Salmon Spawning Survey Open House

Date

Jan 6th, 2024

Time

10:00 AM - 2:00 PM

Contact

Kyle Farmer

kfarmer@ucanr.edu

Location

Jackson Demonstration
State Forest – Camp 1

CDFW have three monitoring stations where intensive lifecycle monitoring takes place. The data gathered there is used to inform the rest of the salmon surveying in the region.

- How many redds (egg masses) does each salmon lay?
- How many juveniles return to the same river as adults?
- What can be done to restore salmon habitat in our local rivers?

These are a few of the questions being explored by the fish biologists you will meet on a cold day in January. Informational booths will be set up to share the story behind various tools of the trade.

If we're lucky, and conditions allow, we'll have a chance to observe salmon spawning in the Little North Fork Noyo.

Registration is free but required.
