Email security solution that provides advanced protection against the full spectrum of email-borne threats

FortiMail provides advanced protection against the full spectrum of email-borne threats including phishing, spear phishing, spam, targeted attacks, ransomware, impersonation, and Business Email Compromise (BEC) attacks. FortiMail consistently earns high marks in independent testing, with efficacy underpinned by threat intelligence from FortiGuard Labs.

This comprehensive coverage is complemented by a wide range of deployment options and operation modes to meet the various on-premise, cloud-based, and hybrid email use cases organizations have today.

- **FortiMail Cloud (SaaS):** Managed by Fortinet in our highly available data centers.
- **Virtual Machines (VM):** Deploy email security infrastructure into a private or public cloud setting.
- **FortiMail Appliances:** On-premise appliances offer high performance scanning, routing, and availability capabilities in a rack-mount form factor.

NSE TRAINING AND CERTIFICATION

FCP - FortiMail Training and Certification

Analyze email security challenges that administrators face, and learn where and how to deploy, manage, and troubleshoot FortiMail to protect your network from email-borne threats. You will also explore the role of FortiMail as a specialized device, and how its features provide both high-performance and in-depth security for business-critical communications.

Course Description

For more information about prerequisites, agenda topics and learning objectives, please refer to the course description at https://training.fortinet.com/local/staticpage/view.php?page=library_fortimail

CHEAT SHEET

The Space

Email still remains the primary vector for attacks on organizations due to its ubiquity of use, along with the ability to reach almost any individual at any time. Phishing, spear phishing, email-based ransomware attacks and Business Email Compromise (BEC) attacks are all of top concern. Additionally, the ability to provide detection and performance at scale while meeting compliance requirements such as GDPR along with tight budgets is a key challenge.

FortiMail provides:

- **Comprehensive email security:** advanced threat protection and data loss prevention
- **Top-rated efficacy:** consistently top rated to stop spam, malware, ransomware, and advanced email threats.
- **Part of the Fortinet Security Fabric:** integrated to uncover the full attack life cycle.

Ordering Guide

Appliances and VMs:

CAPEX:

- Hardware appliances
- VM perpetual licenses

FortiMail Cloud - SaaS - OPEX:

OPEX:

- Virtual machine S-series subscription licensing
- Feature a-la-carte menu for both VMs and HW
- Buy as a bundle with additional features and support
- BYOL support for public clouds (Azure, AWS, Oracle)

SaaS:

- FortiMail Cloud per mailbox fee
- Price brackets depending on mailbox count and feature bundle
- Additional support for MSSPs through multitenancy

Product Lineup

FortiMail is licensed per device and feature bundle or per mailbox in FortiMail Cloud.

- **HW appliances** require a software license.
- **VM appliances** require a perpetual license (CAPEX) or a subscription license (OPEX).
- **FortiMail Cloud** requires a subscription license based on the number of mailboxes
- **Additional features:** extra functionality can be licensed either separately or through bundles. FortiMail Cloud primarily uses bundles.

Major Highlights

- Consistently earns high marks in third party independent testing scenarios.
- CTAP can be used to prove efficacy against an incumbent.
- Advanced threat protection through Security Fabric integrations with FortiGuard, FortiSandbox, and FortiSolator.
- Deployment flexibility to fit any scenario: SaaS, public cloud (Azure, AWS, AliCloud, KVM, Oracle), VMs, and appliances.
- Multitenancy support for MSSPs to deliver services directly to end customers.
- Scales easily and provides high availability to support millions of messages per hour.
- Strong support for the Fortinet portfolio of products, including FortiAnalyzer and FortiGate.
