

SPILL RESPONSE

A Step-By-Step Guide To Spill Response

Safeguard the health and safety of personnel, the environment and workplace by complying with all regulations and workplace spill procedures.

1 RISK ASSESSMENT.

The first step is to identify the liquid that spilled. This will tell you how serious a threat it poses and what precautions need to be taken. If you can't identify the spilled fluid treat it as highly toxic and unsafe. Each BREG Spill Kit contains a guide on how to identify and clean up spills.

2 PUT ON PROTECTIVE GEAR.

Protect your hands and eyes with gloves and goggles. For more aggressive spills, a full HazMat suit may be required and a ventilator to guard against toxic fumes.

3 CONTAIN THE SPILL.

Use BREG absorbent socks found in each Spill Kit to contain the spill and keep it from spreading and causing further contamination.

4 STOP THE FLOW A.S.A.P.

Take immediate action to stop the source of spill and minimize its impact.

5 CLEAN UP THE SPILL.

Using the appropriate style and type of absorbent, thoroughly clean up the spill with extreme care and attention.

6 DISPOSE AND DECONTAMINATE.

Properly dispose of all used sorbents and all other contaminated items and materials according to local, state and federal regulations. Determine if it's necessary to also decontaminate the site, personnel and equipment.

7 PREPARE THE NECESSARY REPORTS.

Use our incident reporting kit. Complete all required notifications and reports regarding the spill as mandated by the company, as well as all local, state and federal regulators.
