I.	Introduction and Summary	1
II.	Recommendation Verification Summary	7
Appen	dix A – Peoples Gas' Implementation Plan	93

# I. Introduction and Summary

During 2007 and 2008, Liberty conducted an investigation of the pipeline safety program of Peoples Gas Company ("Peoples Gas" or "PGL"). On August 14, 2008, Liberty issued its final report, which contained 66 recommendations for improvement of the pipeline safety program. Phase 2 of Liberty's work involves verification and monitoring of Peoples Gas' implementation of those recommendations. In October 2008, Peoples Gas issued a draft implementation plan for each recommendation. Liberty provided comments on that plan; the Illinois Commerce Commission (ICC) Staff and Liberty met with Peoples Gas in November 2008 to discuss the plan. In late January 2009, Peoples Gas provided a new implementation plan that addressed those comments and discussions. That implementation plan is included as Appendix A to this report.

Each quarter (three-month period) for two years, Liberty will issue an updated status of its verification work. This is the third of these reports, roughly covering the period from December 2008 through August 2009. Liberty's verification work has started in all major areas except for corrosion control and emergency response. Liberty plans to start the verification in these two areas in the fourth quarter. While Liberty has completed its verification work for only a few recommendations, Peoples Gas and Liberty have made progress on many. Peoples Gas implementation plan and Liberty's planned work should result in the closure of many items after the first year (4<sup>th</sup> quarter) following the issuance of Liberty's final report. Because of financial conditions, Peoples Gas has reduced the amount of construction work it is performing. That could affect Liberty's verification work progress in the construction area.

This report contains two main sections:

- I. This introduction and a table that provides a summary of the status of Liberty's verification work on each recommendation.
- II. A summary of the verification work on each recommendation

The following table lists each of the 66 recommendations and addresses the following questions for each recommendation:

- Has Liberty commenced verification work?
- Has Peoples Gas taken the actions in its implementation plan? Did it take those actions on time? (A blank cell in for this question means that it is too early to determine whether Peoples Gas has taken all of the actions stated in its implementation plan. Liberty does not indicate a "Yes" in this column until the company completes all of its commitment actions.)
- Is Liberty's verification work complete?

Rec. #	Recommendation	Verification Started?	Peoples Gas' Actions?	Verification Complete?
Overall (	Observations			
I-1	Improve the management-level organization.	Yes		No
Mains an	d Services			
II-1	Change replacement-weighting factors to assign a higher priority to vulnerable components and those with greater risks.	Yes		No
II-2	Improve the coupon-sampling program.	Yes	Yes	Yes
II-3	Evaluate cast iron replacement policies and increase replacement rates in the North district.	Yes		No
II-4	Implement a systematic replacement program of vulnerable service lines.	Yes		No
Excavati	on Damage Prevention			
II-5	Designate a manager with overall responsibility for the excavation damage-prevention program.	No		
II-6	Work with DIGGER to develop and maintain a complete list of excavation contractors.	No		
II-7	Work with DIGGER to develop a program to screen out bogus emergency-locate requests.	Yes	No	No
II-8	Upgrade the training program for locators.	Yes		No
II-9	Develop and implement a communications and training protocol for the City of Chicago municipal workers and private contractors.	Yes	No	No
II-10	Develop and implement a procedure for monitoring directional boring activities.	Yes	No	No
II-11	Develop and implement criteria and a procedure for conducting inspections of excavating sites.	Yes		No
II-12	Develop and implement a procedure for sealing exposed cast iron joints that are subject to pressures of 25 psig or less.	Yes	Yes	Yes

Rec. #	Recommendation	Verification Started?	Peoples Gas' Actions?	Verification Complete?
II-13	Review and implement Common Ground Alliance (CGA) best practices not in place.	No		
II-14	Develop and implement a root-cause analysis program.	No		
II-15	Develop a system for tracking performance metrics for the damage prevention program.	Yes	No	No
Corrosio	n Control			
II-16	Bring experience and stability to the corrosion control organization.	No		
II-17	Improve the accuracy of corrosion control readings.	No		
II-18	Improve the methods and timeliness of corrective actions.	No		
II-19	Evaluate atmospheric corrosion inspection practices.	No		
II-20	Test casings to ensure electrical isolation from the carrier pipe.	No		
II-21	Improve organizational communications.	No		
II-22	Improve corrosion control training.	No		
II-23	Improve corrosion control record keeping.	No		
II-24	Improve pipe storage practices.	No		
II-25	Demonstrate implementation of best practices.	No		
	s, Valves, Regulators, and			
Odorizat				
III-1	Determine the resources necessary to ensure all annual valve inspections are accomplished within scheduled timeframes.	Yes	Yes	Yes
III-2	Develop a means to track and report histories of valve inspections to identify valves that cause continual problems, and to focus the inspections and maintenance on those problems.	No		
III-3	Resolve interface problems with the chartless recorders.	Yes	Yes	Yes

Rec. #	Recommendation	Verification Started?	Peoples Gas' Actions?	Verification Complete?
III-4	Analyze the gas system to determine sampling sites that will ensure proper concentrations of odorant reaches all parts of the system.	No		
III-5	Develop a schedule and verify that personnel who perform "sniff" tests possess normal olfactory senses.	No		
III-6	Conduct adequate training for Gas Operations Section (GOS) on valves and regulators.	No		
III-7	Re-evaluate the odorant sampling and documentation paper system and convert it to an electronic format.	No		
Emergen	cy Response			
III-8	Increase the frequency of employee emergency-plan training.	No		
III-9	Perform joint training with outside responders	No		
III-10	Perform realistic drills with outside responders	No		
III-11	Increased training for outside first responders	No		
III-12	Provide map access for service section personnel	No		
Leak Ma	nagement			
III-13	Evaluate business district boundaries.	Yes	Yes	No
III-14	Improve leak response times.	Yes	Yes	Yes
III-15	Improve Inside Safety Inspection procedures and training.	Yes	Yes	Yes
III-16	Improve leak management practices.	Yes	Yes	No
III-17	Reduce the year-end leak backlog.	Yes		No
III-18	Implement practical testing of leak investigation personnel.	Yes		No
Construc	tion			
IV-1	Develop specific and comprehensive job descriptions.	Yes	Yes	Yes
IV-2	Review and formalize contractor requirements documents.	Yes		No

Rec. #	Recommendation	Verification Started?	Peoples Gas' Actions?	Verification Complete?
IV-3	Develop detailed construction inspection checklists for construction inspectors.	Yes	Yes	No
IV-4	Re-evaluate and justify the number of contractor construction projects assigned to its Construction Technicians.	Yes	Yes	Yes
IV-5	Require contracting crews to cut out and destructively test the first fusion joint of each day's work.	Yes		No
IV-6	Develop a means to determine the qualifications of individuals performing covered tasks on job sites.	No		
IV-7	Conduct audits of contractor crews as required.	Yes		No
Operator	r Qualifications			
V-1	Review and improve the curricula of all training classes.	No		
V-2	Review and reduce non-training job duties of instructors.	Yes		No
V-3	Revise the testing methods for evaluations of qualifications to perform covered tasks.	No		
V-4	Ensure that all contractors have acceptable Operator Qualification Plans.	No		
V-5	Analyze crew-leader retest failures.	Yes		No
V-6	Modify requalification interval practices.	Yes	Yes	Yes
V-7	Address the new Pipeline and Hazardous Materials Safety Administration (PHMSA) training requirements.	Yes		No
Quality A	Assurance and Quality Control			
V-8	Improve the Quality Assurance / Quality Control (QA/QC) Program.	Yes	No	No
Program	s, Maps, and Records		•	•
V-9	Provide the means for, and require that, General Supervisors spend more time in the field on job sites with their crews.	Yes		No

Rec. #	Recommendation	Verification Started?	Peoples Gas' Actions?	Verification Complete?
V-10	Upgrade the legacy computer systems as planned.	No		
V-11	Develop a structured process for long term planning.	Yes		No
V-12	Develop and implement a procedure for up-rating low-pressure mains.	Yes	Yes	Yes
V-13	Review industry committee participation.	Yes	Yes	Yes
V-14	Establish the combined Integrys successor to the Peoples Materials Standards Committee (MSC).	Yes	Yes	Yes
Performa	ance Measures			
VI-1	Implement a modern and effective performance measures program.	No

# I-1

Improve the management-level organization.

Liberty recommended that Peoples Gas have one manager for each of the functions listed below. These managers would have matrix responsibility for that function for all three divisions, and would report to the Vice President on that function.

- Damage Prevention
- Corrosion Control
- Leak Management
- Operator Qualification and Training
- Quality Assurance and Performance Monitoring

Liberty recommended that Peoples Gas implement this recommendation within one year of the date of Liberty's final report.

# Background

During its audit study of Peoples Gas' code compliance activities, Liberty found Peoples Gas did not exhibit strong performance in any of the areas examined. Liberty concluded that Peoples Gas was particularly weak in corrosion control, excavation damage prevention, and performance monitoring and measurement. Liberty attributed organizational and staffing issues at the root of these weaknesses.

Liberty found that the Vice President, Field Operations, was responsible for field operations and construction, including most safety-code requirements, except for engineering and some support functions. However, there was no senior management level ownership and responsibility for some important functional areas below the level of Vice President leading to fragmented decision-making, and a lack of ownership of the entire program or individual aspects of it.

Liberty recommended that Peoples Gas assign specific management-level ownership and responsibility for damage prevention, corrosion control, leak management, operator qualifications and training, and quality assurance and performance monitoring. The programs would perform better, focusing on key activity objectives with either an individual responsible for each of the programs or an individual having matrix responsibility for a program that reports to the Vice President, Field Operations, directly on the performance of an individual program.

# **Peoples Gas' Implementation Plan**

Peoples Gas indicated that it adopted Liberty's recommendation in part as described by the items listed below.

- Damage Prevention Peoples Gas indicated that it would hire a manager of System Integrity who will have primary focus and responsibility for damage prevention. The Company agreed that centralizing damage prevention and assigning a manager/leader of System Integrity made good sense.
- Corrosion Control Peoples Gas said that it assigned a manager to this function.

- Leak Management Peoples Gas said that it would keep this organization as is, believing leak management is best handled through district shop management.
- Operator Qualification and Training Peoples Gas indicated that it has separate management of Operator Qualification and Training under review. The Technical Training and Standards group will address operator qualification and training issues.
- Quality Assurance and Performance Monitoring The Compliance Monitoring Group (CMG) will be taking on the responsibility for Quality Assurance under the existing CMG leadership. Peoples Gas will assign performance management to CMG under its current leadership.

### Verification Discussion and Conclusions

In January 2009, Peoples Gas advised that:<sup>1</sup>

- It has met its commitment for assigning a manager of the corrosion function. Liberty will review this assignment during its work on other corrosion control recommendations.
- Operator Qualification and Training (OQ and T), and Quality Assurance and Performance Monitoring (QA and PM), have individual manager ownership.
- Peoples Gas has not yet filled the position on Integrity Manager, whose duties would include damage prevention.
- It has identified key performance indicators for improving its damage prevention performance and for reducing pending leaks.

With regard to leak management, Peoples Gas believes the function ties closely to the daily maintenance work for each shop, and therefore it is most effective to keep management of leaks under the direct control of individual district management. Accordingly, during this verification phase of its work, Liberty will evaluate the effectiveness of Peoples Gas' district operations managers in their oversight and development of the means to improve the company's leak management.

Peoples Gas informed Liberty that it held a series of meetings among its managers and union personnel to emphasize how the company may achieve improvements in its leak management practices. Peoples Gas established an annual target of 10 percent reduction in leaks pending at year-end. For the metric pending leaks divided by leaks repaired, Peoples Gas has established a goal of 14 percent for 2009 and 10 percent for 2010. Peoples Gas also stated that the percentage of pending Type 2 leaks is 30, compared with pending Type 3 leaks of 70 percent, and that it has been successful in driving down its leak/mile in emphasizing the reduction of Type 2 leaks. Peoples Gas has implemented a process for addressing venting leaks without repairs that has enabled it to limit the number of these leaks and ensure it makes repairs within 5-10 business days. Peoples Gas has evaluated the leaks cleared with no work performed to ensure leak area locations were clear and to bring heightened attention to these reported leaks. Peoples Gas has also re-evaluated those locations where its personnel made temporary repairs on inside or

<sup>&</sup>lt;sup>1</sup> Interview #101, January 20, 2009.

exposed gas piping to ensure that it accomplished permanent repairs. Through these actions, Peoples Gas believes it is demonstrating improved management of this function.

Peoples Gas established specific leak goals to improve its leak management performance. One of these is to repair all Type 2 leaks within 12 months. However, if a leak requires a main replacement project, or is an upgrade from a Type 3, the repair may exceed 12 months. Beginning in January 2009, on a weekly basis, the District Shop Managers provide the Vice President of Gas Operations with an explanation and a proposed plan to expedite the repair of all Class 2 leaks that are greater than 12 months old.

Peoples Gas had not implemented schedules for rechecking of completed leaks following repairs to ensure leak areas are clear of leakage. Peoples Gas planned to rely on the new work and asset management system (WAMS) to implement such schedules. However, due to delays in the WAMS implementation, Peoples Gas told Liberty that it would determine whether there were alternative ways to institute a system for the recheck of its recently completed leak repair locations under existing systems.<sup>2</sup> Peoples Gas committed to developing a procedure and reinstitute rechecks after leak repairs beginning April 6, 2009.<sup>3</sup> This would be a paper system; Peoples Gas would also explore the cost and time required to establish the new leak-recheck order type from the vendor of the Navigate system.

Data show improved controls of Peoples Gas' leak management practices.<sup>4</sup> As shown in the table below, Peoples Gas reduced its total pending year-end leaks in 2008 from 819 to 555. It reduced the pending Type 2 leaks from 335 to 172 during 2008.

	Type 1	Type 2	Type 3	Total
Leaks pending, 1/1/2008	3	335	481	819
Received	1466	1292	105	2863
Cleared	1070	1440	617	3127
Re-classified	399	15	414	0
Leaks pending, 12/24/2008	0	172	383	555

During the second quarter of 2009, Liberty has continued its evaluation of the effectiveness of Peoples Gas' district operations managers in their oversight and development of the means to improve the company's leak management. Liberty met with Peoples Gas Vice President of Operations, and two of its District Managers. Peoples Gas identified a number of leak management goals and has committed to improve its oversight of leaks. Leak management goals include:

• A 10 percent reduction in leak backlog at year-end,

<sup>&</sup>lt;sup>2</sup> Implementation Plan meeting with Liberty, November 20, 2008.

<sup>&</sup>lt;sup>3</sup> Response to Data Request #388.

<sup>&</sup>lt;sup>4</sup> Response to Data Request #306.

- Reduce its pending type 2 leaks to less than 30% with the remainder being the least hazardous type 3 leaks,
- Clear all type 2 leaks within 12 months,
- District Managers report weekly to the Vice President of Operations as to why any of its type 2 leaks exceed 12 months,
- District Managers ensure any of its leaks that have been vented and downgraded in hazard without making a repair, have in fact received a repair between 5 and 10 business days,
- Verify leak areas are in fact cleared with a second follow-up recheck, especially those reported to be cleared without a repair,
- Reduce response times to reports of leaks from the public,
- Improve on site leak investigations and repairs, and
- Reduce temporary repairs on aboveground and inside piping leaks.

This year's leak management goals are especially challenging as Peoples Gas stated the 2008-09 winter was colder than normal, the 17<sup>th</sup> coldest on record.<sup>5</sup> The colder conditions resulted in an increased number of new leaks and an increase in leak backlogs. Liberty verified that Peoples Gas has assigned additional operations crews to leak repair activities and is working diligently to reduce the backlog of its leaks pending repairs. Liberty notes that Peoples Gas is making progress in many of its stated leak related goals.

Liberty verified that Peoples Gas has met its commitment to implement a paper system of leak area rechecks by April 6, 2009. Liberty also evaluated the leak management approaches of Peoples Gas' Operations General Supervisors, and leak crews assigned to investigate, pinpoint the location of leaking gas facilities, and make repairs at a number of leaking gas locations in its North District<sup>6</sup>. Liberty noted some increased on site presence and supervision of its leak investigation and repair crews. However, Liberty has a limited number of on site field crew visits available during the audit implementation phase, and will be asking Peoples Gas to identify specific activities it has relieved and re-assigned from its general supervisors that make more time available for its supervisors to spend time with their crews in the field.

As shown in the table below, Peoples Gas maintained its levels of leak repair activities clearing 775 leaks during the colder than normal weather, in spite of an increased number of new leaks (968 versus 693 during 2008) requiring initial investigations and make safe actions.<sup>7</sup> It has managed to hold its backlog of pending leaks at the end of March 2009 to a moderate increase as compared with the previous year. Further audits of Peoples implementation plan will determine if these efforts are continuing to be successful in addressing Liberty's recommendations.

<sup>&</sup>lt;sup>5</sup> Interview, May 5, 2009.

Pending (as of 04/02/2008)	4	265	460	729	

Liberty verification work on this recommendation is not complete. Liberty plans to:

- Interact with the managers assigned to Operator Qualifications, Training, Quality Assurance, and Performance Monitoring in the course of its verification work on other recommendations.
- Monitor the effectiveness of Peoples Gas' leak management practices in conjunction with the verification work on Recommendations III-16 and III-17. The initial results show improvement in leak management practices.
- Because of the delays in implementing WAMS, review Peoples Gas' efforts to implement a temporary paper process to recheck completed leaks following repairs. Alternatively, review the changes Peoples Gas implemented to the Navigate system. On June 19, 2009, Peoples Gas indicated that it made changes in March 2009 to generate electronically and capture leak recheck inspections after repairs.

During the third quarter of 2009, Liberty continued its evaluation of the effectiveness of Peoples Gas' district operations managers in their oversight and implementation of the means to improve the company's leak management. Liberty met with Peoples Gas' Vice President of Operations, and two of its District Managers to discuss progress and changes in leak management. Liberty also evaluated field locations of leaks to verify leak classifications and to verify that leaks cleared in PGL's Navigate system and on PGL's paper records were in fact free of gas readings.<sup>8</sup> Liberty verified that PGL implemented Navigate changes on March 26, 2009 to generate electronically and capture leak recheck inspections after repairs.

Liberty confirmed that PGL is diligently applying its leak repair crews as well as applying additional crews for leak repairs to address its leak backlog. PGL has continued to shift crews from its Central District to the North District, to work on the increase in the numbers of leaks it has received this past winter. For the year to date period (01/01/2009 to 07/29/2009), PGL received 1945 new type 1, 2, and 3 leaks, while clearing 1709 leaks. During the period

<sup>&</sup>lt;sup>8</sup> Interviews #131, #134, and #135, and field observation of leak crews, August 5, 6, and 7, 2009.

04/01/2009 to 07/29/2009, PGL managed to increase its leaks cleared ratio from 80 percent to 88 percent of the new leaks occurring on its system, and is endeavoring to meet its goal of reducing its leak backlog at year-end. PGL stated it would like to get to the point where its leaks cleared versus the number of new leaks received is at the 105 percent level.

Liberty continues to be concerned with the level and number of new leaks received on PGL's system especially in the North district as compared with the Central and South districts. PGL has indicated that its cast iron and ductile iron breaks and cracks that occur on its distribution mains are directly proportional to the severity of the winter,<sup>9</sup> comparing breaks and cracks with the number of degree-days in a particular year. To address this, PGL needs to continue with its historical rate of eliminating its cast iron and ductile iron mains. This year due to PGL capital constraints, it appears PGL has reduced its cast iron and ductile iron replacements by two thirds, with limited capital dollars available for discretionary main replacements. This in effect will adversely affect leak levels, leak backlogs, main breaks and cracks, as leaks will continue to occur with the onset of cold weather. Simply put, less cast iron and ductile iron replacements adversely affect PGL's long-term ability to reduce new leaks. In the meantime, PGL's district managers continue to monitor its leak repair efforts in the following areas.

- PGL managers continue to evaluate those leak locations cleared without work performed to verify the leak indications no longer exist by performing multiple rechecks of the leak areas,
- PGL general supervisors schedule leak location rechecks to verify the safety of reducing leak hazard classifications, especially if those leak locations were reduced in hazard with no repairs performed,
- PGL continues to apply efforts to eliminate leaks that have been pending the longest,
- PGL schedules leak repair crews to repair leak locations on streets the city has scheduled for resurfacing.

<sup>&</sup>lt;sup>9</sup> Response to Data Request #410.

• PGL leak repair crews make use of leak sketches depicting the extent of hazardous gas migration during their repair efforts.

Liberty verified PGL's leak repair actions, leak classifications and recheck results, by conducting a series of leak location follow-up audits to verify the status and leak hazard classifications.<sup>10</sup>

<sup>&</sup>lt;sup>10</sup> Field observation of leak crews, conducted August 4 and 6, 2009, in North and Central Districts.

# II-1

Change replacement-weighting factors to assign a higher priority to vulnerable components and those with greater risks.

# Background

One objective of Liberty's investigation was to evaluate Peoples Gas' methods for identifying system components more prone to failure and its programs to replace or phase out these components from system operation. Gas distribution-system operators have implemented component replacement programs in accordance with risk-based analyses and performance measures. Between 1990 and 2002, the industry reduced the mileage of cast iron mains by 21 percent and the mileage of bare, unprotected steel mains by 7 percent. During the same period, the industry reduced the number of bare, unprotected steel services 13 percent.<sup>11</sup> Operators continue to replace specific components based on their own or industry's experience with the material's leak prone history.

The table below describes the materials contained in Peoples Gas' system as of year-end 2006.<sup>12</sup>

Material	Mains (Miles)	Services (No.)
Cast Iron	1,664	71
Ductile Iron	314	382
Cathodically protected Steel	1,208	44,031
Plastic	839	411,608
Coated, unprotected steel		182
Bare Steel		6,735
Copper		19,852
Clear Plastic		24,439
Totals	4,025	507,300

Liberty concluded that the priorities assigned to component replacements do not appropriately consider vulnerability and risks, and that Peoples Gas needed to re-evaluate the values assigned to the various factors in its main evaluation process. It should assign higher values to components with a higher probability and consequence of failure. Examples of those facilities that pose higher risks are cast iron and bare steel mains and services near schools, hospitals, and nursing homes. Peoples Gas should have continuing surveillance programs that include materials evaluation (bare steel, cast iron, plastic, copper, mains, services, regulators) of components more prone to failure (mains, services, tees, above ground components), and determination of leakage and damage incident rates, their vintage, and location. Furthermore, Peoples Gas' evaluation process should ensure that the discretionary portion of its main replacement program and its

<sup>&</sup>lt;sup>11</sup> The American Gas Foundation January 2005 study entitled "Safety Performance and Integrity of the Natural Gas Distribution Infrastructure" (AGF Study).

<sup>&</sup>lt;sup>12</sup> Responses to Data Requests #10 and #130.

service line replacement programs take into consideration the consequences should leaks or failures occur on these vulnerable facilities.

Liberty recommended that Peoples Gas change replacement weighting factors to assign a higher priority to vulnerable components and those with greater risks. Peoples Gas' processes should result in elimination of vulnerable facilities that could affect structures such as schools, hospitals, and nursing homes.

#### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas stated that its infrastructure evaluation approach considers and weighs many factors before making repair/replacement. The majority of these decisions identify components with a higher probability and consequence of failure. Peoples Gas agreed that facilities such as hospitals, schools, and nursing homes require unique considerations, and agreed to analyze its infrastructure adjacent to these types of facilities and adjust the weighting values accordingly. Steps in its plan include:

- Obtain land base data identifying schools, hospitals, and nursing homes from the City of Chicago
- Update Peoples Gas' Geographic Information System (GIS) with land base information
- Determine types and scope of facilities (Cast/Ductile iron) that are adjacent to schools hospitals and nursing homes
- Assess weighting values by January 5, 2009
- Implement changes by March 2, 2009. This schedule is consistent with Liberty's recommended implementation timeline of six months from the date of Liberty's final report.

#### Verification Discussion and Conclusions

Liberty reviewed Peoples Gas' approach and progress in implementing this recommendation.<sup>13</sup> Peoples Gas obtained data on the location of higher consequence facilities (HCAs) such as schools, hospitals, and nursing homes, and determined Chicago has 1052 schools, 44 hospitals, and 114 nursing homes.<sup>14</sup> Peoples Gas next determined the proximity and characteristics of its vulnerable infrastructure adjacent (within 80 feet) to these types of facilities.

Vulnerable main segme	Vulnerable main segments (from 1 ft. to 5296 ft in length) portions within 80 ft or HCAs					
Miles of main	Current replacement plans					
116	Cast Iron Low pressure	If UMRI score reaches 5.0				
28	Cast Iron Medium pressure	If UMRI score reaches 5.0				
23	Ductile Iron Low pressure	If UMRI score reaches 5.0				
7	Ductile Iron Medium pressure	Replace within 5 years				

<sup>&</sup>lt;sup>13</sup> Interview #104, January 23, 2009.

<sup>&</sup>lt;sup>14</sup> Response to DR 309.

Peoples Gas modified its main segment ranking software to accept new weighting factors where its vulnerable main materials are within 80 feet of HCAs.<sup>15</sup> Peoples added a 120 percent safety factor to the UMRI (Gas Main Ranking) of gas main segments adjacent to schools, hospitals, and nursing homes. Peoples Gas schedules a gas main for replacement when the UMRI number reaches 6.0. Peoples Gas will replace a gas main adjacent to a school, hospital, or nursing home within 12 months of reaching a UMRI rating of 5.0. Peoples Gas believes ductile iron main is more susceptible to failure when exposed, especially if weakened or in poor condition. The risk increases when operating at medium pressure, and Peoples Gas plans to replace 7 miles of MPDI near HCAs within 5 years.

Peoples Gas also identified materials susceptible to leakage on 32 vulnerable service lines serving HCAs. It plans to replace these within 3 years.<sup>16</sup>

Vulnerable Service Lines Serving Schools, Hospitals, and Nursing Homes (HCAs)				
# of services	Service material	Plans for replacement		
24	Ductile Iron	Replace in 3 years		
7	Copper	Replace in 3 years		
1	Bare Steel	Replace in 3 years		
0	Clear Plastic (CAB)	N/A		

Peoples Gas has not identified its clear plastic service lines less than 80 feet in length as higher risk or more susceptible to failure. Liberty discusses this issue under Recommendation II-4 below.

Peoples Gas met the timetable in its implementation plan for this recommendation to date. It has:

- Identified its higher consequence structures such as schools, hospitals, and nursing homes.
- Identified its vulnerable service lines consisting of bare steel, ductile iron, and copper serving HCAs, and plans to replace 32 services within 3 years.

Liberty's verification work on this recommendation is not complete. Peoples Gas has not identified its clear plastic as more vulnerable to failure. Liberty needs to review this issue further before determining whether Peoples Gas' actions meet the recommendation. In June 2009, Peoples Gas stated that it has no clear plastic services serving schools, hospitals, or nursing homes.

<sup>&</sup>lt;sup>15</sup> Response to Data Request #310.

<sup>&</sup>lt;sup>16</sup> Response to Data Request #314.

# **II-2**

Peoples Gas should ensure that:

- The coupon collection and analysis program continues
- The results of coupon sampling analyses are integrated with pipe condition information reported by its field crews
- The coupon collection is representative of main conditions in all areas of its system
- It incorporates the program's results systematically into the main replacement process.

Liberty found that it was unclear whether the coupon collection was representative of main conditions in all areas of its system. Moreover, it was unclear how Peoples Gas systematically incorporates this information into the main replacement process. Peoples Gas needs to ensure that it continues the coupon collection program and integrates the results with pipe condition information reported by its field crews.

# Background

Peoples Gas implemented an industry best practice of cast iron pipe coupon sampling. It is to use the results from the coupons samples in Peoples Gas' replacement weighting factors to assign a higher priority to vulnerable components and those with greater risks. However, it was unclear whether Peoples Gas consistently factored the results of the program into its replacement program and whether the coupon collections are representative of main conditions in all areas of its system. As part of its evaluation of the condition of its cast iron pipe, Peoples Gas' field crews collect and process pipe coupons taken from pipe segments around its system using Institute of Gas Technology (IGT) procedures used in a 1978 study of cast iron pipe. The Technical Training Center is responsible for testing the cast iron main coupons in the lab for strength, corrosion activity, condition, graphitization, and wall loss information. They enter this information into a database that provides justification for its main replacement program, and input to GMOS'<sup>17</sup> main ranking system for input to the main ranking index (MRI).

#### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas indicated that it currently has a procedure in the Operating & Maintenance Plan (Corrosion Control Order 8.137) that specifies when it should obtain a coupon sample. Addressing Liberty's recommendations in the order listed above, Peoples Gas stated that it:

- 1. plans to continue the coupon analysis program
- 2. integrates the results of the coupon sampling analysis with pipe condition information reported by field crews

<sup>&</sup>lt;sup>17</sup> Peoples Gas' Gas Main On-line System (GMOS) is the primary database for the distribution system, containing histories for approximately 83,000 segments. Dynamic segmentation identifies a different main segment whenever the following segment factors change: diameter, material, pressure, the "in" street, and year installed. There are associated segment inspection requirements such as corrosion control and leak surveys.

- 3. believes the coupon collection is representative of all low-pressure mains identified as "poor" in all areas of the distribution system
- 4. incorporates the results of the coupon analysis into its main replacement process

Peoples Gas plans to accomplish the following in support of its coupon-sampling program to validate that coupons were taken (or if main was replaced).

- 1. Peoples Gas will perform an internal review of records to validate adherence to Corrosion Control Order 8.137 regarding coupon sampling by December 15, 2008. This schedule is consistent with Liberty's recommendation to complete the review within six months of the date of Liberty's final report.
- 2. Provide training / communication if procedure is not being followed properly. March 31, 2009.
- 3. A report of coupons collected for 2009 and beyond will be generated quarterly to demonstrate the program's consistency and effectiveness. March 31, 2009.
- 4. Revise corrosion order 8.137 to include coupon sampling of medium pressure gas main segments that have been evaluated and identified as "poor" by field personnel. March 31, 2009.

### Verification Discussion and Conclusions

Liberty audit determined that Peoples Gas evaluated its coupon sampling processes and identified corrective actions to improve the program.<sup>18</sup> Peoples Gas revised corrosion order 8.137; the current date of the order is March 30, 2009. Peoples Gas will have to review the newly implemented or revised procedure with its Distribution department crews during its 2-day crew refresher training during the December/January period, or conduct tailgate meetings during the year. It is unclear whether the coupon collection is representative of main conditions in all areas of its system. Liberty verified that analyses of cast iron main coupons provided to the Technical Training Center were up to date, and tested in the lab for strength, corrosion activity, condition, graphitization, and wall loss information.<sup>19</sup> Peoples Gas used the results in its main ranking index results.

Liberty will verify when training on revised corrosion work order 8.137 is to take place, as well as Peoples Gas' review of its coupon program with its field personnel. Liberty will also review Peoples Gas' sampling program to determine how it gauges the conditions of its mains throughout its distribution system, and continue to ensure that Peoples Gas tests coupons in a timely manner and uses the results in the main replacement index.

During the third quarter of 2009, Liberty verified that Peoples Gas is continuing its analyses of cast iron mains via coupons provided to the Technical Training Center from field crews. Liberty verified that Peoples Gas' followed its analysis procedures and coupon tracking systems and that coupon analyses were up to date and tested in the lab for strength, corrosion activity, condition, graphitization, and wall loss information.<sup>20</sup> Technical Training and Standards personnel entered

<sup>&</sup>lt;sup>18</sup> Interview January 23, 2009.

<sup>&</sup>lt;sup>19</sup> Interview May 5, 2009.

<sup>&</sup>lt;sup>20</sup> Interview #133, August 5, 2009.

the analysis results of the coupon and soil samples taken, into the Gas Main Maintenance Detail format and used in its main ranking index results.

Liberty considers this recommendation verified and closed.

# II-3

Evaluate cast iron main replacement policies and increase replacement rates in the North district. Liberty recommended that Peoples Gas document a plan for cast iron main replacements.

# Background

Liberty concluded that cast iron main replacements in the North District lagged behind the other districts. As part of its cast iron replacement program in recent years, Peoples Gas has replaced less footage in the North district compared with replacement footage for its Central and South districts. As a result, the remaining amount of the most vulnerable 4", 6", and 8" diameter cast iron main remaining in the North district is 40 to 70 percent higher than the other two districts. The North district also has the most reported leaks and the highest percentage of vulnerable materials. Liberty concluded that Peoples Gas should increase the North District cast iron main replacement rate.

# **Peoples Gas' Implementation Plan**

Peoples Gas agreed that cast/ductile iron replacement rates in the South and Central district territories has out paced that of the North district territory and said that it would evaluate the cast/ductile iron replacement criteria. For consistency with Liberty's recommendation number II-1, Peoples Gas believes it should upgrade its system criteria considering system integrity and risk rather than primarily on a geographic boundary. Peoples Gas indicated that it would evaluate the cast/ductile iron replacement criteria and modify the GIS project selection program to include new weighting criteria. Peoples Gas proposed to:

- 1. Identify and assess risks in the gas distribution infrastructure by November 11, 2008.
- 2. Capture and update the Geographic Information System (GIS) database with the necessary attributes to query and quantify risks by November 11, 2008. This schedule is consistent with Liberty's recommendation to complete a plan for cast iron replacements within three months of Liberty's final report.
- 3. Assign a weighting value to identified risks by December 1, 2008.
- 4. Modify the existing GIS project selection program to include new weighting criteria and issue final report by March 2, 2009.

# Verification Discussion and Conclusions

During 2008, Peoples Gas increased its cast iron and ductile iron (CI - DI) replacements of main in its North District.<sup>21</sup> Peoples Gas stated the North District replaced the highest amount of these materials during 2008. Peoples Gas replaced the following amounts of cast and ductile iron during 2008.<sup>22</sup>

<sup>&</sup>lt;sup>21</sup> Interview #104, January 23, 2009.

<sup>&</sup>lt;sup>22</sup> Response to Data Request # 385.

	Total CI-DI	Total CI-DI	Total miles of
District	replaced (feet) -	replaced (miles)	10" CI-DI and
	2008	- 2008	less replaced
North	95,905	18.18	15.84
South	78,901	14.94	9.27
Central	72,303	13.69	11.06
All Districts	247,109	46.81	34.16

During April 2008, Peoples Gas formed the Gas Distribution System Design Task Group to identify and consolidate processes Peoples Gas uses to evaluate and select gas main construction projects and coordinate its approach with Peoples Gas long-term strategy and plans for upgrading the gas distribution system. The task group is to make recommendations of the most cost effective approach while managing risk and maintaining system integrity. The process is to weigh multiple components and assign greater values to those components with a higher probability of failure.

Peoples Gas described elements of the plan that include:<sup>23</sup>

- 1. Use the capital optimization program as the evaluation tool for all gas main system improvement projects. Modifications will be made to the tool to assign greater weighting values to components with higher probabilities and consequences of failure. (i.e., replacement of bare steel, clear plastic and copper service pipes and poor performing gas mains)
- 2. An emphasis on replacing poor performing CI-DI gas mains adjacent to schools, hospitals, and nursing homes (increasing the weight to 120 percent rating factor when the segment is within 80 feet of HCAs.).
- 3. An emphasis on replacing ductile iron medium pressure mains.
- 4. An emphasis on upgrading areas aligned with the long-term plan strategy.

Peoples believes the above will address Liberty's recommendations, will cause replacement rates of cast iron and ductile iron mains in the North District to increase, and will increase the rate of elimination of its more vulnerable at risk service lines.

In April 2009, Peoples Gas indicated that it had not established targets for cast iron and ductile iron replacements for 2009.<sup>24</sup> During May 2009, Peoples indicated it would reduce its capital expenditures by up to \$45 million.<sup>25</sup> This will affect the number of miles of cast iron and ductile iron main it will replace during 2009. Peoples Gas estimated it might only replace between 15 and 18 miles this year, down from 46 miles of cast iron and ductile iron main eliminated during 2008. PGL roughly estimates it costs \$1 million dollars per mile of main to install. With its planned capital expenditure reduction during 2009, Peoples Gas indicated it would have to concentrate its main replacements on those mains adversely impacted by public improvement projects, primarily due to interference work, or mains whose integrity would be affected by proposed construction. Peoples Gas indicated funding for discretionary main replacements is not there for 2009.

<sup>&</sup>lt;sup>23</sup> Response to Data Request #313.

<sup>&</sup>lt;sup>24</sup> Response to Data Request #385.

<sup>&</sup>lt;sup>25</sup> Interview, May 5, 2009.

Liberty will continue to monitor Peoples approach to its capital expenditures and mains replacement program to determine how it is able to comply with its original plans in response to this recommendation.

As stated in its evaluation of Peoples Gas' implementation of Recommendation I-1, Liberty is concerned with the level and number of new leaks received on Peoples Gas' system especially in the North district as compared with the Central and South districts. Peoples Gas indicated that its cast iron and ductile iron breaks and cracks that occur on its distribution mains are directly proportional to the severity of the winter,<sup>26</sup> comparing breaks and cracks with the number of degree-days in a particular year. To address this, PGL needs to continue with its historical rate of eliminating its cast iron and ductile iron mains. For 2009, due to Peoples Gas' capital constraints, it appears Peoples Gas reduced its cast iron and ductile iron replacements by two thirds, with limited capital dollars available for discretionary main replacements. This will adversely affect leak levels, leak backlogs, and main breaks and cracks, as leaks will continue to occur with the onset of cold weather. Simply put, fewer miles of cast iron and ductile iron eliminated adversely affects PGL's long-term ability to reduce new leaks. As of July 1, 2009, the North District had only retired 5.5 miles of cast/ductile iron mains for 2009. Previous interviews indicated that this year, Peoples Gas would only be able to eliminate between 15-18 miles on its entire system this

<sup>&</sup>lt;sup>26</sup> Response to Data Request #410.

# **II-4**

Implement a systematic replacement program of vulnerable service lines.

Liberty recommended that Peoples Gas document a well-defined plan for the systematic replacement of vulnerable service lines. Peoples Gas needs to implement a replacement program to target the more vulnerable services lines that pose the highest threat to the public.

# Background

Liberty found that Peoples Gas did not have a well-defined evaluation and replacement program for its at-risk service line components.

Liberty asked how Peoples Gas integrates the need to replace its higher risk service lines with main segments that it is evaluating for replacement.<sup>27</sup> Possible factors associated with vulnerable service lines include age, un-sleeved and located beneath a habitable structure, geography, and material (bare steel, copper inserts, clear plastic, cast iron, ductile iron). However, Peoples Gas indicated that its current method is to replace CAB<sup>28</sup> and bare steel services in conjunction with its Distribution System upgrade program rather than approach their replacements with separate replacement programs. Peoples Gas considers several factors when determining a project's value. The number of CAB and bare steel services in the project area is one of the factors considered.<sup>29</sup> The highest priority would involve high consequence leaks, water in the LP system, and ICC requests. Peoples Gas has 51,208 of these vulnerable lines. At the current replacement rates, it will take approximately 28 years to eliminate the threats from gas facilities closest to habitable structures and some service lines will be more than 77 years old at replacement.

Peoples Gas should assign higher values to components with a higher probability and consequence of failure and should ensure that the discretionary portion of its main replacement program and its service line replacement programs take into consideration the consequences should leaks or failures occur on these vulnerable facilities.

# Peoples Gas' Implementation Plan

Peoples Gas stated that it currently has a process in place to identify and target vulnerable service lines. Typically, Peoples Gas replaces these services in conjunction with Low-to-Medium Pressure conversion projects. Peoples Gas plans to review the failure rates of vulnerable service pipes and modify the weighting factor as appropriate. Peoples Gas also agreed to perform a study to identify service pipes that pose the highest threat to the public and document a plan for their replacement. The plan indicates it will:

1. Perform a number of database queries to validate statistics on replacement and failure rates of CI/DI, copper, bare steel, and CAB services by November 10, 2008.

<sup>&</sup>lt;sup>27</sup> Response to Data Request #153.

<sup>&</sup>lt;sup>28</sup> CAB is cellulose acetate butyrate service lines, a material that has shown poor performance in the industry.

<sup>&</sup>lt;sup>29</sup> Response to Data Request #156.

- 2. Perform a number of Geographic Information System (GIS) queries to identify geographic location of service pipes with higher probability and consequence of failure by November 17, 2008.
- 3. Analyze data and develop a plan by December 1, 2008.
- 4. Document a plan for systematic replacement of the more vulnerable service lines that pose the highest threat to the public by March 3, 2009. This schedule is consistent with Liberty's recommendation that Peoples Gas document a replacement plan within six months of the date of Liberty's final report.

Peoples Gas also stated that it has an effective program in place to renew vulnerable service pipes when upgrading an area to medium pressure. It based the program on risk avoidance; the program shows that:

- All medium pressure CAB services have been eliminated

- Only 115 CAB services are longer than 80 feet (CAB is susceptible to shrinkage)

- Of the 1,240 schools, hospitals, and nursing homes, there are only 32 identified as having vulnerable services (none are CAB)

- 92 percent of services Liberty has identified as vulnerable serve residential customers

- Only 5 percent of services Liberty has identified as vulnerable are medium pressure.

### Verification Discussion and Conclusions

Liberty determined that Peoples Gas had identified the numbers and failure rates of its vulnerable service line materials as shown in the table below.<sup>30</sup> Peoples Gas analyzed its leak rates for its services. It believes that it should emphasize replacements of its bare steel services and then copper service lines.

Service material	Leak rate (1994-2007)	Leak rate (1999-2007)	2007 leak rate	# of services
Bare steel	1.86%	1.75%	1.60%	6,500
Clear plastic (CAB)	.47%	.51%	.63%	23,000
Copper (Cu)	.62%	.58%	.52%	19,000
Ductile/cast iron (CI/DI)				750

Peoples Gas has not identified its clear plastic (CAB) service lines less than 80 feet in length as higher risk or more susceptible to failure. PGL has recognized its CAB services as having a vulnerability to shrink and pull out of couplings when their lengths are more than 80 feet, but has not recognized CAB services are also vulnerable to brittle failure. Peoples Gas indicated that it plans to replace all bare steel services in 10 years, approximately 650 per year as it recognizes bare steel services have the highest leak rates.<sup>31</sup> Liberty notes that CAB and copper inserted service lines have leak rates less than bare steel, however, CAB leak rates are worsening, and copper insert leak rates are slightly above that of CAB for the most recent 9-year period.

<sup>&</sup>lt;sup>30</sup> Response to Data Request #314, and interviews January 23, 2009, May 5, 2009.

<sup>&</sup>lt;sup>31</sup> Interview, January 23, 2009.

Liberty will continue to monitor Peoples Gas' service line replacements and the leak rates its service materials experience and report on its findings.

# II-7

Work with DIGGER to develop a program to screen out bogus emergency-locate requests.

# Background

Liberty concluded that DIGGER did not effectively screen out non-emergency locates called in as emergencies. At times, excavators call in jobs as emergency locates in order to get immediate markouts (within 2 hours), as opposed to the standard practice, which takes several days. DIGGER does not screen for bogus emergency calls and, unlike JULIE, has no provision for penalizing excavators who make such calls. This practice interferes with the performance of the program and, in addition to the inefficiencies created, interferes with the normal workload of the locators.

Liberty recommended that Peoples and DIGGER develop a protocol to enable DIGGER to distinguish between bona fide emergency requests and bogus requests, and to institute penalties for excavators who abuse the emergency locate service. Peoples Gas should make every effort to establish the protocol and implement the notifications within three months of the date of Liberty's report and within six months of the date of the report, Peoples Gas should report to the ICC regarding efforts to implement a penalty system for abuses of emergency locate requests.

# Peoples Gas' Implementation Plan

Peoples Gas identified the following action items to complete for this recommendation:

- 1. Initial meeting with CDOT (Chicago Department of Transportation) DIGGER personnel
- 2. Process to communicate with DIGGER personnel, excavating contractors working via emergency locate requests that are not emergencies. Process for communication would be via e-mail/spreadsheet.
- 3. Revise Distribution Department General Order 0.800 Procedures and Policies for the Prevention of Damage to (Underground) Gas Co. Facilities with new process.
- 4. Develop training material and provide training for Union and Management personnel to implement new procedure.
- 5. Work with DIGGER, Greater Chicago Damage Prevention Council (GCDPC), and the ICC staff to develop a process for compliance via penalty and/or education. One potential penalty may be to delay issuing permits to excavators that have a record of bogus locate requests.
- 6. Process to communicate with DIGGER personnel, excavating contractors working on emergency locate numbers that are not emergencies via enhancement to the Navigate/DIGGER programming. This will require programming changes that will need more in depth analysis.

# Verification Discussion and Conclusions

Peoples Gas provided the following information relative to items 1 and 2 in its implementation  $plan:^{32}$ 

<sup>&</sup>lt;sup>32</sup> Response to Data Request #338.

PGL looks to this issue as being an educational issue that will require improved communication with DIGGER for resolution. On 12/10/08, at the monthly Greater Chicago Damage Prevention Council Meeting (GCDPC), PGL representatives initiated a discussion regarding the abuse of emergency locate requests. The general discussion at this meeting regarded the screening process that CDOT/DIGGER call center operators use when they take information from excavators who are looking to obtain DIG numbers. PGL representatives said that in the future PGL would be providing the DIGGER Office with examples of false emergency locates in the hopes that the issues can be corrected. PGL also stated that it plans to work with the GCDPC, as well as on its own, to improve this process. The Manager of the CDOT/DIGGER Office attended and appeared to be open minded to future improvements.

*PGL* will be initiating the following steps in the first quarter of 2009 to provide *CDOT/DIGGER* examples of incorrect emergency locate requests:

1. PGL Locators will be instructed to identify those emergency locate requests that they determine to be not-in-fact emergencies. Locators will then initiate a "Follow-Up" to themselves in the Navigate system and type in comments in the "Remarks" box as to why they believe the particular emergency locate request is in fact not an emergency.

2. Supervisors will then look at these Locator "Follow-Ups" in the Navigate system and save a copy of the locate screen from Navigate in a folder that will be set up for each District Shop.

3. Weekly, the folder for the previous week containing the emergency locates that we consider to be false, will be e-mailed to the CDOT Manager of the DIGGER Office. A summary comment will be authored regarding the types of issues that were discovered in that particular week on the e-mail. The locate screens identify the name of the locate requester and the type of work that had been the planned for each locate.

Longer term, PGL will evaluate enhancements to the Navigate software to capture information and statistics in a more automated manner. Any future Navigate enhancements will be subject to a cost/benefit analysis.

One of the most important issues with bogus emergency locates deals with whether the call center operators have the training required to screen information from excavators who are looking to obtain DIG numbers. Peoples Gas only had a general discussion, which likely was inadequate.

On April 9, 2009, Liberty interviewed Peoples Gas personnel regarding the proper training of DIGGER call center operators. Peoples Gas agreed to gather initial data on emergency bogus tickets and meet with the Manager of DIGGER to discuss safety issues and other implications involved. These include traffic safety when rushing to a scene, personal safety, and leaving an existing work location to respond to an emergency request. Peoples Gas indicated that it would offer training to assist in the understanding of pertinent information needed in taking emergency locates. Peoples Gas will help verify that operators know how to handle an invalid emergency

request, including notifying the caller that they will have to wait 48 hours or they will be violating the law. If conducted properly, this will be a major step in reducing bogus emergency locates.

Liberty also discussed with Peoples Gas the issue of requesting that DIGGER require mandatory training for excavators who damage facilities. Peoples Gas agreed that it could combine this matter with Liberty's recommendation to request that DIGGER require training or delayed permit issuance for excavators who have a record of bogus locate requests. The ICC Staff allowed Peoples Gas an extension of two months (until May 31, 2009) on implementation plan item #5, in order for Peoples Gas to gather the necessary data and meet with DIGGER.

Peoples Gas included the process for identifying bogus emergency-locate requests in Distribution General Order 0.800.<sup>33</sup> Peoples Gas also noted that the new System Integrity Group (SIG) would communicate findings with DIGGER and will:<sup>34</sup>

set up meetings with the DIGGER office to review the findings. The SIG will endeavor to work with DIGGER to improve screening methods to reduce the risk of bogus emergency locate requests. We will also encourage DIGGER to impose sanctions for those excavators found abusing the system. Sanctions may include requiring greater notice for locate requests (>2 days) or mandatory damage prevention training.

Peoples Gas should meet with the Manager of DIGGER to discuss in detail how to curtail bogus emergency locates. Liberty will follow-up on this matter and review the outcome of the Peoples Gas–DIGGER meetings.

In an e-mail of May 29, 2009, Peoples Gas provided locate statistics for the year 2008. Over 20 percent of the locate requests were "emergency." The large number of emergency requests (over 20,000 in 2008) has a significant effect on its resources, Peoples Gas needs to prevent or limit bogus emergency requests. Peoples Gas did not track the actual number of bogus requests in 2008.

Peoples Gas covered implementation plan item #4, training, in its Distribution General Order 0.800.<sup>35</sup> Liberty found that this information adequately covers the subject matter.

Peoples Gas scheduled the action for item # 6 in its implementation plan for the end of September 2009.

In response to a request for information about bogus emergency locate requests, Peoples Gas stated,<sup>36</sup>

As a way to track "not-in-fact" emergencies, PGL locators have been assigning suspect locates to a fictitious locator named "Emergency No" as described in General Order 0.800 since March 2009. A NaviGate report for all follow-up

<sup>&</sup>lt;sup>33</sup> Response to Data Request #334.

<sup>&</sup>lt;sup>34</sup> Response to Data Request #339.

<sup>&</sup>lt;sup>35</sup> Responses to Data Requests #334 and #340.

<sup>&</sup>lt;sup>36</sup> Response to Data Request #418.

locates assigned to "Emergency No" has been generated and reviewed by a supervisor to further investigate claims of "not-in-fact" emergencies. The report currently provides a means to identify "not-in-fact" emergencies to investigate and report to Digger but does not identify the original locator. This report and process require further improvements to include a locator data field to identify who generated the "Emergency No".

The accompanying report showed that during the four-month period from March through June 2009, there were 106 locates assigned to "Emergency No," and, after investigation, only 27 turned out to be true emergencies.

On August 5, 2009, Liberty interviewed Peoples Gas personnel regarding the three steps noted above and for which Peoples Gas was hopeful would reduce the number of bogus emergency locate requests. This included a detailed discussion of e-mail communications that Peoples Gas sent to CDOT regarding false locate requests.<sup>37</sup> There were numerous e-mails in which, month after month, Peoples Gas had notified the DIGGER office of probable DIGGER violations or inadequate information on the locate requests. Common among these communications were statements such as:

- this permit did not say anything about directional bore
- actual locate request was for a single address, they were working the entire block
- *permit did not specify boring*
- contractor directional boring but not on DIGGER as directional boring
- more weekend work, not an emergency
- this is happening again... we need to take care of this immediately... we are getting this more and more
- more from last weekend, have you figured out what is happening?
- seems like every weekend we are getting some of these
- *it appears that this occurs most frequently with water and sewer*
- *here is another one, don't know if you found out anything about the others sent last week*
- this does not comply with the standard 48-hour notice

These comments indicate the continued existence of a significant problem. It shows a lack of positive response from the city and the failure of Peoples Gas to take an alternative approach in its communications. The e-mail communication process is apparently ineffective; Peoples Gas should increase the level of communications to whoever at DIGGER is responsible.

One of the most important issues with bogus emergency locates deals with whether the call center operators have the training required to screen information from excavators who are looking to attain locates. PGL did recommend to CDOT that the operators in the DIGGER office be included in some training. However, Peoples Gas has not followed through with a training plan or necessary actions to deal with operators that would be necessary to reduce the number of bogus emergency locates.

<sup>&</sup>lt;sup>37</sup> Response to Data Request #419.

Peoples Gas has made some efforts to meet with GCDPC and CDOT to discuss training. There was one training session for the City Water/Sewer crew foreman and engineers on July 29, 2009, and a training session for two contractors.<sup>38</sup> However, Peoples Gas only appointed a manager for damage prevention in April 2009. The lack of adequate action to address the training issue is likely because this new manager has several other responsibilities and dealing with the city may require constant and special attention.

In addition, Peoples Gas was supposed to work with DIGGER, GCDPC, and the ICC Staff to develop a process for compliance via penalty and education for abuses of emergency locate requests. PGL did bring this issue up to CDOT, and a recommendation resulted involving presenting data to the DIGGER office so that it could take steps to eliminate the problem. Peoples Gas has not expedited or followed up discussions with the city concerning the compliance process. Moreover, Peoples Gas failed to include the ICC Staff.

Damage prevention continues to show very little progress or significant accomplishments over the last year. In August 2009, Peoples Gas assigned yet another manager to be responsible for damage prevention. Peoples Gas assured Liberty that, given time to come up to speed, this new manager would address the issues and get them resolved. Liberty would like to see this new manager develop a relationship with the city to resolve critical issues necessary to reduce damages to PGL's underground facilities.

PGL did not meet their target date for action item # 5.

Liberty will continue to keep this recommendation open for additional verification work.

<sup>&</sup>lt;sup>38</sup> Response to Data Request # 420.

# **II-8**

Upgrade the training program for locators.

# Background

Liberty concluded that Peoples Gas' training for its locators did not meet minimum requirements. Peoples Gas required its locators to have taken basic Operator Apprentice training as well as two days of classroom and on-the-job training before the initial locate. In contrast, NULCA's (National Utility Locating Contractors Association's) training program takes approximately two weeks to complete. Liberty's comparison between Peoples Gas' training materials and classroom sessions and NULCA's training standards demonstrated that Peoples Gas does not meet PHMSA (Pipeline and Hazardous Materials Safety Administration) minimum requirements or industry best practices.

Liberty recommended that Peoples Gas upgrade the training program for locators. As a group, Peoples Gas' locators needed more and better training. Liberty stated that Peoples Gas should design and implement the improved training program within six months of the date of the final report and all locators should receive the new training within one year of the date of the report.

#### **Peoples Gas' Implementation Plan**

Peoples Gas stated that it would complete the following action items:

- Review NULCA program and identify gaps between it and Peoples Gas' training program.
- Review Common Ground Alliance (CGA) best practices and identify gaps between it and Peoples Gas' training program.
- Design revisions to its program and develop training materials.
- Train instructors.
- Conduct new training for locators: 5/1/09 through 9/30/09.
- Measure the effectiveness of training using root cause analysis and evaluations from QA/QC audits.

#### Verification Discussion and Conclusions

Liberty reviewed Peoples Gas' comparison of NULCA<sup>39</sup> training standards to its own training materials.<sup>40</sup> The company reviewed each NULCA "units of competence," which includes an explanation of the unit, elements of competence, and performance criteria. For each of these "units," Peoples Gas developed a response or recommendations for any deficiencies or clarifications that it might need. The review is complete, but Liberty will spend additional time to verify actual changes or additions in training materials, company procedures, and classroom presentations. An example of a change in company procedures is General Order 0.800- Section C, which states "A sufficient number of locate marks shall be made over mains and services to

<sup>&</sup>lt;sup>39</sup> National Utility Locating Contractors Association.

<sup>&</sup>lt;sup>40</sup> Response to Data Request #341.

assure that the excavator can readily determine the locations of company facilities throughout the area of construction." The training manager indicated that Peoples Gas would probably require a minimum of ten feet between locate marks over facilities. If this is the case, Peoples Gas will have to revise General Order 0.800 to reflect this policy change.

Peoples Gas also provided the results of its review of the CGA practices and the identification of gaps with Peoples Gas' training.<sup>41</sup> Peoples Gas did an outstanding job in developing these comparisons, which clearly identify areas for the adoption of best practices. In particular, the spreadsheets for gaps CGA and Peoples Gas' practices is thorough and includes the gap description, corrective actions, and any follow-up that it might need. The following is an example of part of the company's findings:

OVERALL SUMMARY - Phase I						
All Gaps		Total Number		51		
		Perce	ntage (Gaps to E	Best Practices)	62%	
Remediation Effort		Minor		24		
		Moderate		25		
			Significant		3

	Significant		6			
				1		
		CROSS SECTIONAL SUMMARY				
		Effort			ļ	
		Minor	Moderate	Significant	Priority	
e						
enc	Significant	0	5	1	1st Priority	
ene						
ISe	Moderate	1	8	1	2nd Priority	
Consequence					,	
	Minor	23	12	1	3rd Priority	

With regard to training instructors (action item #4), Peoples Gas sent four TTS (Technical Training and Standards) staff personnel last November for locating training at Staking University in Illinois. Basic locating concepts as well as problem solving techniques that could assist with difficult locating processes were part of the program. The instruction used several instruments to perform specific locating techniques including comparing peak versus null response,

<sup>&</sup>lt;sup>41</sup> Response to Data Request #342.

triangulation, and depth validation techniques. Instructors who attended this training thought it was a valuable experience and would welcome future training opportunities.

Peoples Gas scheduled action items #3 through #6 to be complete after April 1, 2009, and Liberty will monitor these items later in the verification phase.

## II-9

Develop and implement a communications and training protocol for the City of Chicago municipal workers and private contractors.

## Background

Liberty concluded that Peoples Gas' communications with and training for excavators was deficient. For the period January 2006 through September 2007, Peoples Gas' underground facilities were damaged in 1,452 incidents. Of that number, 632 incidents (44 percent) were excavations about which the one-call system was not notified. Liberty concluded that Peoples Gas' communications to excavators regarding excavation damage prevention have not been effective.

Municipal workers caused 564, or 39 percent of the 1,452 incidents in the period referenced above. The last documented training of City of Chicago employees was in April 2004. Liberty concluded that the training provided to City of Chicago employees regarding excavation damage prevention was woefully inadequate.

Liberty recommended that Peoples Gas develop and implement a program for meetings with municipal and private excavators to educate and train them about the damage prevention program. Excavators should be required to attend such meetings.

### **Peoples Gas' Implementation Plan**

Peoples Gas stated they would comply with Liberty's recommendation by completing the following action items:

1. Prepare a letter to GCDPC (Greater Chicago Damage Prevention Council) strongly recommending training by TTS to municipal and private excavators

2. Schedule training sessions from responses from GCDPC members

3. Conduct training January 2009 through May 29, 2009. This is consistent with Liberty's recommendation that the training should be complete by May 2009.

#### Verification Discussion and Conclusions

Peoples Gas issued a letter to GCDPC recommending training for municipal and private excavators.<sup>42</sup> TTS scheduled training every Friday through the month of April on damage prevention for the city of Chicago.<sup>43</sup> Peoples Gas' TTS manager was uncertain who would be conducting the training for the city and indicated that there had been no response from GCDPC members for any training.

During the week of April 6, 2009, Liberty confirmed that Peoples Gas is not meeting the intent of this recommendation. The only effort made regarding the training of municipal workers and private contractors was sending a letter to the GCDPC letting them know Peoples Gas could

<sup>&</sup>lt;sup>42</sup> Response to Data Request #301 and #346.

<sup>&</sup>lt;sup>43</sup> Response to Data Request #347.

conduct some training. There has been no response from members of GCDPC and consequently no training given. Peoples Gas agreed to remove the training from the calendar until it actually schedules training. Peoples Gas appointed a manager for Damage Prevention on April 10, 2009. He indicated that he would contact City department heads about training. Liberty will follow-up on this matter and other issues of training contractors in the future.

In a May 27, 2009, telephone meeting with the new Manager of System Integrity (damage prevention), Peoples Gas confirmed that no actual training had been conducted. The manager indicated that he met with the head of Chicago Department of Transportation to present Peoples Gas' training materials, and hopes that this will lead to training of personnel in various city departments.

On August 5, 2009, Liberty interviewed Peoples Gas personnel regarding implementing training protocol for the city of Chicago municipal workers and private contractors. Peoples Gas had discussions with GCDPC and CDOT concerning training for municipal workers and private contractors.<sup>44</sup> However, Peoples Gas documented only the following damage prevention training for this year as a result of their efforts:

- 1. Training for City Water/Sewer Crew Foreman and Engineers was held on July 29<sup>th</sup>.
- 2. Training for Benchmark was held July 30<sup>th</sup>
- 3. Training for GroundHog is scheduled for August 18<sup>th</sup>.

Peoples Gas has not conducted the damage prevention training of excavators that is necessary to have a meaningful effect. Peoples Gas' actions to promote excavator training have not been effective. This is partly because Peoples Gas did not assign in a timely manner a manager who would be accountable for damage prevention and then replacing this manager three months later. Peoples Gas is almost a construction season behind in actions it should have taken at the end of 2008.

Although Peoples Gas made a recommendation to GCDPC that excavators causing damage should be required to attend training, there were only two excavators that eventually had any training. (There are over 300 eligible for training.<sup>45</sup>) All excavators causing damage should be required to attend training. The recommendation made to GCDPC concerning mandatory training was insufficient and ineffective. It did not address all excavators and did not produce results.

Peoples Gas has not met the clear intent of this recommendation. Liberty will continue to monitor any progress in this area.

<sup>&</sup>lt;sup>44</sup> Response to Data Request #420.

<sup>&</sup>lt;sup>45</sup> Response to Data Request #335.

## II-10

Develop and implement a procedure for monitoring directional boring activities.

## Background

Liberty found that Peoples Gas did not identify and observe directional boring activities. Directional bores create additional hazards to underground facilities and require special treatment, including a Peoples Gas presence on-site during the boring operation. However, Peoples Gas' locators mark out the site and leave, with no special consideration given to a directional bore site. The mark-out ticket usually indicates a directional bore. Even if not on the ticket, an adequately trained mark-out person should be able to assess the intent to bore at the site.

Liberty recommended that Peoples Gas develop a procedure for identifying and monitoring directional boring activities and train its locators or other monitors in the specific requirements and hazards associated with directional bores. Peoples Gas should pay particular attention to those contractors who have caused damage in previous boring operations.

#### **Peoples Gas' Implementation Plan**

Peoples Gas stated they would comply with Liberty's recommendation by completing the following action items:

- Develop criteria for enhanced monitoring of directional boring activities.
- Revise Distribution Dept. General Order 0.800 Policies and Procedures for the Prevention of Damage to (Underground) Gas Company Facilities with new criteria for monitoring directional boring activities.
- Work with DIGGER office and GCDPC (Greater Chicago Damage Prevention Council) to ensure that excavator and Digger office personnel understand the importance of communicating boring activities when locates are requested.
- Develop training material and provide training to Union and Management personnel covering new monitoring requirements for directional boring.

#### Verification Discussion and Conclusions

Liberty reviewed relevant sections of General Order 0.800, in which Peoples Gas addressed directional boring activities.<sup>46</sup> Peoples Gas did a good job in revising procedures to include new criteria for monitoring directional boring activities. In addition, Peoples Gas indicated that it is initiating steps to amend procedures in an effort to minimize risks associated with excavators performing directional drilling operations in close proximity to underground natural gas facilities.<sup>47</sup> The steps Peoples Gas is taking are twofold. One is improved education and communication required for Peoples Gas to identify excavators who plan to perform directional boring. The other is enhanced monitoring Peoples Gas will conduct to minimize the risks to its

<sup>&</sup>lt;sup>46</sup> Response to Data Request #334.

<sup>&</sup>lt;sup>47</sup> Response to Data Request #348.

facilities when directional boring is performed. Some of Peoples Gas' standards are consistent with industry practices such as:

- 1. Verify test holing is performed when crossing over gas facilities.
- 2. Drill head is observed in test holes as it passes exposed gas facilities.
- 3. Drill paths parallel to gas facilities, within 3' of the gas facility, should be discouraged. When deemed necessary to drill within 3', test holing at regular intervals should be performed to ensure the facility being installed did not encroach on the gas facility.
- 4. Drilling machines are located to avoid anchor stakes striking nearby underground gas facilities.
- 5. Excavators with history of damaging gas facilities will be observed more closely during actual construction

Peoples Gas also said that:<sup>48</sup>

On 12/10/08, at the monthly Greater Chicago Damage Prevention Council Meeting (GCDPC), PGL representatives initiated a discussion regarding the importance that locate requests identify the planned excavating techniques. It was agreed that the current information that excavators are required to provide to the DIGGER Office is deficient in determining excavating techniques.

It was suggested that the DIGGER call center operators who take the requests be informed that they should extract this type of information when excavators call for DIG numbers. It was also recommended that the DIGGER system be enhanced to require that the excavation technique be a required entry field. The Manager of the DIGGER Office, who attended at this meeting, said that they would look into this issue.

Apparently, Peoples Gas' representatives made no effort to visit DIGGER facilities and ensure that office personnel understand the importance of communicating boring activity on locate requests. There was no documentation of any follow-up by Peoples Gas to check on training of call center operators.

On August 5, 2009, Liberty met with PGL personnel to discuss action item # 3, which states: Work with DIGGER office and GCDPC (Greater Chicago Damage Prevention Council) to ensure that excavator and Digger office personnel understand the importance of communicating boring activities when locates are requested.

Liberty reviewed numerous e-mails over a period of several months and found repeated comments such as:<sup>49</sup>

- this permit did not say anything about directional bore
- permit did not specify boring
- contractor directional boring but not on DIGGER as directional boring
- this is happening again... we need to take care of this immediately... we are getting this more and more

<sup>&</sup>lt;sup>48</sup> Response to Data Request #348.

<sup>&</sup>lt;sup>49</sup> Response to Data Request #419.

It is apparent that e-mails are not accomplishing anything regarding DIGER office personnel understanding the importance of communicating boring activities when locates are requested.

AT the December 10, 2008, monthly meeting of the GCDPC,<sup>50</sup> Peoples Gas suggested that the DIGGER call center operators who take the requests be informed that they should identify planned excavation techniques such as boring activity when excavators call for DIG numbers. It was also recommended that the DIGGER system be enhanced to require that the excavation technique be a required entry field. After 10 months, Peoples Gas has not followed through sufficiently in order to get these recommendations accepted by the city of Chicago.

Liberty requested that Peoples Gas provide efforts, results, and follow-ups it has taken to ensure DIGGER personnel understand the importance of communicating boring activity on locate requests.<sup>51</sup> Liberty found Peoples Gas' response to be inadequate and not addressing the issue properly. One of the most important issues with bogus emergency locates and identifying boring activities deals with whether the call center operators have the training required to screen information from excavators who are looking to attain locates. Peoples Gas has not taken the right actions or followed up to create opportunities to ensure that DIGGER office personnel are trained properly to identify when boring activities are involved in locate requests. DIGGER office personnel are similar to 911 operators in that if the information is not taken properly, the result could cause personal injury or death. Peoples Gas needs to take a stronger approach with the city of Chicago in order to resolve this issue.

PGL did not meet their target date for action item # 3. Liberty will keep this recommendation open.

<sup>&</sup>lt;sup>50</sup> Response to Data Request # 348

<sup>&</sup>lt;sup>51</sup> Response to Data Request # 423

# II-11

Develop and implement criteria and a procedure for conducting inspections of excavating sites.

## Background

Liberty concluded that Peoples Gas' procedural requirement to inspect the site every time its facilities are exposed was unrealistic and the company did not comply with the procedure. Peoples Gas did not inspect most sites after excavation exposure, and in fact, this is an unrealistic and impractical requirement. Peoples Gas needs to perform a risk assessment and develop criteria for which types of sites it must inspect and which it will inspect on a sample basis.

Liberty recommended that Peoples Gas develop criteria for inspecting excavation sites, including a determination and ranking of relative risk of various types of excavations and development of a realistic and achievable sampling protocol.

## Peoples Gas' Implementation Plan

Peoples Gas stated they would comply with Liberty's recommendation by completing the following action items:

- Develop more reasonable criteria and guidelines for performing inspections at excavation sites.
- Revise Distribution Dept. General Order 0.800 Policies and Procedures for the Prevention of Damage to (Underground) Gas Facilities with new inspection guidelines.
- Develop training material and provide training to Union and Management personnel.
- Provide locators with business cards to help improve communication with excavators in order to implement new inspection guidelines.
- Develop report to verify the company is achieving sampling requirements contained in new guidelines.

## Verification Discussion and Conclusions

Liberty reviewed General Order 0.800 Policies and Procedures for the Prevention of Damage to (Underground) Gas Company Facilities dated 3/30/09<sup>52</sup> where PGL has revised this document with new inspection guidelines. Liberty found that Peoples Gas has done a good job in this area and has revised its procedures accordingly. Peoples Gas established plans to perform follow-up inspections on 5 percent of most excavation activities such as:<sup>53</sup>

- Excavations to be performed by City of Chicago workforces or contractors working for the City of Chicago since these excavators have a poor record of damage prevention regarding PGL facilities.
- Other excavators with a poor record of damage prevention regarding PGL facilities.

<sup>&</sup>lt;sup>52</sup> Response to Data Request #334.

<sup>&</sup>lt;sup>53</sup> Response to Data Request #351.

- Excavations to be performed in parkways where a gas main is located since this is where most gas mains are damaged.
- Excavators trenching across intersections since this is the location where most gas mains are crossed perpendicular and damage is more likely.

Because there were about 90,000 locates last year, this could amount to approximately 90 follow-ups per week. This is aggressive and Liberty will monitor Peoples Gas' efforts to meet this goal.

Liberty also noted that Peoples Gas' plans provide for and document that inspections of exposed gas facilities are performed by creating a checklist to be completed by the company employees who perform inspections. These employees are not always locators. Peoples Gas will file the checklists at each District Shop. The checklist will include those items currently shown in Distribution Dept. General Order 0.800.

Liberty will verify that Peoples Gas is using the checklist in the field during the construction season. In addition, Peoples Gas is developing training material, and will conduct the training of union and management personnel between May and the end of October 2009. Peoples Gas provided locators with business cards to help improve communication with excavators and to implement new inspection guidelines. Peoples Gas indicated that the report to verify that the company is achieving sampling requirements contained in new guidelines will be developed by the target date of September 30, 2009.

The verification of this recommendation remains open. Liberty will follow-up on the third and fifth action items in the implementation plan.

# II-12

Peoples Gas should develop and implement a procedure for sealing exposed cast iron joints that are subject to pressures of 25 psig or less.

## Background

Federal code requires that exposed cast iron joints subject to pressures 25 psig or less must be sealed by means other than caulking. That requirement was not included in Peoples Gas' procedures, and Liberty observed that Peoples employees were generally not aware of it. Liberty found that Peoples Gas needed to include this code requirement in its procedures, make its field personnel aware of the requirement, and implement a process to provide for such sealing.

## **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas stated that it will make changes to applicable orders to reflect that whenever a cast iron or ductile iron bell joint subject to pressures of 25 psig or less is exposed, it must be sealed (leaking or not) using means other than caulking (*i.e.*, anaerobic sealant or encapsulant). Peoples Gas would:

- Issue a bulletin by 11-26-08
- Conduct tailgate information sessions by 12-31-08, and
- Update appropriate O&M Orders by 3-31-09.

## Verification Discussion and Conclusions

To address this code requirement, Peoples Gas issued Distribution Department (Technical Training and Standards) Bulletin #74, dated November 12, 2008, entitled Exposed Cast Iron Bell and Spigot Joints.<sup>54</sup> Peoples Gas also issued Distribution Department Main Work order numbers 1.003, 1.004, 1.005 and 1.007, that address the cast iron joint sealant requirements contained in the federal safety code.<sup>55</sup> Peoples Gas held tailgates training sessions on various dates in November 2008 using Bulletin #74.<sup>56</sup>

Liberty concluded that Peoples Gas took the actions in its implementation plan and met the intent of this recommendation. Liberty considers this recommendation verified and closed.

<sup>&</sup>lt;sup>54</sup> Response to Data Request # 301.

<sup>&</sup>lt;sup>55</sup> Response to Data Request # 394.

<sup>&</sup>lt;sup>56</sup> Response to Data Request # 355.

## II-15

Develop a system for tracking performance metrics for the damage prevention program.

## Background

Liberty determined that Peoples Gas did not maintain, track, and use performance measures. There are a number of performance measures in common use in the industry, including damages per mile of mains, damages per 1,000 excavations, total number of hits, and many others. Peoples Gas does not maintain any such statistics. Furthermore, the ICC requires reporting of hits to transmission systems, but not distribution systems, and Peoples does not track hits to its distribution system.

Liberty recommended that Peoples Gas develop a system for tracking performance metrics for the damage prevention program. Peoples Gas should develop a system for collecting and tracking performance metrics, including a comparison with a peer group of utilities.

Liberty also suggested that the ICC might want to consider requiring Peoples Gas to report to it all damages or probable violations of the Illinois Underground Utility Facilities Damage Prevention Act using the DIRT "root causes." This would enable the ICC to analyze damage prevention activities and step up enforcement in certain areas.

#### **Peoples Gas' Implementation Plan**

PGL has identified the following action items in order to complete this recommendation.

- 1. Complete survey of peer utilities
- 2. Determine and compile performance metrics and make decision on using those metrics that will enhance Peoples Gas' performance in preventing damage to gas facilities. Peoples Gas will work with the ICC in developing these performance metrics.
- 3. Implement performance metrics.

## Verification Discussion and Conclusions

Peoples Gas' survey of peer utilities showed that the following were the most commonly used metrics:<sup>57</sup>

- 1. Ratio of # Damages and Cause
- 2. # of Mis-marks
- 3. # of hits per year
- 4. Underground damage investigation reports for each incident
- 5. Locate volume (gas/elec/both)
- 6. Damages (by geographic area, category, facility-gas/electric)
- 7. Damages to facilities by company and by contractors
- 8. Locator at-fault damages
- 9. Locator on-time performance

<sup>&</sup>lt;sup>57</sup> Response to Data Request #361.

- 10. Locator second notice tracking (reason why one-call second notice was issued)
- 11. Locator audits
- 12. ICC enforcement actions
- 13. # of hits per year
- 14. # of tickets per volume of work.

Using the survey results and other research, Peoples Gas determined that the following metrics were most common in the industry:<sup>58</sup>

- Number of mis-marks per 1000 locates
- Hits Per 1000 locate request to compare with industry
- Number of total damages and by pipe and size
- Damages per 1000 locate requests
- Damages per 1000 miles of main
- Damages per 1000 services
- Total number of locate requests and tracked by month and by category of request
- Percentage of locate request no-show to total locate requests
- Percentage of on time locates.

Peoples Gas indicated that it will discuss these and other metrics with the ICC Staff to develop an agreed upon set of performance metrics related to damage prevention for reporting purposes.

On August 5, 2009, Liberty met with Peoples Gas personnel to discuss the status of damageprevention performance metrics. Liberty had requested a list of metrics as a follow-up to previous discussions.<sup>59</sup> Liberty noted that Peoples Gas' response was a letter dated March 31, 2009, to the ICC saying that there does not appear to be any standard list of metrics and list a handful of metrics Peoples Gas will probably start with. The letter also states that implementing the metrics would be later in the year. Peoples Gas personnel responsible for damage prevention were unaware of this response. However, the peer survey identified numerous metrics and was available in January 2009.

Peoples Gas has delayed developing a system for collecting and tracking metrics, which is an important part for any effective damage prevention program. The small number of metrics is inadequate to identify problem areas and make improvements to the damage prevention program.

Peoples Gas did not meet their target date. Liberty will continue to monitor Peoples Gas' progress in implementing this recommendation.

<sup>&</sup>lt;sup>58</sup> Response to Data Request #362.

<sup>&</sup>lt;sup>59</sup> Response to Data Request # 425

# III-1

Determine the resources necessary to ensure all annual valve inspections are accomplished within scheduled timeframes.

## Background

Peoples' Gas Operations Section (GOS) personnel conduct over 4,000 annual valve inspections (located on main lines or on feeder lines) for field identification, accessibility, and operability. Distribution field crews perform the remaining 6,000 valve inspections. GOS also annually inspects 113 Security Valves (slam shut), conducting a maintenance diagnostic test, 39 remote-operated valves (ROVs), and 13 Meter Runs.<sup>60</sup>

To accomplish this work in 1999, GOS had 34 employees (Manager, General Supervisor, Engineer, Technician, 6 Supervisors and 24 union personnel). By 2007, due in part to work rule changes, Peoples Gas reduced the GOS workforce to 22 employees (6 management and 16 union personnel). Peoples Gas reported that overdue valve inspections numbered 13, 38, and 8 for the years 2005 through 2007, respectively.<sup>61</sup>

Liberty concluded that the GOS did not appear to have adequate resources to ensure it meets its annual inspection schedules. Liberty also concluded that Peoples Gas needed to determine its workforce needs based on work activities, both for GOS valve inspections, and for valve inspections performed by distribution operations field forces.

Liberty recommended that Peoples Gas should complete the assessment of workforce needs and make the appropriate adjustments to its field forces.

## **Peoples Gas' Implementation Plan**

Peoples Gas stated that it believes this is not a resource issue. It claims the overdue valve inspection information provided in the data request included valves that were completed on the same day the inspection was due. Peoples Gas indicated only 6 overdue valve inspections occurred in 2006 and 1 in 2007, compared to the 38 and 7 it reported. Since 2007, the company has been closely monitoring all inspections and has been reporting all overdue inspections to the ICC on a monthly basis. In addition, Peoples Gas created Centralized Planning, to schedule, route, and monitor inspections. Centralized Planning's focus will be to ensure Peoples Gas completes all inspections on time.

During Liberty's discussions with Centralized Planning, Peoples Gas indicated that during 2008 it scheduled valve inspections for the North and Central Districts.<sup>62</sup> During 2009, it also plans to schedule valve inspections for the South District.

To address Liberty's recommendation, Peoples Gas planned specific action items as follows.

<sup>&</sup>lt;sup>60</sup> Interviews Gas Operations Section, August 15, 2007, and November 15, 2007. Meter Runs are located at Gate Stations and at special meter locations of large volume customers.

<sup>&</sup>lt;sup>61</sup> Response to Data Request #197.

<sup>&</sup>lt;sup>62</sup> Interview #107, January 20, 2009.

- Centralized Planning Group to Monitor Inspections by October 1, 2008.
- Centralized Planning Group to Schedule and Route Inspections for North and Central Shop by October 1, 2008.
- Peoples Gas will create a monthly and YTD valve inspection report by February 28, 2009.
- Centralized Planning Group to Schedule and Route all Inspections for the Company by spring 2010 (March 1, 2010 WAMS).

## Verification Discussion and Conclusions

Liberty determined that Peoples Gas had assigned two engineers in its Centralized Planning Section to work with the North and Central Districts during 2008 to schedule valve inspections.<sup>63</sup> The engineers explained their scheduling process, valve inspection tracking, and how they contact field personnel to ensure the Districts completed its valve inspections on schedule. They schedule inspections by square mile grid and identify them on Peoples Gas Navigate system. Peoples Gas provided a spreadsheet containing the number and location of valves it scheduled for inspection, as well as their inspection dates for the last 6 months of 2008.<sup>64</sup> It scheduled and completed 5,095 valve inspections in the last six months of 2008.

Liberty will continue to monitor Peoples Gas' implementation of its valve inspection reports, its planned implementation of valve inspection scheduling for the South District (in addition to the North and Central Districts) during 2009, and inspections performed by GOS of its network valves.

During the third quarter, Liberty met with Peoples Gas' Centralized Planning Section<sup>65</sup> and evaluated the group's work in scheduling and tracking valve inspections and in ensuring Peoples Gas' crews perform valve inspections on time. Peoples Gas schedules its valve inspections by the square mile in which the valve exists. At the beginning of the year, valve inspections are identified by the month the inspections are due and are provided to crews/employees 30 days in advance of the inspection due date. They print a weekly report of valve inspections due within 30 days including those valves previously scheduled and still not inspected. These are reviewed by Centralized Planning Section personnel weekly to identify those due within two weeks and discussed with crews scheduled to perform the inspections to ensure due dates are met. Liberty did not note any inspection violations. The process appears adequate to ensure inspections due dates are in compliance. Liberty considers this recommendation verified and closed.

<sup>&</sup>lt;sup>63</sup> Interview #107, January 20, 2009.

<sup>&</sup>lt;sup>64</sup> Response to Data Request # 315

<sup>&</sup>lt;sup>65</sup> Interview #132, August 5, 2009.

## III-3

Resolve interface problems with the chartless recorders.

To take full advantage of chartless technology and to ensure there are no operating problems at its pressure regulation stations, Peoples Gas needs to identify and resolve the interface issues.

## Background

Peoples Gas uses chartless electronic data recorders (CDRs) installed inside vaults to compile input pressure, output pressure, case temperature, and battery voltage. The CDRs replaced the older pressure recording charts.<sup>66</sup>

Prior to 2007, Peoples Gas converted its pressure-recording charts in regulator vaults to chartless electronic data recorders. This streamlined pressure verification activities. However, Liberty's inspection during 2007 identified problems (downloading data from the chartless recorders) with the computer hardware and software interface.<sup>67</sup> A follow-up inspection determined that Peoples Gas was still experiencing problems associated with data from the recorders being unable to plot in output report formats

Liberty concluded that Peoples Gas needed to identify and resolve the interface issues.

## **Peoples Gas' Implementation Plan**

Peoples Gas indicated that it installed software revisions in computers and portable data collectors (PDCs) in May 2007, and that this resolved incompatibilities between PDCs and its computers. Peoples' Gas Operations Section (GOS) was available to demonstrate that previous interface issues have been resolved.

#### Verification Discussion and Conclusions

Liberty met with Peoples Gas and GOS demonstrated its data interface on its computer.<sup>68</sup> Liberty selected four district regulator stations and GOS brought up inspection data for those stations. GOS demonstrated that its chartless data, recorded for each station, matched the data documented by the GOS crew performing a regulator inspection. Liberty will continue to evaluate some additional regulator stations later in the year to verify no additional PDC and computer interface problems exist.

During the third quarter of 2009, Liberty met with Peoples Gas' Gas Operations Section (GOS)<sup>69</sup> to verify that no additional problems exist on the interface between portable data collectors and GOS regulator-station computer data files. Liberty selected four district regulator stations and GOS brought up inspection data for those stations. GOS was able to demonstrate that its current chartless data, recorded for each station, matched the data documented by the GOS crew performing a regulator inspection. Peoples Gas captured data on one station, vault 84, after

<sup>&</sup>lt;sup>66</sup> Response to Data Request #118, and Inspection conducted November 15, 2007.

<sup>&</sup>lt;sup>67</sup> Inspections Gas Operations Section November 15, 2007, and May 14, 2008.

<sup>&</sup>lt;sup>68</sup> Interview, January 22, 2009.

<sup>&</sup>lt;sup>69</sup> Interview #132, August 5, 2009.

October 2008. Other station vaults had captured data prior to October 2008. Peoples Gas has now corrected this issue, and is capturing data as intended. Liberty considers this recommendation verified and closed.

## **III-13**

Peoples Gas needs to evaluate business district boundaries.

## Background

Liberty found that Peoples Gas had not reviewed the boundaries of its business districts and recommended that Peoples Gas have a process that periodically evaluates its business districts. Over time, demographics change and business district boundaries change. The district boundaries have important implications for leak survey requirements. Peoples Gas' procedures should define a frequency within which it identifies its business districts for leak survey and pipe replacement purposes and communicate this to its field operations personnel that conduct leak surveys. Subsequent to Liberty's audits, Peoples Gas informed Liberty it had conducted a study of its business districts during 2007 and implemented changes during 2008.

## **Peoples Gas' Implementation Plan**

Peoples Gas stated that it completed an extensive review on the boundaries of business districts in 2007. The 2008 inspection cycle was based on those updated records. The Distribution Design Section used aerial photography from four (4) different sources to audit the business classification in addition to performing numerous site surveys. Peoples will determine best practices regarding the frequency of re-surveying business district boundaries. By March 31, 2009, Peoples Gas will update Exhibit IV (Safety Inspection Program) of Operating and Maintenance plan to reflect an appropriate business-district review cycle.

## Verification Discussion and Conclusions

Liberty discussed Distribution Design Section's process conducted during 2007 to evaluate and identify the limits of its business districts for leak survey purposes.<sup>70</sup> Peoples Gas did not retain a copy of the procedure it followed; however, it demonstrated the basic process. Peoples Gas provided an updated map of its business districts and a table of changes.<sup>71</sup> Liberty evaluated a number of business district boundaries with Peoples Gas by using business district maps and confirming the limits by comparing the nature of the properties fronting a street on Google Earth. In each case evaluated, Liberty determined Peoples Gas satisfactorily encompassed and at times exceeded the limits of business districts. The following table provides the results of Peoples Gas 2007 study. Liberty will evaluate in the field, a sample of business districts that Peoples Gas determined are no longer business districts.

	2007 Total Count		Ch	ange	2008 Total Count		
	Business	Residential	Business →(to) Residential	Residential →(to) Business	Business	Residential	
# of segments	10,686	67,641	5,881	5,568	10,373	67,954	
Miles of main			219	178			

<sup>&</sup>lt;sup>70</sup> Interview #105, January 23, 2009.

<sup>&</sup>lt;sup>71</sup> Response to Data Request #317.

## **III-14**

Improve leak response times

## Background

Liberty found that Peoples Gas needed to evaluate and determine how it may best improve its leak response profile, specifically the percentage of calls responded to within 30 minutes and within 45 minutes. Peoples Gas also needs to reduce the number of calls responded to in excess of 60 minutes.

Liberty suggested that Peoples Gas evaluate alternatives for improving its leak response profile within three months of the date of this report. The evaluation should include specific recommendations, a schedule, and monthly performance reviews for meeting specific response time profile goals.

#### **Peoples Gas' Implementation Plan**

Peoples Gas stated that through training it would increase the awareness of its employees in responding to more leaks in less than 60 minutes. Peoples Gas' plan stated it would:

- 1. Hold Emergency Response Time meetings with all managers, supervisors, and engineers by December 1, 2008.
- 2. Conduct Tailgate Meetings for field-service union personnel by December 2, 2008.
- 3. Complete an analysis of response to leak calls exceeding 60 minutes. Complete a statistical analysis to estimate the probable reduction in response time for varying increases in resources by December 31, 2008.
- 4. Based on results of statistical review, allocate additional crews to shifts that have the greatest benefit from increased resources by June 30, 2009.
- 5. Establish and adopt performance goals for leaks responded to within 30, 40, and 60 minutes by January 31, 2009.

## Verification Discussion and Conclusions

Liberty discussed the actions taken in relation to this recommendation with Peoples Gas on several occasions.<sup>72</sup> Peoples Gas explained it had carried out a detailed analysis of its emergency response crews' response times from the time it received a gas or odor complaint to time of the crew's arrival on location. Peoples Gas evaluated its crews response in terms of percent of calls responded to within 10-minute increments for each shift, for each district, and for each season (quarter) for the years 2004 through 2008.

Peoples Gas identified a vulnerability in the North District for the entire year (three seasons) on the night shift and an associated need for two additional crews, and identified a citywide need for one extra crew on its midnight to 8 a.m. shift for the heating season. With these added crews on specific shifts, Peoples Gas expects to improve its leak response performance.

<sup>&</sup>lt;sup>72</sup> Interviews January 21, 2009, January 22, 2009, and May 5, 2009.

Crew Response Time from	Peoples Gas 2009 Goals
Receipt to Arrival (Minutes)	Percent of Calls
30 Minutes	75%
40 Minutes	90%
50 Minutes	95%
60 Minutes	99%
Over 60 minutes	< 0.5%

Peoples Gas has begun to implement changes to improve its response profiles and established the following 2009 response time goals:<sup>73</sup>

Peoples Gas is meeting its implementation plan commitments has met its response time goals during 2008.<sup>74</sup> Liberty plans to continue it evaluate actual response times for 2009.

During the third quarter, Liberty met with Peoples Gas<sup>75</sup> and reviewed its actions and progress in achieving its leak response time goals. Peoples Gas managers continue to evaluate district response times by each of three shifts to identify those shifts and times challenged in meeting emergency leak-response time targets. Peoples Gas then identifies some limited individual shifts and adds additional crews for those shifts in need of additional response to meet overall goals by district and for Peoples Gas as a whole. It appears Peoples Gas' action to address this issue and to improve its emergency leak response times is acceptable; it is meeting its target goals. Liberty considers its verification work on this recommendation complete.

<sup>&</sup>lt;sup>73</sup> Response to Data Request #319.

<sup>&</sup>lt;sup>74</sup> Response to Data Request #321.

<sup>&</sup>lt;sup>75</sup> Interviews #135 and #131, August 4 and 5, 2009.

## III-15

Peoples Gas needs to improve its Inside Safety Inspection procedures and training.

Inside service line safety inspections, should include inspection for corrosion at the point of entry. This should include inspection of the "heel" of service inside of the building (between the building wall and the inlet to the meter/regulator set). Peoples Gas should revise its current procedure and training materials, and implement the new procedure within six months of the date of this report.

## Background

As part of its leak surveys and safety inspections, Peoples Gas conducts "Inside Safety Inspections" of gas piping from the point of entry of the gas service line including piping on the customer side of the meter set.

Liberty determined that Peoples Gas' Inside Safety Inspections (ISIs) do not address the threat from corrosion at a building's point of entry through the foundation wall. Pipe at the building foundation wall is more vulnerable to corrosion attack due to changes in oxygen levels, soils, materials, and chemicals leaching from the foundation wall. Peoples Gas needs to emphasize this aspect of the inspection, and to change the ISI procedure and training materials.

## **Peoples Gas' Implementation Plan**

PGL will revise its training procedure and training materials for ISIs, adding emphasis in instructions to operations personnel to inspect for corrosion at the heel of the service, explaining the vulnerability to corrosion at this location due to changes in oxygen levels, soils, materials, and chemicals leaching from the foundation wall. It will provide visual, physical examples of corrosion in training. Peoples Gas will complete the revised training documents December 31, 2008.

#### Verification Discussion and Conclusions

Liberty reviewed and discussed Peoples Gas' revised training materials, revised lesson plans, revised Section 16 of Peoples Gas Field Service Manual, and witnessed training of Peoples Gas safety inspection personnel at its Training Center. <sup>76</sup> Liberty verified the dates of "ingrade training" and "crew refresher training" when the inside safety inspection details for corrosion were addressed. Training emphasized corrosion at the "heel" of the service within the building, and included examples of slight and moderate corrosion. Peoples Gas has fully addressed this recommendation. Liberty considers its verification work on this recommendation complete.

<sup>&</sup>lt;sup>76</sup> Interview, May 5, 2009, and response to Data Request #322.

## **III-16**

Improve leak management practices.

Peoples Gas can improve leak management practices through a number of actions:

- 1. Increase the percentage of repairs as opposed to investigations. In part, this will be accomplished through an increased presence of Peoples Gas supervision on site.
- 2. Improve the consistency of leak-area investigation documentation.
- 3. Ensure crews evaluate and use information contained on leak repair sketches and barhole reading histories.
- 4. Re-evaluate Peoples Gas' practice of reducing leak hazard classifications without making repairs at leak locations. Specific questionable practices include venting a leak area or placing a vented manhole cover over a manhole without continuous repair activities.
- 5. Re-evaluate Peoples Gas' practice of clearing leaks without repairs.
- 6. Institute a leak recheck of recently repaired leaks to verify the effectiveness of repairs.

Peoples Gas should develop a written plan for meeting these recommendations within six months of the date of this report. The plan should include revised procedures, training, implementing schedules, and specific quality assurance inspections to verify their implementation within one year of the date of this report.

### Background

This recommendation concerns improving Peoples Gas' focus on its leak investigations and repairs, specifically Peoples Gas' lack of consistency in conducting and documenting leak investigations, downgrading leaks without repairs or just by venting the area, and clearing leaks without making repairs.

• Peoples Gas' O&M Plan, Exhibit II Field Service Manual, section 11 Leak Investigations, describes the actions its field service employees must take when responding to and investigating calls from members of the public who suspect a gas leak or a gas odor.<sup>77</sup>

When a leak survey operator detects an indication of natural gas, the procedures call for the use of impact bars<sup>78</sup> to assess the hazard area, and to follow General Order 300 leak investigation guidelines for barhole gas-migration readings. The leak survey operator also is required to fill out a leak ticket form and enter the test point information into the Navigate system. Peoples Gas refers to this as the Navigate leak sketch.

<sup>&</sup>lt;sup>77</sup> Response to Data Request #2. In addition, the O&M Plan Distribution Manual Volume I, Exhibit I, General Order 0.300 contains Peoples Gas' procedure for its distribution personnel in reporting, classifying, rechecking, repairing and clearing of outside natural gas leaks.

<sup>&</sup>lt;sup>78</sup> Impact bars are driven into the ground making a barhole, which provides a means to take a gas-in-air reading of subsurface conditions and determine the migration pattern of a gas leak.

Liberty determined that certain actions that Peoples Gas should perform would help improve the company's leak management practices. Those actions would result in a more consistent approach in evaluating gas leak areas, taking advantage of prior investigations of the same leak area, leaks being repaired in a more timely fashion, fewer leak hazards left without repairs, and generally tighten its control of ensuring leak areas were cleared of gas readings. Liberty recommendations addressed:

- Increasing the percentage of repairs as opposed to investigations
- Increasing the presence of Peoples Gas supervision on work sites
- Ensuring leak area investigation documentation is consistent. Personnel should take leak area migration pattern and test-point readings each day the leak area is under evaluation, as well as when a leak-ticket sketch is initially prepared.
- Encouraging crews to take advantage and use the information contained on leak repair sketches and barhole reading histories to evaluate changes in leak migration patterns and to assist in determining where to make leak repairs.
- Re-evaluating Peoples Gas' practice of reducing leak hazard classifications without making repairs at leak locations. Specific questionable practices include venting a leak area or placing a vented manhole cover over a manhole without continuous repair activities.
- Re-evaluating Peoples Gas' process for clearing leaks without repairs.
- Re-instituting Peoples Gas' practice of rechecking recently repaired leaks to verify the effectiveness of repairs.

## Peoples Gas' Implementation Plan

In its implementation plan, Peoples Gas identified the following actions.

- 1. Personnel create leak sketches in Navigate when they discover a leak while performing a leak survey or during the initial recheck of a leak initially investigated by an employee not assigned a leak survey order. Distribution General Supervisors will print out the latest leak sketch available in Navigate for an active leak and make it available for the Crew Leader assigned to repair the leak. Peoples Gas will instruct crew leaders to use the information captured in previous leak sketches to more effectively pinpoint and repair leaks. (November 1, 2008.)
- 2. The work management team (WAMS) has proposed to configure the system to attach the latest leak sketch to the leak repair order. (March 31, 2010.)
- 3. The company does not consider the venting of a below ground, outside gas leak as a temporary repair. This activity is discouraged, but on those limited occasions where it is deemed necessary to either vent or allow a temporary repair on a below ground, outside gas leak, the following procedures will be followed. Manager or higher approval will be required and the manager will be responsible for documenting and tracking the number of days until a permanent repair is made. Permanent repairs will typically be made within five (5) business days, but not to exceed ten (10) business days. Daily rechecks will be conducted on all leaks vented or temporarily repaired. The ICC pipeline safety group will be notified if permanent repairs will be delayed for more than 10 days. (November 1, 2008.)

- 4. No leak will be cleared in LKMS prior to an Operations Manager or Construction Manager's review of known work in the area that could account for the leak being cleared. (November 1, 2008.)
- 5. Upon implementation of the new work and asset management system, Peoples will require two (2) successive zero readings before the leak can be cleared after a repair. Additional rechecks must be made no sooner than 3 days and no later than 7 days after the repair. An inquiry will be made as to the feasibility of re-instituting this process in the legacy LKMS system prior to the implementation of the new work management system. (March 31, 2010.)
- 6. Revise Distribution Department General Order 0.300 to add clarity to Action Items Numbers 1, 3, 4 and 5. (March 31, 2009.)

## Verification Discussion and Conclusions

Liberty continued its evaluation of Peoples Gas' actions concerning this recommendation by conducting a series of interviews at Peoples Gas including visiting leak sites to evaluate Peoples Gas leak investigation crews with their General Supervisors, during the week of May 5-7, 2009,.

The vice president Operations indicated that Peoples Gas continues to emphasize the importance of improving leak management practices, by requiring increased attention by District Managers and their General Supervisors.<sup>79</sup> Due to the colder than normal 2008-2009 winter, and resultant increased numbers of new leaks reported, that need investigation and repairs, Peoples Gas has shifted additional crews to work and repair leaks in an effort to bring the leak backlogs down as quick as possible. Managers and supervisors' practices and attention are particularly focused to:

- Log and keep track of those leaks that have not been repaired, and for which vent holes have been excavated to reduce the leak migration pattern, and reduce the immediate hazard where gas had migrated to the building front wall, or where accumulations of gas was present in sewer systems and manholes. These conditions are some of the most hazardous and provide paths of hazardous gas migration into buildings.
- Ensure any of its leaks that have been vented and downgraded in hazard without making a repair, have in fact received a repair between 5 and 10 business days,
- Verify leak areas are in fact cleared by instituting a second follow-up recheck, especially those reported to be cleared without a repair.
- Improve on site leak investigations and repairs, by implementing practices to improve the use and availability of sketches of leak migration patterns prepared by crews previously working the leak location.
- Review weekly status of type 2 hazard leaks reaching the 9-month old status.

Liberty notes that Peoples Gas is making progress in many of its stated leak related goals.

Liberty verified that Distribution General Supervisors are printing out the latest leak sketch available in Navigate for an active leak and making it available for the Crew Leader assigned to

<sup>&</sup>lt;sup>79</sup> Interview, January 20, 2009.

repair the leak. Liberty noted that crew leaders have had the leak sketches on leak location sites and were familiar with the information captured in previous leak investigations and have used this to assist them in pinpointing and repairing leaks. Peoples Gas has met its commitment to implement a paper system of leak area rechecks by April 6, 2009. Liberty also evaluated the leak management approaches of Peoples Gas' Operations General Supervisors, and leak crews assigned to investigate, pinpoint the location of leaking gas facilities, and make repairs at a number of leaking gas locations in its North District.<sup>80</sup> Liberty noted increased on site presence and supervision of its leak investigation and repair crews. Liberty determined the General Supervisors and Operations Managers were implementing the duties required in the memos to discuss with Operations Managers those un-repaired leaks, downgraded with a vent hole/venting manhole cover.<sup>81</sup> These leaks are documented on logs and worked or surveilled on a daily basis with a goal of repair no later than 10 days. This recommendation will continue to receive additional evaluation regarding its implementation.

During the third quarter of 2009, Liberty met with Peoples Gas<sup>82</sup> and reviewed Peoples Gas' actions and progress in improving its leak management practices. Liberty's work this quarter included conducting on site evaluations of a number of leak locations to evaluate leak repair crews' actions, and to verify that Peoples Gas accurately recorded the leak readings and associated leak classifications. Liberty verified that Peoples Gas' actions to conduct rechecks of leak locations to verify the effectiveness of repairs, and to verify a leak location is free of gas and can be cleared or down-graded in classification based on gas readings in the field, appears to be achieving desired results. Liberty determined that the leak indication readings at each location checked, was accurate and either properly cleared of gas, or Peoples Gas leak repair crews had properly classified the leak in accordance with remaining gas readings at the sites. For those gas leaks that Peoples Gas crews were in the process of investigating and making repairs, the crews' actions were appropriate. However, even though Peoples Gas did not always apply the use of leak location sketches consistently, due to the nature of the leak and its leak migration pattern, Liberty determined the crews' actions to be acceptable. Liberty will continue to monitor implementation of this recommendation.

<sup>&</sup>lt;sup>80</sup> Interviews and field observations of leak crews, May 6, 2009.

<sup>&</sup>lt;sup>81</sup> Interview, May 6, 2009, North District Manager and General Supervisor.

<sup>&</sup>lt;sup>82</sup> Interviews #134, #135, and #131, August 4, 5, and 6, 2009.

## III-17

Reduce the year-end leak backlog.

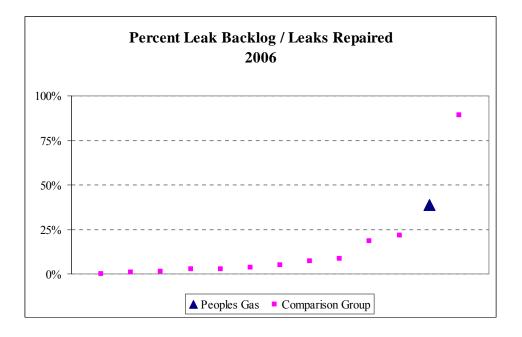

Peoples Gas needs to repair more leaks and reduce the level of backlogs at year-end. In both relative terms, compared to its peers, and absolute numbers of leaks outstanding, Peoples Gas' leak backlog is too high. Peoples Gas should reduce the backlog so that the percentage of the leaks in backlog at year-end is less than 10 percent of the number of leaks repaired during the year. Peoples Gas should develop and implement a written plan for meeting this recommendation. The plan should include specific goals for reducing leak backlogs and repairing more leaks, including target levels for leak backlogs at year-end for the current and following two years.

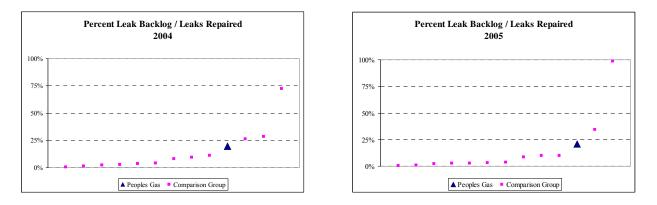

#### Background

Peoples Gas has had a comparatively large leak backlog at year-end, a time of year when frost cover presents the highest risk for hazardous gas leak migration. Peoples Gas carried over 500 leaks in need of repair at year-end 2005. This level of backlog is high in relation to the number of leaks repaired.

The number of leaks in the backlog at year-end divided by the number of leaks repaired is a metric that reflects the risk posed to the public by allowing leaks to go un-repaired at year-end. Good operators reduce their leak backlog levels prior to frost conditions. Liberty compared this measure for Peoples Gas with a peer group. Peoples Gas' measure was about 25 percent while the peer group was below 10 percent.

This metric compares the leak backlog with the actual leak repair efforts. The charts below show the number of known leaks at year-end scheduled for repair as a percentage of the total number of leaks repaired during the year. A higher number reflects poor repair numbers compared with leak backlogs. An acceptable performance number is in the low single digits.

Peoples Gas' leak backlog performance presents an unacceptably high risk. To increase safety, Peoples Gas needs to reduce its backlog of leaks, *i.e.*, repair more leaks.

### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas indicated that it planned to:

- Reduce the number of underground leaks by increasing leaks repaired versus leaks received by October 1, 2008.
- Implement a policy of repairing 110% of leaks received immediately.
- Provide copy of November 19, 2008, report on Status of Leak Indications by November 21, 2008. This schedule is consistent with Liberty's recommendation that Peoples Gas should develop a plan within three months of the date of Liberty's final report.
- Continue this rate of leaks repaired versus leaks received (110%) through the end of 2009.
- Achieve a reduction in the backlog so that the percentage of leaks in backlog compared with leaks repaired by year-end 2009 is below 10 percent. (Note that this differs from the response to Data Request 327, which identifies the year-end 2009 goal as 14 percent. Actual for year-end 2008 was 17.7 percent).
- Maintain a report that keeps a yearly cumulative total of leaks cleared and leaks repaired to track achievement of reducing Peoples Gas year-end backlog of leaks to be repaired.

#### Verification Discussion and Conclusions

Liberty reviewed weekly reports of leaks received and repaired as well as for the calendar year to date period for the weeks ending November 19, 2008, and January 14, 2009.<sup>83</sup> Liberty determined that Peoples Gas has cleared more leaks for both year-to-date periods, and met its goal to repair and clear 10 percent more leaks than the number of leaks received for the year.

<sup>&</sup>lt;sup>83</sup> Response to Data Request # 301.

Liberty determined that managers are paying greater attention to and tracking leaks, reducing backlogs, are discussing leaks daily and holding weekly meetings between general supervisors and managers to discuss how best to schedule and repair older leaks approaching 12 months.<sup>84</sup>

The table below provides a history of People Gas' year-end pending leaks and number of leaks cleared for each year since 2003.<sup>85</sup> For 2009 and 2010, Peoples Gas' goal is to reduce the percentage of pending leaks to leaks cleared at the end of the year to be equal to or less than 14 percent for 2009 and 10 percent for 2010.

	Pending Leak Repairs as of 12/31	Leaks Cleared	% Pending
2003	540	3,084	17.5%
2004	497	2,845	17.5%
2005	522	2,834	18.4%
2006	865	2,477	34.9%
2007	819	3,286	24.9%
2008*	555	3,127	17.7%

As of 4/1/2009 757 \* as of 12/24/2008

This year's leak management goals are especially challenging as Peoples Gas stated the 2008-09 winter was colder than normal, the 17<sup>th</sup> coldest on record.<sup>86</sup> The colder conditions resulted in an increased number of new leaks and an increase in leak backlogs. Liberty verified that Peoples Gas has assigned additional operations crews to leak repair activities and is working diligently to reduce the backlog of its leaks pending repairs. In spite of its efforts, as shown in the chart below, leaks pending repairs increased to 757 on April 1, 2009 as compared with 729 the same period one year ago.<sup>87</sup> Peoples Gas' level of type 2 leaks also increased to 43 percent as compared with Peoples Gas' percent of type 2 leaks pending at year-end 2008 of 30 percent.

Status of Leak Indications

Additional audits of the implementation plan will determine if Peoples Gas' leak management efforts are continuing to be successful in addressing Liberty's recommendations.

During the third quarter of 2009, Liberty confirmed that Peoples Gas is applying available crews to clear leaks and reduce its leak backlogs. Peoples Gas has continued to shift crews from its Central District to the North District to work on the increase in the numbers of leaks it has received this past winter. For the year to date period (01/01/2009 to 07/29/2009) Peoples Gas has experienced an increase of 236 leaks in its leak backlog as compared with a reduction of 200 leaks in its backlog for the same period last year. For the 2009 year to date, Peoples Gas received 1,945 new type 1, 2, and 3 leaks, while clearing 1,709 leaks. During the period 04/01/2009 to 07/29/2009, Peoples Gas has managed to increase its leaks cleared ratio from 80 percent to 88 percent of the new leaks occurring on its system, and is endeavoring to meet its goal of reducing its leak backlog at year-end. PGL stated it would like to get to the point where its leaks cleared versus the number of new leaks received is at the 105 percent level.

Liberty continues to be concerned with the level and number of new leaks received on Peoples Gas' system, especially in the North district. Liberty notes that in spite of its leak repair efforts, Peoples Gas' pending leaks and leak backlogs continue to be higher than the previous year. Liberty will continue to monitor Peoples Gas' efforts in reducing its pending leaks and its progress in reducing its year-end backlog of leaks.

## **III-18**

Implement practical testing of leak investigation personnel.

Leak investigation is not a textbook exercise. While there is a role for a written test in evaluating competence in the required activities, a practical test is also necessary to determine that the employees are able to perform adequately in the field.

Peoples Gas should begin to develop plans to address this recommendation within three months of the date of this report, and complete its implementation within one year of the date of this report

## Background

Federal Code requires that Peoples Gas have qualified personnel to perform leak management activities and procedures, including leak surveys, patrols, the use of leak detection equipment, leak area investigation, pinpointing and repairs. Liberty determined that Peoples Gas' leak-investigation course material covers the requirements contained in its procedures. However, Peoples Gas evaluates its leak investigation personnel solely on a written test and does not have a means to test practical applications to leak areas, such as a physical or electronic leak simulation facility.

Liberty concluded that to ensure qualification of personnel responding to suspected gas leaks and gas odors, Peoples Gas needs to include practical testing of its leak survey crews and leak investigation and response personnel. A functional area such as leak response and investigation requires that Peoples Gas test its personnel in a practical examination such as in a "Leak Street" training environment or on leak investigation simulation software, in addition to any on-the-job testing or verification. Peoples Gas should include practical testing in its training program in order to qualify or re-qualify personnel.

#### **Peoples Gas' Implementation Plan**

Peoples Gas stated it would investigate the use of the electronic leak simulation software that was mentioned in Liberty's conclusion supporting the recommendation. It will also research field training sites such as other utility facilities (Ameren and Nicor), construction of in house leak fields, or use real life field examples. Further, Peoples Gas committed to:

- Review leak simulation software by 1/31/2009.
- Research field training sites by 2/28/2009.
- Integrate the leak simulation software or field training (if feasible by this date) into leak investigation training curriculum and lesson plans by 3/31/2009.
- Complete new training for leak investigation personnel by 9/30/2009.

#### **Verification Discussion and Conclusions**

Liberty verified that Peoples Gas had conducted site visits at the simulated leak investigation training sites of NiCor, MGU (Michigan Gas Utilities), Ameren, and held a teleconference with WPSR to evaluate various companies' practical leak-training facilities.<sup>88</sup> Research and site visits were completed in February 2009. Peoples Gas determined that other utility companies use a combination classroom and leak field training. Training varied from two days up to two weeks, with one company applying a comprehensive three-year apprentice program. The leak field facilities, consisting of buried gas piping with live gas capability, varied from applying two scenarios up to a leak field that can simulate 57 leaks. Utilities have used leak simulation software, but two of three found it to be "cumbersome" and not adaptive to a large classroom. Peoples documented their evaluation of training sites on a spreadsheet that formed the basis for conceptual development and design of its own leak field training facility. Peoples Gas identified a size of 200 feet by 150 feet for a training field, ideally located within the Central District, free of contaminants that would include buried gas piping and a means of varying leak situations in a controlled safe design.

Peoples Gas senior management approved of the concept, and directed that the leak investigation field training site be incorporated into a larger, more comprehensive, outdoor training facility.<sup>89</sup> The practical training site would be used to centralize training of field personnel across the broader range of tasks for which practical training is now conducted in dispersed company sites or at actual distribution system facilities. The broadened scope of the proposed training facility precludes site determination until a date beyond the window for construction of a leak investigation practical training facility for use in the 2009 Training and Operator Qualification (OQ) evaluation program. Therefore, a site was selected for an Interim Leak Investigation Training Field for construction this spring. The interim leak field site is within Peoples Gas' Crawford Gate Station property. The interim facility will be 50 percent the size of the planned permanent leak field facility, and may not include inside (premise interior) leak training this year. Detailed facility design, material acquisition, and construction planning for this interim facility are ongoing.

The timing for a larger parcel for the permanent comprehensive outdoor practical training facility is under review. Peoples Gas has determined site selection criteria for this permanent, broader scope facility. Liberty will continue to monitor Peoples Gas' progress in developing the interim practical leak training facility, as well as the timing, site selection process, and the design and development of a new full-scale permanent facility.

During the third quarter of 2009, Liberty met with Peoples Gas<sup>90</sup> and reviewed its actions and progress in developing its interim field training site at the Crawford Station property, developing field training leak investigation training curriculum and lesson plans, and conducting actual training at the site by September 30, 2009. Liberty determined that Peoples Gas has developed its interim site to the point where it is operable and allows its instructors to present a series of actual leak indication scenarios for leak investigation employees to evaluate. The site provides for

<sup>&</sup>lt;sup>88</sup> Interview, May 5, 2009.

<sup>&</sup>lt;sup>89</sup> Response to Data Request # 397.

<sup>&</sup>lt;sup>90</sup> Interview # 133, August 5, 2009

instructor evaluation of employees use of combustible leak indicators, leak site investigation, leak classification, and emergency response actions to take for a series of leak scenarios. Additional development and improvements will enhance the site's capabilities. Liberty also reviewed associated lesson plans for investigation of inside and outside gas leaks, leak classification, and steps for leak management control and emergency actions. The lesson plan outlines appear to address the needs of practical evaluation, the practical situations developed for on-site leak evaluations are reasonable and instructive, and the forms developed to evaluate employees undergoing practical evaluation provide for consistent evaluations of covered tasks associated with leak investigations. Liberty plans to conduct observations and evaluations of actual training to complete assessment of the interim training facility for leak investigation.

## IV-1

Develop specific and comprehensive job descriptions.

The positions of General Manager of Construction, Construction Manager, and Construction Technician do not have job descriptions, so incumbents are aware of their job duties and responsibilities. Peoples Gas should implement this recommendation within six months of the date of this report.

#### Background

Operators should have effective processes, which systematically evaluate and document all aspects during construction to ensure they achieve the quality of installations they expect and that their installation standards require.

During its audit, Liberty determined that Peoples Gas' Field Operations recently changed its construction organization. Prior to the spring of 2007, each district had a Construction Manager reporting to the General Manger of Construction. The Construction Manager also functioned as the "assistant District Manager." This has changed as of May 2007. The Construction Manager title no longer reports to the General Manager of Construction. In its investigation, which it conducted during the transition period, Liberty found that Peoples had not clearly defined the new construction title functions. This confused Peoples Gas' construction personnel as to their job tasks and reporting responsibilities. During interviews of the General Manager of Construction and District Construction Managers, managers indicated that they were unaware of activities within their job descriptions.<sup>91</sup> Further, Peoples Gas' job descriptions for the General Manager of Construction and District Construction Manager positions were very general in nature and did not identify specific activities.

#### **Peoples Gas' Implementation Plan**

Job descriptions for General Manager and Manager of Construction will be reviewed and revised to describe better job duties and reporting relationships. The job description for Technician is rather new and needs no revision. The majority of employees in these roles are incumbents and have either worked in or closely with others in the position and know what is expected of them as employees in their roles. However, Peoples Gas agrees that it would be beneficial to have more comprehensive written descriptions.

Develop additional job description details and Review Job Descriptions for General Manager Construction, Manager of Construction, and Technician with respective personnel by December 31, 2008.

<sup>&</sup>lt;sup>91</sup> Interviews with General Manager of Construction September 17, 2007, and District Managers Construction, September 18, 2007, September 20, 2007, and June 7, 2007.

#### **Verification Discussion and Conclusions**

Liberty reviewed the details of job descriptions for the titles General Manager Construction, Manager of Construction, and Technician.<sup>92</sup> Liberty discussed the job duties with the Construction Manager for Central Shop,<sup>93</sup> as well as visited contractor construction sites that Peoples Gas Construction Technicians were overseeing.<sup>94</sup> Liberty determined that Peoples Gas Construction personnel were knowledgeable of their job description duties. The construction technicians were on their job sites carrying out their oversight duties of contractor operations. Additional construction sites must be audited to verify construction technicians are applying Peoples Gas contractor requirements and conducting inspection activities in a consistent comprehensive manner. The recommendation for developing comprehensive job descriptions IV-1 has been satisfied. However, recently, Peoples Gas has reorganized along functional organization responsibilities, and Liberty will review those changes to determine their effect on job descriptions and whether further job description updates are needed.

During the third quarter, Liberty met with Peoples Gas<sup>95</sup> and reviewed actions related to its construction activities. Liberty determined that the construction function and activities reflect wording in job descriptions. Liberty will check into this issue during the remainder of the implementation phase, but considers Peoples Gas' actions acceptable. As a result, Liberty considers its verification work on this recommendation complete.

<sup>&</sup>lt;sup>92</sup> Response to Data Request # 328.
<sup>93</sup> Interview, May 7, 2009.

<sup>&</sup>lt;sup>94</sup> Interview, May 7, 2009.

<sup>&</sup>lt;sup>95</sup> Interviews #134 and #135, August 4 and 6, 2009.

## **IV-2**

Review and formalize contractor requirements documents.

Part IV Engineering Specifications (Revised 10-25-07), should include a Peoples Gas letterhead and a document number or numbered engineering specification. Furthermore, documents containing contract requirements should have specific reference to appropriate Peoples' specifications or standards, other than just reference to "General Detail Drawing(s)." Peoples Gas should implement this recommendation within six months of the date of this report.

## Background

Peoples Gas has construction procedures and standards in its "Design Manual,"<sup>96</sup> engineering and construction standards and practices in its O&M Manual,<sup>97</sup> and construction contract requirements in "Part IV Engineering Specifications (Revised 10-25-07)."<sup>98</sup> Peoples Gas developed these standards and procedures to comply with federal safety construction requirements for design and installation of its mains and services. Liberty found that Peoples Gas' written construction procedures, standards, and practices were clear, comprehensive, and consistent with federal code requirements.

The document Part IV Engineering Specifications (Revised 10-25-07) lacked a Peoples Gas letterhead, document number, or numbered engineering specification. The contract requirements contained within this document generally appeared to address code requirements but lacked specific reference to Peoples Gas' specifications or standards, other than reference to "General Detail Drawing(s).

#### **Peoples Gas' Implementation Plan**

Part IV Engineering Specifications will be revised and printed on Company letterhead. Its function will serve chiefly in the procurement process for bidding work. It will be supplemented with a useful Contractor Procedures Manual.

By December 31, 2008, Peoples Gas will assemble, construct, and distribute to its contractors, a Manual for Contractors whose basis is extracted from the Distribution Department Manual.

## Verification Discussion and Conclusions

Liberty reviewed Peoples Gas' revised *Part IV engineering specifications dated 11-01- 2008 (1,)* and the Contractor Manual (or the Construction Manual), which contains copies of Peoples Gas' Corrosion Orders, General Orders, Main Work Orders, and Service Pipe Orders.<sup>99</sup> Peoples Gas also provided all of its contractors, one hard copy and one CD version of the Construction Manual. The letterhead portion of Liberty's recommendation has been satisfied. However, the engineering specifications still refer to General Detail Drawings and do not refer to Peoples Gas

<sup>&</sup>lt;sup>96</sup> Response to Data Request # 9, Initial Meeting between PGL, ICC, and Liberty conducted May 10, 2007.

<sup>&</sup>lt;sup>97</sup> Responses to Data Requests #1 and #2.

<sup>&</sup>lt;sup>98</sup> Response to Data Request # 161.

<sup>&</sup>lt;sup>99</sup> Response to Data Request # 329.

specifications or standards contained in the CD provided its contractors. The engineering or bidding specifications should reference the company's standards and work orders where appropriate.

The verification of this recommendation remains open.

## IV-3

Develop detailed construction inspection checklists for construction inspectors.

## Background

Liberty audits determined that a construction inspector (construction technician) in any one of the three geographic districts could cover up to five construction projects during the day. To evaluate effectively and consistently the quality of each construction project, construction inspectors need detailed checklists to enable them to evaluate systematically and comprehensively contractor construction crews' quality of work and compliance with People Gas' construction standards and procedures.

#### **Peoples Gas' Implementation Plan**

Peoples Gas will create a detailed Construction checklist by 11/15/2008. Technicians will fill out the checklist forms for each job watched beginning November 1, 2008. Technicians will turn in the checklist forms with their weekly job recap sheets to the Construction Engineer.

#### Verification Discussion and Conclusions

During the second and third quarters, Liberty reviewed construction projects at various field locations. Liberty noted that inspectors were preparing and filling out construction inspection checklists for the assigned projects. During the times Liberty conducted its construction evaluations, there were a limited number of construction projects in progress. This issue needs further evaluation, especially when the number of construction projects increases.

# IV-4

Re-evaluate and justify the number of contractor construction projects assigned to its Construction Technicians.

## Background

A construction inspector (construction technician) in any one of the three geographic districts may cover up to five construction projects during the day. Construction technicians verify that contractor crews comply with contract requirements and company procedures. During July 2007, there were 13 to 14 contractor crews working at Peoples Gas within the three shops. At peak construction levels, there may be as many as 15 to 16 contractor construction crews working. This is too heavy a workload to allow for complete and comprehensive evaluations. As a result, Liberty concluded construction inspectors' responsibilities for this level of contractor construction projects at the same time detract from their performance.

## **Peoples Gas' Implementation Plan**

The company accepts this recommendation and prior to receiving it was taking steps to increase the technician staff by two people to allow for increased supervision. One technician was hired and another is planned to start on 10/06/08. Peoples Gas anticipates that it will add three additional Technicians. Peoples Gas will determine the number of additional construction technicians needed for 2009 based on the level of construction activity planned for 2009. This approach should allow for average coverage of two jobs per technician and allow for adequate training and development time.

## Verification Discussion and Conclusions

During the second and third quarters, Liberty reviewed construction projects at various field locations. Liberty verified that as of March 1, 2009, Peoples Gas had five construction technicians available to inspect contractor construction projects. Peoples Gas determined that staffing level is adequate based of forecasted workload. Liberty's second and third quarter evaluations verified that Peoples Gas had a limited number of construction projects in progress and that construction technician workload met Liberty's recommendation. Due to the Peoples Gas planned constrained capital construction budget for 2009, Liberty does not anticipate any additional issues during the year. Liberty will monitor the number of contractor crews assigned to construction technicians during the reminder of the verification phase, but considers Peoples Gas' response and actions adequate. As a result, Liberty considers its verification work on this recommendation complete.

# IV-5

Require contracting crews to cut out and destructively test the first fusion joint of each day's work.

## Background

Peoples Gas has requirements in place intended to ensure sound plastic fusion joints. The company could further ensure sound quality fusion joints by implementing the best practice of requiring contractors to cut out a joint at the beginning of each day's work and destructively test the joint. This would ensure proper working condition of equipment as well as assess the quality of plastic joints performed that day.

## **Peoples Gas' Implementation Plan**

Peoples Gas disagrees with the recommendation stating that the recommended practice is not widely used in the industry, and claims it is not a best practice. Peoples Gas states that the integrity of fusion joints is important. To address the intent of this recommendation, Peoples Gas proposes to increase the level of supervision crews receive. In addition each technician will be equipped with a pyrometer and check the temperature of heating plates a minimum of once per day. They will visually inspect joints and cut out joints that they feel are questionable. They will inspect contractor equipment daily for certification tags by TTC and visually check equipment for signs of damage or misalignment. They will also check the fusilier's qualification card and status to insure that only qualified personnel are performing fusion joints.

## Verification Discussion and Conclusions

During the second and third quarters, Liberty conducted field inspections of plastic projects constructed by both Peoples Gas and contractor crews. On the job-sites, Peoples Gas evaluated the plastic pipe for deleterious scratches, gouges, and the quality of the fusion joints. The pipe and fusion joints appeared acceptable. Due to the limited number of projects visited to date, Liberty will continue to evaluate the quality of Peoples Gas' fusion joints, as well as conduct additional evaluations of Peoples Gas' implementation plan.

# IV-7

Conduct audits of contractor crews as required.

# Background

Liberty found that Peoples Gas had not been conducting the required audits of its construction contracting crews in accordance with its Compliance Monitoring Group requirements. Peoples Gas established the Compliance Monitoring Group (CMG) in June 2006. One objective for CMG was to identify code deficiencies and get Peoples Gas to institute changes to ensure compliance with code requirements. The program included a requirement that Peoples Gas audit its contractor construction installation crews with a frequency of one audit per quarter for each contractor work activity. However, Peoples Gas' construction personnel performed only four inspections of crews involving contractor service installations work during one quarter for May and June 2007. Peoples Gas' construction personnel did not perform any audits of its main installation crews during the year 2007.

Liberty recommended that Peoples Gas conduct audits of contractor crews as required. Peoples Gas should evaluate why it has not been conducting audits of its construction contracting crews in accordance with its Compliance Monitoring Group requirements, and remedy the problem to ensure it completes audits of all its contractor construction crews.

### **Peoples Gas' Implementation Plan**

Peoples Gas indicated that it would complete audits of contractor crews as required in the QA/QC Manual.

#### Verification Discussion and Conclusions

Peoples Gas provided reports on the 34 audits of contractor crews conducted during 2009 through July 24.<sup>100</sup> On August 4, 2009, Liberty met with Peoples Gas personnel to discuss these audits. Liberty found that:

- Auditors from the CMG performed only four of the audits.
- One auditor performed five audits on the same date. The audited activities were:
  - Activity 5 Plastic Main Installation Direct Burial
  - Activity 6 Plastic Main Installation Insertion
  - Activity 7 Steel Main Installation
  - Activity 19 Corrosion Control Activities Distribution (CCAD)
  - Activity 5 Plastic Main Installation Direct Burial (different location from first bullet)
- The same auditor performed four audits again on the same date. The audited activities were:

<sup>&</sup>lt;sup>100</sup> Response to Data Request #427.

- Activity 6 Plastic Main Installation Insertion
- Activity 19 Corrosion Control Activities Distribution (CCAD)
- Activity 7 Steel Main Installation
- Activity 12 LP/MP Conversion
- Multiple activities were audited on the same date on other occasions.

It is likely that the multiple audits conducted on the same day by the same auditor are of questionable quality. It appears that Peoples Gas was simply trying to meet an audit frequency through perfunctory reviews. Peoples Gas indicated that a complete transition to the CMG would cure these issues. Peoples Gas originally established an action item target date of June 30, 2009, for this transition, but has since revised the date to August 30, 2009 (Refer to action item #5 under Recommendation V-8).

When contractor audits are accessed in Peoples Gas' computer program, the drop-downs do not identify specific crews or individuals of the contractor. They only reference the name of the contractor. It is important that Peoples Gas identify the crew leader as well as crew members in order to track audit deficiencies and who has had poor performance. Audits should emphasize evaluation of individuals as well as the company performing the work.

Peoples Gas needs to improve its contractor audit program. Liberty will perform additional verification work on this recommendation.

# **V-2**

Review and reduce non-training job duties of instructors.

# Background

Liberty concluded that some training instructors had too many other responsibilities or too little experience. Instructors must have time to attend training courses to maintain and improve their knowledge of subject-area work activity. Instructors must also have time to conduct field observations of subject-area work activities and interface with employees in the field. Such knowledge is necessary to strengthen and broaden their understanding and knowledge in their subject areas and maintain their confidence in order to train others. Training courses are readily available and include training seminars, educational and teaching seminars, committees, and meetings. For example, Leak Handling instructors would clearly benefit by attending leak investigation and emergency response courses provided by Heath Consultants or by others such as TSI, MEA, and other gas safety seminars as well as field observations of actual leak response and leak investigations.

Generally, the number and quality of training sessions attended by instructors were not sufficient. Many instructors have little or no training in the subjects they are instructing. Liberty reviewed a sample of the training taken by training instructors, including the entire training of the Locating and Marking instructor. Liberty found that he had received no training on that subject between January 2002 and September 2007.

Liberty recommended that Peoples Gas review and reduce non-training job duties of instructors. The primary duty of the instructors is to instruct. This requires that the instructors take appropriate training themselves, both initially and with regular refresher classes, to become expert in the subjects they teach, and to maintain that expertise on a current basis. As currently configured, their job duties allow no time for their training. Liberty recommended that Peoples Gas implement changes within 18 months of the date of Liberty's final report.

#### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas identified the following actions.

- 1. Analyze and determine the continuing education needs of TTS (Technical Training and Standards) instructors.
- 2. Research internal and external training programs for instructor staff and complete the scheduling of training.
- 3. Technical support resource needs to handle current non-training duties of instructors.
- 4. Final determination of need for additional technical support personnel.
- 5. Latest start date for the possible one additional technical support.
- 6. Instructors relieved of non-training duties.
- 7. Complete the first cycle of continuing education training for TTS instructors.

#### Verification Discussion and Conclusions

On February 10, 2009, Liberty reviewed the following documents submitted by Peoples Gas:

- 1. instructor courses memo, document dated November 19, 2008<sup>101</sup>
- 2. instructors non-instructing hours memo, dated November 12, 2008<sup>102</sup>
- 3. instructor continuing education research memo
- 4. MEA leak detection seminar information
- 5. Fischer regulator course information

Documents nos. 1, 3, 4, and 5 show that there is an effort to train TTS staff. However catch-up will be especially difficult because the heavy workload that presently exists for staff remains until additional personnel can be brought aboard, freeing up time for staff to attend training.

Peoples Gas has made progress on action items 1 and 2 of this recommendation, addressing training for instructors and making some progress in analyzing and determining the continuing education needs of instructors. However, it remains to be determined how many of the available training seminars mentioned in action items nos. 3, 4, and 5 above will be actually attended by TTS instructors.

Liberty is concerned about the information provided in document #2, which listed for each instructor a description of the non-instructor duties and hours spent on each task per year. There were 2,569 hours of non-training tasks and after subtracting a possible 546 hours for "maintenance" that could be given to others, it still left 2,023 hours. According to the TTS manager, the addition of one technical person would be able to handle these non-training duties. Liberty suggested a revisit of this analysis to take into consideration the hours in a year, vacation time, sick time, and special projects that arise.

With regard to action item #3, Liberty observed that although Peoples Gas has made commitments to increase staffing and reduce non- training activities for TTS instructors, the conditions at TTS remain the same. Positions that TTS requested last October recently have been approved, but the long delay in the approval process will drastically reduce the time necessary to train an additional technical support person that would relieve non-training duties of the instructors. The TTS manager is concerned about filling positions because management has changed the pension plan to eliminate any incentive for a knowledgeable union person to apply. The TTS manager and his staff are doing their best to meet their responsibilities regarding Peoples Gas's Implementation Plan. However, their frustrations are evident with senior management's lack of support for timely resources needed to meet the target dates of the plan.

According to action item #5 in the implementation plan, the latest start date for the addition of one technical support person was March 31, 2009, and action item #6 states that instructors will be relieved of non-training duties by April 30, 2009. Liberty found that the technical support person requested by TTS last October was not approved until very recently. TTS is confident that they will be able to hire a technical support person by the target date. This would leave at most

<sup>&</sup>lt;sup>101</sup> Response to Data Request #366.

<sup>&</sup>lt;sup>102</sup> Response to Data Request #369.

only one month to train that person in all the non-training activities. This is not realistic and there would be no way for Peoples Gas to relieve instructors of non-training duties by April 30, 2009.

A more realistic target date for relieving instructors of non-training duties would be August 31, 2009. TTS should review and reassess the need for an additional technical support person by this same date and add the staff by October 30, 2009. Liberty discussed these action items with the TTS manager, and he agreed to revise the plan for recommendation V-2 accordingly. Liberty will continue to monitor this recommendation over the next several months.

# V-5

Analyze crew leader retest failures.

# Background

Liberty found that Peoples Gas does not perform an evaluation of Operator Qualification (OQ) requalification test failures. Peoples Gas should perform an analysis to determine in what areas (covered tasks) crew leaders are failing retests. The number of job classifications involving crew leaders who needed a "90 day retest" for failing a distribution covered task is problematic, particularly since the retest report indicated "no concept" (no basic understanding) in many cases. Some crew leaders may concentrate on certain tasks and not perform other tasks often enough to keep their knowledge and skills current. Peoples Gas needs to re-evaluate training intervals due to the infrequent or repetitive nature of performing a covered task identified by the retest analysis.

### **Peoples Gas' Implementation Plan**

The action items for this recommendation are:

- 1. Initial review of covered task failures for the most recent OQ period
- 2. Review of covered tasks failures for the past three years
- 3. Revised material for upcoming refresher training covering an area of failures
- 4. Follow-up review of covered tasks failures for the subsequent OQ period.

# Verification Discussion and Conclusions

Liberty reviewed the documents submitted by Peoples Gas regarding action items #1 and #2, and found them to be acceptable and complete.<sup>103</sup> The General supervisor/instructor did an excellent job identifying each task failure, what caused the failure, and what to know to correctly complete a task.

The following is an example:

TASK: Install Cast Iron to Steel Dresser Coupling

Task failures due to:

- 1. Coupling attempted to be installed backwards
- 2. Gaskets installed on wrong type pipe
- 3. Gaskets installed backwards
- 4. Coupling centered not positioned 2/3 on cast iron, 1/3 on steel
- 5. Insulator left out

What to know to complete this task correctly:

• While the steel ring will not fit the cast iron pipe, the cast iron ring will fit over both sides (more loosely on the steel side). These rings need to be installed on the correct type of pipe material.

<sup>&</sup>lt;sup>103</sup> Response to Data Request #370.

- The gaskets are designed quite differently. The gasket for the cast iron main has a rubber "skirt" attached. This gasket is installed on the cast iron main with the skirt extending beyond the ring on the cast iron side.
- The gaskets are tapered. The taper points into the barrel of the coupling.
- This fitting does not get centered between the pipe ends. There is more cast iron pipe installed into this coupling than steel (2/3 1/3). This is to ensure the insulation of cast iron from steel during pipe deflection.
- The insulator components (plastic skirt and ring) need to be installed to complete the insulation of the two different pipe materials.

With regard to action item #3, Liberty reviewed the material and observed the deliverance by the General Supervisor/instructor during the Crew Refresher "Train the Trainer" training class on February 11, 2009.<sup>104</sup> For Distribution department between the years of 2006-2008, there were 118 employees failing OQ tasks. Of those failing, 78 employees failed at least one practical exam, some more than one. Forty employees failed one or more written tests only. While TTS (Technical Training and Standards) documented failures in all the various practical exams, the instructor focused on the most common practical OQ failures for those years. Again, the instructor did an excellent job in developing and presenting this material which was interesting to all those attending this class.

Peoples Gas gave the "Train the Trainers" Distribution Crew Refresher course to six supervisors, representing two from each shop. The distribution department from each shop sends their supervisors to TTS for training, and they in turn go back to the shops and train their personnel. In contrast, the Service department from each shop sends all their personnel to TTS for training. Distribution supervisors are responsible for planning, scheduling, and assigning work for employees engaged in construction, operations, maintenance, and repair of the gas distribution system. It takes seven to ten days for supervisors to conduct the necessary training at the shops, thus taking away valuable time from their primary activities. The first 45 minutes of this course related to how to be a trainer. In addition, an important part of this course was review of the 113 new and revised distribution orders and 15 bulletins that affect company procedures. TTS trainers are more familiar with changes in procedures and bulletins because they write them and they would be more capable to address questions or concerns from field personnel than to have supervisors present this information. The TTS trainers are more efficient and would be able to ensure that training would be consistent for all three shops. Peoples Gas can only accomplish this by having the TTS trainers do what they are supposed to do – train. TTS trainers could give this class at shop locations saving travel time for distribution personnel.

Peoples Gas has done an excellent job in responding to this recommendation. It will not complete action item #4 until November 25, 2009; this recommendation will remain open.

<sup>&</sup>lt;sup>104</sup> Response to Data Request #371.

# **V-6**

Modify requalification interval practices.

# Background

Liberty found that Peoples Gas' requalification interval was not consistent with industry practices. Peoples Gas' OQ Plan, Appendix A, shows requalification intervals for each covered task. The maximum interval is three years. In addition, throughout Peoples Gas' O&M Plan, numerous sections state "... employee must re-qualify every three years." However, Liberty found that several employees were past their three years for requalification. Language in the OQ Plan states that, "Subsequent evaluations will be performed before the end of the third (or other as specified in Appendix A) calendar year after the calendar year in which the previous evaluation was successfully completed." Peoples Gas stated this could mean that a person could go as long as three years, eleven months before requalification. The majority of operators use either three years to the day or three years not to exceed 39 months for requalification intervals.

### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas accepted this recommendation and indicated that it would conform, by having Operations send personnel in for requalification by their due dates. It committed to updating the OQ Plan document and communicating the policy change by the end of 2008.

#### Verification Discussion and Conclusions

Peoples Gas modified its requalification interval practices and changed its OQ plan (section 5.2 evaluation of qualifications, page 8) to require requalification within three years or not to exceed 39 months.<sup>105</sup>

Liberty met with the TTS (Technical Training and Standards) manager and staff regarding the logistics of implementing the policy changes and there seems to be no concern with the coordination between shop managers and TTS. Liberty and the ICC Staff will monitor requalifications for the next few cycles.

Liberty has verified that Peoples Gas has made the necessary changes to its procedures to reflect implementation of the recommendation. Liberty's verification work is complete.

<sup>&</sup>lt;sup>105</sup> Response to Data Request #372.

# **V-7**

Address the new Pipeline and Hazardous Materials Safety Administration (PHMSA) training requirements.

# Background

Liberty concluded that Peoples Gas had not addressed several new training requirements from PHMSA. Peoples Gas was deficient in responding to two recent PHMSA's Advisory Bulletins, both related to excavation damage prevention. One relates to ensuring that individuals critical to damage prevention at construction sites are qualified to perform the necessary safety tasks, including one call notifications, line locating and marking, and inspection of the construction activities. The other emphasizes the importance of accurately locating and marking underground pipelines before construction related excavation activities commence near the pipelines and to urge operators to follow the best practices on damage prevention found in the Common Ground Study. Peoples Gas has not trained its instructors on the new requirements and has not incorporated them into the relevant course curriculum.

Liberty recommended that Peoples Gas address the new Pipeline and Hazardous Materials Safety Administration (PHMSA) training requirements. Peoples Gas should train instructors and add to course curricula the new requirements and guidelines contained in the PHMSA Advisory bulletins.

#### **Peoples Gas' Implementation Plan**

In its implementation plan, Peoples Gas indicated that it would complete the following action items:

- 1. Comparative study of the requirements and guidelines from advisory bulletins 06-01 and 06-03 two current course curricula related to excavation damage prevention, and train instructors on this information.
- 2. Identify gaps in current training curricula shown by the comparative study to ADB 06-01 and 06-03 requirements and guidelines.
- 3. Review and compare the Common Ground Alliance (CGA) best practices to current excavation damage prevention processes training curricula; and the NULCA<sup>106</sup> locator training standards and practices to current training curricula.
- 4. Identify gaps in current training curricula shown by the comparative studies to CGA best practices and NULCA locator training standards.

Note: Peoples Gas revised these action items on February 11, 2009, during Liberty's on-site verification work.

#### Verification Discussion and Conclusions

Peoples Gas submitted the following documents during Liberty's interview on February 10, 2009:

<sup>&</sup>lt;sup>106</sup> National Utility Locating Contractors Association.

- 1. Communications to TTS Sr. instructors and leaders
- 2. Advisory bulletin (ADB-06-03)
- 3. Comparison of NULCA training standards versus Peoples Gas training material<sup>107</sup>
- 4. Peoples Gas versus CGA Best Practice Comparison
- 5. Phase 1 & 2 Gap Analysis<sup>108</sup>

Liberty reviewed Peoples Gas' communications to TTS Senior instructors and their leaders regarding the PHMSA Advisory Bulletins on safe excavation and safe excavation locating practices. The document summarized in a clear fashion the key messages from bulletins ADB 06-01 and ADB 06-03.

The company reviewed each NULCA "units of competence," which includes an explanation of the unit, elements of competence, and performance criteria. For each of these "units," Peoples Gas developed a response or recommendations for any deficiencies or clarifications that it might need. The review is complete, but Liberty will spend additional time to verify actual changes or additions in training materials, company procedures, and classroom presentations.

The Peoples Gas comparison to CGA best practices only responded to CGA practice statements involving locators. Others within Peoples Gas will need to review CGA information. Liberty noted in the comparisons that Peoples Gas referenced the DIGGER Handbook and General Order 0.800, which both state that excavators should use the practice of clearly marking in white exactly where excavations activities will occur prior to calling DIGGER. Peoples Gas as an excavator does not "white-line" its excavations for other owners of underground facilities. This practice would make it easier to identify exactly where the excavation will be prior to calling DIGGER. Peoples Gas should address its own failure to take actions it expects of others.

Peoples Gas did an outstanding job in developing these documents that clearly identify areas where the company can adopt best practices. In particular, the spreadsheets for Gap Analysis between CGA and Peoples Gas practices is thorough and includes gap description, corrective action, and any follow up that might be needed. Liberty will continue to verify the implementation of the findings.

Items 1, 2, 3, and 5 are complete but will need significant time to verify implementation. A major contributing factor to complete this recommendation lies in the scheduling of TTS training classes such as Operator Qualification (OQ), which does not start for distribution until June. TTS has canceled or added classes in the past and they have offered to send Liberty their training schedule on a weekly basis to help schedule future trips. The supporting document submitted by Peoples Gas for #4 above (Peoples Gas versus CGA Best Practice Comparison) is not complete, but Peoples Gas will address this as an added action item under Recommendation II-13.

Liberty will need to continue evaluating the implementation of this recommendation.

<sup>&</sup>lt;sup>107</sup> Response to Data Request #341.

<sup>&</sup>lt;sup>108</sup> Response to Data Request #342.

## **V-8**

Improve the Quality Assurance / Quality Control (QA/QC) Program.

# Background

Liberty concluded that Peoples Gas did not have an effective Quality Assurance program and practices.

Peoples Gas has a QA/QC document that provides for audits of various activities. The activities and associated checklists cover the appropriate documents and could be helpful in meeting the objectives of promoting improvement in fieldwork safety and quality and assessing compliance with procedures and regulations.

It is unclear whether any individual is responsible for the QA program. The written document only mentions some oversight by Peoples Gas' internal audit department.

The heart of the program is a large number of Performance Audits. The auditor for these audits is someone from the same organization and shop that is performing the audited activity. Thus, these audits may accomplish no more than provide a supervisor with a minimum set of activities to observe that should be part of normal supervisory responsibilities. The auditor is only to report on items from the checklist that he or she actually observes. If the supervisor is on site for only a short period, he completes the audit paperwork without observation or monitoring of most of the work. Peoples Gas assumes that by varying the time of day that it performs audits, it will eventually cover all items for each checklist activity. However, Peoples Gas does not track and compile the work activities audited so does not know if in fact all work activities are covered.

Peoples Gas recorded the completion of a large number of Performance Audits. However, the number of deficiencies recorded from these many audits has been incredibly small. At any gas company, Liberty would expect to see good audits identify some deficiencies. At Peoples Gas, the total number of deficiencies is only a very small percentage of the number of audits performed. It serves little purpose to have recorded the completion of hundreds of audits and minimal deficiencies other than to give a false sense of success. Peoples Gas' recorded corrective actions are only statements of the deficiency.

Peoples Gas' audits of contractors are practically non-existent.

Peoples Gas' supervisors and engineers have the experience and skills to conduct meaningful audits. However, due to either insufficient time to perform all of their assigned duties or simply a traditional lack of emphasis on quality, they either do not perform the audits or do not perform them adequately.

# **Peoples Gas' Implementation Plan**

1) Peoples Gas proposes to make changes to its Quality Assurance and Quality Control (QAQC) Program requiring that each field activity be audited once (1) per quarter, requiring that all QAQC database checklist questions for each activity be audited, not just the questions pertaining to the tasks that the auditor observes when he happens to be on site. These activities are listed in the November 2007 version of the QAQC Program manual and are in the following departments: Distribution, Field Services, Gas Operations (GOS), and Special Projects Field Services.

2) Peoples Gas proposes to increase the CMG staff by 6 Auditors.

3) Peoples Gas proposes to track audit results and corrective actions to completion in the current QAQC database. Peoples Gas will enhance the database features to allow this functionality.

4) Peoples Gas proposes to have the CMG (expanded staff) perform all the QAQC Performance Audits. These groups will be independent of the shops.

5) The CMG Group will also perform all contractor QAQC Performance Audits at the frequency specified in the QAQC Program manual (November 2007), one per quarter per job type performed. The transition schedule (Actions items to Complete-section below) is the same for the contractor audits as for the shop audits.

6) Peoples Gas proposes to designate one department / individual with responsibility for the QA/QC program.

#### Verification Discussion and Conclusions

On August 4, 2009, Liberty met with Peoples Gas personnel to discuss the QA/QC Program. Liberty learned that the CMG Group consists of a supervisor and nine auditors, five of whom Peoples Gas recently hired. Four of the five new auditors have little or no experience in gas distribution. Peoples Gas formed the CMG group in May 2006 and began performing Corrosion Field Verification audits. In 2007, CMG added Valves and Inside Safety Inspections to its Field Verification audits. Also in 2007, CMG began conducting performance audits for activities in Distribution, Field Services, Gas Operations Section, and Special Projects Field Services. CMG's supervisor has been responsible for QA/QC program for a little over a year.

Peoples Gas documented and discussed with Liberty the efforts and improvements it has made to the QA/QC program.<sup>109</sup> These matters included the increased scope of CMG performance audits, the addition of auditors, enhancements to the QAQC database, and changes to the QAQC manual.

Peoples Gas indicated that, most of the time, crews knew when there would be audit field visits. This occurred so that the auditors would know for sure the time and location of a visit and would not waste time. However, on August 6, 2009, Liberty accompanied two veteran auditors separately at different construction sites for a field audit of Peoples Gas employees and a contractor. Before going to the field, the auditor obtained computer information that listed all crews including the crew leader and crew members, the Nextel number, truck number, crew size, location, and type of work. The auditor used the Navigate system to identify the location of

<sup>&</sup>lt;sup>109</sup> Response to Data Request # 426.

People Gas' vehicles. There was no reason why the audits could be unannounced. Unannounced audits would more likely lead to improvements in procedures, training, and work practices.

As discussed above under Recommendation IV-7, Peoples Gas conducted audited multiple activities by the same auditor on the same day. It is likely that such audits are of questionable quality. It appeared that Peoples Gas was simply trying to meet an audit frequency through perfunctory reviews.

Peoples Gas provided a listing of all employees evaluated by CMG during the second quarter of 2009, the dates of actual valuations, the functional categories evaluated, and the results of the second quarter evaluations.<sup>110</sup> The reports showed that between April 1 and June 24, 2009, there were nine deficiencies from Distribution, four from Field Service, and one from Gas Operations. The audits covered anaerobic sealant, new service installation, service renewal, leak survey exposed pipe, main leak repairs, and locating of the gas facilities. However, the nine deficiencies from the Gas Distribution were:

- 1. no inspection tag on fire extinguisher
- 2. expired permit
- 3. customer house piping inspection-no access to basement
- 4. fire extinguisher in truck
- 5. employee failed to inspect his fire extinguisher and update tag
- 6. employee must wear his helmet
- 7. did not have a chipping tool
- 8. locator unable to verify location of the service for the school
- 9. inspection tag is not current

There were no deficiencies covering the construction, installation, operations, and maintenance of gas facilities for the distribution field activities. Because of the number and nature of the documented deficiencies, Liberty concluded that the audits were of questionable quality and ineffective in measuring compliance with company procedures and, through those procedures, with Federal Gas Pipeline Safety Standards and other applicable regulations.

On its field visits, Liberty questioned both auditors on their education, experience, and training. They had just recently performing audits for distribution activities. Their prior audit work was in corrosion verification audits. They had not attended the distribution classes for operator qualifications or any other supplemental training that would benefit their work activities. Both auditors agreed they needed training in order to do their job.

Peoples Gas uses a field evaluation form or checklist for each audited field activity. Liberty noted that the checklists did not contain revision numbers and dates. Later, Liberty confirmed that Peoples Gas had not revised the activity checklists for several years to reflect any changes to company procedures. However, there were many changes to company procedures this year alone, as Liberty observed during OQ training at TTS. Peoples Gas needs to keep the auditing tools up to date and make sure that auditors are aware of procedure changes.

<sup>&</sup>lt;sup>110</sup> Data Response # 401

For a QA/QC program to be effective, auditors need to be experienced and trained. This is not the case for Peoples Gas, especially considering the newly added employees. Liberty found that the two veteran auditors it accompanied were professional, very capable, and willing to perform their duties if given the proper training. They were aware that they could cause improvement in field activities that affect gas system safety, employee safety, and the quality of work. Overall, a fundamental weakness in Peoples Gas' QA/QC program is the lack of qualifications within the auditing group.

Additional items related to this recommendation were:

- Liberty could not confirm whether, and if so when, the ICC received the promised progress report.
- Peoples Gas had a target date of June 30, 2009, to hire additional auditors. The company did hire additional personnel in July and August, but again, the major issue is the training and experience of these people.

Peoples Gas indicated that it would make additional QA/QC improvements by the end of 2009. Liberty will continue to monitor activities related to this recommendation.

# V-9

Provide the means for, and require that, General Supervisors spend more time in the field on job sites with their crews.

Liberty recommended that Peoples Gas identify means of increasing the effectiveness of their General Supervisors, eliminating tasks that keep them away from their primary activities, and increasing their on-site supervision of crews. Peoples Gas' Operations Field Support should continue to develop its planning applications function to perform routine planning for code compliance activities to relieve General Supervisors from performing tasks and activities in the office. In addition, Peoples Gas may need to hire more General Supervisors. Peoples Gas should develop a written plan for meeting this recommendation. The plan should include schedules and specific goals for General Supervisor on-site time.

# Background

Liberty conducted a series of field inspections of district operations, meetings with managers and General Supervisors, and observations of crews performing various code-mandated activities such as planning routine code-mandated inspections.<sup>111</sup> Liberty's observations of crews in the field at work locations generally found that General Supervisors were not at the job site. Liberty often observed General Supervisors accomplishing paperwork in the district office or performing planning functions at their desks.

Liberty concluded that General Supervisors do not spend sufficient time on job sites with their crews.

General supervisors should spend the majority of their time on site with field crews. However, they have a variety of office duties that keep them otherwise occupied. During Liberty's observations, they were usually not at the job site. Many of the office duties are routine planning activities that the Field Support Planning group could perform. The solution may also require hiring more General Supervisors.

# Peoples Gas' Implementation Plan

In its implementation plan, Peoples Gas stated it should be allowed to implement the Work and Asset Management System (WAM) system and staff the centralized planning group before making a decision on this recommendation. Consideration must also be given to acceptance of related recommendations within this audit.

Peoples Gas stated that it is in the process of implementing a new computer system to replace some of the legacy systems in use today. The system will handle many of the office tasks currently performed by General Supervisors such as permit management. The system will also eliminate the need to review time and work tickets. Peoples Gas expects that the system will in itself, increase the effectiveness of the General Supervisors, both in the field and in the office.

<sup>&</sup>lt;sup>111</sup> Inspections and observations made June 5-7, 2007, July 17-19, 2007, August 13-16, 2007, September 17-20, 2007, November 14-15, 2007, April 30, 2008, and May 1, 2008.

In conjunction with the WAM system, the centralized planning group will take over some of the daily tasks currently performed by general supervisors. These tasks include planning and assigning regulatory work, assigning locate requests and assigning valve inspections.

In addition to the above, the Compliance Monitoring Group (CMG) will take over responsibility for performing all field QA/QC audits. This will free up time for supervisors to spend more time directly supervising crews.

Peoples Gas implementation plan dates include:

- CMG to perform all shop QA/QC audits by August 30, 2009
- Centralized Planning to manage safety surveys by February 1, 2009
- Centralized Planning to manage valve inspections by February 1, 2009

# Verification Discussion and Conclusions

Peoples Gas is in the process of developing a new Work and Asset Management System (WAMS), an integrated computer system.<sup>112</sup> WAMS is a \$22 million system that will be able to, among other functions, issue electronic work tickets, and time tickets. Peoples Gas expected the system to be complete in September 2009. Common of a project of this nature, the completion date has been delayed from September 2009 to January 2010.<sup>113</sup> Details, goals, and milestones for the new Work and Asset Management System (WAMS) are lacking. Peoples Gas asks that it await WAMS implementation and staffing of the centralized planning group.

In the meantime, Peoples Gas has proposed to reduce and eliminate certain activities that the General Supervisors currently perform and shift some of these to the Compliance Monitoring Group (Quarterly personnel QA/QC audits), and safety surveys and valve inspections to the centralized planning group. These actions will no doubt help relieve the General Supervisors of duties that others can readily perform, freeing up time that can better be spent on job sites with their field crews to assist in accomplishing work.

Peoples Gas needs to go further in its review and identify other activities that can free up more general supervisors' time and get them to spend more time with their crews on job sites.

Liberty has identified the time and effort associated with the distribution crew refresher course given annually. Peoples Gas at its Training facility gives a course to General Supervisors entitled "Train the Trainers" associated with the Distribution Crew Refresher course. During 2008, TTS (Technical Training and Standards) instructors gave the course to six General Supervisors, representing two from each shop. The service department does not waste the time of its general supervisors in this manner. Instead, each shop sends their service personnel to TTS for training by TTS instructors. Whereas the distribution department sends their supervisors to TTS for training and they in turn go back to the shops and train their personnel, a function that can and should be accomplished by qualified instructors from the training facility. It takes seven to ten

<sup>&</sup>lt;sup>112</sup> Response to Data Request #248.

<sup>&</sup>lt;sup>113</sup> June 19, 2009, E-mail from Peoples Gas.

days for supervisors to conduct the necessary training at the Districts' distribution crew refresher course presentations thus taking away valuable time from their primary activities.

TTS instructors are more familiar with changes in procedures and bulletins because they write them and they would be more capable to address questions or concerns from field personnel than to have supervisors present this information. Liberty believes that:

- TTS instructors are more efficient in instruction,
- Would ensure that training is consistent for all three shops,
- Be able to provide this training by the instructors who write the Bulletins and changes to the standards, and
- TTS trainers could give this instruction class at shop locations saving travel time for distribution personnel.

Liberty will continue to monitor Peoples Gas' efforts in providing means for its General Supervisors to spend more time in the field on job sites with their crews.

# V-11

Develop a structured process for long term planning.

Peoples Gas should develop its long-term plans for the distribution system in a more formal, structured process. This includes having plans with greater specificity, and developing and updating long-term objectives, intermediate goals, and recommendations.

# Background

The Engineering Distribution Design Group performs the functions of reviewing system assets, determining future system needs, determining what system design parameters it needs to achieve in terms of system load, system pressures, and design-day requirements, and developing a delivery system capable of providing those supply needs for the future. Those system plans involve an assessment of the materials and components that Peoples Gas will need to replace and a framework for doing so. The framework includes guidelines for identifying current replacements, integrating those efforts with third-party construction projects, and meeting short-and long-term goals.

Liberty concluded that Peoples Gas' informal long-term planning process identified the following long-term goals:<sup>114</sup>

- Remove all cast iron and wrought iron from the distribution system by the year 2050.
- Extend and loop the 150-psig interstation system to enhance system reliability.
- Replace as much of the low-pressure distribution system as practical through lowpressure to medium-pressure conversions, retiring low-pressure regulator vaults, replacing vulnerable segments, and identifying higher cost-benefit opportunities.
- Extend the medium-pressure feeder supply network for adequate for supply pressure and emergency shutdowns of segments on the system.

Peoples Gas applies to this process spatial analysis, which is a general geographic identification of areas of its system installed with similar factors (*e.g.*, age, materials, and leak rates).

Peoples Gas' long-term planning efforts lacked structure. It did not involve a systematic, comprehensive, and documented process describing the issues evaluated and the process' findings, conclusions, and recommendations.

Liberty recommended that Peoples Gas develop its long-term plans for the distribution system in a more formal, structured process. This includes having plans with greater specificity, and developing and updating long-term objectives, intermediate goals, and recommendations.

# Peoples Gas' Implementation Plan

In its implementation plan, Peoples Gas stated that it would provide a formal structured process for long term planning. The documentation of the process will be completed by December 1,

<sup>&</sup>lt;sup>114</sup> Interview with Engineering Distribution Design May 15, 2008, and September 19, 2007.

2008 and the implementation within 6 months. The process will include long-term goals and vision as well as a process for the evaluation of projects towards those goals.

Development and documentation of the process:

- Completion of the long term analysis and design March 1, 2009
- Implementation of process by April 1, 2009

#### Verification Discussion and Conclusions

Liberty found that Peoples Gas provided a framework for its long-term planning process.<sup>115</sup> It needs to supply the details of its process steps to allow Liberty to evaluate the process. The process steps included in the framework appear to be the correct ones. Explanations provided during the audit confirmed this.<sup>116</sup> Peoples Gas' long-term process steps have included:

- Identify demand forecasts
- Supply/receipt points
- Evaluate Design days versus a fault analysis
- Its plans include a full network model of its future system
- All LP to MP is completed
- CI/DI is replaced
- Recommendation guidance on replacements and improvements to go to Medium Pressure delivery system
- Peoples Gas' design day/peak day is 91 degree day (minus 20 degrees F with a 2 degree variance)
- Long-term planning reviews every project 8" and above to determine if it meets current, intermediate, and future needs.

Liberty requested that Peoples Gas provide additional details of its long-term planning process steps. Peoples Gas responded by stating, "This action item has a scheduled completion date of 3/31/2009. PGL is requesting a new deliverable date of 4/30/2009 due to unforeseen medical leaves in Engineering."<sup>117</sup> On April 27, 2009, Peoples Gas requested an extension of the target completion dates for this recommendation. Peoples Gas requested extensions due to a long-term disability of one of the individuals assigned to this project. The new dates are:

1 – Completion of long tem analysis and design by May 29, 2009

2 – Implementation of the process by June 30, 2009.

During the third quarter of 2009, Liberty received no additional details as promised,<sup>118</sup> to followup on Peoples Gas' framework for a long-term plan that it submitted previously. Liberty awaits the details of Peoples Gas' long-term analysis, design, and implementation process.

<sup>&</sup>lt;sup>115</sup> Response to Data Request # 331.

<sup>&</sup>lt;sup>116</sup> Interview #106, January 23, 2009.

<sup>&</sup>lt;sup>117</sup> Response to Data Request # 387.

<sup>&</sup>lt;sup>118</sup> Response to Data Request # 387.

# **V-12**

Develop and implement a procedure for up-rating low-pressure mains.

## Background

To upgrade its low-pressure system, Peoples Gas inserts or replaces low-pressure mains. Peoples Gas does not normally consider up-rating existing low-pressure mains. However, if Peoples Gas does up-rate pressure in segments of its system, its process must meet the requirements of 49CFR192 subpart K. This subpart requires that Peoples Gas' up-rating process include the evaluation of data on affected system components and their capability of withstanding new and higher pressures, as well as detailed procedures to increase safely operating pressures. Peoples Gas did not have a written procedure for the up-rating process (converting low-pressure mains to a higher operating pressure) that ensures the design and capability of system components are within the limits of the pressure up-rating.

### **Peoples Gas' Implementation Plan**

Peoples Gas' Technical Training and Standards will revise Main Work Order 7.100 of the Distribution Manual to address up-rating mains in accordance with Pipe Safety Regulations Part 192.557, Subpart K by March 1, 2009.

# Verification Discussion and Conclusions

During the third quarter, Liberty reviewed Peoples Gas' main work order 7.100 dated March 2, 2009, titled "Procedure for Uprating Steel Mains from Low Pressure to Medium Pressure." Liberty determined that the revised procedure contains requirements for Peoples Gas:

- Gas Engineering Department to review the design, operating, and maintenance history of all the main segments to be converted,
- Field Operations to complete a leak survey of the area of all the main segments to be converted and repair any leaks found and make any repairs, replacements or alterations in each segment of pipeline that are necessary for safe operation at the increased pressure.

Peoples Gas actions meet the requirements contained in the recommendation. Liberty considers its verification work on this recommendation complete.

# **V-13**

Review industry committee participation.

## Background

Peoples Gas employees participate in a number of industry committees, which provides the company with insight into industry work methods, and practices, as well as provides insight into standards development and enables the company to participate in research and development forums to ensure its designs and procedures keep abreast with the best approaches to operating gas systems.

However, the current assignments of personnel on various industry committees have resulted in too many committees assigned to the same individual.<sup>119</sup> The company has not reviewed its participation to limit the number of committees assigned to any one individual. Multiple memberships may overwhelm certain individuals and result in ineffective participation, negating the company's goals for its participation.

#### **Peoples Gas' Implementation Plan**

A review of AGA committee assignments will be conducted by 3/31/2009. Assignments of individuals to multiple committees will be verified to ensure that logic exists for multiple assignments and adequate time is allocated for effective participation.

# Verification Discussion and Conclusions

During the second and third quarters, Liberty reviewed Peoples Gas actions<sup>120</sup> to address the participation in industry committees. Liberty verified that Peoples Gas is reviewing its employee's participation in industry committees on an annual basis. Liberty reviewed the committee assignments as of March 2009 and determined that Peoples Gas has diversified the committee assignments and is ensuring that employees participating are not overwhelmed with too many committee assignments and attending meetings. Peoples Gas is meeting the intent of this recommendation. Liberty considers its verification work on this recommendation complete.

<sup>&</sup>lt;sup>119</sup> Response to Data Request #246

<sup>&</sup>lt;sup>120</sup> Interview #131, August 5, 2009.

# **V-14**

Establish the combined Integrys successor to the Peoples Materials Standards Committee (MSC).

## Background

Following the acquisition of North Shore Gas, Peoples established a Materials Standards Committee (MSC) under ICC Peoples Gas Light and Coke Company Order #11. Order #11 established MSC responsibilities that included evaluation of new and existing materials, tools, and equipment, assuring proper disposition of inactive and obsolete materials, evaluating revised material procurement and delivery system, and making recommendations for improvement. With the merger with Integrys, the MSC was disbanded, to be replaced by a yet to be named committee as part of the Integrys Energy Group with a similar mission. Peoples Gas should ensure that the lack of continuity of this committee during the transition period does not compromise safety policies.

#### **Peoples Gas' Implementation Plan**

The successor Integrys committee for oversight of procedures and materials procurement processes for all Integrys gas distribution utilities was chartered on November 13, 2007, called the Gas Standards and Component Materials (GSCM) Committee. Its organizational meetings occurred in December 2007 and January 2008. Committee activity subsequently commenced. Two quarterly meetings were held in May and July 2008.

## Verification Discussion and Conclusions

During the second and third quarters of 2009, Liberty evaluated Peoples Gas' actions to address its materials procurement processes. Liberty verified that under SAP, Peoples Gas<sup>121</sup> used the enterprise resource planning system for materials evaluation until January 2008. Peoples Gas followed a procedure to ensure that it checked fittings at the warehouse to ensure they met quality requirements and that it received the proper fittings. Liberty reviewed the minutes of Peoples Gas' GSCM Committee meeting held October 27, 2008,<sup>122</sup> as well as the minutes of the GSCM held April 23, 2009<sup>123</sup>, and verified that the GSCM Committee is meeting on a quarterly basis, and is addressing the materials and tools issues appropriately meeting the intent of its recommendation. Liberty considers its verification work on this recommendation complete.

	Recommendation:								
		s successor to the Peoples Mater	rials Standards Commi	tee (MSC).					
	An ICC Order required the MSC to fill an identified need. Peoples Gas dissolved the MSC in anticipation of a joint Integrys committee. That new committee has not yet been established, although the merger took place in early 2007. Peoples Gas should establish a committee to oversee the transition involving procedures and materials procurement processes resulting from the merger and to comply with the ICC order. Peoples Gas should implement this recommendation within three months of the date of this report.

	Recommendation:									
	Implement a modern and effective performance measures program.									
	development of the progr Peoples Gas should have	eoples Gas should significantly improve the completeness, presentation, and dissemination of performance reports. Peoples Gas should retain expert assistance in the evelopment of the program. Peoples Gas should replace the obsolete systems that inhibit a useful performance measures system. Within six months of the date of this report, soples Gas should have a documented plan for improving its performance measures program. At minimum, this plan should provide a complete definition of performance etrics, a schedule for their implementation, and the commissioning of a computer-system study.
