

Sentinel Provider Influenza-Like Illness (ILI)¹ Surveillance Summary (health.state.tn.us/TNflu_report_archive.htm)
for the Week of February 9-15, 2014 (Week 7)

Summary for	# Sites reporting	Total Sites	Total Regional ILI	Total Regional Patients	% ILI	Compared to State ²
Hamilton County (Chattanooga)	4	4	3	454	0.7%	lower
East Tennessee Region	8	8	136	2250	6.0%	higher
Jackson-Madison County	1	2	15	515	2.9%	
Knoxville-Knox County	4	4	30	1692	1.8%	
Mid-Cumberland Region	8	10	10	858	1.2%	lower
Shelby County (Memphis)	1	5	2	101	2.0%	
Nashville-Davidson County	3	6	4	366	1.1%	
Northeast Region	3	3	1	198	0.5%	
South Central Region	3	3	0	207	0.0%	lower
Southeast Region	5	5	7	742	0.9%	lower
Sullivan County (Tri-Cities)	2	2	1	398	0.3%	lower
Upper Cumberland Region	4	4	3	550	0.6%	lower
West Tennessee Region	5	6	2	314	0.6%	lower
State of Tennessee	51	62	214	8645	2.48%	

The percentage of patients with ILI reported in Week 7 was 2.48% as compared to 2.08% in Week 6. To date, 14 specimens from Week 7 were tested; 2 (14.2%) were positive for influenza: one A(H1N1) and one A(H3N2).

People who are still unvaccinated are at the highest risk of contracting influenza; it is not too late to benefit from influenza vaccination. Vaccine takes about 2 weeks to work: do not delay. Persons, including pregnant women, at high risk of complications from influenza infection who develop influenza symptoms should consult their healthcare provider promptly and take antiviral medication, if prescribed.

ILI activity still going - Vaccine reduces risk

Declines in ILI activity has been noted in Tennessee and surrounding states, but influenza continues to circulate and is expected to do so for several more weeks. Local areas not hit hard earlier may still see more intense activity this season. Influenza activity is unpredictable.

People can still benefit from getting vaccinated; the match between vaccine strains and the circulating strains of H1N1, H3N2 and B type influenza viruses is very good. Vaccine is the first and most important step in protecting against flu and its potentially serious complications. Preliminary CDC data reported this week show a 60% reduction in a vaccinated person's risk of having to go to the doctor, compared to those who are unvaccinated. More at

Percentage of Outpatient Visits Reported by the U.S. and Tennessee Outpatient Influenza-like Illness Surveillance Network (ILINet) as Influenza-like Illness, 2013-2014

Updated: February 20, 2014

Influenza Positive Tests Submitted to TN Dept. of Health Laboratory Services Tennessee, 2013-2014

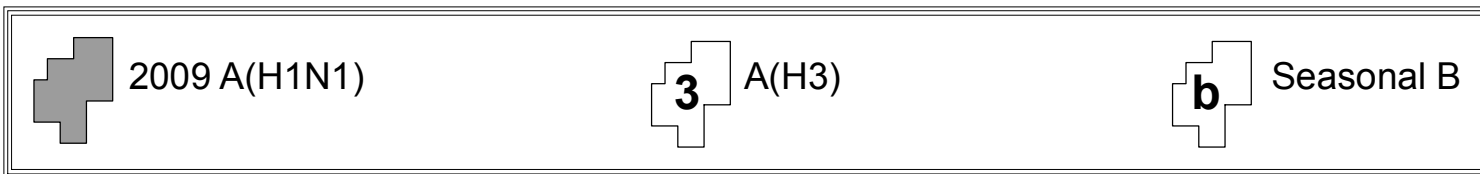

Updated: February 20, 2014

Influenza Confirmed by Culture or PCR in Tennessee from Specimens Collected by Any Source within the Past 6 Weeks

January 5 to February 15, 2014

- Strains are reported by county of case residence.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars mark counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area).

Reference Information for Sentinel Provider Network

1 Influenza-like illness (ILI) is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test.

2 The % of patients with ILI seen in each region is compared to the statewide average. Regions with % statistically-significantly different from the state average are noted as "higher" or "lower." The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.3%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

Important information for Sentinel Providers

Sentinel Providers report ILI by the end of Tuesday following the end of the reporting week (www2a.cdc.gov/ilinet) and collect and ship specimens from ILI cases Monday through Thursday (maximum 10/week per provider). All Sentinel Provider specimens MUST be accompanied by the Influenza and Respiratory Viral Panel Submission form or testing will not be done. The Respiratory Viral Panel is only validated for nasopharyngeal (NP) specimens. Specimens collected from other sites cannot be tested.

Additional laboratory supplies can be obtained by completing the lab order supply form. To ensure the order is filled, please include the CDC Provider ID Code.
