Container

FortiWeb Web Application Firewall protects your business-critical web applications and APIs from attacks that target known and unknown vulnerabilities. Using an advanced multi-layered approach backed by a sophisticated machine learning engine, FortiWeb protects against the OWASP Top 10 and more.

The FortiWeb product line offers solutions and deployment options across SaaS, VMs, and appliances that can protect business applications no matter where the application is hosted. This ordering guide will help you choose the right solution for your customer.

FortiWeb is offered as a SaaS-based cloud service, virtual appliance, or as an on-premise appliance:

- **FortiWeb Cloud (SaaS):** cloud-native multitenant SaaS-based solution with a global distribution of WAF clusters around the world.
- **VM Subscription (Public/Private Cloud):** virtual solution supported across public and private clouds.
- **FortiWeb Appliance:** on-premise FortiWeb appliance providing best price/performance data center WAF solution in the industry.

## THREAT ANALYTICS

This new SaaS based service ingests events from across your entire hybrid cloud environments (FortiWeb Cloud and FortiWeb HW/VM) to help address alert fatigue. Using machine learning algorithms, it removes the complexity that comes from manually evaluating alerts by evaluating thousands of alerts and grouping those alerts into incidents based on the patterns identified. The solution separates significant threats from informational alerts and false positives to help security teams focus on the threats that matter.

Threat Analytics is available for free for FortiWeb Cloud customers and is sold as part of the Advanced bundle or A-La-Carte for FortiWeb appliances. Read more about the service [here](#).

## PRODUCT OFFERINGS

For OPEX-based purchasing, choose between FortiWeb Cloud (a cloud-based SaaS service (Cloud WAF) requiring no hardware/software installation) and FortiWeb-VM S-series (a yearly subscription of our virtual WAF supported on all common hypervisors and public cloud providers).

When choosing FortiWeb Cloud, simply pick the overall bandwidth needed and number of web applications that your customer requires.

When choosing the virtual WAF (FortiWeb-VM S series), remember this is a yearly subscription. Choose between the standard and advanced subscription bundles, which vary by the type of services included.

## NSE TRAINING AND CERTIFICATION

### FCP – FortiWeb Training and Certification

Learn how to deploy, configure, and troubleshoot FortiWeb. Learn key concepts of web application security and explore protection and performance features. Experience traffic and attack simulations that use real web applications. Learn how to distribute the load from virtual servers to real servers, while enforcing logical parameters, inspecting flow, and securing HTTP session cookies.

#### Course Description

For more information about prerequisites, agenda topics and learning objectives, please refer to the course description at [https://training.fortinet.com/local/staticpage/view.php?page=library\\_fortiweb](https://training.fortinet.com/local/staticpage/view.php?page=library_fortiweb)

### Ordering Information

SKU	DESCRIPTION
FT-FWB	Instructor-led Training - 3 days
FT-FWB-LAB	On-demand Labs (self-paced)
NSE-EX-FTE2	Certification Exam

## ORDER LIFECYCLE - FORTIWEB CLOUD

### New Order

*Example: One year*

Five websites, 50 Mbps throughput

- FC2-10-WBCLD-655-02-12
- FC2-10-WBCLD-654-02-12

### Add More Websites

*Example: Add one more website*

Use co-term to align expiry date across all contracts

One more website:

- FC1Z-15-WBCLD-607-02-00

### Renew All Contracts

*Example: Renew all six websites and 50 Mbps bandwidth contracts*

Use the co-term tool when the first renewal occurs. This also aligns all contracts to the same expiration date.

- FC2Z-15-WBCLD-607-02-00 (5 websites)
- FC1Z-15-WBCLD-607-02-00 (1 website)
- FC2Z-15-WBCLD-606-02-00 (50 Mbps)

### Add Bandwidth

*Example: Add 20 Mbps additional bandwidth*

Use the co-term to align expiration date across all contracts.

One 20 Mbps additional license:

- FC1Z-15-WBCLD-606-02-00

# CHEAT SHEET

## The Space

- WAF space consolidates around three main functionalities: web protection, bot mitigation, and API protection.
- SaaS is becoming more attractive.
- Cloud WAF popularity is on the rise and usually includes content delivery network and DDoS.
- Customers have expectations for easy onboarding and a low maintenance WAF.

## Product Lineup

FortiWeb product line includes various options:

- **HW/VM/container:** models range from 50 Mbps to 70 Gbps throughput. BYOL/PAYG for VMs deployed on public cloud.
- **Cloud WAF:** FortiWeb Cloud SaaS-based solution. Global scrubbing centers across public cloud. Priced by bandwidth and number of applications. Can alternatively be consumed directly from marketplace.

## Ordering Guide

**Product Offerings:** OPEX and CAPEX options

**OPEX:** two options available:

- **FortiWeb Cloud:** hassle-free, no SW/HW required, WAF-as-a-service. Priced by bandwidth and number of applications, measured by 95% percentile.
- **FortiWeb-VM:** S-series provides yearly subscription for IaaS/private cloud. All inclusive standard/advanced bundle options.

**CAPEX:** two options available:

- **HW appliances:** selected by throughput (50 Mbps to 70 Gbps)
- **FortiWeb-VM:** preferably choose S-series though perpetual license is available.

## Major Highlights

- Industry's fastest WAF appliance: FortiWeb-4000F at 70 Gbps HTTP/HTTPS throughput.
- The only vendor to provide ML for anomaly detection for web and API applications.
- Two-layer ML tech ensures virtually no false positives.
- FortiGuard Labs automated updates ensure AI threat models are up-to-date.
- Deep learning automatically adjusts models when application changes, virtually integrating with CI/CD pipeline.
- One-of-a-kind SQLi and XSS syntax-based detection policies, without reliance on static signatures.
- Strong API protection capabilities including ML based API Discovery and Protection, API gateway, protocol enforcement, and schema validation.
- Threat Analytics: Using Machine Learning, attacks are analyzed across all your web applications to identify common characteristics and patterns and group them into meaningful security incidents.
