Sophos Managed Risk

Powered by ⬡ tenable®

Sophos Managed Risk is a vulnerability and external attack surface management service powered by industry-leading Tenable technology and delivered by Sophos threat exposure and remediation experts. With Sophos Managed Risk, our experienced analysts identify high-priority cybersecurity vulnerabilities and potential attack vectors in your environment so actions can be taken to prevent attacks before they disrupt your business.

Use Cases

1 | ATTACK SURFACE VISIBILITY

Desired Outcome: Mitigate cyber risk and prevent potential threats by knowing what you own.

Solution: You can't protect what you can't see - you need to eliminate blind spots to stay ahead of potential attacks. Establishing your attack surface is foundational to your organization's security strategy. Sophos Managed Risk discovers your internet-facing assets, services, and applications and analyzes your external attack surface.

2 | CONTINUOUS RISK MONITORING

Desired Outcome: Extend your IT Security team with vulnerability experts.

Solution: Sophos' highly skilled threat analysts identify exposures in your environment and review key findings with your team, enabling you to understand the overall security posture of your attack surface. We provide expert guidance on the current exploitation landscape, identify new and emerging threats, and help set remediation priorities for your business.

3 | PRIORITIZE VULNERABILITIES

Desired Outcome: Understand your exposures and know which vulnerabilities to fix first.

Solution: When every threat is a high priority, none of them are - you need to know where to focus your time and effort. Sophos Managed Risk identifies, investigates, and prioritizes high-risk exposures across your environment using the industry's most extensive vulnerability coverage from Tenable. Automated risk-based prioritization ensures the most critical vulnerabilities are remediated quickly.

4 | IDENTIFY NEW RISKS FAST

Desired Outcome: Know when new critical exposures affect your applications.

Solution: Attackers look for weaknesses in your environment long before you know they're there. Identifying high-risk exposures quickly is crucial. With Sophos Managed Risk, when a new critical vulnerability is discovered that affects your internet-facing applications, Sophos proactively notifies your team and provides remediation guidance.

≡IDC

Sophos is named a Leader in the 2024 IDC MarketScape for Worldwide Managed Detection and Response (MDR) Services

G2 Leader

Sophos is rated the #1 MDR solution by customers in the G2 Winter 2024 Reports

Gartner
