Joe,

Is there any word on the Washington Monuments repairs from the re-opening I am catching a great deal of heat from my powers to be. I really needs some help on this.

Thanks,

James E. Snider

We are experiencing loss of power intermittently to the elevator. Quality has been trying to figure out why, but so far they have not been able to figure it out. One of our electricians is now working with Quality to see what the problem is. In the meantime, the elevator remains down.

As soon as I get more news, I will pass them to you.

Subject: WAMO Closed due to Elevator Not Working and Severe Weather
Date: Wednesday, May 27, 2015 2:32:16 PM

Jorge,

There is been no communication on this issue since about 1 PM this afternoon. Both Paul and Rosanna do not know what the status of the elevator is and are reporting to me that both Quality Elevator and our Electricians are no longer at the site. The USPP do not know the status and they are contacting Paul and Rosanna for information.

I have made a decision to close the Washington Monument at 5 PM due to the elevator not working and severe weather pending.

Please provide us an update as to the status of the elevator and any other electrical issues that are occurring at the Washington Monument.

Thanks, Sean

Subject: Washington Monument Operating Status - May 28, 2015
Date: Thursday, May 28, 2015 7:23:01 AM

Jorge,

Please use this email thread as a way to provide everyone an update on the operating status of the Washington Monument. Provide updates as milestones are achieved, or hourly, whichever comes first.

Update #1 (9 AM):

Quality Elevator and NPS Electricians on site trouble shooting electrical issues. Elevator is out of service due to intermittent electrical issues. Opening time not yet determined.

Thanks, Sean

So far nothing to report. Quality and NPS have installed monitors to see if we can record the fluctuation in electricity.

Quality will be bringing weights to simulate actual loads to see if this affects the power.

The last time we lost power was yesterday at 2:17 PM.

So next step here is to bring weights and run the elevator with them to see if we get any power fluctuation.

I will update more once this testing is done

Update #2:(10 AM) : Quality Elevator is going back to their shop to bring weights. They want to run the elevator with loads simulating real usage. They should be back in 2 hours. So far today, we have not been able to replicate the power fluctuation. As I said in my last email, the last time we lost power was yesterday afternoon at 2:17.

Just heard from Tammy at Quality. She told me that under the direction of her supervisor, Jim Snyder, they are going to send us a proposal to continue working on the elevator and will not come back until they receive the signed proposal back. They have not gotten paid for last year's work when we had a similar problem and do not want to go on this road again. So I am waiting for the proposal to see how much it is and will need your help to approve this.

Thanks, Jorge

Jorge – Per our discussions from yesterday into today.

We have been experiencing multiple “Loss of Power” to our control system. To assist in isolating the power or voltage loss to the elevator equipment we propose to inspect the entire length of the existing power feed from the switch gear at base to the elevator machine room, install phase monitoring at various points. We also propose to run the elevator with various loads to increase the voltage/amps to help isolate the problem should it be in the feeder line. Please review the attached proposal and let us know how to proceed.

As you know from our discussion onsite and with your Electricians this situation is placing significant stresses on the electrical components of the elevator system. Power surges can not only damage electrical components of the elevator controller but damage to hoist motor fields, armature, windings even the transformers.

Please review the proposal attached, we await your direction.

Should you have any questions please do not hesitate to call me, (240) 372-1419.

Patricia -

This email serves as my funds certification and approval in the event that the emergency repair costs exceed the emergency repair CLIN of the existing contract. The Washington Monument elevator is a crucial piece of equipment to our park's operations. If it needs to be modified to add additional funding, I'd appreciate an update from someone for my accounting purposes.

Joe -

We have not submitted to mod to deobligate the (b) (4) yet. We were going to include it in the full list of required deobligations that we'll submit as part of the UDO review exercise in late June. Note that all lines on that contract have their full balance. This means that no invoices have been paid. I would like someone to let us know why no invoices have been paid and whether the full balance of each line will be needed. If they aren't needed, we can submit one mod to the MABO with the (b) (4) plus any other balances that should be deobligated -- rather than doing this piece meal.

**Date:** Thursday, May 28, 2015 12:39:17 PM

---

Update #3 (2:25PM): Quality Elevator left the Monument at 10 AM to go and pick up weights for testing. I called them at 12 to see where they were since I had not heard from them. Tammy and Jim Snyder told me that they were sending me a couple of proposals for the work and that they would not come back to site until these were signed.

I Spoke with Teri and Patricia and determined that we have about (b) (4) in the current contract to spend on emergency repairs. Patricia made the call to Quality to approve the work , not to exceed the (b) (4). Quality is not coming back today since it has gotten late in the day but will come at 6 AM tomorrow to start the testing.

I have arranged for a K-9 unit to be on site as close to 6 AM as possible to allow their equipment into the plaza. our electricians are also coming at 6:30 to assist Quality. In the meantime, we have placed 3 monitors to check the electrical flow into the elevator, so tomorrow morning we will have a bit more idea of where the problem could be.

At this time we should make arrangements to keep the Monument close tomorrow and until we can find the problem.

Jorge

Update #2:(10 AM) : Quality Elevator is going back to their shop to bring weights. They want to run the elevator with loads simulating real usage. They should be back in 2 hours. So far today, we have not been able to replicate the power fluctuation. As I said in my last email, the last time we lost power was yesterday afternoon at 2:17.

Jorge,

Please use this email thread as a way to provide everyone an update on the operating status of the Washington Monument. Provide updates as milestones are achieved, or hourly, whichever comes first.

Update #1 (9 AM):

Quality Elevator and NPS Electricians on site trouble shooting electrical issues. Elevator is out of service due to intermittent electrical issues. Opening time not yet determined.

Thanks, Sean

We have not submitted to mod to deobligate the (b) (4) yet. We were going to include it in the full list of required deobligations that we'll submit as part of the UDO review exercise in late June. Note that all lines on that contract have their full balance. This means that no invoices have been paid. I would like someone to let us know why no invoices have been paid and whether the full balance of each line will be needed. If they aren't needed, we can submit one mod to the MABO with the (b) (4) plus any other balances that should be deobligated -- rather than doing this piece meal.

---

We have ran all the testings possible on the elevator without being able to duplicate the problem.

We will be opening the elevator to the public at 12 noon today.

A tech from quality will remain at the Monument until closing today just in case.

If you have any questions please call me

Jorge

All,

Tonight we had a hiccup with the elevator. After the second observation on the way down the elevator "abruptly stopped" for a period of approximately 30 seconds before resuming its descent. Additionally a minor "shudder" was experienced periodically throughout the night by several of the staff. No intervention on the part of the staff was needed or attempted but this indicates to me that there may still be a gremlin in the system. I would recommend Quality does another diagnostic.

On a side note, the staff, including myself, were not given any kind of explanation for the issue or how it was resolved. Due to this the rumor mill has everything from a broken circuit to a complete computer failure. To alleviate this problem can we please receive updates and explanations on these types of issues in the future.

Thanks,  
Tim

Patricia: I am going to be running short on hours for the repair of the WAMO elevator. It broke down again last night and Quality has been working with us since 10 PM. They have found one problem but the problem we had last week has not been found. Please let me know what we need to do in order to keep Quality working in order to find out the original problem and get the elevator back in service

Thanks, Jorge

Tammy,

I'm authorizing up to (b) (4) for emergency work on the (Elevator) at the Washington Monument, the additional funds will cover the work currently being done in order to get the Elevator back in working condition AS SOON AS POSSIBLE.

I'll have the Purchase Order to you in the Morning June 2, 2015.

This is to repair parts that malfunctioned over the weekend and today.

(b) (4)

Tammy:

Thanks! I tweaked and simplified a bit; let me know if this retains the essence of what you and Jim sent. Please let me know ASAP; I'd like to get this out prior to the start of 6 p.m. newscasts.

The Washington Monument will remain closed until at least Thursday, June 4, to allow technicians to repair a mechanical alignment issue with the elevator. The problem is suspected to have been caused by the repeated shut down of the elevator over the last week due to intermittent loss of power. At no time was any visitor or National Park Service employee in danger; the elevator responded as designed.

From: Jim Snider <JSnider@Qualityelevator.com>
Date: June 1, 2015, 5:02:25 PM EDT
To: Tammy Wright <TWright@Qualityelevator.com>

The elevator located at the Washington Monument was experiencing intermittent electrical power interruptions. It is suspected these intermittent electrical interruptions has caused the elevator to go off line during operation. The most recent electrical anomaly is suspected to have caused the elevator to shut down and caused mechanical alignment issue that is presently being investigated and repaired.

At no time was any Park Service Visitors or employees in danger at the time of this incident. The elevator responded as designed.

Subject: Re: WAMO status for tomorrow?
Date: Wednesday, June 03, 2015 10:06:51 AM

I am waiting on the following information from Facility Management:

1. Written statement from Quality Elevator saying the elevator is safe and reliable to be placed back in operation.
2. Written cost proposal and schedule to replace the traveling rope they removed yesterday.
3. Data from Pepco's electrical metering device about quality of electric service.
4. Data/results from the other metering devices placed in machine room the last few days.
5. Commitment from Quality to immediately respond if we have any issues.

Once we have this information, I think it is safe to say we can open tomorrow (Thursday, 6/4) at 9 AM.

I'm getting press calls and Jerry is getting congressional calls about tickets asking whether we expect to be open tomorrow. Based on where the repairs are now, is there something we can say? Perhaps "Crews continue to make progress in the repairs to the Washington Monument; at this time, we expect it will reopen at 9 a.m. on Thursday." Do we think that's the case, or is it still up in the air enough that we're best just leaving it alone for now?

I am waiting on the following information from Facility Management:

1. Written statement from Quality Elevator saying the elevator is safe and reliable to be placed back in operation.
2. Written cost proposal and schedule to replace the traveling rope they removed yesterday.
3. Data from Pepco's electrical metering device about quality of electric service.
4. Data/results from the other metering devices placed in machine room the last few days.
5. Commitment from Quality to immediately respond if we have any issues.

Once we have this information, I think it is safe to say we can open tomorrow (Thursday, 6/4) at 9 AM.

Thanks, Sean

Tammy,

Thanks. We work with contracting on this requirement. Also, I need a letter or a written email statement that we can put the elevator back in operation and transport visitors to the top of the monument in it's current condition. In other words, I need confirmation that it is safe to operate the elevator as it is now, while we await the process to get this rope and the switch replaced. Please send me something ASAP so we can reopen the monument.

Tom,

Please generate a PR in SharePoint.

Melissa,

Coming your way. I will need approval in SP and someone to enter into FBMS (Stach and Dena are out). Who can I get to enter into FBMS?

Patricia – I got with Traci in our accounting department the only outstanding balances from the “old” CONTRACT (contract prior February 2015) are two invoices, please see attachments.

6-30-14 – Invoice # 48162 Jefferson Maintenance for June 2014 - (b) (4)

*8-28-2014 – Invoice #48504 Washington Monument for Repairs associated with the re-opening -

[REDACTED]

*Quality Elevator has not received any partial payments or notification from the park service for any payment including partial approved funds/funding toward invoice #48504. The entire balance of (b) (4) remains unpaid as of today's date. Original Invoice date was 8-28-2014.

Under the current contract April maintenance billings remain unpaid, they just moved into 60 days in arrears.

We appreciate your attention to this matter. Please call me or Jim Snider (301) 440-8851 to discuss our next steps. We look forward to hearing from you as soon as possible.

On Tue, Jun 2, 2015 at 3:26 PM, Jim Snider <JSnider@qualityelevator.com> wrote:

We have consulted with Park Service Staff and removed the one of the compensation ropes that was damaged due to the ongoing monument emergency stops that has occurred over the previous month. We have checked the operation of the elevator system and have found the motor and drive system operating within the design criteria of the elevator system. Quality is recommending the installation of an additional safety switch which will stop the elevator if there is any future disruption or disturbance of the compensation ropes.

Additionally I am being told verbally that there is funding available for last year's work that occurred during the Grand Re-opening of the Washington Monument, to date nothing has been paid. Can you confirm if there are funds available? If there is only a portion of the balance of funding available, this would give some level of relief to Quality Elevator for this outstanding invoice. *(All of our technical staff and vendors have been paid. The Park Service has had excellent service out of elevator control equipment that has operated through an earthquake, rain coming in from the outside, high humidity, poor temperature control in the machinery space and a large scale construction project.)* Quality Elevator has been burdened with the cost expenditures associated of a fast and consistent response to keep both the Washington Monument Open and the Park Service in a good light of public opinion. We have no indication that we will be reimbursed in the near future for that effort.

Please can we move this outstanding balance from what will be 1 year next month through your system and get current on this unpaid balance.

Patricia/Jackie,

We are good with this quote. We will be performing the work during the OT rate. I have approved a PR in our Sharepoint site and we are in-process of entering into FBMS. Can you please give approval to Quality to proceed with this work so they can order the parts? Thanks.

v/r,

Please find attached pricing to replace one (1) compensation rope, and install the 2 pull out switches.

Pricing is provided for regular time and overtime.

Please review and contact me with any questions.

Thanks Tammy!

I have a question, Can Quality Elevator provide an email letting us know if it is safe to run the elevator without the cable?

Do you know who I can talk to about getting a proposal to replace the cable? How quickly could I get that proposal? Please advise.

Patricia – I got with Traci in our accounting department the only outstanding balances from the “old” CONTRACT (contract prior February 2015) are two invoices, please see attachments.

6-30-14 – Invoice # 48162 Jefferson Maintenance for June 2014 - (b) (4)

*8-28-2014 – Invoice #48504 Washington Monument for Repairs associated with the re-opening -

*Quality Elevator has not received any partial payments or notification from the park service for any payment including partial approved funds/funding toward invoice #48504. The entire balance of remains unpaid as of today's date. Original Invoice date was 8-28-2014.

Under the current contract April maintenance billings remain unpaid, they just moved into 60 days in arrears.

We appreciate your attention to this matter. Please call me or Jim Snider (301) 440-8851 to discuss our next steps. We look forward to hearing from you as soon as possible.

Thank you -

Good Afternoon Tammy,

Per our conversation last week, were you able to find out if all the other invoices were paid in full from last years contract and this one invoice is the only invoice to get paid? I need that in writing before I proceed. Please advise.

Good Afternoon Mr. Snider,

I am working with Tammy to finalize some numbers but yes, the rumors are true. Once we get this information finalized, I will work with Tammy and the Park to get the funds executed to pay the over (b) (4) invoice from last year.

I am also working with Tammy to ensure the invoices that are accruing right now will get paid in a timely manner.

On Tue, Jun 2, 2015 at 3:26 PM, Jim Snider <JSnider@qualityelevator.com> wrote:

We have consulted with Park Service Staff and removed the one of the compensation ropes that was damaged due to the ongoing monument emergency stops that has occurred over the previous month. We have checked the operation of the elevator system and have found the motor and drive system operating within the design criteria of the elevator system. Quality is recommending the installation of an additional safety switch which will stop the elevator if there is any future disruption or disturbance of the compensation ropes.

Additionally I am being told verbally that there is funding available for last year's work that occurred during the Grand Re-opening of the Washington Monument, to date nothing has been paid. Can you confirm if there are funds available? If there is only a portion of the balance of funding available, this would give some level of relief to Quality Elevator for this outstanding invoice. *(All of our technical staff and vendors have been paid. The Park Service has had excellent service out of elevator control equipment that has operated through an earthquake, rain coming in from the outside, high humidity, poor temperature control in the machinery space and a large scale construction project.)* Quality Elevator has been burdened with the cost expenditures associated of a fast and consistent response to keep both the Washington Monument Open and the Park Service in a good light of public opinion. We have no indication that we will be reimbursed in the near future for that effort.

Please can we move this outstanding balance from what will be 1 year next month through your system and get current on this unpaid balance.

Paul: The doors at the 490 level hesitated to close and once they closed they re-opened again. Quality has checked them and they found lots of fingerprints in the eyes of the doors (electronic eyes) that prevent the doors from hitting someone when the doors are closing. Elevator is running without a hitch.

Joe,

As a follow up. Quality Elevator finds no safety concerns associated with operating the elevator at the Washington Monument for public service with one Whisper Flex Compensation until such time the other compensation can be ordered and installed. As previously indicated we checked the motor and drive function and all readings remain within the elevators normal operating range.

As always the decision is up to the National Park Service to reopen the monument for public service.

QEC can recommend that in light of previous problems that have occurred the Park Service may want increased visits to the monument.

Please advise how you intend to proceed.

Jim or Mac,

Please confirm by responding to this email that the WAMO elevator is stable and safe to operate with passengers on board in it's current condition with that compensation rope being removed. We want to run the elevator all day today and open the monument tomorrow. Also, as discussed on the phone just now, please send an estimate for the rope replacement and the safety switch along with how long it will take you to complete this work once you have received the approval to proceed.

We have consulted with Park Service Staff and removed the one of the compensation ropes that was damaged due to the ongoing monument emergency stops that has occurred over the previous month. We have checked the operation of the elevator system and have found the motor and drive system operating within the design criteria of the elevator system. Quality is recommending the installation of an additional safety switch which will stop the elevator if there is any future disruption or disturbance of the compensation ropes.

Additionally I am being told verbally that there is funding available for last year's work that occurred during the Grand Re-opening of the Washington Monument, to date nothing has been paid. Can you confirm if there are funds available? If there is only a portion of the balance of funding available, this would give some level of relief to Quality Elevator for this outstanding invoice. *(All of our technical staff and vendors have been paid. The Park Service has had excellent service out of elevator control equipment that has operated through an earthquake, rain coming in from the outside, high humidity, poor temperature control in the machinery space and a large scale construction project.)* Quality Elevator has been burdened with the cost expenditures associated of a fast and consistent response to keep both the Washington Monument Open and the Park Service in a good light of public opinion. We have no indication that we will be reimbursed in the near future for that effort.

Please can we move this outstanding balance from what will be 1 year next month through your system and get current on this unpaid balance.

Paul: The doors at the 490 level hesitated to close and once they closed they re-opened again.

Quality has checked them and they found lots of fingerprints in the eyes of the doors (electronic eyes) that prevent the doors from hitting someone when the doors are closing. Elevator is running without a hitch.

Joe,

As a follow up. Quality Elevator finds no safety concerns associated with operating the elevator at the Washington Monument for public service with one Whisper Flex Compensation until such time the other compensation can be ordered and installed. As previously indicated we checked the motor and drive function and all readings remain within the elevators normal operating range.

As always the decision is up to the National Park Service to reopen the monument for public service.

QEC can recommend that in light of previous problems that have occurred the Park Service may want increased visits to the monument.

Please advise how you intend to proceed.

**Subject:** URGENT - WAMO reopening statement  
**Date:** Wednesday, June 03, 2015 2:39:00 PM

---

Here is my proposed statement on reopening, and a couple of Q&As that I suspect we'll get as follow ups (just the initial statement will be released; Q&As are for internal use in answering questions). The language has been fairly carefully parsed, since we can't say we "replaced" the comp cable. And while we can say it was "removed," then we just get questions about how safe it is to operate without the cable.

Let me know if there are any fatal flaws in what's here, especially on the Q&As. It's all what I think I got in talking to Joe, but with mechanical stuff, there's always a better than average chance I butchered it in the translation.

Like to send this out by 5:00 if it can be turned around that fast.

Mike

The Washington Monument will reopen at 9 a.m. on Thursday, June 4, as repairs, including the realignment of the elevator car and testing of the electrical system, have been completed. Tickets for Thursday will be available on a first-come, first-served basis starting at 8:30 a.m. at the Washington Monument Lodge, located on 15th Street between Madison and Jefferson drives.

**What specifically was wrong?**

One of the cables that balances the elevator car by compensating for and offsetting the weight of the suspension ropes was damaged. With the weight distribution of the cables thus off balance, the cab suffered a misalignment which was likely responsible for the intermittent loss of power experienced by the elevator over the last week.

**You said on Friday it was fixed, yet it broke down again on Monday; how confident are you that this won't happen again?**

The National Park Service facility management specialists and our contracted elevator technicians are confident that the damaged compensation cables were responsible for the

problems experienced since last week. As a precaution, monitors remain installed on the electrical system to measure current coming in to the Washington Monument and running through the system.

Maurice and Tom,

The USPP requested elevator upgrades include:

- "elevator capture" which returns elevator to base without opening doors right away. USPP wants the ability to control the opening of the doors in possible terrorist situation
- elevator level display in back room needs to be functioning or viable alternative. This will allow USPP to identify at what level the elevator has stopped.

If we are talking brand new elevator/controls they would probably have additional wish list items. Joe or Jorge may want to reach out to Pete to ask the "what if" question regarding a new elevator.

Subject: Elevator Loading @ The Monumnet
Date: Monday, June 08, 2015 3:36:07 PM

George,

Per our discussion today regarding the loading of the elevator at the Washington Monument. Below are a few of the reasons behind the number of visitor limitations on the elevator.

1. Loading the elevator at landing will produce rope stretch and considering the elevator typically operates with a full tour of visitors. As visitors enter the elevator at the base of the Monument, the elevator ropes will stretch and the elevator will move downward. This rope stretch can be enough that the elevator moves out of the leveling zone. When the elevator is out of the leveling zone it will relevel back into the landing. The elevator will move back into the landing while the visitors continue to enter the elevator. We have had instances where we believe this leveling occurrence has caused the elevator to shut down. In 2014 during the Grand Re-Opening we lowered the number of passengers per trip and the failure diminished and this policy has remained in effect.
2. The Monument Elevator has front and rear doors. It is advisable and necessary to prevent passengers from leaning on the elevator doors during the ride up or down. There are areas in the hoistway that only provide approximately one inch of clearance from the elevator car door to the elevator landings. It is not a good procedure to have the visitors fill the elevator to capacity, when their tendency will be to lean on the elevator doors. This could lead to catastrophic failure should the door impact a landing.
3. The elevator has observation points which turns the glass from opaque to clear to view memorials at various landings. To allow proper viewing by all passengers it is recommended to place fewer personnel on the elevator. It is a natural tendency of passengers to maneuver inside of the elevator to allow all to see the memorials, some passengers are requested to stand back during this mode so all passengers can view the memorial. The Observation action in a capacity situation can push passengers towards the opposing door creating an increased danger.
4. Rangers command the area around the elevator control station. From this point they give facts about the Washington Monument which requires additional space so they can speak to each group.

These are some of the reasons the Park Service has reduced the elevator occupancy down to below capacity levels. Both safety concerns and visitor comfort. It should also be noted the elevator when originally installed did not have observation points which allowed for more space around the elevator for the ride to the top of the monument.

Thanks, Sean. I understand that Norton's office would like to have this happen early next week, but does the park feel they are in the position to discuss this now (i.e. do we have a good understanding of the status/condition of the elevator, or are we in the middle of conducting tests, evaluations, etc.)? If we have a legitimate reason for pushing this a week or so, I'm happy to try to do that. But if we're relatively certain of what caused the last outage(s) and in a position to explain it, then we should move forward now.

Thanks

Thanks, Sean. I understand that Norton's office would like to have this happen early next week, but does the park feel they are in the position to discuss this now (i.e. do we have a good understanding of the status/condition of the elevator, or are we in the middle of conducting tests, evaluations, etc.)? If we have a legitimate reason for pushing this a week or so, I'm happy to try to do that. But if we're relatively certain of what caused the last outage(s) and in a position to explain it, then we should move forward now.

Thanks

Hi Brandon and Susan,

Congresswoman Norton would like to meet with Karen Cucurullo, Acting Superintendent of the National Mall and Memorial Parks, and any supporting staff to discuss the recent Washington Monument closures due to elevator issues.

I have copied Try, who will follow-up with you to discuss possible dates/times. As of now, the Congresswoman is looking to have the meeting early next week.

Best,

Lauren

Joe, we couldn't really find any reason for that specific number, considering the full weight capacity of the elevator. So in talking with Jim, Jorge and I learned some good information about rope stretch and balance that can help us justify that number in the SOP. I'm working on drafting something for distribution to staff and will run it by all of you plus Sean and Karen before I do. I will also incorporate it directly into the SOP for use in training staff. But the final number will probably be close to 18 (maybe 20?)

Subject: Elevator Loading @ The Monumnet

George,

Per our discussion today regarding the loading of the elevator at the Washington Monument. Below are a few of the reasons behind the number of visitor limitations on the elevator.

1. Loading the elevator at landing will produce rope stretch and considering the elevator typically operates with a full tour of visitors. As visitors enter the elevator at the base of the Monument, the elevator ropes will stretch and the elevator will move downward. This rope stretch can be enough that the elevator moves out of the leveling zone. When the elevator is out of the leveling zone it will relevel back into the landing. The elevator will move back into the landing while the visitors continue to enter the elevator. We have had instances where we believe this leveling occurrence has caused the elevator to shut down. In 2014 during the Grand Re-Opening we lowered the number of passengers per trip and the failure diminished and this policy has remained in effect.
2. The Monument Elevator has front and rear doors. It is advisable and necessary to prevent passengers from leaning on the elevator doors during the ride up or down. There are areas in the hoistway that only provide approximately one inch of clearance from the elevator car door to the elevator landings. It is not a good procedure to have the visitors fill the elevator to capacity, when their tendency will be to lean on the elevator doors. This could lead to catastrophic failure should the door impact a landing.
3. The elevator has observation points which turns the glass from opaque to clear to view memorials at various landings. To allow proper viewing by all passengers it is recommended to place fewer personnel on the elevator. It is a natural tendency of passengers to maneuver inside of the elevator to allow all to see the memorials, some passengers are requested to stand back during this mode so all passengers can view the memorial. The Observation action in a capacity situation can push passengers towards the opposing door creating an increased danger.
4. Rangers command the area around the elevator control station. From this point they give facts about the Washington Monument which requires additional space so they can speak to each group.

These are some of the reasons the Park Service has reduced the elevator occupancy down to below capacity levels. Both safety concerns and visitor comfort. It should also be noted the elevator when originally installed did not have observation points which allowed for more space around the elevator for the ride to the top of the monument.

If you have any additional questions please feel free to contact me.

Ok. Did they install a bracket to prevent the rope from swinging and getting too close to the buffer? They were measuring things the other week they were there.

Thanks, Sean

Maurice,

I'm coming up to talk about this. We need to WOs in FMSS (I think you may have already done them) and then a PMIS project.

Joe,

Attached is some of Quality Elevator's recommendations for the Washington Monument. If you would like to schedule we can meet at Quality's office or if you would like I can attend the meeting the Park Service has scheduled with Ms. Norton. It is up to you how you would like to proceed.

Please let me know what you need from us.

Jim,

The last thing I need from you because I'm sure you have exact dates and can do this easier than I:

How many times since we opened have we closed the monument due to the actual elevator, dates, and failures? Do you have a record of how many times the elevator got stuck, trapping personnel on-board? How many times did the elevator get stuck on the 500/490 level forcing personnel to walk down the stairs?

Ok. Did they install a bracket to prevent the rope from swinging and getting too close to the buffer? They were measuring things the other week they were there.

Thanks, Sean

Subject: FYI: WAMO Elevator out of service
Date: Saturday, June 13, 2015 11:37:51 AM

At about 1300, the WAMO elevator stopped about 10 feet above the ground with visitors on board. After approximately 10 minutes, the elevator reached the ground and passengers were able to exit. About 60 visitors at the top are presently being evacuated by 5 ranger staff via stairwell. I have contacted both Quality and Joe Salvatore, and temporarily suspended operations. I will await instructions before any announcement of full suspension of operations.

Subject: Quality Elevator On Site At WAMO Tuesday June 16 at 0500 hrs
Date: Monday, June 15, 2015 2:31:58 PM

ALL,

A quick heads up that Quality Elevator will be on site at WAMO starting at 0500 hrs on Tuesday June 16th. They plan to be on site for approximately two hours to monitor elevator conditions.

They will NOT need to bring vehicles inside the barrier and any tools they may need can be visually inspected.

Let me know if you have any questions or need further.

Pete

Subject: Washington Memorial Fire alarm inspection
Date: Tuesday, June 16, 2015 5:41:57 AM

We arrived at the Washington Monument this morning as scheduled. Upon arrival we found out that the elevators were being serviced this morning. We were not informed of this until we arrived. The last we heard the elevators were working.

The elevator technicians told us when they would be done their work this morning. However, that would not provide us enough time to conduct the inspection and get out of the way before opening to the public.

To conduct the inspection, the elevators must be operational and we must have access to the elevators for the duration of the inspection. Therefore, the inspection will need to be rescheduled on a day in which the circumstances meet the above criterion. Please let me know when that will be.

Today's visit will be invoiced.

Thank you,

## **Norton Assured by NPS of Washington Monument Elevator's Safety; Monitors in Place to Pinpoint Causation**

WASHINGTON, D.C.—Congresswoman Eleanor Holmes Norton (D-DC) today met with National Park Service (NPS) officials to determine if NPS had a permanent solution to the issues with the Washington Monument's elevator that have arisen due to electrical problems two years in a row as tourist season began. Norton met with National Mall and Memorial Parks Superintendent Karen Cucurullo, Deputy Superintendent Sean Kennealy, Chief of Maintenance Joseph Salvatore, and Public Affairs Officer Michael Litterst. They assured Norton that the Washington Monument's elevator is safe and that if another electrical surge occurs, the elevator will deliver passengers to the nearest level and a park ranger, who is in the elevator at all times to ensure passengers' safety, will help escort passengers off the elevator if needed. Each elevator carries up to 18 passengers. Norton had been particularly concerned whether the solution to the electrical problem was in the hands of NPS, a contractor, or elsewhere. NPS reported that the electrical surge is not an internal issue with the Monument or the elevator itself, but rather with the external power source not controlled by NPS. Norton appreciated the candor of officials in indicating that they did not yet know the exact cause for the electrical surges or outages, and that they have set up four monitors to collect the necessary data in order to pinpoint an exact cause should there be another issue. Norton hopes this evidence-based approach will settle the issue of causation.

“My priority today was to ensure the elevator is safe and that elevator problems have been resolved to the best extent possible,” Norton said. “After hearing today's briefing, I would not hesitate to bring my 3-year-old grandson and his brother, who is two months old, to ride the elevator to the top of the monument. I hope that the thousands of visitors who come to the nation's capital during this busy tourist season are also reassured.”

NPS reported the elevator operates 13 hours a day, seven days a week, from Memorial Day until Labor Day, and eight hours a day, seven days of the week, the rest of the year.

As of right now, Tuesday June 23 or Wednesday June 24 (preferably Wednesday) will work for us to inspect Washington Monument fire alarm system at approximately 6:00 AM. If the elevator stops working, notify us as soon as you find out so we don't have the same problem as Monday. We are not scheduling until we hear back from you.

The park service Electricians had installed a phase monitor up in the machine room. I don't know when that was removed. When I was in the machine room last Monday we noted it had been removed. I believe the NPS Electrician's name was Brian. Where there any finding during there monitoring?

Wednesday early a.m. we would like to move the phase monitor from the base to the machine room. We would like to be onsite at 5 am to remove it from the main power vault up to the machine room. We anticipate this to take about 2 to 2 and half hours.

Please let me know if this day and time works.

Unless someone has a problem with this work, I will allow Max to come and work on the fire alarm system at WAMO tomorrow, Tuesday June 23.

Max: Please let me know if this is still on your schedule

Thanks, Jorge

Max: I am sorry that Quality Elevator was working on the elevator this morning.

Please go ahead and invoice your visit for this morning. We will reschedule your inspection again. Hope we can do this next week. Please let me know what your schedule is

Thanks, Jorge

On Tue, Jun 16, 2015 at 7:41 AM, Max Davis  
<max\_davis@sossecurityalarms.com> wrote:

We arrived at the Washington Monument this morning as scheduled. Upon arrival we found out that the elevators were being serviced this morning. We were not informed of this until we arrived. The last we heard the elevators were working.

The elevator technicians told us when they would be done their work this morning. However, that would not provide us enough time to conduct the inspection and get out of the way before opening to the public.

To conduct the inspection, the elevators must be operational and we must have access to the elevators for the duration of the inspection.

Therefore, the inspection will need to be rescheduled on a day in which the circumstances meet the above criterion. Please let me know when that will be.

Today's visit will be invoiced.

Thanks for the heads up. I hope it is minor and just a breaker.

Are the 4 electrical current monitors in place? Maybe they will be helpful in the evaluation of the issue.

Thanks, Sean

Jorge,

YOU and JOE told me that four monitors were put in place to monitor electrical current. Additionally, there is no 550 foot level. Are the four monitors in place or not?

Thanks, Sean

I never said "4". I was checking but never got that message. They are monitoring from the vault.

Sean: WE currently have three monitors reading current coming to the elevator. Two of them are in the machine room and one in the bunker. the forth was PEPCO's . That one has been removed and taken to their shop to Analyze the data. I have not heard anything from PEPCO on this one.

The one in the bunker has been removed this morning by Quality to Analyze the data as well. So currently we only have 2 in the machine room.

One more thing. The computer for the elevator does not show any power loss or issues due to the storm and lighting last night.

I believe the monitor located on the Pepco side of the electrical service is the most important one. That one would be the first indicator of any power fluctuations coming into the building. Given the electrical issues a few weeks ago, it is imperative we continue to monitor the incoming power. After discussing this issue with FM, Quality, GSA Elevator Inspectors, and my long history and experience with the elevator, I firmly believe the issues a few weeks ago were attributable to the power fluctuations (brown outs), thus causing the elevator's sensitive electrical components to get out of whack.

Karen and I also informed Eleanor Holmes Norton last Friday that we have 4 monitors in place through the summer. We also indicated that the power fluctuations most likely came from the in-coming service.

Please make the necessary arrangements to have this monitor reinstalled.

Subject: Fire alarm inspreciton
Date: Thursday, July 09, 2015 11:50:11 AM

Jorge,

We completed the fire alarm inspection of the Washington Monument today.

Each smoke detector we tested created an alarm at the panel, as they should.

Each manual pull station we tested created an alarm at the panel, as they should.

The smoke detector directly in front of the elevator car door on level 2 (490) recalled the elevator to the ground floor after a delay, as it should.

The smoke detector directly in front of the elevator car door on level 3 (500) recalled the elevator to the ground floor after a delay, as it should.

Alarm signals were sent to USPP in DC as coming from "Washington Monument", as they should, according to Sgt. Wilson.

Alarm signals were sent to NCRCC in Hagerstown (backup) as coming from "Brentwood Maintenance", according to the operator. **This is NOT what should happen. This has to do with the central station receiver programming. This is out of our control and needs to be addressed between you and Jordan Harrison of NPS.**

The smoke detectors are required by fire code to be replaced every 10 years. They are working now, but I don't know how long they have been installed. Perhaps you know. We can give you an estimate to replace them

when you request.

Thanks for your business,

Max Davis

Again, we need to talk about Logistics, maintenance and life safety. Who leads and who supports.

Jorge,

We completed the fire alarm inspection of the Washington Monument today. Each smoke detector we tested created an alarm at the panel, as they should. Each manual pull station we tested created an alarm at the panel, as they should. The smoke detector directly in front of

the elevator car door on level 2 (490) recalled the elevator to the ground floor after a delay, as it should.

The smoke detector directly in front of the elevator car door on level 3 (500) recalled the elevator to the ground floor after a delay, as it should.

Alarm signals were sent to USPP in DC as coming from "Washington Monument", as they should, according to Sgt. Wilson.

Alarm signals were sent to NCRCC in Hagerstown (backup) as coming from "Brentwood Maintenance", according to the operator. **This is NOT what should happen. This has to do with the central station receiver programming. This is out of our control and needs to be addressed between you and Jordan Harrison of NPS.**

The smoke detectors are required by fire code to be replaced every 10 years.

They are working now, but I don't know how long they have been installed.

Perhaps you know. We can give you an estimate to replace them when you request.

Thanks for your business,

Max Davis

Jorge-

I spoke with the technician who was out last night and he was unable to recreate the problem. He observed the elevator for several hours without fault.

At this time, we have no calls pending on his route. Therefore, we did dispatch him there this morning to further troubleshoot and hopefully identify what may have happened yesterday.

The ranger relayed to our technician this only happened once.

We will keep you informed.

Just an FYI,

I am at 143 tonight, but the rangers came in and told me that at 2005 hours the elevator at WAMO broke down with rangers on it. Unknown what floor, but it was only rangers on the elevator and they were able to get out safely. They will be forced to walk all the visitors up top down the stairs. I informed Officer Coleman who is at 142 and he will be assisting the Rangers with walking the people down. Unknown if there is any people with disabilities up top. I just wanted to keep you all informed.

Jeff / Al,

NPS facilities / maintenance has a few questions ref. tonight's elevator malfunction.

Will you please follow up with the beat officers or any officers on site at the time, and provide a synopsis.

To include, but not limited to what specifically happened, what notifications were made (how were USPP notified), what attempts were made to "recall" the elevator if any (from fire recall or from USPP office?) and /or any pertinent info to pass along to maintenance and Quality Elevator.

Please include Sgt. Diethrich, Joe Salvatore (NPS, cc'd above) and myself.

Let me know if you have any questions or need further.

Thanks,

Pete

Subject: Elevator incident July 29
Date: Wednesday, July 29, 2015 8:11:42 PM

Rosanna,

Here's a summary of this evening's elevator failure. At just before 8 pm Tim Olling was in the elevator and observed the following:

"Coming down from the 500 foot level to 490 level, power to elevator went off twice. The elevator came to a stop hard enough at the 490 level to shake the landing according to park guide Suzy Traut. Elevator was run to ground level and back up empty [of visitors, Olling and Prentner were inside] coming to stop at 230 level going up for approximately one minute before continuing up. When back at 500 foot level, the power went out two more times. Notified WAMO POC John Purcell. SPRs Hayes and Moore informed. Park guide Suzy Traut and park rangers Pete Prentner and Olling walked 78 people down the stairs stopping to rest along the way."

At about 8 pm, I was notified via radio of the elevator problems. I called Jorge Alvarez then Joe Salvatore and passed on the information as I understood from Tim Olling's radio communication. At about 8:05 pm, after riding by themselves and encountering more problems, Tim Moore instructed the WAMO crew to halt operations and begin an orderly evacuation down the stairs.

Visitor evacuation began around 8:07 pm. All 78 visitors were out by 9:15 pm. After visitors were clear of the stairwell, USPP used the override to call the empty elevator down. When the elevator arrived and doors opened, Tim Moore observed the following:

"The power light, fire service light, alarm light, assistance acknowledged light were all illuminated for about 15 seconds then went out. There was a strong burning odor, perhaps electrical in origin. I then went into the stairway to observe the roof of the cabin but did not see any smoke, flame, or anything out of the ordinary."

I too smelled a burning odor inside the elevator. All NPS staff departed WAMO at about 9:22 pm. Quality had not yet arrived when we left.

John Purcell, Tim Olling, Pete Prenter, Suzy Traut, Jeff Cole, and Bob Herendeen deserve praise for their rapid response, clear communication, and professional courtesy to disappointed visitors.

Best regards,

Thank you, ties up a few loose ends.

On Thursday, July 30, 2015, Innis, Jeffrey <jeffrey_innis@nps.gov> wrote:

Hi Pete,

I spoke with Officer Coleman concerning this elevator issue and he said that Officer Russo had overheard the NPS radio while at the Jefferson Memorial indicating that there were issues with the WAMO elevator. He relayed this message to Officer Coleman at 142 who confirmed with the on-site ranger at WAMO that there had been ongoing problems that day with the elevator.

According to the ranger the elevator had been "shaking" while being operated at the 490 and 500 foot levels. No odors, electrical or otherwise, were noticed at the site. At approximately 1930 hours the elevator was placed out of service and the visitors that were at the 500 foot level were escorted down the stairs. After the visitors had exited the monument Officer Coleman said he flipped the capture switch and that the elevator appeared to operate normally.

He was asked by NPS to check the elevator's operation and he rode the elevator up to the 500 foot level and back down again with no issues. He said that Quality Elevator personnel arrived to work on the elevator and the problem appeared to be resolved.

At Lt. Jarboe's request the elevator's operation was checked again later that evening by Officer LeBlanc and was found to be operating normally.

Let me know if you need anything else.

The elevator has been deemed ready for operation as of last night. There was a power failure to the CPU which caused the disruption in service. We are checking phase monitors this morning to see if we "see" any disruption to service. There has been no evidence of anything that would have caused a "burning" smell.

Thank you for this information, I will share this with the adjustor. This indicates more than the 8:00 pm issue. From reading this I would like to expand the information we hope to gain from the phase monitor. Could the Electricians are look into to a wider time period? Lets request the electricians for anything perhaps 72 hours up to a week prior.

Last nite we confirmed the CPU did a hard power down and then an immediate sequence of operation to reset and restore operation. We are looking into what caused this. Our mechanic did not experience any burning smell.

Did the monument experience any other power interruptions ie. lighting, or other devices tripping out when the elevator occurrences happened?

Rosanna,

Here's a summary of this evening's elevator failure. At just before 8 pm Tim Olling was in the elevator and observed the following:

"Coming down from the 500 foot level to 490 level, power to elevator went off twice. The elevator came to a stop hard enough at the 490 level to shake the landing according to park guide Suzy Traut. Elevator was run to ground level and back up empty [of visitors, Olling and Prentner were inside] coming to stop at 230 level going up for approximately one minute before continuing up. When back at 500 foot level, the power went out two more times. Notified WAMO POC John Purcell. SPRs Hayes and Moore informed. Park guide Suzy Traut and park rangers Pete Prentner and Olling walked 78 people down the stairs stopping to rest along the way."

At about 8 pm, I was notified via radio of the elevator problems. I called Jorge Alvarez then Joe Salvatore and passed on the information as I understood from Tim Olling's radio communication. At about 8:05 pm, after riding by themselves and encountering more problems, Tim Moore instructed the WAMO crew to halt operations and begin an orderly evacuation down the stairs.

Visitor evacuation began around 8:07 pm. All 78 visitors were out by 9:15 pm. After visitors were clear of the stairwell, USPP used the override to call the empty elevator down. When the elevator arrived and doors opened, Tim Moore observed the following:

"The power light, fire service light, alarm light, assistance acknowledged light were all illuminated for about 15 seconds then went out. There was a strong burning odor, perhaps electrical in origin. I then went into the stairway to observe the roof of the cabin but did not see any smoke, flame, or anything out of the ordinary."

I too smelled a burning odor inside the elevator. All NPS staff departed WAMO at about 9:22 pm. Quality had not yet arrived when we left.

John Purcell, Tim Olling, Pete Prenter, Suzy Traut, Jeff Cole, and Bob Herendeen deserve praise for their rapid response, clear communication, and professional courtesy to disappointed visitors.

Best regards,

Ben Hayes

Will be interesting to see what shows up on the 3 (or 4) phase monitors.....

Thanks, Sean

There are only 2 monitors there. PEPCO doesn't have any. I'm trying to figure out why. Jorge just said they removed them.

One of the staff members said it would help if they had a small vacuum to clean the tracks. Please purchase.

Joe,

Brian has reviewed a couple of days worth of data on the monitoring equipment. The system went ten days with no issues, but the last couple of days it shows voltage drops which correspond to the time when people may be getting home and turning on their AC units. Per Brian the elevator system is doing what it should by identifying voltage drops and shutting down to protect the equipment. He does not believe this is an issue on the NPS side.

A big problem is someone has tampered with the monitoring equipment. The language was changed to Italian and a portion of the memory was wiped out. It is imperative that the equipment is not touched by anyone but the electric shop so we do not have these issues, this includes Quality touching the equipment.

Thanks,
Scott

I will purchase when I return. Please advise if cordless vacuums provided are not working for this job, whether a small single nozzle battery powered is more suitable.
Thanks

Paul,

After checking into it more, it appears the jerking/sudden stop/slamming sound was the elevator brakes engaging. In addition, that probably was the source of the "burning" smell that was initially reported. The elevator experienced a power bump and the brakes engaged as designed to protect the controls etc.

Also, all of the trouble lights in the cabin reported were lit up because the USPP used the call switch to bring the elevator down to the ground. As soon as they reset it from the USPP station the lights were clear. The elevator was actually good to go as soon as the USPP called it down and reset it. Everything was functioning fine with Quality showed up on site.

Subject: WAMO Elevator update
Date: Friday, July 31, 2015 6:29:21 AM

Hey everyone,
Here's an update about the elevator at WAMO, based on the analysis by Quality Elevator and Joe Salvatore. I'm sure some of you were probably frustrated to hear that everything checked out ok after experiencing the sudden jerking stop at the 490' level. I know I was. The first thought that ran through my mind was, "why doesn't the elevator do this stuff when Quality is there!?"

After checking into it more, however, it appears the jerking/sudden stop/slamming sound that was observed was the elevator brakes engaging due to a power "bump." This is exactly what the elevator is supposed to do in a situation like this. It feels something abnormal in the system, so it shuts down immediately. In addition, that probably was the source of the "burning" smell that was initially reported. If you think of the brakes in your car, if you slam down hard on them you sometimes smell an odor due to the friction. The elevator experienced a power bump and the brakes engaged just as they're designed to do to protect the controls, etc.

Also, all of the trouble lights in the cabin that were reported as being lit up were like that because the USPP used the call switch to bring the elevator down to the ground. As soon as they reset it from the USPP station the lights were clear. Any time the call switch is used, the elevator lights up. The elevator was actually good to go as soon as the USPP called it down and reset it. Everything was functioning fine when Quality showed up on site, which makes perfect sense to me once I understood how the elevator is designed to function in response to power anomalies.

So, to summarize, the elevator functioned perfectly, just as it should, in response to a power bump triggering its sensors. I would expect that the power bump occurred when it did because it corresponded to when commuters start to get home from work. On a hot day after being away from home, the first thing they probably all did was turn on their AC, which sent a huge demand to the power system.

If anyone has any questions, please let me know. But rest assured that the elevator is in great working condition!
