Predictive Services Discussion:

The low moving out of the Great Basin will weaken, with the thunderstorms coming to an end. This will flatten the ridge of high pressure over the Central Rockies. High temperatures in the Inland Northwest will remain above normal but will only get into the lower 90s. Farther south across the Central Valley and into Arizona, the heat wave will continue with widespread temperatures of 100 to 110 degrees. RH of 5 to 20% will remain in place across much of the Intermountain West and into the western High Plains. Overnight recoveries will continue to be poor, 20 to 30%. Winds across much of the Intermountain West will be 10 to 15 mph out of the west to southwest, with gusts 20 to 25 mph, and some stronger gusts of 20 to 30 mph across the Northern Rockies and the northern Great Basin. Any existing fire, and additional holdovers, will likely see increasing activity with the winds, and with poor overnight recoveries possibly continuing to burn through the overnight. Some remaining moisture in the Four Corners could still result in isolated mixed wet/dry thunderstorms.

Some light rain remains possible from the eastern Great Lakes into the Northeast as a low continues to slowly progress eastward, along with some better rain expected across Florida. A tropical system developing in the western Gulf will bring some increasing moisture into the Texas coast. Outside of this activity expect much of the eastern US to remain dry, with lower RH of 20 to 30% from the eastern High Plains across the Midwest and into the Ohio and Tennessee valleys. Winds will be light.
