

COMPUTATIONAL BME & BIOSYSTEMS

Understanding the way in which complex biological processes behave in health and disease is a crucial part of improving human health. Computational Biomedical Engineering and Biosystems uses mathematical, statistical, and computational tools to develop predictive models that guide experiment design, data interpretation, and treatment design.

Universal Consulting Services
Varian Medical Systems
Zimmer Biomet
ZMT Zurich MedTech AG

APPLICATION EXAMPLES

Synthetic biology, Metabolic engineering, Pharmacology PK/PD modeling, Pharmacometrics, Quantitative Systems Pharmacology (QSP), Disease modeling, Cancer modeling, Physiological systems modeling, Biopharmaceuticals, Immune engineering, Endocrinology modeling, Artificial pancreas, Diabetes management, Medical & health informatics, Hospital & clinical outcomes informatics, Bioinformatics, Genomics & proteomics, Biomanufacturing, Simulations, Musculoskeletal modeling, Machine learning, Biomedical Analytics, Computational Medicine, Health systems engineering, Human modeling and simulation, Systems biology & physiology

RELEVANT COURSE EXAMPLES (*REQUIRED IN BME CURRICULUM)

BMEG 230	*Circuits, Signals, and Systems for Biomedical Applications	CHEG 604	Probability and Statistics for Engineering Problem Solving
BMEG 301	*Quantitative Cellular Physiology	CHEG 621	Metabolic Engineering
BMEG 302	*Quantitative Systems Physiology	CIEG 642	Advanced Data Analysis
BMEG 340	*Biomedical Modeling and Simulation	CISC 181	Introduction to Computer Science II
BMEG 341	*Biomed Exp Design & Analysis	CISC 210	Introduction to Systems Programming
BMEG 420	*Biological Transport Phenomenon	CISC 220	Data Structures
BMEG 447	Immunoengineering	CISC 436	Computational Biology and Bioinformatics
BMEG 471	Mathematical Physiology	CISC 437	Database Systems
BMEG 479	Introduction to Medical Imaging Systems	CISC 483	Introduction to Data Mining
BISC 401	Molecular Biology of the Cell	CISC 484	Introduction to Machine Learning
BISC 484	Computer Based Genetics Laboratory	ELEG 418	Digital Control Systems
CHEG 401	Chemical Process Dynamics & Control	ELEG 697	Computational System Biology (BINF695, BMEG695)
CHEG 420	Biochemical Engineering	MATH 460	Intro to Systems Biology (CHEG 460)
CHEG 672	Mathematics of Particle Systems	MEEG 421	Linear Systems

PATHWAY EXAMPLES

Pathways are optional groupings of 5 technical electives (including at least 2 BME) that demonstrate depth and focus in a particular area. Examples below are provided for reference and are not all-inclusive. Be sure to check current course offerings, approved technical electives, and pre-requisites (all subject to change).

Path 1: Disease Modeling and Treatment

BMEG 447	Immunoengineering
BMEG 461	Cell Engineering
BMEG 471	Mathematical Physiology
BISC 401	Molecular Biology of the Cell
ELEG 697	Computational Systems Biology

Path 3: Synthetic Biology

BMEG 461	Cell Engineering
BMEG 471	Mathematical Physiology
CHEG 420	Biochemical Engineering
CHEM 527	Introductory Biochemistry
ELEG 697	Computational System Biology

Path 2: Informatics and Data Science

BMEG 471	Mathematical Physiology
BMEG 479	Introduction to Medical Imaging Systems
CISC 210	Introduction to Systems Programming
CISC 220	Data Structures
CISC 436	Computational Biology and Bioinformatics

Extracurricular Enhancement

Bioinformatics Minor
Computer Science Minor
Computational Biology Minor
4+1 Master in Computer Science
