Domestic Uranium Production Report 2nd Quarter 2019

August 2019

This report was prepared by the U.S. Energy Information Administration (EIA), the statistical and analytical agency within the U.S. Department of Energy. By law, EIA's data, analyses, and forecasts are independent of approval by any other officer or employee of the United States Government. The views in this report therefore should not be construed as representing those of the Department of Energy or other federal agencies.

Introduction

In this report, the U.S. Energy Information Administration (EIA) reports U.S. uranium production from 1996 through the second quarter of 2019. Data in this report are based on information reported on Form EIA-851A, *Domestic Uranium Production Report (Annual)*, and Form EIA-851Q, *Domestic Uranium Production Report (Quarterly)*.

Previous issues of this report are available on the [EIA website](#).

Definitions for terms used in this report are available in EIA's [Energy Glossary](#).

Second quarter of 2019

U.S. production of uranium concentrate (U_3O_8) in the second quarter of 2019 was 44,569 pounds, down 24% from the first quarter of 2019 and down 88% from the second quarter of 2018. During the second quarter of 2019, U.S. uranium was produced at four U.S. uranium facilities, the same number as in the first quarter of 2019.

U.S. uranium in-situ leach plants in production (state)

- Lost Creek Project (Wyoming)
- Nichols Ranch ISR Project (Wyoming)
- Ross CPP (Wyoming)
- Smith Ranch-Highland Operation (Wyoming)

Notes: The reported 4th-quarter 2002 production amount was adjusted by rounding to the nearest 100,000 pounds to avoid disclosure of individual company data. This adjustment also affects the 2002 annual production. The reported production amounts in 2003 and the 1st, 2nd, and 4th quarters of 2004 were adjusted by rounding to the nearest 200,000 pounds to avoid disclosure of individual company data. The reported 2004 total is the actual production for 2004. Totals may not equal the sum of components because of independent rounding.

¹ Heap leach solutions: The separation, or dissolving-out from mined rock, of the soluble uranium constituents by the natural action of percolating a prepared chemical solution through mounded (heaped) rock material. The mounded material usually contains low-grade mineralized material and/or waste rock produced from open pit or underground mines. The solutions are collected after percolation is completed and processed to recover the valued components.

- = No data reported

Notes: Capacity for the 2nd quarter of 2019. An operating status of *operating* indicates the mill usually was producing uranium concentrate at the end of the period.

Notes: Production capacity for the 2nd quarter of 2019. An operating status of *operating* indicates the in-situ-leach plant usually was producing uranium concentrate at the end of the period. Hobson ISR Plant processed uranium concentrate that came from La Palangana. Hobson and La Palangana are part of the same project. ISR stands for in-situ recovery. Christensen Ranch and Irigaray are part of the Willow Creek Project. Urinerz Energy has a tolling arrangement with Cameco Resources. Uranium is first processed at the Nichols Ranch plant and then transported to the Smith Ranch-Highland Operation plant for final processing into uranium concentrate. CPP stands for *central processing plant*.
