Table B. Principal Data Sources and Methods for Estimating Intermediate Inputs and Value Added

Input component	Source data and methods used in 2012 benchmark year
Intermediate inputs¹	<p>Agriculture, forestry, fishing, and hunting Inputs to the agriculture, forestry, fishing, and hunting industries were estimated from U.S. Department of Agriculture's 2012 Census of Agriculture or by extrapolating 2007 benchmark Input-Output (I-O) estimates.</p> <p>Mining Inputs to the mining industries were estimated primarily from the 2012 Economic Census mining sector reports. Detailed expense data used to estimate intermediate inputs included accounting, auditing, and bookkeeping services; advertising and promotional expenses; communication services; legal services; purchased electricity; purchased fuels consumed; rental payments for buildings and other structures; rental payments for machinery and equipment; supplies used and minerals received; and all other operating expenses.</p> <p>Construction Inputs to the construction industries were estimated primarily from 2012 Economic Census construction data.</p> <p>Manufacturing Inputs to the manufacturing industries were estimated primarily from the 2012 Economic Census's manufacturing sector reports. Detailed expense data used to estimate intermediate inputs included accounting, auditing, and bookkeeping services; advertising and promotional services; communication services; legal services; management consulting and administrative services; materials, parts, containers, packaging, etc. used; purchased computer services; purchased electricity; purchased fuels; refuse removal services; rental payments for buildings and other structures; rental payments for machinery and equipment; repair and maintenance services of buildings and/or machinery; and all other operating expenses. Inputs were also interpolated using the 2007 benchmark I-O estimates and Annual Survey of Manufactures (ASM) data.</p> <p>Wholesale trade, retail trade, and accommodation and food services Inputs to the wholesale, retail trade, and accommodation and food services industries were estimated primarily from the Census Bureau's 2012 Annual Wholesale Trade Survey (AWTS) and Annual Retail Survey (ARTS) quinquennial Business Expenditure Series. Detailed expense data used to estimate intermediate inputs included packaging materials and containers; data processing and other purchased computer services; communication services; repairs and maintenance to machinery and equipment; repairs and maintenance to buildings, structures, and offices; rental payments for machinery and equipment; rental payments for buildings, offices, stores; purchased electricity; purchased fuels (except motor fuels); water, sewer, refuse removal, and other utility payments; purchased transportation, shipping and warehousing services; purchased advertising and promotional services; and purchased professional and technical services. Inputs were also interpolated using the 2007 benchmark I-O estimates.</p> <p>Services, transportation and warehousing, and utilities For selected census-covered industries, information from the 2012 Service Annual Survey (SAS) on operating expenses was used. Detailed expense data used to estimate intermediate inputs included materials, parts and supplies (not for resale); purchased electricity; purchased fuels (except motor fuels); rental payments for machinery, equipment and other tangible items; rental payments for buildings, structures, and land; repairs and maintenance to machinery and equipment; repairs and maintenance to buildings, structures, and offices; advertising and promotional services; printing services; data processing and other purchased computer services; communication services; water, sewer, refuse removal and other utilities; professional and technical services; and all other operating expenses. For industries not covered by census, inputs were estimated from a variety of sources, including data from the 2012 SAS on operating expenses, and data from Amtrak, Department of Transportation Surface Transportation Board, Alaska Rail, Department of Energy, and Federal Reserve Board.</p>
Value added:	<p>Compensation of employees..... Tabulations of wages and salaries from the Bureau of Labor Statistics Quarterly Census of Employment and Wages (QCEW) program, and estimates of supplements to wages and salaries from the national income and product accounts were used; data were adjusted for misreporting and I-O industry definitions. For industries not covered by the QCEW, payroll data from the 2012 Economic Censuses were used; data were adjusted for misreporting and I-O industry definitions. Benefits data were based on the relationship between the Economic Census, SAS, and Business Expenses Supplement reported benefits and payroll data, applied to the 2012 QCEW wage and salary data. For the remaining industries, benefits were estimated using indirect techniques. All estimates were adjusted to balance to total compensation by industry in the national income and product accounts.</p>
Taxes on production and imports less subsidies.....	<p>The estimates by industry were prepared in two parts: For excise and general sales taxes, the values were estimated either as part of each industry's output or directly assigned; for other taxes, assessments and license fees, the estimates were distributed on the basis of a variety of source data, including state government tax collections statistics, the ASM, ARTS, AWTS and SAS. For all other tax liabilities, estimates were distributed to industries using indirect techniques. Subsidies are directly assigned to specific industries based on which industry is collecting the subsidy. All estimates were adjusted to balance to total taxes on production and imports less subsidies, by industry in the national income and product accounts.</p>
Gross operating surplus.....	<p>For most industries, gross operating surplus reflects a quality-weighted average of a residual estimate (total industry output less total intermediate inputs, compensation of employees, and taxes on production and imports, less subsidies) and a direct-estimate based on summing up the components of gross operating surplus from the national income and product accounts, adjusted to an establishment basis.²</p>

1. Estimates for intermediate inputs were adjusted during the process of balancing commodity purchases across industries with commodity output totals.
