Inception Date	6/29/2018
Net Assets	\$570.32MM
Effective Duration	1.85 years
Years to Maturity	1.92
Yield to Worst	5.39
Yield to Maturity	5.40
Benchmark	Bloomberg 1-3 Year US Govt/ Credit Index - Unhedged

Performance data quoted represents past performance. Past performance is no guarantee of future results so that shares, when redeemed, may be worth more or less than their original cost. The investment return and principal value will fluctuate. Current performance may be higher or lower than the performance quoted. For current month-end performance call 1-866-759-5679 or visit www.alpsfunds.com. Performance includes reinvested distributions and capital gains.

Maximum Offering Price (MOP) performance for Class A shares includes the Fund's maximum sales charge of 2.25%.

Contingent Deferred Sales Charge (CDSC) performance for Class C shares includes a 1% CDSC on shares redeemed within 12-months of purchase. Performance shown at Net Asset Value (NAV) does not include these sales charges and would have been lower had it been taken into account.

[^] As of 6/30/2024, holdings are subject to change

[†] Fee imposed on purchases.

[‡] A percentage of the lower of original purchase price or redemption proceeds.

^{^^} What You Pay reflects the Adviser's and Sub-Adviser's decision to contractually limit expenses through 2/28/2025. Please see the prospectus for additional information.

* Registered Representative of ALPS Distributors, Inc.

ALPS | Smith Short Duration Bond Fund

Fund Yields

	30-Day SEC Yield	30-Day SEC Yield (Unsubsidized)	Trailing Twelve Month Yield
Class I	4.80%	4.72%	4.33%
Class Inv	4.50%	4.49%	4.03%
Class A	4.39%	4.39%	4.06%
Class C	3.79%	3.75%	3.35%

Credit Quality

	Fund	Benchmark
AAA	-	3.69%
AA	32.56%	73.85%
A	20.05%	11.99%
BBB	44.73%	9.95%
BB	2.66%	0.52%

Credit Quality is a measure of the credit worthiness and risk of a bond or portfolio, based on the issuer's financial condition. AAA/Aaa is highest and D is lowest. If applicable, the Pre-Refunded/Agency category includes bonds which are secured by US Government Securities and therefore are deemed high-quality investment-grade by the Advisor. If applicable, the Not Rated category includes bonds that are not rated by a Nationally Recognized Statistical Rating Organization.

Composite Rating Source: Bloomberg L.P., ratings presented are a blend of a security's Moody's, S&P, Fitch and DBRS ratings. The rating agencies are evenly weighted when calculating the composite. Ratings presented may differ when viewed on an agency-by-agency basis.

Important Disclosures & Definitions

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. This material must be preceded or accompanied by the prospectus. Read the prospectus carefully before investing.

Performance data quoted represents past performance. Past performance is no guarantee of future results; current performance may be higher or lower than performance quoted. All investments are subject to risks, including the loss of money and the possible loss of the entire principal amount invested. Additional information regarding the risks of this investment is available in the prospectus.

The characteristics presented reflect trade date + 1 information.

A rise in interest rates typically causes bond prices to fall. The longer the duration of the bonds held by a fund, the more sensitive it will likely be to interest rate fluctuations. Duration measures the weighted average term to maturity of a bond's expected cash flows. Duration also represents the approximate percentage change that the price of a bond would experience for a 1% change in yield. For example: the price of a bond with a duration of 5 years would change approximately 5% for a 1% change in yield. The price of a bond with a duration of 10 years would be expected to decline by approximately 10% if its yield was to rise by +1%. Bond yields tend to fluctuate in response to changes in market levels of interest rates. Generally, if interest rates rise, a bond's yield will also rise in response; the duration of the bond will determine how much the price of the bond will change in response to the change in yield.

The Fund's investments in fixed-income securities and positions in fixed-income derivatives may decline in value because of changes in interest rates. As nominal interest rates rise, the value of fixed-income securities and any long positions in fixed-income derivatives held by the Fund are likely to decrease, whereas the value of its short positions in fixed-income derivatives is likely to increase.

Overall securities market risks may affect the value of individual instruments in which the Fund invests. Factors such as domestic and foreign economic growth and market conditions, interest rate levels, and political events affect the securities and derivatives markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

30-Day SEC Yield: reflects the dividends and interest earned during the period, after the deduction of the Fund's expenses.

30-Day SEC Yield (Unsubsidized): reflects the dividends and interest earned during the period, after the deduction of the Fund's expenses, excluding fee waivers.

Alpha: a measure of performance on a risk-adjusted basis; often considered the active return on an investment, the ratio gauges the performance of an investment against a market index used as a benchmark.

Beta: a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market or a benchmark.

Bloomberg 1-3 Year US Government/Credit Index: includes all medium and larger issues of US government, investment-grade corporate, and investment-grade international dollar-denominated bonds that have maturities of between 1 and 3 years and are publicly issued. One may not invest directly in an index.

Down Capture: a statistical measure of an investment manager's relative performance during bear (down) markets.

R-squared: the percentage of a fund or security's movements that can be explained by movements in a benchmark index.

Sharpe Ratio: a measure that indicates the average return minus the risk-free return divided by the standard deviation of return on an investment.

Standard Deviation: a statistical measure that indicates the extent of deviation for a group as a whole.

Trailing Twelve Month Yield: refers to the percentage of income a portfolio has returned to investors over the last 12 months. Past performance is no guarantee of future results.

Up Capture: a statistical measure of an investment manager's relative performance during bull (up) markets.

Years to Maturity: the period during which an investor will receive interest payments on the investment. When the bond reaches maturity, the investor is repaid its par, or face, value.

Yield to Maturity: the percentage rate of return for a bond assuming that the investor holds the asset until its maturity date. It is the sum of all of its remaining coupon payments. A bond's yield to maturity rises or falls depending on its market value and how many payments remain to be made.

Yield to Worst: a measure of the lowest possible yield that can be received on a bond that fully operates within the terms of its contract without defaulting.
