

Small Business Profiles for the States, Territories, and Nation 2023

U.S. SMALL BUSINESS ADMINISTRATION
OFFICE OF ADVOCACY

The Office of Advocacy at the Small Business Administration was created by Congress in 1976 and provides an independent voice for small business within the federal government. Appointed by the President and confirmed by the Senate, the Chief Counsel for Advocacy directs the office. The Chief Counsel advances the views, concerns, and interests of small business before Congress, the White House, federal agencies, federal courts, and state policy makers. Regional advocates and an office in Washington, DC, support the Chief Counsel's efforts.

The statutory mission of the Office of Advocacy includes examining the role of small business in the economy. Led by Director Patrick Delehanty, the Office of Economic Research accomplishes this objective by publishing small business research products and sponsoring and disseminating small business data and statistics. This report uses the latest government data to profile the small businesses in each state, each territory, the District of Columbia, and the nation. It was prepared by Research Economist Daniel Wilmoth with editorial support by Editor Akira Loring, Editor M. B. Humphrey, and Director of the Office of Information David Tokarz.

The Office of Advocacy regularly releases other research products, ranging from short fact sheets that use new data to show emerging trends to lengthy reports that use sophisticated statistical techniques to explore complex issues. To receive notifications about new publications, along with updates about regulatory issues and news about the Office of Advocacy, subscribe at advocacy.sba.gov/subscribe.

November 2023

United States

33.3 million small businesses
99.9 percent of US businesses

61.6 million small business employees
45.9 percent of US employees

Technical Notes

Definition of small business

A single firm may encompass multiple establishments if it operates at multiple locations. Small businesses are generally defined in these profiles as firms with fewer than 500 employees across all establishments. However, in the data used for the business dynamics feature on the first page of each state profile, the association of establishments and employment with small businesses is based on the number of employees linked with an Employer Identification Number (EIN). Since a single firm may use multiple EINs, some of the establishments and employment associated with small businesses in that feature would not be associated with small businesses in other features.

Classification by industry

Classification by industry is made at the establishment level, so a business encompassing multiple establishments may participate in multiple industries. A business participating in multiple industries would be included in the total for each industry, so the sum of businesses across industries may exceed the total number of businesses.

Data

All data used in these profiles are publicly available and published online. Data and associated technical documentation can be accessed using the hyperlinks in the source notes for each feature. Years indicated in source notes are the years the data describe, which may not match the naming convention used by the data publisher. Where no year is listed, data from multiple years were used.

The populations described by ACS employment statistics vary slightly. Self-employment rates were estimated using values from table B24080 describing the population age 16 years and over. The share of workers who were Hispanic and the share who were racial minorities were estimated using values from table S2301 describing the population age 16 years and over. The share of workers who were women was estimated using values from table S2301 describing the population age 20 to 64. The share of workers who were veterans was estimated using values from table S2101 describing the population age 18 to 64.

Software

The profiles were created using R with formatting through HTML and CSS. Data visualizations were primarily created using the ggplot2 package in R. Tables were primarily created using the knitr and gt packages. Elements were combined into an HTML document using the knitr package. A PDF document was created from the HTML document using Prince XML.

Rounding

Numbers in these profiles have been rounded if they include a decimal point, with the number of digits after the decimal point indicating the precision preserved under rounding. Numbers were rounded using the `round_half_up` command from the `janitor` package in R, which rounds up numbers ending in 5. For example, 1.05 would be rounded to 1.1, while 1.04 would be rounded to 1.0.

Imputation

Values were imputed for some features when published data were missing, obviously erroneous, or otherwise problematic. A source note that begins “Source:” indicates that statistics in a feature are as reported by the source, with no imputation. A source note that begins “Source of original data:” indicates that the feature includes an imputed value for at least one profile.

Maps on the first page of each state profile showing small business share of employment by county were based primarily on 2019 Statistics of US Businesses data. Where data for a county were insufficient to calculate the share, if the missing data were available for that county for any of the four preceding years, data from the most recent year were carried forward. If data were not available for a recent year, shares were imputed by averaging the shares of neighboring counties. If shares for some neighboring counties were also missing, the share for the state as a whole was used as a substitute for those counties in the calculation. Imputed values were calculated using the `spdep` package in R.

The feature that includes the business ownership shares by demographic group data visualization may also include imputed values. Although counts for some categories were often missing, the ownership shares shown in the visualization could still be calculated precisely using a combination of the reported values. For example, if the number of businesses with equal ownership by men and women was not reported, the number of businesses with equal or majority ownership by women could be calculated by subtracting the number of businesses with majority ownership by men from the number of businesses with ownership classifiable by sex.

In the same feature, the share of businesses owned by racial minorities was approximated by subtracting the number of businesses with majority ownership by Whites from the total number of businesses with ownership classifiable by race. This method was used instead of adding the counts for each separate racial minority group because the racial categories are not mutually exclusive and because the counts for some racial minority groups were often missing. The share reported is therefore the share of businesses with half or majority ownership by racial minorities and without simultaneous majority ownership by Whites.

The time series figure on the fourth page of each state profile showing total employment by business size category may include imputed values. Where a value for a size category was missing or reported as zero, the value was imputed by carrying forward the latest valid value for that category from a preceding year.

The time series figure in each territory profile showing total employment by establishment size category may also include imputed values. Where a value for a size category was missing, that value was sometimes imputed by subtracting the values reported for the other categories from the total for all categories. When that was not possible, if a value for a preceding year was available, the missing value was imputed by carrying forward the latest preceding value. When that also was not possible, the missing value was imputed by carrying backward the earliest value.

Effects of the COVID-19 pandemic

Data on small businesses are generally only available with a substantial lag relative to the period they describe. Some data analyzed in these profiles predate the COVID-19 pandemic. Research indicates that the effects of the pandemic on small businesses have been substantial and have varied by industry, geography, and demographic group. Research from the Office of Advocacy describing the effects of the pandemic on small businesses can be found at advocacy.sba.gov/tag/covid-19.

Contact
