

Plan, orchestrate, and analyze complex work

Why Cutover?

- **Go faster:** With a single, intuitive platform, IT Service Management (ITSM) integrations, built-in communication, and real-time visibility, you can move quickly with confidence.
- **Scale flexibly:** A modern, scalable software as a service (SaaS) platform that aligns with your needs before, during, and after your cloud migration or transformation program.
- **Increase repeatability:** Full observability, detailed analytics, and audit capabilities offer a single system of record across testing, rehearsing, collaboration, and communication.
- **Reduce risk:** Leverage the full event view to pinpoint roadblocks and eradicate wasted time by removing delays between dependencies and scheduling conflicts.

Product overview

Many enterprise IT, financial compliance, and resilience teams are still using older, on-premises IT project tools and working across static spreadsheets. These methods are inflexible, don't scale, don't integrate with automation, and require high maintenance, all of which delay and obstruct migration to the cloud. Many of these tools are also not designed to accommodate resiliency planning and operations. As companies move their applications to the cloud, these older methods become a constraint on innovation, communication, productivity, and agility.

Product features

Mission control

The Cutover platform offers a single space for senior stakeholders to manage and view all change-related activities. From strategic roadmap planning to post-event audit and improvement analytics, Cutover provides the transparency, accountability, and data you require to manage your organization's IT initiatives.

Seamless integrations

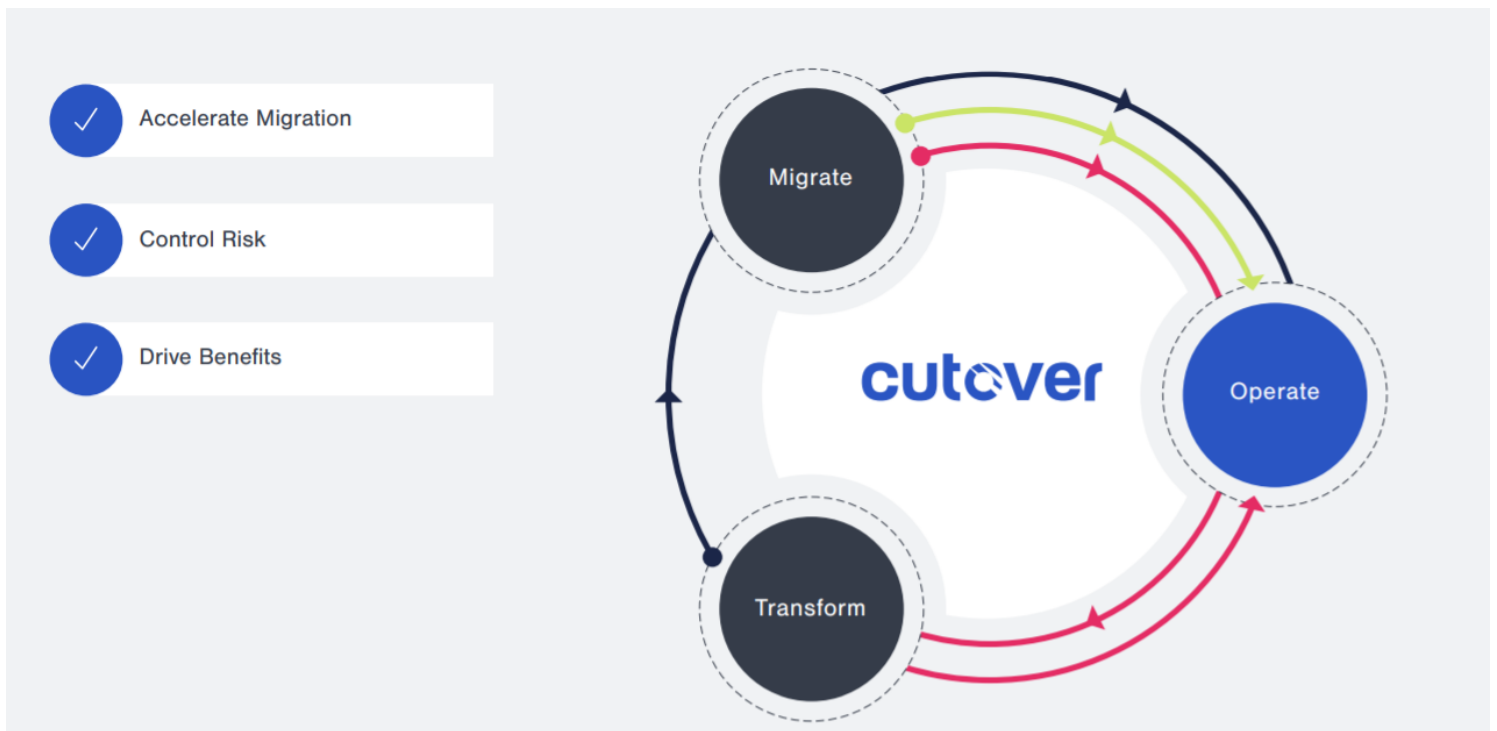

Cutover integrates with over 20 tools across ITSM, DevOps, project management, and collaboration platforms. This enables clients to work more efficiently while reducing the risk of managing complex data in multiple places. Building on the Amazon Web Services (AWS) infrastructure, Cutover can effortlessly integrate project and plan details from third-party tools. In addition, the platform enables easy communications across your team through your preferred methods.

Powerful automation

Cutover's automation runbooks streamline your operations through integration, enabling you to coordinate and operate in one place rather than across multiple toolsets and interfaces. Automated tasks and human-driven actions work side-by-side, so teams can move quickly with confidence. Replace manual coordination with monitoring where possible to reduce human involvement. Also, set up notifications to alert teams when interaction is needed during an automation runbook.

How it works

With Cutover, teams limit operational risk when moving data, applications, or systems to the cloud and expedite the process while gaining greater control and observability.

Differentiators

- Enables an accelerated move to the cloud.
- Share up-to-date progress with team members or stakeholders through real-time dashboards with live visibility of all runbooks.
- Plan, orchestrate, and analyze everything in one place, removing the need for multiple spreadsheets, fragmented communications, and numerous coordination meetings.
- Satisfy all regulatory and compliance requirements through automated indelible audit trail gathering.

What our customers are saying

The ability to automate communications to stakeholders across the business through one system enables us to manage change consistently, reducing customer impact and increasing business confidence in a successful delivery.

-Matt Cox, Head of Insight & Innovation, Nationwide Building Society

Data Points

Move quickly with confidence and control

Work faster and smarter with automation runbooks	In automation runbooks, automated tasks and human-driven actions work side-by-side, helping to extend the value of tools you're already using. Automate time-consuming, manual tasks, and manage all your work in one place.
Dashboards provide real-time observability	Real-time automated dashboards provide Cutover users with live visibility of all their runbooks, to make it easy to share progress with team members or stakeholders.
Connect all your tools with integrations	Cutover integrates with over 20 tools including ITSM, collaboration, agile, and DevOps solutions.
In-built communications keep everyone on the same page	Embedded communications are sequenced alongside tasks, keeping all communication in one place, at hand, and in the context of the event.
Stress-free audit capabilities	All event actions are automatically captured, providing an indelible audit trail for full traceability, accountability, and compliance.
Analytics for continuous improvement	Cutover's robust analytics engine gives you the data you need to continuously improve your processes while managing risk and meeting regulatory requirements.
