The Texas HIV Surveillance Report is an annual report generated by:

Texas Department of State Health Services

Important Notes on the data:

This report describes HIV and AIDS cases reported to the Texas Department of State Health Services Surveillance Program which were diagnosed through December 31, 2021, and reported to the Enhanced HIV/AIDS Reporting System (eHARS) by August 25, 2022, the cut-off date for the creation of the current HIV analysis data file. The report presents data by diagnosis year vs. report year.

HIV Diagnoses - All HIV cases regardless of disease status (HIV-only or AIDS) at diagnosis.

AIDS - The AIDS data in this report include all cases who were diagnosed with AIDS in the given time frame, regardless of whether they were previously diagnosed as HIV-only or if they were newly diagnosed and had already met the AIDS case definition ([cdc.gov/mmwr/preview/mmwrhtml/rr6303a1.htm](https://www.cdc.gov/mmwr/preview/mmwrhtml/rr6303a1.htm)).

People Living with HIV - These data represent the cumulative number of people living with HIV in Texas who are not reported as deceased. In terms of geography, the report lists cases by residence at the time of HIV or AIDS diagnosis. In late 2021, DSHS matched all Texas HIV cases against two national death indices. DSHS discovered many deaths not previously recorded in the surveillance system. These were not necessarily deaths due to HIV, nor were they deaths which occurred in any one time frame. Consequently, the number of people living with HIV in Texas is slightly lower than the number listed in previous reports. Texas' HIV data is constantly evolving and improving; therefore, the most recent report or analysis is the most accurate.

Cumulative HIV Diagnoses - Cumulative data represent all cases in the Texas eHARS reporting system, living or deceased, by residence at HIV or AIDS diagnosis.

A substantial number of cases of HIV infection and AIDS are reported without an identified risk factor. Therefore, DSHS uses multiple imputation, a Centers for Disease Control and Prevention (CDC) algorithm which involves assigning values for cases with missing risk factor data, in the tables showing estimated transmission categories for diagnoses among adults and adolescents.

DSHS used population numbers provided by the U.S. Census Bureau's Population Estimates and Projections Program to calculate rates. The rates are current as of July 1, 2022. Population denominators used to calculate rates of HIV/AIDS among men who have sex with men (MSM) were estimated through a previously published methodology. These estimates are available through 2020.

Definitions:

The Centers for Disease Control and Prevention of the United States Public Health Service defines HIV infection and AIDS for surveillance purposes. Visit the page below to find the publication designating the most current definition:

cdc.gov/hiv/library/reports/hiv-surveillance.html

Beginning with 2017 data, DSHS based Texas HIV surveillance reporting of gender on calculations which account for both "sex assigned at birth" and "current gender identity" to illustrate data on transgender people. Transgender is a term for people whose gender identity or expression is different from their sex assigned at birth. Transgender women are people who were assigned the male sex at birth but identify as women. Transgender men are people who were assigned the female sex at birth but identify as men. To accurately identify transgender people, DSHS requires both the person's sex assigned at birth and their current gender identity.

Reporting Authority:

Texas enacted the Communicable Disease Prevention and Control Act (the "Act") to safeguard Texans against sexually transmitted diseases. Under the Act's authority, the Texas Department of State Health Services created rules and regulations focused on:

1. Reporting communicable disease(s), providing public health surveillance.
2. Adopting rules to address the performance of duties created by DSHS under the Act and Texas Administrative Code.
