FTSE 3-Mo. TBill	1.39	2.76	5.64	3.17	2.22	–	2.23
Value Add	-0.96	-1.95	+0.58	-1.12	-0.81	–	-0.78

Performance data quoted represents past performance and is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance data may be lower or higher than the performance data provided herein. The portfolio is not managed relative to a benchmark. References to an index are for informational purposes only. If certain expenses were not reimbursed, performance would be lower. Transaction costs, if any, are paid to the fund to offset the cost of portfolio transactions to invest or raise cash. To obtain performance information to the most recent month-end, visit [www.gmo.com](http://www.gmo.com).

### MAJOR PERFORMANCE DRIVERS

The GMO Alternative Allocation portfolio had a positive return for the second quarter of 2024.

Over the course of the quarter, the total capital at work was decreased by about five percentage points. At the end of June 2024, the portfolio was allocated broadly: 28% in Systematic Global Macro, 28% in Event-Driven, 34% in Equity Dislocation, 6% in Relative Value Credit, 12% in Fixed Income Absolute Return, 15% in Asset Allocation Long/Short, and 8% in Put Selling.

Equity Dislocation was the biggest contributor, adding 0.4% to total performance, an excellent result given that MSCI ACWI Value trailed MSCI ACWI Growth by some 6.8%. Both the Asset Allocation Long/Short strategy and Put Selling generated a higher absolute return than Equity Dislocation, but their smaller allocations meant they did not contribute quite as much at the total portfolio level, adding 0.3% and 0.2%, respectively. The credit positions and Event-Driven had no material impact on total performance for the quarter.

Fixed Income Absolute Return deducted 0.2% from total performance for the quarter, leaving Systematic Global Macro as the biggest detractor. It detracted 0.3% from total returns as challenging performance in equity and commodity positions was partially offset by a good return from currency positions.

Inception Date: 1-May-19

Performance for the year of inception is less than a full calendar year. Returns shown for periods less than one year are not annualized.

**Risks:** Risks associated with investing in the Fund may include those as follows. (1) Management and Operational Risk: The risk that GMOs investment techniques will fail to produce desired results. (2) Leveraging Risk: The use derivatives and securities lending creates leverage. Leverage increases the Funds losses when the value of its investments (including derivatives) declines. (3) Derivatives and Short Sales Risk: The use of derivatives involves the risk that their value may not change as expected relative to changes in the value of the underlying assets, pools of assets, rates, currencies or indices. Derivatives also present other risks, including market risk, illiquidity risk, currency risk, credit risk, and counterparty risk. For a more complete discussion of these risks and others, please consult the Fund's prospectus. Annualized Returns may include the impact of purchase premiums and redemption fees. Returns shown for periods greater than one year are on an annualized basis.

If certain expenses were not reimbursed, performance would be lower. Transaction costs, if any, are paid to the fund to offset the cost of portfolio transactions to invest or raise cash. **Net Expense Ratio: 1.69%; Gross Expense Ratio: 2.03% Net Expense Ratio reflects the reduction of expenses from fee reimbursements. The fee reimbursements will continue until at least June 30, 2024. Elimination of this reimbursement will result in higher fees and lower performance.**

The adjusted expense ratios, which reflects the net and gross expense ratios excluding dividend and interest expense on short sales, are as follows: Net Expense Ratio: 0.84 and Gross Expense Ratio: 1.18. Dividends paid on borrowed securities are an expense of short sales. Such expenses are required to be treated as a Fund expense for accounting purposes and are not payable to GMO. The Fund also receives income in connection with short sales, which is reflected in the Fund's net income but is not reflected as an offset to dividend expenses on short sales in the Fund's annual fund operating expenses table. Any interest expense amount or dividends paid on securities sold short will vary based on the extent of Fund's use of those investments. **Gross Expense Ratio is equal to the Funds Total Annual Operating Expenses set forth in the Funds most recent prospectus dated June 30, 2024.**
