

Top Titles *in the Environmental Humanities Collection*

The **Environmental Humanities e-book collection** includes over 120 titles that intermingle key areas of environmental study with a wide variety of disciplines. The collection includes classic areas of environmental studies, such as anthropology and geography; incorporates areas of environmental humanities, including literary studies, philosophy, ecology, Indigenous studies, and race; and explores fields that are growing in popularity, including multispecies interactions, energy studies, environmental media, and oceanic studies. In this way, the collection **challenges traditional boundaries of environmental studies to reflect a growing overlap of fields across the humanities disciplines.**
