Prepare a drive for Expanded Storage tests

PCMark 8 Expanded Storage tests can only be run on a completely clean drive. To protect against accidental data loss, PCMark 8 will refuse to run the Expanded Storage tests on a disk that has partitions defined in the partition table. To clean and prepare a drive for the Expanded Storage tests:

- Run DISKPART from an elevated (admin) command line
- Type list disk
- Type select disk n, where n is the number of the disk to test
- Type clean to fully erase the drive
- Exit DISKPART

Tests

Individual tests can be run by specifying the test number. For example, to run only the *Advanced Photo Editing* (4) and *Casual Gaming* (6) workloads from the Home benchmark:

PCMark8Cmd.exe --home=4,6 --out=myresults.pcmark-8-result

Atest.
