

TOWARD A REAL-TIME DRUG OVERDOSE MONITORING SYSTEM

Using Locally Available Data

Richard Harruff, MD, PhD
Chief Medical Examiner

Julia Hood, PhD, MPH
Epidemiologist

Public Health
Seattle & King County

Goals for Today's Presentation

1. Make the case for *real-time* overdose monitoring.
2. Describe the complexity of overdose monitoring.
3. Advocate for greater cross-agency coordination around overdose monitoring and response.

Overview

- **Background**
 - The vast spectrum of opioids
 - Trends in fatal overdose: nationally>regionally>locally
- **Real-time** Overdose Data Systems
 - Medical Examiners Office
 - Other sources of real-time OD data.
- **Other Relevant** (not real-time) Data Sources
- Translating **Data into Action!**

BACKGROUND

Complementary Goals

Public Health: Reduce Demand.

Law Enforcement: Reduce Supply.

Terminology

Opioid – interacts with the opioid receptor.

- Naturally occurring opiates and derivatives.
- Prescription and synthetic opioids (pharmaceutical opioids).

Opiate – naturally occurring alkaloid or simple derivative of the opium poppy:

- Heroin
- Morphine

Found at Death Scene Investigations

- Opiate Opioids

- Heroin
- Morphine
- Codeine

- Fentanyl

- (& its derivatives)

- Pharmaceutical Opioids

- Oxycodone
- Oxymorphone
- Hydromorphone
- Hydrocodone
- Tramadol

- Therapeutic Opioids

- Methadone
- Buprenorphine

OVERDOSE TRENDS

Nationally

Age-adjusted rate* of drug overdose deaths† and drug overdose deaths involving opioids — United States, 2000–2014

Citation: Rudd RA, Aleshire N, Zibbell JE, Gladden MR. Increases in Drug and Opioid Overdose Deaths — United States, 2000–2014. *MMWR Morb Mortal Wkly Rep* 2016;64(50):1378–82. DOI: https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6450a3.htm?s_cid=mm6450a3_w.

Data Source: National Vital Statistics System, Mortality file.

* Age-adjusted death rates were calculated by applying age-specific death rates to the 2000 U.S. standard population age distribution.

† Drug overdose deaths are identified using *International Classification of Diseases, Tenth Revision* underlying cause-of-death codes X40–X44, X60–X64, X85, and Y10–Y14.

By State

Age-adjusted rate of drug overdose deaths, 2010 and 2015

Citation: Rudd RA, Seth P, David F, Scholl L. Increases in Drug and Opioid-Involved Overdose Deaths — United States, 2010–2015. *MMWR Morb Mortal Wkly Rep* 2016;65:1445–1452. DOI: <http://dx.doi.org/10.15585/mmwr.mm65051e1>.

Data Source: CDC. National Vital Statistics System, Mortality. CDC WONDER. Atlanta, GA: US Department of Health and Human Services, CDC; 2016. <https://wonder.cdc.gov/>.

Rates shown are the number of deaths per 100,000 population. Age-adjusted death rates were calculated by applying age-specific death rates to the 2000 U.S standard population age distribution.

† Deaths were classified using the *International Classification of Diseases, Tenth Revision (ICD–10)*. Drug overdose deaths were identified using underlying cause-of-death codes X40–X44, X60–X64, X85, and Y10–Y14.

West Virginia's ME Viewpoint:

“My dad is a family doc in my hometown. He regularly has the phone wires to his office cut because they think they are cutting the alarm system. This has been lessening, though, as the focus shifts from oxycodone to injectables.”

“When I first started here it was oxycodone, day in and day out. We had a brief run of heroin, but now almost everything is fentanyl, carfentanil, acetyl fentanyl or furanyl fentanyl. Or some combination of those.”

REAL-TIME MONITORING OF DRUG OVERDOSE

Goals of Real-Time Monitoring

1. Identify potential overdose clusters.
2. Timely and targeted response to emergent threats.
3. Inform law enforcement investigations.

FATAL OVERDOSE

Medical Examiners Office

Challenges to Monitoring Drug Overdoses through Death Records

- Limited resources
- Limited investigation
- No or poor witnesses
- Limited ability to identify drug or source
- Delay in toxicology analysis
- Delay in death certification

“Because drug deaths take a [long time to certify](#), the Centers for Disease Control and Prevention will not be able to calculate final [2016] numbers until December [2017].”

**Drug Deaths in America Are Rising Faster Than Ever –
NYT 6/5/2017**

Developing Real-Time Monitoring of Fatal Drug Overdoses

- Expend resources to enhance fatal drug overdose investigation.
- Utilize family/friends to assist in identifying source of drug.
- Improve efforts to identify drugs recovered from scene.
- Recognize similar drugs found at different scenes and clusters of related drug overdose deaths.
- Recognize potential novel or counterfeit drugs and request chemical analysis.
- Request expedited toxicology analysis and utilize screening kits for potential novel or counterfeit drugs.
- Develop rapid reporting system for drug overdose deaths to inform local law enforcement, DEA, HIDTA.

OTHER REAL-TIME DATA SOURCES

Emergency Medical Services

Emergency Department Visits

Emergency Medicine Services

- Centralized repository of data collected by first responders (e.g. firefighters and paramedics).
- Captures:
 - Responding agency
 - Date/time/location of incident
 - Demographics of patient
 - Chief complaint
 - Narrative
 - Whether naloxone was distributed
 - Whether case transported to ED/hospital

Emergency Department Visit Data

- PHSKC Syndromic Surveillance System:
 - Automated system.
 - Hosted by PHSKC Communicable Disease Epi Program.
 - Captures all ED visits in last 24 hours.
 - 21 of 22 King County EDs participating.
 - Captures: hospital name, date & time of visit, age, sex, home zip, chief complaint, disposition, diagnosis, patient/visit key.
 - Free text fields queried for key terms.
 - Weaknesses: limited data elements and granularity; data quality
- Other Systems:
 - EDIE/PreManage
 - ESSENCE ~ managed by DOH

OTHER RELEVANT DATA SOURCES

(Not available in real-time)

Other Key Data Sources

- Overdose:
 - WA State Death Certificate Data
 - Hospitalization data (“CHARS”)
- Prescribing patterns:
 - Prescription Monitoring Program
- Toxicology Results:
 - WA State Patrol Toxicology and Crime Laboratories
 - Hospital Toxicology Laboratories
- Surveys:

Data Source	Who?	Drugs Used	Survived Overdose	Harm-Reduction
Healthy Youth Survey	Middle & High School Students	X		
Behavioral Risk Factor Surveillance System	Adults in general population.	X		
Needle Exchange Survey	Clients of KC Needle Exchange	X	X	X
National HIV Behavioral Surveillance	Injection Drug Users	X	X	X
HIV Surveillance	People with diagnosed HIV	X
