SOURCE WATER PROGRAM ACRONYMS

AST	Aboveground Storage Tank
BMP	Best Management Practices
ERP	Emergency Response Plan
GWUDI	Ground Water Under the Direct Influence of Surface Water
LEPC	Local Emergency Planning Committee
OEHS/EED	Office of Environmental Health Services/Environmental Engineering Division
PE	Professional Engineer
PSSCs	Potential Source of Significant Contamination
PWSU	Public Water System Utility
RAIN	River Alert Information Network

RPDC	Regional Planning and Development Council
SDWA	Safe Drinking Water Act
SWAP	Source Water Assessment and Protection
SWAPP	Source Water Assessment and Protection Program
SWP	Source Water Protection
SWPP	Source Water Protection Plan
WARN	Water/Wastewater Agency Response Network
WHPA	Wellhead Protection Area
WHPP	Wellhead Protection Program
WSDA	Watershed Delineation Area
WVBPH	West Virginia Bureau for Public Health
WVDEP	West Virginia Department of Environmental Protection
WVDHHR	West Virginia Department of Health and Human Resources
WVDHSEM	Division of Homeland Security and Emergency Management
ZCC	Zone of Critical Concern
ZPC	Zone of Peripheral Concern

Purpose

The goal of the West Virginia Bureau of Public Health (WVBPH) source water assessment and protection (SWAP) program is to prevent degradation of source waters which may preclude present and future uses of drinking water supplies to provide safe water in sufficient quantity to users. The most efficient way to accomplish this goal is to encourage and oversee source water protection on a local level. Many aspects of source water protection may be best addressed by engaging local stakeholders.

The intent of this document is to describe what Grantsville Water Department has done, is currently doing, and plans to do to protect its source of drinking water. Although this water system treats the water to meet federal and state drinking water standards, conventional treatment does not fully eradicate all potential contaminants and treatment that goes beyond conventional methods is often very expensive. By completing this plan, Grantsville Water Department acknowledges that implementing measures to minimize and mitigate contamination can be a relatively economical way to help ensure the safety of the drinking water.

What are the benefits of preparing a Source Water Protection Plan?

- Fulfills the requirement for the public water utilities to complete or update their source water protection plan.
- Identifying and prioritizing potential threats to the source of drinking water; and establishing strategies to minimize the threats.
- Planning for emergency response to incidents that compromise the water supply by contamination or depletion, including how the public, state, and local agencies will be informed.
- Planning for future expansion and development, including establishing secondary sources of water.
- Ensuring conditions to provide the safest and highest quality drinking water to customers at the lowest possible cost.
- Providing more opportunities for funding to improve infrastructure, purchase land in the protection area, and other improvements to the intake or source water protection areas.

Background: WV Source Water Assessment and Protection Program

Since 1974 the federal Safe Drinking Water Act (SDWA) has set minimum standards on the construction, operation, and quality of water provided by public water systems. In 1986, Congress amended the SDWA. A portion of those amendments were designed to protect the source water contribution areas around ground water supply wells. This program eventually became known as the Wellhead Protection Program (WHPP). The purpose of the WHPP is to prevent pollution of the source water supplying the wells.

The Safe Drinking Water Act Amendments of 1996 expanded the concept of wellhead protection to include surface water sources under the umbrella term of Source Water Protection. The amendments encourage states to establish SWAP programs to protect all public drinking water supplies. As part of this initiative states must explain how protection areas for each public water system will be delineated, how potential contaminant sources will be inventoried, and how susceptibility ratings will be established.

In 1999, the WVBPH published the West Virginia Source Water Assessment and Protection Program, which was endorsed by the United States Environmental Protection Agency. Over the next few years, WVBPH staff

completed an assessment (i.e., delineation, inventory and susceptibility analysis) for all of West Virginia's public water systems. Each public water system was sent a copy of its assessment report. Information regarding assessment reports for Grantsville Water Department can be found in **Table 1**.

State Regulatory Requirements

On June 6, 2014, §16 1 2 and §16 1 9a of the Code of West Virginia, 1931,was reenacted and amended by adding three new sections, designated §16 1 9c, §16 1 9d and §16-1-9e. The changes to the code outlines specific requirements for public water utilities that draw water from a surface water source or a surface water influenced groundwater source.

Under the amended and new codes each existing public water utility using surface water or ground water influenced by surface water as a source must have completed or updated a source water protection plan by July 1, 2016, and must continue to update their plan every three years. Existing source water protection plans have been developed for many public water utilities in the past. If available, these plans were reviewed and considered in the development of this updated plan. Any new water system established after July 1, 2016 must submit a source water protection plan before they start to operate. A new plan is also required when there is a significant change in the potential sources of significant contamination (PSSC) within the zone of critical concern (ZCC).

The code also requires that public water utilities include details regarding PSSCs, protection measures, system capacities, contingency plans, and communication plans. Before a plan can be approved, the local health department and public will be invited to contribute information for consideration. In some instances, public water utilities may be asked to conduct independent studies of the source water protection area and specific threats to gain additional information.

System Information

Grantsville Water Department is classified as a state regulated public utility and operates a community public water system. A community public water system is a system that regularly supplies drinking water from its own sources to at least 15 service connections used by year round residents of the area or regularly serves 25 or more people throughout the entire year. For purposes of this source water protection plan, community public water systems are also referred to as public water utilities. Information on the population served by this utility is presented in **Table 1** below.

Table 1. Population Served by Grantsville Water Department

Administrative office location:	229 Court Street		
Is the system a public utility, according to the Public Service Commission rule?	Grantsville, WV 26147		
Date of Most Recent Source Water Assessment Report:	April, 2002		
Date of Most Recent Source Water Protection Plan:	February, 2011		
Population served directly:	773		
Bulk Water Purchaser Systems:	**System Name**	**PWSID Number**	**Population**
	Pleasant Hill PSD	WV3300703	1392
	Mt. Zion PSD	WV3300702	1392
Total Population Served by the Utility:	3557		
Does the utility have multiple source water protection areas (SWPAs)?	no		
How many SWPAs does the utility have?	1		

Water Treatment and Storage

As required, Grantsville Water Department has assessed their system (e.g., treatment capacity, storage capacity, unaccounted for water, contingency plans) to evaluate their ability to provide drinking water and protect public health. **Table 2** contains information on the water treatment methods and capacity of the utility. Information about the surface sources from which Grantsville Water Department draws water can be found in **Table 3**. If the utility draws water from any groundwater sources to blend with the surface water the information about these ground water sources can be found in **Table 4**.

Table 2. Grantsville Water Department Water Treatment Information

Water Treatment Processes (List All Processes in Order)	Coagulation Flocculation Filtering Disinfection
Current Treatment Capacity (gal/day)	1 MGD
Current Average Production (gal/day)	300000
Maximum Quantity Treated and Produced (gal)	480000
Minimum Quantity Treated and Produced (gal)	186000
Average Hours of Operation	10
Maximum Hours of Operation in One Day	15
Minimum Hours of Operation in One Day	6
Number of Storage Tanks Maintained	2
Total Gallons of Treated Water Storage (gal)	800,000
Total Gallons of Raw Water Storage (gal)	0

Table 3. Grantsville Water Department Surface Water Sources

Delineations

For surface water systems, delineation is the process used to identify and map the drainage basin that supplies water to a surface water intake. This area is generally referred to as the source water protection area (SWPA). All surface waters are susceptible to contamination because they are exposed at the surface and lack a protective barrier from contamination. Accidental spills, releases, sudden precipitation events that result in overland runoff, or storm sewer discharges can allow pollutants to readily enter the source water and potentially contaminate the drinking water at the intake. The SWPA for surface water is distinguished as a Watershed Delineation Area (WSDA) for planning purposes; and the Zone of Peripheral Concern (ZPC) and Zone of Critical Concern (ZCC) are defined for regulatory purposes.

The WSDA includes the entire watershed area upstream of the intake to the boundary of the State of West Virginia border or a topographic boundary. The ZCC for a public surface water supply is a corridor along streams within the watershed that warrants more detailed scrutiny due to its proximity to the surface water intake and the intake's susceptibility to potential contaminants within that corridor. The ZCC is determined using a mathematical model that accounts for stream flows, gradient and area topography. The length of the ZCC is based on a five-hour time-of-travel of water in the streams to the water intake, plus an additional one-quarter mile below the water intake. The width of the zone of critical concern is 1,000 feet measured horizontally from each bank of the principal stream and five hundred feet measured horizontally from each bank of the tributaries draining into the principal stream. Ohio River ZCC delineations are based on ORSANCO guidance and extend 25 miles above the intake and one-quarter mile below the intake. The Ohio River ZCC delineations include 1,320 feet (one-quarter mile) measured from the bank of the main stem of the Ohio River and 500 feet on tributary.

The ZPC for a public surface water supply source and for a public surface water influenced groundwater supply source is a corridor along streams within a watershed that warrants scrutiny due to its proximity to the surface water intake and the intake's susceptibility to potential contaminants within that corridor. The ZPC is determined using a mathematical model that accounts for stream flows, gradient and area topography. The length of the zone of peripheral concern is based on an additional five-hour time-of-travel of water in the streams beyond the perimeter of the zone of critical concern, which creates a protection zone of ten hours above the water intake. The width of the zone of peripheral concern is one thousand feet measured horizontally from each bank of the principal stream and five hundred feet measured horizontally from each bank of the tributaries draining into the principal stream.

For groundwater supplies there are two types of SWPA delineations: 1) wellhead delineations and 2) conjunctive delineations, which are developed for supplies identified as groundwater under the direct influence of surface water, or GWUDIs. A wellhead protection area is determined to be the area contributing to the recharge of the groundwater source (well or spring), within a five year time of travel. A conjunctive delineation combines a wellhead protection area for the hydrogeologic recharge and a connected surface area contributing to the wellhead.

Information and maps of the WSDA, ZCC, ZPC and Wellhead Protection Area for this public water supply were provided to the utility and are attached to this report. See **Appendix A. Figures**. Other information about the WSDA is shown in **Table 5**.

Table 5. Watershed Delineation Information

Size of WSDA (Indicate units)	901 Square Miles
River Watershed Name (8-digit HUC)	05030203
Size of Zone of Critical Concern (Acres)	7928 Acres
Size of Zone of Peripheral Concern (Acres) (Include ZCC area)	47,532 Acres
Method of Delineation for Groundwater Sources	N/A
Area of Wellhead Protection Area (Acres)	N/A

Protection Team

One important step in preparing a source water protection plan is to organize a source water protection team who will help develop and implement the plan. The legislative rule requires that water utilities make every effort to inform and engage the public, local government, local emergency planners, the local health department and affected residents at all levels of the development of the protection plan. WVBPH recommends that the water utility invite representatives from these organizations to join the protection team, which will ensure that they are given an opportunity to contribute in all aspects of source water protection plan development. Public water utilities should document their efforts to engage representatives and provide an explanation if any local stakeholder is unable to participate. In addition, other local stakeholders may be invited to participate on the team or contribute information to be considered. These individuals may be emergency response personnel, local decision makers, business and industry representatives, land owners (of land in the protection area), and additional concerned citizens.

The administrative contact for Grantsville Water Department is responsible for assembling the protection team and ensuring that members are provided the opportunity to contribute to the development of the plan. The acting members of the Protection Team are listed in **Table 6**.

The role of the protection team members will be to contribute information to the development of the source water protection plan, review draft plans and make recommendations to ensure accuracy and completeness, and when possible contribute to implementation and maintenance of the protection plan. The protection team members are chosen as trusted representatives of the community served by the water utility and may be designated to access confidential data that contains details about the local PSSCs. The input of the protection team will be carefully considered by the water utility when making final decisions relative to the documentation and implementation of the source water protection plan.

Grantsville Water Department will be responsible for updating the source water protection plan and rely upon input from the protection team and the public to better inform their decisions. To find out how you can become involved as a participant or contributor, visit the utility website or call the utility phone number, which are provided in **Table 6.**

Potential Sources of Significant Contamination

Source water protection plans should provide a complete and comprehensive list of the PSSC contained within the ZCC based upon information obtained from the WVBPH, working in cooperation with the Department of Environmental Protection (WVDEP) and the Division of Homeland Security and Emergency Management (WVDHSEM). A facility or activity is listed as a PSSC if it has the potential to release a contaminant that could potentially impact a nearby public water supply, and it does not necessarily indicate that any release has occurred.

The list of PSSCs located in the SWPA is organized into two types: 1) SWAP PSSCs, and 2) Regulated Data. SWAP PSSCs are those that have been collected and verified by the WVBPH SWAP program during previous field investigations to form the source water assessment reports and source water protection plans. Regulated PSSCs are derived from federal and state regulated databases, and may include data from WVDEP, US Environmental Protection Agency, WVDHSEM, and from state data sources.

Confidentiality of PSSCs

A list of the PSSCs contained within the ZCC should be included in the source water protection plan. However, the exact location, characteristics and approximate quantities of contaminants shall only be made known to one or more designees of the public water utility and maintained in a confidential manner. In the event of a chemical spill, release or other related emergency, information pertaining to the contaminant shall be immediately disseminated to any emergency responders reporting to the site. The designees for Grantsville Water Department are identified in the communication planning section of the source water protection plan.

PSSC data from some agencies (ex. (WVDHSEM), WVDEP, etc.) may be restricted due to the sensitive nature of the data. Locational data will be provided to the public water utility. However, to obtain specific details regarding contaminants, (such as information included in Tier II reports), water utilities should contact the local emergency planning commission (LEPC) or agencies, directly. While the maps and lists of the PSSCs and regulated sites are to be maintained in a confidential manner, these data are provided in **Appendix A. Figures** for internal review and planning uses only.

Local and Regional PSSCs

For the purposes of this source water protection plan, local PSSCs are those that are identified by the water utility and local stakeholders not included in the PSSCs lists distributed by the WVBPH and other agencies. Local stakeholders may identify local PSSCs for two main reasons. The first is that it is possible that threats exist from unregulated sources and land uses that have not already been inventoried and do not appear in regulated databases. For this reason each public water utility should investigate their protection area for local PSSCs. A PSSC inventory should identify all contaminant sources and land uses in the delineated ZCC. The second reason local PSSCs are identified is because public water utilities may consider expanding the PSSC inventory effort outside of the ZCC into the ZPC and WSDA if necessary to properly identify all threats that could impact the drinking water source. As the utility considers threats in the watershed they may consider collaborating with upstream communities to identify and manage regional PSSCs.

When conducting local and regional PSSC inventories, utilities should consider that some sources may be obvious like above ground storage tanks, landfills, livestock confinement areas, highway or railroad right of ways, and sewage treatment facilities. Others are harder to locate like abandoned cesspools, underground tanks, French drains, dry wells, or old dumps and mines.

Grantsville Water Department reviewed intake locations and the delineated SWPAs to verify the existence of PSSCs provided by the WVBPH and identify new PSSCs. If possible, locations of regulated sites within the SWPA were confirmed. Information on any new or updated PSSCs identified by Grantsville Water Department that do not already appear in datasets from the WVBPH can be found in **Table 7**.

Prioritization of Potential Threats and Management Strategies

Once the utility has identified local concerns, they must develop a management plan that identifies specific activities that will be pursued by the public water utility in cooperation and concert with the WVBPH, local health departments, local emergency responders, LEPCs, and other agencies or organizations to protect the source water from contamination.

Depending on the number identified, it may not be feasible to develop management strategies for all of the PSSCs in the SWPA. The identified PSSCs can be prioritized by potential threat to water quality, proximity to the intake(s), and local concern. The highest priority PSSCs can be addressed first in the initial management plan. Lower ranked PSSCs can be addressed in the future as time and resources allow. To assess the threat to the source water, water systems should consider confidential information about each PSSC. This information may be obtained from state or local emergency planning agencies, Tier II reports, facility owner, facility groundwater protection plans, spill prevention response plans, results of field investigations, etc.

In addition to identifying and prioritizing PSSCs within the SWPA, local source water concerns may also focus on critical areas. For the purposes of this source water protection plan, a critical area is defined as an area that is identified by local stakeholders and can lie within or outside of the ZCC. Critical areas may contain one or more PSSC(s) which would require immediate response to address a potential incident that could impact the source water.

A list of priority PSSCs was selected and ranked by the Grantsville Water Department Protection Team. This list reflects the concerns of this specific utility and may contain PSSCs not previously identified and not within the ZCC or ZPC. **Table 8** contains a description of why each critical area or PSSC is considered a threat and what management strategies the utility is either currently using or could use in the future to address each threat.

Implementation Plan for Management Strategies

Grantsville Water Department reviewed the recommended strategies listed in their previous source water protection plan, to consider if any of them should be adopted and incorporated in this updated plan. **Table 9** provides a brief statement summarizing the status of the recommended strategies. **Table 9** also lists strategies from a previous plan that are being incorporated in this plan update.

When considering source management strategies and education and outreach strategies, this utility has considered how and when the strategies will be implemented. The initial step in implementation is to establish responsible parties and timelines to implement the strategies. The water utility, working in conjunction with the protection team members, can determine the best process for completing activities within the projected time periods. Additional meetings may be needed during the initial effort to complete activities, after which the Protection Team should consider meeting annually to review and update the Source Water Protection Plan. A system of regular updates should be included in every implementation plan.

Proposed commitments and schedules may change but should be well documented and reported to the local stakeholders. If possible, utilities should include cost estimates for strategies to better plan for implementation and possible funding opportunities. Grantsville Water Department has developed an implementation plan for priority concerns **Table 8**. The responsible team member, timeline, and potential cost of each strategy are presented in **Table 9**. Note: Because timelines may change, future plan updates should describe the status of each strategy and explain the lack of progress.

Table 8. Priority PSSCs or Critical Areas

PSSC or Critical Area	Priority Number	Reason for Concern
Sanitary Septic Systems, Home Aeration Units and Wastewater Treatment Systems	1	Discharge from smaller, failing sanitary systems as well as overflows from larger sanitary sewer systems located upstream of the intake can pose a possible contamination threat including fecal coliform into the source water.
Oil and Gas Wells	2	Due to the significant number of oil and gas wells and related storage tanks they are considered a high priority. Contaminants such as brine water, benzene and certain radioactive elements are used in the fracturing process and could spill.
Vandalism	3	Vandals could damage facilities, including raw water system. Water treatment plant has suffered vandalism in the past.
State Route 5 and 16	4	Sections of the roads pass through the SWPA and potential spills are a concern.
Future Development	5	Extent and type of future development, including potential impacts on source water, is not known at this time.

Table 9. Priority PSSC Management Strategies

PSSC or Critical Area	Management Activity	Responsible Protection Team Member	Status/Schedule	Comments	Estimated Cost
General	There are 4 general management strategies for source water protection. These are incorporated in this plan update and listed below: 1. A tier II recommendation is to meet with county OES or local fire chief to have access to local tier II information that is confidential and maintain that going forward with at least one annual meeting. Identify tier II facilities in critical areas and reach out to them. 2. No generator – recommend doing the wiring to accept a generator. MOVRC will submit grant paperwork for a generator. 3. Build capacity to identify contaminants, BPH staff will assist. The first step is to get spill reports 4. Build communication team if possible to include more local and county entities including but not limited to: County OES/911 health department, county commission local fire department, etc.	Alan Bell	This work will begin in 2016		$0 up front costs to begin these strategies.

Sanitary Septic Systems, Home Aeration Units and Wastewater Treatment Systems	There were 4 management strategies recommended in the existing plan. 1 of these strategies has been accomplished. 3 of these are ongoing or continue to be a concern. These are incorporated in this plan update and listed below: 1. Support study and planning of sanitary sewer system extensions and upgrades along Little Kanawha River and tributaries upstream of intake to extend service to these areas and eliminate failing septic systems, home aeration units and wastewater treatment systems and overflows from larger sanitary sewer systems. 2. Raise awareness at city government and/or county commissions for need for source water protection to increase support for proposed sanitary sewer system extensions and upgrades. 3. Evaluate enhanced fecal coliform testing of surface water to better identify sources of fecal coliform contamination including coordinating efforts with towns upstream of intake.	Alan Bell	Strategies number 1 has been implemented. Strategies number 2 and 3 have not been implemented.		$0
Oil and Gas Wells	There were 4 management strategies recommended in the existing plan. 1 of these strategies has been accomplished. 3 of these are ongoing or continue to be a concern.	Alan Bell	Strategies 1 and 4 have been completed. Strategies 2 and 3 are being	The installation of the early detection system may reduce the need for additional sampling.	$20,000 for early detection monitoring system, with $500 yearly operational

	These are incorporated in this plan update and listed below: 1. Reviewing public information of surface water protection practices for oil and gas industry to raise PSD staff awareness of surface water protection practices of oil and gas industry (completed) 2. Evaluate increased sampling of water quality for parameters associated with oil and gas industry to better assess whether source water quality is being impacted by oil and gas industry 3. Evaluate installing monitoring equipment upstream of the intake are being evaluated as part of this SWPP. 4. Maintain contact with other neighboring public water systems, to receive input on effects of anticipated Marcellus shale and gas well drilling and tract status of regulations through such organizations as WVDHHR, WVRWA, WVPSC and WVDEP. 5. If parameters associated with oil and gas industry become problematic to water quality, consider symposium form local oil and gas industry to raise awareness of source water		evaluated as a part of this SWPP. Strategy 5 is not yet applicable.		costs. The cost for increased sampling is currently being evaluated

	protection and review regulatory requirements.				
Vandalism	There were 2 management strategies recommended in the existing plan. 0 of these strategies has been accomplished. 2 of these are ongoing or continue to be a concern. These are incorporated in this plan update and listed below: 1. Consider installing available security cameras at WTP intake. 2. Install signage at intake, in visible places to general public identifying this as a source water area and providing a notice regarding video surveillance. Include emergency contact numbers.	Alan Bell	These strategies are being evaluated by the board.		$20,000
State Route 5 and 16	There were 4 management strategies recommended in the existing plan. 2 of these strategies has been accomplished. 2 of these are ongoing or continue to be a concern. These are incorporated in this plan update and listed below: 1. Better coordination of emergency response with local first responders, including raising awareness for the need to protect drinking water supplies. 2. Evaluate installing signage along state routes and targeted city streets with emergency contact numbers. This	Alan Bell	Strategies number 1 and 3 are currently being implemented. Strategies number 2 and 4 have not been implemented.		$0

	would also help raise awareness with motorist and truckers that they are traveling through a source water protection zone while providing them. 3. Regular inspections of the roadways to identify if spillage is occurring. Maintain records of identified leaks and spills. 4. Contact fire department and other first responders on boom availability, if any. If none (or if unsuitable), evaluate purchase of booms for in-stream spill containment.				
Future Development	There were 3 management strategies recommended in the existing plan. 0 of these strategies has been accomplished. 3 of these are ongoing or continue to be a concern. These are incorporated in this plan update and listed below: 1. Raise awareness of city and/or county government by providing SWPA map and educational brochure, to help decision making with respect to future development. 2. Evaluate what authority exists at city and/or county government regarding approval over development that could be a high risk to surface water resources.	Alan Bell	Ongoing as part of this SWPP update		$500

	3. Evaluate developing policy that PWS Chief Operator should comment on building permit applications.				

Education and Outreach Strategies

The goal of education and outreach is to raise awareness of the need to protect drinking water supplies and build support for implementation strategies. Education and outreach activities will also ensure that affected citizens and other local stakeholders are kept informed and provided an opportunity to contribute to the development of the source water protection plan. Grantsville Water Department has created an Education and Outreach plan that describes activities it has either already implemented or could implement in the future to keep the local community involved in protecting their source of drinking water. This information can be found in **Table 10**.

Table 10. Education and Outreach Implementation Plan

Education and Outreach Strategy	Description of Activity	Responsible Protection Team Member	Status/Schedule	Comments	Estimated Cost
Utilize Social Media	Use the Calhoun SWAP program Facebook page to inform residents with educational materials related to source water protection.	Rod Godfrey	This strategy is currently being utilized.		$0
Consumer Confidence Report	A copy of the Consumer Confidence Report is kept online at CDC.gov	Alan Bell	This strategy is currently being utilized.	A link to the CCR will be posted on the Facebook page.	$0
Educational Brochure at www.yourwateryourdecision.org. This brochure building tool was prepared by the Source Water Collaborative, a partnership between local, state and federal drinking water organizations and regulatory entities including USEPA	Provide web address to public for their use.	Linda Jarvis	This strategy is currently being utilized	A link to the brochure will be posted on the Facebook page.	$0

School Curricula	Source water protection is incorporated in the school's curriculum.	Linda Jarvis	This strategy is currently in the beginning stages. It is the system's goal to have source water protection added to the school curricula by 2017.	This strategy is currently being discussed with local schools.	$0
Awareness of Best Management Practices and Need to Protect Drinking Water Supplies	Local first responders are to be educated about BMPs and the need to protect drinking water supplies	Alan Bell	This strategy has not yet been utilized. It is Grantsville's goal to implement this strategy by the end of 2016.		$1,000
Signage	Use signage to inform public about the limits of the source water protection area and provide an emergency number.	Signage	This strategy has not yet utilized.		$500

Contingency Plan

The goal of contingency planning is to identify and document how the utility will prepare for and respond to any drinking water shortages or emergencies that may occur due to short and long term water interruption, or incidents of spill or contamination. Utilities should examine their capacity to protect their intake, treatment, and distribution system from contamination. They should also review their ability to use alternative sources and minimize water loss, as well as their ability to operate during power outages. In addition, utilities should report the feasibility of establishing an early warning monitoring system and meeting future water demands.

Isolating or diverting any possible contaminant from the intake for a public water system is an important strategy in the event of an emergency. One commonly used method of diverting contaminants from an intake is establishing booms around the intake. This can be effective, but only for contaminants that float on the surface of the water. Alternatively, utilities can choose to pump floating contaminants from the water or chemically neutralize the contaminant before it enters the treatment facility.

Public utilities using surface sources should be able to close the intake by one means or another. However, depending upon the system, methods for doing so could vary greatly from closing valves, lowering hatches or gates, raising the intake piping out of the water, or shutting down pumps. Systems should have plans in place in advance as to the best method to protect the intake and treatment facility. Utilities may benefit from turning off pumps and, if possible, closing the intake opening to prevent contaminants from entering the piping leading to the pumps. Utilities should also have a plan in place to sample raw water to identify the movement of a plume and allow for maximum pumping time before shutting down an intake (See Early Warning Monitoring System). The amount of time that an intake can remain closed depends on the water infrastructure and should be determined by the utility before an emergency occurs. The longer an intake can remain closed in such a case, the better.

Treated water storage capacity in the event of such an emergency also becomes extremely important. Storage capacity can directly determine how well a water system can respond to a contamination event and how long an intake can remain closed. Information regarding the water shortage response capability of Grantsville Water Department is provided in **Table 11**.

Response Networks and Communication

Statewide initiatives for emergency response, including source water related incidents, are being developed. These include the West Virginia Water/Wastewater Agency Response Network (WV WARN, see http://www.wvwarn.org/) and the Rural Water Association Emergency Response Team (see http://www.wvrwa.org/). Grantsville Water Department has analyzed its ability to effectively respond to emergencies and this information is provided in **Table 11**.

Table 11. Grantsville Water Department Water Shortage Response Capability

Can the utility isolate or divert contamination from the intake or groundwater supply?	No
Describe the utility's capability to isolate or divert potential contaminants:	None except to shut intake down

Can the utility switch to an alternative water source or intake that can supply full capacity at any time?	no
Describe in detail the utility's capability to switch to an alternative source:	No alternative source
Can the utility close the water intake to prevent contamination from entering the water supply?	Yes, pump shut down
How long can the intake stay closed?	2-days
Describe the process to close the intake:	Shut off pumps
Describe the treated water storage capacity of the water system:	675000
Is the utility a member of WVRWA Emergency Response Team?	yes
Is the utility a member of WV-WARN?	Yes
List any other mutual aid agreements to provide or receive assistance in the event of an emergency:	Glenville Water

Operation During Loss of Power

This utility analyzed and examined its ability to operate effectively during a loss of power. This involved ensuring a means to supply water through treatment, storage, and distribution without creating a public health emergency. Information regarding the utility's capacity for operation during power outages is shown in **Table 12**.

Table 12. Generator Capacity

What is the type and capacity of the generator needed to operate during a loss of power?	3 phase 277/480 500KW
Can the utility connect to generator at intake/wellhead? If yes, select a scenario that best describes system.	Power is fed from the treatment plant- generator would not need to be connected at intake.
Can the utility connect to generator at treatment facility? If yes, select a scenario that best describes system.	Currently no connection point in place- wiring and connection point would have to be installed for a generator to be connected to facility.
Can the utility connect to a generator in distribution system? If yes, select a scenario that best describes system.	There is no need for generator to be connected to the distribution system- pumps at the treatment facility and pressure for system comes from gravity.

Does the utility have adequate fuel on hand for the generator?		NO		
What is your on-hand fuel storage and how long will it last operating at full capacity?		**Gallons**	**Hours**	
		None	0	
Provide a list of suppliers that could provide generators and fuel in the event of an emergency:	**Supplier**		**Contact Name**	**Phone Number**
	Generator	Walker Machinery		304.949.6400
	Generator			
	Fuel	Harris Oil Company	Fred Depue	304.927.2470
	Fuel			
Does the utility test the generator(s) periodically?		No		
Does the utility routinely maintain the generator?		No		
If no scenario describing the ability to connect to generator matches the utility's system or if utility does not have ability to connect to a generator, describe plans to respond to power outages:		Wait for power to be restored.		

Future Water Supply Needs

When planning for potential emergencies and developing contingency plans, a utility needs to not only consider their current demands for treated water but also account for likely future needs. This could mean expanding current intake sources or developing new ones in the near future. This can be an expensive and time consuming process, and any water utility should take this into account when determining emergency preparedness. Grantsville Water Department has analyzed its ability to meet future water demands at current capacity, and this information is included in **Table 13**.

Table 13. Future Water Supply Needs for Grantsville Water Department

Is the utility able to meet water demands with the current production capacity over the next 5 years? If so, explain how you plan to do so.	Yes

If not, describe the circumstances and plans to increase production capacity:	NA

Water Loss Calculation

In any public water system there is a certain percentage of the total treated water that does not reach the customer. Some of this water is used in treatment plant processes such as back washing filters or flushing piping, but there is usually at least a small percentage that goes unaccounted for. To measure and report on this unaccounted for water, a public utility must use the same method used in the Public Service Commission's rule, *Rules for the Government of Water Utilities*, 150CSR7, section 5.6. The rule defines unaccounted for water as the volume of water introduced into the distribution system less all metered usage and all known non-metered usage which can be estimated with reasonable accuracy.

To further clarify, metered usages are most often those that are distributed to customers. Non-metered usages that are being estimated include uses such as by the fire departments for fires or training, un-metered bulk sells, flushing to maintain the distribution system, backwashing filters, and cleaning settling basins. By totaling the metered and non-metered uses the utility calculates unaccounted for water. Note: To complete annual reports submitted to the PSC, utilities typically account for known water main breaks by estimating the amount of water lost. However, for the purposes of the source water protection plan, any water lost due to leaks, even if the system is aware of how much water is lost at a main break, is not considered a use. Water lost through leaks and main breaks cannot be controlled during a water shortages or other emergencies and should be included in the calculation of percentage of water loss for purposes of the source water protection plan. The data in **Table 14** is taken from the most recently submitted Grantsville Water Department PSC Annual Report.

Table 14. Water Loss Information

Total Water Pumped (gal)		118824000
Total Water Purchased (gal)		0
Total Water Pumped and Purchased (gal)		118824000
Water Loss Accounted for Except Main Leaks (gal)	**Mains, Plants, Filters, Flushing, etc.**	9393000
	Fire Department	0
	Back Washing	0
	Blowing Settling Basins	0
Total Water Loss Accounted For Except Main Leaks		9393000
Water Sold- Total Gallons (gal)		97953000

Unaccounted For Lost Water (gal)	10479000
Water lost from main leaks (gal)	0
Total gallons of Unaccounted for Lost Water and Water Lost from Main Leaks (gal)	10479000
Total Percent Unaccounted For Water and Water Lost from Main Leaks (gal)	9%
If total percentage of Unaccounted for Water is greater than 15%, please describe any measures that could be taken to correct this problem:	NA

Early Warning Monitoring System

Public water utilities are required to provide an examination of the technical and economic feasibility of implementing an early warning monitoring system. Implementing an early warning monitoring system may be approached in different ways depending upon the water utility's resources and threats to the source water. A utility may install a continuous monitoring system that will provide real time information regarding water quality conditions. This would require utilities to analyze the data in order to establish what condition is indicative of a contamination event. Continuous monitoring will provide results for a predetermined set of parameters. The more parameters being monitored, the more sophisticated the monitoring equipment will be. When establishing a continuous monitoring system, the utility should consider the logistics of placing and maintaining the equipment, and receiving output data from the equipment.

Alternately, or in addition, a utility may also pull periodic grab samples on a regular basis, or in case of a reported incident. The grab samples may be analyzed for specific contaminants. A utility should examine their PSSCs to determine what chemical contaminants could pose a threat to the water source. If possible, the utility should plan in advance how those contaminants will be detected. Consideration should be given for where samples will be collected, the preservations and hold times for samples, available laboratories to analyze samples, and costs associated with the sampling event. Regardless of the type of monitoring (continuous or grab), utilities should collect samples for their source throughout the year to better understand the baseline water quality conditions and natural seasonal fluctuations. Having a baseline will help determine if changes in the water quality are indicative of a contamination event and inform the needed response.

Every utility should establish a system or process for receiving or detecting chemical threats with sufficient time to respond to protect the treatment facility and public health. All approaches to receiving and responding to an early warning should incorporate communication with facility owners and operators that pose a threat to the water quality, with state and local emergency response agencies, with surrounding water utilities, and with the public. Communication plays an important role in knowing how to interpret data and how to respond.

Grantsville Water Department has analyzed its ability to monitor for and detect potential contaminants that could impact its source water. Information regarding this utility's early warning monitoring system capabilities can be found in **Table 15** and in **Appendix B.**

Table 15. Early Warning Monitoring System Capabilities

Does your system currently receive spill notifications from a state agency, neighboring water system, local emergency responders, or other facilities? If yes, from whom do you receive notices?			Yes-DHHR Engineering Department sends email notices and calls of Spills in our area. We also hear from the Glenville Water Department, which is up stream of us. Local 911 will call if they are notified of a spill.
Are you aware of any facilities, land uses, or critical areas within your protection areas where chemical contaminants could be released or spilled?			Yes
Are you prepared to detect potential contaminants if notified of a spill?			No
List laboratories (and contact information) on whom you would rely to analyze water samples in case of a reported spill.	**Laboratories**		
	Name	**Contact**	
	Reic Labs	John- 304-241-5861	
Do you have an understanding of baseline or normal conditions for your source water quality that accounts for seasonal fluctuations?			Yes
Does your utility currently monitor raw water (through continuous monitoring or periodic grab samples) at the surface water intake or from a groundwater source on a regular basis?			Yes. Periodic grabs for PH and Turbidity. Daily samples for manganese, iron, hardness and alkalinity.
Provide or estimate the capital and O&M costs for your current or proposed early warning system or upgraded system.	**Capital**		$20,000
	Yearly O & M		$500
Do you serve more than 100,000 customers? If so, please describe the methods you use to monitor at the same technical levels utilized by ORSANCO.			NA
Note: Complete appropriate Early Warning Monitoring form for your system in Appendix B (Line 71).			

Single Source Feasibility Study

If a public water utility's water supply plant is served by a single–source intake to a surface water source of supply or a surface water influenced source of supply, the submitted source water protection plan must also include an examination and analysis of the technical and economic feasibility of alternative sources of water to provide continued safe and reliable public water service in the event that its primary source of supply is detrimentally affected by contamination, release, spill event or other reason. These alternatives may include a secondary intake, two days of additional raw or treated water storage, an interconnection with neighboring systems, or other options identified on a local level. Note: a suitable secondary intake would draw water supplies from a substantially different location or water source.

To accomplish this requirement, utilities should examine all existing or possible alternatives and rank them by their technical, economic, and environmental feasibility. To have a consistent and complete method for ranking alternatives, WVBPH has developed a feasibility study guide (**See Instructions**). This guide provides several criteria to consider for each category, organized in a Feasibility Study Matrix. By completing the Feasibility Study Matrix, utilities will demonstrate the process used to examine the feasibility of each alternative and document scores that compare the alternatives. The Feasibility Study matrix and summary of the results are presented in an alternatives feasibility study attached as **Appendix D**.

Communication Plan

Grantsville Water Department has also developed a Communication Plan that documents the manner in which the public water utility, working in concert with state and local emergency response agencies, shall notify the local health agencies and the public of the initial spill or contamination event and provide updated information related to any contamination or impairment of the source water supply or the system's drinking water supply. The initial notification to the public will occur in any event no later than thirty minutes after the public water system becomes aware of the spill, release, or potential contamination of the public water system. A copy of the source water protection plan and the Communication Plan has been provided to the local fire department. Grantsville Water Department will update the Communication Plan as needed to ensure contact information is up to date.

Procedures should be in place for the kinds of catastrophic spills that can reasonably be predicted at the source location or within the SWPA. The chain-of-command, notification procedures and response actions should be known by all water system employees.

The WVBPH has developed a recommended communication plan template that provides a tiered incident communication process to provide a universal system of alert levels to utilities and water system managers. The comprehensive Communication Plan for Grantsville Water Department is attached as **Appendix C** for internal review and planning purposes only.

The West Virginia Department of Environmental Protection is capable of providing expertise and assistance related to prevention, containment, and clean-up of chemical spills. The West Virginia Department of Environmental Protection Emergency Response 24-hour Phone is 1-800-642-3074. The West Virginia Department of Environmental Protection also operates an upstream distance estimator that can be used to determine the distance from a spill site to the closest public water supply surface water intake.

Emergency Response Short Form

A public water utility must be prepared for any number of emergency scenarios and events that would require immediate response. It is imperative that information about key contacts, emergency services, and downstream water systems be posted and readily available in the event of an emergency. Elements of this source water protection plan, such as the contingency planning and communication plan, may contain similar information to the utility's emergency response plan. However, the emergency response plan is to be kept confidential and is not included in this source water protection plan. An Emergency Short Form is included in **Appendix C** to support the Communicate Plan by providing quick access to important information about emergency response and are to be used for internal review and planning purposes only.

Conclusion

This report represents a detailed explanation of the required elements of Grantsville Water Department's Source Water Protection Plan. Any supporting documentation or other materials that the utility considers relevant to their plan can be found in **Appendix E**.

This source water protection plan is intended to help prepare community public water systems all over West Virginia to properly handle any emergencies that might compromise the quality of the system's source water supply. It is imperative that this plan is updated as often as necessary to reflect the changing circumstances within the water system. The protection team should continue to meet regularly and continue to engage the public whenever possible. Communities taking local responsibility for the quality of their source water is the most effective way to prevent contamination and protect a water system against contaminated drinking water. Community cooperation, sufficient preparation, and accurate monitoring are all critical components of this source water protection plan, and a multi-faceted approach is the only way to ensure that a system is as protected as possible against source water degradation.

Appendix B. Early Warning Monitoring System Forms

Proposed Early Warning Monitoring System Worksheet- Surface

Describe the type of early warning detection equipment that could be installed, including the design.
An Advanced Water Quality Monitoring Platform connected to the riser is proposed. For the basis of this report, we evaluated and priced an EXO2 sonde (probe) with related appurtenances from YSI (xylem). The sonde can be moved up and down in the water column as needed. The system proposed includes: • Sensors for: o Conductivity (to detect potential contaminants from oil and gas wells) o Salinity (to detect potential contaminants from oil and gas wells (brine)) o Total Suspended Solids (TDS) (to detect potential contaminants from oil and gas wells) o pH (Changes in pH provide information regarding potential heavy metals such as iron and manganese). o Turbidity (Total Suspended Solids) (this is a standard measurement for raw water sources. Bacteria such as e. coli and protozoa such as Giardia can attach themselves to the suspended solids and promote gastrointestinal disease). • Central wiper – This wipes the sensors prior to each reading to remove algae or other biofouling) • Localized power (D batteries)
Where would the equipment be located?
In a raw water sampling port that exists in the water plant.
What would the maintenance plan for the monitoring equipment entail?
Occasional adjustment in elevation and replacement of batteries
Describe the proposed sampling plan at the monitoring site.
The monitoring system takes readings at user-defined intervals. To start, readings should be taken every hour, but can be adjusted as needed.
Describe the proposed procedures for data management and analysis.
The monitoring system will be connected to the water treatment plants system via hard wiring.

Communication Plan Template

For Grantsville Water Department

PWSID: __WV3300701_____ District: _____St. Albans_____

Certified Operator: _____Robert Alan Bell_____

Contact Phone Number: _____304.354.7316_____

Contact Email Address: _____grantsvillewaterplant@yahoo.com_____

Plan Developed On: _5/31/2016_____ Plan Update Due On: _____

ACKNOWLEDGMENTS:

This plan was developed by Alan Bell of Grantsville Water Department to meet certain requirements of the Source Water and Assessment Protection Program (SWAPP) and the Wellhead Protection Program (WHPP) for the State of West Virginia, as directed by the federal Safe Drinking Water Act (SDWA) and state laws and regulations.

Table of Contents

Introduction

Legislative Rule 64CSR3 requires public water systems to develop a Communication Plan that documents how public water suppliers, working in concert with state and local emergency response agencies, shall notify state and local health agencies and the public in the event of a spill or contamination event that poses a potential threat to public health and safety. The plan must indicate how the public water supplier will provide updated information, with an initial notification to the public to occur no later than thirty minutes after the supplier becomes aware that the spill, release or potential contamination of the public water system poses a potential threat to public health and safety.

The public water system has responsibility to communicate to the public, as well as to state and local health agencies. This plan is intended to comply with the requirements of Legislative Rule 64CSR3, and other state and federal regulations.

TIERS Reporting System

This water system has elected to use the *Tiered Incident / Event Reporting System* (TIERS) for communicating with the public, agencies, the media, and other entities in the event of a spill or other incident that may threaten water quality. TIERS provides a multi-level notification framework, which escalates the communicated threat level commensurate with the drinking water system risks associated with a particular contamination incident or event. TIERS also includes a procedural flow chart illustrating key incident response communication functions and how they interface with overall event response / incident management actions. Finally, TIERS identifies the roles and responsibilities for key people involved in risk response, public notification, news media and other communication.

TIERS provides an easy-to-remember five-tiered **A-B-C-D-E** risk-based incident response communication format, as described below. Table 1 provides also associated risk levels. Example press releases are provided as attachments to this plan.

> **A** = **A**nnouncement. The water system is issuing an announcement to the public and public agencies about an incident or event that may pose a threat to water quality. Additional information will be provided as it becomes available. As always, if water system customers notice anything unusual about their water, they should contact the water system
>
> **B** = **B**oil Water. A boil water advisory has been issued by the water system. Customers may use the water for showering, bathing, and other non-potable uses, but should boil water used for drinking or cooking.
>
> **C** = **C**annot Drink. The water system asks that users not drink or cook with the water at this time. Non-potable uses, such as showering, bathing, cleaning, and outdoor uses are not affected.
>
> **D** = **D**o Not Use. An incident or event has occurred affecting nearly all uses of the water. Do not use the water for drinking, cooking, showering, bathing, cleaning, or other tasks where water can come in contact with your skin. Water can be used for flushing commodes and fire protection.
>
> **E**=**E**mergency. Water cannot be used for any reason.

Tier	Tier Category	Risk Level	Tier Summary
A	**A**nnouncement	Low	The water system is issuing an announcement to the public and public agencies about an incident or event that could pose a threat to public health and safety. Additional information will be provided as it becomes available.
B	**B**oil Water Advisory	Moderate	Water system users are advised to boil any water to be used for drinking or cooking, due to possible microbial contamination. The system operator will notify users when the boil water advisory is lifted.
C	**C**annot Drink	High	System users should not drink or cook with the water until further notice. The water can still be used for showering, bathing, cleaning, and other tasks.
D	**D**o Not Use	Very High	The water should only be used for flushing commodes and fire protection until further notice. More information on this notice will be provided as soon as it is available.
E	**E**mergency	Extremely High	The water should not be used for any purpose until further notice. More information on this notice will be provided as soon as it is available.

Communication Team

The Communication Team for the water system is listed in the table below, along with key roles. In the event of a spill or other incident that may affect water quality, the water system spokesperson will provide initial information, until the team assembles (if necessary) to provide follow-up communication.

Water system communication team members, organizations, and roles.

Team Member Name	Organization	Phone	Email	Role
Doyle Hupp	City of Grantsville	304.354.7035		Primary Spokesperson
Alan Bell	Grantsville Water	304.354.7316	grantsvillewaterplant@yahoo.com	Secondary Spokesperson

In the event of a spill, release, or other incident that may threaten water quality, members of the team who are available will coordinate with the management staff of the local water supplier to:

- Collect information needed to investigate, analyze, and characterize the incident/event
- Provide information to the management staff, so they can decide how to respond
- Assist the management staff in handling event response and communication duties
- Coordinate fully and seamlessly with the management staff to ensure response effectiveness

Communication Team Duties

The communication team will be responsible for working cooperatively with the management staff and state and local emergency response agencies to notify local health agencies and the public of the initial spill or contamination event. The team will also provide updated information related to any contamination or impairment of the source water supply or the system's drinking water supply.

According to Legislative Rule 64CSR3, the initial notification to the public will occur no later than thirty minutes after the public water system becomes aware that the spill, release or potential contamination of the public water system poses a potential threat to public health and safety.

As part of the group implementing the Source Water Protection Plan, team members are expected to be familiar with the plan, including incident/event response and communication tasks. Specifically, team members should:

- Be knowledgeable on elements of the Source Water Protection Plan and Communication Plan
- Attend team meetings to ensure up-to-date knowledge of the system and its functions
- Participate in periodic exercises that practice incident response and communication tasks
- Help to educate local officials, the media, and others on source water protection
- Cooperate with water supplier efforts to coordinate incident response communication
- Be prepared to respond to requests for field investigations of reported incidents
- Agree not to speak on behalf of the water supplier unless designated as the system’s spokesperson

The primary spokesperson will be responsible for speaking on behalf of the water system to local agencies, the public, and the news media. The spokesperson should work with the management staff and the team to ensure that all communication is clear, accurate, timely, and consistent. The spokesperson may authorize and/or direct others to issue news releases or other information that has been approved by the system’s management staff. The spokesperson is expected to be on call immediately when an incident or event which may threaten water quality occurs. The spokesperson will perform the following tasks in the event of a spill, release, or other event that threatens water quality:

- Announce which risk level (A, B, C, D, or E) will apply to the public notifications that are issued (see example press releases attached)
- Issue news releases, updates, and other information regarding the incident/event
- Use the news media, email, social media, and other appropriate information venues
- Ensure that news releases are sent to local health agencies and the public
- Respond to questions from the news media and others regarding the incident/event
- Appear at news conferences and interviews to explain incident response, etc.

Incident / Event Communication Procedure

The flow chart in this section illustrates how the water system will respond when it receives a report that a spill, release, or other contamination event may have occurred. Key elements of the flow chart are described below.

Communication with agencies, the public, and the media during threat incidents

Upon initial notification of the incident/event, system managers and staff will collect information and verify the need for further investigation. Only properly trained personnel will perform onsite investigations if permitted by emergency responders. If further investigation is warranted, and the initial facts support it, the water system spokesperson will issue a public communication statement consistent with the threat level. In addition, water system personnel and partners will be dispatched to conduct reconnaissance, a threat assessment, and a threat characterization, if present. This work may include:

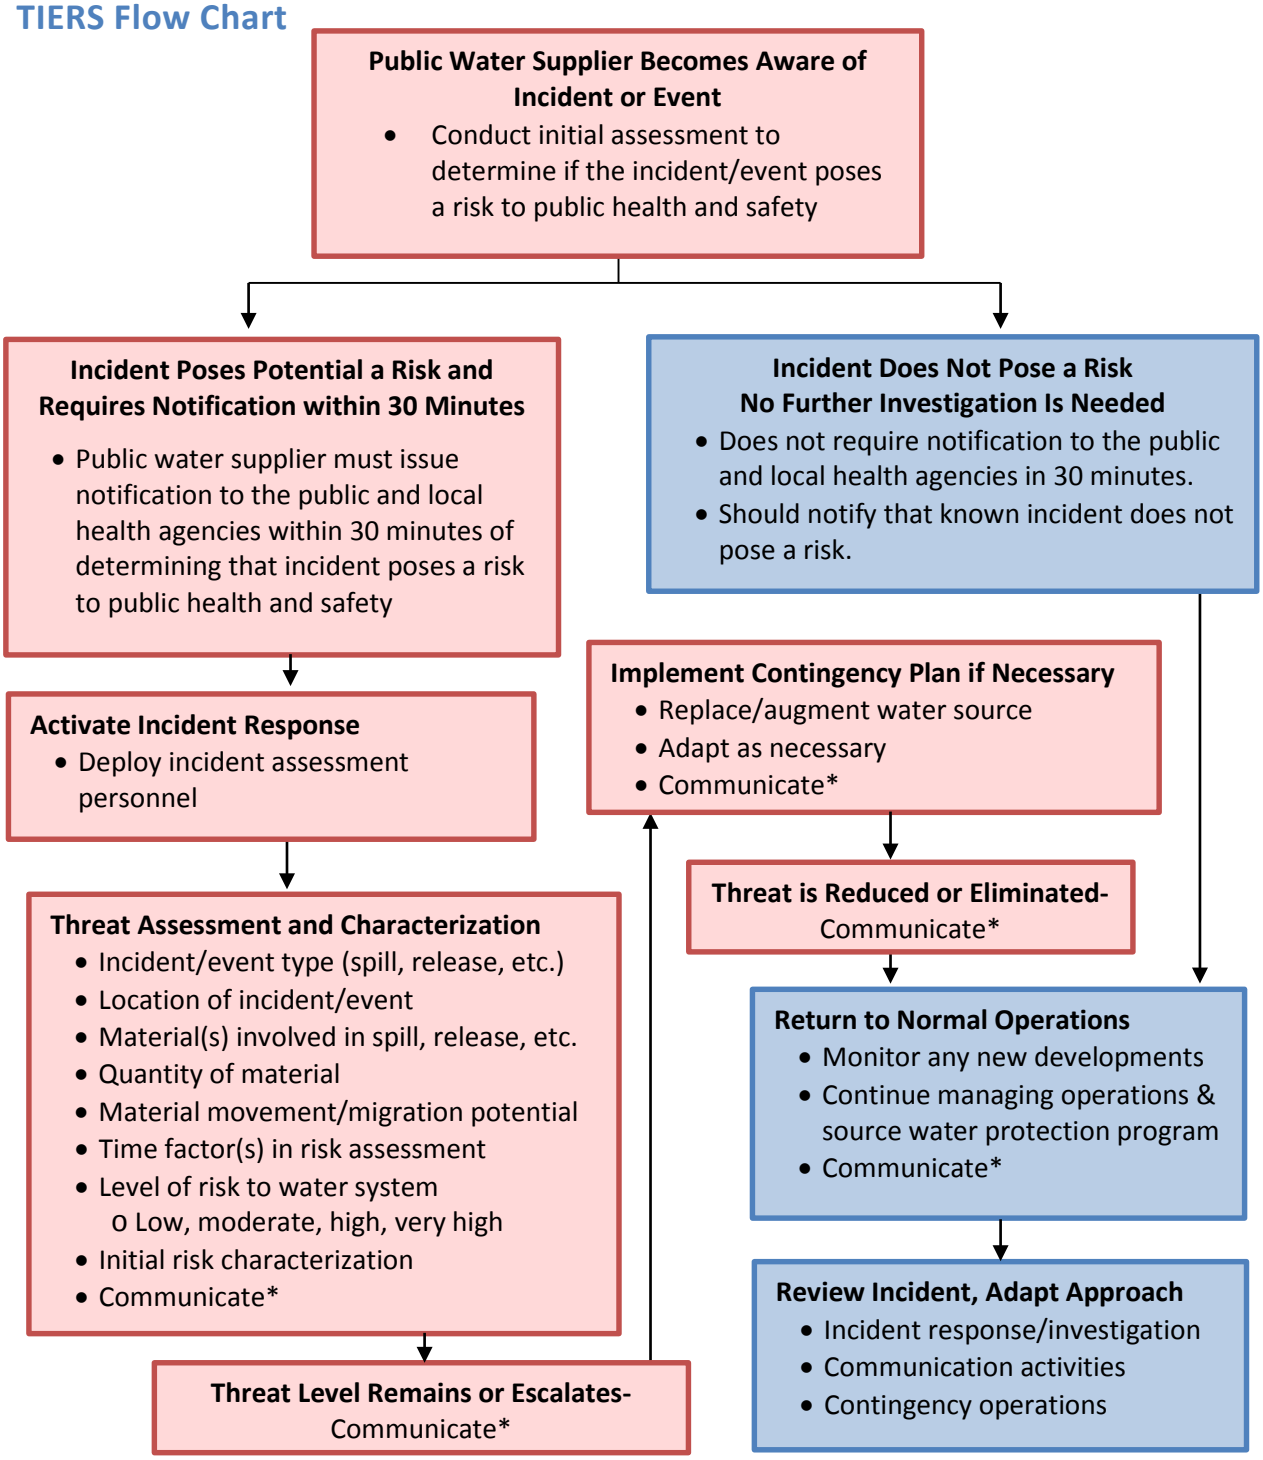
- Verification of the incident/event type (spill, release, etc.)
- Location of incident/event
- Type of material(s) involved in spill, release, etc.
- Quantity of material involved
- Potential of the material to move, migrate, or be transported
- Relevant time factor(s) in the risk assessment (e.g., downstream movement rate)
- Overall level of risk to water system, whether low, moderate, high, or very high
- Development of the initial risk characterization

As the flow chart indicates, several iterative cycles will occur after the initial threat assessment, including communication with local agencies and the public, further investigation of the incident, possible implementation of the water system's contingency plan, and eventual elimination of the threat and a return to normal operations. Communication activities during this period will include:

- The initial release (i.e., **A**nnouncement, **B**oil Water, **C**annot Drink, **D**o Not Use, or **E**mergency attached)
    - Sent to local health agencies, the public, and the news media within 30 minutes
- Notification of the local water system's source water protection and communication teams
    - If warranted by initial findings regarding the spill, release, or incident
- Notification of the WV Bureau of Public Health
    - As required
- Periodic information updates, as incident response information is received
- Updates to the applicable A-B-C-D-E advisory tier, as necessary

If time permits and the need arises, after the threat level is reduced, and operations return to normal, the water system staff, the communication and source water protection teams, and their partners may conduct a post-event review and assessment. The purpose of the review is to examine the response to the incident, relevant communication activities, and overall outcomes. Plans and procedures may be updated, altered, or adapted based on lessons learned through this process.

TIERS Flow Chart



Communicate*

Constant communication with local agencies, public, and the media is critical throughout the entire process. The initial notification should include all pertinent information, depending on the TIERS level. Regular information updates should be provided. The **A-B-C-D-E** TIERS levels should be updated and explained as necessary.

Press Release Attachments

TIERS Levels A, B, C, D, and E

UTILITY ISSUED NOTICE – LEVEL A

PUBLIC WATER SYSTEM ANNOUNCEMENT

A WATER SYSTEM INVESTIGATION IS UNDERWAY

On _____ at ___:____ AM/PM, the _____ Water System began investigating an incident that may affect local water quality.

The incident involves the following situation at this location:
_____
_____
_____

There are no restrictions on water use at this time. As always, if water system customers notice anything unusual about their water – such as abnormal odors, colors, sheen, etc. – they should contact the water system at _____.

At this time there is no need for concern if you have consumed or used the water.

Regular updates will be provided about this Announcement as water system staff continue their investigation. Again, there are no restrictions on water use at this time.

State Water System ID# _____ Date Distributed: _____

UTILITY ISSUED NOTICE – LEVEL B

BOIL WATER ADVISORY

A BOIL WATER ADVISORY IS IN EFFECT

On _____ at ___:____ am/pm, a water problem occurred causing contamination of your water. The areas that are affected are as follows:

□ Entire Water System or □ Other: _____

_____

CONDITIONS INDICATE THERE IS A HIGH PROBABILITY THAT YOUR WATER IS CONTAMINATED. TESTING HAS NOT OCCURRED TO CONFIRM OR DENY THE PRESENCE OF CONTAMINATION IN YOUR WATER.

What should I do?

- **DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST.** Bring all water to a boil, let it boil for one minute, and let it cool before using, or use bottled water. Boiled or bottled water should be used for drinking, making ice, brushing teeth, washing dishes, bathing, and food preparation **until further notice**. Boiling kills bacteria and other organisms in the water.

What happened?

- **The problem is related to** _____

What is being done?

- **The water system is taking the following action:** _____

  _____

What should a customer do if they have consumed or used the water?

- _____

We will inform you when you no longer need to boil your water. We anticipate resolving the problem within _____ hours/days. For more information, please contact _____ at _____ or _____ at _____.

General guidelines on ways to lessen the health risk are available from the EPA Safe Drinking Water Hotline at 1 (800) 426-4791.

Please share this information others who use this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice was distributed by _____

State Water System ID# _____ Date Distributed: _____

UTILITY ISSUED NOTICE – LEVEL C
"CANNOT DRINK" WATER NOTIFICATION
A LEVEL C WATER ADVISORY IS IN EFFECT

On _____ at ___:____ am/pm, a water problem occurred causing contamination of your water. The areas that are affected are as follows:

□ Entire Water System or □ Other: _____
_____

CONDITIONS INDICATE THERE IS A HIGH PROBABILITY THAT YOUR WATER IS CONTAMINATED. TESTING HAS NOT OCCURRED TO CONFIRM OR DENY THE PRESENCE OF CONTAMINATION IN YOUR WATER.

What should I do?

- **DO NOT DRINK THE WATER.** You can't drink the water, but you can use it for showering, bathing, toilet-flushing, and other non-potable purposes.
- **BOILING WILL NOT PURIFY THE WATER.** Do not drink the water, even if it is boiled. The type of contamination suspected is not removed by boiling.

What happened?

- **The problem is related to** _____

What is being done?

- **The water system is taking the following action:** _____
  _____

What should a customer do if they have consumed or used the water?

- _____

We will inform you when the water is safe to drink. We anticipate resolving the problem within _____ hours/days. For more information – or to report unusual water conditions such as abnormal odors, colors, sheen, etc. – please contact _____ at _____ or _____ at _____.

Please share this information others who use this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

UTILITY ISSUED NOTICE – LEVEL D
"DO NOT USE" WATER NOTIFICATION
A LEVEL D WATER ADVISORY IS IN EFFECT

On _____ at ___:____ am/pm, a water problem occurred causing contamination of your water. The areas that are affected are as follows:

□ Entire Water System or □ Other: _____
_____

CONDITIONS INDICATE THERE IS A HIGH PROBABILITY THAT YOUR WATER IS CONTAMINATED. TESTING HAS NOT OCCURRED TO CONFIRM OR DENY THE PRESENCE OF CONTAMINATION IN YOUR WATER.

What should I do?

- **DO NOT DRINK THE WATER.** The water is contaminated.
- **DO NOT SHOWER OR BATHE IN THE WATER.** You can't use the water for drinking, showering, or bathing. It can be used for toilet flushing and firefighting.
- **BOILING WILL NOT PURIFY THE WATER.** Do not use the water, even if it is boiled. The type of contamination suspected is not removed by boiling.

What happened?

- **The problem is related to** _____

What is being done?

- **The water system is taking the following action:** _____

What should a customer do if they have consumed or used the water?

- _____

We will inform you when the water is safe to drink. We anticipate resolving the problem within _____ hours/days. For more information – or to report unusual water conditions such as abnormal odors, colors, sheen, etc. – please contact _____ at _____ or _____ at _____.

Please share this information others who use this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Appendix D. Single Source Feasibility Study

Single Source Feasibility Study

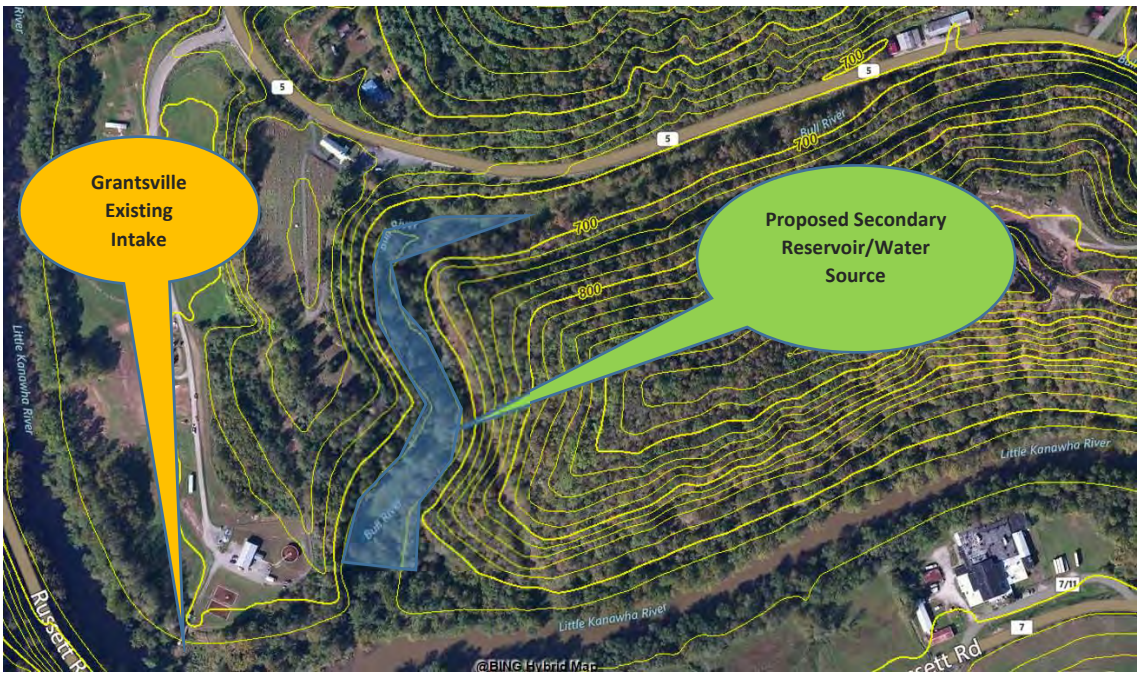
Discussion – Currently, Grantsville Water Department serves 564 customers directly, 1,088 indirectly through Pleasant Hill PSD and 389 through Mt. Zion PSD. According to 64 CSR 77 (WVDHHR Water System Design Standards) the secondary source must be able to provide 300 gpd for each customer, plus fire flow, if applicable, for at least two days. Also according to 64 CSR 77, fire flow can be calculated at 250 gpm for two hours (total of 30,000 gallons). Due to the excessive calculations and field work required, pressure evaluation for fire flow was not considered in this analysis. Therefore, the required volume can be calculated as follows:

((312+1088+389) x 300) x 2 days + 30,000 = **1,103,400 gallons**

Backup Intake

Introduction - One secondary source option for Grantsville Water Department is the construction or establishment of a secondary or backup intake which draws water supplies from a substantially different location or water source.

Exploration – Windshield surveys were performed, and discussions were held with local stakeholders to better ascertain the feasibility of establishing a backup intake at an existing water source or constructing a second water source and backup intake. No obvious existing water sources were revealed. Therefore, a new water source was evaluated. Discussions with Grantsville Water Department personnel revealed that impounding Bull River, a tributary of the Little Kanawha River just downstream from the existing water plant, is a practical choice for the construction of a reservoir.



Evaluation – The second water source/backup intake was evaluated for three criteria: Economic, Technical and Environmental. It must be stated that geographical location of a secondary reservoir greatly affects the evaluation of these criteria.

- Economics
  - Operations and Maintenance Costs – Operations and maintenance costs include operation and maintenance of a source water intake system, early warning detection system, pump station and 500 feet of 8" PVC waterline. In addition, the reservoir would be subject to bi-annual inspections by a licensed engineer for submission to West Virginia Department of Environmental Protection – Dam Safety Division. Operation and Maintenance Costs are estimated in the following table:

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
Personnel	HR	260	$ 30	$ 7,800	Assume 1 hour a day, 5 days a week, 52 weeks a year
Power	LS	1	$ 20,000	$ 20,000	Based on 20% of power usage at water plant
Replacement Parts, Supplies	LS	1	$ 12,750	$ 12,750	Based on 5% of capital costs.
				$ 40,550	

This results in an Operations and Maintenance cost of $40,550/91,642,000 gallons, or $0.44/kgal.

  - Capital Costs – For estimating purposes, it is assumed that an earthen dam would be constructed to create a reservoir at Bull River, adjacent to the existing water plant. The dam would be from approximate elevations 665 to 685. The resulting reservoir would contain approximately 4,000,000 gallons. Capital funds would be required for the acquisition of property, construction of approximately 200 feet of PVC 8" waterline and retrofitting the existing pump station to pump the raw water to the existing treatment plant just upstream. For the basis of this estimate, it is assumed a pump system similar to the ones currently in use at the existing intake would be constructed. Based on a life of 15 years, 8% annual interest and the following cost opinion, the annualized capital cost to implement the alternative was calculated to be $29,789/91,642,000 gallons, or $0.33/kgal.

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
8" PVC Waterline	LF	500	$ 20	$ 10,000	Run line to current waterworks.
20' Earthen Dam	LS	1	$ 200,000	$ 200,000	
Retrofit Existing Pump Station	LS	1	$ 25,000	$ 25,000	Considering the close proximity of Bull River to the existing treatment plant, this should be a relatively affordable system.
Early Warning System	LS	1	$ 20,000	$ 20,000	From Early Warning System specified for existing intake
				$ 255,000	

- Technical
  - Permitting – Permits from WVDEP Dam Safety for construction of earthen dam, from the United States Corps of Engineers for work within a waterway, West Virginia Department of Natural Resources for work within a waterway and WVDEP for erosion and sediment

control during construction are required. In addition, a permit from West Virginia Bureau of Public Health is required for significant improvement to water supply system, WVDOH for work within road right of way. The work will also be performed within the FEMA designated 100 year floodplain. Therefore, a permit for construction within the floodplain will be required. Obtaining these permits will involve a significant amount of effort, but approval from these agencies is likely.

- Resilience/Flexibility – A secondary reservoir provides additional resilience to the water system, as it is a separate source. In addition, the earthen embankment can be raised as needed to increase capacity.

- Institutional Requirements – Grantsville Water Department will need to acquire approximately 10 acres from private property owners. There are currently no development or planning restrictions in place as a barrier to this alternative.

- Environmental
  - Environmental Impacts – The potential reservoir area must be evaluated for endangered species, potential historical preservation issues and cemeteries. Preliminary evaluation indicates that these should items should be non-issues.

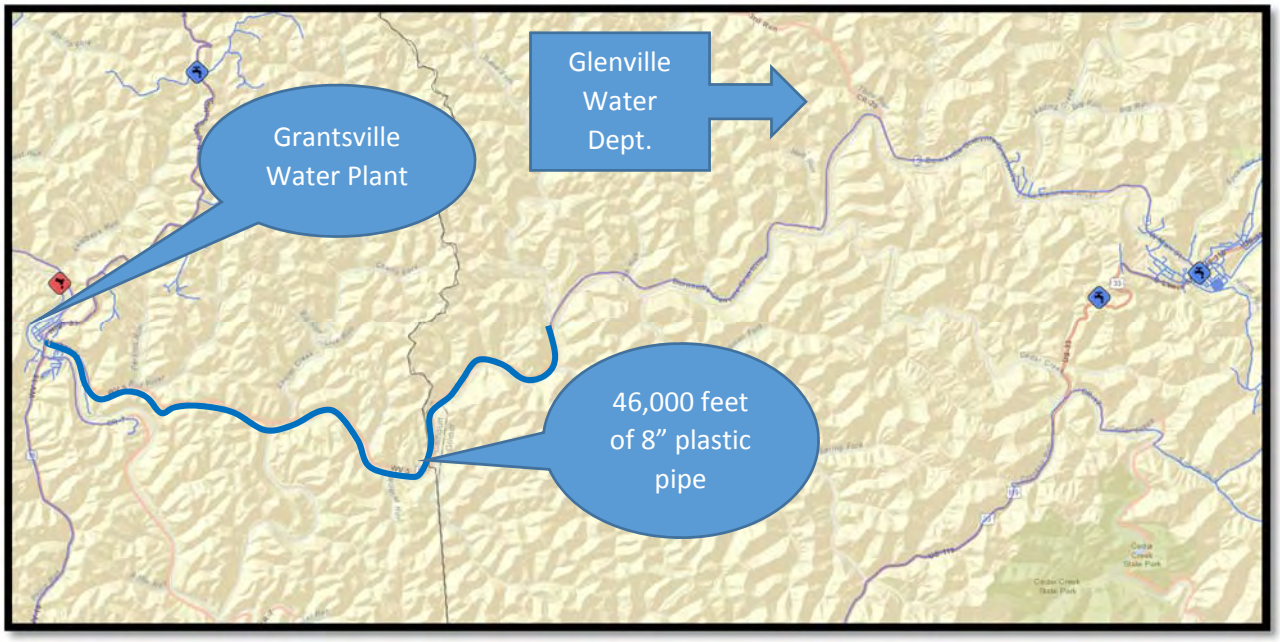
  - Aesthetic Impacts – A second reservoir provides a potential recreational and park area for the use of local residents.

  - Stakeholder Issues – There are a few residents and businesses that are currently within the 100 year floodplain just upstream from the proposed reservoir. A hydrologic and hydraulic analysis will be required to verify that this project will not create an adverse effect on these properties.

Interconnect

Introduction - One secondary source option for Grantsville Water Department is establishing an operational interconnection with another water system to allow the utility to receive its water from a different source of supply.

Exploration – Grantsville Water Department does not currently have an interconnection with other public water systems. The most fiscally feasible interconnection would be connecting to the Glenville Water Department. This requires approximately 32,000 feet of water main construction in addition to other capital components such as a pump station. The Glenville Water Department system must be analyzed further before such a connection should be investigated further to verify that Glenville Water Department has adequate flow to the point of connection.



Evaluation – The interconnection was evaluated for three criteria: Economic, Technical and Environmental.

Economics

- Operations and Maintenance Costs – Operations and maintenance costs include operation and maintenance of an additional 32,000 feet of 8" PVC water line and a pump station. O & M costs are estimated in the following table:

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
Personnel	HR	260	$ 30	$ 7,800	Assume 1 hour a day, 5 days a week, 52 weeks a year
Power	LS	1	$ 20,000	$ 20,000	Based on 20% of power usage at water plant
Replacement Parts, Supplies	LS	1	$ 47,000	$ 47,000	Based on 5% of capital costs.
				$ 74,800	

This results in an Operations and Maintenance cost of $74,800/91,642,000 gallons, or $0.82/kgal.

- Capital Costs – The construction of 32,000 feet of 8" PVC as well as a pump station are required for this option. This analysis is prepared under the assumption that Glenville Water Department have/has the water pressure and volume available at the point of connection. Based on a life of 15 years, 8% annual interest and the following cost opinion, the annualized capital cost to implement the alternative was calculated to be $109,813/91,642,000 gallons, or $1.20/kgal.

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
8" PVC water line	LF	32000	$ 20	$ 640,000	
Pump Station	LS	1	$ 300,000	$ 300,000	Based on 40 hp pump station
				$ 940,000	

- Technical
  - Permitting – A permit from WVDEP for erosion and sediment control during construction, and a permit from West Virginia Bureau of Public Health is needed for significant improvement to water supply system. Any work within the WVDOH right of way will also require an encroachment permit. The majority if not all of the water main extension will be located within the 100 year floodplain and crosses the Gilmer County/Calhoun County line. Therefore, permits from both the Gilmer County Floodplain Manager and the Calhoun County Floodplain Manager are required.

  - Resilience/Flexibility – An interconnection with a separate system served by a different treatment works and different water source significant increases the resilience of a system. There is also the added benefit of Grantsville Water Department being able to provide water to Glenville Water Department if the need arises.

  - Institutional Requirements –Grantsville Water Department will need to develop an agreement with Glenville Water Department.

- Environmental
  - Environmental Impacts – The potential construction area will need to be evaluated for endangered species, potential historical preservation issues and cemeteries. Preliminary evaluation indicates that these should items should be non-issues.

  - Aesthetic Impacts – An additional storage tank will be located at a high elevation and likely screened by vegetation. There should be minimal adverse aesthetic impacts.

  - Stakeholder Issues – Glenville Water Department is a stakeholder, as well as their customers.

Treated Water Storage

Introduction - One secondary source option for Grantsville Water Department is establishing/constructing enough treated water storage for use during a shutdown of the currently used water intake.

Exploration – Grantsville Water Department currently owns and operates three water storage tanks totaling 800,000 gallons:

Tank	Year Built	Capacity (gal)	Size	Material
1	unknown	300,000	20'Ø x 30' H	Steel
2*	unknown	200,000	20'Ø x 30' H	Steel
3	unknown	300,000	20'Ø x 30' H	Glass Fused to Steel
Total		**800,000**		

* Leased from Pleasant Hill PSD

By reason that 800,0000 gallons of treated water storage exist in existing tanks, an additional storage amount of 303,400 gallons is required for the treated water storage to be considered a secondary source with the following stipulations:

- The water source must be closed quickly enough to prevent contamination of the treated water stored in the tanks.
- The tanks will need to be full prior to the emergency event.
- Proper circulation of the treated water stored in the tanks must be considered and evaluated for turn-over requirements.

Evaluation – The treated storage was evaluated for three criteria: Economic, Technical and Environmental.

- Economics
    - Operations and Maintenance Costs – The addition of a storage tank should have minimal to no effect on the current operations and maintenance costs expended by Grantsville Water Department

    - Capital Costs – A 300,000 gallon storage tank with related appurtenances (piping, fencing, etc.) is estimated to cost $250,000. For the basis of this evaluation, it is assumed that the tank can be placed in an area that already has vehicular access for Grantsville Water Department personnel to perform necessary tasks. Based on a life of 15 years, 8% annual interest and the following cost opinion, the annualized capital cost to implement the alternative was calculated to be $26,824/91,642,000 gallons, or $0.29/kgal.

- Technical
    - Permitting – A permit from WVDEP for erosion and sediment control during construction is required. In addition, a permit from West Virginia Bureau of Public Health is needed for significant improvement to water supply system. Obtaining these permits will involve a moderate amount of effort, and approval from these agencies is likely.

- Resilience/Flexibility – Four treated water storage tanks at different locations throughout the system provides Grantsville Water Department with flexibility during normal operations.

- Institutional Requirements – There are currently no development or planning restrictions in place as a barrier to this alternative.

- Environmental
  - Environmental Impacts – The potential tank area will need to be evaluated for endangered species, potential historical preservation issues and cemeteries. Preliminary evaluation indicates that these should items should be non-issues.

  - Aesthetic Impacts – Three storage tanks are currently a part of the system. The additional storage tank should not have significant impacts.

  - Stakeholder Issues – Three storage tanks are currently a part of the system. The additional storage tank should not have significant stakeholder issues.

Raw Water Storage

Introduction - One secondary source option for Grantsville Water Department is the construction or establishment of a secondary or backup intake which draws water supplies from a substantially different location or water source.

Exploration – Windshield surveys were performed, and discussions were held with local stakeholders to better ascertain the feasibility of establishing a backup intake at an existing water source or constructing a second water source and backup intake. No obvious existing water sources were revealed. Therefore, a new water source was evaluated. Discussions with Grantsville Water Department personnel revealed that impounding Bull River, a tributary of the Little Kanawha River just downstream from the existing water plant, is a practical choice for the construction of a reservoir.

Evaluation – The second water source/backup intake was evaluated for three criteria: Economic, Technical and Environmental. It must be stated that geographical location of a secondary reservoir greatly affects the evaluation of these criteria.

- Economics
  - Operations and Maintenance Costs – Operations and maintenance costs include operation and maintenance of a source water intake system, early warning detection system, pump station and 500 feet of 8" plastic waterline. In addition, the reservoir would be subject to bi-annual inspections by a licensed engineer for submission to West Virginia Department of Environmental Protection – Dam Safety Division. Operation and Maintenance Costs are estimated in the following table:

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
Personnel	HR	260	$ 30	$ 7,800	Assume 1 hour a day, 5 days a week, 52 weeks a year
Power	LS	1	$ 20,000	$ 20,000	Based on 20% of power usage at water plant
Replacement Parts, Supplies	LS	1	$ 16,200	$ 16,200	Based on 5% of capital costs.
				$ 44,000	

This results in an Operations and Maintenance cost of $44,000/91,642,000 gallons, or $0.48/kgal.

- Capital Costs – For estimating purposes, it is assumed that an earthen dam would be constructed to create a reservoir at Bull River, adjacent to the existing water plant. The dam would be from approximate elevation 665 to elevation 685. The resulting reservoir would contain approximately 4,000,000 gallons. Capital funds would be required for the acquisition of property, construction of approximately 500 feet of plastic 8" waterline and retrofitting the existing pump station to pump the raw water to the existing treatment plant just upstream. For the basis of this estimate, it is assumed a pump system similar to the ones currently in use at the existing intake would be constructed. Based on a life of 15 years, 8% annual interest and the following cost opinion, the annualized capital cost to implement the alternative was calculated to be $37,854/91,642,000 gallons, or $0.41/kgal.

Item	Unit	Quantity	Unit Cost	Total Item Cost	Notes
8" PVC Waterline	LF	500	$ 20	$ 10,000	Run line to current waterworks.
20' Earthen Dam	LS	1	$ 200,000	$ 200,000	
Retrofit Existing Pump Station	LS	1	$ 25,000	$ 25,000	Considering the close proximity of Bull River to the existing treatment plant, this should be a relatively affordable system.
Early Warning System	LS	1	$ 20,000	$ 20,000	From Early Warning System specified for existing intake
				$ 255,000	

- Technical
  - Permitting – Permits from WVDEP Dam Safety for construction of earthen dam, from the United States Corps of Engineers for work within a waterway, West Virginia Department of Natural Resources for work within a waterway and WVDEP for erosion and sediment control during construction are required. In addition, a permit from West Virginia Bureau of Public Health is required for significant improvement to water supply system, WVDOH for work within road right of way. The work will also be performed within the FEMA designated 100 year floodplain. Therefore, a permit for construction within the floodplain will be required. Obtaining these permits will involve a significant amount of effort, but approval from these agencies is likely.

  - Resilience/Flexibility – A secondary reservoir provides additional resilience to the water system, as it is a separate source. In addition, the earthen embankment can be raised as needed to increase capacity.

  - Institutional Requirements – Grantsville Water Department will need to acquire approximately 10 acres from private property owners. There are currently no development or planning restrictions in place as a barrier to this alternative.

- Environmental
  - Environmental Impacts – The potential reservoir area must be evaluated for endangered species, potential historical preservation issues and cemeteries. Preliminary evaluation indicates that these should items should be non-issues.

  - Aesthetic Impacts – A second reservoir provides a potential recreational and park area for the use of local residents.

  - Stakeholder Issues – There are a few residents and businesses that are currently within the 100 year floodplain just upstream from the proposed reservoir. A hydrologic and hydraulic analysis will be required to verify that this project will not create an adverse effect on these properties.
