

Cisco Webex Teams

Meetings with Video Addresses in Your Cisco Webex Teams Meeting List

If you're invited to a meeting that provides information for joining from a standards-based video device, you can see the meeting in your meetings list in Webex Teams.

Meetings in your calendar that have video addresses will automatically appear in your meetings list, even if they're not Webex standard meetings, Webex Personal Room meetings, or Webex team meetings. You'll also see a meeting notification and a Join button in your meetings and messages list for these meetings 5 minutes before they're scheduled to start. You don't have to do anything—your meetings with video addresses will automatically appear in your meetings list under the following conditions:

- You have Webex Teams for Windows or Mac.
- You have the Cisco Webex Hybrid Calendar Service.
- You're using Microsoft Outlook Exchange, Microsoft Outlook 365, or G Suite for Google Calendar.
- The video address is in the body of the meeting.
- The video address is in one of the supported formats shown in the following list:

Supported Video Address Formats

sip:alphanumeric@example.com

sips:alphanumeric@example.com

sip:123_4356@example.com

sip:12345@example.com

12345@example.com

`dial meeting`

`dial conference`
