

**Incident Management Situation Report
Wednesday, May 31, 2023 – 0730 MDT
National Preparedness Level 2**

National Fire Activity:

Fire Activity and Teams Assigned	Total
Initial attack activity:	Light (94 fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires: **	3
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
Complex IMTs committed:	0

Nationally, there are three fires being managed under a strategy other than full suppression.

**Uncontained large fires only include fires being managed under a full suppression strategy.

[Geographic Area daily reports](#)

[Understanding the IMSR](#)

Seventeen fire suppression crews, three incident management teams and thirty-three overhead personnel have been assigned to large fires in Alberta, Canada.

This report will post Monday – Friday at 0730 Mountain time unless significant activity occurs.

Active Incident Resource Summary

Acres (2013 – 2022 as of today)	1,007,943

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

High pressure will bring well above normal temperatures to the Great Lakes, Ohio Valley, and Northeast, with the driest conditions focused on the eastern Great Lakes into the Northeast. Isolated thunderstorms are forecast over the western Great Lakes with localized rainfall, but potential lightning ignitions as well. Elevated to critical southwest winds will develop over southeast Arizona into central New Mexico with wind gusts to 40 mph and relative humidity as low as 5%. Dry conditions will also continue for the southern Great Basin and West Slope. Scattered showers and thunderstorms will develop from the Sierra through the northern Great Basin into the northern Rockies, on much of the Plains, and western Mississippi Valley. Severe thunderstorms are likely across the central and southern High Plains with areas of heavy rainfall and potential flash flooding. Scattered to numerous showers and thunderstorms will develop over the northeastern Gulf Coast and much of Florida while low pressure brings continued cool and showery conditions to much of Alaska.
