

ThermoWorks

# Signals™

## 4-Channel Wi-Fi/Bluetooth BBQ Alarm Thermometer

### Durable Housing

Molded-in seals for splash-proof protection; safe for outdoor use without additional waterproof bags or cases. Thicker base stands up on its own.

### Current Temp and High/Low Alarms

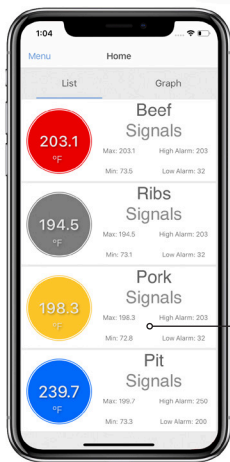

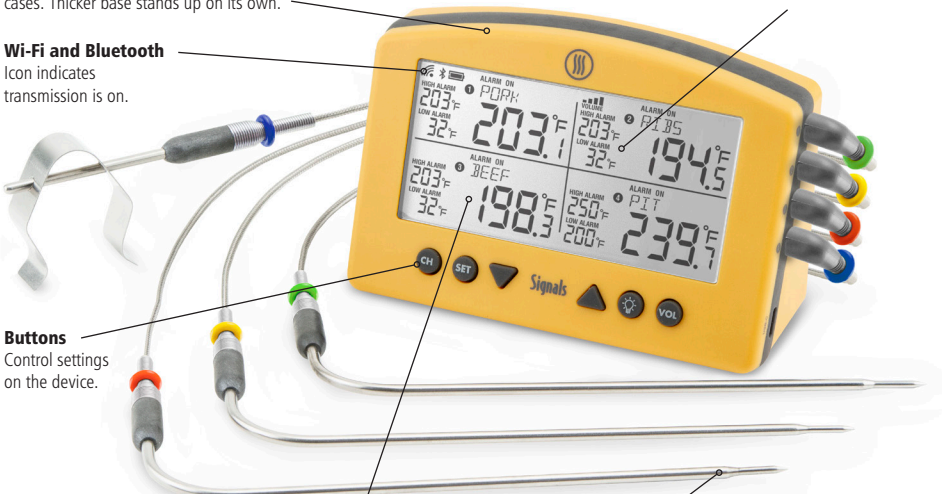

Simultaneously see current temperature and alarm temperatures for each probe.

### Wi-Fi and Bluetooth

Icon indicates transmission is on.

### Buttons

Control settings on the device.

### Works as Stand-Alone Unit

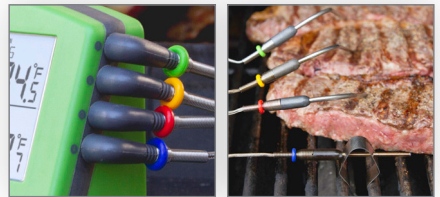

The big, bold dashboard-like display shows the channel name, current temperature, high and low alarm settings, and alarm state for each channel—plus volume level, battery state, and wireless status for the whole unit. Control all functions on the unit with physical buttons or from your phone.

### Free App

Name probes, track current and min/max temps, set alarms, and graph with ThermoWorks BBQ app.

### Four Probes

Includes three Pro-Series® High-Temp Cooking Probes and one Pro-Series High-Temp Air Probe. Works with all other Pro-Series probes.

### Probe Identifiers

Four sets of different colored probe rings included with each Signals. Quickly identify which probe is plugged into each channel.

### Custom Channel Names

Through the free ThermoWorks BBQ app, give each channel its own custom name up to four characters long. Such as "Pork", "Beef", "Pit", or "Ribs".

### Big Backlit Display

With Signals, you don't have to manually scroll through each channel to see the temperature. Signals displays all four channels simultaneously. Push the backlight button to turn on the backlight for 20 seconds.
