Random Number Generator Certificate

Operator: NeoPoint Technologies

This is to certify that iTech Labs has evaluated the Random Number Generator (RNG) used for fixed odds games in NeoPoint's gaming system, and found that the RNG complies with the relevant UK Gambling Commission, Alderney Gambling Control Commission and iTech Labs standards.

The RNG uses a widely recognized algorithm to generate random numbers. The numbers generated by this RNG have passed Marsaglia's "diehard" tests for statistical randomness.

iTech Labs has also evaluated the scaling of the numbers. Chi-squared tests were applied to numbers for all games. The tests were conducted on 100 sets of 10 million samples for each game type. The test results have indicated statistical randomness.

The certified code for the RNG has been fingerprinted.
