Predictive Services Discussion:

Record high temperatures will continue in California, with some all-time records possible as temperatures near 120 degrees in portions of the Central Valley. Record high temperatures will also spread into central and western Oregon and into the southern/western Great Basin and Arizona, while the rest of the West remains well above average with low afternoon RH of 3-15%, except near the coast. A backdoor cold front moving through Montana and Wyoming will bring northwesterly sustained winds of 12-25 mph with gusts 25-40 mph to much of eastern Oregon, the northern/eastern Great Basin, southern Wyoming, and West Slope for elevated to critical conditions. Very poor overnight RH recovery will continue for California, southwest Oregon, the southern/western Great Basin, Arizona, and the Four Corners.

Isolated mixed wet and dry thunderstorms are expected in southeast Arizona into the southern half of New Mexico. Isolated to scattered thunderstorms will develop near and behind a cold front in central/eastern Montana and northern Wyoming. Scattered showers and thunderstorms will develop across much of the northern and central Plains, with showers and thunderstorms along the Gulf and East Coasts near a cold front. Cool and wet conditions will continue across much of Alaska, with a brief decrease in dry trade winds across Hawai'i today.
