

HASA Packaged Products

HASA offers a wide range of **liquid chlorine products packaged in bulk** for recreational, industrial, and general water treatment use.

Batches are fully tested & samples are retained **to ensure consistency**

All HASA sodium hypochlorite products are packaged in **strict accordance with industry guidelines** to ensure product strength and quality.

Tamper proof caps assure product is delivered "as shipped" from HASA factory

Hasachlor®

Hasachlor® is a professional strength liquid chlorine formulated at 12.5%–25 percent stronger than liquid bleach products offered by most big box stores—and packaged in convenient 2x1 or 4x1 gallon options.

Formulated for swimming pools as a daily sanitizer or shock, Hasachlor® quickly eliminates algae, bacteria, parasites and other dangerous microorganisms.

Primary Benefit of HASA Sodium Hypochlorite

It doesn't introduce any cyanuric acid (CYA) to pools. CYA can build up over time & lower the effectiveness of chlorine against contaminants.

HASA 12.5% Liquid Chlorine Dosing

Just 10 fl. oz. added to 10,000 gallons of water will provide enough chlorine to raise a 10,000 gallon pool level to 1 part per million (ppm).

Multi-Chlor®

HASA Multi-Chlor® is a 12.5% sodium hypochlorite available for swimming pool and hot tub treatment, but also is certified to NSF 60 for drinking water chlorination.

Additional applications:

- Food processing & dishwashing
- Laundry & medical sanitization
- Mold & mildew control
- Drip irrigation
- Coolant towers
- Public water systems & more...

Gallon Drum & Tote Options

Hasachlor® and Sani-Clor® sodium hypochlorite are also available in 5, 15, 30 and 53 gallon drums for larger quantity needs and fulfillment—and 250 and 330 gallon tote sizes.

All HASA drums are certified and pressure tested before re-filling to ensure product performance—and safety.
