**Subject:** Re: Status of RPKI Interoperability and Global Trust Anchor Testbed with IANA

Dear Adiel,

As you note, the RIRs and ICANN have been holding regular teleconferences to finalize the implementation of a RPKI "sandbox" with a global trust anchor. It is disappointing to read that due to various changes in priorities, we will be calling a moratorium on the plans at this time. I appreciate your email notifying us of this change in circumstances.

Like the RIR organizations, ICANN will remain supportive and contribute to the standards work related to RPKI that is taking place within the IETF.

Thank you for informing us of the change in support for the establishment of a global scale testbed of the RPKI system.

Best regards,  
-- Elise
