultimate benefit, if any, to the estate.

**A. Breach of Fiduciary Duties**

Any person empowered to collect and hold funds on behalf of another has a fiduciary duty with respect to any funds collected. MGAs, TPAs, reinsurance intermediaries, brokers, and others may have violated this obligation by:

- Failing to maintain a premium trust account where required by law.
- Skimming premiums.
- Withholding funds without authorization.
- Failing to collect and remit premiums.
- Paying affiliates more than market rate for services.
- Deducting excess commissions and/or fees.
- Taking improper set-offs.
- Improperly using funds to make loss payments.

The investigative examination initiated by the receiver may indicate the presence of these problems. The receiver may need to conduct a more intensive investigation of transactions arising from the suspect MGA or TPA agreement, reinsurance treaty, etc., to determine whether a violation has occurred and the extent of injury to the insurer. Some examples of the information that may suggest a need for further investigation are:

- A significant decline in reported premium volume from one period to the next.
- Gaps in policy number sequence.
- Sharp increases in agents' balances receivable.
- Inordinate delays in collecting reinsurance balances receivable.
- Increase in consumer complaints.

**B. Abuses Related to Risk Selection**

An insurer may have delegated the authority to bind risks to an MGA or TPA, or may have given a reinsurance intermediary the power to cede or assume reinsurance on behalf of the insurer. Delegation of authority carries with it the duty to perform on the underlying agreement that binds the agent or intermediary to adhere to the insurer's articulated underwriting guidelines and limitations. To the extent any agent exceeded these limits and caused the insurer to suffer financially, the receiver may be entitled to appropriate remedies.

Some of the ways in which underwriting authority may have been abused are:

- Accepting excluded classes of business.

*Chapter 4—Investigation and Asset Recovery*

- Violating territorial limits.
- Exceeding premium and/or product mix limits.
- Using binders improperly.
- Misrepresenting risks.
- Placing reinsurance with insolvent reinsurers.
- Improperly placing reinsurance with affiliated or unauthorized reinsurers.
- Failing to obtain adequate security for balances due the ceding.
- Misrepresenting reinsurance coverage.

As noted above, the takeover investigation may indicate that these problems exist and that a more intensive examination of performance under specific agreements may be in order.

Some examples of information that may suggest a need for deeper investigation in this area are:

- Unusual line codes or state codes in statistical reports or state pages of reports.
- Variances from sales plans and volume projections.
- Schedule F or S problems, mismatches, and unexplained differences.
- Reinsurers' resistance to or questions regarding claims presented.

**C. Loss Settlements**

As with risk selection, the insurer may have delegated claims settlement authority to a third party, be it an MGA, TPA, or loss adjuster. The third party has the duty to adhere to any guidelines and limitations stipulated in the delegation agreement, as well as to comply with fair claims settlement practices. Typically, these agreements will stipulate the third party's settlement authority, reporting practices, reserving practices, and use of outside experts.

Potential abuses include exceeding the claims settlement authority and establishing inadequate loss reserves in order to maintain a relationship with the insurer. Other indicators of problems are:

- Fluctuations in reported incurred losses.
- Unusually high LAEs.
- Unexpectedly high losses.
- Late development of reported losses.
- Policyholder complaints.
- Low salvage recoveries and/or high ratio of salvage costs to amount recovered.
- Low subrogation recoveries and/or high ratio of subrogation cost to recovered amount.
- Negative market conduct examination report comments.

*Receiver's Handbook for Insurance Company Insolvencies*

- Claims payments exceeding clean claim guidelines in health insurance.

To the extent that an agent's actions caused the insurer's financial suffering, the receiver may wish to pursue litigation or other available remedies.

**D. Abuses Relating to Premium Computations**

This area is closely related to risk selection in that the parties to whom underwriting authority has been delegated may also have the authority to compute the premium for the risks, as well as compute, collect, and remit premium adjustments.

The compensation of the party in question, especially an MGA, is generally a commission based on premiums written. Consequently, the agent may deliberately underprice the premium or fail to compute additional premiums in order to write the risk and generate a commission.

Similarly, the insurance broker, the policyholder, and intermediary (if reinsurance is involved) might deliberately suppress information relating to compensation. The receiver should look for:

- Change in pattern of premiums audit activity.
- Unusual lag in reporting losses.
- Unexpectedly high incurred loss ratios.
- Uncollectible adjustment premiums.
- Captive cell arrangements

**E. Professional Malpractice**

Insurers frequently retain outside professionals, including attorneys, auditors, certified public accountants (CPAs), investment advisors, actuaries, and loss reserve specialists. The receiver should retain an expert from the same profession to review the activities of the insurer's professionals and to determine if their actions met the minimum standards of the profession.

Types of actions that may result in litigation or other proceedings against such persons include:

- Incompetence or failure to meet professional standards.
- Failure to divulge conflicts of interests.
- Billing abuses.
- Failure to timely discover or disclose insolvency or other deficiencies of the insurer that prolonged the insurer's operations and increased its debts.

Many professional organizations promulgate a code of ethics and technical performance standards that the receiver may wish to obtain as a source of professional standards against which a breach may be measured. This is an area of considerable complexity, however, so the receiver should consider retaining the services of knowledgeable legal counsel.

It is particularly important for the receiver to review whether certain professionals who were responsible for reporting on the financial condition of the insurer, such as auditors and actuaries, performed their duties in accordance with their applicable standards. Even in cases where the actual cause of insolvency was due

*Chapter 4—Investigation and Asset Recovery*

to misfeasance or malfeasance by the directors and officers (D&O), other professionals may be liable for not discovering and disclosing the problems. If an auditor breached and/or failed to meet its duties of care, such breach and/or failure may be the proximate cause of damages to the insurer and its policyholders, creditors, and shareholders by reducing the value of the insurer and deepening the insurer's insolvency. For instance, if an auditor gives a clean opinion on an annual statement, reporting an insurer to be solvent when it should have detected and reported the insurer's insolvency if it had properly performed its duties, then the insurer's financial condition may continue to deteriorate, causing an even greater loss of surplus or increase in insolvency.

Some jurisdictions have awarded damages against auditors for what is referred to as the "deepening of the insolvency." This theory of damages was initially used in bankruptcy cases but has been applied to the insurance insolvency settings. Some courts have found "deepening of the insolvency" to be a separate cause of action even though it would still primarily be based upon some kind of professional negligence action. However, this theory is not universally accepted. In most states, auditors are required, as a condition of providing annual audit services to insurers, to provide a letter of qualification to the commissioner of insurance stating that they understand that the annual audited financial statements of the insurer and the auditor's own report with respect thereto will be filed and that the insurance commissioner intends to rely on this information in the monitoring and regulation of the financial position of the insurer. Such reliance may form the basis of a claim. Examples of professional malpractice of an auditor may include the failure to detect and disclose:

- Risks and accounting errors associated with an insurer's insurance program.
- Dissipation and mispending of funds by the insurer's officers and directors or controlling companies.
- Inadequacy of an insurer's reserves.
- Diversion of audit premiums or other assets.
- Existence of retroactive reinsurance or other reinsurance that could not be counted as an asset.
- Any significant deficiencies in the insurer's internal controls.

If such failures mask the true financial condition of the insurer so that the insurer continued to operate and slide further into insolvency, the auditor could be liable for the increase in insolvency from the date of that failure (i.e., the failure to report the insurer's deficiencies or insolvency) and the date when the insurer was actually placed into an insolvency proceeding.

Similarly, other professionals, such as actuaries, may be liable for the deepening of the insolvency if they breach their standards of performance and understate the insurer's reserves to the extent that, had they properly stated the reserves, the insurer would likely have been put into an insolvency proceeding sooner.

**F. Income Tax**

Insurance companies placed into liquidation often have net losses for federal income tax purposes. They are required to file federal income tax returns. (See Chapter 3—Accounting and Financial Analysis.) In addition, they may carry back the net operating losses and capital losses for a three-year period and recover prior years' federal income taxes. If the company is included in a consolidated return, the losses may be used to offset income from other companies in the consolidated group.

As part of the receiver's investigation, it should be as certain whether the company has entered into a tax-sharing agreement. A tax-sharing agreement provides for the allocation of tax among members of a consolidated group may enforce the insurer's rights to tax recoveries. The receiver should determine

*Receiver's Handbook for Insurance Company Insolvencies*

whether any tax obligations or refunds due the insurance company have been paid and should be aware that intercompany tax allocations are frequently not recorded.

See *Exhibit 4-1* for a chart of potential recoveries from third parties.

## **IX. POTENTIAL ACTIONS AGAINST MANAGEMENT (DIRECTORS AND OFFICERS), SHAREHOLDERS, AND POLICYHOLDERS/OWNERS**

### **A. Directors and Officers**

The receiver may seek to recover damages from an insurer's D&O under one or more of the following theories:

#### 1. General Mismanagement

In most states, case law requires that corporate officers and directors exercise ordinary or reasonable care and diligence in discharging their duties. The standard varies by jurisdiction. In most states, officers and directors are protected by the "business judgment rule" for their good faith actions. (See Chapter 9—Legal Considerations.)

The receiver should focus on what the D&O did or did not do. Accordingly, the receiver should begin the investigation by identifying the D&O and examining their qualifications to serve in their respective capacities. Such persons are held to minimum requirements of background, experience, and skill for each position. These prerequisites may be defined by statute or contained in the company's bylaws. The receiver should ascertain that the minimum requirements were met. The statutory remedy for an officer or director failing to meet qualifications is removal. However, willful failure of other officers and directors to enforce timely action may lead to their liability if it contributed to the insurer's insolvency.

The receiver should pay attention to the directors' and officers' actions during the time leading up to the commencement of the receivership. If, prior to initiation of receivership, the D&O knew or should have known that the company was hopelessly insolvent, their failure to take remedial actions may be considered mismanagement. That is, continuing operations of the company may result in a larger dollar amount of the insolvency than would have occurred had management taken remedial actions, such as ceasing to write new business, going into run-off, or voluntarily consenting to receivership. In some jurisdictions, this "deepening of the insolvency" is considered an element of damages in an action against the D&O.

An officer or director is accountable for the results of the operations of the insure. Whether accountability translates into liability in directors' and officers' litigation would appear to be dependent on answers to the following questions:

- Did the officer exercise reasonable and ordinary care in monitoring the behavior of subordinates?
- Did the officer act promptly to take appropriate corrective action?
- Did the officer attempt to conceal the failings or wrongdoing?
- Was the officer an active co-conspirator?
- Did the officer obtain adequate information before making a judgment?

*Chapter 4—Investigation and Asset Recovery*

The receiver should review all minutes of the board, board committee meetings, and related activity. Records of attendance at board meetings should be scrutinized. Particular attention should be given to officers' compensation and directors' fees, as well as to excessive travel or preferential use of company property. The receiver also should examine investment transactions for improper or self-dealing in ventures in which officers and/or directors had an interest. An absentee or empty-headed/pure-hearted director is not absolved and may incur additional liability because of continuous absences or non-feasance.

## 2. Racketeer Influenced Corrupt Organizations

The availability of the federal RICO Act to receivers is discussed in-depth in Chapter 9—Legal Considerations.

At least some causes of action under RICO require demonstration of fraud. In such cases, the concern expressed below regarding collectability of reinsurance and errors and omissions (E&O) liability coverage would apply to these RICO actions as well.

## 3. Fraud

Civil liability is not the only remedy available to a receiver. In appropriate cases, consideration should be given to referring the matter to local, state, or federal law enforcement authorities for criminal enforcement. Alleged fraudulent or criminal activity may involve only one or two persons. It is not necessary to prove a pattern of activity, and it should include a comprehensive evaluation on impact to the estate. Fraud is often used as a defense or basis to deny coverage by liability insurers covering D&O of the insurer and may be used as a defense by reinsurers.

## 4. Voidable Preferences and Fraudulent Transfers

As discussed earlier, statutes prohibiting voidable preferences and fraudulent transfers often allow the receiver to pursue insiders who knowingly participated in the prohibited transactions. A forensic analysis will help identify potential voidable preferences or fraudulent transfers.

## 5. Activities that Give Rise to Potential Recoveries

Recoveries from the directors and/or officers may be founded on a variety of acts or failures to act that may be difficult to uncover. Major things to consider are outlined in the following paragraphs. Refer to Chapter 9—Legal Considerations for more detail.

### a. Self-Dealing

All transactions between the insurer and vendors owned or controlled by D&O and/or their immediate family members should be examined for propriety. Leases of office space, data processing equipment, and furniture and equipment can be used to skim funds from insurers for the improper benefit of owners/officers. Similarly, there have been instances in which the insurer paid excessive management fees to organizations controlled by related parties. Other possible areas for abuse are claim service organizations, software vendors, auto repair shops, attorneys, consultants, and shared office space.

### b. Executive Compensation

Travel and expense reimbursements to officers and directors should be examined for abuses, such as travel with no clear business connection, travel to resort areas accompanied by family members, etc. Special facilities, such as leased or company-owned luxury cars, boats, or residences maintained for executives may also be suspect.

*Receiver's Handbook for Insurance Company Insolvencies*

Some scandals have identified artworks, antiques, oriental rugs, or other high-end items purchased with company funds for the primary benefit of its officers.

## c. Investment Transactions

Real estate owned by D&O may have been sold to the insurer at an inflated value or exchanged for other property of greater value. Mortgage loans may have been granted to family members based on overstated appraisals or in violation of company investment policies.

Other areas of potential abuse include secured loans in which the collateral may be improperly secured or below investment quality.

## d. Underwriting Transactions

Poor underwriting results may have been the result of actionable misconduct, such as:

- Accepting risks in violation of the insurer's published underwriting guidelines.
- Failing to prevent or correct over-lining (writing prohibited classes of business).
- Failing to obtain motor vehicle records on automobile risks and safety, and engineering reports on commercial property risks or workers' compensation risks.
- Taking on additional risk when the premium is insufficient to cover the risk.
- Placing reinsurance with unacceptable reinsurers and/or failing to obtain adequate security (LOCs, trust funds, or funds withheld) to cover unauthorized reinsurance.
- Failing to keep new business writings within prescribed limits.
- Failing to monitor the activities of MGAs and TPAs.

## e. Claim Operations

Claim operations are vulnerable to liability for unlawful conversion of funds, which usually requires active participation by an employee or agent of the insurer. Persons in senior management positions may be culpable and subject to litigation to the extent that they were aware of activities, such as:

- Improper payments to claimants.
- Payments made to non-existent claimants.
- Payments to non-existent providers or service vendors.
- Inflated invoices for LAEs linked to a kickback scheme.
- Deliberate and material under-reporting of incurred losses.

The degree of culpability will be determined by answers to at least the following questions:

- Did the officer exercise reasonable and ordinary care?
- Did the officer take prompt corrective action?
- Did the officer attempt to conceal the failings or misconduct?

*Chapter 4—Investigation and Asset Recovery*

- Was the officer an active co-conspirator?

## f. Actuarial and Financial

An officer may have negligently or intentionally misstated actuarial data, either through improper valuation of policy reserves or case reserves for P/C losses, or by negligent or intentional failure to maintain sufficient data on which to base a reasonable estimate of loss reserves. The degree of culpability would appear to hinge first on intent and then on the qualifications of the officer. Alternatively, a group of officers and/or directors acting in concert may have intentionally tampered with reserve data or deliberately filed false financial statements.

## g. Failure to Act in the Best Interests of the Company

A corporation's officers and directors have a common law duty of loyalty to that corporation that precludes, among other things, seeking private profit or advantage from their office. In most cases, the standards of conduct are clearly defined. The officer or director must not place his or her private gain above the best interests of the company and its survivability as a going concern. The receiver should carefully scrutinize insider stock trading, employment contracts, "golden parachutes," "poison pills," bylaws, etc., to verify that key personnel did not breach this duty.

## 6. Directors and Officers Indemnification

Consideration should be given to the existence and effect under applicable law of indemnification provisions in the company's bylaws and in state corporate laws.

## 7. Errors and Omissions, and Directors and Officers Insurance

Many companies purchase E&O and D&O insurance that may provide coverage for certain types of conduct described above. As part of the receiver's investigative examination, all such policies should be identified and examined. These policies will almost certainly be claims-made policies that should be reviewed to determine the deadline for notifying the carrier concerning possible claims. Additionally, the policies may provide for the purchase of "tail coverage," which could extend the time in which to file a claim. In most cases, the receiver should purchase the tail coverage if his/her investigations have not been completed. The presence of insurance may be a factor in the cost/benefit analysis with respect to assessing causes of action against officers and directors. If insurance does exist, consideration should be given as to whether causes of action are covered by the insurance. Certain causes of action may be excluded by the policy, and it is important for counsel to review the policies before any suits are filed. One common exclusion that should be considered is the "regulatory exclusion" clause, which will likely be present in the policy under review. Another common exclusion is the "insured versus insured" clause, which may be in the policy under review.

**B. Shareholders and Policyholders/Owners**

Some jurisdictions permit alter-ego actions against shareholders, usually in closely held corporations, under common law or by statute. It may not be necessary to establish that management was negligent or guilty of fraud to recover from the shareholders. Where permitted, such recoveries may be limited, as in Arizona, to the par value of the outstanding shares.

In certain situations, it may be possible to assess policyholders or shareholders. Reciprocal inter-insurance exchanges and some old-line mutual insurers may have issued assessable policies that required policyholders to pay amounts over and above their premiums. Impairment to surplus usually is sufficient to trigger assessment.

*Receiver's Handbook for Insurance Company Insolvencies*

Recoveries from shareholders and policyholders are special situations not likely to be encountered in most receiverships, and the amounts to be recovered and the procedures for recovery are specific. Thus, the receiver's attention is directed to the statutes and other authorities.

**C. Significant Developments in the *Insurer Receivership Model Act***

In litigation between the receiver and affiliates of the insolvent insurer, Section 113 of Model #555 prohibits the affiliate from using any evidence that was not included in the records of the insurer at the time of the transaction. As an example, it is not unknown for inter-affiliate loans from the insurer to have side agreements excusing repayment under various circumstances. Under Section 113, if the side agreement is not fully documented at the time of the loan in the records of the insurer, the borrowing affiliate may not present that agreement as a defense to the receiver's collection efforts.

*Chapter 5—Claims*

**This page intentionally left blank.**

*Receiver's Handbook for Insurance Company Insolvencies***I. INTRODUCTION**

Claims processing is the most visible, tangible part of a receivership proceeding. Because policyholder protection is the basic goal of any insurance receivership, the adjustment and adjudication of claims is closely monitored by interested parties. Accordingly, the claims process should be carefully developed and administered.

A receiver should consider the different circumstances under which claims are adjudicated. There are several variables that may affect the way the claims process is handled, each of which, as well as state law, will have an impact on the type of claims procedure that must be established:

- Whether the insurer has any assets.
- Whether the insurer is a primary carrier, an excess carrier, a professional reinsurer, or a primary carrier that assumed reinsurance obligations.
- Whether the insurer underwrote property/casualty (P/C); fidelity/surety; a health maintenance organization (HMO) or a preferred provider organization (PPO); or life, accident, and health risks.
- Whether guaranty associations are involved.
- Whether the proceeding is judicial or administrative.
- Whether the proceeding is a conservation, rehabilitation, or liquidation.
- Whether the claim arises under an insurance policy or other contract.
- Whether the insolvency crosses state or international borders.
- Whether the insurer handles claims adjudication internally or outsources this function to third parties.

For a discussion of the legal aspects of claims processing and payment, see Chapter 9—Legal Considerations.

**The following discussion is ordered chronologically and, unless indicated otherwise, assumes that the insurer is insolvent and that the receivership proceeding is a liquidation. One of the first tasks for any receiver is to establish a claims procedure and publish the procedure to potential claimants. Once established and published, the claims procedure is implemented. It may be prudent to file the claims procedures with the receivership court and seek the court's approval of the procedures prior to implementation of the procedures. The receivership court ultimately approves the claims that the receiver has adjusted and recommended for payment or denial. Establishing appropriate reserves is an integral part of the process. The final step is payment.**

This section addresses the timetable for the filing of claims, the different types of creditors and their claims, and provision of notice to claimants. The receivership court's order defines the required notice to potential creditors and establishes deadlines for the filing of claims.

**A. The Fixing Date**

One of the first steps in any insurance insolvency proceeding is to establish the exact date upon which the rights, obligations, and liabilities of the insurer and its creditors are determined or "fixed." Most states use the date of entry of the liquidation order or, in some cases, rehabilitation order, for this purpose. (See

*Chapter 5—Claims*

Section 501(B) of the *Insurer Receivership Model Act* [#555], also known as IRMA.) However, as to some policyholder claims, the fixing date is often required to be the date when the statute or court order terminates the insurer's policies. The effect of the fixing date is significant: It provides a reference date upon which the insurer's liability and creditors' rights are determined. The most common legal distinction made is that between contingent and absolute claims. In essence, a claim is contingent if a liability-imposing event has occurred, but it is uncertain that the claim will be made or coverage and liability established. An absolute or non-contingent claim is one of certain liability. Although there may be a question as to the ultimate amount of the liability or when it may be due, there is no doubt that some debt will be due. An example outside the liquidation context helps to illustrate these distinctions. Assume that A negligently drives his car into the rear of B's automobile. As a result of the incident, B has a contingent claim against A. If B sues A, and B is awarded a final judgement, B has an absolute claim against A. In short, a claim remains contingent until liability is certain.

Identification of the fixing date may be subject to statutes applicable to both life/health and P/C insolvencies in several states that require continuation of coverage for a specified period after liquidation, usually 30 days. Most state statutes require that a life insurer's policies continue in full force and effect, at least until the receiver reinsures or transfers the policy liabilities to another insurer.

**B. Claim Filing Deadlines**

## 1. What Is a Claim Filing Deadline?

A claim filing deadline is the deadline for filing proofs of claim against the estate. (See Section 701(A) of Model #555.) The purpose of the claim filing deadline is to enable the receiver to: identify existing or potential claims against the estate; adjust and adjudicate claims; make distributions; and eventually close the estate. A claim received after the filing deadline should be classified as a late claim. Timely filed claims may be amended or supplemented subject to certain limitations provided notice of the loss or occurrence giving rise to the claim was provided on or before the claim filing deadline. Late-filed claims may be accepted but may not be paid until all timely filed claims of the same priority have been paid in full, or it will be moved to a lower priority of distribution within the estate. Under Model #555, late-filed claims are assigned to Class 9, provided that the claim was late due to certain specified criteria (Model #555, Section 701 and Section 801(I)). Other claims filing dates may apply.

In some circumstances, claimants need not file a claim to preserve their rights (e.g., policyholders of a life insurance company). Unearned premium claims may be treated similarly in P/C liquidations. It is recommended that the receiver discuss with the guaranty association which claimants are required to file a proof of claim. It is the receiver's responsibility in such circumstances to develop a list of claimants who are deemed to have filed claims prior to the claim filing deadline. As always, it is imperative to check local statutes for the appropriate procedure and rule of law.

## a. Effectiveness as Against Federal Claims

Whether claim filing deadlines cut off untimely claims of the federal government pursuant to federal super priority statute 31 U.S.C.A. § 3713 remains unsettled. For a more extensive discussion of this and other claims issues, see Chapter 9—Legal Considerations.

## b. Applicability in Rehabilitations

Whether a claims deadline date will be established in a rehabilitation proceeding depends upon the specific circumstances and applicable law. In rehabilitations of a limited or set duration, a claim filing deadline may enable the rehabilitator to ascertain the amount of outstanding claims and implement a plan to return the insurer to solvency. A deadline may also allow the rehabilitator to conserve liquid assets to pay current obligations while a rehabilitation plan is

*Receiver's Handbook for Insurance Company Insolvencies*

being developed or the amount of outstanding claims is being assessed. In other rehabilitations, it may be appropriate to set no claim filing deadline until a final dissolution plan has been settled.

## 2. How Is a Claim Filing Deadline Established?

A court order is required pursuant to the applicable statutory requirements to establish the claim filing deadline for a particular receivership. (See Section 701 of Model #555 and Chapter 6—Guaranty Associations for claim deadlines applicable to guaranty associations or ancillary receiverships.) The claim filing deadline established for claims against the receivership estate will also apply to the claims against a guaranty association.

Some state statutes specify the maximum period of the period of time for the claim filing deadline bar date. If there is flexibility within the statute, the length of this period often will depend upon the complexity and size of the receivership and the type of business written. The assumption of blocks of business by a solvent insurer may eliminate the need for many claims to be filed at all. There can be a general correlation between the length of the claim filing deadline and the amount of the estate's administrative expenses.

## 3. Deemed Filed Claims

In circumstances where the insurer has better information about claims than the policyholders have, the receiver may be able to avoid the administrative expense of handling some or all proofs of claim by establishing a “deemed filed” procedure. Under such a procedure, the receiver may establish a list of policyholders and claimants based on the insurer's books and records, which shall provisionally state the amounts claimed. Each person whose name appears on such a list shall be deemed to have filed a proof of claim in a timely manner. Claimants are given notice and provided an opportunity to correct errors and prove their claims before final allowance. This procedure works well for unearned premium claims and claims for investment values in life insurer insolvencies. Most state statutes do not require holders of life or annuity contracts to file claims.

## D. Developing the List of Creditors

The first step in this process is to develop a master mailing list of creditors from the insurer's books and records and other interested parties.<sup>1</sup> Most state statutes or receivership courts require notice by first class mail to the last known address of the known claimants, as well as by publication. In some states, notice shall be given in a manner determined by the receivership court.

The following persons usually will be included in the insurer's mailing list:

- Guaranty associations.
- Policyholders.
- Third-party claimants.
- Secured creditors.
- Government agencies.
- Wage claimants.

<sup>1</sup> See *Elmco Properties, Inc. v. Second National Federal Savings Ass'n*, 94 F.3d 914 (4th Cir. 1996) for a receivership involving a savings association.

*Chapter 5—Claims*

- General creditors.
  - Reinsurers and reinsureds.
  - Intermediaries.
  - Managing general agents (MGAs) and third-party administrators (TPAs).
  - Claims adjusters.
  - Defense attorneys.
  - Vendors.
- Equity (stock or share) holders.

**E. Proof of Claim Forms**

Once the list of claimants is developed, the receiver typically sends a proof of claim form to each person identified. The proof of claim form, which is the basic prerequisite to the allowance of a creditor's claim, serves a number of useful purposes. First and foremost, it identifies the claimant and the nature and extent of the claim. The receiver also may use the form to calculate the extent of the insolvency, to identify any obligations the claimant may owe the insurer (e.g., through the identification of any setoffs), to set reserves, and to determine the estate's right to collect reinsurance. In some cases, health claims may not have to file a proof of claim. An example is where the health insurer uses a TPA and is covered by the guaranty fund; there should be no need for the TPA to adjudicate the same claims twice.

Many proof of claim forms have been developed over the years. Claim forms to be used in any particular proceeding should be tailored to the circumstances presented. For example, the receiver should consider whether claims forms must be filed by all claimants. Most state statutes permit the receiver to dispense with the issuance of claim forms in a life receivership. The receivership simply draws a list of creditors from the insurers' books and records. In some states, filing with a guaranty association may constitute filing with the receiver for purposes of satisfying a claim filing deadline, but the receiver may need additional information from the claimant that the guaranty association did not elicit. Guaranty associations and receivers should coordinate their respective claim filing procedures to the extent possible. With receivership court approval, receivers may deem open claims as reflected on the books and records of the delinquent insurer as timely filed. In such circumstances, proofs of claim need not be filed by insureds or third-party claimants for such claims.

Before a proof of claim form is created, the receiver may wish to determine the number and types of claim forms that will be needed. The first task is to identify in broad categories the various classes and types of claimants. Then the receiver can determine what information is required for each type of claim. With this information, specific proof of claim forms can be developed for each category of claimant based on the type of business written. Some receivers use only one claim form but use control numbers (such as an alphanumeric system) to designate the type of claim presented in the form. This saves the cost of developing separate forms. Receiverships involving surety business may necessitate the use of a separate proof of claim form for each type of surety bond. The objective is to facilitate the exchange of information between the claimant and the receiver in order to adjust and later adjudicate a claim.

The more specific the information that can be elicited in the initial proof of claim form, the less follow-up will be required. Receivers should be encouraged to request submissions from creditors that the company in receivership has reinsured in accordance with the format of reporting under the reinsurance contracts in question. This should just be complemented by a comprehensive overview and breakdown of the total claimed by such reinsured creditor. The receiver, however, may require the claimant to present

*Receiver's Handbook for Insurance Company Insolvencies*

supplementary information or evidence, may take testimony under oath, may require production of affidavits or depositions, or may otherwise obtain additional information or evidence. (See Section 702(C) of Model #555). The class determinations should be subject to a right of appeal by the claimant. The prompt determination of creditor class permits a faster wind down, as well as facilitates more prompt calculations and distributions for creditor claims. It may be unnecessary to determine the amount of receivership claims for a creditor class if receivership assets are unavailable for that creditor class.

Most statutes require claimants to provide certain basic information. (See Section 702 of Model #555.) The following information typically is required:

- The nature and particulars (e.g., the who, what, when, where, and amount) of the claim asserted.
- The consideration for the claim.
- The identity and amount of any security held on the claim.
- Any payments made or received on the claim.
- A copy of each written instrument upon which the claim is founded or a statement of the reasons a copy of the instrument(s) cannot be provided.
- The amount and a description of the source of any salvage or subrogation collected or that may be collected.
- An affirmation (notarized) that the insurer justly owes the sum sought and that there is no setoff, counterclaim, or defense to the claim (Section 702 A of Model #555).
- The name and address of the claimant and any attorney representing the claimant.

Additionally, Model #555 requires that the claimant provide: 1) its Social Security number (SSN) or federal employer identification number; and 2) any right of priority of payment or other specific right asserted by the claimant (Section 702 A of Model #555).

The receiver may decide to use the same claims and policyholder service forms that the insolvent company previously employed because the information required is fairly uniform, and the use of different forms could be confusing to the service providers and policyholders. Additionally, many estates make proof of claim forms available for easy access via the receiver's office website.

The receiver decides what additional supporting documentation will be required to prove a claim and in what form it should be submitted. (See Section 702 C of Model #555.) Different documentation will be needed for different types of claims. For example, death benefit claims require the furnishing of a death certificate. Accident and health (A&H) claims may require a physician's certification and copies of medical bills. Return premium claims may be established simply by submitting a bordereau of all cancelled policies and return premium amounts attributable thereto, while computer summaries may be required to prove cumbersome or complicated claims. When policyholders claim return premium, the receiver may require additional documentation, such as copies of cancelled checks. Reinsurance claims may require yet another form of documentation. Life insurance claims usually require the policyholder to furnish the original policy. If the original cannot be provided, a copy thereof may suffice. If neither the original nor a copy of the policy can be furnished, a lost policy form should be executed and submitted to the receiver.

The level of detail required in the proof should conform to industry standards and statutory guidelines, as well as make it convenient for the receiver to communicate with the claimant and add the information to its database for claims management. Some estates may not process a claim that does not include all the

*Chapter 5—Claims*

requested information. One of the most critical needs of general creditors involves financial information on an insolvent ceding company. Providing regular financial statements of the company would be beneficial to interested parties, such as guaranty associations, reinsurers, and other receivers or regulators. It should be noted that whenever a reinsurer of the company in receivership has claims against the estate or where a reinsured creditor at the same time is a reinsurer of the estate, receivers should use the guidance provided in Subsection F—Coordination and Communication With Reinsurers.

The receiver must determine who may submit a proof of claim on behalf of an entity and what form of verification is required. Because corporations can act only through their designated agents, it is best to determine and inform corporate claimants who may sign on their behalf (e.g., officers, directors, MGAs or attorneys). Generally, a director does not have authority to act for a corporation because directors must act as a body unless otherwise authorized by the company's bylaws. In most instances, the notarized signature of an individual who attests to his authority to do so will suffice. The signature of a trustee should be received when dealing with trust claims, and the trust document should be provided to the receiver to verify the identity of the trustee. If in doubt as to the capacity or authority of an individual who submits a claim on behalf of a corporation, partnership, or trust, the receiver may require that the claimant provide a certificate of incumbency, signed by another authorized officer or representative, as to the signer's authority to bind the entity. In the case of a corporation, partnership, trust, or individual, the receiver may also require a signature guarantee if in doubt as to the identity of the individual executing the claim. Careful drafting of the attestation will ensure that such authorization has been given to the signatory. Note that the availability of notarizations may depend upon the residence of the claimant. Although most foreign countries maintain their own systems for verification, notaries may be found at most American embassies. Consideration should be given to electronic signatures and proof of claims submission.

When developing proof of claim forms, it is helpful to have in mind the volume, type, and class of claims that creditors may submit. Claimants, including guaranty associations and reinsured creditors, may have hundreds of outstanding claims against the insured. Some claimants may be permitted to file a single omnibus proof of claim for all claims against the receivership estate. Section 702(D) of Model #555 allows a single omnibus claim to be filed by guaranty associations, which may be periodically updated without regard to the claim filing deadline, and the guaranty association may be required to submit a reasonable amount of documentation in support of the claim. Also, for reinsured creditors, the receiver will want to decide whether these claims need to be submitted individually or on a bordereaux basis. There are certain advantages to bordereaux submissions, which are dictated by the sheer volume of claims, the requirements of the treaty, and the receiver's need to efficiently process reinsurance recoveries. Ceding treaty retrocessionaires may only be able to file claims on bordereaux. There are other claims submission methods that might be used for reinsurance recoveries, depending upon the complexities of the situation. In the final analysis, the preferred submission approach ordinarily is the one that permits an orderly and efficient administration of claims on a computer system and often closely follows the procedures formerly in effect when the company was in operation.

In some states, if applicable, claims must be submitted on the liquidator's proof of claim form unless the liquidator grants an exception. Therefore, one approach to the claims filing process for reinsurers would be to allow for claims to be submitted in any format acceptable to the receiver; if the receiver (or the court) agrees, a claim would not have to be submitted on a proof of claim form.

To the extent omnibus proof of claims by reinsurers/intermediaries are allowed under your state's law, another consideration to expedite the filing of certain types of claims would be to allow reinsurers/intermediaries to file "place holder" claims, like those of guaranty associations, whereby the reinsurers/intermediaries timely file claims but are permitted to supplement their claims as additional information becomes available later in the receivership process. When appropriate, deem filing practices would be allowed for certain claims in receiverships. Generally, such orders are only sought in situations involving claims for which adequate claims documentation/proof exists within the records of the insolvent insurer.

*Receiver's Handbook for Insurance Company Insolvencies***III. NOTICE**

Once a receivership order has been entered, whether it is for rehabilitation or liquidation, one of the first actions taken is to mail notices of the receivership to the company's agents, policyholders/members, reinsurers, and other parties related to the receivership. These notices should contain information regarding the claims processing filing process and references to the receiver's office website. The website should be kept updated with receivership information relevant to interested parties. The receivership website should not only provide information for consumers, but also provide an overview of the current status of the receivership, including past and upcoming deadlines, as well as provide access to court orders relevant to the receivership. To simplify the administration of the website, such information can be provided in the format of a simple table as some receivers' websites already do. Similar receivership notices are also provided to insurance departments of other states where the company is licensed.

Once a claims procedure has been established, the next step is communicating the procedure to all creditors. The receiver should check the domiciliary statute for any applicable time constraints in sending notice.

Ideally, in the case of surety bonds, insureds, their agents, and obligees should be advised of the status of their policies and of the procedures to be followed to make a valid claim. Among other things, the notice typically will inform them of the insurer's insolvency, whether policies have been or will be cancelled, and the procedures for presenting claims. The notice also may be used to describe, in general terms, the anticipated course of the liquidation. Some states require the notice to describe the guaranty association's involvement, if applicable. If a guaranty association is or may be involved, the receiver may want to jointly draft the notice with the association. The receiver should be cognizant of the effect of the receivership on guaranteed renewable and non-cancellable business.

The form of notice should be adapted to the circumstances. The notice may consist of the actual proof of claim form, with appropriate instructions for its use. The notice should identify the rights fixing date and claim filing deadline and its significance. Highlighting the penalty for failing to file by the claim filing deadline may help to avoid problems later. Posting notices, proof of claim forms, and claim filing deadlines on the receiver or estate's website is a best practice.

In multistate receiverships, notices to life insurance policyholders and annuity or investment contract holders should be coordinated with affected guaranty associations through the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA). The receiver also may consider coordinating with the National Conference of Insurance Guaranty Funds (NCIGF) in multistate receiverships on the issuance of notices sent to P/C policyholders. Guaranty associations may request that the receiver include appropriate guaranty association information in the receiver's notice.

**A. Contents: Plain Language**

Most people will be receiving a receivership notice and proof of claim form for the first time. It is important that all forms be written as simply and clearly as possible. When appropriate, bilingual or multilingual notices can be issued.

**B. Service**

For the initial mailing of proofs of claim, receivers may send notices and proofs of claim as claimants are identified or initiate the mailing process once all potential claimants are identified. For ease of reference

*Chapter 5—Claims*

and tracking, proofs may be numbered either before issuance or upon receipt, and a procedure may be implemented for recording the mailing, undelivered return, receipt and processing of all proofs. Notice commonly is given by mail and occasionally by publication. The receiver should be aware that there are constitutional issues with respect to the deprivation of property rights. Specifically, identifiable creditors of the estate, who have a known or reasonably ascertainable address, may be entitled to mailed notice of the proceedings affecting their claim. *Elmco Properties Inc. v. Second National Federal Savings Association*, 94 F. 3d 914 (4th Cir. 1996). (See Chapter 9—Legal Considerations.) Mailing should be done in the manner and form prescribed by the domiciliary receivership statute (e.g., certified, first class, bulk), with appropriate documentation and records to demonstrate issuance, in case a challenge arises later. Publication may be required by law and is advisable for unknown claims. In most cases, the court order establishing a claim filing deadline will also require published notice of the receivership. Refer to applicable statutes or the court order to determine the timing, media, and frequency of published notice.

**Proofs of claim themselves may be issued by mail or through the receiver’s website. A copy of the entire proof of the claim distribution list should be maintained and supported by verification by the individual(s) handling the distribution.**

**IV—CLAIMS PROCESSING**

The receiver should make decisions at the commencement of the liquidation about proof of claim filing requirements and the claim evaluation process. Making these decisions upfront affords timely notice to claimants prior to the expiration of any claim filing deadlines and permits the development of claim forms and procedures consistent with such decisions. Each of these topics are discussed below:

**A. Filing Methods**

State laws typically permit the presentation of claims by a variety of delivery methods, including U.S. mail, personal delivery, or private delivery service. The receiver may also allow claimants to present their claims by facsimile or electronic (i.e., computer) transmission. The receiver should determine in advance whether to require original or electronic signatures, verification under oath, and acceptable forms of supporting documentation—whether actual receipt, postmark, or receipt of delivery to a courier by the claim filing deadline.

State law may provide the receiver with discretion to exempt preexisting claims from the proof of claim requirement. In exercising such discretion, a receiver would notify claimants with pending claims reported prior to the entry of the receivership order that their claims are deemed on file. Upon finalizing such decisions, the receiver should develop clear and timely communication protocols that address the requirements for presenting claims against the estate.

In developing claim filing protocols, the receiver should be cognizant of information-sharing requirements with other stakeholders, such as state insurance regulators, guaranty associations, and reinsurers.

**1. Documenting Receipt of Proofs of Claim**

As noted, the receiver should determine at the outset what constitutes “receipt” of a claim; i.e., whether proofs of claim are considered received on the date they are mailed or on the date they are actually received at the designated address. This determination will affect whether claims are timely filed or late. Documenting the date of receipt of proofs of claim is a critical receivership function that should follow established business protocols.

**2. Guaranty Association Claims**

*Receiver's Handbook for Insurance Company Insolvencies*

The receiver should establish effective communication with the affected guaranty associations at the earliest possible date in the insolvency. (See Section 303 and Section 405 of Model #555.) This is the essential first step to efficient referral of claims to the appropriate associations. After claims have been referred to the guaranty associations, claimant inquiries can be directed to the appropriate guaranty association or claim handler. The receiver may also need to monitor claims where more than one guaranty association is involved. If guaranty associations are unable to commence claim payments shortly after the liquidation date of the insolvent insurer, the receiver may want to establish a transitional prepayment plan for hardship categories, such as workers' compensation claims, pharmacy benefits, or impounded automobiles. Such payments may be appropriate for subsequent treatment as early access distributions to or direct reimbursement by affected guaranty associations. See Section 802(D) of Model #555. (Note: Section 802(D) of Model #555 relates specifically to workers' compensation payments in P/C cases). In the case of a life and health multistate insolvency, such payments may be used to provide funding to support assumption transfers of business or to provide initial funding for covered claims. In either event, the funding would be considered early access in accordance with Section 803 of Model #555. The referral of a claim to a guaranty association does not terminate the receiver's involvement with the claim. The receivership estate may have responsibility for claims that are excluded from guaranty association coverage or for portions of claims that exceed the applicable guaranty association coverage limit. A collaborative approach to the resolution of such claims between the receiver and guaranty association should be considered. Where guaranty associations administer covered claims, it is also critical for the receiver and guaranty association to coordinate information sharing so that the receiver is able to notify, cede, and recover losses from reinsurers. Many state laws exempt guaranty associations from proof of claim requirements and claim filing deadlines. Model #555 permits guaranty associations to file a single omnibus proof of claim for all claims of the association, which may be updated periodically without regard to the claim filing deadline. (See Section 702(D) of Model #555.)

**B. Proof of Claim Evaluation**

This section outlines the general steps a receiver usually takes when reviewing claims filed against an insurer. It also identifies policy or administrative questions the receiver should consider at the beginning of the claims evaluation process. Model #555 provides that the liquidator may adopt, with the approval of the receivership court, procedures for the review, determination, and appeal of claims that will be preliminary to review by the receivership court. (See Section 707(A) of Model #555).

Prompt and efficient resolution of claims should be management priorities for the receiver. Model #555 provides that the liquidator shall review all duly filed claims and shall further investigate as the liquidator considers necessary. However, a liquidator is not required to process claims for any class until it appears reasonably likely that assets will be available for a distribution to that class. (See Section 703(A) of Model #555). If there are insufficient assets to justify processing all claims for any class, then the liquidator shall report the facts to the receivership court and make appropriate recommendations for handling the remainder of the claims. (See Section 703(K) of Model #555.) The liquidator may allow, disallow, or compromise claims that will be recommended to the receivership court unless the liquidator is required by law to accept the claims as settled. (See Section 703(A) of Model #555).

The receiver should manage the claim staff to achieve these goals. To the extent that the ultimate claim resolution is dependent upon the outcome of a guaranty association's claim administration, the receiver should consider coordinating with the applicable guaranty association on ultimate claim resolution when closure of the receivership estate is in view.

Completion of the claims evaluation process will enable the receiver to effectuate distributions to policyholders and creditors; generate insurance recoverables; and resolve subrogation and salvage, coordination of benefits, and loss-sensitive underwriting recoveries. The receiver in a health insurance insolvency should evaluate coordination of benefits owed from other parties, as well as

*Chapter 5—Claims*

subrogation recoverables. Inquiries to be made include whether collateral is being held by the creditor in connection with the claim and whether there are other third parties who may be pursued, such as indemnitors. Proof of claim forms can be a source of such information.

Receivers and guaranty associations may need to coordinate on entitlement to collect and retain salvage and subrogation recoveries. The decision in *Cal. Ins. Guarantee Ass'n v. Superior Court*, 64 Cal. App. 4th 219, 220-21 (Ct. App. 1998) resolved whether the receiver or the California Insurance Guarantee Association (CIGA) was entitled to the sums CIGA recovered through subrogation actions after it had paid covered claims. The Court held that to the extent CIGA pays covered claims, it was entitled to retain the amounts it recovers through subrogation actions. Conversely, to the extent CIGA pays covered claims with “early access distributions” or other assets from the insolvent insurer’s estate, the estate is entitled to proceeds of any subrogation action. *Id.* at 229. In instances where pre-receivership payments were made by the insurer prior to guaranty association assumption of a claim, those payments typically constitute subrogation of the receivership estate under state law. In the case of surety claims, the receiver will need to review the underwriting file to determine subrogation or salvage potential and the identity of any third-party indemnitors. The estate should notify third-party indemnitors and solicit their involvement and support in settling the claims. Failure to properly and timely notify third-party indemnitors can result in the loss of indemnification through failure to give the indemnitor reasonable opportunity to minimize loss.

#### 1. Review of Timely Filed Claims

Timely filing of a proof of claim may determine whether a claimant receives priority payment and, if so, at what level of priority. The receiver accordingly must determine whether each claim is timely filed.

Determinations of timeliness are made with reference to the claim filing deadline and the receipt or postmark rule. Claims received thereafter are categorized as late and subordinated in priority under state law. State law may provide a limited exception to the claim filing deadline for late claims. The receiver should review the applicable state law to determine whether a claim qualifies under the limited exception. (See Section 801 of Model #555.) For example, in some states, a late-filed claim may be a deemed timely filed claim if the claimant can show that they were entitled by virtue of an open claim on the books and records of the company to receive actual notice of the receivership and claim filing procedures but was not sent such notice. In one jurisdiction, a court held that the claims filing deadline should not be extended as a remedy for a receiver’s failure to give notice of the appointment of a receiver. (See *In re Liquidation of American Mutual Liability Insurance Company*, 802 N.E.2d 555, (Mass. 2004.)

Although the law on this point is fact-intensive, a receiver may not be able to rely on constructive or published notice in circumstances where the existence of a claim was contained in the insurer’s books and records.

Other examples of deeming late claims timely may include: 1) creditors who received transfers that were subsequently voided by the receiver or surrendered assets transferred to them; 2) secured creditors whose security was valued below the amount of their claims (Section 701(B) of Model #555); and 3) reinsurers whose reinsurance contract is terminated by the liquidation, giving rise to a termination claim under Section 701(C) of Model #555.

- Post-Deadline Maturity of Timely Filed Claims

Certain timely filed claims may not be absolute for a variety of reasons. The receiver may request the Court to set an absolute, or final, or contingent claim deadline, by which timely filed claims must be made absolute or fixed. Claims not made absolute, liquidated or mature by that deadline are date would be denied.

*Receiver's Handbook for Insurance Company Insolvencies*

## 2. Review as to Form

- Policyholder Protection Claims

Some jurisdictions permit policyholder protection claims by first party insureds for claims that are incurred but unreported or not known at the time of the claim filing deadline. Such claims may be allowed if they are amended or supplemented consistent with statutory or judicial rules and procedures. The receiver should consult applicable law to determine whether to allow such claims. Other states expressly prohibit policyholder protection claims. (See Chapter 9—Legal Considerations.) Statutes in some states either provide expressly, or courts have decided, that such claims may be allowed. Absent such guidance, some receivers require that the initial proof of claim be specific and may not be amended in any material respect after the claim deadline expires. Other receivers allow proof of claim amendments of all types until assets are distributed. Receivers should consult their local statutes and applicable court decisions on this issue.

- Contingent Claims

Most states provide for the filing of contingent claims by first-party insureds, subject to an additional deadline for liquidating such claims. Contingent claims may be allowed if the claim is liquidated and the insured presents evidence of payment of the claim on or before the contingent claim filing deadline established by the Court. A contingent claim is a known loss or occurrence that is presented by an insured prior to the entry of a judgment or a determination of the insured's liability. Contingent claims do not include, and should be distinguished from, claims presented by third parties where liability or damages had not been established prior to the filing of the claim. (See Section 705 of Model #555.)

Model #555 and most state laws provide third-party claimants with a direct right to file claims with the liquidator prior to the expiration of the claim filing deadline. (See Section 706 of Model #555.) In such instances, an insured may also file a contingent claim for the same occurrence raised by the third party. Section 706 of Model #555 provides that the liquidator may make recommendations to the receivership court for the amount allowable on insured/third-party claims, basing this recommendation on the probable outcome of third-party claims against the insured. But distributions will be withheld and reserved pending the outcome of such a dispute or litigation between the insured and the third party. When the third-party claim is resolved, the reserved distribution will be paid to the insured or third-party claimant, as appropriate, and any excess amount reserved will be redistributed pro rata to other claimants in the receivership.

Section 706 of Model #555 provides a procedure for resolving multiple claims filed by different parties against an insured that may exceed policy limits. In the case of multiple claims and irrespective of the Model #555 provisions, it is imperative to apportion the varying claims without preference to the policy proceeds, and it is important to file for claim approvals with the receivership court before any claims are paid under the insurance policy. The receivership court claim approvals should be filed with due and proper notice to all parties that may be affected by such claim payments. It is recommended that defense costs be paid pro rata, even before all claims have been resolved and settled against a policy, provided that proper notice is sent to all affected and interested parties.

Section 706 of Model #555 provides that the third-party claimant waives certain rights against the insured by filing a claim against the liquidator for the insured's insurance policy benefits, but the waiver will be ineffective if the claimant withdraws the claim or the liquidator avoids insurance coverage.

*Chapter 5—Claims*

- Amendment and Supplement of Claim Information

Amendment and supplement of information supporting a previously asserted timely filed claim can assist the receiver in the disposition of a claim that was contingent, unliquidated, or immature at the time of its filing. Consistent with the applicable statutory requirements, the receiver may determine the types of amendment or supplement that will be allowed. Amendments may include, but are not limited to, correcting or updating the amount, correcting technical defects, and providing sufficient documentation supporting payments or damages. Some states may allow insureds to file contingent claims that include reasonable attorneys' fees for services rendered after the date of receivership in defense of approved claims, provided the insured has actually paid the fees and evidence of payment is presented prior to applicable deadlines established by the Court or before assets are distributed.

- Assumed Reinsurance Claims

As for the policies of a P/C insurer, the liability for claims that a P/C reinsurer has assumed generally are limited to those arising out of reinsured events that occurred on or before the liquidation date (unless the court or statute directs otherwise). A receiver should decide at the beginning of the receivership how to evaluate the claims of ceding companies under reinsurance contracts. This decision will dictate the form of notice to ceding companies and the form of the proof or documentation cedents must use to file claims against the insurer. The receiver may opt to let the insurer's assumed reinsurance business run off and have cedents file their current claims against the insurer, allowing the cedents to amend their claims from time to time.

Another option that receivers have proposed is to require all ceding companies to file a proof of claim against the insurer as of the date of the receivership order (or a reasonably close date) for all reported and unreported losses. Under this alternative, the receiver takes a snapshot at the fixing date. Paid losses are recognized as reported if covered under the reinsurance contract. Outstanding claim reserves and incurred but not reported (IBNR) claims reserves are actuarially calculated and discounted to present value. This method allows the receiver to evaluate cedents' claims at an earlier stage in the receivership. Because the receiver will want to employ consistent evaluation methods for all claims that include IBNR, the proof of claim form may require that the claimant report the basis for the IBNR calculation. It is important for the receiver to determine the existence and extent of retrocessional reinsurance that might be available to cover assumed claims. This reinsurance can represent a significant asset of the estate. (See Section 3(b).)

- Claims Under Occurrence Policies Under the *Insurer Receivership Model Act*

Model #555 provides insureds the right to file a claim for the protection afforded under the insured's policy, irrespective of whether a claim is then known or if the policy is an occurrence policy. Further, any obligee shall have the right to file a claim for the protection afforded under a surety bond or a surety undertaking issued by the insurer as to which the obligee is the beneficiary, irrespective of whether a claim is then known. When a specific claim is made by or against the insured or by the obligee, the insured or the obligee shall supplement the claim, and the receiver shall treat the claim as a contingent or unliquidated claim. (See Section 704 of Model #555.)

Having concluded that a proof of claim was timely filed (or properly amended), the receiver should next review the claim to determine if all required information has been provided and if the form has been completed in accordance with the applicable instructions. Model #555 provides that the liquidator need not review or adjudicate any claims that do not contain all applicable information and may deny or disallow any such claims (subject to notice). (See Section 703(I) of Model #555.)

*Receiver's Handbook for Insurance Company Insolvencies*

If additional information is required, the receiver should specify a deadline for its submission, advising that the claim will be denied if the information is not submitted by that date. Review of applicable statutes for guidance on this point is suggested.

### 3. Review of Claims Based on Contract Provisions

The next step in the review process often consists of a substantive review of the claim. Here the receiver determines whether the claim may be allowed on its merits. This section presumes that the receiver has claim files to review (i.e., that the files are not in the possession of a guaranty association). The initial issue is the review of coverage: Is the claimed loss covered under the terms and conditions of the insurer's policy or contract, or is it excluded from coverage? The issue is resolved by referring to the policy or contract, the insurer's claims manuals, and underwriting files.

- Policyholder Claims

The starting point in the review of any policy claim filed against an insurer is the insurance policy or contract. The receiver treats the claim as if the insurer were reviewing it in the normal course of business prior to receivership. The receivership process and the procedures required by the receivership statutes and court are not a substitute for the sort of policy examination and initial claim review that the insurer followed before receivership.

The receiver first determines whether the policy was in force at the time of the loss. If not, the receiver will ascertain why the policy was not in force. Did the policy expire because of the insured's failure to pay premium? Did the term of the policy expire prior to the loss? If the insurer or insured cancelled the policy before receivership, the receiver must decide whether the applicable statutory or contractual procedures for cancellation were satisfied. The receiver also must determine whether the loss occurred before any cancellation of the policy by court order or by operation of law as a result of entry of the order of receivership. In the case of surety bonds, the receiver needs to determine that the bond was in force at the time of the occurrence upon which the claim is predicated. The receiver should be aware that some bond forms cover events that may have occurred prior to issuance of the bond, as well as during the term of the bond. In addition, the receiver will need to determine whether the obligee (claimant) has adequately discharged its obligations under the contract to both principal and surety in such a fashion as not to have prejudiced the surety's position.

Next, the receiver reviews the terms of the policy to ascertain whether the claim is within the scope and limits of coverage of the policy and not otherwise excluded. Model #555 provides that no claim shall be allowed in excess of the applicable policy limits or otherwise, beyond or contrary to the coverage provided. (See Section 703(A) of Model #555.)

In the case of a policy with aggregate limits, the receiver should determine how many claims have been filed against the policy and whether the aggregate limit has been exhausted. (See Section 706(D) of Model #555). If guaranty associations are paying claims under the policies, they should be notified of the extent to which the aggregate limit has been eroded. The receiver also will want to determine if the policy's terms provide procedural defenses to the claim, such as late notice, lack of cooperation, coinsurance, or coordination of benefit provisions (e.g., in a health insurance policy).

The insurance policies under which the claims arise must be read in conjunction with the insolvent insurer's reinsurance agreements. A reinsurer's obligation to pay may only be triggered if the claims under a policy exceed a specified retention point. In some instances, the retention point may only be met if claims under a policy can be characterized as a "single incident" under the terms of the reinsurance agreement. The receiver must determine when claims under a policy constitute a single incident for reinsurance recovery purposes. As the reinsurer may argue that the claims at issue involve multiple incidents, the receiver should carefully review case law from the applicable jurisdiction when making this determination.

*Chapter 5—Claims*

In the case of claims under policies of life insurance, the receiver should be sensitive to contestability issues. For example, some claims may be contestable because of misrepresentations contained in the policy application. Suicide claims may not be payable if the death occurred within the policy's contestable period, typically two years. In the case of A&H claims, the receiver should be alert to preexisting conditions that might render a policy claim void. Other areas to watch for are work-related claims that could be covered under a workers' compensation policy or claims resulting from automobile accidents that could be covered by the insured's auto policy.

Model #555 provides that a judgment or order against an insured or insurer entered after the date of the initial filing of a successful petition for receivership, or within 120 days before the initial filing of the petition, and a judgment or order against an insured or the insurer entered at any time by default or by collusion need not be considered as evidence of liability of the amount of damages. (See Section 703(E) of Model #555.)

- Assumed Reinsurance Claims

Most states accord cedent claims the same priority as claims of general creditors. (See Chapter 9—Legal Considerations.) In cases where there are insufficient assets to satisfy all policyholders' claims, the receiver should determine whether a review of general creditor claims is necessary. If it appears that the insurer's assets will cover only a portion of policyholder priority claims, there may be no need to evaluate general creditor claims unless the insolvent company has retroceded a portion of its reinsurance business. In such case, the receiver will need to evaluate and fix the amount of all or at least certain ceding company claims in order to pursue available reinsurance recoverables.

Assuming reinsurance recoverables are available or that assets are available to distribute to general creditors, the receiver will review all such claims. Review of the individual reinsurance contract ensures that the reinsurance contract covers the claim being asserted. The receiver should verify that the contract was in force at the time of the receivership, because the cedent and the insurer may have entered into a commutation agreement terminating the reinsurance agreement or some other agreement that establishes the rights of the parties (such as a novation, loss portfolio transfer, assumption, assignment, or settlement). If so, then the receiver should determine whether the commutation should be honored or whether there is some basis for setting it aside (such as the creation of a voidable preference). If the commutation is determined to be valid, no other claims should be allowed against the insurer under that reinsurance agreement.

As with a direct policy claim, the receiver should determine whether reinsurance claims are covered, proper notice of the claim was provided, and premium and other amounts due under the reinsurance contract have been paid. The receiver should also offset claims due from the cedent (e.g., for unpaid premium, salvage, etc.).

- Certain Other Types of Contracts

The receiver may need to review the terms of the employment contracts with directors, officers or other individuals. Model #555 provides that claims under employment contracts should be limited to payment for services rendered prior to the receivership order unless explicitly approved in writing by the commissioner prior to receivership or by the receiver post-receivership. (See Section 703(F) of Model #555.) The receiver also should carefully review the terms of all leases. Model #555 provides that the claim of a lessor for termination of a lease shall be disallowed to the extent the claim exceeds the rent reserved by the lease (without acceleration) for the greater of one year, or 15% (not to exceed three years) of the remaining term of the lease following either the date of the filing of the petition or

*Receiver's Handbook for Insurance Company Insolvencies*

the date of repossession or surrender of the leased property (whichever comes first), plus any unpaid rent due. (See Section 703(L) of Model #555.)

The receiver also should carefully review the terms of all netting agreements or qualified financial contracts (QFCs). Model #555 provides suggestions for the receiver as to how to deal with these types of contracts. (See Section 711 of Model #555.)

#### 4. Review of Guaranty Association Claims

When a receivership triggers guaranty association coverage, the receiver should coordinate the approval and disapproval of claims with the guaranty association(s). Consulting the applicable statutes may enable the receiver to determine whether guaranty association payments bind the receiver. Coordination affects, among other things, the amount recovered under the insurer's reinsurance treaties or reinsurance agreements.

The receiver should establish appropriate procedures at the beginning of the receivership in order to accommodate guaranty association claims. For example, receivers often allow guaranty associations to file an omnibus proof of claim form that can be amended from time to time. Typically, the receiver's forms for guaranty associations will include sections asking the guaranty association to segregate its claim by administrative expenses, allocated and unallocated loss adjustment expenses (LAEs), unearned premium payments, and policy loss payments. The receiver should review the guaranty association's claim for validity of liability and reasonableness of amount claimed. The receiver should be cognizant of the operational differences between life/health guaranty associations and P/C guaranty associations. P/C guaranty association claims are typically related to terminated policies, whereas life/health guaranty associations obligations can also include claims related to the continuation of benefits under the insolvent insurer's contracts.

Life/health guaranty associations may satisfy coverage obligations by transferring those obligations to a different insurer through an assumption reinsurance agreement negotiated by the NOLHGA or through ongoing administration of policies and claims in run-off where assumption reinsurance is not available. Consequently, the nature of the claims and expenses incurred by life/health guaranty associations can differ from the claims and expenses of P/C guaranty associations. In addition, life/health guaranty associations have statutory and subrogation claims to assets of the insolvent insurer to assist the association in satisfying its obligations. Early access agreements frequently permit the receiver to audit the guaranty association's records concerning the association's handling of claims.

The level of scrutiny given to a guaranty association claim depends on the circumstances. When the guaranty association provides complete coverage for affected policyholders, the receiver in cooperation with guaranty associations may wish to so notify policyholders (or have the associations do so) and thereafter deal only with the omnibus proof of claim filed by the association. Most state guaranty association statutes provide that a guaranty association's adjustment of covered claims usually binds the receiver, up to the amount the guaranty association has allowed, subject to statutory limitations. Although Section 703(A) of Model #555 obligates the liquidator to accept claims as settled by a guaranty association when required by law, it prohibits the allowance of any claim in excess of the policy limits or contrary to the coverage provided under the terms of the insurance policy.

In other situations, limitations on guaranty association coverage—including caps, crediting rate limits, copayments, deductibles and net worth—may make it necessary for the receiver to undertake a separate review of claims. The receiver should keep accurate records for, and coordinate with, all affected guaranty associations concerning the tracking of per-occurrence and aggregate limits of coverage under policies where there are multiple claims and claimants. Coordination with guaranty associations is essential.

*Chapter 5—Claims*

Claims covered by guaranty associations may be reinsured. It is important for the guaranty associations to report development on these claims so that reinsurance notice requirements can be met. Lack of reporting can hinder the collection of reinsurance recoverables. Because guaranty associations ultimately benefit from reinsurance collection, the receiver and the guaranty associations have a common interest in collaboration.

#### 5. Review Claimant Standing

A claimant's standing to file a particular claim against a receivership estate should also be reviewed by the receiver. Model #555 provides that with respect to claims of co-debtors, if a creditor does not timely file a proof of the creditor's claim, then an entity that is liable to the creditor together with the insurer (or that has secured the creditor) may file a proof of the claim. (See Section 709 of Model #555.)

### C. Claims Valuation

All claims should be assigned a value for allowance. In general, the determination of a claim's value is subject to the contractual agreement under which it arose and any statutory limitations. However, the receiver may be inhibited by statute from valuing claims in the same manner as the insurer did before receivership. In a typical surety insolvency, for example, the receiver and the receiver's legal counsel may face myriad issues as to what must have occurred prior to the fixing date for the bond claimant to pursue a claim in the receivership (e.g., how the bond claim is to be valued when the receivership order has interrupted the normal surety repair/completion of a bond principal's default, etc.). Model #555 permits the liquidator to apply to the receivership court for approval to disallow *de minimis* claims. A *de minimis* amount shall be any amount equal to or less than a maximum *de minimis* amount approved by the receivership court as being reasonable and necessary for administrative convenience. (See Section 703(H) of Model #555.)

#### 1. Secured Claims

Generally, the value of security held by secured creditors can be determined by converting the security into money according to the terms of the security agreement, by agreement with the receiver or by the supervising court. Model #555 allows the value of security to alternatively be determined by agreement or litigation between the creditor and the liquidator. (See Section 710(A) of Model #555.) The value of the security is then credited against the claim. Valuation of secured claims may affect the overall recovery and distribution of assets to the other creditors of the estate. Model #555 provides that the claimant may file a proof of claim for any deficiency, which shall be treated as an unsecured claim. If the claimant surrenders the security to the liquidator, the entire claim must be treated as unsecured. The liquidator may recover from property securing an allowed secured claim, the reasonable, necessary costs and expenses of preserving, or disposing of, the property to the extent of any benefit to the holder of such claim. (See Section 710(C) and (D) of Model #555.)

A receiver should proceed with caution when valuing secured claims. The value of the security may be overstated on the books and records of the insolvent insurer.

#### 2. Claims Estimation

The long-tail nature of certain claims, such as workers' compensation or mass tort, in a P/C receivership can present special issues for receivers. Under some rehabilitation plans, claims may be permitted to develop in a normal fashion. In other rehabilitation proceedings and almost all liquidation proceedings, however, the receiver may be ready to distribute assets before all claims are fully developed. In addition to the typical issues of coverage, liability, and damages, the receiver should have a plan for valuing long-tail claims that complies with applicable state law.

Before a claim may be allowed, the receiver needs timely and accurate evidence:

*Receiver's Handbook for Insurance Company Insolvencies*

- That the policyholder has, in fact, sustained a loss within the coverage of a valid policy and in a specific or determinable amount. The receiver evaluates the merits of the underlying claim. Under many states' statutes, a judgment against the policyholder entered after (and, in some states, even before) the date of liquidation may not be binding evidence of either liability or the amount of the loss. Nor does an insured's settlement bind the receiver, unless the insured can demonstrate that it is both bona fide and fair to the insurer as well as the insured. Collusive or side agreements between the insured and one or more of the claimants, consent judgments, and covenants not to execute should be reviewed to determine whether the judgment or settlement is reasonable.
- That a third party has asserted and proven a claim against the policyholder on a timely basis, in an amount that can be reasonably determined. Again, judgments should be evaluated by the receiver for reasonableness. Each claim must be evaluated on its merits.

Some claims will fail to meet the requirements for proof and liquidation set out above, even though, were it not for the receivership's requirements, the claims would eventually have matured into enforceable claims. Late-maturing and even "contingent" claims are nevertheless an important component of the company's liabilities, both because of the significance of the claims themselves and because, when allowed, late claims may generate reinsurance recoverables for the estate.

- The receiver's flexibility in dealing with late-maturing claims may be limited by statute. Nevertheless, a procedure to deal with late-maturing claims should be developed in any estate involving long-tail exposures or where reinsurance recoveries are a consideration. The methodology used by the receiver will depend upon the individual estate, applicable state law, and the nature of the claims and the records available. A number of alternative approaches are available to the receiver:
  - The receiver might deny all claims that have not matured within a specific period after entry of the liquidation order. This "cut-off" approach may be appropriate where the insolvent insurer wrote simple, short-tail business or where the estate has few assets and recoverables. However, if the insolvent insurer wrote more complex business with a longer tail, the cut-off approach may defeat policyholder expectations and limit the receiver's right to collect from reinsurers.
  - Extensions of a claim filing deadline may ameliorate, but not eliminate, the risk that a policyholder with a legitimate claim will be left without a remedy. It sometimes helps and may be statutorily required to establish a second claim filing deadline, prior to any distribution to stockholders, in order to afford late claims an opportunity for recovery. Where permitted by state law, some receivers have obtained approval for plans under which a claim deadline is extended and policyholder claims are allowed for distribution as they mature. This "run-off" approach may delay the distribution of assets and/or closure of the estate.
  - Model #555 provides that a claim that is not mature as of the coverage termination date may be allowed as if it were mature, except it shall be discounted to present value. (See Section 703(D) of Model #555.)
  - The receiver should determine whether the law in the domiciliary state would allow a plan to estimate and pay claims pro rata. While some states' receivership statutes (e.g., Illinois, Missouri, and Utah) expressly permit the estimation of policyholder claims, receivers in other jurisdictions might seek receivership court approval for a claims estimation plan with proper notice to interested parties. Case law that allows for claims estimation when a state statute permits estimation for the payment of

*Chapter 5—Claims*

claims or recovery of reinsurance proceeds includes *Angoff v. Holland-America Ins. Co.*, 937 S.W.2d 213 (1996), providing that “the Missouri insolvency statutes grant the receiver considerable discretion in evaluating the determining claims by estimation using actuarial evaluation or other accepted methods of valuing claims with reasonable certainty, including determinations for IBNR losses to the extent that those types of claims can be determined with reasonable certainty.” State law may provide that estimated contingent claims may be allowed, but at a lower priority level than non-estimated claims (e.g., Illinois). Case law in another state provides that the receiver should not pay receivership distributions based on actuarial estimates of claims. See *In re Liquidation of Integrity Ins. Co.*, 2006 WL 2795343 (N.J. Super. A.D.). (The court rejected the holding in the *Holland-America Insurance Company* case that permitted claims estimation because it was based on Missouri statute, whereas New Jersey had no such provision.)

Assuming that a claim estimation plan is in accord with state law, the receiver should be aware of the following:

- Some state statutes have been amended to address the handling of contingent and unliquidated claims by providing an opportunity for estimation of contingent claims without lowering the priority of distribution of the claim. These few state statutes specifically allow for the estimation of claims, but some (e.g., Illinois) provide a separate priority of distribution level for holders of such allowed claims.
- Another approach to estimation assumes that each policyholder is assigned a case reserve established in the policyholder’s name and a proportionate share of the total projected IBNR. Although largely untested in this country, this technique has worked well in other countries in the liquidation of reinsurers.
- Even if IBNR estimations are acceptable for purposes of distribution from the estate, estimation may not be a valid basis for recovering reinsurance. (See Section 611(I) of Model #555.)
- . Claims in a Life/Health Insolvency

Few receivership statutes directly address the issue of valuing life and annuity claims, but there is a well-developed body of case law on the subject. In any event, it often will be necessary to assess the type of policyholder claims at issue to evaluate whether groups of policyholders are being fairly treated in any rehabilitation, liquidation, or assumption reinsurance transaction.

- Mature Claims

Life insurance claims have the advantage that, in most cases, the condition precedent to claim liability is fairly clear: The policyholder is either alive on the relevant date or not. If the events triggering the insurer’s obligation to pay on a life policy have occurred on or before the fixing date, then the receiver’s claims process is substantially similar to that of a going concern, centering on proof of death, premium and cash value accounting, and beneficiary designation. Immediate annuities present slightly different problems, but essentially the claim of the owner of such an annuity ought to be the present value of the future stream of payments.

- Immature Claims

Challenges can arise in connection with policies for which the principal liability-creating event has not yet occurred at liquidation. Few such claims would be considered contingent

*Receiver's Handbook for Insurance Company Insolvencies*

because the policyholder usually has significant rights at the liquidation date, including surrender rights or rights to unearned premium. Court decisions, going back to the early 1800s and ending in the 1940s as the assumption/guaranty system developed, support the allowance of claims based on these immature policies in the amount of a fairly adjusted reserve, or alternatively in the amount of the difference between premiums expected to be paid in the future and claims expected to be recovered by the policyholder—all discounted to present value.

In evaluating policyholder claims against life insurers, the receiver should look at the company's own reserves, after suitable investigation, to quantify individual policy claims. These reserves will typically equal or exceed cash or surrender value on the policies. Cash or surrender value, being the sum that the policyholder could obtain at any given moment from a solvent insurer, is usually the largest component of such a reserve and establishes a minimum number for the receiver's valuation. Other policy features are usually captured in the company reserves as well, including special premium considerations, renewal commitments, advantageous mortality charges, and above-market crediting rates. Annuity contracts may have features that affect the actual value of the contract. There may be a cash value, an account value, a surrender value, or other valuations used by the company to represent the amount payable to a claimant at a given point. Also, tax consequences may be incurred by a contract holder if their tax-qualified retirement contract is paid out and not rolled over into a qualifying contract within the time allowed by the IRS.

On the other hand, statutory reserves usually do not reflect the likelihood that some policyholders, had the insurer continued in business, would have permitted their policies to lapse. One approach to lapse issues would be to consider that because lapse is an election completely within the control of the policyholder, it would not be appropriate to reduce the claim in respect of an election that, at the date of liquidation, the policyholder had not made. Other analyses, however, are also possible.

In a life/health receivership, the receiver will frequently conclude that traditional proofs of claim are either unnecessary or irrelevant. The company's records often form a better base for a claim valuation than anything the policyholder could construct. The actuarial techniques that ought to be employed in the valuation are outside the competence of most policyholders. Finally, application of a single actuarial method to all claims will permit them to be evaluated on a consistent basis. Part or all of the policyholder claims arising from life insurance policies and annuity contracts will be covered by guaranty associations. State guaranty association statutes typically require a pro rata distribution of receivership assets to guaranty associations based upon the reserves that should have been established for the covered policies. In addition, guaranty associations may have other creditor rights. Accordingly, the receiver should coordinate with the affected guaranty associations as to valuation issues.

**D. Notice of Claims Determinations**

Once the receiver has completed the review of proofs of claim, the claimants should be advised of their claim determinations. In some states, the receiver will not send a determination letter if the claim has been resolved by a guaranty association. Some receivers merely file with the supervising court a report or recommendations as to the allowance or disallowance of each claim and require claimants to file any objections with the court. Other receivers give claimants notice and an opportunity to object before reporting to the court. As discussed below, Section 703(B) of Model #555 follows this procedure. If the latter procedure is used, notice of the full or partial allowance of a claim should inform the claimant of the amount that the receiver will recommend to the supervising court for adjudication and the class of the claim for priority of distribution purposes.

*Chapter 5—Claims*

In the case of the partial or total disallowance of a claim, the notice should state the reason for the disallowance and inform the claimant of the amount of time (specified by statute or court order) that the claimant has to object to the determination. Many states provide that claimants be given 60 days from the date the notice was mailed to submit written objections to the receiver. Model #555 provides 45 days. (See Section 703(C) of Model #555). Model #555 allows the liquidator to accelerate the allowance of claims by obtaining waivers of objections. (See Section 703(C) of Model #555.) Model #555 also provides that preliminary notice of the amount of the claim determination may be given to any reinsurer that is or may be liable with respect to the claim at least 45 days before the notice is given to the claimant. If the reinsurer does not object to the claim determination, it is bound by the determination. (See Section 703(B) of Model #555.) Advance notice to reinsurers may not be practical under some circumstances, such as where the case is settled at mediation on the eve of trial or where the reinsurer has expressed disinterest in the claim determination because it intends to dispute liability. Notice to a reinsurer can help establish proper documentation when a reinsurer denies having been notified of the loss.

Once an objection is received, the receiver should consider whether the determination should be altered before proceeding to a court hearing on the objection. Model #555 provides that whenever objections to the liquidator's proposed treatment of a claim are filed, and the liquidator does not alter the determination of the claim as a result of the objections, the liquidator shall ask the receivership court for a hearing. (See Section 707(B) of Model #555). However, there is case law supporting the proposition that the commissioner may not have a statutory obligation to provide claimants a formal hearing when determining a claim (*Garamendi v. Golden Eagle Insurance Company*, 128 Cal. App. 4th 452, 27 Cal. Rptr. 3d 239 (Cal. Ct. App. Dist. 1. Div. 1. 2005)). Because it may be cost-prohibitive to have hearings on every claim objection, the receiver may settle or otherwise resolve an objection without the need for a hearing. The procedures for hearings on claim objections are discussed further below.

Prior to the court's approval, the receiver may revise the determination. This enables the receiver to correct any errors that were made and to amend the determination in light of any subsequently provided information or negotiations. The receiver should remind the claimant to advise the receiver of any change of address or the information provided in the proof of claim. Naturally, if the receiver changes an initial denial of a claim to an allowance or partial allowance determination, the receiver should notify the claimant of the amended determination.

In addition to policy claimants, the receiver should give notice of claim determinations to other directly affected persons, such as reinsurers. (The reinsurance contract contemplates the reinsurer receiving notice and an opportunity to participate prior to the court approving the claim.) The receiver should pay particular attention to the requirements contained in the insolvency clauses of applicable reinsurance agreements. Similarly, if the insurer underwrote surety bonds (such as contract performance or payment bonds), then the receiver will want to provide notice of the determination to indemnitors of the bonds, any collateral depositors, and the bond principal. Notice will enable the receiver to obtain any information those persons have with respect to the claim and will put them on notice that the receiver may be looking to their collateral or indemnification agreements for reimbursement of the insurer's liability under the bond. If not established by statute, the receiver should set a deadline for the claimant to respond to the claim determination. If a timely response is not received, the claim determination should become final, subject to court adjudication.

**E. Judicial Review of the Receiver's Claims Determinations**

Depending upon the degree of oversight exercised by the supervising court, the receiver may be expected to account to the court for all claims processed. Model #555 provides that the liquidator shall present reports of claims settled or determined by the liquidator to the receivership court for approval. The reports will be presented from time to time as determined by the liquidator and shall include information identifying the claim and the amount and priority of the claim. (See Section 708 of Model #555.) After the receiver makes the claims determinations, those decisions may be presented to the supervising court in the form of a recommendation for allowance or disallowance, in whole or part. This next section outlines

*Receiver's Handbook for Insurance Company Insolvencies*

the procedural steps that may be taken in making, filing, and presenting recommendations for final court approval.

### 1. Documenting the Recommendation

The first step is to make sure that claims determinations have been properly documented. The receiver may want to have a separate file for each claim filed in the receivership, containing the proof of claim and other relevant information. Files may be organized numerically either on a date of loss or policy basis. A status sheet or checklist may be attached at the front of each file detailing the status of the claim, including the recommendation to allow or disallow the claim, the priority of the claim, status of reinsurance, and other notes. Information in the status sheet should be entered into an electronic claims system. After the recommendation has been documented, the receiver then presents the claim (depending upon its status) to the court for approval or for a contested hearing, if the claimant filed a timely objection to the receiver's determination.

### 2. Presenting Recommended Approvals to the Supervising Court

The receiver may obtain court approval of recommended claim allowances, or the receiver may obtain advance approval for the payment of claims within a specified claims priority. In the event of advance approval, the receiver may report back to the receivership court if there is uncertainty as to whether claims fall within the approved claims priority class.

If the receiver does not seek advance approval for payment of claims within a creditor class, claims may be presented to the court by listing the claims and amounts approved or, if required, by a full financial accounting. The court usually will enter an order confirming the allowed claims. When the court approves a claim and all possible appeals have been exhausted, the receiver's staff should be notified that the legal action has concluded so that the allowed claims may be placed in line for eventual distribution.

### 3. Review of Recommended Rejections

This section outlines a general procedure for the denial of claims in a receivership. Model #555 provides that disputed claim procedures are not applicable to disputes with respect to coverage determinations by guaranty associations as part of their statutory obligations. (See Section 707(C) of Model #555.) Some states follow the practice of conducting individual hearings on denied or disallowed claims. The receiver's goal is to complete the process as quickly and smoothly as possible. The receiver may use in-house counsel or retain outside counsel to handle hearings, depending upon the complexity of the receivership and the disputed claims. The receiver should consider the potential expense involved in contested claims proceedings in deciding whether to force a hearing or pursue settlement or arbitration.

The claims hearing process begins when the receiver files a notice with the supervising court and notifies the claimant and other directly affected persons. Various courts require different notices, and legal counsel should be consulted to assure that the receiver is following the correct procedure. Usually, the notice sets forth: 1) the time and date of the hearing; 2) the procedure to be followed at the hearing; 3) the amount claimed; 4) the relevant priority status of the disputed claim(s); 5) the reason for the denial or priority status assigned; and 6) whether an objection was filed. In some instances, due to the volume of claims, a special master may be appointed to hear the disputed claims rather than the judge of the supervising court. If a special master is appointed, the parties should meet as soon as practicable to establish the exact procedure to be followed. The receiver's staff should work closely with the legal counsel conducting the proceeding.

Assuming all notice requirements have been satisfied and any special procedures have been implemented, claims hearings typically follow a routine procedure. If permitted, multiple hearings should be scheduled at the same time to conserve estate assets and resources. Depending upon the

*Chapter 5—Claims*

complexity of the hearing involved, the receiver's staff and other resources may be needed. The receiver's counsel generally will need testimony from members of the claims staff or the receiver, along with production of relevant records. Expert witnesses also may be required. Receivers should take care to discuss the need for expert witnesses with legal counsel due to the costs involved.

At the close of a claims hearing, the court typically issues a report or decision. Assuming the receiver's recommendation is upheld, the receiver should note the deadline for appeal of the order. If there is an appeal, it is best to complete the appeal process as soon as possible. If the decision is not appealed (or an appeal is concluded), the final order of the court can be entered into the receiver's records, along with any change in claim status. The final disposition by the receivership court of a disputed claim is deemed a final judgment for purposes of appeal. (See Section 707(D) of Model #555.)

#### 4. Arbitration

Judicial review of the receiver's determinations is not always mandatory. Depending upon the nature of the legal right or claim involved and the applicable law, arbitration may be required. Although the arbitration provision contained in a policy or reinsurance agreement may be unenforceable against a receiver (review of applicable law on this point is essential), careful review of these contracts is necessary to determine whether arbitration may benefit the receiver or the estate and, if not, whether arbitration can be avoided. Legal counsel may assist the receiver make this determination. If arbitration is an attractive option or cannot be avoided under applicable law, then the receiver should become familiar with the specifics of the arbitration clause in each contract.

Arbitration is a contract-based proceeding, subject to statutory and case law in the particular jurisdiction whose law may govern the proceeding. Careful review of the agreement with legal counsel is essential. Numerous legal questions arise in the context of arbitration proceedings, and no receiver should enter into arbitration without the assistance of competent counsel. For example, the choice of arbiters can be critical. The receiver may wish to consult with other receivers to identify arbitrators for recommendation. If one party refuses to name an arbiter, however, the other may seek court intervention to facilitate the process.

Section 105(E) of Model #555 recognizes the propriety of arbitration to resolve reinsurance disputes. (See Chapter 7.)

### **F. Establishing Claim Reserves**

Establishing appropriate claim reserves may be just as important to an insurer in receivership as to a solvent company.

#### 1. Why Reserve?

The nature of the receivership will dictate if, how, and when reserves should be established. A rehabilitator is particularly concerned with the company's reserves in assessing the company's prospects for a successful rehabilitation. It may appear that a liquidator should not be concerned with reserves because the insurer usually has been adjudged insolvent, and the liquidator's charge is to adjudicate the claims and close the estate. However, the liquidator will be concerned about reserving from the standpoint of reinsurance claims. Reinsurers need data from which to establish IBNR loss reserves, as well as reserves for existing claims. The receiver's failure to furnish this information on a timely basis may lead reinsurers to attempt to avoid their obligations.

Accordingly, the receiver should determine the reporting requirements established in the insurer's reinsurance contracts and other reserve requirements imposed by the court or by law. Accurate reserve information is equally important for determining the prospects for attracting a potential purchaser or investor and for calculating the availability of assets for early access distributions to

*Receiver's Handbook for Insurance Company Insolvencies*

guaranty associations. It is frequently possible to bring significant assets into the estate of a P/C company by negotiating commutations with reinsurers, but such an effort is difficult without reliable, credible, and current reserves. The receiver also should determine when reserve information must be presented to the court, if at all. And there also may be deadlines imposed as to when reserve information must be submitted. This often is the case where receiver reports must be submitted to the court, guaranty associations, or regulators within a specified period. In other words, it is important for the receiver's staff to know the needs of the different users of reserve information.

Further, it may not be useful to obtain an actuary's estimate of IBNR claims and applicable reserves more than once per calendar year, as there may not be enough new data or developments to change the earlier reserve estimate for IBNR. This also means that to the extent that the receivership's claims payment rate is affected by estimates of IBNR claims, the claims payout rate may not be adjusted more than once per calendar year.

Whether a receiver can use actuarial estimates of IBNR for the purpose of collecting reinsurance proceeds from reinsurers depends upon the applicable statutes and case law. (See *Angoff v. Holland-America Ins. Co.*, 937 S.W.2d 213 (1996); *Quackenbush v. Mission Ins. Co.*, 62 Cal. App. 4th 797 (1998)). In *Holland-America*, claims estimation for reinsurance recoveries was permitted on the basis of a state statute that authorized claims estimation for that purpose. In the *Integrity* and *Quackenbush* cases, claims estimation of future IBNR losses would not be permitted for collection of reinsurance proceeds because, in those cases, the applicable state statutes required that unliquidated or undetermined claims could not share in the assets of the insolvent insurer.

IBNR claims will arise in two contexts, namely: 1) IBNR losses from policyholder protection proof of claims in which the actual claim is unknown and has not been submitted to the receiver; or 2) further IBNR loss development from known claims, but the amount or extent of the future IBNR loss development is unknown. A final bar date by which all claims must be presented should be established so that the estate can determine the universe of claims and wind down its affairs over time, thereby saving the costs of keeping a receivership estate open indefinitely. Although the final claims deadline may resolve whether IBNR claims may be presented for policyholder or protection claims, the final claims deadline is likely to allow, as timely filed and proper claims, known claims for which there may be continued IBNR loss development.

How IBNR loss development on known claims may affect reinsurance recoveries, recoveries by insureds, and third parties from guaranty associations or recoveries by guaranty associations from receivership estate assets are important issues. For example, at the closure of the receivership, there may be many known claims for which the future stream of benefit payments could be calculated by the receiver, guaranty association, and/or claimant, such as the value of future benefit payments for workers' compensation claims. If the receiver or guaranty association purchased an annuity in settlement of all future benefit payments due a claimant (including an IBNR component), would the *Integrity* and *Quackenbush* courts reject the settlement because it included IBNR loss development? Or would a claim settled in this way be considered liquidated and non-contingent? The settlement payment should satisfy the court's concerns about having a liquidated and determined claim, but this would be a case of first impression.

Without any accommodations being made for future loss development, guaranty associations may still have obligations to the aforementioned claimant after the receivership is closed but will not receive any distributions from the receiver for these losses. Similarly, claimants will receive no payments for their post-receivership loss development if such development is not allowed by the receivership court or guaranty associations.

Receivers should address IBNR claims before making final receivership distributions and closing the receivership estate, bearing in mind: 1) whether the applicable state statute permits IBNR claims; and 2) whether IBNR loss development can be made liquidated and certain under different alternatives

*Chapter 5—Claims*

(e.g., an annuity in settlement of all known and unknown losses as described above). Receivers should also evaluate the extent of reinsurance recoverables available for IBNR losses, and the reinsurers of the insolvent insurer should be given notice and an opportunity to participate in the settlement of claims involving IBNR.

In the case of a life insurer, an actuarial evaluation may be necessary both to value the business (within a positive or negative range) and to estimate total liabilities so that the guaranty association or the receiver can effectuate assumption of the in-force blocks of business by a solvent insurer. The evaluation should be done for each line of business. Life, annuity, and A&H blocks should be considered separately. Proper liability reserving is necessary in any receivership to project ultimate distribution amounts to various creditor classes. Caution must be exercised in establishing loss reserves, however, as reserve reductions that do not reflect actual liabilities can trigger negative tax consequences.

## 2. Reserve Adjustment

It may be appropriate to adjust outstanding case or claim reserves. In some cases, case or claim reserves will be adjusted continually as additional information becomes available. Reserve adjustments may be required if, for example, amendments to proofs of claim are permitted after the claim filing deadline or the supervising court extends the claim filing deadline. Such adjustments typically affect the amount of a letter of credit (LOC) that a reinsurer must post, early access distributions, tax liabilities, and the future payout rate for other claims. The receiver should also estimate the future administrative costs to pay all claims and to wind up the receivership, including the cost of concluding litigation to recover assets.

Notice of reserve adjustments should be disseminated as necessary. The receiver may be required to report the adjustments to reinsurers and the supervising court, among others. The timing of these reports will depend upon the court's requirements and applicable law. The receiver's staff should identify the needs of the different users of information and determine when information should be provided.

## G. Assignment of Claims Issues Considerations and Guidelines

There has been an increase in the number of assignments of claim that are presented to receivers. The development of best practices for administering the assignment of claims was undertaken by the NAIC's Receivership Technology and Administration (E) Working Group, which drew upon the experience of receivers, state insurance regulators, and interested parties to develop best-practice guidance. [RTAWG GUIDANCE attached as reference. Note to publishing link to guidance on NAIC web-site in electronic version.]

## V. PAYMENT OF APPROVED CLAIMS

Theoretically, distribution of the insurer's assets to claimants in a liquidation proceeding is different from normal business practice. While claims against an insurer in rehabilitation may be paid either in the normal course of business as they become due or pursuant to a rehabilitation plan, in a liquidation proceeding, the insurer's assets must be distributed to creditors in the order set forth in the priority of distribution statute. This section addresses some of the many issues the receiver must address once the claims evaluation and approval process has been completed and the asset distribution process begins. See generally Article VIII of Model #555.

### A. Priority of Distribution in Receiverships

All state receivership statutes and Section 801 of Model #555 provide a priority of distribution scheme. The liquidator must become familiar with the priority of distribution scheme of the domiciliary state's

*Receiver's Handbook for Insurance Company Insolvencies*

receivership statute at the outset of the receivership process. Typically, statutory priority schemes require that claims in a higher priority class must be paid in full or funds reserved to pay them in full before any payment may be made to lower priority claims. Also, the statutes typically require that all claims in a class must receive substantially the same *pro rata* distribution.

The receiver must keep in mind that the same claimant may hold several claims, not all of which have the same priority. There also may be different types of claims within a particular class of creditors (e.g., landlord claims, vendor claims, and assumed reinsurance claims are different types of general creditor claims). A receiver must avoid creating subclasses within a priority class. (See *In re Conservation of Alpine Insurance Company*, 741 N.E. 2d 663 (Ill. Ct. App. Dist. 1. Div.4. 2000).) The following discussion is based on the scheme of priorities established by Section 801 of Model #555. Secured creditors and special deposit claimants are outside the scheme of priorities established by Section 801. Secured creditors are covered by Section 710 of Model #555, and special deposit claimants are covered by Section 1002(C) of Model #555.

### 1. Secured Creditors

Secured creditors include anyone holding a perfected security interest in or lien against the property of the insurer (e.g., mortgages, trust deeds, pledges and security interests perfected under applicable law, excluding special deposit beneficiaries). Once determined, the value of the security is applied against the creditor's claim, with the deficiency, if any, treated as an unsecured claim. The priority of the deficiency claim depends upon applicable state law. Model #555 also provides guidance to the receiver for the disposition of specific types of secured claims; i.e., claims involving surety bonds or undertaking, and obligees or completion contractors. (See Section 710(B) of Model #555.)

### 2. Special Deposit Claimants

Some states require deposit or trust accounts for the benefit of policyholders as a condition to authorization of the insurer to transact business in that state. Although owners of special deposit claims often are loosely referred to as secured, they do not, strictly speaking, have a "security interest." Some special deposits are made for the benefit of all policyholders, while others specially protect residents, property, or lines of business in the state where the deposit is established.

States differ in their treatment of special deposit beneficiaries' claims in the domiciliary receivership. Some apply the rules applicable to holders of partially secured claims; i.e., treating the deficiency as an ordinary policyholder claim. Another method gives effect to the special deposit arrangements, but it applies the "hotchpot" principle to payment of any deficiency. Under this method, special deposit beneficiaries receive no additional payment on their claim until all other claimants in the same class have received assets sufficient to make their percentage distribution equal to that of the special deposit claimants. The treatment to be accorded special deposit claimants may be articulated in the receivership statute.

There has been litigation in various state jurisdictions regarding the handling of special deposits for insurance company liquidations. A Massachusetts case provides that an insurance commissioner, acting as ancillary receiver of a foreign insurance company, cannot take any action to remove special deposit funds until all special deposit claims have been satisfied. (See generally, *Commissioner of Ins. v. Equity Gen. Ins. Co.*, 191 N.E.2d 139 [Mass. Sup. Jud. Ct. 1963].)

In North Carolina, a "special deposit claim" has been defined as any claim secured by a deposit pursuant to statute for the security or benefit of a limited class or classes of persons. (See *State ex rel. Ingram v. Reserve Ins. Co.*, 281 S.E.2d 16, 20 [N.C. 1981]. N.C. GEN. STAT. § 58-30-10 [19]). Special deposits are expressly excluded from general assets. *Id.*

In most receiverships, it is difficult for receivers to collect special deposits posted in other state jurisdictions without a court order and provision having been made for the payment of all

*Chapter 5—Claims*

policyholders in such state jurisdictions. Thus, the receiver will need to develop a claims distribution plan that takes the special deposits into account and avoids unlawful preferences, being mindful that the state jurisdiction in which a deposit is posted may use the special deposit to satisfy unpaid policy claims in that state jurisdiction.

### 3. Class 1—Receiver’s Administrative Expenses

The expenses of the receiver in marshaling and distributing the insurer’s assets are paid out of the unencumbered assets before any other claims are paid. Most statutes treat administrative expenses as claims having a first priority. Some statutes accord the same priority to a guaranty association’s administrative expenses. However, some guaranty association expenses may be classified as policyholder benefits, which is an area of disagreement between guaranty associations and receivers. As will be discussed below, Section 801 of Model #555 provides two alternatives as to classification of the priority of guaranty association claims. Reinsurers may argue that if the receiver is making reinsurance recoveries under reinsurance treaties, then all premiums due under the treaties should be treated as an administrative expense. Under general contract law, ratification of a contract may be found under a variety of circumstances, such as: intentionally accepting benefits under the contract after discovery of facts that would warrant rescission; remaining silent or acquiescing in the contract for a period of time after having the opportunity to avoid it; or recognizing the validity of the contract by acting upon it, performing under it, or affirmatively acknowledging it (17A C.J.S., Contracts § 138). Reinsurers’ claims should be evaluated on a case-by-case basis, but there may be benefits to the estate from treating the reinsurers’ claims as administrative expenses. The reinsurance contract obligations may be binding on the receiver as administrative expense obligations if the receiver has legally “ratified” the reinsurance contract. The assets available to pay all other creditors are those remaining in the estate, net of the cost of recovering and administering them. The process of estimating administrative expenses is a difficult one, as it will depend on many factors, some of which are beyond the control of the receiver. The receiver should establish a contingency reserve for administrative expenses before recommending any payments on claims of lower priority.

### 4. Class 2—Guaranty Association Expenses

Guaranty associations may have several types of expense claims, not all of which may have the same priority. Model #555 provides two alternative priority schemes depending on how a state wishes to classify certain expenses of guaranty associations. The first alternative places expenses of the guaranty associations, including defense and cost containment expenses of a P/C guaranty association, in Class 2; i.e., after administrative expenses of the receiver. The second alternative places the defense and cost containment expenses of P/C guaranty associations in Class 3 with other policyholder-level claims, while the remaining expenses of the guaranty associations are placed in Class 2. No significance or deference should be given alternatives under Model #555 based on whether an alternative is labeled as alternative one or two. Receivers should note case law providing that however a guaranty association’s claims are classified, the claims of an out-of-state guaranty association should be of equal priority with the claims of the guaranty association in the receivership state (in *re Liquidation of American Mutual Liability Insurance Company*, 747 N.E.2d 1215 [Mass. 2001]).

### 5. Class 3 and Class 4—Claims for Policy Benefits

Many state statutes accord priority status to claims for policy benefits behind only the administrative expenses of receivers and guaranty associations. This status applies not only to the claims of policyholders, but also to those claiming through them, including guaranty associations and liability claimants whose claims were covered under one of the insurer’s policies. Claims under life insurance or annuity policies include claims for investment values, as well as death benefit and annuity payments. Premium refunds and unearned premium claims, however, are treated as general creditor claims under the former Model Act, and some state statutes, although guaranty associations often

*Receiver's Handbook for Insurance Company Insolvencies*

cover such claims, at least in part. Some states and Model #555 accord the same priority rank to policy loss and premium refund claims. A review of the applicable receivership statute generally will inform the receiver as to how to treat such claims. As sub-classifications within a priority level should be avoided, case law provides that the receiver cannot divide policyholders into those who were insured only by the insolvent insurer and those who had additional insurance through other carriers (in re *Conservation of Alpine Insurance Company*, 741 N.E. 2d 663 [Ill. Ct. App. Dist. 1. Div. 4. 2000]).

## a. Deductible and Limits

The policyholder's claim is for the amount that the insurer should have paid. The insurer's liability attaches after the deductible has been paid by the insured (non-advancement policies). However, for some policies (e.g., some workers' compensation policies), the insurer is required to pay the claim and seek the deductible from the insured (thereafter, known as large deductible policies). It is common for insureds to post collateral with the insurer for deductible payments that may be made by the insurer, for which the insurer then seeks reimbursement from the insureds. There are three available model alternatives that provide for the disposition of large deductible policy recoveries between receivers and guaranty associations: 1) Section 712 of Model #555; 2) the *Guideline for Administration of Large Deductible Policies in Receivership* (#1980); and 3) the NCIGF Model Large Deductible Act (NCIGF Model). Individual state statutes based on the NCIGF Model or Guideline #1980 may differ from Section 712 of Model #555 in certain respects. See Section ---- for more information on large-deductible programs.

## b. Previous Guaranty Association Payments

A guaranty association that pays all or part of a policyholder's claim acquires the policyholder's rights in the receivership estate (with occasional additional privileges, such as an exemption from certain filing deadlines). The policyholder's claim (or the claim of the liability claimant under the policy) is reduced proportionately, but it usually is not expunged. In some states, a guaranty association may make payment directly to the liability claimant if the claimant waives any further claim against the insured. The receiver should remember, however, that guaranty associations only process "covered" claims and that insureds with claims that the guaranty association does not cover will be instructed to handle their own claims and then seek reimbursement from the estate.

## c. Cut-Through

As an enhancement to security, insurance policies or reinsurance agreements sometimes obligate a reinsurer to pay the policyholder directly in the event a covered loss cannot be paid due to the insolvency of the direct insurer, pursuant to a cut-through clause or endorsement. A number of controversies have resulted from these provisions, including the issue of the validity of such agreements. Insofar as the arrangement purports to affect the obligation of the reinsurer to the cedent, or of the cedent to the insured, the receivership estate may be affected. The receiver should seek the guidance of legal counsel concerning rules applicable in the local jurisdiction. Some jurisdictions have allowed insureds direct access to reinsurers even in the absence of a cut-through clause or endorsement. In such cases, courts will look to the relationship among the parties. (See *Koken v. Legion Insurance Co.*, 831 A.2d 1196 (2003), where the court allowed a cut-through where the insolvent insurer had fronted the reinsurance arrangement.)

## d. Assignments

*Chapter 5—Claims*

Policyholders sometimes assign to a third person their rights to recover from the insurer. Although the general rule is that the assignee stands in the shoes of the assignor, the receiver should determine the validity of any assignment with reference to applicable law.

e. Separate Accounts for Life and Annuity Policyholders

A special form of assets is separate account assets. Separate accounts are accounts established by life and annuity insurers in association with specific types of policies or other business, such as pension plans. Generally, separate accounts are created and administered in accordance with specific regulatory or statutory guidelines. Typically, such statutes provide that assets properly maintained in separate accounts will not be chargeable with liabilities arising out of any other business of the insurer. It has been held that the status of separate account assets is preserved in receivership.

6. Class 5—Federal Government

In general, claims of the federal government may be paid after administrative and policyholder claims. However, the receiver is well-advised to obtain a release from the federal government prior to making any final distributions. This is because the federal government may not be bound by the receivership court's claim filing deadline or the estate's classification and payment of certain claims, and it could seek to hold the receiver personally liable if, for instance, it takes the position that it should have been paid in the place of other creditors.

For a discussion of the federal super priority statute and the 1993 U.S. Supreme Court decision in *U.S. v. Fabe*, see Chapter 9—Legal Considerations.

7. Class 6—Employee Compensation

Most priority of distribution statutes assign a higher priority to certain claims for employee compensation earned pre-receivership. This priority generally applies to wages limited in amount and earned within a specified time, but it may not apply to the wages of the insurer's officers and directors, including stockholders who are employed in such positions.

8. Class 7—General Creditors

The populace of general creditors is often large and diverse. It frequently includes the persons described below.

a. Brokers, Agents and Intermediaries—Personal Versus Agency/Derivative Claims

These categories are considered together, since the primary problem arising in connection with broker balances and similar claims is a tendency of all concerned to lose track of the capacity in which the obligation is incurred and to attempt to lump together amounts that derive from quite different sources. A distinction should be made between the divergent and often conflicting interests of the intermediary (especially a broker) acting as the insurer's agent for the collection of premiums as the representative or subrogee of the insured, and acting on his own account, notably for commission. Identifying the capacity in which the broker served is essential for the receiver to determine the relative priority of the broker's claims and the extent to which such claims may be combined (if at all) for purposes of setoff.

b. Cedents

In the relatively few cases where creditors of this class receive a distribution, the receiver may be able to set off interest deemed received by cedents on premature draw-downs of LOCs against the

*Receiver's Handbook for Insurance Company Insolvencies*

distributions due them. Legal counsel should be consulted on the issue of setoff. (See Chapter 9—Legal Considerations.)

c. Certain Claims of Directors and Officers

Model #555 provides that, except as expressly approved by a receiver, expenses arising from a duty to indemnify the directors, officers, or employees of the insured should be excluded from the class of administrative expenses and, if allowed, are Class 6 claims. (See Section 801 of Model #555.) (But see *Weingarten v. Gross*, 563 S.E.2d 771 [Va. 2002]). Here, fees and costs incurred by directors in their defense of an action brought by a receiver were held to be entitled to payment as an administrative expense under applicable statutory law.)

d. Reinsurers

Reinsurers may be creditors of insolvent ceding insurers for premiums or other contract-based financial obligations, such as salvage and subrogation recoveries. Receivers should be aware of the fact that such recoveries may be held in trust and, thus, would be payable in full, not *pro rata*. Similarly, the cedent may hold as the reinsurer's trustee funds withheld and the proceeds of drawn-down security until such time as the funds are applied to appropriate claims. Excess amounts then may have to be returned directly to the reinsurer instead of merged with the general assets of the estate, and the reinsurer's claim to such amounts may be considered the claim of a trust beneficiary, not a general creditor. Depending on the terms, express or implied, of the instrument creating the relationship, the reinsurer's claim for interest on these amounts may not be valid. Setoff is an issue when addressing reinsurers' claims, and legal counsel should be sought. Before making payments of salvage, subrogation, or other amounts due the reinsurers after the receivership commences, it is advisable to obtain written assurances from reinsurers that they will honor reinsured claims submitted by the receiver.

e. Other General Creditors

This category includes: trade creditors, landlords, and utilities (for pre-receivership debts); bondholders (excluding surplus noteholders); secured creditors with deficient security: and, in some jurisdictions, late-filing insurance creditors and claimants for unearned premium.

9. Class 8—State and Local Government Claims and Some Legal Fees

State and local government claims that are not included in another class are placed in this class. Some examples of non-Class-8 governmental claims are policy benefit claims under policies issued to the government entity or current sewer or water bills on the insurer's office.

Class 8 also includes the legal expenses incurred by the management of the company in defending against the receivership proceeding. There are significant limitations on these claims.

10. Class 9—Claims for Penalties, Punitive Damages, or Forfeitures

If the policy issued by the insolvent insurer specifically covered punitive damages, penalties, and forfeitures, these claims would be in the policy benefits class.

11. Class 10—Unexcused Late-Filed Claims

Under Model #555, if the claimant can show that there was good cause for the delay, claims filed after the claim filing deadline (as discussed above in Section II(B)) are evaluated in the class they would have been in if timely filed. If there is no good cause, the claims are placed in Class 10. Most receivership statutes have standards for good cause. (See Section 701(B) and (C) of Model #555.) In some state receivership statutes, there may be some ambiguity on the treatment of late-filed claims.

*Chapter 5—Claims*

## 12. Class 11—Surplus Notes

Model #555 provides that claims within this class will be subordinated to other claims in this class if there is a pre-receivership subordination agreement in existence.

## 13. Class 12—Interest

Interest is not often allowed on claims in receivership after the date of entry of the receivership order, on the general theory that if interest were allowed, it would run equally in favor of all claimants and simply result in a proportionately greater deficiency. Special cases, however, do exist: Holders of secured interests may be allowed interest to the extent their security is sufficient, and creditors in general sometimes may collect interest on their debts before any distribution to shareholders, on the theory that the receivership is to be conducted as if there were no insolvency. Many state laws are silent on this point, but others provide that interest on a given class of claims should be paid or provided for before such payment is made to any lower class. A review of the state's receivership statute may indicate whether interest should be paid as part of any claim. Model #555 allows interest on claims in Classes 1—11 if the liquidator proposes and the court approves a plan to pay interest. (See Section 801(K) of Model #555). Even if the contract upon which the claim is based allows for interest, legal precedent provides that interest shall not be allowed if statutorily prohibited. (See *Swiss Re v. Gross*, 479 S.E.2d 857 [Va. 1987].) Also, legal precedent provides that if claimants are entitled to post-allowance interest on claims, such interest should not be paid at the same priority level of the underlying claim (in re the *Liquidation of Pine Top Insurance Company*, 749 N.E.2d 1011 [Ill. Ct. App. Dist. 1. Div. 4. 2001]).

## 14. Class 13—Equity Interests

After all higher priority classes are paid, any remaining funds are paid to the owners of the insolvent insurer. Like surplus notes, any pre-liquidation subordination agreements among the owners will be honored. Before making a distribution to the owners, the liquidator should be sure to reserve adequate funds to pay any post-discharge expenses, such as the cost of responding to future inquiries from claimants and the costs associated with disposal of estate records.

**B. Setoffs**

In general terms, the claim of a creditor or debtor in a receivership is defined as the net amount due after the application of any permissible setoff. Section 609 of Model #444 addresses setoff. As the subject of setoffs in an insurer receivership is complex and often the subject of litigation, the receiver should consult legal counsel. For a detailed analysis of this subject, see Chapter 9—Legal Considerations.

**C. Currency Conversion**

Variations in foreign exchange rates can become a problem in the distribution of the insurer's assets if the insurer has creditors in foreign countries. The receiver may need to evaluate foreign currency in three situations:

- An insured incurs a loss in a foreign country under a policy denominated in dollars. In issuing such a policy, the insured may be deemed to have assumed a certain degree of foreign exchange risk for foreign currency exposures. However, the insured did not assume the risk of exchange variation during the period when the insurer's insolvency delays payment of the claim.
- An insured incurs a foreign currency loss under a policy denominated in the foreign currency. In this case, the insured may have assumed the risk of currency variation either between loss and payment or pending the insurer's receivership.

*Receiver's Handbook for Insurance Company Insolvencies*

- At the time of receivership, the insurer holds funds or other assets in foreign currency. Some can readily be converted to dollars while others (such as reinsurance assets and outstanding premium receivables) cannot.

Foreign exchange risk characteristically is quite random and runs both ways. Prudent financial management does not attempt to predict the direction of future currency variation, but it only plans to match anticipated foreign debt with foreign assets. Unfortunately, this matching produces difficult problems that the receiver must sort out.

Receivers are forced, sooner or later, to restate the value of all assets and claims in a common currency; otherwise, they cannot calculate a distribution. The only question is when they should do so. The English Insolvency Rules still automatically use the date of liquidation, which is certainly the most straightforward technique. American law does not generally contain direction on this point. Applying a differential standard is likely to seriously complicate the claims process without appreciably improving the fairness of the result. Where the foreign exchange balances are significant, the prudent course may be to accept claims denominated in foreign currency, converting them to dollars at a date shortly before distribution, and planning the conversion of assets to occur at or near the same date.

The actual process of conversion of claims valuation may not be as complicated as it sounds. For example, the receiver might announce a suitable benchmark standard, such as the average of bid and asked prices for the relevant currency as published in *The Wall Street Journal* or offered by major banks. The U.S. Department of Treasury (Treasury Department) also maintains a listing of values for the purpose of assessing *ad valorem* (value-added) customs duties.

Expert assistance may be needed in cases where the currency in question is not readily transferable or has little or no market. Experts also may be helpful in the management of foreign currency assets between takeover and distribution, as well as the matching of assets to anticipated liabilities.

It is helpful to address currency issues at the outset of the receivership, particularly in the case of international insolvencies. Some statutes do not contemplate such issues. The receiver should have the supervising court approve the receiver's practices and procedures on this point when the court enters the order allowing claim payments.

## VI. INTERIM AND FINAL DISTRIBUTIONS

With the approval of the receivership court, a receiver may declare and pay one or more partial distributions on claims (as those claims are allowed), as well as a final distribution. All claims allowed within a priority class are paid at substantially the same percentage. (See Section 802(A) of Model #555.) Model #555 specifically permits the liquidator to pay benefits under workers' compensation policies after entry of the liquidation order if certain conditions are met and only until the appropriate guaranty association assumes responsibility for payment or determines that the claim is not a covered claim. (See Section 802 D of Model #555 and Chapter 6—Guaranty Associations.) Procedures for continuation of pharmacy benefits should also be addressed. In some cases, it will be preferable to continue the company plan for a period of time. In other cases, the guaranty funds have ongoing vendor relationships and can make a transition expeditiously. Model #555 and most state laws also require the liquidator to make early access payments to guaranty associations from distributable assets of the liquidation estate. (See Section 803 of Model #555 and Chapter 6—Guaranty Associations.) State law should be reviewed in all cases to determine specific requirements and authority regarding partial distributions, priority of claims, workers' compensation prepay procedures, pharmacy benefit continuation, and early access.

In determining the percentage to be paid on claims, the receiver may consider the estimated value of the insurer's assets (including estimated reinsurance recoverables) and the estimated value of the insurer's liabilities. (See Section 802(B) of Model #555.) But see, for example, the aforementioned *Integrity*, *Quackenbush*, and *Holland-*

*Chapter 5—Claims*

*America* legal cases for additional information on how IBNR claim estimates and corresponding reinsurance recoveries were addressed in other receiverships.

An insurer's assets often consist of readily available (i.e., liquid) assets and those that may not be readily collected or liquidated. The latter category may include litigation recoveries, subrogation and salvage recoveries, reinsurance recoverables for claims that the receiver recently approved, the proceeds of difficult collection actions, or the sale of real estate. If liquid assets are substantial and the collectibility of other assets is uncertain, the receiver may be able to pay an interim distribution from available assets, with later payments coming from other assets, if and when liquidated.

Distribution of property in kind may be made at valuations set by agreement between the liquidator and the creditor and as approved by the receivership court. (See Section 802(C) of Model #555.)

A receiver may find that estate closure can be expedited by entering into a settlement with the guaranty funds on long tail liabilities, such as workers' compensation, that may remain open after the estate is otherwise resolved. The settlement should be negotiated with the involved guaranty funds and include a distribution for claim payments, as well as administrative expenses. The NCIGF can assist with coordination with the appropriate guaranty funds.

**A. Unclaimed Funds**

Often, small sums of money remain at the end of the distribution process, usually unpaid distributions (i.e., misdelivered or unclaimed checks). The receiver should not treat these assets as "found money." State law typically requires the receiver to retain unclaimed or unproved assets for a specified time, during which the assets should be deposited with an appropriate financial institution, and at the end of which the assets may escheat to the state. The receiver should consult the relevant receivership statute, escheat statutes, and legal counsel, particularly in regard to circumstances in which a state may be entitled to interest on funds held for escheat. The retention of escheated funds may also present challenges for closing the receivership. The receiver should consider the use of a trust for escheated funds on approved claims if the receiver is ready to close the receivership estate, but the required time period has not passed for the payment of escheated funds to states. Under the trust approach, the escheated funds are paid to the trust, the receivership is closed, and then the trustee (the commissioner or former receiver) of the trust pays the escheated funds to states permitted under applicable state law.

Model #555 provides that any funds that are unclaimed after the final distribution should be placed in a segregated unclaimed funds account to be held by the commissioner for two years, or in the alternative, that such funds should be handled in accordance with state unclaimed property laws. (See Section 804 of Model #555.)

Receivers should also check the applicable state agency for escheated funds to see if there are unclaimed funds that are owed to the entity in receivership.

**B. Surplus Assets**

In rare cases, assets may remain after the principal amount of all non-equity claims have been paid "in full." In some states, payment in full means principal plus interest on all timely filed claims. In a few states, where assets remain after such claims have been paid in full, a second claim filing deadline may be set, and the foregoing process may begin anew, albeit on an abbreviated basis. The receiver should review the applicable law to determine how to proceed in such cases. It has been held that a receiver may request court approval for payment of statutory interest on allowed claims where receivership assets exceed the amount necessary to pay all claims in full. (See *Wenzel v. Holland-America Insurance Company*, 13 S.W.3d 643 [Mo. 2000].)

**C. Equity Distributions**

*Receiver's Handbook for Insurance Company Insolvencies*

Finally, in the rarest of cases, shareholders, mutual insurer members, and other owners of an insurer are paid. The receiver should take care to ensure that the administrative expenses of the estate are paid before the final distribution is made and should retain an amount sufficient for common post-receivership expenses (e.g., record storage, etc.)

## VII. SPECIAL ISSUES REGARDING CLAIMS

This section discusses special issues regarding particular claims, namely: 1) claims of the Federal Home Loan Bank (FHLB); 2) life and health claims; and 3) claims under large-deductible programs. As large-deductible programs involve both policy claims and the collection of amounts due under those policies, both subjects are covered in that subchapter

### A. FEDERAL HOME LOAN BANK CLAIMS

#### 1. Overview

Insurance companies are increasingly likely to be members of, and have a borrowing relationship with, one of the 12 FHLBs (each, an “FHLBank”). The FHLBanks are federally chartered cooperatives under the Federal Home Loan Bank Act (FHLBank Act), regulated by the Federal Housing Finance Agency (FHFA), and their business practices are subject to the terms and limitations of the FHLBank Act and FHFA regulations. Although each FHLBank is a separate legal entity with its own geographical territory and its own specific policies, the FHLBanks share a common mission and have similar business models.<sup>2</sup>

2. An insurance company can only be a member of the FHLBank in the district where the insurer is domiciled or where it maintains its principal place of business as defined by FHFA regulations
3. If a newly appointed receiver finds that the delinquent insurer has a relationship with an FHLBank, they should promptly determine from the insurer’s records:
  - i) The amount owed to the FHLBank.
  - ii) The interest charged on that debt.
  - iii) The payment due dates.
  - iv) The collateralization of this debt, and whether and how it is over-collateralized.
  - v) The amount of FHLBank stock held by the insurer.

Armed with this data, the receiver should establish goals for the program, including whether it is better to service the loan due to its low cost or to repay it, and whether reduction of overcollateralization or stock redemption would aid the receivership materially.

Once the goals are established, an initial friendly dialogue should be undertaken with the bank. In general, the bank’s principal concern will be avoiding default. Overcollateralization will be important to the bank in service to this first goal. If the receiver can persuade the bank that some reduction in collateral will not unduly increase default risk for the bank, the bank may be more accommodating. While prepayment may create hedging issues for the bank, avoiding prepayment is generally a secondary goal, and the bank may

<sup>2</sup> For additional information regarding the mission and purpose of the FHLBanks, visit <http://www.fhlbanks.com>.

*Chapter 5—Claims*

show greater flexibility in permitting it. Similarly, stock redemption may be permitted more freely if the bank is in sound financial condition. For the dialogue to be productive for the receiver, they should first become generally informed about the bank's condition and management structure. It will be helpful for the receiver to remind the bank that (at least as of this writing) no FHLBank has ever lost a penny due to an insurer insolvency. The receiver should strive to induce the bank to treat resolution of the insurer's financial problems as a common public policy goal in which the bank should be interested at least for the preservation of harmonious relations between the FHLB system and insurance regulators.

The Federal Home Loan Bank (FHLB) Claims Supplement that follows elaborate on these topics.

[Note: To Publishing create hyper-link in electronic version. ]

**B. LIFE/HEALTH CLAIMS**

## Overview

The processes for handling claims in life/health and P/C receiverships differ substantially due to the nature of the policies and the coverage provided by the guaranty associations. In a life/health receivership, coverage will continue for policies covered by the guaranty association to the extent provided by the state guaranty act, and a primary focus is dealing with these continuing obligations.

## Role of Guaranty Associations and the National Organization of Life and Health Guaranty Associations

In a multistate life/health insolvency where guaranty associations across the country are triggered, the guaranty associations will—to the extent of their statutory limits—guarantee, assume, or reinsure policy obligations, and in turn will be subrogated to the policyholder claims against the estate. In these situations, the NOLHGA will play a key role in the coordination of policy and financial analysis, preparation of bid packages, analysis of bids, negotiation of assumption agreements, and policyholder notification. For a description of how the NOLHGA operates, see Chapter 6—Guaranty Associations.

Other possible issues relevant to life insurance company insolvencies include notice for and court approval of assumption agreements, opt outs (by policyholders and guaranty associations), closings for transfers of obligations, early access distributions, and guaranty association coverage limits.

## Annuities

In the insolvency of an annuity insurer, special consideration should be given to any single premium immediate annuities that were issued to form the basis of funding of periodic or lump sum payments in personal injury settlements, commonly known as structured settlement annuities.

These annuities are normally issued to qualified assignment (QA) companies in order to comport with numerous IRS tax codes (primarily 104(a)(2)) and various Revenue Rulings in order to preserve the tax benefit to the beneficiary or payee. However, some older annuities (prior to 1986), although not issued to a QA company, may nonetheless enjoy the same tax benefits. Generally, periodic payments are excludable from the recipient's gross income only if the payee is not the legal or constructive owner of the annuity and does not have the current economic benefit of the sum required to purchase the periodic payments.

When these blocks of business are resolved in the insolvency context (typically through assumption reinsurance), extreme care must be taken to ensure that the resolution does not compromise the tax benefits to the payees. It is strongly recommended that competent and experienced tax counsel be retained to guide the receiver through this potentially complicated process.

Structured settlement annuities are typically issued to fund the settlement of underlying tort actions, and the amounts of these annuities tend to be fairly large, reflective of the seriousness of the injuries sustained by the

*Receiver's Handbook for Insurance Company Insolvencies*

beneficiaries. The nature of these policies should be taken into consideration when determining the appropriate notice to these beneficiaries.

#### Non-covered claims

State life and health guaranty acts provide for the continuations of certain policies covered by the guaranty association. The liquidator should determine how any portion of the policy that is not covered by the guaranty association and any non-covered claims should be handled under the state's receivership act and case law.

## **C. BEST PRACTICES FOR SUCCESSFUL BILLING AND COLLECTION OF LARGE-DEDUCTIBLE PROGRAMS IN LIQUIDATION**

### **1. Overview of Large-Deductible Workers' Compensation**

A large-deductible workers' compensation policy or program is a method of insuring workers' compensation risk with the employer assuming some of that risk in a deductible of \$100,000, \$250,000, or even higher per claim and an insurer taking on the remaining risk. Large-deductible programs for workers' compensation can be complex arrangements and depend on the employer's fulfillment of its obligation to reimburse all claims within the deductible. If the employer is unable to fulfill that obligation, the financial consequences to the employer could be catastrophic, and the employer's inability to pay could have a cascading impact on the financial health of the insurer. In order to manage this risk successfully, insurers and state insurance regulators must have a clear understanding of the nature and size of the insurer's exposure. Additionally, they must ensure that there are adequate measures in place to limit and mitigate the risk of the employer's failure to pay and ensure injured workers will receive benefits in compliance with state law.

Professional employer organizations (PEOs) often operate workers' compensation programs that are backed by large-deductible policies. A PEO is an outsourcing firm that provides services to small and medium-sized businesses under a contractual co-employment agreement with its clientele. Where permitted by state law, these services generally include workers' compensation coverage obtained by the PEO in its own name. If the PEO assumes most of the risk of that program by purchasing a large-deductible policy, it recovers the estimated cost through the fees it charges its clients. If those fees are inadequate to cover the actual costs of the claims, or the PEO fails for any other reason to reimburse its share of the claims, the insurer incurs an unexpected liability. The failure of the claim reimbursement mechanism has been a significant factor in a number of insurer insolvencies. For further information and guidance on high-deductible workers' compensation insurance and PEOs, refer to the NAIC's *2016 Workers' Compensation Large-Deductible Study*.

### **2. Administration of Large-Deductible Plans**

The administration of large-deductible plans is affected by entry of an order of liquidation. In such cases, there are three versions of applicable model legislation for states to consider. The most recent is Guideline #1980. The three model alternatives are as follows:

- (a) Section 712—Administration of Loss Reimbursement Policies of Model #555.
- (b) Guideline #1980.
- (c) The NCIGF Model.

Each of these three alternatives provide statutory guidance that articulates the respective rights and responsibilities of the various parties, greatly enhancing the ability to manage complex large-deductible programs post-liquidation. Generally, all approaches provide for the collection of large-deductible reimbursements from

*Chapter 5—Claims*

policyholders, clarify entitlement to reimbursement, and ensure that the claimants are paid. The most significant difference is the approach taken to address the ultimate ownership of and entitlement to the deductible recoveries paid by the employer or drawn from collateral as between the estate and the guaranty fund, and collateral as between the estate and the guaranty fund. Section 712 of Model #555 generally treats these funds as general assets of the estate, while Guideline #1980 and the NCIGF Model apply them directly to the payment of claims. It should be noted that the NCIGF Model has evolved over time based on additional experiences from insolvencies, and the NCIGF continues to modify its model as warranted; as a result, states that have based their laws on the NCIGF Model have done so with varying language.

### **3. Communication and Reporting Between the Liquidator, Policyholders, and Guaranty Associations, Including Administration of Self-Funded Policyholder Programs**

#### I.i.Claim Payment, Reserve, and Reimbursement Reporting

The administration of large-deductible programs requires strong communication and reporting programs between the liquidator, guaranty associations, and policyholders. Under all three model alternatives, the liquidator is required to administer large-deductible programs and related collateral securing large-deductible obligations, consistent with the policyholder's policy provisions and large-deductible agreement (LDA), except where those provisions conflict with the statute. All three model alternatives make provision for two types of LDAs: 1) those that permit direct payment by the policyholder; and 2) those that require initial payment by the insurer or guaranty association with reimbursement by the policyholder. Both arrangements necessitate the reporting of claim payments and outstanding claim reserves to the liquidator for billing, guaranty association reimbursement, and establishing collateral need requirements. The liquidator's Uniform Data Standard (UDS) should be deployed as the reporting protocol for guaranty association claim payments and outstanding claim reserves. Policyholders that continue self-payment under their LDA will need to continue or establish a claim information reporting protocol with the liquidator through the policyholder's third-party claim administrator or through a proprietary claim information aggregator. All three model alternatives require the liquidator to form an independent opinion on outstanding claim reserves reported by policyholders and guaranty associations, including an allowance for adverse development and IBNR liability to ensure that collateral remains adequate throughout the administration of the program.

#### I.iii. Agreements Between the Liquidator and Guaranty aAssociations

An agreement between the liquidator and the guaranty funds may be advisable, though it is less important in states that have enacted one of the three model alternatives or other comprehensive statutory framework for the liquidator's administration of large-deductible programs. The model alternatives can serve as an outline for the issues that should be addressed in such an agreement in states that have not enacted pertinent legislation. Among other things, an agreement should address: 1) whether large-deductible recoveries are estate assets subject to the liquidator's distribution regime or directly pass through to the guaranty association on account of its prior claim payments; 2) claim reporting protocols; 3) frequency of collateral review and reimbursement activity; and 4) administration of collateral for under collateralized non-performing policyholder accounts.

#### I.viv.Converting Policyholder Accounts From an Incurred to Paid Basis Under the Model Act.

Generally, LDAs are on a paid basis with collateral for the reserves. However, liquidators may encounter contractual arrangements where an LDA is constructed such that policyholders pay periodic large upfront payments that were accounted as premium based on losses incurred, as opposed to paid basis. After a certain number of years, the LDA provides policyholders with an opportunity to elect paid basis rather than incurred basis, which converts the incurred payments to collateral. The liquidator may wish to negotiate a conversion at the outset of liquidation. Conversion of a policyholder's LDA at liquidation from an incurred to a paid basis is beneficial to policyholders in several ways. Most importantly, conversion at liquidation treats pre-liquidation incurred loss payments made by the policyholder to the insurer as collateral and, thus, property of the policyholder pledged to the insurer and restricted to the satisfaction of that policyholder's claims, rather than as a general asset of the liquidation estate. Conversion also offers flexibility to a policyholder as to the

*Receiver's Handbook for Insurance Company Insolvencies*

type of security provided to an insurer in satisfaction of the collateral requirement. Conversion affords policyholders the ability to use an LOC to secure an insurer for the outstanding portion of their loss, rather than payment of cash, since the outstanding bill after conversion is reflected in the liquidator's collateral need analysis, rather than an incurred loss billing.

The liquidator should consider notifying large-deductible policyholders of these important policyholder rights at the inception of a liquidation proceeding and offer policyholders the opportunity to elect to convert their large-deductible programs from an incurred to paid basis memorializing any elections with an endorsement that otherwise follows and requires the policyholder to adhere to the provisions of applicable law.

iii. Large-Deductible Billing by the Liquidator

The liquidator should establish a large-deductible billing and collection program that bills policyholders on a periodic basis (e.g., quarterly). The liquidator's invoice to policyholders should communicate a claim payment summary that includes detail such as the insurer or guaranty association's check number, date of payment, payee, account year, and remaining large-deductible limits. Large-deductible programs that are paid directly by policyholders should also report their claim payments to the liquidator on a similar periodic basis so that the liquidator can establish appropriate claim reserves, track the exhaustion of the policyholder's deductible limits, report to reinsurers, and collect reinsurance. Consideration should be given to using one of many proprietary billing and collection software programs to automate the large-deductible billing and collection process. Large-deductible recoveries that are subject to guaranty association reimbursements should be aggregated and distributed on a quarterly or other periodic basis that balances the liquidator's accounting requirements and the guaranty associations' reimbursement needs.

vi. Annual cCollateral Rreview by the Liquidator

Guideline #1980 and the NCIGF Model require the liquidator to perform a periodic collateral review for each policyholder account. Consistent with the typical LDA, this review should be performed annually to ensure that the liquidator holds adequate collateral to support a policyholder's large-deductible obligations and to release any excess collateral held back to the policyholder. This review should include: a report to the policyholder on total incurred claims; claims paid; outstanding reserves, including an appropriate allowance for adverse development and claims IBNR; any additional safety factor; and total collateral need. The liquidator's collateral review should result in a report to the policyholder and an invoice for additional collateral need or a release and distribution of excess collateral. The liquidator should consider whether any additional safety factor should be included for nonperforming policyholder accounts. Guideline #1980 provides flexibility on the timing of the annual review, enabling the liquidator to perform the annual review process throughout the calendar year so that all policyholder account reviews are not due at the same time.

## 2. Administration Fees

Section 712(G) of Model #555 provides:

The receiver is entitled to recover through billings to the insured or from largedeductible policy collateral all reasonable expenses that the receiver or guaranty associations incur in fulfilling their responsibilities under this section. All such deductions or charges shall be in addition to the insured's obligation to reimburse claims and related expenses and shall not diminish the rights of claimants.

Further, Section 712(F) provides, in part:

The expenses incurred by a guaranty association in pursuing reimbursement shall not be permitted as a claim in the delinquency proceeding at any priority; however, a guaranty association may net the expenses incurred in collecting any reimbursement against that reimbursement.

*Chapter 5—Claims*

Several states have adopted statutory provisions similar to the provisions regarding handling of large deductibles in an insolvency and provide for the receiver to retain reasonable actual expenses incurred from the reimbursement to the guaranty association(s). Similarly, statutes may provide for the guaranty association to net expenses incurred in collecting a reimbursement.

Subsection (F) of Guideline #1980 provides:

- (a) The receiver is entitled to recover through billings to the insured or from collateral all reasonable expenses that the receiver incurred in fulfilling its collection obligations under this section. All such deductions or charges shall be in addition to the insured's obligation to reimburse claims and related expenses and shall not diminish the rights of claimants or guaranty associations.
- (b) To the extent the receiver cannot collect such expenses pursuant to paragraph (1), the receiver is entitled to deduct from the collateral or from the deductible reimbursements reasonable and actual expenses incurred in connection with the collection of the collateral and deductible reimbursements.
- (c) To the extent such amounts are not available from reimbursements or collateral, the receiver, or guaranty associations if provided under an agreement with the receiver under Subsection D(5), shall have a claim against the estate as provided pursuant to [insert state priority of claim statute].

When there is no statutory guidance, receivers should include a provision for reimbursement of reasonable actual expenses in an agreement with the guaranty associations regarding the collection and allocation of large deductibles.

### **3.3. Policy and Collateral Definitions**

It is important that state laws define large-deductible workers' compensation policies and large-deductible collateral. Defining the treatment of such policies and associated collateral is imperative for developing policies and processes for administering the collection of assets. The following definition is taken from Guideline #1980. The definitions in the other model acts are similar. However, the term used in Model #555 is "loss reimbursement policy."

"Large-deductible policy" means any combination of one or more workers' compensation policies and endorsements, and contracts or security agreements entered into between an insured and the insurer in which the insured has agreed with the insurer to:

- (a) Pay directly the initial portion of any claim covered under the policy up to a specified dollar amount, which the insurer would otherwise be obligated to pay, or the expenses related to any claim.
- (b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term "large-deductible policy" also includes policies that contain an aggregate limit on the insured's liability for all deductible claims, a per claim deductible limit, or both. The primary purpose and distinguishing characteristic of a large-deductible policy is the shifting of a portion of the ultimate financial responsibility under the large-deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer, and the insurer remains liable to claimants in the event the insured fails to fulfill its payment or reimbursement obligations.

The dollar amount of "large" will vary by state law. While many states might associate a minimum financial threshold, it is more important to consider the administration of the policy compared to a traditional policy. Deductible amounts can include: claim-related payments by the insurer for medical and indemnity benefits; allocated LAEs, such as medical case management expenses; legal defense fees; and independent medical exam

*Receiver's Handbook for Insurance Company Insolvencies*

expenses. It is critical that the policy specify the claim-related payments that are the responsibility of the policyholder and not be inside agreements or other agreements outside of the policy.

Collateral held by the insurer should be defined as amounts held as security for the insured's obligations under the large-deductible policy. The policy should specify acceptable financial instruments that can be held for the large-deductible policy. Typical collateral requirements include: cash, LOCs, surety bonds, or other liquid financial means held for the benefit of the insurer.

Guideline #1980 defines "large-deductible collateral" to mean "any cash, letters of credit, surety bond, or any other form of security posted by the insured, or by a captive insurer or reinsurer, to secure the insured's obligation under the large deductible policy to pay deductible claims or to reimburse the insurer for deductible claim payments. Collateral may also secure an insured's obligation to reimburse or pay to the insurer as may be required for other secured obligations."

#### **4. Responsible Party for Collection of Large Deductible Reimbursements**

It is critical to immediately establish the party responsible for billing and collecting large-deductible payments or reimbursements. While some states might have specific statutory language that specifies the entity responsible, some statutes might be silent. In the case where the statutes do not specify responsibility, it is recommended that the receivers and guaranty associations enter into an agreement that allows for the most efficient administration of the large-deductible collections.

Specific consideration should be given to large-deductible policies that provide coverage in multiple states and have claimants subject to the jurisdiction of multiple guaranty funds. If feasible, the most efficient approach for such policies would likely be for the receiver to administer the deductible billing and collection process. Throughout the life of the estate, claimants continue to incur benefit payments and expenses, and deductible collection efforts may last beyond the life of the estate. The party responsible for collections needs the ability to compromise and settle the future obligations.

The receiver should make provisions in its discharge motion and court order, to the extent possible, regarding the transition of ongoing deductible collections to the guaranty association, as well as the disposition of any collateral being held by the receiver.

#### **5. Treatment of Collateral in Receivership**

When collateral has been posted by or on behalf of a large-deductible policyholder, what does the receivership estate actually own? The answer is generally found in the documents pledging the collateral to the insurer.

Model #555 defines "property of the estate" to include "all right, title and interest in property ... includ[ing] choses in action, contract rights, and any other interest recognized under the laws of this state."<sup>4</sup> In states without an explicit statutory definition, the common-law definition is substantially similar.

This means that the insurer's right to draw on the collateral automatically becomes an asset of the receivership estate, but the collateral itself is not an estate asset unless and until it is drawn. In the first instance, the conditions and procedures for drawing the collateral should be spelled out in the relevant contract documents (which could include third-party instruments, such as LOCs or surety bonds), but state law could provide additional rights<sup>5</sup> and will specify what the receiver may do when the documents are silent, incomplete, or missing.

<sup>4</sup> Section 104(V)(1) of Model #555.

<sup>5</sup> For example, Section 712(D) of Model #555 specifically provides that the relevant provisions of the policy are not controlling "where the loss reimbursement policy conflicts with this section."

*Chapter 5—Claims*

Possession and control over the collateral are distinct from ownership. The insurer could already be in possession of the collateral before the receivership, or the receiver might act to take possession by enforcing applicable contract rights or by negotiating an agreement. Nevertheless, this does not immediately give the receiver the right to use the collateral to pay claims. The defining characteristic of collateral is that it is intended to serve as a backstop in case the policyholder does not meet its obligations to pay all reimbursements promptly and in full. Commonly, the right to draw on collateral only attaches after the policyholder has defaulted or has consented to a draw, or, if the collateral is an LOC, after the issuer has given notice of nonrenewal (in which case, the receiver must act promptly to call the LOC or obtain replacement collateral). There could also be the opportunity to negotiate an agreement under which the policyholder turns over the collateral and makes a lump-sum payment to commute any further reimbursement obligations, or the collateral might have been structured from the outset as a “working” loss fund from which the insurer was expected to pay claims in the ordinary course of business.

In any case, while it is essential for the receiver to preserve and exercise the right to access the collateral as needed, it is also essential to ensure that collateral is not dissipated to pay claims that the policyholder should be funding. Special consideration needs to be given in situations where the policyholder is at risk of being or becoming judgment-proof, or where rights to the collateral are shared with other creditors of the policyholder and prompt action is necessary to preserve the receiver’s priority.

When the guaranty association is paying the claims, it is generally entitled to receive the proceeds of any policyholder reimbursements, including draws on the collateral. Under laws substantially similar to Model #555, these payments are considered early access distributions (but without the necessity for court approval), which may be subject to subsequent clawback, while Guideline #1980 and the NCIGF Model treat them as the ultimate source of funding for the underlying claims, so that they belong unconditionally to the guaranty association.<sup>6</sup> Either way, however, it is the receiver rather than the guaranty association that has the right and obligation to draw on the collateral,<sup>7</sup> unless there is a formal written agreement assigning that right to the guaranty association.

Finally, there is always the hope that the policyholder’s reimbursement obligations will be oversecured or will become oversecured as claims are run off. In that case, any excess collateral will revert to the policyholder or the policyholder’s guarantor. State law might expressly provide a process for determining when excess collateral is being held by or on behalf of the receiver,<sup>8</sup> or the ability to return collateral before the estate is closed might be part of the general powers of the receiver. However, because workers’ compensation is a long-tail exposure with significant risk of adverse reserve development, receivers must take great care not to make premature or excessive return distributions.

## **6. Issues Raised by Net Worth Exclusions and Deductible Exclusions**

Unlike other lines of insurance, workers’ compensation insurance is generally exempt from the statutory caps on guaranty association coverage so that the guaranty fund is usually obligated to pay workers’ compensation claims in full. However, individual states may have adopted caps on guaranty association coverage.<sup>9</sup> States have created this exception to honor their state’s promise that injured workers will be paid the full benefits to which they are entitled. The general purpose of these exclusions is to avoid any obligation for the guaranty association to pay losses that can and should be borne by the policyholder. Net worth exclusions make guaranty association protection unavailable to policyholders with net worth above a specified threshold, while deductible exclusions expressly prohibit guaranty association coverage for amounts within a policy deductible.

Unless these exclusions are drafted and implemented carefully, there is a risk that they could result in delays in claims payments or even a complete loss of coverage. In some states, claimants might be protected by an

<sup>6</sup> Compare Section 712(C)(3) of Model #555 with Section C of Guideline #1980 and Section 712(C) of the NCIGF Model.

<sup>7</sup> See Section (E)(3) of Guideline #1980 and Section 712(E)(3) of the NCIGF Model.

<sup>8</sup> See, e.g., Section (E)(4) of Guideline #1980 and Section 712(E)(5) of the NCIGF Model.

<sup>9</sup> See Section 8(A)(1)(a)(i) of the *Property and Casualty Insurance Guaranty Association Model Act*. Almost all states have some provision requiring payment in full of workers’ compensation claims, but some states might have caps or other limitations on coverage.

*Receiver's Handbook for Insurance Company Insolvencies*

uninsured employer fund, but that is not the purpose of those funds, so even if such a fund exists in your state, it should be a priority to ensure that however it is done, the estate, employer, or guaranty association will provide for payment in full of all benefits due under the state's workers' compensation laws. If this is not possible under current law, regulators should advocate for a change in the law. A variety of successful approaches are available; there is not a single one-size-fits-all solution that is best for every state.

iii. Net Worth Exclusions

The *Property and Casualty Insurance Guaranty Association Model Act* (#540) contains an optional section with a variety of alternative provisions states can select, excluding coverage for high-net-worth insureds, whether they are individuals or business entities.<sup>10</sup> The base version sets the threshold at \$50 million, while one of the alternatives sets the threshold at \$25 million. Many states have enacted some version of this clause or some comparable net worth exclusion.

The impact on workers' compensation coverage depends on how the exclusion is structured. In states with provisions substantially similar to any of the three alternatives under the Model #540, coverage is excluded completely for first-party claims by high-net-worth insureds, but workers' compensation claims against high-net-worth policyholders are administered by the guaranty association on a "pay-and-recover" basis; that is, the guaranty association has the obligation to pay the claim in the first instance and the right to be reimbursed by the policyholder.<sup>11</sup> Thus, claimants are fully protected, and for large-deductible policies, this mirrors the structure of the policy for claims within the deductible. In states with guaranty association laws similar to Guideline #1980 or the NCIGF Model, this is the same reimbursement right the guaranty association would have as the insurer's successor in the absence of the exclusion.

If the policyholder is cooperative, the guaranty association has the option of negotiating an agreement where the policyholder advances funding for claims within the deductible. However, if the policyholder is not cooperative, guaranty associations have expressed concern that the pay-and-recover framework is burdensome and gives the policyholder too much leverage to avoid or delay paying its obligations in full. If Model #540's Alternative 2 is modified to treat workers' compensation claims the same as other third-party claims, then the guaranty association has no obligation unless the formerly high-net-worth policyholder has become insolvent.<sup>12</sup> Otherwise, the claimant's only recourse is against the policyholder or the insured's estate. As stated above, the injured worker should be protected by some means in these cases.

When a guaranty association net worth exclusion and a large deductible both come in to play on the same claim, it is imperative that the receiver and guaranty association stay in close communication in order to avoid any confusion regarding which entity is responsible for the collection. In Section 712 of Model #555, Guideline #1980, and the NCIGF Model, the guaranty fund is entitled to collect net worth reimbursements. Coordination of these collections with receiver efforts to collect on high deductible will do much to avoid duplication of billings and potential resulting collection delays.

iiii. Deductible Exclusions

Model #540 does not contain any explicit deductible exclusion. Instead, it simply provides that: "In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under

<sup>10</sup> Section 13 of Model #540.

<sup>11</sup> Alternative 1 applies the pay-and-recover obligation to all third-party claims. Alternative 2 excludes most third-party claims as well as all first-party claims, but requires the guaranty association to pay workers' compensation claims, statutory automobile insurance claims, and other claims for ongoing medical payments. Alternative 3 excludes only first-party claims and claims by out-of-state claimants that are subject to a net worth exclusion in the claimant's home state. This alternative does not create any statutory right of recovery when the guaranty association is obligated to pay a third-party claim.

<sup>12</sup> Section 13(B)(2) Alternative 2 of Model #540.

*Chapter 5—Claims*

the policy or coverage from which the claim arises.”<sup>13</sup> However, some states have enacted explicit language further clarifying that there is no guaranty association coverage for amounts within a policy’s deductible or self-insured retention.<sup>14</sup> For example, Minnesota law excludes “any claims under a policy written by an insolvent insurer with a deductible or self-insured retention of \$300,000 or more, nor that portion of a claim that is within an insured’s deductible or self-insured retention” from coverage by the P/C guaranty association.<sup>15</sup>

A Minnesota employer entered into an employee leasing arrangement with a PEO, which obtained a workers’ compensation policy with a \$1 million deductible. Both the PEO and the insurer became insolvent, and the Minnesota Court of Appeals held that there was no guaranty association coverage for workers’ compensation claims against the client employer because of the statutory deductible exclusion.<sup>16</sup> The court observed that the legislature deliberately chose to protect the guaranty association from unlimited exposure, without mentioning that the legislature also deliberately created an exception making the cap on coverage inapplicable to workers’ compensation claims (which strongly suggests that the statute in question, which is tied to the statutory \$300,000 cap on coverage, was not written with workers’ compensation in mind).<sup>17</sup> Likewise, the court took for granted that the statute’s undefined term “deductible” included the contract provision at issue in the case, even though the insurer had assumed the unconditional liability to pay all claims in full. The opinion did not consider the possibility that the legislature’s intent was simply to clarify that the guaranty association has no obligation to drop down and pay claims from the first dollar if the insurer would have had no obligation to pay those claims.

Therefore, if states determine that there is a need to include express provisions addressing deductibles and self-insured retentions in their guaranty association laws, it is essential to avoid unintended consequences. In particular, the key terms should not be left undefined. For this reason, Model #555 coined the term “loss reimbursement policy” in its section addressing these types of policies to distinguish them from true deductibles, where the insurer has no obligation to pay anything except the portion of the loss that exceeds the deductible.<sup>18</sup>

This is the crucial difference between a large-deductible workers’ compensation policy and an excess policy. Although large-deductible policies transfer a significant amount of risk back to the policyholder, they do not extinguish the insurer’s liability. That is why large-deductible policies, in states that allow them, are accepted as a mechanism for satisfying the policyholder’s compulsory coverage obligations, while excess policies generally are not. Usually, excess workers’ compensation policies may only be issued to self-insurers that have been approved by the state. It is the approved self-insurance program, not the excess policy, that satisfies the employer’s compulsory coverage obligation, and the insurer has no liability for any portion of a claim that falls within the employer’s self-insured retention.<sup>19</sup> Thus, despite the terminology that is commonly used, it is the excess policy, not the large-deductible policy, that functions as a “deductible” in the traditional sense of the term.

It is worth noting, however, that commercial self-insured retention and large-deductible policies can vary widely in policy terms and sometimes “side agreements” supplement the policies. Arrangements can contain aggregate

<sup>13</sup> Section 8(A)(1)(b) of Model #540. Compare Section 3(B)(2)(a) of the *Life and Health Insurance Guaranty Association Model Act* (#520), expressly excluding from life and health guaranty association coverage: “A portion of a policy or contract not guaranteed by the member insurer, or under which the risk is borne by the policy or contract owner.”

<sup>14</sup> Currently, the only states with language specifically excluding claims within policy “deductibles” are Iowa, Louisiana, Minnesota, Missouri, and Nevada. Louisiana’s exclusion applies only to policies issued to group self-insurance funds, and Missouri’s does not apply to workers’ compensation claims.

<sup>15</sup> Minn. Stat. § 60C.09(2)(4).

<sup>16</sup> *Terminal Transport v. Minnesota Ins. Guar. Ass’n*, 862 N.W.2d 487 (Minn. App. 2015), review denied June 30, 2015.

<sup>17</sup> Minn. Stat. § 60C.09(3).

<sup>18</sup> For example, if a consumer has an auto policy with a collision deductible of \$1,000, and the repair costs \$5,000, the insurer’s liability is limited to \$4,000. “Self-insured retentions” (SIRs) in commercial excess policies are designed to function the same way on a larger scale. If a business is found liable (or a third-party claim is settled) for \$500,000, and its liability policy has an SIR of \$300,000, the insurer is never responsible for more than the remaining \$200,000, even if the policyholder is bankrupt.

<sup>19</sup> In many states, a separate self-insurance guaranty fund protects claimants if a self-insured employer becomes insolvent. Those funds typically operate entirely under the state’s workers’ compensation laws, not the state’s insurance receivership or insurance guaranty fund laws.

*Receiver's Handbook for Insurance Company Insolvencies*

limits, can vary on the obligation for defense cost and expenses, and, in some cases, permit the insured to “self-fund” its claims with an account in the possession of the TPA that is handling the claims. Because of these complexities, policy terms and any related endorsements and side agreements should be carefully reviewed. Whether such side agreements are legally enforceable requires a thorough case-by-case analysis in light of applicable state laws.

*Chapter 5—Claims***Federal Home Loan Bank Claims Supplement**

This supplement will provide additional details for receivers involved in Federal Home Loan Bank (FHLB) transactions.

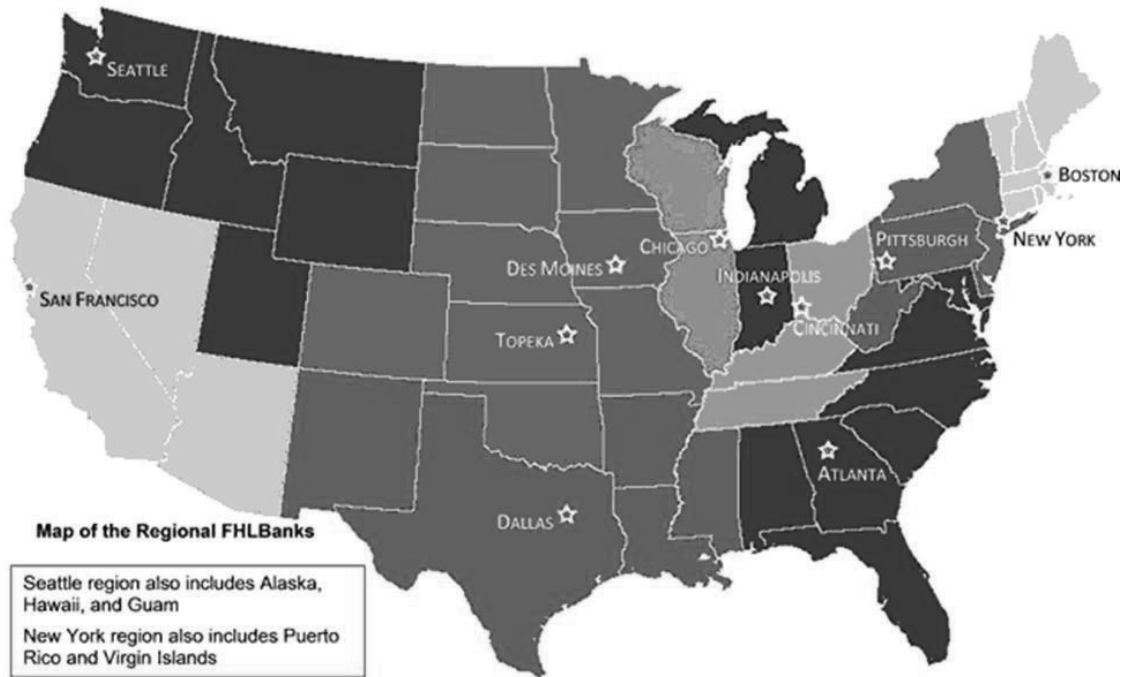

## Definitions Specific to FHLBank Transactions

The following are common terms that a receiver is likely to encounter when dealing with an FHLBank and may be more specifically defined in FHLBank documents:

- a. “Advance” means a secured loan from the FHLBank to its member in accordance with such terms and conditions as are applicable to such loan under an advances agreement, and it includes without limitation a funding agreement executed under an advances agreement.
- b. “Advances agreement” means one or more written agreements, including any written, document, policy, or procedure of the FHLBank and incorporated by reference into such written agreements between the FHLBank and its members pursuant to which the FHLBank makes or agrees to make advances and provide other extensions of credit or other benefits to the member and the member, among other things, grants to the FHLBank a security interest in certain collateral.
- c. “AHP” means the Affordable Housing Program of the FHLBank.
- d. “Assuming insurer” means an insurer that has entered into a purchase and assumption agreement with the insurance department by which the assuming insurer has agreed to assume some or all obligations of a member.
- e. “Member” means an insurer that is a member of an FHLBank. Such members will own FHLBank capital stock and may from time to time have outstanding advances or other obligations to the FHLBank, which have not been satisfied in full, or have not expired or been terminated.
- f. “Capital stock” means all capital stock of the FHLBank owned by a member. Each FHLBank has its own capital plan (which is published on the FHLBank’s website), with its own specific capital stock requirements and policies, but generally, each FHLBank requires a member to purchase membership stock (calculated annually) and activity-based stock. (The required amount fluctuates with the amount of a member’s advances or other obligations outstanding.) By statute, capital stock is collateral for a member’s obligations to the FHLBank.
- g. “Collateral” means all property—real, personal, and mixed—in which either a member or an affiliate of the member has granted a security interest to the FHLBank, or the FHLBank has otherwise acquired a security interest. Each FHLBank has its own policies regarding collateral that the FHLBank will accept to secure advances and other obligations, the minimum amount of collateral required, and how the value of such collateral is calculated for purposes of pledging to the FHLBank.
- h. “Obligations” are any and all indebtedness, obligations, and liabilities of the member to the FHLBank pursuant to the terms and conditions of the advance agreement or any other agreement between the member and the FHLBank, subject to applicable law.

**3. Coordination of Efforts With an FHLBank**

When an insurer that is a member of the FHLBank system is placed in receivership, the receiver must address a number of issues. There is no prescribed order of steps for managing the insurer’s obligations to an FHLBank. The following may facilitate the process:

1. Gain an Understanding of the History and the Current Status of the FHLBank Program<sup>20</sup>

<sup>20</sup> The guidance in Sections B.1, B.8, B.9, and B.10 are intended only to offer practical suggestions for managing the relationship between the receiver and the FHLBank based on the experience of the Shenandoah Life Insurance Company in receivership, related discussions, and circumstances as existed generally at the time of this writing. It is important to note that

*Chapter 5—Claims*

It is imperative that the receiver understand fully the history and components of the program. Important aspects of this basic information include:

a. Contacts

Who are the individuals at the bank (including outside counsel and advisors) who manage the bank's role with the insurer, and how can they be reached, especially if contact on short notice becomes necessary. Similarly, who will be "point" for the receiver in managing the ongoing relationship? Providing the bank with a contact person upon inception of delinquency proceedings will temper the possibility that the bank will take summary protective action for lack of information.

b. Complete Documentation

The receiver should strive to obtain and review carefully all of the documents governing the relationship, including the initial documents establishing the relationship and those related to subsequent advances and repayments.

c. Inception Date and Terms

The terms on which the relationship was established are likely to govern all subsequent advances and repayments. Not only is the formal agreement important, but so are emails and other communications that may provide a more complete understanding of the parties' actual expectations and concerns. Whether or not legally sufficient to alter the formal agreement, course of conduct may be critical guidance on how transactions actually were to be conducted.

d. History of Advances and Repayments

The relationship may have been in place for years and involved a number of advances and repayments. It is important that the receiver gain a thorough understanding of this history to determine whether certain remedial steps (such as stock redemption or release of excess collateral) are indicated immediately.

e. History of Collateral

For similar and other reasons, the collateral requirements upon which the parties agreed when the relationship was established and with each subsequent advance, and how the posting and release of that collateral has evolved over time, are important factors in understanding what company assets are properly hypothecated or pledged to the FHLBank (and, therefore, unavailable to pay other claims or expenses), and which assets may be so identified on the company's records but may in fact be eligible for release from such FHLBank claims. Note that the agreement(s) with the FHLBank may require that the insurer post collateral of a stated value in excess of outstanding advances and may also prescribe a reduction in the value assigned to that collateral (the "haircut"), with the combined effect of leaving the bank over-collateralized. It may be possible to negotiate some relief from the over-collateralization of outstanding advances. Note also that the use of proceeds from advances and posting of collateral from other invested assets of the insurer may create or exacerbate asset-liability mismatches. For example, using previously acquired longer duration, high-grade assets as collateral but using the advance proceeds to acquire shorter duration and/or lower-grade (higher potential yield) investments may result in an

---

every situation has its own characteristics and circumstances and that the relationship between one insurer and one FHLBank is likely to differ materially from any other such relationship. Further, no effort is made in this guidance to explore the legal or policy bases for the parties' rights and liabilities, nor to evaluate suggested legislative or regulatory improvements.

*Receiver's Handbook for Insurance Company Insolvencies*

imbalance between the duration of existing liabilities and newly acquired investments intended to fund them.

f. History of Acquisition and Redemption or Disposition of Bank Stock

As a condition of becoming a member of the FHLBank system, and therefore eligible for advances, the insurer will likely have been required to purchase a certain amount of “membership” stock in the FHLBank. There is typically no independent market on which that stock can be sold, and the only way in which the insurer can dispose of it is to sell it back to the FHLBank on redemption terms established by the parties’ agreement. Normally, the agreement requires that the insurer retain the membership stock so long as the agreement remains in place and advances remain outstanding. But redemption by the bank of membership stock may be subject to its discretion informed by the bank’s own liquidity and financial condition. As a result, an insurer may be required to retain membership stock for which there is no market and which has no liquidity long after repaying all advances in full.

Further, with each advance, the insurer may have been required to purchase additional bank stock as “activity stock,” typically in quantities constituting a small percentage of each advance. As with “membership” stock, there is no independent market on which activity stock can be sold, and the only way in which the insurer can dispose of it is to sell it back to the FHLBank on redemption terms established by the FHLBank’s capital plan and the parties’ agreement. The agreements or explicit terms and conditions of the stock may give the FHLBank discretion to postpone the redemption of membership and activity stock.

Because the stock is illiquid and, therefore, of little value to the receiver in managing the rehabilitation or liquidation, exploring prompt redemption of outstanding stock may be prudent.

g. Investment of Advances

It is important to determine whether the collateral obligations created by advances have resulted in the hypothecation of other assets of the insurer in a way that may have resulted in asset-liability mismatches and potential liquidity problems. It is not unusual to find a disproportionate share of the insurer’s high-grade, liquid assets pledged as collateral for advances, the proceeds of which were instead invested to potentially create beneficial leverage or interest rate arbitrage. Over time, and with deteriorating conditions in the capital market, this can create serious challenges for the receiver. The potential substitution of collateral should be explored with the FHLBank to ameliorate these challenges. However, an FHLBank is limited by regulation on the types of collateral it may accept.

h. Performance in Relation to Repayment Obligations

By design, the FHLBank program is structured so that the FHLBank does not take on much risk in connection with advances to members, including insurers. The pricing (interest rates charged) for the advances do not typically contemplate material risk of default, and collateral requirements are intended to all but eliminate such risk. The receiver should familiarize themselves with the history of the relationship to determine whether there are outstanding concerns for the bank that should be addressed promptly so that the bank does not feel compelled to exercise its rights to the collateral in a manner that might prove disruptive to the receivership. Outstanding defaults or near-defaults should be identified and remedied to preserve the collateral.

i. Current Balance of Advances

*Chapter 5—Claims*

Obviously, the amount of outstanding advances and resulting repayment obligations must be understood well by the receiver, particularly in relation to collateral pledges. The records of troubled insurers may not be sufficiently complete or accurate to allow for proper monitoring of these outstanding balances, and efforts should be made to reconcile the insurer's records to those of the bank.

j. Repayment Due Dates and Segregated Cash Account Balance

Advances are made with specific repayment obligations. These obligations will address both interest and principal payment obligations, with specific dates established for both. It is common for segregated-cash-account requirements to be imposed from which the bank can draw some or all of these payments. The receiver needs to identify how much cash the insurer is required to maintain in specified accounts by the agreement(s) and the dates and amounts of required interest and principal payments. Plans should be made to assure liquidity and the ability to comply with these requirements or to make other payment arrangements. If forbearance or accommodations become necessary or desirable, those should be negotiated promptly, if the bank has the ability to provide them.

k. Excess Cash

If the insurer finds itself with more cash than required in the specified account(s), discussions should be undertaken with the FHLBank. Ideally, the receiver and the bank will agree that excess cash will automatically be redirected to the insurer's general account. However, if the bank is unwilling to permit the receiver to withdraw cash from the account to which the bank has no contractual claim, it may be necessary to resort to the receiver's right to seek a court order mandating the release of excess cash collateral.

l. Prepayment Fees

Typically, the agreements discourage early repayment of advances because such repayments may be inconsistent with hedges and other arrangements made by the bank in connection with the advances to the insurer. Prepayment may, therefore, trigger prepayment charges or fees owed by the insurer. However, the bank's need to charge those prepayment fees may be reduced or eliminated by changing circumstances affecting the hedges or other arrangements made by the bank. The receiver should, therefore, consider whether prepayment may be advantageous (e.g., because of associated collateral release or stock redemption). If prepayment would be helpful to the receiver's strategy, discussions with the bank should ensue to determine the most optimal prepayment timing that will result in the lowest applicable prepayment fees.

m. Cash Required

As noted, the agreements typically require the insurer to maintain specified liquidity, likely in segregated accounts at the bank, for the protection of the bank. The receiver will need to address these requirements.

2. Notice of Receivership to the FHLBank

a. Notify FHLBank of Receivership

Immediately following the establishment of the receivership, the receiver should contact the FHLBank (see initial FHLBank contact information above) to inform the FHLBank that the insurer has been placed into receivership.

b. Identify Authorized Individuals

*Receiver's Handbook for Insurance Company Insolvencies*

The receiver should forward electronically to the FHLBank all legal agreements, court orders, and/or notices that evidence the appointment of the receiver and a delegation of authority designating individuals authorized to transact business on behalf of the receiver in a mutually satisfactory form. To protect the receiver, the FHLBank may place the account of the member “on hold,” prohibiting any additional member/receiver-initiated activity until the required agreements and authority delegations are received.

c. Schedule Initial Conference Call or Meeting

The receiver and the FHLBank should schedule a mutually convenient time to meet via conference call following the establishment of receivership.

3. Considerations for the Initial conference Call or Meeting with the FHLBank

a. Identify Contact Person(s)

The FHLBank, the receiver, and the assuming insurer, if applicable, should each identify their primary contact person(s) and business activity coordinator(s). The receiver should also provide to the FHLBank a key point person(s) who will remain involved with the disposition of all residual issues pertaining to the receivership through completion.

b. Identify Outstanding Obligations, Pledged Collateral, and Capital Stock

During the initial conference call meeting, the receiver should request that the FHLBank identify all outstanding advances and any other outstanding obligations of the member, including AHP subsidy exposures, LOCs, and correspondent services exposures. Furthermore, the receiver should request that the FHLBank provide information regarding the amount and nature of collateral pledged, the balance of any member cash accounts or safekeeping accounts, and the member's capital stock.

c. Establish Receivership Timeline

During or prior to the initial conference call meeting, the receiver should inform the FHLBank of the planned receivership timeline and the identity of any other parties involved in the receivership process.

d. Discuss Payment of Obligations and Collateral Releases

The FHLBank will need to know what the receiver's intentions are with respect to the obligations and if it desires to retain continued correspondent services activities during the receivership. Depending on the facts and circumstances, and subject to renegotiation with the receiver, the FHLBank may allow the receiver to:

- Level the obligations outstanding in accordance with their existing terms and conditions, including scheduled interest and principal payment dates and collateral requirements.
- Prepay the obligations, subject to FHLBank policies and procedures regarding prepayments.
- Transfer the obligations to an assuming insurer acceptable to all parties.

The receiver should request that the FHLBank discuss the process and timing for release of any collateral once all or any part of the outstanding obligations have been satisfied, assumed, or secured with other collateral. If a court-ordered or statutory stay is in effect, the receiver and the

*Chapter 5—Claims*

FHLBank may need to execute an agreement detailing the agreed-upon payment of obligations and treatment of collateral.

e. Prepayments

If the receiver wants to pay down advances prior to the scheduled maturity date, the receiver should contact the FHLBank and request that the FHLBank calculate an estimation of the final payment due as of that agreed-upon prepayment date. The requested estimation should include outstanding principal, accrued interest up to the date of prepayment, and applicable prepayment/settlement fees.

f. Assuming Insurer

If the obligations of the member are expected to be transferred to an assuming insurer, such transfer is subject to the approval of the receiver, the FHLBank, and the receivership court. If approved, the FHLBank likely will require that the assuming insurer execute <sup>21</sup>an assumption agreement, and such agreement will stipulate that the assuming insurer is responsible for the timely payment of assumed obligations, direct or contingent, in accordance with the terms and conditions of the advances agreement and any other agreements in effect between the member and the FHLBank.

g. Summary of Call

Following the initial conference call, the receiver should request that the FHLBank provide a detailed closing statement for the receiver along with a summary of other matters discussed and agreed upon during the call. The summary of the call could provide the framework for the development of a memorandum of understanding between the parties.

4. Disposition of Obligations

The FHLBank will expect payment from the receiver in the event obligations are outstanding unless the obligations have been purchased by or assigned to an acceptable assuming insurer.

With the approval of the receiver, FHLBank, and the receivership court, the obligations may be transferred to an assuming insurer through the execution of an assumption agreement that will be provided by the FHLBank. Such obligations will be required to be collateralized in a manner acceptable to the FHLBank prior to any release of collateral pledged by the failed member. Such collateral requirements may differ from the requirements the assuming insurer may be accustomed to if it is a member of another FHLB.

Obligations that the receiver has decided not to resolve immediately will need to remain collateralized in accordance with the advances agreement.

5. Release of Collateral

(Assuming all member obligations have either been satisfied or assumed and fully collateralized by the assignee)

---

<sup>21</sup> If the assumption is consummated during a receivership proceeding, then the receivership court would have to approve the transaction, and if the assuming insurer is a U.S. insurer, then the domiciliary insurance department would also have to approve the transaction.

*Receiver's Handbook for Insurance Company Insolvencies*

If mortgages have been listed and/or delivered to the FHLBank or to a third-party custodian, the FHLBank will initiate the delivery of those mortgages to the receiver or the receiver's designee in a timely manner, and the FHLBank will file a UCC-3 termination statement<sup>22</sup> upon request.

If cash or securities have been pledged by the member, the FHLBank's interest in those assets will be promptly released, and the assets will be delivered to the receiver or receiver's designee based on instructions provided.

Partial payment of obligations may allow for partial release of collateral in accordance with the FHLBank's collateral release practices.

#### 6. Capital Stock

Typically, capital stock holdings of the member may be retained by the receiver or transferred to an assuming insurer, if such assuming insurer is a current member of the FHLBank. If the assuming insurer is not a member of the FHLBank, then the capital stock may be repurchased if permissible under applicable laws, regulations, regulatory obligations, and the FHLBank's capital plan and the proceeds of the capital stock transferred to the assuming insurer or receiver as long as the proceeds of the capital stock are not required to be retained by the FHLBank as collateral or as capital required against remaining outstanding business activity, in accordance with the FHLBank's policies, procedures, or practices.

Treatment of capital stock and any payment of dividends are subject to the provisions and restrictions set forth under applicable laws, regulations, regulatory obligations, and the FHLBank's capital plan.

#### 7. Other Matters

If the member was a participant in other FHLBank programs such as AHP or LOCs, collateral will be required to support all obligations that continue to exist past the life of the member. The receiver should request that the FHLBank provide a detailed account of all other programs in which the member participated and the term of exposure and the amount and type of collateral required.

The receiver and the FHLBank should determine an appropriate frequency of follow-up correspondence throughout the receivership process.

#### 8. Areas of Possible Agreement

The receiver seeks to maximize the value of the estate and to protect policyholders, claimants, and beneficiaries of the insurer. To this end, the receiver takes all appropriate steps to marshal and preserve assets for distribution in a liquidation or to facilitate rehabilitation or other resolution of the impaired or insolvent insurer. Apart from maximizing the value of the estate, liquidity is important to both the ongoing operation of the estate and more timely distributions. While more formal means to accomplish the purposes of the receivership are always available and should be pursued if necessary, money and other resources ought not to be devoted to that pursuit unless good faith attempts to reach consensual resolution with the FHLBank have failed. In particular, receivers may seek agreement with the FHLBank in the following areas:

##### a. Release of Excess Cash

---

<sup>22</sup> When a secured lender obtains a lien on collateral pledged to it, the lender files a UCC-1 so that there is a public record putting other creditors on notice of the lien. A UCC-3 is a termination statement filed by a secured lender to update the UCC record to reflect the lien has been released.

*Chapter 5—Claims*

As noted, the history of the relationship may have resulted in the insurer porting more cash than required by the agreement in accounts accessible solely by the bank and unavailable to the receiver for other purposes. Release of this excess cash to the general assets of the receivership should be pursued promptly.

## b. Release of Excess Collateral

Over time, the insurer may have caused more collateral to be pledged to the bank than is required by the agreements (e.g., because repayments may not have resulted in full release of the associated collateral or because of the appreciation of the collateral). In addition, because of the deteriorating condition of the insurer, the bank may have had the right to require that the insurer post additional collateral (sometimes as much 25% over the amount of outstanding advances). It may be possible to convince the bank to release some of this excess collateral so that it can be used for other receivership purposes. This is particularly true if the bank can be assured that reducing collateral will not unduly endanger the probability for full repayment when due.

## c. Reduction of Haircut and Excess Collateral Requirements

If the formula for determining excess collateral and haircuts applied to collateral values no longer reflect economic reality, the receiver should work with the FHLBank to recalculate these in the light of current conditions, again resulting in the release of some collateral.

## d. Repurchase of Excess Stock

Over time, the insurer may have accumulated more bank stock, especially activity stock, than is required by outstanding advances (i.e., excess stock) because, for example, the bank may have been slow in repurchasing stock following repayment of advances. Although the bank cannot be required to redeem excess stock upon demand by the receiver, except after expiration of a redemption period (typically five years), if the bank's financial condition is not an issue, and barring any statutory or regulatory prohibition, the receiver might seek waiver of the redemption period in order to negotiate the repurchase of excess stock, converting it into liquid assets available for receivership purposes.

9. Managing the Relationship<sup>23</sup>

Apart from seeking accommodations, the receiver should manage the ongoing relationship.

## a. Evaluate Prepayment

The receivership should consider when it would be optimal to repay outstanding advances and plan accordingly in cooperation with the bank.

## b. Evaluate Need for Extensions

It may be necessary or appropriate to renegotiate the repayment schedule with the bank and to evaluate the cost of doing so.

## c. Evaluate Substitution of Collateral

Due to asset liability matching considerations or for other reasons, it may be helpful to explore the possibility of substituting collateral posted against outstanding advances.

## d. Determine Desirability of Maintaining the FHLBank Program

---

<sup>23</sup> See Footnote 3.

*Receiver's Handbook for Insurance Company Insolvencies*

The FHLBank program typically provides the insurer a facility for financing or access to liquidity on desirable terms. The receiver should consider whether continuation of the program may play a useful role in rehabilitation or liquidation plans. If sale of the company is being considered, preservation of the program may add value to potential buyers, making the insurer that much more attractive.

e. Develop an Exit Strategy if Desirable

Conversely, the receiver may conclude that terminating the FHLBank program is the best option. In that case, a thoughtful program for concluding the relationship in cooperation with the bank should be developed and implemented.

10. Share Experience with the NAIC<sup>24</sup>

In any case, because this is a relatively new development in the world of insurance receiverships, sharing the receiver's experience with the NAIC and other receivers is indicated provided that appropriate confidentiality can be maintained under applicable law. Developing a body of knowledge will facilitate the management of these programs by banks and receivers involved in subsequent cases.

---

<sup>24</sup> See Footnote 3.

## Solvency Regulation and The Resolution System: 2023 Tabletop Exercise

### Background

NOLHGA and NCIGF propose holding a “tabletop” session on how commissioners, solvency regulators, receivership staff, and the guaranty system can produce the best outcomes for policyholders of troubled insurance companies, and how early and frequent planning and collaboration can best support insurance commissioners in achieving those outcomes. The session will be designed to:

- Promote communication among regulators, receivers, and guaranty system members about the regulatory and resolution systems and how they can best work together
- Identify key questions/issues for further research, process improvements, and regulatory development
- Determine areas for enhanced coordination and planning among regulators, receivers, and the guaranty system to improve policyholder outcomes

### Overview

- The session would be a partial day event (3-5 hours), potentially connected to an NAIC meeting, conference, or training platform.
- A series of interactive panel discussions and breakout sessions would be built around a hypothetical troubled company scenario. Issues to consider include:
  - Early-stage decision making, communication, and information sharing
  - Transitions from oversight to rehabilitation to liquidation
  - Policyholder protection and communication
  - Guaranty system information, data, planning, and execution on consumer protection
  - Receivership court proceedings, other litigation, and third-party involvement/interest
  - Receivership execution

### Participants

- State Insurance Commissioners
- Senior financial regulators and other insurance department personnel
- Receivership leaders (including RITF and its working groups)
- Guaranty system representatives

### Planning

- In 2022, NOLHGA and NCIGF each held similar tabletop exercises (and received very positive feedback from participants). Using those as a starting point, we could support a “turnkey” session that would minimize demands on NAIC staff time.
- Because the Receiver’s Handbook Subgroup has been identifying resolution issues for updated analysis over the last year, the subgroup’s input on designing and executing on the session may be particularly valuable.
- Since an effective session will require coordination with solvency regulators, we suggest early-stage collaboration with FAWG to get input and participation.
- Holding the session around an existing NAIC meeting could increase attendance from stakeholders. We suggest a session in 2023, but adequate notice will be important in securing attendance.
- If successful, similar sessions could be conducted in future years to reach a broader audience and/or cover additional topics.

**REINSURANCE (E) TASK FORCE**

Reinsurance (E) Task Force March 6, 2023, Minutes ..... 9-675  
Implementation of the *Term and Universal Life Insurance Reserve Financing Model Regulation*  
(#787); Status as of Feb. 22, 2023 (Attachment One) ..... 9-677

Draft: 3/11/22

Reinsurance (E) Task Force  
Virtual Meeting (*in lieu of meeting at the 2023 Spring National Meeting*)  
March 6, 2023

The Reinsurance (E) Task Force met March 6, 2023. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Adrienne A. Harris, Vice Chair, represented by John Finston (NY); Mark Fowler (AL); Alan McClain represented by Chris Erwin (AR); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Wanchin Chou (CT); Michael Yaworsky represented by Virginia Christy (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen represented by Kim Cross (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark and Vicki Lloyd (KY); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Grace Arnold represented by Ben Slutsker (MN); Mike Causey represented by Jan Andrews (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by David Wolf and John Tirado (NJ); Jennifer Catechis represented by Patrick Zeller (NM); Judith L. French represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by John Tudino (RI); Michael Wise represented by Tom Baldwin (SC); Cassie Brown represented by Mike Arendall (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Nathan Houdek represented by Mark McNabb (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Eft made a motion, seconded by Crawford, to adopt the Task Force's Nov. 17, 2022, minutes (*see NAIC Proceedings – Fall 2022, Reinsurance (E) Task Force*). The motion passed unanimously.

2. Adopted the Report of the Reinsurance Financial Analysis (E) Working Group

Kaumann stated that the Working Group meets in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. He stated that the Working Group met Jan. 31, 2023; Dec. 19, 2022; and Nov. 22, 2022; to approve several certified and reciprocal jurisdiction reinsurers for passporting. He noted that the Working Group will meet several more times during 2023.

Kaumann stated that the Working Group has now approved 55 reciprocal jurisdiction reinsurers and 41 certified reinsurers for passporting, and that 39 states have passported a reciprocal jurisdiction reinsurer. He noted that the list of passported reinsurers can be found on the Certified and Reciprocal Jurisdiction Reinsurer web page.

Kaumann made a motion, seconded by Wolf, to adopt the Working Group's report. The motion passed unanimously.

Rehagen stated that as part of the adoption of *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53), the Valuation Analysis (E) Working Group was directed to assist in the targeted review of asset adequacy analysis related to modeling of business supported with projected high net yield assets. He noted that this work will involve reviewing reinsurance and that the work is only in the early stages.

3. Received a Status Report on the Reinsurance Activities of the Mutual Recognition of Jurisdictions (E) Working Group

Wake stated that the Working Group met Nov. 7, 2022, to reapprove the status of Bermuda, France, Germany, Ireland, Japan, Switzerland, and the United Kingdom (UK) as qualified jurisdictions and to reapprove Bermuda, Japan, and Switzerland as reciprocal jurisdictions. He noted that this process will be completed again during fall of 2023. Wake noted that on Feb. 24, the Bermuda Monetary Authority (BMA) issued a consultation paper on planned enhancements to their regulatory process and that NAIC staff provided this document to the Working Group and the Task Force. He stated that the document has not yet been fully reviewed but that any changes to the BMA's regulatory practices will be evaluated during the annual re-review of their status as a qualified and reciprocal jurisdiction.

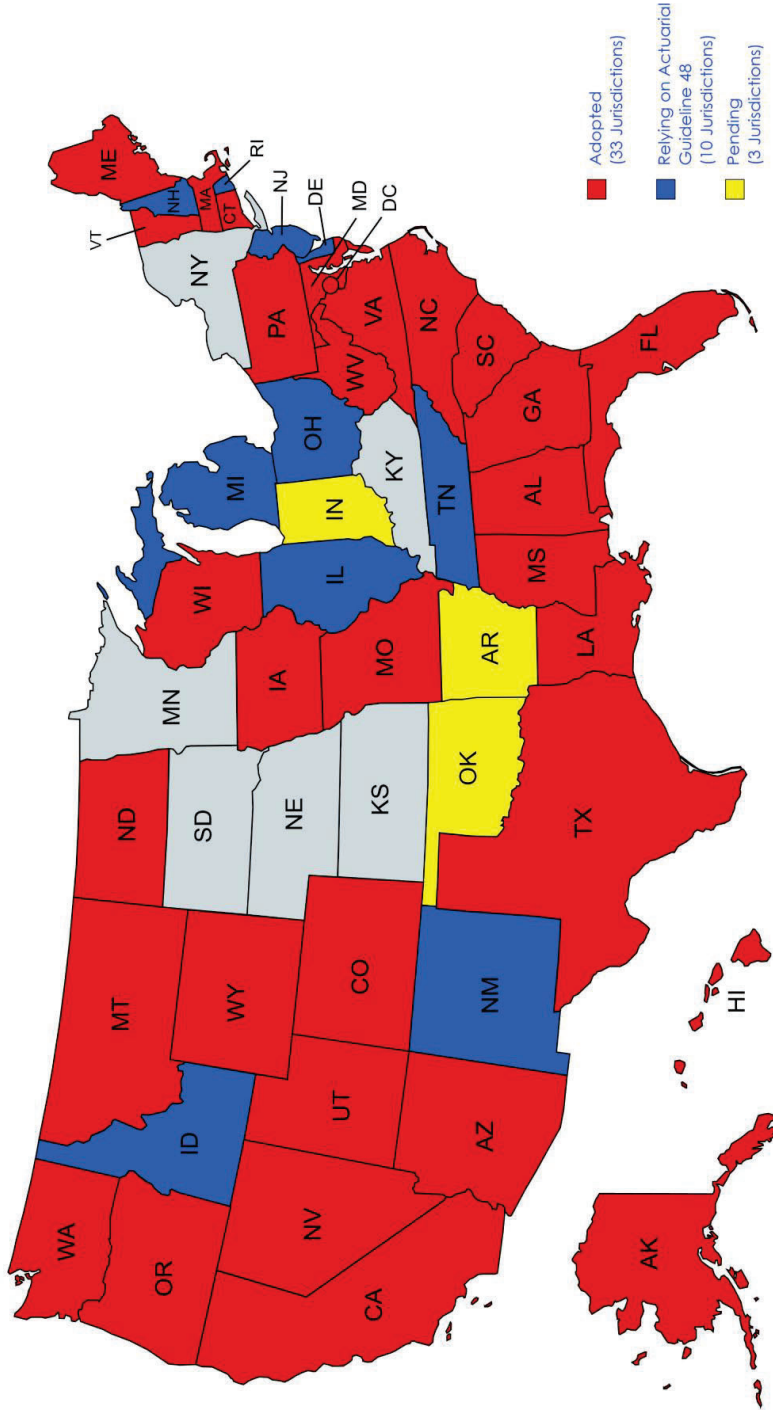

4. Received a Status Report on the States' Implementation of Model #787

Jake Stultz (NAIC) stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation (#787)* became an accreditation standard on Sept. 1, 2022, with enforcement beginning on Jan. 1. He noted that as of Feb. 22, 33 jurisdictions have adopted Model #787, with another three jurisdictions with action under consideration. He noted that Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48)* and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline. He stated that 11 states have advised NAIC staff that they will rely on AG 48, either through an insurance bulletin or through simple adoption of the NAIC's *Accounting Practices and Procedures Manual (AP&P Manual)*. He added that if a state adopts Model #787, it also will need to adopt Section 5B(4) of the *Credit for Reinsurance Model Law (#785)*. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment One).

Having no further business, the Reinsurance (E) Task Force adjourned.

Valuation of Securities (E) Task Force  
Louisville, Kentucky  
March 23, 2023

The Valuation of Securities (E) Task Force met in Louisville, KY, March 23, 2023. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Eric Dunning, Vice Chair, represented by Lindsay Crawford (NE); Mark Fowler represented by Sheila Travis (AL); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Michael Yaworsky represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher (ID); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Jon Godfread represented by Matt Fischer (ND); Marlene Caride represented by John Sirovetz (NJ); Adrienne A. Harris represented by Jim Everett (NY); Glen Mulready represented by Eli Snowbarger (OK); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Nathan Houdek represented by Amy Malm (WI). Also participating was: Philip Barlow (DC).

1. Adopted its Feb. 21, 2023, and 2022 Fall National Meeting Minutes

Mears said the Task Force met Feb. 21 and took the following action: 1) adopted a *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)* amendment to update references to 5GI; 2) adopted a P&P Manual amendment to add instructions for the financial modeling of collateralized loan obligations (CLOs); and 3) discussed a Structured Securities Group (SSG) memorandum on a proposed CLO modeling methodology (excluding scenarios and probabilities).

Kozak made a motion, seconded by Crawford, to adopt the Task Force's Feb. 21, 2023 (Attachment One) and Dec. 14, 2022 (see *NAIC Proceedings – Fall 2022, Valuation of Securities (E) Task Force*) minutes. The motion passed unanimously.

2. Received a Report on the Projects of the RBC Investment Risk and Evaluation (E) Working Group

Mears said the next item is to hear a report on projects before the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group. Barlow, chair of the Working Group, provided the update.

Barlow said the Working Group met and had a very good discussion on the two main projects that are before the Working Group. The first is the long-term CLO RBC project. An update was received from the American Academy of Actuaries (Academy). The Academy continues to make good progress, and it is working to develop a modeling structure for how CLOs might be modeled for RBC purposes. This is only laying out a framework and not actually creating a model yet. This will help the Academy as it moves forward. It will continue to communicate around the modeling with the SSG, so if modeling is the way to go, the Working Group could build off the work that Eric Kolchinsky's (NAIC) team is doing on modeling. The Academy discussed how to address RBC arbitrage in the CLOs. It was decided that there is no common definition of what is meant by that. The Academy is working to develop a definition of what it means for there to be arbitrage in the RBC calculation, and it will present that to the Working Group.

The other item on the agenda is the interim solution for residual tranches. The Working Group will expose an updated structural change that includes the proposal from the Task Force, except with one bucket for the residual

tranches as opposed to the three that were originally proposed. The Working Group will move ahead with the structural change and debate other aspects of the need for an interim solution. There will be a meeting that will include the Working Group, the Task Force, and the Statutory Accounting Principles (E) Working Group to look at the actual results of the annual statement filings to see where that data is. Another meeting will be scheduled to focus on the discussion of the interim proposal.

### 3. Discussed an Amendment to the P&P Manual to Add Instructions for Structured Equity and Funds

Mears said the next item on the agenda is to receive and discuss comments on a proposed P&P Manual amendment to add instructions for Structured Equity and Funds. This amendment was first discussed at the 2022 Fall National Meeting and exposed for a 60-day public comment period that ended Feb. 13. Three comment letters were received. One was a joint letter from the American Council of Life Insurers (ACLI), the Private Placements Investors Association (PPIA), and the North American Securities Valuation Association (NASVA); the second was from Varagon Capital Partners; and the third was from PineBridge Investments.

Mark Perlman (NAIC) said as mentioned in the Securities Valuation Office's (SVO's) memorandum and at the 2022 Fall National Meeting, Structured Equity and Funds, sometimes called "rated notes" or "feeder funds," are investments that, with the insertion of an intervening entity, such as a special purpose vehicle (SPV) or limited partnership, permit underlying assets that alone may not qualify as "bonds" or be eligible to receive an NAIC Designation under the current regulatory guidance to be reported as "bonds." This regulatory transformation is enabled because the intervening entity issues notes, and those notes receive a credit rating provider (CRP) rating. Typically, the notes are backed by equity or fund investments, some of which may have underlying bonds or loans, but the structure could just as easily be backed by any asset, including those of affiliates, non-admissible assets, real estate, mortgage loans, unrated loans, or an asset type that is ineligible to be assigned an NAIC Designation or use CRP ratings. It is possible that many of the transactions the SVO has mechanically processed as private ratings would qualify as bonds eligible for Schedule D-1 reporting according to the proposed principles-based bond definition, while others would likely not qualify.

The comment letters submitted by interested parties affirmed the SVO's primary regulatory concern. Investments in Structured Equity and Funds are oftentimes circumventing the NAIC's regulatory reporting, statutory accounting, investment risk assessment, and RBC guidance. It was noted in the comment letters that this structure was developed to be "anti-arbitrage," meaning it is intended "... to allow insurance companies to access funds with a capital charge that puts insurance company investors on a level playing field with pension funds, banks, and other non-insurance investors." In other words, the structure is intended to put insurers on a level playing field with entities subject to different regulatory regimes. The creation of investment structures for the purpose of attaining better reporting and capital treatment under the NAIC's guidance should be strongly discouraged. As communicated in the SVO's memorandum, such actions have the potential to undermine the NAIC's regulatory framework. The SVO is aware of at least one insurer using this general structure to transfer CLO Combo Notes, a type of principal protected security (PPS), an asset type expressly made ineligible for filing exemption (FE) by the P&P Manual, into an SPV that issued "rated notes" backed by those CLO Combo Notes.

Charles Therriault (NAIC) said the SVO is very sympathetic that non-life insurers do not get the RBC benefit afforded to life insurers investing in private funds with an SVO-assigned NAIC Designation, and a fund investment can be more operationally efficient, particularly for small insurers, than owning the underlying investments directly. However, if insurers do not like how an asset is treated within NAIC guidance for RBC or investment classification purposes, they should address that treatment with the appropriate regulatory group instead of creating alternate investment structures.

This amendment does not seek to alter the accounting treatment or classification for these investments, and it does not seek to set an RBC factor for them; those are the responsibilities of other NAIC regulatory groups.

However, the SVO is recommending that this amendment be permitted to assess the credit risk of these investments to ensure regulatory reporting equivalency, which is the responsibility of the Task Force. These structures exploit the inherent weakness of the FE process, whereby anything with a CRP rating is assumed to be a “bond”; the rating is assumed to reflect regulatory risk concerns; and the investment is permitted to be automatically processed and assigned an NAIC Designation without any regulatory assessment of its actual risk, structure, or underlying assets. The FE process has effectively positioned CRPs as de facto super-regulators, allowing them to decide what a bond is, what its investment risk is, and by extension, what capital charge it should receive.

Perlman said some of the comment letters suggested that this amendment should wait for the Statutory Accounting Principles (E) Working Group to finish its work on the principles-based bond definition and the RBC Investment Risk and Evaluation (E) Working Group to finish its work on the RBC factors for residual tranches. As previously mentioned, each regulatory group has its own unique area of responsibility and expertise that ultimately creates the overall NAIC regulatory framework and its intentional interdependencies. While the Task Force welcomes feedback, comments, and recommendations from other regulatory groups that utilize NAIC Designations in their processes, the Task Force’s action on this matter is not dependent on the completion of those projects by their Statutory Accounting Principles (E) Working Group and RBC Investment Risk and Evaluation (E) Working Group colleagues.

For example, the RBC Investment Risk and Evaluation (E) Working Group is looking at the RBC factors for residual tranches of CLOs and potentially all tranches of CLOs. The Task Force decided to remove CLOs from FE eligibility in 2024 because ratings, while potentially sound on their own, do not always lead to the appropriate outcome when applied to the NAIC’s regulatory framework, and this will ensure a consistent approach to CLO designations. The Task Force’s mission “... to establish and maintain all aspects of the NAIC’s credit assessment process for insurer-owned securities ...” and assign NAIC Designations did not need to wait for the Working Group to finish its residual and CLO RBC factor analysis, an analysis that may not have any impact on the Structured Equity and Funds’ investments being discussed today.

There were also comments requesting full transparency into the methodologies the SVO would use when assessing a Structured Equity and Fund investment. When assessing insurer investments, the SVO is authorized by the Task Force in Part One of the P&P Manual to “... use any analytical technique or financial modeling approach taught in undergraduate and graduate business school financial analysis curriculum; any analytical technique otherwise widely or commonly used by lending officers, securities professionals, credit rating analysts, valuation professionals, statisticians, or members of similar professions and any special technique of modeling approach that may be appropriate in a special situation [and this next phrase is crucial] that provides a reasonable assessment of risk or valuation for regulatory purposes.”

Therriault said comments compared the lack of express methodology for the Structure Equity and Funds proposal with a very transparent and collaborative process around establishing a CLO methodology. That difference in approach stems in large part from the lack of transparency afforded to the SVO with respect to Structured Equity and Fund investments and the great variety and potentially limitless permutations of these structures and the underlying assets. Structured Equity and Fund investments are not a homogeneous asset class, and they are privately issued and rated. The apportionment of risk between Structured Equity and Funds notes and equity, as well as the types of underlying investments it can hold, vary widely, all of which require the SVO to apply different approaches and methodologies based upon the structure that it is reviewing. It is not possible to produce a generic standardized methodology for what is, by its very nature, a highly bespoke transaction. Some CRPs have developed methodologies for Structured Equity and Funds, and recognizing this methodology may reasonably capture the risk. The SVO included a provision in the amendment that would permit it to consider that rating agency analysis in its review. The CLO modeling methodology benefits from several factors that permit a level of transparency that are not present for Structured Equity and Funds: 1) a broadly syndicated investment; 2) a homogeneous

structure; 3) transparent publicly rated underlying investments; 4) publicly available legal agreements, and 5) widely available third-party data models and software to analyze them.

It was also noted in the comments that since the SVO is receiving private letter rating (PLR) rationale reports, it should already have sufficient transparency into Structured Equity and Fund transactions. The two examples that the SVO included in its memorandum were pulled directly from PLR rationale reports. While those reports helped the SVO identify this issue to raise up to the Task Force, they did not contain sufficient information to fully analyze the transactions or their underlying investments. The Task Force has not authorized the SVO to act on any rationale report that it sees in which it may disagree with the rating.

There seems to be a common misunderstanding around the use of CRP ratings, possibly because the FE process has been in effect for so many years. The SVO is not a rating agency, and NAIC Designations are not ratings. As directed by Part One of the P&P Manual, “An NAIC Designation must be interpreted by the NAIC member in the context of the NAIC Financial Regulation Standards and Accreditation Program, other characteristics of the investment, and the specific financial and regulatory status of the insurance company.”

Other policies in Part One explain, “The NAIC uses publicly available credit ratings, when available, as one component of the services it provides to state insurance regulators concerned with financial solvency monitoring of insurance company investments. In adopting or implementing the procedure described in this section, the NAIC acts solely as a private consumer of publicly available credit ratings. The sole NAIC objective in obtaining and using publicly available credit ratings is to conserve limited regulatory resources (e.g., the resources of the SVO).”

The SVO is recommending that the Task Force add a definition for Structured Equity and Funds and remove them from the FE process, because for the reasons explained, the SVO does not believe the FE process adequately serves the NAIC’s regulatory objectives for these investments. The SVO has the resources it needs through the provisions incorporated into this amendment, such as considering a rating agency’s analysis of complex transactions, to provide a reasonable assessment of risk. If the Task Force wishes to limit the scope of this amendment because of the potential volume that has been suggested, the SVO would recommend restricting this to privately rated securities or those with underlying investments that are privately rated. Privately rated securities already need to be submitted to the SVO, and this would only require some additional information.

Mike Reese (Northwestern Mutual), representing the ACLI, the PPIA, and NASVA, said he wants to clarify the phrase “anti-arbitrage.” It primarily relates to example one, where there was a limited partnership backed by debt instruments, that if an insurer relied upon the normal RBC charge, it would be 30%. The exposure states that the underlying debt would call for a 9% RBC charge, and that presents a similar type of arbitrage because the weighted average of the debt and equity tranche was something less, like 5%. The anti-arbitrage is that insurers want the 9% RBC charge, but they do not want the 30%. The SVO’s point is that it is an RBC charge of 4% in aggregate, and it should be 9%.

The ACLI, PPIA, and NASVA struggled a little bit in responding to the letter, because there were a couple of things commingled. There were three concerns in the letter: 1) the pure regulatory arbitrage; 2) what constitutes a bond; and 3) the lack of transparency. The comment letter suggests that the first issue would be addressed with an updated residual RBC charge. That is the whole point of the residual workstream, because it is the same concern with CLOs where there is arbitrage, so this would be duplicative of that effort.

The second concern relates to the second example regarding the math not quite working in the example. That was a security that would not qualify, or at least certainly in the lower tranche, as a bond. The Statutory Accounting Principles (E) Working Group is defining what a bond is, and that should address what constitutes a bond.

PLR rationale reports are now starting to be filed with the SVO. The vast majority of these are supposedly 10, 20, and 30 pages of detailed data. The rating rationales for these two instruments are not known, but if they are not robust, that would potentially be a problem that should be addressed.

To revert to the specific two examples and just share a few other high-level thoughts of what the other members are potentially concerned about, the first is debt-backed securitization, not too dissimilar in some ways to a CLO. The group believed the residual tranche work would address the issue. The proposed solution of the SVO says there is arbitrage, which is acknowledged. If the RBC charge would be 9%, it would be hard arguing against that. The proposal said the SVO would use the weighted average rating factor (WARF) methodology, which works well in many instances. Where there are waterfall structures, the WARF methodology may not be appropriate. If the underlying debt securities are not rated, the WARF reverts to an NAIC Designation Category of 5.B. That would then result in an RBC charge that would be higher than what it should be. It does not get to the RBC charge that the underlying debt would suggest that that charge should be.

Reese said the residual tranche interim solution is intended to address this issue, and it would be duplicative. The other option is the rating agency rating could be used on that debt; industry would be fine with this as well. If neither of those work, then anything could be used to determine that charge. That is where industry likes transparency because transparency to the methodology is important. Industry has capital certainty, which is not part of what an NAIC Designation is, but as industry looks at investments to buy, capital certainty is important as industry tries to apportion capital for the investment portfolio.

If there are methodologies that the SVO consistently uses, industry would like transparency into them so industry can understand them. If there are not methodologies for every type of security structure, and it is going to be sort of an ad hoc use of them, that is troubling for industry if it is not consistent and not known. What made the examples more confusing is that there was a discussion in the exposure about paid-in-kind (PIK) interest and the potential deferral or extension of principal. There are real business reasons for those, and they are used in the portfolios much more broadly than these types of securities. The example said these could defer principal or interest without accruing interest, and it was hard to ascertain from the exposure if that “could” was used more broadly or if it related to the security in question. The comment letter states that if that is the case, industry would certainly say that is a subscript S or nonpayment risk type security. Just the fact that there are PIK or deferrals of principal, industry does not understand that concern. Raising that concern in this context alarmed many constituents.

The other example that was there was an equity-backed securitization that had ratings. It did not have a residual tranche, and it had two tranches that were rated. Quoting what Therriault said, “Just the fact that someone rates a security does not mean it is a bond.” Reese said he would argue quite robustly that if there was a securitization that had two debt tranches and no equity tranche, at least with the facts that are known, it would be hard to call that a bond, certainly under the new bond standard because it is meant to have substantive credit enhancement. That seems to be more of a definition of a bond type example.

There was some trouble with the scope. The scope seemed to bring in an awful lot of securities that may not be intentional. Industry understands the no arbitrage concept, but not what else was really trying to be scoped in here or if it is anything equity-backed. There are many equity securitizations out there where the residual tranches are not even issued as part of the securitization, and it is retained. There might be 80% asset coverage, which is very thick over collateralization. The scope was what caught a lot of people's attention. This would really require the filing of quite a substantial number of securities and that it be much broader than it should be.

Mears asked if anyone from Varagon Capital Partners would like to speak to its comment letter. She said the themes in that letter were very consistent with things that Reese had just covered. Some of these rated notes, or

feeder structures, are structured and tranced in ways that are similar to what is looked at with asset-backed securities (ABS) in some of the other workstreams.

Helen Remeza (PineBridge Investments) said PineBridge is an asset manager with a deep insurance heritage going back to its American International Group Inc. (AIG) days. It serves insurance companies of all sizes across the nation. Most feeder fund structures serve an important purpose; they can offer an operationally efficient way for insurers to gain exposure to certain asset classes. That also helps level the playing field across smaller insurers. That said, it is understood that there may be limited situations where potential reviews may be necessary. In the comment letter submitted, a simple framework was shared based on the SVO and SSG's proposed red flags to help identify and prioritize these cases. PineBridge supports the Task Force's mission of promoting transparency, as well as enhancing risk assessment.

Mears said a key theme that was in many of the comment letters and discussed somewhat this morning is that there are a lot of ancillary workstreams that cover this in some way. One was this review of residual tranches and the appropriate capital charge to be associated with them. Probably not in all cases, but in many cases, that may be something that mitigates some of the concerns the Task Force has. The concern, anecdotally, as residuals have been reviewed that were reported Dec. 31, 2022, is that these types of residuals are not being seen in that reporting. It is difficult to say that this will be addressed via the residual workstream when they are not being captured in the population of that workstream. There are a variety of reasons why companies that were completing their Dec. 31, 2022, statements may not have done so. Mears would like the Task Force to consider providing direction to make a referral to the Statutory Accounting Principles (E) Working Group to review how it defines the reporting for those types of annual statement lines and what types of investments are in those lines to ensure that substantively similar types of exposures are all captured together as the Working Group's workstream continues. Crawford agreed and said she is supportive of a referral to get the appropriate reporting of these assets and securities, which is very important.

Mears directed the SVO to prepare a referral to the Statutory Accounting Principles (E) Working Group, and she said this is something that was also touched on at the RBC Investment Risk and Evaluation (E) Working Group meeting.

One of the key components of this is the transparency concern. As noted in the examples and the additional example mentioned today that was troubling, in many cases there are quite a few types of things in these structures. That is a concern that is maybe not unique to structured equity. As there continues to be an increase in private transactions and things that originated within companies, there is a lack of transparency. It is difficult, as noted by Reese, when creating a scope to just look at transactions that might be of concern, if there is not enough transparency to write a proposed amendment in such a way that it does not scope in a whole host of other investments that likely fall under very valid uses of these types of structures. Mears said she appreciates that the scoping issue is there, and there is a PLR process that is starting to receive that type of information. In fact, that is where some of these issues were identified. In some cases, complete information may not be received. What will be helpful and aligns somewhat with PineBridge's comment letter is to direct staff to create a more distinct process of how investments within that PLR population can be reviewed and perhaps have those ratings challenged. That goes back to the variety of reasons that there may be concerns, but it is not necessarily possible to say exactly what those are until there is a more transparent process. It is appreciated that industry has a concern that if you went to bed one day and had one rating and woke up the next day and had a different NAIC Designation, that may be troubling. A very distinct process on how any sort of challenging of those existing ratings that are feeding the NAIC Designation process would work. Some communication with the affected insurers and information regarding where to go from there so it is a well-understood and documented process would be beneficial, but there would be transparency needed and then communication with insurers would need to continue from that perspective. Walker said she is supportive of a transparent process when asking industry to be transparent in their investments.

Mears directed staff to document how that process could work and be brought back to the Task Force to review. It would be mostly for PLRs, since that is what is being received and available for review. Where this ends up for some of these problems today, using a stoplight example, is having only FE or not FE, or a red light or green light. Creating a yellow light option will help the process and provide more communication when there are concerns directly to those insurers involved. The Task Force is deferring any sort of adoption of this proposal, realizing that it is trying to put this other process in place and that it is well understood, to make it clear that transparency is still desired, as there are concerns about what can be in many of these structures. The Task Force recognizes that, in many cases, these concerns are extremely valid and are an efficient way for many insurers to invest, but the Task Force can also start down this path so that it is very clear how a review process will work going forward.

#### 4. Discussed Next Steps for the CLO Modeling Project

Mears said the next item on the agenda is to discuss the next steps for the CLO modeling project now that the amendment to the P&P Manual to include CLO as a financial model security in Part Four has been adopted with an effective date of Jan. 1, 2024, for Dec. 31, 2023, financial statements.

Kolchinsky said based on interested party responses to the methodology exposure, staff proposed to rearrange the next step work within the ad hoc group. Specifically, the ad hoc group will first work on the prepay/discount dynamic to demonstrate the quantitative impact of these proposals on tranche losses. This will also allow interested parties to “tie-out” the model, a task we originally slated for further on in the process. Furthermore, this change will also be responsive to those interested parties who commented that it is difficult to give adequate feedback on a methodology without seeing a suite of assumptions.

The main goal for the ad-hoc group will be to demonstrate the effects of prepay/discount purchases to state insurance regulators. This process should take about two months, at the conclusion of which staff and interested parties will report back to the Task Force.

Secondly, the ad hoc group will endeavor to tie out the cash flows on some “dummy” scenarios to ensure that the methodology is adequately specified in documents. Additionally, this arrangement will give time of some interested parties to propose scenarios and more of the work to occur at the RBC Investment Risk and Evaluation (E) Working Group as well.

Operationally, this work will involve three to four proxy CLO deals from industry, which will be run through Stress Scenarios A, B, and C. Please note that staff are not suggesting that these scenarios will be used in the future. They are out there for everyone to implement to tie-out the transactions.

The purpose of the ad hoc group is to resolve and clarify technical and modeling issues. Regulatory policy discussions will be limited and brought back to the Task Force.

To ensure that our time is spent productively, staff request that parties group themselves by interest and only one participant from the group speak at a given meeting. These participants can change, as it is intended to make the meetings go quickly.

Otherwise, the SSG hopes to keep the meetings open, and other parties may submit their concerns in writing to the NAIC. Staff suggest that non-regulatory participants have a technical background for the discussion. Staff will run models and results to get everything set.

Staff hope that at the end of this process, interested parties will have a better understanding of the NAIC’s approach to modeling CLOs, as well as have completed the tie-out of the bulk of the methodology on “dummy”

scenarios. Staff do not anticipate that any of the above will change the timeline for the implementation of CLO modeling.

Mears said the approach of the ad hoc group is to ensure that this is moving forward and is efficient. Having a collection of speakers, a process used in a few other projects across different groups, is really helpful. It is incredibly important to keep the discussion itself tight. If at some point it feels like the group is losing some sort of efficiency because there are too many voices in the room, the Task Force reserves the right to review this process and see if it is something that needs to have more of a closed group that reports back to the Task Force. This is a great way to start, as there are many interested folks, and the intent is certainly not to be exclusionary by any means.

Kolchinsky said the first meeting will be in about two weeks, and information and Webex links will be sent out. Industry participants are asked to think about the deals to use, as those deals should be commonly held by insurance companies and be available in modeling. One standard CLO, one CLO with a bond bucket, and one with a very large triple C bucket that has different CLOs to test was suggested.

#### 5. Discussed Questions for NAIC CRPs

Mears said, as was mentioned at the 2022 Fall National Meeting, there has been a lot of interest in the continuing review of CRPs. There was a small ad hoc group that did work last year. The group went through some of the concerns and tried to come up with a more focused approach to move forward. That group no longer meets because the Task Force is now moving on to a regulator-only review directly with each CRP. The Task Force has made this preliminary list of questions available for feedback, and the questions are for the conversations with the CRPs. The goal is to eventually have a formalized, due diligence questionnaire. This will help inform initial conversations and any later due diligence questionnaires. The questions reflect the range of issues that have been discussed by the ad hoc group. Feedback on these CRP questions before those meetings are scheduled is appreciated, which is why they have been included in the materials. Comments can be sent back to SVO staff or Mears. The CRP questions will not be publicly exposed for comment to allow CRPs to privately provide comments. The Task Force will look at those comments and potentially re-arrange our questions or at least be aware of where there are differences. Some of that can come up with individual conversations with CRPs. Before scheduling those meetings, the Task Force will publish the final list of CRP questions. There will be a 30-day deadline for comments on the CRP questions, and those comments can be sent to SVO staff or Mears.

#### 6. Discussed a Proposed P&P Manual Amendment to Update the Notice of Credit Deterioration for the List of Qualified U.S. Financial Institutions

Mears said the SVO maintains the *List of Qualified U.S. Financial Institutions* (QUSFI), which indicates the financial institutions eligible to issue letters of credit pursuant to the *Credit for Reinsurance Model Law* (#785). The letter of credit can be used to reduce an insurers liability when ceding reinsurance to certain assuming insurers. There are detailed instructions in Part Two of the manual. Perlman will provide a summary of this amendment.

Perlman said the SVO encountered a recent situation in which financial institutions on the QUSFI, namely Silicon Valley Bank and Signature Bank, were closed by their primary regulators and placed in Federal Deposit Insurance Corporation (FDIC) receivership prior to rating agencies taking action and downgrading them below the minimum permitted ratings of BBB-/Baa3 in the QUSFI guidelines in Part Two of the P&P Manual. These situations accelerated very rapidly, and regulatory actions occurred before any rating actions. The proposed amendment would recognize that regulatory actions, either announced or taken, by a financial institution's primary regulator would necessitate removal from the QUSFI. The proposed additional text would read:

If a financial institution on the List of Qualified U.S. Financial Institutions is closed by and/or placed in receivership or conservatorship, or notice is given of such action, by its primary regulator(s), the SVO shall promptly remove the name of the financial institution from the List of Qualified U.S. Financial Institutions. This may result in the SVO being unable to provide Notice of Credit Deterioration.

Given the recent situation, the SVO would recommend a very short exposure period of 15 day if there are no objections by the Task Force, followed by an email vote with a simultaneous referral to the Reinsurance (E) Task Force. Mike Monahan (ACLI) said the ACLI is comfortable with the shortened comment period.

Mears directed staff to expose the proposed P&P Manual amendment to update the Notice of Credit Deterioration for the QUSFI to include actions by the financial institution's primary regulator for a 15-day public comment period ending April 10, with an e-vote to occur shortly afterwards and a referral to be sent to the Reinsurance (E) Task Force.

#### 7. Received the Annual Report from the SVO on Year-End Carryover Filings

Mears said the next item is to hear the annual report from the SVO on carryover filings.

Therriault said as required in Part Two, Operational and Administrative Instructions Applicable to the SVO, of the P&P Manual, the SVO director must prepare a report for the Spring National Meeting identifying an acceptable annual rate of carryover filings for the year-end reporting period. These carryover filings can be identified with the administrative symbols "IF," which are initial filings with a self-assigned NAIC Designation, and "YE," which are annual update filings the SVO has not yet reviewed, and the NAIC Designation from the prior review was carried forward until the current year review is complete. There were 1,199 carry over filings in 2022 versus 828 carryover filing for 2021 and 795 in 2020; 381 were "IF" and 818 were "YE." This represented a carryover rate of 9.2% for 2022, versus a carryover rate of 6.7% for 2021 and a carryover rate of 6.3% for 2020. Overall, the SVO reviewed 12,983 security filings in 2022 versus 12,258 security filings for 2021. A carryover rate below 10% is manageable for the office, given its current staffing, and the 2022 carryover rate is getting close to that threshold. As of March 15, there were 258 remaining carryover filings to review.

There has been a continued rapid growth in privately rated securities. In 2019, the first year the SVO received PLRs, there were 2,850; in 2020, there were 4,231; in 2021, there was 5,147; and in 2022, there were 6,792. The SVO is also seeing a very large number of privately rated securities that are being self-reported without the required general interrogatory (GI) administrative symbol that would be added to the "PL" symbol so they can be identified in the annual statements as PLGI. Self-reporting in the GI without the administrative symbol is only permitted for a very narrow set of securities within the definition of the P&P Manual. The SVO wants to encourage insurers to follow the reporting instructions for the permitted uses of the PLGI.

The office continues to need additional technology resources. Some progress is being made on projects that were delayed for several years. Specifically, the multiple security identifiers that have been mentioned for a number of years using the Global Instruments Cross Reference Service (GICRS) dataset so the SVO can utilize the International Securities Identification Numbering (ISIN) identifier. There are probably other enhancements that could be made that would benefit both NAIC staff and insurers if there were additional resources. Those projects have had to be indefinitely deferred given the current support level.

#### 8. Received a Report on the Projects of the Statutory Accounting Principles (E) Working Group

Mears said the next item is to hear a report on projects before the Statutory Accounting Principles (E) Working Group.

Julie Gann (NAIC) provided a brief update on some of the items in accordance with the coordination initiative. There are two adoptions specifically to note that occurred at the Spring National Meeting. The first was the clarification of what constitutes an affiliate in an investment. The language that was adopted indicates that any invested asset that is held by a reporting entity that is issued by an affiliated entity or which includes the obligations of an affiliate entity, is an affiliated investment, and that is a clarification that goes back to the related party guidance adopted last year.

The Working Group also adopted a new disclosure for 2023 to capture information on aggregate deferred interest and PIK interest, which is something that was discussed earlier this afternoon by the Task Force. Again, this is an aggregate disclosure. It will be required for year-end 2023. The Working Group is moving forward with the blank's exposure shortly after the national meeting, and it will be data-captured. Granular information on a specific investment-level detail is planned as part of the bond project, but this will be an aggregate footnote disclosure for this year-end.

Regarding exposures, the Working Group is moving forward on the principles-based bond definition. At this national meeting, the Working Group exposed revisions to the authoritative Statements of Statutory Accounting Principles (SSAPs). Most of the revisions are limited at this point in time; the term used was window dressing. The Working Group is proposing to incorporate the guidance for residuals in *SSAP No. 21R—Other Admitted Assets*. There was a question with that exposure to industry from state insurance regulators asking how residuals have been amortized in the past and how other than temporary impairments (OTTIs) have been determined. That will assist staff in drafting language for those investments in SSAP No. 21R.

The Working Group also exposed a proposed concept for Schedule BA new reporting lines. This mirrored the guidance that exists now for certain joint ventures, limited liability corporations (LLCs), and partnerships, where there are two reporting lines for each classification of non-debt securities that do not qualify as bonds to separate them between those that have SVO-assigned designations and those that do not. The Working Group is hoping to get comments on that, consider those comments, and then sponsor a blanks proposal in the next round.

Regarding the principles-based bond definition, the Blanks reporting changes for Schedule D, which is about 200 pages long, was exposed by the Blanks (E) Working Group during its meeting in lieu of the Spring National Meeting, and the comment deadline for that is June 30.

The Statutory Accounting Principles (E) Working Group exposed guidance for collateral loans to clarify that if there is a collateral loan, it can only be admitted if the collateral that is pledged to support that collateral loan qualifies as an admitted invested asset. That means if it is a joint venture; LLC; partnership; or something that would qualify as a subsidiary, controlled, or affiliated (SCA) entity, it must be audited in accordance with *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*, but the comparison to the collateral loan will be based on audited net equity value instead of fair value.

There was also exposed guidance to incorporate the financial modeling of CLOs, which was adopted by the Task Force, into *SSAP No. 43R—Loan-Backed and Structured Securities*.

The Working Group discussed negative interest maintenance reserve (IMR). There is no exposure for this at the moment. The Working Group directed two referrals, one to the Life Actuarial (A) Task Force and one to Capital Adequacy (E) Task Force, and it directed NAIC staff to put together some guidance for a subsequent exposure, which is planned for after the national meeting.

There are three other informational updates. For those who purchase the *Accounting Practices and Procedures Manual* (AP&P Manual) via Bookshelf, there will be a portable document format (PDF) that comes with it that is

available through Account Manager. The PDF will come with Bookshelf, so there is no additional charge. It is available for download now via the 2023 updates for industry.

The Working Group asked for feedback by April 15 from state insurance regulators so that it could respond to the Valuation of Securities (E) Task Force's referral regarding the acquisition of data so it could do an analytical analysis. Once that feedback has been received, the Working Group will respond with a referral letter.

Lastly, on the editorial listing, Gann said there is a proposal to remove the specific location references to the P&P Manual in the AP&P Manual. The AP&P Manual will still refer to the P&P Manual when it is appropriate, but the proposal would delete all the Part One, Part Two, and Part Three references because it sometimes gets out of sync.

Stolte asked to go back to the Working Group's referral in item #2, and he questioned if the Task Force contemplates delaying the work on the interim solution for the residuals. Mears said what the Task Force identified as something that will potentially be discussed in a regulator-only session when reviewing the results that came out of reporting is that the reporting may not be complete or it may be under-reported just to ensure that whatever decision is made by the Working Group, whether in the short term or long term, is being used for the correct population. The Task Force does not anticipate this affecting the speed of any decisions.

Reese asked Therriault to repeat the numbers for the PLR filings and the comments about the PLGI. Therriault repeated the PLR filing numbers, and he said there are permitted uses for the PLR GI reporting or PLGI under specific scenarios. It appeared in the 2022 filings that there were securities issued in 2022, which would not have been permitted to use the PLGI and would need to be reported to the SVO. The SVO did not receive a PLR in any capacity, either the electronic feed or physically, which is filed in the VISION system. The SVO does not have a match up to a PLR, and the securities were not identified as a PLGI, which probably would not have been permitted anyways. These securities were reported as a PL security, which would not be permitted, so it is a compliance issue with the P&P Manual.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

[https://naiconline.sharepoint.com/teams/SVOVOSTaskForce/Shared Documents/Meetings/2023/2023-03-23 Spring NM/Minutes/VOSTF 3.23.23 Spring NM Minutes \(v5 FINAL\).docx](https://naiconline.sharepoint.com/teams/SVOVOSTaskForce/Shared Documents/Meetings/2023/2023-03-23 Spring NM/Minutes/VOSTF 3.23.23 Spring NM Minutes (v5 FINAL).docx)

Draft: 3/9/23

Valuation of Securities (E) Task Force  
Virtual Meeting  
February 21, 2023

The Valuation of Securities (E) Task Force met Feb. 21, 2023. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Eric Dunning, Vice Chair, represented by Lindsay Crawford (NE); Mark Fowler represented by Sheila Travis (AL); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Michael Yaworsky represented by Ray Spudeck (FL); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Kathleen A. Birrane represented by Matt Kozak (MD); Gary D. Anderson represented by John Turchi (MA); Grace Arnold represented by Ben Slutsker (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Marlene Caride represented by John Sirovetz (NJ); Adrienne A. Harris represented by Jim Everett (NY); Glen Mulready represented by Holly Mills (OK); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Amy Garcia (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted a P&P Manual Amendment to Update References to 5GI

Mears said the first item is to consider adoption of a non-substantive proposed *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) amendment to update references to 5GI. This proposed amendment was exposed for a 60-day comment period that ended Feb. 13. One comment letter was received from the American Council of Life Insurers (ACLI).

Marc Perlman (NAIC) said that at the 2021 Fall National Meeting, the Task Force adopted a non-substantive technical amendment to the Private Letter (PL) Securities section in Part Three of the P&P Manual, which clarified that an NAIC 5GI designation is the equivalent of an NAIC 5.B designation category. The Securities Valuation Office (SVO) identified other places in the P&P Manual where the 5GI.B designation category was not specified and proposed a non-substantive technical amendment to make those clarifying changes. The SVO recommends that these changes be adopted.

Mike Reese (Northwestern Mutual representing the ACLI, North American Securities Valuation Association (NASVA), and Private Placements Investors Association (PPIA) said they are supportive of the proposed amendment (Attachment One-A).

Doggett made a motion, seconded by Clements, to adopt the P&P Manual amendment to update references to 5GI (Attachment One-B). The motion passed unanimously.

2. Adopted a P&P Manual Amendment to Add Instructions for the Financial Modeling of CLOs

Mears said the next item is to discuss comments and consider for adoption an updated proposed amendment to the P&P Manual to include collateralized loan obligations (CLOs) as a financially modeled security in Part Four. At the 2022 Fall National Meeting, the Task Force directed Investment Analysis Office (IAO) staff to update the amendment to take into consideration the technical recommendations in the ACLI's comment letter (Attachment One-C), and then re-expose the amendment for a 15-day comment period that ended Jan. 9, 2023. One comment letter was received from the ACLI.

Charles Therriault (NAIC) said this amendment would add CLOs within the scope of financially modeled securities in Part Four of the P&P Manual.

Like the current residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) project, the NAIC will almost exclusively perform surveillance work for CLOs. While the Structured Securities Group (SSG) may be asked to perform some regulatory treatment analysis services (RTAS) on new issue mandates, these are expected to be extremely rare. Surveillance requires significantly less effort and will only be done once a year, along the same schedule as other financially modeled securities that the SSG already models. The actions proposed in the amendment are designed to allow insurers to continue participating in the CLO market without the risk that aggressive structuring puts policyholders and insurer investments in jeopardy.

Two comment letters were received from the ACLI. The ACLI made several constructive technical suggestions in the first comment, which the IAO substantially incorporated into the updated proposed amendment. The second comment letter, dated Jan. 9, asked about the intent of the note in the amendment stating that it was effective as of Jan. 1, 2024. The purpose of this note is to establish when the SSG is authorized to begin modeling CLO investments and provide insurers sufficient notice of this change. It is expected that insurers will follow the existing limited filing exemption (FE) for RMBS and CMBS in Part Four, paragraphs 4–5, for interim reporting. These paragraphs permit securities that cannot be financially modeled, which would be the case for CLOs until the SSG produces its first modeling output for them but are rated by a credit rating provider (CRP), to use that CRP rating to determine the NAIC designation that would be applicable under the FE procedure. Once the security is financially modeled, this limited exemption would no longer apply because it would then be a “financially modeled” security. The SVO did notice that some section titles in the amendment did not include “CLO,” but the detailed instructions within that section did. With the Task Force’s approval, the SVO will make those technical corrections to the final amendment.

Steve Clayburn (ACLI) thanked the Task Force for taking the concerns and suggestions in the comment letter into consideration and explaining the plan with regards to the Jan. 1, 2024, effective date and interim reporting.

Mears noted that the adoption of this finalized amendment would formalize the motion the Task Force adopted at the 2022 Fall National Meeting authorizing SSG staff to take on the CLO analytical function and request the resources it may need.

Stolte made a motion, seconded by Spudeck, to adopt the P&P Manual amendment to include CLOs as a financially modeled security in Part Four with an effective date of Jan. 1, 2024, with the technical corrections noted by Therriault (Attachment One-D). The motion passed unanimously.

### 3. Discussed an SSG Memorandum on a Proposed CLO Modeling Methodology (Excluding Scenarios and Probabilities)

Mears said the next item on the agenda is to hear comments on the SSG memorandum on a proposed CLO modeling methodology (excluding scenarios and probabilities). The modeling methodology was exposed for a 60-day comment period that was scheduled to end Feb. 13, but it was extended, at industry’s request, to Feb. 17. The Task Force will be working through the substance of the details in those comments but will use this opportunity to have the interested parties that wrote comment letters speak, allowing immediate questions and responses so that a dialog can take place to establish next steps. Comment letters were received from:

- ACLI
- American Academy of Actuaries (Academy)

- PineBridge Investments
- Equitable, MetLife, New York Life Insurance Company, Northwestern Mutual, Pacific Life Insurance Company, Prudential Financial, and Western & Southern Financial Group (sent jointly)
- Athene, Everlake Life Insurance Company, F&G Annuities & Life, Global Atlantic Financial Group, and Security Benefit Life Insurance Company (sent jointly)
- American Investment Council
- Structured Finance Association

According to the Task Force’s website, “The mission of the Valuation of Securities (E) Task Force is to provide regulatory leadership and expertise to establish and maintain all aspects of the NAIC’s credit assessment process for insurer-owned securities, as well as produce insightful and actionable research and analysis regarding insurer investments.”

As noted several times, it is not under the purview of the Task Force to establish actual risk-based capital (RBC) factors, and there is an initiative underway by the RBC group to address that. It is also not under the purview of the Task Force to determine statutory accounting. That would be under the purview of Statutory Accounting Principles (E) Working Group. However, it is under the purview of this Task Force to establish the credit assessment procedures and finding areas of focus that may end up involving some of those other regulatory groups. Each group has its own unique area of responsibility and expertise that the NAIC utilizes along with interdependencies between the groups.

It has been said multiple times, but it bears repeating, the SVO and SSG are not rating agencies. The Task Force has required them to provide these designations on an annual basis for use in the year-end financial statements for use by regulators in establishing RBC results, in quality assessments, and they are used in some state law provisions. The Task Force does not require them to follow the requirements imposed by the Credit Agency Reform Act, which would apply to nationally recognized statistical rating organizations (NRSROs) who take a different view in terms of an overarching surveillance process and not the annual review that is used for this narrow provision for regulators. While the Task Force relies on the SVO and SSG, there are times when it feels it is appropriate to effectively outsource that review to NRSRO when the results will be consistent with what the Task Force expects moving all the way through the NAIC framework. As noted for the CLOs, the Task Force has identified an instance where it does not feel that the existing process works throughout the entire NAIC framework. The Task Force is assessing the modeling piece for credit assessment of CLOs. The RBC assessment is being looked at by the Risk-Based Capital Investment Risk and Evaluation (E) Working Group and the groups are being collaborative with one another.

Eric Kolchinsky (NAIC) said due to the late nature of the responses, there has not been an opportunity to respond in writing yet but there will be one. Some of the comments were not responsive to the methodology, but instead just discussed the modeling process itself. One of the comments by the interested parties compared the resources at a rating agency, which rates new deals, to what the SSG does, which is a very simple surveillance process. Having previously co-managed what was called the Global Derivatives Group at Moody's Investors Service (Moody's), which included CLOs, collateralized debt obligations (CDOs), and similar products and knowing the resources needed for this product, the SSG is not trying to build a new issue platform, but rather a surveillance process, for which there are adequate resources. As with the current RMBS/CMBS project, the SSG does not expect to analyze any new issues. There is an RTAS process in case that is required, but the SSG currently does at most one every year. The backlog that was mentioned by one of the commenters had to do with new issue process, not surveillance. Lastly, resources are not a theoretical question. The SSG currently runs all the insurance company CLO holdings annually without any extra resources. As the regulators participating in this meeting know, the SSG produces bond-level results for them to use and put up on the Tableau worksheet. This is easily doable going

forward with extra resources.

Overall, there were a lot of miscellaneous textual comments or questions. Most were very good and will be included in responses in terms of detail and working through those issues in the future. The main issue that came up multiple times is that of prepayments and reinvestments. This is going to be the main issue for us working through the methodology. Prepayments are not material, but they do influence two other assumptions in the modeling: having the use of principal to pay overcollateralization (OC) tests, and, much more importantly, the par building process that is sometimes assumed. Using principal proceeds to cure OC tests is extremely expensive. Thinking about the total cost of funds for the deal, it is not expected to be used. The managers have a lot of options not to be used and do not think that is a controversial position. All that it does is switch the risk from the top to the bottom if using principal proceeds. The main issue up for discussion going forward in terms of scenarios is going to be reinvestment. Having prepayments allows principal proceeds, which can be reinvested, and if reinvested at a below par price, then par can build up. That annual ongoing par build allows the offset losses in the modeling. For example, if 20% of the portfolio repays, then take that 20%, and reinvest in something trading at a dollar price over 0.99, then there is more par and that offset approximately 0.2 times 0.1 losses in the modeling. There is some historical precedent to this, as there was a lot of par building by CLOs in the global financial crisis and during the coronavirus pandemic, and it did work out well. Part of the reason it worked out well is because of the Federal Reserve's interventions in the market, which stabilized pricing on risky assets and pushed those prices up, allowing managers to build a par and maintain a safer portfolio. It is not clear whether that assumption should continue.

It is also important to remember, for those of who were there in the past, that the process of buying securities at a discount was the death knell of the collateralized bond obligation (CBO), which was the main product before the CLO. Post the dot-com bubble, reinvested at a discount price created a downward spiral and CBOs have never recovered. This is not a universally positive thing. The SSG is not aware of any rating agency modeling these discounted purchases to build up par. If that is incorrect, the SSG requests that interested parties provide references to public NRSRO criteria that allow it to do that. The SSG's understanding is that it is not something that is modeled for by rating agencies. Next, active management is not to CLOs, so it is something that could theoretically be applied to any active pool, whether it is loans or bonds, but that was not assumed in the modeling for RBC C-1 factors. This is not something that differentiates CLOs from the standard of active management and it is unknown why it would be applied there in the first place. Lastly, Kolchinsky said that he personally has a strong conviction against this par-building mechanic based on his prior experience with CBOs and the dot-com bubble. However, part of the ACLI proposal is only to have it in certain scenarios and he is willing to explore that potentially with interested parties.

Outside of these two issues is primarily that of reinvestment and the assumption that proceeds are reinvested. This will require a greater focus on the reinvestment type assumptions: what rating, what maturity, callable schedule, etc. One of the reasons the SSG proposed a no-reinvestment assumption is because it is simpler. It does not try to overfit the model and is a very simple assumption. Again, it is stylistically better but it can be opened if there are good reasons to do so if it does not overfit the model.

Recall that the main constraint here is the reporting equivalency between a pool of loans and the sum of all the tranches. To that extent, no matter what is discussed in terms of reinvestment assumptions, certainly, the only thing it could do is sort of shift between various tranches and risk levels within the CLO, not necessarily improve CLO performance. There is a limited usefulness of these assumptions, but again SSG is open to discussing them once the process starts going.

Lastly, Kolchinsky said there was one very reasonable comment to release all the assumptions for modeling. This has not been done because the SSG has not written the assumptions. There has been one main constraint, which

is reporting equivalency. How to accomplish that is something the SSG will want to work with interested parties on. With the reporting equivalency, the SSG will continue to work with the Risk-Based Capital Investment Risk and Evaluation (E) Working Group to make sure the view of reporting equivalency is consistent. It is a process working in parallel with that Working Group and continuing communication with them.

To keep this process going and ensure transparency, the SSG would like to ask the Task Force to form an ad hoc group to model deals. The discussion so far has been about theoretics, though, at some point the idea is to nail down as much of those theoretics as possible. At the end of the day, it is going to come down to transactions and looking at those transactions and how the scenarios impact them. Making sure that is effective requires a small number of active participants going back and forth with information. Interested parties are asked to form coalitions, or at least groups, that have a single voice and can take information back to their participants. Once this process is formalized, SSG can begin looking at actual transactions and modelling actual transactions with some of these modifications and without some of the modifications so there are numbers for people to compare.

Mears said there was a lot of information to digest. As a reminder, the Task Force is not taking any actions today and will discuss the ad hoc group after hearing from interested parties on their comment letters. Everett asked if regulators can be part of the ad hoc group as well, to which Kolchinsky replied absolutely.

Clayburn said he is intrigued by the suggestion for an ad hoc group and the ACLI gives a thumbs up on that. The ACLI appreciates the fact that it was allowed to comment, and the overriding thoughts are that the assumptions should not be simplified and should be able to reflect the economic conditions of each point in time in the scenarios that are ultimately developed. The exposed methodology assumes that the non-defaulting portion of each loan matures based on the legal maturity. While commercially available models may have limitations with projecting every possible cash flow scenario, the ACLI recommends that, where practical and reasonable, modeling assumptions should capture loan features such as amortization and callability. Proposed in the letter is to replace no prepayments assumed with prepayment assumptions that vary by scenario and through time within the scenario. A chart was provided that outlines some of those scenarios for the Task Force and the SSG to consider. The letter also proposed replacing reinvestment collateral as purchased at par with pricing levels that vary by scenario and term and included a chart for which to begin the discussion. This was answered on the Task Force's last agenda item. Expected frequency of the designation modeling will be done once a year but ACLI suggests that maybe it could be done more frequently than annually.

As for assigning ratings to underlying assets, the ACLI proposes replacing the fallback assumption that uses the SVO-assigned NAIC designation category with more transparent assumption logic that all parties can instantly use because not everyone has availability to the NAIC designations. The letter suggested using the fallback logic that had been used for reinvestment assumptions that is assigned the weighted average rating factor, or, if not reported, assume it to be, for example, 4.B, which is a B3 or B rating. As for callability of bonds, CLO transactions typically include call provisions that are frequently exercised when market conditions make it economically advantageous. The ACLI suggests considering whether modeling call features would be impactful to the loss projections under the proposed modeling framework, and if so, to evaluate ways of incorporating this feature in the modeling exercise.

Kolchinsky said loans with an amortization schedule, if available, are easy to work on and non-controversial. The things with calls, both on the loans and the tranches where there's optionality, they are just difficult to model but SSG is very much open to seeing how that works out. In terms of the annual frequency, that is the official frequent but SSG will endeavor to do unofficial ones as often as possible. The goal is to work on a detailed process that everyone knows and that is predictable. It is very important that everyone sees what is going on. Currently, what is run is the latest portfolio, as available in trustee reports, running through methodology in batches, as resources

allow.

Mears said the intent once this is complete is that the methodology and scenarios are transparent enough that any user who has access to a modeling framework platform should be able to do it on their own, like a one-by-one deal. Kolchinsky said the hope is that most of the participants who responded and are sophisticated modelers should be able to replicate what the SSG is doing and provide feedback.

Steve Smith (Academy) said Kolchinsky has been transparent and engaging throughout working through the process. The comment really is more of a process-oriented comment. The Academy has been engaged with the Risk-Based Capital Investment Risk and Evaluation (E) Working Group and helping them think through CLO capital. This has involved higher-level, more conceptual issues such as what the statistical safety level should be, how it should think about the concept of RBC arbitrage, etc. As the Risk-Based Capital Investment Risk and Evaluation (E) Working Group works through those problem, they will form the basis for the objectives of any model that would then be built to assign NAIC designations to CLOs, recognizing that it's difficult to disentangle NAIC designations from RBC from C1. The comment is to acknowledge that the Academy finds it difficult to comment on any methodology to a model before the Academy knows what the objectives are. It is premature to be getting into too detailed a conversation on model methodology.

Kolchinsky said it has been great working with the Academy. It has been a mutually great relationship going back and forth. He said the goal is that RBC is the target, and the SSG works on how to reach the target. Kolchinsky said whatever targets may be provided, the SSG is happy to adjust to those.

Mears said the PineBridge Investments comment letter talks about what time frames to look out for some of the data that is being used. PineBridge Investments believes pre-2000 data is not necessarily relevant. It also points to the fact that the NAIC uses Moody's default data and recommends looking more at the Morningstar LSTA US Leveraged Loan Index. There are some other technical comments on recovery rates. Another comment is that since this is starting with CLOs, is it unfairly penalizing CLOs by going through this process that has not yet been done for other types of securitized transactions that may exhibit similar features. This is being done because there is more information on CLOs, and it is a place to start. That will take time and it is an important consideration to work through as the Task Force looks at the overall structured securities universe over time.

Kolchinsky said CLOs are clearest. One always needs to start somewhere. If the Task Force asks the IAO to look at other types, it is happy to assist. As for Morningstar LSTA versus Moody's, Moody's was used to calibrate the defaults for risk-based capital C-1 factors, so it is a consistent apples-to-apples comparison. Mears said this will go back for consideration, too, as work proceeds with the Academy.

Christopher Halldorson (Prudential Financial) said the firms listed in this letter all purchase CLOs and are strongly in support of the NAIC initiative. The firms believe the initiative is going to generate capital requirements that are transparent, consistent across asset classes, appropriately calibrated for tail risks, and designed to minimize capital arbitrage incentives. Highlighting a couple of items for consideration just because they are out there in the ether, some of them have not necessarily been brought up so far. CLOs represent a material risk to U.S. life insurers. That is because of the growth rate versus general accounts, the significant allocations within certain firms, and the fact that insurers are a material capital source for CLOs, in general. By some accounts, insurers look like they are 50% of the mezzanine capital source. And finally, just one other point is that CLOs represent about 3–4% of life insurance holdings. That might sound small, but it is also the size that CMBS was in 2006. It is hard to look back and say that more transparency would not have been wanted in the system.

The firms on the joint letter 100% believe the SVO has the in-house modeling capabilities to appropriately model

CLO for this purpose. The third-party model, transparency, stresses, and parameters used will all mean that it can be replicated. Some insurers have replicated the annual NAIC Capital Markets Bureau studies and have gotten very similar results. There may be disagreements on inputs to those stress tests but can get to the same results. This transparency is needed.

The IAO is not trying to become a rating agency and is just trying to perform a function that the rating agencies are not designed for. Rating agencies do not rate credits to the 96<sup>th</sup> percentile standard that the risk-based capital C-1 factor is designed. This is trying to fill a gap that exists. In terms of capital arbitrage, our firms interpret the no-arbitrage principle as an effort to ensure consistent capital treatment across asset classes and structured tranches. All regulators and industry participants should support that goal.

There should be caution around how one thinks about active management and diversification when getting into tail events. Most leveraged loans are financed through CLOs, so one would have to assume certain CLO managers are outperforming each other, which is a hard thing for the NAIC to do. Also on the diversification front, current C-1 bond factors incorporate the diversification of about 800 mostly investment grade issuers. The typical CLO has 200 or less issuers and mostly high yield. One must be careful about over ascribing diversification to one without looking at it in conjunction with the other. There is a lot of discussion surrounding experience on CLOs and how an experience on a BBB CLO or a BB CLO versus corporate bonds. CLO tranches are designed to have different loss experience relative to corporate bonds. This is by design; it is not good or bad. CLOs have a first loss protection built in, which is there to absorb collateral defaults when they are low. They also have embedded leverage, which can drive material losses when collateral defaults are high. This cliff risk, which the Academy described in its report, is driven primarily by systemic credit downturns, not by idiosyncratic or a few issuers' default. A systemic credit downturn has not been seen to the extent that insurers have held capital for corporate bonds over the past 20 years. That is when insurance companies have had CLOs. Extrapolating the very specific market conditions over the past 20 years that has been had for CLOs is not going to be a sufficient answer to meet RBC standards for corporate bonds held right now. Just as a reminder, the current C-1 bond factor is recalibrated using almost 40 years of default and loss experience. There is no reason to delay this work and there should be some urgency on this moving forward. CLOs should be the easiest structured asset class to model, understand, and provide consistent capital treatment and transparency to regulators.

Kimberly Welsh (Athene) said the firms included on the comment letter believe that any review must be data driven, nondiscriminatory, and result in asset capital charges that align with the risk across all asset classes. A concept called equal capital for equal risk in the letter. The firms are arguing for the appropriate amount of capital for development risk, not necessarily less capital, and believe all asset classes should be modeled and evaluated using the equivalent assumptions and methodologies. Consistency across risk and asset classes, and curve and appropriate allocation of capital and avoid inappropriate concentration from certain risks. It is unclear as to why senior secured loans are vulnerable to be knocked down only within the CLO. The approach in the comment letter is consistent with the NAIC's long-standing class process of data-driven and nondiscriminatory regulations.

Welsh agreed with the NAIC that capital target for CLOs needs to be calibrated and thinks that if the analysis is performed on a bottom-up basis with consistent assumptions across asset classes, it will be determined that capital charges for CLOs rated investment grade will be lower than those for equivalently rated corporate debt. There is no shortage of data and studies that track the performance of CLOs, showing that they performed better and have less risk than equivalently rated corporate bonds. But beyond performance, a recent paper by Professor Robert A. Jarrow from Cornell University concluded that CLO tranche loss probabilities are, on average lower than comparably rated corporate debt. A discussion in the Academy and a recent white paper on structured debt are linked in the submission and should be considered as well.

Welsh said Kolchinsky responded to some of the concerns raised in the letter about the current ability for the SSG to dynamically model CLOs. There may be a need for more clarity on that. It is a heavy lift, and the NAIC is encouraged to more extensively evaluate the gaps in the current analysis and service of the credit reporting providers, which could be helpful in this process. Also, the letter provides technical feedback on the stress test methodology. It is difficult to provide complete feedback without understanding the full scope of the proposed changes and without certain plans for that. It would be helpful to back test the analysis and impact analysis of filing exempt (FE) ratings mapped to intrinsic price.

Mears said that this process began not quite a year ago and introduced the concept. At the time, it was within an existing RBC and designation framework and considered a different way to map those to those existing categories. This is how the concept of RBC arbitrage came up. Since then, it has been said multiple times that is not a reflection on the CLOs themselves. CLOs are not arbitrage type investments. The RBC group has since picked up reviewing the overall capital charges in general. This would effectively solve for that capital arbitrage to Smith's point earlier, as there would be something to calibrate and map to that makes sense. The comments are appreciated but to some extent they may be somewhat dated with this presumption that it would result in punitive capital charges for CLOs. That is not part of the methodology. The idea of the very highly rated CLOs having perhaps lower capital charges than corporate bonds has been on the table for a while and would likely come out of the RBC process, where ultimately that will reside. Additional commentary on this is better placed with the RBC group.

Kolchinsky said he did not have a view of the final outcome and did not want to prejudice the process. It may be possible that mezzanine AAA and AA rated tranches get a little more capital charge on this framework. Knowing the results would require knowing the probabilities, which is something that will be worked out in this ad hoc group. The overall constraint is reporting equivalency. Back testing is something that would apply to a black box model, but since this is going to be transparent, each company can run the back testing however they want. Back testing is done on a closed model to see how it does as proof and all the companies that do that work as part of the analysis.

Welsh said the second part was impact analysis. Kolchinsky said absolutely, and that as the stress tests are run, the process for stress test analysis is there. The idea is transparency so that everyone can do it and if something comes up, and it would be shared. To clarify the notching leveraged loans in the CLOs, mentioned in the technical comments, is only the rating on the loan if there is no issuer rating or no corporate rating. Those need to be mapped to default probabilities. It is very similar to what rating agencies do to take the default probability, because the rating on the loan itself, the issue rating incorporates recovery assumptions as well. There is no penalty for leveraged loans; rather, the default probability is extrapolated, similar to what is done by rating agencies.

Mears said there were quite a few technical comments that can be taken into consideration as well as other broader comments that have been addressed in this discussion already. If something has not been addressed, it will be as the comments are reviewed.

Dallin Merrill (Structured Finance Association (SFA)) said substantively, most of the comments are from issues that have already been raised. The SFA does strive for consensus in two areas. Firstly, in eliminating capital arbitrage and supporting the NAIC and the regulators in that. Secondly, on the need for fleshing out the modeling assumptions in the scenarios. The SFA would be interested in any working groups that form to help advance that work so the modeling assumptions can be made clear.

Mears directed Kolchinsky to coordinate the creation of this ad hoc group. Task Force members can participate as they would like. For this to be a very efficient group, representatives should have the technical expertise to really

work through some of these modeling processes. Additionally, the coalitions that are formed in the trade groups can put forth one person to be the communication point back to their group. Full representation is wanted, as there are some varying opinions on some of these topics, and so that the persons involved are actively engaged, and in tune with the conversations.

The modeling process is on the SSG website and not in the P&P Manual. As changes are made, they would be communicated back to this group and published on the website. The methodologies are not adopted. Once there is something that everyone can wrap their arms around, direction would be provided to continue to move forward with that methodology. For those not participating in the ad hoc group, please remain engaged with your various counterparts. The Task Force will continue to be transparent with this group about changes to that process.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

**Re: Non-substantive technical amendment to the Purposes and Procedures Manual  
Clarifying the Corresponding NAIC Designation Category for NAIC 5GI**

Dear Ms. Mears,

The undersigned (ACLI, PPIA, and NASVA) appreciate the opportunity to comment on the exposure referred to above that was released for comment by the Valuation of Securities Task Force (VOSTF) on December 14<sup>th</sup>, 2022.

The undersigned are supportive of the referred to proposed amendment.

\*\*\*\*\*

We stand ready to work collaboratively with the Task Force and SVO on this and other matters in the future.

Sincerely,

A handwritten signature in black ink that reads 'Mike Monahan'.

## MEMORANDUM

TO: Carrie Mears, Chair, Valuation of Securities (E) Task Force  
Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)  
Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office (SVO)

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Non-substantive technical amendment to the Purposes and Procedures Manual clarifying the corresponding NAIC Designation Category for NAIC 5GI

DATE: November 15, 2022

---

**Summary** – At the 2021 Fall National Meeting the Task Force adopted a non-substantive technical amendment to the PL Securities section in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (Purposes and Procedures Manual)* which clarified that an NAIC 5GI Designation is the equivalent of an NAIC 5.B Designation Category. The SVO has identified other places in the *Purposes and Procedures Manual* where the 5GI.B Designation Category is not currently specified and proposes a non-substantive technical amendment to make the changes shown below in **red** (additions **underlined** and deletions with **~~strikethrough~~**).

Executive Office | 444 North Capitol Street NW | Suite 700 | Washington, DC 20001 | (202) 471-3990

Central Office | 1100 Walnut Street | Suite 1500 | Kansas City, MO 64106-2197 | (816) 842-3600

Capital Markets & Investment Analysis Office | One New York Plaza | Suite 4210 | New York, NY 10004 | (212) 398-9000

[www.naic.com](http://www.naic.com)

**PART TWO**  
**OPERATIONAL AND ADMINISTRATIVE INSTRUCTIONS**  
**APPLICABLE TO THE SVO**

---

**COMPILATION AND PUBLICATION OF THE SVO LIST OF INVESTMENT SECURITIES**

---

...

**RMBS/CMBS Modeled Securities Process**

7. RMBS and CMBS that are deemed to be subject to financial modeling are retained in the RMBS/CMBS Modeled Process. RMBS and CMBS that are deemed ineligible for financial modeling but that have been assigned credit ratings by NAIC CRPs migrate to the Filing Exempt Securities Process. RMBS and CMBS that are deemed ineligible for financial modeling and that have also not been assigned credit ratings by NAIC CRPs may be reported by the insurer in the **5GI NAIC General Interrogatory** with an NAIC 5GI and an NAIC Designation Category of 5.B GI.

---

**PART THREE**  
**SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION**  
**OF NAIC DESIGNATIONS**

**PRODUCTION OF NAIC DESIGNATIONS**

---

...

**NAIC DESIGNATIONS RELATED TO SPECIAL REPORTING INSTRUCTION**

27. An insurance company that self-assigns a 5.B GI must attest that securities receiving this designation meet all required qualifications by completing the appropriate general interrogatory in the statutory financial statements. If documentation necessary for the SVO to perform a full credit analysis for a security does not exist or if an NAIC CRP credit rating for an FE or PL security is not available, but the issuer is not current on contractual interest and principal payments, and/or if the insurer does not have an actual expectation of ultimate payment of all contracted interest and principal, the insurance company is required to self-assign this security an NAIC 6\*.
28. NAIC 6\* is assigned by an insurer to an obligation in lieu of reporting the obligation with appropriate documentation in instances in which appropriate documentation does not exist, but the requirements for an insurance company to assign a 5.B GI are not met.
29. Securities with NAIC 5.B GI Designations Categories are deemed to possess the credit characteristics of securities assigned an NAIC 5.B Designation Category. A security assigned an NAIC 5.B GI Designation Category incurs the regulatory treatment associated with an NAIC 5.B Designation Category.
30. Securities an insurance company previously assigned as NAIC 5.B GI are permitted to subsequently receive this NAIC 6\* Designation Category if the requirements for an NAIC 5.B GI Designation Category continue to be met.
31. Securities with NAIC 6\* Designations are deemed to possess the credit characteristics of securities assigned an NAIC 6 Designation. Therefore, a security assigned an NAIC 6\* Designation incurs the regulatory treatment associated with an NAIC 6 Designation.
32. Securities that are residual tranches or interests, as defined in *SSAP 43R – Loan Backed and Structured Securities*, shall be reported on Schedule BA - Other Long-Term Invested Assets, without an NAIC Designation and are ineligible to be assigned an NAIC 5.B GI Designation Category or NAIC 6\* Designation.

**NOTE REGARDING RESIDUAL TRanches OR INTERESTS:** For 2021 year-end reporting only, residual tranches or interests previously reported on Schedule D-1: Long-Term Bonds shall be permitted to be reported on Schedule D-1 with an NAIC 6\* Designation, however an NAIC 5GI is not permitted.

**NOTE:** The GI after the quality indicator 5.B refers to General Interrogatory and distinguishes NAIC 5.B GI from an NAIC 5.B Designation Category. The asterisk (\*) after the quality indicator 6 distinguishes the NAIC 6\* Designation from an NAIC 6 Designation.

**REGULATORY TRANSACTIONS**

---

...

**Status of Regulatory Transactions**

290. A Regulatory Transaction is not eligible for:
- Assignment of an NAIC Designation by the SVO;
  - The filing exemption process for publicly rated securities;
  - The private letter rating component of the filing exemption or for use of the PLGI designation symbol;
  - Self-assignment by an insurer of the administrative symbol Z under the 120-rule;
  - Self-reporting by an insurer on the general interrogatory for securities eligible for filing exemption but for which no NAIC CRP credit rating is available (i.e., 5.B GI) and
  - Inclusion in the SVO List of Investment Securities or any other NAIC electronic system or processes maintained for operations for the VOS/TF

**Re: Re-Exposure Amendment to Part Four of the Purposes and Procedures Manual (“P&P Manual”) of the NAIC Investment Analysis Office to Include Collateralized Loan Obligations (“CLO”)**

Dear Ms. Mears:

ACLI appreciates the opportunity to provide comments on the Valuation of Securities Task Force's (VoSTF) re-exposure to update Part Four of the P&P Manual to include CLOs. We have the following ask for clarification with the newly written paragraph 24.

In the “Use of the Financial Modeling for Year-End Reporting for CLO, RMBS, and CMBS”, new paragraph 24, the following is the rewrite from the previous exposure:

24. Beginning with year-end **2024** ~~2023~~ for CLOs, probability weighted net present values will be produced **under NAIC staff supervision by SSG using its financial model** ~~by SSG~~ with defined analytical inputs selected by the SSG. SSG will model CLO investments and evaluate all tranche level losses across all debt and equity tranches under a series of calibrated and weighted collateral stress scenarios to assign NAIC Designations **Categories** for a specific CLO tranche ~~is~~ **will be as** determined by the NAIC. ~~Designation Intrinsic Price Mapping by SSG.~~

NOTE: Please refer to SSAP No. 43R—Loan-Backed and Structured Securities for guidance on all accounting and related reporting issues.

**NOTE: Effective as of January 1, 2024, SSG will financially model CLOs.**

Currently the paragraph starts by stating “beginning with year-end 2024 for CLOs”; however, the second note states “effective as of January 1, 2024, SSG will financially model CLOs”. This has raised the questions as what is the intent of the note and how will this work? In addition, can one explain how to understand the “year-end 2024” reference? If the SSG will provide designations for all CLOs starting January 1, 2024 (although not necessarily done for RMBS/CMBS), how are

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

[acli.com](http://acli.com)

insurers expected to provide ratings/designations for CLO tranches for 2024 quarterly financial statements? If SSG cannot provide credit designations for all CLOs beginning Q1 2024, this raises the question which rating categories are eligible for insurers to complete their 2024 quarterly financial statements.

Thank you for the opportunity to continue to participate and comment on this issue. We look forward to future discussions and continued collaboration with the NAIC on this important initiative.

Sincerely,

Steve Clayburn

RE: Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office  
(the "P&P Manual") to Include Collateralized Loan Obligations (CLO) as a Financially Model  
Security in Part Four

DATE: September 16, 2022 (**Updated: December 20, 2022**)

**Summary** – A collateralized loan obligation (CLO) is type of structured security backed by a pool of debt, typically corporate loans with low credit ratings. An insurer that purchases every tranche of a CLO holds the exact same investment risk as if it had directly purchased the entire pool of loans backing the CLO. The aggregate risk-based capital (RBC) factor for owning all of the CLO tranches should be the same as that required for owning all of the underlying loan collateral. If it is less, it means there is risk-based capital (RBC) arbitrage. As noted in the Investment Analysis Office’s (IAO) memo of May 25, 2022, “Risk Assessment of Structured Securities – CLOs”, it is currently possible to materially (and artificially) reduce C1 capital requirements just by securitizing a pool of assets.

**Recommendation** – The Investment Analysis Office recommends the Task Force assign the Structured Securities Group (SSG) the responsibility of financially modeling CLO investments. SSG can model CLO investments and evaluate all tranche level losses across all debt and equity tranches under a series of calibrated and weighted collateral stress scenarios to assign NAIC Designations that create equivalency between securitization and direct holdings, thereby eliminating RBC arbitrage.

The Task Force sent a referral to the Capital Adequacy (E) Task Force (CATF) and its Risk-Based Capital Investment Risk and Evaluation (E) Working Group (RBCIREWG) requesting those groups consider adding two new RBC factors. These recommended new RBC factors would account for the tail risk in any structured finance tranche. Staff also recommends adding NAIC Designation Categories (e.g. 6.A, 6.B and 6.C) with possible interim RBC factors of 30%, 75% and 100%, respectively, until those groups can further study structured securities. Staff request approval to draft a Blanks proposal for the new NAIC Designation Categories.

**Proposed Amendment** - The proposed text changes to P&P Manual are shown below with additions in red underline, deletions in ~~red strikethrough~~ as it would appear in the 2022 P&P Manual format. Changes made on December 20, 2022 are highlighted in **yellow**.

**POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK  
FORCE**

...

<p style="text-align: center;"><b>POLICIES APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES</b></p>
----------------------------------------------------------------------------------------------------------------------------------------------

### **Filing Exemption**

82. Bonds, within the scope of SSAP No. 26R and SSAP No. 43R (excluding **CLO** RMBS and CMBS subject to financial modeling) and Preferred Stock within scope of SSAP No. 32, that have been assigned an Eligible NAIC CRP Rating, are exempt from filing with the SVO (FE securities) with the exception of Bonds and or Preferred Stock explicitly excluded in this Manual.

...

**PART TWO**  
**OPERATIONAL AND ADMINISTRATIVE INSTRUCTIONS**  
**APPLICABLE TO THE SVO**

## COMPILATION AND PUBLICATION OF THE SVO LIST OF INVESTMENT SECURITIES

---

### Directive

3. On a quarterly basis, the SVO shall:
  - Compile a list of Investment Securities from each of the data files defined as VOS Process, Filing Exempt Securities Process, **CLO/RMBS/CMBS Modeled Securities Process**, U.S. Treasury Process and the Exempt U.S. Government Securities Process (each an SVO Sub-List bearing the name of the corresponding Process).

...

### **CLO/RMBS/CMBS Modeled Securities Process**

6. **Collateralized Loan Obligations (CLO)**, Residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) are Investment Securities, reported by an insurance company to the NAIC and subsequently added by NAIC staff to the **CLO/RMBS/CMBS Modeled Securities Process**, where on an annual basis and for purposes of the annual surveillance they are evaluated for eligibility to be financially modeled.
7. **CLO/RMBS** and CMBS that are deemed to be subject to financial modeling are retained in the **CLO/RMBS/CMBS Modeled Process**. **CLO**, RMBS and CMBS that are deemed ineligible for financial modeling but that have been assigned credit ratings by NAIC CRPs migrate to the Filing Exempt Securities Process. **CLO**, RMBS and CMBS that are deemed ineligible for financial modeling and that have also not been assigned credit ratings by NAIC CRPs may be reported by the insurer in the **5GI General Interrogatory**.
8. Insurance companies shall not file Regulatory Transactions as eligible for the **CLO/RMBS/CMBS Modeled Securities Process**, and the NAIC staff shall not add a Regulatory Transaction to the **CLO/RMBS/CMBS Modeled Securities Process**.

...

## **NAIC POLICY ON THE USE OF CREDIT RATINGS OF NRSROS**

---

**NOTE:** See “Coordination Between the Statutory Accounting Principles Working Group and the Valuation of Securities Task Force, “Use of Credit Ratings of NRSROs in NAIC Processes” and “Policies Applicable to the Filing Exemption (FE) Process” in Part One; “Definition – Credit Ratings Eligible for Translation to NAIC Designations in this “NAIC Policy on the Use of Credit Ratings of NRSROs”; “Procedure Applicable to Filing Exempt (FE) Securities and Private Letter (PL) Rating Securities” in Part Three; and “Filing Exemption Status of **CLO**, RMBS and CMBS” in Part Four, which excludes **CLO**, RMBS and CMBS from the use of **NRSRO** credit ratings for NAIC regulatory processes.

**PART THREE**  
**SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION**  
**OF NAIC DESIGNATIONS**

## **PROCEDURE APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES**

---

**NOTE:** See “Use of Credit Ratings of NRSROs in NAIC Processes” and “Coordination Between the Statutory Accounting Principles Working Group and the Valuation of Securities Task Force” (especially “NAIC Designations Do Not Communicate Statutory Accounting or Reporting” and “Policies Applicable to the Filing Exemption (FE) Process”) in Part One; “NAIC Policy on the Use of Credit Ratings of NRSROs” (especially “Definition – Credit Ratings Eligible for Translation to NAIC Designations”) in Part Two (the definition excludes the use of NAIC CRP credit ratings assigned to a security type where the NAIC has determined that the security type is not eligible to be reported on Schedule D or the it is not appropriate for NRSRO credit ratings to be used to determine the regulatory treatment of the security or asset, as specified in this Manual); and “Filing Exemption Status of **CLO**, RMBS and CMBS” in Part Four (excluding **CLO**, RMBS and CMBS from the use of credit ratings for NAIC regulatory processes).

<b>FE SECURITIES</b>
----------------------

### **Filing Exemption**

3. Bonds, within the scope of SSAP No. 26R and SSAP No. 43R (excluding **CLO**, RMBS and CMBS subject to financial modeling) and Preferred Stock within scope of SSAP No. 32, that have been assigned an Eligible NAIC CRP Rating, as described in this Manual, are exempt from filing with the SVO (FE securities) with the exception of Bonds and/or Preferred Stock explicitly excluded below.

**PART FOUR**  
**THE NAIC STRUCTURED SECURITIES GROUP**

## DEFINITIONS

---

1. The following terms used in this Part Four have the meaning ascribed to them below.
  - **ABS** stands for asset-backed securities and means structured securities backed by consumer obligations originated in the United States.
  - **CLO** stands for collateralized loan obligation and means structured securities backed by a pool of debt, typically corporate loans with low credit ratings. The loans are managed by a collateral manager which bundles the initial loans (for example, generally 150 or more) together and then actively manages the portfolio -- buying and selling loans. To fund the purchase of new debt, the CLO manager sells various tranches of the CLO to outside investors, such as which could include insurers. Each tranche differs based on the order-priority in which the investors will be paid when the underlying loan payments are made. As a result, they also differ with respect to the risk associated with the investment since investors who are in lower tranches paid last have a higher risk of default from the underlying loans. To compensate for the risk, the interest coupon payments on the subordinate tranches are higher. Investors who are in higher tranches paid out first have lower overall risk, but they receive smaller interest coupon payments, as a result.
  - **CMBS** stands for commercial mortgage-backed securities and means structured securities backed by commercial real estate mortgage loans originated in the United States. The definition of CMBS may refer to securitizations backed by commercial mortgages, respectively, originated outside of the United States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the commercial mortgage and commercial mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.
  - **Initial Information** means the documentation required to be filed with an Initial Filing of an CLO, RMBS or a CMBS CUSIP, pursuant to the section below and pertaining to Loan Information, Reps and Warranty Information and Structure and Formation Information for the transaction, where:

- *Loan Information* For RMBS and CMBS, means a review of the loan files by a third party to assess the sufficiency of legal title and other related issues. For middle market loans in CLOs, means a review consistent with the guidance in Part Three of this manual for General Corporate and Municipal Methodology for Independent Credit Quality Assessment. This requirement will generally not apply to broadly syndicated bank loans.
- *Reps and Warranty Information* means the actual representation and warranties in effect for the securitization given by the mortgage originator(s) to the Trust pertaining to loan origination processes and standards, compliance with applicable law, loan documentation and the process governing put backs of defective mortgages back to the originator(s). Rep and Warranty information will generally not be applicable or required in the case of CLOs.
- *Structure and Formation Information* means the waterfall, as described in the definition of Ongoing Information, information and documentation in the form of legal opinions and documentation governing the formation of the securitization and its entities relative to issues such as bankruptcy remoteness, true sale characterization, the legal standards and procedures governing the securitization and other similar issues. In each case, as applicable to the relevant asset class in question.
- **Intrinsic Price** is an output of financial modeling, defined as ‘1 – weighted average of discounted principal loss’ expressed as a percentage, reflecting the credit risk of the security.
- **Legacy Security**, for the purposes of this section shall mean any RMBS and any CMBS that closed prior to January 1, 2013.
- **Official Price Grids** means and refers to those generated by the SSG and provided to an insurance company or insurance companies that own the security for regulatory reporting purposes.

- **Ongoing Information** differs based on the asset class of the security being reviewed. In general, Ongoing Information can consist of: (a) tranche level data; such as principal balance, factors, principal and interest due and paid, interest shortfalls, allocated realized losses, appraisal reductions and other similar information typically provided by the trustee in periodic reports for the specific tranche; (b) trust level data, such as aggregate interest and principal and other payments received, balances and payments to non-tranche accounts, aggregate pool performance data and other similar information; (c) loan level performance information (where such information is not otherwise available - for example, broadly syndicated loans - it will generally not require such information); and (d) a computerized model of rules that govern the order and priority of the distribution of cash from the collateral pool (i.e., the “waterfall”) to the holders of the certificates/securities—provided in the format and modeling package used by the NAIC financial modeling vendor.
- **Original Source**, with respect to a specific set of data, means the Trustee, Servicer or similar entity that is contractually obligated under the agreement governing the RMBS or CMBS to generate and maintain the relevant data and information in accordance with standards specified in applicable agreements or an authorized re-distributor of the same.
- **NAIC Designation Intrinsic Price Mapping** is the mapping of the Intrinsic Price to a single NAIC Designation and Designation Category employing the midpoints between each adjoining AVR RBC charges (pre-tax). The midpoints are directly used as the minimum Intrinsic Prices (weighted average loss points) for corresponding NAIC Designations and Designation Categories.
- **Price Grids** means and refers to CUSIP-specific price matrices containing six price breakpoints; i.e., each price corresponding to a specific NAIC Designation category. Each breakpoint on a Price Grid is the price point that tips the NAIC Designation for the RMBS CUSIP into the next NAIC Designation (credit quality/credit risk) category. The plural is used because two Price Grids are generated for any CUSIP. This reflects the difference in RBC for those insurance companies that maintain an asset valuation reserve and for those insurance companies that do not.

- **Re-REMIC** is a securitization backed by: (a) otherwise eligible RMBS from one or two transactions; or (b) otherwise eligible CMBS from one or two transactions at closing. Re-REMICs cannot acquire any Underlying Securities after closing.
- **RMBS** stands for residential mortgage-backed securities and means structured securities backed by non-agency residential mortgages originated in the United States, where the collateral consists of loans pertaining to non-multi-family homes. That includes prime, subprime and Alt-A mortgages, as well as home-equity loans, home-equity lines of credit and Re-REMICs of the above. Excluded from this definition is agency RMBS, where the mortgages are guaranteed by federal and federally sponsored agencies such as the Government National Mortgage Association (GNMA), Federal National Mortgage Association (FNMA) or Federal Home Loan Mortgage Corporation (FHLMC) and loans against manufactured or mobile homes or collateralized debt obligations backed by RMBS. The exclusion covers bonds issued and guaranteed by, or only guaranteed by, the respective agency. Also not included are loans guaranteed by the U.S. Department of Veteran Affairs or the U.S. Department of Agriculture's Rural Development Housing and Community Facilities Programs. The definition of RMBS may refer to securitizations backed by residential mortgages, respectively, originated outside of the United States if and to the extent that the vendor selected by the NAIC to conduct the financial modeling: (a) has the necessary information about the residential mortgage and residential mortgage loans originated outside of the United States to fully model the resulting securities; and (b) can adapt the modeling process to account for any structural peculiarities associated with the jurisdiction in which the mortgage was originated.
- **Underlying Security** means the RMBS or CMBS backing a Re-REMIC. A Re-REMIC cannot be an Underlying Security.

**NOTE:** The definitions of **CLO**, RMBS and CMBS reflect limitations associated with the financial modeling process, NAIC credit rating provider (CRP) internal naming conventions and SSG processes, as more fully discussed below and may, therefore, be subject to a narrower or a broader reading in any reporting period. Please call the SSG with any concerns or questions about the scope of the definitions for a given reporting period. Also note:

- It is possible that the scope of the CLO, RMBS and CMBS definitions may be broadened because the financial modeling vendors indicate other collateral or waterfall structures can be modeled.
- NAIC CRPs may adopt different internal conventions with respect to what market or asset segments are within their rated populations of CLO, RMBS, CMBS or ABS. This could affect the application of the adopted NAIC methodology or require the NAIC to select which naming process it wishes to adopt.
- It is possible that the SSG will acquire analytical assessment capabilities that permit the assessment of existing, additional or different structured securities that cannot now be modeled or that are not currently rated.

## ADMINISTRATIVE AND OPERATIONAL MATTERS

---

### Certain Administrative Symbols

2. The following administrative symbols are used in the Valuation of Securities (VOS) Products to identify RMBS and CMBS that the NAIC vendor has confirmed will be subject to the financial modeling methodology and application of Price Grids described in this Part.
  - **FMR** – Indicates that the specific CUSIP identifies a Legacy Security RMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category.
  - **FMC** – Indicates that the specific CUSIP identifies a Legacy Security CMBS that is subject to the financial modeling methodology and the application of Price Grids to determine a NAIC Designation and Designation Category
  - Non-Legacy RMBS and CMBS subject to the financial modeling methodology would be assigned an NAIC Designation and Designation Category by the SSG without an administrative symbol.
  - **CLO** subject to the financial modeling methodology would be assigned an NAIC Designation and Designation Category by the SSG without an administrative symbol.

**NOTE:** The administrative symbols **FMR** and **FMC** are related to symbols that insurers are required to use in the financial statement reporting process. Under applicable financial statement reporting rules, an insurer uses the symbol **FM** as a suffix to identify Legacy Security modeled RMBS and CMBS CUSIPs. The symbol **FM** is inserted by the insurer in the financial statement as a suffix following the NAIC Designation Category for Legacy Security RMBS and CMBS; (e.g., **2.B FM**), and for **CLO** and Non-Legacy RMBS and CMBS it would be left blank (e.g. **3.C**).

The use of these administrative symbols in the VOS Product means the insurer should not use the filing exempt process for the security so identified.

### Quarterly Reporting of RMBS and CMBS

3. To determine the NAIC Designation to be used for quarterly financial statement reporting for a **CLO**, RMBS or CMBS purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) and follows the instructions in contained under the heading “Use of Net Present Value and Carrying Value for Financially Modelled Legacy Security RMBS and CMBS” or “Use of Intrinsic Price for Financially Modelled non-Legacy Security RMBS and CMBS” below, subject to, and in accordance with, *SSAP No. 43R—Loan-Backed and Structured Securities*.

## FILING EXEMPTIONS

---

### Limited Filing Exemption for RMBS and CMBS

4. **CLO, RMBS and CMBS that Can be Financially Modeled** – CLO, RMBS and CMBS that can be financially modeled are exempt from filing with the SVO. NAIC Designations for CLO, RMBS and CMBS that can be financially modeled are determined by application of the methodology discussed in this Part, not by the use of credit ratings of CRPs.
5. **CLO, RMBS and CMBS securities that Cannot be Financially Modeled**
  - **But Are Rated by a CRP** – CLO, RMBS and CMBS that cannot be financially modeled but that are rated by a CRP are exempt from filing with the SSG. The NAIC Designations for these CLO, RMBS and CMBS are determined by application of the filing exemption procedures discussed in this Manual.
  - **But Are Not Rated by a CRP** – CLO, RMBS and CMBS that cannot be financially modeled and that are not rated by a CRP are not filing exempt and must be filed with the SSG or follow the procedures, as discussed below in this Part.

### Filing Exemption for ABS

6. ABS rated by a CRP are exempt from filing with the SSG.

### Review of Decisions of the SSG

7. Analytical decisions made through the application of financial modeling are not subject to the appeal process. In the absence of an appeal, the SSG shall provide whatever clarification as to the results of financial modeling is possible to any insurer who requests it and owns the security, provided that it is not unduly burdensome for the SSG to do so. Any decision made by the SSG that results in the assignment of an NAIC Designation and does not involve financial modeling methodology, whether developed by the SSG on its own or in collaboration with the SVO, is subject to the appeal process.

## **REQUIRED DATA AND DOCUMENTS FOR TRANSACTIONS SUBMITTED TO THE SSG**

---

8. The policy statement set forth in this section shall be applicable generally to any transaction filed with the SSG for an analytical assessment, including, but not limited to, a Price Grid or for assignment of an NAIC Designation. Any filing with the SSG is deemed to be incomplete unless the insurer has provided the information, documentation, and data in quantity and quality sufficient to permit the SSG to conduct an analysis of the creditworthiness of the issuer and the terms of the security to determine the requested analytical value. It is the obligation of the reporting insurance company to provide the SSG with all necessary information. It is the responsibility of the SSG to determine whether the information provided is sufficient and reliable for its purposes and to communicate informational deficiencies to the reporting insurance company.

### **Documentation Standards**

9. In order for an insurer-owned CLO, RMBS or CMBS to be eligible for the year-end modeling process, conducted pursuant to this section below, the analysis must be based on information, documentation and data of the utmost integrity. A Legacy Security must meet the Ongoing Information requirements. A CLO, RMBS, CMBS or Re-REMIC that is not a Legacy Security must meet the Initial Information and Ongoing Information requirements. For the purposes of determining a Re-REMIC's status as a Legacy Security, the closing date of the Re-REMIC (not the Underlying Security) shall be used. The SSG may, in its sole discretion, determine that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the CLO, RMBS or CMBS CUSIP to be eligible for financial modeling. If the SSG determines that the Initial Information and/or Ongoing Information is not sufficient and/or not reliable to permit the CLO, RMBS or CMBS CUSIP to be eligible for financial modeling, it will communicate this decision to the insurer and invite a dialogue to ascertain whether alternative information is available that would be deemed sufficient and/or reliable by the SSG.

### **Initial Information Requirements**

10. A CLO, RMBS or CMBS meets the Initial Information Requirements if the security meets one of the following three conditions:

- **RTAS** – The RMBS or CMBS was assigned a preliminary price grid or designation as described in this Part;
- **Initial Sufficiency Filing** – The **CLO**, RMBS or CMBS was reviewed by SSG through an Initial Sufficiency Filing; or
- **Safe Harbor** – The **CLO**, RMBS or CMBS meets the Safe Harbor requirements.

### Initial Sufficiency Information Filing

11. An insurance company may file Initial Sufficiency Information with the SSG for the purpose of obtaining a determination that a **CLO**, RMBS or CMBS CUSIP is eligible for financial modeling under the annual surveillance process discussed below. Initial Sufficiency Information is only filed once for any given **CLO**, RMBS or CMBS. Reporting insurance companies are solely responsible for providing the SSG with Initial Information. A determination by the SSG that a given **CLO**, RMBS or CMBS CUSIP is eligible for financial modeling after an Initial Sufficiency Filing assessment is subject to the further and continuing obligation that the SSG obtain or the insurer provide the SSG with updated Ongoing Information close to the date of the annual surveillance.
12. **Required Documents for Initial Sufficiency Filing** – An insurer that owns a **CLO**, RMBS or a CMBS for which Initial Information is not publicly available shall provide the SSG with the following documentation.
13. **CLO** – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for a CLO consists of submission of Initial Information and Ongoing Information in the form of the following documentation, as may be appropriate:
  - **Pooling and Servicing Agreement Indenture** or similar
  - **Prospectus, Offering Memorandum or similar; Accountant’s comfort letter, if obtained in connection with such transaction.**
  - If applicable, ISDA Schedules and Confirmations or similar
  - Legal opinions given in connection with the transaction
  - Any other documents referenced by the above

- ~~Third-Party Due diligence scope document and raw results. If less than 100% due diligence, detailed description of the loan selection process.~~
- ~~If applicable, loan purchase agreements or similar.~~
- ~~Loan Tape~~
- All available eligible CRP ratings for underlying loan portfolio.
- For each unrated underlying loans, the Prospectus, Offering Memorandum or similar; 3-years of audited financial statements for the issuing entity.

14. **RMBS** – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for an RMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

- Pooling and Servicing Agreement or similar
- Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
- If applicable, ISDA Schedules and Confirmations or similar
- Legal opinions given in connection with the transaction
- Any other documents referenced by the above
- Third-Party Due diligence scope document and raw results. If less than 100% due diligence, detailed description of the loan selection process
- If applicable, loan purchase agreements or similar. Loan Tape

15. **CMBS** – Unless otherwise specified by the SSG in a Modeling Alert, as further described below, an Initial Filing for a CMBS consists of submission of Initial Information and Ongoing Information in the form of the following documentation:

- Pooling and Servicing Agreement or similar
- Prospectus, Offering Memorandum or similar; Accountant’s comfort letter
- If applicable, ISDA Schedules and Confirmations or similar
- Legal opinion given in connection with the transaction
- Any other documents referenced in the above
- Asset Summaries

- Loan Tape
- Loan documents, including reliable information about the terms of the transaction; including, but not limited to, financial covenants, events of default, legal remedies and other information about financial, contractual or legal aspects of the transaction in form and substance consistent with industry best practices for CMBS issuance.
- In certain cases, additional documents below will enable the SSG to verify and validate initial underwriting information of the property securing the CMBS. These documents may be required in form and substance consistent with best practices for typical CMBS issuance.
- Historical operating statements and borrower's budget
- Underwriter's analysis of stabilized cash flow with footnotes of assumptions used
- Property type specific, rent roll information
- Appraisals and other data from recognized industry market sources
- Independent engineering report (Property Condition Assessment)
- Environmental Site Assessment (ESA) – Phase I/Phase II
- Documentation related to seismic, flood and windstorm risks
- Franchise agreements and ground leases, if applicable
- Management agreements

### **SSG Modeling Alerts**

16. The SSG shall at all times have discretion to determine that differences in the structure, governing law, waterfall structure or any other aspect of a securitization or a class of securitization requires that insurance companies provide Initial Information and/or Ongoing Information additional to or different from that identified in this Part. The SSG shall communicate such additional or different documentation requirements to insurers by publishing a Modeling Alert on the NAIC website and scheduling a meeting of the VOS/TF to ensure public dissemination of the decision.

### Safe Harbor

17. Safe Harbor options serve as proxies for the Initial Sufficiency filing. The options reflect publicly available information that a third party has analyzed the Initial Information. Because the structured securities market is quite dynamic, the list of Safe Harbor options may change frequently, with notice and opportunity for comment, as described in this section. A CLO, RMBS or CMBS meets the Initial Information requirement if:

- At least two Section 17(g)-7 reports issued by different CRPs are publicly available; or
- A security that is publicly registered under the federal Securities Act of 1933.

### Ongoing Information Requirements

18. A CLO, RMBS or CMBS meets the Ongoing Information Requirements if Ongoing Information is available to the SSG and the relevant third-party vendor from an Original Source. The SSG, in its sole discretion and in consultation with the relevant third-party vendor, may determine that the Ongoing Information is not sufficient or reliable to permit a given CLO, RMBS or CMBS CUSIP to be financially modeled. However, in making such a determination, the SSG shall take into account reasonable market practices and standards.

### Special Rules for Certain Re-REMICs

19. Re-REMICs are generally simple restructurings of RMBS or CMBS. An Initial Sufficiency Filing for a Re-REMIC (a) which is not a Legacy Security itself but (b) where each Underlying Security is a Legacy Security shall not require submission of information regarding the Underlying Securities. In most cases, a prospectus for the Re-REMIC will be sufficient. If the SSG determines that additional information about the Re-REMIC structure or formation is required, it will communicate this decision to the insurer and invite a dialogue to ascertain whether additional information is available that would be deemed sufficient by the SSG.

## ANALYTICAL ASSIGNMENTS

### ANNUAL SURVEILLANCE OF CLO, RMBS AND CMBS – MODELED AND NON-MODELED SECURITIES

#### Scope

20. This section explains the financial modeling methodology applicable to all CLO, RMBS and CMBS (defined above) securitizations, the book/adjusted carrying value methodology applicable to a modeled Legacy Security, the NAIC Designation Intrinsic Price Mapping applicable to a modeled non-Legacy Security, and non-modeled securities subject to SSAP No. 43R—*Loan-Backed and Structured Securities*. Please refer to SSAP No. 43R for a description of securities subject to its provisions. The VOS/TF does not formulate policy or administrative procedures for statutory accounting guidance. Reporting insurance companies are responsible for determining whether a security is subject to SSAP No. 43R and applying the appropriate guidance.

#### Important Limitation on the Definitions of RMBS and CMBS

21. The definitions of CLO, RMBS and CMBS above are intended solely to permit the SSG to communicate with financial modeling vendors, insurance company investors who own CLO, RMBS and CMBS subject to financial modeling and/or the book/adjusted carrying value methodology and their investment advisors to facilitate the performance by the SSG of the financial modeling methodology described below. The definitions contained in this section are not intended for use and should not be used as accounting or statutory statement reporting instructions or guidance.

**NOTE:** Please refer to SSAP No. 43R—*Loan-Backed and Structured Securities* for applicable accounting guidance and reporting instructions.

### ANALYTICAL PROCEDURES APPLICABLE TO CLO, RMBS AND CMBS SECURITIZATIONS SUBJECT TO FINANCIAL MODELING METHODOLOGY

#### Filing Exemption Status of RMBS and CMBS

22. CLO, RMBS and CMBS are not eligible for filing exemption because credit ratings of CRPs are no longer used to set risk-based capital (RBC) for CLO, RMBS or CMBS. However, CLO, RMBS and CMBS are not submitted to the SSG.

### Use of Financial Modeling for Year-End Reporting for CLO, RMBS and CMBS

23. Beginning with year-end 2009 for RMBS, and 2010 for CMBS, probability weighted net present values will be produced under NAIC staff supervision by an NAIC-selected vendor using its financial model with defined analytical inputs selected by the SSG. The vendor will provide the SSG with a Intrinsic Price and/or a range of net present values for each RMBS or CMBS corresponding to each NAIC Designation category. The NAIC Designation for a specific Legacy Security RMBS or CMBS is determined by the insurance company, based on book/adjusted carrying value ranges, and the NAIC Designation for a specific non-Legacy Security RMBS or CMBS is determined by the NAIC Designation Intrinsic Price Mapping by SSG.
24. Beginning with year-end 2024 2023 for CLOs, probability weighted net present values will be produced under NAIC staff supervision by SSG using its financial model by SSG with defined analytical inputs selected by the SSG. SSG will model CLO investments and evaluate all tranche level losses across all debt and equity tranches under a series of calibrated and weighted collateral stress scenarios to assign NAIC Designations Categories for a specific CLO tranche is will be as determined by the NAIC. Designation Intrinsic Price Mapping by SSG.

**NOTE:** Please refer to *SSAP No. 43R—Loan-Backed and Structured Securities* for guidance on all accounting and related reporting issues.

**NOTE:** Effective as of January 1, 2024, SSG will financially model CLOs.

### Analytical Procedures for CLO, RMBS and CMBS

25. The SSG shall develop and implement all necessary processes to coordinate the engagement by the NAIC of a vendor who will perform loan-level analysis of insurer-owned CLO, RMBS and CMBS using the vendor's proprietary models.

<b>CLO, RMBS AND CMBS SUBJECT TO FINANCIAL MODELING</b>
---------------------------------------------------------

### Setting Microeconomic Assumptions and Stress Scenarios

26. Not later than September of each year, the SSG shall begin working with the vendor to identify the assumptions, stress scenarios and probabilities (hereafter model criteria) the SSG intends to use at year-end to run the vendor's financial model.

**The Financial Modeling Process**

27. Information about the financial modeling process can be found at [www.naic.org/structured\\_securities/index\\_structured\\_securities.htm](http://www.naic.org/structured_securities/index_structured_securities.htm).

**Use of Net Present Value and Carrying Value for Financially Modeled Legacy Security RMBS and CMBS**

28. For each modeled Legacy Security RMBS and CMBS, the financial model determines the net present value at which the expected loss equals the midpoint between the RBC charges for each NAIC Designation; i.e., each price point, if exceeded, changes the NAIC Designation. Net present value is the net present value of principal losses, discounted using the security’s coupon rate (adjusted in case of original issue discount securities to book yield at original issue and in case of floating rate securities, discounted using LIBOR curve + Origination spread). Because of the difference in RBC charge, the deliverable is five values for each RMBS and CMBS security for companies required to maintain an asset valuation reserve (AVR) and five values for companies not required to maintain an AVR. This is illustrated in the chart below.

**RBC charge / NAIC designation (pre-tax)**

P&C	RBC	Midpoint
1	0.3%	0.65%
2	1.0%	1.50%
3	2.0%	3.25%
4	4.5%	7.25%
5	10.0%	20.00%
6	30.0%	
Life	RBC	Midpoint
1	0.4%	0.85%
2	1.3%	2.95%
3	4.6%	7.30%
4	10.0%	16.50%
5	23.0%	26.50%
6	30.0%	

29. The NAIC Designation and NAIC Designation Category for a given modeled Legacy Security RMBS or CMBS CUSIP owned by a given insurance company depends on the insurer’s book/adjusted carrying value of each RMBS or CMBS, whether that carrying value, in accordance with *SSAP No. 43R—Loan-Backed and Structured Securities*, paragraphs 25 through 26a, is the amortized cost or fair value, and where the book/adjusted carrying value matches the price ranges provided in the model output for each NAIC Designation and the mapped NAIC Designation Category, reflected in the table below, to be used for reporting an NAIC Designation Category until new prices ranges are developed to reflect the full range of new Risk Based Capital factors adopted for each NAIC Designation Category; except that a modeled Legacy Security RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios would be assigned an **NAIC 1 Designation** and **NAIC 1.A Designation Category** regardless of the insurer’s book/adjusted carrying value.

**NOTE:** Please refer to the detailed instructions provided in SSAP No. 43R.

NAIC Designation Determined by Modeled Price Ranges	Mapped NAIC Designation Category
1	1.D
2	2.B
3	3.B
4	4.B
5	5.B
6	6

**Use of Intrinsic Price for Financially Modeled CLO and non-Legacy Security RMBS and CMBS**

30. The NAIC Designation and NAIC Designation Category for a given modeled CLO and non-Legacy Security RMBS or CMBS CUSIP owned by a given insurance is assigned by SSG and **does not** depend on the insurer’s book/adjusted carrying value of each CLO, RMBS or CMBS. The NAIC Designation and Designation Category assigned will be determined by applying the Intrinsic Price to the NAIC Designation Intrinsic Price Mapping, as defined in this Part.

**Securities Not Modeled by the SSG and Not Rated by an NAIC CRP or Designated by the SVO**

31. Securities subject to *SSAP No. 43R—Loan-Backed and Structured Securities* that cannot be modeled by the SSG and are not rated by an NAIC CRP or designated by the SVO are either: (a) assigned the NAIC administrative symbol **ND** (not designated), requiring subsequent filing with the SVO; or (b) assigned the NAIC Designation for Special Reporting Instruction [i.e., an **NAIC 5GI**, NAIC Designation Category **NAIC 5.B GI** or **NAIC 6\*** (six-star)].

## **MORTGAGE REFERENCED SECURITIES**

---

### **Definition**

32. A Mortgage Referenced Security has the following characteristics: A Mortgage Referenced Security’s coupon and/or principal payments are linked, in whole or in part, to prices of, or payment streams from, real estate, index or indices related to real estate, or assets deriving their value from instruments related to real estate, including, but not limited to, mortgage loans.

### **Not Filing Exempt**

33. A Mortgage Referenced Security is not eligible for filing exemption but is subject to the filing requirement.

### **NAIC Risk Assessment**

34. In determining the NAIC Designation of a Mortgage Referenced Security, the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.

### **Quarterly Reporting for Mortgage Reference Securities**

35. To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing status.

**NOTE:** Please refer to SSAP No. 26R and SSAP No. 43R for the definition of and guidance on Structured Notes and Mortgage Referenced Securities. Please also refer to Part Three of this Manual for guidance about the filing exempt status of Structured Notes.

## **GROUND LEASE FINANCING TRANSACTIONS**

---

### **Definition**

36. Ground Lease Financing (GLF) transactions are defined and explained in “Ground Lease Financing Transactions” in Part Three of this Manual.

### **SSG Role and Process**

37. On occasion, the SVO may refer a GLF transaction to the SVO for financial modeling of the GLF space leases or business operation, as applicable, in accordance with the process set forth in “Ground Lease Financing Transactions” in Part Three of this Manual. Following an SVO referral the SSG and SVO will maintain open communication related to requests for additional data, analytical questions and analytical conclusions. Any GLF transaction NAIC Designation will be assigned by the SVO.

## **THE RTAS – EMERGING INVESTMENT VEHICLE**

---

### **Purpose**

38. Price grids and/or NAIC Designation and Designation Categories are generated for the exclusive use of insurance companies and the NAIC regulatory community. Insurance companies use official Prices Grids and/or NAIC Designations and Designation Categories by following the instructions in *SSAP No. 43R—Loan-Backed and Structured Securities* to derive a final NAIC Designation for the **CLO**, RMBS or CMBS, which they use to derive the RBC applicable for the **CLO**, RMBS or CMBS.

**NOTE:** Please refer to SSAP No. 43R for a full explanation of the applicable procedure.

### **Extension of Authority**

39. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure is extended to the SSG, and the SSG is authorized to determine probable regulatory treatment for **CLO**, RMBS and CMBS pursuant to this Part or for other securities, where, in the opinion of the SSG, financial modeling methodology would yield the necessary analytical insight to determine probable regulatory treatment or otherwise enable the SSG to make recommendations to the VOS/TF as to regulatory treatment for a security.

### **Interpretation**

40. To facilitate this purpose, wherever in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure reference is made to the SVO, it shall be read to also refer to and apply to the SSG, adjusting for differences in the operational or methodological context. The Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure shall also be read as authority for collaboration between SVO and SSG staff functions so as to encompass RTAS assignments that require the use of SVO financial, corporate, municipal, legal, and structural analysis and related methodologies, as well as of financial modeling methodologies.

### Translation of Preliminary into Official Price Grids and/or NAIC Designations and Designation Categories

41. Price Grids and/or Designations and Designation Categories (“PGD”) generated by the SSG pursuant to an RTAS are preliminary within the meaning of that term as used in the Regulatory Treatment Assessment Service – Emerging Investment Vehicle procedure and accordingly cannot be used for official NAIC regulatory purposes. Preliminary NAIC Designations are translated into official NAIC Designations by the SVO when an insurance company purchases and files the security and the SVO conducts an official assessment. However, this Manual does not require the filing of CLO, RMBS and CMBS subject to financial modeling methodology with the SSG. It is, therefore, necessary to specify a procedure for the translation of preliminary Price Grids and/or Designations and Designation Categories (“Preliminary PGD”) into official PGD that can be used for NAIC regulatory purposes. Preliminary PGDs generated by the SSG become an official PGD within the meaning of this section when an insurance company has purchased the security for which the PGD was generated and reported that security for quarterly reporting purposes using the SSG generated PGD. A PGD for a security reported by an insurance company for quarterly reporting is effective until the SSG conducts the next annual surveillance pursuant to this Part at which the time the PGD generated by the SSG at year-end shall be the official PGDs for that security.

Draft: 3/28/23

Financial Regulation Standards and Accreditation (F) Committee  
Louisville, Kentucky  
March 22, 2023

The Financial Regulation Standards and Accreditation (F) Committee met in Louisville, KY, March 22, 2023. The following Committee members participated: Lori K. Wing-Heier, Chair (AK); Vicki Schmidt, Co-Vice Chair (KS); Sharon P. Clark, Co-Vice Chair (KY); Alan McClain (AR); Andrew N. Mais (CT); Gary D. Anderson (MA); Mike Causey (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning (NE); Andrew R. Stolfi (OR); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Larry D. Deiter (SD); Scott A. White (VA); and Jeff Rude (WY).

1. Adopted its 2022 Fall National Meeting Minutes

Commissioner Schmidt made a motion, seconded by Commissioner Mais, to adopt the Committee's Dec. 13, 2022, minutes (see *NAIC Proceedings – Fall 2022, Financial Regulation Standards and Accreditation (F) Committee*). The motion passed unanimously.

Director Wing-Heier said the Committee met March 21 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to vote to award continued accreditation to Nebraska, Virginia, and West Virginia.

2. Adopted Revisions Made During 2022 to NAIC Publications Referenced in the Accreditation Standards

Director Wing-Heier said there are several NAIC publications currently included in the accreditation standards by reference. At each Spring National Meeting, the Committee is to review revisions made to these publications in the prior year. Each of the applicable groups that developed revisions to the publications in 2022 have provided the Committee with a memorandum discussing the revisions, and they indicated whether the revisions should be considered significant or insignificant for accreditation purposes. This included the following publications: the *Accounting Practices and Procedures Manual (AP&P Manual)* (Attachment One); the *Annual and Quarterly Statement Blanks and Instructions* (Attachment Two); *Risk-Based Capital (RBC) Formulas and Instructions for Life and Property/Casualty (P/C) Insurers* (Attachment Three); the *Financial Condition Examiners Handbook* (Handbook) (Attachment Four); the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)* (Attachment Five); and the *Valuation Manual* (Attachment Six). The working group or task force responsible for each of these publications has deemed their 2022 changes as insignificant to the accreditation process.

Commissioner Clark made a motion, seconded by Commissioner White, to adopt the revisions deemed insignificant to each of the publications immediately by reference to the accreditation standards. The motion passed unanimously.

3. Discussed Comments Received on Exposure of 2020 Revisions to Model #440 and Model #450

At the 2021 Summer National Meeting, the Committee exposed proposed changes to the Accreditation Program to incorporate the 2020 revisions to the *Insurance Holding Company System Regulatory Act (#440)* and *Insurance Holding Company Model Regulation with Reporting Forms and Instructions (#450)* for a one-year public comment period ending Dec. 31, 2022.

The changes include the incorporation of the group capital calculation (GCC) and liquidity stress test (LST) requirements as significant elements for the Part A accreditation standards for insurance holding company systems. It is important to note that the proposed elements would allow commissioners to grant exemptions to the GCC to groups meeting the standards set out in Section 21A and Section 21B of Model #450, without the requirement to file at least once. During the 12-month exposure period, two comment letters were received. The first is from the National Risk Retention Association (NRRA), and the second is from the NAIC's Risk Retention Group (E) Task Force. Both comment letters discuss the applicability of the GCC requirements to risk retention groups (RRGs), noting that few groups are likely to be impacted. However, both letters stress the importance of allowing the commissioner to exempt an RRG from the GCC reporting requirements, when appropriate, to avoid placing an unnecessary burden on groups where such a filing would not provide added benefit. A final vote on the proposed additions to the Part A accreditation standards is scheduled for the 2023 Summer National Meeting.

#### 4. Voted to Remove Model #822 as an Accreditation Standard

At the 2022 Fall National Meeting, the Committee discussed a question that came up about significant elements in the Part A Liabilities and Reserves accreditation standard that require sections of the *Actuarial Opinion and Memorandum Regulation* (#822) to be adopted. The question raised was whether the requirements in Model #822 are duplicative of requirements in the *Valuation Manual*, which became an accreditation requirement when principle-based reserves was implemented in 2020. As a result of those discussions, the Committee sent a referral to the Life Actuarial (A) Task Force asking whether Model #822 was redundant with the requirements outlined in the *Valuation Manual*. The Task Force's analysis showed that Model #822 is now redundant with the requirements outlined in the *Valuation Manual*. As such, the Task Force recommends that Model #822 be removed as an accreditation standard. Please note that this should not be construed as a requirement that states rescind their versions of Model #822, only that adoption of the *Valuation Manual* is the new accreditation standard for life insurance and annuity actuarial opinion and memorandum requirements.

Commissioner Mais made a motion, seconded by Commissioner Anderson, to remove Model #822 as an accreditation standard. The motion passed unanimously.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.

### MEMORANDUM

TO: Commissioner Lori K. Wing-Heier, (AK), Chair, Financial Regulations Standards and Accreditation (F) Committee  
 Commissioner Vicki Schmidt, (KS), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee  
 Commissioner Sharon P. Clark, (KY), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group  
 Kevin Clark (IA), Vice Chair, Statutory Accounting Principles (E) Working Group

DATE: February 27, 2023

RE: Financial Regulation Standards – As of March 2023 *Accounting Practices and Procedures Manual*

In 2001, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the *Accounting Practices and Procedures Manual – Effective January 1, 2001, Version 1999* (AP&P Manual) as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Statutory Accounting Principles (E) Working Group has made to the AP&P Manual in 2022 up to the 2023 date of submission for publication. This memo is to provide the customary annual update regarding changes to the AP&P Manual.

Attachment A to this memo includes a detailed listing of the changes made to the AP&P Manual in 2022. On behalf of the Working Group, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards.

As outlined in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* (SAP Policy Statement), modifications will be made to the *AP&P Manual* each year. As such, it will be reprinted with an “as of” date associated with it. For example, the next printing of the AP&P Manual, which encompasses the attached modifications, will be titled *Accounting Practices and Procedures Manual – as of March 2023*. This process allows for an efficient way to update the AP&P Manual and virtually guarantees that users have the latest version. Reprints and updates are necessary because of the evolutionary nature of accounting—in both the statutory accounting principles and the generally accepted accounting principles arenas—and are positive for users of the AP&P Manual.

The Working Group sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the AP&P Manual. We will continue to notify the Committee of any changes to the AP&P Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

Attachment A

**Summary of Changes to the  
As of March 2022 Accounting Practices and Procedures Manual  
included in the As of March 2023 Manual**

The following summarizes changes made to the *As of March 2022 Accounting Practices and Procedures Manual* (Manual) and shown in the As of March 2023 version.

**Section 1** summarizes revisions that result in a new SSAP or new SAP concept to statutory accounting principles. Revisions that introduce original or modified accounting principles can be reflected in an existing or new SSAP. When revisions that result in a new SAP concept are made to an existing SSAP, the effective date is identified in the Status section, New SSAPs and new SAP concepts that revise existing SSAPs are commonly accompanied by a corresponding issue paper that reflects the tracked revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

**Section 2** summarizes revisions that clarify existing statutory accounting principles. These revisions are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Such revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Revisions that clarify existing statutory accounting principles are effective when adopted unless a specific effective date is noted.

**Section 3** summarizes revisions to the Manual appendices.

1. Revisions that Resulted in a New SSAP or New SAP Concept – Statutory Accounting Principles		
Section	Reference	Description
<i>There were no revisions that resulted in a new SSAP or new SAP concept.</i>		
2. Revisions that Resulted in a SAP Clarification – Statutory Accounting Principles		
Section	Reference	Description
Preamble	2022-01	Revisions incorporate updates from <i>FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements</i> , which updates the definition of an asset.
How to Use This Manual; Summary of Changes; Preamble	2021-26EP 2021-14	Revisions to replace the term “substantive” with “new SSAP” or “new SAP concept” and to replace the term “nonsubstantive” with “SAP clarification” on a primarily prospective basis.
SSAP No. 4	2022-01	Revisions update the definition of an asset based on updates from <i>FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements</i> .
SSAP No. 19	2021-25	Revisions clarify that leasehold improvements shall be immediately expensed upon lease termination unless limited exceptions are met.

## Attachment A

SSAP No. 22R	2021-29	Revisions reject <i>ASU 2021-05, Leases (Topic 842), Lessors—Certain Leases with Variable Lease Payments</i> for statutory accounting.
	2022-05	Revisions reject <i>ASU 2021-09, Leases Discount Rate for Lessees That Are Not Public Business Entities</i> for statutory accounting.
SSAP No. 24	2022-04	Revisions incorporate disclosures from <i>ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance</i> regarding terms and provisions of assistance received.
SSAP No. 25	2021-21	Revisions clarify reporting of related party transactions and incorporate new investment schedule reporting requirements to identify investments that involve related parties.
	2022-13	Revisions identify foreign open-end investment funds as a fund in which ownership percentage is not deemed to reflect control unless the entity has the power to direct the underlying company.
SSAP No. 36	2022-10	Revisions reject <i>ASU 2022-02, Troubled Debt Restructurings and Vintage Disclosures</i> and identify that retained guidance reflects superseded U.S. GAAP.
SSAP No. 43R	2021-21	Revisions clarify reporting of related party transactions and incorporate new investment schedule reporting requirements to identify investments that involve related parties.
	2021-23	Revisions update the summarized financial modeling guidance and refers users to the <i>Purposes and Procedures Manual of the NAIC Investment Analysis Office</i> for the detailed financial modeling guidance.
SSAP No. 47	2022-07	Revisions reject <i>ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers</i> for statutory accounting.
SSAP No. 48	2022-02	Revisions clarify that the audit of an entity utilizing the U.S. tax basis equity valuation exception shall occur at the investee level.
SSAP No. 61R	2021-31	Revisions clarify and, in some cases, remove certain disclosures for life and health reinsurance contracts. Clarifications also address the information in the audited report.
SSAP No. 68	2021-28	Revisions reject <i>ASU 2021-03, Intangibles – Goodwill and Other (Topic 350) – Accounting Alternative for Evaluating Triggering Events</i> for statutory accounting.
	2022-07	Revisions reject <i>ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers</i> for statutory accounting and note that rejection does not impact the determination of U.S. GAAP book value of an acquired entity.
SSAP No. 72	2021-27	Revisions incorporate guidance related to the accounting for the changes in fair value when exchanging equity-classified written call options, while rejecting <i>ASU 2021-04</i> for statutory accounting.
SSAP No. 73	2021-25	Revisions clarify that leasehold improvements shall be immediately expensed upon lease termination unless limited exceptions are met.

Attachment A

SSAP No. 86	2021-20	Revisions result with a new Exhibit A, replacing both Exhibit A and Exhibit B of <i>SSAP No. 86—Derivatives</i> that adopts with modification U.S. GAAP guidance in determining hedge effectiveness, and measurement guidance for excluded components.
	2022-09	Revisions adopt with modification derivative guidance from <i>ASU 2017-12, Derivatives and Hedging</i> and <i>ASU 2022-01, Fair Value Hedging – Portfolio Layer</i> to incorporate the portfolio layer method and partial-term hedges for statutory accounting.
SSAP No. 97	2022-13	Revisions identify foreign open-end investment funds as a fund in which ownership percentage is not deemed to reflect control unless the entity has the power to direct the underlying company.
SSAP No.104R	2022-06	Revisions incorporate the practical expedient from <i>ASU 2021-07, Compensation – Stock Compensation, Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards</i> for the current price input, a required component for option-pricing models utilized in determining fair value for share-based payments.
SSAP No. 108	2021-18	Revisions ensure consistency with the <i>Valuation Manual</i> , Section 21, by updating references to the “standard” scenario.
<b>3. Revisions to the Appendices</b>		
<b>Section</b>	<b>Reference</b>	<b>Description</b>
Appendix A		<i>No revisions impacting this appendix were adopted in 2022.</i>
Appendix B	2022-08 INT 22-01	New <i>INT 22-01—Freddie Mac When-Issued K-Deal (WI Trust) Certificates</i> clarifies that investments in the Freddie Mac “When Issued K-Deal” (WI) Program are in scope of <i>SSAP No. 43R—Loan-Backed and Structured Securities</i> from the date of initial acquisition.
	INT 22-02	<i>INT 22-02: Third Quarter 2022 through First Quarter 2023 Reporting of the Inflation Reduction Act – Corporate Alternative Minimum Tax</i> provides an exception that does not require entities to assess the statutory valuation allowance and deferred tax asset impacts or tax estimates related to Inflation Reduction Act CAMT for third quarter 2022 through first quarter 2023. It also provides subsequent event exceptions and disclosures.
Appendix C	AG 44	Revised <i>Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves</i> provides for the use of the 2023 GTLW Mortality and Recovery Valuation Tables for individuals disabled on or after January 1, 2023.
	AG 53	New <i>Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves</i> provides uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis.
Appendix D	Rejected as Not Applicable to Statutory Accounting:	
	2021-30	<i>ASU 2021-06, Amendments to SEC Paragraphs in Topic 205, Topic 942 and Topic 94</i>

## Attachment A

Appendix E	2022-01	<i>Issue Paper No. 166—Updates to the Definition of an Asset</i> documents revisions to <i>SSAP No. 4—Assets and Nonadmitted Assets</i> to incorporate updates from <i>FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements</i> , which updates the definition of an asset.
Appendix F	2021-26EP 2021-14	Revisions to replace the term “substantive” with “new SSAP” or “new SAP concept” and to replace the term “nonsubstantive” with “SAP clarification” on a primarily prospective basis.
Appendix G		<i>No revisions impacting this appendix were adopted in 2022.</i>
Appendix H		<i>No revisions impacting this appendix were adopted in 2022.</i>

**MEMORANDUM**

TO: Lori K. Wing-Heier, Chair  
Financial Regulation Standards & Accreditation (F) Committee

FROM: Pat Gosselin, Chair  
Blanks (E) Working Group

DATE: January 4, 2023

RE: Items Impacting Current Accreditation Standard

---

Please find attached a list of items adopted by the Blanks (E) Working Group during 2022. The Blanks Working Group adopts numerous changes to the Annual Statement Blanks and Instructions each year. Most of the changes are made to clarify current requirements or are considered enhancements to existing reporting. The changes adopted in 2022 do not represent a substantive change to any reporting requirements.

I am planning to be present when the Financial Regulation Standards & Accreditation (F) Committee meets in the event any member of the committee wishes to discuss these issues.

### Changes to blanks and instructions adopted during 2022

1. Add a footnote to Exhibit 7 in the Life/Fraternal statement and the Health Statement (Life Supplement) to capture amount of Federal Home Loan Bank (FHLB) Funding Agreements reported in columns 1 through 6 of the exhibit (2021-16 SAPWG). (2021-15BWG) Effective Dec. 31, 2022.
2. For Note 9 – Income Taxes, remove the 9C illustration instructions for the DTA and DTL components which states that “reporting entities should disclose those items included as “Other” (Lines 2a13, 2e4, 3a5 and 3b3) as additional lines for those items greater than 5% in the printed/PDF filing document”, as the illustration is not set up to accommodate variable lines. Add formulas for calculation of total and subtotal on the illustration for 9C. For Note 15 – Leases, modify the illustrations to add a “Thereafter” line and add a formula for “Total” line. (2021-16BWG) Effective Dec. 31, 2022.
3. Modify the Analysis of Operations by Lines of Business in the Health Blank to include all of health lines of business included in the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health. Add instructions for the new columns and adjust the column references. Add the Health Blank Analysis of Operations by Lines of Business as a supplement to the Life/Fraternal Blank with the appropriate instructions and crosschecks. Add crosscheck to the Health Blank Analysis of Operations by Lines of Business to the Life/Fraternal Analysis of Operations by Lines of Business – Accident and Health instructions. (2021-17BWG) Effective Dec. 31, 2023.
4. Add columns and lines to U&I (Parts 1, 2, 2A, 2B, and 2D) and the Exhibit of Premiums, Enrollment and Utilization in the annual statement bring the lines of business reporting in line with Life/Fraternal and Property. Add columns and lines to the Exhibit of Premiums, Enrollment and Utilization and U&I Analysis of Claims Unpaid quarterly pages. The appropriate adjustments to the instructions are also being made. (2021-19BWG) Effective Dec. 31, 2022.
5. Starting at Line 72 of the Life/Fraternal Five-Year Historical add or delete lines that do not pull in the specific lines of business reported on the Life/Fraternal Analysis of Operations by Lines of Business detail pages for life (individual and group), annuities (individual and group), and A&H for Line 33 of those pages. (2021-20BWG) Effective Dec. 31, 2023.
6. Add instruction to the Investment Schedules General Instructions to exclude non-rated residual tranches or interests from being reported as bonds on Schedule D, Part 1 and add lines to Schedule BA for the reporting of those investments (2021-15 SAPWG). (2021-21BWG) Effective Dec. 31, 2022.
7. Add a new reporting requirement in the investment schedules for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor/originator, along with whether the underlying investment is in a related party. (2021-22BWG Modified) Effective Dec. 31, 2022.
8. Added a group of lines for Residual Tranches or Interests in the Asset Valuation Reserve Equity and Other Invested Asset Component blank and renumber lines below them. Modify instructions as appropriate for the added lines. (2021-23BWG) Effective Dec. 31, 2022.
9. Add new questions to General Interrogatories Part 1 asking if the reporting entity accepts cryptocurrency for payment of premiums, which cryptocurrencies are accepted, and whether they are held for investment or immediately converted to U.S. dollars (2021-24 SAPWG). (2022-01BWG) Effective Dec. 31, 2022.

10. Add four new electronic-only columns to Schedule D, Part 6, Section 1, for Prior Year Book/Adjusted Carrying Value (BACV) (Column 16), Prior Year Nonadmitted Amount (Column 17), Prior Year Sub-2 Verified Value (Column 18), and Prior Year VISION Filing Number (Column 19) (2021-22 SAPWG). (2022-02BWG) Effective Dec. 31, 2022.
11. Split Line 5 of the Quarterly Part 1 – Loss Experience and Part 2 – Direct Premiums Written into Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion). (2022-03BWG) Effective Jan. 1, 2023.
12. Add a new supplement to capture premium and loss data for Annual Statement Line 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business. (2022-04BWG) Effective Dec. 2023.
13. Add line numbers to the status data points in the Life/Fraternal, Health, and Property/Casualty (P/C) Schedule T footnote. (2022-05BWG Modified) Effective Dec. 31, 2022.
14. Revise the Health Annual Statement Test language in the annual statement instructions. (2022-06BWG Modified) Effective Dec. 31, 2022.
15. Modify the Health Actuarial Opinion Instructions. Add definitions of “actuarial asset” and “actuarial liability.” Modify Section 4 – Identification, Section 5 – Scope, and Section 7 – Opinion to clarify that the actuary’s opinion covers actuarial assets as well as actuarial liabilities. Modify Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities. (2022-07BWG) Effective Dec. 31, 2022.
16. Modify the instructions in Section 1, Section 3, and Section 8 of the P/C Actuarial Opinion Instructions to reflect the changes adopted by the Actuarial Opinion (C) Working Group. (2022-08BWG) Effective Dec. 31, 2022.
17. Changes to the Life/Fraternal VM-20, Requirements for Principle Based Reserves for Life Products, Reserves Supplement blank Part 2, and adding a Question 3, a disclosure of the year that the Life Principle-Based Reserving (PBR) Exemption was actively filed, and a confirmation of the eligibility criteria in the case of ongoing exemptions. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be allowed). For the VM-20 Reserves Supplement Instructions, add instructions for the new disclosure item, Question 3. Correct the references to a state “granting” an exemption. For the Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement), for Question 8, add instructions on how to respond if the company is utilizing the ongoing exemption. The same instructions can also be found in the Valuation Manual, Section II, Subsection 1G(1). (2022-09BWG) Effective Dec. 31, 2022.
18. Add instructions to Schedule T, State pages and the Accident and Health (A&H) Policy Experience Exhibit to clarify guidance for reporting premium adjustments by jurisdiction. (2022-10BWG) Effective Dec. 31, 2022.
19. Update the Life/Fraternal Blank Asset Valuation Reserve (AVR) factors to correspond with the adopted Risk-Based Capital (RBC) factors for the expanded bond designation categories. (2022-11BWG Modified) Effective Dec. 31, 2022.
20. Combine the Health Analysis of Operations by Lines of Business Supplement page and the Health Care Receivable Supplement pages (Exhibits 3 and 3A) into one supplement filing set for Health Blank pages filed as a supplement by Life/Fraternal companies. (2022-12BWG) Effective Dec. 31, 2023.

21. Modify Five-Year Historical Data questions 68 and 69 to reference group comprehensive and modify questions 70 and 71 to reflect inclusion of all health lines of business other than group comprehensive. Crosschecks for these questions are being modified accordingly. (2022-13 BWG Modified) Effective Dec. 31, 2022.
22. Modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages. Adds definitions for life and annuity products to the lines of business definitions in the health appendix. (2022-19BWG Modified) Effective Dec. 31, 2023.

## MEMORANDUM

TO: Lori K. Wing-Heier, Chair, Financial Regulation Standards and Accreditation (F) Committee

FROM: Tom Botsko, Chair, Capital Adequacy (E) Task Force and Property and Casualty Risk-Based Capital (E) Working Group

DATE: February 1, 2023

RE: Accreditation Standards – Changes to the RBC Formulas and Instructions for Health, Life, and P/C

---

Attached please find a brief description of changes to the 2022 risk-based capital (RBC) reports, including an overview and instructions, for health, life, and property/casualty (P/C). These changes were adopted by the Capital Adequacy (E) Task Force and the Executive (EX) Committee and Plenary in 2022. The significance of these changes was viewed as it relates to the overall RBC standard.

***No changes to the RBC formulas or instructions were deemed to be significant for health, life, or P/C.***

Any questions can be directed to NAIC staff:  
 P/C – Eva Yeung  
 Life – Dave Fleming  
 Health – Crystal Brown

### Health RBC Formula

Not Significant      Added benchmarking guidelines to the underwriting risk instructions for investment income.

### Life RBC Formula

Not Significant      Added an instruction to address changes made to Schedule BA and the asset valuation reserve (AVR) to isolate the reporting of residual tranches.

Not Significant      Made structural changes to LR025, Life Insurance, to expand the categorization of policies with instructional and factor changes.

**P/C RBC Formula**

Not Significant	Included the Karen Clark & Company (KCC) catastrophe model as one of the approved third-party commercial vendor catastrophe models.
Not Significant	Incorporated wildfire peril as one of the catastrophe risk perils for informational-purposes only in the Rcat component.
Not Significant	For companies qualifying for exemption under PR027INT C(10), did not require to report PR027C Lines 1 through 10.
Not Significant	Removed the embedded 2% operational risk contained in the R3 credit risk component.
Not Significant	Removed the trend test for the information-only footnote in PR033.
Not Significant	Updated the Line 1 industry average development factors in PR017 and PR018.

## MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Susan Bernard (CA), Chair, Financial Examiners Handbook (E) Technical Group  
John Litweiler (WI), Vice-Chair, Financial Examiners Handbook (E) Technical Group

DATE: Feb. 3, 2023

RE: Consideration for Financial Accreditation Standards  
*2023 Financial Condition Examiners Handbook*

The *Accreditation Program Manual* (Manual) includes Review Team Guidelines to be used for financial examinations performed using the risk-focused surveillance approach that is found in the NAIC *Financial Condition Examiners Handbook* (Handbook). This memorandum is to update the Financial Regulation Standards and Accreditation (F) Committee (FRSAC) on changes the Financial Examiners Handbook (E) Technical Group has made to the Handbook in 2022.

Modifications are made to the Handbook each year, and a new edition is available annually. This process allows for an efficient way to update the Handbook and ensures that users have the latest version. The Technical Group made several changes to the Handbook in 2022, all of which it considers non-significant; i.e., having no impact on accreditation guidance.

During 2022, the Technical Group made the following changes:

### **Non-Significant Changes to the Handbook:**

- Revisions to incorporate elements and topics of the Common Framework for the Supervision of Internationally Active Insurance Groups (IAIGs) throughout the Handbook. Additional considerations for IAIGs were included throughout the following:
  - Narrative guidance in Sections 1-1, 1-3, 1-11 and 2-1.
  - Repositories: Capital and Surplus, Investments, Reinsurance Assuming, Reinsurance Ceding, Reserves/Claims Handling (Health), Reserves/Claims Handling (Life), Reserves/Claims Handling (P/C), and Underwriting.
  - Exhibits: Exhibit E – Audit Review Procedures, Exhibit M – Understanding the Corporate Governance Structure, Exhibit Y – Exam Interviews and Exhibit AA – Summary Review Memorandum.
  
- Revisions to enhance regulatory guidance in the following areas:
  - Terrorism Reinsurance: Additional guidance was added regarding Terrorism Reinsurance that was previously included in the Solvency Monitoring Risk Alert, which includes the background of the

p | 212 398 9000

[www.naic.org](http://www.naic.org)

Terrorism Risk Insurance Act (TRIA) and possible procedures for regulators to consider when assessing an insurer's solvency.

- Affiliated Relationships: Guidance was added to emphasize the importance of understanding and evaluating affiliated relationships in monitoring the services provided by and receivable balances due from key agents and producers. Potential procedures were added to the Underwriting Repository for examiners to consider regarding risks surrounding affiliated relationships.
  - Start-Up Insurers: Guidance was added to help evaluate the reasonableness of a start-up insurer's business plan, projections and strategy, and level of funding needed to meet targets. Possible procedures were added to the Capital and Surplus Repository to help the exam team address the reasonableness of the aforementioned areas.
- Revisions to Exhibit E helped to clarify that Audit Awareness Letters should be received when there has been a change in auditor.
  - Revisions to the Capital and Surplus Repository to align the recently added ORSA procedures to the work conducted in evaluating risks related to an insurer's capital and surplus.
  - Revisions to the Investments Repository and the Reserves/Claims Handling (Life) Repository help to provide additional guidance and potential procedures to assist examiners in evaluating related party investment holdings and asset adequacy of complex investments.
  - Revised guidance related to information technology (IT) in the following areas:
    - Additional guidance was added in Section 1-3 to describe a new process for communicating and addressing prospective IT risks. Exhibit C, Part Three (IT Review Summary Memo) was also updated to include a new subsection that details this process and includes an additional column in the IT findings chart where examiners can recommend ongoing monitoring.
    - Guidance was added for monitoring companies that heavily outsource IT functions and cross references to applicable procedures within Exhibit C Part Two (IT Work Program).

The Technical Group will continue to notify the FRSAC of any changes to the Handbook and advise if, in our opinion, these changes are "significant" by accreditation expectations.

## MEMORANDUM

**TO:** Financial Regulation Standards and Accreditation (F) Committee

**FROM:** Carrie Mears (IA), Chair Valuation of Securities (E) Task Force  
Charles Therriault, Director, NAIC Securities Valuation Office

**CC:** Dan Daveline, Director, NAIC Financial Regulatory Services  
Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office

**DATE:** February 13, 2023

**RE:** Report of the Valuation of Securities (E) Task Force

---

**A. Purpose** – This report is presented to assist the Financial Regulation Standards and Accreditation (F) Committee to determine if amendments to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* adopted by the Valuation of Securities (E) Task Force in 2022 require corresponding changes in either the Financial Regulation Standards (defined below) or state laws or regulations adopted in conformity with Part A: Laws and Regulations of the Financial Regulation Standards.

**B. Financial Regulation Standards** – The NAIC Policy Statement on Financial Regulation Standards (SFRS) in the *2023 Accreditation Program Manual* consists of four parts: Part A identifies laws and regulations deemed necessary to financial solvency regulation;<sup>1</sup> Part B identifies regulatory practices and procedures that supplement and support enforcement of the financial solvency laws and regulations discussed in Part A;<sup>2</sup> Part C contains three standards related to an insurance department’s organizational and personnel policies; and Part D focuses on Organization, licensing and change of control of domestic insurers. This report is concerned with the financial solvency standards in Part A. Those standards relevant to this report are shown immediately below and can be characterized as NAIC model legislation, codified NAIC guidance (i.e., *the Accounting Practices and Procedures Manual*): analytical work product of the NAIC staff (including the NAIC Investment Analysis Office) and state laws and regulations that contain substantially the same standards as NAIC model legislation or guidance. A review indicates that the work product of the NAIC Investment Analysis Office is directly or indirectly incorporated into the following Part A standards. For example:

- Standard 5 requires that insurer owned securities be valued in accordance with the standards promulgated by the NAIC Investment Analysis Office;<sup>3</sup>

- Standard 2, the *Risk-Based Capital (RBC) for Insurers Model Act* (#312)<sup>4</sup> assigns RBC factors for securities based on their credit risk as measured by NAIC Designations;
- Standard 3, the *Accounting Practices and Procedures Manual*<sup>5</sup> uses NAIC Designations produced by the SVO or SSG, or by insurers through the filing exempt process and or Price Grids produced by the SSG to identify valuation rules applicable to an investment and the reserved capital amount the insurer must report;
- Standard 8, pertaining to state investment regulations often incorporate NAIC mechanisms that relate asset allocations to credit risk expressed in the form of NAIC Designations;<sup>6</sup> and
- Standard 10, the *Credit for Reinsurance Model Act* (#785)<sup>7</sup> identifies insurer owned securities compiled by the SVO into a List of Investment Securities published quarterly in the NAIC AVS + Plus product, and letters of credits issued by the institutions on the NAIC Qualified U.S. Financial Institutions List administered by the SVO, as eligible for use as collateral in reinsurance transactions.

**C. Investment Analysis Office Standards Identified in the *Purposes and Procedures Manual*** – All SVO and SSG standards related to the assessment of credit risk in insurer owned securities, identification of additional non-payment risk in securities, classification of certain assets as bonds or as bond-like for reporting purposes, the valuation of insurer owned securities, and other activities conducted by the SVO or the SSG in support of state insurance regulatory objectives, are determined and promulgated by the Valuation of Securities (E) Task Force and published in the *Purposes and Procedures Manual*. In 2022, the *Purposes and Procedures Manual* was revised once, in December, with all policies, analytical procedures and instructions adopted during 2022 effective for year-end financial reporting. Amendments to the *Purposes and Procedures Manual* would automatically be reflected in the SFRS if any or all of the SFRS Standards identified in paragraph A of this memorandum have been adopted by an accredited state or incorporated by reference into the laws or regulations of an accredited state. For example, amendments to the *Purposes and Procedures Manual* would be directly incorporated by reference if the laws or regulations of an accredited state refer to or incorporate Standard 5 on valuation. Amendments to the *Purposes and Procedures Manual* would be indirectly incorporated by reference if the law or regulations of a state refers to or incorporates any other Standard that itself uses NAIC Designations or other analytical products of the Investment Analysis Office as a component; for example, Standard 2 in the case of RBC and/or Standard 3 in the case of statutory accounting.

**D. Conclusion** – In our opinion, reasoning as discussed above, amendments to the *Purposes and Procedures Manual* adopted by the Valuation of Securities (E) Task Force in 2022 can be characterized as maintenance items consistent with the existing regulatory framework and automatically incorporated into the Part A Standards identified above. The amendments identified in Attachments One did not create processes or practices external to the *Purposes and Procedures Manual* or other NAIC model legislation, guidance or analysis of NAIC staff that would suggest the need to consider an amendment to NAIC model legislation or guidance or legislative action on the part of an accredited state.

We hope this is responsive to the issues and concerns before the Committee.

**Attachment One****RECENT CHANGES TO THE PURPOSES AND PROCEDURES MANUAL***Published in the December 31, 2022 Publication*

- **Adopted updates to permit un-guaranteed and unrated subsidiary obligors in WCFI transaction, with SVO discretion to notch** – the Task Force directs the SVO to rely upon the NAIC Designation or NAIC CRP Rating equivalent of the obligor, subsidiary or affiliate’s parent entity if the obligor, subsidiary or affiliate does not have an NAIC CRP Rating and the SVO cannot assign an NAIC Designation to it. The Task Force authorizes the SVO, based on its analytical judgement and in its sole discretion, to notch such NAIC Designation down or decline to assign an NAIC Designation.

*The Valuation of Securities (E) Task Force adopted this amendment on Apr. 5, 2022*

- **Adopted updates clarifying the SVO’s role regarding accounting and reporting determinations** – these changes clarify, in accordance with Part One, that the SVO can assign NAIC Designations to investments which it does not think are eligible for Schedule D or BA reporting so long as it has the methodology to do so. The SVO, however, would have the authority, at its discretion, to notify the appropriate regulators of any investments which, in its opinion, would not or might not be eligible for reporting on Schedules D or BA. The SVO would also maintain its authority to offer its accounting and reporting opinion, when requested to do so, as part of its Regulatory Treatment Analysis Service, it being understood that such opinions would not be authoritative and might not reflect the opinion of the relevant state regulator.

*The Valuation of Securities (E) Task Force adopted this amendment on Aug. 11, 2022*

- **Adopted updates to the definition of Principal Protected Securities (PPS)** – PPS typically have both a principal protected component and a performance component whose payments originate from, or are determined by, non-fixed income like sources and, therefore, pose the risk of non-fixed income like cashflows. Additional transaction examples were included for demonstrative purposes only, to highlight the intent behind the principle-based PPS definition and the core regulatory concern (that there are Other Non-payments Risks associated with PPSs beyond the contractually promised payments that may not be reflected in a CRP rating) but are not intended to encompass all possible PPS variants. Each of these examples meets the definition of a PPS. Any design that circumvents the definition, and related examples, through technical means but which in substance achieves the same ends or poses the same risk, shall be deemed a PPS.

*The Valuation of Securities (E) Task Force adopted this amendment on Aug. 11, 2022*

- **Adopted updates to Part Four to reflect a consistent reference to “NAIC Designation Category” and the additional price points needed to determine them.** – the changes reflect the adoption of new Risk Based Capital (RBC) factors for each NAIC Designation Category in 2021 by the Capital Adequacy (E) Task Force and its parent, the Financial Condition (E) Committee. These technical updates reflect a consistent reference to “NAIC designation Category” and the nineteen price points needed to determine them using the new RBC factors.

***The Valuation of Securities (E) Task Force adopted this amendment on Aug. 11, 2022***

- **Adopted updates to Part One and Part Three to reflect changes adopted by the Statutory Accounting Principles (E) Working Group to SSAP No. 25 – Affiliates and Other Related Parties and SSAP No. 43 – Loan-Backed and Structured Securities for Subsidiary, Controlled and Affiliated (SCA) and Related Party Investments.** – the changes in section for Subsidiary, Controlled and Affiliated (SCA) and Related Party Debt or Preferred Stock Investments clarifies that it includes non-control relationships. Additionally, the amendment divides SCA and related party investments into two categories: (1) those with direct or indirect credit risk exposure to the SCA or related party, which are not filing exempt, and (2) those with no direct or indirect credit exposure to the SCA or related party, which are filing exempt. Transactions in category (1) could include structures in which the non-issuer underlying credit exposure would qualify as a related party pursuant to paragraph 4.a. in SSAP No. 43R – Loan-Backed and Structured Securities. Transactions in category (2) are captured by a new defined term called Related Party Filing Exempt Investments which would mean any investment (i) issued by an SCA or related party special purpose entity (SPE) which itself is not an obligor or ultimate source of the investment repayment, or (ii) issued as part of a structure in which the originator, sponsor, manager, servicer, other influential transaction party is an affiliate or related party of the reporting insurance company. SCA and Related Party Filing Exempt Investments would be eligible for filing exemption unless otherwise ineligible (for reasons other than their affiliate or related party status). The P&P Manual also clarifies that state insurance regulators are permitted, as specified in Part One of the P&P, to require an insurance company to file what would otherwise be an SCA and Related Party Filing Exempt Investment for analysis and/or assignment of an NAIC Designation only by the SVO, thereby making it ineligible for filing exemption in the future.

***The Valuation of Securities (E) Task Force adopted this amendment on Dec. 14, 2022***

---

**END NOTES**

<sup>1</sup> “...The purpose of the Part A: Laws and Regulations standards are to assure that an accredited state has sufficient authority to regulate the solvency of its multi-state domestic insurance industry in an effective manner. ... A state may demonstrate compliance with a Part A standard through a law, a regulation, an established practice, which implements the general authority granted to the state or any combination of laws, regulations or practices, which achieves the objective of the standard ...” Accreditation Program Manual. “...For those standards included in the Part A ... where the term “substantially similar” is included, a state must have a law, regulation, administrative practice or a combination of the above that addresses the significant elements included in the NAIC model laws or regulations. ... Accreditation Interlineations (Substantially Similar)”

<sup>2</sup> “...Part B sets out standards required to ensure adequate solvency regulation of multi-state insurers ... In addition to a domestic state’s examination and analysis activities, other checks and balances exist in the regulatory environment. These include ... analyses by NAIC’s staff, ... and to some extent the evaluation by private rating agencies...” Accreditation Program Manual

<sup>3</sup> The SFRS requires that securities owned by insurance companies be valued in accordance with standards promulgated by the NAIC’s Capital Markets and Investment Analysis Office approved by VOS TF while other invested assets should be valued in accordance with procedures promulgated by the Financial Condition (E) Committee. The Investment Analysis Office refers to two independent staff functions: i.e., that of the SVO and that of the NAIC Structured Securities Group (SSG). The SSG was formally established as an NAIC staff function in 2013 and assumes responsibility for the conduct of the year-end financial surveillance of insurer owned residential mortgage backed securities (RMBS) and commercial mortgage backed securities (CMBS), conducted by

---

the SVO since 2009. The SSG is also presumptively the segment of NAIC professional staff that would lead assessment of structured finance products generally.

The financial modeling process administered by the SSG generates intrinsic price values (referred to Price Grids) for legacy RMBS and CMBS and NAIC Designations for non-legacy RMBS and CMBS. These standards are contained in Part Four of the Purposes and Procedures Manual. Price Grids are used by insurers to generate NAIC Designations in accordance with procedures specified in Statement of Statutory Accounting Principles (SSAP) No. 43R *Loan Backed and Structured Securities* of the NAIC Accounting Practices and Procedures Manual. Accordingly, to the extent that the NAIC Accounting Practices and Procedures Manual are incorporated by reference in any standard, Price Grids and NAIC Designations derived by reference to them would also be incorporated.

<sup>4</sup> The SFRS requires the adoption of the *Risk Based Capital (RBC) for Insurers Model Act* (#312) or a substantially similar law or regulation. RBC factors are tied to NAIC designations assigned by the SVO or in certain cases, for example in the case of Mortgage Referenced Securities, by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “...*This standard does not articulate a threshold level for minimum capital and surplus required for insurers to transact business ... Risk-based capital will, however, effectively require minimums when adopted by states.*” Accreditation Interlineations - [Financial Regulation Standards](#)

<sup>5</sup> The SFRS requires the use of the codified version of the *Accounting Practices and Procedures Manual*. Valuation procedures applicable to long-term invested assets are determined by the nature of the insurer (life or property/casualty) and the NAIC designation assigned to the security by the SVO or SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “...*To satisfy this standard, ... specific adoption of the NAIC Annual Statement Blank, NAIC Annual Statement Instructions, and the NAIC Accounting Practices and Procedures Manual [is required]...Accreditation Interlineations - Financial Regulation Standards*”

<sup>6</sup> The SFRS requires a diversified investment portfolio. Although the Investment of Insurers Model Act (Defined Limits or Defined Standards) is not specifically identified, portions of one or the other model acts have been adopted by many of the states and these relate specific asset allocations to NAIC designations provided by the SVO or in some cases by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the *Purposes and Procedures Manual* or NAIC Designations derived by insurance companies for RMBS and CMBS from Price grids produced by the SSG pursuant to SSAP No., 43R. “... *This standard ... [will require] that statutes, together with related regulations and administrative practices, provide adequate basis ... to prevent, or correct, undue concentration of investment by type and issue and unreasonable mismatching of maturities of assets and liabilities. The standard is not interpreted to require an investment statute that automatically leads to a fully diversified portfolio of investments.*” [Accreditation Interlineations - Financial Regulation Standards](#)

The *NAIC Investment of Insurers Model Act (Defined Limits Version)* (# 280) imposes a 3% limit on the amount an insurer can invest in a single person (the threshold diversification limit) and also imposes a percentage limit on total investments of a defined credit quality, expressed by reference to NAIC Designation categories (the threshold credit quality limit). An additional percentage limit is then assigned to specific asset categories, which may or may not be subject to adjustment with the two threshold requirements. The limits identified in the Model Act are what would guide portfolio allocation decisions. Once made the insurer would shift to monitoring changes in the portfolio and rebalancing the allocations accordingly. Assuming a process for the identification of concentrations caused by indirect exposures, the insurer would aggregate such exposures with similar risks across all activities.

<sup>7</sup> The SFRS requires the adoption of the *Credit for Reinsurance Model Act* (#785), *Credit for Reinsurance Model Regulation* (#786) and *Life and Health Reinsurance Agreement Model Regulation* (#791) or substantially similar laws. The SVO maintains a list of banks that meet defined eligibility criteria to issue letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law.

## MEMORANDUM

**TO:** Director Lori K. Wing-Heier (AK), Chair, Financial Regulations Standards and Accreditation (F) Committee, Commissioner Vicki Schmidt, (KS), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee and Commissioner Sharon P. Clark, (KY), Co-Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

**FROM:** Rachel Hemphill (TX), Chair, Life Actuarial (A) Task Force, Craig Chupp (VA), Vice Chair, Life Actuarial (A) Task Force

**DATE:** March 1, 2023

**RE:** Financial Regulation Standards – As of March 2023 *Valuation Manual*

---

In 2017, the Financial Regulation Standards and Accreditation (F) Committee approved a motion to adopt the *Valuation Manual – Effective January 1, 2020* as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Life Actuarial (A) Task Force made to the Valuation Manual in 2022. The changes were adopted by the Executive (EX) Committee and Plenary at the 2022 Summer Meeting.

Attachment A to this memo includes a detailed listing of the changes made to the Valuation Manual in 2022. Of the 2022 Valuation Manual amendments, 2020-12 warrants additional notice due to the potential for increases to reserve requirements for life insurance and annuity companies with certain hedging practices. The other 2022 Valuation Manual amendments could be characterized as clarifications, additional guidance, updates to the basis used in prescribed assumption tables, or requests for additional documentation. In light of the considerations above and on behalf of the Task Force, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards.

As outlined in the Valuation Manual, amendments will be adopted annually by the Executive (EX) Committee and Plenary at each NAIC Summer Meeting. As such, the Valuation Manual will be reposted with an effective date of January 1 of the year following Executive Committee and Plenary adoption. For example, the current Valuation Manual, which encompasses the attached modifications, is titled the *2023 Edition - Valuation Manual*. This process allows for an efficient way to update the Valuation Manual and ensures that users have the latest version.

The Task Force sincerely requests that the Committee consider the items listed in Attachment A as “insignificant” changes to the Valuation Manual. We will continue to notify the Committee of any changes to the Valuation Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

## Attachment A

LATF VM Amendment	Valuation Manual Reference	Valuation Manual Amendment Proposal Descriptions	LATF Adoption Date
2020-12	VM-01, VM-20, VM-21, VM-31	Create consistency between CDHS determination in VM-20 and VM-21. Revise hedge modeling to only require CDHS if modeling future hedging reduces the reserves under VM-20 or TAR under VM-21.	6/9/22
2021-11	VM-21, section 12 and various others	Add a section for other assumptions requirement in VM-21 which covers general guidance and requirements for assumptions, and expense assumptions.	2/3/22
2021-12	VM-21 Section 6.B.3.a, VM-21 Section 6.B.6.a, VM-21 Section 6.B.6.b, VM-21 Section 6.C.4, VM-21 Section 6.C.10, VM-21 Section 6.C.11	Correct CSMP reference and clarify requirements for VA contracts with no minimum guaranteed benefits in Additional Standard Projection Amount in VM-21 Section 6.C. These three prescribed assumptions are Partial Withdrawal, Account Value Depletion, and Other Voluntary Contract Termination.	11/18/21
2021-13	VM-20 Sect. 9.C.6.e, VM-20 Sect. 9.C.7, VM-31 Sect. 3.D.3.o.	It has been observed that adding the prescribed mortality margins for some Life/LTC combination products cause modeled reserves to decrease rather than increase.	11/4/21
2022-01	VM-20 Section 8.C.18	Clarifying the Valuation Manual treatment of the pre-reinsurance ceded reserve and the reserve credit for retrocessions	3/10/22
2022-02	VM-31	Revise language and add an explicit cross-reference to the VM-21 section since it has further details on how to demonstrate compliance	3/31/22
2022-03	VM-20, VM-21, VM-31	General cleanup, including updating cross-references, better consistency between VM-20 and VM-21, where reasonable, and making clarifying edits.	3/31/22
2022-04	VM-20 Section 9.F.8, App 2.F, App 2.G	LIBOR transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance to facilitate the LIBOR transition to SOFR.	6/30/22
2022-05	VM-51 App 1, App 4	Add dividend plan code & Covid-19 indicator; change field identifier; correct Appendix 1 reference.	5/12/22

The individual amendment proposals reside on the Industry tab on the NAIC website and are accessible by following the link below:

Draft: 4/3/23

International Insurance Relations (G) Committee  
Louisville, Kentucky  
March 22, 2023

The International Insurance Relations (G) Committee met in Louisville, KY, March 22, 2023. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Lori K. Wing-Heier (AK); Ricardo Lara (CA); Andrew N. Mais (CT); Gordon I. Ito (HI); Dean L. Cameron (ID); Doug Ommen (IA); Dana Popish Severinghaus (IL); Vicki Schmidt (KS); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); and Marlene Caride (NJ).

1. Adopted its Feb. 3, 2023; Jan. 4, 2023; and 2022 Fall National Meeting Minutes

The Committee met Feb. 3, 2023, and Jan. 4, 2023. During these meetings, the Committee took the following action: 1) discussed NAIC comments on the International Association of Insurance Supervisors' (IAIS') public consultation on the review of its individual insurer monitoring (IIM) assessment methodology; and 2) discussed NAIC comments on the IAIS' *Issues Paper on Insurance Sector Operational Resilience*.

Commissioner Mais made a motion, seconded by Commissioner Caride, to adopt the Committee's Feb. 3, 2023 (Attachment One), Jan. 4, 2023 (Attachment Two), and Dec. 13, 2022 (*see NAIC Proceedings – Fall 2022, International Insurance Relations (G) Committee*) minutes. The motion passed unanimously.

2. Heard an Update on International Activities Related to Addressing Protection Gaps

Commissioner Anderson spotlighted international activities related to addressing protection gaps and mentioned the recent creation of the Protection Gaps Task Force (PGTF) at the IAIS. He noted that Director Cameron serves as a member of the PGTF, with California represented as a member as well. He said that the primary work of the PGTF will initially be focused on surveying members, and eventually stakeholders, on protection gaps related to natural catastrophes. This survey will ultimately lead to a report to be released by year-end.

David Snyder (American Property Casualty Insurance Association—APCIA) and Dennis Burke (Reinsurance Association of America—RAA) presented a recent report published by the Global Federation of Insurance Associations (GFIA). Titled *Global Protection Gaps and Recommendations for Bridging Them*, the report examines the drivers of the most relevant protection gaps and provides an overview of the wide range of potential levers that could help reduce each of the gaps.

Snyder reviewed the roles that various groups play in addressing protection gaps and highlighted the report's four primary risk categories that drive the gaps: 1) natural catastrophes (natcats); 2) cyber; 3) pensions; and 4) health. Burke spoke to the natcat risks as defined in the paper and recommended that committee members provide the report to their relevant staff who cover the topic. Snyder and Burke noted that certain protection gaps, such as health, may be more present in some countries versus others, based on the respective insurance markets in place.

Snyder listed the main recommendations of the report, noting education and consumer risk literacy are of key importance to tackling wide protection gaps. He noted that with respect to natcats, better building codes and inspections are recommended, as well as the involvement of more private-public partnerships. Burke noted that market differences exist globally and that open markets will help alleviate the spreading of risk. On cyber risk, recommendations included: 1) promoting an improved cyber-resilience landscape; 2) focusing on critical infrastructure; 3) creating a cyber-incident reporting framework to understand major incidents; and 4) the

furthered use of aggregate modeling. Finally, they noted that jurisdictions should be mindful of not creating barriers for insurers in addressing protection gaps and allowing risk-based capital (RBC) models to be used.

Commissioner Anderson emphasized that both domestic and international activities to address protection gaps are important for state insurance regulators and the larger insurance sector. He asked the presenters about the process GFIA undertook to highlight the four topics and if there were others on the list. Snyder responded by saying that a cross-section of members from many jurisdictions around the world participated in the drafting of the report and noted that there were no other topics on the agenda.

Director Cameron inquired about access and affordability and whether it is a lack of understanding of risk rather than access to funding mechanisms. He acknowledged that the report addresses what regulators and governments can do. However, he asked if there is any discussion that addresses industry action. Snyder and Burke noted that the paper is, to a lesser extent, focused on the risk-takers of the world, i.e., insurers and insurance sellers. They did note that a combination of recommendations is aimed at different groups and that the industry as a whole should look at potential ways to fill protection gaps together, such as parametric insurance and microinsurance in less developed nations.

Commissioner Lara asked the speakers how global insurers are incentivizing risk reduction and not just the pricing of the risk. Snyder noted that GFIA aims to provide more information on risk mitigation from around the world, which will be circulated once available. He concluded by saying that the work being undertaken by GFIA is a strong signal of the desire to work with regulators to address the top-priority issue of protection gaps.

### 3. Heard an Update on Activities of the IAIS

Commissioner Anderson gave an update on IAIS activities and its key 2023 projects and priorities. He began with a review of the IAIS committee meetings that took place earlier in the month. On the insurance capital standard (ICS), he commended the recent approval of the final criteria to assess whether the aggregation method (AM) provides comparable outcomes to the ICS. Commissioner Anderson noted that this marks an important milestone for the global insurance sector and represents years of work by supervisors to fulfill the Financial Stability Board's (FSB's) charge to develop a comprehensive, group-wide supervisory and regulatory framework for internationally active insurance groups (IAIGs), including a quantitative capital standard. He mentioned that the IAIS is entering the fourth year of the five-year monitoring period for the ICS and that specifications for both the ICS and AM data collections will be released at the end of April, with data due to the IAIS of August 31.

Next, Commissioner Anderson applauded the FSB's endorsement of the IAIS holistic framework for systemic risk in the insurance sector and the discontinuation of the process to designate global systemically important insurers (G-SIIs). He noted that the FSB's decision was based in part on the targeted jurisdictional assessment (TJA) of the holistic framework, which took place over the course of 2021 and 2022.

Commissioner Anderson highlighted some of the ongoing work being undertaken by forums and other groups within the IAIS, including:

- The Financial Inclusion Forum, which is discussing updating the 2012 IAIS Application Paper on Regulation and Supervision Supporting Inclusive Insurance Markets.
- The Fintech Forum and its continuing review of artificial intelligence (AI) and machine learning (ML) guidance from supervisory authorities and explore the need for the IAIS to develop global guidance for the insurance sector.
- The Climate Risk Steering Group's upcoming public consultation that covers the addition of new text to the IAIS Insurance Core Principles Introduction, work related to climate risk and governance, and the IAIS' plans to address climate more broadly.

Commissioner Anderson concluded by mentioning the IAIS Operational Resilience Task Force will be finalizing an issues paper on operational resilience in the insurance sector, and the Resolution Working Group recently issued a public consultation on an application paper on policyholder protection schemes. He said that the Committee will be meeting April 13 to consider any NAIC comments on the application paper.

#### 4. Heard an Update on International Activities

##### A. International Activities

Director Dunning reported on upcoming regional supervisory cooperation activities. The European Union (EU)-U.S. Insurance Dialogue Project has been working within three working groups this year: 1) climate risk financial oversight, including climate risk disclosures, supervisory reporting, and other financial surveillance; 2) climate risk and resilience, including innovative technology, pre-disaster mitigation, adaptation efforts, and modeling; and 3) innovation and technology, including big data, AI, and supervisory technology as a regulatory tool. He noted the project's upcoming public stakeholder event to be held June 16 in Seattle, WA.

Director Dunning then spoke about the NAIC's International Fellows program and noted the application period is currently open for the spring 2023 virtual session. He encouraged Committee members to notify NAIC staff if their insurance departments would be willing to host a fellow this fall for the in-person session.

Director Dunning spotlighted NAIC participation in recent international events, including the Bermuda Risk Summit 2023, held March 6–8, where Director Lindley-Myers and Director Wing-Heier addressed the NAIC's upcoming priorities for the year, as well as the importance of regulatory collaboration. He also noted the Geneva Association's Program on Regulation and Supervision (PROGRES) that was held March 9–10, where Commissioner Mais participated on a panel on the interplay between health and insurance regulation, and Commissioner Anderson participated on a panel on the ICS.

##### B. OECD

Director Dunning reported on work at the Organization for Economic Co-operation and Development (OECD) conducted by the NAIC along with its federal colleagues from the U.S. Department of Commerce (DOC), Federal Insurance Office (FIO), and Department of Labor (DOL). He said that since the 2022 Fall National Meeting, work has continued on a variety of topics, including enhancing the contribution of insurance climate adaptation, as well as digitalization to encourage policyholder risk reduction. Lastly, he noted an upcoming OECD roundtable event in India hosted in conjunction with India's insurance regulator and the Asian Development Bank Institute (ADBI) scheduled for May 24–25 and the next OECD Insurance and Private Pensions Committee meeting scheduled for June 26–27 in Paris, France.

##### C. SIF

Director Dunning reported that the Sustainable Insurance Forum (SIF) is continuing its work on two work streams: 1) identifying the potential role of insurance supervisors in the net-zero transition; and 2) how to best leverage existing practices from around the globe to help jurisdictions address access and affordability issues to help close the coverage gap within their own jurisdictions. The next meeting is expected to take place in the second quarter of 2023.

## 5. Discussed Other Matters

Commissioner Anderson noted two upcoming events: 1) the NAIC's International Insurance Forum scheduled for May 18–19, in Washington, DC; and 2) the IAIS 2023 Global Seminar scheduled for June 15–16, in Seattle, WA, which will be hosted by the NAIC.

In his closing remarks, Commissioner Anderson gave special thanks to NAIC CEO Michael F. Consedine, who will be resigning from his position in April 2023. Commissioner Anderson highlighted Consedine's commitment to the U.S. perspective at the global insurance regulatory stage and his consistent push for the NAIC's participation in a variety of international forums, associations, and events.

Having no further business, the International Insurance Relations (G) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/G CMTE/National Meetings/2023/Louisville-Spring National Meeting

Draft: 2/13/23

International Insurance Relations (G) Committee  
Virtual Meeting  
February 3, 2023

The International Insurance Relations (G) Committee met Feb. 3, 2023. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Lori K. Wing-Heier (AK); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by William Arfanis (CT); Dean L. Cameron (ID); Doug Ommen (IA); Dana Popish Severinghaus (IL); Vicki Schmidt (KS); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); and Marlene Caride (NJ).

1. Discussed NAIC Comments on the IAIS Public Consultation on the Review of the IIM Assessment Methodology

Commissioner Anderson explained that the International Association of Insurance Supervisors (IAIS) is conducting a public consultation on the review of its Individual Insurer Monitoring (IIM) Assessment Methodology, which is one component of the IAIS's Global Monitoring Exercise (GME). He reviewed the GME as a key element of the Holistic Framework adopted by the IAIS in November 2019 to support the IAIS mission of effective and globally consistent supervision in order to protect policyholders and contribute to global financial stability. He noted that the objective of the public consultation is to seek input on the review of the IIM Assessment Methodology for the next three-year cycle of application, and the triannual review of the IIM helps to ensure that the Holistic Framework for systemic risk in insurance remains up to date as risks and the sector continue to evolve. He said the NAIC's initial draft comments are based on an internal review of the IIM consultation document, and they were circulated in advance of the call, but no input was received from state insurance regulators or interested parties.

Ryan Workman (NAIC) gave an overview of the NAIC's comments on the public consultation and summarized the draft answers to a variety of the consultation questions. The NAIC comments address potential changes to the IIM scoring indicators, including refinements to Level 3 assets, cross-border reinsurance, the derivatives and the short-term funding indicators, and removal the financial guarantee indicator. Workman explained that the draft comments recommend that the insurer pool selection criteria contain language providing for an inflation adjustment of the dollar threshold on a periodic basis. He concluded by noting that the last comment recommends that the IAIS Global Insurance Market Report (GIMAR) should be more concise going forward.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) provided a review of comments to be submitted by the APCIA on the public consultation. He noted three areas of focus for the comments: 1) a misplaced focus on cross-border reinsurance that should be better directed at identifying concentration risk; 2) the abundance of liquidity risk measures that exist and how they should be limited in number to one or two; and 3) general comments on how the IAIS should reduce additional data requests to items that are not publicly available and are directly relevant to identifying systemic risk.

Commissioner Caride made a motion, seconded by Director Cameron, to approve the submission of the NAIC comments on the review of the IIM Assessment Methodology (Attachment One-A). The motion passed unanimously.

Having no further business, the International Insurance Relations (G) Committee adjourned.

G Cmte Minutes 020323

NAIC Comments Submitted Feb. 3, 2023

## IAIS public consultation on the review of the Individual Insurer Monitoring (IIM) Assessment Methodology

### Consultation Questions

#### 2.1 IIM scoring indicators

##### 2.1.2 *Enhancing the monitoring of level 3 assets*

###### Questions:

- Which (underlying) data rows would be necessary to monitor the different types of level 3 assets?
  - If possible, also provide the technical specifications for these rows
- Which (underlying) data rows would be necessary to monitor illiquid/difficult to value assets held at historical cost or valued using other non-fair value methods?
  - If possible, also provide the technical specifications for these rows
- Which other refinements could be made to the level 3 assets indicator?

###### Answer:

Refinement of Level 3 assets does not seem necessary because Level 3 assets have been readily publicly available (other otherwise has proxies). The NAIC suggests more time needs to be spent on data validation, rather than collecting more data, to be more efficient at analyzing firm and jurisdictional differences of Level 3 assets.

##### 2.1.3 *Enhancing the monitoring of (cross-border) reinsurance*

###### Questions:

- Which (underlying) data rows would be necessary to better capture (1) cross-border reinsurance exposures (ceded and assumed) and (2) the concentration risk of cross-border reinsurance in certain insurers or jurisdictions?
  - If possible, also provide the technical specifications for these rows
- Which potential reinsurance ancillary indicator could be developed?
  - If possible, also provide the data rows and technical specifications
- Which other refinements could be made to better capture reinsurance exposures under the intra-financial assets and liabilities indicators?
- If possible, also provide the technical specifications for these rows.

###### Answer:

The NAIC agrees with the proposed enhancements -- asking jurisdictions where premiums and risk is ceded could assist in better capturing concentration of exposures.

NAIC Comments Submitted Feb. 3, 2023

#### **2.1.4 Refining the derivatives indicator**

##### **Questions:**

- Which (underlying) data rows would be necessary to monitor the different types of derivatives?
  - If possible, also provide the technical specifications for these rows
- Which other variables could be looked at to monitor derivatives exposures and their potential 'outward' risk, in addition to gross notional amounts?
- What is your assessment of the difference in systemic risk between the risk from OTC derivatives that are centrally cleared vs derivatives that are bilaterally settled?
- Should the hedging leverage in derivatives and repo exposures be monitored?
  - If yes, how?

##### **Answer:**

The existing derivatives data seems adequate. With respect to other variables and hedging leverage, the impact of margin calls may be a useful additional indicator of risk. Centrally cleared derivatives are typically considered less risky than bilaterally settled.

#### **2.1.5 Refining the short-term funding indicator**

##### **Question:**

- Which (underlying) data rows would be necessary to monitor the potential outward risk of short-term funding?
  - If possible, also provide the technical specifications for these rows
- Which other refinements could be made to the short-term funding indicator?

##### **Answer:**

The NAIC agrees with the existing assessment methodology, so no changes are necessary.

#### **2.1.6 Removal of the financial guarantees indicator**

**Question:** Do you have any feedback on the removal of financial guarantees as an indicator?

##### **Answer:**

The NAIC is in favor of removing the financial guarantee indicator.

#### **2.1.7 Any other feedback on any of the indicators and the IIM data template**

##### **Question:**

- Do you have any other feedback on any of the indicators?
- What is your view of the overall granularity of the IIM data template (Annex 1)?

##### **Answer:**

No comments.

NAIC Comments Submitted Feb. 3, 2023

## 2.2 Indicator weighting

**Question:** Do you have any feedback on the updated indicator weighting?

**Answer:**

The NAIC agrees with the updated indicator weighting to reflect omission of the financial guarantee indicator.

## 2.3 Insurer Pool selection criteria

**Question:** Do you have any feedback on the Insurer Pool selection criteria?

**Answer:**

The NAIC recommends that the insurer pool selection criteria contain language providing for an inflation adjustment of the dollar threshold on a periodic basis.

## 2.4 Reporting to participating insurers and the public

### *2.4.1 Reporting to participating insurers: Participating Insurer Reports (PIRs)*

**Question:** Do you have any feedback on the Participating Insurer Reports?

**Answer:**

No comments.

### *2.4.2 Reporting to the public: Global Insurance Market Report (GIMAR)*

**Question:** Do you have any feedback on the Global Insurance Market Report (GIMAR)?

**Answer:**

The NAIC recommends that the GIMAR should be more concise.

Draft: 1/17/23

International Insurance Relations (G) Committee  
Virtual Meeting  
January 4, 2023

The International Insurance Relations (G) Committee met Jan. 4, 2023. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Andrew N. Mais represented by William Arfanis (CT); Doug Ommen (IA); Dana Popish Severinghaus represented by Susan Berry (IL); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox represented by Judy Weaver (MI); Marlene Caride (NJ); and Michael Wise (SC).

1. Discussed NAIC Comments on the IAIS Public Consultation on the Issue Paper on Insurance Sector Operational Resilience

Commissioner Anderson explained that the International Association of Insurance Supervisors' (IAIS's) public consultation on its Issue Paper on Insurance Sector Operational Resilience was a result of work done by the IAIS Operational Resilience Task Force. He noted that the issue paper: 1) identifies issues affecting operational resilience in the insurance sector, specifically those related to cyber resilience, third-party outsourcing, and business continuity management; and 2) provides examples of how supervisors are approaching these developments while considering lessons learned during the COVID-19 pandemic. He said the NAIC's initial draft comments on the issue paper that were circulated in advance of the call for review were drafted upon internal review by NAIC staff and members of the Cybersecurity (H) Working Group.

Ryan Workman (NAIC) gave an overview of the NAIC's comments on the public consultation, noting that many were editorial in nature, and he provided more of an explanation of the comments on areas for further clarification and suggestions for additional context to strengthen certain concepts that were being discussed. He summarized the draft answers to three consultation questions, which touched on the priorities of observations set out in the paper, the potential future focus of the IAIS, and the value of cross-border information sharing.

Commissioner Donelon made a motion, seconded by Acting Director Wise, to approve the submission of the NAIC comments on the Issue Paper on Insurance Sector Operational Resilience consultation document (Attachment Two-A). The motion passed unanimously.

Having no further business, the International Insurance Relations (G) Committee adjourned.

**NAIC Comments Submitted Jan. 13, 2023**

# **Questions for Consultation on Issues Paper on Insurance Sector Operational Resilience**

Thank you for your interest in the public consultation on the Issues Paper on Insurance Sector Operational Resilience. The Consultation Tool is available on the IAIS website.

**Please do not submit this document to the IAIS. All responses to the Consultation Document must be made via the [Consultation Tool](#) to enable those responses to be considered.**

NAIC Comments Submitted Jan. 13, 2023

## Consultation questions

1	<p>General comments on the Issues Paper</p> <p>The paper introduces new terms that may not be familiar to some readers. Suggest adding a glossary to the beginning of the paper.</p> <p>“Business Continuity Management” (BCM) is a concept mentioned throughout the paper and in some places, “Business Continuity Planning” (BCP) is used as an interchangeable term. Suggest defining these two terms in a glossary and also clarifying in the paper (see comments for paragraphs 35 and 80) the difference between the two. Presumably BCM encompasses BCP.</p> <p>There are numerous inconsistencies in the use of the Oxford comma (a.k.a. serial comma) throughout the document. For example, paragraphs 25 and 29 omit it, while paragraphs 2 and 24 employ it.</p>
2	General comments on Section 1 Introduction
3	General comments on Section 1.1 Objectives and Scope
4	<p>Comment on Paragraph 1</p> <p>In the second bullet, add “IT” before “Third-party outsourcing” as this is way the topic is framed throughout the paper and especially in the heading for Section 3.4</p>
5	Comment on Paragraph 2
6	<p>Comment on Paragraph 3</p> <p>Suggest the following edit to this paragraph. Based on the preceding text, the area of expertise of the stakeholders is implied.</p> <p>The information in this paper is informed by a review of the IAIS Insurance Core Principles (ICPs), a stocktake of existing publications by Standard Setting Bodies (SSBs) with relevance to operational resilience, direct engagement – including roundtables – held with <b>operational resilience</b> experts external to the IAIS membership, and information shared on supervisory practices among insurance supervisors.</p>
7	General comments on Section 1.2 Relevance of operational resilience to the insurance sector
8	<p>Comment on Paragraph 4</p> <p>Suggest the following edit to the second sentence to improve flow:</p> <p><del>Thus,</del> The concept of operational resilience is not new, though recognition of the importance of adapting supervisory regimes to account for the growing reliance by insurers on digital systems is more recent.</p>

## NAIC Comments Submitted Jan. 13, 2023

9	<p>Comment on Paragraph 5</p> <p>It might strengthen this paragraph to have similar statistics on cyber-attacks between 2019 and 2020, if available, to give some pre-pandemic context. Also, this paragraph is a bit disjointed; there is a number in February and a number in late April, but then goes to the percent increase in May and June compared to March and April. Since the number for March isn't given anywhere, it is hard to know what kind of increase it is over March.</p> <p>For consistency with the use of percent signs elsewhere within the document, suggest replacing “per cent” with a percent sign.</p> <p>Replace “cyber attacks” with “cyber-attacks” for consistency with the other eight occurrences of this word throughout the document.</p>
10	Comment on Paragraph 6
11	Comment on Paragraph 7
12	Comment on Paragraph 8
13	Comment on Paragraph 9
14	Comment on Paragraph 10
15	Comment on Paragraph 11
16	General comments on Section 1.3 Issues Paper structure
17	Comment on Paragraph 12
18	Comment on Paragraph 13
19	<p>Comment on Paragraph 14</p> <p>Replace both occurrences of “cyber attacks” with “cyber-attacks” for consistency with the other eight occurrences of this word throughout the document.</p>
20	<p>Comment on Paragraph 15</p> <p>Suggest the following edit to the first sentence to improve flow:</p> <p>The risks posed <del>to insurers</del> by a third-party outsourcing partner for IT-related functions are similar across many industries, including the insurance industry.</p> <p>In this paragraph, consider adding a bit more context around “concentration risk” as the concept is being introduced here.</p>
21	<p>Comment on Paragraph 16</p> <p>Suggest the following edit to the last sentence; removing “business continuity” eliminates a redundancy and also broadens this statement a bit.</p>

## NAIC Comments Submitted Jan. 13, 2023

	<p>However, a critical piece of moving to hybrid and remote work environments is understanding and proactively managing the <del>business continuity</del> risks that arise from an increased attack surface, and reliance on technology and outsourcing of critical IT services.</p>
22	Comment on Paragraph 17
23	General comments on Section 2 Applicability of ICPs to operational resilience
24	Comment on Paragraph 18
25	Comment on Paragraph 19
26	<p>Comment on Paragraph 20</p> <p>Suggest the following edit to the second sentence; modifier not needed.</p> <p>“All of which promote <del>sound</del> operational risk management more generally, while respecting issues of proportionality.”</p>
27	<p>Comment on Paragraph 21</p> <p>The ICPs typically use “sound” in referring to an insurer’s management, governance, etc., but not when describing supervision.</p> <p>The ICPs identified as supporting the <del>sound</del> supervision and <del>sound</del> management of operational resilience in the insurance sector include:</p>
28	<p>Comment on Paragraph 22</p> <p>Similar to paragraph 20, the modifier is not really needed here.</p> <p>The ICPs have clear interactions with operational resilience and support the <del>sound</del> management of an insurer’s operational risks.</p>
29	Comment on Paragraph 23
30	<p>Comment on Paragraph 24</p> <p>Similar to paragraph 21, delete the modifier in this context.</p> <p>The review of ICPs also revealed a number of examples of areas where further discussions or considerations for developing supporting materials could advance the <del>sound</del>-supervision of cyber resilience, IT third-party outsourcing, and BCM as critical elements of operational risk management (which are considered among those elements outlined in section 4).</p>
31	General comments on Section 3 Key issues and supervisory approaches
32	Comment on Paragraph 25

## NAIC Comments Submitted Jan. 13, 2023

33	Comment on Paragraph 26
34	<p>Comment on Paragraph 27</p> <p>Suggest the following edit to the last sentence to improve clarity:</p> <p>This is particularly important for insurers, in respect of any confidential or personal <b>customer</b> data that is shared with third-party service providers.</p> <p>Inclusion of the word “legacy” in the second sentence implies that all on-premises IT infrastructure is ipso facto obsolete, unable to be updated, nonconforming to security standards, inherently vulnerable, unsupported, unscalable, etc. This simply should not be presumed. The use of advancing technologies could provide cyber security benefit as compared to in-house technology infrastructure and systems, whether legacy or not.</p> <p>The use of advancing technologies, such as the cloud, could provide efficiencies and improvements in cyber security as compared to <del>in-house legacy on-premises</del> technology infrastructure and systems.</p>
35	Comment on Paragraph 28
36	<p>Comment on Paragraph 29</p> <p>See general comments above and for paragraph 80 – BCP is introduced here without explaining its relationship to BCM. It is also used somewhat interchangeably with BCM. Recommend adding a sentence clarifying the difference between BCM and BCP in this paragraph.</p>
37	General comments on Section 3.1 Governance and Board accountability
38	Comment on Paragraph 30
39	Comment on Paragraph 31
40	<p>Comment on Paragraph 32</p> <p>The document mentions sound operational resilience, sound practices, sound operational risk management, sound governance, sound management, sound supervision etc., but the word appears misplaced in the following sentence. It should be moved as follows.</p> <p>Recognising that operational disruptions can have widespread impacts across an organisation, the provision of appropriate training across relevant groups within an organisation could facilitate the <del>sound</del> implementation of <del>an a sound</del> operational resilience framework.</p>
41	<p>Comment on Paragraph 33</p> <p>Suggest the following edit to the first sentence to eliminate redundancy:</p>

NAIC Comments Submitted Jan. 13, 2023

	The absence of a framework for identifying – and analysing the impact of – severe but plausible short, medium and long-term risks <del>to operational resilience</del> can limit the chances of successfully enhancing the insurer’s overall <del>operational</del> resilience.
42	Comment on Paragraph 34
43	General Comments on Section 3.1.1 Lessons learnt from the pandemic
44	Comment on Paragraph 35
45	Comment on Paragraph 36
46	General comments on 3.1.2 Supervisory approaches
47	<p>Comment on Paragraph 37</p> <p>Replace “oversight over” with “oversight of” in the first sentence to eliminate the nearly redundant alliteration.</p> <p>Many supervisory authorities currently seek assurance that insurers have sound governance frameworks and adequate Board and Senior Management oversight <del>over</del> of resilience measures, as well as strategies to mitigate risks associated with operational disruption.</p> <p>Additionally, just having and documenting processes isn’t enough, so recommend adding a bullet regarding the importance of regularly reviewing/updating processes.</p>
48	<p>General Comments on Section 3.2 Information collection and sharing among supervisors, public/private collaboration</p> <p>Recommend shortening this section name for clarity and consistency with other section titles:</p> <p><b>3.2 Information collection and sharing <del>among supervisors, public/private collaboration</del></b></p>
49	Comment on Paragraph 38
50	<p>Comment on Paragraph 39</p> <p>Regarding supervisor and insurer engagement, it seems that in most cases the appropriate engagement is between the supervisor and insurer management (not the board), though the board of course should have a clear understanding of the insurer’s operational resilience framework (this is mentioned elsewhere in the paper).</p> <p>To gather this information, some supervisors proactively engage with an entity’s <del>Board and</del> Senior Management to understand the effectiveness of an entity’s operational resilience framework.</p>

## NAIC Comments Submitted Jan. 13, 2023

51	<p>Comment on Paragraph 40</p> <p>Last sentence, beginning and end quotes should be consistent:</p> <p>As the International Monetary Fund (IMF) has noted “[a]ttackers show a degree of agility in cooperation across borders that authorities find difficult to match.”<sup>11</sup></p>
52	General comment on Section 3.2.1 Lessons learnt from the pandemic
53	Comment on Paragraph 41
54	General comments on Section 3.2.2 Supervisory approaches
55	Comment on Paragraph 42
56	Comment on Paragraph 43
57	<p>Comment on Paragraph 44</p> <p>The seventh bullet point references operational <i>resiliency</i>, rather than operational <i>resilience</i>, which appears 79 times throughout the document.</p> <p>Reports on training delivered in relation to operational <del>resiliency</del> <i>resilience</i> best practices, and in particular on expectations, and roles and responsibilities during periods of sub-optimal functioning;</p>
58	<p>Comment on Paragraph 45</p> <p>Consider adding “consumer” to the second bullet point as follows:</p> <p>Concerns on data protection and <del>consumer</del> privacy laws that limit or prevent the sharing of information beyond an entity or jurisdiction</p> <p>Further, consider adding an additional bullet as an additional barrier:</p> <ul style="list-style-type: none"> <li><del>Hesitancy of insurer to share information with supervisor because of concerns the information could be used against them, could lead to additional scrutiny of their controls, or that doing so could cause legal risks;</del></li> </ul>
59	General Comments on Section 3.3 Cyber resilience
60	<p>Comment on Paragraph 46</p> <p>We may be further away from the pandemic once this paper is published, so recommend deleting “has” in the first sentence. Also in the first sentence, there should be a comma after “technologies” to separate the two independent clauses.</p> <p>The insurance sector is heavily dependent on the use of digital technologies, and this reliance <del>has</del> only accelerated during the pandemic as entities transitioned to remote working.</p>

Public

Public Consultation on Issues Paper on Insurance Sector Operational Resilience

13 October 2022 – 6 January 2023

NAIC Comments Submitted Jan. 13, 2023

61	Comment on Paragraph 47
62	Comment on Paragraph 48
63	Comment on Paragraph 49
64	Comment on Paragraph 50
65	Comment on Paragraph 51
66	Comment on Paragraph 52
67	Comment on Paragraph 53
68	<p>Comment on Paragraph 54</p> <p>For this paragraph and heading, it might be more appropriate to refer to “consistent approach” rather than “standardized metrics” to be less prescriptive. The use of “consistent approach” is also more outcomes focused.</p> <p><b>Lack of <del>standardised metries</del> consistent approach</b></p> <p>Having a consistent/<del>standardised</del> approach to assess insurers’ cyber resilience can be helpful especially when insurers are engaging third-party service providers that operate cross jurisdiction (eg cloud).</p>
69	<p>Comment on Paragraph 55</p> <p>Punctuation is inconsistent. An en dash follows Availability in the first bullet point, while a simple hyphen follows RTO and RPO in the second and third bullet points. All should be en dash characters to maintain consistency with the remainder of the document.</p> <p>Recovery Time Objective (RTO) – defined by the entity...</p> <p>Recovery Point Objective (RPO) – defined by the entity...</p>
70	Comment on Paragraph 56
71	Comment on Paragraph 57
72	<p>Comment on Paragraph 58</p> <p>Recommend the following edit to avoid using duplicating word choice:</p> <p>One consequence of skills shortages is that the advancement of supervisory frameworks over cyber resilience may lag behind the <del>advancement</del> growing sophistication of cyber-attacks.</p>
73	General Comments on Section 3.3.1 Lessons learnt from the pandemic

NAIC Comments Submitted Jan. 13, 2023

74	Comment on Paragraph 59
75	General Comments on Section 3.3.2 Supervisory approaches
76	<p>Comment on Paragraph 60</p> <p>First sentence of the “Tabletop Exercises” example:</p> <p>Working with US state and federal supervisors, law enforcement agencies, and other officials, under the auspices of the Treasury Department’s “Hamilton” programme, the National Association of Insurance Commissioners (NAIC) facilitates tabletop exercises with insurers and supervisors to explore cyber incident response and recovery<del>back</del>.</p> <p>For consistency of the British English spelling used throughout the document, consider changing “programs” to “programmes” in the second sentence under Tabletop Exercises.</p> <p>This aims to enhance cyber response <del>programs</del> programmes of insurers and supervisors by discussing key methods supporting pre-emptive and/or reactive responses to potential threats.</p>
77	<p>Comment on Paragraph 61</p> <p>The first bullet point requires two corrections, as follows:</p> <p>Self-assessment Questionnaires – involves <del>entity’s entities</del> performing self-assessments of the quality of their cyber resilience framework, the responses to which provide a snapshot of the <del>entity’s entities’</del> cyber resilience capabilities and vulnerabilities.</p> <p>Suggest the Vulnerability Assessments bullet point be expanded to indicate that these tools are automated scans that check for exploitable known vulnerabilities and culminate in a report on risk exposure.</p> <p>Suggest changing “Cyber incident reporting” to “Cyber Incident Reporting” for case consistency with other titles throughout the document.</p> <p>Suggest changing “Scenario-Based Testing” to “Scenario-based Testing”, for case consistency with other hyphenated titles throughout the document.</p>
78	<p>Comment on Section 3.4 IT third-party outsourcing</p> <p>Suggest additional clarification in this section regarding what is considered a critical and important IT service. As mentioned in paragraph 68, third-party provider risk goes beyond just those that provide IT services.</p>
79	<p>Comment on Paragraph 62</p> <p>Comment on Paragraph 62</p>

NAIC Comments Submitted Jan. 13, 2023

	<p>The last sentence ends awkwardly with two terms that mean essentially the same thing. Recommend striking some text to remove the redundancy. Additionally, “third party” should be hyphenated because it is used as an adjective rather than a noun.</p> <p>However, an area where both supervisory requirements and financial institutions' risk management processes remain less advanced is the identification and management of concentration risks associated with the provision of critical IT services to firms by third-party <del>and-outsourced</del> service providers.</p>
80	Comment on Paragraph 63
81	Comment on Paragraph 64
82	Comment on Paragraph 65
83	Comment on Paragraph 66
84	Comment on Paragraph 67
85	<p>Comment on Paragraph 68</p> <p>Suggest the following edits:</p> <p>Other examples of third-party services often used by insurers that may present concentration risks include processes for annuities, payroll <del>and benefits</del> administration, <del>investment management</del>, claims processing and resolving customer queries.</p>
86	Comment on Section 3.4.1 Lessons learned from the pandemic
87	Comment on Paragraph 69
88	Comment on Paragraph 70
89	<p>Comment on Paragraph 71</p> <p>The contractual relationship is not at issue, so suggest identifying the third parties as simply <i>providers</i>:</p> <p>This was associated with entities having in place numerous arrangements in the same geographic area, resulting in a dependence on one or a few <del>sub-contractors providers</del> in that area for the delivery of services.</p>
90	Comment on Section 3.4.2 Supervisory approaches
91	Comment on Paragraph 72
92	Comment on Paragraph 73
93	Comment on Paragraph 74
94	Comment on Paragraph 75
95	Comment on Paragraph 76

## NAIC Comments Submitted Jan. 13, 2023

96	Comment on Paragraph 77
97	General Comments on Section 3.5 Business continuity management
98	<p>Comment on Paragraph 78</p> <p>Suggest using a different word for the following sentence, as to not limit it to only speed:</p> <p>An operational disruption, <del>slowdown</del> degradation or interruption in the activities of an insurer or any of its service providers could jeopardise its ability to meet its commitments to its insureds and other partners.</p>
99	Comment on Paragraph 79
100	<p>Comment on Paragraph 80</p> <p>Second sentence, similar to the first comments and comments for paragraph 35, recommend adding some additional context around “BCP” or at least referencing an earlier explanation.</p>
101	Comment on Paragraph 81
102	<p>Comment on Paragraph 82</p> <p>Second sentence, since the IAIS may follow up on some of these considerations, suggest noting that here:</p> <p>The following aspects of BCM are identified as challenges that could benefit from further analysis by the IAIS and/or cooperation amongst supervisory authorities:</p>
103	Comment on Paragraph 83
104	<p>Comment on Paragraph 84</p> <p>Suggest adding the parenthetical reference “(BIA)” following “Business Impact Analysis.”</p> <p>Also, suggest the following addition to include an example of another area that could be contemplated in a BCP.</p> <p>For example, the need to consider availability in BCPs could be extended to consider the consequences of loss of confidentiality and integrity of information for important business services when business impact analysis (BIA) and risk assessment are performed (information security / cyber preparedness could be integrated into broader BCP and enterprise risk management [ERM]), or how the insurer would handle the loss of a significant number of employees.</p>
105	Comment on Paragraph 85

NAIC Comments Submitted Jan. 13, 2023

	<p>If the BIA parenthetical reference is added to paragraph 84, then suggest changing the last sentence accordingly. Additionally, the last sentence of the paragraph should be singular.</p> <p>Continuity assumptions that proved inadequate during the pandemic have led to a review of the criticality of some existing processes and the adoption of different time frames (eg immediate, short, medium and long term) in many operational continuity strategies, depending on the results of their <del>business impact analysis</del> BIA and the needs and resources of each insurers.</p>
106	<p>Comment on Paragraph 86</p> <p>First and second sentences, recommend the following edits. We can already observe that remote work is more permanent. Also, it should be clarified that any additional expenses for remote work are likely attributed to IT security, as remote work in general is often cheaper for organizations.</p> <p>Although hybrid work arrangements <del>might have</del> become more permanent features, in practice remote working policies may vary significantly. Some institutions may consider arrangements that limit the amount of time staff can work from home to avoid additional expenses on IT security.</p>
107	Comment on Paragraph 87
108	General Comments on Section 3.5.1 Lessons learnt from the pandemic
109	<p>Comment on Paragraph 88</p> <p>Recommend replacing “cyberattacks” with “cyber-attacks” in the last bullet point for consistency with the other eight occurrences of this word throughout the document.</p> <p>It was often seen that third parties had the capability of offering technology solutions that are more secure, resilient, and flexible than financial institutions’ own existing technology solutions, which sometimes rely on legacy systems.</p> <p>The third bullet point is cumbersome but can possibly be repaired by striking one word.</p> <p>Growing customer expectations in relation to the time to recovery and level of recovery, and in terms of effective communication from insurers – ie when a disruption occurs, progress in recovering, <del>and</del> mitigation measures to ensure they can still get serviced, and notification of when services are restored;</p>
110	Comment on Paragraph 89
111	General Comments on Section 3.5.2 Supervisory approaches
112	Comment on Paragraph 90
113	General Comments on Section 4 Summary of observations and potential future areas of IAIS focus

NAIC Comments Submitted Jan. 13, 2023

114	Comment on Paragraph 91
115	Comment on Paragraph 92
116	Comment on Paragraph 93
117	Comment on Paragraph 94
118	Comment on Paragraph 95
119	<p>Comment on Paragraph 96</p> <p>Revision to the first sentence to address a typo:</p> <p>Based on the observations outlined in section 3.4 4, areas that may benefit from further consideration include:</p> <p>In the fourth bullet point, the last sentence identifies small and medium-sized entities but neither qualifies nor quantifies those terms. Accordingly, recommend modifying as follows to denote all but the largest insurers:</p> <p>However, it is recognised that these are complex and costly tools, in particular for <del>small and medium-sized</del> smaller entities.</p>
120	Comment on Paragraph 97
121	<p>Comment on Paragraph 98</p> <p>First bullet, suggest edit to reflect that the sector is already integrating BCM into other risk management functions:</p> <p>How the sector is approaching evolutions in BCM best practices, in particular in relation to the need to <b>continue</b> to integrate BCM with other relevant risk management functions to remove silos and ensure that BCM frameworks consider the implications of disruptions stemming from cyber and IT third-party outsourcing risks;</p>
122	<p>Consultation Question 1: Do you have views on the relative priority of the observations set out in section 4? Please indicate your preferred prioritisation and any relevant explanations.</p> <p>In our view, cyber incident reporting and concentration risk (as outlined under “IT third-party outsourcing) are key areas that could benefit from additional IAIS discussion. These are areas require supervisory coordination on jurisdictional and global levels and also have implications beyond the insurance sector.</p>
123	<p>Consultation question 2: Are there additional observations for potential future IAIS focus that you view as important to address with respect to insurance sector operational resilience, and which have not been identified in this Issues Paper?</p> <p>If the third-party provider management discussed in this Issues Paper is strictly related to IT services, additional discussion on third-party vendor management as a whole could be useful. If, for instance, a company’s producer suffers a cyber-attack or data</p>

Public

Public Consultation on Issues Paper on Insurance Sector Operational Resilience

13 October 2022 – 6 January 2023

NAIC Comments Submitted Jan. 13, 2023

	<p>breach or isn't able to resume business in a timely manner after a disaster, that impacts the company's operations, as well. Also, as touched on in Annex 1, there is very little consideration that has been given to fourth-party risks to date.</p> <p>Another item that was touched on briefly but wasn't mentioned as a potential future area of focus is the need to be able to attract and retain talent with expertise in cybersecurity. Training existing staff is a good response, but there has to be existing staff that is interested and there has to be someone or some way to train them. After the training, there still needs to be a way to retain them. Cybersecurity experts are at a premium and although large insurers have the money to pay them, small and mid-sized companies and regulatory agencies don't have the budget.</p>
124	<p>Consultation Question 3: Do you find value in the IAIS facilitating cross-border information sharing to collect information to facilitate a dialogue on operational resilience exposures and best practices? Would you be willing to participate?</p> <p>We think there is value in this assuming it is folded into an existing IAIS forum, such as the revamped Supervisory Forum. It might also be required for such information sharing that participants are signatories to the MMoU. Depending on the forum, we might be interested in participating.</p>

Draft: 4/6/23

Innovation, Cybersecurity, and Technology (H) Committee  
Louisville, KY  
March 22, 2023

The Innovation, Cybersecurity, and Technology (H) Committee met in Louisville, KY, March 22, 2023. The following Committee members participated: Kathleen A. Birrane, Chair (MD); Michael Conway, Co-Vice Chair, and Jason Lapham (CO); Doug Ommen, Co-Vice Chair (IA); John F. King (GA); Gordon I. Ito and Lance Hirano (HI); Dana Popish Severinghaus (IL); Chlora Lindley-Myers represented by Cynthia Amann (MO); Troy Downing (MT); Jon Godfread and Chris Aufenthie (ND); Adrienne A. Harris represented by John Finston (NY); Judith L. French (OH); Carter Lawrence (TN); Kevin Gaffney (VT); and Mike Kreidler and Molly Nollette (WA). Also participating were: Lori K. Wing-Heier (AK); George Bradner (CT); Weston Trexler (ID); Amy L. Beard (IN); Sandra Darby (ME); Grace Arnold (MN); Angela Hatchell (NC); Jennifer A. Catechis (NM); Elizabeth Kelleher Dwyer (RI); and Katie Johnson (VA).

1. Adopted its 2022 Fall National Meeting Minutes

Director French made a motion, seconded by Commissioner Godfread, to adopt the Committee's Dec. 13, 2022, minutes (*see NAIC Proceedings – Fall 2022, Innovation, Cybersecurity, and Technology (H) Committee*). The motion passed unanimously.

2. Adopted the Reports of its Working Groups

A. Big Data and Artificial Intelligence (H) Working Group

Superintendent Dwyer said the Big Data and Artificial Intelligence (H) Working Group met March 22 at the Spring National Meeting.

Related to the Working Group's survey efforts, Superintendent Dwyer reported that the home insurance survey is complete, with the Working Group now shifting to the analysis phase of the project. A public report is to be provided to the public at the Summer National Meeting.

Superintendent Dwyer reminded attendees that the private passenger auto (PPA) insurance survey report is already available on the Working Group's website.

Lastly, related to the survey work, the artificial intelligence (AI)/machine learning (ML) life insurance survey is scheduled to be distributed by the end of March. The requesting states intend to issue a public report by the Fall National Meeting.

The Working Group's third-party vendor workstream has three deliverables this year.

First, using the results of the survey work, the workstream will develop a library of third-party vendors operating in the PPA market, home market, and life market. The library will be completed for both the PPA and home markets by the Summer National Meeting. The library for the life market will be delivered by the Fall National Meeting. The second deliverable of this workstream is to develop a regulator-only tool for states to share information about third-party vendors' activities, similar to what the NAIC has developed for states to share information about the review of property/casualty (P/C) rating models. This tool will be available by the end of April. The final deliverable is a set of model and data regulatory questions, which state insurance regulators may use to ask about models and data used by insurance companies. A revised draft of the questions should be circulated by the end of April. Those in the industry have submitted comments raising the following issues: 1) the

document should be principle-based; 2) the document should be more limited in scope to encourage state insurance regulators to focus on higher-risk AI models; 3) questions should be prioritized to recognize the importance of model governance; 4) there are questions about assumptions of law that are not based in law; 5) there are concerns about redundancy with financial examinations and the potential burdens on smaller companies and smaller AI providers; and 6) the document needs to clarify the intended use of the questions.

The third workstream under the Working Group will evaluate tools and resources for monitoring the industry's use of data and AI/ML. This workstream will create a library of tools, metrics, and resources available to the insurance industry for managing AI/ML activity by the Summer National Meeting. The workstream may then pursue a more formal assessment of the strengths and weaknesses of these tools.

The final Working Group workstream, which is addressing the development of a regulatory framework for AI/ML, has not been active due to work on the AI Interpretive Bulletin, which will address regulatory expectations for the use of AI by insurers, as well as regulatory oversight and examination considerations. Related to the final workstream, Commissioner Beard said that the state insurance regulators have started leaning toward the idea of an independent data set, which could help in testing for bias. The work would progress with the assistance of Dorothy L. Andrews (Center for Insurance Policy and Research—CIPR) and the CIPR. Birny Birnbaum (Center for Economic Justice—CEJ) asked who would be responsible for the development of an independent data set and how the project came about. Commissioner Birrane said that the project cannot be elaborated on because, at this point, state insurance regulators have just started to brainstorm the possibilities of the project.

#### B. Cybersecurity (H) Working Group

Amann said the Cybersecurity (H) Working Group's most significant project is the planned cybersecurity response plan. The Working Group has volunteers and has drafted an outline document that the volunteers will now meet to expand on. The response plan will serve as an aid to states responding to cybersecurity events occurring at regulated entities. Additionally, the Working Group, as part of its efforts to monitor federal cybersecurity developments, will be having discussions about cloud service providers that insurers are using, whether state insurance regulators should have that data, and how they would go about getting that data. Third, the Working Group will send a referral to the Information Technology (IT) Examination (E) Working Group, asking it to consider updating its guidance based on recent releases by the Cybersecurity and Infrastructure Security Agency (CISA). The Cybersecurity (H) Working Group will also continue to support NAIC training initiatives. Lastly, the Working Group will also be working with NAIC staff to receive presentations from cyber risk analytic vendors so that state insurance regulators can consider if the tools would be useful to them as regulatory tools.

#### C. E-Commerce (H) Working Group

Director French said that the E-Commerce (H) Working Group has now exposed its state laws surveys/framework with comments due by March 23. The framework was developed based on survey work completed in 2022, which included questions on state laws, questions on actions taken in the wake of the COVID-19 pandemic, and a business impact survey.

Following the receipt of the comments, the Working Group plans to meet to further discuss the framework comments received and to consider the next steps required to meet the demands of the Working Group's 2023 charges.

#### D. Innovation in Technology and Regulation (H) Working Group

Commissioner Conway said the Innovation in Technology and Regulation (H) Working Group plans to meet in April to develop a supotech regulator forum that would allow state insurance regulators to share insights on current innovations and technologies being explored among the regulatory community. The regulators will also look at developing an insurtech forum that would allow regulators to have confidential one-on-one discussions with insurers and third parties about innovation and technologies that insurers and third parties are using, as well as the regulations and barriers that may exist. The Working Group will also continue to monitor the developments of the Innovation, Cybersecurity, and Technology (ICT) Hub to ensure insights shared among the state insurance regulator community can be widely and easily distributed. The Working Group will continue to monitor industry trends, including consideration of training for regulators, which may lead to referrals to other working groups or committees.

#### E. Privacy Protections (H) Working Group

Johnson said that on Feb. 1, the Privacy Protections (H) Working Group exposed a draft of the new *Insurance Consumer Privacy Protection Model Law (#674)* for a 60-day public comment period ending April 3. In the interim, the Working Group has met in regulator-to-regulator sessions on March 15 and Jan. 23. The Working Group met directly with companies on Feb. 16, March 1, 2, March 9, March 14, and March 19, with additional meetings scheduled for April 5, April 6, April 11, April 12, and April 13. The Working Group is also planning open meetings following the comment period beginning April 18 and an interim in-person meeting in Kansas City, MO, in June. The Working Group also met March 21 during the Spring National Meeting, during which it adopted its 2022 Fall National Meeting minutes, heard updates from Jennifer Neuerburg (NAIC) on state privacy legislation, heard updates from Shana Oppenheim (NAIC) on federal privacy legislation, and adopted its 2023 work plan. Commissioner Birrane commended the Working Group for its process thus far, noting that it has been rigorous and transparent.

Commissioner Godfreed made a motion, seconded by Deputy Superintendent Finston, to adopt the reports of the Big Data and Artificial Intelligence (H) Working Group (Attachment One), the Cybersecurity (H) Working Group (Attachment Two), the E-Commerce (H) Working Group, the Innovation in Technology and Regulation (H) Working Group, and the Privacy Protections (H) Working Group (Attachment Three). The motion passed unanimously.

#### 3. Received an Update from the Collaboration Forum on Algorithmic Bias on the Development of a Model Bulletin Providing Regulatory Guidance Respecting the Use of Big Data/AI-Driven Decisional Systems by Insurers

Commissioner Birrane started the discussion by revisiting past discussions on the bulletin at the 2022 Fall National Meeting. Commissioner Birrane stated that bulletin work is a member-driven activity with a consensus that the framework developed should be principles-based and not prescriptive. The membership also has a consensus that the framework should focus on governance requirements and the establishment of protocols that rely on external and objective standards. The membership has also agreed that validations should be a part of the requirements but with recognition of the practical difficulties and limitations associated with testing. With respect to third parties, the preference among the membership was that responsibility be placed on licensees to conduct appropriate diligence with respect to third-party data and model vendors and to hold licensees responsible as opposed to attempting to directly regulate unlicensed third parties at this time.

Since the 2022 Fall National Meeting, state insurance regulators have started drafting the four sections of the bulletin among drafting groups. There is an introductory section with the leaders of that group: Director Popish Severinghaus, Commissioner Andrew R. Stolfi (OR), and Commissioner Nathan Houdek (WI). There is also a definitional section, of which the leaders are Commissioner Conway and Commissioner Gaffney. There is a section

focused on regulatory expectations, which is the largest section of the bulletin. This section's leaders are Commissioner Beard, Commissioner Birrane, Superintendent Dwyer, and Deputy Superintendent Finston. The final section of the bulletin is focused on regulatory oversight and examination based on the articulated standards. The leaders of that section are Commissioner Arnold, Commissioner Trinidad Navarro (DE), Commissioner Ommen, Commissioner Jon Pike (UT), and Director Wing-Heier.

Commissioner Birrane said she hopes to have a public exposure draft by the Summer National Meeting.

#### 4. Heard a Report on the Colorado Proposed Algorithm and Predictive Model Governance Regulation

Commissioner Conway introduced Lapham, who provided an update on the Colorado proposed regulation. Lapham stated that the regulation under consideration is based on Senate Bill (S.B.) 21-169, which is designed to protect Colorado insurance consumers from insurance practices that result in unfair discrimination due to the use of predictive model AI tools. It applies broadly to insurers that use external consumer data and information sources (ECDIS), as well as the algorithms and predictive models that use ECDIS. The law requires that the Colorado Division of Insurance engages in stakeholder outreach for each type of insurance, with the Division initiating this process in February 2022. The Division has initially focused on life insurance underwriting and has held six stakeholder meetings thus far. Additionally, the Division completed a survey of 10 life insurers. In the process of stakeholder outreach, the Division has discovered that there is a wide range of insurer preparedness related to governance and risk management around AI tools. The Division bifurcated its approach to addressing the required risk management framework and testing components contemplated by S.B. 21-169 through two regulations.

The draft risk management framework regulation has three sections. The sections address governance framework expectations, documentation requirements, and a reporting requirement. The Division is in the process of digesting and synthesizing comments received and will adjust the regulations as appropriate with the intention of exposing a revised draft for additional comment. Commissioner Conway added that there has been an inaccurate view that once the Division notices the regulation, the discussion or opportunity for input is over. Commissioner Conway said this is not true. The Division continues to look forward to input regarding S.B. 21-169.

Birnbaum asked how many insurers will be submitting the annual reporting on their use of ECDIS, to which Lapham responded he does not have an answer apart from saying that as many carriers as are subject to the regulation. Commissioner Conway noted that the Division has not done a comprehensive survey of the companies to which the regulation will apply, so the Division is currently unable to provide an estimate apart from anticipating there will be a robust number of companies submitting the required information. Birnbaum followed up by saying that the reason for his inquiry is that, on the resources, the Division will need to review the insurance company reporting in a timely manner. Commissioner Conway said that is an issue that industry members have raised as well, and it will be one the Division is going to be cognizant of, as there is no point in requiring the testing or getting the required report if the Division cannot use it in a meaningful way.

#### 5. Heard a Presentation on the Use of Block Chain Methodology for Data Calls

Commissioner Godfreed led a presentation on a North Dakota project to use blockchain technology for data calls. The reason for the data call initiative is to address several issues with data. The data available is often delayed, but the legislature meets on a biannual basis, with the data provided often being out of date. However, the North Dakota Insurance Department wants all policy decisions to be data-driven, noting that bad data can lead to bad public policy. Additionally, the data often available is usually higher in level than is needed to address the questions posed. The data-gathering process is often delayed as the Department tries to refine the questions being asked, which can lead to legislation not advancing or legislation advancing without the data needed. Data calls are often for a single point in time and are not easy to repeat. Lastly, Commissioner Godfreed noted that the data does not provide meaningful value to companies.

To address this problem, the Department undertook a pilot with one goal of the data call being to help answer the question regarding uninsured motorists, which is a frequent issue in every session of the legislature. The second goal was to test the data-gathering process/technology. Some industry estimates suggest the figure is as high as 20%, while others say it is as high as 7%, and the data available right now is likely 24 months old.

The Department gathered data by asking the North Dakota Department of Transportation (DOT) to provide the registers of vehicles in the state and relied on the 10 personal auto insurance companies with the most business in the state to provide data on the vehicles they insure in North Dakota.

Commissioner Godfread then described the mechanics of the technology, which, at a high level, can be explained as a highly secure, highly complex spreadsheet of information. The Department posted its list of vehicles registered in North Dakota. Carriers input their insured vehicle identification numbers (VINs) into a node created for each individual company. Information was then compared. No information ever left the nodes and thus stayed in the custody, control, and care of each company the entire time. This is different from a traditional data call, in which the data would have been copied and given to a third party or regulator, which raises a security issue consideration.

The Department ran into resistance, which required an extensive explanation of the technology and safeguards in place. However, once data was received, the Department found that among the 10 participating carriers, 46% of vehicles registered in North Dakota can be as insured in the top 10 auto carriers. The figure appears low, but Commissioner Godfread reminded the Committee that the data call only included 10 carriers and only focused on personal auto and that some companies provided information on recreational and farm auto VINs. Other vehicle types (e.g., motorcycles, classics, and recreational vehicles [RVs]) may also not be accounted for.

What the Department also found was that this data call was easy to repeat, with the first call going out on Feb. 10 and a repeat data call going out on March 10. The data call also allowed the Department to provide information back to carriers—for instance, that 21% of the VINs insured were not registered in the state. A final data call is expected on April 10. This data process could also be repeated to ask for more granular data as long as a data standard is set up, which sounds simple but has proved to be difficult. Still, because of the speed of the process and the information the process yielded, Commissioner Godfread considered the project a success.

Deputy Superintendent Finston asked if the Department ever took possession of the data. Aufenthie responded that the Department only received aggregated results based on the question posed. Godfread restated that the intent of the project was to prove that functionality was viable. Aufenthie noted that the American Association of Insurance Services (AAIS) created nodes for each individual company, and each company uploaded information into its node, but the nodes remained in their possession.

Commissioner Gaffney noted that this effort is very timely, as states are in legislative session, so this technology may be beneficial from an efficiency and data security standard. Commissioner Gaffney asked what expertise would be needed to complete the project or if the expertise was provided by the vendor. Commissioner Godfread remarked that the resources/costs were not substantial but that the key hurdle was generating willingness to embark on the project as it required many discussions with stakeholders, especially if departments of insurance (DOIs) continue with parallel data tracking mechanisms while the blockchain technology continues to be validated for data call usage. Commissioner Godfread noted that smaller companies did find the project beneficial in that they were able to access meaningful data that was gathered as part of the project. Commissioner Godfread further noted that while there may be a cost associated with the technology, it is negligible compared to the cost associated with the current data-gathering processes.

Darby, Statistical Data (C) Working Group chair, noted that the Working Group had been looking at blockchain technology/OpenIDL technology for a similar project and asked if there was a cost figure per company or if figures

were able to compare costs between smaller and larger companies. Aufenthie noted that there was zero cost to the companies participating in the process. However, he said that he was unsure about cost to the vendor and expects the cost would go down as an increasing number of companies participate in the process. Darby also asked about the security of the data in the node. Aufenthie noted that the program was permission-based, which helped avoid security issues. The companies were able to see and understand the information that would be shared, which required some upfront discussion about the technology, but the fact that the information stays with the company the entire time means it is more secure than the current process. Under the current process for data calls, data is transmitted to a third party, which is less secure. Additionally, DOIs are able to limit access to the data to only the data fields that are truly needed for the information-gathering exercise.

Bradner noted that in their own experience with OpenIDL, the initial setup can be time-consuming, but it can be easily repeated once set up. Bradner hopes that state insurance regulators can continue to build data-gathering capabilities leveraging OpenIDL technology.

Hirano asked how, if the Department did not ever have the data locally, it was able to determine that farm and recreational vehicles were included in the data set. Commissioner Godfread noted that as companies were uploading information, they informed the Department about what was being uploaded. Therefore, this determination did not come out through the blockchain analysis phase of the project but instead was identified in the early discussions before data was uploaded.

Commissioner Birrane asked how long the project took to get started. Aufenthie stated that the project started in June 2022 with the hopes of getting done by the end of the year, but the project took a long time to get started, specifically with getting companies comfortable with the technology. The Department started the discussions with a day-long summit to talk about the technology and intent of the project, which was beneficial, but the companies still raised many questions as the project moved along.

Commissioner Birrane asked what the North Dakota Insurance Department sees as the challenge going forward. Commissioner Godfread said that a data standard is the largest obstacle. Working with VINs was manageable, but as the complexity of the data call increases, so will the complexity of the data standards. Therefore, asking for very specific information may prove to be difficult.

Birnbaum thanked North Dakota for its willingness to engage in the data call pilot project. Birnbaum asked about resource requirements for the DOIs to continue with the data calls. Aufenthie said the resource requirements are minimal because most of the work of the project comes in the setup. Asking for a data refresh, as anticipated in April, will take one minute to complete. Aufenthie noted that this project resulted in no additional staffing needs and no cost to the state. Birnbaum then asked how difficult it would be to expand the data call project to include zip codes and then produce the same uninsured data by zip code. Aufenthie said it would not be difficult to expand the data call as such but would require upfront work with the vendor to ensure the coding is updated. Aufenthie noted, however, that adding ZIP codes could introduce privacy issues that would need to be considered.

Tony Cotto (National Association of Mutual Insurance Companies—NAMIC), thanked North Dakota for the process undertaken, including involving the trades, as it helped build comfort with the project. Cotto also noted that while answering the uninsured motorist problem was not the true intent of the data call, it is still an important issue for states to consider. Cotto noted that the Insurance Industry Committee on Motor Vehicle Administration (IICMVA) is also looking at blockchain technology, specifically regarding motor vehicle authentication.

Robin Wescott (AAIS) thanked Aufenthie for his work on the project and noted that cost is difficult to determine, even for the current data-gathering process, but noted that the blockchain project might yield efficiencies. Wescott also noted that the technology this was built upon is the hyper ledger fabric through the Linux Foundation, which is an open software solution. Wescott encouraged the industry to look at open-source solutions, not just proprietary ones. This technology could affect the statistical reporting process, perhaps even removing the need for statistical agents. Wescott said the AAIS supports this because its goal is to make data easier to access.

Having no further business, the Innovation, Cybersecurity, and Technology (H) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H Cmte/2023\_Spring/H-Cmte Minutes032223-Final.docx

Draft: 4/4/23

Big Data and Artificial Intelligence (H) Working Group  
Louisville, Kentucky  
March 22, 2023

The Big Data and Artificial Intelligence (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Louisville, KY, March 22, 2023. The following Working Group members participated: Elizabeth Kelleher Dwyer, Chair (RI); Amy L. Beard, Co-Vice Chair, represented by Victoria Hastings (IN); Doug Ommen, Co-Vice Chair (IA); Kevin Gaffney, Co-Vice Chair (VT); Sarah Bailey (AK); Mark Fowler (AL); Peg Brown and Jason Lapham (CO); George Bradner and Wanchin Chou (CT); Michelle Brewer (FL); Shannon Hohl (ID); Erica Weyhenmeyer (IL); Abigail Gall (KY); Tom Travis (LA); Jackie Horigan (MA); Kory Boone (MD); Timothy N. Schott and Sandra Darby (ME); Karen Dennis (MI); Grace Arnold (MN); Cynthia Amann (MO); Robert Croom (NC); Chris Aufenthie, John Arnold, and Colton Schulz (ND); Connie Van Slyke and Martin Swanson (NE); Christian Citarella (NH); TK Keen (OR); Shannen Logue (PA); Ryan Basnett (SC); Travis Jordan (SD); Stephanie Cope (TN); Leah Gillum (TX); Tanji J. Northrup (UT); Eric Lowe and Katie Johnson (VA); Molly Nollette (WA); Nathan Houdek and Lauren Van Buren (WI); and Erin K. Hunter (WV). Also participating were: John F. King (GA); Troy Downing (MT); and Matt Gendron (RI).

1. Adopted its 2022 Fall National Meeting Minutes

Commissioner Gaffney made a motion, seconded by Cope, to adopt the Working Group's Dec. 13, 2022, minutes (see *NAIC Proceedings – Fall 2022, Innovation, Cybersecurity, and Technology (H) Committee, Attachment Two*). The motion passed unanimously.

2. Received an Update on the AI/ML Surveys

Commissioner Gaffney said the purpose of the home survey is to gain a better understanding of the industry's use of big data, artificial intelligence (AI), and machine learning (ML), as well as what governance, risk management, and controls are being put in place in developing and managing those activities. The survey also seeks to gather information that may inform the development of guidance or a potential regulatory framework that would support the insurance industry's use of big data and AI/ML in accordance with the expectations outlined in the NAIC's AI Principles. As previously reported to the Working Group, the formal examination call letter was sent to 194 companies. Any company licensed to write home insurance in one of the 10 Requesting States that also had at least \$50 million in national home insurance premiums for 2020 was required to complete the survey.

Commissioner Gaffney said survey responses were due by Dec. 15, 2022. The Requesting States were still awaiting responses from eight companies as of March 1. A final request was sent to these companies on March 3 with a response deadline of March 24. Once the survey is closed on March 24, NAIC staff will begin working with the Requesting States to produce a public report, similar to the Private Passenger Auto (PPA) Report. As with the PPA Report, the confidentiality of individual company responses will be protected. The Requesting States will present a public report to the Working Group at the Summer National Meeting.

Commissioner Gaffney said a group of 14 states continued to develop the life insurance survey with the goal of collecting information to understand how life insurance companies are deploying AI/ML in the following operational areas: 1) pricing and underwriting; 2) marketing; and 3) loss prevention. Like the PPA survey and the home survey, the goal of the life insurance survey is to learn directly from the industry about what is happening in this space to get a sense of the current level of risk and exposure associated with their use of AI/ML and how the industry is managing or mitigating that risk. The following criteria were used to identify

which companies should receive the survey: 1) a company with more than \$250 million in premiums on all individual policies in 2021; 2) a term writer that has issued policies on more than 10,000 lives; or 3) a specifically selected InsurTech company. Using these criteria, the 14 Requesting States, which will collect the survey information under their examination authority, will issue a formal examination call letter to a total of 192 life insurance companies.

An informational letter should be sent to the 192 companies on March 31. Coinciding with the issuance of this letter, the NAIC will go live with the AI/ML life insurance survey weblink, which will include the survey template, survey filing guidance and definitions, and a frequently asked questions (FAQ) document. Concurrently, each company will receive a survey link and can begin to input their answers into the Qualtrics survey tool even before the official call letter is sent. Commissioner Gaffney said each company scheduled to receive the survey should have designated one contact to receive the survey link, and they can forward it to anyone in their company who has the information needed for the survey. The tool allows multiple people in a company to input answers and saves the most up-to-date information input into the survey.

Commissioner Gaffney said the formal examination call letter is scheduled to be issued on May 1, and companies will have until May 31 to respond to the survey. The Requesting States hope this timeline will help accommodate those companies also filing Market Conduct Annual Statement (MCAS) data due April 30.

Superintendent Dwyer reminded everyone that the PPA public report is posted on the Working Group's web page, and she is not aware of any comments on or concerns about this report.

### 3. Discussed Draft Model and Data Regulatory Questions

Commissioner Ommen said the subject matter experts (SMEs) assembled for Workstream #2 were asked last year by the Working Group to provide recommendations for: 1) the feasibility of a library of third-party data and model vendors with AI-known applications in the business of insurance; and 2) an appropriate regulatory framework for monitoring and overseeing the industry's use of third-party data and model vendors. In accordance with the second charge of the Working Group, the state insurance regulators on Workstream #2 exposed for discussion draft questions that state insurance regulators might ask about data and models used by insurance companies, regardless of whether the data or model is developed internally or obtained from external sources. These questions were meant to be a starting point for discussion, and there needs to be further work.

Commissioner Ommen provided a summary of the document. The first section, titled "Main General Questions," includes a list of suggested questions to obtain a high-level understanding of a model or data being used. The second section, titled "Detailed and Technical Questions," expands on the first section by including additional questions to obtain a more in-depth understanding of the model or data. The questions are subdivided into three categories within each of these first two sections. The first category contains questions to ask a company about a model, whether the company is an insurer or a third party. The second category contains questions to ask an insurer about its implementation of a third-party model. The third category contains questions about the purchase of third-party data. Finally, the third section in the document contains definitions of key terms used throughout the document. Commissioner Ommen said he is not satisfied with the definitions, which are meant as "placeholder" definitions.

Commissioner Ommen said the SMEs of Workstream #2 had a call on March 8 and began discussing the following policy issues raised in the comment letters: 1) the document should be principle-based; 2) the document should be more limited in scope to encourage state insurance regulator use for "higher-risk" AI models; 3) questions should be prioritized to recognize the importance of model governance; 4) there are concerns that questions contain assumptions of law that are not based in law; 5) there are concerns regarding redundancy with financial

examinations; 6) there are concerns with the potential burden on smaller companies and small AI providers; and 7) clarification of the intended use of questions by state insurance regulators is needed. He said a smaller group of the Workstream SMEs will review the comments and hope to present a revised draft for public comment by the end of May.

Birny Birnbaum (Center for Economic Justice—CEJ) said insurers use data models through the insurance life cycle, including marketing, underwriting, pricing, antifraud, and claim settlements. He said state insurance regulators have a responsibility to ensure that rates are not excessive, inadequate, or unfairly discriminatory, and he said the document should identify regulatory authorities and responsibilities. He said state insurance regulators can best fulfill their responsibilities by analyzing the outcomes of data models rather than asking questions to understand how an insurer developed a data model. He said state insurance regulators do not have the resources to review and analyze insurers' narrative responses, and state insurance regulators should collect additional data from insurers to ensure that model outcomes comply with state laws rather than focusing on an insurer's process of model development.

David Leifer (American Council of Life Insurers—ACLI) said the scope of information to be collected is overly broad, especially regarding third-party vendors and the ability of insurers to produce proprietary information from third-party vendors. David F. Snyder (American Property Casualty Insurance Association—APCIA) also said the questions should be grounded in existing state laws. He said the definitions need to be revised. He also encouraged additional coordination of this work with other workstreams across the NAIC, such as the Accelerated Underwriting (A) Working Group and the Innovation, Cybersecurity, and Technology (H) Committee's work on the AI model bulletin.

Andrew Pauley (National Association of Mutual Insurance Companies—NAMIC) said NAMIC has concerns with the questions not being based on state regulatory requirements. He said the definitions need to be revised, and he encouraged this work to be coordinated with other NAIC workstreams. He suggested that the state insurance regulators focus on a principle-based approach, and he questioned why all information would be requested at once. He also expressed concern regarding the protection of confidential proprietary information that might be provided.

Scott Harrison (American InsurTech Council—AITC) suggested a risk-based approach, and he voiced concern that the scope of questions would create a disproportionate burden on smaller companies. He suggested that state insurance regulators should focus on only those AI models that affect consumers or a company's financial solvency since companies use models that do not have regulatory implications. He also expressed concerns regarding the protection of confidential information, especially the protection of proprietary information.

Snyder said the creation of a uniform set of questions is helpful, but the scope and detail of the questions are very broad. He said there are concerns with the definitions, and he suggested that state insurance regulators should consider the risk, scale, and complexity of a company when asking about its AI models. He urged that testing not be included in the document due to the complicated nature of AI model testing. He said it is not clear what standard is being tested and how much is too much of a relationship to a protected class. Snyder also said confidentiality protections are important, and the disclosure of propriety models of third-party vendors can be very complicated. Finally, Snyder encouraged everyone to remember that the use of AI models makes it possible for the industry to provide better services to consumers.

Bob Ridgeway (America's Health Insurance Plans—AHIP) said any use of these questions should be under examination authority to protect the confidentiality of responses. He said insurers are familiar with submitting confidential information to state insurance regulators, but third-party vendors are not comfortable with sharing proprietary information. He said third-party vendors might not have any appropriate recourse if a governmental

agency is the source of propriety information being shared with the public. He said the scope of the questions would require insurers to share a voluminous amount of information, and he suggested that higher-level information be collected first. This would make it easier for companies to respond and for state insurance regulators to review the information.

Peter Kochenburger (University of Connecticut School of Law) said state insurance regulators should not look at these issues only through the application of existing state laws. State insurance regulators should be setting expectations, and if needed, they can amend existing laws and regulations to address the use of AI in the insurance industry.

Superintendent Dwyer said the Innovation, Cybersecurity, and Technology (H) Committee is coordinating the AI work across the NAIC, including the activities of Workstreams #3 and #4. Workstream #3 is charged with evaluating tools and resources for monitoring the industry's use of data and AI/ML, and Workstream #4 is focusing on the broader regulatory framework and governance.

Having no further business, the Big Data and Artificial Intelligence (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H Cmte/2023\_Spring/WG-BDAI/BDAI-Minutes032223-Final.docx

Draft: 4/6/23

Cybersecurity (H) Working Group  
Virtual Meeting (*in lieu of meeting at the 2023 Spring National Meeting*)  
March 7, 2023

The Cybersecurity (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met March 7, 2023. The following Working Group members participated: Cynthia Amann, Co-Chair (MO); C.J. Metcalf, Co-Vice Chair (IL); Michael Peterson, Co-Vice Chair (VA); Julia Jette (AK); Damon Diederich (CA); Wanchin Chou (CT); Tim Li (DE); Shane Mead (KS); Matt Kilgallen (GA); Daniel Mathis (IA); Alexander Borkowski (MD); T.J. Patton (MN); Jake Martin (MI); Troy Smith (MT); Colton Schulz and Chris Aufenthie (ND); Martin Swanson (NE); David Bettencourt (NH); Justin Herrings (NY); Matt Walsh (OH); John Haworth (WA); and Rebecca Rebholz (WI).

1. Adopted its 2022 Fall National Meeting Minutes

Haworth made a motion, seconded by Schulz, to adopt the Working Group's Nov. 15, 2022, minutes (*see NAIC Proceedings – Fall 2022, Innovation, Cybersecurity, and Technology (H) Committee, Attachment Three*). The motion passed unanimously.

2. Discussed its Work Plan for 2023

Amann summarized the Working Group's work plan for 2023 (Attachment Two-A) The work plan contains four components, called workstreams, building from the results of the Working Group's survey to state insurance regulators in 2022.

The first item on the work plan is to develop a cybersecurity response plan. The subject matter expert (SME) group leads for this workstream are Amann and Peterson. The outline for the response plan includes 12 topics to date:

- Introduction
- Communication with other states/federal regulators
- Initial notification by domestic
- Meetings (initial and follow-up meetings if necessary)
- Communication with the firm handling the incident
- Organizational security
- Risk assessment
- Audits
- Communications with consumers
- Summary of regulator tools
- Coordination of communication
- Information-gathering template

A drafting group is being formed, and drafting will begin following the Spring National Meeting.

The second item on the work plan is for the Working Group to send a referral to the Information Technology (IT) Examination (E) Working Group asking it to consider updating its cybersecurity guidance (Attachment Two-B).

The third item on the work plan is for the Working Group to continue to support NAIC training initiatives. This workstream will identify cybersecurity subject matters. The Working Group will work with NAIC staff, state insurance regulators, and the insurance industry to identify warranted training. Any work considered by this workstream requires coordination with the Innovation, Cybersecurity, and Technology (H) Committee to avoid duplications of effort.

The fourth item on the work plan is for the Working Group to continue to monitor cybersecurity trends among regulated entities and among federal and international bodies. State insurance regulators will receive relevant updates regarding cybersecurity trends, work being completed by related working groups, state efforts to adopt the *Insurance Data Security Model Law* (#668), and relevant work happening at the federal and international levels.

Amann concluded by asking states to consider volunteering and contacting NAIC staff with their specific interest in supporting components of the work plan. Romero noted that workstream one, the cybersecurity response plan, is the workstream most likely to need assistance. Romero acknowledged past willingness to aid from Connecticut and North Dakota.

Haworth asked if the Working Group would meet in regulator-to-regulator session to discuss cybersecurity events. Amann said there may be a case for regulator-only sessions for some of the issues the Working Group will be addressing. Romero indicated that if there is a specific subject matter related to an examination or another confidential matter, a regulator-only meeting would be a possibility.

### 3. Heard an Overview of the Treasury Department's Report Titled *The Financial Services Sector's Adoption of Cloud Services*

Ethan Sonnichsen (NAIC) provided an overview of the U.S. Department of Treasury's (Treasury Department's) *The Report on the Financial Services Sector's Adoption of Cloud Services*, which was released on Feb. 8. The report discusses the benefits and challenges of the financial services sector's increasing adoption of cloud services technology. It also makes several recommendations for financial service providers and the regulatory community.

The report summarizes some of the benefits, including scalability, cost savings, and the security of the information technology infrastructure. In the financial services sector, there is a concentration among a small number of cloud service providers. Risks may involve a significant system failure or data breach at a large cloud service provider, which may have substantial implications for the financial services sector and the customers they serve. Many financial services institutions additionally expressed concerns regarding a cloud service provider's (CSP's) cybersecurity vulnerabilities. Currently, there is a lack of data in the financial regulatory community regarding the number of providers and the types of services provided at CSPs.

The report addressed concerns from institutions regarding the lack of transparency of reporting, as several of the institutions surveyed noted they do not receive information regarding incidents, outages, or other problems at the CSP that would affect the institution's system or its customer's access to information.

The report highlights a talent gap at financial services firms, including training expertise and the ability to determine which services to transition to a cloud infrastructure. The talent gap is the most pressing issue for smaller institutions.

The report also notes there is exposure to potential operational incidents at CSPs. Many financial services institutions additionally expressed concerns regarding CSPs' cybersecurity vulnerabilities or a service failure. Financial service regulators need more data regarding a financial institution's exposures.

Additionally, the report addresses the global regulatory requirements and how those may create challenges for firms wishing to migrate to a cloud service. There are regulatory differences around the world, making it difficult for a large global financial institution wanting to transition to the cloud. Some countries have restrictive data policies requiring data to be housed locally, whereas the U.S. is less restrictive regarding data flows.

Likewise, the report addresses concerns regarding market concentration. First, the market is concentrated among a small number of CSPs; third-parties may also use the same CSP. This concentration means an incident has a better chance of spreading throughout the financial system. Market concentration exists across banking, securities, and insurance markets. There is also a need to close significant data gaps regarding a financial institution's use of a CSP to better understand its risk exposure.

The report asks financial institutions to think about building a communication plan with its CSP, establishing a risk management framework to prioritize which systems will move to the cloud, whether there are backups and controls to execute them, and to introduce performance metrics showing the financial institution is receiving some economic value by transitioning to the cloud.

A cloud services steering group will be created in the next year or so to focus closer on domestic collaboration among financial regulators regarding cloud services. The steering group will consider writing best practices for cloud adoption and cloud contracts to provide some standardization. Interagency collaboration and coordination will be important. The steering group will also examine the data gap regarding CSP usage and determine what the financial regulators need to know regarding the reliance at a CSP.

The steering group will also look at protocols for incident response and engaging on international standards as the international standard setting groups, as well as fostering some industry discussions to obtain a direct account of what is happening in the financial services sector as cloud standards are adopted.

Amann asked the Working Group to consider the data state insurance regulators need, why they need it, and what the data will disclose regarding an insurer's use of cloud service providers. She asked the Working Group to also think about how this data is best obtained, whether the data is confidential data, unidentified data, group data, individual insurer data, how frequently the data needs to be collected, and if there are exemptions.

Peterson said that he believes the Treasury Department intends to remain active on this topic. He suggested that state insurance regulators could take the initiative to create a solution that works for both insurers and state insurance regulators. Peterson proposed that state insurance regulators use the systems summary grid, a tool in the *Financial Condition Examiners Handbook*, to help gather information on insurers' industry-wide use of cloud service providers. He suggested that a regulator-only filing submission could be beneficial as a new annual filing and would help regulators from a macroprudential perspective of an insurers' cloud service usage. There would be logistics to work through, including whether template standardization is necessary. Peterson asked the Working Group to consider whether this is a viable path forward to help state insurance regulators gather cloud service provider information.

Romero restated the proposal regarding whether regulators could use the systems summary grid to streamline the transmission of information on an insurer's use of cloud service providers, including whether data is needed and how frequently data needs to be submitted. Amann emphasized the need for insurers' input on this proposal. Romero indicated that given the time left for the meeting, the Working Group could solicit industry input on this proposal via e-mail following the meeting. Upon receiving the insurer's input, the Working Group could reconvene to continue the discussion.

#### 4. Discussed a Referral to the IT Examination (E) Working Group.

Amann said that because of the discussion last year with the Cybersecurity and Infrastructure Security Agency (CISA), the Working Group will be asking the IT Examination (E) Working Group to consider updating its cybersecurity-related guidance based on the CISA cybersecurity performance goals. Romero indicated that the Working Group has a charge to monitor and not to update cybersecurity guidance. Therefore, the referral sends the matter to the Working Group, having authority over cybersecurity guidance.

The Working Group's referral acknowledges there may be resources apart from the CISA cybersecurity performance goals. Updated guidance could help ensure the addressing of cybersecurity-related risks.

Brian de Vallance (Center for Internet Security—CIS) stated that cybersecurity is an important topic for state insurance regulators to consider and that the CIS supports updating the guidance as cyber defense has evolved. He noted that the CIS would be available to assist state insurance regulators as they continue to study this project.

#### 5. Discussed the Outline for the Incident Response Plan

Amann stated that the Working Group's charge of creating an incident response plan builds on the Model #668 and would aid the states in requesting information from insurers that have experienced a cybersecurity event.

Amann indicated that insurers' input benefits this project, specifically in addressing the type of information that would be available. Romero indicated that in following up with states regarding the state insurance regulators' needs, the survey identified the demand for a tool assisting states in responding to cybersecurity events among regulated entities. Such a tool would help guide states in the communication and information-gathering responsibilities of the department of insurance (DOI). The tool would enhance a state's ability to act as a lead state in a cybersecurity event and minimize state inquiries to regulated entities.

States could tailor the tool to suit their individual needs. Romero suggested the Working Group form a drafting group to advance the tool's planning and suggested creating an information-gathering template and the value therein from an insurer's perspective.

Peter Kochenburger (University of Connecticut School of Law) said consumer representatives might also provide valuable input to ensure consumer notifications are included in the response plan. Schulz suggested that the workstream leverage insights from past NAIC cybersecurity tabletop exercises to assist with this project.

#### 6. Discussed Other Matters

Skyler Gunther (NAIC) said that the NAIC would lead an effort to facilitate vendor presentations from Security Scorecard and Bitsight to provide information to state insurance regulators regarding cyber-risk analytic capabilities. Herring indicated that the New York Department of Financial Services (DFS) has been using Security Scorecard and may provide beneficial information in the Working Group's consideration of these tools. Romero indicated that after the vendor meetings, the state insurance regulators would reconvene to consider the usefulness of these tools.

Having no further business, the Cybersecurity (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2023\_Spring/Cybersecurity/Cyber-WG-Minutes030723.docx

**The Cybersecurity (H) Working Group 2023 Workplan:**

## Working Group Charges:

- A. Monitor cybersecurity trends such as vulnerabilities, risk management, governance practices and breaches with the potential to affect the insurance industry.
- B. Interact with and support state insurance departments responding to insurance industry cybersecurity events.
- C. Promote communication across state insurance departments regarding cybersecurity risks and events.
- D. Oversee the development of a regulatory cybersecurity response guidance document to assist state insurance regulators in the investigation of insurance cyber events.
- E. Monitor federal and international activities on efforts to manage and evaluate cybersecurity risk.
- F. Coordinate NAIC committee cybersecurity work including cybersecurity guidance developed by the Market Conduct Examination Guidelines (D) Working Group and the Information Technology Examination (E) Working Group.
- G. Advise on the development of cybersecurity training for state insurance regulators.
- H. Work with the Center for Insurance Policy and Research (CIPR) to analyze publicly available cybersecurity related information.
- I. Support the states with implementation efforts related to the adoption of *Insurance Data Security Model Law* (#668).

- 
- Workstream 1: Cybersecurity Response Plan

Subject Matter Expert Group Lead: Cindy Amann/Michael Peterson

Summary: Regulators will develop an optional guide to assist states in responding to cybersecurity events among their regulated entities. The project will include, but is not limited to:

- A Review of existing regulator cybersecurity response plans
- Drafting an outline of main topics to be included in the cybersecurity response plan to ensure the necessary topics are incorporated into the response plan
- Drafting a response plan
- Creating a reporting template to aid states in collecting information in the wake of a cybersecurity event

Timeline: Completed by 2023

Related Charges: This project would fall under charges B, C, and D.

Considerations: Regulators should consider:

- Whether the response plan should include a reporting template
- Whether the publication should be a public or regulator only resource

- Workstream 2: Referral to the Information Technology (IT) Examination (E) Working Group (ITEWG)

Subject Matter Expert Group Lead: N/A

Summary: Referral should be sent by Summer NM, but the actual underlying project may last until 2024 depending on the approach chosen by ITEWG

- Update the Financial Examination Handbook to strengthen and update guidance for financial examiners to draw on more focus on cyber during an exam.

Related Charges: This project would fall under charge E.

Considerations: The Working Group needs to recognize that there is overlapping membership between the ITEWG and the Cybersecurity (H) Working Group, limiting the Working Group's resources.

- Workstream 3: Training

Summary: The Working Group could work with NAIC staff, regulators, and industry to identify cybersecurity subject matter that warrant training. The Working Group would oversee the development of training.

The Working Group could also work with D/E committee groups to aid in the identification of relevant certifications/credentials that Departments of Insurance could use to help in developing subject matter expertise.

Timeline: The working group could develop an initial plan by the Summer National Meeting and thereafter, the work would transition to an ongoing project.

Related Charges: This project falls primarily under charge F, but the training material may relate to other charges.

Considerations: While there are many topics that may warrant training, resource limitations will make it important to prioritize training requests considering the significance/prevalence/complexity of said subject matter.

H Committee and other related groups may also undertake related efforts. Work should be coordinated to avoid duplication of effort.

- Workstream 4: Monitoring

Subject Matter Expert Group Lead: Wendy Erdly

Summary: The Working Group has several charges that relate to monitoring and coordination. At rotating meetings, regulators could receive updates from NAIC staff or regulators:

- Cybersecurity trends
  - Industry may also assist in the identification of relevant trends
- The relevant work done at the Market Conduct Examination Guidelines (D) Working Group and the Information Technology Examination (E) Working Group
- State efforts to implement/adopt the *Insurance Data Security Model Law* (#668)
- The relevant work done at federal and/or international level

Timeline: The working group should consider engaging in some monitoring effort on an annual basis, but otherwise, there is no expiration or timeline for this work.

Related Charges: This project would fall under charges A, C, and D.

Considerations: With each item discussed, it would be relevant to consider whether the Working Group should take action. Actions would be determined based on the situation. It's most likely that federal/international work would lead to such action/responses.

**MEMORANDUM**

TO: Jerry Ehlers, Chair, Information Technology (IT) Examination (E) Working Group  
Ber Vang, Vice-Chair, Information Technology (IT) Examination (E) Working Group

FROM: Cindy Amann, Co-Chair, Cybersecurity (H) Working Group  
Wendy Erdly, Co-Chair, Cybersecurity (H) Working Group  
CJ Metcalf, Co-Vice-Chair, Cybersecurity (H) Working Group  
Michael Peterson, Co-Vice-Chair, Cybersecurity (H) Working Group

DATE: March 7, 2023

RE: Cybersecurity Procedures

---

The Cybersecurity (H) Working Group has several charges that call on the working group to monitor industry trends and to coordinate our work with the IT Examination (E) Working Group. Those include:

- A. Monitor cybersecurity trends such as vulnerabilities, risk management, governance practices, and breaches with the potential to affect the insurance industry.
- E. Monitor federal and international activities on cybersecurity engaging on efforts to manage and evaluate cybersecurity risk.
- F. Coordinate NAIC committee cybersecurity work, including cybersecurity guidance developed by the Market Conduct Examination Guidelines (D) Working Group and the Information Technology (IT) Examination (E) Working Group.

In keeping with those charges, the Cybersecurity (H) Working Group met with the Executive Director from the Cybersecurity and Infrastructure Security Agency (CISA), Brandon Wales, who provided an update on his agency's work. As part of the update, Mr. Wales mentioned his agency's work to develop and publish a "Cross-Sector Baseline Cybersecurity Performance Goals (CPGs)". Per CISA's website, "the CPGs are a prioritized subset of IT and operational technology (OT) cybersecurity practices that critical infrastructure owners and operators can implement to meaningfully reduce the likelihood and impact of known risks and adversary techniques."

More importantly, these CPG's the Cybersecurity (H) Working Group is suggesting this publication to the IT Examination (E) Working Group as it may represent an opportunity to update the cybersecurity related guidance contained within the *Financial Condition Examiners Handbook* (Handbook). While the guidance in the Handbook has long served regulators as an effective tool to investigate a myriad of risks, cybersecurity included, this tool or other resources may represent an opportunity to ensure the work program appropriately prioritizes cybersecurity related considerations.

Therefore, the Cybersecurity (H) Working Group asks the IT Examination (E) Working Group to consider the following:

- Whether the existing guidance would benefit from an update to better prioritize cybersecurity risks.
- If so, whether the CPGs or a different resource (i.e., NIST, CIS, etc.) would aid in a project to update cybersecurity guidance.
  - For instance, the CIS listing of security controls includes a tiering that may make that a useful tool that allows regulators to distinguish relevant controls from key controls.
- Whether any international developments could prove beneficial as a resource towards this project (i.e., Issues Paper under development by the Operational Resilience Task Force).

This is potentially a substantial project, but one that could enhance the regulatory ability to investigate cybersecurity risks. An update may also identify specific procedures that are less relevant as the focus of investigations prioritizes cybersecurity over the review of IT general controls. Upon a quick review by one of our Working Group volunteers, we found substantial overlap between the CPGs and the existing Handbook work program. However, the IT Examination (E) Working Group may find that the CPGs more clearly or simply articulate the controls that are needed to directly address cybersecurity risks. There may also be procedures that while still relevant could be de-emphasized or investigated via inquiry to better allow for cybersecurity to remain a core focus.

The Cybersecurity (H) Working Group acknowledges less ambitious ideas may also be appropriate but stands ready to support the work of the IT Examination (E) Working Group in whatever approach to this project and study is chosen.

Please work with our NAIC support staff, Miguel Romero and Sara Robben to keep our group updated on your progress and decisions.

Draft: 4/6/23

Privacy Protections (H) Working Group  
Louisville, Kentucky  
March 22, 2023

The Privacy Protections (H) Working Group of the Innovation, Technology, and Cybersecurity (H) Committee met March 22, 2023. The following Working Group members participated: Katie C. Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Catherine O'Neil (AZ); LeAnn Crow (KS); Kathleen Birrane Alexander Borkowski (MD); Robert Wake (ME); T. J. Patton (MN); Jo LeDuc (MO); Martin Swanson (NE); Gary Jones (PA); Patricia Smock (RI); Frank Marnell (SD); Amy Garcia (TX); Don Beatty (VA); Todd Dixon (WA); and Rachel Cissne Carabell, Tim Cornelius, and Lauren U. Van Buren (WI). Also participating were Peg Brown (CO); Victoria Hastings (IN); John Arnold (ND); and Travis Jordan (SD).

1. Adopted its 2022 Fall National Meeting Minutes

Ms. Johnson said the Working Group met Dec. 12, 2022.

The Working Group also met Feb. 16, 2023, and Mar. 15, 2023, in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss next steps for the Working Group.

Ms. Amann made a motion, seconded by Mr. Aufenthie, to adopt the Working Group's Dec. 12, 2022 (*see NAIC Proceedings – Fall 2022, Innovation, Technology, and Cybersecurity (H) Committee, Attachment xx*). The motion passed unanimously.

2. Heard an Update on Federal and State Privacy Legislation

Ms. Neuerburg said there had been a lot of activity since the Fall National Meeting in December, but that she was going to try to keep her update brief because she knew a lot of people were waiting to comment on the exposure draft. Ms. Neuerburg said there are currently around 50 bills under consideration across 21 states.

She said the Iowa legislature passed a consumer data privacy bill on Mar. 15, 2023, that is similar to Utah's privacy law and that is business friendly. While the bill is pending the governor's signature, she said Iowa would become the sixth state to pass a comprehensive data privacy bill. Ms. Neuerburg said Hawaii and Indiana are considering bills that are similar to the Virginia Consumer Data Protection Act. She said there are also bills being considered in New Jersey, Montana, and Oklahoma, just to name a few.

Ms. Neuerburg said charts tracking the legislation will be posted on the NAIC's Privacy Protections Working Group webpage if anyone wants to read more about these bills. She said the NAIC Legal team will continue to follow state data privacy legislation and will provide updates at future Working Group meetings.

Ms. Oppenheim said there had been a lot of activity on the federal side. In the House Financial Services Committee, she said Chair Patrick McHenry's financial data privacy bill, the data privacy bill of 2023, H.R. 165, has passed out of committee along party lines. Ms. Oppenheim said it would revamp existing data privacy protections for consumers by providing a preemptive ceiling and floor in an attempt to create a uniform federal standard. For enforcement by the functional regulators, the current bill provides a new deletion right for consumers and allows consumers to stop the collection and disclosure of their data among other provisions. She said Representative

Waters and other Democrats have been critical of the exemption because it would hinder a state's ability to, "Act as a laboratory for innovation while establishing what they see to be a weak federal standard.

Ms. Oppenheim said the House energy and Commerce Subcommittee on innovation, technology, and commerce across the hall also recently held a hearing like a hearing for a federal national standard on data privacy. She said this follows up on the work from the last Congress when the House Energy and Commerce Committee leaders and then senior commerce ranking member, Senator Wicker, compromised on the American Data Privacy Protection Act. Ms. Oppenheim said Chairwoman Senator Cantwell did not sign though the bill passed the House Energy and Commerce Committee and was being considered for the Omnibus bill but it was ultimately not included. She said this preemptive bill would create a national standard and safeguards for personal information collected by companies, including protections intended to address potentially discriminatory impacts of algorithms. Ms. Oppenheim said we expect this to be reintroduced in some form, so we expect federal action to be ongoing.

### 3. Considered its Updated 2023 Work Plan

Ms. Johnson gave an overview of the updated Work Plan dated Mar. 13, 2023. She said the Work Plan is posted on the Working Group's Webpage and indicates that the Exposure Draft of the new model was distributed on Feb. 1, for a two-month comments period that ends Apr. 3, 2023. Ms. Johnson said the revised Work Plan extends the date of which the model will be sent to the Innovation, Cybersecurity, and Technology (H) Committee to the 2023 Fall National Meeting. She said the Working Group did that because it had received so many comments from interested parties and the Working Group wanted to give everyone enough time to consider those comments.

Ms. Johnson said the revised workplan lists Apr. 18 as the date that bi-weekly Working Group meetings will resume to discuss comments received in open meetings. She asked that all parties come prepared to roll up their sleeves and get to work on refining the wording in the draft exposure model.

Ms. Johnson said a two-day, in-person Interim Working Group Meeting is also being planned for June in Kansas City to work through the more complex issues identified in the model using transparent collaborations to address those issues in a way that makes the model workable for regulators, industry, and consumers. She said many of the more complex issues have already been identified by the drafting group in private meetings with volunteer companies. Ms. Johnson thanked the companies that had stepped forward to discuss these complex issues. She said many of the industry trade associations and consumer representatives were included in those who volunteered. She said the Working Group was very grateful for their help and appreciated their help.

### 4. Received and Discussed Comments on the Exposure Draft of the New Consumer Privacy Protections Model Law (#674)

Ms. Johnson said the Working Group would hear preliminary comments from interested parties on the exposure draft of the new Privacy Protections Model Law (#674) in advance of the 60-day public comment period ending April 3.

Dr. Harold M. Ting (Healthcare Consumer Advocate and NAIC Consumer Representative) said he was also a Senior Health Insurance Information Program-SHIIP counselor who has counseled over 400 people who qualify for Medicare and Medicaid. He said the comments he submitted in more detail in writing on the new model draft #674 expressed his very strong support for it and suggested a few changes. Dr. Ting said since getting involved in this Working Group, he had become more aware of how personal information is captured and misused. He said whenever he goes to a new website now, he tries to minimize the data that can be stored and utilized. He also tried to read the entire privacy policy to understand how to exercise that option; however, he said sometimes it

takes too much time and sometimes, he is given no choice if he wants to use the site. Dr. Ting said he experienced abuse of his personal data daily; he has had his credit card information stolen; he gets so many unwanted marketing emails that the emails he wants to see get lost in a sea of unwanted emails; and he said the worst of it is that it seems to be occurring more frequently. He said he gets phishing emails and texts disguised as urgent messages from companies he uses trying to steal his personal information. Dr. Ting said in addition to that, he cannot escape losing his information as it is being shared by his phone, his TV, his car, and his appliances through the Internet of Things-IoT in this environment. He said he wished the federal government would do more to protect his personal information but that it was unlikely because Google and Meta base their business upon it.

Dr. Ting said now is the time for insurance regulators to pass fair consumer data privacy legislation for the insurance industry because the key players in this realm are not taking any action. He said he was pleased to see that the draft model #674 establishes clear standards for protecting consumer privacy in the areas of transparency and data minimization; use limitations by review and correction; and requiring third party service providers to meet the same privacy standards as licensees and accountability. Recognizing that not all states and territories will adopt this model, he said he hoped that many insurance companies and licensees will adopt these privacy protections anyway. By doing so, Dr. Ting said companies are likely to meet the requirements of the states where they do business. He said there are six reasons why consumer data privacy standards are needed and three revisions that he recommends. He said claims that standards are not needed because consumers are not complaining is totally invalid because consumers have no way of knowing that their data is being used or how it is being shared with others for their use. Dr. Ting said privacy protections must be the default of privacy protection policies should always be the default of non-disclosure. He said it is well documented that most consumers do not read entire privacy policies and that it is not realistic to expect them to do so nor to expect them to understand what's in them because privacy policies are notoriously long and complex. Moreover, Dr. Ting said companies use dark patterns that manipulate consumers into permitting greater use of their data than the consumer had intended.

Dr. Ting said Health Insurance Portability and Accountability Act-HIPAA standards should apply to all personal information. Dr. Ting said when HIPAA was enacted, it stated that personal health information was more sensitive and needed more protection than personal financial information; however, time has proven that to be false as personal financial information has been used fraudulently to significantly harm millions of Americans. He said the same standards should apply to third party service providers as for insurance providers and licensees because the risk of abuse to personal information is the same for both groups. Dr. Ting said because most states do not have regulatory authority over third party service providers, it is even more important that the model include these providers in its privacy protections standards through their contracts with insurance carriers that are regulated by state insurance departments. He said data minimization is essential because it is impossible to totally prevent data breaches and that over the past 5 years, insurance companies as diverse as Prudential Financial, John Hancock, Allstate and State Farm have each reported multiple data breaches and major third-party providers have reported breaches by BlueCross Blue Shield healthcare group, a medical imaging group, a professional health care collection agency, and Verisk Analytics - one of the world's largest data aggregators.

Dr. Ting said last month in Congress, the Electronic Privacy Information Center agreed that all companies should limit their data collection to only what is reasonably necessary and appropriate to provide or maintain a product or service requested by an individual. He said that is exactly what we see in the draft of model #674 and that compliance with it is the key. Dr. Ting said model #674 will only be effective if it has meaningful penalties for serious non-compliance because there is no practical way for state insurance regulators to adequately monitor thousands of licensees and third-party service providers. He said there are 3 specific recommendations:

- Article 3, Section 7, should also require disclosure of consumer reporting agencies used and to the extent they use their third-party services to obtain and share consumers' personal information;
- Article 5, Section 14, should be revised and it should not be optional because consumers should have the ability to obtain detailed reasons for insurance companies' adverse underwriting decisions immediately and not be required to provide a written request to the company to get those details;
- Data security and privacy are inextricably connected so data security requirements such as those in NAIC Model #668 need to be added to this model so third-party service providers and licensees that have access to consumer data are held to the same standards as the insurance companies they contract with.

Ms. Johnson said a joint trade group also submitted comments in advance of the comments deadline that are included in the materials posted on the website for this meeting. She asked if anyone would like to provide comments on the draft model.

Kristin Abbott, American Council of Life Insurers (ACLI) said companies and people need standards for privacy protections but do not need an overly prescriptive model. To avoid friction and unnecessary new barriers, she said the key is prior consent for marketing because requiring it would hurt underserved markets; prohibit joint marketing; increase costs and premiums; harm small to mid-size companies; restrict research; and limit actuarial services. Ms. Abbott said overseas processing is difficult to track and putting privacy restrictions on them would harm international insurers would result in decreased services for customers which is why the General Data Privacy Regulation-GDPR doesn't even require this. She said the 90-day deletion requirement needs to be removed from the model as most companies with Legacy Systems will not be able to accommodate this standard. Ms. Abbott said the new notice and oversight requirements in the model would increase implementation costs because insurers use personal information to provide products to meet their needs.

Robert Ridgeway, Americas Health Insurance Plans (AHIP) said he was speaking on behalf of both HIPAA-compliant and non-HIPAA-compliant companies. He said the companies he represents like the new timetable and the schedule of future meetings, including the Interim, in-person meeting being planned. Mr. Ridgeway said the Working Group's plan to handle low-hanging fruit in the form of less complex privacy issues during calls would be very productive. He said the partial exemption for HIPAA issues should be made a complete exemption via safe harbor for HIPAA-compliant companies. Mr. Ridgeway said the operative sections should be what companies need to do or not do; and should not pertain to activities that are already covered by HIPAA so companies are not trying to wade through duplicate obligations. He said for other non-HIPAA-compliant companies, the pinch points are: 1) private right of action where verbiage the same as model #668 would be a good choice; and 2) whether the sharing of personal data overseas should be considered as a privacy or cybersecurity issue.

Chris Peterson, Joint Health Coalition, said he agreed with Mr. Ridgeway that the partial safe harbor for HIPAA should be a full safe harbor incorporating oversight of third-party contracts including business associates.

Shelby Shoensee, American Property Casualty Insurance Association (APCIA) said that several members have met with the Drafting Group; want an in-person interim meeting; will be submitting written comments; and will be actively engaged in the collaboration process. She said their primary concerns are: 1) the overseas data privacy requirement because many of the companies operate on a global basis that relies on the data market; 2) the marketing and research limitations as that would prevent joint marketing; 3) third party oversight, which is a contractual issue so a delayed effective date (like the risk-based approach in the Insurance Data Security Act-IDSA model) for implementation is imperative; 4) the private right of action; 5) the new notice requirements; and 6) the inconsistent language about actuarial studies.

5. Discussed Other Matters

Ms. Johnson reminded attendees about the Working Group's Two-Day, In-Person, Interim Meeting tentatively scheduled for June 4-6, in Kansas City, Missouri.

Having no further business, the Privacy Protections (H) Working Group adjourned.

NAIC/American Indian and Alaska Native Liaison Committee March 25, 2023, Minutes  
(Attachment One) ..... 13-8

Draft: 4/6/23

NAIC/Consumer Liaison Committee  
Louisville, Kentucky  
March 21, 2023

The NAIC/Consumer Liaison Committee met in Louisville, KY, March 21, 2023. The following Liaison Committee members participated: Andrew R. Stolfi, Chair (OR); Grace Arnold, Vice Chair (MN); Lori K. Wing-Heier represented by Sharon Comstock (AK); Mark Fowler (AL); Alan McClain (AR); Andrew N. Mais represented by Kurt Swan (CT); Michael Conway (CO); Trinidad Navarro (DE); Michael Yaworsky (FL); Doug Ommen represented by Sonya Sellmeyer (IA); Dean L. Cameron represented by Shannon Hohl (ID); Vicki Schmidt (KS); Kathleen A. Birrane represented by Nour Benchaaboun (MD); Anita G. Fox represented by Renee Campbell (MI); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Chaney represented by Ryan Blakeney (MS); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by John Arnold (ND); Eric Dunning represented by Martin Swanson (NE); Chris Nicolopoulos represented by David Bettencourt (NH); Scott Kipper represented by Dave Cassetty (NV); Adrienne A. Harris represented by John Finston (NY); Judith L. French represented by Jana Jarrett (OH); Michael Humphreys (PA); Jon Pike represented by Shelley Wiseman (UT); Scott A. White represented by Don Beatty (VA); Mike Kreidler (WA); and Allan L. McVey (WV).

1. Adopted its 2022 Fall National Meeting Minutes

Commissioner Arnold made a motion, seconded by Beatty, to adopt the Committee's Dec. 12, 2022, minutes (see *NAIC Proceedings – Fall 2022, NAIC/Consumer Liaison Committee*). The motion passed unanimously.

2. Heard Opening Remarks

Commissioner Stolfi said the NAIC Consumer Participation Board of Trustees met March 21 to discuss Michael Delong's (Consumer Federation of America—CFA) request that the NAIC review the use of telematics in auto insurance. The Property and Casualty Insurance (C) Committee is reviewing this request under its existing charges. The Board reviewed the 2023 budget for the Consumer Participation Program and discussed potential changes to the Consumer Representative applications for 2024.

3. Heard a Presentation from RIPIN, ACS CAN, and CHIR on Barriers to Enrollment

Shamus Durac (Rhode Island Parent Information Network—RIPIN) said Medicaid eligibility is determined at the time of application, during regulator redeterminations, and when a Medicaid agency receives new eligibility information. At the beginning of the COVID-19 public health emergency (PHE), redeterminations were paused, and Medicaid terminations were prohibited. Durac said these protections end on March 31, 2023, and states have 12 months to initiate Redeterminations for all current Medicaid enrollees.

Durac said redeterminations are expected to result in as many as 15 million Americans losing Medicaid coverage. Medicaid renewals can take place *ex parte* when Medicaid can verify income and all other eligibility information. If Medicaid does not have all necessary information, consumers must go through the full renewal process, which requires consumers to provide information and documentation to demonstrate continuing eligibility for Medicaid.

Anna Schwamlein Howard (American Cancer Society Cancer Action Network—ACS CAN) said state insurance regulators should work with their Medicaid counterparts to coordinate the notices Medicaid will be sending to consumers. Schwamlein Howard encouraged state insurance regulators to reach out to health plans so they are prepared for an influx of enrollees and remind health insurers of the requirement to comply with network adequacy requirements. Schwamlein Howard said state insurance regulators should reach out to consumers to

explain changes to Medicaid provisions, provide consumer notices in multiple languages, and be vigilantly watching for fraudulent activity, which may occur during the Medicaid unwinding. For states with state-based exchanges, Schwamlein Howard said states can extend open enrollment past 60 days.

Maanasa Kona (Georgetown University Center on Health Insurance Reforms—CHIR) said federal continuity of care protections apply to patients with serious conditions, including consumers undergoing treatment, such as those who are pregnant or terminally ill. Kona said the protections are available for up to 90 days for the duration of the patient’s treatment and that 29 states offer similar protections to enrollees who lose access to an in-network provider. These protections are limited since they are triggered when a provider leaves a network. Only 13 jurisdictions extend their continuity of care protections when consumers transition from Medicaid to a new plan. At the same time, the protections vary by state. Kona said that state insurance regulators should extend continuity of care protections to consumers transitioning to new plans, require pro-rating of deductibles and out-of-pocket maximums, and require insurance companies to honor prior authorizations for care.

Bettencourt asked how to engage with provider groups to encourage enrollment in Medicaid. Kona said state insurance regulators are encouraged to reach out to providers to ensure they have the necessary information to communicate with consumers.

3. Heard a Presentation from the HCFA, LLS, Consumers’ Checkbook, and the HIV+Hepatitis Policy Institute on “Obstacles to Medically Necessary Care – Part 1: Delays and Red Tape Due to Prior Authorization”

Carl Schmid (HIV+Hepatitis Policy Institute) referenced multiple situations in which consumers had problems accessing necessary prescription drugs due to a lack of authorization by health insurers. Schmid said 17%, or 48 million consumers, experience denied prescription coverages, and very few consumers appeal a denial. Schmid said African Americans and Hispanic Americans were much more affected by the privatization of step therapy. Schmid said prescription drugs that prevent HIV should not require preauthorization by an insurer and that some companies’ preauthorization requirements for long-term HIV treatment are very difficult to meet.

Lucy Culp (Leukemia & Lymphoma Society—LLS) said her organization has seen blood cancer patients struggling with accessing medically necessary care prescribed by their providers. Culp said LLS partnered with Manatt to identify barriers to care and solutions.

Eric Ellsworth (Consumers’ Checkbook/Center for the Study of Services—Consumers’ Checkbook) said the claims adjudication system, with most claims being adjudicated automatically, contributes to the access to care problem. Ellsworth said the medical necessity rules and coding rules are all different between insurance carriers, and it is almost impossible for a health provider or patient to determine what the rules and codes mean. This leads to confusion on why claims and charges are denied. In addition to code-based claims, the utilization management system is unclear and disjointed. Ellsworth said the appeals rate is very low because consumers are not aware of their options for appeal.

Ellsworth said state insurance regulators should work to standardize the different rules and codes across all insurers. Ellsworth said the federal Centers for Medicare & Medicaid Services (CMS) has a rule on interoperability in prior authorization, which addresses patient access, provider access to claims for patients, payer-to-payer guidance, prior authorization rules, and reporting requirements regarding prior authorizations. Ellsworth said the proposed effective date is Jan. 1, 2026, and does not supersede more stringent state laws.

Ashley Blackburn (Health Care for All—HCFA) talked about a proposal in Massachusetts, which is facing an extreme workforce shortage. Blackburn said there is a prior authorization work group that has been developing standardized pre-authorization forms. The current proposal is focused on improving access to and continuity to care by prohibiting prior authorization for generic medications and medications and treatment with low denial

rates, low variation in utilization, or an evidence base to treat chronic illness. The second goal of the Massachusetts bill is to promote transparency and fairness by requiring public data from insurers related to approvals, denials, appeals, and wait times. The third goal of the Massachusetts bill is to improve timely access to care and administrative efficiency, which requires a 24-hour response time for urgent care.

Culp outlined the following recommendations for state insurance regulators: 1) monitor implementation and compliance with the federal interoperability rule; 2) utilize existing authority to monitor carrier conduct; 3) support efforts to improve access and continuity of care; 4) increase public transparency around utilization management; 5) require the use of standard forms and electronic processing; and 6) require standardization in documentation and publication of medical necessity criteria.

#### 4. Heard a Presentation from the NWLC and the NHeLP on “Obstacles to Medically Necessary Care – Refusal of Care and Network Adequacy”

Dorianne Mason (National Women’s Law Center—NWLC) said health care refusals are when consumers are denied medically necessary care. Wayne Turner (National Health Law Program—NHeLP) said individual providers may deny care due to personal or religious objections, and religiously affiliated health care systems may deny care as a matter of policy. Turner said providers may also fail to inform patients of the full array of services and treatment options.

Mason said standards of care are made up of a patchwork of state and federal laws, and through this patchwork, a consumer’s care may be driven by a hospital or individual health care provider’s beliefs rather than what is best for the patient’s health. Mason said refusals of care force patients to delay or forgo necessary care. This is particularly true and dangerous for patients who have limited options for care. Mason said the refusals of care cause the most harm to people of color, people with limited financial resources, young people, LGBTQ individuals, and people seeking gender-affirming care.

Turner said the Center for American Progress (CAP) said 15% of transgender individuals were refused gender-affirming care, and 20% of transgender people of color reported that a provider refused to see them due to the provider’s religious beliefs or the state religious tenets of the healthcare facility. Turner said people who are turned away from care suffer pain and humiliation. Turner said some of the refusals of care violate federal non-discrimination laws. Turner said end-of-life care directives may not be followed due to ethical and religious directives of religiously affiliated healthcare systems. Turner said religiously affiliated providers also dominate some healthcare markets.

Mason said the expansion of Catholic health care has had a disproportionate effect on the sexual and reproductive health care available to women of color, especially with regard to miscarriage management.

Mason and Turner provided the following recommendations for state insurance regulators: 1) prioritize patient access in federal and state rulemaking; 2) conduct state assessments on access to service to identify coverage gaps; 3) include healthcare refusal as part of network adequacy reviews; 4) require transparency for exclusions from coverage; and 5) consider refusals when reviewing health plan/provider mergers and acquisitions.

#### 5. Heard a Presentation Calling Attention to the Dilemma of Current Assumption Policy Illustrations

Richard Weber (Life Insurance Consumer Advocacy Center—LICAC) said current policy illustrations cannot reflect the long-term likelihood of a policy sustaining its ultimate use as a needed death benefit. Weber said the NAIC *Life Insurance Illustrations Model Regulation* (#582) has a stated purpose to protect consumers and foster consumer education. The goal of Model #582 is to ensure that illustrations do not mislead purchasers of life insurance and to make illustrations more understandable.

Weber said the total death benefits in the U.S. is \$21 trillion, with \$14 trillion being term/group life insurance policies. Weber said all universal life insurance policies are designed to combine term life insurance and cash value. Over time, the cash value replaces the term life insurance element, which makes the policy affordable over time. Weber said the cash accumulation will fluctuate over time, and this is not apparent through the use of a current policy illustration. Weber said policy illustrations are not projections. Weber said the main difference in universal life insurance policies is how universal life credits its cash value. Weber said the original universal life insurance policy was a cash accumulation policy with a minimum guaranteed crediting rate (general account). Weber said the variable universal life insurance policy is a cash accumulation policy in a brokerage account with market-driven ups and downs (security). Weber said there is also an indexed universal life insurance policy where cash accumulation is based on an external index.

Weber provided some simple graphic views of variable universal life policies and said an illustration showing a \$5,900 annual premium with an illustrated rate of return of 10% had only an 8% probability of success of actually covering a policyholder until age 100. Weber said consumers should buy policies based on the probability of success rather than the lowest premium. Weber said a policy with a constant illustrated rate of return of 4.4% would need an annual premium of \$16,500 to reach a 99% probability of success.

Weber suggested insurance companies and agents should discuss the probability of success based on annual premiums and the implied constant illustration rate. Weber said this would provide consumers with a better understanding of what they are purchasing. Weber recommended the NAIC reopen Model #582 to address indexed universal life products, no-lapse guarantees, and variable universal life insurance products.

6. Heard a Presentation from the CEJ on “Dark Patterns in Digital Communications: Addressing the Perils of Moving from Paper to Digital Consumer Interactions”

Birny Birnbaum (Center for Economic Justice—CEJ) said dark patterns are user interface techniques that benefit an online service by leading consumers into making decisions they might not otherwise make. Some dark patterns deceive consumers, while others exploit cognitive biases or shortcuts to manipulate or coerce them into choices that are not in their best interests. Birnbaum said dark patterns are a specific type of choice architecture in website and app design that interfere with user autonomy and choice. Dark patterns modify the presentation of choices available to users or manipulate the flow of information so that users make selections that they would not otherwise have chosen—to their own detriment and to the benefit of the website or app provider. Dark patterns include imposing asymmetric burdens to achieve competing choices, restricting the choices available at the same time (or at all), and hiding information or presenting information deceptively.

From Jamie Liguri published in “Shining a Light on Dark Patterns,” Birnbaum listed the following types of dark patterns:

- Nagging: Repeated requests to do something the firm prefers.
- Confirm shaming: Choice framed in a way that makes it seem dishonorable or stupid.
- Forced Action: Requiring opt-out of optional services, manipulative extraction of personal information and information about other users.
- Social Proof: False/misleading notices that others are purchasing or offering testimonials.
- Roach Motel: Asymmetry between signing up and canceling.
- Price Comparison Prevention: Difficulty in understanding and comparing prices.
- Hidden Information/Aesthetic Manipulation: Important information visually obscured.

From the European Consumer Organization’s (BEUC’s) “Fast Track to Surveillance,” Birnbaum quoted the following: “During this signup process, which involves consumers taking important decisions about how Google will process their personal data, the tech giant uses a combination of deceptive design, unclear language,

misleading choices, and missing information. With only one step ('express personalization'), the consumer activates all the account settings that feed Google's surveillance activities. Google does not provide consumers with the option to turn all settings 'off' in one step. If consumers want to try to protect their privacy, it requires 'manual personalization': five steps with ten clicks and grappling with information that is unclear, incomplete, and misleading. Consider the consent for use of cookies on most websites. In almost every case, one click is required to accept all cookies. If you want to avoid sharing your personal information, it requires many clicks."

Birnbaum provided some examples of state regulation of dark patterns in California, Connecticut, Colorado, the Federal Trade Commission (FTC), and the Consumer Financial Protection Bureau (CFPB). Birnbaum said it is critical for state insurance regulators to understand and address dark patterns. Insurance regulatory disclosures are based on and designed for paper, not digital interfaces. Paper disclosures are static. Digital disclosures are dynamic and change based on the consumer, the method of consumer interaction, and the choices of the consumer during the process. There has been a massive and rapid increase in digital interactions in place of paper or face-to-face interactions between consumers and insurers.

Birnbaum provided the following recommendations for the Market Regulation and Consumer Affairs (D) Committee:

- Train analysts and examiners to recognize dark patterns and manipulative digital design.
- Compile resources on manipulative digital design.
- Review existing disclosure requirements. Do they make sense for a digital interface and protect against dark patterns?
- Update guidance in regulations as needed—not just revisions in disclosures and disclosure requirements but articulating dark patterns as an unfair and deceptive trade practice.
- Develop relevant methods of regulatory review and update the *Market Regulation Handbook*.

In response to Commissioner Stolfi's question of when a website design becomes a dark pattern, Birnbaum said a website design becomes a dark pattern when the website obscures a choice for a consumer. For example, Birnbaum said a person can purchase travel insurance with one click but cannot revoke a purchase with one click. This is an example of an asymmetric approach.

#### 7. Heard a Presentation from the AEPI on "Aftermarket Parts: Imitation Often is Not Equal"

Erica Eversman (Automotive Education & Policy Institute—AEPI) said an aftermarket part is any part that is not factory-installed. An imitation or generic part is any part that was made for use in the repair of a vehicle that is not sanctioned or authorized by the automobile manufacturer. Eversman said the NAIC's *After Market Parts Model Regulation* (#891) applies to only external sheet metal and plastic parts. Eversman said the evolution of arguments in favor of the use of imitation parts include the following: 1) the parts are purely cosmetic; 2) the parts are identical to the automaker parts; and 3) the parts are made by the same manufacturer as the automaker parts. Because of these arguments, Ford Motor Company successfully sued parts makers and distributors for design patent infringement.

Eversman said the claims that aftermarket parts and imitation parts are of the same likeness, kind, and quality as factory-installed parts are not accurate. Eversman said aftermarket parts and imitation parts are not made of the same steel type, weight, and specifications. Eversman said automakers routinely void and restrict auto warranties for any portion of a vehicle on which an insurance claim is paid. In addition, Eversman said an automobile conditions report will note the use of imitation parts if a vehicle repair has been made, which reduces the value of the vehicle.

Eversman said the Certified Automotive Parts Association (CAPA) was funded by the insurance industry. However, Eversman said CAPA routinely decertifies parts. At the same time, Eversman said there is no entity responsible for providing consumer notifications about decertification, and the National Highway Traffic Safety Administration (NHTSA) does not have the authority to recall parts.

Eversman provided the following recommendations:

- Establish a charge under the Property and Casualty Insurance (C) Committee to revisit what an aftermarket part is.
- Establish a concrete definition and criteria for determining proper use in insured/consumer repairs.
- Require auto insurers to establish and publish recall methodology for decertified or defective imitation parts.
- Establish a mechanism for insureds/consumers to obtain replacement parts and installation.
- Mandate payment for replacement parts and installation.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.

Draft: 4/10/23

NAIC/American Indian and Alaska Native Liaison Committee  
Louisville, Kentucky  
March 25, 2023

The NAIC/American Indian and Alaska Native Liaison Committee met in Louisville, KY, March 25, 2023. The following Liaison Committee members participated: Glen Mulready, Chair (OK); Trinidad Navarro, Vice Chair (DE); Lori K. Wing-Heier (AK); Dean L. Cameron represented by Shannon Hohl (ID); Grace Arnold represented by Peter Brickwedde (MN); Chlora Lindley-Myers represented by Jo LeDuc (MO); Troy Downing (MT); Mike Causey represented by Tracy Biehn (NC); Jennifer A. Catechis (NM); Andrew R. Stolfi represented by TK Keen and Eric Cutter (OR); Larry D. Deiter represented by Tony Dorschner (SD); Jon Pike represented by Tanji J. Northrup and Brian Hiller (UT); Mike Kreidler (WA); Nathan Houdek represented Sarah Smith (WI); and Jeff Rude (WY). Also participating were: John Arnold (ND); and Patrick Smock (RI).

1. Adopted its 2022 Fall National Meeting Minutes

Commissioner Navarro made a motion, seconded by Brickwedde, to adopt the Committee's Dec. 14, 2022, minutes (see *NAIC Proceedings – Fall 2022, NAIC/Consumer Liaison Committee, Attachment Two*). The motion passed unanimously.

2. Adopted the Results of its Member Survey and Discussed its Next Steps for 2023

Commissioner Mulready gave an overview of the responses received to the Committee's survey of Members regarding topics to be discussed in 2023. He thanked the Members who responded to the survey with their recommendations for agenda topics for the Liaison Committee to discuss this year. Commissioner Mulready said the responses to the survey were included in the meeting packet for Members at the head table. He said the topics included: tribal issues with the federal Affordable Care Act (ACA); property/casualty (P/C) insurance; large agencies selling to tribal members; the Tribal Association of Insurance Commissioners (TAIC); Sovereign Nations Health Consortium (SNHC); and conducting an interim meeting. Commissioner Mulready said he met with leaders from the SNHC in his office two weeks ago. He also discussed the Committee's next steps for the rest of the year.

3. Heard a Presentation from Blue Cross and Blue Shield of Oklahoma on the Risk Adjustment Treatment of Tribal Enrollees

Commissioner Mulready introduced Lucinda Myers (Blue Cross and Blue Shield of Oklahoma) and J.T. Petherick (Blue Cross and Blue Shield of Oklahoma) as the speakers for this presentation.

Commissioner Mulready said their presentation was titled "ACA Risk Adjustment Treatment of Tribal Enrollees: Barrier to Tribal Member Enrollment and Investments in Tribal Health and Health Equity." This presentation is important because it highlights the inequities of the federal Centers for Medicare & Medicaid Services (CMS) risk assessment process, especially relative to underserved tribal communities due to the lack of tribal investment opportunities.

Petherick said he appreciates the aims of the Committee going forward and that this presentation is just an introduction to future work with the Oklahoma Department of Insurance (DOI) regarding their boots-on-the-ground approach.

Myers said her office serves as a resource for building partnerships to improve health care to the underserved communities. She said she has done liaison work for more than eight years and that she has helped more than 36,000 people since 2012 with the Mobile Assistance Center helping her to become a trusted provider and to create a custom network. Myers said when tribes and insurers work together, care is better.

Petherick said Blue Cross and Blue Shield of Oklahoma does all it can to increase coverage opportunities as evidenced by its 10<sup>th</sup> anniversary on the Tribal Liaison Council. He said their relationship began in 2014 with the federal Affordable Care Act (ACA) and that, initially, the company did not know how risk-sharing and zero premium would work, particularly as a health care 501 (c) group. He described how slides based on the cost-sharing reduction (CSR) demand factors and induced demand factors (IDF) accuracy 2021 risk adjustment paper showed how the inequities of federal risk assessments served as barriers to tribal member enrollments and investments in tribal health. Petherick said insurers should not be penalized for the disparities in health in American Indian and Alaska Native communities. He said the modeling results suggest using the Platinum plan rather than the Silver plan as illustrated by his example of recalibrated CSR factors. Mr. Petherick said it is used for services through Medicare outside of Indian Health Services.

Director Wing-Heier said that this has been a problem in Alaska for many years because they have only two carriers, and the CMS has not responded to them on this issue.

Josh Goldberg (Blue Cross and Blue Shield of Oklahoma), said he has been meeting with the CMS about the report, but it was not ready in time to meet the CMS deadline. He said, however, that they plan to continue the process and to discuss the report with the CMS.

Hiller asked if any state would be willing to take this on; there was no response.

Commissioner Mulready said he has had conversations with the CMS on this issue as well, and it needs to be addressed by this Liaison Committee. He said the Platinum product reduces the administrative process and is geared toward larger tribes with self-funded group plans, so employers and employees of tribes love it.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
