

# DFID Results Estimates: Revisions Log

## Background

This document details revisions made to results estimates. Revisions are made when new data become available, methodologies are improved, or an error has occurred in our statistical processes. Revisions to published figures are usually made within a subsequent publication — for results estimates, which are released annually, that would be in the publication of the following Summer. However, the Chief Statistician may decide to amend and republish the figures immediately rather than wait for the next scheduled publication, depending on the impact of the revision. Our revisions policy can be found in our [Technical Notes](#)

## Log

Date	Impact	Description
22/09/2020	<b>Sector Report</b> , page 11: 8.1 million girls now 8.2 million <b>Tables</b> , Table_5: cells D33:F33 change to 902,000 (Female), 1,208,000 (Male), 75,000 (Not Identified); cells D35:F35 change to 8,200,000 (Female), 8,000,000 (Male), 200,000 (Not Identified)	An update to the disaggregation methodology for multilateral Education results became available after the close of data collection. The new methodology now calculates disaggregated figures for boys and these figures have been added. Calculating the boys figure also updates the girls figure, which has also been amended.
