

A Profile of the Working Poor, 2015

April 2017 | Report 1068

In 2015, according to the U.S. Census Bureau, about 43.1 million people, or 13.5 percent of the nation’s population, lived below the official poverty level.¹ (See the technical notes section for examples of poverty levels.) Although the poor were primarily children and adults who had not participated in the labor force during the year, 8.6 million individuals were among the “working poor” in 2015, according to data from the Bureau of Labor Statistics; the 8.6 million figure was down from 9.5 million in 2014. The working poor are people who spent at least 27 weeks in the labor force (that is, working or looking for work) but whose incomes still fell below the official poverty level. In 2015, the working-poor rate—the ratio of the working poor to all individuals in the labor force for at least 27 weeks—was 5.6 percent, 0.7 percentage point lower than the previous year’s figure. (See table A and 1 and chart 1)

Following are some highlights from the 2015 data:

- Full-time workers continued to be much less likely to be among the working poor than were part-time workers. Among persons in the labor force for 27 weeks or more, 3.4 percent of those usually employed full time were classified as working poor, compared with 14.1 percent of part-time workers (table 1).
- Women were more likely than men to be among the working poor. In addition, Blacks and Hispanics continued to be more than twice as likely as Whites and Asians to be among the working poor (table 2).
- The likelihood of being classified as working poor diminishes as workers attain higher levels of education. Among those with less than a high school diploma, 16.2 percent of those who were in the labor force for at least 27 weeks were classified as working poor, compared with 1.7 percent of college graduates (table 3).
- Individuals who were employed in service occupations continued to be more likely to be among the working poor than those employed in other major occupational groups (table 4).
- Among families with at least one member in the labor force for 27 weeks or more, those with children under 18 years old were about 5 times as likely as those without children to live in poverty. Families maintained by women were almost twice as likely as families maintained by men to be living below the poverty level (table 5).

Table A. Poverty status of people and primary families in the labor force for 27 weeks or more, 2007–15 (Numbers in thousands)

Characteristic	2007	2008	2009	2010	2011	2012	2013	2014	2015

¹ Includes individuals in families, not shown separately.

² Primary families with at least one member in the labor force for more than half the year.

Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement (ASEC).

This report presents data on the relationship between labor force activity and poverty status in 2015 for workers and their families. These data were collected in the 2016 Annual Social and Economic Supplement to the Current Population Survey. (For a detailed description of the source of the data and an explanation of the concepts and definitions used in the report, see the technical notes.) The specific income thresholds used to determine people’s poverty status vary, depending on whether the individuals are living with family members or are living alone or with nonrelatives. For family members, the poverty threshold is determined by their family’s total income; for individuals not living in families, their personal income is used as the determinant.

Chart 1. Working-poor rate of people in the labor force for 27 weeks or more, 1986–2015

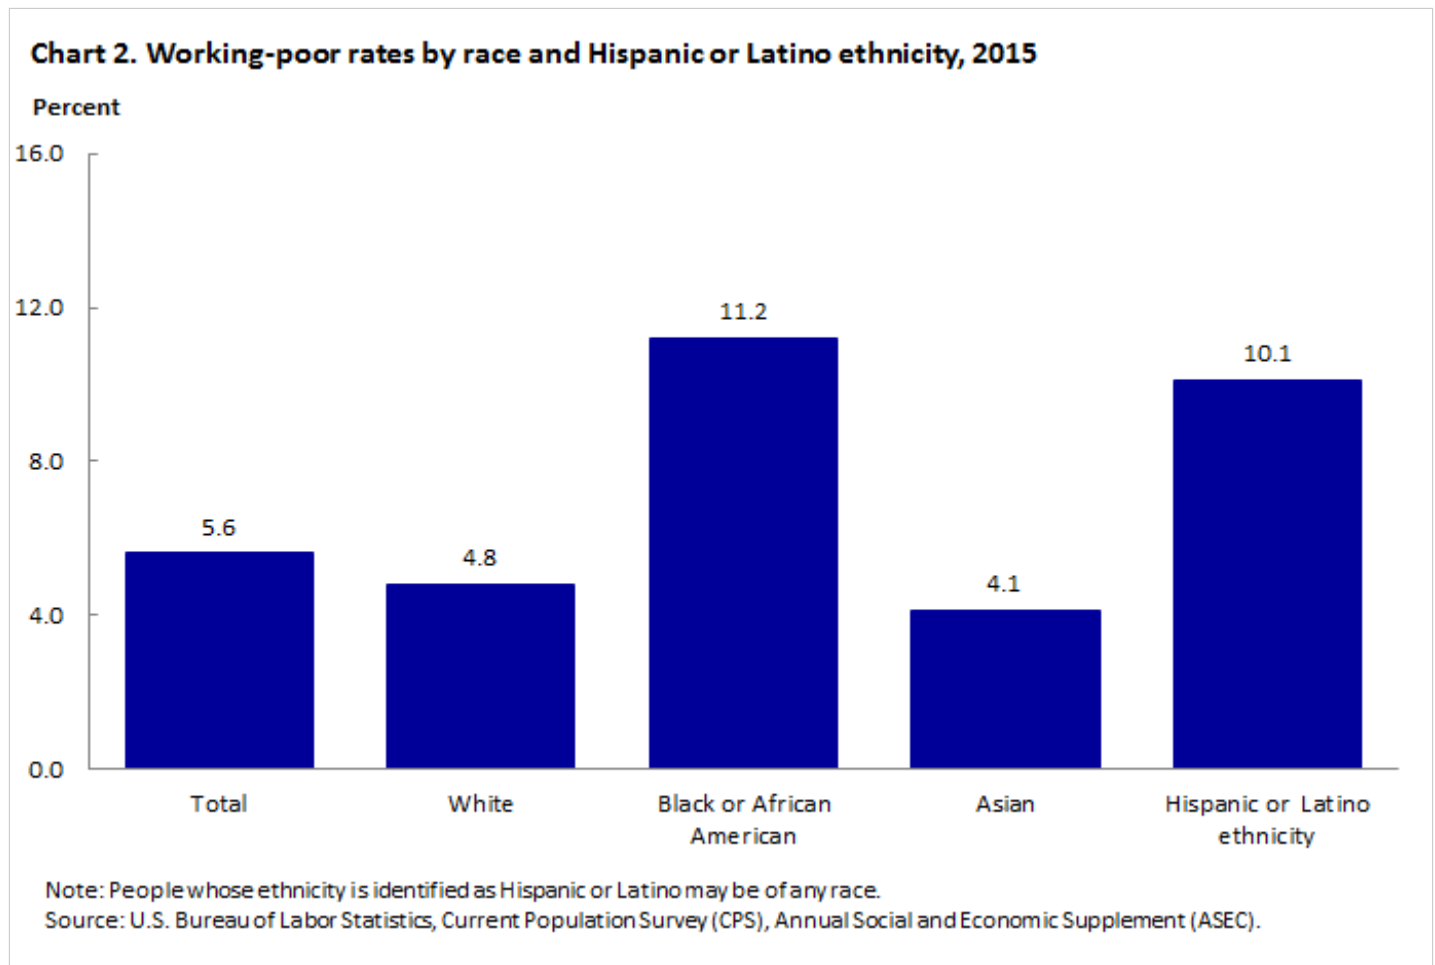

Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement (ASEC).

Demographic characteristics

Among those who were in the labor force for 27 weeks or more in 2015, the number of women classified as working poor (4.5 million) was higher than that of men (4.1 million). The working-poor rate also continued to be higher for women (6.3 percent) than for men (5.0 percent). The working-poor rates for both women and men were down from a year earlier. (See table 2.)

Blacks and Hispanics were more than twice as likely as Whites and Asians to be among the working poor. In 2015, the working-poor rates of Blacks and Hispanics were 11.2 percent and 10.1 percent, respectively, compared with 4.8 percent for Whites and 4.1 percent for Asians. (See chart 2 and table 2.)

Among Whites and Blacks, the working-poor rate was higher for women than for men. The rates for White women and White men who spent at least 27 weeks in the labor force were 5.2 percent and 4.4 percent, respectively. The rate for Black women was 13.3 percent, compared with 8.8 percent for Black men. Among Asians and Hispanics, the rates for women and men were little different from each other.

Young workers are more likely to be poor than are workers in older age groups, in part because earnings are lower for young workers and the unemployment rate for young workers is higher. Among youths who were in the labor force for 27 weeks or more, 10.8 percent of 16- to 19-year-olds and 12.2 percent of 20- to 24-year-olds were living in poverty in 2015. Those rates were considerably higher than the rates for workers ages 25 to 34 (6.6 percent) and 35 to 44 (6.4 percent). Workers ages 45 to 54, 55 to 64, and 65 and older had lower working-poor rates—3.7 percent, 3.4 percent, and 1.6 percent, respectively—than did the younger age groups.

Educational attainment

Achieving higher levels of education reduces the incidence of living in poverty. Individuals who complete more years of education usually have greater access to higher paying jobs—such as management, professional, and related occupations—than those with fewer years of education. Of all the people in the labor force for 27 weeks or more in 2015, those with less than a high school diploma had a higher working-poor rate (16.2 percent) than did high school graduates with no college (7.6 percent). Workers with an associate’s degree and those with a bachelor’s degree or higher had the lowest working-poor rates (3.8 percent and 1.7 percent, respectively). In 2015, at all levels of educational attainment, except for bachelor’s degree or higher, women were more likely than men to be among the working poor. (Among those with a bachelor’s degree or higher, men and women were equally likely to be classified as working poor.) Blacks and Hispanics generally were more likely to be among the working poor than were Whites and Asians with the same educational attainment. (See table 3.)

Occupation

The likelihood of being among the working poor varies widely by occupation. Workers in occupations requiring higher education and characterized by relatively high earnings—such as management, professional, and related occupations—were least likely to be classified as working poor. For example, 1.8 percent of those in management, professional, and related occupations were among the working poor in 2015. By contrast, individuals employed in occupations that typically do not require high levels of education and that are characterized by relatively low earnings were more likely to be among the working poor. For instance, 11.6 percent of service workers who were in the labor force for at least 27 weeks were classified as working poor in 2015. Indeed, service occupations, with 3.0 million working poor, accounted for 38 percent of all those classified as working poor. Among those employed in natural resources, construction, and maintenance occupations, 6.9 percent were classified as working poor. Within this occupation group, 14.1 percent of workers in farming, fishing, and forestry occupations were among the working poor. (See table 4.)

Families

In 2015, 4.6 million families were living below the poverty level despite having at least one member in the labor force for half the year or more. This figure was down from 5.1 million in 2014. Among families with only one member in the labor force for at least 27 weeks in 2015, married-couple families had a lower likelihood of living below the poverty level (8.5 percent) than did families maintained by women (23.9 percent) or by men (14.0 percent). (See table 5.)

Among families with at least one member in the labor force for more than half the year, those with children in the household were much more likely to live below the poverty level than those without children. The proportion of families with children under age 18 that lived in poverty was 11.1 percent, compared with 2.2 percent for families without children. Among families with children under 18, the working-poor rate for those maintained by women (24.8 percent) was higher than that for those maintained by men (15.3 percent). Married-couple families with children under 18 had a working-poor rate of 6.2 percent in 2015.

Unrelated individuals

The “unrelated individuals” category includes individuals who live by themselves or with others not related to them. Of the 36.0 million unrelated individuals who were in the labor force for half the year or longer, 3.1 million lived below the poverty level in 2015, down from 3.4 million a year earlier. The working-poor rate for unrelated individuals was 8.7 percent, a decrease of 1.0 percentage point from the previous year’s figure. (See table 6.)

Within the group of unrelated individuals, teenagers continued to be the most likely to be among the working poor. In 2015, 46.3 percent of teens who were in the labor force for 27 weeks or more and who lived on their own or with others not related to them lived below the poverty level. Overall, the working-poor rate for men living alone or with nonrelatives was 8.2 percent, and the rate for women was 9.3 percent. The working-poor rates for unrelated individuals were 13.9 percent for Blacks, 10.7 percent for Hispanics, 8.2 percent for Asians, and 7.7 percent for Whites. (See table 7.)

Of the 3.1 million unrelated individuals considered to be among the working poor in 2015, about 3 out of 5 lived with others. These individuals had a much higher working-poor rate than individuals who lived alone. Many unrelated individuals living below the poverty level may live with others out of necessity. By contrast, many of those who live alone do so because they have sufficient income to support themselves. Unrelated individuals' poverty status, however, is determined by each person's resources. The pooling of resources and sharing of living expenses may permit some individuals in this category—who are technically classified as poor—to live at a higher standard than they would have if they lived alone.

Labor market problems

As noted earlier, people who usually work full time are less likely to live in poverty than are those who work part time, yet there remains a sizable group of full-time workers who live below the poverty threshold. Among those who participated in the labor force for 27 weeks or more and usually worked in full-time wage and salary jobs, 3.8 million, or 3.2 percent, were classified as working poor in 2015—down from 4.4 million a year earlier. (See table 8.)

There are three major labor market problems that can hinder a worker's ability to earn an income that is above the poverty threshold: low earnings, periods of unemployment, and involuntary part-time employment. (See the technical notes section for detailed definitions.)

In 2015, 82 percent of the working poor who usually work full time experienced at least one of the major labor market problems. Low earnings continued to be the most common problem, with 68 percent subject to low earnings, either as the only problem or in combination with other labor market problems. About 31 percent experienced unemployment as the main labor market problem or in conjunction with other problems. Four percent of the working poor experience all three problems: low earnings, unemployment, and involuntary part-time employment.

Some 685,000, or 18 percent, of the working poor who usually worked full time did not experience any of the three primary labor market problems in 2015. Their classification as working poor may be explained by other factors, including short-term employment, some weeks of voluntary part-time work, or a family structure that increases the risk of poverty.

Notes

¹ *Income and Poverty in the United States: 2015*, Current Population Reports, P60-256 (U.S. Census Bureau, September 2016), table 3, <https://www.census.gov/content/dam/Census/library/publications/2016/demo/p60-256.pdf>.

¹ Number below the poverty level as a percentage of the total in the labor force for 27 weeks or more.

² Includes people with a high school diploma or equivalent.

³ Includes people with bachelor's, master's, professional, and doctoral degrees.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race. Dash represents zero, rounds to zero, or indicates that base is less than 80,000.

Poverty status and work experience	Total people	In married-couple families ¹				In families maintained by women ²			In families maintained by men ²			Unrelated individuals
		Husbands	Wives	Related children under 18 years	Other relatives	Householder	Related children under 18 years	Other relatives	Householder	Related children under 18 years	Other relatives	
1 to 26 weeks	18.2	7.9	7.4	2.4	3.4	58.2	30.0	22.7	28.5	-	6.5	43.7
27 weeks or more	5.6	3.4	1.7	2.2	2.0	18.5	15.0	8.0	9.2	4.3	4.1	8.7
With no labor force activity	21.9	10.9	10.7	9.7	8.4	44.3	35.6	28.2	29.9	23.6	18.7	40.9

¹ Refers to opposite-sex married-couple families only.

² No opposite-sex spouse present.

³ Number below the poverty level as a percentage of the total.

Note: Dash represents zero, rounds to zero, or indicates that base is less than 80,000.

Table 7. Unrelated individuals in the labor force for 27 weeks or more: poverty status, by age, gender, race, Hispanic or Latino ethnicity and living arrangement, 2015 (Numbers in thousands)

Characteristic	Total	At or above poverty level	Below poverty level	Rate ¹
Age and gender				
Total unrelated individuals	35,953	32,817	3,137	8.7
16 to 19 years	373	200	173	46.3
20 to 24 years	4,182	3,304	878	21.0
25 to 64 years	28,729	26,705	2,024	7.0
65 years and older	2,669	2,607	62	2.3
Men	19,700	18,075	1,625	8.2
Women	16,253	14,741	1,512	9.3
Race and Hispanic or Latino ethnicity				
White	28,058	25,907	2,151	7.7
Men	15,481	14,409	1,072	6.9
Women	12,577	11,498	1,080	8.6
Black or African American	5,126	4,416	710	13.9
Men	2,710	2,330	380	14.0
Women	2,416	2,086	330	13.7
Asian	1,533	1,408	125	8.2
Men	822	747	75	9.1
Women	711	661	51	7.1
Hispanic or Latino, ethnicity	4,887	4,364	523	10.7
Men	3,101	2,818	283	9.1
Women	1,786	1,546	240	13.4
Living arrangement				
Living alone	18,469	17,285	1,184	6.4
Living with others	17,484	15,531	1,953	11.2

¹ Number below the poverty level as a percentage of the total in the labor force for 27 weeks or more.

Note: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

Table 8. People in the labor force for 27 weeks or more: poverty status and labor market problems of full-time wage and salary workers, 2015 (Numbers in thousands)

Labor market problems	Total	At or above poverty level	Below poverty level	Rate ¹
Total, full-time wage and salary workers	118,203	114,450	3,753	3.2
No unemployment, involuntary part-time employment, or low earnings ²	99,264	98,579	685	0.7
Workers experiencing one labor market problem				
Unemployment only	5,259	4,891	368	7.0
Involuntary part-time employment only	2,538	2,478	60	2.3
Low earnings only	7,697	6,037	1,660	21.6
Workers experiencing multiple labor market problems				
Unemployment and involuntary part-time employment	993	911	82	8.2
Unemployment and low earnings	1,357	795	561	41.4
Involuntary part-time employment and low earnings	728	539	189	26.0
Unemployment, involuntary part-time employment, and low earnings	368	220	148	40.3
Workers experiencing each labor market problem				
Unemployment (alone or with other problems)	7,976	6,817	1,159	14.5
Involuntary part-time employment (alone or with other problems)	4,626	4,147	479	10.3
Low earnings (alone or with other problems)	10,149	7,591	2,558	25.2

1 Number below the poverty level as a percentage of the total in the labor force for 27 weeks or more.

2 The low-earnings threshold in 2015 was \$348.85 per week.

Technical Notes

The data presented in this report were collected in the Annual Social and Economic Supplement (ASEC) to the Current Population Survey (CPS). Conducted by the U.S. Census Bureau for the Bureau of Labor Statistics, the CPS is a monthly sample survey of about 60,000 eligible households. Data from the CPS are used to obtain monthly estimates of the nation's employment and unemployment levels. The ASEC, conducted in the months of February through April, includes questions about work activity and income during the previous calendar year. For instance, data collected in 2016 are for the 2015 calendar year.

The estimates presented in this report are based on a sample and, consequently, may differ from estimates that would have been obtained from a complete count using the same questionnaire and procedures. Sampling variability may be relatively large in cases where the numbers are small. Thus, both small estimates and small differences between estimates should be interpreted with caution. For a detailed explanation of the ASEC supplement to the CPS, its sampling variability, more extensive definitions than those provided here, and additional information about income and poverty measures, see "Income and poverty in the United States: 2015," *Current Population Reports*, P60-256 (U.S. Census Bureau, September 2016), <https://www.census.gov/content/dam/Census/library/publications/2016/demo/p60-256.pdf>.

Material in this report is in the public domain and may be reproduced without permission.

Concepts and definitions

Poverty classification. Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families on the basis of factors such as family size and the number of children under 18 years of age.

The actual poverty thresholds vary with the makeup of the family. In 2015, the weighted average poverty threshold for a family of four was \$24,257; for a family of nine or more people, the threshold was \$49,177; and for one person (see Unrelated individuals), it was \$12,082. Poverty thresholds are updated each year to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). Thresholds do not vary geographically. (For more information, see "Income and poverty in the United States: 2015.")

Low earnings. The low-earnings level, as first developed in 1987, represented the average of the real value of the minimum wage between 1967 and 1987 for a 40-hour workweek. The year 1967 was chosen as the base year because that was the first year in which minimum-wage legislation covered essentially the same broad group of workers that currently is covered. The low-earnings level has been adjusted each year since then in accordance with the CPI-U, so the measure maintains the same real value that it held in 1987. In 2015, the low-earnings threshold was \$348.85 per week. For a complete definition, see pp. 5–8 of "A profile of the working poor," *Monthly Labor Review*, <https://www.bls.gov/opub/mlr/1989/10/art1full.pdf>.

Income. Data on income are limited to money income—before personal income taxes and payroll deductions—received in the calendar year preceding the CPS supplement. Data on income do not include the value of noncash benefits, such as food stamps, Medicare, Medicaid, public housing, and employer-provided benefits. For a complete definition of income, see “Income and poverty in the United States: 2015.”

Labor force. People in the labor force are those who worked or looked for work sometime during the calendar year. The number of weeks in the labor force is accumulated over the entire year. The focus in this report is on people who were in the labor force for 27 weeks or more.

Working poor. The working poor are people who spent at least 27 weeks in the labor force (that is, working or looking for work) but whose incomes still fell below the official poverty level.

Working-poor rate. This rate is the number of individuals in the labor force for at least 27 weeks whose incomes still fell below the official poverty level, as a percentage of all people who were in the labor force for at least 27 weeks during the calendar year.

Involuntary part-time workers. These are people who, during at least 1 week of the year, worked fewer than 35 hours because of slack work or unfavorable business conditions or because they could not find full-time work. The number of weeks of involuntary part-time work is accumulated over the year.

Occupation. This term refers to the job in which a person worked the most weeks during the calendar year.

Unemployed. Unemployed people are those who looked for work while not employed or those who were on layoff from a job and were expecting to be recalled to that job. The number of weeks unemployed is accumulated over the entire year.

Family. A family is defined as a group of two or more people residing together who are related by birth, marriage, or adoption. The count of families used in this report includes only primary families. A primary family consists of the reference person (the householder) and all people living in the household who are related to the reference person. Families are classified either as married-couple families or as those maintained by men or women without spouses present. Family status is determined at the time of the survey interview and, thus, may be different from that of the previous year.

Unrelated individuals. These are people who are not living with anyone related to them by birth, marriage, or adoption. Such individuals may live alone, reside in a nonrelated family household, or live in group quarters with other unrelated individuals.

Related children. Related children are children under age 18 (including sons, daughters, stepchildren, and adopted children) of the husband, wife, or person maintaining the family, as well as other children related to the householder by birth, marriage, or adoption.

Race. White, Black or African American, and Asian are categories used to describe the race of people. People in these categories are those who selected that race group only. Data for the two remaining race categories—American Indian and Alaska Native, and Native Hawaiian and Other Pacific Islander—and for people who selected more than one race category are included in totals, but are not shown separately because the number of survey respondents is too small to develop estimates of sufficient quality for publication. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. This term refers to people who identified themselves in the CPS enumeration process as being of Hispanic, Latino, or Spanish ethnicity. People whose ethnicity is identified as Hispanic or Latino may be of any race.
