Predictive Services Discussion:

A shortwave trough will continue to move across the Northwest while high pressure moves over the central third of the US. Overall, weather conditions will be similar to Monday. Further cooling is expected west of the Divide bringing widespread temperatures several degrees below normal in most areas. Temperatures over the southern Plains and Gulf Coast will continue to remain 5 to 10 degrees above normal, rising to the 90s to around 100°F. Breezy southerly winds of 15-25 mph will continue for west Texas with RH of 15-25%. Breezy northerly offshore winds are likely to continue for the Gulf Coast states with RH of 25-35%. A sea breeze over the Gulf Coast may kick up thunderstorm activity that would bring concerns for new ignitions to the Lower Mississippi Valley.

Monsoon activity will continue to remain active for Arizona, Utah, Colorado, and will likely push farther east into New Mexico while westerly flow keeps activity out of southeast California and southern Nevada. There will likely be a continuation of scattered mixed wet/dry thunderstorms for portions of the Northwest, northern California, northern Great Basin, and across the Rockies due to the shortwave trough moving through. Widespread breezy to gusty westerly flow will continue for portions of California, Nevada, and into southern Idaho, as well as through the Cascade gaps and Columbia Basin. Winds will likely be a little weaker than on Monday at around 15-25 mph with gusts to 35 mph. Very dry conditions will remain in place east of the Sierra with RH as low as 8-25%, and higher humidity will continue to the west.
