WELCOME!

Garrett County, a healthier place to live, work, and play!

Congratulations! Our community has crafted the very first digitally responsive Community Health Improvement Plan. Creating a vision for our county and incrementally measuring our progress toward the goals we set together has created a true culture of collaboration in Garrett County. The Robert Wood Johnson Foundation recognized our efforts and has awarded Garrett County as one of the culture of health prize winners for 2017. Way to go, Garrett County!

What does this mean for you? As a community, we are addressing social risk factors that determine health in a systematic and collaborative way, ultimately leading to better health outcomes for the citizens of Garrett County.

"Our goal is to foster innovation to improve health outcomes in Garrett County."

- Bob Stephens M.S., Health Officer

This innovative new approach in public health engages the community utilizing the digital platform found at mygarrettcounty.com, which has achieved unprecedented success and dramatically increased equity!

This plan reflects your ideas, concerns, and solutions. Community feedback on such a large scale has informed measure development and prioritization, marking an important step toward ensuring that measures reflect what is most important in the daily lives of our community stakeholders.

Shelley Argabrite M.A.

Garrett County Strategic Health Planner, Author
Garrett County Health Department

Johnathon Corbin

Public Affairs Specialist/Informatician
Garrett County Health Department

HOW IT WORKS

A Data-Driven Approach to Population Health

While Garrett County, Maryland has a long established record of excellence in collaboration, the innovative and transformational community health improvement planning processes found at mygarrettcounty.com, and summarized in this document, demonstrates our greatest commitment yet toward measuring the improvements in local health outcomes for stakeholders in our community.

This innovative process originated out of the need to increase representation, improve stakeholder engagement, and create opportunities for equity to flourish. This journey began through analysis of the Garrett County 2016 Community Health Assessment, which identified four broad focus areas for our community, based on the data collected: **behavioral health** (including substance related disorders and mental health), **chronic diseases** (prioritizing modifiable risk factors, such as physical activity, nutrition, and tobacco use), **access to care and community linkages**, and **maternal, child, and adolescent health** (later revised to incorporate comprehensive family health, regardless of familial structure). While these focus areas initially guided our framework for mygarrettcounty.com, many additional community-driven insights, especially within the domain of the **social determinants of health** (also referred to as social risk factors), emerged through open and transparent digital discussions, and have gained popularity as matters of importance that are actively addressed with measurable strategies in this version of the Community Health Improvement Plan.

This transformational process offers a beacon of hope for our community's most vulnerable residents as it seeks to engage nontraditional, multisectoral partners at an unprecedented scale and works toward establishing baselines for the most vital programs, initiatives, and systems changes that ensure healthy, thriving communities.

Furthermore, this plan is the first-of-its-kind to be driven by hyper local data, collected and reported within and by our community, that is timely, actionable, specialized, attributable, and collective to ensure validity and understand interoperational connectivity. This transformational approach is the most comprehensive pivot toward data-driven decision making that our community has ever employed, and offers incalculable opportunities for collaborative strategies that seek to not only improve, but transform health outcomes for all who live, work, and play in Garrett County, Maryland.

PROJECT TIMELINE

Oct. '16	Innovative Health Planning Collaborative Developed
Nov. '16	Initial BETA Launch of the Garrett County Planning Tool (GCPT) to Primary Stakeholders
Dec. '16	Widespread Community Launch of GCPT
Feb. '17	Peak Growth Phase as Nontraditional Community Stakeholders are Onboarded
June '17	Measurement Framework Process Begins and the GCPT Achieves National Status as Innovative Practice with Funding from PHNCI & RWJF
Sep. '17	Rural Data Infrastructure Planning
March '18	CHIP Dash Launched and Document Published
April '18	Integrated Population Health Implementation

INNOVATION VISION

The *BIG* Picture

The Garrett County Planning Tool, found at mygarrettcounty.com, was created with the intention to guide our community as we built a local, data-informed vision from our current needs by meaningfully and transparently engaging all residents.

This vision becomes actionable through the planning tool framework providing the platform for the creation of a comprehensive and responsive Community Health Improvement Plan.

Demonstrating high performance through accountability and credibility is an especially important element for health departments initially seeking or maintaining public health accreditation and is essential to sustaining a robust public health system that is responsive to the needs of all residents.

"Culture of Health Prize communities have inspired hope across the country."

- Richard Besser .MD., RWJF Presesident and CEO

This framework guides stakeholders through the process of creating a measurement framework to ensure that the strategies they implement to improve health in our community have metrics that specifically align with desirable population health outcomes identified as strategic priorities through our Community Health Assessment. The ultimate goal being that the specific strategies, measured as ***hyper local data***, become the primary method of program attribution.

Meaningful, transparent measurements establish unprecedented levels of accountability and commitment by community agencies and stakeholders to work collectively toward eliminating health disparities and develop equity, while propelling Garrett County toward transforming into the healthiest community to live, work, and play in the state of Maryland.

THINGS YOU NEED TO KNOW

This Community Health Improvement Plan (CHIP) is unlike any other our community has ever had access to in the past. This plan is living, and constantly being revised, updated, and worked on at mygarrettcounty.com, where anyone who lives, works, or plays in Garrett County has an opportunity to participate in the planning and implementation processes.

Due to the dynamic nature of this CHIP, ***snapshots*** are taken quarterly for comparison of performance measures over time, and to correlate our collective efforts in working toward improved health outcomes for Garrett County.

"While other plans may be static documents that don't change for several years, this CHIP is an innovative step toward creating living processes that ensure the best outcomes for all of our community's stakeholders. The more successful our planning processes are, the more likely this document is to change and grow over time as we work to make Garrett County the healthiest community in the state of Maryland."

- Shelley Argabrite M.A., Strategic Health Planner

Every strategy that the CHIP measures lives in a group on my mygarrettcounty.com, where transparent, collaborative planning occurs. This innovative process is open 24/7 to make it easy for people to participate at their convenience and improves community engagement. After all, community improvement initiatives are most successful when we're able to work together. So merge your passions with our purpose, and join groups today to make Garrett County a healthier place to live, work, and play tomorrow!

STRATEGIES TO IMPROVE HEALTH

The following strategies have been proposed for the first time ever in the transparent workspace on mygarrettcounty.com, working with a variety of multisectoral partners in efforts to drastically change health outcomes in Garrett County through the highest degree of collaboration that we've ever been able to measure.

You may notice in future iterations of this plan that data points may change and strategies may be improved as we work to become more responsive to the community. While this printed plan is a convenient carry along, we encourage everyone to utilize the digital edition at mygarrettcounty.com to always have access to the most up-to-date information, and have plentiful opportunities to participate in the implementation and refinement of these strategies, or propose new ones as health priorities change and evolve over time. We'll see you on mygarrettcounty.com, and look forward to improved health outcomes in 2020!
