

Certified EKG Technician (CET)

National Standard Setting Study - Executive Summary

The Certified EKG Technician (CET) examination is designed to evaluate the knowledge and skills associated with the performance of tasks required for entry-level practice as an EKG technician. A criterion-referenced cut score was set to establish the minimum level of competency for the CET examination. A modified version of the standard setting method presented by Angoff (1971) was used to establish the cut score for this assessment. The cut score was established in 2018 by a panel of subject matter experts who evaluated whether a minimally qualified candidate would correctly respond to each item on the examination, and rating those items accordingly. This study yielded a raw cut score that was transformed to a scaled score of 390/500. Based on existing impact data, the expected pass rate for candidates at this cut score is 74.8%.
