project partners

The Methow River Collaborative is a group of organizations working together to build awareness for improving water quality and salmon recovery actions in the Methow Valley watershed.

In the Methow Watershed **Methow Salmon Recovery Foundation and Methow Beaver Project** provides technical assistance to local agencies and non-profits to identify, construct, and monitor habitat improvement projects intended to protect and improve the survival of endangered Upper Columbia River spring Chinook and threatened steelhead.

Ecology's Water Quality Program provides support for water quality projects such as stream restoration, education and outreach. The Methow Water Quality Restoration and Monitoring Project is a local project designed to address critically warming stream temperatures in the Methow watershed through riparian restoration, monitoring, and public outreach and education.

Methow Salmon Recovery Foundation was founded to help the Methow community steward its river ecosystems through scientifically based, locally controlled salmon recovery projects. We believe that protecting salmon habitat will provide benefits for years to come, both for salmon, and the local recreation, economy and quality of life in our valley.

Methow Arts Alliance Through arts education, public art, performance, artist promotion and leadership, we work to ensure that the Arts are ACCESSIBLE and central to the daily lives of community members in North Central WA.
