

# JaiD

## Jaid uses AI to solve business problems.

Jaid is an AI-powered platform that reads, interprets, and organizes human, unstructured omni-channel communications. We transform these communications into a structured format that underlying systems can quickly understand and efficiently process. They are then automatically routed to the appropriate team or platform for resolution.

### AI that Automates Your Customer Service Workflows

With automated workflows and real-time, end-to-end visibility, Jaid makes existing **service teams 50% more** effective leading to happier customers and employees.
