Welcome from Congress Director

It is with much pleasure that I welcome you all to the XXII Congress of ISPRS, in my home town of Melbourne, Australia. An ISPRS Congress always offers the opportunity to meet old friends, make new ones, experience the latest developments in the science and art of photogrammetry, remote sensing and spatial sciences, and to experience this in a unique and rewarding location. I have always anticipated the next ISPRS Congress with enthusiasm and pleasure, and now it is Australia's turn to repay that experience to the ISPRS community.

There have been many advances in the science and technology of information from imagery over the last 4 years since the Congress in Beijing. People everywhere now use on-line satellite image services routinely to navigate, to explore new places and to plan their visit. We now have systems where users can contribute to the image and map database of 'space and place'; for example crowd sourced data is now an indispensable part of disaster response planning. Today there are small satellites that can be launched for a fraction of the cost of earlier imaging programmes, giving smaller nations affordable access to multispectral satellite imagery. This technology can only continue to improve, making high resolution satellite imagery and the associated spatial information ubiquitous.

The mission of ISPRS is information from imagery. This encompasses far more than the speedy delivery of imagery over the internet. Our profession can almost automatically derive 3d models of the built environment, determine the shrinkage of the world's glaciers, determine sea level and temperature, monitor development and the impact on arable land, measure the size of cancer tumours, model tangible cultural heritage and give decision makers the tools they need to make informed and justifiable decisions. As a profession we can be proud of what we have achieved and can offer the world. The participation by so many people here at the Melbourne Congress is testament to the important role the Congress plays in the sharing of this knowledge.

You should also make time to discover Melbourne while you are here, it is a vibrant multi-cultural community with a long tradition of science, technology and the arts. There are many reasons why Melbourne is consistently awarded the honour of the world's most liveable city.

On behalf of the ISPRS, the Surveying and Spatial Sciences Institute of Australia, and the City of Melbourne, I welcome you all to the Congress and wish you a rewarding and enriching experience.

Cliff Ogleby
Congress Director

Welcome from ISPRS President

Now the program of the Congress is ready. So I cordially invite you once more to attend the XXII ISPRS Congress in Melbourne, Australia from 25 August – 1 September 2012. Program of the Congress consists of meetings of the General Assembly, the decision making body of the Society; plenary and technical parallel sessions, with oral and interactive presentations of papers on new developments in a broad range of topics in the photogrammetry, remote sensing and spatial information sciences; a large commercial exhibition displaying the latest equipment and services that are related to the topics covered by ISPRS; and a scientific exhibition displaying the many achievements of ISPRS members. It is the culmination of four years' work of many researchers, scientists, practitioners and administrators working in the fields covered by ISPRS. In the name of the ISPRS I thank all paper presenters for their contribution.

Melbourne will be an exciting location for the Congress. The unique culture of Australia is an exotic mixture of different cultures and the past. A visit to Melbourne and other parts of Victoria will reveal many architectural and cultural gems, as well as pleasant landscapes. I am sure that all who attend the Congress will be fascinated by their visit to Australia.

I encourage all who have an interest in the photogrammetry, remote sensing and spatial information sciences to participate in this ISPRS quadrennial Congress.

I am sure that this Congress will prove to be very successful and rewarding for all participants.

Orhan ALTAN
President, ISPRS

Welcome to Melbourne and the XXII Congress of the International Society for Photogrammetry and Remote Sensing.

Melbourne is the capital of the State of Victoria, the most geographically diverse state in Australia; home to a dynamic scientific research community among nine Universities. Our long and prestigious history of scientific research and technical innovation make Melbourne the perfect city to host the XXII Congress of the International Society for Photogrammetry and Remote Sensing.

With a population of approximately four million people, Melbourne is one of the most cosmopolitan and multicultural cities in the world with 140 nationalities representing 100 religious faiths and 180 different languages. While you are in Melbourne for the Congress, please explore the city's range of delights. There is something for everyone in Melbourne, with diverse arts and cultural attractions, delightful parks and gardens, exciting entertainment options and a vibrant food and wine culture.

I encourage you to also take the time to enjoy the attractions of regional Victoria; from sweeping coastlines and pristine beaches to national parks and forests teeming with wildlife to wineries, lakes and mountains offering skiing, climbing and hiking. Many of Victoria's unique and varied landscapes are easily accessible as day trips from Melbourne.

I wish you all the best for a productive meeting here in Melbourne and hope that this important and topical gathering provides a platform for the exchange of ideas and an opportunity to forge new partnerships and friendships.

Welcome to Melbourne, enjoy the meeting and please come and visit us again.
