

# webTADS Application Update

July 24, 2018

The following changes have been updated in webTADS:

Enhancement	Description
<b>Removing the Period Covered from report calculations</b>	<ul style="list-style-type: none"><li>• Use of the Period Covered has been removed from the following calculations:<ul style="list-style-type: none"><li>○ Element Outage Frequency: TOF, SOF, MOF</li><li>○ Element Outage Duration: SODT</li><li>○ Circuit Outage Frequency: TCOF, SCOF, MCOF</li><li>○ Multiple Circuit Outage Frequency: TMCOF, SMCOF, MMCO</li></ul></li></ul>
<b>Allow zero (0) duration outages for form 6.3</b>	<ul style="list-style-type: none"><li>• On Form 6.3 (Non-Automatic Transformer Outages) entry form, remove the fatal error validation for duration of less than one (1) minute. This will allow data reporters to report Non-Automatic Transformer Outages with a duration of zero (0) minutes.</li><li>• The Form 6.3 import will also be enhanced to allow the zero (0) duration outage to be successfully imported.</li></ul>
