

ORDERING GUIDE

FortiADC

Available in

In recent years, the landscape of application delivery has undergone significant transformations influenced by evolving technology trends and the increasing adoption of cloud computing. Many organizations are integrating on-premises data centers with public cloud environments to optimize application performance, enhance scalability, and improve overall business agility.

FortiADC, the advanced Application Delivery Controller (ADC), optimizes application delivery, enhances performance, and ensures application security whether they are hosted on-premises or in the cloud.

FortiADC offers robust L4-L7 load-balancing capabilities with Scripting support for content manipulation and Advanced SSL Services (Offloading and mirroring).

FortiADC also offers application acceleration, application authentication, and built-in security features like Web Application Firewall protection for any application threats (OWASP-Top10 compliance), DDoS Protection, ZTNA, and more.

With flexible deployment options and integration into the Fortinet Security Fabric, FortiADC empowers businesses to deliver exceptional application experiences and security.

FortiADC supports standard deployment requirements and is available in multiple form factors:

- **Hardware appliances:** FortiADC is available as physical appliances with different throughput combined with hardware-based SSL offloading, and scalability options, ranging from 3Gbps to 250Gbps. FortiADC appliances are suitable for organizations that require high-performance ADC solutions for their on-premises infrastructures.
- **Virtual appliances:** FortiADC can be deployed as virtual machines in virtualized environments, which offers flexibility, scalability, and cost-effectiveness. This option is ideal for organizations with virtualized or cloud-based infrastructures and is supported via Fortinet **FortiFlex** (<https://www.fortinet.com/products/fortiflex>) on-demand licensing and provisioning for security solutions and services for all environments.
- **Cloud service:** FortiADC is also available as a cloud-based service so that organizations can leverage ADC capabilities without needing hardware or software deployment. This option provides agility, scalability, and ease of management for cloud-native applications. It is also supported via FortiFlex.

FORTIADC SECURITY FABRIC

FortiADC is part of the Fortinet Security Fabric, a comprehensive and integrated security platform that provides unified protection across your entire network and application. By combining FortiADC with other Fortinet solutions, you create a powerful security ecosystem that safeguards your applications and data from end to end.

FORTIADC PRODUCT OFFERINGS

FortiADC application delivery controllers are available as hardware appliances, virtual machines, and public cloud VMs, and offer a new bundles license on any of the form-factors.

FORTINET TRAINING AND CERTIFICATION

FortiADC Training

Learn how to configure and administer the most commonly used features of FortiADC, explore Layer 4 and Layer 7 server load balancing, link load balancing, global load balancing, high availability (HA), firewall policies, advanced routing, and more.

Course Description

For more information about prerequisites, agenda topics and learning objectives, please refer to the course description at https://training.fortinet.com/local/staticpage/view.php?page=library_fortiadc

FORTIADC CHEAT SHEET

The Space

The ADC market continues to evolve with application automation and software-centric use cases:

- **Application automation** and integration with microservices - Support K8s and OCP Ingress Controller
- The **most Secure** ADC in the market with WAF (OWASP-top10), Bot Protection, DLP, IPS, AV, Sandbox, DDoS Protection and more...
- **“Over the top”** ADC services (GSLB)
- **Application visibility** and ease-of-use focus

Ordering Guide

Product Offerings: OPEX and CAPEX options

OPEX: two options available:

- **FortiADC-VM:** S-series provides yearly subscription for IaaS/private cloud. All-inclusive standard/advanced bundle options.
- **FortiFlex:** FortiADC VM is part of the new FortiFlex program (<https://www.fortinet.com/products/fortiflex>), providing you the flexibility to right-size your services and spend

CAPEX: three options available:

- **HW appliances:** selected by throughput (1.5 Gbps to 250 Gbps)
- **FortiADC-VM:** preferably choose S-series though perpetual license is available.
- **FortiFlex:** FortiADC VM is part of the new FortiFlex program (<https://www.fortinet.com/products/fortiflex>), providing you the flexibility to right-size your services and spend

Where to Find More Info

Product Lineup

FortiADC product line includes various options:

- **On-premise:** any FortiADC can be purchased as HW, VM, and Cloud VM models. Models are from 5 Gbps and up to 250 Gbps throughput.
- **Cloud VM:** FortiADC also runs on public cloud (AWS, OCI, Azure, GCP, and IBM). We support perpetual licenses (BYOL and PAYG).

Major Capabilities to Pitch

- **Application connectors and automation** for autoscaling and service availability.
- **Advanced application LB** with L7 routing, advanced health checks, and application optimization.
- **Unleash the power of the script:** With FortiADC Script, you can manage and control network/application traffic.
- **SSL visibility and inspection:** SSL-based attacks are rising. With FortiADC, you can monitor and block SSL attacks.
- **Global LB:** real-time traffic LB between multiple locations/data centers for best availability and quality of experience to reduce latency.
- **Application security:** The most secure ADC in the market with WAF (OWASP Top-10), antivirus, IPS, DDoS protection, and Sandbox integration.
- **Ease of use:** FortiView provides real-time data analytics and application visibility. FortiADC has integration with Splunk, FortiAnalyzer, and FortiSIEM.
