

AskRail was developed by the Class I Carriers in collaboration with the International Association of Fire Chiefs

Through AskRail's easy-to-use interface, emergency responders can:

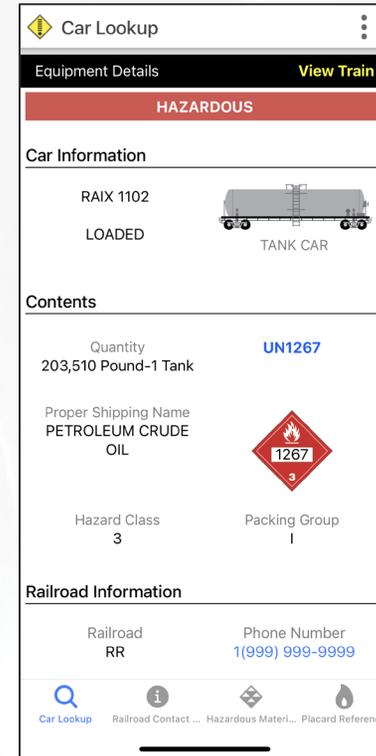

- Query the contents of a railcar with a simple railcar ID search
- View the make up of the train if the car is on an active train
- View emergency contact information for all Class I railroads
- Access reference resources that can support their incident response
- Access a list of emergency contact phone numbers for all seven Class I freight railroads
- Export the consist for use with incident management software

AskRail provides critical information to responders who arrive first to an incident

AskRail provides immediate access to accurate, real-time information about railcars carrying hazardous materials.

Enter railcar Initials and Numbers in AskRail's query field

AskRail provides the following information:

- Loaded or empty status
- Hazardous or non-hazardous
- United Nations ID Number
- Proper shipping name
- Hazard class
- Railroad name
- Railroad's emergency contact

If a train consist is associated with the car number, the consist will be displayed with details for each car
