<p>A cold front crossed the region during the afternoon and evening hours at the same as an upper-level disturbance approached the region. A southerly flow out ahead of the boundary brought increased moisture and that combined with heating from sunshine led to unstable conditions by late in the day. Shear also increased late in the day in response to the approaching upper-level disturbance. This combination of instability, forcing, and wind shear led to showers and thunderstorms, some of which produced gusty winds over the waters.</p>

## Storm Data and Unusual Weather Phenomena - September 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A tree was blown down in the 7000 block of Riverside Road.

---

**CHARLES COUNTY --- 2.1 NNW GRAYTON [38.45, -77.21]**

09/02/19 17:51 EST			0	Thunderstorm Wind (EG 50 kt)
09/02/19 17:51 EST			0	Source: State Official

A tree was blown down near the intersection of Liverpool Point Road and Port Tobacco Road.

**A cold front crossed the region during the afternoon and evening hours at the same as an upper-level disturbance approached the region. A southerly flow out ahead of the boundary brought increased moisture and that combined with heating from sunshine led to unstable conditions by late in the day. Shear also increased late in the day in response to the approaching upper-level disturbance. This combination of instability, forcing, and wind shear led to showers and thunderstorms, some of which became severe.**

---

**(MD-Z014) ANNE ARUNDEL, (MD-Z017) ST. MARY'S**

09/07/19 19:11 EST			0	Coastal Flood
09/08/19 04:06 EST			0	

**Strong northwest flow that had been place in over the region relaxed, allowing high water anomalies in the central and southern Chesapeake Bay to rebound northward. This caused moderate coastal flooding to occur along the western shore of the Chesapeake Bay and lower tidal Potomac.**

---

**(MD-Z014) ANNE ARUNDEL**

09/14/19 03:54 EST			0	Coastal Flood
09/14/19 05:24 EST			0	

**Persistent easterly flow allowed water to build up in the lower part of the Chesapeake Bay in the tidewater area of Virginia. As the flow turned southerly, this brought most of the water anomalies northward along the western shore of the Chesapeake Bay and tidal Potomac River, leading to moderate Coastal Flooding.**

### VIRGINIA, North

---

**FREDERICK COUNTY --- 1.3 WNW GREEN SPG [39.31, -78.19]**

09/02/19 14:30 EST			0	Thunderstorm Wind (EG 50 kt)
09/02/19 14:30 EST			0	Source: Public

A tree was blown down at a residence on VA-682 Glaze Orchard Road. Several trees were also blown down onto wires on VA-671 Green Spring Road.

09/28/19 15:50 EST	0	Thunderstorm Wind (EG 50 kt)
09/28/19 15:50 EST	0	Source: State Official

Three trees were blown down near the 10000 block of Homeland Road. Another tree was blown down onto wires on Egghornsville Road.

### RAPPAHANNOCK COUNTY --- 1.8 NE LAUREL MILLS [38.67, -78.08]

09/28/19 15:50 EST	0	Thunderstorm Wind (EG 50 kt)
09/28/19 15:50 EST	0	Source: State Official

A tree was blown down on VA-729 Richmond Road near Aaron Mountain Road.

**A trough of surface low pressure developed during the midday hours of September 28th in the lee of the Appalachian crest and with anomalous heat and humidity, and therefore instability, scattered thunderstorms developed. A few thunderstorms became strong to locally severe.**

## WEST VIRGINIA, East

### JEFFERSON COUNTY --- 1.8 WSW MANNINGS [39.22, -77.81]

09/02/19 14:52 EST	0	Thunderstorm Wind (EG 50 kt)
09/02/19 14:52 EST	0	Source: Trained Spotter

A tree was blown down in the 700 block of Mount Vista Trail. A couple of other trees were also blown down near the intersection of Mission Road and Mountainside Road.

## Storm Data and Unusual Weather Phenomena - September 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A cold front crossed the region during the afternoon and evening hours at the same as an upper-level disturbance approached the region. A southerly flow out ahead of the boundary brought increased moisture and that combined with heating from sunshine led to unstable conditions by late in the day. Shear also increased late in the day in response to the approaching upper-level disturbance. This combination of instability, forcing, and wind shear led to showers and thunderstorms, one of which became severe.
