

Shawmut Environmental Policy

Shawmut Corporation is committed to minimizing activities that negatively impact the environment. This will be accomplished through:

- Reduction of GHG Emissions via process monitoring
- Reduction of Noise Emission through process analysis and engineering controls if necessary.
- Monthly monitoring of Air Quality and reporting via local state agencies
- Responsible Chemical Management by reducing or eliminating the use of hazardous chemicals in our processes.
- Evaluating our process to accelerate decarbonization.
- Monitoring water quality, consumption and management via reuse and recycling of incoming and in process water.
- Evaluating the use of Renewable Energy in future building projects.
- Efficient use of energy via engineering controls
- Sustainable Resource Management and Waste Reduction through the creation and use of recyclable materials and through reducing the amount of waste generated at the facilities.
- Reviewing of the manufacturing processes to eliminate any negative impact to biodiversity, land use, deforestation, and soil quality.
- Assurance that no products or processes negatively affect animal welfare.
