

NETWORK SECURITY ACADEMY

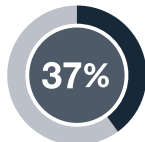

Seven in 10 organizations state that security certifications are more useful than security degrees.¹

The **Fortinet Network Security Academy (FNSA)** program is designed to provide industry-recognized Fortinet training and certification opportunities to the next generation of cybersecurity professionals. The FNSA program collaborates with academic institutions, non-profit organizations, and veterans programs around the world to help learners to become part of an elite group of skilled security professionals.

The program provides unique training and certification that were previously only offered to Fortinet customers, employees, and partners. FNSA graduates leave with in-demand skills for protecting networks from global cyber threats.

Cybersecurity ranks as the **#1** area where organizations have a problematic shortage of skilled staff.²

Demand for cybersecurity professionals is expected to grow by **37% per year at least through 2022.**³

Employers list nearly **two certification** requirements for security professionals in their job ads.⁴

Fortinet sponsors training content and exam vouchers at each FNSA site and supports instructor preparation.

For more information about the Fortinet Network Security Academy or to apply to become an FNSA site, visit www.fortinet.com/training/fortinet-network-security-academy.html or contact us at academy@fortinet.com.
