

FIRE PREVENTION

Do not leave matches or lighters where children can obtain them. Lighters should have child resistant locks.

Do not leave cigarettes, cigars or pipes unattended.

Never smoke in bed or while drowsy! Falling asleep while smoking is exceptionally dangerous, as tobacco is manufactured to stay lit. Smoldering ashes can quickly start a deadly fire. All mattresses should be compliant with the 1973 Federal Mattress Flammability Standard.

Extinguish all smoking materials in deep ashtrays. Soak ashes in water before disposal.

Do not leave smoking paraphernalia in the bedroom. Electric heaters should be placed a minimum of three feet away from bedding.

SMOKING SAFETY

Do not smoke near upholstered furniture.

Do not smoke in oxygen-saturated areas. Do not smoke near a medical oxygen tank.

Never empty ashes into a waste paper basket. Smoldering ashes will quickly ignite paper and other combustibles and start a fire. Ashes should be discarded down the toilet or left overnight to cool.

Never allow children to play with a lighter. Do not use the lighter as a source of entertainment or amusement for the child; doing so will naturally peak the child's interest in the lighter and they will be inclined to use the lighter themselves.

Immediately extinguish cigarettes or cigars if you begin to feel drowsy.

Smoking outdoors is the most effective manner of reducing the risk of fire.
