

Get to Market Faster with Early Engagement of Our HazLoc Experts

We help position our customers for success through early engagement in many aspects of compliance projects or even projects not heading for a final certification – allowing your staff to concentrate on getting products to market.

To maximize market opportunities, manufacturers seeking a competitive advantage should engage with a conformity assessment body early to identify financial rewards in many aspects of compliance projects, or even projects not aiming for final certification. This will allow manufacturers to create a risk mitigation plan to know most of the risks from the beginning – for faster time to market.

UL's Advisory Services

Our team will work closely with your engineering, project management, compliance and quality teams—from C-suite to shop floor—to maximize your market opportunities using our global HazLoc industry experience. UL staff will help you to identify and manage many elements of project risk associated with mandatory, voluntary and customer approvals by design, supporting your project with the goal of increasing your speed to market.

A dedicated technical expert will work with you through a customized bank of hours that you control. You will be billed on a call off basis and will receive a summary report of time used associated with activity.

Advisory services include:

- Conducting a Preliminary Investigation
- Clarifying certification, regulatory and standard (technical) requirements
- Referencing the need to comply with a standard or similar
- Conducting testing (including validation or performance testing) and reporting results
- Confirming compliance with the standard
- Explaining findings
- Discussions of product concepts and how the standard applies
- Discussion of new product concepts in order to consider developing new certification requirements
- Evaluation of installation instructions and use manuals
- Participating in design reviews with comments limited to compliance with applicable certification requirements
- Custom services are also available

Your deliverable will be customized based on your scope selection. Examples include: on-site meeting, virtual or email Q&A, formal report of findings, documented red-lines and presentations.

From education and training to HazLoc competency assessment and functional safety, you can count on UL to help you navigate and understand the complex world of conformity assessment.

Why choose UL?

Knowledge You Can Trust – Our experienced staff has extensive expertise and membership on various technical committees.

Speed and Efficiency – Leveraging our HazLoc experience early in compliance projects can help reduce cost, saving time and frustration. We have technical expertise versed in all protection methods with comprehensive industry knowledge that translates into actionable business efficiencies for our customers to speed time to market.

Global Reach and Access – Our global network of expert HazLoc engineers helps you understand the various national and global requirements, as well as help identify new requirements based on industry demands. Leverage UL's active participation and leadership in the global standards writing process. You can benefit with faster time to a global marketplace with the UL certification process, not only do we understand the requirements - we helped develop them. In fact, we participate in over 50 Standards writing committees, such as: TC31 (IECEX), UL STP (North America), NFPA, API, BSEE and CFR committees.
