Notes to table:

1. The waste descriptions provided in this table do not replace waste descriptions in chapter 33.1-24-02. Descriptions of treatment/regulatory subcategories are provided, as needed, to distinguish between applicability of different standards.
2. CAS means chemical abstract services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.
3. Concentration standards for wastewaters are expressed in mg/l and are based on analysis of composite samples.
4. All treatment standards expressed as a technology code or combination of technology codes are explained in detail in section 33.1-24-05-282 Table 1 - Technology Codes and Descriptions of Technology-Based Standards.
5. Except for metals (extraction procedure or toxicity characteristic leaching procedure) and cyanides (total and amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based upon incineration in units operated in accordance with the technical requirements of sections 33.1-24-05-144 through 33.1-24-05-159 or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in subsection 4 of section 33.1-24-05-280. All concentration standards for nonwastewaters are based on analysis of grab samples.
6. Where an alternate treatment standard or set of alternate standards has been indicated, a facility may comply with this alternate standard, but only for the treatment/regulatory subcategory or physical form (for example, wastewater and/or nonwastewater) specified for that alternate standard.
7. Both cyanides (total) and cyanides (amenable) for nonwastewaters are to be analyzed using method 9010C or 9012B, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05, with a sample size of ten grams and a distillation time of one hour and fifteen minutes.
8. These wastes, when rendered nonhazardous and then subsequently managed in Clean Water Act or Clean Water Act-equivalent systems, are not subject to treatment standards. (See subdivisions c and d of subsection 3 of section 33.1-24-05-250.)
9. These wastes, when rendered nonhazardous and then subsequently injected in a class I Safe Drinking Water Act well are not subject to treatment standards. (See 40 CFR section 148.1(d).)
10. The treatment standard for this waste may be satisfied by either meeting the constituent concentrations in this table or by treating the waste by the specified technologies: combustion, as defined by the technology code CMBST in table 1 in section 33.1-24-05-282, for nonwastewaters; and, biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined by the technology code CMBST in table 1 of section 33.1-24-05-282, for wastewaters.
11. For these wastes, the definition of CMBST is limited to: (1) combustion units operating under sections 33.1-24-05-201 through 33.1-24-05-249, (2) combustion units permitted under sections 33.1-24-05-144 through 33.1-24-05-159, or (3) combustion units operating under the applicable standards of subsection 5 of section 33.1-24-06-16, which have obtained a determination of equivalent treatment under subsection 2 of section 33.1-24-05-282.
12. Disposal of K175 wastes that have complied with all applicable section 33.1-24-05-280 treatment standards must also be macroencapsulated in accordance with section 33.1-24-05-285 table 1 unless the waste is placed in: (1) a monofill regulated under article 33.1-20 containing only K175 wastes that meet all applicable section 33.1-24-05-280 treatment standards; or (2) a dedicated landfill cell regulated under article 33.1-20 in which all other wastes being codisposed are at pH 6.0 or less.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-281. Treatment standards expressed as concentration in waste extract.

For the requirements previously found in this section and for treatment standards in table CCWE-Constituent Concentrations in Waste Extracts, refer to section 33.1-24-05-280.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-282. Treatment standards expressed as specified technologies.

NOTE: For the requirements previously found in this section in Table 2 - Technology-Based Standards By Resource Conservation Recovery Act Waste Code, and Table 3 - Technology-Based Standards for Specific Radioactive Hazardous Mixed Waste, refer to section 33.1-24-05-280.

1. The following wastes in the table in section 33.1-24-05-280 "Treatment Standards for Hazardous Wastes", for which standards are expressed as a treatment method rather than a concentration level, must be treated using the technology or technologies specified in the table entitled "Technology Codes and Description of Technology-Based Standards" in this section.

Table 1. Technology Codes and Description of Technology-Based Standards

<u>Technology Code</u>	<u>Description of Technology-Based Standards</u>
<u>ADGAS:</u>	<u>Venting of compressed gases into an absorbing or reacting media (for example, solid or liquid) venting can be accomplished through physical release utilizing valves/piping, physical penetration of the container, and/or penetration through detonation.</u>
<u>AMLGM:</u>	<u>Amalgamation of liquid, elemental mercury contaminated with radioactive materials utilizing inorganic reagents, such as copper, zinc, nickel, gold, and sulfur that result in a nonliquid, semi-solid amalgam and thereby reducing potential emissions of elemental mercury vapors to the air.</u>
<u>BIODG:</u>	<u>Biodegradation of organics or nonmetallic inorganics (for example, degradable inorganics that contain the elements of phosphorus, nitrogen, and sulfur) in units operated under either aerobic or anaerobic conditions such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (for example, total organic carbon can often be used as an indicator parameter for the biodegradation of many organic constituents that cannot be directly analyzed in wastewater residues).</u>
<u>CARBN:</u>	<u>Carbon adsorption (granulated or powdered) of nonmetallic inorganics, organo-metallics, and/or organic constituents, operated such that a surrogate compound or indicator parameter has not undergone breakthrough (for example, total organic carbon can often be used as an indicator parameter for the adsorption of many organic constituents that cannot be directly analyzed in wastewater residues). Breakthrough occurs when the carbon has become saturated with the constituent (or indicator parameter) and substantial change in adsorption rate associated with that constituent occurs.</u>

Table 1. Technology Codes and Description of Technology-Based Standards

<u>Technology Code</u>	<u>Description of Technology-Based Standards</u>
<u>CHOXD:</u>	<u>Chemical or electrolytic oxidation utilizing the following oxidation reagents (or waste reagents) or combinations of reagents: (1) hypochlorite (e.g. bleach); (2) chlorine; (3) chlorine dioxide; (4) ozone or UV-assisted ozone; (5) peroxides; (6) persulfates; (7) perchlorates; (8) permangantes; and/or (9) other oxidizing reagents of equivalent efficiency, performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (for example, total organic carbon can often be used as an indicator parameter for the oxidation of many organic constituents that cannot be directly analyzed in wastewater residues). Chemical oxidation specifically includes what is commonly referred to as alkaline chlorination.</u>
<u>CHRED:</u>	<u>Chemical reduction utilizing the following reducing reagents (or waste reagents) or combinations of reagents: (1) sulfur dioxide; (2) sodium, potassium, or alkali salts or sulfites, bisulfites, metabisulfites, and polyethylene glycols (for example, NaPEG and KPEG); (3) sodium hydrosulfide; (4) ferrous salts; and/or (5) other reducing reagents of equivalent efficiency, performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (for example, total organic halogens can often be used as an indicator parameter for the reduction of many halogenated organic constituents that cannot be directly analyzed in wastewater residues). Chemical reduction is commonly used for the reduction of hexavalent chromium to the trivalent state.</u>
<u>CMBST:</u>	<u>High temperature organic destruction technologies, such as combustion in incinerators, boilers, or industrial furnaces operated in accordance with the applicable requirements of sections 33.1-24-05-144 through 33.1-24-05-159, sections 33.1-24-05-525 through 33.1-24-05-549, or subsection 5 of section 33.1-24-06-16, and in other units operated in accordance with applicable technical operating requirements; and certain noncombustive technologies, such as the catalytic extraction process.</u>
<u>DEACT:</u>	<u>Deactivation to remove the hazardous characteristics of a waste due to its ignitability, corrosivity, and/or reactivity.</u>
<u>FSUBS:</u>	<u>Fuel substitution in units operated in accordance with applicable technical operating requirements.</u>
<u>HLVIT:</u>	<u>Vitrification of high level mixed radioactive wastes in units in compliance with all applicable radioactive protection requirements under control of the Nuclear Regulatory Commission.</u>
<u>IMERC:</u>	<u>Incineration of wastes containing organics and mercury in units operated in accordance with the technical operating requirements of sections 33.1-24-05-144 through 33.1-24-05-159. All wastewater and nonwastewater residues derived from this process must then comply with the corresponding treatment standards per waste code with consideration of any applicable subcategories (for example, high or low mercury subcategories).</u>
<u>INCIN:</u>	<u>Incineration in units operated in accordance with the technical operating requirements of sections 33.1-24-05-144 through 33.1-24-05-159.</u>

Table 1. Technology Codes and Description of Technology-Based Standards

<u>Technology Code</u>	<u>Description of Technology-Based Standards</u>
<u>LLEXT:</u>	<u>Liquid-liquid extraction (often referred to as solvent extraction) of organics from liquid wastes into an immiscible solvent for which the hazardous constituents have a greater solvent affinity, resulting in an extract high in organics that must undergo either incineration, reuse as a fuel, or other recovery/reuse and a raffinate (extracted liquid waste) proportionately low in organics that must undergo further treatment as specified in the standard.</u>
<u>MACRO:</u>	<u>Macroencapsulation with surface coating materials such as polymeric organics (e.g. resins and plastics) or with a jacket of inert inorganic materials to substantially reduce surface exposure to potential leaching media. Macroencapsulation specifically does not include any material that would be classified as a tank or container according to section 33.1-24-01-04.</u>
<u>NEUTR:</u>	<u>Neutralization with the following reagents (or waste reagents) or combinations of reagents: (1) acids; (2) bases; or (3) water (including wastewaters) resulting in a pH greater than 2 but less than 12.5 as measured in the aqueous residuals.</u>
<u>NLDBR:</u>	<u>No land disposal based on recycling.</u>
<u>POLYM:</u>	<u>Formation of complex high-molecular weight solids through polymerization of monomers in high-total organic carbon D001 nonwastewaters which are chemical components in the manufacture of plastics.</u>
<u>PRECP:</u>	<u>Chemical precipitation of metals and other inorganics as insoluble precipitates of oxides, hydroxides, carbonates, sulfides, sulfates, chlorides, flourides, or phosphates. The following reagents (or waste reagents) are typically used alone or in combination: (1) lime (for example, containing oxides and/or hydroxides of calcium and/or magnesium); (2) caustic (for example, sodium and/or potassium hydroxides); (3) soda ash (for example, sodium carbonate); (4) sodium sulfide; (5) ferric sulfate or ferric chloride; (6) alum; or (7) sodium sulfate. Additional flocculating, coagulation, or similar reagents/processes that enhance sludge dewatering characteristics are not precluded from use.</u>
<u>RBERY:</u>	<u>Thermal recovery of Beryllium.</u>
<u>RCGAS:</u>	<u>Recovery/reuse of compressed gases, including techniques such as reprocessing of the gases for reuse/resale; filtering/adsorption of impurities; remixing for direct reuse or resale; and use of the gas as a fuel source.</u>
<u>RCORR:</u>	<u>Recovery of acids or bases utilizing one or more of the following recovery technologies: (1) distillation (for example, thermal concentration); (2) ion exchange; (3) resin or solid adsorption; (4) reverse osmosis; and/or (5) incineration for the recovery of acid - Note: This does not preclude the use of other physical phase separation or concentration techniques, such as decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.</u>
<u>RLEAD:</u>	<u>Thermal recovery of lead in secondary lead smelters.</u>

Table 1. Technology Codes and Description of Technology-Based Standards

<u>Technology Code</u>	<u>Description of Technology-Based Standards</u>
<u>RMERC:</u>	<u>Retorting or roasting in a thermal processing unit capable of volatilizing mercury and subsequently condensing the volatilized mercury for recovery. The retorting or roasting unit (or facility) must be subject to one or more of the following: (a) a National Emissions Standard for Hazardous Air Pollutants (NESHAP) for mercury; (b) a Best Available Control Technology (BACT) or a Lowest Achievable Emission Rate (LAER) standard for mercury imposed pursuant to a Prevention of Significant Deterioration (PSD) permit; or (c) a state permit that establishes emission limitations (within meaning of section 302 of the Clean Air Act) for mercury. All wastewater and nonwastewater residues derived from this process must then comply with the corresponding treatment standards per waste code with consideration of any applicable subcategories (for example, high or low mercury subcategories).</u>
<u>RMETL:</u>	<u>Recovery of metals or inorganics utilizing one or more of the following direct physical/removal technologies: (1) ion exchange; (2) resin or solid (for example, zeolites) adsorption; (3) reverse osmosis; (4) chelation/solvent extraction; (5) freeze crystallization; (6) ultrafiltration; and/or (7) simple precipitation (for example, crystallization) - Note: This does not preclude the use of other physical phase separation or concentration techniques, such as decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.</u>
<u>RORGS:</u>	<u>Recovery of organics utilizing one or more of the following technologies: (1) Distillation; (2) thin film evaporation; (3) steam stripping; (4) carbon adsorption; (5) critical fluid extraction; (6) liquid-liquid extraction; (7) precipitation/crystallization (including freeze crystallization); or (8) chemical phase separation techniques (for example, addition of acids, bases, demulsifiers, or similar chemicals) - Note: This does not preclude the use of other physical phase separation techniques, such as a decantation, filtration (including ultrafiltration), and centrifugation, when used in conjunction with the above listed recovery technologies.</u>
<u>RTHRM:</u>	<u>Thermal recovery of metals or inorganics from nonwastewaters in units identified as industrial furnaces according to subdivisions a, f, g, k, and l of subsection 45 of section 33.1-24-01-04 under the definition of "industrial furnaces".</u>
<u>RZINC:</u>	<u>Resmelting in high temperature metal recovery units for the purpose of recovery of zinc.</u>
<u>STABL:</u>	<u>Stabilization with the following reagents (or waste reagents) or combinations of reagents: (1) Portland cement; or (2) lime/pozzolans (for example, fly ash and cement kiln dust) - This does not preclude the addition of reagents (for example, iron salts, silicates, and clays) designed to enhance the set/cure time and/or compressive strength, or to overall reduce the leachability of the metal or inorganic.</u>
<u>SSTRP:</u>	<u>Steam stripping of organics from liquid wastes utilizing direct application of steam to the wastes operated such that liquid and vapor flow rates, as well as temperature and pressure ranges, have been optimized, monitored, and maintained. These operating parameters are dependent upon the design parameters of the unit, such as the number of</u>

Table 1. Technology Codes and Description of Technology-Based Standards

<u>Technology Code</u>	<u>Description of Technology-Based Standards</u>
	<u>separation stages and the internal column design, thus resulting in a condensed extract high in organics that must undergo either incineration, reuse as a fuel, or other recovery/reuse and an extracted wastewater that must undergo further treatment as specified in the standard.</u>
<u>WETOX:</u>	<u>Wet air oxidation performed in units operated such that a surrogate compound or indicator parameter has been substantially reduced in concentration in the residuals (for example, total organic carbon can often be used as an indicator parameter for the oxidation of many organic constituents that cannot be directly analyzed in wastewater residues).</u>
<u>WTRRX:</u>	<u>Controlled reaction with water for highly reactive inorganic or organic chemicals with precautionary controls for protection of workers from potential violent reactions as well as precautionary controls for potential emissions of toxic/ignitable levels of gases released during the reaction.</u>

Note 1: When a combination of these technologies (for example, a treatment train) is specified as a single treatment standard, the order of application is specified in section 33.1-24-05-282, table 2 by indicating the five letter technology code that must be applied first, then the designation "fb" (an abbreviation for "followed by"), then the five letter technology code for the technology that must be applied next, and so on.

Note 2: When more than one technology (or treatment train) are specified as alternative treatment standards, the five letter technology codes (or the treatment trains) are separated by a semicolon(;) with the last technology preceded by the word "or". This indicates that any one of these best demonstrated available technologies or treatment trains can be used for compliance with the standard.

2. Any person may submit an application to the administrator demonstrating that an alternative treatment method can achieve a measure of performance equivalent to that achieved by methods specified in subsections 1, 3, and 4 for wastes or specified in table 1 of section 33.1-24-05-285 for hazardous debris. The applicant must submit information demonstrating that the applicant's treatment method is in compliance with federal, state, and local requirements and is protective of human health and the environment. On the basis of such information and any other available information, the administrator may approve the use of the alternative treatment method if the administrator finds that the alternative treatment method provides a measure of performance equivalent to that achieved by methods specified in subsections 1, 3, and 4 for wastes or in table 1 of section 33.1-24-05-285 for hazardous debris. Any approval must be stated in writing and may contain such provisions and conditions as the administrator deems appropriate. The person to whom such approval is issued must comply with all limitations contained in such a determination.
3. As an alternative to the otherwise applicable sections 33.1-24-05-280 through 33.1-24-05-289 treatment standards, lab packs are eligible for land disposal provided the following requirements are met:
 - a. The lab packs comply with the applicable provisions of section 33.1-24-05-185;
 - b. The lab pack does not contain any of the wastes listed in appendix VIII of chapter 33.1-24-05;

- c. The lab packs are incinerated in accordance with the requirements of sections 33.1-24-05-144 through 33.1-24-05-159; and
 - d. Any incinerator residues from lab packs containing D004, D005, D006, D007, D008, D010, and D011 are treated in compliance with the applicable treatment standards specified for such wastes in sections 33.1-24-05-280 through 33.1-24-05-289.
4. Radioactive hazardous mixed wastes are subject to the treatment standards in section 33.1-24-05-280. Where treatment standards are specified for radioactive mixed wastes in the Table of Treatment Standards, those treatment standards will govern. Where there is no specific treatment standard for radioactive mixed waste, the treatment standard for the hazardous waste (as designated by environmental protection agency/state waste code) applies. Hazardous debris containing radioactive waste is subject to the treatment standards specified in section 33.1-24-05-285.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-283. Treatment standards expressed as waste concentrations.

For the requirements previously found in this section and for treatments standards in table CCW - Constituent Concentrations in Wastes, refer to section 33.1-24-05-280.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-284. Variance from a treatment standard.

1. Based on a petition filed by a generator or treater of hazardous waste, the administrator may approve a variance from an applicable treatment standard if:
 - a. It is not physically possible to treat the waste to the level specified in the treatment standard, or by the method specified as the treatment standard. To show this is the case, the petitioner must demonstrate that because the physical or chemical properties of the waste differ significantly from waste analyzed in developing the treatment standard, the waste cannot be treated to the specified level or by the specified method; or
 - b. It is inappropriate to require the waste to be treated to the level specified in the treatment standard or by the method specified as the treatment standard, even though such treatment is technically possible. To show this is the case, the petitioner must either demonstrate that:
 - (1) Treatment to the specified level or by the specified method is technically inappropriate (for example, resulting in combustion of large amounts of mildly contaminated environmental media); or
 - (2) For remediation waste only, treatment to the specified level, or by the specified method is environmentally inappropriate because it would likely discourage aggressive remediation.
2. Each petition must be submitted in accordance with the procedures in section 33.1-24-01-06.
3. These petitions must include the following statement signed by the petitioner or an authorized representative: I certify under penalty of law that I have personally examined and am familiar with the information submitted in this petition and all attached documents, and that, based on

my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

4. After receiving a petition for variance from a treatment standard, the administrator may request any additional information or samples which the administrator may require to evaluate the petition. Additional copies of the complete petition may be requested as needed to send to affected states and to the environmental protection agency regional offices.

5. The administrator will give public notice in the federal register of the intent to approve or deny a petition and provide an opportunity for public comment. The final decision on a variance from a treatment standard will be published in the federal register.

6. A generator, treatment facility, or disposal facility that is managing a waste covered by a variance from the treatment standards shall comply with the waste analysis requirements for restricted wastes found under section 33.1-24-05-256.

7. During the petition review process, an applicant is required to comply with all restrictions on land disposal under sections 33.1-24-05-250 through 33.1-24-05-299 once the effective date for the waste has been reached.

8. Based on a petition filed by a generator or treater of hazardous waste, the administrator, or the administrator's delegated representative, may approve a site-specific variance from an applicable treatment standard if:

a. It is not physically possible to treat the waste to the level specified in the treatment standard, or by the method specified as the treatment standard. To show that this is the case, the petitioner must demonstrate that because the physical or chemical properties of the waste differ significantly from waste analyzed in developing the treatment standard, the waste cannot be treated to the specified level or by the specified method; or

b. It is inappropriate to require the waste to be treated to the level specified in the treatment standard or by the method specified as the treatment standard, even though such treatment is technically possible. To show that this is the case, the petitioner must either demonstrate that:

(1) Treatment to the specified level or by the specified method is technically inappropriate (for example, resulting in combustion of large amounts of mildly contaminated environmental media when the treatment standard is not based on combustion of such media); or

(2) For remediation waste only, treatment to the specified level or by the specified method is environmentally inappropriate because it would likely discourage aggressive remediation.

c. For contaminated soil only, treatment to the level or by the method specified in the soil treatment standards would result in concentrations of hazardous constituents that are below (for example, lower than) the concentrations necessary to minimize short- and long-term threats to human health and the environment. Treatment variances approved under this subsection must:

(1) At a minimum, impose alternative land disposal restriction treatment standards that, using a reasonable maximum exposure scenario:

(a) For carcinogens, achieve constituent concentrations that result in the total excess risk to an individual exposed over a lifetime generally falling within a range from 10⁻⁴ to 10⁻⁶; and

(b) For constituents with noncarcinogenic effects, achieve constituent concentrations that an individual could be exposed to on a daily basis without appreciable risk of deleterious effect during a lifetime.

(2) Not consider post-land-disposal controls.

d. For contaminated soil only, treatment to the level or by the method specified in the soil treatment standards would result in concentrations of hazardous constituents that are below (for example, lower than) natural background concentrations at the site where the contaminated soil will be land disposed.

e. Public notice and reasonable opportunity for public comment must be provided before granting or denying a petition.

9. Each application for a site-specific variance from a treatment standard must include the information in subdivisions a through d of subsection 2 of section 33.1-24-01-06.

10. After receiving an application for a site-specific variance from a treatment standard, the assistant administrator, or a delegated representative, may request any additional information or samples which may be required to evaluate the application.

11. A generator, treatment facility, or disposal facility that is managing a waste governed by a site-specific variance from a treatment standard must comply with the waste analysis requirements for restricted wastes found under section 33.1-24-05-256.

12. During the application review process, the applicant for a site-specific variance must comply with all restrictions on land disposal under sections 33.1-24-05-250 through 33.1-24-05-299 once the effective date for the waste has been reached.

13. For all variances, the petitioner must also demonstrate that compliance with any given treatment variance is sufficient to minimize threats to human health and the environment posed by land disposal of the waste. In evaluating this demonstration, the environmental protection agency may take into account whether a treatment variance should be approved if the subject waste is to be used in a manner constituting disposal pursuant to sections 33.1-24-05-201 through 33.1-24-05-209.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-285. Treatment standards for hazardous debris.

1. Treatment standards. Hazardous debris must be treated prior to land disposal as follows unless the department determines under subdivision b of subsection 5 of section 33.1-24-02-03 that the debris is no longer contaminated with hazardous waste or the debris is treated to the waste-specific treatment standard provided in sections 33.1-24-05-280 through 33.1-24-05-289 for the waste contaminating the debris.

a. General. Hazardous debris must be treated for each "contaminant subject to treatment" defined by subsection 2 using the technology or technologies identified in table 1 of this section.

b. Characteristic debris. Hazardous debris that exhibits the characteristic of ignitability, corrosivity, or reactivity identified under sections 33.1-24-02-11, 33.1-24-02-12, and 33.1-24-02-13, respectively, must be deactivated by treatment using one of the technologies identified in table 1 of this section.

c. Mixtures of debris types. The treatment standards of table 1 in this section must be achieved for each type of debris contained in a mixture of debris types. If an immobilization technology is used in a treatment train, it must be the last treatment technology used.

d. Mixtures of contaminant types. Debris that is contaminated with two or more contaminants subject to treatment identified under subsection 2 must be treated for each contaminant using one or more treatment technologies identified in table 1 of this section. If an immobilization technology is used in a treatment train, it must be the last treatment technology used.

e. Waste polychlorinated biphenyls. Hazardous debris that is also a waste polychlorinated biphenyl under 40 CFR part 761 is subject to the requirements of either 40 CFR part 761 or the requirements of this section, whichever are more stringent.

2. Contaminants subject to treatment. Hazardous debris must be treated for each "contaminant subject to treatment". The contaminants subject to treatment must be determined as follows:

a. Toxicity characteristic debris. The contaminants subject to treatment for debris that exhibits the toxicity characteristic by section 33.1-24-02-14 are those extraction procedure constituents (hazardous waste numbers D004 through D017) for which the debris exhibits the toxicity characteristic.

b. Debris contaminated with listed waste. The contaminants subject to treatment for debris that is contaminated with a prohibited listed hazardous waste are those constituents or wastes for which treatment standards are established for waste under section 33.1-24-05-280.

c. Cyanide reactive debris. Hazardous debris that is reactive because of cyanide must be treated for cyanide.

3. Conditioned exclusion of treated debris. Hazardous debris that has been treated using one of the specified extraction or destruction technologies in table 1 of this section and that does not exhibit a characteristic of hazardous waste identified under sections 33.1-24-02-10 through 33.1-24-02-14 after treatment is not a hazardous waste and need not be managed in a hazardous waste facility. Hazardous debris contaminated with a listed waste that is treated by an immobilization technology specified in table 1 is a hazardous waste and must be managed in a hazardous waste facility.

4. Treatment residuals.

a. General requirements. Except as provided by subdivisions b and d:

(1) Residue from the treatment of hazardous debris must be separated from the treated debris using simple physical or mechanical means; and

(2) Residue from the treatment of hazardous debris is subject to the waste-specific treatment standards provided by sections 33.1-24-05-280 through 33.1-24-05-289 for the waste contaminating the debris.

b. Nontoxic debris. Residue from the deactivation of ignitable, corrosive, or reactive characteristic hazardous debris (other than cyanide-reactive) that is not contaminated

with a contaminant subject to treatment defined by subsection 2, must be deactivated prior to land disposal and is not subject to the waste-specific treatment standards of sections 33.1-24-05-280 through 33.1-24-05-289.

c. Cyanide-reactive debris. Residue from the treatment of debris that is reactive because of cyanide must meet the treatment standards for D003 in "treatment standards for hazardous wastes" at section 33.1-24-05-280.

d. Ignitable nonwastewater residue. Ignitable nonwastewater residue containing equal to or greater than ten percent total organic carbon is subject to the technology specified in the treatment standard for D001: ignitable liquids.

e. Residue from spalling. Layers of debris removed by spalling are hazardous debris that remain subject to the treatment standards of this section.

Table 1. Alternative Treatment Standards for Hazardous Debris¹

<u>Technology Description</u>	<u>Performance and/or Design and Operating Standard</u>	<u>Contaminant Restrictions²</u>
<u>A. Extraction Technologies:</u>		
<u>1. Physical Extraction</u>		
<u>a. Abrasive Blasting: Removal of contaminated debris surface layers using water and/or air pressure to propel a solid media (for example, steel shot, aluminum oxide grit, plastic beads).</u>	<u>Glass, Metal, Plastic, Rubber: Treatment to a clean debris surface.³</u> <u>Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Removal of at least 0.6 cm of the surface layer; treatment to a clean debris surface.³</u>	<u>All Debris: None.</u>
<u>b. Scarification, Grinding, and Planing: Process utilizing striking piston heads, saws, or rotating grinding wheels such that contaminated debris surface layers are removed.</u>	<u>Same as above.</u>	<u>Same as above.</u>
<u>c. Spalling: Drilling or chipping holes at appropriate locations and depth in the contaminated debris surface and applying a tool which exerts a force on the sides of those holes such that the surface layer is removed. The surface layer removed remains hazardous debris subject to the debris treatment standards.</u>	<u>Same as above.</u>	<u>Same as above.</u>
<u>d. Vibratory Finishing: Process utilizing scrubbing media, flushing fluid, and oscillating energy such that hazardous contaminants or contaminated debris surface layers are removed.⁴</u>	<u>Same as above.</u>	<u>Same as above.</u>

Table 1. Alternative Treatment Standards for Hazardous Debris¹

Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
<p>e. High Pressure Steam and Water Sprays: Application of water or steam sprays of sufficient temperature, pressure, residence time, agitation, surfactants, and detergents to remove hazardous contaminants from debris surfaces or to remove contaminated debris surface layers.</p>	<p>Same as above.</p>	<p>Same as above.</p>
<p>2. Chemical Extraction</p>		
<p>a. Water Washing and Spraying: Application of water sprays or water baths of sufficient temperature, pressure, residence time, agitation, surfactants, acids, bases, and detergents to remove hazardous contaminants from debris surfaces and surface pores or to remove contaminated debris surface layers.</p>	<p>All Debris: Treatment to a clean debris surface³: Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Debris must be no more than 1.2 cm (1/2 inch) in one dimension (for example, thickness limit,⁵ except that this thickness limit may be waived under an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282;⁸ debris surfaces must be in contact with water solution for at least 15 minutes.</p>	<p>Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Contaminant must be soluble to at least 5% by weight in water solution or 5% by weight in emulsion; if debris is contaminated with a dioxin-listed waste,⁶ and "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282 must be obtained.⁸</p>
<p>b. Liquid Phase Solvent Extraction: Removal of hazardous contaminants from debris surfaces and surface pores by applying a nonaqueous liquid or liquid solution which causes the hazardous contaminants to enter the liquid phase and be flushed away from the debris along with the liquid or liquid solution while using appropriate agitation, temperature, and residence time.⁴</p>	<p>Same as above.</p>	<p>Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Same as above, except that contaminant must be soluble to at least 5% by weight in the solvent.</p>
<p>c. Vapor Phase Solvent Extraction: Application of an organic vapor using sufficient agitation, residence time, and temperature to cause hazardous contaminants on contaminated debris surfaces and surface pores to enter the vapor phase and be flushed away with the organic vapor.⁴</p>	<p>Same as above, except that brick, cloth, concrete, paper, pavement, rock, and wood surfaces must be in contact with the organic vapor for at least 60 minutes.</p>	<p>Same as above.</p>
<p>3. Thermal Extraction</p>		

Table 1. Alternative Treatment Standards for Hazardous Debris¹

Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
<p>a. <u>High Temperature Metals Recovery: Application of sufficient heat, residence time, mixing, fluxing agents, and/or carbon in a smelting, melting, or refining furnace to separate metals from debris.</u></p>	<p><u>For refining furnaces, treated debris must be separated from treatment residuals using simple physical or mechanical means,⁹ and, prior to further treatment, such residuals must meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.</u></p>	<p><u>Debris contaminated with a dioxin-listed waste:⁵ Obtain an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282.⁸</u></p>
<p>b. <u>Thermal Desorption: Heating in an enclosed chamber under either oxidizing or nonoxidizing atmospheres at sufficient temperature and residence time to vaporize hazardous contaminants from contaminated surfaces and surface pores and to remove the contaminants from the heating chamber in a gaseous exhaust gas.⁷</u></p>	<p><u>All Debris: Obtain an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282;⁸ treated debris must be separated from treatment residuals using simple physical or mechanical means,⁹ and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.</u></p>	<p><u>All Debris: Metals other than mercury.</u></p>
<p><u>B. Destruction Technologies:</u></p>	<p><u>Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Debris must be no more than 10 cm (4 inches) in one dimension (for example, thickness limit),⁵ except that this thickness limit may be waived under the "Equivalent Technology" approval.</u></p>	
<p><u>1. Biological Destruction (Biodegradation): Removal of hazardous contaminants from debris surfaces and surface pores in an aqueous solution and biodegradation of organic or nonmetallic inorganic compounds (for example, inorganics that contain phosphorus, nitrogen, or sulfur) in units operated under either aerobic or anaerobic conditions.</u></p>	<p><u>All Debris: Obtain an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282;⁸ treated debris must be separated from treatment residuals using simple physical or mechanical means,⁹ and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.</u></p>	<p><u>All Debris: Metal contaminants.</u></p>
	<p><u>Brick, Cloth, Concrete, Paper,</u></p>	

Table 1. Alternative Treatment Standards for Hazardous Debris¹

Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
2. Chemical Destruction	<p><u>Pavement, Rock, Wood: Debris must be no more than 1.2 cm (1/2 inch) in one dimension (for example, thickness limit),⁵ except that this thickness limit may be waived under the "Equivalent Technology" approval.</u></p>	
<p><u>a. Chemical Oxidation: Chemical or electrolytic oxidation utilizing the following oxidation reagents (or waste reagents) or combination of reagents: (1) hypochlorite (for example, bleach); (2) chlorine; (3) chlorine dioxide; (4) ozone or UV (ultraviolet light) assisted ozone; (5) peroxides; (6) persulfates; (7) perchlorates; (8) permanganates; and/or (9) other oxidizing reagents of equivalent destruction efficiency.⁴ Chemical oxidation specifically includes what is referred to as alkaline chlorination.</u></p>	<p><u>All Debris: Obtain an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282;⁸ treated debris must be separated from treatment residuals using simple physical or mechanical means,⁹ and, prior to further treatment, such residue must meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.</u></p> <p><u>Brick, Cloth, Concrete, Paper, Pavement, Rock, Wood: Debris must be no more than 1.2 cm (1/2 inch) in one dimension (for example, thickness limit),⁵ except that this thickness limit may be waived under the "Equivalent Technology" approval.</u></p>	<p><u>All Debris: Metal contaminants.</u></p>
<p><u>b. Chemical Reduction: Chemical reaction utilizing the following reducing reagents (or waste reagents) or combination of reagents: (1) sulfur dioxide; (2) sodium, potassium, or alkali salts of sulfites, bisulfites, and metabisulfites, and polyethylene glycols (for example, NaPEG and KPEG); (3) sodium hydrosulfide; (4) ferrous salts; and/or (5) other reducing reagents of equivalent efficiency.⁴</u></p>	<p><u>Save as above.</u></p>	<p><u>Same as above.</u></p>
<p><u>3. Thermal Destruction: Treatment in an incinerator operating in accordance with sections 33.1-24-05-144 through 33.1-24-05-159 or subpart O of</u></p>	<p><u>Treated debris must be separated from treatment residuals using simple physical or mechanical means,⁹ and, prior to further treatment, such residue must</u></p>	<p><u>Brick, Concrete, Glass, Metal, Pavement, Rock, Metal: Metals other than mercury, except that there are no metal restrictions for</u></p>

Table 1. Alternative Treatment Standards for Hazardous Debris¹

Technology Description	Performance and/or Design and Operating Standard	Contaminant Restrictions ²
<p>40 CFR 265; a boiler or industrial furnace operating in accordance with sections 33.1-24-05-525 through 33.1-24-05-549, or other thermal treatment unit operated in accordance with sections 33.1-24-05-299 through 33.1-24-05-399, or subpart P, Part 265 of the 40 CFR, but excluding for purposes of these debris treatment standards Thermal Desorption units.</p>	<p>meet the waste-specific treatment standards for organic compounds in the waste contaminating the debris.</p>	<p>vitrification. Debris contaminated with a dioxin-listed waste.⁶ Obtain an "Equivalent Technology" approval under subsection 2 of section 33.1-24-05-282,⁸ except that this requirement does not apply to vitrification.</p>
<p>C. Immobilization Technologies:</p>		
<p>1. Macroencapsulation: Application of surface coating materials, such as polymeric organics (for example, resins and plastics) or use of a jacket of inert inorganic materials to substantially reduce surface exposure to potential leaching media.</p>	<p>Encapsulating material must completely encapsulate debris and be resistant to degradation by the debris and its contaminants and materials into which it may come into contact after placement (leachate, other waste, microbes).</p>	<p>None.</p>
<p>2. Microencapsulation: Stabilization of the debris with the following reagents (or waste reagents) such that the leachability of the hazardous contaminants is reduced: (1) Portland cement; or (2) lime/pozzolans (for example, fly ash and cement kiln dust). Reagents (for example, iron salts, silicates, and clays) may be added to enhance the set/cure time and/or compressive strength, or to reduce the leachability of the hazardous constituents.⁵</p>	<p>Leachability of the hazardous contaminants must be reduced.</p>	<p>None.</p>
<p>3. Sealing: Application of an appropriate material which adheres tightly to the debris surface to avoid exposure of the surface to potential leaching media. When necessary to effectively seal the surface, sealing entails pretreatment of the debris surface to remove foreign matter and to clean and roughen the surface. Sealing materials include epoxy, silicone, and urethane compounds, but paint may not be used as a sealant.</p>	<p>Sealing must avoid exposure of the debris surface to potential leaching media and sealant must be resistant to degradation by the debris and its contaminants and materials into which it may come into contact after placement (leachate, other waste, microbes).</p>	<p>None.</p>

FOOTNOTE: ¹Hazardous debris must be treated by either these standards of the waste-specific treatment standards for the waste contaminating the debris. The treatment standards must be met for each type of debris contained in a mixture of debris types, unless the debris is converted into treatment residue as a result of the treatment process. Debris treatment residuals are subject to the waste-specific treatment standards for the waste contaminating the debris.

FOOTNOTE: ²Contaminant restriction means that the technology is not best demonstrated available technologies for that contaminant. If debris containing a restricted contaminant is treated by the technology, the contaminant must be subsequently treated by a technology for which it is not restricted in order to be land disposed (and excluded from article 33.1-24).

FOOTNOTE: ³"Clean debris surface" means the surface, when viewed without magnification, shall be free of all visible contaminated soil and hazardous waste except that residual staining from soil and waste consisting of light shadows, slight streaks, or minor discolorations, and soil and waste in cracks, crevices, and pits may be present provided that such staining and waste and soil in cracks, crevices, and pits shall be limited to no more than 5% of each square inch of surface area.

FOOTNOTE: ⁴Acids, solvents, and chemical reagents may react with some debris and contaminants to form hazardous compounds. For example, acid washing of cyanide-contaminated debris could result in the formation of hydrogen cyanide. Some acids may also react violently with some debris and contaminants, depending on the concentration of the acid and the type of debris and contaminants. Debris treaters should refer to the safety precautions specified in Material Safety Data Sheets for various acids to avoid applying an incompatible acid to a particular debris/contaminant combination. For example, concentrated sulfuric acid may react violently with certain organic compounds, such as acrylonitrile.

FOOTNOTE: ⁵If reducing the particle size of debris to meet the treatment standards results in material that no longer meets the 60 mm minimum particle size limit for debris, such material is subject to the waste-specific treatment standards for the waste contaminating the material, unless the debris has been cleaned and separated from contaminated soil and waste prior to size reduction. At a minimum, simple physical or mechanical means must be used to provide such cleaning and separation of nondebris materials to ensure that the debris surface is free of caked soil, waste, or other nondebris material.

FOOTNOTE: ⁶Dioxin-listed wastes are hazardous waste numbers F020, F021, F022, F023, F026, and F027.

FOOTNOTE: ⁷Thermal desorption is distinguished from thermal destruction in that the primary purpose of thermal desorption is to volatilize contaminants and to remove them from the treatment chamber for subsequent destruction or other treatment.

FOOTNOTE: ⁸The demonstration "Equivalent Technology" under subsection 2 of section 33.1-24-05-282 must document that the technology treats contaminants subject to treatment to a level equivalent to that required by the performance and design and operating standards for other technologies in this table such that residual levels of hazardous contaminants will not pose a hazard to human health and the environment absent management controls.

FOOTNOTE: ⁹Any soil, waste, and other nondebris material that remains on the debris surface (or remains mixed with the debris) after treatment is considered a treatment residual that must be separated from the debris using, at a minimum, simple physical or mechanical means. Examples of simple physical or mechanical means are vibratory or trommel screening or water washing. The debris surface need not be cleaned to a "clean debris surface" as defined in footnote 3 when separating treated debris from residue; rather, the surface must be free of caked soil, waste, or other nondebris material. Treatment residuals are subject to the waste-specific treatment standards for the waste contaminating the debris.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-286. Alternative treatment standards based on high temperatures metal recovery.

For the treatment standards previously found in this section, refer to section 33.1-24-05-280.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-287. [Reserved].

33.1-24-05-288. Universal treatment standards.

Table "Universal Treatment Standards" identifies the hazardous constituents, along with the nonwastewater and wastewater treatment standard levels, that are used to regulate most prohibited hazardous wastes with numerical limits. For determining compliance with treatment standards for underlying hazardous constituents as defined in subsection 10 of section 33.1-24-05-251, these treatment standards may not be exceeded. Compliance with these treatment standards is measured by an analysis of grab samples, unless otherwise noted in the following table "Universal Treatment Standards".

Zinc⁵	7440-66-6	2.61	4.3 mg/l TCLP

¹ CAS means Chemical Abstract Services. When the waste code and/or regulated constituents are described as a combination of a chemical with its salts and/or esters, the CAS number is given for the parent compound only.

² Concentration standards for wastewaters are expressed in mg/l and are based on analysis of composite samples.

³ Except for Metals (Extraction procedure or toxicity characteristic leaching procedure) and cyanides (total and amenable) the nonwastewater treatment standards expressed as a concentration were established, in part, based

Universal Treatment Standards

<u>Regulated Constituent/ Common Name</u>	<u>CAS¹ Number</u>	<u>Wastewater Standard</u> <u>Concentration² in mg/l</u>	<u>Nonwastewater Standard</u> <u>Concentration³ in mg/kg unless noted as "mg/l TCLP"</u>
upon incineration in units operated in accordance with the technical requirements of sections 33.1-24-05-144 through 33.1-24-05-159, and the applicable requirements under subsection 5 of section 33.1-24-06-16, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may comply with these treatment standards according to provisions in subsection 4 of section 33.1-24-05-280. All concentration standards for nonwastewaters are based on analysis of grab samples.			
⁴ <u>Both cyanides (total) and cyanides (amenable) for nonwastewaters are to be analyzed using Method 9010C or 9012B, found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05, with a sample size of 10 grams and a distillation time of one hour and fifteen minutes.</u>			
⁵ <u>These constituents are not "underlying hazardous constituents" in characteristic wastes, according to the definition at subsection 10 of section 33.1-24-05-251.</u>			
⁶ <u>[Reserved]</u>			
⁷ <u>This constituent is not an underlying hazardous constituent as defined in subsection 10 of section 33.1-24-05-251 because its UTS level is greater than its toxicity characteristic level, thus a treated selenium waste would always be characteristically hazardous, unless it is treated to below its characteristic level.</u>			
⁸ <u>This standard is temporarily deferred for soil exhibiting a hazardous characteristic due to D004 through D011 only.</u>			

Note: NA means not applicable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-289. Alternative land disposal restriction treatment standards for contaminated soil.

1. Applicability. The generator or treatment, storage, or disposal facility must comply with land disposal restrictions prior to placing soil that exhibits a characteristic of hazardous waste, or exhibited a characteristic of hazardous waste at the time soil that exhibits or exhibited a characteristic of hazardous waste was generated, into a land disposal unit. The following chart describes whether the generator or treatment, storage, or disposal facility must comply with land disposal restrictions prior to placing soil contaminated by listed hazardous waste into a land disposal unit:

<u>If land disposal restrictions</u>	<u>And if land disposal restrictions</u>	<u>And if</u>	<u>Then you</u>
<u>Applied to the listed waste when it contaminated the soil.</u>	<u>Apply to the listed waste now.</u>		<u>Must comply with the land disposal restrictions.</u>
<u>Did not apply to the listed waste when it contaminated the soil.</u>	<u>Apply to the listed waste now.</u>	<u>The soil is determined to contain a listed waste when the soil is first generated.</u>	<u>Must comply with the land disposal restrictions.</u>
<u>Did not apply to the listed waste when it contaminated the soil.</u>	<u>Apply to the listed waste now.</u>	<u>The soil is determined not to contain a listed waste when the soil is first generated.</u>	<u>Need not comply with the land disposal restrictions.</u>
<u>Did not apply to the listed waste when it contaminated the soil.</u>	<u>Do not apply to the listed waste now.</u>		<u>Need not comply with the land disposal restrictions.</u>

*For dates of land disposal restriction applicability, see appendix XI to chapter 33.1-24-05. To determine the date any given listed hazardous waste contaminated any given volume of soil, use the last date any given listed hazardous waste was placed into any given land disposal unit or, in the case of an accidental spill, the date of the spill.

2. Prior to land disposal, contaminated soil identified by subsection 1 as needing to comply with land disposal restrictions must be treated according to the applicable treatment standards specified in subsection 3 or according to the universal treatment standards specified in section 33.1-24-05-288 applicable to the contaminating listed hazardous waste or the applicable characteristic of hazardous waste if the soil is characteristic, or both. The treatment standards specified in subsection 3 and the universal treatment standards may be modified through a treatment variance approved in accordance with section 33.1-24-05-284.
3. Treatment standards for contaminated soils. Prior to land disposal, contaminated soil identified by subsection 1 as needing to comply with land disposal restrictions must be treated according to all the standards specified in this subsection or according to the universal treatment standards specified in section 33.1-24-05-288.
 - a. All soils. Prior to land disposal, all constituents subject to treatment must be treated as follows:
 - (1) For nonmetals, except carbon disulfide, cyclohexanone, and methanol, treatment must achieve ninety percent reduction in total constituent concentrations, except as provided by paragraph 3.
 - (2) For metals and carbon disulfide, cyclohexanone, and methanol, treatment must achieve ninety percent reduction in constituent concentrations as measured in leachate from the treated media (tested according to the toxicity characteristic leaching procedure) or ninety percent reduction in total constituent concentrations (when a metal removal treatment technology is used), except as provided by paragraph 3.
 - (3) When treatment of any constituent subject to treatment to a ninety percent reduction standard would result in a concentration less than ten times the universal treatment standard for that constituent, treatment to achieve constituent concentrations less than ten times the universal treatment standard is not required. Universal treatment standards are identified in table "universal treatment standards" in section 33.1-24-05-288.
 - b. Soils that exhibit the characteristic of ignitability, corrosivity, or reactivity. In addition to the treatment required by subdivision a, prior to land disposal, soils that exhibit the characteristic of ignitability, corrosivity, or reactivity must be treated to eliminate these characteristics.
 - c. Soils that contain nonanalyzable constituents. In addition to the treatment requirements of subdivisions a and b, prior to land disposal, the following treatment is required for soils that contain nonanalyzable constituents:
 - (1) For soil that contains only analyzable and nonanalyzable organic constituents, treatment of the analyzable constituents to the levels specified in subdivisions a and b; or
 - (2) For soil that contains only nonanalyzable constituents, treatment by the method or methods specified in section 33.1-24-05-282 for the waste contained in the soil.
4. Constituents subject to treatment. When applying the soil treatment standards in subsection 3, constituents subject to treatment are any constituents listed in section 33.1-24-05-288, table

"universal treatment standards" that are reasonably expected to be present in any given volume of contaminated soil, except fluoride, selenium, sulfides, vanadium, and zinc, and are present at concentrations greater than ten times the universal treatment standard. Polychlorinated biphenyls are not a constituent subject to treatment in any given volume of soil which exhibits the toxicity characteristic solely because of the presence of metals.

5. Management of treatment residuals. Treatment residuals from treating contaminated soil identified by subsection 1 as needing to comply with land disposal restrictions must be managed as follows:

a. Soil residuals are subject to the treatment standards of this section;

b. Nonsoil residuals are subject to:

(1) For soils contaminated by listed hazardous waste, the article 33.1-24 standards applicable to the listed hazardous waste; and

(2) For soils that exhibit a characteristic of hazardous waste, if the nonsoil residual also exhibits a characteristic of hazardous waste, the treatment standards applicable to the characteristic hazardous waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-290. Prohibitions on storage of restricted wastes.

1. Except as provided in this section, the storage of hazardous wastes restricted from land disposal under sections 33.1-24-05-266 through 33.1-24-05-279 is prohibited, unless the following conditions are met:

a. A generator stores such wastes in tanks, containers, or containment buildings onsite solely for the purpose of the accumulation of such quantities of hazardous waste as necessary to facilitate proper recovery, treatment, or disposal and the generator complies with the requirements in section 33.1-24-03-12, chapter 33.1-24-05, and the applicable requirements of subsection 5 of section 33.1-24-06-16;

b. An owner or operator of a hazardous waste treatment, storage, or disposal facility stores such wastes in tanks, containers, or containment buildings solely for the purpose of the accumulation of such quantities of hazardous waste as necessary to facilitate proper recovery, treatment, or disposal and:

(1) Each container is clearly marked to identify its contents and the date each period of accumulation begins; and

(2) Each tank is clearly marked with a description of its contents, the quantity of each hazardous waste received, and the date each period of accumulation begins, or such information for each tank is recorded and maintained in the operating record at that facility. Regardless of whether the tank itself is marked, an owner or operator shall comply with the operating record requirements specified in section 33.1-24-05-40; and

c. A transporter stores manifested shipments of such wastes at a transfer facility for ten days or less.

2. An owner or operator of a treatment, storage, or disposal facility may store such wastes for up to one year unless the department can demonstrate that such storage was not solely for the

purpose of accumulation of such quantities of hazardous wastes as are necessary to facilitate proper recovery, treatment, or disposal.

3. An owner or operator of a treatment, storage, or disposal facility may store such wastes beyond one year; however, the owner or operator bears the burden of proving that such storage was solely for the purpose of accumulation of such quantities of hazardous wastes as are necessary to facilitate proper recovery, treatment, or disposal.
4. If a generator's waste is exempt from a prohibition on the type of land disposal utilized for the waste, for example, because of an approved case-by-case extension under section 33.1-24-05-254, or a national capacity variance under sections 33.1-24-05-266 through 33.1-24-05-279, the prohibition in subsection 1 does not apply during the period of such exemption.
5. The prohibition in subsection 1 does not apply to hazardous wastes that meet the treatment standard specified under sections 33.1-24-05-281, 33.1-24-05-282, and 33.1-24-05-283 or the treatment standard specified under the variance in section 33.1-24-05-284, or, where treatment standards have not been specified, is in compliance with the applicable prohibitions specified in section 33.1-24-04-272 or Resource Conservation and Recovery Act section 3004.
6. Liquid hazardous wastes containing polychlorinated biphenyls at concentrations greater than or equal to fifty parts per million must be stored at a facility that meets the requirements of 40 CFR 761.65(b) and must be removed from storage and treated or disposed as required under sections 33.1-24-05-250 through 33.1-24-05-299 within one year of the date when such wastes are first placed into storage. The provisions of subsection 3 do not apply to such polychlorinated biphenyls wastes prohibited under section 33.1-24-05-272.
7. The prohibition and requirements in this section do not apply to hazardous remediation wastes stored in a staging pile approved pursuant to section 33.1-24-05-554.

33.1-24-05-300. Applicability to miscellaneous units.

Sections 33.1-24-05-300 through 33.1-24-05-309 apply to owners and operators of facilities that treat, store, or dispose of hazardous waste in miscellaneous units, except as section 33.1-24-05-01 provides otherwise.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-301. Environmental performance standards.

A miscellaneous unit must be located, designed, constructed, operated, maintained, and closed in a manner that will ensure protection of human health and the environment. Permits for miscellaneous units are to contain such terms and provisions as necessary to protect human health and the environment, including as appropriate, design and operating requirements, detection and monitoring requirements, and requirements for responses to releases of hazardous waste or hazardous constituents from the unit. Permit terms and provisions must include those requirements of sections 33.1-24-05-89 through 33.1-24-05-190, sections 33.1-24-05-400 through 33.1-24-05-474, chapter 33.1-24-06, 40 CFR part 63, subpart EEE, and 40 CFR part 146 that are appropriate for the miscellaneous unit being permitted. Protection of human health and the environment includes:

1. Prevention of any releases that may have adverse effects on human health or the environment due to migration of waste constituents in the ground water or subsurface environment, considering:
 - a. The volume and physical and chemical characteristics of the waste in the unit, including its potential for migration through soil, liners, or other containing structures;
 - b. The hydrologic and geologic characteristics of the unit and the surrounding area;
 - c. The existing quality of ground water, including other sources of contamination and their cumulative impact on the ground water;
 - d. The quantity and direction of ground water flow;
 - e. The proximity to and withdrawal rates of current and potential ground water users;
 - f. The patterns of land use in the region;

- g. The potential for deposition or migration of waste constituents into subsurface physical structures, and into the root zone of food chain crops and other vegetation;
- h. The potential for health risks caused by human exposure to waste constituents; and
- i. The potential for damage to domestic animals, wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.

2. Prevention of any releases that may have adverse effects on human health or the environment due to migration of waste constituents in surface water, or wetlands or on the soil surface considering:

- a. The volume and physical and chemical characteristics of the waste in the unit;
- b. The effectiveness and reliability of containing, confining, and collecting systems in structures in preventing migration;
- c. The hydrologic characteristics of the unit and the surrounding area, including the topography of the land around the unit;
- d. The patterns of precipitation in the region;
- e. The quantity, quality, and direction of ground water flow;
- f. The proximity of the unit to surface waters;
- g. The current and potential uses of nearby surface waters and any water quality standards established for those surface waters;
- h. The existing quality of surface waters and surface soils, including other sources of contamination and their cumulative impact on surface waters and surface soils;
- i. The patterns of land use in the region;
- j. The potential for health risks caused by human exposure to waste constituents; and
- k. The potential for damage to domestic animals, wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.

3. Prevention of any release that may have adverse effects on human health or the environment due to migration of waste constituents in the air, considering:

- a. The volume and physical and chemical characteristics of the waste in the unit, including its potential for the emission and dispersal of gases, aerosols, and particulate;
- b. The effectiveness and reliability of systems and structures to reduce or prevent emissions of hazardous constituents to the air;
- c. The operating characteristics of the unit;
- d. The atmospheric, meteorologic, and topographic characteristics of the unit and the surrounding area;
- e. The existing quality of the air, including other sources of contamination and their cumulative impact on the air;
- f. The potential for health risks caused by human exposure to waste constituents; and

g. The potential for damage to domestic animals, wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-302. Monitoring, analysis, inspection, response, reporting, and corrective action.

Monitoring, testing, analytical data, inspections, response, and reporting procedures and frequencies must ensure compliance with sections 33.1-24-05-06, 33.1-24-05-17, 33.1-24-05-42, 33.1-24-05-43, 33.1-24-05-44, 33.1-24-05-58, and 33.1-24-05-301 as well as meet any additional requirements needed to protect human health and the environment as specified in the permit.

33.1-24-05-303. Postclosure care.

A miscellaneous unit that is a disposal unit must be maintained in a manner that complies with section 33.1-24-05-301 during the postclosure care period. In addition, if a treatment or storage unit has contaminated soils or ground water that cannot be completely removed or decontaminated during closure, then that unit must also meet the requirements of section 33.1-24-05-301 during postclosure care. The postclosure plan under section 33.1-24-05-67 must specify the requirements that will be used to satisfy this requirement.

33.1-24-05-394. [Reserved].

33.1-24-05-395. [Reserved].

33.1-24-05-396. [Reserved].

33.1-24-05-397. [Reserved].

33.1-24-05-398. [Reserved].

33.1-24-05-399. [Reserved].

33.1-24-05-400. Applicability to air emission standards for process vents.

1. The regulations of sections 33.1-24-05-400 through 33.1-24-05-419 apply to owners and operators of facilities that treat, store, or dispose of hazardous wastes (except as provided in section 33.1-24-05-01).
2. Except for subsections 4 and 5 of section 33.1-24-05-404, sections 33.1-24-05-400 through 33.1-24-05-419 apply to process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations that manage hazardous wastes with organic concentrations of at least ten parts per million weight, if these operations are conducted in one of the following:
 - a. A unit that is subject to the permitting requirements of chapter 33.1-24-06;
 - b. A unit (including a hazardous waste recycling unit) that is not exempt from permitting under the provisions of subsection 1 of section 33.1-24-03-12 (for example, a hazardous waste recycling unit that is not a ninety-day tank or container) and that is located at a hazardous waste management facility otherwise subject to the permitting requirements of chapter 33.1-24-06; or
 - c. A unit that is exempt from permitting under the provisions of subsection 1 of section 33.1-24-03-12 (for example, a ninety-day tank or container) and is not a recycling unit under the provisions of section 33.1-24-02-06.
3. For the owner and operator of a facility subject to sections 33.1-24-05-400 through 33.1-24-05-419 and who received a final state-issued hazardous waste permit under article 33.1-24 prior to December 6, 1996, the requirements of section 33.1-24-05-400 through 33.1-24-05-419 shall be incorporated into the permit when the permit is reissued in accordance with the requirements of section 33.1-24-07-11 or reviewed in accordance with the

requirements of subsection 1 of section 33.1-24-06-06. Until such date when the owner and operator receive a final state-issued hazardous waste permit incorporating the requirements of sections 33.1-24-05-400 through 33.1-24-05-419, the owner and operator are subject to the applicable requirements of subsection 5 of section 33.1-24-06-16.

Note: The requirements of sections 33.1-24-05-402 through 33.1-24-05-406 apply to process vents on hazardous waste recycling units previously exempt under subdivision a of subsection 3 of section 33.1-24-02-06. Other exemptions under section 33.1-24-02-04 and subsection 7 of section 33.1-24-05-01 are not affected by these requirements.

4. [Reserved].

5. The requirements of sections 33.1-24-05-400 through 33.1-24-04-419 do not apply to the process vents at a facility where the facility owner or operator certifies that all of the process vents would otherwise be subject to sections 33.1-24-05-400 through 33.1-24-05-419 are equipped with and operating air emission controls in accordance with the process vent requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, 61, or 63. The documentation of compliance under regulations at 40 CFR part 60, 61, or 63 shall be kept with, or made readily available with, the facility operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-401. Definitions.

As used in sections 33.1-24-05-400 through 33.1-24-05-419, all terms not defined herein have the meaning given in North Dakota Century Code chapter 23.1-04 and chapters 33.1-24-01 through 33.1-24-05 of this article.

1. "Air stripping operation" is a desorption operation employed to transfer one or more volatile components from a liquid mixture into a gas (air) either with or without the application of heat to the liquid. Pack towers, spray towers, and bubble-cap, sieve, or valve-type plate towers are among the process configurations used for contacting the air and a liquid.

2. "Bottoms receiver" means a container or tank used to receive and collect the heavier bottoms fractions of the distillation feed stream that remain in the liquid phase.

3. "Closed-vent system" means a system that is not open to the atmosphere and that is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.

4. "Condenser" means a heat-transfer device that reduces a thermodynamic fluid from its vapor phase to its liquid phase.

5. "Connector" means flange, screwed, welded, or other joined fittings used to connect two pipelines or a pipeline and a piece of equipment. For the purposes of reporting and recordkeeping, "connector" means flanged fittings that are not covered by insulation or other materials that prevent location of the fittings.

6. "Continuous recorder" means a data-recording device recording an instantaneous data value at least once every fifteen minutes.

7. "Control device" means an enclosed combustion device vapor recovery system, or flare. Any device the primary function of which is the recovery or capture of solvent or other organic for use, reuse, or sale (e.g., a primary condenser on a solvent recovery unit) is not a control device.

8. "Control device shutdown" means the cessation of operation of a control device for any purpose.
9. "Distillate receiver" means a container or tank used to receive and collect liquid material (condensed) from the overhead condenser of a distillation unit and from which the condensed liquid is pumped to larger storage tanks or other process units.
10. "Distillation operation" means an operation, either batch or continuous separating one or more feed streams into two or more exit streams, each exit stream having component concentrations different from those in the feed streams. The separation is achieved by the redistribution of the components between the liquid and vapor phase as they approach equilibrium within the distillation unit.
11. "Double-block and bleed system" means two block valves connected in series with a bleed valve or line that can vent the line between the two block valves.
12. "Equipment" means each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, or flange or other connector, and any control devices or systems required by sections 33.1-24-05-400 through 33.1-24-05-419.
13. "First attempt at repair" means to take rapid action for the purpose of stopping or reducing leakage of organic material to the atmosphere using best practices.
14. "Flame zone" means the portion of the combustion chamber in a boiler occupied by the flame envelope.
15. "Flow indicator" means a device that indicates whether gas flow is present in a vent stream.
16. "Fractionation operation" means a distillation operation or method used to separate a mixture of several volatile components of different boiling points in successive stages, each stage removing from the mixture some proportion of one of the components.
17. "Hazardous waste management unit shutdown" means a work practice or operational procedure that stops operation of a hazardous waste management unit or part of a hazardous waste management unit. An unscheduled work practice or operational procedure that stops operation of a hazardous waste management unit or part of a hazardous waste management unit for less than twenty-four hours is not a hazardous waste management unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping operation are not hazardous waste management unit shutdowns.
18. "Hot well" means a container for collecting condensate as in a steam condenser serving a vacuum-jet or steam-jet ejector.
19. "In gas or vapor service" means that the piece of equipment contains or contacts a hazardous waste stream that is in the gaseous state at operating conditions.
20. "In heavy liquid service" means that the piece of equipment is not in gas or vapor service or in light liquid service.
21. "In light liquid service" means that the piece of equipment contains or contacts a waste stream where the vapor pressure of one or more of the organic components in the stream is greater than three-tenths kilopascals at twenty degrees Celsius, the total concentration of the pure organic components having a vapor pressure greater than three-tenths kilopascals at twenty degrees Celsius is equal to or greater than twenty percent by weight, and the fluid is a liquid at operating conditions.
22. "In situ sampling systems" means nonextractive samplers or inline samplers.

23. "In vacuum service" means that equipment is operating at an internal pressure that is at least five kilopascals below ambient pressure.
24. "Malfunction" means any sudden failure of a control device or a hazardous waste management unit or failure of a hazardous waste management unit to operate in a normal or usual manner, so that organic emissions are increased.
25. "Open-ended valve or line" means any valve, except pressure release valves, having one side of the valve seat in contact with hazardous waste and one side open to the atmosphere, either directly or through open piping.
26. "Pressure release" means the emission of materials resulting from the system pressure being greater than the set pressure of the pressure release device.
27. "Process heater" means a device that transfers heat liberated by burning fuel to fluids contained in tubes, including all fluids except water that are heated to produce steam.
28. "Process vent" means any open-ended pipe or stack that is vented to the atmosphere either directly, through a vacuum-producing system, or through a tank (e.g., distillate receiver, condenser, bottoms receiver, surge control tank, separator tank, or hot well) associated with hazardous waste distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations.
29. "Repaired" means that equipment is adjusted, or otherwise altered, to eliminate a leak.
30. "Sampling connection system" means an assembly of equipment within a process or waste management unit used during periods of representative operation to take samples of the process of waste fluid. Equipment used to take nonroutine grab examples is not considered a sampling connection system.
31. "Sensor" means a device that measures a physical quantity or the change in a physical quantity, such as temperature, pressure, flow rate, pH, or liquid level.
32. "Separator tank" means a device used for separation of two immiscible liquids.
33. "Solvent extraction operation" means an operation or method of separation in which a solid or solution is contacted with a liquid solvent (the two being mutually insoluble) to preferentially dissolve and transfer one or more components into the solvent.
34. "Start-up" means the setting in operation of a hazardous waste management unit or control device for any purpose.
35. "Steam stripping operation" means a distillation operation in which vaporization of the volatile constituents of a liquid mixture takes place by the introduction of steam directly into the charge.
36. "Surge control tank" means a large-sized pipe or storage reservoir sufficient to contain the surging liquid discharge of the process tank to which it is connected.
37. "Thin-film evaporation operation" means a distillation operation that employs a heating surface consisting of a large diameter tube that may be either straight or tapered, horizontal or vertical. Liquid is spread on the tube wall by a rotating assembly of blades that maintain a close clearance from the wall or actually ride on the film of liquid on the wall.
38. "Vapor incinerator" means any enclosed combustion device that is used for destroying organic compounds and does not extract energy in the form of steam or process heat.

39. "Vented" means discharged through an opening, typically an open-ended pipe or stack, allowing the passage of a stream of liquids, gases, or fumes into the atmosphere. The passage of liquids, gases, or fumes is caused by mechanical means such as compressors or vacuum-producing systems or by process-related means such as evaporation produced by heating and not caused by tank loading and unloading (working losses) or by natural means such as diurnal temperature changes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-402. Standards - Process vents.

1. The owner or operator of a facility with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations managing hazardous wastes with organic concentrations of at least ten parts per million weight shall either:
 - a. Reduce total organic emissions from all affected process vents at the facility below one and four-tenths kilograms/hour (three pounds per hour) and two and eight-tenths megagrams/year (three and one-tenth tons/year); or
 - b. Reduce, by use of a control device, total organic emissions from all affected process vents at the facility by ninety-five weight percent.
2. If the owner or operator installs a closed-vent system and control device to comply with the provisions of subsection 1, the closed-vent system and control device must meet the requirements of section 33.1-24-05-403.
3. Determinations of vent emissions and emission reductions or total organic compound concentrations achieved by add-on control devices may be based on engineering calculations or performance tests. If performance tests are used to determine vent emissions, emission reductions, or total organic compound concentrations achieved by add-on control devices, the performance tests must conform with the requirements of subsection 3 of section 33.1-24-05-404.
4. When an owner or operator and the department do not agree on determinations of vent emissions or emission reductions, or both, or total organic compound concentrations achieved by add-on control devices based on engineering calculations, the procedures in subsection 3 of section 33.1-24-05-404 must be used to resolve the disagreement.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-403. Standards - Closed-vent systems and control devices.

1. Requirements for owners or operators of closed-vent systems and control devices.
 - a. Owners or operators of closed-vent systems and control devices used to comply with provisions of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 shall comply with the provisions of this section.
 - b. For:

- (1) The owner or operator of an existing facility who cannot install a closed-vent system and control device to comply with the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 on the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to thirty months after the effective date that the facility becomes subject to sections 33.1-24-05-400 through 33.1-24-05-419 for installation and start-up.
 - (2) Any unit that begins operation after December 21, 1990, and is subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 when operation begins, must comply with the rules immediately (for example, must have control devices installed and operating on start-up of the affected unit); the thirty-month implementation schedule does not apply.
 - (3) The owner or operator of any facility in existence on the effective date of a statutory or regulatory amendment that renders the facility subject to sections 33.1-24-05-400 through 33.1-24-05-419 shall comply with all requirements of sections 33.1-24-05-400 through 33.1-24-05-419 as soon as practicable but no later than thirty months after the amendment's effective date. When control equipment required by sections 33.1-24-05-400 through 33.1-24-05-419 cannot be installed and begin operation by the effective date of the amendment, the facility owner or operator shall prepare an implementation schedule that includes the following information: specific calendar dates for award of contracts or issuance of purchase orders for the control equipment, initiation of onsite installation of the control equipment, completion of the control equipment installation, and performance of any testing to demonstrate the installed equipment meets the applicable standards of sections 33.1-24-05-400 through 33.1-24-05-419. The owner or operator shall enter the implementation schedule in the operating record or in a permanent, readily available file located at the facility.
 - (4) Owners and operators of facilities and units that become newly subject to the requirements of sections 33.1-24-05-400 through 33.1-24-05-419 after December 8, 1997, due to an action other than those described in paragraph 3 must comply with all applicable requirements immediately (for example, must have control devices installed and operating on the date the facility or unit becomes subject to sections 33.1-24-05-400 through 33.1-24-05-419; the thirty-month implementation schedule does not apply).
2. A control device involving vapor recovery (for example, a condenser or absorber) must be designed and operated to recover the organic vapors vented to it with an efficiency of ninety-five weight percent or greater unless the total organic emission limits of subdivision a of subsection 1 of section 33.1-24-05-402 for all affected process vents can be attained at an efficiency less than ninety-five weight percent.
 3. An enclosed combustion device (for example, a vapor incinerator, boiler, or process heater) must be designed and operated to reduce the organic emissions vented to it by ninety-five weight percent or greater; to achieve a total organic compound concentration of twenty parts per million volume, expressed as the sum of the actual compounds, not carbon equivalents, on a dry basis corrected to three percent oxygen; or to provide a minimum residence time of fifty hundredths seconds at a minimum temperature of seven hundred sixty degrees Celsius. If a boiler or process heater is used as the control device, then the vent stream must be introduced into the flame zone of the boiler or process heater.

4. Flares.

- a. A flare must be designed for and operated with no visible emissions as determined by the methods specified in subdivision a of subsection 5, except for periods not to exceed a total of five minutes during any two consecutive hours.
- b. A flare must be operated with a flame present at all times, as determined by the methods specified in paragraph 3 of subdivision b of subsection 6.
- c. A flare must be used only if the net heating value of the gas being combusted is eleven and two-tenths mega joules per standard cubic meter at standard conditions (three hundred British thermal units per standard cubic foot at standard conditions) or greater if the flare is steam-assisted or air-assisted; or if the net heating value of the gas being combusted is seven and forty-five hundredths mega joules per cubic meter at standard conditions (two hundred British thermal units per standard cubic foot at standard conditions) or greater if the flare is nonassisted. The net heating value of the gas being combusted must be determined by the methods specified in subdivision b of subsection 5.
- d. Steam-assisted or nonassisted flare.
 - (1) A steam-assisted or nonassisted flare must be designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, less than eighteen and three-tenths meters per second [sixty feet per second], except as provided in paragraphs 2 and 3.
 - (2) A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, equal to or greater than eighteen and three-tenths meters per second [sixty feet per second] but less than one hundred twenty-two meters per second [four hundred feet per second] is allowed if the net heating value of the gas being combusted is greater than thirty-seven and three-tenths mega joules per standard cubic meter at standard conditions [one thousand British thermal units per standard cubic foot at standard conditions].
 - (3) A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, less than the velocity V_{max} as determined by the method specified in subdivision d of subsection 5 and less than one hundred twenty-two meters per second [four hundred feet per second] is allowed.
- e. An air-assisted flare must be designed and operated with an exit velocity less than the velocity V_{max} as determined by the method specified in subdivision e of subsection 5.
- f. A flare used to comply with this section must be steam-assisted, air-assisted, or nonassisted.

5. Methods.

- a. Referenced method 22 in 40 CFR part 60 must be used to determine the compliance of a flare with the visible emissions provisions of sections 33.1-24-05-400 through 33.1-24-05-419. The observation period is two hours and must be used according to method 22.
- b. The net heating value of the gas being combusted in a flare shall be calculated using the following equation:

$$H_T = K \left[\sum_{i=1}^n C_i H_i \right]$$

where:

H_T = Net heating value of the sample, MJ/scm; where the net enthalpy per mole of offgas is based on combustion at 25°C and 760 mm Hg, but the standard temperature for determining the volume corresponding to 1 mol is 20°C;

K = Constant, 1.74×10^{-7} (1/ppm) (g mol/scm) (MJ/kcal) where standard temperature for (g mol/scm) is 20°C;

C_i = Concentration of sample component i in ppm on a wet basis, as measured for organics by reference method 18 in 40 CFR part 60 and measured for hydrogen and carbon monoxide by ASTM D 1946-82 (incorporated by reference as specified in section 33.1-24-01-05); and

H_i = Net heat of combustion of sample component i , kcal/g mol at 25°C and 760 mm Hg. The heats of combustion may be determined using ASTM D 2382-83 (incorporated by reference as specified in section 33.1-24-01-05) if published values are not available or cannot be calculated.

- c. The actual exit velocity of a flare must be determined by dividing the volumetric flow rate (in units of standard temperature and pressure), as determined by reference methods 2, 2a, 2c, or 2d in 40 CFR part 60 as appropriate, by the unobstructed (free) cross-sectional area of the flare tip.
- d. The maximum allowed velocity in meters per second V_{max} for a flare complying with paragraph 3 of subdivision d of subsection 4 must be determined by the following equation:

$$\log_{10}(V_{max}) = (H_T + 28.8)/31.7$$

where:

28.8 = constant,

31.7 = constant, and

H_T = the net heating value as determined in subdivision b.

- e. The maximum allowed velocity in meters per second V_{max} for an air-assisted flare must be determined by the following equation:

$$V_{max} = 8.706 + 0.7084(H_T)$$

where:

8.706 = constant,

0.7084 = constant, and

H_T = the net heating value as determined in subdivision b.

6. The owner or operator shall monitor and inspect each control device required to comply with this section to ensure proper operation and maintenance of the control device by implementing the following requirements:
- a. Install, calibrate, maintain, and operate according to the manufacturer's specifications a flow indicator that provides a record of vent stream flow from each affected process vent to the control device at least once every hour. The flow indicator sensor must be installed in the vent stream at the nearest feasible point to the control device inlet but before the point at which the vent streams are combined.
- b. Install, calibrate, maintain, and operate according to the manufacturer's specifications a device to continuously monitor control device operation as specified below:
- (1) For a thermal vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of plus or minus one percent of the temperature being monitored in Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor must be installed at a location in the combustion chamber downstream of the combustion zone.
- (2) For a catalytic vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature at two locations and have an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. One temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed inlet and a second temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed outlet.
- (3) For a flare, a heat sensing monitoring device equipped with a continuous recorder that indicates the continuous ignition of the pilot flame.
- (4) A boiler or process heater having a design heat input capacity less than forty-four megawatts a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor must be installed at a location in the furnace downstream of the combustion zone.
- (5) For a boiler or process heater having a design heat input capacity greater than or equal to forty-four megawatts a monitoring device equipped with a continuous recorder to measure a parameter that indicates good combustion operating practices are being used.
- (6) For a condenser, either:
- (a) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds, the exhaust vent stream from the condenser; or
- (b) A temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature with an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor shall be installed at a location in the exhaust vent stream from the condenser exit (for example, product side).

(7) For a carbon adsorption system that regenerates the carbon bed directly in the control device such as a fixed-bed carbon adsorber either:

(a) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the carbon bed; or

(b) A monitoring device equipped with a continuous recorder to measure a parameter that indicates the carbon bed is regenerated in a regular predetermined time cycle.

c. Inspect the readings from each monitoring device required by subdivisions a and b at least once each operating day to check control device operation and, if necessary, immediately implement the corrective measures necessary to ensure the control device operates in compliance with the requirements of this section.

7. An owner or operator using a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device shall replace the existing carbon in the control device with fresh carbon at a regular predetermined time interval that is no longer than the carbon service life established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.

8. An owner or operator using a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device shall replace the existing carbon in the control device with fresh carbon on a regular basis by using one of the following procedures:

a. Monitor the concentration level of organic compounds in the exhaust vent stream from the carbon adsorption system on a regular schedule, and replace the existing carbon with fresh carbon immediately when carbon breakthrough is indicated. The monitoring frequency must be daily or at an interval no greater than twenty percent of the time required to consume the total carbon working capacity established as a requirement of subparagraph g of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405, whichever is longer.

b. Replace the existing carbon with fresh carbon at a regular, predetermined time interval that is less than the design carbon replacement interval established as a requirement of subparagraph g of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.

9. An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.

10. An owner or operator of an affected facility seeking to comply with the provisions of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 by using a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system is required to develop documentation, including sufficient information to describe the control device operation and identify the process parameter or parameters that indicate proper operation and maintenance of the control device.

11. A closed-vent system shall meet either of the following design requirements:

a. A closed-vent system shall be designed to operate with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million volume

above background as determined by the procedure in subsection 2 of section 33.1-24-05-404, and by visual inspections; or

b. A closed-vent system shall be designed to operate at a pressure below atmospheric pressure. The system shall be equipped with at least one pressure gauge or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.

12. The owner or operator shall monitor and inspect each closed-vent system required to comply with this section to ensure proper operation and maintenance of the closed-vent system by implementing the following requirements:

a. Each closed-vent system that is used to comply with subdivision a of subsection 11 shall be inspected and monitored in accordance with the following requirements:

(1) An initial leak detection monitoring of the closed-vent system shall be conducted by the owner or operator on or before the date that the system becomes subject to this section. The owner or operator shall monitor the closed-vent system components and connections using the procedures specified in subsection 2 of section 33.1-24-05-404 to demonstrate the closed-vent system operates with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million volume above background.

(2) After initial leak detection monitoring required in paragraph 1, the owner or operator shall inspect and monitor the closed-vent system as follows:

(a) Closed-vent system joints, seams, or other connections that are permanently or semipermanently sealed (for example, a welded joint between two sections of hard piping or a bolted and gasketed ducting flange) shall be visually inspected at least once per year to check for defects that could result in air pollutant emissions. The owner or operator shall monitor a component or connection using the procedures specified in subsection 2 of section 33.1-24-05-404 to demonstrate that it operates with no detectable emissions following any time the component is repaired or replaced (for example, a section of damaged hard piping is replaced with new hard piping) or the connection is unsealed (for example, a flange is unbolted).

(b) Closed-vent system components or connections other than those specified in subparagraph a shall be monitored annually and at other times as requested by the department, except as provided for in subsection 15, using the procedures specified in subsection 2 of section 33.1-24-05-404 to demonstrate that the components or connections operate with no detectable emissions.

(3) In the event that a defect or leak is detected, the owner or operator shall repair the defect or leak in accordance with the requirements of subdivision c.

(4) The owner or operator shall maintain a record of the inspection and monitoring in accordance with the requirements specified in section 33.1-24-05-405.

b. Each closed-vent system that is used to comply with subdivision b of subsection 11 shall be inspected and monitored in accordance with the following requirements:

(1) The closed-vent system shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in duct work or piping or loose connections.

- (2) The owner or operator shall perform an initial inspection of the closed-vent system on or before the date that the system becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year.
- (3) In the event that a defect or leak is detected, the owner or operator shall repair the defect in accordance with the requirements of subdivision c.
- (4) The owner or operator shall maintain a record of the inspection and monitoring in accordance with the requirements specified in section 33.1-24-05-405.

c. The owner or operator shall repair all detected defects as follows:

- (1) Detectable emissions, as indicated by visual inspection, or by an instrument reading greater than five hundred parts per million volume above background, shall be controlled as soon as practicable, but not later than fifteen calendar days after the emission is detected, except as provided for in paragraph 3.
- (2) A first attempt at repair shall be made no later than five calendar days after the emission is detected.
- (3) Delay of repair of a closed-vent system for which leaks have been detected is allowed if the repair is technically infeasible without a process unit shutdown, or if the owner or operator determines that emissions resulting from immediate repair would be greater than the fugitive emissions likely to result from delay of repair. Repair of such equipment shall be completed by the end of the next process unit shutdown.
- (4) The owner or operator shall maintain a record of the defect repair in accordance with the requirements specified in section 33.1-24-05-405.

13. Closed-vent systems and control devices used to comply with provisions of sections 33.1-24-05-400 through 33.1-24-05-419 must be operated at all times when emissions may be vented to them.

14. The owner or operator using a carbon adsorption system to control air pollutant emissions shall document that all carbon that is a hazardous waste and that is removed from the control device is managed in one of the following manners, regardless of the average volatile organic concentration of the carbon:

a. Regenerated or reactivated in a thermal treatment unit that meets one of the following:

- (1) The owner or operator of the unit has been issued a final permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-300 through 33.1-24-05-309; or
- (2) The unit is equipped with operating air emission controls in accordance with the applicable requirements of sections 33.1-24-05-400 through 33.1-24-05-419 and sections 33.1-24-05-450 through 33.1-24-05-474 or the applicable requirements of subsection 5 of section 33.1-24-06-16; or
- (3) The unit is equipped with operating air emission controls in accordance with a national emission standard for hazardous air pollutants under 40 CFR part 61 or 40 CFR part 63.

b. Incinerated in a hazardous waste incinerator for which the owner or operator either:

(1) Has been issued a final permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-144 through 33.1-24-05-159; or

(2) Has designed and operates the incinerator in accordance with the applicable interim status requirements of subsection 5 of section 33.1-24-06-16.

c. Burned in a boiler or industrial furnace for which the owner or operator either:

(1) Has been issued a final permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-525 through 33.1-24-05-549; or

(2) Has designed and operates the boiler or industrial furnace in accordance with the interim status requirements of sections 33.1-24-05-525 through 33.1-24-05-549.

15. Any components of a closed-vent system that are designated, as described in subdivision i of subsection 3 of section 33.1-24-05-405, as unsafe to monitor are exempt from the requirements of subparagraph b of paragraph 2 of subdivision a of subsection 12 if:

a. The owner or operator of the closed-vent system determines that the components of the closed-vent system are unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subparagraph b of paragraph 2 of subdivision a of subsection 12; and

b. The owner or operator of the closed-vent system adheres to a written plan that requires monitoring the closed-vent system components using the procedures specified in subparagraph b of paragraph 2 of subdivision a of subsection 12 as frequently as practicable during safe-to-monitor times.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-404. Test methods and procedures.

1. Each owner or operator subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 shall comply with the test methods and procedures requirements provided in this section.

2. When a closed-vent system is tested for compliance with no detectable emissions, as required in subsection 12 of section 33.1-24-05-403, the test must comply with the following requirements:

a. Monitoring must comply with referenced method 21 in 40 CFR part 60.

b. The detection instrument must meet the performance criteria of reference method 21.

c. The instrument must be calibrated before use on each day of its use by the procedures specified in reference method 21.

d. Calibration gases must be:

(1) Zero air (less than ten parts per million hydrocarbon in air).

(2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million methane or n-hexane.

e. The background level must be determined as set forth in reference method 21.

- f. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in reference method 21.
- g. The arithmetic difference between the maximum concentration indicated by the instrument and background level is compared with five hundred parts per million for determining compliance.
3. Performance tests to determine compliance with subsection 1 of section 33.1-24-05-402 and with the total organic compound concentration limit of subsection 3 of section 33.1-24-05-403 must comply with the following:
- a. Performance tests to determine total organic compound concentrations and mass flow rates entering and exiting control devices must be conducted and data reduced in accordance with the following reference methods and calibration procedures:
- (1) Method 2 in 40 CFR part 60 for velocity and volume flow rate.
 - (2) Method 18 or Method 25A in 40 CFR part 60, appendix A, for organic content. If Method 25A is used, the organic hazardous air pollutant used as the calibration gas must be the single organic hazardous air pollutant representing the largest percent by volume of the emissions. The use of Method 25A is acceptable if the response from the high-level calibration gas is at least twenty times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.
 - (3) Each performance test must consist of three separate runs; each run conducted for at least one hour under the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur. For the purpose of determining total organic compound concentrations and mass flow rates, the average of results of all runs apply. The average must be computed on a time-weighted basis.
 - (4) Total organic mass flow rates must be determined by the following equation:
 - (a) For sources utilizing method 18.

$$E_h = Q_{2sd} \left[\sum_{i=1}^n C_i MW_i \right] [0.0416][10^{-6}]$$

where:

E_h = Total organic mass flow rate, kg/h;

Q_{2sd} = Volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h;

n = Number of organic compounds in the vent gas;

C_i = Organic concentration in ppm, dry basis, of compound i in the vent gas, as determined by Method 18;

MW_i = Molecular weight of organic compound i in the vent gas, kg/kg-mol;

0.0416 = Conversion factor for molar volume, kg-mol/m³ (@293K and 760 mm Hg); and

10⁻⁶ = Conversion from ppm.

(b) For sources utilizing method 25A.

$$E_h = (Q)(C)(MW)(0.0416)(10^{-6})$$

where:

E_h = Total organic mass flow rate, kg/h;

Q = Volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h;

C = Organic concentration in ppm, dry basis, as determined by Method 25A;

MW = Molecular weight of propane, 44;

0.0416 = Conversion factor for molar volume, kg-mol/m³ (@ 293 K and 760 mm Hg);

10⁻⁶ = Conversion from ppm.

(5) The annual total organic emission rate must be determined by the following equation:

$$E_A = (E_h)(H)$$

where:

E_A = Total organic mass emission rate, kg/y;

E_h = Total organic mass flow rate for the process vent, kg/h;

H = Total annual hours of operations for the affected unit, h.

(6) Total organic emissions from all affected process vents at the facility must be determined by summing the hourly total organic mass emission rates (E_h as determined in paragraph 4) and by summing the annual total organic mass emission rates (E_A, as determined in paragraph 5) for all affected process vents at the facility.

b. The owner or operator shall record such process information as may be necessary to determine the conditions of the performance test. Operations during periods of startup, shutdown, and malfunction do not constitute representative conditions for the purpose of a performance test.

c. The owner or operator of an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

(1) Sampling ports adequate for the test methods specified in subdivision a.

(2) Safe sampling platforms.

(3) Safe access to sampling platforms.

(4) Utilities for sampling and testing equipment.

d. For the purpose of making compliance determinations, the time-weighted average of the results of the three runs applies. In the event that a sample is accidentally lost or

conditions occur in which one of the three runs must be discontinued because of force shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the owner's or operator's control, compliance may, upon the department's approval, be determined using the average of the results of the two other runs.

4. To show that a process vent associated with a hazardous waste distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation is not subject to the requirements of sections 33.1-24-05-400 through 33.1-24-05-419, the owner or operator must make an initial determination that the time-weighted, annual average total organic concentration of the waste managed by the waste management unit is less than ten parts per million weight using one of the following two methods:

a. Direct measurement of the organic concentration of the waste using the following procedures:

(1) The owner or operator must take a minimum of four grab samples of waste for each waste stream managed in the affected unit under process conditions expected to cause the maximum waste organic concentration.

(2) For waste generated onsite, the grab samples must be collected at a point before the waste is exposed to the atmosphere such as in an enclosed pipe or other closed system that is used to transfer the waste after generation to the first affected distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation. For waste generated offsite, the grab samples must be collected at the inlet to the first waste management unit that receives the waste provided the waste has been transferred to the facility in a closed system such as a tank truck and the waste is not diluted or mixed with other waste.

(3) Each sample must be analyzed and the total organic concentration of the sample must be computed using method 9060A (incorporated by reference under section 33.1-24-01-05) of "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," environmental protection agency publication SW-846 or analyzed for its individual organic constituents.

(4) The arithmetic mean of the results of the analysis of the four samples applies for each waste stream managed in the unit in determining the time-weighted annual average total organic concentration of the waste. The time-weighted average is to be calculated using the annual quantity of each waste stream processed and the mean organic concentration of each waste stream managed in the unit.

b. Using knowledge of the waste to determine that its total organic concentration is less than ten parts per million weight. Documentation of the waste determination is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the waste is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to generate a waste stream having a total organic content less than ten parts per million weight, or prior speciation analysis results on the same waste stream where it can also be documented that no process changes have occurred since that analysis that could affect the waste total organic concentration.

5. The determination that distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations manage hazardous wastes with time-weighted, annual average total organic concentrations less than ten parts per million weight must be made as follows:

- a. By the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 or by the date when the waste is first managed in a waste management unit, whichever is later; and
 - b. For continuously generated waste, annually; or
 - c. Whenever there is a change in the waste being managed or a change in the process that generates or treats the waste.
6. When an owner or operator and the department do not agree on whether a distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation manages a hazardous waste with organic concentrations of at least ten parts per million weight based on knowledge of the waste, the dispute may be resolved by using direct measurement as specified at subdivision a of subsection 4.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-405. Recordkeeping requirements.

1. Applicability.

- a. Each owner or operator subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 shall comply with the recordkeeping requirements of this section.
- b. An owner or operator of more than one hazardous waste management unit subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 may comply with the recordkeeping requirements for these hazardous waste management units in one recordkeeping system if the system identifies each record by each hazardous waste management unit.

2. Owners and operators must record the following information in the facility operating record:

- a. For facilities that comply with the provisions of subdivision b of subsection 1 of section 33.1-24-05-403, an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The schedule must also include a rationale of why the installation cannot be completed at an earlier date. The implementation schedule must be in the facility operating record by the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419.
- b. Up-to-date documentation of compliance with the process vent standards in section 33.1-24-05-402, including:
 - (1) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent, and for the overall facility, namely, the total emissions for all affected vents at the facility, and the approximate location within the facility of each affected unit, for example, identifying the hazardous waste management units on a facility plot plan.
 - (2) Information and data supporting determinations of vent emissions and emission reductions achieved by add-on control devices based on engineering calculation or source tests. For the purpose of determining compliance, determinations of vent emissions and emission reductions must be made using operating parameter values, for example, temperatures, flow rates, or vent stream organic compounds and concentrations, that represent the conditions that result in maximum organic

emissions, such as when the waste management unit is operating at the highest load or capacity level reasonably expected to occur. If the owner or operator takes any action, for example, managing a waste of different composition or increasing operating hours of affected waste management units, that would result in an increase in total organic emissions from affected process vents at the facility, then a new determination is required.

c. Where an owner or an operator chooses to use test data to determine the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan. The test plan must include:

(1) A description of how it is determined that the planned test is going to be conducted when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur. This must include the estimated or design flow rate and organic content of each vent stream and define the acceptable operating ranges of key process and control device parameters during the test program.

(2) A detailed engineering description of the closed-vent system and control device, including:

(a) Manufacturer's name and model number of control device.

(b) Type of control device.

(c) Dimensions of the control device.

(d) Capacity.

(e) Construction materials.

(3) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

d. Documentation of compliance with section 33.1-24-05-403 must include the following information:

(1) A list of all information references and sources used in preparing the documentation.

(2) Records, including the dates, of each compliance test required by subsection 11 of section 33.1-24-05-403.

(3) If engineering calculations are used, a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions" (incorporated by reference as specified in section 33.1-24-01-05) or other engineering texts acceptable to the department that present basic control device design information. Documentation provided by the control device manufacturer or vendor that describes the control device design in accordance with subparagraphs a through g may be used to comply with this requirement. The design analysis must address the vent stream characteristics and control device operation parameters as specified below:

(a) For a thermal vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design

analysis must also establish the design minimum and average temperature in the combustion zone and the combustion zone residence time.

(b) For a catalytic vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average temperatures across the catalyst bed inlet and outlet.

(c) For a boiler or process heater, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average flame zone temperatures, combustion zone residence time, and description of methods and location where the vent stream is introduced into the combustion zone.

(d) For a flare, the design analysis must consider the vent stream composition, constituent concentration, and flow rate. The design analysis must also consider the requirements specified in subsection 4 of section 33.1-24-05-403.

(e) For a condenser, the design analysis must consider the vent stream composition, constituent concentration, flow rate, relative humidity, and temperature. The design analysis must also establish the design outlet organic compound concentration level, design average temperature of the condenser exhaust vent stream, and design average temperatures of the coolant fluid at the condenser inlet and outlet.

(f) For a carbon adsorption system such as a fixed-bed adsorber that regenerates the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design exhaust vent stream organic compound concentration level, the number and capacity of carbon beds, type and working capacity of activated carbon used for carbon beds, design total steam flow over the period of each complete carbon bed regeneration cycle, duration of the carbon bed steaming and cooling or drying cycle, design carbon bed temperature after regeneration, design carbon bed regeneration time, and design service life of carbon.

(g) For a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design outlet organic concentration level, capacity of carbon bed, type and working capacity of activated carbon used for carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule.

(4) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur.

(5) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of ninety-five percent or greater unless the total organic concentration limit of subsection 1 of section 33.1-24-05-402 is achieved at an efficiency less than ninety-five weight percent or the total organic emission limits of subsection 1 of section 33.1-24-05-402 for affected process vents at the facility can be obtained by a control device involving

vapor recovery at an efficiency less than ninety-five weight percent. A statement provided by the control device manufacturer or vendor certifying that the control equipment meets the design specifications may be used to comply with this requirement.

(6) If performance tests are used to demonstrate compliance, all test results.

3. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 must be recorded and up to date in the facility operating record. The information must include:

a. Description and date of each modification that is made to the closed-vent system or control device design.

b. Identification of operating parameters, description of monitoring device, and diagram of monitoring sensor location or locations used to comply with subdivisions a and b of subsection 6 of section 33.1-24-05-403.

c. Monitoring, operating, and inspection information required by subsections 6 through 11 of section 33.1-24-05-403.

d. Date, time, and duration of each period that occurs while the control device is operating when any monitored parameter exceeds the value established in the control device design analysis as specified below:

(1) For a thermal vapor incinerator designed to operate with a minimum residence time of fifty hundredths seconds at a minimum temperature of seven hundred sixty degrees Celsius, period when the combustion temperature is below seven hundred sixty degrees Celsius.

(2) For a thermal vapor incinerator designed to operate with an organic emission reduction efficiency of ninety-five weight percent or greater, period when the combustion zone temperature is more than twenty-eight degrees Celsius below the designed average combustion zone temperature established as a requirement of subparagraph a of paragraph 3 of subdivision d of subsection 2.

(3) For a catalytic vapor incinerator, period when:

(a) Temperature of the vent stream at the catalytic bed inlet is more than twenty-eight degrees Celsius below the average temperature of the inlet vent stream established as a requirement of subparagraph b of paragraph 3 of subdivision d of subsection 2; or

(b) Temperature difference across the catalyst bed is less than eighty percent of the design average temperature difference established as a requirement of subparagraph b of paragraph 3 of subdivision d of subsection 2.

(4) For a boiler or process heater, period when:

(a) Flame zone temperature is more than twenty-eight degrees Celsius below the design average flame zone temperature established as a requirement of subparagraph c of paragraph 3 of subdivision d of subsection 2; or

(b) Position changes where the vent stream is introduced to the combustion zone from the location established as a requirement of subparagraph c of paragraph 3 of subdivision d of subsection 2.

(5) For a flare, period when the pilot flame is not ignited.

(6) For a condenser that complies with subparagraph a of paragraph 6 of subdivision b of subsection 6 of section 33.1-24-05-403, period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the condenser are more than twenty percent greater than the design outlet organic compound concentration level established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2.

(7) For a condenser that complies with subparagraph b of paragraph 6 of subdivision b of subsection 6 of section 33.1-24-05-403, period when:

(a) Temperature of the exhaust vent stream from the condenser is more than six degrees Celsius above the design average exhaust vent stream temperature established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2; or

(b) Temperature of the coolant fluid exiting the condenser is more than six degrees Celsius above the design average coolant fluid temperature at the condenser outlet established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2.

(8) For a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates carbon bed directly onsite in the control device and complies with subparagraph a of paragraph 7 of subdivision b of subsection 6 of section 33.1-24-05-403, period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the carbon bed are more than twenty percent greater than the design exhaust vent stream organic compound concentration level established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2.

(9) For a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device and complies with subparagraph b of paragraph 7 of subdivision b of subsection 6 of section 33.1-24-05-403, period when the vent stream continues to flow through the control device beyond the predetermined carbon bed regeneration time established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2.

e. Explanation for each period recorded under subdivision d of the cause for control device operating parameter exceeding the design value and the measures implemented to correct the control device operation.

f. For a carbon adsorption system operated subject to requirements specified in subsection 7 of section 33.1-24-05-403 or subdivision b of subsection 8 of section 33.1-24-05-403, date when existing carbon in the control device is replaced with fresh carbon.

g. For a carbon adsorption system operated subject to requirements specified in subdivision a of subsection 8 of section 33.1-24-05-403, a log that records:

(1) Date and time when control device is monitored for carbon breakthrough and the monitoring device reading.

(2) Date when existing carbon in the control device is replaced with fresh carbon.

h. Date of each control device startup and shutdown.

i. An owner or operator designating any components of a closed-vent system as unsafe to monitor pursuant to subsection 15 of section 33.1-24-05-403 shall record in a log that is kept in the facility operating record the identification of closed-vent system components that are designated as unsafe to monitor in accordance with the requirements of subsection 15 of section 33.1-24-05-403, an explanation for each closed-vent system component stating why the closed-vent system component is unsafe to monitor, and the plan for monitoring each closed-vent system component.

j. When each leak is detected as specified in subsection 12 of section 33.1-24-05-403, the following information shall be recorded:

(1) The instrument identification number, the closed-vent system component identification number, and the operator name, initials, or identification number;

(2) The date the leak was detected and the date of first attempt to repair the leak;

(3) The date of successful repair of the leak;

(4) Maximum instrument reading measured by method 21 of 40 CFR part 60, appendix A, after it is successfully repaired or determined to be nonrepairable; and

(5) "Repair delayed" and the reason for the delay if a leak is not repaired within fifteen calendar days after discovery of the leak:

(a) The owner or operator may develop a written procedure that identifies the conditions that justify a delay of repair. In such cases, reasons for delay of repair may be documented by citing the relevant sections of the written procedure.

(b) If delay of repair was caused by depletion of stocked parts, there must be documentation that the spare parts were sufficiently stocked onsite before depletion and the reason for depletion.

4. Records of the monitoring, operating, and inspection information required by subdivisions c through j of subsection 3 must be maintained by the owner or operator for at least three years following the date of each occurrence, measurement, maintenance, corrective action, or record.

5. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the department will specify the appropriate recordkeeping requirements.

6. Up to date information and data used to determine whether or not a process vent is subject to the requirements in section 33.1-24-05-402, including supporting documentation as required by subdivision b of subsection 4 of section 33.1-24-05-404 when application of the knowledge of the nature of the hazardous waste stream or the process by which it was produced is used, must be recorded in a log that is kept in the facility operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-406. Reporting requirements.

1. A semiannual report must be submitted by owners and operators subject to the requirements of sections 33.1-24-05-400 through 33.1-24-05-419 to the department by dates specified by the department. The report must include the following information:

a. The identification number, name, and address of the facility.

b. For each month during the semiannual reporting period, dates when the control device exceeded or operated outside of the design specifications as defined in subdivision d of subsection 3 of section 33.1-24-05-405 and as indicated by the control device monitoring required by subsection 6 of section 33.1-24-05-403 and such exceedances were not corrected within twenty-four hours, or that a flare operated with visible emissions as designed in subsection 4 of section 33.1-24-05-03 and as determined by method 22 monitoring, the duration and cause of each exceedance or visible emission, and any corrective measures taken.

2. If, during the semiannual reporting period, the control device does not exceed or operate outside of the design specifications as defined in subdivision d of subsection 3 of section 33.1-24-05-405 for more than twenty-four hours or a flare does not operate with visible emissions as defined in subsection 4 of section 33.1-24-05-403, a report to the department is not required.

History: Effective January 1, 2019.

33.1-24-05-419. [Reserved].

33.1-24-05-420. Applicability to air emission standards for equipment leaks.

1. The regulations in sections 33.1-24-05-420 through 33.1-24-05-449 apply to owners and operators of facilities that treat, store, or dispose of hazardous wastes (except as provided in section 33.1-24-05-01).
2. Except as provided in subsection 11 of section 33.1-24-05-434, sections 33.1-24-05-420 through 33.1-24-05-449 apply to equipment that contains or contacts hazardous waste with organic concentrations of at least ten percent by weight that are managed in one of the following:
 - a. A unit that is subject to the permitting requirements of chapter 33.1-24-06;
 - b. A unit (including a hazardous waste recycling unit) that is not exempt from permitting under the provisions of subsection 1 of section 33.1-24-03-12 (for example, a hazardous waste recycling unit that is not a ninety-day tank or container) and that is located at a hazardous waste management facility otherwise subject to the permitting requirements of chapter 33.1-24-06; or
 - c. A unit that is exempt from permitting under the provisions of subsection 1 of section 33.1-24-03-12 (for example, a ninety-day tank or container) and is not a recycling unit under the provisions of section 33.1-24-02-06.
3. For the owner or operator of a facility subject to sections 33.1-24-05-420 through 33.1-24-05-449 and who received a final state-issued hazardous waste permit under article 33.1-24 prior to December 6, 1996, the requirements of sections 33.1-24-05-420 through 33.1-24-05-449 shall be incorporated into the permit when the permit is reissued in accordance with the requirements of section 33.1-24-07-11 or reviewed in accordance with the requirements of section 33.1-24-06-06. Until such date when the owner or operator receives a final state-issued hazardous waste permit incorporating the requirements of sections 33.1-24-05-420 through 33.1-24-05-449, the owner or operator is subject to the applicable requirements of subsection 5 of section 33.1-24-06-16.

4. Each piece of equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 apply must be marked in such a manner that it can be distinguished readily from other pieces of equipment.
5. Equipment that is in vacuum service is excluded from the requirements of sections 33.1-24-05-422 to 33.1-24-05-430 if it is identified as required in subdivision e of subsection 7 of section 33.1-24-05-434.
6. Equipment that contains or contacts hazardous waste with an organic concentration of at least ten percent by weight for less than three hundred hours per calendar year is excluded from the requirements of sections 33.1-24-05-422 through 33.1-24-05-430 if it is identified as required in subdivision f of subsection 7 of section 33.1-24-05-434.
7. Purged coatings and solvents from surface coating operations subject to the national emission standards for hazardous air pollutants (NESHAP) for the surface coating of automobiles and light-duty trucks at 40 CFR part 63, subpart IIII, are not subject to the requirements of sections 33.1-24-05-420 through 33.1-24-05-449.

Note: The requirements of sections 33.1-24-05-422 through 33.1-24-05-435 apply to equipment associated with hazardous waste recycling units previously exempt under subdivision a of subsection 3 of section 33.1-24-02-06. Other exemptions under section 33.1-24-02-04 and subsection 7 of section 33.1-24-05-01 are not affected by these requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-421. Definitions as used in sections 33.1-24-05-420 through 33.1-24-05-449.

All terms have the meaning given them in section 33.1-24-05-401, North Dakota Century Code chapter 23.1-04, and chapters 33.1-24-01 through 33.1-24-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-422. Standards - Pumps in light liquid service.

1. Time frame.

- a. Each pump in light liquid service must be monitored monthly to detect leaks by the method specified in subsection 2 of section 33.1-24-05-433, except as provided in subsections 4, 5, and 6.
- b. Each pump in light liquid service must be checked by visual inspection each calendar week for indications of liquids dripping from the pump seal.

2. Indicators.

- a. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.
- b. If there are indications of liquids dripping from the pump seal, a leak is detected.

3. Response.

- a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-05-429.
 - b. A first attempt at repair (for example, tightening the packing gland) must be made no later than five calendar days after each leak is detected.
4. Each pump equipped with a dual mechanical seal system that includes a barrier fluid system is exempt from the requirements of subsection 1, provided the following requirements are met:
- a. Each dual mechanical seal system must be:
 - (1) Operated with the barrier fluid at a pressure that is at all times greater than the pump stuffing box pressure;
 - (2) Equipped with a barrier fluid degassing reservoir that is connected by a closed-vent system to a control device that complies with requirements of section 33.1-24-05-430; or
 - (3) Equipped with a system that purges the barrier fluid into a hazardous waste stream with no detectable emissions to the atmosphere.
 - b. The barrier fluid system must not be a hazardous waste with organic concentrations ten percent or greater by weight.
 - c. Each barrier fluid system must be equipped with a sensor that will detect failure of the sealed system, the barrier fluid system, or both.
 - d. Each pump must be checked by visual inspection each calendar week for indications of liquids dripping from the pump seals.
 - e. Checks.
 - (1) Each sensor as described in subdivision c must be checked daily or be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly.
 - (2) The owner or operator must determine, based on design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.
 - f. Leaks.
 - (1) If there are indications of liquids dripping from the pump seal or the sensor indicates failure of the seal system, the barrier fluid system, or both, based on the criterion determined in paragraph 2 of subdivision e, a leak is detected.
 - (2) When a leak is detected it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-05-429.
 - (3) A first attempt at repair (for example, relapping the seal) must be made no later than five calendar days after each leak is detected.
5. Any pump that is designated, as described in subdivision b of subsection 7 of section 33.1-24-05-434, for no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, is exempt from the requirements of subsections 1, 3, and 4 if the pump meets the following requirements:

- a. Must have no externally actuated shaft penetrating the pump housing.
 - b. Must operate with no detectable emissions as indicated by an instrument reading of less than five hundred parts per million above background as measured by the methods specified in subsection 3 of section 33.1-24-05-433.
 - c. Must be tested for compliance with subdivision b initially upon designation, annually, and at other times as requested by the department.
6. If any pump is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal or seals to a control device that complies with the requirements of section 33.1-24-05-430, it is exempt from the requirements of subsections 1 through 5.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-423. Standards - Compressors.

1. Each compressor must be equipped with a seal system that includes a barrier fluid system and that prevents leakage of total organic emissions to the atmosphere, except as provided in subsections 8 and 9.
2. Each compressor seal system as required in subsection 1 must be:
 - a. Operated with the barrier fluid at a pressure that is at all times greater than the compressor stuffing box pressure;
 - b. Equipped with the barrier fluid system that is connected by a closed-vent system to a control device that complies with the requirements of section 33.1-24-05-430; or
 - c. Equipped with a system that purges the barrier fluid into a hazardous waste stream with no detectable emissions to atmosphere.
3. The barrier fluid must not be a hazardous waste with organic concentrations ten percent or greater by weight.
4. Each barrier fluid system as described in subsections 1 through 3 must be equipped with a sensor that would detect failure of the sealed system, barrier fluid system, or both.
5. Checks.
 - a. Each sensor as required in subsection 4 must be checked daily or must be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly unless the compressor is located within the boundary of an unmanned plantsite, in which case the sensor must be checked daily.
 - b. The owner or operator shall determine, based on design consideration and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.
6. If the sensor indicates failure of the seal system, the barrier fluid system, or both, based on the criterion determined under subdivision b of subsection 5, a leak is detected.
7. Leaks.
 - a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-05-429.

b. A first attempt at repair, for example, tightening the packing gland, must be made no later than five calendar days after each leak is detected.

8. A compressor is exempt from the requirements of subsections 1 and 2 if it is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal to a control device that complies with the requirements of section 33.1-24-05-430 except as provided in subsection 9.

9. Any compressor that is designed, as described in subdivision b of subsection 7 of section 33.1-24-05-434, for no detectable emissions as indicated by an instrument reading of less than five hundred parts per million above background is exempt from the requirements of subsections 1 through 8 if the compressor:

a. Is determined to be operating with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-05-433.

b. Is tested for compliance with subdivision a of subsection 9 initially upon designation, annually, and other times as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-424. Standards - Pressure relief devices in gas or vapor service.

1. Except during pressure releases, each pressure relief device in gas or vapor service must be operated with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-05-433.

2. Pressure release.

a. After each pressure release, the pressure relief device must be returned to a condition of no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as soon as practicable, but no later than five calendar days after each pressure release, except as provided in section 33.1-24-05-429.

b. No later than five calendar days after the pressure release, the pressure relief device must be monitored to confirm the condition of no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-05-433.

3. Any pressure relief device that is equipped with a closed-vent system capable of capturing and transporting leakage from the pressure relief device to a control device as described in section 33.1-24-05-430 is exempt from the requirements of subsections 1 and 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-425. Standards - Sampling connection systems.

1. Each sampling connection system must be equipped with a closed-purge, closed-loop, or closed-vent system. This system must collect the sample purge for return to the process or for

routing to the appropriate treatment system. Gases displaced during filling of the sample container are not required to be collected or captured.

2. Each closed-purge, closed-loop, or closed-vent system as required in subsection 1 must meet one of the following requirements:

a. Return the purged process fluid directly to the process line;

b. Collect and recycle the purged process fluid; or

c. Be designed and operated to capture and transport all the purged process fluid to a waste management unit that complies with the applicable requirements of sections 33.1-24-05-454 through 33.1-24-05-456 or a control device that complies with the requirements of section 33.1-24-05-430.

3. In situ sampling systems and sampling systems without purges are exempt from the requirements of subsections 1 and 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-426. Standards - Open-ended valves or lines.

1. Requirements.

a. Each open-ended valve or line must be equipped with a cap, blind flange, plug, or a second valve.

b. The cap, blind flange, plug, or second valve must seal the open end at all times except during operations requiring hazardous waste stream flow through the open-ended valve or line.

2. Each open-ended valve or line equipped with a second valve must be operated in a manner such that the valve on the hazardous waste stream end is closed before the second valve is closed.

3. When a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves but must comply with subsection 1 at all other times.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-427. Standards - Valves in gas or vapor service or in light liquid service.

1. Each valve in gas or vapor or light liquid service must be monitored monthly to detect leaks by the methods specified in subsection 2 of section 33.1-24-05-433 and must comply with subsections 2 through 5, except as provided in subsections 6, 7, and 8 and sections 33.1-24-05-431 and 33.1-24-05-432.

2. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.

3. Timeframe.

- a. Any valve for which a leak is not detected for two successive months may be monitored the first month of every succeeding quarter, beginning with the next quarter, until a leak is detected.
- b. If a leak is detected, the valve must be monitored monthly until a leak is not detected for two successive months.

4. Release.

- a. When a leak is detected, it must be repaired as soon as practicable, but no later than fifteen calendar days after the leak is detected, except as provided in section 33.1-24-05-429.
- b. A first attempt at repair must be made no later than five calendar days after each leak is detected.

5. First attempts at repair include the following best practices where applicable:

- a. Tightening of bonnet bolts.
- b. Replacement of bonnet bolts.
- c. Tightening of packing gland nuts.
- d. Injection of lubricant into lubricated packing.

6. Any valve that is designated, as described in subdivision b of subsection 7 of section 33.1-24-05-434, for no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, is exempt from the requirements of subsection 1 if the valve:

- a. Has no external actuating mechanism in contact with the hazardous waste stream.
- b. Is operated with emissions less than five hundred parts per million above background as determined by the methods specified in subsection 3 of section 33.1-24-05-433.
- c. Is tested for compliance with subdivision b initially upon designation, annually, and at other times as requested by the department.

7. Any valve that is designated, as described in subdivision a of subsection 8 of section 33.1-24-04-434 as an unsafe-to-monitor valve is exempt from the requirements of subsection 1 if:

- a. The owner or operator of the valve determines that the valve is unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subsection 1.
- b. The owner or operator of the valve adheres to a written plan that requires monitoring of the valve as frequently as practicable during safe-to-monitor times.

8. Any valve that is designated as described in subdivision b of subsection 8 of section 33.1-24-05-434, as a difficult-to-monitor valve is exempt from the requirements of subsection 1 if:

- a. The owner or operator of the valve determines that the valve cannot be monitored without elevating the monitoring personnel more than two meters above a support surface.

- b. The hazardous waste management unit within which the valve is located was in operation before June 21, 1990.
- c. The owner or operator of the valve follows a written plan that requires monitoring of the valve at least once per calendar year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-428. Standards - Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors.

1. Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors must be monitored within five days by the method specified in subsection 2 of section 33.1-24-05-433 if evidence of a potential leak is found by visual, audible, olfactory, or any other detection method.
2. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.
3. Timeframe.
 - a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-05-429.
 - b. The first attempt at repair must be made no later than five calendar days after each leak is detected.
4. First attempts at repair include the best practices described under subsection 5 of section 33.1-24-05-427.
5. Any connector that is inaccessible or is ceramic or ceramic-lined (for example, porcelain, glass, or glass-lined) is exempt from the monitoring requirements of subsection 1 and from the recordkeeping requirements of section 33.1-24-05-434.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-429. Standards - Delay of repair.

1. Delay of repair of equipment for which leaks have been detected will be allowed if the repair is technically unfeasible without a hazardous waste management unit shutdown. In such a case, repair of this equipment must occur before the end of the next hazardous waste management unit shutdown.
2. Delay of repair of equipment for which leaks have been detected will be allowed for equipment that is isolated from the hazardous waste management unit and that does not continue to contain or contact hazardous waste with organic concentrations of at least ten percent by weight.
3. Delay of repair for valves will be allowed if:
 - a. The owner or operator determines that emissions of purged material resulting from immediate repair are greater than the emissions likely to result from delay of repair.

b. When repair procedures are effected, the purged material is collected and destroyed or recovered in a control device complying with section 33.1-24-05-430.

4. Delay of repair for pumps will be allowed if:

a. Repair requires the use of a dual mechanical seal system that includes a barrier fluid system.

b. Repair is completed as soon as practicable, but not later than six months after the leak was detected.

5. Delay of repair beyond a hazardous waste management unit shutdown will be allowed for a valve if valve assembly replacement is necessary during the hazardous waste management unit shutdown, valve assembly supplies have been depleted, and valve assembly supplies had been sufficiently stocked before the supplies were depleted. Delay of repair beyond the next hazardous waste management unit shutdown will not be allowed unless the next hazardous waste management unit shutdown occurs sooner than six months after the first hazardous waste management unit shutdown.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-430. Standards - Closed-vent systems and control devices.

1. Owners and operators of closed-vent systems and control devices subject to sections 33.1-24-05-420 through 33.1-24-05-449 shall comply with the provisions of section 33.1-24-05-403.

2. For:

a. The owner or operator of an existing facility who cannot install a closed-vent system and control device to comply with the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 on the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to thirty months after the effective date that the facility becomes subject to sections 33.1-24-05-420 through 33.1-24-05-449 for installation and start-up.

b. Any unit that begins operation after December 21, 1990, and is subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 when operation begins, must comply with the rules immediately (for example, must have control devices installed and operating on start-up of the affected unit); the thirty-month implementation schedule does not apply.

c. The owner or operator of any facility in existence on the effective date of a statutory or regulatory amendment that renders the facility subject to sections 33.1-24-05-420 through 33.1-24-05-449 shall comply with all requirements of sections 33.1-24-05-420 through 33.1-24-05-449 as soon as practicable but no later than thirty months after the amendment's effective date. When control equipment required by sections 33.1-24-05-420 through 33.1-24-05-449 cannot be installed and begin operation by the effective date of the amendment, the facility owner or operator shall prepare an implementation schedule that includes the following information: specific calendar dates for award of contracts or issuance of purchase orders for the control equipment, initiation of onsite installation of the control equipment, completion of the control equipment

installation, and performance of any testing to demonstrate that the installed equipment meets the applicable standards of sections 33.1-24-05-420 through 33.1-24-05-449. The owner or operator shall enter the implementation schedule in the operating record or in a permanent, readily available file located at the facility.

- d. Owners and operators of facilities and units that become newly subject to the requirements of sections 33.1-24-05-420 through 33.1-24-05-449 after December 8, 1997, due to an action other than those described in subdivision c must comply with all applicable requirements immediately (for example, must have control devices installed and operating on the date the facility or unit becomes subject to sections 33.1-24-05-420 through 33.1-24-05-449; the thirty-month implementation schedule does not apply).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-431. Alternative standards for valves in gas or vapor service or light liquid service - Percentage of valves allowed to leak.

1. An owner or operator subject to the requirements of section 33.1-24-05-427 may elect to have all valves within a hazardous waste management unit comply with an alternative standard that allows no greater than two percent of the valves to leak.
2. The following requirements must be met if an owner or operator decides to comply with the alternative standard of allowing two percent of valves to leak:
 - a. A performance test as specified in subsection 3 must be conducted initially upon designation, annually, and at other times requested by the department.
 - b. If a valve leak is detected, it must be repaired in accordance with subsections 4 and 5 of section 33.1-24-05-427.
3. Performance tests must be conducted in the following manner:
 - a. All valves subject to requirements in section 33.1-24-05-427 within the hazardous waste management unit shall be monitored within one week by the methods specified in subsection 2 of section 33.1-24-05-433.
 - b. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.
 - c. The leak percentage must be determined by dividing the number of valves subject to the requirements in section 33.1-24-05-427 for which leaks are detected by the total number of valves subject to the requirements in section 33.1-24-05-427 within the hazardous waste management unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-432. Alternative standard for valves in gas or vapor service or in light liquid service - Skip period leak detection and repair.

1. An owner or operator subject to the requirements of section 33.1-24-05-427 may elect for all valves within a hazardous waste management unit to comply with one of the alternative work practices specified in subdivisions b and c of subsection 2.

2. Requirements.

- a. An owner or operator shall comply with the requirements for valves, as described in section 33.1-24-05-427, except as described in subdivisions b and c.
- b. After two consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, an owner or operator may begin to skip one of the quarterly leak detection periods (for example, monitor for leaks once every six months) for the valves subject to the requirements in section 33.1-24-05-427.
- c. After five consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, an owner or operator may begin to skip three of the quarterly leak detection periods (for example, monitor for leaks once every year) for the valves subject to the requirements in section 33.1-24-05-427.
- d. If the percentage of valves leaking is greater than two percent, the owner or operator shall monitor monthly in compliance with the requirements in section 33.1-24-05-427, but may again elect to use this section after meeting the requirements of subdivision a of subsection 3 of section 33.1-24-05-427.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-433. Test methods and procedures.

1. Each owner or operator subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 shall comply with the test methods and procedures requirements provided in this section.
2. Leak detection monitoring, as required in sections 33.1-24-05-422 through 33.1-24-05-432, must comply with the following requirements:
 - a. Monitoring must comply with reference method 21 in 40 CFR part 60.
 - b. The detection instrument must meet the performance criteria of reference method 21.
 - c. The instrument must be calibrated before use on each day of its use by the procedures specified in reference method 21.
 - d. Calibration gas must be:
 - (1) Zero air (less than ten parts per million of hydrocarbon in air).
 - (2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million methane or n-hexane.
 - e. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in reference method 21.
3. When equipment is tested for compliance with no detectable emissions, as required in subsection 5 of section 33.1-24-05-422, subsection 9 of section 33.1-24-05-423, section 33.1-24-05-424, and subsection 6 of section 33.1-24-05-427, the test must comply with the following requirements:
 - a. The requirements of subdivisions a through d of subsection 2 apply.
 - b. The background level must be determined as set forth in reference method 21.

- c. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in reference method 21.
 - d. The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with five hundred parts per million for determining compliance.
 4. In accordance with the waste analysis plan required by subsection 2 of section 33.1-24-05-04, an owner or operator of the facility must determine, for each piece of equipment, whether the equipment contains or contacts a hazardous waste with organic concentration that equals or exceeds ten percent by weight using the following:
 - a. Methods described in American society for testing and materials methods D2267-88, E169-87, E168-88, E260-85 (incorporated by reference under section 33.1-24-01-05);
 - b. Method 9060A (incorporated by reference under section 33.1-24-01-05) of "Test Methods for Evaluating Solid Waste," environmental protection agency publication SW-846, for computing total organic concentration of the sample, or analyzed for its individual organic constituents; or
 - c. Application of the knowledge of the nature of the hazardous waste stream or process by which it was produced. Documentation of a waste determination by knowledge is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the waste is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to have a total organic content less than ten percent, or prior speciation analysis results on the same waste stream where it can also be documented that no process changes have occurred since that analysis that could affect the waste total organic concentration.
 5. If an owner or operator determines that a piece of equipment contains or contacts a hazardous waste with organic concentrations at least ten percent by weight, the determination can be revised only after following the procedures in subdivision a or b of subsection 4.
 6. When an owner or operator and the department do not agree on whether a piece of equipment contains or contacts a hazardous waste with organic concentrations at least ten percent by weight, the procedures in subdivision a or b of subsection 4 can be used to resolve the dispute.
 7. Samples used in determining the percent organic content must be representative of the highest total organic content hazardous waste that is expected to be contained in or contact the equipment.
 8. To determine if pump or valves are in light liquid service, the vapor pressures of constituents may be obtained from standard reference texts or may be determined by American society for testing and materials D-2879-86 (incorporated by reference under section 33.1-24-01-05).
 9. Performance tests to determine if control device achieves ninety-five weight percent organic emission reduction shall comply with the procedures of subdivisions a through d of subsection 3 of section 33.1-24-05-404.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-434. Recordkeeping requirements.

1. Owner or operator.

- a. Each owner or operator subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 shall comply with the recordkeeping requirements of this section.
- b. An owner or operator of more than one hazardous waste management unit subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 may comply with the recordkeeping requirements for these hazardous waste management units in one recordkeeping system if the system identifies each record by each hazardous waste management unit.

2. Owners and operators must record the following information in the facility operating record:

- a. For each piece of equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 applies:
 - (1) Equipment identification number and hazardous waste management unit identification.
 - (2) Approximate locations within the facility, for example, identify the hazardous waste management unit on a facility plot plan.
 - (3) Type of equipment, for example, a pump or pipeline valve.
 - (4) Percent-by-weight total organics in the hazardous waste stream at the equipment.
 - (5) Hazardous waste state at the equipment, for example, gas/vapor or liquid.
 - (6) Method of compliance with the standard, for example, "monthly leak detection and repair" or "equipped with dual mechanical seals".
- b. For facilities that comply with the provisions of subdivision b of subsection 1 of section 33.1-24-05-403, an implementation schedule as specified in subdivision b of subsection 1 of section 33.1-24-05-403.
- c. Where an owner or operator chooses to use test data to demonstrate the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-05-405.
- d. Documentation of compliance with section 33.1-24-05-430, including the detailed design documentation or performance test results specified in subdivision d of subsection 2 of section 33.1-24-05-405.

3. When each leak is detected as specified in sections 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-427, and 33.1-24-05-428, the following requirements apply:

- a. A weatherproof and fully visible identification, marked with the equipment identification number, the date evidence of a potential leak was found in accordance with subsection 1 of section 33.1-24-05-428, and the date the leak was detected, must be attached to the leaking equipment.
- b. The identification on equipment, except on a valve, may be removed after it has been repaired.

c. The identification on a valve may be removed after it has been monitored for two successive months as specified in subsection 3 of section 33.1-24-05-427 and no leak has been detected during those two months.

4. When each leak is detected as specified in sections 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-427, and 33.1-24-05-428, the following information must be recorded in an inspection log and must be kept in the facility operating record:

a. The instrument and operator identification numbers and the equipment identification number.

b. The date evidence of a potential leak was found in accordance with subsection 1 of section 33.1-24-05-428.

c. The date the leak was detected and the dates of each attempt to repair the leak.

d. Repair methods applied in each attempt to repair the leak.

e. "Above ten thousand" if the maximum instrument reading measured by the methods specified in subsection 2 of section 33.1-24-05-433 after each repair attempt is equal to or greater than ten thousand parts per million.

f. "Repair delayed" and the reason for the delay if a leak is not repaired within fifteen calendar days after discovery of the leak.

g. Documentation supporting the delay of repair of a valve in compliance with subsection 3 of section 33.1-24-05-429.

h. The signature of the owner or operator (or designate) whose decision it was that repair could not be effected without a hazardous waste management unit shutdown.

i. The expected date of successful repair of the leak if a leak is not repaired within fifteen calendar days.

j. The date of successful repair of the leak.

5. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of section 33.1-24-05-430 must be recorded and kept up-to-date in the facility operating record as specified in subsection 3 of section 33.1-24-05-405. Design documentation as specified in subdivisions a and b of subsection 3 of section 33.1-24-05-405 and monitoring, operating, and inspection information in subdivisions c through h of subsection 3 of section 33.1-24-05-405.

6. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the department will specify the appropriate recordkeeping requirements.

7. The following information pertaining to all equipment subject to the requirements in sections 33.1-24-05-422 through 33.1-24-05-430 must be recorded in a log that is kept in the facility operating record:

a. A list of identification numbers for equipment (except welded fitting) subject to the requirements of sections 33.1-24-05-420 through 33.1-24-05-449.

b. Equipment.

(1) A list of identification numbers for equipment that the owner or operator elects to designate for no detectable emissions, as indicated by an instrument reading of less

than five hundred parts per million above background, under the provisions of subsection 5 of section 33.1-24-05-422, subsection 9 of section 33.1-24-05-423, and subsection 6 of section 33.1-24-05-427.

(2) The designation of this equipment as subject to the requirements of subsection 5 of section 33.1-24-05-422, subsection 9 of section 33.1-24-05-423, or subsection 6 of section 33.1-24-05-427 must be signed by the owner or operator.

c. A list of equipment identification numbers for pressure relief devices required to comply with subsection 1 of section 33.1-24-05-424.

d. Data.

(1) The dates of each compliance test required in subsection 5 of section 33.1-24-05-422, subsection 9 of section 33.1-24-05-423, section 33.1-24-05-424, and subsection 6 of section 33.1-24-05-427.

(2) The background level measured during each compliance test.

(3) The maximum instrument reading measured at the equipment during each compliance test.

e. A list of identification numbers for equipment in vacuum service.

f. Identification, either by list or location (area or group) of equipment that contains or contacts hazardous waste with an organic concentration of at least ten percent by weight for less than three hundred hours per calendar year.

8. The following information pertaining to all valves subject to the requirements of subsections 7 and 8 of section 33.1-24-05-427 must be recorded in a log that is kept in the facility operating record.

a. A list of identification numbers for valves that are designated as unsafe to monitor, an explanation for each valve stating why the valve is unsafe to monitor, and the plan for monitoring each valve.

b. A list of identification numbers for valves that are designated as difficult to monitor, an explanation for each valve stating why the valve is difficult to monitor, and the planned schedule for monitoring each valve.

9. The following information must be recorded in the facility operating record for valves complying with section 33.1-24-05-432:

a. A schedule of the monitoring.

b. The percent of valves found leaking during each monitoring period.

10. The following information must be recorded in a log that is kept in the facility operating record:

a. Criteria required in paragraph 2 of subdivision e of subsection 4 of section 33.1-24-05-422 and subdivision b of subsection 5 of section 33.1-24-05-423 and an explanation of the design criteria.

b. Any changes to these criteria and the reasons for the changes.

11. The following information must be recorded in a log that is kept in the facility operating record for use in determining exemptions as provided in the applicability section of sections 33.1-24-05-420 through 33.1-24-05-449 and other specific sections:

- a. An analysis determining the design capacity of the hazardous waste management unit.
 - b. A statement listing the hazardous waste influent to and effluent from each hazardous waste management unit subject to the requirements in sections 33.1-24-05-422 through 33.1-24-05-430 and an analysis determining whether these hazardous wastes are heavy liquids.
 - c. An up-to-date analysis and the supporting information and data used to determine whether or not equipment is subject to the requirements in sections 33.1-24-05-422 through 33.1-24-05-430. The record must include supporting documentation as required by subdivision c of subsection 4 of section 33.1-24-05-433 when application of the knowledge of the nature of the hazardous waste stream or the process by which it was produced is used. If the owner or operator takes any action, for example, changing the process that produced the waste, that could result in an increase in the total organic content of the waste contained in or contacted by equipment determined not to be subject to the requirements in sections 33.1-24-05-422 through 33.1-24-05-430, then a new determination is required.
12. Records of the equipment leak information required by subsection 4 and the operating information required by subsection 5 need be kept only three years.
 13. The owner or operator of any facility with equipment that is subject to sections 33.1-24-05-420 through 33.1-24-05-449 and to the regulations at 40 CFR parts 60, 61, or 63, may elect to determine compliance with sections 33.1-24-05-420 through 33.1-24-05-449 either by documentation pursuant to section 33.1-24-05-434, or by documentation of compliance with the regulations at 40 CFR parts 60, 61, or 63, pursuant to the relevant provisions of the regulations at 40 CFR parts 60, 61, or 63. The documentation of compliance under the regulations at 40 CFR parts 60, 61, or 63 must be kept with or made readily available with the facility operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-435. Reporting requirements.

1. A semiannual report must be submitted by owners and operators subject to the requirements of sections 33.1-24-05-420 through 33.1-24-05-449 to the department by dates specified by the department. The report must include the following information:
 - a. The identification number, name, and address of the facility.
 - b. For each month during the semiannual reporting period:
 - (1) The equipment identification number of each valve for which a leak was not repaired as required in subsection 4 of section 33.1-24-05-427.
 - (2) The equipment identification number of each pump for which a leak was not repaired as required in subdivision f of subsection 4 of section 33.1-24-05-422 and subsection 3 of section 33.1-24-05-422.
 - (3) The equipment identification number of each compressor for which a leak was not repaired as required in subsection 7 of section 33.1-24-05-423.
 - c. Dates of hazardous waste management unit shutdowns that occurred within the semiannual reporting period.

d. For each month during the semiannual reporting period, dates when the control device installed as required by section 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-424, or 33.1-24-05-425 exceeded or operated outside of the design specifications as defined in subsection 5 of section 33.1-24-05-434 and as indicated by the control device monitoring required by section 33.1-24-05-430 and was not corrected within twenty-four hours, the duration and cause of each exceedance, and any corrective measures taken.

2. If, during the semiannual reporting period, leaks from valves, pumps, and compressors are repaired as required in subsection 4 of section 33.1-24-05-427, subdivision f of subsection 4 of section 33.1-24-05-422, subsection 3 of section 33.1-24-05-422, and subsection 7 of section 33.1-24-05-423, respectively, and the control device does not exceed or operate outside of the design specifications as defined in subsection 5 of section 33.1-24-05-434 for more than twenty-four hours, a report to the department is not required.

33.1-24-05-450. Applicability to air emission standards for tanks, surface impoundments, and containers.

1. The requirements of sections 33.1-24-05-450 through 33.1-24-05-474 apply to owners and operators of all facilities that treat, store, or dispose of hazardous waste in tanks, surface impoundments, or containers subject to either sections 33.1-24-05-89 through 33.1-24-05-129 except as section 33.1-24-05-01 and subsection 2 provide otherwise.
2. The requirements of sections 33.1-24-05-450 through 33.1-24-05-474 do not apply to the following waste management units at the facility:
 - a. A waste management unit that holds hazardous waste placed in the unit before December 6, 1996, and in which no hazardous waste is added to the unit on or after December 6, 1996.
 - b. A container that has a design capacity less than or equal to 26.417 gallons [0.1 meters³].
 - c. A tank in which an owner or operator has stopped adding hazardous waste and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan.
 - d. A surface impoundment in which an owner or operator has stopped adding hazardous waste (except to implement an approved closure plan) and the owner or operator has begun implementing or completed closure pursuant to an approved closure plan.
 - e. A waste management unit that is used solely for onsite treatment or storage of hazardous waste that is placed in the unit as a result of implementing remedial activities required under the corrective action authorities of Resource Conservation and Recovery Act sections 3004(u), 3004(v), or 3008(h); Comprehensive Environmental Response, Compensation and Liability Act authorities, or similar federal or state authorities.

- f. A waste management unit that is used solely for the management of radioactive mixed waste in accordance with all applicable regulations under the authority of the Atomic Energy Act and the Nuclear Waste Policy Act.
- g. A hazardous waste management unit that the owner or operator certifies is equipped with and operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, part 61, or part 63. For the purpose of complying with this subdivision, a tank for which the air emission control includes an enclosure, as opposed to a cover, must be in compliance with the enclosure and control device requirements of subsection 9 of section 33.1-24-05-454, except as provided in subdivision e of subsection 3 of section 33.1-24-05-452.
- h. A tank that has a process vent as defined in section 33.1-24-05-401.
- 3. For the owner and operator of a facility subject to sections 33.1-24-05-450 through 33.1-24-05-474, and who received a final state-issued hazardous waste permit prior to December 6, 1996, the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 shall be incorporated into the permit when the permit is reissued in accordance with the requirements of section 33.1-24-07-11 or reviewed in accordance with the requirements of section 33.1-24-06-06. Until such date when the permit is reissued in accordance with the requirements of section 33.1-24-07-11 or reviewed in accordance with the requirements of section 33.1-24-06-06, the owner and operator are subject to the applicable requirements of subsection 5 of section 33.1-24-06-16.
- 4. The requirements of sections 33.1-24-05-450 through 33.1-24-05-474, except for the recordkeeping requirements specified in subsection 9 of section 33.1-24-05-459, are administratively stayed for a tank or a container used for the management of hazardous waste generated by organic peroxide manufacturing and its associated laboratory operations when the owner or operator of the unit meets all of the following conditions:

 - a. The owner or operator identifies that the tank or container receives hazardous waste generated by an organic peroxide manufacturing process producing more than one functional family of organic peroxides or multiple organic peroxides within one functional family, that one or more of these organic peroxides could potentially undergo self-accelerating thermal decomposition at or below ambient temperatures, and that organic peroxides are the predominant products manufactured by the process. For the purpose of meeting the conditions of this subdivision, "organic peroxide" means an organic compound that contains the bivalent -O-O- structure and which may be considered to be a structural derivative of hydrogen peroxide where one or both of the hydrogen atoms has been replaced by an organic radical.
 - b. The owner or operator prepares documentation, in accordance with the requirements of subsection 9 of section 33.1-24-05-459, explaining why an undue safety hazard would be created if air emission controls specified in sections 33.1-24-05-454 through 33.1-24-05-457 are installed and operated on the tanks and containers used at the facility to manage the hazardous waste generated by the organic peroxide manufacturing process or processes meeting the conditions of subdivision a.
 - c. The owner or operator notifies the department in writing that hazardous waste generated by an organic peroxide manufacturing process or processes meeting the conditions of subdivision a are managed at the facility in tanks or containers meeting the conditions of subdivision b. The notification shall state the name and address of the facility, and be signed and dated by an authorized representative of the facility owner or operator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-05-451. Definitions.

As used in sections 33.1-24-05-450 through 33.1-24-05-474, all terms shall have the meaning given to them as defined below or as defined elsewhere in this article.

1. "Average volatile organic concentration" or "average VO concentration" means the mass-weighted average volatile organic concentration of a hazardous waste as determined in accordance with the requirements of section 33.1-24-05-454.
2. "Closure device" means a cap, hatch, lid, plug, seal, valve, or other type of fitting that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere. Closure devices include devices that are detachable from the cover (for example, a sampling port cap), manually operated (for example, a hinged access lid or hatch), or automatically operated (for example, a spring-loaded pressure relief valve).
3. "Continuous seal" means a seal that forms a continuous closure that completely covers the space between the edge of the floating roof and the wall of a tank. A continuous seal may be a vapor-mounted seal, liquid-mounted seal, or metallic shoe seal. A continuous seal may be constructed of fastened segments so as to form a continuous seal.
4. "Cover" means a device that provides a continuous barrier over the hazardous waste managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit.
5. "Enclosure" means any structure that surrounds a tank or container, captures organic vapors emitted from the tank or container, and vents the captured vapors through a closed-vent system to a control device.
6. "External floating roof" means a pontoon or double-deck type cover that rests on the surface of a material managed in a tank with no fixed roof.
7. "Fixed roof" means a cover that is mounted on a unit in a stationary position and does not move with fluctuations in the level of the material managed in the unit.
8. "Floating membrane cover" means a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous waste being managed in a surface impoundment.
9. "Floating roof" means a cover consisting of a double deck, pontoon single deck, or internal floating cover which rests upon and is supported by the material being contained, and is equipped with a continuous seal.
10. "Hard-piping" means pipe or tubing that is manufactured and properly installed in accordance with relevant standards and good engineering practices.
11. "In light material service" means the container is used to manage a material for which both of the following conditions apply: The vapor pressure of one or more of the organic constituents in the material is greater than 0.3 kilopascals at 20 degrees Celsius; and the total concentration of the pure organic constituents having a vapor pressure greater than 0.3 kilopascals at 20 degrees Celsius is equal to or greater than twenty percent by weight.

12. "Internal floating roof" means a cover that rests or floats on the material surface (but not necessarily in complete contact with it) inside a tank that has a fixed roof.
13. "Liquid-mounted seal" means a foam or liquid-filled primary seal mounted in contact with the hazardous waste between the tank wall and the floating roof continuously around the circumference of the tank.
14. "Malfunction" means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or usual manner. Failures that are caused in part by poor maintenance or careless operation are not malfunctions.
15. "Maximum organic vapor pressure" means the sum of the individual organic constituent partial pressures exerted by the material contained in a tank, at the maximum vapor pressure-causing conditions (for example, temperature, agitation, pH effects of combining wastes, etc.) reasonably expected to occur in the tank. For the purpose of sections 33.1-24-05-450 through 33.1-24-05-474, maximum organic vapor pressure is determined using the procedures specified in subsection 3 of section 33.1-24-05-453.
16. "Metallic shoe seal" means a continuous seal that is constructed of metal sheets which are held vertically against the wall of the tank by springs, weighted levers, or other mechanisms and is connected to the floating roof by braces or other means. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.
17. "No detectable organic emissions" means no escape of organics to the atmosphere as determined using the procedure specified in subsection 4 of section 33.1-24-05-453.
18. "Point of waste origination" means as follows:
 - a. When the facility owner or operator is the generator of the hazardous waste, the point of waste origination means the point where a solid waste produced by a system, process, or waste management unit is determined to be a hazardous waste as defined in chapter 33.1-24-02.

Note: In this case, this term is being used in a manner similar to the use of the term "point of generation" in air standards established for waste management operations under authority of the Clean Air Act in 40 CFR parts 60, 61, and 63.
 - b. When the facility owner and operator are not the generator of the hazardous waste, point of waste origination means the point where the owner or operator accepts delivery or takes possession of the hazardous waste.
19. "Point of waste treatment" means the point where a hazardous waste to be treated in accordance with subdivision b of subsection 3 of section 33.1-24-05-452 exits the treatment process. Any waste determination shall be made before the waste is conveyed, handled, or otherwise managed in a manner that allows the waste to volatilize to the atmosphere.
20. "Safety device" means a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device which functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of sections 33.1-24-05-450 through 33.1-24-05-474, a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold

setting applicable to the air emission control equipment as determined by the owner or operator based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials.

21. "Single-seal system" means a floating roof having one continuous seal. This seal may be vapor-mounted, liquid-mounted, or a metallic shoe seal.

22. "Vapor-mounted seal" means a continuous seal that is mounted such that there is a vapor space between the hazardous waste in the unit and the bottom of the seal.

23. "Volatile organic concentration" or "VO concentration" means the fraction by weight of the volatile organic compounds contained in a hazardous waste expressed in terms of parts per million as determined by direct measurement or by knowledge of the waste in accordance with the requirements of section 33.1-24-05-453. For the purpose of determining the VO concentration of a hazardous waste, organic compounds with a Henry's law constant value of at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^6 atmospheres/gram-mole/m³) at 25 degrees Celsius must be included. Appendix VI presents a list of compounds known to have a Henry's law constant value less than the cutoff level.

24. "Waste determination" means performing all applicable procedures in accordance with the requirements of section 33.1-24-05-454 to determine whether a hazardous waste meets standards specified in sections 33.1-24-05-450 through 33.1-24-05-474. Examples of a waste determination include performing the procedures in accordance with the requirements of section 33.1-24-05-454 to determine the average VO concentration of a hazardous waste at the point of waste origination; the average VO concentration of a hazardous waste at the point of waste treatment and comparing the results to the exit concentration limit specified for the process used to treat the hazardous waste; the organic reduction efficiency and the organic biodegradation efficiency for a biological process used to treat a hazardous waste and comparing the results to the applicable standards; or the maximum volatile organic vapor pressure for a hazardous waste in a tank and comparing the results to the applicable standards.

25. "Waste stabilization process" means any physical or chemical process used to either reduce the mobility of hazardous constituents in a hazardous waste or eliminate free liquids as determined by Test Method 9095B (Paint Filter Liquids Test) in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846 as incorporated by reference in section 33.1-24-01-05. A waste stabilization process includes mixing the hazardous waste with binders or other materials, and curing the resulting hazardous waste and binder mixture. Other synonymous terms used to refer to this process are "waste fixation" or "waste solidification". This does not include the adding of absorbent materials to the surface of a waste, without mixing, agitation, or subsequent curing, to absorb free liquid.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-452. Standards - General.

1. This section applies to the management of hazardous waste in tanks, surface impoundments, and containers subject to sections 33.1-24-05-450 through 33.1-24-05-474.

2. The owner or operator shall control air pollutant emissions from each hazardous waste management unit in accordance with standards specified in sections 33.1-24-05-454 through

33.1-24-05-457, as applicable to the hazardous waste management unit, except as provided for in subsection 3.

3. A tank, surface impoundment, or container is exempt from standards specified in sections 33.1-24-05-454 through 33.1-24-05-457, as applicable, provided that the waste management unit is one of the following:

a. A tank, surface impoundment, or container for which all hazardous waste entering the unit has an average VO concentration at the point of waste origination of less than five hundred parts per million by weight. The average VO concentration shall be determined using the procedures specified in subsection 1 of section 33.1-24-05-453. The owner or operator shall review and update, as necessary, this determination at least once every twelve months following the date of the initial determination for the hazardous waste streams entering the unit.

b. A tank, surface impoundment, or container for which the organic content of all the hazardous waste entering the waste management unit has been reduced by an organic destruction or removal process that achieves any one of the following conditions:

(1) A process that removes or destroys the organics contained in the hazardous waste to a level such that the average VO concentration of the hazardous waste at the point of waste treatment is less than the exit concentration limit (C_t) established for the process. The average VO concentration of the hazardous waste at the point of waste treatment and the exit concentration limit for the process shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.

(2) A process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency (R) for the process is equal to or greater than ninety-five percent, and the average VO concentration of the hazardous waste at the point of waste treatment is less than one hundred parts per million weight. The organic reduction efficiency for the process and the average VO concentration of the hazardous waste at the point of waste treatment shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.

(3) A process that removes or destroys the organics contained in the hazardous waste to a level such that the actual organic mass removal rate (MR) for the process is equal to or greater than the required organic mass removal rate (RMR) established for the process. The required organic mass removal rate and the actual organic mass removal rate for the process shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.

(4) A biological process that destroys or degrades the organics contained in the hazardous waste, such that either of the following conditions is met:

(a) The organic reduction efficiency (R) for the process is equal to or greater than ninety-five percent, and the organic biodegradation efficiency (R_{bio}) for the process is equal to or greater than ninety-five percent. The organic reduction efficiency and the organic biodegradation efficiency for the process shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.

(b) The total actual organic mass biodegradation rate (MR_{bio}) for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate (RMR). The required organic mass removal rate and the

actual organic mass biodegradation rate for the process shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.

- (5) A process that removes or destroys the organics contained in the hazardous waste and meets all of the following conditions:

 - (a) From the point of waste origination through the point where the hazardous waste enters the treatment process, the hazardous waste is managed continuously in waste management units which use air emission controls in accordance with the standards specified in sections 33.1-24-05-454 through 33.1-24-05-457, as applicable to the waste management unit.
 - (b) From the point of waste origination through the point where the hazardous waste enters the treatment process, any transfer of the hazardous waste is accomplished through continuous hard-piping or other closed system transfer that does not allow exposure of the waste to the atmosphere. The department considers a drain system that meets the requirements of 40 CFR part 63, subpart RR - national emission standards for individual drain systems to be a closed system.
 - (c) The average VO concentration of the hazardous waste at the point of waste treatment is less than the lowest average VO concentration at the point of waste origination determined for each of the individual waste streams entering the process or five hundred parts per million weight, whichever value is lower. The average VO concentration of each individual waste stream at the point of waste origination shall be determined using the procedures specified in subsection 1 of section 33.1-24-05-453. The average VO concentration of the hazardous waste at the point of waste treatment shall be determined using the procedures specified in subsection 2 of section 33.1-24-05-453.
- (6) A process that removes or destroys the organics contained in the hazardous waste to a level such that the organic reduction efficiency (R) for the process is equal to or greater than ninety-five percent and the owner or operator certifies that the average VO concentration at the point of waste origination for each of the individual waste streams entering the process is less than ten thousand parts per million weight. The organic reduction efficiency for the process and the average VO concentration of the hazardous waste at the point of waste origination must be determined using the procedures specified in subsections 2 and 1 of section 33.1-24-05-453, respectively.
- (7) A hazardous waste incinerator for which the owner or operator has either:

 - (a) Been issued a final permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-144 through 33.1-24-05-159; or
 - (b) Has designed and operates the incinerator in accordance with the applicable interim status requirements of subsection 5 of section 33.1-24-06-16.
- (8) A boiler or industrial furnace for which the owner or operator has either:

 - (a) Been issued a final permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-525 through 33.1-24-05-549; or
 - (b) Has designed and operates the boiler or industrial furnace in accordance with sections 33.1-24-05-525 through 33.1-24-05-549.
- (9) For the purpose of determining the performance of an organic destruction or removal process in accordance with the conditions in each of paragraphs 1

through 6, the owner or operator shall account for VO concentrations determined to be below the limit of detection of the analytical method by using the following VO concentration:

(a) If method 25D in 40 CFR part 60, appendix A, is used for the analysis, one-half the blank value determined in the method at section 4.4 of method 25D in 40 CFR part 60, appendix A, or a value of twenty-five parts per million by weight, whichever is less.

(b) If any other analytical method is used, one-half the sum of the limits of detection established for each organic constituent in the waste that has a Henry's law constant value at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at twenty-five degrees Celsius.

c. A tank or surface impoundment used for biological treatment of hazardous waste in accordance with the requirements of paragraph 4 of subdivision b.

d. A tank, surface impoundment, or container for which all hazardous waste placed in the unit either:

(1) Meets the numerical concentration limits for organic hazardous constituents, applicable to the hazardous waste, as specified in sections 33.1-24-05-250 through 33.1-24-05-299 under table "Treatment Standards for Hazardous Waste" in section 33.1-24-05-280; or

(2) The organic hazardous constituents in the waste have been treated by the treatment technology established by the environmental protection agency for the waste in subsection 1 of section 33.1-24-05-282, or have been removed or destroyed by an equivalent method of treatment approved by the environmental protection agency pursuant to subsection 2 of section 33.1-24-05-282.

e. A tank used for bulk feed of hazardous waste to a waste incinerator and all of the following conditions are met:

(1) The tank is located inside an enclosure vented to a control device that is designed and operated in accordance with all applicable requirements specified under 40 CFR part 61, subpart FF - national emission standards for benzene waste operations for a facility at which the total annual benzene quantity from the facility waste is equal to or greater than ten megagrams per year;

(2) The enclosure and control device serving the tank were installed and began operation prior to November 25, 1996; and

(3) The enclosure is designed and operated in accordance with the criteria for a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical or electrical equipment; or to direct air flow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in section 5.0 to "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" annually.

4. The department may at any time perform or request that the owner or operator perform a waste determination for a hazardous waste managed in a tank, surface impoundment, or

container exempted from using air emission controls under the provisions of this section as follows:

- a. The waste determination for average VO concentration of a hazardous waste at the point of waste origination shall be performed using direct measurement in accordance with the applicable requirements of subsection 1 of section 33.1-24-05-453. The waste determination for a hazardous waste at the point of waste treatment shall be performed in accordance with the applicable requirements of subsection 2 of section 33.1-24-05-453.
- b. In performing a waste determination pursuant to subdivision a, the sample preparation and analysis shall be conducted as follows:
 - (1) In accordance with the method used by the owner or operator to perform the waste analysis, except in the case specified in paragraph 2.
 - (2) If the department determines that the method used by the owner or operator was not appropriate for the hazardous waste managed in the tank, surface impoundment, or container, then the department may choose an appropriate method.
- c. In a case when the owner or operator is requested to perform the waste determination, the department may elect to have an authorized representative observe the collection of the hazardous waste samples used for the analysis.
- d. In a case when the results of the waste determination performed or requested by the department do not agree with the results of a waste determination performed by the owner or operator using knowledge of the waste, then the results of the waste determination performed in accordance with the requirements of subdivision a shall be used to establish compliance with the requirements of sections 33.1-24-05-450 through 33.1-24-05-474.
- e. In a case when the owner or operator has used an averaging period greater than one hour for determining the average VO concentration of a hazardous waste at the point of waste origination, the department may elect to establish compliance with sections 33.1-24-05-450 through 33.1-24-05-474 by performing or requesting that the owner or operator perform a waste determination using direct measurement based on waste samples collected within a one-hour period as follows:
 - (1) The average VO concentration of the hazardous waste at the point of waste origination shall be determined by direct measurement in accordance with the requirements of subsection 1 of section 33.1-24-05-453.
 - (2) Results of the waste determination performed or requested by the department showing that the average VO concentration of the hazardous waste at the point of waste origination is equal to or greater than five hundred parts per million weight shall constitute noncompliance with sections 33.1-24-05-450 through 33.1-24-05-474 except in a case as provided for in paragraph 3.
 - (3) For the case when the average VO concentration of the hazardous waste at the point of waste origination previously has been determined by the owner or operator using an averaging period greater than one hour to be less than five hundred parts per million weight but because of normal operating process variations the VO concentration of the hazardous waste determined by direct measurement for any given one-hour period may be equal to or greater than five hundred parts per million weight, information that was used by the owner or operator to determine the

average VO concentration of the hazardous waste (for example, test results, measurements, calculations, and other documentation) and recorded in the facility records in accordance with the requirements of subsection 1 of section 33.1-24-05-453 and section 33.1-24-05-459 shall be considered by the department together with the results of the waste determination performed or requested by the department in establishing compliance with sections 33.1-24-05-450 through 33.1-24-05-474.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-453. Waste determination procedures.

1. Waste determination procedure to determine average volatile organic (VO) concentration of a hazardous waste at the point of waste origination.

a. An owner or operator shall determine the average VO concentration at the point of waste origination for each hazardous waste placed in a waste management unit exempted under the provisions of subdivision a of subsection 3 of section 33.1-24-05-452 from using air emission controls in accordance with standards specified in sections 33.1-24-05-454 through 33.1-24-05-457, as applicable to the waste management unit.

(1) An initial determination of the average VO concentration of the waste stream shall be made before the first time any portion of the material in the hazardous waste stream is placed in a waste management unit exempted under the provisions of subdivision a of subsection 3 of section 33.1-24-05-452 from using air emission controls, and thereafter an initial determination of the average VO concentration of the waste stream shall be made for each averaging period that a hazardous waste is managed in the unit; and

(2) Perform a new waste determination whenever changes to the source generating the waste stream are reasonably likely to cause the average VO concentration of the hazardous waste to increase to a level that is equal to or greater than the applicable VO concentration limits specified in section 33.1-24-05-452.

b. For a waste determination that is required by subdivision a, the average VO concentration of a hazardous waste at the point of waste origination may be determined using either direct measurement as specified in subdivision c or by knowledge as specified in subdivision d.

c. Direct measurement to determine average VO concentration of a hazardous waste at the point of waste origination.

(1) Identification. The owner or operator shall identify and record the point of waste origination for the hazardous waste.

(2) Sampling. Samples of the hazardous waste stream must be collected at the point of waste origination in a manner such that volatilization of organics contained in the waste and in the subsequent sample is minimized and an adequately representative sample is collected and maintained for analysis by the selected method.

(a) The averaging period to be used for determining the average VO concentration for the hazardous waste stream on a mass-weighted average basis must be designated and recorded. The averaging period can represent any time interval that the owner or operator determines is appropriate for the hazardous waste stream but shall not exceed one year.

- (b) A sufficient number of samples, but no less than four samples, must be collected and analyzed for a hazardous waste determination. All of the samples for a given waste determination shall be collected within a one-hour period. The average of the four or more sample results constitutes a waste determination for the waste stream. One or more waste determinations may be required to represent the complete range of waste compositions and quantities that occur during the entire averaging period due to normal variations in the operating conditions for the source or process generating the hazardous waste stream. Examples of such normal variations are seasonal variations in waste quantity or fluctuations in ambient temperature.
- (c) All samples must be collected and handled in accordance with written procedures prepared by the owner or operator and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous waste stream are collected such that a minimum loss of organics occurs throughout the sample collection and handling process, and by which sample integrity is maintained. A copy of the written sampling plan must be maintained onsite in the facility operating records. An example of an acceptable sample collection and handling procedures for a total volatile organic constituent concentration may be found in method 25D in 40 CFR part 60, appendix A.
- (d) Sufficient information, as specified in the "site sampling plan" required under subparagraph c shall be prepared and recorded to document the waste quantity represented by the samples and, as applicable, the operating conditions for the source or process generating the hazardous waste represented by the samples.
- (3) Analysis. Each collected sample must be prepared and analyzed in accordance with method 25D in 40 CFR part 60, appendix A, for the total concentration of volatile organic constituents, or using one or more methods when the individual organic compound concentrations are identified and summed and the summed waste concentration accounts for and reflects all organic compounds in the waste with Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/meters³) at twenty-five degrees Celsius. At the owner's or operator's discretion, the owner or operator may adjust test data obtained by any appropriate method to discount any contribution to the total volatile organic concentration that is a result of including a compound with a Henry's law constant value of less than 0.1 Y/X at twenty-five degrees Celsius. To adjust these data, the measured concentration of each individual chemical constituent contained in the waste is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}). If the owner or operator elects to adjust test data, the adjustment must be made to all individual chemical constituents with a Henry's law constant value greater than or equal to 0.1 Y/X at twenty-five degrees Celsius contained in the waste. Constituent-specific adjustment factors (f_{m25D}) can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711. Other test methods may be used if they meet the requirements in subparagraphs a or b and provided the requirement to reflect all organic compounds in the waste with Henry's law constant values greater than or equal to 0.1 Y/X (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at twenty-five degrees Celsius, is met.
- (a) Any environmental protection agency standard method that has been validated in accordance with "Alternative Validation Procedure for Environmental

Protection Agency Waste and Wastewater Methods", 40 CFR part 63, appendix D.

- (b) Any other analysis method that has been validated in accordance with the procedures specified in section 5.1 or 5.3, and the corresponding calculations in section 6.1 or section 6.3, of method 301 in 40 CFR part 63, appendix A. The data are acceptable if they meet the criteria specified in section 6.1.5 or 6.3.3 of method 301. If correction is required under section 6.3.3 of method 301, the data are acceptable if the correction factor is within the range 0.7 to 1.30. Other sections of method 301 are not required.

(4) Calculations.

- (a) The average VO concentration (C) on a mass-weighted basis shall be calculated by using the results for all waste determinations conducted in accordance with paragraphs 2 and 3 and the following equation:

$$\bar{C} = \frac{1}{Q_T} \times \sum_{i=1}^n (Q_i \times C_i)$$

where:

C = Average VO concentration of the hazardous waste at the point of waste origination on a mass-weighted basis, parts per million weight.

i = Individual waste determination "i" of the hazardous waste.

n = Total number of waste determinations of the hazardous waste conducted (at least four) for the averaging period (not to exceed one year).

Q_i = Mass quantity of hazardous waste stream represented by C_i, kilograms per hour.

Q_T = Total mass quantity of hazardous waste during the averaging period, kilograms per hour.

C_i = Measured VO concentration of waste determination "i" as determined in accordance with the requirements of paragraph 3 (for example, the average of the four or more samples specified in subparagraph b of paragraph 2), parts per million weight.

- (b) For the purpose of determining C_i, for individual waste samples analyzed in accordance with paragraph 3, the owner or operator shall account for VO concentrations determined to be below the limit of detection of the analytical method by using the following VO concentration:

[1] If method 25D in 40 CFR part 60, appendix A, is used for the analysis, one-half the blank value determined in the method at section 4.4 of method 25D in 40 CFR part 60, appendix A.

[2] If any other analytical method is used, one-half the sum of the limits of detection established for each organic constituent in the waste that has Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8 x 10⁻⁶ atmospheres/gram-mole/m³) at twenty-five degrees Celsius.

(5) Provided that the test method is appropriate for the waste as required under paragraph 3, the department will determine compliance based on the test method used by the owner or operator as recorded pursuant to subsection 6 of section 33.1-24-05-459.

d. Use of owner or operator knowledge to determine average VO concentration of a hazardous waste at the point of waste origination.

(1) Documentation shall be prepared that presents the information used as the basis for the owner's or operator's knowledge of the hazardous waste stream's average VO concentration. Examples of information that may be used as the basis for knowledge include material balances for the source or process generating the hazardous waste stream; constituent-specific chemical test data for the hazardous waste stream from previous testing that are still applicable to the current waste stream; previous test data for other locations managing the same type of waste stream; or other knowledge based on information included in manifests, shipping papers, or waste certification notices.

(2) If test data are used as the basis for knowledge, then the owner or operator shall document the test method, sampling protocol, and the means by which sampling variability and analytical variability are accounted for in the determination of the average VO concentration. For example, an owner or operator may use organic concentration test data for the hazardous waste stream that are validated in accordance with method 301 in 40 CFR part 63, appendix A, as the basis for knowledge of the waste.

(3) An owner or operator using chemical constituent-specific concentration test data as the basis for knowledge of the hazardous waste may adjust the test data to the corresponding average VO concentration value which would have been obtained had the waste samples been analyzed using method 25D and 40 CFR part 60, appendix A. To adjust these data, the measured concentration for each individual chemical constituent contained in the waste is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}).

(4) In the event that the department and the owner or operator disagree on a determination of the average VO concentration for a hazardous waste stream using knowledge, then the results from a determination of average VO concentration using direct measurement as specified in subdivision c must be used to establish compliance with the applicable requirements in sections 33.1-24-05-450 through 33.1-24-05-474. The department may perform or request that the owner or operator perform this determination using direct measurement. The owner or operator may choose one or more appropriate methods to analyze each collected sample in accordance with the requirements of paragraph 3 of subdivision c.

2. Waste determination procedures for treated hazardous waste.

a. An owner or operator shall perform the applicable waste determinations for each treated hazardous waste placed in waste management units exempted under the provisions of paragraphs 1 through 6 of subdivision b of subsection 3 of section 33.1-24-05-452 from using air emission controls in accordance with standards specified in sections 33.1-24-05-454 through 33.1-24-05-457, as applicable to the waste management unit.

(1) An initial determination of the average VO concentration of the waste stream shall be made before the first time any portion of the material in the treated waste stream is placed in the exempt waste management unit, and thereafter update the

information used for the waste determination at least once every twelve months following the date of the initial waste determination; and

(2) Perform a new waste determination whenever changes to the process generating or treating the waste stream are reasonably likely to cause the average VO concentration of the hazardous waste to increase to a level such that the applicable treatment conditions specified in subdivision b of subsection 3 of section 33.1-24-05-452 are not achieved.

b. The waste determination for a treated hazardous waste must be performed in accordance with the procedures specified in subdivisions c through j, as applicable to the treated hazardous waste.

c. The owner or operator shall designate and record the specific provision in subdivision b of subsection 3 of section 33.1-24-05-452 under which the waste determination is being performed. The waste determination for the treated hazardous waste shall be performed using the applicable procedures specified in subdivisions d through j.

d. Procedure to determine the average VO concentration of a hazardous waste at the point of waste treatment.

(1) Identification. The owner or operator shall identify and record the point of waste treatment for the hazardous waste.

(2) Sampling. Samples of the hazardous waste stream must be collected at the point of waste treatment in a manner such that volatilization of organics contained in the waste and in the subsequent sample is minimized and an adequately representative sample is collected and maintained for analysis by the selected method.

(a) The averaging period to be used for determining the average VO concentration for the hazardous waste stream on a mass-weighted average basis must be designated and recorded. The averaging period can represent any time interval that the owner or operator determines is appropriate for the hazardous waste stream but shall not exceed one year.

(b) A sufficient number of samples, but no less than four samples, must be collected and analyzed for a hazardous waste determination. All of the samples for a given waste determination shall be collected within a one-hour period. The average of the four or more sample results constitutes a waste determination for the waste stream. One or more waste determinations may be required to represent the complete range of waste compositions and quantities that occur during the entire averaging period due to normal variations in the operating conditions for the process generating or treating the hazardous waste stream. Examples of such normal variations are seasonal variations in waste quantity or fluctuations in ambient temperature.

(c) All samples must be collected and handled in accordance with written procedures prepared by the owner or operator and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous waste stream are collected such that a minimum loss of organics occurs throughout the sample collection and handling process, and by which sample integrity is maintained. A copy of the written sampling plan must be maintained onsite in the facility operating records. An example of acceptable sample collection and handling procedures for a total volatile organic constituent concentration may be found in method 25D in 40 CFR part 60, appendix A.

(d) Sufficient information, as specified in the site sampling plan required under subparagraph c shall be prepared and recorded to document the waste quantity represented by the samples and, as applicable, the operating conditions for the process treating the hazardous waste represented by the samples.

(3) Analysis. Each collected sample must be prepared and analyzed in accordance with method 25D in 40 CFR part 60, appendix A, for the total concentration of volatile organic constituents, or using one or more methods when the individual organic compound concentrations are identified and summed and the summed waste concentration accounts for and reflects all organic compounds in the waste with Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/meters³) at twenty-five degrees Celsius. When the owner or operator is making a waste determination for a treated hazardous waste that is to be compared to an average VO concentration at the point of waste origination or the point of waste entry to the treatment system to determine if the conditions of paragraphs 1 through 6 of subdivision b of subsection 3 of section 33.1-24-05-452 are met, then the waste samples shall be prepared and analyzed using the same method or methods as were used in making the initial waste determinations at the point of waste origination or at the point of entry to the treatment system. At the owner's or operator's discretion, the owner or operator may adjust test data obtained by any appropriate method to discount any contribution to the total volatile organic concentration that is a result of including a compound with a Henry's law constant value less than 0.1 Y/X at twenty-five degrees Celsius. To adjust these data the measured concentration of each individual chemical constituent contained in the waste is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}). If the owner or operator elects to adjust test data, the adjustment must be made to all individual chemical constituents with a Henry's law constant value greater than or equal to 0.1 Y/X at twenty-five degrees Celsius contained in the waste. Constituent-specific adjustment factors (f_{m25D}) can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711. Other test methods may be used if they meet the requirements in subparagraph a or b of paragraph 3 of subdivision c of subsection 1 and provided the requirement to reflect all organic compounds in the waste with Henry's law constant values greater than or equal to 0.1 Y/X (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at twenty-five degrees Celsius, is met.

(a) Any environmental protection agency standard method that has been validated in accordance with "Alternative Validation Procedure for Environmental Protection Agency Waste and Wastewater Methods", 40 CFR part 63, appendix D.

(b) Any other analysis method that has been validated in accordance with the procedures specified in section 5.1 or 5.3 and the corresponding calculations in section 6.1 or section 6.3 of method 301 in 40 CFR part 63, appendix A. The data are acceptable if they meet the criteria specified in section 6.1.5 or 6.3.3 of method 301. If correction is required under section 6.3.3 of method 301, the data are acceptable if the correction factor is within the range 0.7 to 1.30. Other sections of method 301 are not required.

(4) Calculations. The average VO concentration (C) on a mass-weighted basis must be calculated by using the results for all waste determinations conducted in accordance with paragraphs 2 and 3 and the following equation:

$$\bar{C} = \frac{1}{Q_T} \times \sum_{i=1}^n (Q_i \times C_i)$$

where:

C = Average VO concentration of the hazardous waste at the point of waste treatment on a mass-weighted basis, parts per million weight.

i = Individual waste determination "i" of the hazardous waste.

n = Total number of waste determinations of the hazardous waste conducted for the averaging period (not to exceed one year).

Q_i = Mass quantity of hazardous waste stream represented by C_i , kilograms per hour.

Q_T = Total mass quantity of hazardous waste during the averaging period, kilograms per hour.

C_i = Measured VO concentration of waste determination "i" as determined in accordance with the requirements of paragraph 3 (for example, the average of the four or more samples specified in subparagraph b of paragraph 2), parts per million weight.

(5) Provided that the test method is appropriate for the waste as required under paragraph 3, compliance shall be determined based on the test method used by the owner or operator as recorded pursuant to subdivision a of subsection 6 of section 33.1-24-05-459.

e. Procedure to determine the exit concentration limit (C_t) for a treated hazardous waste.

(1) The point of waste origination for each hazardous waste treated by the process at the same time must be identified.

(2) If a single hazardous waste stream is identified in paragraph 1, then the exit concentration limit (C_t) must be five hundred parts per million weight.

(3) If more than one hazardous waste stream is identified in paragraph 1, then the average VO concentration of each hazardous waste stream at the point of waste origination must be determined in accordance with the requirements of subsection 1. The exit concentration limit (C_t) must be calculated by using the results determined for each individual hazardous waste stream and the following equation:

$$C_t = \frac{\sum_{x=1}^m (Q_x \times C_x) + \sum_{y=1}^n (Q_y \times 500 \text{ ppmw})}{\sum_{x=1}^m Q_x + \sum_{y=1}^n Q_y}$$

where:

C_t = Exit concentration limit for treated hazardous waste, parts per million weight.

x = Individual hazardous waste stream "x" that has an average VO concentration less than five hundred parts per million weight at the point of waste origination as determined in accordance with the requirements of subsection 1.

y = Individual hazardous waste stream "y" that has an average VO concentration equal to or greater than five hundred parts per million weight at the point of waste origination as determined in accordance with the requirements of subsection 1.

m = Total number of "x" hazardous waste streams treated by process.

n = Total number of "y" hazardous waste streams treated by process.

Q_x = Annual mass quantity of hazardous waste stream "x", kilograms per year.

Q_y = Annual mass quantity of hazardous waste stream "y", kilograms per year.

C_x = Average VO concentration of hazardous waste stream "x" at the point of waste origination as determined in accordance with the requirements of subsection 1, parts per million weight.

f. Procedure to determine the organic reduction efficiency (R) for a treated hazardous waste.

(1) The organic reduction efficiency (R) for a treatment process must be determined based on results for a minimum of three consecutive runs.

(2) All hazardous waste streams entering the treatment process and all hazardous waste streams exiting the treatment process must be identified. The owner or operator shall prepare a sampling plan for measuring these streams that accurately reflects the retention time of the hazardous waste in the process.

(3) For each run, information must be determined for each hazardous waste stream identified in paragraph 2 using the following procedures:

(a) The mass quantity of each hazardous waste stream entering the process (Q_b) and the mass quantity of each hazardous waste stream exiting the process (Q_a) must be determined.

(b) The average VO concentration at the point of waste origination of each hazardous waste stream entering the process (C_b) during the run must be determined in accordance with the requirements of subdivision c of subsection 1. The average VO concentration at the point of waste treatment of each waste stream exiting the process (C_a) during the run must be determined in accordance with the requirements of subdivision d.

(4) The waste volatile organic mass flow entering the process (E_b) and the waste volatile organic mass flow exiting the process (E_a) must be calculated by using the results determined in accordance with paragraph 3 and the following equations:

$$E_{b} = \frac{1}{10^6} \sum_{j=1}^m (Q_{bj} \times \overline{C_{bj}})$$

$$E_{a} = \frac{1}{10^6} \sum_{j=1}^m (Q_{aj} \times \overline{C_{aj}})$$

where:

E_a = Waste volatile organic mass flow exiting process, kilograms per hour.

E_b = Waste volatile organic mass flow entering process, kilograms per hour.

m = Total number of runs (at least three).

j = Individual run "j".

Q_{bj} = Mass quantity of hazardous waste entering process during run "j", kilograms per hour.

Q_{aj} = Average mass quantity of hazardous waste exiting process during run "j", kilograms per hour.

C_{aj} = Average VO concentration of hazardous waste exiting process during run "j" as determined in accordance with the requirements of subdivision d, parts per million weight.

C_{bj} = Average VO concentration of hazardous waste entering process during run "j" as determined in accordance with the requirements of subdivision c of subsection 1, parts per million weight.

- (5) The organic reduction efficiency of the process shall be calculated by using the results determined in accordance with paragraph 4 and the following equation:

$$R = \frac{(E_b - E_a)}{E_b} \times 100\%$$

where:

R = Organic reduction efficiency, percent.

E_b = Waste volatile organic mass flow entering process as determined in accordance with the requirements of paragraph 4, kilograms per hour.

E_a = Waste volatile organic mass flow exiting process as determined in accordance with the requirements of paragraph 4, kilograms per hour.

- g. Procedure to determine the organic biodegradation efficiency (R_{bio}) for a treated hazardous waste.

- (1) The fraction of organics biodegraded (F_{bio}) must be determined using the procedure specified in 40 CFR part 63, appendix C.

- (2) The R_{bio} must be calculated by using the following equation:

$$R_{bio} = F_{bio} \times 100\%$$

where:

R_{bio} = Organic biodegradation efficiency, percent.

F_{bio} = Fraction of organic biodegraded as determined in accordance with the requirements of paragraph 1.

h. Procedure to determine the required organic mass removal rate (RMR) for a treated hazardous waste.

- (1) All of the hazardous waste streams entering the treatment process must be identified.
- (2) The average VO concentration of each hazardous waste stream at the point of waste origination must be determined in accordance with the requirements of subsection 1.
- (3) For each individual hazardous waste stream that has an average VO concentration equal to or greater than five hundred parts per million weight at the point of waste origination, the average volumetric flow rate and the density of the hazardous waste stream at the point of waste origination must be determined.
- (4) The RMR must be calculated by using the average VO concentration, average volumetric flow rate, and density determined for each individual hazardous waste stream, and the following equation:

$$RMR = \sum_{y=1}^n \left[V_y \times k_y \times \frac{\bar{C}_y - 500 \text{ ppmw}}{10^6} \right]$$

where:

RMR = Required organic mass removal rate, kilograms per hour.

y = Individual hazardous waste stream "y" that has an average VO concentration equal to or greater than five hundred parts per million weight at the point of waste origination as determined in accordance with the requirements of subsection 1.

n = Total number of "y" hazardous waste streams treated by process.

V_y = Average volumetric flow rate of hazardous waste stream "y" at the point of waste origination, meters³ per hour.

K_y = Density of hazardous waste stream, "y", kilograms per meters³.

C_y = Average VO concentration of hazardous waste stream "y" at the point of waste origination as determined in accordance with the requirements of subsection 1, parts per million weight.

i. Procedure to determine the actual organic mass removal rate (MR) for a treated hazardous waste.

- (1) The MR shall be determined based on results for a minimum of three consecutive runs. The sampling time for each run must be one hour.
- (2) The waste volatile organic mass flow entering the process (E_b) and the waste volatile organic mass flow exiting the process (E_a) must be determined in accordance with the requirements of paragraph 4 of subdivision f.
- (3) The MR must be calculated by using the mass flow rate determined in accordance with the requirements of paragraph 2 and the following equation:

$$MR = E_b - E_a$$

where:

MR = Actual organic mass removal rate, kilograms per hour.

E_b = Waste volatile organic mass flow entering process as determined in accordance with the requirements of paragraph 4 of subdivision f, kilograms per hour.

E_a = Waste volatile organic mass flow exiting process as determined in accordance with the requirements of paragraph 4 of subdivision f, kilograms per hour.

j. Procedure to determine the actual organic mass biodegradation rate (MR_{bio}) for a treated hazardous waste.

(1) The MR_{bio} must be determined based on results for a minimum of three consecutive runs. The sampling time for each run must be one hour.

(2) The waste organic mass flow entering the process (E_b) must be determined in accordance with the requirements of paragraph 4 of subdivision f.

(3) The fraction of organic biodegraded (F_{bio}) must be determined using the procedure specified in 40 CFR part 63, appendix C.

(4) The MR_{bio} must be calculated by using the mass flow rates and fraction of organic biodegraded determined in accordance with the requirements of paragraphs 2 and 3, respectively, and the following equation:

$$MR_{bio} = E_b \times F_{bio}$$

where:

MR_{bio} = Actual organic mass biodegradation rate, kilograms per hour.

E_b = Waste organic mass flow entering process as determined in accordance with the requirements of paragraph 4 of subdivision f, kilograms per hour.

F_{bio} = Fraction of organic biodegraded as determined in accordance with the requirements of paragraph 3.

3. Procedure to determine the maximum organic vapor pressure of a hazardous waste in a tank.

a. An owner or operator shall determine the maximum organic vapor pressure for each hazardous waste placed in a tank using tank level 1 controls in accordance with standards specified in subsection 3 of section 33.1-24-05-454.

b. The maximum organic vapor pressure of the hazardous waste may be determined using either direct measurement as specified in subdivision c or knowledge of the waste as specified in subdivision d to determine the maximum organic vapor pressure which is representative of the hazardous waste composition stored or treated in the tank.

c. Direct measurement to determine the maximum organic vapor pressure of a hazardous waste.

(1) Sampling. A sufficient number of samples must be collected to be representative of the waste contained in the tank. All samples must be collected and handled in accordance with written procedures prepared by the owner or operator and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous waste are collected such that a minimum loss of organics occurs throughout the sample collection and handling process and by which sample integrity is maintained. A copy of the written sampling plan must be maintained onsite in the facility operating records. An example of acceptable sample collection and handling procedures may be found in method 25D in 40 CFR part 60, appendix A.

(2) Analysis. Any appropriate one of the following methods may be used to analyze the samples and compute the maximum organic vapor pressure of the hazardous waste:

(a) Method 25E in 40 CFR part 60, appendix A;

(b) Methods described in American Petroleum Institute Publication 2517, Third Edition, February 1989, "Evaporative Loss from External Floating-Roof Tanks", as incorporated by reference in section 33.1-24-01-05;

(c) Methods obtained from the standard reference texts;

(d) ASTM method 2879-92, as incorporated by reference in section 33.1-24-01-05;
or

(e) Any other method approved by the department.

d. Use of knowledge to determine the maximum organic vapor pressure of the hazardous waste. Documentation must be prepared and recorded that presents the information used as the basis for the owner's or operator's knowledge that the maximum organic vapor pressure of the hazardous waste is less than the maximum vapor pressure limit listed in paragraph 1 of subdivision a of subsection 2 of section 33.1-24-05-454 for the applicable tank design capacity category. An example of information that may be used is documentation that the hazardous waste is generated by a process for which at other locations it previously has been determined by direct measurement that the waste maximum organic vapor pressure is less than the maximum vapor pressure limit for the appropriate tank design capacity category.

4. The procedure for determining no detectable organic emissions for the purpose of complying with sections 33.1-24-05-450 through 33.1-24-05-474 must be conducted in accordance with the procedures specified below:

a. The test must be conducted in accordance with the procedures specified in method 21 of 40 CFR part 60, appendix A. Each potential leak interface (for example, a location where organic vapor leakage could occur) on the cover and associated closure devices must be checked. Potential leak interfaces that are associated with covers and closure devices include the interface of the cover and its foundation mounting, the periphery of any opening on the cover and its associated closure device, and the sealing seat interface on a spring-loaded pressure relief valve.

b. The test must be performed when the unit contains a hazardous waste having an organic concentration representative of the range of concentrations for the hazardous waste expected to be managed in the unit. During the test, the cover and closure devices must be secured in the closed position.

- c. The detection instrument must meet the performance criteria of method 21 of 40 CFR part 60, appendix A, except the instrument response factor criteria in section 3.1.2(a) of method 21 must be for the average composition of the organic constituents in the hazardous waste placed in the waste management unit, not for each individual organic constituent.
- d. The detection instrument must be calibrated before use on each day of its use by the procedures specified in method 21 of 40 CFR part 60, appendix A.
- e. Calibration gases must be as follows:
 - (1) Zero air (less than ten parts per million volume hydrocarbon in air); and
 - (2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million volume methane or n-hexane.
- f. The background level must be determined according to the procedures in method 21 of 40 CFR part 60, appendix A.
- g. Each potential leak interface must be checked by traversing the instrument probe around the potential leak interface as close to the interface as possible, as described in method 21 of 40 CFR part 60, appendix A. In the case when the configuration of the cover or closure device prevents a complete traverse of the interface, all accessible portions of the interface must be sampled. In the case when the configuration of the closure device prevents any sampling at the interface and the device is equipped with an enclosed extension or horn (for example, some pressure relief devices), the instrument probe inlet must be placed at approximately the center of the exhaust area to the atmosphere.
- h. The arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of five hundred parts per million volume except when monitoring a seal around a rotating shaft that passes through a cover opening, in which case the comparison must be as specified in subdivision i. If the difference is less than five hundred parts per million volume, then the potential leak interface is determined to operate with no detectable organic emissions.
- i. For the seals around a rotating shaft that passes through a cover opening, the arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of ten thousand parts per million weight. If the difference is less than ten thousand parts per million weight, then the potential leak interface is determined to operate with no detectable organic emissions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-454. Standards - Tanks.

- 1. The provisions of this section apply to the control of air pollutant emissions from tanks for which subsection 2 of section 33.1-24-05-452 references the use of this section for such air emission control.
- 2. The owner or operator shall control air pollutant emissions from each tank subject to this section in accordance with the following requirements as applicable:
 - a. For a tank that manages hazardous waste that meets all of the conditions specified in paragraphs 1 through 3, the owner or operator shall control air pollutant emissions from

the tank in accordance with the tank level 1 controls specified in subsection 3 or the tank level 2 controls specified in subsection 4.

(1) The hazardous waste in the tank has a maximum organic vapor pressure which is less than the maximum organic vapor pressure limit for the tank's design capacity category as follows:

(a) For a tank design capacity equal to or greater than 5,330 feet³ [151 meters³], the maximum organic vapor pressure limit for the tank is 5.2 kilopascals.

(b) For a tank design capacity equal to or greater than 2,650 feet³ [75 meters³] but less than 5,330 feet³ [151 meters³], the maximum organic vapor pressure limit for the tank is 27.6 kilopascals.

(c) For a tank design capacity less than 2,650 feet³ [75 meters³], the maximum organic vapor pressure limit for the tank is 76.6 kilopascals.

(2) The hazardous waste in the tank is not heated by the owner or operator to a temperature that is greater than the temperature at which the maximum organic vapor pressure of the hazardous waste is determined for the purpose of complying with paragraph 1.

(3) The hazardous waste in the tank is not treated by the owner or operator using a waste stabilization process, as defined in section 33.1-24-05-451.

b. For a tank that manages hazardous waste that does not meet all of the conditions specified in paragraphs 1 through 3 of subdivision a, the owner or operator shall control air pollutant emissions from the tank by using tank level 2 controls in accordance with the requirements of subsection 4. Examples of tanks required to use tank level 2 controls include a tank used for a waste stabilization process; and a tank for which the hazardous waste in the tank has a maximum organic vapor pressure that is equal to or greater than the maximum organic vapor pressure limit for the tank's design capacity category as specified in paragraph 1 of subdivision a.

3. Owners and operators controlling air pollutant emissions from a tank using tank level 1 controls shall meet the requirements specified in subdivisions a through d:

a. The owner or operator shall determine the maximum organic vapor pressure for a hazardous waste to be managed in the tank using tank level 1 controls before the first time the hazardous waste is placed in the tank. The maximum organic vapor pressure must be determined using the procedures specified in subsection 3 of section 33.1-24-05-453. Thereafter, the owner or operator shall perform a new determination whenever changes to the hazardous waste managed in the tank could potentially cause the maximum organic vapor pressure to increase to a level that is equal to or greater than the maximum organic vapor pressure limit for the tank design capacity category specified in paragraph 1 of subdivision a of subsection 2, as applicable to the tank.

b. The tank must be equipped with a fixed roof designed to meet the following specifications:

(1) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the hazardous waste in the tank. The fixed roof may be a separate cover installed on the tank (for example, a removable cover mounted on an open-top tank) or may be an integral part of the tank structural design (for example, a horizontal cylindrical tank equipped with a hatch).

- (2) The fixed roof must be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between roof section joints or between the interface of the roof edge and the tank wall.
- (3) Each opening in the fixed roof, and any manifold system associated with the fixed roof, must be either:

 - (a) Equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the opening and the closure device; or
 - (b) Connected by a closed-vent system that is vented to a control device. The control device must remove or destroy organics in the vent stream, and must be operating whenever hazardous waste is managed in the tank, except as provided for in items 1 and 2.
- [1] During periods when it is necessary to provide access to the tank for performing the activities of item 2, venting of the vapor headspace underneath the fixed roof to the control device is not required, opening of closure devices is allowed, and removal of the fixed roof is allowed. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, and resume operation of the control device.
- [2] During periods of routine inspection, maintenance, or other activities needed for normal operations, and for removal of accumulated sludge or other residues from the bottom of the tank.
- (4) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices include organic vapor permeability, the effects of any contact with the hazardous waste or its vapors managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.
- c. Whenever a hazardous waste is in the tank, the fixed roof must be installed with each closure device secured in the closed position except as follows:

 - (1) Opening of closure devices or removal of the fixed roof is allowed at the following times:

 - (a) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.
 - (b) To remove accumulated sludge or other residues from the bottom of the tank.
 - (2) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed

during normal operations for the purpose of maintaining the tank internal pressure in accordance with the tank design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the tank internal pressure is within the internal pressure operating range determined by the owner or operator based on the tank manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the tank internal pressure exceeds the internal pressure operating range for the tank as a result of loading operations or diurnal ambient temperature fluctuations.

(3) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The owner or operator shall inspect the air emission control equipment in accordance with the following requirements:

(1) The fixed roof and its closure devices must be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

(2) The owner or operator shall perform an initial inspection of the fixed roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year except under the special conditions provided for in subsection 12.

(3) In the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 11.

(4) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-05-459.

4. Owners and operators controlling air pollutant emissions from a tank using tank level 2 controls shall use one of the following tanks:

a. A fixed-roof tank equipped with an internal floating roof in accordance with the requirements specified in subsection 5;

b. A tank equipped with an external floating roof in accordance with the requirements specified in subsection 6;

c. A tank vented through a closed-vent system to a control device in accordance with the requirements specified in subsection 7;

d. A pressure tank designed and operated in accordance with the requirements specified in subsection 8; or

e. A tank located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device in accordance with the requirements specified in subsection 9.

5. The owner or operator who controls air pollutant emissions from a tank using a fixed-roof with an internal floating roof shall meet the requirements specified in subdivisions a through c.

a. The tank must be equipped with a fixed roof and an internal floating roof in accordance with the following requirements:

(1) The internal floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

(2) The internal floating roof must be equipped with a continuous seal between the wall of the tank and the floating roof edge that meets either of the following requirements:

(a) A single continuous seal that is either a liquid-mounted seal or a metallic shoe seal, as defined in section 33.1-24-05-451; or

(b) Two continuous seals mounted one above the other. The lower seal may be a vapor-mounted seal.

(3) The internal floating roof must meet the following specifications:

(a) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and the rim space vents is to provide a projection below the liquid surface.

(b) Each opening in the internal floating roof must be equipped with a gasketed cover or a gasketed lid except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains.

(c) Each penetration of the internal floating roof for the purpose of sampling must have a slit fabric cover that covers at least ninety percent of the opening.

(d) Each automatic bleeder vent and rim space vent must be gasketed.

(e) Each penetration of the internal floating roof that allows for passage of a ladder must have a gasketed sliding cover.

(f) Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof must have a flexible fabric sleeve seal or a gasketed sliding cover.

b. The owner or operator shall operate the tank in accordance with the following requirements:

(1) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling shall be continuous and must be completed as soon as practical.

(2) Automatic bleeder vents are to be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.

(3) Prior to filling the tank, each cover, access hatch, gauge float well, or lid on any opening in the internal floating roof must be bolted or fastened closed (for example, no visible gaps). Rim space vents are to be set to open only when the internal floating roof is not floating or when the pressure beneath the rim exceeds the manufacturer's recommended setting.

c. The owner or operator shall inspect the internal floating roof in accordance with the procedures specified as follows:

(1) The floating roof and its closure devices must be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include the internal floating roof is not floating on the surface of the liquid inside the tank; liquid has accumulated on top of the internal floating roof; any portion of the roof seals have detached from the roof rim; holes, tears, or other openings are visible in the seal fabric; the gaskets no longer close off the hazardous waste surface from the atmosphere; or the slotted membrane has more than ten percent open area.

(2) The owner or operator shall inspect the internal floating roof components as follows except as provided in paragraph 3:

(a) Visually inspect the internal floating roof components through openings on the fixed roof (for example, manholes and roof hatches) at least once every twelve months after initial fill; and

(b) Visually inspect the internal floating roof, primary seal, secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every ten years.

(3) As an alternative to performing the inspection specified in paragraph 2 for an internal floating roof equipped with two continuous seals mounted one above the other, the owner or operator may visually inspect the internal floating roof, primary and secondary seals, gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every five years.

(4) Prior to each inspection required by paragraph 2 or 3, the owner or operator shall notify the department in advance of each inspection to provide the department with the opportunity to have an observer present during the inspection. The owner or operator shall notify the department of the date and location of the inspection as follows:

(a) Prior to each visual inspection of an internal floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the owner or operator so that it is received by the department at least thirty calendar days before refilling the tank except when an inspection is not planned as provided for in subparagraph b.

(b) When a visual inspection is not planned and the owner or operator could not have known about the inspection thirty calendar days before refilling the tank, the owner or operator shall notify the department as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the department at least seven calendar days before refilling the tank.

(5) In the event that a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 11.

(6) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-05-459.

d. Safety devices, as defined in section 33.1-24-05-451, may be installed and operated as necessary on any tank complying with the requirements of this subsection.

6. The owner or operator who controls air pollutant emissions from a tank using an external floating roof shall meet the requirements specified in subdivisions a through c.

a. The owner or operator shall design the external floating roof in accordance with the following requirements:

(1) The external floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

(2) The floating roof must be equipped with two continuous seals, one above the other, between the wall of the tank and the roof edge. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.

(a) The primary seal must be a liquid-mounted seal or a metallic shoe seal, as defined in section 33.1-24-05-451. The total area of the gaps between the tank wall and the primary seal may not exceed 10.0 inches² per foot [212 square centimeters per meter] of tank diameter, and the width of any portion of these gaps may not exceed 1.5 inches [3.8 centimeters]. If a metallic shoe seal is used for the primary seal, the metallic shoe seal must be designed so that one end extends into the liquid in the tank and the other end extends a vertical distance of at least sixty-one centimeters above the liquid surface.

(b) The secondary seal must be mounted above the primary seal and cover the annular space between the floating roof and the wall of the tank. The total area of the gaps between the tank wall and the secondary seal may not exceed 1.0 inches² per foot [21.2 square centimeters per meter] of tank diameter, and the width of any portion of these gaps must not exceed 0.5 inches [1.3 centimeters].

(3) The external floating roof must meet the following specifications:

(a) Except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in a noncontact external floating roof must provide a projection below the liquid surface.

(b) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be equipped with a gasketed cover, seal, or lid.

(c) Each access hatch and each gauge float well must be equipped with a cover designed to be bolted or fastened when the cover is secured in the closed position.

(d) Each automatic bleeder vent and each rim space vent must be equipped with a gasket.

(e) Each roof drain that empties into the liquid managed in the tank must be equipped with a slotted membrane fabric cover that covers at least ninety percent of the area of the opening.

(f) Each unslotted and slotted guide pole well must be equipped with a gasketed sliding cover or a flexible fabric sleeve seal.

(g) Each unslotted guide pole must be equipped with a gasketed cap on the end of the pole.

(h) Each slotted guide pole must be equipped with a gasketed float or other device which closes off the liquid surface from the atmosphere.

(i) Each gauge hatch and each sample well must be equipped with a gasketed cover.

b. The owner or operator shall operate the tank in accordance with the following requirements:

(1) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.

(2) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be secured and maintained in a closed position at all times except when the closure device must be open for access.

(3) Covers on each access hatch and each gauge float well must be bolted or fastened when secured in the closed position.

(4) Automatic bleeder vents must be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.

(5) Rim space vents must be set to open only at those times that the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting.

(6) The cap on the end of each unslotted guide pole must be secured in the closed position at all times except when measuring the level or collecting samples of the liquid in the tank.

(7) The cover on each gauge hatch or sample well must be secured in the closed position at all times except when the hatch or well must be opened for access.

(8) Both the primary seal and the secondary seal must completely cover the annular space between the external floating roof and the wall of the tank in a continuous fashion except during inspections.

c. The owner or operator shall inspect the external floating roof in accordance with the procedures specified as follows:

(1) The owner or operator shall measure the external floating roof seal gaps in accordance with the following requirements:

(a) The owner or operator shall perform measurements of gaps between the tank wall and the primary seal within sixty calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every five years.

(b) The owner or operator shall perform measurements of gaps between the tank wall and the secondary seal within sixty calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every year.

(c) If a tank ceases to hold hazardous waste for a period of one year or more, subsequent introduction of hazardous waste into the tank must be considered an initial operation for the purposes of subparagraphs a and b.

- (d) The owner or operator shall determine the total surface area of gaps in the primary seal and in the secondary seal individually using the following procedure:
- [1] The seal gap measurements must be performed at one or more floating roof levels when the roof is floating off the roof supports.
 - [2] Seal gaps, if any, must be measured around the entire perimeter of the floating roof in each place where a 0.125-inch [0.32-centimeter] diameter uniform probe passes freely (without forcing or binding against the seal) between the seal and the wall of the tank and measure the circumferential distance of each such location.
 - [3] For a seal gap measured under this subdivision, the gap surface area must be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.
 - [4] The total gap area must be calculated by adding the gap surface areas determined for each identified gap location for the primary seal and the secondary seal individually, and then dividing the sum for each seal type by the nominal diameter of the tank. These total gap areas for the primary seal and secondary seal are then compared to the respective standards for the seal type as specified in paragraph 2 of subdivision a.
- (e) If the seal gap measurements do not conform to the specifications in paragraph 2 of subdivision a, the owner or operator shall repair the defect in accordance with the requirements of subsection 11.
- (f) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-05-459.
- (2) The owner or operator shall visually inspect the external floating roof in accordance with the following requirements:
- (a) The floating roof and its closure devices must be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include holes, tears, or other openings in the rim seal or seal fabric of the floating roof; a rim seal detached from the floating roof; all or a portion of the floating roof deck being submerged below the surface of the liquid in the tank; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.
 - (b) The owner or operator shall perform an initial inspection of the external floating roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year except for the special conditions provided for in subsection 12.
 - (c) If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 11.
 - (d) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-05-459.

(3) Prior to each inspection required by paragraph 1 or 2, the owner or operator shall notify the department in advance of each inspection to provide the department with the opportunity to have an observer present during the inspection. The owner or operator shall notify the department of the date and location of the inspection as follows:

(a) Prior to each inspection to measure external floating roof seal gaps as required under paragraph 1, written notification must be prepared and sent by the owner or operator so that it is received by the department at least thirty calendar days before the date the measurements are scheduled to be performed.

(b) Prior to each visual inspection of an external floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the owner or operator so that it is received by the department at least thirty calendar days before refilling the tank except when an inspection is not planned as provided for in subparagraph c.

(c) When a visual inspection is not planned and the owner or operator could not have known about the inspection thirty calendar days before refilling the tank, the owner or operator shall notify the department as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the department at least seven calendar days before refilling the tank.

d. Safety devices, as defined in section 33.1-24-05-451, may be installed and operated as necessary on any tank complying with the requirements of this subsection.

7. The owner or operator who controls air pollutant emissions from a tank by venting the tank to a control device shall meet the requirements specified in subdivisions a through c.

a. The tank must be covered by a fixed roof and vented directly through a closed-vent system to a control device in accordance with the following requirements:

(1) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the liquid in the tank.

(2) Each opening in the fixed roof not vented to the control device must be equipped with a closure device. If the pressure in the vapor headspace underneath the fixed roof is less than atmospheric pressure when the control device is operating, the closure devices must be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the fixed roof is equal to or greater than atmospheric pressure when the control device is operating, the closure device must be designed to operate with no detectable organic emissions.

(3) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices include organic vapor permeability, the effects of any contact with the liquid and its vapor managed in the

tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

(4) The closed-vent system and control device must be designed and operated in accordance with the requirements of section 33.1-24-05-457.

b. Whenever a hazardous waste is in the tank, the fixed roof must be installed with each closure device secured in the closed position and the vapor headspace underneath the fixed roof vented to the control device except as follows:

(1) Venting to the control device is not required, and opening of closure devices or removal of the fixed roof is allowed at the following times:

(a) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

(b) To remove accumulated sludge or other residues from the bottom of a tank.

(2) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

c. The owner or operator shall inspect and monitor the air emission control equipment in accordance with the following procedures:

(1) The fixed roof and its closure devices must be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

(2) The closed-vent system and control device must be inspected and monitored by the owner or operator in accordance with the procedures specified in section 33.1-24-05-457.

(3) The owner or operator shall perform an initial inspection of the air emission control equipment on or before the date that the tank becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year except for the special conditions provided for in subsection 12.

(4) If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 11.

(5) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-05-459.

8. The owner or operator who controls air pollutant emissions by using a pressure tank shall meet the following requirements:

a. The tank must be designed not to vent to the atmosphere as a result of compression of the vapor headspace in the tank during filling of the tank to its design capacity.

b. All tank openings must be equipped with closure devices designed to operate with no detectable organic emissions as determined using the procedure specified in subsection 4 of section 33.1-24-05-453.

c. Whenever a hazardous waste is in the tank, the tank must be operated as a closed system that does not vent to the atmosphere except under either of the following conditions as specified in paragraph 1 or 2:

(1) At those times when opening of a safety device, as defined in section 33.1-24-05-451, is required to avoid an unsafe condition.

(2) At those times when purging of inerts from the tank is required and the purge stream is routed to a closed-vent system and control device designed and operated in accordance with the requirements of section 33.1-24-05-457.

9. The owner or operator who controls air pollutant emissions by using an enclosure vented through a closed-vent system to an enclosed combustion control device shall meet the requirements specified in subdivisions a through d.

a. The tank must be located inside an enclosure. The enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in section 5.0 to "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and, thereafter, annually.

b. The enclosure must be vented through a closed-vent system to an enclosed combustion control device that is designed and operated in accordance with the standards for either a vapor incinerator, boiler, or process heater specified in section 33.1-24-05-457.

c. Safety devices, as defined in section 33.1-24-05-451, may be installed and operated as necessary on any enclosure, closed-vent system, or control device used to comply with the requirements of subdivisions a and b.

d. The owner or operator shall inspect and monitor the closed-vent system and control device as specified in section 33.1-24-05-457.

10. The owner or operator shall transfer hazardous waste to a tank subject to this section in accordance with the following requirements:

a. Transfer of hazardous waste, except as provided in subdivision b, to the tank from another tank subject to this section or from a surface impoundment subject to section 33.1-24-05-455 must be conducted using continuous hard-piping or another closed system that does not allow exposure of the hazardous waste to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of 40 CFR part 63, subpart RR - National Emission Standards for Individual Drain Systems.

b. The requirements of subdivision a do not apply when transferring a hazardous waste to the tank under any of the following conditions:

- (1) The hazardous waste meets the average VO concentration conditions specified in subdivision a of subsection 3 of section 33.1-24-05-452 at the point of waste origination.
- (2) The hazardous waste has been treated by an organic destruction or removal process to meet the requirements in subdivision b of subsection 3 of section 33.1-24-05-452.
- (3) The hazardous waste meets the requirements of subdivision d of subsection 3 of section 33.1-24-05-452.

11. The owner or operator shall repair each defect detected during an inspection performed in accordance with the requirements of subdivision d of subsection 3, subdivision c of subsection 5, subdivision c of subsection 6, or subdivision c of subsection 7 as follows:

- a. The owner or operator shall make first efforts at repair of the defect no later than five calendar days after detection, and repair shall be completed as soon as possible but no later than forty-five calendar days after detection except as provided in subdivision b.
- b. Repair of a defect may be delayed beyond forty-five calendar days if the owner or operator determines that repair of the defect requires emptying or temporary removal from service of the tank and no alternative tank capacity is available at the site to accept the hazardous waste normally managed in the tank. In this case, the owner or operator shall repair the defect the next time the process or unit that is generating the hazardous waste managed in the tank stops operation. Repair of the defect shall be completed before the process or unit resumes operation.

12. Following the initial inspection and monitoring of the cover as required by the applicable provisions of sections 33.1-24-05-450 through 33.1-24-05-474, subsequent inspection and monitoring may be performed at intervals longer than one year under the following special conditions:

- a. If inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions, then the owner or operator may designate a cover as an "unsafe to inspect and monitor cover" and comply with all of the following requirements:
 - (1) Prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required.
 - (2) Develop and implement a written plan and schedule to inspect and monitor the cover, using the procedures specified in the applicable section of sections 33.1-24-05-450 through 33.1-24-05-474, as frequently as practicable during those times when a worker can safely access the cover.
- b. If a tank is buried partially or entirely underground, an owner or operator is required to inspect and monitor, as required by the applicable provisions of this section, only those portions of the tank cover and those connections to the tank (for example, fill ports, access hatches, gauge wells, etc.) that are located on or above the ground surface.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-455. Standards - Surface impoundments.

1. The provisions of this section apply to the control of air pollutant emissions from surface impoundments for which subsection 2 of section 33.1-24-05-452 references the use of this section for such air emission control.
2. The owner or operator shall control air pollutant emissions from the surface impoundment by installing and operating either of the following:
 - a. A floating membrane cover in accordance with the provisions specified in subsection 3; or
 - b. A cover that is vented through a closed-vent system to a control device in accordance with the provisions specified in subsection 4.
3. The owner or operator who controls air pollutant emissions from a surface impoundment using a floating membrane cover shall meet the requirements specified in subdivisions a through c.
 - a. The surface impoundment shall be equipped with a floating membrane cover designed to meet the following specifications:
 - (1) The floating membrane cover must be designed to float on the liquid surface during normal operations and form a continuous barrier over the entire surface area of the liquid.
 - (2) The cover shall be fabricated from a synthetic membrane material that is either:
 - (a) High-density polyethylene with a thickness no less than 0.1 inches [2.5 millimeters]; or
 - (b) A material or a composite of different materials determined to have both organic permeability properties that are equivalent to those of the material listed in subparagraph a and chemical and physical properties that maintain the material integrity for the intended service life of the material.
 - (3) The cover must be installed so there are no visible cracks, holes, gaps, or other open spaces between cover section seams or between the interface of the cover edge and its foundation mountings.
 - (4) Except as provided for in paragraph 5, each opening in the floating membrane cover must be equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device.
 - (5) The floating membrane cover may be equipped with one or more emergency cover drains for removal of stormwater. Each emergency cover drain shall be equipped with a slotted membrane fabric cover that covers at least ninety percent of the area of the opening or a flexible fabric sleeve seal.
 - (6) The closure devices must be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the closure devices throughout their intended service life. Factors to be considered when selecting the materials of construction and designing the cover and closure devices include organic vapor permeability; the effects of any contact with the liquid and its vapor managed in the surface impoundment; the effects of

outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the surface impoundment on which the floating membrane cover is installed.

b. Whenever a hazardous waste is in the surface impoundment, the floating membrane cover shall float on the liquid and each closure device shall be secured in the closed position except as follows:

(1) Opening of closure devices or removal of the cover is allowed at the following times:

(a) To provide access to the surface impoundment for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the surface impoundment, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly replace the cover and secure the closure device in the closed position, as applicable.

(b) To remove accumulated sludge or other residues from the bottom of a surface impoundment.

(2) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

c. The owner or operator shall inspect the floating membrane cover in accordance with the following procedures:

(1) The floating membrane cover and its closure devices shall be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the cover section seams or between the interface of the cover edge and its foundation mountings; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

(2) The owner or operator shall perform an initial inspection of the floating membrane cover and its closure devices on or before the date that the surface impoundment becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year except for the special conditions provided for in subsection 7.

(3) If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 6.

(4) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 3 of section 33.1-24-05-459.

4. The owner or operator who controls air pollutant emissions from a surface impoundment using a cover vented to a control device shall meet the requirements specified in subdivisions a through c.

a. The surface impoundment must be covered by a cover and vented directly through a closed-vent system to a control device in accordance with the following requirements:

(1) The cover and its closure devices must be designed to form a continuous barrier over the entire surface area of the liquid in the surface impoundment.

(2) Each opening in the cover not vented to the control device must be equipped with a closure device. If the pressure in the vapor headspace underneath the cover is less

than atmospheric pressure when the control device is operating, the closure devices must be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the cover is equal to or greater than atmospheric pressure when the control device is operating, the closure device must be designed to operate with no detectable organic emissions using the procedure specified in subsection 4 of section 33.1-24-05-453.

(3) The cover and its closure devices must be made of suitable materials that will minimize exposure of the hazardous waste to the atmosphere, to the extent practical, and will maintain the integrity of the cover and closure devices throughout their intended service life. Factors to be considered when selecting the materials of construction and designing the cover and closure devices shall include organic vapor permeability; the effects of any contact with the liquid or its vapors managed in the surface impoundment; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the surface impoundment on which the cover is installed.

(4) The closed-vent system and control device must be designed and operated in accordance with the requirements of section 33.1-24-05-457.

b. Whenever a hazardous waste is in the surface impoundment, the cover must be installed with each closure device secured in the closed position and the vapor headspace underneath the cover vented to the control device except as follows:

(1) Venting to the control device is not required, and opening of closure devices or removal of the cover is allowed at the following times:

(a) To provide access to the surface impoundment for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample liquid in the surface impoundment, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the surface impoundment.

(b) To remove accumulated sludge or other residues from the bottom of the surface impoundment.

(2) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

c. The owner or operator shall inspect and monitor the air emission control equipment in accordance with the following procedures:

(1) The surface impoundment cover and its closure devices must be visually inspected by the owner or operator to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the cover section seams or between the interface of the cover edge and its foundation mountings; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

- (2) The closed-vent system and control device must be inspected and monitored by the owner or operator in accordance with the procedures specified in section 33.1-24-05-457.
- (3) The owner or operator shall perform an initial inspection of the air emission control equipment on or before the date that the surface impoundment becomes subject to this section. Thereafter, the owner or operator shall perform the inspections at least once every year except for the special conditions provided for in subsection 7.
- (4) If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of subsection 6.
- (5) The owner or operator shall maintain a record of the inspection in accordance with the requirements specified in subsection 3 of section 33.1-24-05-459.

5. The owner or operator shall transfer hazardous waste to a surface impoundment subject to this section in accordance with the following requirements:

- a. Transfer of hazardous waste, except as provided in subdivision b, to the surface impoundment from another surface impoundment subject to this section or from a tank subject to section 33.1-24-05-454 must be conducted using continuous hard-piping or another closed system that does not allow exposure of the waste to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of 40 CFR part 63, subpart RR - National Emission Standards for Individual Drain Systems.
- b. The requirements of subdivision a do not apply when transferring a hazardous waste to the surface impoundment under any of the following conditions:
 - (1) The hazardous waste meets the average VO concentration conditions specified in subdivision a of subsection 3 of section 33.1-24-05-452 at the point of waste origination.
 - (2) The hazardous waste has been treated by an organic destruction or removal process to meet the requirements in subdivision b of subsection 3 of section 33.1-24-05-452.
 - (3) The hazardous waste meets the requirements of subdivision d of subsection 3 of section 33.1-24-05-452.

6. The owner or operator shall repair each defect detected during an inspection performed in accordance with the requirements of subdivision c of subsection 3 or subdivision c of subsection 4 as follows:

- a. The owner or operator shall make first efforts at repair of the defect no later than five calendar days after detection and repair shall be completed as soon as possible but no later than forty-five calendar days after detection except as provided in subdivision b.
- b. Repair of a defect may be delayed beyond forty-five calendar days if the owner or operator determines that repair of the defect requires emptying or temporary removal from service of the surface impoundment and no alternative capacity is available at the site to accept the hazardous waste normally managed in the surface impoundment. In this case, the owner or operator shall repair the defect the next time the process or unit that is generating the hazardous waste managed in the surface impoundment stops operation. Repair of the defect must be completed before the process or unit resumes operation.

7. Following the initial inspection and monitoring of the cover as required by the applicable provisions of sections 33.1-24-05-450 through 33.1-24-05-474, subsequent inspection and monitoring may be performed at intervals longer than one year in the case when inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions. In this case, the owner or operator may designate the cover as an "unsafe to inspect and monitor cover" and comply with all of the following requirements:

- a. Prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required.
- b. Develop and implement a written plan and schedule to inspect and monitor the cover using the procedures specified in the applicable section of sections 33.1-24-05-450 through 33.1-24-05-474 as frequently as practicable during those times when a worker can safely access the cover.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-456. Standards - Containers.

1. The provisions of this section apply to the control of air pollutant emissions from containers for which subsection 2 of section 33.1-24-05-452 references the use of this section for such air emission control.

2. General requirements.

a. The owner or operator shall control air pollutant emissions from each container subject to this section in accordance with the following requirements, as applicable to the container, except when the special provisions for waste stabilization processes specified in subdivision b apply to the container.

(1) For a container having a design capacity greater than 3.5 feet³ [0.1 meter³] and less than or equal to 16.25 feet³ [0.46 meter³], the owner or operator shall control air pollutant emissions from the container in accordance with the container level 1 standards specified in subsection 3.

(2) For a container having a design capacity greater than 16.25 feet³ [0.46 meter³] that is not in light material service, the owner or operator shall control air pollutant emissions from the container in accordance with the container level 1 standards specified in subsection 3.

(3) For a container having a design capacity greater than 16.25 feet³ [0.46 meter³] that is in light material service, the owner or operator shall control air pollutant emissions from the container in accordance with the container level 2 standards specified in subsection 4.

b. When a container having a design capacity greater than 3.5 feet³ [0.1 meter³] is used for treatment of a hazardous waste by a waste stabilization process, the owner or operator shall control air pollutant emissions from the container in accordance with the container level 3 standards specified in subsection 5 at those times during the waste stabilization process when the hazardous waste in the container is exposed to the atmosphere.

3. Container level 1 standards.

a. A container using container level 1 controls is one of the following:

- (1) A container that meets the applicable department of transportation regulations on packaging hazardous materials for transportation as specified in subsection 6.
- (2) A container equipped with a cover and closure devices that form a continuous barrier over the container openings such that when the cover and closure devices are secured in the closed position there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container (for example, a lid on a drum or a suitably secured tarp on a roll-off box) or may be an integral part of the container structural design (for example, a "portable tank" or bulk cargo container equipped with a screw-type cap).
- (3) An open-top container in which an organic-vapor suppressing barrier is placed on or over the hazardous waste in the container such that no hazardous waste is exposed to the atmosphere. One example of such a barrier is application of a suitable organic-vapor suppressing foam.

b. A container used to meet the requirements of paragraph 2 or 3 of subdivision a must be equipped with covers and closure devices, as applicable to the container, that are composed of suitable materials to minimize exposure of the hazardous waste to the atmosphere and to maintain the equipment integrity for as long as it is in service. Factors to be considered in selecting the materials of construction and designing the cover and closure devices shall only include organic vapor permeability; the effects of contact with the hazardous waste or its vapor managed in the container; the effects of outdoor exposure of the closure device or cover material to wind, moisture, and sunlight; and the operating practices for which the container is intended to be used.

c. Whenever a hazardous waste is in a container using container level 1 controls, the owner or operator shall install all covers and closure devices for the container, as applicable to the container, and secure and maintain each closure device in the closed position except as follows:

(1) Opening of a closure device or cover is allowed for the purpose of adding hazardous waste or other material to the container as follows:

(a) In the case when the container is filled to the intended final level in one continuous operation, the owner or operator shall promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

(b) In the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within fifteen minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the material being added to the container, whichever condition occurs first.

(2) Opening of a closure device or cover is allowed for the purpose of removing hazardous waste from the container as follows:

(a) For the purpose of meeting the requirements of this section, an empty container as defined in subsections 3, 4, and 5 of section 33.1-24-02-07 may be open to the atmosphere at any time (for example, covers and closure

devices are not required to be secured in the closed position on an empty container).

(b) In the case when discrete quantities or batches of material are removed from the container but the container does not meet the conditions to be an empty container as defined in subsections 3, 4, and 5 of section 33.1-24-02-07, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within fifteen minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

(3) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous waste. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

(4) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device shall be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens shall be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the owner or operator based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

(5) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The owner or operator of containers using container level 1 controls shall inspect the containers and their covers and closure devices as follows:

(1) In the case when a hazardous waste already is in the container at the time the owner or operator first accepts possession of the container at the facility and the container is not emptied within twenty-four hours after the container is accepted at the facility (for example, does not meet the conditions for an empty container as specified in subsections 3, 4, and 5 of section 33.1-24-02-07), the owner or operator shall visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection shall be conducted on or before the date that the container is accepted at the facility (for example, the date the container becomes subject to the container standards in sections 33.1-24-05-450 through

33.1-24-05-474). For purposes of this requirement, the date of acceptance is the date of signature that the facility owner or operator enters on item 20 of the uniform hazardous waste manifest in appendix I to chapter 33.1-24-03 (environmental protection agency forms 8700-22 and 8700-22A), as required by section 33.1-24-05-38. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of paragraph 3.

(2) In the case when a container used for managing hazardous waste remains at the facility for a period of one year or more, the owner or operator shall visually inspect the container and its cover and closure devices initially and thereafter, at least once every twelve months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of paragraph 3.

(3) When a defect is detected for the container, cover, or closure devices, the owner or operator shall make first efforts at repair of the defect no later than twenty-four hours after detection and repair shall be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous waste shall be removed from the container and the container shall not be used to manage hazardous waste until the defect is repaired.

e. The owner or operator shall maintain at the facility a copy of the procedure used to determine that containers with capacity of 16.25 feet³ [0.46 meter³] or greater, which do not meet applicable department of transportation regulations as specified in subsection 6, are not managing hazardous waste in light material service.

4. Container level 2 standards.

a. A container using container level 2 controls is one of the following:

(1) A container that meets the applicable department of transportation regulations on packaging hazardous materials for transportation as specified in subsection 6.

(2) A container that operates with no detectable organic emissions as defined in section 33.1-24-05-451 and determined in accordance with the procedure specified in subsection 7.

(3) A container that has been demonstrated within the preceding twelve months to be vapor-tight by using 40 CFR part 60, appendix A, method 27 in accordance with the procedure specified in subsection 8.

b. Transfer of hazardous waste in or out of a container using container level 2 controls shall be conducted in such a manner as to minimize exposure of the hazardous waste to the atmosphere, to the extent practical, considering the physical properties of the hazardous waste and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the department considers to meet the requirements of this subdivision include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous waste is filled and subsequently purging the transfer line before removing it from the container opening.

- c. Whenever a hazardous waste is in a container using container level 2 controls, the owner or operator shall install all covers and closure devices for the container, and secure and maintain each closure device in the closed position except as follows:
- (1) Opening of a closure device or cover is allowed for the purpose of adding hazardous waste or other material to the container as follows:
 - (a) In the case when the container is filled to the intended final level in one continuous operation, the owner or operator shall promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.
 - (b) In the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within fifteen minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the material being added to the container, whichever condition occurs first.
 - (2) Opening of a closure device or cover is allowed for the purpose of removing hazardous waste from the container as follows:
 - (a) For the purpose of meeting the requirements of this section, an empty container as defined in subsections 3, 4, and 5 of section 33.1-24-02-07 may be open to the atmosphere at any time (for example, covers and closure devices are not required to be secured in the closed position on an empty container).
 - (b) In the case when discrete quantities or batches of material are removed from the container but the container does not meet the conditions to be an empty container as defined in subsections 3, 4, and 5 of section 33.1-24-02-07, the owner or operator shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within fifteen minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.
 - (3) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous waste. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the owner or operator shall promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.
 - (4) Opening of a spring-loaded, pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device shall be designed to operate with no detectable organic emission when the device is secured in the closed position. The settings at which the device opens shall be established such that the device remains in the closed position whenever the

internal pressure of the container is within the internal pressure operating range determined by the owner or operator based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

(5) Opening of a safety device, as defined in section 33.1-24-05-451, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The owner or operator of containers using container level 2 controls shall inspect the containers and their covers and closure devices as follows:

(1) In the case when a hazardous waste already is in the container at the time the owner or operator first accepts possession of the container at the facility and the container is not emptied within twenty-four hours after the container is accepted at the facility (for example, does not meet the conditions for an empty container as specified in subsections 3, 4, and 5 of section 33.1-24-02-07), the owner or operator shall visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection shall be conducted on or before the date that the container is accepted at the facility (for example, the date the container becomes subject to the container standards in sections 33.1-24-05-450 through 33.1-24-05-474). For purposes of this requirement, the date of acceptance is the date of signature that the facility owner or operator enters on item 20 of the uniform hazardous waste manifest in appendix I to chapter 33.1-24-03 (environmental protection agency forms 8700-22 and 8700-22A), as required by section 33.1-24-05-38. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of paragraph 3.

(2) In the case when a container used for managing hazardous waste remains at the facility for a period of one year or more, the owner or operator shall visually inspect the container and its cover and closure devices initially and thereafter, at least once every twelve months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the owner or operator shall repair the defect in accordance with the requirements of paragraph 3.

(3) When a defect is detected for the container, cover, or closure devices, the owner or operator shall make first efforts at repair of the defect no later than twenty-four hours after detection, and repair shall be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous waste shall be removed from the container and the container shall not be used to manage hazardous waste until the defect is repaired.

5. Container level 3 standards.

a. A container using container level 3 controls is one of the following:

(1) A container that is vented directly through a closed-vent system to a control device in accordance with the requirements of paragraph 2 of subdivision b.

(2) A container that is vented inside an enclosure which is exhausted through a closed-vent system to a control device in accordance with the requirements of paragraphs 1 and 2 of subdivision b.

b. The owner or operator shall meet the following requirements, as applicable to the type of air emission control equipment selected by the owner or operator:

(1) The container enclosure shall be designed and operated in accordance with the criteria for a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of containers through the enclosure by conveyor or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The owner or operator shall perform the verification procedure for the enclosure as specified in section 5.0 to "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and, thereafter, annually.

(2) The closed-vent system and control device shall be designed and operated in accordance with the requirements of section 33.1-24-05-457.

c. Safety devices, as defined in section 33.1-24-05-451, may be installed and operated as necessary on any container, enclosure, closed-vent system, or control device used to comply with the requirements of subdivision a.

d. Owners and operators using container level 3 controls in accordance with the provisions of sections 33.1-24-05-450 through 33.1-24-05-474 shall inspect and monitor the closed-vent systems and control devices as specified in section 33.1-24-05-457.

e. Owners and operators that use container level 3 controls in accordance with the provisions of sections 33.1-24-05-450 through 33.1-24-05-474 shall prepare and maintain the records specified in subsection 4 of section 33.1-24-05-459.

f. Transfer of hazardous waste in or out of a container using container level 3 controls shall be conducted in such a manner as to minimize exposure of the hazardous waste to the atmosphere, to the extent practical, considering the physical properties of the hazardous waste and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the department considers to meet the requirements of this subdivision include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous waste is filled and subsequently purging the transfer line before removing it from the container opening.

6. For the purpose of compliance with paragraph 1 of subdivision a of subsection 3 or paragraph 1 of subdivision a of subsection 4, containers shall be used that meet the applicable department of transportation regulations on packaging hazardous materials for transportation as follows:

a. The container meets the applicable requirements specified in 49 CFR part 178 - Specifications for Packaging or 49 CFR part 179 - Specifications for Tank Cars.

b. Hazardous waste is managed in the container in accordance with the applicable requirements specified in 49 CFR part 107, subpart B - Exemptions; 49 CFR part 172 -

Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements; 49 CFR part 173 - Shippers - General Requirements for Shipments and Packages; and 49 CFR part 180 - Continuing Qualification and Maintenance of Packagings.

c. For the purpose of complying with sections 33.1-24-05-450 through 33.1-24-05-474, no exceptions to the 49 CFR part 178 or 179 regulations are allowed except as provided for in subdivision d.

d. For a lab pack that is managed in accordance with the requirements of 49 CFR part 178 for the purpose of complying with sections 33.1-24-05-450 through 33.1-24-05-474, an owner or operator may comply with the exceptions for combination packagings specified in 49 CFR 173.12(b).

7. To determine compliance with the no detectable organic emissions requirement of paragraph 2 of subdivision a of subsection 4, the procedure specified in subsection 4 of section 33.1-24-05-453 shall be used.

a. Each potential leak interface (for example, a location where organic vapor leakage could occur) on the container, its cover, and associated closure devices, as applicable to the container, shall be checked. Potential leak interfaces that are associated with containers include the interface of the cover rim and the container wall; the periphery of any opening on the container or container cover and its associated closure device; and the sealing seat interface on a spring-loaded pressure-relief valve.

b. The test shall be performed when the container is filled with a material having a volatile organic concentration representative of the range of volatile organic concentrations for the hazardous waste expected to be managed in this type of container. During the test, the container cover and closure devices shall be secured in the closed position.

8. Procedure for determining a container to be vapor-tight using method 27 of 40 CFR part 60, appendix A, for the purpose of complying with paragraph 3 of subdivision a of subsection 4.

a. The test shall be performed in accordance with method 27 of 40 CFR part 60, appendix A.

b. A pressure measurement device shall be used that has a precision of plus or minus 0.1 inch [plus or minus 2.5 millimeters] water and that is capable of measuring above the pressure at which the container is to be tested for vapor tightness.

c. If the test results determined by method 27 indicate that the container sustains a pressure change less than or equal to seven hundred fifty pascals within five minutes after it is pressurized to a minimum of four thousand five hundred pascals, then the container is determined to be vapor-tight.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-457. Standards - Closed-vent systems and control devices.

1. This section applies to each closed-vent system and control device installed and operated by the owner or operator to control air emissions in accordance with standards of sections 33.1-24-05-450 through 33.1-24-05-474.

2. The closed-vent system shall meet the following requirements:

- a. The closed-vent system shall route the gases, vapors, and fumes emitted from the hazardous waste in the waste management unit to a control device that meets the requirements specified in subsection 3.
- b. The closed-vent system shall be designed and operated in accordance with the requirements specified in subsection 11 of section 33.1-24-05-403.
- c. In the case when the closed-vent system includes bypass devices that could be used to divert the gas or vapor stream to the atmosphere before entering the control device, each bypass device shall be equipped with either a flow indicator as specified in paragraph 1 or a seal or locking device as specified in paragraph 2. For the purpose of complying with this subdivision, low leg drains, high point bleeds, analyzer vents, open-ended valves or lines, spring-loaded pressure relief valves, and other fittings used for safety purposes are not considered to be bypass devices.
 - (1) If a flow indicator is used to comply with this subdivision, the indicator shall be installed at the inlet to the bypass line used to divert gases and vapors from the closed-vent system to the atmosphere at a point upstream of the control device inlet. For this subdivision, a flow indicator means a device which indicates the presence of either gas or vapor flow in the bypass line.
 - (2) If a seal or locking device is used to comply with this subdivision, the device shall be placed on the mechanism by which the bypass device position is controlled (for example, valve handle, damper lever) when the bypass device is in the closed position such that the bypass device cannot be opened without breaking the seal or removing the lock. Examples of such devices include a car-seal or a lock-and-key configuration valve. The owner or operator shall visually inspect the seal or closure mechanism at least once every month to verify that the bypass mechanism is maintained in the closed position.
- d. The closed-vent system shall be inspected and monitored by the owner or operator in accordance with the procedure specified in subsection 12 of section 33.1-24-05-403.

3. The control device shall meet the following requirements:

- a. The control device shall be one of the following devices:
 - (1) A control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least ninety-five percent by weight;
 - (2) An enclosed combustion device designed and operated in accordance with the requirements of subsection 3 of section 33.1-24-05-403; or
 - (3) A flare designed and operated in accordance with the requirements of subsection 4 of section 33.1-24-05-403.
- b. The owner or operator who elects to use a closed-vent system and control device to comply with the requirements of this section shall comply with the requirements specified in paragraphs 1 through 6.
 - (1) Periods of planned routine maintenance of the control device, during which the control device does not meet the specifications of paragraph 1, 2, or 3 of subdivision a, as applicable, shall not exceed two hundred forty hours per year.
 - (2) The specifications and requirements in paragraphs 1, 2, and 3 of subdivision a for control devices do not apply during periods of planned routine maintenance.

(3) The specifications and requirements in paragraphs 1, 2, and 3 of subdivision a for control devices do not apply during a control device system malfunction.

(4) The owner or operator shall demonstrate compliance with the requirements of paragraph 1 (for example, planned routine maintenance of a control device, during which the control device does not meet the specifications of paragraph 1, 2, or 3 of subdivision a, as applicable, shall not exceed two hundred forty hours per year) by recording the information specified in paragraph 5 of subdivision a of subsection 5 of section 33.1-24-05-459.

(5) The owner or operator shall correct control device system malfunctions as soon as practicable after their occurrence in order to minimize excess emissions of air pollutants.

(6) The owner or operator shall operate the closed-vent system such that gases, vapors, or fumes are not actively vented to the control device during periods of planned maintenance or control device system malfunction (for example, periods when the control device is not operating or not operating normally) except in cases when it is necessary to vent the gases, vapors, or fumes, or any combination, to avoid an unsafe condition or to implement malfunction corrective actions or planned maintenance actions.

c. The owner or operator using a carbon adsorption system to comply with subdivision a shall operate and maintain the control device in accordance with the following requirements:

(1) Following the initial startup of the control device, all activated carbon in the control device shall be replaced with fresh carbon on a regular basis in accordance with the requirements of subsection 7 or 8 of section 33.1-24-05-403.

(2) All carbon that is a hazardous waste and that is removed from the control device shall be managed in accordance with the requirements of subsection 14 of section 33.1-24-05-403, regardless of the average volatile organic concentration of the carbon.

d. An owner or operator using a control device other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with subdivision a shall operate and maintain the control device in accordance with the requirements of subsection 10 of section 33.1-24-05-403.

e. The owner or operator shall demonstrate that a control device achieves the performance requirements of subdivision a as follows:

(1) An owner or operator shall demonstrate using either a performance test as specified in paragraph 3 or a design analysis as specified in paragraph 4 the performance of each control device except for the following:

(a) A flare;

(b) A boiler or process heater with a design heat input capacity of 44 megawatts or greater;

(c) A boiler or process heater into which the vent stream is introduced with the primary fuel;

(d) A boiler or industrial furnace burning hazardous waste for which the owner or operator has been issued a final permit under chapter 33.1-24-06 and has

designed and operates the unit in accordance with the requirements of sections 33.1-24-05-525 through 33.1-24-05-549; or

(e) A boiler or industrial furnace burning hazardous waste for which the owner or operator has designed and operates in accordance with sections 33.1-24-05-525 through 33.1-24-05-549.

(2) An owner or operator shall demonstrate the performance of each flare in accordance with the requirements specified in subsection 5 of section 33.1-24-05-403.

(3) For a performance test conducted to meet the requirements of paragraph 1, the owner or operator shall use the test methods and procedures specified in subdivisions a through d of subsection 3 of section 33.1-24-05-404.

(4) For a design analysis conducted to meet the requirements of paragraph 1, the design analysis shall meet the requirements specified in paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.

(5) The owner or operator shall demonstrate that a carbon adsorption system achieves the performance requirements of subdivision a based on the total quantity of organics vented to the atmosphere from all carbon adsorption system equipment that is used for organic adsorption, organic desorption or carbon regeneration, organic recovery, and carbon disposal.

f. If the owner or operator and the department do not agree on a demonstration of control device performance using a design analysis, then the disagreement shall be resolved using the results of a performance test performed by the owner or operator in accordance with the requirements of paragraph 3 of subdivision e. The department may choose to have an authorized representative observe the performance test.

g. The closed-vent system and control device shall be inspected and monitored by the owner or operator in accordance with the procedures specified in subdivision b of subsection 6 and subsection 12 of section 33.1-24-05-403. The readings from each monitoring device required by subdivision b of subsection 6 of section 33.1-24-05-403 shall be inspected at least once each operating day to check control device operation. Any necessary corrective measures shall be immediately implemented to ensure the control device is operated in compliance with the requirements of section 33.1-24-05-457.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-458. Inspection and monitoring requirements.

1. The owner or operator shall inspect and monitor air emission control equipment used to comply with sections 33.1-24-05-450 through 33.1-24-05-474 in accordance with the applicable requirements specified in sections 33.1-24-05-454 through 33.1-24-05-457.

2. The owner or operator shall develop and implement a written plan and schedule to perform the inspections and monitoring required by subsection 1. The owner or operator shall incorporate this plan and schedule into the facility inspection plan required under section 33.1-24-05-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-05-459. Recordkeeping requirements.

1. Each owner or operator of a facility subject to requirements in sections 33.1-24-05-450 through 33.1-24-05-474 shall record and maintain the information specified in subsections 2 through 10, as applicable to the facility. Except for air emission control equipment design documentation and information required by subsections 9 and 10, records required by this section shall be maintained in the operating record for a minimum of three years. Air emission control equipment design documentation shall be maintained in the operating record until the air emission control equipment is replaced or otherwise no longer in service. Information required by subsections 9 and 10 shall be maintained in the operating record for as long as the waste management unit is not using air emission controls specified in sections 33.1-24-05-454 through 33.1-24-05-457 in accordance with the conditions specified in subsection 4 or subdivision g of subsection 2 of section 33.1-24-05-450, respectively.

2. The owner or operator of a tank using air emission controls in accordance with the requirements of section 33.1-24-05-454 shall prepare and maintain records for the tank that include the following information:
 - a. For each tank using air emission controls in accordance with the requirements of section 33.1-24-05-454, the owner or operator shall record:
 - (1) A tank identification number (or other unique identification description as selected by the owner or operator).
 - (2) A record for each inspection required by section 33.1-24-05-454 that includes the following information:
 - (a) Date inspection was conducted.
 - (b) For each defect detected during the inspection, the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. In the event that repair of the defect is delayed in accordance with the provisions of section 33.1-24-05-454, the owner or operator shall also record the reason for the delay and the date that completion of repair of the defect is expected.
 - b. In addition to the information required by subdivision a, the owner or operator shall record the following information, as applicable to the tank:
 - (1) The owner or operator using a fixed roof to comply with the tank level 1 control requirements specified in subsection 3 of section 33.1-24-05-454 shall prepare and maintain records for each determination for the maximum organic vapor pressure of the hazardous waste in the tank performed in accordance with the requirements of subsection 3 of section 33.1-24-05-454. The records shall include the date and time the samples were collected, the analysis method used, and the analysis results.
 - (2) The owner or operator using an internal floating roof to comply with the tank level 2 control requirements specified in subsection 5 of section 33.1-24-05-454 shall prepare and maintain documentation describing the floating roof design.
 - (3) Owners and operators using an external floating roof to comply with the tank level 2 control requirements specified in subsection 6 of section 33.1-24-05-454 shall prepare and maintain the following records:

- (a) Documentation describing the floating roof design and the dimensions of the tank.
 - (b) Records for each seal gap inspection required by subdivision c of subsection 6 of section 33.1-24-05-454 describing the results of the seal gap measurements. The records shall include the date that the measurements were performed, the raw data obtained for the measurements, and the calculations of the total gap surface area. In the event that the seal gap measurements do not conform to the specifications in subdivision a of subsection 6 of section 33.1-24-05-454, the records shall include a description of the repairs that were made, the date the repairs were made, and the date the tank was emptied, if necessary.
- (4) Each owner or operator using an enclosure to comply with the tank level 2 control requirements specified in subsection 9 of section 33.1-24-05-454 shall prepare and maintain the following records:
 - (a) Records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.
 - (b) Records required for the closed-vent system and control device in accordance with the requirements of subsection 5.
- 3. The owner or operator of a surface impoundment using air emission controls in accordance with the requirements of section 33.1-24-05-455 shall prepare and maintain records for the surface impoundment that include the following information:
 - a. A surface impoundment identification number (or other unique identification description as selected by the owner or operator).
 - b. Documentation describing the floating membrane cover or cover design, as applicable to the surface impoundment, that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications listed in subsection 3 of section 33.1-24-05-455.
 - c. A record for each inspection required by section 33.1-24-05-455 that includes the following information:
 - (1) Date inspection was conducted.
 - (2) For each defect detected during the inspection, the following information: the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. In the event that repair of the defect is delayed in accordance with the provisions of subsection 6 of section 33.1-24-05-455, the owner or operator shall also record the reason for the delay and the date that completion of repair of the defect is expected.
 - d. For a surface impoundment equipped with a cover and vented through a closed-vent system to a control device, the owner or operator shall prepare and maintain the record specified in subsection 5.

4. The owner or operator of containers using container level 3 air emission controls in accordance with the requirements of section 33.1-24-05-456 shall prepare and maintain records that include the following information:
 - a. Records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.
 - b. Records required for the closed-vent system and control device in accordance with the requirements of subsection 5.
5. The owner or operator using a closed-vent system and control device in accordance with the requirements of section 33.1-24-05-457 shall prepare and maintain records that include the following information:
 - a. Documentation for the closed-vent system and control device that includes:
 - (1) Certification that is signed and dated by the owner or operator stating that the control device is designed to operate at the performance level documented by a design analysis as specified in paragraph 2 or by performance tests as specified in paragraph 3 when the tank, surface impoundment, or container is or would be operating at capacity or the highest level reasonably expected to occur.
 - (2) If a design analysis is used, then design documentation as specified in subdivision d of subsection 2 of section 33.1-24-05-405. The documentation shall include information prepared by the owner or operator or provided by the control device manufacturer or vendor that describes the control device design in accordance with paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405 and certification by the owner or operator that the control equipment meets the applicable specifications.
 - (3) If performance tests are used, then a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-05-405 and all test results.
 - (4) Information as required by subdivisions a and b of subsection 3 of section 33.1-24-05-405, as applicable.
 - (5) An owner or operator shall record, on a semiannual basis, the information specified in subparagraphs a and b for those planned routine maintenance operations that would require the control device not to meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-05-457, as applicable.
 - (a) A description of the planned routine maintenance that is anticipated to be performed for the control device during the next six-month period. This description shall include the type of maintenance necessary, planned frequency of maintenance, and lengths of maintenance periods.
 - (b) A description of the planned routine maintenance that was performed for the control device during the previous six-month period. This description shall include the type of maintenance performed and the total number of hours during those six months that the control device did not meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-05-457, as applicable, due to planned routine maintenance.
 - (6) An owner or operator shall record the information specified in subparagraphs a through c for those unexpected control device system malfunctions that would

require the control device not to meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-05-457, as applicable.

(a) The occurrence and duration of each malfunction of the control device system.

(b) The duration of each period during a malfunction when gases, vapors, or fumes are vented from the waste management unit through the closed-vent system to the control device while the control device is not properly functioning.

(c) Actions taken during periods of malfunction to restore a malfunctioning control device to its normal or usual manner of operation.

(7) Records of the management of carbon removed from a carbon adsorption system conducted in accordance with paragraph 2 of subdivision c of subsection 3 of section 33.1-24-05-457.

6. The owner or operator of a tank, surface impoundment, or container exempted from standards in accordance with the provisions of subsection 3 of section 33.1-24-05-452 shall prepare and maintain the following records, as applicable:

a. For tanks, surface impoundments, and containers exempted under the hazardous waste organic concentration conditions specified in subdivision a of subsection 3 or paragraphs 1 through 6 of subdivision b of subsection 3 of section 33.1-24-05-452, the owner or operator shall record information used for each waste determination (such as, test results, measurements, calculations, and other documentation) in the facility operating log. If analysis results for waste samples are used for the waste determination, then the owner or operator shall record the date, time, and location that each waste sample is collected in accordance with applicable requirements of section 33.1-24-05-453.

b. For tanks, surface impoundments, or containers exempted under the provisions of paragraph 7 or 8 of subdivision b of subsection 3 of section 33.1-24-05-452, the owner or operator shall record the identification number for the incinerator, boiler, or industrial furnace in which the hazardous waste is treated.

7. An owner or operator designating a cover as "unsafe to inspect and monitor" pursuant to subsection 12 of section 33.1-24-05-454 or subsection 7 of section 33.1-24-05-455 shall record in a log that is kept in the facility operating record the following information: the identification numbers for waste management units with covers that are designated as "unsafe to inspect and monitor", the explanation for each cover stating why the cover is unsafe to inspect and monitor, and the plan and schedule for inspecting and monitoring each cover.

8. The owner or operator of a facility that is subject to sections 33.1-24-05-450 through 33.1-24-05-474 and to the control device standards in 40 CFR part 60, subpart VV, or 40 CFR part 61, subpart V, may elect to demonstrate compliance with the applicable sections of sections 33.1-24-05-450 through 33.1-24-05-474 by documentation either pursuant to sections 33.1-24-05-450 through 33.1-24-05-474, or pursuant to the provisions of 40 CFR part 60, subpart VV or 40 CFR part 61, subpart V, to the extent that the documentation required by 40 CFR part 60 or 61 duplicates the documentation required by this section.

9. For each tank or container not using air emission controls specified in sections 33.1-24-05-454 through 33.1-24-05-457 in accordance with the conditions specified in subsection 4 of section 33.1-24-05-450, the owner or operator shall record and maintain the following information:

- a. A list of the individual organic peroxide compounds manufactured at the facility that meet the conditions specified in subdivision a of subsection 4 of section 33.1-24-05-450.
 - b. A description of how the hazardous waste containing the organic peroxide compounds identified in subdivision a are managed at the facility in tanks and containers. This description shall include:
 - (1) For tanks used at the facility to manage this hazardous waste, sufficient information shall be provided to describe for each tank a facility identification number for the tank; the purpose and placement of this tank in the management train of this hazardous waste; and the procedures used to ultimately dispose of the hazardous waste managed in the tanks.
 - (2) For containers used at the facility to manage these hazardous wastes, sufficient information shall be provided to describe a facility identification number for the container or group of containers; the purpose and placement of this container, or group of containers, in the management train of this hazardous waste; and the procedures used to ultimately dispose of the hazardous waste handled in the containers.
 - c. An explanation of why managing the hazardous waste containing the organic peroxide compounds identified in subdivision a in the tanks and containers as described in subdivision b would create an undue safety hazard if the air emission controls, as required under sections 33.1-24-05-454 through 33.1-24-05-457, are installed and operated on these waste management units. This explanation shall include the following information:
 - (1) For tanks used at the facility to manage these hazardous wastes, sufficient information shall be provided to explain how use of the required air emission controls on the tanks would affect the tank design features and facility operating procedures currently used to prevent an undue safety hazard during the management of this hazardous waste in the tanks; and why installation of safety devices on the required air emission controls, as allowed under sections 33.1-24-05-450 through 33.1-24-05-474, will not address those situations in which evacuation of tanks equipped with these air emission controls is necessary and consistent with good engineering and safety practices for handling organic peroxides.
 - (2) For containers used at the facility to manage these hazardous wastes, sufficient information shall be provided to explain how use of the required air emission controls on the containers would affect the container design features and handling procedures currently used to prevent an undue safety hazard during the management of this hazardous waste in the containers; and why installation of safety devices on the required air emission controls as allowed under sections 33.1-24-05-450 through 33.1-24-05-474, will not address those situations in which evacuation of containers equipped with these air emission controls is necessary and consistent with good engineering and safety practices for handling organic peroxides.
10. For each hazardous waste management unit not using air emission controls specified in sections 33.1-24-05-454 through 33.1-24-05-457 in accordance with the requirements of subdivision g of subsection 2 of section 33.1-24-05-450, the owner and operator shall record and maintain the following information:

- a. Certification that the waste management unit is equipped with and operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, 61, or 63.
- b. Identification of the specific requirements codified under 40 CFR part 60, 61, or 63 with which the waste management unit is in compliance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-460. Reporting requirements.

1. Each owner or operator managing hazardous waste in a tank, surface impoundment, or container exempted from using air emission controls under the provisions of subsection 3 of section 33.1-24-05-452 shall report to the department each occurrence when hazardous waste is placed in the waste management unit in noncompliance with the conditions specified in subdivision a or b of subsection 3 of section 33.1-24-05-452, as applicable. Examples of such occurrences include placing in the waste management unit a hazardous waste having an average VO concentration equal to or greater than five hundred parts per million weight at the point of waste origination; or placing in the waste management unit a treated hazardous waste of which the organic content has been reduced by an organic destruction or removal process that fails to achieve the applicable conditions specified in paragraphs 1 through 6 of subdivision b of subsection 3 of section 33.1-24-05-452. The owner or operator shall submit a written report within fifteen calendar days of the time that the owner or operator becomes aware of the occurrence. The written report shall contain the identification number, facility name and address, a description of the noncompliance event and the cause, the dates of the noncompliance, and the actions taken to correct the noncompliance and prevent recurrence of the noncompliance. The report shall be signed and dated by an authorized representative of the owner or operator.
2. Each owner or operator using air emission controls on a tank in accordance with the requirements of subsection 3 of section 33.1-24-05-454 shall report to the department each occurrence when hazardous waste is managed in the tank in noncompliance with the conditions specified in subsection 2 of section 33.1-24-05-454. The owner or operator shall submit a written report within fifteen calendar days of the time that the owner or operator becomes aware of the occurrence. The written report shall contain the identification number, facility name and address, a description of the noncompliance event and the cause, the dates of the noncompliance, and the actions taken to correct the noncompliance and prevent recurrence of the noncompliance. The report shall be signed and dated by an authorized representative of the owner or operator.
3. Each owner or operator using a control device in accordance with the requirements of section 33.1-24-05-457 shall submit a semiannual written report to the department except as provided for in subsection 4. The written report must be signed and dated by the owner or operator or that person's designated representative and shall include the identification number, facility name and address, an explanation why the control device could not be returned to compliance within twenty-four hours, and actions taken to correct the noncompliance and shall describe each occurrence during the previous six-month period when either:
 - a. A control device is operated continuously for twenty-four hours or longer in noncompliance with the applicable operating values defined in subdivision d of subsection 3 of section 33.1-24-05-405; or
 - b. A flare is operated with visible emissions for five minutes or longer in a two-hour period, as defined in subsection 4 of section 33.1-24-05-403.

4. A report to the department in accordance with the requirements of subsection 3 is not required for a six-month period during which all control devices subject to sections 33.1-24-05-450 through 33.1-24-05-474 are operated by the owner or operator such that:

a. During no period of twenty-four hours or longer did a control device operate continuously in noncompliance with the applicable operating values defined in subdivision d of subsection 3 of section 33.1-24-05-405; and

b. No flare was operated with visible emissions for five minutes or longer in a two-hour period, as defined in subsection 4 of section 33.1-24-05-403.

History: Effective January 1, 2019.

33.1-24-05-475. Applicability to containment buildings.

The requirements of sections 33.1-24-05-475 through 33.1-24-05-500 apply to owners or operators who store or treat hazardous waste in units designed and operated under section 33.1-24-05-476. The owner or operator is not subject to the definition of land disposal in Resource Conservation and Recovery Act section 3004(k) provided that the unit:

1. Is a completely enclosed, self-supporting structure that is designed and constructed of manmade materials of sufficient strength and thickness to support themselves, the waste contents, and any personnel and heavy equipment that operate within the unit, and to prevent failure due to pressure gradients, settlement, compression, or uplift, physical contact with the hazardous wastes to which they are exposed; climatic conditions; and the stresses of daily operation, including the movement of heavy equipment within the unit and contact of such equipment with containment walls;
2. Has a primary barrier that is designed to be sufficiently durable to withstand the movement of personnel, wastes, and handling equipment within the unit;
3. If the unit is used to manage liquids, has:
 - a. A primary barrier designed and constructed of materials to prevent migration of hazardous constituents into the barrier;
 - b. A liquid collection system designed and constructed of materials to minimize the accumulation of liquid on the primary barrier; and
 - c. A secondary containment system designed and constructed of materials to prevent migration of hazardous constituents into the barrier, with a leak detection and liquid collection system capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time, unless the unit has been granted a variance from the secondary containment system requirements under subdivision d of subsection 2 of section 33.1-24-05-476;

4. Has controls sufficient to prevent fugitive dust emissions to meet the no visible emission standard in paragraph 4 of subdivision a of subsection 3 of section 33.1-24-05-476; and
5. Is designed and operated to ensure containment and prevent the tracking of materials from the unit by personnel or equipment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-476. Design and operating standards.

1. All containment buildings must comply with the following design standards:
 - a. The containment building must be completely enclosed with a floor, walls, and a roof to prevent exposure to the elements (for example, precipitation, wind, run-on) and to assure containment of managed wastes.
 - b. The floor and containment walls of the unit, including the secondary containment system if required under subsection 2, must be designed and constructed of materials of sufficient strength and thickness to support themselves, the waste contents, and any personnel and heavy equipment that operate within the unit, and to prevent failure due to pressure gradients, settlement, compression, or uplift, physical contact with the hazardous wastes to which they are exposed; climatic conditions; and the stresses of daily operation, including the movement of heavy equipment within the unit and contact of such equipment with containment walls. The unit must be designed so that it has sufficient structural strength to prevent collapse or other failure. All surfaces to be in contact with hazardous wastes must be chemically compatible with those wastes. The department will consider standards established by professional organizations generally recognized by the industry such as the American concrete institute or the American society of testing materials in judging the structural integrity requirements of this subsection. If appropriate to the nature of the waste management operation to take place in the unit, an exception to the structural strength requirement may be made for lightweight doors and windows that meet these criteria:
 - (1) They provide an effective barrier against fugitive dust emissions under paragraph 4 of subdivision a of subsection 3; and
 - (2) The unit is designed and operated in a fashion that assures that wastes will not actually come in contact with these openings.
 - c. Incompatible hazardous wastes or treatment reagents must not be placed in the unit or its secondary containment system if they could cause the unit or secondary containment system to leak, corrode, or otherwise fail.
 - d. A containment building must have a primary barrier designed to withstand the movement of personnel, waste, and handling equipment in the unit during the operating life of the unit and appropriate for the physical and chemical characteristics of the waste to be managed.
2. For a containment building used to manage hazardous wastes containing free liquids or treated with free liquids (the presence of which is determined by the paint filter test, a visual examination, or other appropriate means), the owner or operator must include:
 - a. A primary barrier designed and constructed of materials to prevent the migration of hazardous constituents into the barrier (for example, a geomembrane covered by a concrete wear surface).

b. A liquid collection and removal system to minimize the accumulation of liquid on the primary barrier of the containment building:

(1) The primary barrier must be sloped to drain liquids to the associated collection system; and

(2) Liquids and waste must be collected and removed to minimize hydraulic head on the containment system at the earliest practicable time.

c. A secondary containment system including a secondary barrier designed and constructed to prevent migration of hazardous constituents into the barrier, and a leak detection system that is capable of detecting failure of the primary barrier and collecting accumulated hazardous wastes and liquids at the earliest practicable time.

(1) The requirements of the leak detection component of the secondary containment system are satisfied by installation of a system that is, at a minimum:

(a) Constructed with a bottom slope of one percent or more; and

(b) Constructed of a granular drainage material with a hydraulic conductivity of 1×10^{-2} centimeters per second or more and a thickness of twelve inches [30.5 centimeters] or more, or constructed of synthetic or geonet drain materials with a transmissivity of 3×10^{-5} square meters per second.

(2) If treatment is to be conducted in the building, an area in which such treatment will be conducted must be designed to prevent the release of liquids, wet materials, or liquid aerosols to other portions of the building.

(3) The secondary containment system must be constructed of materials that are chemically resistant to the waste and liquids managed in the containment building and of sufficient strength and thickness to prevent collapse under the pressure exerted by overlaying materials and by any equipment used in the containment building. (Containment buildings can serve as secondary containment systems for tanks placed within the building under certain conditions. A containment building can serve as an external liner system for a tank, provided it meets the requirements of subdivision a of subsection 5 of section 33.1-24-05-106. In addition, the containment building must meet the requirements of subsection 2 of section 33.1-24-05-106 and subdivisions a and b of subsection 3 of section 33.1-24-05-106 to be considered an acceptable secondary containment system for a tank.)

d. For existing units other than ninety-day generator units, the department may delay the secondary containment requirement for up to two years, based on a demonstration by the owner or operator that the unit substantially meets the standards of sections 33.1-24-05-475 through 33.1-24-05-500. In making this demonstration, the owner or operator must:

(1) Provide written notice to the department of the request by November 16, 1992. This notification must describe the unit and its operating practices with specific reference to the performance of existing containment systems, and specific plans for retrofitting the unit with secondary containment;

(2) Respond to any comments from the department on these plans within thirty days; and

(3) Fulfill the terms of the revised plans, if such plans are approved by the department.

3. Owners or operators of all containment buildings must:

- a. Use controls and practices to ensure containment of the hazardous waste within the unit; and, at a minimum:
- (1) Maintain the primary barrier to be free of significant cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the primary barrier;
 - (2) Maintain the level of the stored or treated hazardous waste within the containment walls of the unit so that the height of any containment wall is not exceeded;
 - (3) Take measures to prevent the tracking of hazardous waste out of the unit by personnel or by equipment used in handling the waste. An area must be designated to decontaminate equipment and any rinsate must be collected and properly managed; and
 - (4) Take measures to control fugitive dust emissions such that any openings (doors, windows, vents, cracks, etc.) exhibit no visible emissions (see 40 CFR part 60, appendix A, method 22 Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares). In addition, all associated particulate collection devices (for example, fabric filter, electrostatic precipitator) must be operated and maintained with sound air pollution control practices (see 40 CFR part 60, subpart 292 for guidance). This state of no visible emissions must be maintained effectively at all times during routine operating and maintenance conditions, including when vehicles and personnel are entering and exiting the unit.
- b. Obtain and keep onsite a certification by a qualified professional engineer that the containment building design meets the requirements of subsections 1, 2, and 3.
- c. Throughout the active life of the containment building, if the owner or operator detects a condition that could lead to or has caused a release of hazardous waste, the owner or operator must repair the condition promptly, in accordance with the following procedures.
- (1) Upon detection of a condition that has led to a release of hazardous waste (for example, upon detection of leakage from the primary barrier) the owner or operator must:
 - (a) Enter a record of the discovery in the facility operating record;
 - (b) Immediately remove the portion of the containment building affected by the condition from service;
 - (c) Determine what steps must be taken to repair the containment building, remove any leakage from the secondary collection system, and establish a schedule for accomplishing the cleanup and repairs; and
 - (d) Within seven days after the discovery of the condition, notify the department of the condition, and within fourteen working days, provide a written notice to the department with a description of the steps taken to repair the containment building, and the schedule for accomplishing the work.
 - (2) The department will review the information submitted, make a determination regarding whether the containment building must be removed from service completely or partially until repairs and cleanup are complete, and notify the owner or operator of the determination and the underlying rationale in writing.
 - (3) Upon completing all repairs and cleanup the owner or operator must notify the department in writing and provide a verification, signed by a qualified, registered

professional engineer, that the repairs and cleanup have been completed according to the written plan submitted in accordance with subparagraph d of paragraph 1 of subdivision c of subsection 3.

d. Inspect and record in the facility's operating record, at least once every seven days, data gathered from monitoring and leak detection equipment as well as the containment building and the area immediately surrounding the containment building to detect signs of releases of hazardous waste.

4. For containment buildings that contain both areas with and without secondary containment, the owner or operator must:

a. Design and operate each area in accordance with the requirements enumerated in subsections 1, 2, and 3;

b. Take measures to prevent the release of liquids or wet materials into areas without secondary containment; and

c. Maintain in the facility's operating log a written description of the operating procedures used to maintain the integrity of areas without secondary containment.

5. Notwithstanding any other provision of sections 33.1-24-05-475 through 33.1-24-05-500, the department may waive requirements for secondary containment for a permitted containment building where the owner or operator demonstrates that the only free liquids in the unit are limited amounts of dust suppression liquids required to meet occupational health and safety requirements, and where containment of managed wastes and liquids can be assured without a secondary containment system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-477. Closure and postclosure care.

1. At closure of a containment building, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (liners for example) contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless subsection 4 of section 33.1-24-02-03 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for containment buildings must meet all of the requirements specified in sections 33.1-24-05-59 through 33.1-24-05-88.

2. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in subsection 1, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, the owner or operator must close the facility and perform postclosure care in accordance with the closure and postclosure requirements that apply to landfills (section 33.1-24-05-180). In addition, for the purposes of closure, postclosure, and financial responsibility, such a containment building is then considered to be a landfill, and the owner or operator must meet all of the requirements for landfills specified in sections 33.1-24-05-59 through 33.1-24-05-88.

33.1-24-05-501. Applicability to drip pads.

1. The requirements of sections 33.1-24-05-501 through 33.1-24-05-524 apply to owners and operators of facilities that use new or existing drip pads to convey treated wood drippage, precipitation, and surface water runoff, or any combination, to an associated collection system. Existing drip pads are those constructed before December 6, 1990, and those for which the owner or operator has a design and has entered into binding financial or other agreements for

construction prior to December 6, 1990. All other drip pads are new drip pads. The requirement of subdivision c of subsection 2 of section 33.1-24-05-504 to install a leak collection system applies only to those drip pads that are constructed after December 24, 1992, except for those constructed after December 24, 1992, for which the owner or operator has a design and has entered into binding financial or other agreements for construction prior to December 24, 1992.

2. The owner or operator of any drip pad that is inside or under a structure that provides protection from precipitation so that neither runoff nor run-on is generated is not subject to regulation under subsection 5 or 6 of section 33.1-24-05-504.
3. The requirements of sections 33.1-24-05-501 through 33.1-24-05-524 are not applicable to the management of infrequent and incidental drippage in storage yards provided that the owner or operator maintains and complies with a written contingency plan that describes how the owner or operator will respond immediately to the discharge of such infrequent and incidental drippage. At a minimum, the contingency plan must describe how the owner or operator will do the following:
 - a. Clean up the drippage;
 - b. Document the cleanup of the drippage;
 - c. Retain documents regarding cleanup for three years; and
 - d. Manage the contaminated media in a manner consistent with federal regulations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-502. Assessment of existing drip pad integrity.

1. For each existing drip pad as defined in section 33.1-24-05-501, the owner or operator must evaluate the drip pad and determine that it meets all of the requirements of sections 33.1-24-05-501 through 33.1-24-05-524, except the requirements for liners and leak detection systems of subsection 2 of section 33.1-24-05-504. No later than the effective date of this rule, the owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by a qualified professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated and recertified annually until all upgrades, repairs, or modifications necessary to achieve compliance with all of the standards of section 33.1-24-05-504 are complete. The evaluation must document the extent to which the drip pad meets each of the design and operating standards of section 33.1-24-05-504, except the standards for liners and leak detection systems, specified in subsection 2 of section 33.1-24-05-504.
2. The owner or operator must develop a written plan for upgrading, repairing, and modifying the drip pad to meet the requirements of subsection 2 of section 33.1-24-05-504, and submit the plan to the department no later than two years before the date that all repairs, upgrades, and modifications are complete. This written plan must describe all changes to be made to the drip pad in sufficient detail to document compliance with all the requirements of section 33.1-24-05-504. The plan must be reviewed and certified by a qualified professional engineer.
3. Upon completion of all upgrades, repairs, and modifications, the owner or operator must submit to the department, the as-built drawings for the drip pad together with a certification by a qualified professional engineer attesting that the drip pad conforms to the drawings.

4. If the drip pad is found to be leaking or unfit for use, the owner or operator must comply with the provisions of subsection 13 of section 33.1-24-05-504 or close the drip pad in accordance with section 33.1-24-05-506.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-503. Design and installation of new drip pads.

Owners and operators of new drip pads must ensure that the pads are designed, installed, and operated in accordance with one of the following:

1. All of the requirements of sections 33.1-24-05-504 (except subdivision d of subsection 1 of section 33.1-24-05-504), 33.1-24-05-505, and 33.1-24-05-506; or
2. All of the requirements of sections 33.1-24-05-504 (except subsection 2 of section 33.1-24-05-504), 33.1-24-05-505, and 33.1-24-05-506.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-504. Design and operating requirements.

1. Drip pads must:

- a. Be constructed of nonearthen materials, excluding wood and nonstructurally supported asphalt;
- b. Be sloped to free-drain treated wood drippage, rain and other waters, or solutions of drippage and water or other wastes to the associated collection system;
- c. Have a curb or berm around the perimeter;
- d. Drip pads must meet and have on file the following:

(1) Have a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second (for example, existing concrete drip pads must be sealed, coated, or covered with a surface material with a hydraulic conductivity of less than or equal to 1×10^{-7} centimeters per second), such that the entire surface where drippage occurs or may run across is capable of containing such drippage and mixtures of drippage and precipitation, materials, or other wastes while being routed to an associated collection system. This surface material must be maintained free of cracks and gaps that could adversely affect its hydraulic conductivity, and the material must be chemically compatible with the preservatives that contact the drip pad. The requirements of this provision apply only to existing drip pads and those drip pads for which the owner or operator elects to comply with subsection 2 of section 33.1-24-05-503 instead of subsection 1 of section 33.1-24-05-503.

(2) The owner or operator must obtain and keep on file at the facility a written assessment of the drip pad, reviewed and certified by a qualified professional engineer that attests to the results of the evaluation. The assessment must be reviewed, updated, and recertified annually. The evaluation must document the extent to which the drip pad meets the design and operating standards of this section, except for subsection 2.

- e. Be of sufficient structural strength and thickness to prevent failure due to physical contact, climatic conditions, the stress of daily operations (for example, variable and moving loads such as vehicle traffic, movement of wood, etc.).

Note: The department will generally consider applicable standards established by professional organizations generally recognized by the industry such as the American concrete institute (ACI) or the American society of testing and materials (ASTM) in judging the structural integrity requirement of this subsection.

- 2. If an owner or operator elects to comply with subsection 1 of section 33.1-24-05-503 instead of subsection 2 of section 33.1-24-05-503, the drip pad must have:

- a. A synthetic liner installed below the drip pad that is designed, constructed, and installed to prevent leakage from the drip pad into the adjacent subsurface soil or ground water or surface water at any time during the active life (including the closure period) of the drip pad. The liner must be constructed of materials that will prevent waste from being absorbed into the liner and to prevent releases into the adjacent subsurface soil or ground water or surface water during the active life of the facility. The liner must be:

- (1) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or drip pad leakage to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation (including stresses from vehicular traffic on the drip pad);
- (2) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and
- (3) Installed to cover all surrounding earth that could come in contact with the waste or leakage.

- b. A leakage detection system immediately above the liner that is designed, constructed, maintained, and operated to detect leakage from the drip pad. The leakage detection system must be:

- (1) Constructed of materials that are:
 - (a) Chemically resistant to the waste managed in the drip pad and the leakage that might be generated; and
 - (b) Of sufficient strength and thickness to prevent collapse under the pressures exerted by overlaying materials and by any equipment used at the drip pad;
- (2) Designed and operated to function without clogging through the scheduled closure of the drip pad; and
- (3) Designed so that it will detect the failure of the drip pad or the presence of a release of hazardous waste or accumulated liquid at the earliest practicable time.

- c. A leakage collection system immediately above the liner that is designed, constructed, maintained, and operated to collect leakage from the drip pad such that it can be removed from below the drip pad. The date, time, and quantity of any leakage collected in this system and removed must be documented in the operating log.

3. Drip pads must be maintained such that they remain free of cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the drip pad.

Note: See subsection 13 for remedial action required if deterioration or leakage is detected.

4. The drip pad and associated collection system must be designed and operated to convey, drain, and collect liquid resulting from drippage or precipitation in order to prevent runoff.

5. Unless protected by a structure, as described in subsection 2 of section 33.1-24-05-501, the owner or operator must design, construct, operate, and maintain a run-on control system capable of preventing flow onto the drip pad during peak discharge from at least a twenty-four-hour, twenty-five-year storm, unless the system has sufficient excess capacity to contain any runoff that might enter the system.

6. Unless protected by a structure or cover as described in subsection 2 of section 33.1-24-05-501, the owner or operator, must design, construct, operate, and maintain a runoff management system to collect and control at least the water volume resulting from a twenty-four-hour, twenty-five-year storm.

7. The drip pad must be evaluated to determine that it meets the requirements of subsections 1 through 6 and the owner or operator must obtain a statement from a qualified professional engineer certifying that the drip pad design meets the requirements of this section.

8. Drippage and accumulated precipitation must be removed from the associated collection system as necessary to prevent overflow onto the drip pad.

9. The drip pad surface must be cleaned thoroughly in a manner and frequency such that accumulated residues of hazardous waste or other materials are removed, with residues being properly managed as hazardous waste, so as to allow weekly inspections of the entire drip pad surface without interference or hindrance from accumulated residues of hazardous waste or other materials on the drip pad. The owner or operator must document the date and time of each cleaning and the cleaning procedure used in the facility's operating log. The owner or operator must determine if the residues are hazardous as per section 33.1-24-03-02 and, if so, must manage them under article 33.1-24.

10. Drip pads must be operated and maintained in a manner to minimize tracking of hazardous waste or hazardous waste constituents off the drip pad as a result of activities by personnel or equipment.

11. After being removed from the treatment vessel, treated wood from pressure and nonpressure processes must be held on the drip pad until drippage has ceased. The owner or operator must maintain records sufficient to document that all treated wood is held on the pad following treatment in accordance with this requirement.

12. Collection and holding units associated with run-on and runoff control systems must be emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system.

13. Throughout the active life of the drip pad and as specified in the permit, if the owner or operator detects a condition that may have caused or has caused a release of hazardous waste, the condition must be repaired within a reasonably prompt period of time following discovery, in accordance with the following procedures:

a. Upon detection of a condition that may have caused or has caused a release of hazardous waste (for example, upon detection of leakage in the leak detection system), the owner or operator must:

- (1) Enter a record of the discovery in the facility operating log;
- (2) Immediately remove the portion of the drip pad affected by the condition from service;
- (3) Determine what steps must be taken to repair the drip pad and clean up any leakage from below the drip pad, and establish a schedule for accomplishing the repairs; and
- (4) Within twenty-four hours after discovery of the condition, notify the department of the condition and, within ten working days, provide written notice to the department with a description of the steps that will be taken to repair the drip pad and clean up any leakage, and the schedule for accomplishing this work.

b. The department will review the information submitted, make a determination regarding whether the pad must be removed from service completely or partially until repairs and cleanup are complete, and notify the owner or operator of the determination and the underlying rationale in writing.

c. Upon completing all repairs and cleanup, the owner or operator must notify the department in writing and provide a certification signed by an independent, qualified registered professional engineer, that the repairs and cleanup have been completed according to the written plan submitted in accordance with paragraph 4 of subdivision a.

14. Should a permit be necessary, the department will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

15. The owner or operator must maintain, as part of the facility operating log, documentation of past operating and waste handling practices. This must include identification of preservative formulations used in the past, a description of drippage management practices, and a description of treated wood storage and handling practices.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-505. Inspections.

1. During construction or installation, liners and cover systems (for example, membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections (for example, holes, cracks, thin spots, or foreign materials). Immediately after construction or installation, liners must be inspected and certified as meeting the requirements of section 33.1-24-05-504 by a qualified professional engineer. This certification must be maintained at the facility as part of the facility operating record. After installation, liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters.

2. While a drip pad is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

a. Deterioration, malfunctions, or improper operation of run-on and runoff control systems.

b. The presence of leakage in and proper functioning of leak detection system.

c. Deterioration or cracking of the drip pad surface.

Note: See subsection 13 of section 33.1-24-05-504 for remedial action required if deterioration or leakage is detected.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-506. Closure.

1. At closure, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (pad, liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leakage, and manage them as hazardous waste.
2. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in subsection 1, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, the owner or operator must close the facility and perform postclosure care in accordance with closure and postclosure care requirements that apply to landfills in section 33.1-24-05-180. For permitted units, the requirement to have a permit continues throughout the postclosure period. In addition, for the purpose of closure, postclosure, and financial responsibility, such a drip pad is then considered to be landfill, and the owner or operator must meet all of the requirements for landfills specified in sections 33.1-24-05-59 through 33.1-24-05-88.
3. Drip pad:
 - a. The owner or operator of an existing drip pad, as defined in section 33.1-24-05-501, that does not comply with the liner requirements of subdivision a of subsection 2 of section 33.1-24-05-504 must:
 - (1) Include in the closure plan for the drip pad under section 33.1-24-05-61 both a plan for complying with subsection 1 and a contingent plan for complying with subsection 2 in case not all contaminated subsoils can be practicably removed at closure; and
 - (2) Prepare a contingent postclosure plan under section 33.1-24-05-67 for complying with subsection 2 in case not all contaminated subsoils can be practicably removed at closure.
 - b. The cost estimates calculated under sections 33.1-24-05-61 and 33.1-24-05-76 for closure and postclosure care of a drip pad must include the cost of complying with the contingent closure plan and the contingent postclosure plan, but are not required to include the cost of expected closure under subsection 1.

33.1-24-05-524. [Reserved].

33.1-24-05-525. Applicability to hazardous waste burned in boilers and industrial furnaces.

1. The regulations of sections 33.1-24-05-525 through 33.1-24-05-549 apply to hazardous waste burned or processed in a boiler or industrial furnace (as defined in section 33.1-24-01-04) irrespective of the purpose of burning or processing, except as provided by subsections 2, 3, 4, 7, and 8. In sections 33.1-24-05-525 through 33.1-24-05-549, the term "burn" means burning for energy recovery or destruction, or processing for materials recovery or as an ingredient. The emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 apply to facilities operating under interim status or under a hazardous waste operating permit as specified in sections 33.1-24-05-527 and 33.1-24-05-528.

2. Integration of the maximum achievable control technology standards.

a. Except as provided by subdivisions b through d, the standards of sections 33.1-24-05-525 through 33.1-24-05-549 do not apply to a new hazardous waste boiler or industrial furnace unit that becomes subject to hazardous waste permit requirements after October 12, 2005; or no longer apply when an owner or operator of an existing hazardous waste boiler or industrial furnace unit demonstrates compliance with the maximum achievable control technology requirements of 40 CFR part 63, subpart EEE, by conducting a comprehensive performance test and submitting to the department a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting compliance with the requirements of 40 CFR part 63, subpart EEE. Nevertheless, even after this demonstration of compliance with the maximum achievable control technology standards, hazardous waste permit conditions that were based on the standards of sections 33.1-24-05-525 through 33.1-24-05-549 will continue to be in effect until they are removed from the permit or the permit is terminated or revoked, unless the permit expressly provides otherwise.

b. The following standards continue to apply:

(1) If a permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, subdivision a of subsection 5 of section 33.1-24-05-527 requiring operations in accordance with the operating requirements specified in the permit at all times that hazardous waste is in the unit, and paragraph 3 of subdivision b of subsection 5 of section 33.1-24-05-527 requiring compliance with the emission standards and operating requirements during startup and shutdown if hazardous waste is in the combustion chamber, except for

particular hazardous wastes. These provisions apply only during startup, shutdown, and malfunction events;

(2) The closure requirements of subdivision k of subsection 5 of section 33.1-24-05-527 and subsection 12 of section 33.1-24-05-528;

(3) The standards for direct transfer of section 33.1-24-05-536;

(4) The standards for regulation of residues of section 33.1-24-05-537; and

(5) The applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-88, 33.1-24-05-420 through 33.1-24-05-474, and subsection 5 of section 33.1-24-06-16.

c. The owner or operator of a boiler or hydrochloric acid production furnace that is an area source under 40 CFR section 63.2 and the owner or operator elects not to comply with the emission standards under 40 CFR sections 63.1216, 63.1217, and 63.1218 for particulate matter, semivolatile and low volatile metals, and total chlorine, the owner or operator also remains subject to:

(1) Section 33.1-24-05-530 - Standards to control particulate matter;

(2) Section 33.1-24-05-531 - Standards to control metals emissions, except for mercury; and

(3) Section 33.1-24-05-532 - Standards to control hydrogen chloride and chlorine gas.

d. The particulate matter standard of section 33.1-24-05-530 remains in effect for boilers that elect to comply with the alternative to the particulate matter standard under 40 CFR sections 63.1216(e) and 63.1217(e).

3. The following hazardous wastes and facilities are not subject to regulation under sections 33.1-24-05-525 through 33.1-24-05-549:

a. Used oil burned for energy recovery that is also hazardous waste solely because it exhibits a characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14. Such used oil is subject to regulation under sections 33.1-24-05-600 through 33.1-24-05-689;

b. Gas recovered from hazardous or solid waste landfills when such gas is burned for energy recovery;

c. Hazardous wastes that are exempt from regulation under section 33.1-24-02-04 and paragraphs 4 through 6 of subdivision c of subsection 1 of section 33.1-24-02-06, and hazardous wastes that are subject to the special requirements for conditionally exempt small quantity generators under section 33.1-24-02-05; and

d. Coke ovens, if the only hazardous waste burned is hazardous waste number K087, decanter tank tar sludge from coking operations.

4. Owners and operators of smelting, melting, and refining furnaces (including pyrometallurgical devices such as cupolas, sintering machines, roasters, and foundry furnaces, but not including cement kilns, aggregate kilns, or halogen acid furnaces burning hazardous waste) that process hazardous waste solely for metal recovery are conditionally exempt from regulation under sections 33.1-24-05-525 through 33.1-24-05-549, except for sections 33.1-24-05-526 and 33.1-24-05-537.

a. To be exempt from sections 33.1-24-05-527 through 33.1-24-05-536, an owner or operator of a metal recovery furnace or mercury recovery furnace must comply with the

following requirements, except that an owner or operator of a lead or a nickel-chromium recovery furnace, or a metal recovery furnace that burns baghouse bags used to capture metallic dusts emitted by steel manufacturing, must comply with the requirements of subdivision c, and owners or operators of lead recovery furnaces that are subject to regulation under the secondary lead smelting national emission standard for hazardous air pollutants must comply with the requirements of subsection 8:

(1) Provide a one-time written notice to the department indicating the following:

(a) The owner or operator claims exemption under this subsection;

(b) The hazardous waste is burned solely for metal recovery consistent with the provisions of subdivision b;

(c) The hazardous waste contains recoverable levels of metals; and

(d) The owner or operator will comply with the sampling and analysis and recordkeeping requirements of this subsection;

(2) Sample and analyze the hazardous waste and other feedstocks as necessary to comply with the requirements of this subsection by using appropriate methods; and

(3) Maintain at the facility for at least three years records to document compliance with the provisions of this subsection, including limits on levels of toxic organic constituents and British thermal unit value of the waste, and levels of recoverable metals in the hazardous waste compared to normal nonhazardous waste feedstocks.

b. A hazardous waste meeting either of the following criteria is not processed solely for metal recovery:

(1) The hazardous waste has a total concentration of organic compounds listed in appendix V of chapter 33.1-24-02 exceeding five hundred parts per million by weight, as-fired, and so is considered to be burned for destruction. The concentration of organic compounds in a waste as-generated may be reduced to the five hundred parts per million limit by bona fide treatment that removes or destroys organic constituents. Blending for dilution to meet the five hundred parts per million limit is prohibited and documentation that the waste has not been impermissibly diluted must be retained in the records required by paragraph 3 of subdivision a; or

(2) The hazardous waste has a heating value of five thousand British thermal units per pound or more, as-fired, and so is considered to be burned as fuel. The heating value of a waste as-generated may be reduced to below the five thousand British thermal units per pound limit by bona fide treatment that removes or destroys organic constituents. Blending for dilution to meet the five thousand British thermal units per pound limit is prohibited and documentation that the waste has not been impermissibly diluted must be retained in the records required by paragraph 3 of subdivision a.

c. To be exempt from sections 33.1-24-05-527 through 33.1-24-05-536, an owner or operator of a lead or nickel-chromium or mercury recovery furnace (except for owners or operators of lead recovery furnaces subject to regulation under the secondary lead smelting national emission standards for hazardous air pollutants), or a metal recovery furnace that burns baghouse bags used to capture metallic dusts emitted by steel manufacturing, must provide a one-time written notice to the department identifying each hazardous waste burned and specifying whether the owner or operator claims an

exemption for each waste under this subdivision or subdivision a. The owner or operator must comply with the requirements of subdivision a for those wastes claimed to be exempt under that subdivision and must comply with the requirements below for those wastes claimed to be exempt under subdivision a and must comply with the requirements below for those wastes claimed to be exempt under this subdivision.

(1) The hazardous wastes listed in appendices XXVI, XXVII, and XXVIII of chapter 33.1-24-05, and baghouse bags used to capture metallic dusts emitted by steel manufacturing are exempt from the requirements of subdivision a, provided that:

(a) A waste listed in appendix XXVI must contain recoverable levels of lead, a waste listed in appendix XXVII must contain recoverable levels of nickel or chromium, a waste listed in appendix XXVIII must contain recoverable levels of mercury and contain less than five hundred parts per million organic constituents listed in appendix V of chapter 33.1-24-02 and baghouse bags used to capture metallic dusts emitted by steel manufacturing must contain recoverable levels of metal;

(b) The waste does not exhibit the toxicity characteristic of section 33.1-24-02-14 for an organic constituent;

(c) The waste is not a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 because it is listed for an organic constituent as identified in appendix IV of chapter 33.1-24-02; and

(d) The owner or operator certifies in the one-time notice that hazardous waste is burned under the provisions of subdivision c and that sampling and analysis will be conducted or other information will be obtained as necessary to ensure continued compliance with these requirements. Sampling and analysis shall be conducted according to paragraph 2 of subdivision a and records to document compliance with subdivision c shall be kept for at least three years.

(2) The department may decide on a case-by-case basis that the toxic organic constituents in a material listed in appendix XXVI, XXVII, or XXVIII of chapter 33.1-24-05 that contains a total concentration of more than five hundred parts per million toxic organic compounds listed in appendix V of chapter 33.1-24-02, may pose a hazard to human health and the environment when burned in a metal recovery furnace exempt from the requirements of sections 33.1-24-05-525 through 33.1-24-05-549. In that situation, after adequate notice and opportunity for comment, the metal recovery furnace will become subject to the requirements of sections 33.1-24-05-525 through 33.1-24-05-549 when burning that material. In making the hazard determination, the department will consider the following factors:

(a) The concentration and toxicity of organic constituents in the material;

(b) The level of destruction of toxic organic constituents provided by the furnace; and

(c) Whether the acceptable ambient levels established in appendix XIX or XX of chapter 33.1-24-05 may be exceeded for any toxic organic compound that may be emitted based on dispersion modeling to predict the maximum annual average offsite ground level concentration.

5. The standards for direct transfer operations under section 33.1-24-05-536 apply only to facilities subject to the permit standards of section 33.1-24-05-527 or the interim status standards of section 33.1-24-05-528.

6. The management standards for residues under section 33.1-24-05-537 apply to any boiler or industrial furnace burning hazardous waste.
7. Owners and operators of smelting, melting, and refining furnaces (including pyrometallurgical devices such as cupolas, sintering machines, roasters, and foundry furnaces) that process hazardous waste for recovery of economically significant amounts of the precious metals gold, silver, platinum, palladium, irridium, osmium, rhodium, or ruthenium, or any combination of these are conditionally exempt from regulation under sections 33.1-24-05-525 through 33.1-24-05-549, except for section 33.1-24-05-537. To be exempt from sections 33.1-24-05-526 through 33.1-24-05-536, an owner or operator must:
 - a. Provide a one-time written notice to the department indicating the following:
 - (1) The owner or operator claims exemption under this subsection;
 - (2) The hazardous waste is burned for legitimate recovery of precious metal; and
 - (3) The owner or operator will comply with the sampling and analysis and recordkeeping requirements of this subsection;
 - b. Sample and analyze the hazardous waste as necessary to document that the waste contains economically significant amounts of the metals and that the treatment recovers economically significant amounts of precious metals; and
 - c. Maintain at the facility, for at least three years, records to document that all hazardous wastes burned are burned for recovery of economically significant amounts of precious metal.
8. Starting June 23, 1997, owners or operators of lead recovery furnaces that process hazardous waste for recovery of lead and that are subject to regulation under the secondary lead smelting national emission standards for hazardous air pollutants are conditionally exempt from regulation under sections 33.1-24-05-525 through 33.1-24-05-549, except for section 33.1-24-05-526. To be exempt, an owner or operator must provide a one-time notice to the department identifying each hazardous waste burned and specifying that the owner or operator claims an exemption under this subsection. The notice also must state that the waste burned has a total concentration of nonmetal compounds listed in appendix V of chapter 33.1-24-02 of less than five hundred parts per million by weight as fired and as provided in paragraph 1 of subdivision b of subsection 4, or is listed in appendix XXVI of chapter 33.1-24-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-16; S.L. 2017, ch. 199, § 19

33.1-24-05-526. Management prior to burning.

1. **Generators.** Generators of hazardous waste that is burned in a boiler or industrial furnace are subject to chapter 33.1-24-03.
2. **Transporters.** Transporters of hazardous waste that is burned in a boiler or industrial furnace are subject to chapter 33.1-24-04.
3. **Storage and treatment facilities.**
 - a. Owners and operators of facilities that store or treat hazardous waste that is burned in a boiler or industrial furnace are subject to the applicable provisions of sections 33.1-24-05-01 through 33.1-24-05-190, sections 33.1-24-05-300 through 33.1-24-05-524,

sections 33.1-24-05-550 through 33.1-24-05-559, sections 33.1-24-05-800 through 33.1-24-05-819, sections 33.1-24-05-950 through 33.1-24-05-1149, applicable requirements of subsection 5 of section 33.1-24-06-16, and chapter 33.1-24-06, except as provided by subdivision b. These standards apply to storage and treatment by the burner as well as to storage and treatment facilities operated by intermediaries (processors, blenders, distributors, etc.) between the generator and the burner.

- b. Owners and operators of facilities that burn, in an onsite boiler or industrial furnace exempt from regulation under the small quantity burner provisions of section 33.1-24-05-533, hazardous waste that they generate are exempt from regulation under sections 33.1-24-05-01 through 33.1-24-05-190, sections 33.1-24-05-300 through 33.1-24-05-524, sections 33.1-24-05-550 through 33.1-24-05-559, sections 33.1-24-05-800 through 33.1-24-05-819, sections 33.1-24-05-950 through 33.1-24-05-1149, applicable requirements of subsection 5 of section 33.1-24-06-16, and chapter 33.1-24-06, applicable to storage units for those storage units that store mixtures of hazardous waste and the primary fuel to the boiler or industrial furnace in tanks that feed the fuel mixture directly to the burner. Storage of hazardous waste prior to mixing with the primary fuel is subject to regulation as prescribed in subdivision a.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-527. Permit standards for burners.

1. Applicability.

- a. General. Owners and operators of boilers and industrial furnaces burning hazardous waste and not operating under interim status must comply with the requirements of this section and subdivision ff of subsection 2 of section 33.1-24-06-17 and subsection 4 of section 33.1-24-06-19, unless exempt under the small quantity burner exemption of section 33.1-24-05-533.
- b. Applicability of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 standards. Owners and operators of boilers and industrial furnaces that burn hazardous waste are subject to the following provisions of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, except as provided otherwise by sections 33.1-24-05-525 through 33.1-24-05-549:
- (1) Notwithstanding any other provisions of these regulations, enforcement actions may be brought pursuant to section 23.1-04-14 of the North Dakota Century Code or 7003 of the Resource Conservation and Recovery Act;
 - (2) In sections 33.1-24-05-02 through 33.1-24-05-14, sections 33.1-24-05-02 through 33.1-24-05-09;
 - (3) In sections 33.1-24-05-15 through 33.1-24-05-25, sections 33.1-24-05-15 through 33.1-24-05-20;
 - (4) In sections 33.1-24-05-26 through 33.1-24-05-36, sections 33.1-24-05-26 through 33.1-24-05-31;
 - (5) In sections 33.1-24-05-37 through 33.1-24-05-46, the applicable provisions of sections 33.1-24-05-38 through 33.1-24-05-44;

- (6) In sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-47 and 33.1-24-05-58;
- (7) In sections 33.1-24-05-59 through 33.1-24-05-73, sections 33.1-24-05-60 through 33.1-24-05-64;
- (8) In sections 33.1-24-05-74 through 33.1-24-05-88, 33.1-24-05-75, 33.1-24-05-76, 33.1-24-05-77, and 33.1-24-05-79 through 33.1-24-05-81, except that the state and federal governments are exempt from the requirements of sections 33.1-24-05-74 through 33.1-24-05-88; and
- (9) Sections 33.1-24-05-420 through 33.1-24-05-449, except subsection 1 of section 33.1-24-05-420.

2. Hazardous waste analysis.

- a. The owner or operator must provide an analysis of the hazardous waste that quantifies the concentration of any constituent identified in appendix V of chapter 33.1-24-02 that may reasonably be expected to be in the waste. Such constituents must be identified and quantified if present, at levels detectable by using appropriate analytical procedures. The appendix V of chapter 33.1-24-02 constituents excluded from this analysis must be identified and the basis for their exclusion explained. This analysis will be used to provide all information required by sections 33.1-24-05-525 through 33.1-24-05-549 and subdivision ff of subsection 2 of section 33.1-24-06-17 and subsection 4 of section 33.1-24-06-19 and to enable the permit writer to prescribe such permit conditions as necessary to protect human health and the environment. Such analysis must be included as a portion of the part B permit application, or, for facilities operating under the interim status standards of sections 33.1-24-05-525 through 33.1-24-05-549, as a portion of the trial burn plan that may be submitted before the part B application under provisions of subdivision g of subsection 4 of section 33.1-24-06-19 as well as any other analysis required by the department in preparing the permit. Owners and operators of boilers and industrial furnaces not operating under the interim status standards must provide the information required by subdivision ff of subsection 2 of section 33.1-24-06-17 or subdivision c of subsection 4 of section 33.1-24-06-19 in the part B application to the greatest extent possible.
- b. Throughout normal operation, the owner or operator must conduct sampling and analysis as necessary to ensure that the hazardous waste, other fuels, and industrial furnace feedstocks fired into the boiler or industrial furnace are within the physical and chemical composition limits specified in the permit.

3. Emissions standards. Owners and operators must comply with emissions standards provided by sections 33.1-24-05-529 through 33.1-24-05-532.

4. Permits.

- a. The owner or operator may burn only hazardous wastes specified in the facility permit and only under the operating conditions specified under subsection 5, except in approved trial burns under the conditions specified in subsection 4 of section 33.1-24-06-19.
- b. Hazardous wastes not specified in the permit may not be burned until operating conditions have been specified under a new permit or permit modification, as applicable. Operating requirements for new wastes may be based on either trial burn results or alternative data included with part B of a permit application under subdivision ff of subsection 2 of section 33.1-24-06-17.

- c. Boilers and industrial furnaces operating under the interim status standards of section 33.1-24-05-528 are permitted under procedures provided by subdivision g of subsection 4 of section 33.1-24-06-19.
- d. A permit for a new boiler or industrial furnace (those boilers and industrial furnaces not operating under the interim status standards) must establish appropriate conditions for each of the applicable requirements of this section, including allowable hazardous waste firing rates and operating conditions necessary to meet the requirements of subsection 5, in order to comply with the following standards:
 - (1) For the period beginning with initial introduction of hazardous waste and ending with initiation of the trial burn, and only for the minimum time required to bring the device to a point of operational readiness to conduct a trial burn, not to exceed a duration of seven hundred twenty hours operating time when burning hazardous waste, the operating requirements must be those most likely to ensure compliance with the emission standards of section 33.1-24-05-529 through 33.1-24-05-532, based on the department's engineering judgment. If the applicant is seeking a waiver from a trial burn to demonstrate conformance with a particular emission standard, the operating requirements during this initial period of operation shall include those specified by the applicable provisions of section 33.1-24-05-529, 33.1-24-05-530, 33.1-24-05-531, or 33.1-24-05-532. The department may extend the duration of this period for up to seven hundred twenty additional hours when good cause for the extension is demonstrated by the applicant.
 - (2) For the duration of the trial burn, the operating requirements must be sufficient to demonstrate compliance with the emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 and must be in accordance with the approved trial burn plan.
 - (3) For the period immediately following completion of the trial burn, and only for the minimum period sufficient to allow sample analysis, data computation, submission of the trial burn results by the applicant, review of the trial burn results and modification of the facility permit by the department to reflect the trial burn results, the operating requirements must be those likely to ensure compliance with the emission standards sections 33.1-24-05-529 through 33.1-24-05-532 based on the department's engineering judgment.
 - (4) For the remaining duration of the permit, the operating requirements must be those demonstrated in a trial burn or by alternative data specified in subdivision ff of subsection 2 of section 33.1-24-06-17, as sufficient to ensure compliance with the emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532.

5. Operating requirements.

- a. General. A boiler or industrial furnace burning hazardous waste must be operated in accordance with the operating requirements specified in the permit at all times where there is hazardous waste in the unit.
- b. Requirements to ensure compliance with the organic emissions standards:
 - (1) Destruction and removal efficiency standard. Operating conditions will be specified either on a case-by-case basis for each hazardous waste burned as those demonstrated (in a trial burn or by alternative data as specified in subdivision ff of subsection 2 of section 33.1-24-06-17) to be sufficient to comply with the destruction and removal efficiency performance standard of subsection 1 of section 33.1-24-05-529 or as those special operating requirements provided by

subdivision d of subsection 1 of section 33.1-24-05-529 for the waiver of the destruction and removal efficiency trial burn. When the destruction and removal efficiency trial burn is not waived under subdivision d of subsection 1 of section 33.1-24-05-529, each set of operating requirements will specify the composition of the hazardous waste (including acceptable variations in the physical and chemical properties of the hazardous waste which will not affect compliance with the destruction and removal efficiency performance standard) to which the operating requirements apply. For each such hazardous waste, the permit will specify acceptable operating limits including the following conditions as appropriate:

- (a) Feed rate of hazardous waste and other fuels measured and specified as prescribed in subdivision f;
- (b) Minimum and maximum device production rate when producing normal product expressed in appropriate units, measured and specified as prescribed in subdivision f;
- (c) Appropriate controls of the hazardous waste firing system;
- (d) Allowable variation in boiler or industrial furnace system design or operating procedures;
- (e) Minimum combustion gas temperature measured at a location indicative of combustion chamber temperature, measured and specified as prescribed in subdivision f;
- (f) An appropriate indicator of combustion gas velocity, measured and specified as prescribed in subdivision f, unless documentation is provided under subsection 4 of section 33.1-24-06-19 demonstrating adequate combustion gas residence time; and
- (g) Such other operating requirements as are necessary to ensure that the destruction and removal efficiency performance standards of subsection 1 of section 33.1-24-05-529 are met.

(2) Carbon monoxide and hydrocarbon standards. The permit must incorporate a carbon monoxide limit and, as appropriate, a hydrocarbon limit as provided by subsections 2 through 6 of section 33.1-24-05-529. The permit limits will be specified as follows:

- (a) When complying with the carbon monoxide standard of subdivision a of subsection 2 of section 33.1-24-05-529, the permit limit is one hundred parts per million by volume.
- (b) When complying with the alternative carbon monoxide standard under subsection 3 of section 33.1-24-05-529, the permit limit for carbon monoxide is based on the trial burn and is established as the average overall valid runs of the highest hourly rolling average carbon monoxide level of each run, and the permit limit for hydrocarbon is twenty parts per million by volume (as defined in subdivision a of subsection 3 of section 33.1-24-05-529), except as provided in subsection 6 of section 33.1-24-05-529.
- (c) When complying with the alternative hydrocarbon limit for industrial furnaces under subsection 6 of section 33.1-24-05-529, the permit limit for hydrocarbon and carbon monoxide is the baseline level when hazardous waste is not burned as specified by that subsection.

(3) Startup and shutdown. During startup and shutdown of the boiler or industrial furnace, hazardous waste (except waste fed solely as an ingredient under the tier I (or adjusted tier I) feed rate screening limits for metals and chloride/chlorine, and except low risk waste exempt from the trial burn requirements under subdivision e of subsection 1 of section 33.1-24-05-529, sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532) must not be fed into the device unless the device is operating within the conditions of operation specified in the permit.

c. Requirements to ensure conformance with the particulate standard.

(1) Except as provided in paragraphs 2 and 3, the permit shall specify the following operating requirements to ensure conformance with the particulate standard specified in section 33.1-24-05-530:

(a) Total ash feed rate to the device from hazardous waste, other fuels, and industrial furnace feedstocks, measured and specified as prescribed in subdivision f;

(b) Maximum device production rate when producing normal product expressed in appropriate units, and measured and specified as prescribed in subdivision f;

(c) Appropriate controls on operation and maintenance of the hazardous waste firing system and any air pollution control system;

(d) Allowable variation in boiler or industrial furnace system design, including any air pollution control system or operating procedures; and

(e) Such other operating requirements as are necessary to ensure that the particulate standard in subsection 1 of section 33.1-24-05-530 is met.

(2) Permit conditions to ensure conformance with the particulate matter standard shall not be provided for facilities exempt from the particulate matter standard under subsection 2 of section 33.1-24-05-530.

(3) For cement kilns and lightweight aggregate kilns, permit conditions to ensure compliance with the particulate standard shall not limit the ash content of hazardous waste or other feed materials.

d. Requirements to ensure conformance with the metals emissions standard.

(1) For conformance with the tier I (or adjusted tier I) metals feed rate screening limits of subsection 2 or 5 of section 33.1-24-05-531, the permit shall specify the following operating requirements:

(a) Total feed rate of each metal in hazardous waste, other fuels, and industrial furnace feedstocks measured and specified under provisions of subdivision f;

(b) Total feed rate of hazardous waste measured and specified as prescribed in subdivision f; and

(c) A sampling and metals analysis program for the hazardous waste, other fuels, and industrial furnace feedstocks;

(2) For conformance with the tier II metals emission rate screening limits under subsection 3 of section 33.1-24-05-531 and the tier III metals controls under subsection 4 of section 33.1-24-05-531, the permit shall specify the following operating requirements:

(a) Maximum emission rate for each metal specified as the average emission rate during the trial burn;

(b) Feed rate of total hazardous waste and pumpable hazardous waste, each measured and specified as prescribed in paragraph 1 of subdivision f; and

(c) Feed rate of each metal in the following feedstreams, measured and specified as prescribed in subdivision f:

[1] Total feedstreams;

[2] Total hazardous waste feed;

[3] Total pumpable hazardous waste feed;

[4] Total feed rate of chlorine and chloride in total feedstreams measured and specified as prescribed in subdivision f;

[5] Maximum combustion gas temperature measured at a location indicative of combustion chamber temperature, and measured and specified as prescribed in subdivision f;

[6] Maximum flue gas temperature at the inlet to the particulate matter air pollution control system measured and specified as prescribed in subdivision f;

[7] Maximum device production rate when producing normal product expressed in appropriate units and measured and specified as prescribed in subdivision f;

[8] Appropriate controls on operation and maintenance of the hazardous waste firing system and any air pollution control system;

[9] Allowable variation in boiler or industrial furnace system design including any air pollution control system or operating procedures; and

[10] Such other operating requirements as are necessary to ensure that the metal standards under subsection 3 of section 33.1-24-05-531 or subsection 4 of section 33.1-24-05-531 are met; and

(3) For conformance with an alternative implementation approach approved by the department under subsection 6 of section 33.1-24-05-531, the permit will specify the following operating requirements:

(a) Maximum emission rate for each metal specified as the average emission rate during the trial burn;

(b) Feed rate of total hazardous waste and pumpable hazardous waste, each measured and specified as prescribed in paragraph 1 of subdivision f;

(c) Feed rate of each metal in the following feedstreams, measured and specified as prescribed in subdivision f:

[1] Total hazardous waste feed; and

[2] Total pumpable hazardous waste feed;

- (d) Total feed rate of chlorine and chloride in total feedstreams measured and specified prescribed in subdivision f;
 - (e) Maximum combustion gas temperature measured at a location indicative of combustion chamber temperature, and measured and specified as prescribed in subdivision f;
 - (f) Maximum flue gas temperature at the inlet to the particulate matter air pollution control system measured and specified as prescribed in subdivision f;
 - (g) Maximum device production rate when producing normal product expressed in appropriate units and measured and specified as prescribed in subdivision f;
 - (h) Appropriate controls on operation and maintenance of the hazardous waste firing system and any air pollution control system;
 - (i) Allowable variation in boiler or industrial furnace system design including any air pollution control system or operating procedures; and
 - (j) Such other operating requirements as are necessary to ensure that the metals standards under subsection 3 of section 33.1-24-05-531 or subsection 4 of section 33.1-24-05-531 are met.
- e. Requirements to ensure conformance with the hydrogen chloride and chlorine gas standards.
- (1) For conformance with the tier I total chloride and chlorine feed rate screening limits of subdivision a of subsection 2 of section 33.1-24-05-532, the permit will specify the following operating requirements:
 - (a) Feed rate of total chloride and chlorine in hazardous waste, other fuels, and industrial furnace feedstocks measured and specified as prescribed in subdivision f;
 - (b) Feed rate of total hazardous waste measured and specified as prescribed in subdivision f; and
 - (c) A sampling and analysis program for total chloride and chlorine for the hazardous waste, other fuels, and industrial furnace feedstocks; and
 - (2) For conformance with the tier II hydrogen chloride and for chlorine emission rate screening limits under subdivision b of subsection 2 of section 33.1-24-05-532 and the tier III hydrogen chloride and chlorine controls under subsection 3 of section 33.1-24-05-532, the permit will specify the following operating requirements:
 - (a) Maximum emission rate for hydrogen chloride and for chlorine specified as the average emission rate during the trial burn;
 - (b) Feed rate of total hazardous waste measured and specified as prescribed in subdivision f;
 - (c) Total feed rate of chlorine and chloride in total feedstreams, measured and specified as prescribed in subdivision f;
 - (d) Maximum device production rate when producing normal product expressed in appropriate units, measured and specified as prescribed in subdivision f;

- (e) Appropriate controls on operation and maintenance of the hazardous waste firing system and any air pollution control system;
- (f) Allowable variation in boiler or industrial furnace system design including any air pollution control system or operating procedures; and
- (g) Such other operating requirements as are necessary to ensure that the hydrogen chloride and chlorine standards under subdivision b of subsection 2 or subsection 3 of section 33.1-24-05-532 are met.

f. Measuring parameters and establishing limits based on trial burn data.

- (1) General requirements. As specified in subdivisions b through e, each operating parameter shall be measured, and permit limits on the parameter shall be established, according to either of the following procedures:

- (a) Instantaneous limits. A parameter may be measured and recorded on an instantaneous basis (for example, the value that occurs at any time) and the permit limit specified as the time-weighted average during all valid runs of the trial burn; or

- (b) Hourly rolling average.

- [1] The limit for a parameter may be established and continuously monitored on an hourly rolling average basis defined as follows:

- [a] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds.

- [b] An hourly rolling average is the arithmetic mean of the sixty most recent one-minute average values recorded by the continuous monitoring system.

- [2] The permit limit for the parameter shall be established based on trial burn data as the average overall valid test runs of the highest hourly rolling average value for each run.

- (2) Rolling average limits for carcinogenic metals and lead. Feed rate limits for the carcinogenic metals (for example, arsenic, beryllium, cadmium, and chromium) and lead may be established either on an hourly rolling average basis as prescribed by paragraph 1 or on (up to) a twenty-four hour rolling average basis. If the owner or operator elects to use an average period from two to twenty-four hours:

- (a) The feed rate of each metal shall be limited at any time to ten times the feed rate that would be allowed on an hourly rolling average basis;

- (b) The continuous monitor shall meet the following specifications:

- [1] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds;

- [2] The rolling average for the selected averaging period is defined as the arithmetic mean of one-hour block averages for the averaging period. A

one-hour block average is the arithmetic mean of the one-minute averages recorded during the sixty-minute averages recorded during the sixty-minute period beginning at one minute after the beginning of the preceding clock hour; and

(c) The permit limit for the feed rate of each metal shall be established based on trial burn data as the average overall valid test runs of the highest hourly rolling average feed rate for each run.

(3) Feed rate limits for metals, total chloride and chlorine, and ash. Feed rate limits for metals, total chlorine and chloride, and ash are established and monitored by knowing the concentration of the substance (for example, metals, chloride and chlorine, and ash) in each feedstream and the flow rate of the feedstream. To monitor the feed rate of these substances, the flow rate of each feedstream must be monitored under the continuous monitoring requirements of paragraphs 1 and 2.

(4) Conduct of trial burn testing.

(a) If compliance with all applicable emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 is not demonstrated simultaneously during a set of test runs, the operating conditions of additional test runs required to demonstrate compliance with remaining emissions standards must be as close as possible to the original operating conditions.

(b) Prior to obtaining test data for purposes of demonstrating compliance with the emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 or establishing limits on operating parameters under this section, the facility must operate under trial burn conditions for a sufficient period to reach steady-state operations. The department may determine, however, that industrial furnaces that recycle collected particulate matter back into the furnace and that comply with an alternative implementation approach for metals under subsection 6 of section 33.1-24-05-531 need not reach steady-state conditions with respect to the flow of metals in the system prior to beginning compliance testing for metals emissions.

(c) Trial burn data on the level of an operating parameter for which a limit must be established in the permit must be obtained during emission sampling for the pollutant(s) (for example, metals, particulate matter, hydrogen chloride, and chlorine organic compounds) for which the parameter must be established as specified by this subsection.

g. General requirements.

(1) Fugitive emissions. Fugitive emissions must be controlled by:

(a) Keeping the combustion zone totally sealed against fugitive emissions;

(b) Maintaining the combustion zone pressure lower than atmospheric pressure;
or

(c) An alternate means of control demonstrated (with part B of the permit application) to provide fugitive emissions control equivalent to maintenance of combustion zone pressure lower than atmospheric pressure.

(2) Automatic waste feed cutoff. A boiler or industrial furnace must be operated with a functioning system that automatically cuts off the hazardous waste feed when operating conditions deviate from those established under this section. The

department may limit the number of cutoffs per an operating period on a case-by-case basis. In addition:

- (a) The permit limit for (the indicator of) minimum combustion chamber temperature must be maintained while hazardous waste or hazardous waste residues remain in the combustion chamber;
- (b) Exhaust gases must be ducted to the air pollution control system operated in accordance with the permit requirements while hazardous waste or hazardous waste residues remain in the combustion chamber; and
- (c) Operating parameters for which permit limits are established must continue to be monitored during the cutoff, and the hazardous waste feed shall not be restarted until the levels of those parameters comply with the permit limits. For parameters that may be monitored on an instantaneous basis, the department will establish a minimum period of time after a waste feed cutoff during which the parameter must not exceed the permit limit before the hazardous waste feed may be restarted.

- (3) Changes. A boiler or industrial furnace must cease burning hazardous waste when changes in combustion properties, or feed rates of the hazardous waste, other fuels or industrial furnace feedstocks, or changes in the boiler or industrial furnace design or operating conditions deviate from the limits as specified in the permit.

h. Monitoring and inspections.

- (1) The owner or operator must monitor and record the following, at a minimum, while burning hazardous waste:
 - (a) If specified by the permit, feed rates and composition of hazardous waste, other fuels, and industrial furnace feedstocks, and feed rates of ash, metals, and total chloride and chlorine;
 - (b) If specified by the permit, carbon monoxide, hydrocarbons, and oxygen on a continuous basis at a common point in the boiler or industrial furnace downstream of the combustion zone and prior to release of stack gases to the atmosphere in accordance with operating requirements specified in paragraph 2 of subdivision b. Carbon monoxide, hydrocarbon, and oxygen monitors must be installed, operated, and maintained in accordance with methods specified in appendix XXIV of chapter 33.1-24-05; and
 - (c) Upon the request of the department, sampling and analysis of the hazardous waste (and other fuels and industrial furnace feedstocks as appropriate), residues, and exhaust emissions must be conducted to verify that the operating requirements established in the permit achieve the applicable standards of sections 33.1-24-05-529, 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532.
- (2) All monitors shall record data in units corresponding to the permit limit unless otherwise specified in the permit.
- (3) The boiler or industrial furnace and associated equipment (pumps, valves, pipes, fuel storage tanks, etc.) must be subjected to thorough visual inspection when it contains hazardous waste, at least daily for leaks, spills, fugitive emissions, and signs of tampering.

- (4) The automatic hazardous waste feed cutoff system and associated alarms must be tested at least once every seven days when hazardous waste is burned to verify operability, unless the applicant demonstrates to the department that weekly inspections will unduly restrict or upset operations and that less frequent inspections will be adequate. At a minimum, operational testing must be conducted at least once every thirty days.
- (5) These monitoring and inspection data must be recorded and the records must be placed in the operating record required by section 33.1-24-05-40.
 - i. Direct transfer to the burner. If hazardous waste is directly transferred from a transport vehicle to a boiler or industrial furnace without the use of a storage unit, the owner and operator must comply with section 33.1-24-05-536.
 - j. Recordkeeping. The owner or operator must maintain in the operating record of the facility all information and data required by this section for five years.
 - k. Closure. At closure, the owner or operator must remove all hazardous waste and hazardous waste residues (including ash, scrubber waters, and scrubber sludges) from the boiler or industrial furnace.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-528. Interim status standards for burners.

1. Purpose, scope, applicability.

a. General.

- (1) The purpose of this section is to establish minimum national standards for owners and operators of "existing" boilers and industrial furnaces that burn hazardous waste where such standards define the acceptable management of hazardous waste during the period of interim status. The standards of this section apply to owners and operators of existing facilities until either a permit is issued under subsection 4 of section 33.1-24-05-527 or until closure responsibilities identified in this section are fulfilled.
- (2) Existing or in existence means a boiler or industrial furnace that on or before August 1, 1991, is either in operation burning or processing hazardous waste or for which construction (including the ancillary facilities to burn or to process the hazardous waste) has commenced. A facility has commenced construction if the owner or operator has obtained the federal, state, and local approvals or permits necessary to begin physical construction; and either:
 - (a) A continuous onsite, physical construction program has begun; or
 - (b) The owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction of the facility to be completed within a reasonable time.
- (3) If a boiler or industrial furnace is located at a facility that already has a permit or interim status, then the facility must comply with the applicable regulations dealing with permit modifications in section 33.1-24-06-14 or changes in interim status in subsection 5 of section 33.1-24-06-16.

- b. Exemptions. The requirements of this section do not apply to hazardous waste and facilities exempt under subsection 2 of section 33.1-24-05-525, or section 33.1-24-05-533.
- c. Prohibition on burning dioxin-listed wastes. The following hazardous waste listed for dioxin and hazardous waste derived from any of these wastes may not be burned in a boiler or industrial furnace operating under interim status: F020, F021, F022, F023, F026, and F027.
- d. Applicability of interim status standards. Owners and operators of boilers and industrial furnaces that burn hazardous waste and are operating under interim status are subject to the following provisions:
- (1) Notwithstanding any other provisions of these regulations, enforcement actions may be brought pursuant to section 23.1-04-14 of the North Dakota Century Code or 7003 of the Resource Conservation and Recovery Act;
 - (2) General facility standards, sections 33.1-24-05-02 through 33.1-24-05-08;
 - (3) Preparedness and prevention, sections 33.1-24-05-15 through 33.1-24-05-20;
 - (4) Contingency plan and emergency procedures, sections 33.1-24-05-26 through 33.1-24-05-31;
 - (5) Manifest system, recordkeeping and reporting, sections 33.1-24-05-38 through 33.1-24-05-44, except that sections 33.1-24-05-38, 33.1-24-05-39, and 33.1-24-05-43 do not apply to owners and operators of onsite facilities that do not receive any hazardous waste from offsite sources;
 - (6) Closure and postclosure, sections 33.1-24-05-60 through 33.1-24-05-64;
 - (7) Financial requirements, sections 33.1-24-05-75 through 33.1-24-05-77 and sections 33.1-24-05-79 through 33.1-24-05-81, except that states and the federal government are exempt from the financial requirements; and
 - (8) Air emission standards for equipment leaks, sections 33.1-24-05-420 through 33.1-24-05-449, except subsection 1 of section 33.1-24-05-420.
- e. Special requirements for furnaces. The following controls apply during interim status to industrial furnaces (for example, kilns, cupolas) that feed hazardous waste for a purpose other than solely as an ingredient (see paragraph 2) at any location other than the hot end where products are normally discharged or where fuels are normally fired:
- (1) Controls.
 - (a) The hazardous waste shall be fed at a location where combustion gas temperatures are at least one thousand eight hundred degrees Fahrenheit [982.2 degrees Celsius];
 - (b) The owner or operator must determine that adequate oxygen is present in combustion gases to combust organic constituents in the waste and retain documentation of such determination in the facility record;
 - (c) For cement kiln systems, the hazardous waste shall be fed into the kiln; and
 - (d) The hydrocarbon controls of subsection 3 of section 33.1-24-05-529 or subdivision e of subsection 3 apply upon certification of compliance under

subsection 3 irrespective of the carbon monoxide level achieved during the compliance test.

(2) Burning hazardous waste solely as an ingredient. A hazardous waste is burned for a purpose other than solely as an ingredient if it meets either of these criteria:

(a) The hazardous waste has a total concentration of nonmetal compounds listed in appendix V of chapter 33.1-24-02 exceeding five hundred parts per million by weight, as-fired, and so is considered to be burned for destruction. The concentration of nonmetal compounds in a waste as-generated may be reduced to the five hundred parts per million limit by bona fide treatment that removes or destroys nonmetal constituents. Blending for dilution to meet the five hundred parts per million limit is prohibited and documentation that the waste has not been impermissibly diluted must be retained in the facility record; or

(b) The hazardous waste has a heating value of five thousand British thermal units per pound or more, as-fired, and so is considered to be burned as fuel. The heating value of a waste as-generated may be reduced to below the five thousand British thermal units per pound limit by bona fide treatment that removes or destroys organic constituents. Blending to augment the heating value to meet the five thousand British thermal units per pound limit is prohibited and documentation that the waste has not been impermissibly blended must be retained in the facility record.

f. Restrictions on burning hazardous waste that is not a fuel. Prior to certification of compliance under subsection 3, owners and operators shall not feed hazardous waste that has a heating value less than five thousand British thermal units per pound as-generated (except that the heating value of a waste as-generated may be increased to above the five thousand British thermal units per pound limit by bona fide treatment; however, blending to augment the heating value to meet the five thousand British thermal units per pound limit is prohibited and records must be kept to document that impermissible blending has not occurred) in a boiler or industrial furnace, except that:

(1) Hazardous waste may be burned solely as an ingredient;

(2) Hazardous waste may be burned for purposes of compliance testing (or testing prior to compliance testing) for a total period of time not to exceed seven hundred twenty hours;

(3) Such waste may be burned if the department has documentation to show that, prior to August 21, 1991:

(a) The boiler or industrial furnace is operating under the interim status standards for incinerators or thermal treatment units provided by subsection 5 of section 33.1-24-06-16;

(b) The boiler or industrial furnace met the interim status eligibility requirements under subsection 5 of section 33.1-24-06-16; and

(c) Hazardous waste with a heating value less than five thousand British thermal units per pound was burned prior to that date; or

(4) Such waste may be burned in a halogen acid furnace if the waste was burned as an excluded ingredient under subsection 5 of section 33.1-24-02-02 prior to February 21, 1991, and documentation is kept on file supporting this claim.

- g. Direct transfer to the burner. If hazardous waste is directly transferred from a transport vehicle to a boiler or industrial furnace without the use of a storage unit, the owner and operator must comply with section 33.1-24-05-536.

2. Certification of precompliance.

- a. General. The owner or operator must provide complete and accurate information specified in subdivision b to the department on or before August 21, 1991, and must establish limits for the operating parameters specified in subdivision c. Such information is termed a "certification of precompliance" and constitutes a certification that the owner or operator has determined that, when the facility is operated within the limits specified in subdivision c, the owner or operator believes that, using best engineering judgment, emissions of particulate matter, metals, and hydrogen chloride and chlorine are not likely to exceed the limits provided by sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532. The facility may burn hazardous waste only under the operating conditions that the owner or operator establishes under subdivision c until the owner or operator submits a revised certification of precompliance under subdivision h or a certification of compliance under subsection 3, or until a permit is issued.

- b. Information required. The following information must be submitted with the certification of precompliance to support the determination that the limits established for the operating parameters identified in subdivision c are not likely to result in an exceedance of the allowable emission rates for particulate matter, metals, and hydrogen chloride and chlorine:

(1) General facility information:

(a) Identification number;

(b) Facility name, contact person, telephone number, and address;

(c) Description of boilers and industrial furnaces burning hazardous waste, including type and capacity of device;

(d) A scaled plot plan showing the entire facility and location of the boilers and industrial furnaces burning hazardous waste; and

(e) A description of the air pollution control system on each device burning hazardous waste, including the temperature of the flue gas at the inlet to the particulate matter control system.

- (2) Except for facilities complying with the tier I or adjusted tier I feed rate screening limits for metals or total chlorine and chloride provided by subsection 2 or 5 of section 33.1-24-05-531 and subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532 respectively, the estimated uncontrolled (at the inlet to the air pollution control system) emissions of particulate matter, each metal controlled by section 33.1-24-05-531, and hydrogen chloride and chlorine, and the following information to support such determinations:

(a) The feed rate (pound per hour) of ash, chlorine, antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, and thallium in each feedstream (hazardous waste, other fuels, industrial furnace feedstocks).

(b) The estimated partitioning factor to the combustion gas for the materials identified in subparagraph a and the basis for the estimate and an estimate of the partitioning to hydrogen chloride and chlorine of total chloride and chlorine in feed materials. To estimate the partitioning factor, the owner or operator

must use either best engineering judgment or the procedures specified in appendix XXIV of chapter 33.1-24-05.

(c) For industrial furnaces that recycle collected particulate matter back into the furnace and that will certify compliance with the metals emissions standards under subparagraph a of paragraph 2 of subdivision c of subsection 3, the estimated enrichment factor for each metal. To estimate the enrichment factor, the owner or operator must use either best engineering judgment or the procedures specified in "Alternative Methodology for Implementing Metals Controls" in appendix XXIV of chapter 33.1-24-05.

(d) If best engineering judgment is used to estimate partitioning factors or enrichment factors under subparagraph b or c respectively, the basis for the judgment. When best engineering judgment is used to develop or evaluate data or information and make determinations under this section, the determinations must be made by a qualified, registered professional engineer and a certification of his or her determinations in accordance with subsection 4 of section 33.1-24-06-03 must be provided in the certification of precompliance.

(3) For facilities complying with the tier I or adjusted tier I feed rate screening limits for metals or total chlorine and chloride provided by subsection 2 or 5 of section 33.1-24-05-531 and subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532, the feed rate (pound per hour) of total chlorine and chlorine, antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, and thallium in each feedstream (hazardous waste, other fuels, industrial furnace feedstocks).

(4) For facilities complying with the tier II or tier III emission limits for metals or hydrogen chloride and chlorine (under subsection 3 or 4 of section 33.1-24-05-531 or subdivision b of subsection 2 or subsection 3 of section 33.1-24-05-532), the estimated controlled (outlet of the air pollution control system) emissions rates of particulate matter, each metal controlled by section 33.1-24-05-531, and hydrogen chloride and chlorine, and the following information to support such determinations:

(a) The estimated air pollution control system removal efficiency for particulate matter, hydrogen chloride and chlorine, antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, and thallium.

(b) To estimate air pollution control system removal efficiency, the owner or operator must use either best engineering judgment or the procedures prescribed in appendix XXIV of chapter 33.1-24-05.

(c) If best engineering judgment is used to estimate air pollution control system removal efficiency, the basis for the judgment. Use of best engineering judgment must be in conformance with provisions of subparagraph d of paragraph 2.

(5) Determination of allowable emissions rates for hydrogen chloride, chlorine, antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, and thallium, and the following information to support such determinations:

(a) For all facilities:

[1] Physical stack height;

[2] Good engineering practice stack height as defined by 40 CFR 51.100(ii);

[3] Maximum flue gas flow rate;

[4] Maximum flue gas temperature;

[5] Attach a United States geological service topographic map (or equivalent) showing the facility location and surrounding land within five kilometers of the facility;

[6] Identify terrain type: complex or noncomplex; and

[7] Identify land use: urban or rural.

(b) For owners and operators using tier III site-specific dispersion modeling to determine allowable levels under subsection 4 of section 33.1-24-05-531 or subsection 3 of section 33.1-24-05-532, or adjusted tier I feed rate screening limits under subsection 5 of section 33.1-24-05-531 or subsection 5 of section 33.1-24-05-532:

[1] Dispersion model and version used;

[2] Source of meteorological data;

[3] The dilution factor in micrograms per cubic meter per gram per second of emissions for the maximum annual average offsite (unless onsite is required) ground level concentration (maximum exposed individual location); and

[4] Indicate the maximum exposed individual location on the map required under item 5 of subparagraph a;

(6) For facilities complying with the tier II or tier III emissions rate controls for metals or hydrogen chloride and chlorine, a comparison of the estimated controlled emissions rates determined under paragraph 4 with the allowable emission rates determined under paragraph 5;

(7) For facilities complying with the tier I (or adjusted tier I) feed rate screening limits for metals or total chloride and chlorine, a comparison of actual feed rates of each metal and total chlorine and chloride determined under paragraph 3 to the tier I allowable feed rates;

(8) For industrial furnaces that feed hazardous waste for any purpose other than solely as an ingredient (as defined by paragraph 2 of subdivision e of subsection 1) at any location other than the product discharge end of the device, documentation of compliance with the requirements of subparagraph a, b, or c of paragraph 1 of subdivision e of subsection 1; and

(9) For industrial furnaces that recycle collected particulate matter back into the furnace and that will certify compliance with the metals emissions standards under subparagraph a of paragraph 2 of subdivision c of subsection 3:

(a) The applicable particulate matter standard in pound per hour; and

(b) The precompliance limit on the concentration of each metal in collected particulate matter.

c. Limits on operating conditions. The owner and operator shall establish limits on the following parameters consistent with the determinations made under paragraph 2 of subdivision b and certify (under provisions of subdivision i) to the department that the

facility will operate within the limits during interim status when there is hazardous waste in the unit until revised certification of precompliance under subdivision h or certification of compliance under subsection 3:

(1) Feed rate of total hazardous waste and (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531) pumpable hazardous waste;

(2) Feed rate of each metal in the following feedstreams:

(a) Total feedstreams, except that industrial furnaces that comply with the alternative metals implementation approach under subdivision d must specify limits on the concentration of each metal in collected particulate matter in lieu of feed rate limits for total feedstreams;

(b) Total hazardous waste feed, unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531; and

(c) Total pumpable hazardous waste feed, unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531;

(3) Total feed rate of chlorine and chloride in total feedstreams;

(4) Total feed rate of ash in total feedstreams, except that the ash feed rate for cement kilns and lightweight aggregate kilns is not limited; and

(5) Maximum production rate of the device in appropriate units when producing normal product, unless complying with the tier I or adjusted tier I feed rate screening limits for chlorine under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532 and for all metals under subsection 2 or 5 of section 33.1-24-05-531, and the uncontrolled particulate emissions do not exceed the standard under section 33.1-24-05-530.

d. Operating requirements for furnaces that recycle particulate matter. Owners and operators of furnaces that recycle collected particulate matter back into the furnace and that will certify compliance with the metals emissions controls under subparagraph a of paragraph 2 of subdivision c of subsection 3 must comply with the special operating requirements provided in "Alternative Methodology for Implementing Metals Controls" in appendix XXIV of chapter 33.1-24-05.

e. Measurement of feed rates and production rate.

(1) General requirements. Limits on each of the parameters specified in subdivision c (except for limits on metals concentrations in collected particulate matter for industrial furnaces that recycle collected particulate matter) must be established and continuously monitored under either of the following methods:

(a) Instantaneous limits. A limit for a parameter may be established and continuously monitored and recorded on an instantaneous basis (for example, the value that occurs at any time) not to be exceeded at any time; or

(b) Hourly rolling average limits. A limit for a parameter may be established and continuously monitored on an hourly rolling average basis defined as follows:

[1] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds.

[2] An hourly rolling average is the arithmetic mean of the sixty most recent one-minute average values recorded by the continuous monitoring system.

(2) Rolling average limits for carcinogenic metals and lead. Feed rate limits for the carcinogenic metals (arsenic, beryllium, cadmium, and chromium) and lead may be established either on an hourly rolling average basis as prescribed by subparagraph b of paragraph 1 or on (up to) a twenty-four hour rolling average basis. If the owner or operator elects to use an averaging period from two to twenty-four hours:

(a) The feed rate of each metal shall be limited at any time to ten times the feed rate that would be allowed on an hourly rolling average basis; and

(b) The continuous monitor shall meet the following specifications:

[1] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds.

[2] The rolling average for the selected averaging period is defined as the arithmetic mean of one-hour block averages for the averaging period. A one-hour block average is the arithmetic mean of the one-minute averages recorded during the sixty-minute period beginning at one minute after the beginning of preceding clock hour.

(3) Feed rate limits for metals, total chloride and chlorine, and ash. Feed rate limits for metals, total chlorine and chloride, and ash are established and monitored by knowing the concentration of the substance (for example, metals, chloride, chlorine, and ash) in each feedstream and the flow rate of the feedstream. To monitor the feed rate of these substances, the flow rate of each feedstream must be monitored under the continuous monitoring requirements of paragraphs 1 and 2.

f. Public notice requirements at precompliance. On or before August 21, 1991, the owner or operator must submit a notice with the following information for publication in a major local newspaper of general circulation and send a copy of the notice to the appropriate units of state and local government. The owner or operator must provide to the department with the certification of precompliance evidence of submitting the notice for publication. The notice, which shall be entitled "Notice of Certification of Precompliance with Hazardous Waste Burning Requirements of subsection 2 of section 33.1-24-05-528", must include:

(1) Name and address of the owner and operator of the facility as well as the location of the device burning hazardous waste;

(2) Date that the certification of precompliance is submitted to the department;

(3) Brief description of the regulatory process required to comply with the interim status requirements including required emissions testing to demonstrate conformance with emissions standards for organic compounds, particulate matter, metals, and hydrogen chloride and chlorine;

- (4) Types and quantities of hazardous waste burned including source, whether solids or liquids, as well as an appropriate description of the waste;
- (5) Type of device or devices in which the hazardous waste is burned including a physical description and maximum production rate of each device;
- (6) Types and quantities of other fuels and industrial furnace feedstocks fed to each unit;
- (7) Brief description of the basis for this certification of precompliance as specified in subdivision b;
- (8) Locations where the record for the facility can be viewed and copied by interested parties. These records and locations shall at a minimum include:
 - (a) The administrative record kept by the department where the supporting documentation was submitted or another location designated by the department; and
 - (b) The boiler and industrial furnace correspondence file kept at the facility site where the device is located. The correspondence file must include all correspondence between the facility and the department and local regulatory officials, including copies of all certifications and notifications, such as the precompliance certification, precompliance public notice, notice of compliance testing, compliance test report, compliance certification, time extension requests and approvals or denials, enforcement notifications of violations, and copies of state site visit reports submitted to the owner or operator;
- (9) Notification of the establishment of a facility mailing list whereby interested parties shall notify the department that they wish to be placed on the mailing list to receive future information and notices about this facility; and
- (10) Location (mailing address) of the department, where further information can be obtained on regulation of hazardous waste burning.

g. Monitoring other operating parameters. When the monitoring systems for the operating parameters listed in paragraphs 5 through 13 of subdivision a of subsection 3 are installed and operating in conformance with vendor specifications or (for carbon monoxide, hydrocarbon, and oxygen) specifications provided by appendix XXIV of chapter 33.1-24-05, as appropriate, the parameters shall be continuously monitored and records shall be maintained in the operating record.

h. Revised certification of precompliance. The owner or operator may revise at any time the information and operating conditions documented under subdivisions b and c in the certification of precompliance by submitting a revised certification of precompliance under procedures provided by those subdivisions.

(1) The public notice requirements of subdivision f do not apply to recertifications.

(2) The owner and operator must operate the facility within the limits established for the operating parameters under subdivision c until a revised certification is submitted under this subdivision or a certification of compliance is submitted under subsection 3.

i. Certification of precompliance statement. The owner or operator must include the following signed statement with the certification of precompliance submitted to the department:

"I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gathered and evaluated the information and supporting documentation. Copies of all emissions tests, dispersion modeling results and other information used to determine conformance with the requirements of subsection 2 are available at the facility and can be obtained from the facility contact person listed above. Based on my inquiry of the person or persons who manages the facility, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

I also acknowledge that the operating limits established in this certification pursuant to paragraphs c and d of subsection 2 are enforceable limits at which the facility can legally operate during interim status until: (1) A revised certification of precompliance is submitted, (2) a certification of compliance is submitted, or (3) an operating permit is issued."

3. **Certification of compliance.** The owner or operator shall conduct emissions testing to document compliance with the emissions standards of subsections 2 through 5 of section 33.1-24-05-529, sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532, and subparagraph d of paragraph 1 of subdivision e of subsection 1, under the procedures prescribed by this subsection, except under extensions of time provided by subdivision g. Based on the compliance test, the owner or operator shall submit to the department, on or before August 21, 1992, a complete and accurate "certification of compliance" (under subdivision d) with those emission standards establishing limits on the operating parameters specified in subdivision a.

a. Limits on operating conditions. The owner or operator shall establish limits on the following parameters based on operations during the compliance test (under procedures prescribed in paragraph 4 of subdivision d) and include these limits with the certification of compliance. The boiler or industrial furnace must be operated in accordance with these operating limits and all applicable emissions standards of subsections 2 through 5 of section 33.1-24-05-529, sections 33.1-24-05-530 through 33.1-24-05-532, and subparagraph d of paragraph 1 of subdivision e of subsection 1 at all times when there is hazardous waste in the unit until an operating permit is issued.

(1) Feed rate of total hazardous waste and (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531), pumpable hazardous waste;

(2) Feed rate of each metal in the following feedstreams:

(a) Total feedstreams, except that:

[1] Facilities that comply with tier I or adjusted tier I metals feed rate screening limits may set their operating limits at the metals feed rate screening limits determined under subsection 2 or 5 of section 33.1-24-05-531; and

[2] Industrial furnaces that must comply with the alternative metals implementation approach under paragraph 2 of subdivision c must specify limits on the concentration of each metal in collected particulate matter in lieu of feed rate limits for total feedstreams;

(b) Total hazardous waste feed (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531); and

(c) Total pumpable hazardous waste feed (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531);

(3) Total feed rate of chlorine and chloride in total feedstreams, except that facilities that comply with tier I or adjusted tier I feed rate screening limits may set their operating limits at the total chlorine and chloride feed rate screening limits determined under subdivision a of subsection 1 or subsection 5 of section 33.1-24-05-532;

(4) Total feed rate of ash in total feedstreams, except that the ash feed rate for cement kilns and lightweight aggregate kilns is not limited;

(5) Carbon monoxide concentration, and where required, hydrocarbon concentration in stack gas. When complying with the carbon monoxide controls of subsection 2 of section 33.1-24-05-529, the carbon monoxide limit is one hundred parts per million by volume, and when complying with the hydrocarbon controls of subsection 3 of section 33.1-24-05-529, the hydrocarbon limit is twenty parts per million by volume. When complying with the carbon monoxide controls of subsection 3 of section 33.1-24-05-529, the carbon monoxide limit is established based on the compliance test;

(6) Maximum production rate of the device in appropriate units when producing normal product, except that facilities that comply with tier I or adjusted tier I feed rate screening limits may set their operating limits at the total chlorine and chloride feed rate screening limits determined under subdivision a of subsection 1 or subsection 5 of section 33.1-24-05-532 and for all metals under subsection 2 or 5 of section 33.1-24-05-531, and the uncontrolled particulate emissions do not exceed the standard under section 33.1-24-05-530;

(7) Maximum combustion chamber temperature where the temperature measurement is as close to the combustion zone as possible and is upstream of any quench water injection (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531);

(8) Maximum flue gas temperature entering a particulate matter control device (unless complying with tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-532);

(9) For systems using wet scrubbers, including wet ionizing scrubbers (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-531);

(a) Minimum liquid to flue gas ratio;

(b) Minimum scrubber blowdown from the system or maximum suspended solids content of scrubber water; and

(c) Minimum pH level of the scrubber water;

(10) For systems using venturi scrubbers, the minimum differential gas pressure across the venturi (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532);

(11) For systems using dry scrubbers (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532):

(a) Minimum caustic feed rate; and

(b) Maximum flue gas flow rate;

(12) For systems using wet ionizing scrubbers or electrostatic precipitators (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532):

(a) Minimum electrical power in kilovolt amperes (kVA) to the precipitator plates; and

(b) Maximum flue gas flow rate;

(13) For systems using fabric filters (baghouses), the minimum pressure drop (unless complying with the tier I or adjusted tier I metals feed rate screening limits under subsection 2 or 5 of section 33.1-24-05-531 and the total chlorine and chloride feed rate screening limits under subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532).

b. Prior notice of compliance testing. At least thirty days prior to the compliance testing required by subdivision c, the owner or operator shall notify the department and submit the following information:

(1) General facility information including:

(a) Identification number;

(b) Facility name, contact person, telephone number, and address;

(c) Person responsible for conducting compliance test, including company name, address, and telephone number, and a statement of qualifications; and

(d) Planned date of the compliance test;

(2) Specific information on each device to be tested including:

(a) Description of boiler or industrial furnace;

(b) A scaled plot plan showing the entire facility and location of the boiler or industrial furnace;

(c) A description of the air pollution control system;

(d) Identification of the continuous emission monitors that are installed, including:

[1] Carbon monoxide monitor;

[2] Oxygen monitor; and

[3] Hydrocarbon monitor, specifying the minimum temperature of the system and, if the temperature is less than one hundred fifty degrees Celsius, an explanation of why a heated system is not used (see subdivision e) and a brief description of the sample gas conditioning system;

(e) Indication of whether the stack is shared with another device that will be in operation during the compliance test; and

(f) Other information useful to an understanding of the system design or operation; and

(3) Information on the testing planned, including a complete copy of the test protocol and quality assurance/quality control plan, and a summary description for each test providing the following information at a minimum:

(a) Purpose of the test (for example, demonstrate compliance with emissions of particulate matter); and

(b) Planned operating conditions, including levels for each pertinent parameter specified in subdivision a.

c. Compliance testing.

(1) General. Compliance testing must be conducted under conditions for which the owner or operator has submitted a certification of precompliance under subsection 2 and under conditions established in the notification of testing required by subdivision b. The owner or operator may seek approval on a case-by-case basis to use compliance test data from one unit in lieu of testing a similar onsite unit. To support the request, the owner or operator must provide a comparison of the hazardous waste burned and other feedstreams, and the design, operation, and maintenance of both the tested unit and the similar unit. The department shall provide a written approval to use compliance test data in lieu of testing a similar unit if the department finds that the hazardous wastes, the devices, and the operating conditions are sufficiently similar, and the data from the other compliance test is adequate to meet the requirements of subsection 3.

(2) Special requirements for industrial furnaces that recycle collected particulate matter. Owners and operators of industrial furnaces that recycle back into the furnace particulate matter from the air pollution control system must comply with one of the following procedures for testing to determine compliance with the metals standards of subsection 3 or 4 of section 33.1-24-05-531:

(a) The special testing requirements prescribed in "Alternative Method for Implementing Metals Controls" in appendix XXIV of chapter 33.1-24-05; or

(b) Stack emissions testing for a minimum of six hours each day while hazardous waste is burned during interim status. The testing must be conducted when burning normal hazardous waste for that day at normal feed rates for that day and when the air pollution control system is operated under normal conditions. During interim status, hazardous waste analysis for metals content must be sufficient for the owner or operator to determine if changes in metals content may affect the ability of the facility to meet the metals emissions standards established under subsection 3 or 4 of section 33.1-24-05-531. Under this

option, operating limits (under subdivision a) must be established during compliance testing under subdivision c only on the following parameters:

- [1] Feed rate of total hazardous waste;
- [2] Total feed rate of chlorine and chloride in total feedstreams;
- [3] Total feed rate of ash in total feedstreams, except that the ash feed rate for cement kilns and lightweight aggregate kilns is not limited;
- [4] Carbon monoxide concentration, and where required, hydrocarbon concentration in stack gas; and
- [5] Maximum production rate of the device in appropriate units when producing normal product; or

(c) Conduct compliance testing to determine compliance with the metals standards to establish limits on the operating parameters of subdivision a only after the kiln system has been conditioned to enable it to reach equilibrium with respect to metals fed into the system and metals emissions. During conditioning, hazardous waste and raw materials having the same metals content as will be fed during the compliance test must be fed at the feed rates that will be fed during the compliance test.

(3) Conduct of compliance testing.

(a) If compliance with all applicable emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 is not demonstrated simultaneously during a set of test runs, the operating conditions of additional test runs required to demonstrate compliance with remaining emissions standards must be as close as possible to the original operating conditions.

(b) Prior to obtaining test data for purposes of demonstrating compliance with the applicable emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 or establishing limits on operating parameters under this section, the facility must operate under compliance test conditions for a sufficient period to reach steady-state operations. Industrial furnaces that recycle collected particulate matter back into the furnace and that comply with subparagraph a or b of paragraph 2, however, need not reach steady-state conditions with respect to the flow of metals in the system prior to beginning compliance testing for metals.

(c) Compliance test data on the level of an operating parameter for which a limit must be established in the certification of compliance must be obtained during emissions sampling for the pollutant or pollutants (for example, metals, particulate matter, hydrogen chloride and chlorine, organic compounds) for which the parameter must be established as specified by subdivision a.

d. Certification of compliance. Within ninety days of completing compliance testing, the owner or operator must certify to the department compliance with the emissions standards of subsections 2, 3, and 5 of section 33.1-24-05-529, sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532, and subparagraph d of paragraph 1 of subdivision e of subsection 1. The certification of compliance must include the following information:

- (1) General facility and testing information including:

(a) Identification number;

(b) Facility name, contact person, telephone number, and address;

(c) Person responsible for conducting compliance testing, including company name, address, and telephone number, and a statement of qualifications;

(d) Date or dates of each compliance test;

(e) Description of boiler or industrial furnace tested;

(f) Person responsible for quality assurance/quality control, title, and telephone number, and statement that procedures prescribed in the quality assurance/quality control plan submitted under paragraph 3 of subdivision b have been followed, or a description of any changes and an explanation of why changes were necessary;

(g) Description of any changes in the unit configuration prior to or during testing that would alter any of the information submitted in the prior notice of compliance testing under subdivision b, and an explanation of why the changes were necessary;

(h) Description of any changes in the planned test conditions prior to or during the testing that alter any of the information submitted in the prior notice of compliance testing under subdivision b, and an explanation of why the changes were necessary; and

(i) The complete report on results of emissions testing.

(2) Specific information on each test including:

(a) Purpose or purposes of test (for example, demonstrate conformance with the emissions limits for particulate matter, metals, hydrogen chloride, chlorine, and carbon monoxide).

(b) Summary of test results for each run and for each test including the following information:

[1] Date of run;

[2] Duration of run;

[3] Time-weighted average and highest hourly rolling average carbon monoxide level for each run and for the test;

[4] Highest hourly rolling average hydrocarbon level, if hydrocarbon monitoring is required for each run and for the test;

[5] If dioxin and furan testing is required under subsection 5 of section 33.1-24-05-529, time-weighted average emissions for each run and for the test of chlorinated dioxin and furan emissions, and the predicted maximum annual average ground level concentration of the toxicity equivalency factor;

[6] Time-weighted average particulate matter emissions for each run and for the test;

[7] Time-weighted average hydrogen chloride and chlorine emissions for each run and for the test;

[8] Time-weighted average emissions for the metals subject to regulation under section 33.1-24-05-531 for each run and for the test; and

[9] Quality assurance and quality control results.

(3) Comparison of the actual emissions during each test with the emissions limits prescribed by subsections 2, 3, and 5 of section 33.1-24-05-529, sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532 and established for the facility in the certification of precompliance under subsection 2.

(4) Determination of operating limits based on all valid runs of the compliance test for each applicable parameter listed in subdivision a using either of the following procedures:

(a) Instantaneous limits. A parameter may be measured and recorded on an instantaneous basis (for example, the value that occurs at any time) and the operating limit specified as the time-weighted average during all runs of the compliance test; or

(b) Hourly rolling average basis.

[1] The limit for a parameter may be established and continuously monitored on an hourly rolling average basis defined as follows:

[a] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds.

[b] An hourly rolling average is the arithmetic mean of the sixty most recent one-minute average values recorded by the continuous monitoring system.

[2] The operating limit for the parameter shall be established based on compliance test data as the average overall test runs of the highest hourly rolling average value for each run.

(c) Rolling average limits for carcinogenic metals and lead. Feed rate limits for the carcinogenic metals (for example, arsenic, beryllium, cadmium, and chromium) and lead may be established either on an hourly rolling average basis as prescribed by subparagraph b or on (up to) a twenty-four hour rolling average basis. If the owner or operator elects to use an averaging period from two to twenty-four hours:

[1] The feed rate of each metal shall be limited at any time to ten times the feed rate that would be allowed on an hourly rolling average basis;

[2] The continuous monitor shall meet the following specifications:

[a] A continuous monitor is one which continuously samples the regulated parameter without interruption, and evaluates the detector response at least once each fifteen seconds, and computes and records the average value at least every sixty seconds; and

[b] The rolling average for the selected averaging period is defined as the arithmetic mean of one-hour block averages for the averaging period. A one-hour block average is the arithmetic mean of the one-minute averages recorded during the sixty-minute period beginning at one minute after the beginning of preceding clock hour; and

[3] The operating limit for the feed rate of each metal shall be established based on compliance test data as the average overall test runs of the highest hourly rolling average feed rate for each run.

(d) Feed rate limits for metals, total chloride and chlorine, and ash. Feed rate limits for metals, total chlorine and chloride, and ash are established and monitored by knowing the concentration of the substance (for example, metals, chloride/chlorine, and ash) in each feedstream and the flow rate of the feedstream. To monitor the feed rate of these substances, the flow rate of each feedstream must be monitored under the continuous monitoring requirements of subparagraphs a through c.

(5) Certification of compliance statement. The following statement shall accompany the certification of compliance:

"I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gathered and evaluated the information and supporting documentation. Copies of all emissions tests, dispersion modeling results and other information used to determine conformance with the requirements of subsection 3 of section 33.1-24-05-528 are available at the facility and can be obtained from the facility contact person listed above. Based on my inquiry of the person or persons who manages the facility, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

I also acknowledge that the operating conditions established in this certification pursuant to paragraph 4 of subdivision d of subsection 3 of section 33.1-24-05-528 are enforceable limits at which the facility can legally operate during interim status until a revised certification of compliance is submitted."

e. Special requirements for hydrocarbon monitoring systems. When an owner or operator is required to comply with the hydrocarbon controls provided by subsection 3 of section 33.1-24-05-529 or subparagraph d of paragraph 1 of subdivision e of subsection 1, a conditioned gas monitoring system may be used in conformance with specifications provided in appendix XXIV of chapter 33.1-24-05 provided that the owner or operator submits a certification of compliance without using extensions of time provided by subdivision g.

f. Special operating requirements for industrial furnaces that recycle collected particulate matter. Owners and operators of industrial furnaces that recycle back into the furnace particulate matter from the air pollution control system must:

(1) When complying with the requirements of subparagraph a of paragraph 2 of subdivision c, comply with the operating requirements prescribed in "Alternative Method to Implement the Metals Controls" in appendix XXIV of chapter 33.1-24-05; and

(2) When complying with the requirements of subparagraph b of paragraph 2 of subdivision c, comply with the operating requirements prescribed by that subparagraph.

g. Extensions of time.

(1) If the owner or operator does not submit a complete certification of compliance for all of the applicable emissions standards of sections 33.1-24-05-529, 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532 by August 21, 1992, an owner or operator must either:

(a) Stop burning hazardous waste and begin closure activities under subsection 12 for the hazardous waste portion of the facility;

(b) Limit hazardous waste burning only for purposes of compliance testing (and pretesting to prepare for compliance testing) a total period of seven hundred twenty hours for the period of time beginning August 21, 1992, submit a notification to the department by August 21, 1992, stating that the facility is operating under restricted interim status and intends to resume burning hazardous waste, and submit a complete certification of compliance by August 23, 1993; or

(c) Obtain a case-by-case extension of time under paragraph 2.

(2) The owner or operator may request a case-by-case extension of time to extend any time limit provided by this subsection if compliance with the time limit is not practicable for reasons beyond the control of the owner or operator.

(a) In granting an extension, the department may apply conditions as the facts warrant to ensure timely compliance with the requirements of this section and that the facility operates in a manner that does not pose a hazard to human health and the environment;

(b) When an owner or operator requests an extension of time to enable the facility to comply with the alternative hydrocarbon provision of subsection 6 of section 33.1-24-05-529 and to obtain a hazardous waste operating permit because the facility cannot meet the hydrocarbon limit of subsection 3 of section 33.1-24-05-529:

[1] The department shall, in considering whether to grant the extension:

[a] Determine whether the owner and operator have submitted in a timely manner a complete part B permit application that includes information required under subdivision ff of subsection 2 of section 33.1-24-06-17; and

[b] Consider whether the owner or operator have made a good-faith effort to certify compliance with all other emission controls, including the controls on dioxins and furans of subsection 5 of section 33.1-24-05-529 and the controls on particulate matter, metals, and hydrogen chloride and chlorine.

[2] If an extension is granted, the department shall, as a condition of the extension, require the facility to operate under flue gas concentration limits on carbon monoxide and hydrocarbon that, based on available information, including information in the part B permit application, are

baseline carbon monoxide and hydrocarbon levels as defined by subdivision a of subsection 6 of section 33.1-24-05-529.

h. Revised certification of compliance. The owner or operator may submit at any time a revised certification of compliance (recertification of compliance) under the following procedures:

(1) Prior to submittal of a revised certification of compliance, hazardous waste may not be burned for more than a total of seven hundred twenty hours under operating conditions that exceed those established under a current certification of compliance, and such burning may be conducted only for purposes of determining whether the facility can operate under revised conditions and continue to meet the applicable emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532;

(2) At least thirty days prior to first burning hazardous waste under operating conditions that exceed those established under a current certification of compliance, the owner or operator shall notify the department and submit the following information:

(a) Identification number, and facility name, contact person, telephone number, and address;

(b) Operating conditions that the owner or operator is seeking to revise and description of the changes in facility design or operation that prompted the need to seek to revise the operating conditions;

(c) A determination that when operating under the revised operating conditions, the applicable emissions standards of sections 33.1-24-05-529 through 33.1-24-05-532 are not likely to be exceeded. To document this determination, the owner or operator shall submit the applicable information required under subdivision b of subsection 2; and

(d) Complete emissions testing protocol for any pretesting and for a new compliance test to determine compliance with the applicable emissions standards of sections 33.1-24-05-529, 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532 when operating under revised operating conditions. The protocol shall include a schedule of pretesting and compliance testing. If the owner or operator revises the scheduled date for the compliance test, the owner or operator shall notify the department in writing at least thirty days prior to the revised date of the compliance test;

(3) Conduct a compliance test under the revised operating conditions and the protocol submitted to the department to determine compliance with the applicable emissions standards of sections 33.1-24-05-529, 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532; and

(4) Submit a revised certification of compliance under subdivision d.

4. **Periodic recertifications.** The owner or operator must conduct compliance testing and submit to the department a recertification of compliance under provisions of subsection 3 within five years from submitting the previous certification or recertification. If the owner or operator seeks to recertify compliance under new operating conditions, the owner or operator must comply with the requirements of subdivision h of subsection 3.

5. **Noncompliance with certification schedule.** If the owner or operator does not comply with the interim status compliance schedule provided by subsections 2 through 4, hazardous waste burning must terminate on the date that the deadline is missed, closure activities must begin under subsection 12, and hazardous waste burning may not resume except under an

operating permit issued under subsection 4 of section 33.1-24-06-19. For purposes of compliance with the closure provisions of subsection 12 and subsection 5 of section 33.1-24-06-16 the boiler or industrial furnace has received "the known final volume of hazardous waste" on the date that the deadline is missed.

6. **Startup and shutdown.** Hazardous waste (except waste fed solely as an ingredient under the tier I (or adjusted tier I) feed rate screening limits for metals and chloride/chlorine) must not be fed into the device during startup and shutdown of the boiler or industrial furnace, unless the device is operating within the conditions of operation specified in the certification of compliance.

7. **Automatic waste feed cutoff.** During the compliance test required by subdivision c of subsection 3, and upon certification of compliance under subsection 3, a boiler or industrial furnace must be operated with a functioning system that automatically cuts off the hazardous waste feed when the applicable operating conditions specified in paragraphs 1 and 5 through 13 of subdivision a of subsection 3 deviate from those established in the certification of compliance. In addition:

a. To minimize emissions of organic compounds, the minimum combustion chamber temperature (or the indicator of combustion chamber temperature) that occurred during the compliance test must be maintained while hazardous waste or hazardous waste residues remain in the combustion chamber, with the minimum temperature during the compliance test defined as either:

(1) If compliance with the combustion chamber temperature limit is based on an hourly rolling average, the minimum temperature during the compliance test is considered to be the average overall runs of the lowest hourly rolling average for each run; or

(2) If compliance with the combustion chamber temperature limit is based on an instantaneous temperature measurement, the minimum temperature during the compliance test is considered to be the time-weighted average temperature during all runs of the test; and

b. Operating parameters limited by the certification of compliance must continue to be monitored during the cutoff, and the hazardous waste feed shall not be restarted until the levels of those parameters comply with the limits established in the certification of compliance.

8. **Fugitive emissions.** Fugitive emissions must be controlled by:

a. Keeping the combustion zone totally sealed against fugitive emissions;

b. Maintaining the combustion zone pressure lower than atmospheric pressure; or

c. An alternate means of control that the owner or operator can demonstrate provide fugitive emissions control equivalent to maintenance of combustion zone pressure lower than atmospheric pressure. Support for such demonstration shall be included in the operating record.

9. **Changes.** A boiler or industrial furnace must cease burning hazardous waste when changes in combustion properties, or feed rates of the hazardous waste, other fuels, or industrial furnace feedstocks, or changes in the boiler or industrial furnace design or operating conditions deviate from the limits specified in the certification of compliance.

10. **Monitoring and inspections.**

a. The owner or operator must monitor and record the following, at a minimum, while burning hazardous waste:

(1) Feed rates and composition of hazardous waste, other fuels, and industrial furnace feedstocks, and feed rates of ash, metals, and total chloride and chlorine as necessary to ensure conformance with the certification of precompliance or certification of compliance.

(2) Carbon monoxide, oxygen, and if applicable, hydrocarbons, on a continuous basis at a common point in the boiler or industrial furnace downstream of the combustion zone and prior to release of stack gases to the atmosphere in accordance with the operating limits specified in the certification of compliance. Carbon monoxide, hydrocarbon, and oxygen monitors must be installed, operated, and maintained in accordance with methods specified in appendix XXIV of chapter 33.1-24-05.

(3) Upon the request of the department, sampling and analysis of the hazardous waste (and other fuels and industrial furnace feedstocks as appropriate) and the stack gas emissions must be conducted to verify that the operating conditions established in the certification of precompliance or certification of compliance achieve the applicable standards of sections 33.1-24-05-529 through 33.1-24-05-532.

b. The boiler or industrial furnace and associated equipment (pumps, valves, pipes, fuel storage tanks, etc.) must be subjected to thorough visual inspection when they contain hazardous waste, at least daily for leaks, spills, fugitive emissions, and signs of tampering.

c. The automatic hazardous waste feed cutoff system and associated alarms must be tested at least once every seven days when hazardous waste is burned to verify operability, unless the owner or operator can demonstrate that weekly inspections will unduly restrict or upset operations and that less frequent inspections will be adequate. Support for such demonstration shall be included in the operating record. At a minimum, operational testing must be conducted at least once every thirty days.

d. These monitoring and inspection data must be recorded and the records must be placed in the operating log.

11. **Recordkeeping.** The owner or operator must keep in the operating record of the facility all information and data required by this section for five years.

12. **Closure.** At closure, the owner or operator must remove all hazardous waste and hazardous waste residues (including ash, scrubber waters, and scrubber sludges) from the boiler or industrial furnace and must comply with the applicable standards of subsection 5 of section 33.1-24-06-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-16; S.L. 2017, ch. 199, § 19

33.1-24-05-529. Standards to control organic emissions.

1. Destruction and removal efficiency standard.

a. General. Except as provided in subdivision c, a boiler or industrial furnace burning hazardous waste must achieve a destruction and removal efficiency of 99.99 percent for all organic hazardous constituents in the waste feed. To demonstrate conformance with this requirement, 99.99 percent destruction and removal efficiency must be demonstrated during a trial burn for each principal organic hazardous constituent designated (under

subdivision b) in its permit for each waste feed. Destruction and removal efficiency is determined for each principal organic hazardous constituent from the following equation:

$$\text{destruction and removal efficiency} = \left(1 - \frac{W_{out}}{W_{in}}\right) \times 100$$

where:

W_{in} = Mass feed rate of one principal organic hazardous constituent in the hazardous waste fired to the boiler or industrial furnace; and

W_{out} = Mass emission rate of the same principal organic hazardous constituent present in stack gas prior to release to the atmosphere.

- b. Designation of principal organic hazardous constituents. Principal organic hazardous constituents are those compounds for which compliance with the destruction and removal efficiency requirements shall be demonstrated in a trial burn in conformance with procedures prescribed in subsection 4 of section 33.1-24-06-19. One or more principal organic hazardous constituents shall be designated by the department for each waste feed to be burned. Principal organic hazardous constituents shall be designated based on the degree of difficulty of destruction of the organic constituents in the waste and on their concentrations or mass in the waste feed considering the results of waste analyses submitted with part B of the permit application. Principal organic hazardous constituents are most likely to be selected from among those compounds listed in appendix V of chapter 33.1-24-02 that are also present in the normal waste feed. However, if the applicant demonstrates to the department's satisfaction that a compound not listed in appendix V of chapter 33.1-24-02 or not present in the normal waste feed is a suitable indicator of compliance with the destruction and removal efficiency requirements, that compound may be designated as a principal organic hazardous constituent. Such principal organic hazardous constituents need not be toxic or organic compounds.
- c. Dioxin-listed waste. A boiler or industrial furnace burning hazardous waste containing (or derived from) hazardous waste numbers F020, F021, F022, F023, F026, or F027 must achieve a destruction and removal efficiency of 99.9999 percent for each principal organic hazardous constituent designated (under subdivision b) in its permit. This performance must be demonstrated on principal organic hazardous constituents that are more difficult to burn than tetra-, penta-, and hexachlorodibenzo-p-dioxins and dibenzofurans. Destruction and removal efficiency is determined for each principal organic hazardous constituent from the equation in subdivision a. In addition, the owner or operator of the boiler or industrial furnace must notify the department of intent to burn hazardous waste numbers F020, F021, F022, F023, F026, or F027.
- d. Automatic waiver of destruction and removal efficiency trial burn. Owners and operators of boilers operated under the special operating requirements provided by section 33.1-24-05-535 are considered to be in compliance with the destruction and removal efficiency standard of subdivision a and are exempt from the destruction and removal efficiency trial burn.
- e. Low risk waste. Owners and operators of boilers or industrial furnaces that burn hazardous waste in compliance with the requirements of subsection 1 of section 33.1-24-05-534 are considered to be in compliance with the destruction and removal efficiency standard of subdivision a and are exempt from the destruction and removal efficiency trial burn.

2. Carbon monoxide standard.

- a. Except as provided in subsection 3, the stack gas concentration of carbon monoxide from a boiler or industrial furnace burning hazardous waste cannot exceed one hundred parts per million by volume on an hourly rolling average basis (for example, over any sixty-minute period), continuously corrected to seven percent oxygen, dry gas basis.
- b. Carbon monoxide and oxygen shall be continuously monitored in conformance with "Performance Specifications for Continuous Emission Monitoring of Carbon Monoxide and Oxygen for Incinerators, Boilers, and Industrial Furnaces Burning Hazardous Waste" in appendix XXIV of chapter 33.1-24-05.
- c. Compliance with the one hundred parts per million by volume carbon monoxide limit must be demonstrated during the trial burn (for new facilities or an interim status facility applying for a permit) or the compliance test (for interim status facilities). To demonstrate compliance, the highest hourly rolling average carbon monoxide level during any valid run of the trial burn or compliance test must not exceed one hundred parts per million by volume.

3. Alternative carbon monoxide standard.

- a. The stack gas concentration of carbon monoxide from a boiler or industrial furnace burning hazardous waste may exceed the one hundred parts per million by volume limit provided that stack gas concentrations of hydrocarbons do not exceed twenty parts per million by volume, except as provided by subsection 6 for certain industrial furnaces.
- b. Hydrocarbon limits must be established under this section on an hourly rolling average basis (for example, over any sixty-minute period), reported as propane, and continuously corrected to seven percent oxygen, dry gas basis.
- c. Hydrocarbon shall be continuously monitored in conformance with "Performance Specifications for Continuous Emission Monitoring of Hydrocarbons for Incinerators, Boilers, and Industrial Furnaces Burning Hazardous Waste" in appendix XXIV of chapter 33.1-24-05. Carbon monoxide and oxygen shall be continuously monitored in conformance with subdivision b of subsection 2.
- d. The alternative carbon monoxide standard is established based on carbon monoxide data during the trial burn (for a new facility) and the compliance test (for an interim status facility). The alternative carbon monoxide standard is the average overall valid runs of the highest hourly average carbon monoxide level for each run. The carbon monoxide limit is implemented on an hourly rolling average basis, and continuously corrected to seven percent oxygen, dry gas basis.

4. Special requirements for furnaces. Owners and operators of industrial furnaces (for example, kilns, cupolas) that feed hazardous waste for a purpose other than solely as an ingredient (see paragraph 2 of subdivision e of subsection 1 of section 33.1-24-05-528) at any location other than the end where products are normally discharged and where fuels are normally fired must comply with the hydrocarbon limits provided by subsection 3 or 6 irrespective of whether stack gas carbon monoxide concentrations meet the one hundred parts per million by volume limit of subsection 2.

5. Controls for dioxins and furans. Owners and operators of boilers and industrial furnaces that are equipped with a dry particulate matter control device that operates within the temperature range of four hundred fifty degrees to seven hundred fifty degrees Fahrenheit [232.2 to 398.9 degrees Celsius], and industrial furnaces operating under an alternative hydrocarbon limit established under subsection 6 must conduct a site-specific risk assessment as follows to demonstrate that emissions of chlorinated dibenzo-p-dioxins and dibenzofurans

do not result in an increased lifetime cancer risk to the hypothetical maximum exposed individual exceeding one in one hundred thousand:

- a. During the trial burn (for new facilities or an interim status facility applying for a permit) or compliance test (for interim status facilities), determine emission rates of the tetra-octa congeners of chlorinated dibenzo-p-dioxins and dibenzofurans (CDDs/CDFs) using method 0023A, "Sampling Method for Polychlorinated Dibenzo-p-Dioxins and Polychlorinated Dibenzofurans Emissions from Stationary Sources", environmental protection agency publication SW-846, incorporated by reference in section 33.1-24-01-05;
- b. Estimate the 2,3,7,8-TCDD toxicity equivalence of the tetra-octa chlorinated dibenzo-p-dioxins and dibenzofurans congeners using "Procedures for Estimating the Toxicity Equivalence of Chlorinated Dibenzo-p-Dioxin and Dibenzofuran Congeners" in appendix XXIV of chapter 33.1-24-05. Multiply the emission rates of chlorinated dibenzo-p-dioxins and dibenzofurans congeners with a toxicity equivalence greater than zero (see the procedure) by the calculated toxicity equivalence factor to estimate the equivalent emission rate of 2,3,7,8-TCDD;
- c. Conduct dispersion modeling using methods recommended in appendix W of 40 CFR part 51 ("Guidelines on Air Quality Models (Revised)" (1986) and its supplements), the "Hazardous Waste Combustion Air Quality Screening Procedure", provided in appendix XXIV, or in "Screening Procedures for Estimating Air Quality Impact of Stationary Sources", revised as incorporated by reference in section 33.1-24-01-05 to predict the maximum annual average offsite ground level concentration of 2,3,7,8-TCDD equivalents determined under subdivision b. The maximum annual average concentration must be used when a person resides onsite; and
- d. The ratio of the predicted maximum annual average ground level concentration of 2,3,7,8-TCDD equivalents to the risk-specific dose for 2,3,7,8-TCDD provided in appendix XX of chapter 33.1-24-05 (2.2×10^{-7}) shall not exceed 1.0.

6. Monitoring carbon monoxide and hydrocarbon in the bypass duct of a cement kiln. Cement kilns may comply with the carbon monoxide and hydrocarbon limits provided by subsections 2 through 4 by monitoring in the bypass duct provided that:

- a. Hazardous waste is fired only into the kiln and not at any location downstream from the kiln exit relative to the direction of gas flow; and
- b. The bypass duct diverts a minimum of ten percent of kiln off-gas into the duct.

7. Use of emissions test data to demonstrate compliance and establish operating limits. Compliance with the requirements of this section must be demonstrated simultaneously by emissions testing or during separate runs under identical operating conditions. Further, data to demonstrate compliance with the carbon monoxide and hydrocarbon limits of this section or to establish alternative carbon monoxide or hydrocarbon limits under this section must be obtained during the time that destruction and removal efficiency testing, and where applicable, CCD/CDF testing under subsection 5 and comprehensive organic emissions testing under subsection 6 is conducted.

8. Enforcement. For the purposes of permit enforcement, compliance with the operating requirements specified in the permit (under section 33.1-24-05-527) will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the requirements of this section may be "information" justifying modification or revocation and reissuance of a permit under section 33.1-24-06-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-16; S.L. 2017, ch. 199, § 19

33.1-24-05-530. Standards to control particulate matter.

1. A boiler or industrial furnace burning hazardous waste may not emit particulate matter in excess of one hundred eighty milligrams per dry standard cubic meter [0.08 grains per dry standard cubic foot] after correction to a stack gas concentration of seven percent oxygen, using procedures prescribed in 40 CFR part 60, appendix A, methods 1 through 5, and appendix XXIV of chapter 33.1-24-05.
2. An owner or operator meeting the requirements of subsection 2 of section 33.1-24-05-534 for the low risk waste exemption is exempt from the particulate matter standard.
3. Oxygen correction.
 - a. Measured pollutant levels must be corrected for the amount of oxygen in the stack gas according to the formula:

$$P_c = P_m \times 14 / (E - Y)$$

where:

P_c is the corrected concentration of the pollutant in the stack gas;

P_m is the measured concentration of the pollutant in the stack gas;

E is the oxygen concentration on a dry basis in the combustion air fed to the device; and

Y is the measured oxygen concentration on a dry basis in the stack.

- b. For devices that feed normal combustion air, E will equal twenty-one percent. For devices that feed oxygen-enriched air for combustion (that is, air with an oxygen concentration exceeding twenty-one percent), the value of E will be the concentration of oxygen in the enriched air.
 - c. Compliance with all emission standards provided by sections 33.1-24-05-525 through 33.1-24-05-549 must be based on correcting to seven percent oxygen using this procedure.
4. For the purposes of permit enforcement, compliance with the operating requirements specified in the permit (under section 33.1-24-05-527) will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the requirements of this section may be "information" justifying modification or revocation and reissuance of a permit under section 33.1-24-06-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-05-531. Standards to control metals emission.

1. **General.** The owner or operator must comply with the metals standards provided by subsections 2, 3, 4, 5, or 6 for each metal listed in subsection 2 that is present in the hazardous waste at detectable levels by using appropriate analytical procedures.

2. **Tier I feed rate screening limits.** Feed rate screening limits for metals are specified in appendix XVI as a function of terrain-adjusted effective stack height and terrain and land use in the vicinity of the facility. Criteria for facilities that are not eligible to comply with the screening limits are provided in subdivision g.

a. **Noncarcinogenic metals.** The feed rates of antimony, barium, lead, mercury, thallium, and silver in all feedstreams, including hazardous waste, fuels, and industrial furnace feedstocks shall not exceed the screening limits specified in appendix XVI of chapter 33.1-24-05.

(1) The feed rate screening limits for antimony, barium, mercury, thallium, and silver are based on either:

(a) An hourly rolling average as defined in subparagraph b of paragraph 1 of subdivision f of subsection 5 of section 33.1-24-05-527; or

(b) An instantaneous limit not to be exceeded at any time.

(2) The feed rate screening limit for lead is based on one of the following:

(a) An hourly rolling average as defined in subparagraph b of paragraph 1 of subdivision f of subsection 5 of section 33.1-24-05-527;

(b) An averaging period of two to twenty-four hours as defined in paragraph 2 of subdivision f of subsection 5 of section 33.1-24-05-527 with an instantaneous feed rate limit not to exceed ten times the feed rate that would be allowed on an hourly rolling average basis; or

(c) An instantaneous limit not to be exceeded at any time.

b. **Carcinogenic metals.**

(1) The feed rates of arsenic, cadmium, beryllium, and chromium in all feedstreams, including hazardous waste, fuels, and industrial furnace feedstocks shall not exceed values derived from the screening limits specified in appendix XVI of chapter 33.1-24-05. The feed rate of each of these metals is limited to a level such that the sum of the ratios of the actual feed rate to the feed rate screening limit specified in appendix XVI of chapter 33.1-24-05 shall not exceed 1.0, as provided by the following equation:

$$\sum_{i=1}^n \frac{AFR_{(i)}}{FRSL_{(i)}} \leq 1.0$$

where:

n = number of carcinogenic metals

AFR = actual feed rate to the device for metal "i"

FRSL = feed rate screening limit provided by appendix XVI of chapter 33.1-24-05 for metal "i".

(2) The feed rate screening limits for the carcinogenic metals are based on either:

(a) An hourly rolling average; or

(b) An averaging period of two to twenty-four hours as defined in paragraph 2 of subdivision f of subsection 5 of section 33.1-24-05-527 with an instantaneous feed rate limit not to exceed ten times the feed rate that would be allowed in an hourly rolling average basis.

c. Terrain-adjusted effective stack height (TESH).

(1) The terrain-adjusted effective stack height is determined according to the following equation:

$$TESH = H_a + H_1 - T_r$$

where:

H_a = Actual physical stack height

H₁ = Plume rise as determined from appendix XXI of chapter 33.1-24-05 as a function of stack flow rate and stack gas exhaust temperature.

T_r = Terrain rise within five kilometers of the stack.

(2) The stack height (H_a) may not exceed good engineering practice as specified in 40 CFR 51.100(ii).

(3) If the terrain-adjusted effective stack height for a particular facility is not listed in the table in the appendices, the nearest lower terrain-adjusted effective stack height listed in the table shall be used. If the terrain-adjusted effective stack height is four meters or less, a value of four meters shall be used.

d. Terrain type. The screening limits are a function of whether the facility is located in noncomplex or complex terrain. A device located where any part of the surrounding terrain within five kilometers of the stack equals or exceeds the elevation of the physical stack height (H_a) is considered to be in complex terrain and the screening limits for complex terrain apply. Terrain measurements are to be made from United States geological survey 7.5-minute topographic maps of the area surrounding the facility.

e. Land use. The screening limits are a function of whether the facility is located in an area where the land use is urban or rural. To determine whether land use in the vicinity of the facility is urban or rural, procedures provided in appendix XXIV or XXV of chapter 33.1-24-05 shall be used.

f. Multiple stacks. Owners and operators of facilities with more than one onsite stack from a boiler, industrial furnace, incinerator, or other thermal treatment unit subject to controls of metals emissions under a hazardous waste operating permit or interim status controls must comply with the screening limits for all such units assuming all hazardous waste is fed into the device with the worst-case stack based on dispersion characteristics. The worst-case stack is determined from the following equation as applied to each stack:

$$K = HVT$$

where:

K = a parameter accounting for relative influence of stack height and plume rise;

H = physical stack height (meters);

V = stack gas flow rate (m³/second); and

T = exhaust temperature (°Kelvin).

The stack with the lowest value of K is the worst-case stack.

g. Criteria for facilities not eligible for screening limits. If any criteria below are met, the tier I (and tier II) screening limits do not apply. Owners and operators of such facilities must comply with either the tier III standards provided by subsection 4 or with the adjusted tier I feed rate screening limits provided by subsection 5.

(1) The device is located in a narrow valley less than one kilometer wide;

(2) The device has a stack taller than twenty meters and is located such that the terrain rises to the physical height within one kilometer of the facility;

(3) The device has a stack taller than twenty meters and is located within five kilometers of a shoreline of a large body of water such as an ocean or large lake;

(4) The physical stack height of any stack is less than 2.5 times the height of any building within five building heights or five projected building widths of the stack and the distance from the stack to the closest boundary is within five building heights or five projected building widths of the associated building; or

(5) The department determines that standards based on site-specific dispersion modeling are required.

h. Implementation. The feed rate of metals in each feedstream must be monitored to ensure that the feed rate screening limits are not exceeded.

3. **Tier II emission rate screening limits.** Emission rate screening limits are specified in appendix XVI of chapter 33.1-24-05 as a function of terrain-adjusted effective stack height and terrain and land use in the vicinity of the facility. Criteria for facilities that are not eligible to comply with the screening limits are provided in subdivision g of subsection 2.

a. Noncarcinogenic metals. The emission rates of antimony, barium, lead, mercury, thallium, and silver shall not exceed the screening limits specified in appendix XVI of chapter 33.1-24-05.

b. Carcinogenic metals. The emission rates of arsenic, cadmium, beryllium, and chromium shall not exceed values derived from the screening limits specified in appendix XVI of chapter 33.1-24-05. The emission rate of each of these metals is limited to a level such that the sum of the ratios of the actual emission rate to the emission rate screening limit specified in appendix XVI of chapter 33.1-24-05 shall not exceed 1.0, as provided by the following equation:

$$\sum_{i=1}^n \frac{AER_{(i)}}{ERSL_{(i)}} \leq 1.0$$

where:

n = number of carcinogenic metals

AER = actual emission rate for metal "i"

ERSL = emission rate screening limit provided by appendix XVI for metal "i".

- c. Implementation. The emission rate limits must be implemented by limiting feed rates of the individual metals to levels during the trial burn (for new facilities or an interim status facility applying for a permit) or the compliance test (for interim status facilities). The feed rate averaging periods are the same as provided by paragraphs 1 and 2 of subdivision a of subsection 2 and paragraph 2 of subdivision b of subsection 2. The feed rate of metals in each feedstream must be monitored to ensure that the feed rate limits for the feedstreams specified under section 33.1-24-05-527 or 33.1-24-05-528 are not exceeded.
- d. Definitions and limitations. The definitions and limitations provided by subsection 2 for the following terms also apply to the tier II emission rate screening limits provided by this subsection: terrain-adjusted effective stack height, good engineering practice stack height, terrain type, land use, and criteria for facilities not eligible to use the screening limits.
- e. Multiple stacks.
 - (1) Owners and operators of facilities with more than one onsite stack from a boiler, industrial furnace, incinerator, or other thermal treatment unit subject to controls on metals emissions under a hazardous waste operating permit or interim status controls must comply with the emissions screening limits for any such stacks assuming all hazardous waste is fed into the device with the worst-case stack based on dispersion characteristics.
 - (2) The worst-case stack is determined by procedures provided in subdivision f of subsection 2.
 - (3) For each metal, the total emissions of the metal from those stacks shall not exceed the screening limit for the worst-case stack.

4. Tier III and adjusted tier I site-specific risk assessment. The requirements of this subsection apply to facilities complying with either the tier III or adjusted tier I controls, except where specified otherwise.

- a. General. Conformance with the tier III metals controls must be demonstrated by emissions testing to determine the emission rate for each metal. In addition, conformance with either the tier III or adjusted tier I metals controls must be determined by air dispersion modeling to predict the maximum annual average offsite ground level concentration for each metal, and a demonstration that acceptable ambient levels are not exceeded.
- b. Acceptable ambient levels. Appendices XIX and XX of chapter 33.1-24-05 list the acceptable ambient levels for purposes of this rule. Reference air concentrations are listed for the noncarcinogenic metals and 10-5 risk-specific doses are listed for the carcinogenic metals. The risk-specific dose for a metal is the acceptable ambient level for that metal provided that only one of the four carcinogenic metals is emitted. If more than one carcinogenic metal is emitted, the acceptable ambient level for the carcinogenic metals is a fraction of the risk-specific dose as described in subdivision c.
- c. Carcinogenic metals. For the carcinogenic metals arsenic, cadmium, beryllium, and chromium, the sum of the ratios of the predicted maximum annual average offsite ground level concentrations (except that onsite concentrations must be considered if a person resides onsite) to the risk-specific dose for all carcinogenic metals emitted shall not exceed 1.0 as determined by the following equation:

$$\sum_{i=1}^n \frac{\text{Predicted Ambient Concentration}_{(i)}}{\text{Risk - Specific Dose}_{(i)}} \leq 1.0$$

where:

n = number of carcinogenic metals

- d. Noncarcinogenic metals. For the noncarcinogenic metals, the predicted maximum annual average offsite ground level concentration for each metal shall not exceed the reference air concentration.
- e. Multiple stacks. Owners and operators of facilities with more than one onsite stack from a boiler, industrial furnace, incinerator, or other thermal treatment unit subject to controls on metals emissions under a hazardous waste operating permit or interim status controls must conduct emissions testing (except that facilities complying with adjusted tier I controls need not conduct emissions testing) and dispersion modeling to demonstrate that the aggregate emissions from all such onsite stacks do not result in an exceedance of the acceptable ambient levels.
- f. Implementation. Under tier III, the metals controls must be implemented by limiting feed rates of the individual metals to levels during the trial burn (for new facilities or an interim status facility applying for a permit) or the compliance test (for interim status facilities). The feed rate averaging periods are the same as provided by paragraphs 1 and 2 of subdivision a of subsection 2 and paragraph 2 of subdivision b of subsection 2. The feed rate of metals in each feedstream must be monitored to ensure that the feed rate limits for the feedstreams specified under section 33.1-24-05-527 or 33.1-24-05-528 are not exceeded.

5. **Adjusted tier I feed rate screening limits.** The owner or operator may adjust the feed rate screening limits provided by appendix XVI of chapter 33.1-24-05 to account for site-specific dispersion modeling. Under this approach, the adjusted feed rate screening limit for a metal is determined by back-calculating from the acceptable ambient level provided by appendices XIX and XX of chapter 33.1-24-05 using dispersion modeling to determine the maximum allowable emission rate. This emission rate becomes the adjusted tier I feed rate screening limit. The feed rate screening limits for carcinogenic metals are implemented as prescribed in subdivision b of subsection 2.

6. **Alternative implementation approaches.**

- a. The department may approve on a case-by-case basis approaches to implement the tier II or tier III metals emission limits provided by subsection 3 or 4 alternative to monitoring the feed rate of metals in each feedstream.
- b. The emission limits provided by subsection 4 must be determined as follows:
 - (1) For each noncarcinogenic metal, by back-calculating from the reference air concentration provided in appendix XIX of chapter 33.1-24-05 to determine the allowable emission rate for each metal using the dilution factor for the maximum annual average ground level concentration predicted by dispersion modeling in conformance with subsection 8; and
 - (2) For each carcinogenic metal by:
 - (a) Back-calculating from the risk-specific dose provided in appendix XX of chapter 33.1-24-05 to determine the allowable emission rate for each metal if that metal were the only carcinogenic metal emitted using the dilution factor for the maximum annual average ground level concentration predicted by dispersion modeling in conformance with subsection 8; and

- (b) If more than one carcinogenic metal is emitted, selecting an emission limit for each carcinogenic metal not to exceed the emission rate determined by subparagraph a such that the sum for all carcinogenic metals of the ratios of the selected emission limit to the emission rate determined by that subparagraph does not exceed 1.0.

7. Emission testing.

- a. General. Emission testing for metals shall be conducted using method 0060, "Determinations of Metals in Stack Emissions", environmental protection agency publication SW-846, incorporated by reference in section 33.1-24-01-05.
- b. Hexavalent chromium. Emissions of chromium are assumed to be hexavalent chromium unless the owner or operator conducts emissions testing to determine hexavalent chromium emissions using procedures prescribed in method 0061, "Determination of Hexavalent Chromium Emissions from Stationary Sources", environmental protection agency publication SW-846, incorporated by reference in section 33.1-24-01-05.

8. **Dispersion modeling.** Dispersion modeling required under this section shall be conducted according to methods recommended in appendix W of 40 CFR part 51 ("Guidelines on Air Quality Models (Revised)" (1986) and its supplements), the "Hazardous Waste Combustion Air Quality Screening Procedure" provided in appendix XXIV of chapter 33.1-24-05, or in "Screening Procedures for Estimating the Air Quality Impact of Stationary Sources, revised" (incorporated by reference in section 33.1-24-01-05) to predict the maximum annual average offsite ground level concentration. However, onsite concentrations must be considered when a person resides onsite.

9. **Enforcement.** For the purposes of permit enforcement, compliance with the operating requirements specified in the permit (under section 33.1-24-05-527) will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the requirements of this section may be "information" justifying modification or revocation and reissuance of a permit under section 33.1-24-06-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-05-532. Standards to control hydrogen chloride (HCl) and chlorine gas (Cl₂).

1. **General.** The owner or operator must comply with the hydrogen chloride and chlorine controls provided by subsection 2, 3, or 5.

2. Screening limits.

- a. Tier I feed rate screening limits. Feed rate screening limits are specified for total chlorine in appendix XVII as a function of terrain-adjusted effective stack height and terrain and land use in the vicinity of the facility. The feed rate of total chlorine and chloride, both organic and inorganic, in all feedstreams, including hazardous waste, fuels, and industrial furnace feedstocks, shall not exceed the levels specified.
- b. Tier II emission rate screening limits. Emission rates screening limits for hydrogen chloride and chlorine are specified in appendix XVIII as a function of terrain-adjusted effective stack height and terrain and land use in the vicinity of the facility. The stack emission rates of hydrogen chloride and chlorine shall not exceed the levels specified.
- c. Definitions and limitations. The definitions and limitations provided by subsection 2 of section 33.1-24-05-531 for the following terms also apply to the screening limits provided

by this subsection: terrain-adjusted effective stack height, good engineering practice stack height, terrain type, land use, and criteria for facilities not eligible to use the screening limits.

d. Multiple stacks. Owners and operators of facilities with more than one onsite stack from a boiler, industrial furnace, incinerator, or other thermal treatment unit subject to controls on hydrogen chloride or chlorine emissions under a hazardous waste operating permit or interim status controls must comply with the tier I and tier II screening limits for those stacks assuming all hazardous waste is fed into the device with the worst-case stack based on dispersion characteristics.

(1) The worst-case stack is determined by procedures provided in subdivision f of subsection 2 of section 33.1-24-05-531.

(2) Under tier I, the total feed rate of chlorine and chloride to all subject devices shall not exceed the screening limit for the worst-case stack.

(3) Under tier II, the total emissions of hydrogen chloride and chlorine from all subject stacks shall not exceed the screening limit for the worst-case stack.

3. Tier III site-specific risk assessments.

a. General. Conformance with the tier III controls must be demonstrated by emissions testing to determine the emission rate for hydrogen chloride and chlorine, air dispersion modeling to predict the maximum annual average offsite ground level concentration for each compound, and a demonstration that acceptable ambient levels are not exceeded.

b. Acceptable ambient levels. Appendix XIX of chapter 33.1-24-05 lists the reference air concentrations for hydrogen chloride (7 micrograms per cubic meter) and chlorine (0.4 micrograms per cubic meter).

c. Multiple stacks. Owners and operators of facilities with more than one onsite stack from a boiler, industrial furnace, incinerator, or other thermal treatment unit subject to controls on hydrogen chloride or chlorine emissions under a hazardous waste operating permit or interim status controls must conduct emissions testing and dispersion modeling to demonstrate that the aggregate emissions from all such onsite stacks do not result in an exceedance of the acceptable ambient levels for hydrogen chloride and chlorine.

4. Averaging periods. The hydrogen chloride and chlorine controls are implemented by limiting the feed rate of total chlorine and chloride in all feedstreams, including hazardous waste, fuels, and industrial furnace feedstocks. Under tier I, the feed rate of total chloride and chlorine is limited to the tier I screening limits. Under tier II and tier III, the feed rate of total chloride and chlorine is limited to the feed rates during the trial burn (for new facilities or an interim status facility applying for a permit) or the compliance test (for interim status facilities). The feed rate limits are based on either:

a. An hourly rolling average as defined in subdivision f of subsection 5 of section 33.1-24-05-527; or

b. An instantaneous basis not to be exceeded at any time.

5. Adjusted tier I feed rate screening limits. The owner or operator may adjust the feed rate screening limit provided by appendix XVII of chapter 33.1-24-05 to account for site-specific dispersion modeling. Under this approach, the adjusted feed rate screening limit is determined by back-calculating from the acceptable ambient level for chlorine provided by appendix XIX of chapter 33.1-24-05 using dispersion modeling to determine the maximum allowable emission rate. This emission rate becomes the adjusted tier I feed rate screening limit.

6. **Emissions testing.** Emissions testing for hydrogen chloride and chlorine shall be conducted using the procedures described in methods 0050 or 0051, environmental protection agency publication SW-846, incorporated by reference in section 33.1-24-01-05.
7. **Dispersion modeling.** Dispersion modeling shall be conducted according to the provisions of subsection 8 of section 33.1-24-05-531.
8. **Enforcement.** For the purposes of permit enforcement, compliance with the operating requirements specified in the permit (under section 33.1-24-05-527) will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the requirements of this section may be "information" justifying modification or revocation and reissuance of a permit under section 33.1-24-06-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-05-533. Small quantity onsite burner exemption.

1. Exempt quantities. Owners and operators of facilities that burn hazardous waste in an onsite boiler or industrial furnace are exempt from the requirements of sections 33.1-24-05-525 through 33.1-24-05-549 provided that:
 - a. The quantity of hazardous waste burned in a device for a calendar month does not exceed the limits provided in the following table based on the terrain-adjusted effective stack height as defined in subdivision c of subsection 2 of section 33.1-24-05-531:

Exempt Quantities for Small Quantity Burner Exemption			
Terrain-Adjusted Effective Stack Height of Device (Meters)	Allowable Hazardous Waste Burning Rate (Gallons/Month)	Terrain-Adjusted Effective Stack Height of Device (Meters)	Allowable Hazardous Waste Burning Rate (Gallons/Month)
0 to 3.9	0	40.0 to 44.9	210
4.0 to 5.9	13	45.0 to 49.9	260
6.0 to 7.9	18	50.0 to 54.9	330
8.0 to 9.9	27	55.0 to 59.9	400
10.0 to 11.9	40	60.0 to 64.9	490
12.0 to 13.9	48	65.0 to 69.9	610
14.0 to 15.9	59	70.0 to 74.9	680
16.0 to 17.9	69	75.0 to 79.9	760
18.0 to 19.9	76	80.0 to 84.9	850
20.0 to 21.9	84	85.0 to 89.9	960
22.0 to 23.9	93	90.0 to 94.9	1,100
24.0 to 25.9	100	95.0 to 99.9	1,200
26.0 to 27.9	110	100.0 to 104.9	1,300
28.0 to 29.9	130	105.0 to 109.9	1,500
30.0 to 34.9	140	110.0 to 114.9	1,700
35.0 to 39.9	170	115.0 or greater	1,900

- b. The maximum hazardous waste firing rate does not exceed at any time one percent of the total fuel requirements for the device (hazardous waste plus other fuel) on a total heat input or mass input basis, whichever results in the lower mass feed rate of hazardous waste;
 - c. The hazardous waste has a minimum heating value of five thousand British thermal units per pound as generated; and
 - d. The hazardous waste fuel does not contain (and is not derived from) hazardous waste number F020, F021, F022, F023, F026, or F027.
2. Mixing with nonhazardous fuels. If hazardous waste fuel is mixed with a nonhazardous fuel, the quantity of hazardous waste before such mixing is used to comply with subsection 1.
3. Multiple stacks. If an owner or operator burns hazardous waste in more than one onsite boiler or industrial furnace exempt under this section, the quantity limits provided by subdivision a of subsection 1 are implemented according to the following equation:

$$\sum_{i=1}^n \frac{\text{Actual Quantity Burned}_{(i)}}{\text{Allowable Quantity Burned}_{(i)}} \leq 1.0$$

where:

n = number of stacks;

Actual quantity burned means the waste quantity burned per month in device "i";

Allowable quantity burned means the maximum allowable exempt quantity for stack "i" from the table in subdivision a of subsection 1.

Note: Hazardous wastes that are subject to the special requirements for small quantity generators under section 33.1-24-02-05 may be burned in an offsite device under the exemption provided by section 33.1-24-05-533, but must be included in the quantity determination for the exemption.

4. Notification requirements. The owner or operator of facilities qualifying for the small quantity burner exemption under this section must provide a one-time signed, written notice to the department indicating the following:
- a. The combustion unit is operating as a small quantity burner of hazardous waste;
 - b. The owner and operator are in compliance with the requirements of this section; and
 - c. The maximum quantity of hazardous waste that the facility may burn per month as provided by subdivision a of subsection 1.
5. Recordkeeping requirements. The owner or operator must maintain at the facility for at least three years sufficient records documenting compliance with the hazardous waste quantity, firing rate, and heating value limits. At a minimum, these records must indicate the quantity of hazardous waste and other fuel burned in each unit per calendar month, and the heating value of the hazardous waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-534. Low-risk waste exemption.

1. **Waiver of destruction and removal efficiency standard.** The destruction and removal efficiency standard of subsection 1 of section 33.1-24-05-529 does not apply if the boiler or industrial furnace is operated in conformance with subdivision a of subsection 1 and the owner or operator demonstrates by procedures prescribed in subdivision b of subsection 1 that the burning will not result in unacceptable adverse health effects.

a. The device shall be operated as follows:

- (1) A minimum of fifty percent of fuel fired to the device shall be fossil fuel, fuels derived from fossil fuel, tall oil, or, if approved by the department on a case-by-case basis, other nonhazardous fuel with combustion characteristics comparable to fossil fuel. Such fuels are termed "primary fuel" for purposes of this section. (Tall oil is a fuel derived from vegetable and rosin fatty acids.) The fifty percent primary fuel firing rate shall be determined on a total heat or mass input basis, whichever results in the greater mass feed rate of primary fuel fired;
- (2) Primary fuels and hazardous waste fuels shall have a minimum as-fired heating value of eight thousand British thermal units per pound;
- (3) The hazardous waste is fired directly into the primary fuel flame zone of the combustion chamber; and
- (4) The device operates in conformance with the carbon monoxide controls provided by subdivision a of subsection 2 of section 33.1-24-05-529. Devices subject to the exemption provided by this section are not eligible for the alternative carbon monoxide controls provided by subsection 3 of section 33.1-24-05-529.

b. Procedures to demonstrate that the hazardous waste burning will not pose unacceptable adverse public health effects are as follows:

- (1) Identify and quantify those nonmetal compounds listed in appendix V of chapter 33.1-24-02 that could reasonably be expected to be present in the hazardous waste. The constituents excluded from analysis must be identified and the basis for their exclusion explained.
- (2) Calculate reasonable, worst-case emission rates for each constituent identified in paragraph 1 by assuming the device achieves 99.9 percent destruction and removal efficiency. That is, assume that 0.1 percent of the mass weight of each constituent fed to the device is emitted.
- (3) For each constituent identified in paragraph 1, use emissions dispersion modeling to predict the maximum annual average ground level concentration of the constituent.
 - (a) Dispersion modeling shall be conducted using methods specified in subsection 8 of section 33.1-24-05-531.
 - (b) Owners and operators of facilities with more than one onsite stack from a boiler or industrial furnace that is exempt under this section must conduct dispersion modeling of emissions from all stacks exempt under this section to predict ambient levels prescribed by this subdivision.
- (4) Ground level concentrations of constituents predicted under paragraph 3 must not exceed the following levels:

- (a) For the noncarcinogenic compounds listed in appendix XIX of chapter 33.1-24-05, the levels established in appendix XIX of chapter 33.1-24-05;
- (b) For the carcinogenic compounds listed in appendix XX of chapter 33.1-24-05, the sum for all constituents of the ratios of the actual ground level concentration to the level established in appendix XX of chapter 33.1-24-05 cannot exceed 1.0; and
- (c) For constituents not listed in appendix XIX or XX of chapter 33.1-24-05, 0.1 micrograms per cubic meter.

2. Waiver of particulate matter standard. The particulate matter standard of section 33.1-24-05-530 does not apply if:

- a. The destruction and removal efficiency standard is waived under subsection 1; and
- b. The owner or operator complies with the tier I or adjusted tier I metals feed rate screening limits provided by subsection 2 or 5 of section 33.1-24-05-531.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-535. Waiver of destruction and removal efficiency trial burn for boilers.

Boilers that operate under the special requirements of this section, and that do not burn hazardous waste containing (or derived from) hazardous waste number F020, F021, F022, F023, F026, or F027, are considered to be in conformance with the destruction and removal efficiency standard of subsection 1 of section 33.1-24-05-529, and a trial burn to demonstrate destruction and removal efficiency is waived. When burning hazardous waste:

1. A minimum of fifty percent of fuel fired to the device shall be fossil fuel, fuels derived from fossil fuel, tall oil, or, if approved by the department on a case-by-case basis, other nonhazardous fuel with combustion characteristics comparable to fossil fuel. Such fuels are termed "primary fuel" for purposes of this section. (Tall oil is a fuel derived from vegetable and rosin fatty acids.) The fifty percent primary fuel firing rate shall be determined on a total heat or mass input basis, whichever results in the greater mass feed rate of primary fuel fired;
2. Boiler load shall not be less than forty percent. Boiler load is the ratio at any time of the total heat input to the maximum design heat input;
3. Primary fuels and hazardous waste fuels shall have a minimum as-fired heating value of eight thousand British thermal units per pound, and each material fired in a burner where hazardous waste is fired must have a heating value of at least eight thousand British thermal units per pound, as-fired;
4. The device shall operate in conformance with the carbon monoxide standard provided by subdivision a of subsection 2 of section 33.1-24-05-529. Boilers subject to the waiver of the destruction and removal efficiency trial burn provided by this section are not eligible for the alternative carbon monoxide standard provided by subsection 3 of section 33.1-24-05-529;
5. The boiler must be a watertube type boiler that does not feed fuel using a stoker or stoker type mechanism; and
6. The hazardous waste shall be fired directly into the primary fuel flame zone of the combustion chamber with an air or steam atomization firing system, mechanical atomization system, or a rotary cup atomization system under the following conditions:

- a. Viscosity. The viscosity of the hazardous waste fuel as-fired shall not exceed three hundred SSU;
- b. Particle size. When a high pressure air or steam atomizer, low pressure atomizer, or mechanical atomizer is used, seventy percent of the hazardous waste fuel must pass through a 200 mesh (74 micron) screen, and when a rotary cup atomizer is used, seventy percent of the hazardous waste must pass through a 100 mesh (150 micron) screen;
- c. Mechanical atomization systems. Fuel pressure within a mechanical atomization system and fuel flow rate shall be maintained within the design range taking into account the viscosity and volatility of the fuel;
- d. Rotary cup atomization systems. Fuel flow rate through a rotary cup atomization system must be maintained within the design range taking into account the viscosity and volatility of the fuel.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-536. Standards for direct transfer.

1. **Applicability.** The regulations in this section apply to owners and operators of boilers and industrial furnaces subject to section 33.1-24-05-527 or 33.1-24-05-528 if hazardous waste is directly transferred from a transport vehicle to a boiler or industrial furnace without the use of a storage unit.

2. Definitions.

a. When used in this section, the following terms have the meanings given below:

(1) Direct transfer equipment means any device (including such devices as piping, fittings, flanges, valves, and pumps) that is used to distribute, meter, or control the flow of hazardous waste between a container (for example, transport vehicle) and a boiler or industrial furnace.

(2) Container means any portable device in which hazardous waste is transported, stored, treated, or otherwise handled, and includes transport vehicles that are containers themselves (for example, tank trucks, tanker-trailers, and rail tank cars), and containers placed on or in a transport vehicle.

b. This section references several requirements provided in sections 33.1-24-05-89 through 33.1-24-05-117 and subsection 5 of section 33.1-24-06-16. For purposes of this section, the term "tank systems" in those referenced requirements means direct transfer equipment as defined in subdivision a.

3. General operating requirements.

a. No direct transfer of a pumpable hazardous waste shall be conducted from an open-top container to a boiler or industrial furnace.

b. Direct transfer equipment used for pumpable hazardous waste shall always be closed, except when necessary to add or remove the waste, and shall not be opened, handled, or stored in a manner that may cause any rupture or leak.

c. The direct transfer of hazardous waste to a boiler or industrial furnace shall be conducted so that it does not:

- (1) Generate extreme heat or pressure, fire, explosion, or violent reaction;
- (2) Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health;
- (3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
- (4) Damage the structural integrity of the container or direct transfer equipment containing the waste;
- (5) Adversely affect the capability of the boiler or industrial furnace to meet the standards provided by sections 33.1-24-05-529 through 33.1-24-05-632; or
- (6) Threaten human health or the environment.

d. Hazardous waste shall not be placed in direct transfer equipment if it could cause the equipment or its secondary containment system to rupture, leak, corrode, or otherwise fail.

e. The owner or operator of the facility shall use appropriate controls and practices to prevent spills and overflows from the direct transfer equipment or its secondary containment systems. These include at a minimum:

- (1) Spill prevention controls (for example, check valves, dry discount couplings); and
- (2) Automatic waste feed cutoff to use if a leak or spill occurs from the direct transfer equipment.

4. **Areas where direct transfer vehicles (containers) are located.** Applying the definition of container under this section, owners and operators must comply with the following requirements:

a. The containment requirements of section 33.1-24-05-94;

b. The use and management requirements of sections 33.1-24-05-89 through 33.1-24-05-102 except for sections 33.1-24-05-89, 33.1-24-05-93, and 33.1-24-05-97, and except that in lieu of the special requirements of section 33.1-24-05-95 for ignitable or reactive waste, the owner or operator may comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjacent property line that can be built upon as required in tables 2-1 through 2-6 of the National Fire Protection Association's (NFPA) "Flammable and Combustible Liquids Code", (1977 or 1981), as incorporated by reference, see section 33.1-24-01-05. The owner or operator must obtain and keep on file at the facility a written certification by the local fire marshal that the installation meets the subject National Fire Protection Association codes; and

c. The closure requirements of section 33.1-24-05-97.

5. **Direct transfer equipment.** Direct transfer equipment must meet the following requirements:

a. Secondary containment. Owners and operators shall comply with the secondary containment requirements of section 33.1-24-05-106, except for subsections 1, 4, 5, and 9:

(1) For all new direct transfer equipment, prior to their being put into service; and

(2) For existing direct transfer equipment within two years after August 21, 1991.

b. Requirements prior to meeting secondary containment requirements.

(1) For existing direct transfer equipment that does not have secondary containment, the owner or operator shall determine whether the equipment is leaking or is unfit for use. The owner or operator shall obtain and keep on file at the facility a written assessment reviewed and certified by a qualified, registered professional engineer in accordance with subsection 4 of section 33.1-24-06-02 that attests to the equipment's integrity by August 21, 1992.

(2) This assessment shall determine whether the direct transfer equipment is adequately designed and has sufficient structural strength and compatibility with the waste or wastes to be transferred to ensure that it will not collapse, rupture, or fail. At a minimum, this assessment shall consider the following:

(a) Design standard or standards, if available according to which the direct transfer equipment was constructed;

(b) Hazardous characteristics of the waste or wastes that have been or will be handled;

(c) Existing corrosion protection measures;

(d) Documented age of the equipment, if available, (otherwise, an estimate of the age); and

(e) Results of a leak test or other integrity examination such that the effects of temperature variations, vapor pockets, cracks, leaks, corrosion, and erosion are accounted for.

(3) If, as a result of the assessment specified above, the direct transfer equipment is found to be leaking or unfit for use, the owner or operator shall comply with the requirements of subsections 1 and 2 of section 33.1-24-05-109.

c. Inspections and recordkeeping.

(1) The owner or operator must inspect at least once each operating hour when hazardous waste is being transferred from the transport vehicle (container) to the boiler or industrial furnace:

(a) Overfill/spill control equipment (for example, waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;

(b) The aboveground portions of the direct transfer equipment to detect corrosion, erosion, or releases of waste (for example, wet spots, dead vegetation); and

(c) Data gathered from monitoring equipment and leak-detection equipment (for example, pressure and temperature gauges) to ensure that the direct transfer equipment is being operated according to its design.

(2) The owner or operator must inspect cathodic protection systems, if used, to ensure that they are functioning properly according to the schedule provided by subsection 6 of section 33.1-24-05-108.

(3) Records of inspections made under this subdivision shall be maintained in the operating record at the facility, and available for inspection for at least three years from the date of the inspection.

d. Design and installation of new ancillary equipment. Owners and operators must comply with the requirements of section 33.1-24-05-105.

e. Response to leaks or spills. Owners and operators must comply with the requirements of section 33.1-24-05-109.

f. Closure. Owners and operators must comply with the requirements of section 33.1-24-05-110 except for subdivisions b and d of subsection 3.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-537. Regulation of residues.

A residue derived from the burning or processing of hazardous waste in a boiler or industrial furnace is not excluded from the definition of a hazardous waste under subdivision d, g, or h of subsection 2 of section 33.1-24-02-04 unless the device and the owner or operator meet the following requirements:

1. The device meets the following criteria:

a. Boilers. Boilers must burn at least fifty percent coal on a total heat input or mass input basis, whichever results in the greater mass feed rate of coal;

b. Ore or mineral furnaces. Industrial furnaces subject to subdivision g of subsection 2 of section 33.1-24-02-04 must process at least fifty percent by weight normal, nonhazardous raw materials; and

c. Cement kilns. Cement kilns must process at least fifty percent by weight normal cement-production raw materials;

2. The owner or operator demonstrates that the hazardous waste does not significantly affect the residue by demonstrating conformance with either of the following criteria:

a. Comparison of waste-derived residue with normal residue. The waste-derived residue must not contain appendix V of chapter 33.1-24-02 constituents (toxic constituents) that could reasonably be attributable to the hazardous waste at concentrations significantly higher than in residue generated without burning or processing of hazardous waste, using the following procedure. Toxic compounds that could reasonably be attributable to burning or processing the hazardous waste (constituents of concern) include toxic constituents in the hazardous waste, and the organic compounds listed in appendix XXIII of chapter 33.1-24-05 that may be generated as products of incomplete combustion. For polychlorinated dibenzo-p-dioxins and polychlorinated dibenzo-furans, analyses must be performed to determine specific congeners and homologues, and the results converted to 2,3,7,8-TCDD equivalent values using the procedure specified in section 4.0 of appendix XXIV of chapter 33.1-24-05.

(1) Normal residue. Concentrations of toxic constituents of concern in normal residue shall be determined based on analyses of a minimum of ten samples representing a minimum of ten days of operation. Composite samples may be used to develop a sample for analysis provided that the compositing period does not exceed twenty-four hours. The upper tolerance limit (at ninety-five percent confidence with a

ninety-five percent proportion of the sample distribution) of the concentration in the normal residue shall be considered the statistically derived concentration in the normal residue. If changes in raw materials or fuels reduce the statistically derived concentrations of the toxic constituents of concern in the normal residue, the statistically derived concentrations must be revised or statistically derived concentrations of toxic constituents in normal residue must be established for a new mode of operation with the new raw material or fuel. To determine the upper tolerance limit in the normal residue, the owner or operator shall use statistical procedures prescribed in "Statistical Methodology for Bevill Residue Determinations" in appendix XXIV of chapter 33.1-24-05;

- (2) Waste-derived residue. Waste-derived residue shall be sampled and analyzed as often as necessary to determine whether the residue generated during each twenty-four-hour period has concentrations of toxic constituents that are higher than the concentrations established for the normal residue under paragraph 1. If so, hazardous waste burning has significantly affected the residue and the residue shall not be excluded from the definition of a hazardous waste. Concentrations of toxic constituents of concern in the waste-derived residue shall be determined based on analysis of one or more samples obtained over a twenty-four-hour period. Multiple samples may be analyzed, and multiple samples may be taken to form a composite sample for analysis provided that the sampling period does not exceed twenty-four hours. If more than one sample is analyzed to characterize waste-derived residues generated over a twenty-four-hour period, the concentration of each toxic constituent shall be the arithmetic mean of the concentrations in the samples. No results may be disregarded; or

b. Comparison of waste-derived residue concentrations with health-based limits.

- (1) Nonmetal constituents. The concentration of each nonmetal toxic constituent of concern (specified in subdivision a) in the waste-derived residue must not exceed the health-based level specified in appendix XXII of chapter 33.1-24-05, or the level of detection, whichever is higher. If a health-based limit for a constituent of concern is not listed in appendix XXII of chapter 33.1-24-05, then a limit of 0.002 micrograms per kilogram or the level of detection (which must be determined by using appropriate analytical procedures), whichever is higher, must be used. The levels specified in appendix XXII of chapter 33.1-24-05 (and the default level of 0.002 micrograms per kilogram or the level of detection for constituents as identified in note 1 of appendix XXII of chapter 33.1-24-05) are administratively stayed under the condition, for those constituents specified in subdivision a, that the owner or operator complies with alternative levels defined as the land disposal restriction limits specified in section 33.1-24-05-283 for F039 nonwastewaters. In complying with those alternative levels, if an owner or operator is unable to detect a constituent despite documenting use of best good-faith efforts as defined by applicable department guidance or standards, the owner or operator is deemed to be in compliance for that constituent. Until new guidance or standards are developed, the owner or operator may demonstrate such good-faith efforts by achieving a detection limit for the constituent that does not exceed an order of magnitude above the level provided by section 33.1-24-05-283 for F039 nonwastewaters. In complying with the section 33.1-24-05-283 F039 nonwastewater levels for polychlorinated dibenzo-p-dioxins and polychlorinated dibenzo-furans, analyses must be performed for total hexachlorodibenzo-p-dioxins, total hexachlorodibenzofurans, total pentachlorodibenzo-p-dioxins, total pentachlorodibenzofurans, total tetrachlorodibenzo-p-dioxins, and total tetrachlorodibenzofurans;

(2) Metal constituents. The concentration of metals in an extract obtained using the toxicity characteristic leaching procedure of section 33.1-24-02-14 must not exceed the levels specified in appendix XXII of chapter 33.1-24-05; and

(3) Sampling and analysis. Waste-derived residue shall be sampled and analyzed as often as necessary to determine whether the residue generated during each twenty-four-hour period has concentrations of toxic constituents that are higher than the health-based levels. Concentrations of toxic constituents of concern in the waste-derived residue shall be determined based on analysis of one or more samples obtained over a twenty-four-hour period. Multiple samples may be analyzed, and multiple samples may be taken to form a composite sample for analysis provided that the sampling period does not exceed twenty-four hours. If more than one sample is analyzed to characterize waste-derived residues generated over a twenty-four-hour period, the concentration of each toxic constituent shall be the arithmetic mean of the concentrations in the samples. No results may be disregarded.

3. Records sufficient to document compliance with the provisions must be retained until closure of the boiler or industrial furnace unit. At a minimum, the following shall be recorded:

a. Levels of constituents in appendix V of chapter 33.1-24-02, that are present in waste-derived residues; and

b. If the waste-derived residue is compared with normal residue under subdivision a of subsection 2:

(1) The levels of constituents in appendix V of chapter 33.1-24-02, that are present in normal residues; and

(2) Data and information, including analyses of samples as necessary, obtained to determine if changes in raw materials or fuels would reduce the concentration of toxic constituents of concern in the normal residue.

33.1-24-05-550. Applicability of corrective action management unit regulations.

1. Except as provided in subsection 2, corrective action management units are subject to the requirements of section 33.1-24-05-552.
2. Corrective action management units that were approved before April 22, 2002, or for which substantially complete applications (or equivalents) were submitted to the department on or before November 20, 2000, are subject to the requirements in section 33.1-24-05-551 for grandfathered corrective action management units; corrective action management unit waste, activities, and design will not be subject to the standards in section 33.1-24-05-552, so long as the waste, activities, and design remain within the general scope of the corrective action management unit as approved.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-551. Grandfathered corrective action management units.

1. To implement remedies under section 33.1-24-05-58 or Resource Conservation and Recovery Act section 3008(h), or to implement remedies at a permitted facility that is not subject to section 33.1-24-05-58, the department may designate an area at the facility as a corrective action management unit under the requirements of this section. Corrective action management unit means an area within a facility that is used only for managing remediation wastes for implementing corrective action or cleanup at the facility. A corrective action management unit must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the corrective action management unit originated. One or more corrective action management units may be designated at a facility.
 - a. Placement of remediation wastes into or within a corrective action management unit does not constitute land disposal of hazardous wastes.
 - b. Consolidation or placement of remediation wastes into or within a corrective action management unit does not constitute creation of a unit subject to minimum technology requirements.
2. The department may designate a regulated unit as a corrective action management unit in accordance with the following:
 - a. The department may designate a regulated unit (as defined in subdivision b of subsection 1 of section 33.1-24-05-47) as a corrective action management unit, or may incorporate a regulated unit into a corrective action management unit, if:
 - (1) The regulated unit is closed or closing, meaning it has begun the closure process under section 33.1-24-05-62; and
 - (2) Inclusion of the regulated unit will enhance implementation of effective, protective, and reliable remedial actions for the facility.
 - b. The sections 33.1-24-05-47 through 33.1-24-05-88 requirements and the unit-specific requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 that applied to that regulated unit will continue to apply to that portion of the corrective action management unit after incorporation into the corrective action management unit.
3. The department shall designate a corrective action management unit in accordance with the following:
 - a. The corrective action management unit shall facilitate the implementation of reliable, effective, protective, and cost-effective remedies;
 - b. Waste management activities associated with the corrective action management unit shall not create unacceptable risks to humans or to the environment resulting from exposure to hazardous wastes or hazardous constituents;
 - c. The corrective action management unit may include uncontaminated areas of the facility, only if including such areas for the purpose of managing remediation waste is more protective than management of such wastes at contaminated areas of the facility;
 - d. Areas within the corrective action management unit, where wastes remain in place after closure of the corrective action management unit, shall be managed and contained so as to minimize future releases, to the extent practicable;

e. The corrective action management unit shall expedite the timing of remedial activity implementation, when appropriate and practicable;

f. The corrective action management unit shall enable the use, when appropriate, of treatment technologies (including innovative technologies) to enhance the long-term effectiveness of remedial actions by reducing the toxicity, mobility, or volume of wastes that will remain in place after closure of the corrective action management unit; and

g. The corrective action management unit shall, to the extent practicable, minimize the land area of the facility upon which wastes will remain in place after closure of the corrective action management unit.

4. The owner or operator shall provide sufficient information to enable the department to designate a corrective action management unit in accordance with the criteria in section 33.1-24-05-552.

5. The department shall specify, in the permit or order, requirements for corrective action management units to include the following:

a. The areal configuration of the corrective action management unit.

b. Requirements for remediation waste management to include the specification of applicable design, operation, and closure requirements.

c. Requirements for ground water monitoring that are sufficient to:

(1) Continue to detect and to characterize the nature, extent, concentration, direction, and movement of existing releases of hazardous constituents in ground water from sources located within the corrective action management unit; and

(2) Detect and subsequently characterize releases of hazardous constituents to ground water that may occur from areas of the corrective action management unit in which wastes will remain in place after closure of the corrective action management unit.

d. Closure and postclosure requirements.

(1) Closure of corrective action management units shall:

(a) Minimize the need for further maintenance; and

(b) Control, minimize, or eliminate, to the extent necessary to protect human health and the environment, for areas where wastes remain in place, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground, to surface waters, or to the atmosphere.

(2) Requirements for closure of corrective action management units shall include the following, as appropriate and as deemed necessary by the department for a given corrective action management unit:

(a) Requirements for excavation, removal, treatment, or containment of wastes;

(b) For areas in which wastes will remain after closure of the corrective action management unit, requirements for capping of such areas; and

(c) Requirements for removal and decontamination of equipment, devices, and structures used in remediation waste management activities within the corrective action management unit.

(3) In establishing specific closure requirements for corrective action management units under this subsection, the department shall consider the following factors:

(a) Corrective action management unit characteristics;

(b) Volume of wastes which remain in place after closure;

(c) Potential for releases from the corrective action management unit;

(d) Physical and chemical characteristics of the waste;

(e) Hydrogeological and other relevant environmental conditions at the facility which may influence the migration of any potential or actual releases; and

(f) Potential for exposure of humans and environmental receptors if releases were to occur from the corrective action management unit.

(4) Postclosure requirements as necessary to protect human health and the environment, to include, for areas where wastes will remain in place, monitoring and maintenance activities, and the frequency with which such activities shall be performed to ensure the integrity of any cap, final cover, or other containment system.

6. The department shall document the rationale for designating corrective action management units and shall make such documentation available to the public.

7. Incorporation of a corrective action management unit into an existing permit must be approved by the department according to the procedures for department-initiated permit modifications under section 33.1-24-06-12, or according to the permit modification procedures of section 33.1-24-06-14.

8. The designation of a corrective action management unit does not change the department's existing authority to address cleanup levels, media-specific points of compliance to be applied to remediation at a facility, or other remedy selection decisions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-552. Corrective action management unit.

1. To implement remedies under section 33.1-24-05-58 or Resource Conservation and Recovery Act section 3008(h), or to implement remedies at a permitted facility that is not subject to section 33.1-24-05-58, the department may designate an area at the facility as a corrective action management unit under the requirements in this section. Corrective action management unit means an area within a facility that is used only for managing corrective action management unit-eligible wastes for implementing corrective action or cleanup at the facility. A corrective action management unit must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the corrective action management unit originated. One or more corrective action management units may be designated at a facility.

a. Corrective action management unit-eligible waste means:

(1) All solid and hazardous wastes, and all media (including ground water, surface water, soils, and sediments) and debris, that are managed for implementing cleanup. As-generated wastes (either hazardous or nonhazardous) from ongoing

industrial operations at a site are not corrective action management unit-eligible wastes.

(2) Wastes that would otherwise meet the description in paragraph 1 are not "corrective action management unit-eligible wastes" where:

(a) The wastes are hazardous wastes found during cleanup in intact or substantially intact containers, tanks, or other nonland-based units found aboveground, unless the wastes are first placed in the tanks, containers, or nonland-based units as part of cleanup, or the containers or tanks are excavated during the course of cleanup; or

(b) The department exercises the discretion in subdivision b to prohibit the wastes from management in a corrective action management unit.

(3) Notwithstanding paragraph 1, where appropriate, as-generated nonhazardous waste may be placed in a corrective action management unit where such waste is being used to facilitate treatment or the performance of the corrective action management unit.

b. The department may prohibit, where appropriate, the placement of waste in a corrective action management unit where the department has or receives information that such wastes have not been managed in compliance with applicable land disposal treatment standards of sections 33.1-24-05-250 through 33.1-24-05-299, or applicable unit design requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or applicable unit design requirements under subsection 5 of section 33.1-24-06-16, or that noncompliance with other applicable requirements of article 33.1-24 likely contributed to the release of the waste.

c. Prohibition against placing liquids in corrective action management units.

(1) The placement of bulk or noncontainerized liquid hazardous waste or free liquids contained in hazardous waste (whether or not sorbents have been added) in any corrective action management unit is prohibited except where placement of such wastes facilitates the remedy selected for the waste.

(2) The requirements in subsection 3 of section 33.1-24-05-183 for placement of containers holding free liquids in landfills apply to placement in a corrective action management unit except where placement facilitates the remedy selected for the waste.

(3) The placement of any liquid which is not a hazardous waste in a corrective action management unit is prohibited unless such placement facilitates the remedy selected for the waste or a demonstration is made pursuant to subsection 5 of section 33.1-24-05-183.

(4) The absence or presence of free liquids in either a containerized or a bulk waste must be determined in accordance with subsection 2 of section 33.1-24-05-183. Sorbents used to treat free liquids in corrective action management units must meet the requirements of subsection 4 of section 33.1-24-05-183.

d. Placement of corrective action management unit-eligible wastes into or within a corrective action management unit does not constitute land disposal of hazardous wastes.

e. Consolidation or placement of corrective action management unit-eligible wastes into or within a corrective action management unit does not constitute creation of a unit subject to minimum technology requirements.

2. Requirements for regulated units.

a. The department may designate a regulated unit (as defined in subdivision b of subsection 1 of section 33.1-24-05-47) as a corrective action management unit, or may incorporate a regulated unit into a corrective action management unit, if:

(1) The regulated unit is closed or closing, meaning it has begun the closure process under section 33.1-24-05-62 or applicable requirements of subsection 5 of section 33.1-24-06-16; and

(2) Inclusion of the regulated unit will enhance implementation of effective, protective, and reliable remedial actions for the facility.

b. The requirements of sections 33.1-24-05-47 through 33.1-24-05-88 and the unit-specific requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or applicable requirements of subsection 5 of section 33.1-24-06-16 that applied to the regulated unit will continue to apply to that portion of the corrective action management unit after incorporation into the corrective action management unit.

3. The department shall designate a corrective action management unit that will be used for storage or treatment, or both, only in accordance with subsection 6. The department shall designate all other corrective action management units in accordance with the following:

a. The corrective action management unit shall facilitate the implementation of reliable, effective, protective, and cost-effective remedies;

b. Waste management activities associated with the corrective action management unit shall not create unacceptable risks to humans or to the environment resulting from exposure to hazardous wastes or hazardous constituents;

c. The corrective action management unit shall include uncontaminated areas of the facility, only if including such areas for the purpose of managing corrective action management unit-eligible waste is more protective than management of such wastes at contaminated areas of the facility;

d. Areas within the corrective action management unit, where wastes remain in place after closure of the corrective action management unit, shall be managed and contained so as to minimize future releases, to the extent practicable;

e. The corrective action management unit shall expedite the timing of remedial activity implementation, when appropriate and practicable;

f. The corrective action management unit shall enable the use, when appropriate, of treatment technologies (including innovative technologies) to enhance the long-term effectiveness of remedial actions by reducing the toxicity, mobility, or volume of wastes that will remain in place after closure of the corrective action management unit; and

g. The corrective action management unit shall, to the extent practicable, minimize the land area of the facility upon which wastes will remain in place after closure of the corrective action management unit.

4. The owner or operator shall provide sufficient information to enable the department to designate a corrective action management unit in accordance with the criteria in this section. This must include, unless not reasonably available, information on:

- a. The origin of the waste and how it was subsequently managed (including a description of the timing and circumstances surrounding the disposal or release, or both);
- b. Whether the waste was listed or identified as hazardous at the time of disposal or release, or both; and
- c. Whether the disposal or release, or both, of the waste occurred before or after the land disposal requirements of section 33.1-24-05-250 through 33.1-24-05-299 were in effect for the waste listing or characteristic.

5. The department shall specify, in the permit or order, requirements for corrective action management units to include the following:

- a. The areal configuration of the corrective action management unit.
- b. Except as provided in subsection 7, requirements for corrective action management unit-eligible waste management to include the specification of applicable design, operation, treatment, and closure requirements.
- c. Minimum design requirements. Corrective action management units, except as provided in subsection 6, into which wastes are placed must be designed in accordance with the following:

(1) Unless the department approves alternate requirements under paragraph 2, corrective action management units that consist of new, replacement, or laterally expanded units must include a composite liner and a leachate collection system that is designed and constructed to maintain less than a thirty-centimeter depth of leachate over the liner. For purposes of this paragraph, composite liner means a system consisting of two components; the upper component must consist of a minimum thirty mil flexible membrane liner, and the lower component must consist of at least a two-foot layer of compacted soil with a hydraulic conductivity of no more than 1×10^{-7} centimeters per second. Flexible membrane liner components consisting of high density polyethylene must be at least sixty mil thick. The flexible membrane liner component must be installed in direct and uniform contact with the compacted soil component; and

(2) Alternate requirements. The department may approve alternate requirements if:

- (a) The department finds that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents into the ground water or surface water at least as effectively as the liner and leachate collection systems in paragraph 1; or
- (b) The corrective action management unit is to be established in an area with existing significant levels of contamination, and the department finds that an alternative design, including a design that does not include a liner, would prevent migration from the unit that would exceed long-term remedial goals.

d. Minimum treatment requirements. Unless the wastes will be placed in a corrective action management unit for storage or treatment, or both, only in accordance with subsection 6, corrective action management unit-eligible wastes that, absent this subdivision, would be subject to the treatment requirements of sections 33.1-24-05-250 through

33.1-24-05-299, and that the department determines contain principal hazardous constituents must be treated to the standards specified in paragraph 3.

(1) Principal hazardous constituents are those constituents that the department determines pose a risk to human health and the environment substantially higher than the cleanup levels or goals at the site.

(a) In general, the department will designate as principal hazardous constituents:

[1] Carcinogens that pose a potential direct risk from ingestion or inhalation at the site at or above 10^{-3} ; and

[2] Noncarcinogens that pose a potential direct risk from ingestion or inhalation at the site an order of magnitude or greater over their reference dose.

(b) The department will also designate constituents as principal hazardous constituents, where appropriate, when risks to human health and the environment posed by the potential migration of constituents in wastes to ground water are substantially higher than cleanup levels or goals at the site; when making such a designation, the department may consider such factors as constituent concentrations, and fate and transport characteristics under site conditions.

(c) The department may also designate other constituents as principal hazardous constituents that the department determines pose a risk to human health and the environment substantially higher than the cleanup levels or goals at the site.

(2) In determining which constituents are "principal hazardous constituents", the department must consider all constituents which, absent this subdivision, would be subject to the treatment requirements in sections 33.1-24-05-250 through 33.1-24-05-299.

(3) Waste that the department determines contains principal hazardous constituents must meet treatment standards determined in accordance with paragraph 4 or 5.

(4) Treatment standards for wastes placed in corrective action management units.

(a) For nonmetals, treatment must achieve ninety percent reduction in total principal hazardous constituent concentrations, except as provided by subparagraph c.

(b) For metals, treatment must achieve ninety percent reduction in principal hazardous constituent concentrations as measured in leachate from the treated waste or media (tested according to the toxicity characteristic leaching procedure) or ninety percent reduction in total constituent concentrations (when a metal removal treatment technology is used), except as provided by subparagraph c.

(c) When treatment of any principal hazardous constituent to a ninety percent reduction standard would result in a concentration less than ten times the universal treatment standard for that constituent, treatment to achieve constituent concentrations less than ten times the universal treatment standard is not required. Universal treatment standards are identified in section 33.1-24-05-288 table Universal Treatment Standards.

(d) For waste exhibiting the hazardous characteristic of ignitability, corrosivity, or reactivity, the waste must also be treated to eliminate these characteristics.

(e) For debris, the debris must be treated in accordance with section 33.1-24-05-285, or by methods or to levels established under subparagraphs a through d or paragraph 5, whichever the department determines is appropriate.

(f) Alternatives to toxicity characteristic leaching procedure. For metal-bearing wastes for which metals removal treatment is not used, the department may specify a leaching test other than the toxicity characteristic leaching procedure (SW-846 method 1311, paragraph 5 of subdivision c of subsection 3 of section 33.1-24-01-05) to measure treatment effectiveness, provided the department determines that an alternative leach testing protocol is appropriate for use, and that the alternative more accurately reflects conditions at the site that affect leaching.

(5) Adjusted standards. The department may adjust the treatment level or method in paragraph 4 to a higher or lower level, based on one or more of the following factors, as appropriate. The adjusted level or method must be protective of human health and the environment:

(a) The technical impracticability of treatment to the levels or by the methods in paragraph 4;

(b) The levels or methods in paragraph 4 would result in concentrations of principal hazardous constituents that are significantly above or below cleanup standards applicable to the site (established either site-specifically, or promulgated under state or federal law);

(c) The views of the affected local community on the treatment levels or methods in paragraph 4 as applied at the site, and, for treatment levels, the treatment methods necessary to achieve these levels;

(d) The short-term risks presented by the onsite treatment method necessary to achieve the levels or treatment methods in paragraph 4;

(e) The long-term protection offered by the engineering design of the corrective action management unit and related engineering controls:

[1] Where the treatment standards in paragraph 4 are substantially met and the principal hazardous constituents in the waste or residuals are of very low mobility;

[2] Where cost-effective treatment has been used and the corrective action management unit meets the article 33.1-24 liner and leachate collection requirements for new land disposal units at subsection 3 or 4 of section 33.1-24-05-177;

[3] Where, after review of appropriate treatment technologies, the department determines that cost-effective treatment is not reasonably available, and the corrective action management unit meets the article 33.1-24 liner and leachate collection requirements for new land disposal units at subsection 3 and 4 of section 33.1-24-05-177;

[4] Where cost-effective treatment has been used and the principal hazardous constituents in the treated wastes are of very low mobility; or

[5] Where, after review of appropriate treatment technologies, the department determines that cost-effective treatment is not reasonably available, the principal hazardous constituents in the wastes are of very low mobility, and either the corrective action management unit meets or exceeds the liner standards for new, replacement, or laterally expanded corrective action management units in paragraphs 1 and 2 of subdivision c, or the corrective action management unit provides substantially equivalent or greater protection.

(6) The treatment required by the treatment standards must be completed prior to, or within a reasonable time after, placement in the corrective action management unit.

(7) For the purpose of determining whether wastes placed in corrective action management units have met site-specific treatment standards, the department may, as appropriate, specify a subset of the principal hazardous constituents in the waste as analytical surrogates for determining whether treatment standards have been met for other principal hazardous constituents. This specification will be based on the degree of difficulty of treatment and analysis of constituents with similar treatment properties.

e. Except as provided in subsection 6, requirements for ground water monitoring and corrective action that are sufficient to:

(1) Continue to detect and to characterize the nature, extent, concentration, direction, and movement of existing releases of hazardous constituents in ground water from sources located within the corrective action management unit;

(2) Detect and subsequently characterize releases of hazardous constituents to ground water that may occur from areas of the corrective action management unit in which wastes will remain in place after closure of the corrective action management unit; and

(3) Require notification to the department and corrective action as necessary to protect human health and the environment for releases to ground water from the corrective action management unit.

f. Except as provided in subsection 6, closure and postclosure requirements:

(1) Closure of corrective action management units shall:

(a) Minimize the need for further maintenance; and

(b) Control, minimize, or eliminate, to the extent necessary to protect human health and the environment, for areas where wastes remain in place, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground, to surface waters, or to the atmosphere.

(2) Requirements for closure of corrective action management units shall include the following, as appropriate and as deemed necessary by the department for a given corrective action management unit:

(a) Requirements for excavation, removal, treatment, or containment of wastes; and

(b) Requirements for removal and decontamination of equipment, devices, and structures used in corrective action management unit eligible waste management activities within the corrective action management unit.

(3) In establishing specific closure requirements for corrective action management units under this subsection, the department shall consider the following factors:

(a) Corrective action management unit characteristics;

(b) Volume of wastes which remain in place after closure;

(c) Potential for releases from the corrective action management unit;

(d) Physical and chemical characteristics of the waste;

(e) Hydrogeological and other relevant environmental conditions at the facility which may influence the migration of any potential or actual releases; and

(f) Potential for exposure of humans and environmental receptors if releases were to occur from the corrective action management unit.

(4) Cap requirements:

(a) At final closure of the corrective action management unit, for areas in which wastes will remain after closure of the corrective action management unit, with constituent concentrations at or above remedial levels or goals applicable to the site, the owner or operator must cover the corrective action management unit with a final cover designed and constructed to meet the following performance criteria, except as provided in subparagraph b:

[1] Provide long-term minimization of migration of liquids through the closed unit;

[2] Function with minimum maintenance;

[3] Promote drainage and minimize erosion or abrasion of the cover;

[4] Accommodate settling and subsidence so that the cover's integrity is maintained; and

[5] Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

(b) The department may determine that modifications to subparagraph a are needed to facilitate treatment or the performance of the corrective action management unit (for example, to promote biodegradation).

(5) Postclosure requirements as necessary to protect human health and the environment, to include, for areas where wastes will remain in place, monitoring and maintenance activities, and the frequency with which such activities shall be performed to ensure the integrity of any cap, final cover, or other containment system.

6. Corrective action management units used for storage or treatment, or both, only are corrective action management units in which wastes will not remain after closure. Such corrective action management units must be designated in accordance with all of the requirements of this section, except as follows:

- a. Corrective action management units that are used for storage or treatment, or both, only and that operate in accordance with the time limits established in the staging pile regulations at paragraph 3 of subdivision a of subsection 4, subsection 8 and subsection 9 of section 33.1-24-05-554 are subject to the requirements for staging piles at paragraphs 1 and 2 of subdivision a of subsection 4, subdivision b of subsection 4, subsections 5, 6, 10, and 11 of section 33.1-24-05-554 in lieu of the performance standards and requirements for corrective action management units contained in subsection 3 and subdivisions c through f of subsection 5.
- b. Corrective action management units that are used for storage or treatment, or both, only and that do not operate in accordance with the time limits established in the staging pile regulations at paragraph 3 of subdivision a of subsection 4, subsections 8 and 9 of section 33.1-24-05-554:
 - (1) Must operate in accordance with a time limit, established by the department, that is no longer than necessary to achieve a timely remedy selected for the waste; and
 - (2) Are subject to the requirements for staging piles at paragraphs 1 and 2 of subdivision a of subsection 4, subdivision b of subsection 4, and subsections 5, 6, 10, and 11 of section 33.1-24-05-554 in lieu of the performance standards and requirements for corrective action management units contained in subsection 3 and subdivisions d through f of subsection 5.
7. Corrective action management units into which wastes are placed where all wastes have constituent levels at or below remedial levels or goals applicable to the site do not have to comply with the requirements for liners at paragraph 1 of subdivision c of subsection 5, caps at paragraph 4 of subdivision f of subsection 5, ground water monitoring requirements at subdivision e of subsection 5 or, for treatment or storage, or both, only corrective action management units, the design standards at subsection 6.
8. The department shall provide public notice and a reasonable opportunity for public comment before designating a corrective action management unit. Such notice shall include the rationale for any proposed adjustments under paragraph 5 of subdivision d of subsection 5 to the treatment standards in paragraph 4 of subdivision d of subsection 5.
9. Notwithstanding any other provision of this section, the department may impose additional requirements as necessary to protect human health and the environment.
10. Incorporation of a corrective action management unit into an existing permit must be approved by the department according to the procedures for department-initiated permit modifications under section 33.1-24-06-12, or according to the permit modification procedures of section 33.1-24-06-14.
11. The designation of a corrective action management unit does not change the department's existing authority to address cleanup levels, media-specific points of compliance to be applied to remediation at a facility, or other remedy selection decisions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-553. Temporary units.

1. For temporary tanks and container storage areas used to treat or store hazardous remediation wastes during remedial activities required under section 33.1-24-05-58 or Resource Conservation and Recovery Act section 3008(h), or at a permitted facility that is not subject to section 33.1-24-05-58, the department may designate a unit at the facility, as a temporary unit.

A temporary unit must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the temporary unit originated. For temporary units, the department may replace the design, operating, or closure standard applicable to these units under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16, with alternative requirements which protect human health and the environment.

2. Any temporary unit to which alternative requirements are applied in accordance with subsection 1 must be:

- a. Located within the facility boundary; and
- b. Used only for treatment or storage of remediation wastes.

3. In establishing standards to be applied to a temporary unit, the department shall consider the following factors:

- a. Length of time such unit will be in operation;
- b. Type of unit;
- c. Volumes of wastes to be managed;
- d. Physical and chemical characteristics of the wastes to be managed in the unit;
- e. Potential for releases from the unit;
- f. Hydrogeological and other relevant environmental conditions at the facility which may influence the migration of any potential releases; and
- g. Potential for exposure of humans and environmental receptors if releases were to occur from the unit.

4. The department shall specify in the permit or order the length of time a temporary unit will be allowed to operate, to be no longer than a period of one year. The department shall also specify the design, operating, and closure requirements for the unit.

5. The department may extend the operational period of a temporary unit once for no longer than a period of one year beyond that originally specified in the permit or order, if the department determines that:

- a. Continued operation of the unit will not pose a threat to human health and the environment; and
- b. Continued operation of the unit is necessary to ensure timely and efficient implementation of remedial actions at the facility.

6. Incorporation of a temporary unit or a time extension for a temporary unit into an existing permit must be:

- a. Approved in accordance with the procedures for department-initiated permit modifications under section 33.1-24-06-12; or
- b. Requested by the owner or operator as a class 2 modification according to the procedures under section 33.1-24-06-14.

7. The department shall document the rationale for designating a temporary unit and for granting time extensions for temporary units and shall make such documentation available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-554. Staging piles.

1. A staging pile is an accumulation of solid, nonflowing remediation waste (as defined in section 33.1-24-01-04) that is not a containment building and is used only during remedial operations for temporary storage at a facility. A staging pile must be located within the contiguous property under the control of the owner or operator where the wastes to be managed in the staging pile originated. Staging piles must be designated by the department according to the requirements in this section.
 - a. For the purposes of this section, storage includes mixing, sizing, blending, or other similar physical operations as long as they are intended to prepare the wastes for subsequent management or treatment.
 - b. [Reserved].
2. A staging pile may be used to store hazardous remediation waste (or remediation waste otherwise subject to land disposal restrictions) only if the owner or operator follows the standards and design criteria the department has designated for that staging pile. The department must designate the staging pile in a permit or, at an interim status facility, in a closure plan or order (consistent with the applicable requirements of subsection 5 of section 33.1-24-06-16). The department must establish conditions in the permit, closure plan, or order that comply with subsections 4 through 11.
3. An owner or operator that is seeking a staging pile designation must provide the following information:
 - a. Sufficient and accurate information to enable the department to impose standards and design criteria for the staging pile according to subsections 4 through 11;
 - b. Certification by a qualified professional engineer for technical data, such as design drawings and specifications, and engineering studies, unless the department determines, based on information that the owner or operator provided, that this certification is not necessary to ensure that a staging pile will protect human health and the environment; and
 - c. Any additional information the department determines is necessary to protect human health and the environment.
4. Performance criteria for a staging pile. The department must establish the standards and design criteria for the staging pile in the permit, closure plan, or order.
 - a. The standards and design criteria as established by the department in the permit closure plan or order must comply with the following:
 - (1) The staging pile must facilitate a reliable, effective, and protective remedy;
 - (2) The staging pile must be designed so as to prevent or minimize releases of hazardous wastes and hazardous constituents into the environment, and minimize or adequately control cross-media transfer, as necessary to protect human health

and the environment (for example, through the use of liners, covers, and runoff and run-on controls, as appropriate); and

(3) The staging pile may not operate for a period of more than two years, except when the department grants an operating term extension under subsection 9. The owner or operator must measure the two-year limit, or other operating term specified by the department in the permit, closure plan, or order, from the first time remediation waste is placed into a staging pile. The owner or operator must maintain a record of the date when remediation waste is first placed into the staging pile for the life of the permit, closure plan, or order, or for three years, whichever is longer.

b. In setting the standards and design criteria, the department must consider the following factors:

(1) Length of time the staging pile will be in operation;

(2) Volumes of wastes the owner or operator intends to store in the staging pile;

(3) Physical and chemical characteristics of the wastes to be stored in the unit;

(4) Potential for releases from the unit;

(5) Hydrogeological and other relevant environmental conditions at the facility that may influence the migration of any potential releases; and

(6) Potential for human and environmental exposure to potential releases from the unit.

5. Ignitable or reactive remediation waste are prohibited from being placed in a staging pile. The owner or operator must not place ignitable or reactive remediation waste in a staging pile unless:

a. The owner or operator has treated, rendered, or mixed the remediation waste before being placed in the staging pile so that:

(1) The remediation waste no longer meets the definition of ignitable or reactive under section 33.1-24-02-11 or 33.1-24-02-13; and

(2) The owner or operator has complied with subsection 2 of section 33.1-24-05-08; or

b. The owner or operator manages the remediation waste to protect it from exposure to any material or condition that may cause it to ignite or react.

6. Management of incompatible remediation wastes in a staging pile. The owner or operator must comply with the following requirements for incompatible wastes (as defined in section 33.1-24-01-04) in staging piles:

a. The owner or operator may not place incompatible remediation wastes in the same staging pile unless the owner or operator has complied with subsection 2 of section 33.1-24-05-08;

b. If remediation waste in a staging pile is incompatible with any waste or material stored nearby in containers, other piles, open tanks, or land disposal units (for example, surface impoundments), the owner or operator must separate the incompatible materials, or protect them from one another by using a dike, berm, wall, or other device; and

c. The owner or operator must not pile remediation waste on the same base where incompatible wastes or materials were previously piled, unless the base has been decontaminated sufficiently to comply with subsection 2 of section 33.1-24-05-08.

7. Land disposal restrictions and minimum technological requirements are not triggered by placing hazardous remediation wastes into a staging pile.

8. Staging pile operation time limits. The department may allow a staging pile to operate for up to two years after hazardous remediation waste is first placed into the pile. The owner or operator may use a staging pile no longer than the length of time designated by the department in the permit, closure plan, or order except as provided in subsection 9.

9. Extension of operation time limits.

a. The department may grant one operating term extension of up to one hundred eighty days beyond the operating term limit contained in the permit, closure plan, or order (see subsection 12 for modification procedures). To justify to the department the need for an extension, the owner or operator must provide sufficient and accurate information to enable the department to determine that continued operation of the staging pile:

(1) Will not pose a threat to human health and the environment; and

(2) Is necessary to ensure timely and efficient implementation of remedial actions at the facility.

b. The department may, as a condition of the extension, specify further standards and design criteria in the permit, closure plan, or order, as necessary, to ensure protection of human health and the environment.

10. Closure requirements for a staging pile located in a previously contaminated area.

a. Within one hundred eighty days after the operating term of the staging pile expires, the owner or operator must close a staging pile located in a previously contaminated area of the site by removing or decontaminating all:

(1) Remediation waste;

(2) Contaminated containment system components; and

(3) Structures and equipment contaminated with waste and leachate.

b. The owner or operator must also decontaminate contaminated subsoils in a manner and according to a schedule that the department determines will protect human health and the environment.

c. The department must include the above requirements in the permit, closure plan, or order in which the staging pile is designated.

11. Closure requirements for a staging pile located in an uncontaminated area.

a. Within one hundred eighty days after the operating term of the staging pile expires, the owner or operator must close a staging pile located in an uncontaminated area of the site according to subsection 1 of section 33.1-24-05-135 and section 33.1-24-05-60.

b. The department must include the above requirements in the permit, closure plan, or order in which the staging pile is designated.

12. Modifications to an existing permit, closure plan, or order to allow use of a staging pile.

a. A permit, other than a remedial action plan, may be modified to incorporate a staging pile or staging pile operating term extension, by either:

(1) The department may initiate the modification in accordance with section 33.1-24-06-12; or

(2) The owner or operator may request a class 2 modification under section 33.1-24-06-14.

b. A remedial action plan may be modified to incorporate a staging pile or staging pile operating term extension when the owner or operator submits a request pursuant to subsections 1 and 2 of section 33.1-24-06-33.

c. The owner or operator must follow the applicable requirements under subsection 3 of section 33.1-24-05-61 to modify a closure plan to incorporate a staging pile or staging pile operating term extension.

d. To modify an order to incorporate a staging pile or staging pile operating term extension, the owner or operator must follow the terms of the order and the applicable requirements of subsection 5 of section 33.1-24-06-16.

13. The department shall document the rationale for designating a staging pile or staging pile operating term extension and shall make such documentation available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-555. Disposal of corrective action management unit-eligible wastes in permitted hazardous waste landfills.

1. The department may approve placement of corrective action management unit-eligible wastes in hazardous waste landfills not located at the site from which the waste originated, without the wastes meeting the requirements of sections 33.1-24-05-250 through 33.1-24-05-299, if the conditions in subdivisions a through c are met:

a. The waste meets the definition of corrective action management unit-eligible waste in subdivisions a and b of subsection 1 of section 33.1-24-05-552.

b. The department identifies principal hazardous constituents in such waste, in accordance with paragraphs 1 and 2 of subdivision d of subsection 5 of section 33.1-24-05-552, and requires that such principal hazardous constituents are treated to any of the following standards specified for corrective action management unit-eligible wastes:

(1) The treatment standards under paragraph 4 of subdivision d of subsection 5 of section 33.1-24-05-552; or

(2) Treatment standards adjusted in accordance with subparagraphs a, c, d, or item 1 of subparagraph e of paragraph 5 of subdivision d of subsection 5 of section 33.1-24-05-552; or

(3) Treatment standards adjusted in accordance with item 2 of subparagraph e of paragraph 5 of subdivision d of subsection 5 of section 33.1-24-05-552, where treatment has been used and that treatment significantly reduces the toxicity or mobility of the principal hazardous constituents in the waste. For minimizing the short-term and long-term threat posed by the waste, including the threat at the remediation site.

c. The landfill receiving the corrective action management unit-eligible waste must have a hazardous waste permit, meet the requirements for new landfills in sections

33.1-24-05-176 through 33.1-24-05-190, and be authorized to accept corrective action management unit-eligible wastes. For the purposes of this requirement, "permit" does not include interim status.

2. The person seeking approval shall provide sufficient information to enable the department with regulatory oversight at the location where the cleanup is taking place to approve placement of corrective action management unit-eligible waste in accordance with subsection 1. Information required by subdivisions a through c of subsection 4 of section 33.1-24-05-552 for corrective action management unit applications must be provided, unless not reasonably available.

3. The department shall provide public notice and a reasonable opportunity for public comment before approving corrective action management unit-eligible waste for placement in an offsite permitted hazardous waste landfill, consistent with the requirements for corrective action management unit approval at subsection 8 of section 33.1-24-05-552. The approval must be specific to a single remediation.

4. Applicable hazardous waste management requirements in sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, including recordkeeping requirements to demonstrate compliance with treatment standards approved under this section, for corrective action management unit-eligible waste must be incorporated into the receiving facility permit through permit issuance or a permit modification, providing notice and an opportunity for comment and a hearing. Notwithstanding subsection 1 of section 33.1-24-06-10, a landfill may not receive hazardous corrective action management unit-eligible waste under this section unless its permit specifically authorizes receipt of such waste.

5. For each remediation, corrective action management unit-eligible waste may not be placed in an offsite landfill authorized to receive corrective action management unit-eligible waste in accordance with subsection 4 until the following additional conditions have been met:

a. The landfill owner or operator notifies the department and other regulatory agency responsible for oversight of the landfill and persons on the facility mailing list, maintained in accordance with paragraph 4 of subdivision a of subsection 3 of section 33.1-24-07-06, of the owner's or operator's intent to receive corrective action management unit-eligible waste in accordance with this section; the notice must identify the source of the remediation waste, the principal hazardous constituents in the waste, and treatment requirements.

b. Persons on the facility mailing list may provide comments, including objections to the receipt of the corrective action management unit-eligible waste, to the department within fifteen calendar days of notification.

c. The department may object to the placement of the corrective action management unit-eligible waste in the landfill within thirty calendar days of notification; the department may extend the review period an additional thirty calendar days because of public concerns or insufficient information.

d. Corrective action management unit-eligible wastes may not be placed in the landfill until the department has notified the facility owner or operator that the department does not object to its placement.

e. If the department objects to the placement or does not notify the facility owner or operator that the department has chosen not to object, the facility may not receive the waste, notwithstanding subsection 1 of section 33.1-24-06-10, until the objection has

been resolved, or the owner or operator obtains a permit modification in accordance with the procedures of section 33.1-24-06-14 specifically authorizing receipt of the waste.

f. As part of the permit issuance or permit modification process of subsection 4, the department may modify, reduce, or eliminate the notification requirements of this subsection as they apply to specific categories of corrective action management unit-eligible waste, based on minimal risk.

6. Generators of corrective action management unit-eligible wastes sent offsite to a hazardous waste landfill under this section must comply with the requirements of subdivision d of subsection 1 of section 33.1-24-05-256; offsite facilities treating corrective action management unit-eligible wastes to comply with this section must comply with the requirements of subdivision d of subsection 2 of section 33.1-24-05-256, except that the certification must be with respect to the treatment requirements of subdivision b of subsection 1.

7. For the purposes of this section only, the "design of the corrective action management unit" in subparagraph e of paragraph 5 of subdivision d of subsection 5 of section 33.1-24-05-552 means design of the permitted hazardous waste landfill.

33.1-24-05-600. Definitions for the management of used oil.

Terms that are defined in sections 33.1-24-01-04, 33.1-24-02-01, and chapter 33.1-24-08 have the same meanings when used in sections 33.1-24-05-600 through 33.1-24-05-689.

1. "Aboveground tank" means a tank used to store or process used oil that is not an underground storage tank as defined in chapter 33.1-24-08.
2. "Container" means any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.
3. "Do-it-yourselfer used oil collection center" means any site or facility that accepts or aggregates and stores used oil collected only from household do-it-yourselfers.
4. "Existing tank" means a tank that is used for the storage or processing of used oil and that is in operation, or for which installation has commenced on or prior to the effective date of the authorized used oil program for the state in which the tank is located. Installation will be considered to have commenced if the owner or operator has obtained all federal, state, and local approvals or permits necessary to begin installation of the tank and if either:
 - a. A continuous onsite installation program has begun; or
 - b. The owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for installation of the tank to be completed within a reasonable time.
5. "Household do-it-yourselfer used oil" means oil that is derived from households, such as used oil generated by individuals who generate used oil through the maintenance of their personal vehicles.
6. "Household do-it-yourselfer used oil generator" means an individual who generates household do-it-yourselfer used oil.
7. "New tank" means a tank that will be used to store or process used oil and for which installation has commenced after the effective date of the authorized used oil program for the state in which the tank is located.
8. "Petroleum refining facility" means an establishment primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, and lubricants, through fractionation, straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking or other processes, for example, facilities classified as standard industrial code 2911.
9. "Processing" means chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production of, fuel oils, lubricants, or other used oil-derived product. Processing includes blending used oil with virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation, and re-refining.
10. "Re-refining distillation bottoms" means the heavy fraction produced by vacuum distillation of filtered and dehydrated used oil. The composition of still bottoms varies with column operation and feedstock.

11. "Tank" means any stationary device, designed to contain an accumulation of used oil which is constructed primarily of nonearthen materials, (for example, wood, concrete, steel, plastic) which provides structural support.
12. "Used oil" means any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities.
13. "Used oil aggregation point" means any site or facility that accepts, aggregates, or stores, or any combination, used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than fifty-five gallons. Used oil aggregation points may also accept used oil from household do-it-yourselfers.
14. "Used oil burner" means a facility where used oil not meeting the specification requirements in section 33.1-24-05-611 is burned for energy recovery in devices identified in subsection 1 of section 33.1-24-05-661.
15. "Used oil collection center" means any site or facility that is registered, licensed and permitted, and recognized by a state, county, or municipal government to manage used oil and accepts, aggregates, and stores used oil collected from used oil generators regulated under sections 33.1-24-05-620 through 33.1-24-05-629 who bring used oil to the collection center in shipments of no more than fifty-five gallons [208.20 liters] under the provisions of section 33.1-24-05-624. Used oil collection centers may also accept used oil from household do-it-yourselfers.
16. "Used oil fuel marketer" means any person who conducts either of the following activities:
 - a. Directs a shipment of off-specification used oil from their facility to a used oil burner; or
 - b. First claims that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611.
17. "Used oil generator" means any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation.
18. "Used oil processor" means a facility that processes used oil and includes used oil re-refiners.
19. "Used oil transfer facility" means any transportation-related facility including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than twenty-four hours and not longer than thirty-five days during the normal course of transportation or prior to an activity performed pursuant to subdivision b of subsection 2 of section 33.1-24-05-620. Transfer facilities that store used oil for more than thirty-five days are subject to regulation under sections 33.1-24-05-650 through 33.1-24-05-659.
20. "Used oil transporter" means any person who transports used oil, any person who collects used oil from more than one generator and transports the collected oil, and owners and operators of used oil transfer facilities. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation but, with the following exception, may not process used oil. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (for example, settling and water separation), but that are not designed to produce (or make more amenable for production of) used oil derived products or used oil fuel.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-610. Applicability of used oil standards.

This section identifies those materials that are subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689. This section also identifies some materials that are not subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689, and indicates whether these materials may be subject to regulation as hazardous waste under article 33.1-24.

1. **Used oil.** The department presumes that used oil is to be recycled unless a used oil handler disposes of used oil or sends used oil for disposal. Except as provided in section 33.1-24-05-611, the regulations of sections 33.1-24-05-600 through 33.1-24-05-689 apply to used oil, and to materials identified in this section as being subject to regulation as used oil, whether or not the used oil or material exhibits any characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14.

2. **Mixtures of used oil and hazardous waste.**

a. Listed hazardous waste.

- (1) Mixtures of used oil and hazardous waste that is listed in sections 33.1-24-02-15 through 33.1-24-02-19 are subject to regulation as hazardous waste under chapters 33.1-24-01 through 33.1-24-04, chapters 33.1-24-06 and 33.1-24-07, and sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-929, rather than as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.
- (2) Rebuttable presumption for used oil. Used oil containing greater than or equal to one thousand parts per million total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix V of chapter 33.1-24-02).
 - (a) The rebuttable presumption does not apply to metalworking oils or fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement as described in subsection 3 of section 33.1-24-05-624, to reclaim metalworking oils or fluids. The presumption does apply to metalworking oils or fluids if such oils or fluids are recycled in any other manner, or disposed.
 - (b) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons removed from refrigeration units where the chlorofluorocarbons are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with chlorofluorocarbons that have been mixed with used oil from sources other than refrigeration units.

b. Characteristic hazardous waste. Mixtures of used oil and hazardous waste that solely exhibit one or more of the hazardous waste characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14 and mixtures of used oil and hazardous waste that is listed in sections 33.1-24-02-15 through 33.1-24-02-19 solely because it exhibits one or more of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14 are subject to:

- (1) Except as provided in paragraph 3, regulation as hazardous waste under chapters 33.1-24-01 through 33.1-24-04, chapters 33.1-24-06 and 33.1-24-07, and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929, rather than as used oil under sections 33.1-24-05-600 through 33.1-24-05-689, if the resultant mixture exhibits any characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14; or
- (2) Except as specified in paragraph 3, regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689, if the resultant mixture does not exhibit any characteristics of hazardous waste identified under sections 33.1-24-02-10 through 33.1-24-02-14.
- (3) Regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689, if the mixture is of used oil and a waste which is hazardous solely because it exhibits the characteristic of ignitability, for example, ignitable-only mineral spirits, provided that the resultant mixture does not exhibit the characteristic of ignitability under section 33.1-24-02-11.

- c. Conditionally exempt small quantity generator hazardous waste. Mixtures of used oil and conditionally exempt small quantity generator hazardous waste regulated under section 33.1-24-02-05 are subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.

3. Materials containing or otherwise contaminated with used oil.

- a. Except as provided in subdivision b, materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed to the extent possible such that no visible signs of free-flowing oil remain in or on the material:
 - (1) Are not used oil and thus not subject to sections 33.1-24-05-600 through 33.1-24-05-689, and
 - (2) If applicable are subject to the hazardous waste regulations of chapters 33.1-24-01 through 33.1-24-04, chapters 33.1-24-06 and 33.1-24-07, and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929.
- b. Materials containing or otherwise contaminated with used oil that are burned for energy recovery are subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.
- c. Used oil drained or removed from materials containing or otherwise contaminated with used oil is subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.

4. Mixtures of used oil with products.

- a. Except as provided in subdivision b, mixtures of used oil and fuels or other fuel products are subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.
- b. Mixtures of used oil and diesel fuel mixed onsite by the generator of the used oil for use in the generator's own vehicles are not subject to sections 33.1-24-05-600 through 33.1-24-05-689 once the used oil and diesel fuel have been mixed. Prior to mixing, the used oil is subject to the requirements of sections 33.1-24-05-620 through 33.1-24-05-629.

5. Materials derived from used oil.

- a. Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal (for example, re-refined lubricants) are:
 - (1) Not used oil and thus are not subject to sections 33.1-24-05-600 through 33.1-24-05-689; and
 - (2) Not solid wastes and are thus not subject to the hazardous waste regulations of chapters 33.1-24-01 through 33.1-24-04, chapters 33.1-24-06 and 33.1-24-07, and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929 as provided in paragraph a of subdivision b of subsection 3 of section 33.1-24-02-03.
- b. Materials produced from used oil that are burned for energy recovery (for example, used oil fuels) are subject to regulation as used oil under sections 33.1-24-05-600 through 33.1-24-05-689.

c. Except as provided in subdivision d, materials derived from used oil that are disposed of or used in a manner constituting disposal are:

(1) Not used oil and thus are not subject to sections 33.1-24-05-600 through 33.1-24-05-689; and

(2) Are solid wastes and thus are subject to the hazardous waste regulations of chapters 33.1-24-01 through 33.1-24-04, chapters 33.1-24-06 and 33.1-24-07, and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929 if the materials are listed or identified as hazardous wastes.

d. Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products are not subject to sections 33.1-24-05-600 through 33.1-24-05-689.

6. **Wastewater.** Wastewater, the discharge of which is subject to regulation under either section 402 or section 307(b) of the Clean Water Act (including wastewaters at facilities which have eliminated the discharge of wastewater), contaminated with de minimis quantities of used oil are not subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689. For purposes of this subsection, de minimis quantities of used oils are defined as small spills, leaks, or drippings from pumps, machinery, pipes, and other similar equipment during normal operations or small amounts of oil lost to the wastewater treatment system during washing or draining operations. This exception will not apply if the used oil is discarded as a result of abnormal manufacturing operations resulting in substantial leaks, spills, or other releases, or to used oil recovered from wastewaters.

7. **Used oil introduced into crude oil pipelines or a petroleum refining facility.**

a. Used oil mixed with crude oil or natural gas liquids (for example, in a production separator or crude oil stock tank) for insertion into a crude oil pipeline is exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689. The used oil is subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689 prior to the mixing of used oil with crude oil or natural gas liquids.

b. Mixtures of used oil and crude oil or natural gas liquids containing less than one percent used oil that are being stored or transported to a crude oil pipeline or petroleum refining facility for insertion in the refining process at a point prior to crude distillation or catalytic cracking are exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.

c. Used oil that is inserted into the petroleum refining facility process before crude distillation or catalytic cracking without prior mixing with crude oil is exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689 provided that the used oil constitutes less than one percent of the crude oil feed to any petroleum refining facility process unit at any given time. Prior to insertion in the petroleum refining facility process, the used oil is subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.

d. Except as provided in subdivision e, used oil that is introduced into a petroleum refining facility process after crude distillation or catalytic cracking is exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689 only if the used oil meets the specification of section 33.1-24-05-611. Prior to insertion in the petroleum refining facility process, the used oil is subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.

e. Used oil that is incidentally captured by a hydrocarbon recovery system or wastewater treatment system as part of routine process operations at a petroleum refining facility and

inserted into the petroleum refining facility process is exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689. This exemption does not extend to used oil which is intentionally introduced into a hydrocarbon recovery system (for example, by pouring collected used oil into the wastewater treatment system).

f. Tank bottoms from stock tanks containing exempt mixtures of used oil and crude oil or natural gas liquids are exempt from the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.

8. **Used oil on vessels.** Used oil produced on vessels from normal shipboard operations is not subject to sections 33.1-24-05-600 through 33.1-24-05-689 until it is transported ashore.

9. **Used oil containing polychlorinated biphenyls.** Used oil containing polychlorinated biphenyls (as defined at 40 CFR 761.3) at any concentration less than fifty parts per million is subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689 unless, because of dilution, it is regulated under 40 CFR part 761 as a used oil containing polychlorinated biphenyls at fifty parts per million or greater. Polychlorinated biphenyl-containing used oil subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689 may also be subject to the prohibitions and requirements found at 40 CFR part 761, including section 761.20(d) and (e). Used oil containing polychlorinated biphenyls at concentrations of fifty parts per million or greater is not subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689, but is subject to regulations under 40 CFR part 761. No person may avoid these provisions by diluting used oil containing polychlorinated biphenyls, unless otherwise specifically provided for in sections 33.1-24-05-600 through 33.1-24-05-689 or 40 CFR part 761.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-611. Used oil specifications.

Used oil burned for energy recovery, and any fuel produced from used oil by processing, blending, or other treatment, is subject to regulation under sections 33.1-24-05-600 through 33.1-24-05-689 unless it is shown not to exceed any of the allowable levels of the constituents and properties shown in table 1. Once used oil that is to be burned for energy recovery has been shown not to exceed any allowable level and the person making that showing complies with sections 33.1-24-05-672, 33.1-24-05-673, and subsection 2 of section 33.1-24-05-674, the used oil is no longer subject to sections 33.1-24-05-600 through 33.1-24-05-689.

Table 1. Used Oil Not Exceeding Any Allowable Level Shown Below Is Not Subject to Sections 33.1-24-05-600 Through 33.1-24-05-689 When Burned for Energy Recovery¹

Constituent/Property	Allowable Level
Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash point	100°F minimum
Total halogens	4,000 ppm maximum ²

¹The allowable levels do not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste (see subsection 2 of section 33.1-24-05-610).

²Used oil containing greater than or equal to one thousand parts per million total halogens is presumed to be a hazardous

waste under the rebuttable presumption provided under subdivision a of subsection 2 of section 33.1-24-05-610. Such used oil is subject to sections 33.1-24-05-525 through 33.1-24-05-549 rather than sections 33.1-24-05-600 through 33.1-24-05-689 when burned for energy recovery unless the presumption of mixing can be successfully rebutted.

Note: Applicable standards for the burning of used oil containing polychlorinated biphenyls are imposed by 40 CFR 761.20(e).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-612. Prohibitions.

1. Surface impoundment prohibition. Used oil shall not be managed in surface impoundments or waste piles unless the units are subject to regulation under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16.
2. Use as a dust suppressant. The use of used oil as a dust suppressant is prohibited.
3. Burning in particular units. Off-specification used oil fuel may be burned for energy recovery in only the following devices:
 - a. Industrial furnaces identified in section 33.1-24-01-04;
 - b. Boilers, as defined in section 33.1-24-01-04, that are identified as follows:
 - (1) Industrial boilers located on the site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes;
 - (2) Utility boilers used to produce electric power, steam, heated or cooled air, or other gases or fluids for sale; or
 - (3) Used oil-fired space heaters provided that the burner meets the provisions of section 33.1-24-05-623.
 - c. Hazardous waste incinerators subject to regulation under sections 33.1-24-05-144 through 33.1-24-05-159 or the applicable requirements of subsection 5 of section 33.1-24-06-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-613. [Reserved].

33.1-24-05-614. [Reserved].

33.1-24-05-615. [Reserved].

33.1-24-05-616. [Reserved].

33.1-24-05-617. [Reserved].

33.1-24-05-618. [Reserved].

33.1-24-05-619. [Reserved].

33.1-24-05-620. Applicability of standards for used oil generators.

1. **General.** Except as provided in subdivisions a through d, sections 33.1-24-05-620 through 33.1-24-05-629 applies to all used oil generators. A used oil generator is any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation.
 - a. Household do-it-yourselfer used oil generators. Household do-it-yourselfer used oil generators are not subject to regulation under sections 33.1-24-05-620 through 33.1-24-05-629.
 - b. Vessels. Vessels at sea or at port are not subject to sections 33.1-24-05-620 through 33.1-24-05-629. For purposes of sections 33.1-24-05-620 through 33.1-24-05-629, used oil produced on vessels from normal shipboard operations is considered to be generated at the time it is transported ashore. The owner or operator of the vessel and the persons removing or accepting used oil from the vessel are co-generators of the used oil and are both responsible for managing the waste in compliance with sections 33.1-24-05-620 through 33.1-24-05-629 once the used oil is transported ashore. The co-generators may decide among them which party will fulfill the requirements of sections 33.1-24-05-620 through 33.1-24-05-629.
 - c. Diesel fuel. Mixtures of used oil and diesel fuel mixed by the generator of the used oil for use in the generator's own vehicles are not subject to sections 33.1-24-05-660 through 33.1-24-05-689 once the used oil and diesel fuel have been mixed. Prior to mixing, the used oil fuel is subject to the requirements of sections 33.1-24-05-620 through 33.1-24-05-629.
 - d. Farmers. Farmers who generate an average of twenty-five gallons [94.64 liters] per month or less of used oil from vehicles or machinery used on the farm in a calendar year are not subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.
2. **Other applicable provisions.** Used oil generators who conduct the following activities are subject to the requirements of other applicable provisions of sections 33.1-24-05-600 through 33.1-24-05-689 as indicated in subdivisions a through e:

- a. Generators who transport used oil, except under the self-transport provisions of subsections 1 and 2 of section 33.1-24-05-624, must also comply with sections 33.1-24-05-640 through 33.1-24-05-649.
- b. Generators who process used oil must also comply with sections 33.1-24-05-650 through 33.1-24-05-659.
 - (1) Except as provided in paragraph 2, generators who process or re-refine used oil must also comply with sections 33.1-24-05-650 through 33.1-24-05-659.
 - (2) Generators who perform the following activities are not processors provided that the used oil is generated onsite and is not being sent offsite to a burner of on-specification or off-specification used oil fuel.
 - (a) Filtering, cleaning, or otherwise reconditioning used oil before returning it for reuse by the generator;
 - (b) Separating used oil from wastewater generated onsite to make the wastewater acceptable for discharge or reuse pursuant to section 402 or section 307(b) of the Clean Water Act or other applicable federal or state regulations governing the management of discharge of wastewaters;
 - (c) Using oil mist collectors to remove small droplets of used oil from in-plant air to make plant air suitable for continued recirculation;
 - (d) Draining or otherwise removing used oil from materials containing or otherwise contaminated with used oil in order to remove excessive oil to the extent possible pursuant to subsection 3 of section 33.1-24-05-610; or
 - (e) Filtering, cleaning, or otherwise reconditioning used oil before burning it in a space heater pursuant to section 33.1-24-05-623.
- c. Generators who burn off-specification used oil for energy recovery, except under the onsite space heater provisions of section 33.1-24-05-623, must also comply with sections 33.1-24-05-660 through 33.1-24-05-669.
- d. Generators who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611 must also comply with sections 33.1-24-05-670 through 33.1-24-05-679.
- e. Generators who dispose of used oil must also comply with sections 33.1-24-05-680 through 33.1-24-05-689.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-621. Hazardous waste mixing.

- 1. Mixtures of used oil and hazardous waste must be managed in accordance with subsection 2 of section 33.1-24-05-610.
- 2. The rebuttable presumption for used oil of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-05-610 applies to used oil managed by generators. Under the rebuttable presumption for used oil of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-05-610, used oil containing greater than or equal to one thousand parts per million

total halogens is presumed to be a hazardous waste and thus must be managed as hazardous waste and not as used oil unless the presumption is rebutted. However, the rebuttable presumption does not apply to certain metalworking oils or fluids and certain used oils removed from refrigeration units.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-622. Used oil storage.

Used oil generators are subject to all applicable spill prevention, control, and countermeasures [40 CFR part 112] in addition to the requirements of sections 33.1-24-05-620 through 33.1-24-05-629. Used oil generators are also subject to the underground storage tank (chapter 33.1-24-08) standards for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of sections 33.1-24-05-620 through 33.1-24-05-629.

1. **Storage units.** Used oil generators shall not store used oil in units other than tanks, containers, or units subject to regulation under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16.

2. **Condition of units.** Containers and aboveground tanks used to store used oil at generator facilities must be:

- a. In good condition (no severe rusting, apparent structural defects, or deterioration); and
- b. Not leaking (no visible leaks).

3. **Labels.**

- a. Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil".
- b. Fill pipes used to transfer used oil into underground storage tanks at generator facilities must be labeled or marked clearly with the words "Used Oil".

4. **Response to releases.** Upon detection of a release of used oil to the environment not subject to the requirements of chapter 33.1-24-08, sections 33.1-24-08-50 through 33.1-24-08-59, a generator must perform the following cleanup steps:

- a. Stop the release;
- b. Contain the released used oil;
- c. Clean up and manage properly the released used oil and other materials; and
- d. If necessary to prevent future releases, repair or replace any leaking used oil storage containers or tanks prior to returning them to service.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-623. Onsite burning in space heaters.

Generators may burn used oil in used oil-fired space heaters provided that:

1. The heater burns only used oil that the owner or operator generates or used oil received from household do-it-yourselfer used oil generators;
2. The heater is designed to have a maximum capacity of not more than five hundred thousand British thermal units per hour; and
3. The combustion gases from the heater are vented to the ambient air.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-624. Offsite shipments.

Except as provided in subsections 1 through 3, generators must ensure that their used oil is transported only by transporters who have obtained identification numbers.

1. **Self-transportation of small amounts to approved collection centers.** Generators may transport, without an identification number, used oil that is generated at the generator's site and used oil collected from household do-it-yourselfers to a used oil collection center provided that:
 - a. The generator transports the used oil in a vehicle owned by the generator or owned by an employee of the generator;
 - b. The generator transports no more than fifty-five gallons [208.20 liters] of used oil at any time; and
 - c. The generator transports the used oil to a used oil collection center that is registered, licensed, permitted, or recognized by a state, county, and municipal government to manage used oil.
2. **Self-transportation of small amounts to aggregation points owned by the generator.** Generators may transport, without an identification number, used oil that is generated at the generator's site to an aggregation point provided that:
 - a. The generator transports the used oil in a vehicle owned by the generator or owned by an employee of the generator;
 - b. The generator transports no more than fifty-five gallons [208.20 liters] of used oil at any time; and
 - c. The generator transports the used oil to an aggregation point that is owned or operated by the same generator.
3. **Tolling arrangements.** Used oil generators may arrange for used oil to be transported by a transporter without an identification number if the used oil is reclaimed under a contractual agreement pursuant to which reclaimed oil is returned by the processor to the generator for use as a lubricant, cutting oil, or coolant. The contract (known as a "tolling arrangement") must indicate:
 - a. The type of used oil and the frequency of shipments;
 - b. That the vehicle used to transport the used oil to the processing facility and to deliver recycled used oil back to the generator is owned and operated by the used oil processor; and
 - c. That reclaimed oil will be returned to the generator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-625. [Reserved].

33.1-24-05-626. [Reserved].

33.1-24-05-627. [Reserved].

33.1-24-05-628. [Reserved].

33.1-24-05-629. [Reserved].

33.1-24-05-630. Do-it-yourselfer used oil collection centers.

1. **Applicability.** This section applies to owners or operators of all do-it-yourselfer used oil collection centers. A do-it-yourselfer used oil collection center is any site or facility that accepts, aggregates, and stores used oil collected only from household do-it-yourselfers.
2. **Do-it-yourselfer used oil collection center requirements.** Owners or operators of all do-it-yourselfer used oil collection centers must comply with the generator standards in sections 33.1-24-05-620 through 33.1-24-05-629.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-631. Used oil collection centers.

1. **Applicability.** This section applies to owners or operators of used oil collection centers. A used oil collection center is any site or facility that accepts, aggregates, and stores used oil collected from used oil generators regulated under sections 33.1-24-05-620 through 33.1-24-05-629 who bring used oil to the collection center in shipments of no more than fifty-five gallons [208.20 liters] under the provisions of subsection 1 of section 33.1-24-05-624. Used oil collection centers may also accept used oil from household do-it-yourselfers.
2. **Used oil collection center requirements.** Owners or operators of all used oil collection centers must:
 - a. Comply with the generator standards in sections 33.1-24-05-620 through 33.1-24-05-629; and

b. Be registered, licensed, permitted, and recognized by a state, county, and municipal government to manage used oil.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-632. Used oil aggregation points owned by the generator.

1. **Applicability.** This section applies to owners or operators of all used oil aggregation points. A used oil aggregation point is any site or facility that accepts, aggregates, or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than fifty-five gallons [208.20 liters] under the provisions of subsection 2 of section 33.1-24-05-624. Used oil aggregation points may also accept used oil from household do-it-yourselfers.
2. **Used oil aggregation point requirements.** Owners or operators of all used oil aggregation points must comply with the generator standards in sections 33.1-24-05-620 through 33.1-24-05-629.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-633. [Reserved].

33.1-24-05-634. [Reserved].

33.1-24-05-635. [Reserved].

33.1-24-05-636. [Reserved].

33.1-24-05-637. [Reserved].

33.1-24-05-638. [Reserved].

33.1-24-05-639. [Reserved].

33.1-24-05-640. Applicability of standards for used oil transporters and transfer facilities.

1. **General.** Except as provided in subdivisions a through d, sections 33.1-24-05-640 through 33.1-24-05-649 apply to all used oil transporters. Used oil transporters are persons who transport used oil, persons who collect used oil from more than one generator and transport the collected oil, and owners and operators of used oil transfer facilities.
 - a. Sections 33.1-24-05-640 through 33.1-24-05-649 do not apply to onsite transportation.
 - b. Sections 33.1-24-05-640 through 33.1-24-05-649 do not apply to generators who transport shipments of used oil totaling fifty-five gallons [208.20 liters] or less from the generator to a used oil collection center as specified in subsection 1 of section 33.1-24-05-624.
 - c. Sections 33.1-24-05-640 through 33.1-24-05-649 do not apply to generators who transport shipments of used oil totaling fifty-five gallons [208.20 liters] or less from the generator to a used oil aggregation point owned or operated by the same generator as specified in subsection 2 of section 33.1-24-05-624.
 - d. Sections 33.1-24-05-640 through 33.1-24-05-649 do not apply to transportation of used oil from household do-it-yourselfers to a regulated used oil generator, collection center, aggregation point, processor, or burner subject to the requirements of sections 33.1-24-05-600 through 33.1-24-05-689. Except as provided in subdivisions a through c, sections 33.1-24-05-640 through 33.1-24-05-649 do, however, apply to transportation of collected household do-it-yourselfer used oil from regulated used oil generators, collection centers, aggregation points, or other facilities where household do-it-yourselfer used oil is collected.
2. **Imports and exports.** Transporters who import used oil from abroad or export used oil outside of the United States are subject to the requirements of sections 33.1-24-05-640 through 33.1-24-05-649 from the time the used oil enters and until the time it exits the United States.
3. **Trucks used to transport hazardous waste.** Unless trucks previously used to transport hazardous waste are emptied as described in section 33.1-24-02-07 prior to transporting used oil, the used oil is considered to have been mixed with the hazardous waste and must be managed as hazardous waste unless, under the provisions of subsection 2 of section 33.1-24-05-610, the hazardous waste and used oil mixture is determined not to be hazardous waste.
4. **Other applicable provisions.** Used oil transporters who conduct the following activities are also subject to other applicable provisions of sections 33.1-24-05-600 through 33.1-24-05-689 as indicated in subdivisions a through e:
 - a. Transporters who generate used oil must also comply with sections 33.1-24-05-620 through 33.1-24-05-629;
 - b. Transporters who process used oil, except as provided in section 33.1-24-05-641, must also comply with sections 33.1-24-05-650 through 33.1-24-05-659;
 - c. Transporters who burn off-specification used oil for energy recovery must also comply with sections 33.1-24-05-660 through 33.1-24-05-669;
 - d. Transporters who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611 must also comply with sections 33.1-24-05-670 through 33.1-24-05-679; and

- e. Transporters who dispose of used oil must also comply with sections 33.1-24-05-680 through 33.1-24-05-689.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-641. Restrictions on transporters who are not also processors.

1. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation. However, except as provided in subsection 2, used oil transporters may not process used oil unless they also comply with the requirements for processors in sections 33.1-24-05-650 through 33.1-24-05-659.
2. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (e.g., settling and water separation), but that are not designed to produce (or make more amenable for production of) used oil derived products unless they also comply with the processor requirements in sections 33.1-24-05-650 through 33.1-24-05-659.
3. Transporters of used oil that is removed from oil bearing electrical transformers and turbines and filtered by the transporter or at a transfer facility prior to being returned to its original use are not subject to the processor requirements of sections 33.1-24-05-650 through 33.1-24-05-659.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-642. Notification.

1. **Identification numbers.** Used oil transporters who have not previously complied with the notification requirements of section 33.1-24-03-03 must comply with these requirements and obtain an identification number.
2. **Mechanics of notification.** A used oil transporter who has not received an identification number may obtain one by notifying the department of their used oil activity by submitting either:
 - a. A completed notification of regulated waste activity form (environmental protection agency form 8700-12, or equivalent state form); or
 - b. A letter requesting an identification number.

The letter should include the following information:

- (1) Transporter company name;
- (2) Owner of the transporter company;
- (3) Mailing address for the transporter;
- (4) Name and telephone number for the transporter point of contact;
- (5) Type of transport activity (for example, transport only, transport and transfer facility, transfer facility only);
- (6) Location of all transfer facilities at which used oil is stored; and

(7) Name and telephone number for a contact at each transfer facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-643. Used oil transportation.

1. **Deliveries.** A used oil transporter shall deliver all used oil received to:

- a. Another used oil transporter, provided that the transporter has obtained an identification number;
- b. A used oil processing facility who has obtained an identification number;
- c. An off-specification used oil burner facility who has obtained an identification number; or
- d. An on-specification used oil burner facility.

2. **Department of transportation requirements.** Used oil transporters shall comply with all applicable requirements under the United States department of transportation regulations in 49 CFR parts 171 through 180. Persons transporting used oil that meets the definition of a hazardous material in 49 CFR 171.8 shall comply with all applicable regulations in 49 CFR parts 171 through 180.

3. **Used oil discharges.**

- a. In the event of a discharge of used oil during transportation, the transporter must take appropriate immediate action to protect human health and the environment (for example, notify local authorities, dike the discharge area).
- b. If a discharge of used oil occurs during transportation and an official (state or local government or a federal agency) acting within the scope of official responsibilities determines that immediate removal of the used oil is necessary to protect human health or the environment, that official may authorize the removal of the used oil by transporters who do not have identification numbers.
- c. An air, rail, highway, or water transporter who has discharged used oil must:
 - (1) Give notice, if required by 49 CFR 171.15 to the national response center (800-424-8802 or 202-426-2675); and
 - (2) Report in writing as required by 49 CFR 171.16 to the Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590.
- d. A water transporter who has discharged used oil shall give notice as required by 33 CFR 153.203.
- e. A transporter shall clean up any used oil discharge that occurs during transportation or take such action as may be required or approved by federal, state, or local officials so that the used oil discharge no longer presents a hazard to human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-644. Rebuttable presumption for used oil.

1. To ensure that used oil is not a hazardous waste under the rebuttable presumption of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-05-610, the used oil transporter shall determine whether the total halogen content of used oil being transported or stored at a transfer facility is above or below one thousand parts per million.
2. The transporter shall make this determination by:
 - a. Testing the used oil; or
 - b. Applying knowledge of the halogen content of the used oil in light of the materials or processes used.
3. If the used oil contains greater than or equal to one thousand parts per million total halogens, it is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste (for example, by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix V of chapter 33.1-24-02).
 - a. The rebuttable presumption does not apply to metalworking oils or fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement as described in subsection 3 of section 33.1-24-05-624, to reclaim metalworking oils or fluids. The presumption does apply to metalworking oils or fluids if such oils or fluids are recycled in any other manner, or disposed.
 - b. The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons removed from refrigeration units if the chlorofluorocarbons are destined for reclamation. The rebuttable presumption does apply to used oil contaminated with chlorofluorocarbons that have been mixed with used oil from sources other than refrigeration units.
4. Record retention. Records of analyses conducted or information used to comply with subsections 1, 2, and 3 must be maintained by the transporter for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-645. Used oil storage at transfer facilities.

Used oil transporters are subject to all applicable spill prevention, control, and countermeasures [40 CFR part 112] in addition to the requirements of sections 33.1-24-05-640 through 33.1-24-05-649. Used oil transporters are also subject to the underground storage tank (chapter 33.1-24-08) standards for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of sections 33.1-24-05-640 through 33.1-24-05-649.

1. **Applicability.** This section applies to used oil transfer facilities. Used oil transfer facilities are transportation-related facilities including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than twenty-four hours during the normal course of transportation and not longer than thirty-five days. Transfer facilities that store used oil for more than thirty-five days are subject to regulation under sections 33.1-24-05-650 through 33.1-24-05-659.

2. **Storage units.** Owners or operators of used oil transfer facilities may not store used oil in units other than tanks, containers, or units subject to regulation under sections 33.1-24-05-01 through 33.1-24-05-190, sections 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16.

3. **Condition of units.** Containers and aboveground tanks used to store used oil at transfer facilities must be:

- a. In good condition (no severe rusting, apparent structural defects, or deterioration); and
- b. Not leaking (no visible leaks).

4. **Secondary containment for containers.** Containers used to store used oil at transfer facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

- (1) Dikes, berms, or retaining walls; and
- (2) A floor. The floor must cover the entire area within the dikes, berms, or retaining walls; or
- (3) An equivalent secondary containment system.

b. The entire containment system, including walls and floors, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

5. **Secondary containment for existing aboveground tanks.** Existing aboveground tanks used to store used oil at transfer facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

- (1) Dikes, berms, or retaining walls; and
- (2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall except areas where existing portions of the tank meet the ground; or
- (3) An equivalent secondary containment system.

b. The entire containment system, including walls and floors, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

6. **Secondary containment for new aboveground tanks.** New aboveground tanks used to store used oil at transfer facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

- (1) Dikes, berms, or retaining walls; and
- (2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall; or
- (3) An equivalent secondary containment system.

- b. The entire containment system, including walls and floors, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

7. Labels.

- a. Containers and aboveground tanks used to store used oil at transfer facilities must be labeled or marked clearly with the words "Used Oil".
- b. Fill pipes used to transfer used oil into underground storage tanks at transfer facilities must be labeled or marked clearly with the words "Used Oil".

8. Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of chapter 33.1-24-08, sections 33.1-24-08-50 through 33.1-24-08-59, the owner or operator of a transfer facility must perform the following cleanup steps:

- a. Stop the release;
- b. Contain the released used oil;
- c. Clean up and manage properly the released used oil and other materials; and
- d. If necessary, repair or replace any leaking used oil storage containers or tanks prior to returning them to service.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-646. Tracking.

1. Acceptance. Used oil transporters must keep a record of each used oil shipment accepted for transport. Records for each shipment must include:

- a. The name and address of the generator, transporter, or processor who provided the used oil for transport;
- b. The identification number (if applicable) of the generator, transporter, or processor who provided the used oil for transport;
- c. The quantity of used oil accepted;
- d. The date of acceptance; and
- e. The signature, dated upon receipt of the used oil, of a representative of the generator, transporter, or processor who provided the used oil for transport.
- f. Intermediate rail transporters are not required to sign the record of acceptance to comply with subdivision e.

2. Deliveries. Used oil transporters must keep a record of each shipment of used oil that is delivered to another used oil transporter, or to a used oil burner, processor, or disposal facility. Records of each delivery must include:

- a. The name and address of the receiving facility or transporter;
- b. The identification number of the receiving facility or transporter;
- c. The quantity of used oil delivered;

- d. The date of delivery; and
- e. The signature, dated upon receipt of the used oil, of a representative of the receiving facility or transporter.
- f. Intermediate rail transporters are not required to sign the record of acceptance to comply with subdivision e.

3. **Exports of used oil.** Used oil transporters must maintain the records described in subdivisions a through d of subsection 2 for each shipment of used oil exported to any foreign country.

4. **Record retention.** The records described in subsections 1, 2, and 3 must be maintained for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-647. Management of residues.

Transporters who generate residues from the storage or transport of used oil must manage the residues as specified in subsection 5 of section 33.1-24-05-610.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-648. [Reserved].

33.1-24-05-649. [Reserved].

33.1-24-05-650. Applicability of standards for used oil processors.

1. The requirements of sections 33.1-24-05-650 through 33.1-24-05-659 apply to owners and operators of facilities that process used oil. Processing means chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production of, fuel oils, lubricants, or other used oil-derived products. Processing includes: blending used oil with virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation, and re-refining. The requirements of sections 33.1-24-05-650 through 33.1-24-05-659 do not apply to:

- a. Transporters who conduct incidental processing operations that occur during the normal course of transportation as provided in section 33.1-24-05-641; or
- b. Burners who conduct incidental processing operations that occur during the normal course of used oil management prior to burning as provided in subsection 2 of section 33.1-24-05-661.

2. Other applicable provisions. Used oil processors who conduct the following activities are also subject to the requirements of other applicable provisions of sections 33.1-24-05-600 through 33.1-24-05-689 as indicated in subdivisions a through e.

- a. Processors who generate used oil must also comply with sections 33.1-24-05-620 through 33.1-24-05-629;
- b. Processors who transport used oil must also comply with sections 33.1-24-05-640 through 33.1-24-05-649;
- c. Except as provided in paragraphs 1 and 2, processors who burn off-specification used oil for energy recovery must also comply with sections 33.1-24-05-660 through 33.1-24-05-669. Processors burning used oil for energy recovery under the following conditions are not subject to sections 33.1-24-05-660 through 33.1-24-05-669:
 - (1) The used oil is burned in an onsite space heater that meets the requirements of section 33.1-24-05-623; or
 - (2) The used oil is burned for purposes of processing used oil, which is considered burning incidentally to used oil processing;
- d. Processors who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611 must also comply with sections 33.1-24-05-670 through 33.1-24-05-679; and
- e. Processors who dispose of used oil also must comply with the applicable sections 33.1-24-05-680 through 33.1-24-05-689.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-651. Notification.

- 1. **Identification numbers.** Used oil processors who have not previously complied with the notification requirements of section 33.1-24-03-03 must comply with these requirements and obtain an identification number.
- 2. **Mechanics of notification.** A used oil processor who has not received an identification number may obtain one by notifying the department of their used oil activity by submitting either:
 - a. A completed notification of regulated waste activity form (environmental protection agency form 8700-12, or equivalent state form); or
 - b. A letter requesting an identification number.

The letter should include the following information:

- (1) Processor company name;
- (2) Owner of the processor company;
- (3) Mailing address for the processor;
- (4) Name and telephone number for the processor point of contact;
- (5) Type of used oil activity; and
- (6) Location of the processor facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-652. General facility standards.

1. **Preparedness and prevention.** Owners and operators of used oil processing facilities shall comply with the following requirements:

a. Maintenance and operation of facility. Facilities must be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of used oil to air, soil, or surface water which could threaten human health or the environment.

b. Required equipment. All facilities must be equipped with the following, unless none of the hazards posed by used oil handled at the facility could require a particular kind of equipment specified in paragraphs 1 through 4:

(1) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

(2) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;

(3) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and

(4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

c. Testing and maintenance of equipment. All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary to assure its proper operation in time of emergency.

d. Access to communications or alarm system.

(1) When used oil is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required in subdivision b.

(2) If there is only one employee on the premises while the facility is operating, the employee must have immediate access to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required in subdivision b.

e. Required aisle space. The owner or operator must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

f. Arrangements with local authorities.

- (1) The owner or operator shall attempt to make the following arrangements, as appropriate for the type of used oil handled at the facility and the potential need for the services of these organizations:
 - (a) Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of used oil handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes;
 - (b) Where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department, and agreements with any others to provide support to the primary emergency authority;
 - (c) Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and
 - (d) Arrangements to familiarize local hospitals with the properties of used oil handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.
- (2) Where state or local authorities decline to enter into such arrangements, the owner or operator must document the refusal in the operating record.

2. Contingency plan and emergency procedures. Owners and operators of used oil processing facilities must comply with the following requirements:

a. Purpose and implementation of contingency plan.

- (1) Each owner or operator must have a contingency plan for the facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of used oil to air, soil, or surface water.
- (2) The provisions of the plan must be carried out immediately when there is a fire, explosion, or release of used oil which could threaten human health or the environment.

b. Content of contingency plan.

- (1) The contingency plan must describe the actions facility personnel must take to comply with subdivisions a and f in response to fires, explosions, or any unplanned sudden or nonsudden release of used oil to air, soil, or surface water at the facility.
- (2) If the owner or operator has already prepared a spill prevention, control, and countermeasures (SPCC) plan in accordance with 40 CFR part 112, or 40 CFR part 1510 of chapter V, or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate used oil management provisions that are sufficient to comply with the requirements of sections 33.1-24-05-600 through 33.1-24-05-689.
- (3) The plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, pursuant to subdivision f of subsection 1.
- (4) The plan must list names, addresses, and telephone numbers (office and home) of all persons qualified to act as emergency coordinator (see subdivision e), and this

list must be kept up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.

(5) The plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.

(6) The plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of used oil or fires).

c. Copies of contingency plan. A copy of the contingency plan and all revisions to the plan must be:

(1) Maintained at the facility; and

(2) Submitted to all local police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

d. Amendment of contingency plan. The contingency plan must be reviewed, and immediately amended, if necessary, when:

(1) Applicable regulations are revised;

(2) The plan fails in an emergency;

(3) The facility changes (in its design, construction, operation, maintenance, or other circumstances) in a way that materially increases the potential for fires, explosions, or releases of used oil, or changes the response necessary in an emergency;

(4) The list of emergency coordinators changes; or

(5) The list of emergency equipment changes.

e. Emergency coordinator. At all times, there must be at least one employee either on the facility premises or on call (for example, available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristic of used oil handled, the location of all records within the facility, and facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

Guidance: The emergency coordinator's responsibilities are more fully spelled out in subdivision f. Applicable responsibilities for the emergency coordinator vary, depending on factors such as type and variety of used oil handled by the facility, and type and complexity of the facility.

f. Emergency procedures.

- (1) When there is an imminent or actual emergency situation, the emergency coordinator (or the designee when the emergency coordinator is on call) must immediately:

 - (a) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and
 - (b) Notify appropriate state or local agencies with designated response roles if their help is needed.
- (2) When there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analyses.
- (3) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (for example, the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water runoffs from water or chemical agents used to control fire and heat-induced explosions).
- (4) If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health, or the environment, outside the facility, the emergency coordinator must report these findings as follows:

 - (a) If the emergency coordinator's assessment indicated that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and
 - (b) The emergency coordinator must immediately notify either the government official designated as the onscene coordinator for the geographical area (in the applicable regional contingency plan under part 1510 of 40 CFR), or the national response center (using their twenty-four-hour toll-free number 800-424-8802). The report must include:

 - [1] Name and telephone number of reporter;
 - [2] Name and address of facility;
 - [3] Time and type of incident (for example, release, fire);
 - [4] Name and quantity of materials involved, to the extent known;
 - [5] The extent of injuries, if any; and
 - [6] The possible hazards to human health, or the environment, outside the facility.
- (5) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other used oil or hazardous waste at the facility. These measures must include, where applicable, stopping processes and operation, collecting and containing released used oil, and removing or isolating containers.

- (6) If the facility stops operation in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.
- (7) Immediately after an emergency, the emergency coordinator must provide for recycling, storing, or disposing of recovered used oil, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.
- (8) The emergency coordinator must ensure that, in the affected areas of the facility:
 - (a) No waste or used oil that may be incompatible with the released material is recycled, treated, stored, or disposed of until cleanup procedures are completed; and
 - (b) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.
 - (c) The owner or operator must notify the department, and appropriate state and local authorities that the facility is in compliance with subparagraphs a and b before operations are resumed in the affected areas of the facility.
- (9) The owner or operator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within fifteen days after the incident, the owner or operator must submit a written report on the incident to the department. The report must include:
 - (a) Name, address, and telephone number of the owner or operator;
 - (b) Name, address, and telephone number of the facility;
 - (c) Date, time, and type of incident (for example, fire, explosion);
 - (d) Name and quantity of materials involved;
 - (e) The extent of injuries, if any;
 - (f) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and
 - (g) Estimated quantity and disposition of recovered material that resulted from the incident.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-653. Rebuttable presumption for used oil.

1. To ensure that used oil managed at a processing facility is not hazardous waste under the rebuttable presumption of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-05-610, the owner or operator of a used oil processing facility must determine whether the total halogen content of used oil managed at the facility is above or below one thousand parts per million.
2. The owner or operator must make this determination by:
 - a. Testing the used oil; or

b. Applying knowledge of the halogen content of the used oil in light of the materials or processes used.

3. If the used oil contains greater than or equal to one thousand parts per million total halogens, it is presumed to be hazardous waste because it has been mixed with halogenated hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste (for example, by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix V of chapter 33.1-24-02).

a. The rebuttable presumption does not apply to metalworking oils or fluids containing chlorinated paraffins, if they are processed, through a tolling agreement, to reclaim metalworking oils or fluids. The presumption does apply to metalworking oils or fluids if such oils or fluids are recycled in any other manner, or disposed.

b. The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons removed from refrigeration units where the chlorofluorocarbons are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with chlorofluorocarbons that have been mixed with used oil from sources other than refrigeration units.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-654. Used oil management.

Used oil processors are subject to all applicable spill prevention, control, and countermeasures [40 CFR part 112] in addition to the requirements of sections 33.1-24-05-650 through 33.1-24-05-659. Used oil processors are also subject to the underground storage tank (chapter 33.1-24-08) standards for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of sections 33.1-24-05-650 through 33.1-24-05-659.

1. **Management units.** Used oil processors may not store used oil in units other than tanks, containers, or units subject to regulation under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16.

2. **Condition of units.** Containers and aboveground tanks used to store or process used oil at processing facilities must be:

a. In good condition (no severe rusting, apparent structural defects, or deterioration); and

b. Not leaking (no visible leaks).

3. **Secondary containment for containers.** Containers used to store or process used oil at processing facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining walls;
or

(3) An equivalent secondary containment system.

b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

4. **Secondary containment for existing aboveground tanks.** Existing aboveground tanks used to store or process used oil at processing facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall except areas where existing portions of the tank meet the ground; or

(3) An equivalent secondary containment system.

b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

5. **Secondary containment for new aboveground tanks.** New aboveground tanks used to store or process used oil at processing facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall; or

(3) An equivalent secondary containment system.

b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

6. **Labels.**

a. Containers and aboveground tanks used to store or process used oil at processing facilities must be labeled or marked clearly with the words "Used Oil".

b. Fill pipes used to transfer used oil into underground storage tanks at processing facilities must be labeled or marked clearly with the words "Used Oil".

7. **Response to releases.** Upon detection of a release of used oil to the environment not subject to the requirements of chapter 33.1-24-08, sections 33.1-24-08-50 through 33.1-24-08-59, an owner or operator must perform the following cleanup steps:

a. Stop the release;

b. Contain the released used oil;

c. Clean up and manage properly the released used oil and other materials; and

d. If necessary, repair or replace any leaking used oil storage containers or tanks prior to returning them to service.

8. Closure.

a. Aboveground tanks. Owners and operators who store or process used oil in aboveground tanks must comply with the following requirements:

- (1) At closure of a tank system, the owner or operator must remove or decontaminate used oil residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste, unless the materials are not hazardous waste under article 33.1-24.
- (2) If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in paragraph 1, then the owner or operator must close the tank system and perform postclosure care in accordance with the closure and postclosure care requirements that apply to hazardous waste landfills (section 33.1-24-05-180).

b. Containers. Owners and operators who store used oil in containers must comply with the following requirements:

- (1) At closure, containers holding used oils or residues of used oil must be removed from the site; and
- (2) The owner or operator must remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste, unless the materials are not hazardous waste under chapter 33.1-24-02.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-655. Analysis plan.

Owners or operators of used oil processing facilities must develop and follow a written analysis plan describing the procedures that will be used to comply with the analysis requirements of section 33.1-24-05-653 and, if applicable, section 33.1-24-05-672. The owner or operator must keep the plan at the facility.

1. Rebuttable presumption for used oil in section 33.1-24-05-653. At a minimum, the plan must specify the following:

a. Whether sample analyses or knowledge of the halogen content of the used oil will be used to make this determination.

b. If sample analyses are used to make this determination:

- (1) The sampling method used to obtain representative samples to be analyzed. A representative sample may be obtained using either:
 - (a) One of the sampling methods in appendix I of chapter 33.1-24-02; or
 - (b) A method shown to be equivalent under sections 33.1-24-01-06 and 33.1-24-01-07;
- (2) The frequency of sampling to be performed, and whether the analysis will be performed onsite or offsite; and

(3) The methods used to analyze used oil for the parameters specified in section 33.1-24-05-653; and

c. The type of information that will be used to determine the halogen content of the used oil.

2. On-specification used oil fuel in section 33.1-24-05-672. At a minimum, the plan must specify the following if section 33.1-24-05-672 is applicable:

a. Whether sample analyses or other information will be used to make this determination;

b. If sample analyses are used to make this determination:

(1) The sampling method used to obtain representative samples to be analyzed. A representative sample may be obtained using either:

(a) One of the sampling methods in appendix I of chapter 33.1-24-02; or

(b) A method shown to be equivalent under sections 33.1-24-01-06 and 33.1-24-01-07;

(2) Whether used oil will be sampled and analyzed prior to or after any processing;

(3) The frequency of sampling to be performed, and whether the analysis will be performed onsite or offsite; and

(4) The methods used to analyze used oil for the parameters specified in section 33.1-24-05-672; and

c. The type of information that will be used to make the on-specification used oil fuel determination.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-656. Tracking.

1. **Acceptance.** Used oil processors must keep a record of each used oil shipment accepted for processing. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment must include the following information:

a. The name and address of the transporter who delivered the used oil to the processor;

b. The name and address of the generator or processor from whom the used oil was sent for processing;

c. The identification number of the transporter who delivered the used oil to the processor;

d. The identification number (if applicable) of the generator or processor from whom the used oil was sent for processing;

e. The quantity of used oil accepted; and

f. The date of acceptance.

2. **Delivery.** Used oil processor must keep a record of each shipment of used oil that is shipped to a used oil burner, processor, or disposal facility. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment must include the following information:

- a. The name and address of the transporter who delivers the used oil to the burner, processor, or disposal facility;
- b. The name and address of the burner, processor, or disposal facility that will receive the used oil;
- c. The identification number of the transporter who delivers the used oil to the burner, processor, or disposal facility;
- d. The identification number of the burner, processor, or disposal facility that will receive the used oil;
- e. The quantity of used oil shipped; and
- f. The date of shipment.

3. **Record retention.** The records described in subsections 1 and 2 must be maintained for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-657. Operating record and reporting.

1. Operating record.

- a. The owner or operator must keep a written operating record at the facility.
- b. The following information must be recorded, as it becomes available, and maintained in the operating record until closure of the facility:
 - (1) Records and results of used oil analyses performed as described in the analysis plan required under section 33.1-24-05-655; and
 - (2) Summary reports and details of all incidents that require implementation of the contingency plan as specified in subsection 2 of section 33.1-24-05-652.

2. **Reporting.** A used oil processor must report to the department, in the form of a letter, on a biennial basis (by March first of each even-numbered year), the following information concerning used oil activities during the previous calendar year:

- a. The identification number, name, and address of the processor;
- b. The calendar year covered by the report; and
- c. The quantities of used oil accepted for processing and the manner in which the used oil is processed, including the specific processes employed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-658. Offsite shipments of used oil.

Used oil processors who initiate shipments of used oil offsite must ship the used oil using a used oil transporter who has obtained an identification number.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-659. Management of residues.

Owners and operators who generate residues from the storage or processing of used oil must manage the residues as specified in subsection 5 of section 33.1-24-05-610.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-660. Applicability of standards for used oil burners who burn off-specification used oil for energy recovery.

1. **General.** The requirements of sections 33.1-24-05-660 through 33.1-24-05-669 apply to used oil burners except as specified in subdivisions a and b. A used oil burner is a facility where used oil not meeting the specification requirements in section 33.1-24-05-611 is burned for energy recovery in devices identified in subsection 1 of section 33.1-24-05-661. Facilities burning used oil for energy recovery under the following conditions are not subject to sections 33.1-24-05-660 through 33.1-24-05-669:

- a. The used oil is burned by the generator in an onsite space heater under the provisions of section 33.1-24-05-623; or
- b. The used oil is burned by a processor for purposes of processing used oil, which is considered burning incidentally to used oil processing.

2. **Other applicable provisions.** Used oil burners who conduct the following activities are also subject to the requirements of other applicable provisions of sections 33.1-24-05-600 through 33.1-24-05-689 as indicated below.

- a. Burners who generate used oil must also comply with sections 33.1-24-05-620 through 33.1-24-05-629;
- b. Burners who transport used oil must also comply with sections 33.1-24-05-640 through 33.1-24-05-649;
- c. Except as provided in subsection 2 of section 33.1-24-05-661, burners who process or re-refine used oil must also comply with sections 33.1-24-05-650 through 33.1-24-05-659;
- d. Burners who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611 must also comply with sections 33.1-24-05-670 through 33.1-24-05-679; and
- e. Burners who dispose of used oil must comply with sections 33.1-24-05-680 through 33.1-24-05-689.

3. **Specification fuel.** Sections 33.1-24-05-660 through 33.1-24-05-669 do not apply to persons burning used oil that meets the used oil fuel specifications of section 33.1-24-05-611, provided that the burner complies with the requirements of sections 33.1-24-05-670 through 33.1-24-05-679.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-661. Restrictions on burning.

1. Off-specification used oil fuel may be burned for energy recovery in only the following devices:
 - a. Industrial furnaces identified in section 33.1-24-01-04;
 - b. Boilers, as defined in section 33.1-24-01-04, which are identified as follows:
 - (1) Industrial boilers located on the site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes;
 - (2) Utility boilers used to produce electric power, steam, heated or cooled air, or other gases or fluids for sale; or
 - (3) Used oil-fired space heaters provided that the burner meets the provisions of section 33.1-24-05-623; or
 - c. Hazardous waste incinerators subject to regulation under sections 33.1-24-05-144 through 33.1-24-05-159.
2. Used oil burners.
 - a. With the following exception, used oil burners may not process used oil unless they also comply with the requirements of sections 33.1-24-05-650 through 33.1-24-05-659.
 - b. Used oil burners may aggregate off-specification used oil with virgin oil or on-specification used oil for purposes of burning, but may not aggregate for purposes of producing on-specification used oil.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-662. Notification.

1. **Identification numbers.** Used oil burners who have not previously complied with the notification requirements of section 33.1-24-03-03 must comply with these requirements and obtain an identification number.
2. **Mechanics of notification.** A used oil burner who has not received an identification number may obtain one by notifying the department of the used oil burner's used oil activity by submitting either:
 - a. A completed notification of regulated waste activity form (environmental protection agency form 8700-12, or equivalent state form); or
 - b. A letter requesting an identification number. The letter should include the following information:
 - (1) Burner company name;
 - (2) Owner of the burner company;
 - (3) Mailing address for the burner;
 - (4) Name and telephone number for the burner point of contact;

(5) Type of used oil activity; and

(6) Location of the burner facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-663. Rebuttable presumption for used oil.

1. To ensure that used oil managed at a used oil burner facility is not hazardous waste under the rebuttable presumption of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-05-610, a used oil burner must determine whether the total halogen content of used oil managed at the facility is above or below one thousand parts per million.
2. The used oil burner must determine if the used oil contains above or below one thousand parts per million total halogens by:
 - a. Testing the used oil;
 - b. Applying knowledge of the halogen content of the used oil in light of the materials or processes used; or
 - c. If the used oil has been received from a processor subject to regulation under sections 33.1-24-05-650 through 33.1-24-05-659, using information provided by the processor.
3. If the used oil contains greater than or equal to one thousand parts per million total halogens, it is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste (for example, by showing that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix V of chapter 33.1-24-02).
 - a. The rebuttable presumption does not apply to metalworking oils or fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement as described in subsection 3 of section 33.1-24-05-624, to reclaim metalworking oils or fluids. The presumption does apply to metalworking oils or fluids if such oils or fluids are recycled in any other manner, or disposed.
 - b. The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons removed from refrigeration units where the chlorofluorocarbons are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with chlorofluorocarbons that have been mixed with used oil from sources other than refrigeration units.
4. Record retention. Records of analyses conducted or information used to comply with subsections 1, 2, and 3 must be maintained by the burner for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-664. Used oil storage.

Used oil burners are subject to all applicable spill prevention, control, and countermeasures [40 CFR part 112] in addition to the requirements of sections 33.1-24-05-660 through 33.1-24-05-669.

Used oil burners are also subject to the underground storage tank (chapter 33.1-24-08) standards for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of sections 33.1-24-05-660 through 33.1-24-05-669.

1. **Storage units.** Used oil burners may not store used oil in units other than tanks, containers, or units subject to regulation under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or the applicable requirements of subsection 5 of section 33.1-24-06-16.

2. **Condition of units.** Containers and aboveground tanks used to store oil at burner facilities must be:

a. In good condition (no severe rusting, apparent structural defects, or deterioration); and

b. Not leaking (no visible leaks).

3. **Secondary containment for containers.** Containers used to store used oil at burner facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall.

b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

4. **Secondary containment for existing aboveground tanks.** Existing aboveground tanks used to store used oil at burner facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall except areas where existing portions of the tank meet the ground; or

(3) An equivalent secondary containment system.

b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

5. **Secondary containment for new aboveground tanks.** New aboveground tanks used to store used oil at burner facilities must be equipped with a secondary containment system.

a. The secondary containment system must consist of, at a minimum:

(1) Dikes, berms, or retaining walls; and

(2) A floor. The floor must cover the entire area within the dike, berm, or retaining wall; or

(3) An equivalent secondary containment system.

- b. The entire containment system, including walls and floor, must be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, ground water, or surface water.

6. Labels.

- a. Containers and aboveground tanks used to store used oil at burner facilities must be labeled or marked clearly with the words "Used Oil".
- b. Fill pipes used to transfer used oil into underground storage tanks at burner facilities must be labeled or marked clearly with the words "Used Oil".

7. Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of chapter 33.1-24-08, sections 33.1-24-08-50 through 33.1-24-08-59, a burner must perform the following cleanup steps:

- a. Stop the release;
- b. Contain the released used oil;
- c. Clean up and manage properly the released used oil and other materials; and
- d. If necessary, repair or replace any leaking used oil storage containers or tanks prior to returning them to service.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-665. Tracking.

1. Acceptance. Used oil burners must keep a record of each used oil shipment accepted for burning. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment must include the following information:

- a. The name and address of the transporter who delivered the used oil to the burner;
- b. The name and address of the generator or processor from whom the used oil was sent to the burner;
- c. The identification number of the transporter who delivered the used oil to the burner;
- d. The identification number (if applicable) of the generator or processor from whom the used oil was sent to the burner;
- e. The quantity of used oil accepted; and
- f. The date of acceptance.

2. Record retention. The records described in subsection 1 must be maintained for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-666. Notices.

1. **Certification.** Before a burner accepts the first shipment of off-specification used oil fuel from a generator, transporter, or processor, the burner must provide to the generator, transporter, or processor a one-time written and signed notice certifying that:
 - a. The burner has notified the department stating the location and general description of the burner's used oil management activities; and
 - b. The burner will burn the used oil only in an industrial furnace or boiler identified in subsection 1 of section 33.1-24-05-661.
2. **Certification retention.** The certification described in subsection 1 must be maintained for three years from the date the burner last receives shipment of off-specification used oil from that generator, transporter, or processor.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-667. Management of residues.

Burners who generate residues from the storage or burning of used oil must manage the residues as specified in subsection 5 of section 33.1-24-05-610.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-668. [Reserved].

33.1-24-05-669. [Reserved].

33.1-24-05-670. Applicability of standards for used oil fuel marketers.

1. Any person who conducts either of the following activities is subject to the requirements of sections 33.1-24-05-670 through 33.1-24-05-679:
 - a. Directs a shipment of off-specification used oil from their facility to a used oil burner; or
 - b. First claims that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in section 33.1-24-05-611.
2. The following persons are not marketers subject to sections 33.1-24-05-670 through 33.1-24-05-679:
 - a. Used oil generators and transporters who transport used oil received only from generators, unless the generator or transporter directs a shipment of off-specification used oil from their facility to a used oil burner. However, processors who burn some used oil fuel for purposes of processing are considered to be burning incidentally to processing. Thus, generators and transporters who direct shipments of off-specification used oil to processors who incidentally burn used oil are not marketers subject to sections 33.1-24-05-670 through 33.1-24-05-679;

b. Persons who direct shipments of on-specification used oil and who are not the first person to claim the oil meets the used oil fuel specifications of section 33.1-24-05-611.

3. Any person subject to the requirements of sections 33.1-24-05-670 through 33.1-24-05-679 must also comply with one of the following:

a. Sections 33.1-24-05-620 through 33.1-24-05-629 - standards for used oil generators;

b. Sections 33.1-24-05-640 through 33.1-24-05-649 - standards for used oil transporters and transfer facilities;

c. Sections 33.1-24-05-650 through 33.1-24-05-659 - standards for used oil processors; or

d. Sections 33.1-24-05-660 through 33.1-24-05-669 - standards for used oil burners who burn off-specification used oil for energy recovery.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-671. Prohibitions.

A used oil fuel marketer may initiate a shipment of off-specification used oil only to a used oil burner who:

1. Has an identification number; and

2. Burns the used oil in an industrial furnace or boiler identified in subsection 1 of section 33.1-24-05-661.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-672. On-specification used oil fuel.

1. **Analysis of used oil fuel.** A generator, transporter, processor, or burner may determine that used oil that is to be burned for energy recovery meets the fuel specifications of section 33.1-24-05-611 by performing analyses or obtaining copies of analyses or other information documenting that the used oil fuel meets the specifications.

2. **Record retention.** A generator, transporter, processor, or burner who first claims that used oil that is to be burned for energy recovery meets the specifications for used oil fuel under section 33.1-24-05-611, must keep copies of analyses of the used oil (or other information used to make the determination) for three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-673. Notification.

1. Identification numbers. A used oil fuel marketer subject to the requirements of sections 33.1-24-05-670 through 33.1-24-05-679 who has not previously complied with the notification requirements of section 33.1-24-03-03 must comply with these requirements and obtain an identification number.

2. A marketer who has not received an identification number may obtain one by notifying the department of their used oil activity by submitting either:

a. A completed notification of regulated waste activity form (environmental protection agency form 8700-12, or equivalent state form); or

b. A letter requesting an identification number. The letter should include the following information:

(1) Marketer company name;

(2) Owner of the marketer;

(3) Mailing address for the marketer;

(4) Name and telephone number for the marketer point of contact; and

(5) Type of used oil activity (for example, generator directing shipments of off-specification used oil to a burner).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-674. Tracking.

1. **Off-specification used oil delivery.** Any used oil marketer who directs a shipment of off-specification used oil to a burner must keep a record of each shipment of used oil to a used oil burner. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment must include the following information:

a. The name and address of the transporter who delivers the used oil to the burner;

b. The name and address of the burner who will receive the used oil;

c. The identification number of the transporter who delivers the used oil to the burner;

d. The identification number of the burner;

e. The quantity of used oil shipped; and

f. The date of shipment.

2. **On-specification used oil delivery.** A generator, transporter, processor, or burner who first claims that used oil that is to be burned for energy recovery meets the fuel specifications under section 33.1-24-05-611 must keep a record of each shipment of used oil to the facility to which it delivers the used oil. Records for each shipment must include the following information:

a. The name and address of the facility receiving the shipment;

b. The quantity of used oil fuel delivered;

c. The date of shipment or delivery; and

d. A cross-reference to the record of used oil analysis or other information used to make the determination that the oil meets the specifications as required under subsection 1 of section 33.1-24-05-672.

3. **Record retention.** The records described in subsections 1 and 2 must be maintained for at least three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-675. Notices.

1. **Certification.** Before a used oil generator, transporter, or processor directs the first shipment of off-specification used oil fuel to a burner, the generator, transporter, or processor must obtain a one-time written and signed notice from the burner certifying that:

a. The burner has notified the department stating the location and general description of used oil management activities; and

b. The burner will burn the off-specification used oil only in an industrial furnace or boiler identified in subsection 1 of section 33.1-24-05-661.

2. **Certification retention.** The certification described in subsection 1 must be maintained for three years from the date the last shipment of off-specification used oil is shipped to the burner.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-676. [Reserved].

33.1-24-05-677. [Reserved].

33.1-24-05-678. [Reserved].

33.1-24-05-679. [Reserved].

33.1-24-05-680. Applicability of standards for disposal of used oil.

The requirements of sections 33.1-24-05-680 through 33.1-24-05-689 apply to all used oils that cannot be recycled and are therefore being disposed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-681. Disposal.

1. **Disposal of hazardous used oils.** Used oils that are identified as a hazardous waste and cannot be recycled in accordance with sections 33.1-24-05-600 through 33.1-24-05-689 must be managed in accordance with the hazardous waste management requirements of article 33.1-24.
2. **Disposal of nonhazardous used oils.** Used oils that are not hazardous wastes and cannot be recycled under sections 33.1-24-05-600 through 33.1-24-05-689 must be disposed in accordance with the requirements of article 33.1-20.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-682. [Reserved].

33.1-24-05-695. [Reserved].

33.1-24-05-696. [Reserved].

33.1-24-05-697. [Reserved].

33.1-24-05-698. [Reserved].

33.1-24-05-699. [Reserved].

33.1-24-05-700. [Reserved].

33.1-24-05-701. Scope of universal waste rule.

1. Sections 33.1-24-05-700 through 33.1-24-05-799 establish requirements for managing the following:
 - a. Batteries as described in section 33.1-24-05-702;
 - b. Pesticides as described in section 33.1-24-05-703;
 - c. Mercury-containing equipment as described in section 33.1-24-05-704; and
 - d. Lamps as described in section 33.1-24-05-705.

2. Sections 33.1-24-05-700 through 33.1-24-05-799 provide an alternative set of management standards in lieu of regulation under chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-702. Applicability - Batteries.

1. Batteries covered under sections 33.1-24-05-700 through 33.1-24-05-799.

- a. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 apply to persons managing batteries as described in section 33.1-24-01-04, except as those listed in subsection 2.
- b. Spent lead-acid batteries which are not managed under sections 33.1-24-05-235 through 33.1-24-05-249 are subject to management under sections 33.1-24-05-700 through 33.1-24-05-799.

2. Batteries not covered under sections 33.1-24-05-700 through 33.1-24-05-799. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 do not apply to persons managing the following batteries:

- a. Spent lead-acid batteries that are managed under sections 33.1-24-05-235 through 33.1-24-05-249.
- b. Batteries, as described in section 33.1-24-01-04, that are not wastes under chapter 33.1-24-02, including those that do not meet the criteria for waste generation in subsection 3.
- c. Batteries, as described in section 33.1-24-01-04, that are not hazardous waste. A battery is a hazardous waste if it exhibits one or more of the characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14.

3. Generation of waste batteries.

- a. A used battery becomes a waste on the date it is discarded (for example, when sent for reclamation).
- b. An unused battery becomes a waste on the date the handler decides to discard it.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-703. Applicability - Pesticides.

1. Pesticides covered under sections 33.1-24-05-700 through 33.1-24-05-799. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 apply to persons managing pesticides, as described in section 33.1-24-01-04, meeting the following conditions, except those listed in subsection 2:

- a. Recalled pesticides that are:
 - (1) Stocks of a suspended and canceled pesticide that are part of a voluntary or mandatory recall under federal Insecticide, Fungicide, and Rodenticide Act

section 19(b), including those owned by the registrant responsible for conducting the recall; or

(2) Stocks of a suspended or canceled pesticide, or a pesticide that is not in compliance with Federal Insecticide, Fungicide, and Rodenticide Act, that are part of a voluntary recall by the registrant.

b. Stocks of other unused pesticide products that are collected and managed as part of a waste pesticide collection program.

2. Pesticides not covered under sections 33.1-24-05-700 through 33.1-24-05-799. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 do not apply to persons managing the following pesticides:

a. Recalled pesticides described in subdivision a of subsection 1, and unused pesticide products described in subdivision b of subsection 1, that are managed by farmers in compliance with section 33.1-24-03-40.

b. Pesticides not meeting the conditions set forth in subsection 1. These pesticides must be managed in compliance with the hazardous waste regulations in chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149;

c. Pesticides that are not wastes under chapter 33.1-24-02, including those that do not meet the criteria for waste generation in subsection 3 or those that are not wastes as described in subsection 4; and

d. Pesticides that are not hazardous waste. A pesticide is a hazardous waste if it is listed in sections 33.1-24-02-15 through 33.1-24-02-19 or if it exhibits one or more of the characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14.

3. When a pesticide becomes a waste.

a. A recalled pesticide described in subdivision a of subsection 1 becomes a waste on the first date on which both of the following conditions apply:

(1) The generator of the recalled pesticide agrees to participate in the recall; and

(2) The person conducting the recall decides to discard the pesticide (for example, burn the pesticide for energy recovery).

b. An unused pesticide product described in subdivision b of subsection 1 becomes a waste on the date the generator decides to discard it.

4. Pesticides that are not wastes. The following pesticides are not wastes:

a. Recalled pesticides described in subdivision a of subsection 1 provided that the person conducting the recall:

(1) Has not made a decision to discard the pesticide (for example, burn for energy recovery). Until such a decision is made, the pesticide does not meet the definition of "solid waste" under section 33.1-24-02-02; thus the pesticide is not a hazardous waste and is not subject to hazardous waste requirements, including sections 33.1-24-05-700 through 33.1-24-05-799. This pesticide remains subject to the requirements of Federal Insecticide, Fungicide, and Rodenticide Act; or

(2) Has made a decision to use a management option that, under section 33.1-24-02-02, does not cause the pesticide to be a solid waste (for example, the

selected option is use (other than use constituting disposal) or reuse (other than burning for energy recovery) or reclamation). Such a pesticide is not a solid waste and therefore is not a hazardous waste, and is not subject to hazardous waste requirements including sections 33.1-24-05-700 through 33.1-24-05-799. This pesticide, including a recalled pesticide that is exported to a foreign destination for use or reuse, remains subject to the requirements of Federal Insecticide, Fungicide, and Rodenticide Act.

- b. Unused pesticide products described in subdivision b of subsection 1, if the generator of the unused pesticide product has not decided to discard them (for example, burn for energy recovery). These pesticides remain subject to the requirements of Federal Insecticide, Fungicide, and Rodenticide Act.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-704. Applicability - Mercury-containing equipment.

1. **Mercury-containing equipment covered under sections 33.1-24-05-700 through 33.1-24-05-799.** The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 apply to persons managing mercury-containing equipment, as described in section 33.1-24-01-04, except those listed in subsection 2.
2. **Mercury-containing equipment not covered under sections 33.1-24-05-700 through 33.1-24-05-799.** The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 do not apply to persons managing the following mercury-containing equipment:
 - a. Mercury-containing equipment that is not yet a waste under chapter 33.1-24-02. Subsection 3 describes when mercury-containing equipment becomes a waste;
 - b. Mercury-containing equipment that is not a hazardous waste. Mercury-containing equipment is a hazardous waste if it exhibits one or more of the characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14 or is listed in sections 33.1-24-02-15 through 33.1-24-02-19; and
 - c. Equipment and devices from which the mercury-containing components have been removed.

3. Generation of waste mercury-containing equipment.

- a. Used mercury-containing equipment becomes a waste on the date it is discarded.
- b. Unused mercury-containing equipment becomes a waste on the date the handler decides to discard it.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-705. Applicability - Lamps.

1. Lamps covered under sections 33.1-24-05-700 through 33.1-24-05-799. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 apply to persons managing lamps as described in section 33.1-24-01-04, except those listed in subsection 2.

2. Lamps not covered under sections 33.1-24-05-700 through 33.1-24-05-799. The requirements of sections 33.1-24-05-700 through 33.1-24-05-799 do not apply to persons managing the following lamps:

- a. Lamps that are not yet wastes under chapter 33.1-24-02 as provided in subsection 3.
- b. Lamps that are not hazardous waste. A lamp is a hazardous waste if it exhibits one or more of the characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14.

3. Generation of waste lamps.

- a. A used lamp becomes a waste on the date it is discarded.
- b. An unused lamp becomes a waste on the date the handler decides to discard it.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-706. [Reserved].

33.1-24-05-707. [Reserved].

33.1-24-05-708. Applicability - Household and conditionally exempt small quantity generator waste.

1. Persons managing the wastes listed below may, at their option, manage them under the requirements of sections 33.1-24-05-700 through 33.1-24-05-799:

- a. Household wastes that are exempt under subdivision a of subsection 2 of section 33.1-24-02-04 and are also of the same type as the universal wastes defined in section 33.1-24-01-04; or
- b. Conditionally exempt small quantity generator wastes that are exempt under section 33.1-24-02-05 and are also of the same type as the universal wastes defined in section 33.1-24-01-04.

2. Persons who commingle the wastes described in subdivisions a and b of subsection 1 together with universal waste regulated under sections 33.1-24-05-700 through 33.1-24-05-799 must manage the commingled waste under the requirements of sections 33.1-24-05-700 through 33.1-24-05-799.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-709. Definitions.

Terms that are defined in sections 33.1-24-01-04 and 33.1-24-02-01 and chapter 33.1-24-05 have the same meanings when used in sections 33.1-24-05-700 through 33.1-24-05-799.

1. "Ampule" means an airtight vial made of glass, plastic, metal, or any combination of these materials.

2. "FIFRA" means the Federal Insecticide, Fungicide and Rodenticide Act [7 United States Code 136-136y].

3. "Large quantity handler of universal waste" means a universal waste handler (as defined in section 33.1-24-01-04) who accumulates five thousand kilograms or more total of universal waste (batteries, pesticides, lamps, or mercury-containing equipment, calculated collectively) at any time. This designation as a large quantity handler of universal waste is retained through the end of the calendar year in which the five thousand kilogram limit is met or exceeded.

4. "Small quantity handler of universal waste" means a universal waste handler (as defined in section 33.1-24-01-04) who does not accumulate five thousand kilograms or more total of universal waste (batteries, pesticides, lamps, or mercury-containing equipment, calculated collectively) at any time.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-710. Applicability - Small quantity handlers of universal waste.

Sections 33.1-24-05-710 through 33.1-24-05-720 apply to small quantity handlers of universal waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-711. Prohibitions.

A small quantity handler of universal waste is:

1. Prohibited from disposing of universal waste; and

2. Prohibited from diluting or treating universal waste, except by responding to releases as provided by section 33.1-24-05-717; or by managing specific wastes as provided in section 33.1-24-05-713.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-712. Notification.

A small quantity handler of universal waste is not required to notify the department of universal waste handling activities.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-713. Waste management.

1. **Universal waste batteries.** A small quantity handler of universal waste must manage universal waste batteries in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

a. A small quantity handler of universal waste must contain any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage under

reasonably foreseeable conditions in a container. The container must be closed, structurally sound, compatible with the contents of the battery and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

b. A small quantity handler of universal waste may conduct the following activities as long as the casing of each individual battery cell is not breached and remains intact and closed (except that cells may be opened to remove electrolyte but must be immediately closed after removal):

(1) Sorting batteries by type;

(2) Mixing battery types in one container;

(3) Discharging batteries so as to remove the electric charge;

(4) Regenerating used batteries;

(5) Disassembling batteries or battery packs into individual batteries or cells;

(6) Removing batteries from consumer products; or

(7) Removing electrolyte from batteries.

c. A small quantity handler of universal waste who removes electrolyte from batteries, or who generates other solid waste (for example, battery pack materials, discarded consumer products) as a result of the activities listed in subdivision b, must determine whether the electrolyte or other solid waste, or both, exhibit one or more of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14.

(1) If the electrolyte or other solid waste, or both, exhibit a characteristic of hazardous waste, it is subject to all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the hazardous electrolyte or other hazardous waste, or both, and is subject to the requirements of chapter 33.1-24-03.

(2) If the electrolyte or other solid waste is not hazardous, the handler may manage the waste in compliance with applicable federal, state, or local solid waste regulations.

2. **Universal waste pesticides.** A small quantity handler of universal waste must manage universal waste pesticides in a way that prevents releases of any universal waste or component of a universal waste to the environment. The universal waste pesticides must be contained in one or more of the following:

a. A container that remains closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions;

b. A container that does not meet the requirements of subdivision a, provided that the unacceptable container is overpacked in a container that does meet the requirements of subdivision a;

c. A tank that meets the requirements of sections 33.1-24-05-103 through 33.1-24-05-117, except subsection 3 of section 33.1-24-06-110 and sections 33.1-24-05-113 and 33.1-24-05-114; or

d. A transport vehicle or vessel that is closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

3. **Mercury-containing equipment.** A small quantity handler of universal waste must manage universal waste mercury-containing equipment in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

a. A small quantity handler of universal waste must place in a container any universal waste mercury-containing equipment with noncontained elemental mercury or that shows evidence of leakage, spillage, or damage that could cause leakage under reasonable foreseeable conditions. The container must be closed, structurally sound, compatible with the contents of the device, must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions, and must be reasonably designed to prevent the escape of mercury into the environment by volatilization or any other means.

b. A small quantity handler of universal waste may remove mercury-containing ampules or other reservoirs from universal waste mercury-containing equipment provided the handler:

(1) Removes and manages the ampules or other reservoirs in a manner designed to prevent breakage of the ampules or other reservoirs;

(2) Removes the ampules or other reservoirs only over or in a containment device (for example, a tray or pan sufficient to collect and contain any mercury released from an ampule or other reservoir in case of breakage);

(3) Ensures that a mercury cleanup system is readily available to immediately transfer any mercury resulting from spills or leaks from broken ampules or other reservoirs from that containment device to a container that meets the requirements of section 33.1-24-03-12;

(4) Immediately transfers any mercury resulting from spills or leaks from broken ampules or other reservoirs from the containment device to a container that meets the requirements of section 33.1-24-03-12;

(5) Ensures that the area in which ampules or other reservoirs are removed is well-ventilated and monitored to ensure compliance with applicable occupational safety and health administration exposure levels for mercury;

(6) Ensures that employees removing ampules or other reservoirs are thoroughly familiar with proper waste mercury handling and emergency procedures, including transfer of mercury from containment devices to appropriate containers;

(7) Stores removed ampules or other reservoirs in closed, nonleaking containers that are in good condition; and

(8) Packs removed ampules or other reservoirs in the container with packing materials adequate to prevent breakage during storage, handling, and transportation.

c. A small quantity handler of universal waste mercury-containing equipment that does not contain an ampule or other reservoirs may remove the open original housing holding the mercury from universal waste mercury-containing equipment provided the handler:

(1) Immediately seals the original housing holding the mercury with an airtight seal to prevent the release of any mercury to the environment; and

(2) Follows all requirements for removing ampules or other reservoirs and managing removed ampules or other reservoirs under subdivision b.

d. A small quantity handler of universal waste who removes mercury containing ampules or other reservoirs from mercury-containing equipment or seals mercury from mercury-containing equipment in its original housing must:

(1) Determine whether the following exhibit a characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14:

(a) Mercury or cleanup residues resulting from spills or leaks;

(b) Other solid waste generated as a result of the removal of mercury-containing ampules or other reservoirs or housings (for example, the remaining mercury-containing device); or

(c) Both.

(2) If the mercury, residues, or other solid waste, or any combination thereof, exhibits a characteristic of hazardous waste, it must be managed in compliance with all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the mercury, residues, or other solid waste, or any combination thereof, and must manage it in compliance with chapter 33.1-24-03.

(3) If the mercury, residues, or other solid waste, or any combination thereof, is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state, or local solid waste regulations.

4. **Lamps.** A small quantity handler of universal waste must manage lamps in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

a. A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

b. A small quantity handler of universal waste must immediately clean up and place in a container any lamp that is broken and must place in a container any lamp that shows evidence of breakage, leakage, or damage that could cause the release of mercury or other hazardous constituents to the environment. Containers must be closed, structurally sound, compatible with the contents of the lamps and must lack evidence of leakage, spillage, or damage that could cause leakage or releases of mercury or other hazardous constituents to the environment under reasonably foreseeable conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-714. Labeling and marking.

A small quantity handler of universal waste must label or mark the universal waste to identify the type of universal waste as specified below:

1. Universal waste batteries (for example, each battery), or a container in which the batteries are contained, must be labeled or marked clearly with any one of the following phrases: "Universal Waste - Battery(ies)", or "Waste Battery(ies)", "Used Battery(ies)".
2. A container, (or multiple container package unit), tank, or transport vehicle or vessel in which recalled universal waste pesticides as described in subdivision a of subsection 1 of section 33.1-24-05-703 are contained must be labeled or marked clearly with:
 - a. The label that was on or accompanied the product as sold or distributed; and
 - b. The words "Universal Waste - Pesticide(s)" or "Waste - Pesticide(s)".
3. A container, tank, or transport vehicle or vessel in which unused pesticide products as described in subdivision b of subsection 1 of section 33.1-24-05-703 are contained must be labeled or marked clearly with:
 - a. The following:
 - (1) The label that was on the product when purchased, if still legible;
 - (2) If using the labels described in paragraph 1 is not feasible, the appropriate label as required under department of transportation regulation 49 CFR part 172; or
 - (3) If using the labels described in paragraphs 1 and 2 is not feasible, another label prescribed or designated by the waste pesticide collection program administered or recognized by the state; and
 - b. The words "Universal Waste - Pesticide(s)" or "Waste - Pesticide(s)".
4. Universal waste mercury-containing equipment (for example, each device), or a container in which the equipment is contained, must be labeled or marked clearly with any of the following phrases: "Universal Waste - Mercury-Containing Equipment", "Waste Mercury-Containing Equipment", or "Used Mercury-Containing Equipment". A universal waste mercury-containing thermostat or container containing only universal waste mercury-containing thermostats may be labeled or marked clearly with any of the following phrases: "Universal Waste - Mercury Thermostat(s)", "Waste Mercury Thermostat(s)", or "Used Mercury Thermostat(s)".
5. Each lamp or a container or package in which such lamps are contained must be labeled or marked clearly with one of the following phrases: "Universal Waste - Lamp(s)", or "Waste Lamp(s)", or "Used Lamp(s)".

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-715. Accumulation time limits.

1. A small quantity handler of universal waste may accumulate universal waste for no longer than one year from the date the universal waste is generated, or received from another handler, unless the requirements of subsection 2 are met.
2. A small quantity handler of universal waste may accumulate universal waste for longer than one year from the date the universal waste is generated, or received from another handler, if such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal. However, the handler bears the burden of proving that such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal.

3. A small quantity handler of universal waste who accumulates universal waste must be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received. The handler may make this demonstration by:
 - a. Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received;
 - b. Marking or labeling each individual item of universal waste (for example, each battery or mercury-containing device) with the date it became a waste or was received;
 - c. Maintaining an inventory system onsite that identifies the date each universal waste became a waste or was received;
 - d. Maintaining an inventory system onsite that identifies the earliest date that any universal waste in a group of universal waste items or a group of containers of universal waste became a waste or was received;
 - e. Placing the universal waste in a specific accumulation area and identifying the earliest date that any universal waste in the area became a waste or was received; or
 - f. Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-716. Employee training.

A small quantity handler of universal waste shall inform all employees who handle or have responsibility for managing universal waste. The information must describe proper waste handling and emergency procedures appropriate for the type or types of universal waste handled at the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-717. Response to releases.

1. A small quantity handler of universal waste shall immediately contain all releases of universal wastes and other residues from universal wastes.
2. A small quantity handler of universal waste shall determine whether any material resulting from the release is hazardous waste, and if so, must manage the hazardous waste in compliance with all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the material resulting from the release, and must manage it in compliance with chapter 33.1-24-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-718. Offsite shipments.

1. A small quantity handler of universal waste is prohibited from sending or taking universal waste to a place other than another universal waste handler, a destination facility, or a foreign destination.

2. If a small quantity handler of universal waste self-transport universal waste offsite, the handler becomes a universal waste transporter for those self-transportation activities and must comply with the transporter requirements of sections 33.1-24-05-750 through 33.1-24-05-759 while transporting the universal waste.
3. If a universal waste being offered for offsite transportation meets the definition of hazardous materials under 49 CFR parts 171 through 180, a small quantity handler of universal waste must package, label, mark, and placard the shipment and prepare the proper shipping papers in accordance with applicable department of transportation regulations under 49 CFR parts 172 through 180.
4. Prior to sending a shipment of universal waste to another universal waste handler, the originating small quantity handler shall ensure that the receiving handler agrees to receive the shipment.
5. If a small quantity handler of universal waste sends a shipment of universal waste to another handler or to a destination facility and the shipment is rejected by the receiving handler or destination facility, the originating handler shall either:
 - a. Receive the universal waste back when notified that the shipment has been rejected; or
 - b. Agree with the receiving handler on a destination facility to which the shipment will be sent.
6. A small quantity handler of universal waste may reject a shipment containing universal waste, or a portion of a shipment containing universal waste that the handler has received from another handler. If a handler rejects a shipment or a portion of a shipment, the receiving handler shall contact the originating handler to notify the originating handler of the rejection and to discuss reshipment of the load. The receiving handler shall:
 - a. Send the shipment back to the originating handler; or
 - b. If agreed to by both the originating and receiving handler, send the shipment to a destination facility.
7. If a small quantity handler of universal waste receives a shipment containing hazardous waste that is not a universal waste, the handler shall immediately notify the department of the illegal shipment, and provide the name, address, and telephone number of the originating shipper. The department will provide instructions for managing the hazardous waste.
8. If a small quantity handler of universal waste receives a shipment of nonhazardous, nonuniversal waste, the handler may manage the waste in any way that is in compliance with applicable federal, state, or local waste regulations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-719. Tracking universal waste shipments.

A small quantity handler of universal waste is not required to keep records of shipments of universal waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-720. Exports.

A small quantity handler of universal waste who sends universal waste to a foreign destination other than to those organization for economic cooperation and development countries specified in subdivision a of subsection 1 of section 33.1-24-03-25 (in which case the handler is subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59) shall:

1. Comply with the requirements applicable to a primary exporter in section 33.1-24-03-20, subdivisions a through d and f of subsection 1 and subsection 2 of section 33.1-24-03-23, and section 33.1-24-03-24;
2. Export such universal waste only upon consent of the receiving country and in conformance with environmental protection agency acknowledgment of consent as defined in sections 33.1-24-03-17 through 33.1-24-03-29; and
3. Provide a copy of the environmental protection agency acknowledgment of consent for the shipment to the transporter transporting the shipment for export.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-721. [Reserved].

33.1-24-05-722. [Reserved].

33.1-24-05-723. [Reserved].

33.1-24-05-724. [Reserved].

33.1-24-05-725. [Reserved].

33.1-24-05-726. [Reserved].

33.1-24-05-727. [Reserved].

33.1-24-05-729. [Reserved].

33.1-24-05-730. Applicability - Large quantity handlers of universal waste.

Sections 33.1-24-05-730 through 33.1-24-05-740 apply to large quantity handlers of universal waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-731. Prohibitions.

A large quantity handler of universal waste is:

1. Prohibited from disposing of universal waste; and
2. Prohibited from diluting or treating universal waste, except by responding to releases as provided by section 33.1-24-05-737, or by managing specific wastes as provided in section 33.1-24-05-733.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-732. Notification.

1. A large quantity handler of universal waste shall:

- a. Except as provided in subdivisions b and c, send written notification of universal waste management activities to the department, and receive an identification number before meeting or exceeding the five thousand kilogram storage limit.
- b. A large quantity handler of universal waste who has already notified the department of the person's hazardous waste management activities and received an identification number is not required to renotify.
- c. A large quantity handler of universal waste who manages recalled universal waste pesticides as described in subdivision a of subsection 1 of section 33.1-24-05-703 and who has sent notification to the environmental protection agency as required by 40 CFR part 165 is not required to notify for those recalled universal waste pesticides.

2. This notification must include:

- a. The universal waste handler's name and mailing address;
- b. The name and business telephone number of the person at the universal waste handler's site who should be contacted regarding universal waste management activities;
- c. The address or physical location of the universal waste management activities;
- d. A list of all types of universal waste managed by the handler (for example, batteries, pesticides, mercury-containing equipment, lamps); and
- e. A statement indicating that the handler is accumulating more than five thousand kilograms of universal waste at one time.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-733. Waste management.

1. **Universal waste batteries.** A large quantity handler of universal waste must manage universal waste batteries in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

a. A large quantity handler of universal waste must contain any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions in a container. The container must be closed, structurally sound, compatible with the contents of the battery and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

b. A large quantity handler of universal waste may conduct the following activities as long as the casing of each individual battery cell is not breached and remains intact and closed (except that cells may be opened to remove electrolyte but must be immediately closed after removal):

(1) Sorting batteries by type;

(2) Mixing battery types in one container;

(3) Discharging batteries so as to remove the electric charge;

(4) Regenerating used batteries;

(5) Disassembling batteries or battery packs into individual batteries or cells;

(6) Removing batteries from consumer products; or

(7) Removing electrolyte from batteries.

c. A large quantity handler of universal waste who removes electrolyte from batteries, or who generates other solid waste (for example, battery pack materials, discarded consumer products) as a result of the activities listed in subdivision b, must determine whether the electrolyte or other solid waste, or both, exhibit one or more of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14.

(1) If the electrolyte or other solid waste, or both, exhibit a characteristic of hazardous waste, it is subject to all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the hazardous electrolyte or other hazardous waste and is subject to the requirements of chapter 33.1-24-03.

(2) If the electrolyte or other solid waste is not hazardous, the handler may manage the waste in compliance with applicable federal, state, or local solid waste regulations.

2. **Universal waste pesticides.** A large quantity handler of universal waste must manage universal waste pesticides in a way that prevents releases of any universal waste or component of a universal waste to the environment. The universal waste pesticides must be contained in one or more of the following:

- a. A container that remains closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions;
- b. A container that does not meet the requirements of subdivision a, provided that the unacceptable container is overpacked in a container that does meet the requirements of subdivision a;
- c. A tank that meets the requirements of sections 33.1-24-05-103 through 33.1-24-05-117, except subsection 3 of section 33.1-24-06-110 and sections 33.1-24-05-113 and 33.1-24-05-114; or
- d. A transport vehicle or vessel that is closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

3. Mercury-containing equipment. A large quantity handler of universal waste must manage universal waste mercury-containing equipment in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

- a. A large quantity handler of universal waste must place in a container any universal waste mercury-containing equipment with noncontained elemental mercury or that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions. The container must be closed, structurally sound, compatible with the contents of the device, must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions and must be reasonably designed to prevent the escape of mercury into the environment by volatilization or any other means.
- b. A large quantity handler of universal waste may remove mercury-containing ampules or other reservoirs from universal waste mercury-containing equipment provided the handler:
 - (1) Removes and manages the ampules or other reservoirs in a manner designed to prevent breakage of the ampules or other reservoirs;
 - (2) Removes the ampules or other reservoirs only over or in a containment device (for example, tray or pan sufficient to collect and contain any mercury released from an ampule or other reservoir in case of breakage);
 - (3) Ensures that a mercury cleanup system is readily available to immediately transfer any mercury resulting from spills or leaks of broken ampules or other reservoirs from that containment device to a container that meets the requirements of section 33.1-24-03-12;
 - (4) Immediately transfers any mercury resulting from spills or leaks from broken ampules or other reservoirs from the containment device to a container that meets the requirements of section 33.1-24-03-12;
 - (5) Ensures that the area in which ampules or other reservoirs are removed is well-ventilated and monitored to ensure compliance with applicable occupational safety and health administration exposure levels for mercury;
 - (6) Ensures that employees removing ampules or other reservoirs are thoroughly familiar with proper waste mercury handling and emergency procedures, including transfer of mercury from containment devices to appropriate containers;

(7) Stores removed ampules or other reservoirs in closed, nonleaking containers that are in good condition; and

(8) Packs removed ampules or other reservoirs in the container with packing materials adequate to prevent breakage during storage, handling, and transportation.

c. A large quantity handler of universal waste mercury-containing equipment that does not contain an ampule or other reservoirs may remove the open original housing holding the mercury from universal waste mercury-containing equipment provided the handler:

(1) Immediately seals the original housing holding the mercury with an airtight seal to prevent the release of any mercury to the environment; and

(2) Follows all requirements for removing ampules and managing removed ampules under subdivision b.

d. A large quantity handler of universal waste who removes mercury-containing ampules or other reservoirs from mercury-containing equipment or seals mercury from mercury-containing equipment in its original housing must:

(1) Determine whether the following exhibit a characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14:

(a) Mercury or cleanup residues resulting from spills or leaks;

(b) Other solid waste generated as a result of the removal of mercury-containing ampules or other reservoirs or housings (for example, the remaining mercury-containing device); or

(c) Both.

(2) If the mercury, residues, or other solid waste, or any combination thereof, exhibits a characteristic of hazardous waste, it must be managed in compliance with all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the mercury, residues, or other solid waste, or any combination thereof, and must manage it in compliance with chapter 33.1-24-03.

(3) If the mercury, residues, or other solid waste, or any combination thereof, is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state, or local solid waste regulations.

4. **Lamps.** A large quantity handler of universal waste must manage lamps in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

a. A large quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

b. A large quantity handler of universal waste must immediately clean up and place in a container any lamp that is broken and must place in a container any lamp that shows evidence of breakage, leakage, or damage that could cause the release of mercury or other hazardous constituents to the environment. Containers must be closed, structurally

sound, compatible with the contents of the lamps and must lack evidence of leakage, spillage, or damage that could cause leakage or releases of mercury or other hazardous constituents to the environment under reasonably foreseeable conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-734. Labeling and marking.

A large quantity handler of universal waste must label or mark the universal waste to identify the type of universal waste as specified below:

1. Universal waste batteries (for example, each battery), or a container in which the batteries are contained, must be labeled or marked clearly with any one of the following phrases: "Universal Waste - Battery(ies)", or "Waste Battery(ies)", or "Used Battery(ies)".
2. A container (or multiple container package unit), tank, or transport vehicle or vessel in which recalled universal waste pesticides as described in subdivision a of subsection 1 of section 33.1-24-05-703 are contained must be labeled or marked clearly with:
 - a. The label that was on or accompanied the product as sold or distributed; and
 - b. The words "Universal Waste - Pesticide(s)" or "Waste - Pesticide(s)".
3. A container, tank, or transport vehicle or vessel in which unused pesticide products as described in subdivision b of subsection 1 of section 33.1-24-05-703 are contained must be labeled or marked clearly with:
 - a. The following:
 - (1) The label that was on the product when purchased, if still legible;
 - (2) If using the labels described in paragraph 1 is not feasible, the appropriate label as required under department of transportation regulation 49 CFR part 172; or
 - (3) If using the labels described in paragraphs 1 and 2 is not feasible, another label prescribed or designated by the waste pesticide collection program administered or recognized by the state; and
 - b. The words "Universal Waste - Pesticide(s)" or "Waste - Pesticide(s)".
4. Mercury-containing equipment (for example, each device), or a container in which the equipment is contained, must be labeled or marked clearly with any of the following phrases: "Universal Waste - Mercury-Containing Equipment", "Waste Mercury-Containing Equipment", or "Used Mercury-Containing Equipment". A universal waste mercury-containing thermostat or container containing only universal waste mercury-containing thermostats may be labeled or marked clearly with any of the following phrases: "Universal Waste - Mercury Thermostat(s)", "Waste Mercury Thermostat(s)", or "Used Mercury Thermostat(s)".
5. Each lamp or a container or package in which such lamps are contained must be labeled or marked clearly with one of the following phrases: "Universal Waste - Lamp(s)", or "Waste Lamp(s)", or "Used Lamp(s)".

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-735. Accumulation time limits.

1. A large quantity handler of universal waste may accumulate universal waste for no longer than one year from the date the universal waste is generated, or received from another handler, unless the requirements of subsection 2 are met.
2. A large quantity handler of universal waste may accumulate universal waste for longer than one year from the date the universal waste is generated, or received from another handler, if such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal. However, the handler bears the burden of proving that such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal.
3. A large quantity handler of universal waste must be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received. The handler may make this demonstration by:
 - a. Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received;
 - b. Marking or labeling each individual item of universal waste (for example, each battery or mercury-containing equipment) with the date it became a waste or was received;
 - c. Maintaining an inventory system onsite that identifies the date each universal waste became a waste or was received;
 - d. Maintaining an inventory system onsite that identifies the earliest date that any universal waste in a group of universal waste items or a group of containers of universal waste became a waste or was received;
 - e. Placing the universal waste in a specific accumulation area and identifying the earliest date that any universal waste in the area became a waste or was received; or
 - f. Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-736. Employee training.

A large quantity handler of universal waste shall ensure all employees who handle or have responsibility for managing universal waste are thoroughly familiar with proper waste handling and emergency procedures appropriate for the type or types of universal waste handled at the facility, and relative to their responsibilities during normal facility operations and emergencies.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-737. Response to releases.

1. A large quantity handler of universal waste shall immediately contain all releases of universal wastes and other residues from universal wastes.
2. A large quantity handler of universal waste shall determine whether any material resulting from the release is hazardous waste, and if so, must manage the hazardous waste in compliance

with all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. The handler is considered the generator of the material resulting from the release, and is subject to chapter 33.1-24-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-738. Offsite shipments.

1. A large quantity handler of universal waste is prohibited from sending or taking universal waste to a place other than another universal waste handler, a destination facility, or a foreign destination.
2. If a large quantity handler of universal waste self-transportes universal waste offsite, the handler becomes a universal waste transporter for those self-transportation activities and must comply with the transporter requirements of sections 33.1-24-05-750 through 33.1-24-05-759 while transporting the universal waste.
3. If a universal waste being offered for offsite transportation meets the definition of hazardous materials under 49 CFR parts 171 through 180, a large quantity handler of universal waste must package, label, mark, and placard the shipment and prepare the proper shipping papers in accordance with applicable department of transportation regulations under 49 CFR parts 172 through 180.
4. Prior to sending a shipment of universal waste to another universal waste handler, the originating handler shall ensure that the receiving handler agrees to receive the shipment.
5. If a large quantity handler of universal waste sends a shipment of universal waste to another handler or to a destination facility and the shipment is rejected by the receiving handler or destination facility, the originating handler shall either:
 - a. Receive the universal waste back when notified that the shipment has been rejected; or
 - b. Agree with the receiving handler on a destination facility to which the shipment will be sent.
6. A large quantity handler of universal waste may reject a shipment containing universal waste, or a portion of a shipment containing universal waste that the handler has received from another handler. If a handler rejects a shipment or a portion of a shipment, the receiving handler shall contact the originating handler to notify the originating handler of the rejection and to discuss reshipment of the load. The receiving handler shall:
 - a. Send the shipment back to the originating handler; or
 - b. If agreed to by both the originating and receiving handler, send the shipment to a destination facility.
7. If a large quantity handler of universal waste receives a shipment containing hazardous waste that is not a universal waste, the handler shall immediately notify the department of the illegal shipment, and provide the name, address, and telephone number of the originating shipper. The department will provide instructions for managing the hazardous waste.
8. If a large quantity handler of universal waste receives a shipment of nonhazardous, nonuniversal waste, the handler may manage the waste in any way that is in compliance with applicable federal, state, or local solid waste regulations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-739. Tracking universal waste shipments.

1. **Receipt of shipments.** A large quantity handler of universal waste shall keep a record of each shipment of universal waste received at the facility. The record may take the form of a log, invoice, manifest, bill of lading, or other shipping document. The record for each shipment of universal waste received must include the following information:
 - a. The name and address of the originating universal waste handler or foreign shipper from whom the universal waste was sent;
 - b. The quantity of each type of universal waste received (for example, batteries, pesticides, mercury-containing equipment, lamps); and
 - c. The date of receipt of the shipment of universal waste.
2. **Shipments offsite.** A large quantity handler of universal waste must keep a record of each shipment of universal waste sent from the handler to other facilities. The record may take the form of a log, invoice, manifest, bill of lading, or other shipping document. The record for each shipment of universal waste sent must include the following information:
 - a. The name and address of the universal waste handler, destination facility, or foreign destination to whom the universal waste was sent;
 - b. The quantity of each type of universal waste sent (for example, batteries, pesticides, mercury-containing equipment, lamps); and
 - c. The date the shipment of universal waste left the facility.
3. **Record retention.**
 - a. A large quantity handler of universal waste shall retain the records described in subsection 1 for at least three years from the date of receipt of the shipment of universal waste.
 - b. A large quantity handler of universal waste shall retain the records described in subsection 2 for at least three years from the date a shipment of universal waste left the facility.
 - c. The retention period for all records is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-740. Exports.

A large quantity handler of universal waste who sends universal waste to a foreign destination other than those organization for economic cooperation and development countries specified in subdivision a of subsection 1 of section 33.1-24-03-25 (in which case the handler is subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59) shall:

1. Comply with the requirements applicable to a primary exporter in section 33.1-24-03-20, subdivisions a through d and f of subsection 1 and subsection 2 of section 33.1-24-03-23, and section 33.1-24-03-24;
2. Export such universal waste only upon consent of the receiving country and in conformance with environmental protection agency acknowledgment of consent as defined in sections 33.1-24-03-17 through 33.1-24-03-29; and
3. Provide a copy of the environmental protection agency acknowledgment of consent for the shipment to the transporter transporting the shipment for export.

33.1-24-05-749. [Reserved].

33.1-24-05-750. Applicability - Universal waste transporters.

Sections 33.1-24-05-750 through 33.1-24-05-759 apply to all transporters of universal waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-751. Prohibitions.

A universal waste transporter is:

1. Prohibited from disposing of universal waste; and
2. Prohibited from diluting or treating universal waste, except by responding to releases as provided by section 33.1-24-05-754.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-752. Waste management.

1. A universal waste transporter shall comply with all applicable United States department of transportation regulations in 49 CFR parts 171 through 180 for transport of any universal waste that meets the definition of hazardous material in 49 CFR 171.8. For purposes of the department of transportation regulations, a material is considered a hazardous waste if it is subject to the hazardous waste manifest requirements specified in chapter 33.1-24-03. Because universal waste does not require a hazardous waste manifest, it is not considered a hazardous waste under the department of transportation regulations.
2. Some universal waste materials are regulated by the department of transportation as hazardous materials because they meet the criteria for one or more hazard classes specified in 49 CFR 173.2. As universal waste shipments do not require a manifest under chapter 33.1-24-03, they may not be described by the department of transportation proper shipping name "hazardous waste (l) or (s), n.o.s.", nor may the hazardous material's proper shipping name be modified by adding the word "waste".
3. All universal waste transporters shall comply with the solid waste transportation permitting requirements contained in section 33.1-20-02.1-01.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-753. Storage time limits.

1. A universal waste transporter may only store the universal waste at a universal waste transfer facility for ten days or less.
2. If a universal waste transporter stores universal waste for more than ten days, the universal waste transporter becomes a universal waste handler and must comply with the requirements of sections 33.1-24-05-710 through 33.1-24-05-740, as applicable, while storing the universal waste.
3. A universal waste transporter must keep records for each shipment of universal waste transported. The record may take the form of a log, invoice, manifest, bill of lading, or other

shipping document. The record for each shipment of universal waste sent must include the following information:

- a. The name and address of the universal waste generator or handler originating the shipment and the subsequent handler, destination facility, or foreign destination to whom the universal waste was sent;
 - b. The quantity of each type of universal waste sent (for example, batteries, pesticides, mercury-containing equipment); and
 - c. The date the universal waste transporter accepted the shipment of universal waste for transportation.
4. Record retention. A universal waste transporter shall retain the records described in subsection 3 for at least three years from the date of delivery of the shipment of universal waste to another handler, destination facility, or foreign destination.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-754. Storage time limits.

1. A universal waste transporter must immediately contain all releases of universal wastes and other residues from universal wastes.
2. A universal waste transporter must determine whether any material resulting from the release is hazardous waste, and if so, is subject to all applicable requirements of chapters 33.1-24-01 through 33.1-24-04, chapter 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-1149. If the waste is determined to be hazardous waste, the transporter is subject to chapter 33.1-24-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-755. Offsite shipments.

1. A universal waste transporter is prohibited from transporting the universal waste to a place other than a universal waste handler, a destination facility, or a foreign destination.
2. If the universal waste being shipped offsite meets the department of transportation's definition of hazardous materials in 49 CFR 171.8, the shipment must be properly described on a shipping paper in accordance with the applicable department of transportation regulations under 49 CFR part 172.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-756. Exports.

A universal waste transporter transporting a shipment of universal waste to a foreign destination other than those organization for economic cooperation and development countries specified in subdivision a of subsection 1 of section 33.1-24-03-25 (in which case the handler is subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59) may not accept a shipment if the

transporter knows the shipment does not conform to the environmental protection agency acknowledgment of consent. In addition, the transporter must ensure that:

1. A copy of the environmental protection agency acknowledgment of consent accompanies the shipment; and
2. The shipment is delivered to the facility designated by the person initiating the shipment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-757. [Reserved].

33.1-24-05-758. [Reserved].

33.1-24-05-759. [Reserved].

33.1-24-05-760. Applicability - Destination facilities.

1. The owner or operator of a destination facility (as defined in section 33.1-24-01-04) is subject to all applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929 and chapters 33.1-24-06 and 33.1-24-07, and the notification requirement under section 33.1-24-03-03.
2. The owner or operator of a destination facility that recycles a particular universal waste without storing that universal waste before it is recycled must comply with subdivision b of subsection 3 of section 33.1-24-02-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-761. Offsite shipments.

1. The owner or operator of a destination facility is prohibited from sending or taking universal waste to a place other than a universal waste handler, another destination facility, or foreign destination.
2. The owner or operator of a destination facility may reject a shipment containing universal waste or a portion of a shipment containing universal waste. If the owner or operator of the destination facility rejects a shipment or a portion of a shipment, the destination facility must contact the shipper to notify the shipper of the rejection and to discuss reshipment of the load. The owner or operator of the destination facility shall:
 - a. Send the shipment back to the original shipper; or
 - b. If agreed to by both the shipper and the owner or operator of the destination facility, send the shipment to another destination facility.

3. If the owner or operator of a destination facility receives a shipment containing hazardous waste that is not a universal waste, the owner or operator of the destination facility shall immediately notify the department of the illegal shipment, and provide the name, address, and telephone number of the originating shipper. The department will provide instructions for managing the hazardous waste.
4. If the owner or operator of a destination facility receives a shipment of nonhazardous, nonuniversal waste, the owner or operator of the destination facility may manage the waste in any way that is in compliance with applicable federal or state solid waste regulations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-762. Tracking universal waste shipments.

1. The owner or operator of a destination facility shall keep a record of each shipment of universal waste received at the facility. The record may take the form of a log, invoice, manifest, bill of lading, or other shipping document. The record for each shipment of universal waste received must include the following information:
 - a. The name and address of the universal waste handler, destination facility, or foreign shipper from whom the universal waste was sent;
 - b. The quantity of each type of universal waste received (for example, batteries, pesticides, mercury-containing equipment); and
 - c. The date of receipt of the shipment of universal waste.
2. The owner or operator of a destination facility must retain the records described in subsection 1 for at least three years from the date of receipt of a shipment of universal waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-763. [Reserved].

33.1-24-05-764. [Reserved].

33.1-24-05-765. [Reserved].

33.1-24-05-766. [Reserved].

33.1-24-05-767. [Reserved].

33.1-24-05-768. [Reserved].

33.1-24-05-769. [Reserved].

33.1-24-05-770. Imports.

Persons managing universal waste that is imported from a foreign country into the United States are subject to the applicable requirements of sections 33.1-24-05-700 through 33.1-24-05-799, immediately after the waste enters the United States, as indicated in subsections 1 through 3:

1. A universal waste transporter is subject to the universal waste transporter requirements of sections 33.1-24-05-750 through 33.1-24-05-759.
2. A universal waste handler is subject to the universal waste handler requirements of sections 33.1-24-05-710 through 33.1-24-05-740, as applicable.
3. An owner or operator of a destination facility is subject to the destination facility requirements of sections 33.1-24-05-760 through 33.1-24-05-762.
4. Persons managing universal waste that is imported from an organization for economic cooperation and development country as specified in subdivision a of subsection 1 of section 33.1-24-03-25 are subject to subsections 1 through 3, in addition to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-771. [Reserved].

33.1-24-05-772. [Reserved].

33.1-24-05-773. [Reserved].

33.1-24-05-774. [Reserved].

33.1-24-05-775. [Reserved].

33.1-24-05-776. [Reserved].

33.1-24-05-777. [Reserved].

33.1-24-05-778. [Reserved].

33.1-24-05-779. [Reserved].

33.1-24-05-780. Petitions to include other wastes under sections 33.1-24-05-700 through 33.1-24-05-799.

1. Any person seeking to add a hazardous waste or a category of hazardous waste to sections 33.1-24-05-700 through 33.1-24-05-799 may petition for a regulatory amendment under sections 33.1-24-05-780 through 33.1-24-05-781, 33.1-24-01-06, and 33.1-24-01-08.
2. To be successful, the petitioner must demonstrate to the satisfaction of the department that regulation under the universal waste regulations of sections 33.1-24-05-700 through 33.1-24-05-799 is appropriate for the waste or category of waste; will improve management practices for the waste or category of waste; and will improve implementation of the hazardous waste program. The petition must include the information required by subsection 2 of section 33.1-24-01-06. The petition should also address as many of the factors listed in section 33.1-24-05-781 as are appropriate for the waste or waste category addressed in the petition.
3. The department will evaluate petitions using the factors listed in section 33.1-24-05-781. The department will grant or deny a petition using the factors listed in section 33.1-24-05-781. The decision will be based on the weight of evidence showing that regulation under sections 33.1-24-05-700 through 33.1-24-05-799 is appropriate for the waste or category of waste, will improve management practices for the waste of category of waste, and will improve implementation of the hazardous waste program.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-781. Factors for petitions to include other wastes under sections 33.1-24-05-700 through 33.1-24-05-799.

1. The waste or category of waste, as generated by a wide variety of generators, is listed in sections 33.1-24-02-15 through 33.1-24-02-19, or (if not listed) a proportion of the waste stream exhibits one or more characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14. (When a characteristic waste is added to the universal waste regulations of sections 33.1-24-05-700 through 33.1-24-05-799 by using a generic name to identify the waste category (for example, batteries), the definition of universal waste in section 33.1-24-01-04 will be amended to include only the hazardous waste portion of the waste category (for example, hazardous waste batteries).) Thus, only the portion of the waste

stream that does exhibit one or more characteristics (therefore, is hazardous waste) is subject to the universal waste regulations of sections 33.1-24-05-700 through 33.1-24-05-799;

2. The waste or category of waste is not exclusive to a specific industry or group of industries, is commonly generated by a wide variety of types of establishments (including, for example, households, retail and commercial businesses, office complexes, conditionally exempt small quantity generators, small businesses, government organizations, as well as large industrial facilities);
3. The waste or category of waste is generated by a large number of generators (for example, more than one thousand nationally) and is frequently generated in relatively small quantity by each generator;
4. Systems to be used for collecting the waste or category of waste (including packaging, marking, and labeling practices) would ensure close stewardship of the waste;
5. The risk posed by the waste or category of waste during accumulation and transport is relatively low compared to other hazardous wastes, and specific management standards proposed or referenced by the petitioner (for example, waste management requirements appropriate to be added to sections 33.1-24-05-713, 33.1-24-05-733, and 33.1-24-05-752; or applicable department of transportation requirements) would be protective of human health and the environment during accumulation and transport;
6. Regulation of the waste or category of waste under sections 33.1-24-05-700 through 33.1-24-05-799 will increase the likelihood that the waste will be diverted from the nonhazardous waste management systems (for example, the municipal waste stream, nonhazardous industrial or commercial waste stream, municipal sewer, or stormwater systems) to recycling, treatment, or disposal in compliance with the hazardous waste management rules;
7. Regulation of the waste or category of waste under sections 33.1-24-05-700 through 33.1-24-05-799 will improve implementation of the hazardous waste regulatory program; and
8. Such other factors as may be appropriate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-800. Applicability - Military munitions.

The requirements of sections 33.1-24-05-800 through 33.1-24-05-819 apply to owners or operators who store munitions and explosive hazardous wastes, except as section 33.1-24-05-01 provides otherwise. (Note: Depending on explosive hazards, hazardous waste munitions and explosives may also be managed in other types of storage units, including containment buildings (sections 33.1-24-05-475 through 33.1-24-05-500), tanks (sections 33.1-24-05-103 through 33.1-24-05-117), or containers (sections 33.1-24-05-89 through 33.1-24-05-102); see section 33.1-24-05-825 for storage of waste military munitions.)

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-801. Design and operating standards.

1. Hazardous waste munitions and explosives storage units must be designed and operated with containment systems, controls, and monitoring, that:
 - a. Minimize the potential for detonation or other means of release of hazardous waste, hazardous constituents, hazardous decomposition products, or contaminated runoff to the soil, ground water, surface water, and atmosphere;
 - b. Provide a primary barrier, which may be a container (including a shell) or tank, designed to contain the hazardous waste;
 - c. For wastes stored outdoors, provide that the waste and containers will not be in standing precipitation;
 - d. For liquid wastes, provide a secondary containment system that assures that any released liquids are contained and promptly detected and removed from the waste area, or vapor detection system that assures that any released liquids or vapors are promptly detected and an appropriate response taken (for example, additional containment, such as overpacking, or removal from the waste area); and
 - e. Provide monitoring and inspection procedures that assure the controls and containment systems are working as designed and that releases that may adversely impact human health or the environment are not escaping from the unit.
2. Hazardous waste munitions and explosives stored under sections 33.1-24-05-800 through 33.1-24-05-819 may be stored in one of the following:
 - a. Earth-covered magazines. Earth-covered magazines must be:
 - (1) Constructed of waterproofed, reinforced concrete or structural steel arches, with steel doors that are kept closed when not being accessed;
 - (2) Designed and constructed:

- (a) To be of sufficient strength and thickness to support the weight of any explosives or munitions stored and any equipment used in the unit;
 - (b) To provide working space for personnel and equipment in the unit; and
 - (c) To withstand movement activities that occur in the unit; and
- (3) Located and designed, with walls and earthen covers that direct an explosion in the unit in a safe direction, so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.
- b. Aboveground magazines. Aboveground magazines must be located and designed so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.
 - c. Outdoor or open storage areas. Outdoor or open storage areas must be located and designed so as to minimize the propagation of an explosion to adjacent units and to minimize other effects of any explosion.
3. Hazardous waste munitions and explosives must be stored in accordance with a standard operating procedure specifying procedures to ensure safety, security, and environmental protection. If these procedures serve the same purpose as the security and inspection requirements of section 33.1-24-05-05, the preparedness and prevention procedures of sections 33.1-24-05-15 through 33.1-24-05-25, and the contingency plan and emergency procedures requirements of sections 33.1-24-05-26 through 33.1-24-05-36, then these procedures will be used to fulfill those requirements.
4. Hazardous waste munitions and explosives must be packaged to ensure safety in handling and storage.
5. Hazardous waste munitions and explosives must be inventoried at least annually.
6. Hazardous waste munitions and explosives and their storage units must be inspected and monitored as necessary to ensure explosives safety and to ensure that there is no migration of contaminants out of the unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-802. Closure and postclosure care.

- 1. At closure of a magazine or unit which stored hazardous waste under sections 33.1-24-05-800 through 33.1-24-05-819, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components, contaminated subsoils, and structures and equipment contaminated with waste, and manage them as hazardous waste unless subsection 4 of section 33.1-24-02-03 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for magazines or units must meet all of the requirements specified in sections 33.1-24-05-59 through 33.1-24-05-88, except that the owner or operator may defer closure of the unit as long as it remains in service as a munitions or explosives magazine or storage unit.
- 2. If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in subsection 1, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, owner or operator must close the

facility and perform postclosure care in accordance with the closure and postclosure requirements that apply to landfills in section 33.1-24-05-180.

33.1-24-05-819. [Reserved].

33.1-24-05-820. Applicability.

1. The regulations in sections 33.1-24-05-820 through 33.1-24-05-849 identify when military munitions become a solid waste, and, if these wastes are also hazardous under sections 33.1-24-05-820 through 33.1-24-05-849 or chapter 33.1-24-02, the management standards that apply to these wastes.
2. Unless otherwise specified in sections 33.1-24-05-820 through 33.1-24-05-849, all applicable requirements in article 33.1-24 apply to waste military munitions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-821. Definitions.

In addition to the definitions in section 33.1-24-01-04, the following definitions apply to sections 33.1-24-05-820 through 33.1-24-05-849:

1. "Active range" means a military range that is currently in service and is being regularly used for range activities.
2. "Chemical agents and munitions" are defined as in 50 U.S.C. section 1521(j)(1).
3. "Inactive range" means a military range that is not currently being used, but that is still under military control and considered by the military to be a potential range area, and that has not been put to a new use that is incompatible with range activities.

4. "Military" means the department of defense, the armed services, coast guard, national guard, department of energy, or other parties under contract or acting as an agent for the foregoing, who handle military munitions.
5. "Military range" means designated land and water areas set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnance, or weapon systems, or to train military personnel in their use and handling. Ranges include firing lines and positions, maneuver areas, firing lanes, test pads, detonation pads, impact areas, and buffer zones with restricted access and exclusionary areas.
6. "Unexploded ordnance" means military munitions that have been primed, fused, armed, or otherwise prepared for action, and have been fired, dropped, launched, projected, or placed in such a manner as to constitute a hazard to operations, installation, personnel, or material and remain unexploded either by malfunction, design, or any other cause.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-822. Definition of solid waste.

1. A military munition is not a solid waste when:

a. Used for its intended purpose, including:

- (1) Use in training military personnel or explosives and munitions emergency response specialists (including training in proper destruction of unused propellant or other munitions);
- (2) Use in research, development, testing, and evaluation of military munitions, weapons, or weapon systems; or
- (3) Recovery, collection, and on-range destruction of unexploded ordnance and munitions fragments during range clearance activities at active or inactive ranges. However, "use for intended purpose" does not include the on-range disposal or burial of unexploded ordnance and contaminants when the burial is not a result of product use.

b. An unused munition, or component thereof, is being repaired, reused, recycled, reclaimed, disassembled, reconfigured, or otherwise subjected to materials recovery activities, unless such activities involve use constituting disposal (as defined in subdivision a of subsection 3 of section 33.1-24-02-02) or burning for energy recovery (as defined in subdivision b of subsection 3 of section 33.1-24-02-02).

2. An unused military munition is a solid waste when any of the following occurs:

- a. The munition is abandoned by being disposed of, burned, detonated (except during intended use as specified in subsection 1), incinerated, or treated prior to disposal;
- b. The munition is removed from storage in a military magazine or other storage area for the purpose of being disposed of, burned, or incinerated, or treated prior to disposal;
- c. The munition is deteriorated or damaged (for example, the integrity of the munition is compromised by cracks, leaks, or other damage) to the point that it cannot be put into serviceable condition, and cannot reasonably be recycled or used for other purposes; or
- d. The munition has been declared a solid waste by an authorized military official.

3. A used or fired military munition is a solid waste:

- a. When transported off-range or from the site of use, where the site of use is not a range, for the purposes of storage, reclamation, treatment, disposal, or treatment prior to disposal; or
- b. If recovered, collected, and then disposed of by burial, or landfilling either on or off a range.

4. For purposes of Resource Conservation and Recovery Act section 1004(27) or subsection 18 of North Dakota Century Code section 23.1-04-02, a used or fired military munition is a solid waste, and, therefore, is potentially subject to corrective action authorities under Resource Conservation and Recovery Act sections 3004(u) and (v), and 3008(h) or sections 33.1-24-05-57 and 33.1-24-05-58, or imminent and substantial endangerment authorities under section 7003, or North Dakota Century Code section 23.1-04-14, if the munition lands off range and is not promptly rendered safe or retrieved, or both. Any imminent and substantial threats associated with any remaining material must be addressed. If remedial action is infeasible, the operator of the range must maintain a record of the event for as long as any threat remains. The record must include the type of munition and its location (to the extent the location is known).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-823. Standards applicable to the transportation of solid waste military munitions.

1. Criteria for hazardous waste regulation of waste nonchemical military munitions in transportation.

a. Waste military munitions that are being transported and that exhibit a hazardous waste characteristic or are listed as hazardous waste under chapter 33.1-24-02 are listed or identified as a hazardous waste (and thus are subject to regulation under article 33.1-24), unless all the following conditions are met:

- (1) The waste military munitions are not chemical agents or chemical munitions;
- (2) The waste military munitions must be transported in accordance with the department of defense shipping controls applicable to the transport of military munitions;
- (3) The waste military munitions must be transported from a military owned or operated installation to a military owned or operated treatment, storage, or disposal facility; and
- (4) The transporter of the waste must provide oral notice to the department within twenty-four hours from the time the transporter becomes aware of any loss or theft of the waste military munitions, or any failure to meet a condition of this subdivision that may endanger health or the environment. In addition, a written submission describing the circumstances shall be provided within five days from the time the transporter becomes aware of any loss or theft of the waste military munitions or any failure to meet a condition of this subdivision.

b. If any waste military munitions shipped under subdivision a are not received by the receiving facility within forty-five days of the day the waste was shipped, the owner or operator of the receiving facility must report this nonreceipt to the department within five days.

c. The exemption in subdivision a from regulation as hazardous waste shall apply only to the transportation of nonchemical waste military munitions. It does not affect the regulatory status of waste military munitions as hazardous wastes with regard to storage, treatment, or disposal.

d. The conditional exemption in subdivision a applies only so long as all of the conditions in subdivision a are met.

2. Reinstatement of exemption. If any waste military munition loses its exemption under subdivision a of subsection 1, an application may be filed with the department for reinstatement of the exemption from hazardous waste transportation regulation with respect to such munition as soon as the munition is returned to compliance with the conditions of subdivision a of subsection 1. If the department finds that reinstatement of the exemption is appropriate based on factors such as the transporter's provision of a satisfactory explanation of the circumstances of the violation, or a demonstration that the violations are not likely to recur, the department may reinstate the exemption under subdivision a of subsection 1. If the department does not take action on the reinstatement application within sixty days after receipt of the application, then reinstatement shall be deemed granted, retroactive to the date of the application. However, the department may terminate a conditional exemption reinstated by default in the preceding sentence if the department finds that reinstatement is inappropriate based on factors such as the transporter's failure to provide a satisfactory explanation of the circumstances of the violation, or failure to demonstrate that the violations are not likely to recur. In reinstating the exemption under subdivision a of subsection 1, the department may specify additional conditions as are necessary to ensure and document proper transportation to protect human health and the environment.

3. Amendments to department of defense shipping controls. The department of defense shipping controls applicable to the transport of military munitions referenced in paragraph 2 of subdivision a of subsection 1 are government bill of lading (GSA standard form 1109), requisition tracking form (DD form 1348), the signature and tally record (DD form 1907), special instructions for motor vehicle drivers (DD form 836), and the motor vehicle inspection report (DD form 626) in effect on November 8, 1995, except as provided in the following sentence. Any amendments to the department of defense shipping controls shall become effective for purposes of subdivision a of subsection 1 on the date the department of defense publishes notice in the federal register that the shipping controls referenced in paragraph 2 of subdivision a of subsection 1 have been amended.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-824. Standards applicable to emergency responses.

Explosives and munitions emergencies involving military munitions or explosives are subject to subsection 8 of section 33.1-24-03-01, subsection 5 of section 33.1-24-04-01, paragraph 1 of subdivision g of subsection 6 of section 33.1-24-05-01, 40 CFR 265.1(c)(11) as incorporated by reference at subsection 5 of section 33.1-24-06-16, and paragraph 9 of subdivision b of subsection 2 of section 33.1-24-06-01, and subsection 1 of section 33.1-24-06-19.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-825. Standards applicable to the storage of solid waste military munitions.

1. Criteria for hazardous waste regulation of waste nonchemical military munitions in storage.

a. Waste military munitions in storage that exhibit a hazardous waste characteristic or are listed as hazardous waste under chapter 33.1-24-02 are listed or identified as a hazardous waste (and thus are subject to regulation under article 33.1-24), unless all the following conditions are met:

(1) The waste military munitions are not chemical agents or chemical munitions.

(2) The waste military munitions must be subject to the jurisdiction of the department of defense explosives safety board.

(3) The waste military munitions must be stored in accordance with the department of defense explosives safety board storage standards applicable to waste military munitions.

(4) Within ninety days of August 12, 1997, or within ninety days of when a storage unit is first used to store waste military munitions, whichever is later, the owner or operator must notify the department of the location of any waste storage unit used to store waste military munitions for which the conditional exemption in this subdivision is claimed.

(5) The owner or operator must provide oral notice to the department within twenty-four hours from the time the owner or operator becomes aware of any loss or theft of the waste military munitions, or any failure to meet a condition of this subdivision that may endanger health or the environment. In addition, a written submission describing the circumstances shall be provided within five days from the time the owner or operator becomes aware of any loss or theft of the waste military munitions or any failure to meet a condition of this subdivision.

(6) The owner or operator must inventory the waste military munitions at least annually, must inspect the waste military munitions at least quarterly for compliance with the conditions of this subdivision, and must maintain records of the findings of these inventories and inspections for at least three years.

(7) Access to the stored waste military munitions must be limited to appropriately trained and authorized personnel.

b. The conditional exemption in subdivision a from regulation as hazardous waste shall apply only to the storage of nonchemical waste military munitions. It does not affect the regulatory status of waste military munitions as hazardous wastes with regard to transportation, treatment, or disposal.

c. The conditional exemption in subdivision a applies only so long as all of the conditions in subdivision a are met.

2. Notice of termination of waste storage. The owner or operator must notify the department when a storage unit identified in paragraph 4 of subdivision a of subsection 1 will no longer be used to store waste military munitions.

3. Reinstatement of conditional exemption. If any waste military munition loses its conditional exemption under subdivision a of subsection 1, an application may be filed with the department for reinstatement of the conditional exemption from hazardous waste storage regulation with respect to such munition as soon as the munition is returned to compliance with the conditions of subdivision a of subsection 1. If the department finds that reinstatement of the conditional exemption is appropriate based on factors such as the owner's or operator's provision of a satisfactory explanation of the circumstances of the violation, or a demonstration that the violations are not likely to recur, the department may reinstate the conditional exemption under subdivision a of subsection 1. If the department does not take

action on the reinstatement application within sixty days after receipt of the application, then reinstatement shall be deemed granted, retroactive to the date of the application. However, the department may terminate a conditional exemption reinstated by default in the preceding sentence if the department finds that reinstatement is inappropriate based on factors such as the owner's or operator's failure to provide a satisfactory explanation of the circumstances of the violation, or failure to demonstrate that the violations are not likely to recur. In reinstating the conditional exemption under subdivision a of subsection 1, the department may specify additional conditions as are necessary to ensure and document proper storage to protect human health and the environment.

4. Waste chemical munitions.

a. Waste military munitions that are chemical agents or chemical munitions and that exhibit a hazardous waste characteristic or are listed as hazardous waste under chapter 33.1-24-02 are listed or identified as a hazardous waste and shall be subject to the applicable regulatory requirements of article 33.1-24.

b. Waste military munitions that are chemical agents or chemical munitions and that exhibit a hazardous waste characteristic or are listed as hazardous waste under chapter 33.1-24-02 are not subject to the storage prohibition in section 33.1-24-05-290.

5. Amendments to department of defense explosives safety board storage standards. The department of defense explosives safety board storage standards applicable to waste military munitions, referenced in paragraph 3 of subdivision a of subsection 1, are department of defense 6055.9-STD ("DOD ammunition and explosive safety standards"), in effect on November 8, 1995, except as provided in the following sentence. Any amendments to the department of defense explosives safety board storage standards shall become effective for purposes of subdivision a of subsection 1 on the date the department of defense publishes notice in the federal register that the department of defense explosives safety board standards referenced in subdivision a of subsection 1 have been amended.

History: Effective January 1, 2019.

33.1-24-05-850. Definitions applicable to the conditional exemption for low-level mixed waste storage, treatment, transportation, and disposal.

For sections 33.1-24-05-850 through 33.1-24-05-929, use the following special definitions:

1. "Agreement state" means a state that has entered into an agreement with the nuclear regulatory commission under subsection 274b of the Atomic Energy Act of 1954, as amended [68 Stat. 919], to assume responsibility for regulating within its borders byproduct, source, or special nuclear material in quantities not sufficient to form a critical mass. North Dakota is an agreement state.
2. "Certified delivery" means certified mail with return receipt requested, or equivalent courier service, or other means, that provides the sender with a receipt confirming delivery.
3. "Eligible naturally occurring or accelerator-produced radioactive material, or both (NARM)" is NARM that is eligible for the transportation and disposal conditional exemption. It is a NARM waste that contains hazardous waste, meets the waste acceptance criteria of, and is allowed by applicable state NARM regulations to be disposed of at a low-level radioactive waste disposal facility licensed in accordance with 10 CFR part 61 or nuclear regulatory commission agreement state equivalent regulations.

4. "Exempted waste" means a waste that meets the eligibility criteria in section 33.1-24-05-856 and meets all of the conditions in section 33.1-24-05-857, or meets the eligibility criteria in section 33.1-24-05-890 and complies with all the conditions in section 33.1-24-05-895. Such waste is conditionally exempted from the regulatory definition of hazardous waste described in section 33.1-24-02-03.
5. "Hazardous waste" means any material which is defined to be hazardous waste in accordance with section 33.1-24-02-03.
6. "Land disposal restriction treatment standards" means treatment standards, under sections 33.1-24-05-250 through 33.1-24-05-299, that a hazardous waste must meet before it can be disposed of in a permitted hazardous waste land disposal unit.
7. "License" means a license issued by the nuclear regulatory commission, or nuclear regulatory commission agreement state, to users that manage radionuclides regulated by nuclear regulatory commission, or nuclear regulatory commission agreement states, under authority of the Atomic Energy Act of 1954, as amended.
8. "Low-level mixed waste" is a waste that contains both low-level radioactive waste and hazardous waste.
9. "Low-level radioactive waste" is a radioactive waste which contains source, special nuclear, or byproduct material, and which is not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel, or byproduct material as defined in section 11e.(2) of the Atomic Energy Act. See also nuclear regulatory commission definition of "waste" at 10 CFR 61.2.
10. "Mixed waste" means a waste that contains both hazardous waste and source, special nuclear, or byproduct material subject to the Atomic Energy Act of 1954, as amended.
11. "Naturally occurring radioactive material, accelerator-produced radioactive material, or both (NARM)" means radioactive materials that:
 - a. Are naturally occurring and are not source, special nuclear, or byproduct materials (as defined by the Atomic Energy Act); or
 - b. Are produced by an accelerator.

NARM is regulated by the states under state law, or by department of energy (as authorized by the Atomic Energy Act) under department of energy orders.
12. "Nuclear regulatory commission" means the United States nuclear regulatory commission.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-851. [Reserved].

33.1-24-05-852. [Reserved].

33.1-24-05-853. [Reserved].

33.1-24-05-854. [Reserved].

33.1-24-05-855. Storage and treatment conditional exemption and eligibility.

The storage and treatment conditional exemption exempts certain low-level mixed waste from the regulatory definition of hazardous waste in section 33.1-24-02-03 if the waste meets the eligibility criteria in section 33.1-24-05-856 and the generator, treater, or other handler meets the conditions in section 33.1-24-05-857.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-856. Eligible wastes for the storage and treatment conditional exemption.

Low-level mixed waste, defined in section 33.1-24-05-850, is eligible for this conditional exemption if it is generated and managed by a generator, treater, or other handler under a single nuclear regulatory commission or nuclear regulatory commission agreement state license. (Mixed waste generated at a facility with a different license number and shipped to a facility for storage or treatment requires a permit and is ineligible for this exemption. In addition, NARM waste is ineligible for this exemption.)

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-857. Conditions to qualify for and maintain a storage and treatment exemption.

1. For a generator's, treater's, or other handler's low-level mixed waste to qualify for the exemption, the generator, treater, or other handler must notify the department in writing by certified delivery that the generator, treater, or other handler is claiming a conditional exemption for the low-level mixed waste stored at the facility. The dated notification must include the generator's, treater's, or other handler's name, address, identification number, nuclear regulatory commission or nuclear regulatory commission agreement state license number, the waste code or codes and storage unit or units for which an exemption is being sought, and a statement that the generator, treater, or other handler meets the conditions of sections 33.1-24-05-850 through 33.1-24-05-929. The notification must be signed by an authorized representative who certifies that the information in the notification is true, accurate, and complete. The generator, treater, or other handler must notify the department of the claim either within ninety days of the effective date of this rule, or within ninety days of when a storage unit is first used to store conditionally exempt low-level mixed waste.
2. To qualify for and maintain an exemption for low-level mixed waste, the generator, treater, or other handler must:
 - a. Store low-level mixed waste in tanks or containers in compliance with the requirements of the generator's, treater's, or other handler's license that apply to the proper storage of low-level radioactive waste (not including those license requirements that relate solely to recordkeeping);
 - b. Store low-level mixed waste in tanks or containers in compliance with chemical compatibility requirements of a tank or container in section 33.1-24-05-96, or section 33.1-24-05-112;

- c. Certify that facility personnel who manage stored conditionally exempt low-level mixed waste are trained in a manner that ensures that the conditionally exempt waste is safely managed and includes training in chemical waste management and hazardous materials incidents response that meets the personnel training standards found in subdivision c of subsection 1 of section 33.1-24-05-07;
- d. Conduct an inventory of the generator's, treater's, or other handler's stored conditionally exempt low-level mixed waste at least annually and inspect it at least quarterly for compliance with sections 33.1-24-05-850 through 33.1-24-05-929; and
- e. Maintain an accurate emergency plan and provide copies of the plan to all local authorities who may have to respond to a fire, explosion, or release of hazardous waste or hazardous constituents. The plan must describe emergency response arrangements with local authorities; describe evacuation plans; list the names, addresses, and telephone numbers of all facility personnel qualified to work with local authorities as emergency coordinators; and list emergency equipment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-858. [Reserved].

33.1-24-05-859. [Reserved].

33.1-24-05-860. Treatment allowed under storage and treatment conditional exemption.

A generator, treater, or other handler may treat low-level mixed waste at the facility within a tank or container in accordance with the terms of the generator's, treater's, or other handler's nuclear regulatory commission or nuclear regulatory commission agreement state license. Treatment that cannot be done in a tank or container without a hazardous waste permit (such as incineration) is not allowed under this exemption.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-861. [Reserved].

33.1-24-05-862. [Reserved].

33.1-24-05-863. [Reserved].

33.1-24-05-864. [Reserved].

33.1-24-05-865. Loss of conditional exemption.

1. A generator's, treater's, or other handler's low-level mixed waste will automatically lose the storage and treatment conditional exemption if the generator, treater, or other handler fails to meet any of the conditions specified in section 33.1-24-05-857. When low-level mixed waste loses the exemption, the generator, treater, or other handler must immediately manage that waste which failed the condition as hazardous waste, and the storage unit storing the low-level mixed waste immediately becomes subject to hazardous waste container or tank storage requirements, as applicable.

 - a. If a generator, treater, or other handler fails to meet any of the conditions specified in section 33.1-24-05-857 the generator, treater, or other handler must report to the department and the nuclear regulatory commission, or the oversight agency in the nuclear regulatory commission agreement state, in writing by certified delivery within thirty days of learning of the failure. The report must be signed by an authorized representative certifying that the information provided is true, accurate, and complete. This report must include:

 - (1) The specific condition or conditions the generator, treater, or other handler failed to meet;
 - (2) A description of the low-level mixed waste (including the waste name, hazardous waste code or codes and quantity) and storage location at the facility; and
 - (3) The date or dates on which the generator, treater, or other handler failed to meet the condition or conditions.
 - b. If the failure to meet any of the conditions may endanger human health or the environment, the generator, treater, or other handler must also immediately notify the department orally within twenty-four hours and follow up with a written notification within five days. Failures that may endanger human health or the environment include discharge of a comprehensive environmental response, compensation and liability act reportable quantity or other leaking or exploding tanks or containers, or detection of radionuclides above background or hazardous constituents in the leachate collection system of a storage area. If the failure may endanger human health or the environment, the generator, treater, or other handler must follow the provisions of the emergency plan.
2. The department may terminate the conditional exemption for the generator's, treater's, or other handler's low-level mixed waste, or require the generator, treater, or other handler to meet additional conditions to claim a conditional exemption, for serious or repeated noncompliance with any requirement or requirements of sections 33.1-24-05-850 through 33.1-24-05-929.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-866. Procedures to reclaim a lost storage and treatment conditional exemption for low-level mixed waste.

1. A generator, treater, or other handler may reclaim the storage and treatment exemption for low-level mixed waste if:

a. The generator, treater, or other handler again meets the conditions specified in section 33.1-24-05-857; and

b. The generator, treater, or other handler sends the department a notice by certified delivery that the generator, treater, or other handler is reclaiming the exemption for low-level mixed waste. The notice must be signed by an authorized representative certifying that the information contained in the notice is true, complete, and accurate. In the notice the generator, treater, or other handler must do the following:

(1) Explain the circumstances of each failure.

(2) Certify that the generator, treater, or other handler has corrected each failure that caused the loss of the exemption for the low-level mixed waste and that the generator, treater, or other handler again meets all the conditions as of the date specified in the notice.

(3) Describe plans that have been implemented, listing specific steps taken to ensure the conditions will be met in the future.

(4) Include any other information the department should consider when reviewing the notice reclaiming the exemption.

2. The department may terminate a reclaimed conditional exemption if the department finds the claim is inappropriate based on factors including the following: failure to correct the problem; unsatisfactory explanation of the circumstances of the failure; or failure to implement a plan with steps to prevent another failure to meet the conditions of section 33.1-24-05-857. In reviewing a reclaimed conditional exemption under this section, the department may add conditions to the exemption to ensure that waste management during storage and treatment of the low-level mixed waste will protect human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-867. [Reserved].

33.1-24-05-868. [Reserved].

33.1-24-05-869. [Reserved].

33.1-24-05-870. Recordkeeping for the storage and treatment conditional exemption.

1. In addition to those records required by the generator's, treater's, or other handler's nuclear regulatory commission or nuclear regulatory commission agreement state license, the generator, treater, or other handler must keep records as follows:

a. The generator's, treater's, or other handler's initial notification records, return receipts, reports to the department of failure or failures to meet the exemption conditions, and all records supporting any reclaim of an exemption;

- b. Records of low-level mixed waste annual inventories, and quarterly inspections;
 - c. Certification that facility personnel who manage stored mixed waste are trained in safe management of low-level mixed waste, including training in chemical waste management and hazardous materials incidents response; and
 - d. The emergency plan as specified in subsection 2 of section 33.1-24-05-857.
2. The generator, treater, or other handler must maintain records concerning notification, personnel trained, and emergency plan for as long as the exemption is claimed and for three years thereafter, or in accordance with nuclear regulatory commission regulations under chapter 33.1-10-04.1 [10 CFR part 20], whichever is longer. The generator, treater, or other handler must maintain records concerning the annual inventory and quarterly inspections for three years after the waste is sent for disposal, or in accordance with nuclear regulatory commission regulations under chapter 33.1-10-04.1 [10 CFR part 20], whichever is longer.
 3. The retention period referred to in this section is extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-872. [Reserved].

33.1-24-05-873. [Reserved].

33.1-24-05-874. [Reserved].

33.1-24-05-875. Re-entry into regulation under the hazardous waste management rules.

Low-level mixed waste is no longer eligible for the storage and treatment conditional exemption:

1. When the low-level mixed waste has met the requirements of the generator's, treater's, or other handler's nuclear regulatory commission or nuclear regulatory commission agreement state license for decay-in-storage and can be disposed of as nonradioactive waste, then the conditional exemption for storage no longer applies. On that date the waste is subject to hazardous waste regulation under the applicable sections of article 33.1-24, and the time period for accumulation of a hazardous waste as specified in section 33.1-24-03-12 begins.
2. When a generator's, treater's, or other handler's conditionally exempt low-level mixed waste, which has been generated and stored under a single nuclear regulatory commission or nuclear regulatory commission agreement state license number, is removed from storage, it is

no longer eligible for the storage and treatment exemption, however, the waste may be eligible for the transportation and disposal conditional exemption at section 33.1-24-05-885.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-878. [Reserved].

33.1-24-05-879. [Reserved].

33.1-24-05-880. Storage unit closure.

Interim status and permitted storage units that have been used to store only low-level mixed waste prior to the effective date of sections 33.1-24-05-850 through 33.1-24-05-929 and, after that date, store only low-level mixed waste which becomes exempt under sections 33.1-24-05-850 through 33.1-24-05-929, are not subject to the closure requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 or applicable requirements of subsection 5 of section 33.1-24-06-16. Storage units (or portions of units) that have been used to store both low-level mixed waste and nonmixed hazardous waste prior to the effective date of sections 33.1-24-05-850 through 33.1-24-05-929 or are used to store both after that date remain subject to closure requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, or applicable requirements of subsection 5 of section 33.1-24-06-16 with respect to the nonmixed hazardous waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-881. [Reserved].

33.1-24-05-882. [Reserved].

33.1-24-05-883. [Reserved].

33.1-24-05-884. [Reserved].

33.1-24-05-885. Transportation and disposal conditional exemption.

This conditional exemption exempts a generator's, treater's, or other handler's waste from the regulatory definition of hazardous waste in section 33.1-24-02-03 if the waste meets the eligibility criteria under section 33.1-24-05-890, and the generator, treater, or other handler meets the conditions in section 33.1-24-05-895.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-886. [Reserved].

33.1-24-05-888. [Reserved].

33.1-24-05-889. [Reserved].

33.1-24-05-890. Eligibility for the transportation and disposal conditional exemption.

Eligible waste must be:

1. A low-level mixed waste, as defined in section 33.1-24-05-850, that meets the waste acceptance criteria of a low-level radioactive waste disposal facility;
2. An eligible NARM waste, defined in section 33.1-24-05-850; or
3. Both a low-level mixed waste and an eligible NARM waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-891. [Reserved].

33.1-24-05-892. [Reserved].

33.1-24-05-893. [Reserved].

33.1-24-05-894. [Reserved].

33.1-24-05-895. Conditions to qualify for and maintain the transportation and disposal conditional exemption.

A generator, treater, or other handler must meet the following conditions for the generator's, treater's, or other handler's eligible waste to qualify for and maintain the exemption:

1. The eligible waste must meet or be treated to meet land disposal restriction treatment standards as described in section 33.1-24-05-896.
2. If the generator, treater, or other handler is not already subject to nuclear regulatory commission or nuclear regulatory commission agreement state equivalent manifest and transportation regulations for the shipment of the waste, the generator, treater, or other handler must manifest and transport the waste according to nuclear regulatory commission regulations as described in section 33.1-24-05-897.
3. The exempted waste must be in containers when it is disposed of in the low-level radioactive waste disposal facility as described in section 33.1-24-05-900.
4. The exempted waste must be disposed of at a designated low-level radioactive waste disposal facility as described in section 33.1-24-05-899.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-896. Treatment standards for eligible waste.

A generator's, treater's, or other handler's low-level mixed waste or eligible NARM waste must meet land disposal restriction treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-897. Manifest and transportation of eligible wastes not already subject to nuclear regulatory commission or nuclear regulatory commission agreement state equivalent manifest and transportation regulations.

If the generator, treater, or other handler is not already subject to nuclear regulatory commission or nuclear regulatory commission agreement state equivalent manifest and transportation regulations for the shipment of the generator's, treater's, or other handler's waste, then the generator, treater, or other handler must meet the manifest requirements under chapter 33.1-10-04.1 [10 CFR 20.2006], and the transportation requirements under chapter 33.1-10-13 [10 CFR 1.5] to ship the exempted waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-898. Transportation and disposal exemption.

The exemption becomes effective once all the following have occurred:

1. The generator's, treater's, or other handler's eligible waste meets the applicable land disposal restriction treatment standards.
2. The generator, treater, or other handler has received return receipts that the department and the low-level radioactive waste disposal facility have received notification as described in section 33.1-24-05-905.
3. The generator, treater, or other handler has completed the packaging and preparation for shipment requirements for the generator's, treater's, or other handler's waste according to nuclear regulatory commission packaging and transportation regulations found under chapter 33.1-10-13 [10 CFR part 71]; and the generator, treater, or other handler has prepared a manifest for the waste according to nuclear regulatory commission manifest regulations found under chapter 33.1-10-04.1 [10 CFR part 20].
4. The generator, treater, or other handler has placed the waste on a transportation vehicle destined for a low-level radioactive waste disposal facility licensed by the nuclear regulatory commission or a nuclear regulatory commission agreement state.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-899. Disposal facilities for exempted wastes.

The generator's, treater's, or other handler's exempted waste must be disposed of in a low-level radioactive waste disposal facility that is regulated and licensed by the nuclear regulatory commission under 10 CFR part 61 or by a nuclear regulatory commission agreement state under equivalent state regulations where the low-level radioactive waste disposal facility is located, including state NARM licensing regulations for eligible NARM.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-900. Disposal containers for exempted waste.

The generator's, treater's, or other handler's exempted waste must be placed in containers before it is disposed. The container must be:

1. A carbon steel drum;
2. An alternative container with equivalent containment performance in the disposal environment as a carbon steel drum; or
3. A high integrity container as defined by the nuclear regulatory commission.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-901. [Reserved].

33.1-24-05-902. [Reserved].

33.1-24-05-903. [Reserved].

33.1-24-05-904. [Reserved].

33.1-24-05-905. Notification.

1. The generator, treater, or other handler must provide a one-time notice to the department stating that the generator, treater, or other handler is claiming the transportation and disposal conditional exemption prior to the initial shipment of an exempted waste from the generator's, treater's, or other handler's facility to a low-level radioactive waste disposal facility. The dated written notice must include the generator, treater, or other handler facility name, address, telephone number, and identification number, and be sent by certified delivery.
2. The generator, treater, or other handler must notify the low-level radioactive waste disposal facility receiving the exempted waste by certified delivery before shipment of each exempted waste. The generator, treater, or other handler can only ship the exempted waste after receipt of the return receipt of the notice to the low-level radioactive waste disposal facility. This notification must include the following:
 - a. A statement that the generator, treater, or other handler has claimed the exemption for the waste.
 - b. A statement that the eligible waste meets applicable land disposal restriction treatment standards.
 - c. The generator, treater, or other handler facility's name, address, and identification number.
 - d. The hazardous waste code or codes prior to the exemption of the waste streams.
 - e. A statement that the exempted waste must be placed in a container according to section 33.1-24-05-900 prior to disposal in order for the waste to remain exempt under the transportation and disposal conditional exemption of sections 33.1-24-05-850 through 33.1-24-05-929.
 - f. The manifest number of the shipment that will contain the exempted waste.
 - g. A certification that all the information provided is true, complete, and accurate. The statement must be signed by an authorized representative.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-906. [Reserved].

33.1-24-05-907. [Reserved].

33.1-24-05-908. [Reserved].

33.1-24-05-909. [Reserved].

33.1-24-05-910. Recordkeeping for the transportation and disposal conditional exemption.

In addition to those records required by the generator's, treater's, or other handler's nuclear regulatory commission or nuclear regulatory commission agreement state license, the generator, treater, or other handler must keep records as follows:

1. The generator, treater, or other handler must follow the applicable existing recordkeeping requirements under sections 33.1-24-05-40 and 33.1-24-05-256 to demonstrate that the waste has met land disposal restriction treatment standards prior to claiming the exemption.
2. The generator, treater, or other handler must keep a copy of all notifications and return receipts required under sections 33.1-24-05-915 and 33.1-24-05-916 for three years after the exempted waste is sent for disposal.
3. The generator, treater, or other handler must keep a copy of all notifications and return receipts required under subsection 1 of section 33.1-24-05-905 for three years after the last exempted waste is sent for disposal.
4. The generator, treater, or other handler must keep a copy of the notification and return receipt required under subsection 2 of section 33.1-24-05-905 for three years after the exempted waste is sent for disposal.
5. If the generator, treater, or other handler is not already subject to nuclear regulatory commission or nuclear regulatory commission agreement state equivalent manifest and transportation regulations for the shipment of the waste, the generator, treater, or other handler must also keep all other documents related to tracking the exempted waste as required under chapter 33.1-10-04.1 [10 CFR 20.2006], including applicable NARM requirements, in addition to the records specified in subsections 1 through 4.
6. The retention period referred to in this section is extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-911. [Reserved].

33.1-24-05-912. [Reserved].

33.1-24-05-913. [Reserved].

33.1-24-05-914. [Reserved].

33.1-24-05-915. Loss of transportation and disposal conditional exemption.

1. Any waste will automatically lose the transportation and disposal exemption if the generator, treater, or other handler fails to manage it in accordance with all of the conditions specified in section 33.1-24-05-895.

a. When the generator, treater, or other handler fails to meet any of the conditions specified in section 33.1-24-05-895 for any wastes, the generator, treater, or other handler must report to the department, in writing by certified delivery, within thirty days of learning of the failure. The report must be signed by an authorized representative certifying that the information provided is true, accurate, and complete. This report must include:

(1) The specific condition or conditions that the generator, treater, or other handler failed to meet for the waste;

(2) A description of the waste (including the waste name, hazardous waste code or codes and quantity) that lost the exemption; and

(3) The date or dates on which the generator, treater, or other handler failed to meet the condition or conditions for the waste.

b. If the failure to meet any of the conditions may endanger human health or the environment, the generator, treater, or other handler must also immediately notify the department orally within twenty-four hours and follow up with a written notification within five days.

2. The department may terminate the generator's, treater's, or other handler's ability to claim a conditional exemption for the waste, or require the generator, treater, or other handler to meet additional conditions to claim a conditional exemption, for serious or repeated noncompliance with any requirement or requirements of sections 33.1-24-05-850 through 33.1-24-05-929.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-916. Procedures to reclaim a lost transportation and disposal conditional exemption for low-level mixed waste.

1. The generator, treater, or other handler may reclaim the transportation and disposal exemption for a waste after the generator, treater, or other handler has received a return receipt confirming that the department has received notification of the loss of the exemption specified in subsection 1 of section 33.1-24-05-915 and if:

- a. The generator, treater, or other handler again meets the conditions specified in section 33.1-24-05-895 for the waste; and
- b. The generator, treater, or other handler sends a notice, by certified delivery, to the department that the generator, treater, or other handler is reclaiming the exemption for the waste. The notice must be signed by an authorized representative certifying that the information provided is true, accurate, and complete. The notice must:
 - (1) Explain the circumstances of each failure.
 - (2) Certify that each failure that caused the generator, treater, or other handler to lose the exemption for the waste has been corrected and that the generator, treater, or other handler again meets all conditions for the waste as of the date specified in the notice.
 - (3) Describe plans the generator, treater, or other handler has implemented, listing the specific steps taken, to ensure that conditions will be met in the future.
 - (4) Include any other information the department should consider when reviewing the notice reclaiming the exemption.
- 2. The department may terminate a reclaimed conditional exemption if the department finds that the generator's, treater's, or other handler's claim is inappropriate based on factors including failure to correct the problem; unsatisfactory explanation of the circumstances of the failure; or failure to implement a plan with steps to prevent another failure to meet the conditions of section 33.1-24-05-895. In reviewing a reclaimed conditional exemption under this section, the department may add conditions to the exemption to ensure that transportation and disposal activities will protect human health and the environment.

33.1-24-05-948. [Reserved].

33.1-24-05-949. [Reserved].

33.1-24-05-950. Purpose, scope, and applicability of standardized permits.

1. The purpose of sections 33.1-24-05-950 through 33.1-24-05-1149 is to establish minimum standards which define the acceptable management of hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85.
2. Sections 33.1-24-05-950 through 33.1-24-05-1149 applies to owners and operators of facilities who treat or store hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided otherwise in sections 33.1-24-02-01 through 33.1-24-02-07 or subsection 6 of section 33.1-24-05-01.
3. Notwithstanding any other provisions of this part, enforcement actions may be brought pursuant to North Dakota Century Code section 23.1-04-14.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-05-951. Operating status prior to final administrative disposition of the permit application.

If a facility owner or operator has fully complied with the requirements for interim status, as defined in subsection 2 of North Dakota Century Code section 23.1-04-08 and regulations under 40 CFR 270.70 as incorporated by reference at subsection 5 of section 33.1-24-06-16, the owner or operator must comply with the applicable provisions of 40 CFR part 265 as incorporated by reference in subsection 5 of section 33.1-24-06-16 instead of the rules in sections 33.1-24-05-950 through 33.1-24-05-1149, until final administrative disposition of the standardized permit application is made, except as provided under sections 33.1-24-05-550 through 33.1-24-05-559.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-952. [Reserved].

33.1-24-05-954. [Reserved].

33.1-24-05-955. [Reserved].

33.1-24-05-956. [Reserved].

33.1-24-05-957. [Reserved].

33.1-24-05-958. [Reserved].

33.1-24-05-959. [Reserved].

33.1-24-05-960. General facility standards.

1. Sections 33.1-24-05-960 through 33.1-24-05-979 applies to owners or operators of facilities that treat or store hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950.
2. To comply with sections 33.1-24-05-960 through 33.1-24-05-979, the owner or operator must obtain an identification number, and follow the requirements for waste analysis (section 33.1-24-05-963), security (section 33.1-24-05-964), inspections (section 33.1-24-05-965), training (section 33.1-24-05-966), special waste handling (section 33.1-24-05-967), and location standards (section 33.1-24-05-968).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-961. Identification number.

To comply with sections 33.1-24-05-950 through 33.1-24-05-1149, the facility owner or operator must apply to the department for an identification number.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-962. [Reserved].

33.1-24-05-963. General waste analysis.

1. Before an owner or operator treats or stores any hazardous wastes, the owner or operator must obtain a detailed chemical and physical analysis of a representative sample of the wastes. At a minimum, the analysis must contain all the information needed to treat or store the waste to comply with sections 33.1-24-05-950 through 33.1-24-05-1149 and sections 33.1-24-05-250 through 33.1-24-05-299.
 - a. The analysis may include data that was developed under chapter 33.1-24-02, and published or documented data on the hazardous waste or on hazardous waste generated from similar processes.
 - b. The analysis must be repeated as necessary to ensure that it is accurate and up-to-date. At a minimum, the analysis must be repeated if the process or operation generating the hazardous wastes has changed.
2. The owner or operator must develop and follow a written waste analysis plan that describes the procedures which the owner or operator will follow to comply with subsection 1. The owner or operator must keep this plan at the facility. If the facility receives wastes generated from offsite, and is eligible for a standardized permit, the owner or operator also must have submitted the waste analysis plan with the notice of intent. At a minimum, the plan must specify all of the following:
 - a. The hazardous waste parameters that will be analyzed and the rationale for selecting these parameters, for example, how analysis for these parameters will provide sufficient information on the waste's properties to comply with subsection 1;
 - b. The test methods which will be used to test for these parameters;
 - c. The sampling method which will be used to obtain a representative sample of the waste to be analyzed. A representative sample may be obtained using either:
 - (1) One of the sampling methods described in appendix I of chapter 33.1-24-02; or
 - (2) An equivalent sampling method.
 - d. The frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up-to-date; and
 - e. Where applicable, the methods which will be used to meet the additional waste analysis requirements for specific waste management methods as specified in section 33.1-24-05-08, subsection 4 of section 33.1-24-05-404, subsection 4 of section 33.1-24-05-433, and section 33.1-24-05-453.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-964. Security.

1. The owner or operator must prevent, and minimize the possibility for, livestock and unauthorized people from entering the active portion of the facility.

2. The facility must have:

- a. A twenty-four hour surveillance system, for example, television monitoring or surveillance by guards or facility personnel, that continuously monitors and controls entry onto the active portion of the facility; or
- b. An artificial or natural barrier, for example, a fence in good repair or a fence combined with a cliff, that completely surrounds the active portion of the facility; and
- c. A means to control entry, at all times, through the gates or other entrances to the active portion of the facility, for example, an attendant, television monitors, locked entrance, or controlled roadway access to the facility.

3. The owner or operator must post a sign at each entrance to the active portion of a facility, and at other prominent locations, in sufficient numbers to be seen from any approach to this active portion. The sign must bear the legend "Danger - Unauthorized Personnel Keep Out". The legend must be in English and in any other language predominant in the area surrounding the facility and must be legible from a distance of at least twenty-five feet. Existing signs with a legend other than "Danger - Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion can be dangerous.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-965. General inspection requirements.

1. The owner or operator must inspect the facility for malfunctions and deterioration, operator errors, and discharges that may be causing, or may lead to:

- a. Release of hazardous waste constituents to the environment; or
- b. A threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they result in harm to human health or the environment.

2. The owner or operator must develop and follow a written schedule for inspecting, monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.

- a. The owner or operator must keep this schedule at the facility.
- b. The schedule must identify the equipment and devices that will be inspected and what problems will be looked for, such as malfunctions or deterioration of equipment, for example, inoperative sump pump or leaking fitting.
- c. The frequency of inspections may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the items and frequencies required in sections 33.1-24-05-1084, 33.1-24-05-1103, 33.1-24-05-1105, 33.1-24-05-1133, 33.1-24-05-403, 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-428, and 33.1-24-05-453 through 33.1-24-05-459, where applicable.

3. The owner or operator must remedy any deterioration or malfunction of equipment or structures that the inspection reveals in time to prevent any environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action must be taken immediately.
4. The owner or operator must record all inspections in an inspection log or summary. The owner or operator must keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of the inspection, the name of the inspector, a notation of the observations made, and the date and nature of any repairs or other remedial actions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-966. Personnel training.

1. Facility personnel must successfully complete a program of classroom instruction or on the job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of sections 33.1-24-05-950 through 33.1-24-05-1149. The owner or operator shall ensure that this program includes all the elements described in the documents that are required under subdivision c of subsection 4.
 - a. This program must be directed by a person trained in hazardous waste management procedures, and must include instruction which teaches facility personnel hazardous waste management procedures, including contingency plan implementation, relevant to their employment positions.
 - b. At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by including instruction on emergency procedures, emergency equipment, and emergency systems, including all of the following, where applicable:
 - (1) Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;
 - (2) Key parameters for automatic waste feed cut-off systems;
 - (3) Communications or alarm systems;
 - (4) Response to fires or explosions;
 - (5) Response to ground water contamination incidents; and
 - (6) Shutdown of operations.
2. Facility personnel must successfully complete the program required in subsection 1 within six months after the date of their employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after the effective date of the facility's standardized permit must not work in unsupervised positions until they have completed the training requirements of subsection 1.
3. Facility personnel must take part in an annual review of the initial training required in subsection 1.
4. The owner or operator must maintain the following documents and records at the facility:

- a. The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job.
 - b. A written job description for each position listed under subdivision a. This description must include the requisite skill, education, or other qualifications, and duties of employees assigned to each position.
 - c. A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under subdivision a.
 - d. Records that document that facility personnel have received and completed the training or job experience required under subsections 1, 2, and 3.
5. Training records on current personnel must be kept until the facility closes. Training records on former employees must be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-967. General requirements for ignitable, reactive, or incompatible wastes.

1. The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste by following these requirements:
 - a. These wastes must be separated and protected from sources of ignition or reaction such as: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (for example, from heat producing chemical reactions), and radiant heat;
 - b. While ignitable or reactive waste is being handled, the owner or operator must confine smoking and open flames to specially designated locations; and
 - c. "No Smoking" signs must be conspicuously placed wherever there is a hazard from ignitable or reactive waste.
2. If the owner or operator treats or stores ignitable or reactive waste, or mixes incompatible waste or incompatible wastes and other materials, the owner or operator must take precautions to prevent reactions that:
 - a. Generate extreme heat or pressure, fire or explosions, or violent reactions;
 - b. Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health or the environment;
 - c. Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
 - d. Damage the structural integrity of the device or facility; and
 - e. Threaten human health or the environment in any similar way.
3. The owner or operator must document compliance with subsection 1 or 2. This documentation may be based on references to published scientific or engineering literature, data from trial tests (for example, bench scale or pilot scale tests), waste analyses (as specified in section

33.1-24-05-963), or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-968. Location standards.

The department will not issue or approve a permit to any facility or portion of a facility which is or will be constructed in a location with a geology, hydrogeology, hydrology, or topography which the department reasonably believes is incompatible with the type of hazardous waste management activity occurring or proposed to occur. Locations which are specifically within the meaning of this section include floodplains, ground water recharge areas, highly permeable soils, high ground water tables, and areas of high topographic relief.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-969. [Reserved].

33.1-24-05-970. [Reserved].

33.1-24-05-971. [Reserved].

33.1-24-05-972. [Reserved].

33.1-24-05-973. [Reserved].

33.1-24-05-974. [Reserved].

33.1-24-05-975. [Reserved].

33.1-24-05-976. [Reserved].

33.1-24-05-977. [Reserved].

33.1-24-05-978. [Reserved].

33.1-24-05-979. [Reserved].

33.1-24-05-980. Preparedness and prevention.

Sections 33.1-24-05-980 through 33.1-24-05-989 applies to owners or operators of facilities that treat or store hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-981. General design and operation standards.

The owner or operator must design, construct, maintain, and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-982. Required equipment.

The facility must be equipped with all of the following, unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

1. An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
2. A device, such as a telephone (immediately available at the scene of operations), or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;
3. Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and
4. Water at adequate volume and pressure to supply water hose streams, foam-producing equipment, automatic sprinklers, or water spray systems.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-983. Testing and maintenance of equipment.

The owner or operator must test and maintain all required facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, as necessary, to assure its proper operation in time of emergency.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-984. Access to communication equipment or alarm system.

1. Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless the device is not required under section 33.1-24-05-982.
2. If just one employee is on the premises while the facility is operating, that person must have immediate access to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless not required under section 33.1-24-05-982.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-985. Required aisle space.

The owner or operator must maintain enough aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, as appropriate, considering the type of waste being stored or treated.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-986. Arrangements with local authorities.

1. The owner or operator must attempt to make the following arrangements, as appropriate, for the type of waste handled at the facility and the potential need for the services of these organizations:
 - a. Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes;
 - b. Agreements designating primary emergency authority to a specific police and a specific fire department where more than one police and fire department might respond to an emergency, and agreements with any others to provide support to the primary emergency authority;
 - c. Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

d. Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses that could result from fires, explosions, or releases at the facility.

2. Where state or local authorities decline to enter into such arrangements, the owner or operator must document the refusal in the operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-987. [Reserved].

33.1-24-05-988. [Reserved].

33.1-24-05-989. [Reserved].

33.1-24-05-990. Contingency plan and emergency procedures.

Sections 33.1-24-05-990 through 33.1-24-05-1009 applies to owners or operators of facilities that treat or store hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-991. Purpose and implementation of contingency plan.

1. The owner or operator must have a contingency plan for the facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

2. The owner or operator must implement the provisions of the plan immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-992. Content of contingency plan.

1. The contingency plan must:

a. Describe the actions facility personnel will take to comply with sections 33.1-24-05-991 and 33.1-24-05-996 in response to fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

- b. Describe all arrangements agreed upon under section 33.1-24-05-986 by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services.
 - c. List names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator (see section 33.1-24-05-995), and the owner or operator must keep the list up-to-date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.
 - d. Include a current list of all emergency equipment at the facility such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment, where this equipment is required. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.
 - e. Include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes, in cases where the primary routes could be blocked by releases of hazardous waste or fires.
2. If the owner or operator has already prepared a spill prevention, control, and countermeasures (SPCC) plan under 40 CFR part 112, or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that will comply with these requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-993. Copies of contingency plan.

- 1. The owner or operator must maintain a copy of the plan with all revisions at the facility; and
- 2. A copy must be submitted, with all revisions, to all local police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-994. Amendment of contingency plan.

The owner or operator must review, and immediately amend the contingency plan, if necessary, whenever:

- 1. The facility permit is revised;
- 2. The plan fails in an emergency;
- 3. The facility changes in its design, construction, operation, maintenance, or other circumstances in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;
- 4. The list of emergency coordinators changes; or

5. The list of emergency equipment changes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-995. Emergency coordinator.

At least one employee must be either on the facility premises or on call at all times, for example, available to respond to an emergency by reaching the facility within a short period of time, who has the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-996. Emergency procedures.

1. Whenever there is an imminent or actual emergency situation, the emergency coordinator, or the coordinator's designee when the emergency coordinator is on call, must immediately:

- a. Activate internal facility alarm or communication systems, where applicable, to notify all facility personnel; and
- b. Notify appropriate state or local agencies with designated response roles if their help is needed.

2. Whenever there is a release, fire, or explosion, the emergency coordinator must:

- a. Immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.
- b. Assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion. For example, the assessment would consider the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water runoff from water or chemical agents used to control fire and heat induced explosions.

3. If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health or the environment outside the facility, the emergency coordinator must report the coordinator's findings as follows:

- a. If the coordinator's assessment indicates that evacuation of local areas may be advisable, the coordinator must immediately notify appropriate local authorities. The coordinator must be available to help appropriate officials decide whether local areas should be evacuated.
- b. The coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area or the national response center, using their twenty-four hour toll-free number 800-424-8802. The report must include:

- (1) Name and telephone number of the reporter;
- (2) Name and address of facility;
- (3) Time and type of incident, for example, a release or a fire;
- (4) Name and quantity of materials involved, to the extent known;
- (5) The extent of injuries, if any; and
- (6) The possible hazards to human health or the environment outside the facility.

4. During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing release waste, and removing or isolating containers.

5. If the facility stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, when appropriate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-997. Procedures after an emergency.

1. Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

2. The emergency coordinator must ensure that, in the affected areas of the facility:

a. No waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed.

b. All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-998. Notification and recordkeeping after an emergency.

1. The owner or operator must notify the department and other appropriate state and local authorities, that the facility is in compliance with subsection 2 of section 33.1-24-05-997 before operations are resumed in the affected areas of the facility.

2. The owner or operator must note the time, date, and details of any incident that requires implementing the contingency plan in the operating record. Within fifteen days after the incident, the owner or operator must submit a written report on the incident to the department. The report must include the following:

a. The name, address, and telephone number of the owner or operator;

b. The name, address, and telephone number of the facility;

c. The date, time, and type of incident (for example, fire, explosion);

d. The name and quantity of materials involved;

e. The extent of injuries, if any;

f. An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

g. The estimated quantity and disposition of recovered material that resulted from the incident.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-999. [Reserved].

33.1-24-05-1000. [Reserved].

33.1-24-05-1001. [Reserved].

33.1-24-05-1002. [Reserved].

33.1-24-05-1003. [Reserved].

33.1-24-05-1004. [Reserved].

33.1-24-05-1005. [Reserved].

33.1-24-05-1006. [Reserved].

33.1-24-05-1007. [Reserved].

33.1-24-05-1008. [Reserved].

33.1-24-05-1009. [Reserved].

33.1-24-05-1010. Recordkeeping, reporting, and notifying.

Sections 33.1-24-05-1010 through 33.1-24-05-1019 applies to owners or operators of facilities that store or nonthermally treat hazardous waste under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950. In addition, the owner or operator must comply with the manifest requirements of chapter 33.1-24-03 whenever a shipment of hazardous waste is initiated from the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1011. Use of manifest system.

1. If a facility receives hazardous waste accompanied by a manifest, the owner or operator, or the owner's or operator's agent, shall:

- a. Sign and date each copy of the manifest to certify that the hazardous waste covered by the manifest was received;
- b. Note any significant discrepancies in the manifest, as defined in subsection 1 of section 33.1-24-05-1012, on each copy of the manifest;
- c. Immediately give the transporter at least one copy of the signed manifest;
- d. Within thirty days after the delivery, send a copy of the manifest to the generator; and
- e. Retain at the facility a copy of each manifest for at least three years from the date of delivery.

2. If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste which is accompanied by a shipping paper containing all the information required on the manifest (excluding the identification numbers, generator's certification, and signatures), the owner or operator, or the owner's or operator's agent, shall:

- a. Sign and date each copy of the manifest or shipping paper (if the manifest has not been received) to certify that the hazardous waste covered by the manifest or shipping paper was received.
- b. Note any significant discrepancies, as defined in subsection 1 of section 33.1-24-05-1012, in the manifest or shipping paper (if the manifest has not been received) on each copy of the manifest or shipping paper. Note that the department does not intend that the owner or operator of a facility whose procedures under subsection 2 of section 33.1-24-05-963 include waste analysis must perform that analysis before signing the shipping paper and giving it to the transporter. Subsection 2 of section 33.1-24-05-1012, however, requires reporting an unreconciled discrepancy discovered during later analysis.

- c. Immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest or shipping paper (if the manifest has not been received).
 - d. Within thirty days after the delivery, send a copy of the signed and dated manifest to the generator; however, if the manifest has not been received within thirty days after delivery, the owner or operator, or the owner's or operator's agent, shall send a copy of the shipping paper signed and dated to the generator. Note that subsection 3 of section 33.1-24-03-07 requires the generator to send three copies of the manifest to the facility when hazardous waste is sent by rail or water (bulk shipment).
 - e. Retain at the facility a copy of the manifest and shipping paper (if signed in lieu of the manifest at the time of delivery) for at least three years from the date of delivery.
3. Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility must comply with the requirements of chapter 33.1-24-03. The department notes that the provisions of section 33.1-24-03-12 are applicable to the onsite accumulation of hazardous wastes by generators. Therefore, the provisions of section 33.1-24-03-12 only apply to owners or operators who are shipping hazardous waste which they generated at that facility.
4. Within three working days of the receipt of a shipment subject to sections 33.1-24-03-50 through 33.1-24-03-59, the owner or operator of the facility must provide a copy of the tracking document bearing all required signatures to the notifier, to the department, to the Office of Enforcement and Compliance Assurance, Office of Compliance, Enforcement Planning, Targeting and Data Division (2222A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and to competent authorities of all other concerned countries. The original copy of the tracking document must be maintained at the facility for at least three years from the date of signature.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1012. Manifest discrepancies.

1. Manifest discrepancies are differences between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity or type of hazardous waste a facility actually receives. Significant discrepancies in quantity are:
- a. For bulk waste, variations greater than ten percent in weight; and
 - b. For batch waste, any variation in piece count, such as a discrepancy of one drum in a truckload. Significant discrepancies in type are obvious differences which can be discovered by inspection or waste analysis, such as waste solvent substituted for waste acid, or toxic constituents not reported on the manifest or shipping paper.
2. Upon discovering a significant discrepancy, the owner or operator must attempt to reconcile the discrepancy with the waste generator or transporter (for example, with telephone conversations). If the discrepancy is not resolved within fifteen days after receiving the waste, the owner or operator must immediately submit to the department a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1013. Operating record.

1. The owner or operator must keep a written operating record at the facility.
2. The following information must be recorded, as it becomes available, and maintained in the operating record until closure of the facility:
 - a. A description and the quantity of each type of hazardous waste generated, and the methods and dates of its storage or treatment or both at the facility as required by appendix I of chapter 33.1-24-05;
 - b. The location of each hazardous waste within the facility and the quantity at each location;
 - c. Records and results of waste analyses and waste determinations performed as specified in sections 33.1-24-05-963, 33.1-24-05-967, 33.1-24-05-404, 33.1-24-05-433, 33.1-24-05-453, and 33.1-24-05-256;
 - d. Summary reports and details of all incidents that require the owner or operator to implement the contingency plan as specified in subsection 2 of section 33.1-24-05-998;
 - e. Records and results of inspections as required by subsection 4 of section 33.1-24-05-965 (except the owner or operator needs to keep this data for only three years);
 - f. Monitoring, testing or analytical data, and corrective action when required by sections 33.1-24-05-1020 through 33.1-24-05-1039 and sections 33.1-24-05-1101, 33.1-24-05-1103, 33.1-24-05-1105, and subsections 3 through 6 of section 33.1-24-05-404, 33.1-24-05-405, subsections 4 through 9 of section 33.1-24-05-433, 33.1-24-05-434, 33.1-24-05-458, 33.1-24-05-459, and 33.1-24-05-460;
 - g. All closure cost estimates under section 33.1-24-05-1062;
 - h. A certification, at least annually, that the permittee has a program in place to reduce the volume and toxicity of hazardous waste that is generated to the degree determined to be economically practicable; and that the proposed method of treatment or storage is that practicable method currently available to the permittee that minimizes the present and future threat to human health and the environment;
 - i. For an onsite treatment facility, the information contained in the notice (except the manifest number), and the certification and demonstration, if applicable, required by the permittee under section 33.1-24-05-256;
 - j. For an onsite storage facility, the information in the notice (except the manifest number), and the certification and demonstration, if applicable, required by the permittee under section 33.1-24-05-256;
 - k. For an offsite treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256; and
 - l. For an offsite storage facility, a copy of the notice, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1014. Availability, retention, and disposition of records.

1. All records, including plans, required under sections 33.1-24-05-950 through 33.1-24-05-1149 must be furnished upon request, and made available at all reasonable times for inspection, by a duly designated officer, employee, or representative of the department.
2. The retention period for all records required under sections 33.1-24-05-950 through 33.1-24-05-1149 is extended automatically during the course of any unresolved enforcement action involving the facility or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-12; S.L. 2017, ch. 199, § 19

33.1-24-05-1015. Reports.

The owner or operator must prepare and submit a biennial report and other reports listed in subsection 2.

1. Biennial report. The owner or operator must prepare and submit a single copy of a biennial report to the department by March first of each even-numbered year. The biennial report form and instructions can be obtained from the department's division of waste management. The report must cover facility activities during the previous calendar year and must include:
 - a. The identification number, name, and address of the facility;
 - b. The calendar year covered by the report;
 - c. The method of treatment or storage for each hazardous waste;
 - d. The most recent closure cost estimate under section 33.1-24-05-1062;
 - e. A description of the efforts undertaken during the year to reduce the volume and toxicity of generated waste;
 - f. A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for the years prior to 1984; and
 - g. The certification signed by the owner or operator.
2. Additional reports. In addition to submitting the biennial reports, the owner or operator must also report to the department:
 - a. Releases, fires, and explosions as specified in subsection 2 of section 33.1-24-05-998;
 - b. Facility closures specified in section 33.1-24-05-1047; and
 - c. As otherwise required by sections 33.1-24-05-1080 through 33.1-24-05-1099, 33.1-24-05-1100 through 33.1-24-05-1129, 33.1-24-05-1130 through 33.1-24-05-1149, and 33.1-24-05-400 through 33.1-24-05-474.
3. For offsite facilities, the identification number of each hazardous waste generator from which the facility received a hazardous waste during the year; for imported shipments, the report must give the name and address of the foreign generator.
4. A description and the quantity of each hazardous waste the facility received during the year. For offsite facilities, this information must be listed by identification number of each generator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1016. Transfer of ownership.

Before transferring ownership or operation of a facility during its operating life, the permittee must notify the new owner or operator in writing of the requirements of sections 33.1-24-05-950 through 33.1-24-05-1149 and sections 33.1-24-06-45 through 33.1-24-06-85.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1017. [Reserved].

33.1-24-05-1018. [Reserved].

33.1-24-05-1019. [Reserved].

33.1-24-05-1020. Releases from solid waste management units.

Sections 33.1-24-05-1020 through 33.1-24-05-1039 applies to the owner or operator of a facility that treats or stores hazardous waste and is regulated under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950, or unless the facility already has a permit that imposes requirements for corrective action under section 33.1-24-05-58.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1021. [Reserved].

33.1-24-05-1022. [Reserved].

33.1-24-05-1023. [Reserved].

33.1-24-05-1024. [Reserved].

33.1-24-05-1025. [Reserved].

33.1-24-05-1026. [Reserved].

33.1-24-05-1027. [Reserved].

33.1-24-05-1028. [Reserved].

33.1-24-05-1029. [Reserved].

33.1-24-05-1030. [Reserved].

33.1-24-05-1031. Corrective action for solid waste management units.

1. The owner or operator must institute corrective action as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid waste management unit at the facility, regardless of the time at which waste was placed in such unit.
2. The department will specify corrective action in the supplemental portion of the standardized permit in accordance with this section and sections 33.1-24-05-550 through 33.1-24-05-559. The department will include in the supplemental portion of the standardized permit schedules of compliance for corrective action (where corrective action cannot be completed prior to issuance of the permit) and assurances of financial responsibility for completing corrective action.
3. The owner or operator must implement corrective action beyond the facility property boundary, where necessary to protect human health and the environment, unless the owner or operator demonstrates to the satisfaction of the department that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such actions. The owner or operator is not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where offsite access is denied. Onsite measures to address such releases will be determined on a case-by-case basis. The owner or operator must provide assurances of financial responsibility for such corrective action.
4. The owner or operator does not have to comply with this section if the owner or operator are the owner or operator of a remediation waste site unless the owner's or operator's site is part of a facility that is subject to a permit for treating, storing, or disposing of hazardous wastes that are not remediation wastes.

History: Effective January 1, 2019.

33.1-24-05-1039. [Reserved].

33.1-24-05-1040. Applicability of closure requirements.

Sections 33.1-24-05-1040 through 33.1-24-05-1059 applies to the owner or operator of a facility that treats or stores hazardous waste and is regulated under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1041. Closure performance standard.

The owner or operator shall close the storage and treatment units in a manner that:

1. Minimizes the need for further maintenance;
2. Controls, minimizes, or eliminates, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate,

contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere; and

3. Meets the closure requirements of sections 33.1-24-05-1040 through 33.1-24-05-1059 and the requirements of sections 33.1-24-05-1086, 33.1-24-05-1111, and 33.1-24-05-1138. If the owner or operator determines that, when applicable, the closure requirements of section 33.1-24-05-1111 (tanks) or section 33.1-24-05-1138 (containment buildings) cannot be met, then the owner or operator must close the unit in accordance with the requirements that apply to landfills (section 33.1-24-05-180). In addition, for the purposes of postclosure and financial responsibility, such a tank system or containment building is then considered to be a landfill, and the owner or operator must apply for a postclosure care permit in accordance with chapter 33.1-24-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1042. Closure plan.

1. To close the facility, the owner or operator must follow an approved closure plan, and follow notification requirements.
 - a. The closure plan must be submitted with the notice of intent to operate under a standardized permit. Final issuance of the standardized permit constitutes approval of the closure plan, and the plan becomes a condition of the hazardous waste standardized permit.
 - b. The department's approval of the plan must ensure that the approved plan is consistent with sections 33.1-24-05-1041 through 33.1-24-05-1045, 33.1-24-05-1086, 33.1-24-05-1111, and 33.1-24-05-1138.
2. Satisfy the requirements for content of a closure plan. The closure plan must identify steps necessary to perform partial or final, or both, closure of the facility. The closure plan must include, at least:
 - a. A description of how each hazardous waste management unit at the facility subject to sections 33.1-24-05-1040 through 33.1-24-05-1059 will be closed in accordance with section 33.1-24-05-1041.
 - b. A description of how final closure of the facility will be conducted in accordance with section 33.1-24-05-1041. The description must identify the maximum extent of the operations which will be unclosed during the active life of the facility.
 - c. An estimate of the maximum inventory of hazardous wastes ever onsite during the active life of the facility and a detailed description of the methods to be used during partial or final, or both, closure, such as methods for removing, transporting, treating, storing, or disposing of all hazardous wastes, and identification of the types of offsite hazardous waste management units to be used, if applicable.
 - d. A detailed description of the steps needed to remove or decontaminate all hazardous waste residues and contaminated containment system components, equipment, structures, and soils during partial or final closure. These might include procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination required to satisfy the closure performance standard.

e. A detailed description of other activities necessary during the closure period to ensure that partial or final closure satisfies the closure performance standards.

f. A schedule for closure of each hazardous waste management unit, and for final closure of the facility. The schedule must include, at a minimum, the total time required to close each hazardous waste management unit and the time required for intervening closure activities that allow tracking of progress of partial or final closure.

g. For facilities that use trust funds to establish financial assurance under section 33.1-24-05-1063 and that are expected to close prior to the expiration of the permit, an estimate of the expected year of final closure.

3. The owner or operator may submit a written notification to the department for a permit modification to amend the closure plan at any time prior to the notification of partial or final closure of the facility, following the applicable procedures in section 33.1-24-07-51.

a. Events leading to a change in the closure plan, and requiring a modification, may include:

(1) A change in the operating plan or facility design;

(2) A change in the expected year of closure, if applicable; or

(3) In conducting partial or final closure activities, an unexpected event requiring a modification of the approved closure plan.

b. The written notification or request must include a copy of the amended closure plan for review or approval by the department. The department will approve, disapprove, or modify this amended plan in accordance with the procedures in sections 33.1-24-07-51 and 33.1-24-06-85.

4. Notification before final closure.

a. The owner or operator must notify the department in writing at least forty-five days before the date that the owner or operator expects to begin final closure of a treatment or storage tank, container storage area, or containment building.

b. The date when the owner or operator expects to begin closure must be no later than thirty days after the date that any hazardous waste management unit receives the known final volume of hazardous wastes.

c. If the facility's permit is terminated, or if the facility is otherwise ordered, by judicial decree or final order under North Dakota Century Code section 23.1-04-14, to cease receiving hazardous wastes or to close, then the requirements of this subsection do not apply. However, the owner or operator must close the facility following the deadlines established in section 33.1-24-05-1045.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1043. Public comment on the closure plan.

1. The department will provide the owner or operator and the public, when the draft standardized permit is public noticed, the opportunity to submit written comments on the plan and to the draft permit as allowed by section 33.1-24-07-48. The department will also, in response to a request or at the department's own discretion, hold a public hearing whenever such a hearing might clarify one or more issues concerning the closure plan, and the permit.

2. The department will give public notice of the hearing thirty days before it occurs. Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.

History: Effective January 1, 2019.

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1044. [Reserved].

33.1-24-05-1045. Closure - Time allowed for closure.

1. Within ninety days after the final volume of hazardous waste is sent to a unit, the owner or operator must treat or remove from the unit all hazardous wastes following the approved closure plan.
2. The owner or operator must complete final closure activities in accordance with the approved closure plan within one hundred eighty days after the final volume of hazardous wastes is sent to the unit. The department may approve an extension of one hundred eighty days to the closure period if the owner or operator complies with all applicable requirements for requesting a modification to the permit and demonstrates that:
 - a. The final closure activities will take longer than one hundred eighty days to complete due to circumstances beyond the owner's or operator's control, excluding ground water contamination;
 - b. The owner or operator has taken and will continue to take all steps to prevent threats to human health and the environment from the unclosed, but not operating hazardous waste management unit or facility, including compliance with all applicable permit requirements; and
 - c. The demonstration must be made at least thirty days prior to the expiration of the initial one hundred eighty-day period.
3. Nothing in this section precludes the owner or operator from removing hazardous wastes and decontaminating or dismantling equipment in accordance with the approved final closure plan at any time before or after notification of final closure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1046. Disposal or decontamination of equipment, structures, and soils.

The owner or operator must properly dispose of or decontaminate all contaminated equipment, structures, and soils during the partial and final closure periods. By removing any hazardous wastes or hazardous constituents during partial and final closure, the owner or operator may become a generator of hazardous waste and must handle that waste following all applicable requirements of chapter 33.1-24-03.

33.1-24-05-1047. Certification of closure.

Within sixty days of the completion of final closure of each unit under sections 33.1-24-06-45 through 33.1-24-06-85, the owner or operator must submit to the department, by registered mail, a certification that each hazardous waste management unit or facility, as applicable, has been closed following the specifications in the closure plan. Both the owner or operator and a qualified professional engineer must sign the certification. Documentation supporting the qualified professional engineer's certification must be furnished to the department upon request until the department releases the owner or operator from the financial assurance requirements for closure under subsection 10 of section 33.1-24-05-1063.

33.1-24-05-1057. [Reserved].

33.1-24-05-1058. [Reserved].

33.1-24-05-1059. [Reserved].

33.1-24-05-1060. Applicability of financial requirements.

1. The requirements of sections 33.1-24-05-1060 through 33.1-24-05-1079 apply to owners and operators who treat or store hazardous waste under a standardized permit, except as provided in subsection 2 of section 33.1-24-05-950 or subsection 4.
2. The owner or operator must:
 - a. Prepare a closure cost estimate as required in section 33.1-24-05-1062;
 - b. Demonstrate financial assurance for closure as required in section 33.1-24-05-1063; and
 - c. Demonstrate financial assurance for liability as required in section 33.1-24-05-1067.
3. The owner or operator must notify the department if the owner or operator is named as a debtor in a bankruptcy proceeding under title 11 (bankruptcy), United States Code (see also section 33.1-24-05-1068).
4. States and the federal government are exempt from the requirements of sections 33.1-24-05-1060 through 33.1-24-05-1079.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-05-1061. Definitions of terms.

1. "Closure plan" means the plan for closure prepared in accordance with the requirements of section 33.1-24-05-1042.
2. "Current closure cost estimate" means the most recent of the estimates prepared in accordance with subsections 1, 2, and 3 of section 33.1-24-05-1062.
3. [Reserved].
4. "Parent corporation" means a corporation which directly owns at least fifty percent of the voting stock of the corporation which is the facility owner or operator; the latter corporation is deemed a "subsidiary" of the parent corporation.
5. [Reserved].
6. The following terms are used in the specifications for the financial tests for closure and liability coverage. The definitions are intended to assist in the understanding of these regulations and

are not intended to limit the meanings of terms in a way that conflicts with generally accepted accounting practices:

- a. "Assets" means all existing and all probable future economic benefits obtained or controlled by a particular entity.
- b. "Current plugging and abandonment cost estimate" means the most recent of the estimates prepared in accordance with 40 CFR section 144.62(a), (b), and (c).
- c. "Independently audited" refers to an audit performed by an independent certified public accountant in accordance with generally accepted auditing standards.
- d. "Liabilities" means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.
- e. "Tangible net worth" means the tangible assets that remain after deducting liabilities; such assets would not include intangibles such as goodwill and rights to patents or royalties.

7. In the liability insurance requirements, the terms "bodily injury and property damage" shall have the meanings given these terms by applicable North Dakota state law. However, these terms do not include those liabilities which, consistent with standard industry practices, are excluded from coverage in liability policies for bodily injury and property damage. The department intends the meanings of other terms used in the liability insurance requirements to be consistent with their common meanings within the insurance industry. The definitions given below of several of the terms are intended to assist in the understanding of these regulations and are not intended to limit their meanings in a way that conflicts with general insurance industry usage.

- a. "Accidental occurrence" means an accident, including continuous or repeated exposure to conditions, which results in bodily injury or property damage neither expected nor intended from the standpoint of the insured.
- b. "Legal defense costs" means any expenses that an insurer incurs in defending against claims of third parties brought under the terms and conditions of an insurance policy.
- c. "Sudden accidental occurrence" means an occurrence which is not continuous or repeated in nature.

8. "Substantial business relationship" means the extent of a business relationship necessary under applicable North Dakota state law to make a guarantee contract issued incident to that relationship valid and enforceable. A "substantial business relationship" must arise from a pattern of recent or ongoing business transactions, in addition to the guarantee itself, such that a currently existing business relationship between the guarantor and the owner or operator is demonstrated to the satisfaction of the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1062. Cost estimates for closure.

1. The owner or operator must have at the facility a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with the requirements in sections 33.1-24-05-1041 through 33.1-24-05-1045 and applicable closure requirements in sections 33.1-24-05-1086, 33.1-24-05-1111, and 33.1-24-05-1138.

- a. The estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by the closure plan (see subsection 2 of section 33.1-24-05-1042).
- b. The closure cost estimate must be based on the costs to the owner or operator of hiring a third party to close the facility. A third party is a party who is neither a parent nor a subsidiary of the owner or operator (see definition of parent corporation in subsection 4 of section 33.1-24-05-1061). The owner or operator may use costs for onsite disposal if the owner or operator can demonstrate that onsite disposal capacity will exist at all times over the life of the facility.
- c. The closure cost estimate may not incorporate any salvage value that may be realized with the sale of hazardous wastes, or nonhazardous wastes, facility structures or equipment, land, or other assets associated with the facility at the time of partial or final closure.
- d. The owner or operator may not incorporate a zero cost for hazardous wastes, or nonhazardous wastes that might have economic value.

2. During the active life of the facility, the owner or operator must adjust the closure cost estimate for inflation within sixty days prior to the anniversary date of the establishment of the financial instruments used to comply with section 33.1-24-05-1063. For owners and operators using the financial test or corporate guarantee, the closure cost estimate must be updated for inflation within thirty days after the close of the firm's fiscal year and before submission of updated information to the department as specified in paragraph 3 of subdivision b of subsection 6 of section 33.1-24-05-1063. The adjustment may be made by recalculating the maximum costs of closure in current dollars, or by using an inflation factor derived from the most recent implicit price deflator for gross domestic product published by the United States department of commerce in its survey of current business, as specified in subdivisions a and b. The inflation factor is the result of dividing the latest published annual deflator by the deflator for the previous year.

- a. The first adjustment is made by multiplying the closure cost estimate by the inflation factor. The result is the adjusted closure cost estimate.
- b. Subsequent adjustments are made by multiplying the latest adjusted closure cost estimate by the latest inflation factor.

3. During the active life of the facility, the owner or operator must revise the closure cost estimate no later than thirty days after the department has approved the request to modify the closure plan, if the change in the closure plan increases the cost of closure. The revised closure cost estimate must be adjusted for inflation as specified in subsection 2.

4. The owner or operator must keep the following at the facility during the operating life of the facility: The latest closure cost estimate prepared in accordance with subsections 1 and 3 and, when this estimate has been adjusted in accordance with subsection 2, the latest adjusted closure cost estimate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1063. Financial assurance for closure.

The owner or operator must establish financial assurance for closure of each storage or treatment unit that the owner or operator owns or operates. In establishing financial assurance for closure, the owner or operator must choose from the financial assurance mechanisms in subsections 1 through 7.

The owner or operator can also use a combination of mechanisms for a single facility if the owner or operator meets the requirements in subsection 8, or may use a single mechanism for multiple facilities as in subsection 9. The department will release the owner or operator from the requirements of this section after the owner or operator meets the criteria under subsection 10.

1. Closure trust fund. Owners and operators can use the "closure trust fund" that is specified in subdivisions a and b of subsection 1 of section 33.1-24-05-77, and subdivisions f, g, h, i, k, and l of subsection 1 of section 33.1-24-05-77. For purposes of this subsection, the following provisions also apply:

a. Payments into the trust fund for a new facility must be made annually by the owner or operator over the remaining operating life of the facility as estimated in the closure plan, or over three years, whichever period is shorter. This period of time is hereafter referred to as the "pay-in period".

b. For a new facility, the first payment into the closure trust fund must be made before the facility may accept the initial storage. A receipt from the trustee must be submitted by the owner or operator to the department before this initial storage of waste. The first payment must be at least equal to the current closure cost estimate, divided by the number of years in the pay-in period, except as provided in subsection 8 for multiple mechanisms. Subsequent payments must be made no later than thirty days after each anniversary date of the first payment. The owner or operator determines the amount of each subsequent payment by subtracting the current value of the trust fund from the current closure cost estimate, and dividing this difference by the number of years remaining in the pay-in period. Mathematically, the formula is:

Next payment = (current closure estimate - current value of the trust fund) divided by years remaining in the pay-in period.

c. The owner or operator of a facility existing on the effective date of this subsection can establish a trust fund to meet this subsection's financial assurance requirements. If the value of the trust fund is less than the current closure cost estimate when a final approval of the permit is granted for the facility, the owner or operator must pay the difference into the trust fund within sixty days.

d. The owner or operator may accelerate payments into the trust fund or deposit the full amount of the closure cost estimate when establishing the trust fund. However, the owner or operator must maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subdivision b or c.

e. The owner or operator must submit a trust agreement with the wording specified in subdivision a of subsection 1 of section 33.1-24-05-81.

2. Surety bond guaranteeing payment into a closure trust fund. Owners and operators can use the "surety bond guaranteeing payment into a closure trust fund", as specified in subsection 2 of section 33.1-24-05-77, including the use of the surety bond instrument specified at subsection 2 of section 33.1-24-05-81, and the standby trust specified at subdivision c of subsection 2 of section 33.1-24-05-77.

3. Surety bond guaranteeing performance of closure. Owners and operators can use the "surety bond guaranteeing performance of closure", as specified in subsection 3 of section 33.1-24-05-77, the submission and use of the surety bond instrument specified at subsection 3 of section 33.1-24-05-81, and the standby trust specified at subdivision c of subsection 3 of section 33.1-24-05-77.

4. Closure letter of credit. Owners and operators can use the "closure letter of credit" specified in subsection 4 of section 33.1-24-05-77, the submission and use of the irrevocable letter of credit instrument specified in subsection 4 of section 33.1-24-05-81, and the standby trust specified in subdivision c of subsection 4 of section 33.1-24-05-77.

5. Closure insurance. Owners and operators can use "closure insurance", as specified in subsection 5 of section 33.1-24-05-77, utilizing the certificate of insurance for closure specified at subsection 5 of section 33.1-24-05-81.

6. Corporate financial test. An owner or operator that satisfies the requirements of this subsection may demonstrate financial assurance up to the amount specified in this subsection:

a. Financial component.

(1) The owner or operator must satisfy one of the following three conditions:

(a) A current rating for its senior unsecured debt of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's;

(b) A ratio of less than one and five-tenths comparing total liabilities to net worth;
or

(c) A ratio of greater than one-tenth comparing the sum of net income plus depreciation, depletion and amortization, minus ten million dollars, to total liabilities.

(2) The tangible net worth of the owner or operator must be greater than:

(a) The sum of the current environmental obligations (see item 1 of subparagraph a of paragraph 1 of subdivision b), including guarantees, covered by a financial test plus ten million dollars, except as provided in subparagraph b.

(b) Ten million dollars in tangible net worth plus the amount of any guarantees that have not been recognized as liabilities on the financial statements provided all of the environmental obligations (see item 1 of subparagraph a of paragraph 1 of subdivision b) covered by a financial test are recognized as liabilities on the owner's or operator's audited financial statements, and subject to the approval of the department.

(3) The owner or operator must have assets located in the United States amounting to at least the sum of environmental obligations covered by a financial test as described in item 1 of subparagraph a of paragraph 1 of subdivision b.

b. Recordkeeping and reporting requirements.

(1) The owner or operator must submit the following items to the department:

(a) A letter signed by the owner's or operator's chief financial officer that:

[1] Lists all the applicable current types, amounts, and sums of environmental obligations covered by a financial test. These obligations include both obligations in the programs which the environmental protection agency directly operates and obligations where the environmental protection agency has delegated authority to the state or approved the state's program. These obligations include:

[a] Liability, closure, postclosure and corrective action cost estimates required for hazardous waste treatment, storage, and disposal facilities under sections 33.1-24-05-58, 33.1-24-05-76, 33.1-24-05-79, and subsection 5 of section 33.1-24-06-16;

[b] Cost estimates required for municipal solid waste management facilities under sections 33.1-20-14-02, 33.1-20-14-03, 33.1-20-14-04, and 33.1-20-14-05;

[c] Current plugging cost estimates required for underground injection control facilities under subdivision d of subsection 1 of section 33.1-25-01-06;

[d] Cost estimates required for petroleum underground storage tank facilities under section 33.1-24-08-83;

[e] Cost estimates required for polychlorinated biphenyl storage facilities under 40 CFR section 761.65;

[f] Any financial assurance required under, or as part of an action undertaken under, the Comprehensive Environmental Response, Compensation, and Liability Act; and

[g] Any other environmental obligations that are assured through a financial test.

[2] Provides evidence demonstrating that the firm meets the conditions of either subparagraph a or b or c of paragraph 1 of subdivision a and paragraphs 2 and 3 of subdivision a.

(b) A copy of the independent certified public accountant's unqualified opinion of the owner's or operator's financial statements for the latest completed fiscal year. To be eligible to use the financial test, the owner's or operator's financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion, disclaimer of opinion, or other qualified opinion will be cause for disallowance, with the potential exception for qualified opinions provided in the next sentence. The department may evaluate qualified opinions on a case-by-case basis and allow use of the financial test in cases where the department deems that the matters which form the basis for the qualification are insufficient to warrant disallowance of the test. If the department does not allow use of the test, the owner or operator must provide alternate financial assurance that meets the requirements of this section within thirty days after the notification of disallowance.

(c) If the chief financial officer's letter providing evidence of financial assurance includes financial data showing that the owner or operator satisfies subparagraph b or c of paragraph 1 of subdivision a that are different from data in the audited financial statements referred to in subparagraph b or any other audited financial statement or data filed with the securities and exchange commission, then a special report from the owner's or operator's independent certified public accountant to the owner or operator is required. The special report shall be based upon an agreed upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements for the

latest fiscal year with the amounts in such financial statements, the findings of that comparison, and the reasons for any differences.

(d) If the chief financial officer's letter provides a demonstration that the firm has assured for environmental obligations as provided in subparagraph b of paragraph 2 of subdivision a, then the letter shall include a report from the independent certified public accountant that verifies that all of the environmental obligations covered by a financial test have been recognized as liabilities on the audited financial statements, how these obligations have been measured and reported, and that the tangible net worth of the firm is at least ten million dollars plus the amount of any guarantees provided.

(2) The owner or operator of a new facility must submit the items specified in paragraph 1 to the department at least sixty days before placing waste in the facility.

(3) After the initial submission of items specified in paragraph 1, the owner or operator must send updated information to the department within ninety days following the close of the owner or operator's fiscal year. The department may provide up to an additional forty-five days for an owner or operator who can demonstrate that ninety days is insufficient time to acquire audited financial statements. The updated information must consist of all items specified in paragraph 1.

(4) The owner or operator is no longer required to submit the items specified in this subdivision or comply with the requirements of this subsection when:

(a) The owner or operator substitutes alternate financial assurance as specified in this section that is not subject to these recordkeeping and reporting requirements; or

(b) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 10.

(5) An owner or operator who no longer meets the requirements of subdivision a cannot use the financial test to demonstrate financial assurance. Instead an owner or operator who no longer meets the requirements of subdivision a, must:

(a) Send notice to the department of intent to establish alternate financial assurance as specified in this section. The owner or operator must send this notice by certified mail within ninety days following the close of the owner's or operator's fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements of this subsection.

(b) Provide alternative financial assurance within one hundred twenty days after the end of such fiscal year.

(6) The department may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subdivision a, require at any time the owner or operator to provide reports of its financial condition in addition to or including current financial test documentation as specified in subdivision b. If the department finds that the owner or operator no longer meets the requirements of subdivision a, the owner or operator must provide alternate financial assurance that meets the requirements of this section.

7. Corporate guarantee.

a. An owner or operator may meet the requirements of this section by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the

owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in subsection 6 and must comply with the terms of the guarantee. The wording of the guarantee must be identical to the wording in subsection 8 of section 33.1-24-05-81. The certified copy of the guarantee must accompany the letter from the guarantor's chief financial officer and accountants' opinions. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter from the guarantor's chief financial officer must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

b. For a new facility, the guarantee must be effective and the guarantor must submit the items in subdivision a and the items specified in paragraph 1 of subdivision b of subsection 6 to the department at least sixty days before the owner or operator places waste in the facility.

c. The terms of the guarantee must provide that:

(1) If the owner or operator fails to perform closure at a facility covered by the guarantee, the guarantor will:

(a) Perform, or pay a third party to perform closure (performance guarantee); or

(b) Establish a fully funded trust fund as specified in subsection 1 in the name of the owner or operator (payment guarantee).

(2) The guarantee will remain in force for as long as the owner or operator must comply with the applicable financial assurance requirements of this subpart unless the guarantor sends prior notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department as evidenced by the return receipts.

(3) If notice of cancellation is given, the owner or operator must, within ninety days following receipt of the cancellation notice by the owner or operator and the department, obtain alternate financial assurance, and submit documentation for that alternate financial assurance to the department. If the owner or operator fails to provide alternate financial assurance and obtain the written approval of such alternative assurance from the department within the ninety-day period, the guarantor must provide that alternate assurance in the name of the owner or operator and submit the necessary documentation for the alternative assurance to the department within one hundred twenty days of the cancellation notice.

d. If a corporate guarantor no longer meets the requirements of subdivision a of subsection 6, the owner or operator must, within ninety days, obtain alternative assurance, and submit the assurance to the department for approval. If the owner or operator fails to provide alternate financial assurance within the ninety-day period, the guarantor must provide that alternate assurance within the next thirty days, and submit it to the department for approval.

e. The guarantor is no longer required to meet the requirements of this subsection when:

(1) The owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The owner or operator is released from the requirements of this subsection in accordance with subsection 10.

8. Use of multiple financial mechanisms. An owner or operator may use more than one mechanism at a particular facility to satisfy the requirements of this section. The acceptable mechanisms are trust funds, surety bonds guaranteeing payment into a trust fund, letters of credit, insurance, the financial test, and the guarantee, except owners or operators cannot combine the financial test with the guarantee. The mechanisms must be as specified in subsections 1, 2, 4, 5, 6, and 7, respectively, except it is the combination of mechanisms rather than a single mechanism that must provide assurance for an amount at least equal to the cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or letter of credit, the owner or operator may use the trust fund as the standby trust for the other mechanisms. A single trust fund can be established for two or more mechanisms. The department may use any or all of the mechanisms to provide for closure of the facility.

9. Use of a financial mechanism for multiple facilities. An owner or operator may use a financial mechanism for multiple facilities, as specified in subsection 8 of section 33.1-24-05-77.

10. Release of the owner or operator from the requirements of this section. Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that final closure has been completed in accordance with the approved closure plan, the department will notify the owner or operator in writing that the owner or operator is no longer required by this section to maintain financial assurance for final closure of the facility, unless the department has reason to believe that final closure has not been completed in accordance with the approved closure plan. The department shall provide the owner or operator with a detailed written statement of any such reasons to believe that closure has not been conducted in accordance with the approved closure plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1064. [Reserved].

33.1-24-05-1065. [Reserved].

33.1-24-05-1066. [Reserved].

33.1-24-05-1067. Liability requirements.

1. Coverage for sudden accidental occurrences. An owner or operator of a hazardous waste treatment or storage facility, or a group of such facilities, must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator must have and maintain liability coverage for sudden accidental occurrences in the amount of at least one million dollars per occurrence with an annual aggregate of at least two

million dollars, exclusive of legal defense costs. This liability coverage may be demonstrated as specified in subdivisions a through g:

- a. Trust fund for liability coverage. An owner or operator may meet the requirements of this section by obtaining a trust fund for liability coverage as specified in subsection 10 of section 33.1-24-05-79.
- b. Surety bond for liability coverage. An owner or operator may meet the requirements of this section by obtaining a surety bond for liability coverage as specified in subsection 9 of section 33.1-24-05-79.
- c. Letter of credit for liability coverage. An owner or operator may meet the requirements of this section by obtaining a letter of credit for liability coverage as specified in subsection 8 of section 33.1-24-05-79.
- d. Insurance for liability coverage. An owner or operator may meet the requirements of this section by obtaining liability insurance as specified in subdivision a of subsection 1 of section 33.1-24-05-79.
- e. Financial test for liability coverage. An owner or operator may meet the requirements of this section by passing a financial test as specified in subsection 6.
- f. Guarantee for liability coverage. An owner or operator may meet the requirements of this section by obtaining a guarantee as specified in subsection 7.
- g. Combination of mechanisms. An owner or operator may demonstrate the required liability coverage through the use of combinations of mechanisms as allowed by subdivision f of subsection 1 of section 33.1-24-05-79.
- h. An owner or operator shall notify the department in writing within thirty days whenever:
 - (1) A claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in subdivisions a through g;
 - (2) A certification of valid claim for bodily injury or property damages caused by a sudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under subdivisions a through g; or
 - (3) A final court order establishing a judgment for bodily injury or property damage caused by a sudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under subdivisions a through g.

2. [Reserved].

3. [Reserved].

4. [Reserved].

5. Period of coverage. Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that final closure has been completed in accordance with the approved closure plan, the department will notify the owner or operator in writing that the owner or operator is no longer required by this section to maintain liability coverage from that facility, unless the department has reason to believe that closure has not been in accordance with the approved closure plan.

6. Financial test for liability coverage. An owner or operator that satisfies the requirements of this subsection may demonstrate financial assurance for liability up to the amount specified in this subsection:

a. Financial component.

- (1) If using the financial test for only liability coverage, the owner or operator must have tangible net worth greater than the sum of the liability coverage to be demonstrated by this test plus ten million dollars.
- (2) The owner or operator must have assets located in the United States amounting to at least the amount of liability covered by this financial test.
- (3) An owner or operator who is demonstrating coverage for liability and any other environmental obligations, including closure under subsection 6 of section 33.1-24-05-1063, through a financial test must meet the requirements of subsection 6 of section 33.1-24-05-1063.

b. Recordkeeping and reporting requirements.

(1) The owner or operator must submit the following items to the department:

(a) A letter signed by the owner's or operator's chief financial officer that provides evidence demonstrating that the firm meets the conditions of paragraphs 1 and 2 of subdivision a. If the firm is providing only liability coverage through a financial test for a facility or facilities with a permit under sections 33.1-24-05-950 through 33.1-24-05-1149, the letter should use the wording in subsection 2 of section 33.1-24-05-1071. If the firm is providing only liability coverage through a financial test for facilities regulated under sections 33.1-24-05-950 through 33.1-24-05-1149 and also sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 or subsection 5 of section 33.1-24-06-16, the firm should use the letter in subsection 7 of section 33.1-24-05-81. If the firm is providing liability coverage through a financial test for a facility or facilities with a permit under sections 33.1-24-05-950 through 33.1-24-05-1149, and the firm assures closure costs or any other environmental obligations through a financial test, the firm must use the letter in subsection 1 of section 33.1-24-05-1071 for the facilities issued a permit under sections 33.1-24-05-950 through 33.1-24-05-1149.

(b) A copy of the independent certified public accountant's unqualified opinion of the owner's or operator's financial statements for the latest completed fiscal year. To be eligible to use the financial test, the owner's or operator's financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion, disclaimer of opinion, or other qualified opinion will be cause for disallowance, with the potential exception for qualified opinions provided in the next sentence. The department may evaluate qualified opinions on a case-by-case basis and allow use of the financial test in cases where the department deems that the matters which form the basis for the qualification are insufficient to warrant disallowance of the test. If the department does not allow use of the test, the owner or operator must provide alternate financial assurance that meets the requirements of this section within thirty days after the notification of disallowance.

(c) If the chief financial officer's letter providing evidence of financial assurance includes financial data showing that the owner or operator satisfies paragraphs 1 and 2 of subdivision a that are different from data in the audited financial statements referred to in subparagraph b or any other audited financial statement or data filed with the securities and exchange commission, then a special report from the owner's or operator's independent certified public accountant to the owner or operator is required. The special report shall be based upon an agreed upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of that comparison, and the reasons for any differences.

(2) The owner or operator of a new facility must submit the items specified in paragraph 1 to the department at least sixty days before placing waste in the facility.

(3) After the initial submission of items specified in paragraph 1, the owner or operator must send updated information to the department within ninety days following the close of the owner's or operator's fiscal year. The department may provide up to an additional forty-five days for an owner or operator who can demonstrate that ninety days is insufficient time to acquire audited financial statements. The updated information must consist of all items specified in paragraph 1.

(4) The owner or operator is no longer required to submit the items specified in this subdivision or comply with the requirements of this subsection when:

(a) The owner or operator substitutes alternate financial assurance as specified in this section that is not subject to these recordkeeping and reporting requirements; or

(b) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 5.

(5) An owner or operator who no longer meets the requirements of subdivision a cannot use the financial test to demonstrate financial assurance. An owner's or operator who no longer meets the requirements of subdivision a, must:

(a) Send notice to the department of intent to establish alternate financial assurance as specified in this section. The owner or operator must send this notice by certified mail within ninety days following the close of the owner or operator's fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements of this subsection.

(b) Provide alternative financial assurance within one hundred twenty days after the end of such fiscal year.

(6) The department may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subdivision a, require at any time the owner or operator to provide reports of its financial condition in addition to or including current financial test documentation as specified in subdivision b. If the department finds that the owner or operator no longer meets the requirements of subdivision a, the owner or operator must provide alternate financial assurance that meets the requirements of this section.

7. Guarantee for liability coverage.

a. Subject to subdivision b, an owner or operator may meet the requirements of this section by obtaining a written guarantee, hereinafter referred to as "guarantee". The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in subdivisions a and b of subsection 6. The wording of the guarantee must be identical to the wording specified in subdivision b of subsection 8 of section 33.1-24-05-81. A certified copy of the guarantee must accompany the items sent to the department as specified in subdivision b of subsection 6. One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, this letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

(1) If the owner or operator fails to satisfy a judgment based on a determination of liability for bodily injury or property damage to third parties caused by sudden accidental occurrences arising from the operation of facilities covered by this corporate guarantee, or fails to pay an amount agreed to in settlement of claims arising from or alleged to arise from such injury or damage, the guarantor will do so up to the limits of coverage.

(2) [Reserved].

b. The following applies:

(1) In the case of corporations incorporated in the United States, a guarantee may be used to satisfy the requirements of this section only if the attorneys general or insurance commissioners of the state in which the guarantor is incorporated, and each state in which a facility covered by the guarantee is located, have submitted a written statement to the department that a guarantee executed as described in this section and subdivision b of subsection 8 of section 33.1-24-05-81 is a legally valid and enforceable obligation in that state.

(2) In the case of corporations incorporated outside the United States, a guarantee may be used to satisfy the requirements of this section only if:

(a) The non-United States corporation has identified a registered agent for service of process in each state in which a facility covered by the guarantee is located and in the state in which it has its principal place of business; and

(b) The attorney general or insurance commissioner of each state in which a facility covered by the guarantee is located and the state in which the guarantor corporation has its principal place of business, has submitted a written statement to the department that a guarantee executed as described in this section and subdivision b of subsection 8 of section 33.1-24-05-81 is a legally valid and enforceable obligation in that state.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1068. Incapacity of owners or operators, guarantors, or financial institutions.

1. An owner or operator must notify the department by certified mail of the commencement of a voluntary or involuntary proceeding under title 11 (bankruptcy), United States Code, naming the owner or operator as debtor, within ten days after commencement of the proceeding. A guarantor of a corporate guarantee as specified in subsection 7 of section 33.1-24-05-1063 and subsection 7 of section 33.1-24-05-1067 must make such a notification if the owner or operator is named as debtor, as required under the terms of the corporate guarantee (subsection 8 of section 33.1-24-05-81).
2. An owner or operator who fulfills the requirements of section 33.1-24-05-1063 or section 33.1-24-05-1067 by obtaining a trust fund, surety bond, letter of credit, or insurance policy will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy of the trustee or issuing institution, or a suspension or revocation of the authority of the trustee institution to act as trustee or of the institution issuing the surety bond, letter of credit, or insurance policy to issue such instruments. The owner or operator must establish other financial assurance or liability coverage within sixty days after such an event.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1069. [Reserved].

33.1-24-05-1070. [Reserved].

33.1-24-05-1071. Wording of the instruments.

1. The chief financial officer of an owner or operator of a facility with a standardized permit who uses a financial test to demonstrate financial assurance for that facility must complete a letter as specified in subsection 6 of section 33.1-24-05-1063. The letter must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance for closure costs, as specified in sections 33.1-24-05-1060 through 33.1-24-05-1079. This firm qualifies for the financial test on the basis of having [insert "a current rating for its senior unsecured debt of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's" or "a ratio of less than 1.50 comparing total liabilities to net worth" or "a ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus ten million dollars, to total liabilities"].

This firm [insert "is required" or "is not required"] to file a Form 10K with the Securities and Exchange Commission (SEC) for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

[If this firm qualifies on the basis of its bond rating fill in the requested information: "This firm has a rating of its senior unsecured debt of" [insert the bond rating] "from" [insert "Standard and Poor's" or "Moody's"]].

[Complete Line 1. Total Liabilities below and then skip the remaining questions in the next section and resume completing the form at the section entitled Obligations Covered by a Financial Test or Corporate Guarantee.]

[If this firm qualifies for the financial test on the basis of its ratio of liabilities to net worth, or sum of income, depreciation, depletion, and amortization to net worth, please complete the following section.]

*1. Total Liabilities	\$
*2. Net Worth	\$
*3. Net Income	\$
*4. Depreciation	\$
*5. Depletion (if applicable)	\$
*6. Amortization	\$
*7. Sum of Lines 3, 4, 5, and 6	\$

[If the above figures are taken directly from the most recent audited financial statements for this firm insert "The above figures are taken directly from the most recent audited financial statements for this firm". If they are not, insert "The following items are not taken directly from the firm's most recent audited financial statements" [insert the numbers of the items and attach an explanation of how they were derived]].

[Complete the following calculations]

8. Line 1. ÷ Line 2. =	\$	
9. Line 7. ÷ Line 1. =	\$	
Is Line 8. less than 1.5?	Yes	No
Is Line 9. greater than 0.10?	Yes	No

[If the owner or operator did not answer Yes to either of these two questions, the owner or operator cannot use the financial test and need not complete this letter. Instead, the owner or operator must notify the department that the owner or operator intends to establish alternate financial assurance as specified in section 33.1-24-05-1063. The owner or operator must send this notice by certified mail within ninety days following the close of the owner's or operator's fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements of this section. The owner or operator must also provide alternative financial assurance within one hundred twenty days after the end of such fiscal year].

Obligations Covered by a Financial Test or Corporate Guarantee

[On the following lines list all obligations that are covered by a financial test or a corporate guarantee extended by the owner's or operator's firm. The owner or operator may add additional lines and leave blank entries that do not apply to the owner's or operator's situation.]

Hazardous Waste Facility Name and ID	State	Closure	Post-Closure	Corrective Action
		\$	\$	\$

[After completion, a signed copy of the form must be sent to the department. In addition, a signed copy must be sent to every authority who requires a demonstration through a financial test for each of the other obligations in the letter that are assured through a financial test, or accepts a guarantee for an obligation listed in this letter.]

2. The chief financial officer of an owner or operator of a facility with a standardized permit who use a financial test to demonstrate financial assurance only for third party liability for that (or other standardized permit) facility or facilities must complete a letter as specified in subsection 6 of section 33.1-24-05-1067. The letter must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance for third party liability, as specified in sections 33.1-24-05-1060 through 33.1-24-05-1079. This firm qualifies for the financial test on the basis of having tangible net worth of at least ten million dollars more than the amount of liability coverage and assets in the United States of at least the amount of liability coverage.

This firm [insert "is required" or "is not required"] to file a Form 10K with the Securities and Exchange Commission (SEC) for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

[Please complete the following section.]

<u>*1. Total Assets</u>	<u>\$</u>		
<u>*2. Intangible Assets</u>	<u>\$</u>		
<u>*3. Tangible Assets (Line 1. - Line 2.)</u>	<u>\$</u>		
<u>*4. Total Liabilities</u>	<u>\$</u>		
<u>5. Tangible Net Worth (Line 3. - Line 4.)</u>	<u>\$</u>		
<u>*6. Assets in the United States</u>	<u>\$</u>		
<u>7. Amount of liability coverage</u>	<u>\$</u>		
<u>Is Line 5. at least \$10 million greater than Line 7?</u>		<u>Yes</u>	<u>No</u>
<u>Is Line 6. at least equal to Line 7?</u>		<u>Yes</u>	<u>No</u>

[The owner or operator must be able to answer Yes to both these questions to use the financial test for this facility.]

I hereby certify that the wording of this letter is identical to the wording specified in section 33.1-24-05-1071 as such rules were constituted on the date shown immediately below.

33.1-24-05-1080. Applicability of requirements for use and management of containers.

Sections 33.1-24-05-1080 through 33.1-24-05-1099 applies to owners or operators of facilities that treat or store hazardous waste in containers under sections 33.1-24-06-45 through 33.1-24-06-85, except as provided in subsection 2 of section 33.1-24-05-950.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1081. Container standards.

Standards apply to the condition of the containers, to the compatibility of waste with the containers, and to the management of the containers.

1. Condition of containers. If a container holding hazardous waste is not in good condition (for example, it exhibits severe rusting or apparent structural defects) or if it begins to leak, the owner or operator must either:
 - a. Transfer the hazardous waste from this container to a container that is in good condition; or
 - b. Manage the waste in some other way that complies with the requirements of sections 33.1-24-05-950 through 33.1-24-05-1149.
2. Compatibility of waste with containers. To ensure that the ability of the container to contain the waste is not impaired, the owner or operator must use a container made of or lined with materials that are compatible and will not react with the hazardous waste to be stored.
3. Management of containers.
 - a. The owner or operator must always keep a container holding hazardous waste closed during storage, except when it is necessary to add or remove waste.
 - b. The owner or operator must never open, handle, or store a container holding hazardous waste in a manner that may rupture the container or cause it to leak.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1082. Inspections.

At least weekly, the owner or operator must inspect areas where containers are stored, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1083. Containment.

1. Container storage areas must have a containment system that is designed and operated in accordance with subsection 2, except as provided otherwise in subsection 3.
2. The containment system must be designed and operated as follows:

- a. A base must underlie the containers that is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed.
 - b. The base must be sloped or the containment system, must be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids.
 - c. The containment system must have sufficient capacity to contain ten percent of the volume of containers, or the volume of the largest container, whichever is greater. This requirement does not apply to containers that do not contain free liquids.
 - d. Run-on into the containment system must be prevented unless the collection system has sufficient excess capacity, in addition to that required in subdivision c, to contain the liquid.
 - e. Spilled or leaked waste and accumulated precipitation must be removed from the sump or collection area as promptly as is necessary to prevent overflow of the collection system.
3. Storage areas that store containers holding only wastes with no free liquids need not have a containment system as defined in subsection 2, except as provided by subsection 4, if:
 - a. The storage area is sloped or is otherwise designed and operated to drain and remove liquid resulting from precipitation; or
 - b. The containers are elevated or are otherwise protected from contact with accumulated liquid.
 4. Storage areas that store containers holding F020, F021, F022, F023, F026, and F027 wastes that do not contain free liquids must have a containment system as defined by subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1084. Special requirements for ignitable or reactive wastes.

Containers holding ignitable or reactive waste must be located at least fifteen meters [50 feet] from the facility's property line. The owner or operator must also follow the general requirements for ignitable or reactive wastes that are specified in subsection 1 of section 33.1-24-05-967.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1085. Special requirements for incompatible wastes.

1. Incompatible wastes, or incompatible wastes and materials (see appendix III to chapter 33.1-24-05 for examples), must not be placed in the same container, unless subsection 2 of section 33.1-24-05-967 is complied with.
2. Hazardous waste must not be placed in an unwashed container that previously held an incompatible waste or material.
3. A storage container holding a hazardous waste that is incompatible with any waste or with other materials stored nearby in other containers, piles, open tanks, or surface impoundments

must be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1086. Closure.

At closure, all hazardous waste and hazardous waste residues must be removed from the containment system. Remaining containers, liners, bases, and soil containing or contaminated with hazardous waste or hazardous waste residues must be decontaminated or removed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1087. Air emission standards.

The owner or operator shall manage all hazardous waste placed in a container in accordance with the requirements of sections 33.1-24-05-400 through 33.1-24-05-474. Under a standardized permit, the following control devices are permissible: thermal vapor incinerator, catalytic vapor incinerator, flame, boiler, process heater, condenser, and carbon absorption unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1099. [Reserved].

33.1-24-05-1100. Applicability of tank requirements.

The requirements of sections 33.1-24-05-1100 through 33.1-24-05-1129 applies to owners or operators of facilities that treat or store hazardous waste in above ground or on ground tanks under sections 33.1-24-06-45 through 33.1-24-06-85, standardized permit, except as provided in subsection 2 of section 33.1-24-05-950.

1. Tank systems which contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements in section 33.1-24-05-1105. To demonstrate the absence or presence of free liquids in the stored or treated waste, the following test must be used: method 9095B (paint filter liquids test) as described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05.
2. Tank systems, including sumps, as defined in section 33.1-24-01-04, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes are exempted from the requirements of subsection 1 of section 33.1-24-05-1105.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1101. Design and construction standards for new tank systems or components.

Owners or operators must ensure that the foundation, structural support, seams, connections, and pressure controls (if applicable) are adequately designed and that the tank system has sufficient structural strength, compatibility with the wastes to be stored or treated, and corrosion protection to ensure that it will not collapse, rupture, or fail. The owner or operator must obtain a written assessment, reviewed and certified by a qualified professional engineer, in accordance with subsection 4 of section

33.1-24-06-03, attesting that the tank system has sufficient structural integrity and is acceptable for the storing and treating of hazardous waste. This assessment must include, at a minimum, the following information:

1. Design standards for the construction of tanks or the ancillary equipment, or both.
2. Hazardous characteristics of the wastes to be handled.
3. For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system will be in contact with the soil or with water, a determination by a corrosion expert of:
 - a. Factors affecting the potential for corrosion, such as:
 - (1) Soil moisture content.
 - (2) Soil pH.
 - (3) Soil sulfides level.
 - (4) Soil resistivity.
 - (5) Structure to soil potential.
 - (6) Existence of stray electric current.
 - (7) Existing corrosion protection measures (for example, coating, cathodic protection).
 - b. The type and degree of external corrosion protection needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
 - (1) Corrosion resistant materials of construction such as special alloys, fiberglass reinforced plastic;
 - (2) Corrosion resistant coating (such as epoxy, fiberglass) with cathodic protection (for example, impressed current or sacrificial anodes); and
 - (3) Electrical isolation devices such as insulating joints, flanges.
4. Design considerations to ensure that:
 - a. Tank foundations will maintain the load of a full tank.
 - b. Tank systems will withstand the effects of frost heave.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1102. Handling and inspection procedures during installation of a new tank system.

1. The owner or operator shall ensure that proper handling procedures are followed to prevent damage to a new tank system during installation. Before placing a new tank system or component in use an independent, qualified installation inspector or a qualified professional engineer, either of whom is trained and experienced in the proper installation of tank systems or components, must inspect the system for the presence of any of the following items:

- a. Weld breaks.
- b. Punctures.
- c. Scrapes of protective coatings.
- d. Cracks.
- e. Corrosion.
- f. Other structural damage or inadequate construction or installation.

2. The owner or operator must remedy all discrepancies before the tank system is placed in use.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1103. Testing.

All new tanks and ancillary equipment must be tested for tightness before being placed into use. If a tank system is found not to be tight, all repairs necessary to remedy the leaks in the system must be performed prior to covering, enclosing, or placing the tank system into use.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1104. Installation requirements.

1. The owner or operator must support and protect ancillary equipment against physical damage and excessive stress due to settlement, vibration, expansion, or contraction.
2. The owner or operator must provide the type and degree of corrosion protection recommended by an independent corrosion expert, based on the information provided under subsection 3 of section 33.1-24-05-1101, to ensure the integrity of the tank system during use of the tank system. An independent corrosion expert must supervise the installation of a corrosion protection system that is field fabricated to ensure proper installation.
3. The owner or operator must obtain, and keep at the facility, written statements by those persons required to certify the design of the tank system and to supervise the installation of the tank system as required in sections 33.1-24-05-1102, 33.1-24-05-1103, and subsections 1 and 2. The written statement must attest that the tank system was properly designed and installed and that the owner or operator made repairs under sections 33.1-24-05-1102 and 33.1-24-05-1103. These written statements must also include the certification statement as required in subsection 4 of section 33.1-24-06-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1105. Secondary containment requirements.

To prevent the release of hazardous waste or hazardous constituents to the environment, the owner or operator must provide secondary containment that meets the requirements of this section for all new and existing tank systems.

1. Secondary containment systems must be:

- a. Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
 - b. Capable of detecting and collecting releases and accumulated liquids until the collected material is removed.
2. To meet the requirements of subsection 1, secondary containment systems must be, at a minimum:
- a. Constructed of or lined with materials that are compatible with the wastes to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which it is exposed, climatic conditions, and the stress of daily operation (including stresses from nearby vehicular traffic).
 - b. Placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift.
 - c. Provided with a leak detection system that is designed and operated so that it will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous waste or accumulated liquid in the secondary containment system within twenty-four hours.
 - d. Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation must be removed from the secondary containment system within twenty-four hours, or as promptly as possible, to prevent harm to human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1106. Secondary containment devices.

1. Secondary containment for tanks must include one or more of the following:

- a. A liner (external to the tank).
- b. A double-walled tank.
- c. An equivalent device (documentation of equivalency must be maintained at the facility).

2. External liner systems must be:

- a. Designed or operated to contain one hundred percent of the capacity of the largest tank within its boundary.
- b. Designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. The additional capacity must be sufficient to contain precipitation from a twenty-five-year, twenty-four-hour rainfall event.
- c. Free of cracks or gaps.

d. Designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the waste if the waste is released from the tanks (capable of preventing lateral as well as vertical migration of the waste).

3. Double-walled tanks must be:

a. Designed as an integral structure (an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell.

b. Protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell.

c. Provided with a built-in continuous leak detection system capable of detecting a release within twenty-four hours.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1107. Requirements for ancillary equipment.

An owner or operator must provide ancillary equipment with secondary containment (for example, trench, jacketing, double-walled piping) that meets the requirements of subsections 1 and 2 of section 33.1-24-05-1105, except for:

1. Aboveground piping (exclusive of flanges, joints, valves, and other connections) that are visually inspected for leaks on a daily basis;

2. Welded flanges, welded joints, and welded connections, that are visually inspected for leaks on a daily basis;

3. Sealless or magnetic coupling pumps and sealless valves, that are visually inspected for leaks on a daily basis; and

4. Pressurized aboveground piping systems with automatic shutoff devices (for example, excess flow check valves, flow metering shutdown devices, loss of pressure actuated shutoff devices) that are visually inspected for leaks on a daily basis.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1108. General operating requirements.

1. Hazardous wastes or treatment reagents must not be placed in a tank system if they could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.

2. The owner or operator must use appropriate controls and practices to prevent spills and overflows from tank or containment systems. These include at a minimum:

a. Spill prevention controls (for example, check valves, dry disconnect couplings).

b. Overfill prevention controls (for example, level sensing devices, high-level alarms, automatic feed cutoff, or bypass to a standby tank).

c. Sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation.

3. The owner or operator must comply with the requirements of section 33.1-24-05-1110 if a leak or spill occurs in the tank system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1109. Inspections.

1. The owner or operator shall develop and follow a schedule and procedure for inspecting overfill controls.
2. The owner or operator shall inspect at least once each operating day:
 - a. Aboveground portions of the tank system to detect corrosion or releases of waste.
 - b. Data gathered from monitoring and leak detection equipment (for example, pressure or temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design.
 - c. The construction materials and the area immediately surrounding the externally accessible portion of the tank system, including the secondary containment system (for example, dikes) to detect erosion or signs of releases of hazardous waste (for example, wet spots, dead vegetation).
3. The owner or operator must inspect cathodic protection systems, if present, according to, at a minimum, the following schedule to ensure that they are functioning properly:
 - a. Confirm that the cathodic protection system is operating properly within six months after initial installation and annually thereafter.
 - b. Inspect or test, or both, all sources of impressed current, as appropriate, at least every other month.
4. The owner or operator shall document, in the operating record of the facility, an inspection of those items in subsections 1 through 3.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1110. Response to leaks or spills.

A tank system or secondary containment system from which there has been a leak or spill, or if either system is unfit for use, the owner or operator must remove the system from service immediately, and must satisfy the following requirements:

1. Immediately stop the flow of hazardous waste into the tank system or secondary containment system and inspect the system to determine the cause of the release.
2. Remove the waste from the tank system or secondary containment system.
 - a. If the release was from the tank system, the owner or operator must, within twenty-four hours after detecting the leak, remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed.

b. If the material released was to a secondary containment system, all released materials must be removed within twenty-four hours or as quickly as possible to prevent harm to human health and the environment.

3. Immediately conduct a visual inspection of the release and, based upon that inspection:

a. Prevent further migration of the leak or spill to soils or surface water.

b. Remove, and properly dispose of, any visible contamination of the soil or surface water.

4. Report any release to the environment, except as provided in subdivision a, to the department within twenty-four hours of its detection. The release should also be reported pursuant to 40 CFR part 302.

a. A leak or spill of hazardous waste is exempted from this subsection if it is:

(1) Less than or equal to a quantity of one pound; and

(2) Immediately contained and cleaned up.

b. Within thirty days of detection of a release to the environment, a report containing the following information must be submitted to the department:

(1) Likely route of migration of the release.

(2) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate).

(3) Results of any monitoring or sampling conducted in connection with the release (if available). If sampling or monitoring data relating to the release are not available within thirty days, these data must be submitted to the department as soon as they become available.

(4) Proximity to downgradient drinking water, surface water, and populated areas.

(5) Description of response actions taken or planned.

5. Either close the system or make necessary repairs.

a. Unless the owner or operator satisfies the requirements of subdivisions b and c, the tank system must be closed according to section 33.1-24-05-1111.

b. If the cause of the release was a spill that has not damaged the integrity of the system, the owner or operator may return the system to service as soon as the released waste is removed and any necessary repairs are made.

c. If the cause of the release was a leak from the primary tank system into the secondary containment system, the system must be repaired before returning the tank system to service.

6. If the owner or operator has made extensive repairs to a tank system in accordance with subsection 5 (for example, installation of an internal liner, repair of a ruptured primary containment or secondary containment vessel), the tank system may not be returned to service unless the owner or operator has obtained a certification by a qualified professional engineer in accordance with subsection 4 of section 33.1-24-06-03.

a. The engineer must certify that the repaired system is capable of handling hazardous wastes without release for the intended life of the system.

- b. This certification must be submitted to the department within seven days after returning the tank system to use.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1111. Closure.

At closure of a tank system, the owner or operator must remove or decontaminate all waste residues, contaminated containment system components (liners), contaminated soils, and structures and equipment contaminated with waste, and manage them as hazardous waste, unless subsection 4 of section 33.1-24-02-03 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems must meet all of the requirements specified in sections 33.1-24-05-1040 through 33.1-24-05-1079.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1112. Special requirements for ignitable or reactive wastes.

1. Ignitable or reactive wastes may not be placed in tank systems, unless:

a. The waste is treated, rendered, or mixed before or immediately after placement in the tank system so that:

(1) Subsection 2 of section 33.1-24-05-967 is complied with; and

(2) The resulting waste, mixture, or dissolved material no longer meets the definition of ignitable or reactive waste under section 33.1-24-02-11 or 33.1-24-02-13; or

b. The waste is stored or treated in such a way that it is protected from any material or conditions that may cause the waste to ignite or react; or

c. The tank system is used solely for emergencies.

2. The owner or operator of the facility where ignitable or reactive waste is stored or treated in a tank, must comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in tables 2-1 through 2-6 of the national fire protection association's "flammable and combustible liquids code," (1977 or 1981), incorporated by reference, see section 33.1-24-01-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1113. Special requirements for incompatible wastes.

1. Incompatible wastes, or incompatible wastes and materials, may not be placed in the same tank system, unless subsection 2 of section 33.1-24-05-967 is complied with.

2. Hazardous waste may not be placed in a tank system that has not been decontaminated and that previously held an incompatible waste or material, unless subsection 2 of section 33.1-24-05-967 is complied with.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1114. Air emission standards.

The owner or operator shall manage all hazardous waste placed in a tank in accordance with the requirements of sections 33.1-24-05-400 through 33.1-24-05-474. Under a standardized permit, the following control devices are permissible: thermal vapor incinerator, catalytic vapor incinerator, flame, boiler, process heater, condenser, and carbon absorption unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1115. [Reserved].

33.1-24-05-1116. [Reserved].

33.1-24-05-1117. [Reserved].

33.1-24-05-1118. [Reserved].

33.1-24-05-1119. [Reserved].

33.1-24-05-1120. [Reserved].

33.1-24-05-1129. [Reserved].

33.1-24-05-1130. Applicability of containment building requirements.

The requirements of sections 33.1-24-05-1130 through 33.1-24-05-1149 applies to owners or operators of facilities that treat or store hazardous waste in containment buildings under sections 33.1-24-06-45 through 33.1-24-06-85, standardized permit, except as provided in subsection 2 of section 33.1-24-05-950. Storage or treatment, or both, in a containment building is not land disposal as defined in section 33.1-24-05-251 if the unit meets the requirements of sections 33.1-24-05-1131, 33.1-24-05-1132, and 33.1-24-05-1133.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1131. Design and operating standards for containment buildings.

All containment buildings must comply with the design and operating standards in this section. The department will consider standards established by professional organizations generally recognized by the industry such as the American concrete institute and the American society of testing materials in judging the structural integrity requirements of this section.

1. The containment building must be completely enclosed with a floor, walls, and a roof to prevent exposure to the elements, (for example, precipitation, wind, run-on), and to assure containment of managed wastes.
2. The floor and containment walls of the unit, including the secondary containment system, if required under section 33.1-24-05-1133, must be designed and constructed of manmade materials of sufficient strength and thickness to:
 - a. Support themselves, the waste contents, and any personnel and heavy equipment that operates within the unit.

b. Prevent failure due to:

- (1) Pressure gradients, settlement, compression, or uplift.
- (2) Physical contact with the hazardous wastes to which they are exposed.
- (3) Climatic conditions.
- (4) Stresses of daily operation, including the movement of heavy equipment within the unit and contact of such equipment with containment walls.
- (5) Collapse or other failure.

3. All surfaces to be in contact with hazardous wastes must be chemically compatible with those wastes.

4. Incompatible hazardous wastes or treatment reagents must not be placed in the unit or its secondary containment system if they could cause the unit or secondary containment system to leak, corrode, or otherwise fail.

5. A containment building must have a primary barrier designed to withstand the movement of personnel, waste, and handling equipment in the unit during the operating life of the unit and appropriate for the physical and chemical characteristics of the waste to be managed.

6. If appropriate to the nature of the waste management operation to take place in the unit, an exception to the structural strength requirement may be made for lightweight doors and windows that meet these criteria:

a. They provide an effective barrier against fugitive dust emissions under subsection 4 of section 33.1-24-05-1132.

b. The unit is designed and operated in a fashion that assures that wastes will not actually come in contact with these openings.

7. The owner or operator must inspect and record in the facility's operating record, at least once every seven days, data gathered from monitoring equipment and leak detection equipment, as well as the containment building and the area immediately surrounding the containment building to detect signs of releases of hazardous waste.

8. The owner or operator must obtain certification by a qualified professional engineer that the containment building design meets the requirements of sections 33.1-24-05-1132, 33.1-24-05-1133, and subsections 1 through 6.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1132. Requirements to prevent releases.

Owners or operators must use controls and practices to ensure containment of the hazardous waste within the unit, and must, at a minimum:

1. Maintain the primary barrier to be free of significant cracks, gaps, corrosion, or other deterioration that could cause hazardous waste to be released from the primary barrier.
2. Maintain the level of the stored or treated, or both, hazardous waste within the containment walls of the unit so that the height of any containment wall is not exceeded.

3. Take measures to prevent tracking of hazardous waste out of the unit by personnel or by equipment used in handling the waste. An area must be designated to decontaminate equipment and any rinsate must be collected and properly managed.
4. Take measures to control fugitive dust emissions such that any openings (doors, windows, vents, cracks) exhibit no visible emissions (see 40 CFR part 60, appendix A, Method 22 - visual determination of fugitive emissions from material sources and smoke emissions from flares). In addition, all associated particulate collection devices (for example, fabric filter, electrostatic precipitator) must be operated and maintained with sound air pollution control practices. This state of no visible emissions must be maintained effectively at all times during routine operating and maintenance conditions, including when vehicles and personnel are entering and exiting the unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1133. Design and operating standards for liquids.

If the containment building will be used to manage hazardous wastes containing free liquids or treated with free liquids, as determined by the paint filter test, by a visual examination, or by other appropriate means, the owner or operator must include:

1. A primary barrier designed and constructed of materials to prevent the migration of hazardous constituents into the barrier (for example, a geomembrane covered by a concrete wear surface).
2. A liquid collection and removal system to minimize the accumulation of liquid on the primary barrier of the containment building.
 - a. The primary barrier must be sloped to drain liquids to the associated collection system; and
 - b. Liquids and waste must be removed to minimize hydraulic head on the containment system at the earliest practicable time.
3. A secondary containment system, including a secondary barrier designed and constructed to prevent migration of hazardous constituents into the barrier, and a leak detection system capable of detecting failure of the primary barrier and collecting accumulated hazardous wastes and liquids at the earliest practical time.
 - a. The requirements of the leak detection component of the secondary containment system may be met by installing a system that is, at a minimum:
 - (1) Constructed with a bottom slope of one percent or more; and
 - (2) Constructed of a granular drainage material with a hydraulic conductivity of 1×10^{-2} centimeters per second or more and a thickness of twelve inches [30.5 centimeters] or more, or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} meters squared per second or more.
 - b. If treatment will be conducted in the building, the area in which the treatment will be conducted must be designed to prevent the release of liquids, wet materials, or liquid aerosols to other portions of the building.
 - c. The secondary containment system must be constructed using materials that are chemically resistant to the waste and liquids managed in the containment building and of

sufficient strength and thickness to prevent collapse under the pressure exerted by overlaying materials and by any equipment used in the containment building.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1134. Waiver from secondary containment requirements.

Notwithstanding any other provision of sections 33.1-24-05-1130 through 33.1-24-05-1149, the department may waive requirements for secondary containment for a permitted containment building where:

1. The owner or operator demonstrates that the only free liquids in the unit are limited amounts of dust suppression liquids required to meet occupational health and safety requirements; and
2. Containment of managed wastes and dust suppression liquids can be assured without a secondary containment system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1135. Containment building containing areas both with and without secondary containment.

Containment buildings that contain areas both with and without secondary containment, the owner or operator shall:

1. Design and operate each area in accordance with the requirements in sections 33.1-24-05-1131 through 33.1-24-05-1133.
2. Take measures to prevent the release of liquids or wet materials into areas without secondary containment.
3. Maintain in the facility's operating record a written description of the operating procedures used to maintain the integrity of areas without secondary containment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1136. Detection of releases.

Throughout the active life of the containment building, if a condition that could lead to or has caused a release of hazardous waste is detected, the owner or operator shall repair the condition promptly, in accordance with the following procedures:

1. Upon detection of a condition that has lead to a release of hazardous waste (for example, upon detection of leakage from the primary barrier), the owner or operator shall:
 - a. Enter a record of the discovery in the facility operating record;
 - b. Immediately remove the portion of the containment building affected by the condition from service;

- c. Determine what steps must be taken to repair the containment building, to remove any leakage from the secondary collection system, and to establish a schedule for accomplishing the cleanup and repairs; and
 - d. Within seven days after the discovery of the condition, notify the department of the condition, and within fourteen working days, provide a written notice to the department with a description of the steps taken to repair the containment building, and the schedule for accomplishing the work.
2. The department will review the information submitted, make a determination regarding whether the containment building must be removed from service completely or partially until repairs and cleanup are complete, and notify the owner or operator of the determination and the underlying rationale in writing.
 3. Upon completing all repairs and cleanup, the owner or operator shall notify the department in writing and provide a verification, signed by a qualified professional engineer, that the repairs and cleanup have been completed according to the written plan submitted in accordance with subdivision d of subsection 1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-05-1137. Containment buildings used for secondary containment.

Containment buildings can serve as secondary containment systems for tanks placed within the building under certain conditions.

1. A containment building can serve as an external liner system for a tank, provided it meets the requirements of subsection 1 of section 33.1-24-05-1106.
2. The containment building must also meet the requirements of subsection 1 and subdivisions a and b of subsection 2 of section 33.1-24-05-1105 to be considered an acceptable secondary containment system for a tank.

33.1-24-05-1138. Closure.

At closure of a containment building, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (liners), contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless subsection 4 of section 33.1-24-02-03 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for containment buildings must meet all of the requirements specified in sections 33.1-24-05-1040 through 33.1-24-05-1059 and 33.1-24-05-1060 through 33.1-24-05-1079.

APPENDIX I

Recordkeeping Instructions

The recordkeeping instructions of section 33.1-24-05-40 specify that an owner or operator must keep a written operating record at the facility. This appendix provides additional instructions for keeping portions of the operating record. See subsection 2 of section 33.1-24-05-40 for additional recordkeeping requirements.

The following information must be recorded as it becomes available and maintained in the operating record until closure of the facility in the following manner:

Records of each hazardous waste received, treated, stored, or disposed of at the facility which include the following:

1. A description by its common name and the hazardous waste numbers from chapter 33.1-24-02 which apply to the waste. The waste description must also include the wastes' physical form, for example, liquid, sludge, soil, or contained gas. If the waste is not listed in chapter 33.1-24-02 the description must also include the process that produced it (for example, solid filter cake from the production of _____, hazardous waste number W051).

Each hazardous waste listed in and each hazardous waste characteristic defined in chapter 33.1-24-02 has a four-digit hazardous waste number assigned to it. This number must be used for recordkeeping and reporting purposes. Where more than one hazardous waste number applies, the waste description must include all applicable numbers.

2. The estimated or manifest-reported weight or volume and density, where applicable, in one of the units of measure specified in table 1.
3. The methods (by handling codes as specified in table 2) and the dates of treatment, storage, or disposal.

APPENDIX II

Cochran's Approximation to the Behrens-Fisher Student's T-Test

Using all the available background data (n_b readings) calculate the background mean (X_b) and background variance (S_b^2). For the single monitoring well under investigation (n_m reading), calculate the monitoring mean (X_m) and monitoring variance (S_m^2). For any set of data (X_1, X_2, \dots, X_n) the mean is calculated by:

$$\bar{X} = \frac{X_1 + X_2 \dots + X_n}{n}$$

And the variance is calculated by:

$$S^2 = \frac{(X_1 - \bar{X})^2 + (X_2 - \bar{X})^2 \dots + (X_n - \bar{X})^2}{n-1}$$

Where "n" denotes the number of observations in the set of data.

The t-Test uses these data summary measures to calculate a t-statistic (t^*) and a comparison t-statistic (t_c). The t^* is compared to the t_c value and a conclusion reached as to whether there has been a statistically significant change in any indicator parameter.

The t-statistic for all parameters, except pH and similar monitoring parameters, is:

$$t^* = \frac{X_m - \bar{X}_s}{\sqrt{\frac{S_m^2}{n_m} + \frac{S_b^2}{n_b}}}$$

If the value of this t-statistic is negative, then there is no significant difference between the monitoring data and the background data. It should be noted that significantly small negative values may be indicative of a failure of the assumption made for test validity or errors have been made in collecting the background data.

The t-statistic (t_c) against which t^* will be compared necessitates finding t_b and t_m from standard (one-tailed) tables where:

t_b = t-tables ($n_b - 1$) degrees of freedom at the 0.05 level of significance.

t_m = t-tables with ($n_m - 1$) degrees of freedom at the 0.05 level of significance.

Finally, the special weightings W_b and W_m are defined as:

APPENDIX II (continued)
Cochran's Approximation to the Behrens-Fisher Student's T-Test

$$W_b = \frac{S_b^2}{n_b} \text{ and } W_m = \frac{S_m^2}{n_m}$$

And so the comparison t-statistic is:

The t-statistic (t^*) is now compared with the comparison t-statistic (t_c) using the following decision rule:

$$t_c = \frac{W_b t_b + W_m t_m}{W_b + W_m}$$

If t^* is equal to or larger than t_c , then conclude that there most likely has been a significant increase in this specific parameter. If t^* is less than t_c , then conclude that most likely there has not been a change in this specific parameter.

The t-statistic for testing pH and similar monitoring parameters is constructed in the same manner as previously described, except the negative sign (if any) is discarded and the caveat concerning the negative value is ignored. The standard (two-tailed) tables are used in the construction t_c for pH and similar monitoring parameters.

If t^* is equal to or larger than t_c , then conclude that there most likely has been a significant increase (if the initial t^* had been negative, this would imply a significant decrease).

If t^* is less than t_c then conclude that there most likely has been no change.

A further discussion of the test may be found in Statistical Methods (6th Edition, Section 4.14) by G. W. Snedecor and W. G. Cochran, or Principles and Procedures of Statistic (1st Edition, Section 5.8) by R. G. D. Steel and J. H. Torrie.

APPENDIX III

Examples of Potentially Incompatible Waste

Many hazardous wastes, when mixed with other waste or materials at a hazardous waste facility, can produce effects which are harmful to human health and the environment, such as (1) heat or pressure, (2) fire or explosion, (3) violent reaction, (4) toxic dusts, mists, fumes, or gases, or (5) flammable fumes or gases.

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences which result from mixing materials in one group with materials in another group. The list is intended as a guide to owners or operators of treatment, storage, and disposal facilities, and to enforcement and permit granting officials, to indicate the need for special precautions when managing these potentially incompatible waste materials or components.

This list is not intended to be exhaustive. An owner or operator must, as the regulations require, adequately analyze his wastes so that he can avoid creating uncontrolled substances or reactions of the type listed below, whether they are listed below or not.

It is possible for potentially incompatible wastes to be mixed in a way that precludes a reaction (for example, adding acid to water rather than water to acid) or that neutralizes them (for example, a strong acid mixed with a strong base), or that controls substances produced (for example, by generating flammable gases in a closed tank equipped so that ignition cannot occur, and burning the gases in an incinerator).

In the lists below, the mixing of a Group A material with a Group B material may have the potential consequence as noted.

Group 1-A

Acetylene sludge

Alkaline caustic liquids

Alkaline cleaner

Alkaline corrosive liquids

Alkaline corrosive battery fluid

Caustic wastewater

Lime sludge and other corrosive alkalis

Lime wastewater

Lime and water

Spent caustic

Group 1-B

Acid sludge

Acid and water

Battery acid

Chemical cleaners

Electrolyte, acid

Etching acid liquid or solvent

APPENDIX III (continued)
Examples of Potentially Incompatible Waste

Pickling liquor and other corrosive acids

Spent acid

Spent mixed acid

Spent sulfuric acid

Potential consequences: Heat generation; violent reaction.

Group 2-A

Aluminum

Beryllium

Calcium

Lithium

Magnesium

Potassium

Sodium

Zinc powder

Other reactive metals and metal hydrides

Group 2-B

Any Waste in Group 1-A or 1-B

Potential consequences: Fire or explosion; generation of flammable hydrogen gas.

Group 3-A

Alcohols

Water

Group 3-B

Any concentrated waste in Groups 1-A or 1-B

Calcium

Lithium

Metal hydrides

Potassium

SO₂Cl₂, SOCl₂, PCl₃.

CH₃SiCl₃

Other water-reactive waste (potential consequences):

Fire, explosion, or heat generation; generation of flammable or toxic gases.

APPENDIX III (continued)
Examples of Potentially Incompatible Waste

Group 4-A

Alcohols

Aldehydes

Halogenated hydrocarbons

Nitrated hydrocarbons

Unsaturated hydrocarbons

Other reactive organic compounds and solvents

Group 4-B

Concentrated Group 1-A or 1-B wastes

Group 2-A wastes

Potential consequences: Fire, explosion, or violent reaction.

Group 5-A

Spent cyanide and sulfide solutions

Group 5-B

Group 1-B wastes

Potential consequences: generation of toxic hydrogen cyanide or hydrogen sulfide gas.

Group 6-A

Chlorates

Chlorine

Chlorites

Chromic acid

Hypochlorites

Nitrates

Nitric acid, fuming

Perchlorates

Permanganates

Peroxides

Other strong oxidizers

Group 6-B

Acetic acid and other organic acids

Concentrated mineral acids

APPENDIX III (continued)
Examples of Potentially Incompatible Waste

Group 2-A wastes

Group 4-A wastes

Other flammable and combustible wastes

Potential consequences: Fire, explosion, or violent reaction.

APPENDIX IV

Notification of Hazardous Waste Activity Form (page 1 of 2)

OMB# 2050-0024; Expires 12/31/2014

B. Universal Waste Activities; Complete all parts 1-2.

- Y N **1. Large Quantity Handler of Universal Waste** (you accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste managed at your site. If "Yes", mark all that apply.
- a. Batteries
- b. Pesticides
- c. Mercury containing equipment
- d. Lamps
- e. Other (specify) _____
- f. Other (specify) _____
- g. Other (specify) _____
- Y N **2. Destination Facility for Universal Waste**
 Note: A hazardous waste permit may be required for this activity.

C. Used Oil Activities; Complete all parts 1-4.

- Y N **1. Used Oil Transporter**
 If "Yes", mark all that apply.
- a. Transporter
- b. Transfer Facility (at your site)
- Y N **2. Used Oil Processor and/or Re-refiner**
 If "Yes", mark all that apply.
- a. Processor
- b. Re-refiner
- Y N **3. Off-Specification Used Oil Burner**
- Y N **4. Used Oil Fuel Marketer**
 If "Yes", mark all that apply.
- a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- b. Marketer Who First Claims the Used Oil Meets the Specifications

D. Eligible Academic Entities with Laboratories—Notification for opting into or withdrawing from managing laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K

✦ You can **ONLY** Opt into Subpart K if:

- you are at least one of the following: a college or university; a teaching hospital that is owned by or has a formal affiliation agreement with a college or university; or a non-profit research institute that is owned by or has a formal affiliation agreement with a college or university; AND
- you have checked with your State to determine if 40 CFR Part 262 Subpart K is effective in your state

Y N 1. Opting into or currently operating under 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories
 See the item-by-item instructions for definitions of types of eligible academic entities. Mark all that apply:

- a. College or University
- b. Teaching Hospital that is owned by or has a formal written affiliation agreement with a college or university
- c. Non-profit Institute that is owned by or has a formal written affiliation agreement with a college or university

Y N 2. Withdrawing from 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories

11. Description of Hazardous Waste

A. Waste Codes for Federally Regulated Hazardous Wastes. Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes. Please list the waste codes of the State-Regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed.

**ADDENDUM TO THE SITE IDENTIFICATION FORM:
NOTIFICATION OF HAZARDOUS SECONDARY MATERIAL ACTIVITY**

ONLY fill out this form if:

- ❖ You are located in a State that allows you to manage excluded hazardous secondary material (HSM) under 40 CFR 261.2(a)(2)(ii), 261.4(a)(23), (24), or (25) (or state equivalent). See <http://www.epa.gov/epawaste/hazard/dsw/statespf.htm> for a list of eligible states; **AND**
- ❖ You are or will be managing excluded HSM in compliance with 40 CFR 261.2(a)(2)(ii), 261.4(a)(23), (24), or (25) (or state equivalent) or you have stopped managing excluded HSM in compliance with the exclusion(s) and do not expect to manage any amount of excluded HSM under the exclusion(s) for at least one year. Do not include any information regarding your hazardous waste activities in this section.

1. Indicate reason for notification. Include dates where requested.

- Facility will begin managing excluded HSM as of _____ (mm/dd/yyyy).
- Facility is still managing excluded HSM/re-notifying as required by March 1 of each even-numbered year.
- Facility has stopped managing excluded HSM as of _____ (mm/dd/yyyy) and is notifying as required.

2. Description of excluded HSM activity. Please list the appropriate codes and quantities in **short tons** to describe your excluded HSM activity ONLY (do not include any information regarding your hazardous wastes). Use additional pages if more space is needed.

a. Facility code (answer using codes listed in the Code List section of the instructions)	b. Waste code(s) for HSM	c. Estimated short tons of excluded HSM to be managed annually	d. Actual short tons of excluded HSM that was managed during the most recent odd-numbered year	e. Land-based unit code (answer using codes listed in the Code List section of the instructions)

3. Facility has financial assurance pursuant to 40 CFR 261.4(a)(24)(vi). (Financial assurance is required for reclaimers and intermediate facilities managing excluded HSM under 40 CFR 261.4(a)(24) and (25))

Y N Does this facility have financial assurance pursuant to 40 CFR 261.4(a)(24)(vi)?

APPENDIX V

Extraction Procedure (EP) Toxicity Test Method and Structural Integrity Test (Method 1310B)

Note: The extraction procedure (EP), method 1310B, is published in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05.

APPENDIX VII

List of Halogenated Organic Compounds Regulated Under Section 33.1-24-05-272

In determining the concentration of HOCs in a hazardous waste for purposes of the Section 33.1-24-05-272 land disposal prohibition, the department has defined the HOCs that must be included in the calculation as any compounds having a carbon-halogen bond which are listed in this Appendix (see Section 33.1-24-05-251). Appendix VII consists of the following compounds:

List of Halogenated Organic Compounds Regulated Under Section 33.1-24-05-272

I. Volatiles

Bromodichloromethane
Bromomethane
Carbon Tetrachloride
Chlorobenzene
2-Chloro-1,3-butadiene
Chlorodibromomethane
Chloroethane
2-Chloroethyl vinyl ether
Chloroform
Chloromethane
3-Chloropropene
1,2-Dibromo-3-chloropropane
1,2-Dibromomethane
Dibromomethane
Trans-1,4-Dichloro-2-butene
Dichlorodifluoromethane
1,1-Dichloroethane
1,2-Dichloroethane
1,1-Dichloroethylene
Trans-1,2-Dichloroethene
1,2-Dichloropropane
Trans-1,3-Dichloropropene
cis-1,3-Dichloropropene
Iodomethane
Methylene chloride
1,1,1,2-Tetrachloroethane
1,1,2,2-Tetrachloroethane
Tetrachloroethene
Tribromomethane
1,1,1-Trichloroethane
1,1,2-Trichloroethane
Trichloroethene
Trichloromonofluoromethane
1,2,3-Trichloropropane
Vinyl Chloride

II. Semivolatiles

Bis(2-chloroethoxy)ethane
Bis(2-chloroethyl)ether
Bis(2-chloroisopropyl)ether
p-Chloroaniline
Chlorobenzilate
P-Chloro-m-cresol
2-Chloronaphthalene
2-Chlorophenol
3-Chloropropionitrile
m-Dichlorobenzene
o-Dichlorobenzene
p-Dichlorobenzene
3,3'-Dichlorobenzidine
2,4-Dichlorophenol
2,6-Dichlorophenol
Hexachlorobenzene
Hexachlorobutadiene
Hexachlorocyclopentadiene
Hexachloroethane
Hexachloropropene
Hexachloropropene
4,4'-Methylenebis(2-chloroaniline)
Pentachlorobenzene
Pentachloroethane
Pentachloronitrobenzene
Pentachlorophenol
Pronamide
1,2,4,5-Tetrachlorobenzene
2,3,4,6-Tetrachlorophenol
1,2,4-Trichlorobenzene
2,4,5-Trichlorophenol
2,4,6-Trichlorophenol
Tris(2,3-dibromopropyl)phosphate

List of Halogenated Organic Compounds Regulated Under Section 33.1-24-05-272

III. Organochlorine Pesticides

Aldrin

alpha-BHC

beta-BHC

delta-BHC

gamma-BHC

Chlorodane

DDD

DDE

DDT

Dieldrin

Endosulfan I

Endosulfan II

Endrin

Endrin aldehyde

Heptachlor

Heptachlor epoxide

Isodrin

Kepone

Methoxychlor

Toxaphene

IV. Phenoxyacetic Acid Herbicides

2,4-Dichlorophenoxyacetic acid

Silvex

2,4,5-T

V. PCBs

Aroclor 1016

Aroclor 1221

Aroclor 1232

Aroclor 1242

Aroclor 1248

Aroclor 1254

Aroclor 1260

PCBs not otherwise specified

VI. Dioxins and Furans

Hexachlorodibenzo-p-dioxins

Hexachlorodibenzofuran

Pentachlorodibenzo-p-dioxins

Pentachlorodibenzofuran

Tetrachlorodibenzo-p-dioxins

Tetrachlorodibenzofuran

2,3,7,8-Tetrachlorodibenzo-p-dioxin

APPENDIX VIII

Wastes Excluded From Lab Packs
Under the Alternative Treatment Standards of Subsection 3 of
Section 33.1-24-05-282

Hazardous waste with the following hazardous waste codes may not be placed in lab packs under the alternative lab pack treatment standards of subsection 3 of section 33.1-24-05-282: D009, F019, K003, K004, K005, K006, K062, K071, K100, K106, P010, P011, P012, P076, P078, U134, and U151.

APPENDIX IX

[Reserved]

APPENDIX X

Recommended Technologies to Achieve Deactivation of Characteristics in Section 33.1-24-05-282

The treatment standard for many characteristic wastes is stated in the 33.1-24-05-280 Table of Treatment Standards as "Deactivation and meet UTS." The environmental protection agency has determined that many technologies, when used alone or in combination, can achieve the deactivation portion of the treatment standard. Characteristic wastes that are not managed in a facility regulated by the Clean Water Act or in a Clean Water Act-equivalent facility, and that also contain underlying hazardous constituents (see subsection 10 of section 33.1-24-05-251) must be treated not only by a "deactivating" technology to remove the characteristic, but also to achieve the universal treatment standards for underlying hazardous constituents. The following appendix presents a partial list of technologies, utilizing the five letter technology codes established in Table 1 of section 33.1-24-05-282, that may be useful in meeting the treatment standard. Use of these specific technologies is not mandatory and does not preclude direct reuse, recovery, or the use or any combination thereof, of other pretreatment technologies, provided deactivation is achieved and underlying hazardous constituents are treated to achieve the universal treatment standards.

^aThis table does not include mixed radioactive wastes (from the First, Second, and Third Third rules) which received national capacity variance until May 8, 1992. This table also does not include contaminated soil and debris wastes.

^bThe standard was revised in the Third Third Final Rule (55 FR 22520, June 1, 1990).

^cThe standard was revised in the Third Third Emergency Rule (58 FR 29860, May 24, 1993); the original effective date was August 8, 1990.

^dThe standard was revised in the Phase II Final Rule (59 FR 47982, September 19, 1994); the original effective date was August 8, 1990.

^eThe standards for selected reactive wastes was revised in the Phase III Final Rule (61 FR 15566, April 8, 1996); the original effective date was August 8, 1990.

Table 2. Summary of Effective Dates of Land Disposal Restrictions for Contaminated Soil and Debris

<u>Restricted Hazardous Waste in Contaminated Soil and Debris</u>	<u>Effective Date</u>
<u>1. Solvent-(F001 through F005) and dioxin-(F020 through F023 and F026 through F028) containing soil and debris from CERCLA response or RCRA corrective actions.</u>	<u>November 8, 1990</u>
<u>2. Soil and debris not from CERCLA response or RCRA corrective actions contaminated with less than 1% total solvents (F001 through F005) or dioxins (F020 through F023 and F026 through F028).</u>	<u>November 8, 1988</u>
<u>3. All soil and debris contaminated with First Third wastes for which treatment standards are based on incineration.</u>	<u>August 8, 1990</u>
<u>4. All soil and debris contaminated with Second Third wastes for which treatment standards are based on incineration.</u>	<u>June 8, 1991</u>
<u>5. All soil and debris contaminated with Third Third wastes or, First or Second Third "soft hammer" wastes which had treatment standards promulgated in the Third Third rule, for which treatment standards are based on incineration, vitrification, or mercury retorting, acid leaching followed by chemical precipitation, or thermal recovery of metals; as well as all inorganic solids debris contaminated with D004 through D011 wastes, and all soil and debris contaminated with mixed Resource Conservation and Recovery Act/radioactive wastes.</u>	<u>May 8, 1992</u>
<u>6. Soil and debris contaminated with D012 through D043, K141 through K145, and K147 through K151 wastes.</u>	<u>December 19, 1994</u>
<u>7. Debris (only) contaminated with F037, F038, K107 through K112, K117, K118, K123 through K126, K131, K132, K136, U328, U353, U359.</u>	<u>December 19, 1994</u>
<u>8. Soil and debris contaminated with K156 through K161, P127, P128, P188 through P192, P194, P196 through P199, P201 through P205, U271, U277 through U280, U364 through U367, U372, U373, U375 through U379, U381 through U387, U389 through U396, U400 through U404, U407, and U409 through U411 wastes.</u>	<u>July 8, 1996</u>
<u>9. Soil and debris contaminated with K088 wastes.</u>	<u>October 8, 1997</u>
<u>10. Soil and debris contaminated with radioactive wastes mixed with K088, K156 through K161, P127, P128, P188 through P192, P194, P196 through P199, P201 through P205, U271, U277 through U280, U364 through U367, U372, U373, U375 through U379, U381 through U387, U389 through U396, U400 through U404, U407, and U409 through U411 wastes.</u>	<u>April 8, 1998</u>
<u>11. Soil and debris contaminated with F032, F034, and F035.</u>	<u>May 12, 1997</u>
<u>12. Soil and debris contaminated with newly identified D004 through D011 toxicity characteristic wastes and mineral processing wastes.</u>	<u>August 24, 1998</u>
<u>13. Soil and debris contaminated with mixed radioactive newly identified D004 through D011 characteristic wastes and mineral processing wastes.</u>	<u>May 26, 2000</u>

Note: Appendix XI is provided for the convenience of the reader.

APPENDIX XII

Ground Water Monitoring List

Common Name ¹	CAS RN ²	Chemical Abstracts Service Index Name ³
Acenaphthene.....	83-32-9	Acenaphthylene, 1,2-dihydro-
Acenaphthylene.....	208-96-8	Acenaphthylene
Acetone.....	67-64-1	2-Propanone
Acetophenone.....	98-86-2	Ethanone, 1-phenyl-
Acetonitrile; Methyl cyanide.....	75-05-8	Acetonitrile
2-Acetylaminofluorene; 2-AAF.....	53-96-3	Acetamide, N-9H-fluoren-2-yl-
Acrolein.....	107-02-8	2-Propenal
Acrylonitrile.....	107-13-1	2-Propenenitrile

<u>Xylene (total).....</u>	<u>1330-20-7</u>	<u>Benzene, dimethyl-</u>
<u>Zinc.....</u>	<u>(Total)</u>	<u>Zinc</u>

¹Common names are those widely used in government regulations, scientific publications, and commerce; synonyms exist for many chemicals.

²Chemical Abstracts Service registry number. Where "Total" is entered, all species in the ground water that contain this element are included.

³CAS index names are those used in the 9th Cumulative Index.

⁴Polychlorinated biphenyls (CAS RN 1336-36-3); this category contains congener chemicals, including constituents of Aroclor-1016 (CAS RN 12674-11-2), Aroclor-1221 (CAS RN 11104-28-2), Aroclor-1232 (CAS RN 11141-16-5), Aroclor-1242 (CAS RN 53469-21-9), Aroclor-1248 (CAS RN 12672-29-6), Aroclor-1254 (CAS RN 11097-69-1), and Aroclor-1260 (CAS RN 11096-82-5).

⁵This category contains congener chemicals, including tetrachlorodibenzo-p-dioxins (see also 2,3,7,8-TCDD), pentachlorodibenzo-p-dioxins, and hexachlorodibenzo-p-dioxins.

⁶This category contains congener chemicals, including tetrachlorodibenzofurans, pentachlorodibenzofurans, and hexachlorodibenzofurans.

^aWastes that are deep well disposed onsite receive a six-month variance, with restrictions effective in November 1990.

^bDeep well injected D002 liquids with a pH less than 2 must meet the California List treatment standards on August 8, 1990.

^cManaged in systems defined in 40 CFR 144.6(e) and 14.6(e) as Class V injection wells, that do not engage in Clean Water Act-equivalent treatment before injection.

APPENDIX XIX

Reference Air Concentrations*		
Constituent	CAS No.	Reference Air Concentraion ($\mu\text{g}/\text{m}^3$)
Acetaldehyde	75-07-0	10
Acetonitrile	75-05-8	10
Acetophenone	98-86-2	100
Acrolein	107-02-8	20
Aldicarb	116-06-3	1
Aluminum Phosphide	20859-73-8	0.3
Allyl Alcohol	107-18-6	5
Antimony	7440-36-0	0.3
Barium	7440-39-3	50
Barium Cyanide	542-62-1	50
Bromomethane	74-83-9	0.8
Calcium Cyanide	592-01-8	30
Carbon Disulfide	75-15-0	200
Chloral	75-87-6	2
Chlorine (free)		0.4
2-Chloro-1,3-butadiene	126-99-8	3
Chromium III	16065-83-1	1000
Copper Cyanide	544-92-3	5
Cresols	1319-77-3	50
Cumene	98-82-8	1
Cyanide (free)	57-12-15	20
Cyanogen	460-19-5	30
Cyanogen Bromide	506-68-3	80
Di-n-butyl Phthalate	84-74-2	100
o-Dichlorobenzene	95-50-1	10
p-Dichlorobenzene	106-46-7	10
Dichlorodifluoromethane	75-71-8	200
2,4-Dichlorophenol	120-83-2	3
Diethyl Phthalate	84-66-2	800
Dimethoate	60-51-5	0.8
2,4-Dinitrophenol	51-28-5	2
Dinoseb	88-85-7	0.9

Reference Air Concentrations*		
Constituent	CAS No.	Reference Air Concentraion (µg/m³)
Diphenylamine	122-39-4	20
Endosulfan	115-29-1	0.05
Endrin	72-20-8	0.3
Fluorine	7782-41-4	50
Formic Acid	64-18-6	2000
Glycidyaldehyde	765-34-4	0.3
Hexachlorocyclopentadiene	77-47-4	5
Hexachlorophene	70-30-4	0.3
Hydrocyanic Acid	74-90-8	20
Hydrogen Chloride	7647-01-1	7
Hydrogen Sulfide	7783-06-4	3
Isobutyl Alcohol	78-83-1	300
Lead	7439-92-1	0.09
Maleic Anhydride	108-31-6	100
Mercury	7439-97-6	0.3
Methacrylonitrile	126-98-7	0.1
Methomyl	16752-77-5	20
Methoxychlor	72-43-5	50
Methyl Chlorocarbonate	79-22-1	1000
Methyl Ethyl Ketone	78-93-3	80
Methyl Parathion	298-00-0	0.3
Nickel Cyanide	557-19-7	20
Nitric Oxide	10102-43-9	100
Nitrobenzene	98-95-3	0.8
Pentachlorobenzene	608-93-5	0.8
Pentachlorophenol	87-86-5	30
Phenol	108-95-2	30
M-Phenylenediamine	108-45-2	5
Phenylmercuric Acetate	62-38-4	0.075
Phosphine	7803-51-2	0.3
Phthalic Anhydride	85-44-9	2000
Potassium Cyanide	151-50-8	50
Potassium Silver Cyanide	506-61-6	200

Reference Air Concentrations*		
Constituent	CAS No.	Reference Air Concentraion ($\mu\text{g}/\text{m}^3$)
Pyridine	110-86-1	1
Selenious Acid	7783-60-8	3
Selenourea	630-10-4	5
Silver	7440-22-4	3
Silver Cyanide	506-64-9	100
Sodium Cyanide	143-33-9	30
Strychnine	57-24-9	0.3
1,2,4,5-Tetrachlorobenzene	95-94-3	0.3
2,3,4,6-Tetrachlorophenol	58-90-2	30
Tetraethyl Lead	78-00-2	0.0001
Tetrahydrofuran	109-99-9	10
Thallic Oxide	1314-32-5	0.3
Thallium	7440-28-0	0.5
Thallium (I) Acetate	563-68-8	0.5
Thallium (I) Carbonate	6533-73-9	0.3
Thallium (I) Chloride	7791-12-0	0.3
Thallium (I) Nitrate	10102-45-1	0.5
Thallium Selenite	12039-52-0	0.5
Thallium (I) Sulfate	7446-18-6	0.075
Thiram	137-26-8	5
Toluene	108-88-3	300
1,2,4-Trichlorobenzene	120-82-1	20
Trichloromonofluoromethane	75-69-4	300
2,4,5-Trichlorophenol	95-95-4	100
Vanadium Pentoxide	1314-62-1	20
Warfarin	81-81-2	0.3
Xylenes	1330-20-7	80
Zinc Cyanide	557-21-1	50
Zinc Phosphide	1314-84-7	0.3
*The reference air concentration for other appendix V of chapter 33.1-24-02 constituents not listed herein or in appendix XX of chapter 33.1-24-05 is $0.1 \mu\text{g}/\text{m}^3$.		

APPENDIX XX

Risk Specific Doses (10⁻⁵)

Constituent	CAS No.	Unit Risk (m ³ /μg)	RSD (μg/m ³)
Acrylamide	79-06-1	1.3E-03	7.7E-03
Acrylonitrile	107-13-1	6.8E-05	1.5E-01
Aldrin	309-00-2	4.9E-03	2.0E-03
Aniline	62-53-3	7.4E-06	1.4E+00
Arsenic	7440-38-2	4.3E-03	2.3E-03
Benz(a)anthracene	56-55-3	8.9E-04	1.1E-02
Benzene	71-43-2	8.3E-06	1.2E+00
Benzidine	92-87-5	6.7E-02	1.5E-04
Benzo(a)pyrene	50-32-8	3.3E-03	3.0E-03
Beryllium	7440-41-7	2.4E-03	4.2E-03
Bis(2-chloroethyl)ether	111-44-4	3.3E-04	3.0E-02
Bis(chloromethyl)ether	542-88-1	6.2E-02	1.6E-04
Bis(2-ethylhexyl)-phthalate	117-81-7	2.4E-07	4.2E+01
1,3-Butadiene	106-99-0	2.8E-04	3.6E-02
Cadmium	7440-43-9	1.8E-03	5.6E-03
Carbon Tetrachloride	56-23-5	1.5E-05	6.7E-01
Chlordane	57-74-9	3.7E-04	2.7E-02
Chloroform	67-66-3	2.3E-05	4.3E-01
Chloromethane	74-87-3	3.6E-06	2.8E+00
Chromium VI	7440-47-3	1.2E-02	8.3E-04
DDT	50-29-3	9.7E-05	1.0E-01
Dibenz(a,h)anthracene	53-70-3	1.4E-02	7.1E-04

*Note 1: The health-based concentration limits for appendix V of chapter 33.1-24-02 constituents for which a health-based concentration is not provided below is 2xE-06 mg/kg.

Note 2: The levels specified in this appendix and the default level of 0.002 micrograms per kilogram or the level of detection for constituents as identified in Note 1 of this appendix are administratively stayed under the condition, for those constituents specified in subdivision a of subsection 2 of section 33.1-24-05-537, that the owner or operator complies with the alternative levels defined as the land disposal restriction limits specified in section 33.1-24-05-283 for F039 nonwastewaters. See paragraph 1 of subdivision b of subsection 2 of section 33.1-24-05-537.

APPENDIX XXIII

Organic Compounds for Which Residues Must Be Analyzed

<u>Volatiles:</u>	<u>Semivolatiles:</u>
<u>Benzene</u>	<u>Bis(2-ethylhexyl)phthalate</u>
<u>Toluene</u>	<u>Naphthalene</u>
<u>Carbon tetrachloride</u>	<u>Phenol</u>
<u>Chloroform</u>	<u>Diethyl phthalate</u>
<u>Methylene chloride</u>	<u>Butyl benzyl phthalate</u>
<u>Trichloroethylene</u>	<u>2,4-Dimethylphenol</u>
<u>Tetrachloroethylene</u>	<u>o-Dichlorobenzene</u>
<u>1,1,1-Trichloroethane</u>	<u>m-Dichlorobenzene</u>
<u>Chlorobenzene</u>	<u>p-Dichlorobenzene</u>
<u>cis-1,4-Dichloro-2-butene</u>	<u>Hexachlorobenzene</u>
<u>Bromochloromethane</u>	<u>2,4,6-Trichlorophenol</u>
<u>Bromodichloromethane</u>	<u>Fluoranthene</u>
<u>Bromoform</u>	<u>o-Nitrophenol</u>
<u>Bromomethane</u>	<u>1,2,4-Trichlorobenzene</u>
<u>Methylene bromide</u>	<u>o-Chlorophenol</u>
<u>Methyl ethyl ketone</u>	<u>Pentachlorophenol</u>
	<u>Pyrene</u>
	<u>Dimethyl phthalate</u>
	<u>Mononitrobenzene</u>
	<u>2,6-Toluene diisocyanate</u>
	<u>Polychlorinated dibenzo-p-dioxins¹</u>
	<u>Polychlorinated dibenzo-furans¹</u>

¹Analyses for polychlorinated dibenzo-p-dioxins and polychlorinated dibenzo-furans are required only for residues collected from areas downstream of the combustion chamber (for example, ductwork, boiler tubes, heat exchange surfaces, and air pollution control devices).

Note to the table: Analysis is not required for those compounds that do not have an established F039 nonwastewater concentration limit.

APPENDIX XXIV

Methods Manual for Compliance With the Boiler and Industrial Furnace Regulations

The Methods Manual for Compliance With the Boiler and Industrial Furnace Regulations is incorporated by reference in its entirety from Appendix IX to 40 Code of Federal Regulations Part 266, effective April 17, 2015.

APPENDIX XXV

[Reserved]

APPENDIX XXVI

Lead-Bearing Materials That May Be Processed in Exempt Lead Smelters

A.	<u>Exempt Lead-Bearing Materials When Generated or Originally Produced by Lead-Associated Industries¹</u>
1.	Acid dump/fill solids
2.	Sump mud
3.	Materials from laboratory analyses
4.	Acid filters
5.	Baghouse bags
6.	Clothing (for example, coveralls, aprons, shoes, hats, gloves)
7.	Sweepings
8.	Air filter bags and cartridges
9.	Respiratory cartridge filters
10.	Shop abrasives
11.	Stacking boards
12.	Waste shipping containers (for example, cartons, bags, drums, cardboard)
13.	Paper hand towels
14.	Wiping rags and sponges
15.	Contaminated pallets
16.	Water treatment sludges, filter cakes, residues, and solids
17.	Emission control dusts, sludges, filter cakes, residues, and solids from lead-associated industries (for example, K069 and D008 wastes)
18.	Spent grids, posts, and separators
19.	Spent batteries
20.	Lead oxide and lead oxide residues
21.	Lead plates and groups
22.	Spent battery cases, covers, and vents
23.	Pasting belts
24.	Water filter media
25.	Cheesecloth from pasting rollers
26.	Pasting additive bags
27.	Asphalt paving materials
¹ Lead-associated industries are lead smelters, lead-acid battery manufacturing, and lead chemical manufacturing (for example, manufacturing of lead oxide or other lead compounds).	
B.	<u>Exempt Lead-Bearing Materials When Generated or Originally Produced by Any Industry</u>
1.	Charging jumpers and clips
2.	Platen abrasive

3. Fluff from lead wire and cable casings

4. Lead-based pigments and compounding pigment dust

APPENDIX XXVII

Nickel or Chromium-Bearing Materials That May Be Processed in Exempt Nickel-Chromium Recovery Furnaces

<u>A. Exempt Nickel or Chromium-Bearing Materials when Generated by Manufacturers or Users of Nickel, Chromium, or Iron</u>
1. <u>Baghouse bags</u>
2. <u>Raney nickel catalyst</u>
3. <u>Floor sweepings</u>
4. <u>Air filters</u>
5. <u>Electroplating bath filters</u>
6. <u>Wastewater filter media</u>
7. <u>Wood pallets</u>
8. <u>Disposable clothing (coveralls, aprons, hats, and gloves)</u>
9. <u>Laboratory samples and spent chemicals</u>
10. <u>Shipping containers and plastic liners from containers or vehicles used to transport nickel or chromium-containing wastes</u>
11. <u>Respirator cartridge filters</u>
12. <u>Paper hand towels</u>
<u>B. Exempt Nickel or Chromium-Bearing Materials When Generated by Any Industry</u>
1. <u>Electroplating wastewater treatment sludges (F006)</u>
2. <u>Nickel and/or chromium-containing solutions</u>
3. <u>Nickel, chromium, and iron catalysts</u>
4. <u>Nickel-cadmium and nickel-iron batteries</u>
5. <u>Filter cake from wet scrubber system water treatment plants in the specialty steel industry</u>
6. <u>Filter cake from nickel-chromium alloy pickling operations</u>

APPENDIX XXVIII

Mercury-Bearing Wastes That May Be Processed in Exempt Mercury Recovery Units

These are exempt mercury-bearing materials with less than five hundred parts per million of appendix V of chapter 33.1-24-02 organic constituents when generated by manufacturers or users of mercury or mercury products.

1. Activated carbon.
2. Decomposer graphite.
3. Wood.
4. Paper.
5. Protective clothing.
6. Sweepings.
7. Respiratory cartridge filters.
8. Cleanup articles.
9. Plastic bags and other contaminated containers.
10. Laboratory and process control samples.
11. K106 and other wastewater treatment plant sludge and filter cake.
12. Mercury cell sump and tank sludge.
13. Mercury cell process solids.
14. Recoverable levels of mercury contained in soil.

APPENDIX XXIX

Metal-Bearing Wastes Prohibited From Dilution in a Combustion Unit According to Subsection 3 of Section 33.1-24-05-252¹

<u>Waste Code</u>	<u>Waste Description</u>
<u>D004</u>	<u>Toxicity characteristic for arsenic.</u>
<u>D005</u>	<u>Toxicity characteristic for barium.</u>
<u>D006</u>	<u>Toxicity characteristic for cadmium.</u>
<u>D007</u>	<u>Toxicity characteristic for chromium.</u>
<u>D008</u>	<u>Toxicity characteristic for lead.</u>
<u>D009</u>	<u>Toxicity characteristic for mercury.</u>
<u>D010</u>	<u>Toxicity characteristic for selenium.</u>
<u>D011</u>	<u>Toxicity characteristic for silver.</u>
<u>F006</u>	<u>Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.</u>
<u>F007</u>	<u>Spent cyanide plating bath solutions from electroplating operations.</u>
<u>F008</u>	<u>Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.</u>
<u>F009</u>	<u>Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.</u>
<u>F010</u>	<u>Quenching bath residues from oil baths from metal treating operations where cyanides are used in the process.</u>
<u>F011</u>	<u>Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.</u>
<u>F012</u>	<u>Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.</u>
<u>F019</u>	<u>Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum car washing when such phosphating is an exclusive conversion coating process.</u>
<u>K002</u>	<u>Wastewater treatment sludge from the production of chrome yellow and orange pigments.</u>
<u>K003</u>	<u>Wastewater treatment sludge from the production of molybdate orange pigments.</u>
<u>K004</u>	<u>Wastewater treatment sludge from the production of zinc yellow pigments.</u>
<u>K005</u>	<u>Wastewater treatment sludge from the production of chrome green pigments.</u>
<u>K006</u>	<u>Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).</u>
<u>K007</u>	<u>Wastewater treatment sludge from the production of iron blue pigments.</u>
<u>K008</u>	<u>Oven residue from the production of chrome oxide green pigments.</u>
<u>K061</u>	<u>Emission control dust/sludge from the primary production of steel in electric furnaces.</u>

Waste Code	Waste Description
<u>K069</u>	<u>Emission control dust/sludge from secondary lead smelting.</u>
<u>K071</u>	<u>Brine purification muds from the mercury cell processes in chlorine production, where separately prepurified brine is not used.</u>
<u>K100</u>	<u>Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.</u>
<u>K106</u>	<u>Sludges from the mercury cell processes for making chlorine.</u>
<u>P010</u>	<u>Arsenic acid H_3AsO_4.</u>
<u>P011</u>	<u>Arsenic oxide As_2O_5.</u>
<u>P012</u>	<u>Arsenic trioxide.</u>
<u>P013</u>	<u>Barium cyanide.</u>
<u>P015</u>	<u>Beryllium.</u>
<u>P029</u>	<u>Copper cyanide $Cu(CN)$.</u>
<u>P074</u>	<u>Nickel cyanide $Ni(CN)_2$.</u>
<u>P087</u>	<u>Osmium tetroxide.</u>
<u>P099</u>	<u>Potassium silver cyanide.</u>
<u>P104</u>	<u>Silver cyanide.</u>
<u>P113</u>	<u>Thallic oxide.</u>
<u>P114</u>	<u>Thallium (I) selenite.</u>
<u>P115</u>	<u>Thallium (I) sulfate.</u>
<u>P119</u>	<u>Ammonium vanadate.</u>
<u>P120</u>	<u>Vanadium oxide V_2O_5.</u>
<u>P121</u>	<u>Zinc cyanide.</u>
<u>U032</u>	<u>Calcium chromate.</u>
<u>U145</u>	<u>Lead phosphate.</u>
<u>U151</u>	<u>Mercury.</u>
<u>U204</u>	<u>Selenious acid.</u>
<u>U205</u>	<u>Selenium disulfide.</u>
<u>U216</u>	<u>Thallium (I) chloride.</u>
<u>U217</u>	<u>Thallium (I) nitrate.</u>

¹A combustion unit is defined as any thermal technology subject to sections 33.1-24-05-144 through 33.1-24-05-159 or sections 33.1-24-05-525 through 33.1-24-05-549.

CHAPTER 33.1-24-06 PERMITS

Section

<u>33.1-24-06-01</u>	<u>Application for a Permit</u>
<u>33.1-24-06-02</u>	<u>Continuation of Expiring Permits</u>

33.1-24-06-99 [Reserved]
33.1-24-06-100 Options for Incinerators, Cement Kilns, Lightweight Aggregate Kilns, Solid Fuel Boilers, Liquid Fuel Boilers, and Hydrochloric Acid Production Furnaces to Minimize Emissions from Startup, Shutdown, and Malfunction Events

33.1-24-06-01. Application for a permit.

1. **Permit application.** Any person who is required to have a permit (including new applicants and permittees with expiring permits) shall complete, sign, and submit an application to the department as described in this section and section 33.1-24-06-17. Persons currently authorized with interim status shall apply for permits when required by the department. Persons covered by permits by rule (section 33.1-24-06-18) need not apply. Procedures for applications, issuance, and administration of emergency permits are found exclusively in section 33.1-24-06-19. Procedures for application, issuance, and administration of research, development, and demonstration permits are found exclusively in section 33.1-24-06-20. Treatment, storage, and disposal facilities that are otherwise subject to permitting and that meet the criteria in subdivision a or subdivision b may be eligible for a standardized permit under sections 33.1-24-06-45 through 33.1-24-06-85. Procedures for application and issuance of standardized permits are found in sections 33.1-24-07-40 through 33.1-24-07-54, and sections 33.1-24-06-45 through 33.1-24-06-85.

- a. The facility generates hazardous waste and then nonthermally treats, or stores hazardous waste onsite in tanks, containers, or containment buildings; or
- b. The facility receives hazardous waste generated offsite by a generator under the same ownership as the receiving facility, and then stores, or nonthermally treats the hazardous waste in containers, tanks, or containment buildings.

2. **Who must have a permit?** North Dakota Century Code chapter 23.1-04 requires that a permit be obtained for the treatment, storage, or disposal of any hazardous waste as identified or listed in chapter 33.1-24-02. Treatment, storage, and disposal facilities that are otherwise subject to permitting and that meet the criteria in subdivisions a and b of subsection 1 of section 33.1-24-06-48, may be eligible for a standardized permit under sections 33.1-24-06-45 through 33.1-24-06-85. Owners and operators of hazardous waste management units must have permits during the active life (including the closure period) of the unit, during any compliance period specified under section 33.1-24-05-53, including any extension of that period under subsection 3 of section 33.1-24-05-53. Owners or operators of surface impoundments, landfills, land treatment units, and waste pile units that received wastes after July 26, 1982, or that certified closure according to section 33.1-24-05-64 after January 26, 1983, must have postclosure permits, unless they demonstrate closure by removal as provided under subdivisions d and e. If a postclosure permit is required, the permit must address applicable chapter 33.1-24-05 ground water monitoring, unsaturated zone monitoring, corrective action, and postclosure care. The denial of a permit for the active life of a hazardous waste management facility or unit does not affect the requirement to obtain a postclosure permit under this section.

a. Specific inclusions. Hazardous waste permits are required for:

- (1) Injection wells that dispose of hazardous waste, and associated surface facilities that treat, store, or dispose of hazardous waste (see section 33.1-24-06-20). However, the owner or operator with an underground injection control permit will be deemed to have a hazardous waste permit for the injection well itself if the owner or operator complies with requirements of subsection 1 of section 33.1-24-06-18.
- (2) Treatment, storage, or disposal of hazardous waste at facilities requiring a North Dakota pollutant discharge elimination system permit. However, the owner or operator of a publicly owned treatment works receiving hazardous waste will be deemed to have a hazardous waste permit for that waste if the owner or operator complies with the requirements of subsection 2 of section 33.1-24-06-18.

b. Specific exclusions. Hazardous waste permits are not required for:

- (1) Generators who accumulate hazardous waste onsite for less than time periods as provided in section 33.1-24-03-12.
- (2) Farmers who dispose of pesticide containers from their own use as provided in section 33.1-24-03-40.
- (3) Persons who own or operate facilities solely for the treatment, storage, or disposal of hazardous waste excluded from regulation by section 33.1-24-02-04 or 33.1-24-02-05.
- (4) Owners or operators of totally enclosed treatment facilities as defined in section 33.1-24-01-04.
- (5) Owners or operators of elementary neutralization units or wastewater treatment units as defined in section 33.1-24-01-04.
- (6) Transporters storing manifested shipments of hazardous waste in containers meeting the requirements of section 33.1-24-03-08 at a transfer facility for a period of ten days or less.
- (7) Persons mixing absorbent material and waste in a container, provided this mixing occurs at the time waste is first placed in the container, and the person complies with sections 33.1-24-05-90 and 33.1-24-05-91, and subsection 2 of section 33.1-24-05-08.
- (8) Universal waste handlers and universal waste transporters as defined in section 33.1-24-01-04 managing the wastes listed below. These handlers are subject to regulation under sections 33.1-24-05-700 through 33.1-24-05-799.
 - (a) Batteries as described in section 33.1-24-05-702;
 - (b) Pesticides as described in section 33.1-24-05-703;
 - (c) Mercury containing equipment as described in section 33.1-24-05-704; and
 - (d) Lamps as described in section 33.1-24-05-705.
- (9) Immediate response activities.
 - (a) A person is not required to obtain a hazardous waste permit for treatment or containment activities taken during immediate response to any of the following situations:
 - [1] A discharge of a hazardous waste.
 - [2] An imminent and substantial threat of a discharge of hazardous waste.
 - [3] A discharge of a material which, when discharged, becomes a hazardous waste.
 - [4] An immediate threat to human health, public safety, property, or the environment from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosive or munitions emergency response specialist as defined in section 33.1-24-01-04.

- (b) Any person who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this chapter for those activities.
- (c) In the case of emergency responses involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed and its disposition.
- c. Permits for less than an entire facility. The department may issue or deny a permit for one or more units at a facility without simultaneously issuing or denying a permit to all of the units at the facility. The interim status of any unit for which a permit has not been issued or denied is not affected by the issuance or denial of a permit to any other unit at the facility.
- d. Closure by removal. Owners or operators of surface impoundments, land treatment units, and waste piles closing by removal or decontamination under chapter 33.1-24-05 standards must obtain a postclosure permit unless they can demonstrate to the department that the closure met the standards for closure by removal or decontamination in section 33.1-24-05-122, subsection 5 of section 33.1-24-05-167, or section 33.1-24-05-135 respectively. The demonstration may be made in the following ways:
- (1) If the owner or operator has submitted a part B application for a postclosure permit, the owner or operator may request a determination, based on information contained in the application, that chapter 33.1-24-05 closure by removal standards were met. If the department believes that chapter 33.1-24-05 standards were met, the department will notify the public of this proposed decision, allow for public comment, and reach a final determination according to the procedures in subdivision e.
- (2) If the owner or operator has not submitted a part B application for a postclosure permit, the owner or operator may petition the department for a determination that a postclosure permit is not required because the closure met the applicable chapter 33.1-24-05 closure standards.
- (a) The petition must include data demonstrating that closure by removal or decontamination standards were met, or it must demonstrate that the unit closed under requirements that met or exceeded the chapter 33.1-24-05 closure by removal standard.
- (b) The department shall approve or deny the petition according to the procedures outlined in subdivision e.
- e. Procedures for closure equivalency determination.
- (1) If a facility owner or operator seeks an equivalency demonstration under subdivision d, the department will provide the public, through a newspaper notice, the opportunity to submit written comments on the information submitted by the owner or operator within thirty days from the notice. The department will also, in response to a request, or at the department's own discretion, hold a public hearing whenever such a hearing might clarify one or more issues concerning the equivalence of the closure period. The department will give public notice of the hearing at least thirty days before it occurs (public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.)

(2) The department will determine whether the chapter 33.1-24-05 closure met the standards for closure by removal or decontamination in section 33.1-24-05-122, subsection 5 of section 33.1-24-05-167, or section 33.1-24-05-135 respectively within ninety days of its receipt. If the department finds that the closure did not meet the applicable chapter 33.1-24-05 standards, the department will provide the owner or operator with a written statement of the reasons why the closure failed to meet chapter 33.1-24-05 standards. The owner or operator may submit additional information in support of an equivalency demonstration within thirty days after receiving such written statement. The department will review any additional information submitted and make a final determination within sixty days.

(3) If the department determines that the facility did not close in accordance with chapter 33.1-24-05 closure by removal standards, the facility is subject to postclosure permitting requirements.

3. **Who applies?** When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit, however, the owner must also sign the permit application.

4. **Completeness.** The department will not issue a permit before receiving a complete application for a permit, except for permits by rule, or emergency permits. An application for a permit is complete when the department receives an application form and any supplemental information which is completed to the department's satisfaction. The completeness of any application for a permit shall be judged independently of the status of any other permit application or permit for the same facility or activity. An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in subsection 10. The department may deny a permit for the active life of a hazardous waste management facility or unit before receiving a complete application for a permit.

5. **Information requirements.** All applicants for hazardous waste permits shall provide the information required by section 33.1-24-06-17 to the department.

6. **Recordkeeping.** Applicants shall keep records of all data used to complete permit applications and any supplemental information submitted under this chapter for a period of at least three years from the date the application is signed.

7. **When to apply for a permit.**

a. Existing hazardous waste management facilities.

(1) Owners and operators of existing hazardous waste management facilities shall submit part A of their permit application (see subsection 1 of section 33.1-24-06-17) to the department no later than:

(a) Six months after the date of publication of rules which first require them to comply with the standards set forth in chapter 33.1-24-05; or

(b) Thirty days after the date they first become subject to the standards set forth in chapter 33.1-24-05;

whichever occurs first.

(2) The department may extend the date by which owners and operators of specified classes of existing hazardous waste management facilities must submit part A of their permit application if it finds that:

(a) There has been substantial confusion as to whether the owners and operators of such facilities were required to file a permit application; and

(b) Such confusion is attributable to ambiguities in the department's rules in chapters 33.1-24-01 through 33.1-24-05.

(3) The department may, by compliance order, extend the date by which the owner or operator of an existing hazardous waste management facility must submit part A of the permit application.

(4) The owner and operator of an existing hazardous waste management facility may be required to submit part B of the permit application at any time. Any owner or operator must be allowed at least six months from the date of request to submit the application. Any owner or operator of an existing hazardous waste management facility may voluntarily submit an application at any time.

(5) Failure to furnish a requested permit application on time or to furnish in full the information required by the application is grounds for termination of the facility's operating status under the procedures of chapter 33.1-24-07.

b. New hazardous waste management facilities.

(1) No person may begin physical construction of a new hazardous waste management facility without having submitted a complete permit application (including both part A and part B) and having received a finally effective hazardous waste permit.

(2) An application for a permit for a new hazardous waste management facility (including both part A and part B) may be filed anytime after promulgation of those standards in sections 33.1-24-05-89, et seq., applicable to such facility. The application must be submitted to the department at least one hundred eighty days before physical construction is expected to commence.

8. Updating permit applications.

a. If any owner or operator of a hazardous waste management facility has filed part A of a permit application and has not yet filed part B, the owner or operator shall amend part A of the application with the department:

(1) No later than the effective date of regulatory provisions listing or designating wastes as hazardous, if the facility is treating, storing, or disposing of any of those newly listed or designated wastes; or

(2) As necessary to comply with the provisions of section 33.1-24-06-16 for changes prior to the department making final administrative disposition of the application.

b. The owner or operator of a facility who fails to comply with the updating requirements of subdivision a is not authorized to treat, store, or dispose of those wastes not covered by a duly filed part A of the application.

9. Reapplications. Any hazardous waste management facility with an effective permit shall submit a new application at least one hundred eighty days before the expiration date of the effective permit unless permission for a later date has been granted by the department (the department shall not grant permission for applications to be submitted later than the expiration date of the existing permit). Any hazardous waste management facility with an effective permit and intending to be covered by a standardized permit, shall submit a notice of intent as described in subdivision a of subsection 4 of section 33.1-24-06-02, at least one hundred eighty days before the expiration date of the effective permit unless permission for a later date

has been granted by the department. The department shall not grant permission for applications or notices of intent to be submitted later than the expiration date of the existing permit, except as allowed by subdivision b of subsection 4 of section 33.1-24-06-02.

10. Exposure information.

a. Any permit part B applications submitted by an owner or an operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or landfill must be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address:

(1) Reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;

(2) The potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described under paragraph 1; and

(3) The potential magnitude and nature of the human exposure resulting from such releases.

b. Owners and operators of a landfill or surface impoundment who have already submitted a part B application must submit the exposure information required in subdivision a.

11. General requirements. The department may require a permittee or an applicant to submit information in order to establish permit conditions under subdivision b of subsection 2 of section 33.1-24-06-05 and subsection 1 of section 33.1-24-06-06.

12. If the department concludes, based on one or more of the factors listed in subdivision a that compliance with the standards of 40 CFR part 63, subpart EEE alone may not be protective of human health or the environment, the department shall require the additional information or assessments necessary to determine whether additional controls are necessary to ensure protection of human health and the environment. This includes information necessary to evaluate the potential risk to human health or the environment, or both, resulting from both direct and indirect exposure pathways. The department may also require a permittee or applicant to provide information necessary to determine whether such assessments should be required.

a. The department shall base the evaluation of whether compliance with the standards of 40 CFR part 63, subpart EEE alone is protective of human health or the environment on factors relevant to the potential risk from a hazardous waste combustion unit, including, as appropriate, any of the following factors:

(1) Particular site-specific considerations such as proximity to receptors (such as schools, hospitals, nursing homes, day care centers, parks, community activity centers, or other potentially sensitive receptors), unique dispersion patterns, etc.;

(2) Identities and quantities of emissions of persistent, bioaccumulative or toxic pollutants considering enforceable controls in place to limit those pollutants;

(3) Identities and quantities of nondioxin products of incomplete combustion most likely to be emitted and to pose significant risk based on known toxicities (confirmation of which should be made through emissions testing);

(4) Identities and quantities of other offsite sources of pollutants in proximity of the facility that significantly influence interpretation of a facility-specific risk assessment;

- (5) Presence of significant ecological considerations, such as the proximity of a particularly sensitive ecological area;
- (6) Volume and types of wastes, for example wastes containing highly toxic constituents;
- (7) Other onsite sources of hazardous air pollutants that significantly influence interpretation of the risk posed by the operation of the source in question;
- (8) Adequacy of any previously conducted risk assessment, given any subsequent changes in conditions likely to affect risk; and
- (9) Such other factors as may be appropriate.

b. [Reserved].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-02. Continuation of expiring permits.

1. The conditions of an expired permit (including expired permits issued by the environmental protection agency) continue in force until the effective date of a new permit if:
 - a. The permittee has submitted a timely application which is a complete application for a new permit; and
 - b. The department, through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit (for example, when issuance is impractical due to time or resource constraints).
2. Effect. Permits continued under this section remain fully effective and enforceable.
3. Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the department may choose to do any or all of the following:
 - a. Initiate enforcement action based upon the permit which has been continued.
 - b. Issue a notice of intent to deny the new permit. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit.
 - c. Issue a new permit with appropriate conditions.
 - d. Take other actions authorized by this article.
4. Standardized permits.
 - a. The conditions of an expired standardized permit continue in force until the effective date of a new permit (see section 33.1-24-07-11) if:
 - (1) The permittee has submitted a timely and complete notice of intent under subsection 2 of section 33.1-24-07-42 requesting coverage under a hazardous waste standardized permit; and
 - (2) The department, through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit (for example, when issuance is impractical due to time or resource constraints).

- b. The department may notify the owner or operator that the facility is not eligible for a standardized permit (see section 33.1-24-07-46). The conditions of the expired permit will continue in force if the information specified in subdivision a of subsection 1 is submitted within sixty days after receipt of the notification that the facility is not eligible for a standardized permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-03. Signatories to permit applications and reports.

1. Applications. All hazardous waste permit applications must be signed as follows:

- a. For a corporation: by a responsible corporate officer. For the purpose of this section a responsible corporate officer means:
- (1) A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decisionmaking functions for the corporation; or
 - (2) The manager of one or more manufacturing, production, or operating facilities employing more than two hundred fifty persons or having gross annual sales or expenditures exceeding twenty-five million dollars (in second quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

NOTE: The department does not require specific assignments or delegations of authority to responsible corporate officers identified in paragraph 1. The department will presume that these responsible corporate officers have the requisite authority to sign permit applications unless the corporation has notified the department to the contrary. Corporate procedures governing authority to sign permit applications may provide for assignment or delegation to applicable corporate positions under paragraph 2 rather than to specific individuals.

- b. For a partnership or sole proprietorship: by a general partner or the proprietor, respectively.
- c. For a municipality, state, federal, or other public agency: by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a federal agency includes:
- (1) The chief executive officer of the agency; or
 - (2) A senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency.

2. Reports. All reports required by permits, and other information requested by the department must be signed by a person described in subsection 1, or by a duly authorized representative of that person. A person is a duly authorized representative only if:

- a. The authorization is made in writing by a person described in subsection 1;
- b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as position of plant manager, operator of a well or a well field, superintendent, or position of equivalent responsibility (a

duly authorized representative may thus be either a named individual or any individual occupying a named position); and

c. The written authorization is submitted to the department.

3. **Changes to authorization.** If an authorization under subsection 2 is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of subsection 2 must be submitted to the department prior to or together with any reports, information, or applications to be signed by an authorized representative.

4. **Certification.**

a. Any persons signing a document under subsection 1 or 2 shall make the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

b. For remedial action plans under sections 33.1-24-06-30 through 33.1-24-06-35, if the operator certifies according to subdivision a, then the owner may make the following certification instead of the certification in subdivision a:

Based on my knowledge of the conditions of the property described in the remedial action plan and my inquiry of the person or persons who manage the system referenced in the operator's certification, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-04. Conditions applicable to permits.

The following conditions apply to all hazardous waste permits. All conditions applicable to permits must be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to this article must be given in the permit.

1. **Duty to comply.** The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the North Dakota Century Code and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. However, the permittee need not comply with the conditions of this permit to the extent and for the duration such noncompliance is authorized in an emergency permit. (See section 33.1-24-06-19.)

2. **Duty to reapply.** If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee shall apply for and obtain a new permit.

3. **Need to halt or reduce activity not a defense.** It is not a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.
4. **Duty to mitigate.** In the event of noncompliance with the permit, the permittee shall take all reasonable steps to minimize releases to the environment, and shall carry out such measures as are reasonable to prevent any adverse impacts on human health or the environment.
5. **Proper operation and maintenance.** The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance include effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.
6. **Permit actions.** This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.
7. **Property rights.** This permit does not convey any property rights of any sort or any exclusive privilege.
8. **Duty to provide information.** The permittee shall furnish to the department, within a reasonable time, any relevant information which the department may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the department, upon request, copies of records required to be kept by this permit.
9. **Inspection and entry.** The permittee shall allow the department, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:
 - a. Enter at reasonable times upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
 - b. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit;
 - c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and
 - d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized, any substances or parameters at any location.
10. **Monitoring and records.**
 - a. Samples and measurements taken for the purposes of monitoring must be representative of the monitored activity.
 - b. The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, the certification required by subdivision i of subsection 2 of section 33.1-24-05-40, and records of all data used to

complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report, certification, or application. This period may be extended by the request of the department at any time.

c. Records of monitoring information must include:

- (1) The date, exact place, and time of sampling or measurements;
- (2) The individuals who performed the sampling or measurements;
- (3) The dates analyses were performed;
- (4) The individuals who performed the analyses;
- (5) The analytical techniques or methods used; and
- (6) The results of such analyses.

d. The permittee shall maintain records from all ground water monitoring wells and associated ground water surface elevations for the active life of the facility and, for disposal facilities, for the postclosure care period as well.

11. **Signatory requirement.** All applications, reports, or information submitted to the department must be signed and certified. (See section 33.1-24-06-03.)

12. **Reporting requirements.**

a. **Planned changes.** The permittee shall give notice to the department as soon as possible of any planned physical alterations or additions to the permitted facility. For a new hazardous waste management facility, the permittee may not commence treatment, storage, or disposal of hazardous waste; and for a facility being modified, the permittee may not treat, store, or dispose of hazardous waste in the modified portion of the facility, until:

- (1) The permittee has submitted to the department by certified mail or hand delivery a letter signed by the permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the permit; and
- (2) Either of the following:
 - (a) The department has inspected the modified or newly constructed facility and finds it is in compliance with the conditions of the permit; or
 - (b) Within fifteen days of the date of submission of the letter in paragraph 1, the permittee has not received notice from the department of the department's intent to inspect. If so, prior inspection by the department is waived and the permittee may commence treatment, storage, or disposal of hazardous waste.

b. **Anticipated noncompliance.** The permittee shall give advance notice to the department of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements. For a new facility, the permittee may not treat, store, or dispose of hazardous waste; and for a facility being modified, the permittee may not treat, store, or dispose of hazardous waste in the modified portion of the facility except as provided in section 33.1-24-06-14, until:

- (1) The permittee has submitted to the department by certified mail or hand delivery a letter signed by the permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the permit; and

(2) Complied with the following:

(a) The department has inspected the modified or newly constructed facility and finds the modified or newly constructed facility is in compliance with the conditions of the permit; or

(b) Within fifteen days of the date of submission of the letter in paragraph 1, the permittee has not received notice from the department of the department's intent to inspect, prior inspection is waived and the permittee may commence treatment, storage, or disposal of hazardous waste.

c. Transfers. This permit is not transferable to any person except after notice to the department. The department may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate such other requirements as may be necessary. (See section 33.1-24-06-11; in some cases, modification or revocation and reissuance is mandatory.)

d. Monitoring reports. Monitoring results must be reported at the intervals specified elsewhere in this permit.

e. Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit must be submitted no later than fourteen days following each schedule date.

f. Twenty-four-hour reporting.

(1) The permittee shall report any noncompliance which may endanger health or the environment.

(2) Any information shall be provided orally within twenty-four hours from the time the permittee becomes aware of the circumstances. The following shall be included as information which must be reported orally:

(a) Information concerning release of any hazardous waste that may cause an endangerment to public drinking water supplies; and

(b) Any information of a release or discharge of hazardous waste, or of a fire or explosion from a hazardous waste management facility, which could threaten the environment or human health outside the facility. The description of the occurrence and its cause must include:

[1] Name, address, and telephone number of the owner or operator;

[2] Name, address, and telephone number of the facility;

[3] Date, time, and type of incident;

[4] Name and quantity of materials involved;

[5] The extent of injuries, if any;

[6] An assessment of actual or potential hazards to the environment and human health outside the facility, where this is applicable; and

[7] Estimated quantity and disposition of recovered material that resulted from the incident.

(3) A written submission must also be provided within five days of the time the permittee becomes aware of the circumstances. The written submission must contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

(4) The department may waive the five-day written notice requirement in favor of a written report within fifteen days.

g. Other noncompliance. The permittee shall report all instances of noncompliance not reported under subdivisions a, d, e, and f, at the time monitoring reports are submitted. The reports must contain the information listed in subdivision f.

h. Manifest discrepancy reports. If a significant discrepancy in a manifest is discovered, the permittee shall attempt to reconcile the discrepancy. If not resolved within fifteen days, the permittee shall submit a letter report, including a copy of the manifest to the department.

i. Unmanifested waste report. An unmanifested waste report must be submitted to the department within fifteen days of receipt of unmanifested waste.

j. Biennial report. A biennial report must be submitted covering facility activities during odd-numbered calendar years.

k. Other information. Where the permittee becomes aware that the permittee failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the department, the permittee shall promptly submit such facts or information.

13. **Information repository.** The department may require the permittee to establish and maintain an information repository at any time, based on the factors set forth in subsection 2 of section 33.1-24-07-27. The information repository will be governed by the provisions of subsections 3 through 6 of section 33.1-24-07-27.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-05. Establishing permit conditions.

1. In addition to conditions required in all permits (section 33.1-24-06-04), the department shall establish conditions in permits, as required on a case-by-case basis, under section 33.1-24-06-06 (duration of permits), subsection 1 of section 33.1-24-06-07 (schedules of compliance), and section 33.1-24-06-08 (monitoring).

2. Additional permit conditions.

a. Each hazardous waste permit shall include permit conditions necessary to achieve compliance with North Dakota Century Code chapter 23.1-04 and rules, including each of the applicable requirements specified in chapter 33.1-24-05. In satisfying this provision, the department may incorporate applicable requirements of chapter 33.1-24-05 directly into the permit or establish other permit conditions that are based on this chapter.

b. Each permit issued shall contain terms and conditions as the department determines necessary to protect human health and the environment.

c. If, as the result of assessments of other information, the department determines that conditions are necessary in addition to those required under 40 CFR parts 63, subpart EEE, chapter 33.1-24-05 to ensure protection of human health and the environment, the department shall include those terms and conditions in a hazardous waste permit for a hazardous waste combustion unit.

3. An applicable requirement is a statutory or regulatory requirement which takes effect prior to final administrative disposition of a permit. An applicable requirement is also any requirement which takes effect prior to the modification or revocation and reissuance of a permit, to the extent allowed in section 33.1-24-06-12.

4. New or reissued permits, and to the extent allowed under section 33.1-24-06-12, modified or revoked and reissued permits, shall incorporate each of the applicable requirements referenced in this section and in section 33.1-24-06-08.

5. All permit conditions must be incorporated either expressly or by reference. If incorporated by reference, a specific citation to the applicable regulations or requirements must be given in the permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-06. Duration and scope of permits.

1. Hazardous waste permits are effective for a fixed term of five years. Every five years permits must be modified as necessary to assure that the facility continues to comply with the currently applicable requirements of North Dakota Century Code sections 23.1-04-05 and 23.1-04-08, and take into account improvements in technology as well as applicable rules.

2. Except as provided in section 33.1-24-06-02, the term of a permit may not be extended by modification beyond the maximum duration specified in this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-07. Schedules of compliance.

1. The permit may, when appropriate, specify a schedule of compliance leading to compliance with North Dakota Century Code chapter 23.1-04 and its regulations.

a. Time for compliance. Any schedules of compliance under this section must require compliance as soon as possible.

b. Interim dates. Except as provided in paragraph 2 of subdivision a of subsection 2, if a permit establishes a schedule of compliance which exceeds one year from the date of permit issuance, the schedule must set forth interim requirements and the dates for their achievement.

(1) The time between interim dates may not exceed one year.

(2) If the time necessary for completion of any interim requirements (such as the construction of a control facility) is more than one year and is not readily divisible into stages for completion, the permit must specify interim dates for the submission of reports of progress toward completion of the interim requirements and indicate a projected completion date.

c. Reporting. The permit must be written to require that no later than fourteen days following each interim date and the final date of compliance, the permittee shall notify the department in writing of the permittee's compliance or noncompliance with the interim or final requirements.

2. Alternative schedules of compliance. A permit applicant or permittee may cease conducting regulated activities [by receiving a terminal volume of hazardous waste and closing (and conducting postclosure care, where applicable) pursuant to applicable requirements] rather than continue to operate and meet permit requirements as follows:

a. If the permittee decides to cease conducting regulated activities at a given time within the term of a permit which has already been issued:

(1) The permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or

(2) The permittee shall cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.

b. If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit must contain a schedule leading to termination which will ensure timely compliance with applicable requirements.

c. If the permittee is undecided whether to cease conducting regulated activities, the department may issue or modify a permit to contain two schedules as follows:

(1) Both schedules must contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date which ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities.

(2) One schedule must lead to timely compliance with applicable requirements.

(3) The second schedule must lead to cessation of regulated activities by a date which will ensure timely compliance with applicable requirements.

(4) Each permit containing two schedules must require that after the permittee has made a final decision under paragraph 1 the permittee shall (a): follow the schedule leading to compliance if the decision is to continue conducting regulated activities; or (b): follow the schedule leading to termination if the decision is to cease conducting regulated activities.

d. The applicant's or permittee's decision to cease conducting regulated activities must be evidenced by a firm public commitment satisfactory to the department such as a resolution of the board of directors of a corporation.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-08. Requirements for recording and reporting of monitoring results.

All permits shall specify:

1. Requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods when appropriate);

2. Required monitoring including type, intervals, and frequency sufficient to yield data which are representative of the monitored activity including, when appropriate, continuous monitoring; and
3. Applicable reporting requirements based upon the impact of the regulated activity and as specified in chapter 33.1-24-05. Reporting must be no less frequent than specified in that chapter.

33.1-24-06-09. Considerations under other state and federal laws.

Permits must be issued in a manner and must contain conditions consistent with requirements of other applicable laws of this state and the federal government.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-10. Effect of a permit.

1. Compliance with a hazardous waste permit.

a. Compliance with a hazardous waste permit during its term constitutes compliance, for purposes of enforcement, with North Dakota Century Code chapter 23.1-04 except for those requirements not included in the permit which:

(1) Become effective by statute;

(2) Are promulgated under sections 33.1-24-05-250 through 33.1-24-05-299 restricting the placement of hazardous wastes in or on the land;

(3) Are promulgated under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 regarding leak detection systems for new and replacement surface impoundment, waste pile, and landfill units, and lateral expansions of surface impoundment, waste pile, and landfill units. The leak detection system requirements include double liners, construction quality assurance (CQA) programs, monitoring, action leakage rates, and response action plans, and will be implemented through the procedures of section 33.1-24-06-14 class 1 permit modifications; or

(4) Are promulgated under subparts AA, BB, or CC of 40 CFR part 265 limiting air emissions, as incorporated by reference in subsection 5 of section 33.1-24-06-16.

b. A permit may be modified, revoked and reissued, or terminated during the permit's term for cause as set forth in sections 33.1-24-06-12 and subsection 1 of section 33.1-24-06-13, or the permit may be modified upon the request of the permittee as set forth in section 33.1-24-06-14.

2. The issuance of a permit does not convey any property rights of any sort, or any exclusive privilege.

3. The issuance of a permit does not authorize any injury to persons or property or invasion of other private rights, or any infringement of state or local law or regulations.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-11. Transfer of permits.

1. A permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued (under subsection 2 or subdivision b of subsection 2 of section 33.1-24-06-12) to identify the new permittee and incorporate such other requirements as may be necessary.
2. Changes in the ownership or operational control of a facility may be made as a class 1 modification with prior written approval of the department in accordance with section 33.1-24-06-14 or as a routine change with prior approval under section 33.1-24-07-53. The new owner or operator must submit a revised permit application no later than ninety days prior to a scheduled change. A written agreement containing a specific date for transfer of permit responsibility between the current and new permittees must also be submitted to the department. When a transfer of ownership or operational control occurs, the old owner or operator shall comply with the requirements of sections 33.1-24-05-74 through 33.1-24-05-88 (financial requirements) until the new owner or operator has demonstrated that the owner or operator is complying with the requirements of those sections. The new owner or operator must demonstrate compliance with sections 33.1-24-05-74 through 33.1-24-05-88 requirements within six months of the date of the change of ownership or operational control of the facility. Upon demonstration to the department by the new owner or operator of compliance with sections 33.1-24-05-74 through 33.1-24-05-88, the department shall notify the old owner or operator that the owner or operator no longer needs to comply with sections 33.1-24-05-74 through 33.1-24-05-88 as of the date of demonstration.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-12. Modification or revocation and reissuance of permits.

When the department receives any information (for example, inspects the facility, receives information submitted by the permittee as required in the permit (see section 33.1-24-06-04), receives a request for revocation and reissuance under section 33.1-24-07-03 or conducts a review of the permit file), the department may determine whether one or more of the causes listed in subsections 1 and 2 for modification, or revocation and reissuance, or both, exist. If cause exists, the department may modify or revoke and reissue the permit accordingly, subject to the limitations of subsection 3, and may request an updated application if necessary. When a permit is modified, only the conditions subject to modification are reopened. If a permit is revoked and reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term (see section 33.1-24-07-03). If cause does not exist under this section, the department may not modify or revoke and reissue the permit, except on request of the permittee. If a permit modification is requested by the permittee, the department shall approve or deny the request according to the procedures of section 33.1-24-06-14, or section 33.1-24-06-85 and sections 33.1-24-07-40 through 33.1-24-07-54. Otherwise, a draft permit must be prepared and other procedures in chapter 33.1-24-07 followed.

1. **Causes for modifications.** The following are causes for modification, but not revocation and reissuance of permits. However, the following may be causes for revocation and reissuance as well as modification when the permittee requests or agrees:
 - a. Alterations. There are material and substantial alterations or additions to the permitted facility or activity which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit.

- b. Information. The department has received information that was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and would have justified the application of different permit conditions at the time of issuance.
- c. New statutory requirements or regulations. The standards or regulations on which the permit was based have been changed by statute, through promulgation of new or amended standards or regulations, or by judicial decision after the permit was issued.
- d. Compliance schedules. The department determines good cause exists for modification of a compliance schedule, such as an act of God, strike, flood, or materials shortage or other events over which the permittee has little or no control and for which there is no reasonably available remedy.
- e. Notwithstanding any other provision in this section, when a permit for a land disposal facility is reviewed by the department when it comes up for reissuance in accordance with section 33.1-24-06-06, the department shall modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in chapters 33.1-24-01 through 33.1-24-07.

2. **Causes for modification or revocation and reissuance.** The following are causes to modify or, alternatively, revoke and reissue a permit:

- a. Cause exists for termination under section 33.1-24-06-13, and the department determines that modification or revocation and reissuance is appropriate.
- b. The department has received notification (as required in the permit, see subsection 4 of section 33.1-24-06-14) of a proposed transfer of the permit.
- c. The department has received notification under subsection 2 of section 33.1-24-07-42 of a facility owner's or operator's intent to be covered by a standardized permit.

3. **Facility siting.** Suitability of the facility location will not be considered at the time of permit modification or revocation and reissuance unless new information or standards indicate that a threat to human health or the environment exists which was unknown at the time of permit issuance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-13. Termination of permits and permit denial.

1. **Termination of permits.**

- a. The following are causes for terminating a permit during its term, or for denying a permit renewal application:
 - (1) Noncompliance by the permittee with any condition of the permit;
 - (2) The permittee's failure in the application or during the permit issuance process to disclose fully all relevant factors or the permittee's misrepresentation of any relevant facts at any time; or
 - (3) A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification or termination.

b. The department shall follow the applicable procedures in chapter 33.1-24-07 in terminating any permit under this section.

2. **Permit denial.** The department may, pursuant to the procedures in chapter 33.1-24-07, deny the permit application either in its entirety or as to the active life of a hazardous waste management facility or unit only.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-14. Permit modification at the request of the permittee.

1. Class 1 modifications.

a. Except as provided in subdivision b, the permittee may put into effect class 1 modifications listed in appendix I of this section under the following conditions:

(1) The permittee must notify the department concerning the modification by certified mail or other means that establish proof of delivery within seven calendar days after the change is put into effect. This notice must specify the changes being made to permit conditions or supporting documents referenced by the permit and must explain why they are necessary. Along with the notice, the permittee must provide applicable information required by section 33.1-24-06-17 and subsections 2 and 3 of section 33.1-24-06-19.

(2) The permittee must send a notice of the modification to all persons on the facility mailing list, maintained by the department in accordance with chapter 33.1-24-07, and the appropriate units of state and local governments, as specified in section 33.1-24-07-06. This notification must be made within ninety calendar days after the change is put into effect. For the class 1 modifications that require prior department approval, the notification must be made within ninety calendar days after the department approves the request.

(3) Any person may request the department to review, and the department may for cause reject, any class 1 modification. The department must inform the permittee by certified mail that a class 1 modification has been rejected, explaining the reasons for the rejection. If a class 1 modification has been rejected, the permittee must comply with the original permit conditions.

b. Class 1 permit modifications identified in appendix I by an asterisk may be made only with the prior written approval of the department.

c. For a class 1 permit modification, the permittee may elect to follow the procedures in subsection 2 of section 33.1-24-06-14 for class 2 modifications instead of the class 1 procedures. The permittee must inform the department of this decision in the notice required in subdivision a of subsection 2 of section 33.1-24-06-14.

2. Class 2 modifications.

a. For class 2 modifications listed in appendix I of this section, the permittee must submit a modification request to the department that:

(1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;

(2) Identifies that the modification is a class 2 modification;

(3) Explains why the modification is needed; and

(4) Provides the applicable information required by section 33.1-24-06-17 and subsections 2 and 3 of section 33.1-24-06-19.

b. The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the department and to the appropriate units of state and local government as specified in section 33.1-24-07-06 and must publish this notice in a major local newspaper of general circulation. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the department evidence of the mailing and publication. The notice must include:

(1) Announcement of a sixty-day comment period, in accordance with subdivision e of subsection 2 of section 33.1-24-06-14, and the name and address of a department contact to whom comments must be sent;

(2) Announcement of the date, time, and place for a public meeting held in accordance with subdivision d of subsection 2 of section 33.1-24-06-14;

(3) Name and telephone number of the permittee's contact person;

(4) Name and telephone number of a department contact person;

(5) Location where copies of the modification request and any supporting documents can be viewed and copied; and

(6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the department contact person."

c. The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

d. The permittee must hold a public meeting no earlier than fifteen days after the publication of the notice required in subdivision b and no later than fifteen days before the close of the sixty-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.

e. The public must be provided sixty days to comment on the modification request. The comment period will begin on the date the permittee publishes the notice in the local newspaper. Comments should be submitted to the department contact identified in the public notice.

f. Notification request.

(1) No later than ninety days after receipt of the notification request, the department must:

(a) Approve the modification request, with or without changes, and modify the permit accordingly;

(b) Deny the request;

(c) Determine that the modification request must follow the procedures in subsection 3 of section 33.1-24-06-14 for class 3 modifications for the following reasons:

[1] There is significant public concern about the proposed modification; or

[2] The complex nature of the change requires the more extensive procedures of class 3;

(d) Approve the request, with or without changes, as a temporary authorization having a term of up to one hundred eighty days; or

(e) Notify the permittee that the department will decide on the request within the next thirty days.

(2) If the department notifies the permittee of a thirty-day extension for a decision, the department must, no later than one hundred twenty days after receipt of the modification request:

(a) Approve the modification request with or without changes, and modify the permit accordingly;

(b) Deny the request; or

(c) Determine that the modification request must follow the procedures in subsection 3 of section 33.1-24-06-14 for class 3 modifications for the following reasons:

[1] There is significant public concern about the proposed modification; or

[2] The complex nature of the change requires the more extensive procedures of class 3.

(d) Approve the request, with or without changes, as a temporary authorization having a term of up to one hundred eighty days.

(3) If the department fails to make one of the decisions specified in paragraph 2 by the one hundred twentieth day after receipt of the modification request, the permittee is automatically authorized to conduct the activities described in the modification request for up to one hundred eighty days, without formal department action. The authorized activities must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of section 33.1-24-06-16. If the department approves, with or without changes, or denies the modification request during the term of the temporary or automatic authorization provided for in paragraph 1, 2, or 3, such action cancels the temporary or automatic authorization.

(4) The following applies:

(a) In the case of an automatic authorization under paragraph 3, or a temporary authorization under subparagraph d of paragraph 1 or subparagraph d of paragraph 2, if the department has not made a final approval or denial of the modification request by the date fifty days prior to the end of the temporary or automatic authorization, the permittee must, within seven days of that time, send a notification to persons on the facility mailing list, and make a reasonable effort to notify other persons who submitted written comments on the modification request, that:

[1] The permittee has been authorized temporarily to conduct the activities described in the permit modification request; and

[2] Unless the department acts to give final approval or denial of the request by the end of the authorization period, the permittee will receive authorization to conduct such activities for the life of the permit.

(b) If the owner or operator fails to notify the public by the date specified in subparagraph a of paragraph 4, the effective date of the permanent authorization will be deferred until fifty days after the owner or operator notifies the public.

(5) Except as provided in paragraph 7, if the department does not finally approve or deny a modification request before the end of the automatic or temporary authorization period or reclassify the modification as a class 3, the permittee is authorized to conduct the activities described in the permit modification request for the life of the permit unless modified later under section 33.1-24-06-12 or 33.1-24-06-14. The activities authorized under this paragraph must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of section 33.1-24-06-16.

(6) In making a decision to approve or deny a modification request including a decision to issue a temporary authorization or to reclassify a modification as a class 3, the department must consider all written comments submitted to the department during the public comment period and must respond in writing to all significant comments in the department's decision.

(7) With the written consent of the permittee, the department may extend, indefinitely or for a specified period, the time periods for final approval or denial of a modification request or for reclassifying a modification as a class 3.

g. The department may deny or change the terms of a class 2 permit modification request under paragraphs 1 through 3 of subdivision f for the following reasons:

(1) Modification request is incomplete;

(2) The requested modification does not comply with the appropriate requirements of chapter 33.1-24-05 or other applicable requirements; or

(3) The conditions of the modification fail to protect human health and the environment.

h. The permittee may perform any construction associated with a class 2 permit modification request beginning sixty days after the submission of the request unless the department establishes a later date for commencing construction and informs the permittee in writing before day sixty.

3. Class 3 modifications.

a. For class 3 modifications listed in appendix I of this section, the permittee must submit a modification request to the department that:

(1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;

(2) Identifies that the modification is a class 3 modification;

(3) Explains why the modification is needed; and

(4) Provides the applicable information required by section 33.1-24-06-17 and subsections 2, 3, and 4 of section 33.1-24-06-19.

b. The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the department and to the appropriate units of state and local government as specified in section 33.1-24-07-06 and must publish this notice in a major local newspaper of general circulation. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the department evidence of the mailing and publication. The notice must include:

(1) Announcement of a sixty-day comment period, and a name and address of a department contact to whom comments must be sent;

(2) Announcement of the date, time, and place for a public meeting on the modification request, in accordance with subdivision d of subsection 3 of section 33.1-24-06-14;

(3) Name and telephone number of the permittee's contact person;

(4) Name and telephone number of a department contact person;

(5) Location where copies of the modification request and any supporting documents can be viewed and copied; and

(6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the department contact person."

c. The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.

d. The permittee must hold a public meeting no earlier than fifteen days after the publication of the notice required in subdivision b and no later than fifteen days before the close of the sixty-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.

e. The public must be provided at least sixty days to comment on modification requests. The comment period will begin on the date the permittee publishes the notice in the local newspaper. Comments should be submitted to the department contact identified in the notice.

f. After the conclusion of the sixty-day comment period, the department must grant or deny the permit modification request according to the permit modification procedures of chapter 33.1-24-07. In addition, the department must consider and respond to all significant written comments received during the sixty-day comment period.

4. Other modifications.

a. In the case of modifications not explicitly listed in appendix I of this section, the permittee may submit a class 3 modification request to the department, or the permittee may request a determination by the department that the modification should be reviewed and approved as a class 1 or class 2 modification. If the permittee requests that the modification be classified as a class 1 or 2 modification, the permittee must provide the department with the necessary information to support the requested classification.

b. The department shall make the determination described in subdivision a as promptly as practicable. In determining the appropriate class for a specific modification, the department shall consider the similarity of the modification to other modifications codified in appendix I and the following criteria:

- (1) Class 1 modifications apply to minor changes to keep the permit current with routine changes to the facility or its operation. These changes do not substantially alter the permit conditions or reduce the capacity of the facility to protect human health or the environment. In the case of class 1 modifications, the department may require prior approval.
- (2) Class 2 modifications apply to changes that are necessary to enable a permittee to respond, in a timely manner, to:
 - (a) Common variations in the types and quantities of the wastes managed under the facility permit;
 - (b) Technological advancement; and
 - (c) Changes necessary to comply with new regulations, where these changes can be implemented without substantially changing design specifications or management practices in the permit.
- (3) Class 3 modifications substantially alter the facility or its operation.

5. Temporary authorizations.

- a. Upon request of the permittee, the department may, without prior public notice and comment, grant the permittee a temporary authorization in accordance with this section. Temporary authorizations must have a term of not more than one hundred eighty days.
- b. Temporary authorizations.
 - (1) The permittee may request a temporary authorization for:
 - (a) Any class 2 modification meeting the criteria of paragraph 2 of subdivision c; and
 - (b) Any class 3 modification that meets the criteria in subparagraph a or b of paragraph 2 of subdivision c; or that meets the criteria in subparagraphs c through e of paragraph 2 of subdivision c and provides improved management or treatment of a hazardous waste already listed in the facility permit.
 - (2) The temporary authorization request must include:
 - (a) A description of the activities to be conducted under the temporary authorization;
 - (b) An explanation of why the temporary authorization is necessary; and
 - (c) Sufficient information to ensure compliance with chapter 33.1-24-05 standards.
 - (3) The permittee must send a notice about the temporary authorization request to all persons on the facility mailing list maintained by the department and to appropriate units of state and local governments as specified in section 33.1-24-07-06. This notification must be made within seven days of submission of the authorization request.
- c. The department shall approve or deny the temporary authorization as quickly as practical. To issue a temporary authorization, the department must find:
 - (1) The authorized activities are in compliance with the standards of chapter 33.1-24-05.

(2) The temporary authorization is necessary to achieve one of the following objectives before action is likely to be taken on a modification request:

(a) To facilitate timely implementation of closure or corrective action activities;

(b) To allow treatment or storage in tanks or containers, or in containment buildings, in accordance with sections 33.1-24-05-250 through 33.1-24-05-299;

(c) To prevent disruption of ongoing waste management activities;

(d) To enable the permittee to respond to sudden changes in the types or quantities of the wastes managed under the facility permit; or

(e) To facilitate other changes to protect human health and the environment.

d. A temporary authorization may be issued for one additional term of up to one hundred eighty days provided that the permittee has requested a class 2 or 3 permit modification for the activity covered in the temporary authorization, and:

(1) The reissued temporary authorization constitutes the department's decision on a class 2 permit modification in accordance with subparagraph d of paragraph 1 of subdivision f of subsection 2 or subparagraph d of paragraph 2 of subdivision f of subsection 2; or

(2) The department determines that the reissued temporary authorization involving a class 3 permit modification request is warranted to allow the authorized activities to continue while the modification procedures of subsection 3 are conducted.

6. Public notice and appeals of permit modification decisions.

a. The department shall notify persons on the facility mailing list and appropriate units of state and local government within ten days of any decision under this section to grant or deny a class 2 or 3 permit modification request. The department shall also notify such persons within ten days after an automatic authorization for a class 2 modification goes into effect under paragraph 3 or 5 of subdivision f of subsection 2.

b. The department's decision to grant or deny a class 2 or 3 permit modification request under this section may be appealed under the permit appeal procedures of section 33.1-24-07-14.

c. An automatic authorization that goes into effect under paragraph 3 or 5 of subdivision f of subsection 2 may be appealed under the permit appeal procedure of section 33.1-24-07-14; however, the permittee may continue to conduct the activities pursuant to the automatic authorization until the appeal has been granted pursuant to subsection 3 of section 33.1-24-07-14, notwithstanding the provisions of subsection 2 of section 33.1-24-07-11.

7. Newly regulated wastes and units.

a. The permittee is authorized to continue to manage wastes listed or identified as hazardous under chapter 33.1-24-02 or to continue to manage hazardous waste in units newly regulated as hazardous waste management units if:

(1) The unit was in existence as a hazardous waste facility with respect to the newly listed or characterized waste or newly regulated waste management unit of the effective date of the final rule listing or identifying the waste, or regulating the unit;

- (2) The permittee submits a class 1 modification request on or before the date on which the waste or unit becomes subject to the new requirements;
- (3) The permittee is in compliance with the applicable standards of subsection 5 of section 33.1-24-06-16 and sections 33.1-24-05-191 through 33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, and 33.1-24-05-820 through 33.1-24-05-929;
- (4) The permittee also submits a complete class 2 or 3 modification request within one hundred eighty days of the effective date of the rule listing or identifying the waste or subjecting the unit to hazardous waste management standards; and
- (5) In the case of land disposal units, the permittee certifies that each such unit is in compliance with all applicable ground water monitoring and financial responsibility requirements in subsection 5 of section 33.1-24-06-16 on the date twelve months after the effective date of the rule identifying or listing the waste as hazardous or regulating the unit as a hazardous waste management unit. If the owner or operator fails to certify compliance with all these requirements, the owner or operator will lose authority to operate under this subsection.

b. New wastes or units added to a facility's permit under this subsection do not constitute expansions for the purpose of the twenty-five percent capacity expansion limit for class 2 modifications.

8. Military hazardous waste munitions treatment and disposal. The permittee is authorized to continue to accept waste military munitions notwithstanding any permit conditions barring the permittee from accepting offsite wastes, if:

a. The facility was in existence as a hazardous waste facility, and the facility was already permitted to handle the waste military munitions, on the date when the waste military munitions became subject to hazardous waste regulatory requirements;

b. On or before the date when the waste military munitions become subject to hazardous waste regulatory requirements, the permittee submits a class 1 modification request to remove or amend the permit provision restricting the receipt of offsite waste munitions; and

c. The permittee submits a complete class 2 modification request within one hundred eighty days of the date when the waste military munitions became subject to hazardous waste regulatory requirements.

9. Permit modification list. The department must maintain a list of all approved permit modifications and must publish a notice once a year in a statewide newspaper that an updated list is available for review.

10. Combustion facility changes to meet 40 CFR part 63 maximum achievable control technology standards. The following procedures apply to hazardous waste combustion facility permit modifications requested under appendix I to this section, section L(9).

a. Facility owners or operators must have complied with the notification of intent to comply requirements of 40 CFR 63.1210 that were in effect prior to October 11, 2000 (see 40 CFR part 63 sections 63.1200 through 63.1499 revised as of July 1, 2000) in order to request a permit modification under this section for the purpose of technology changes needed to meet the standards under 40 CFR 63.1203, 63.1204, and 63.1205.

b. Facility owners or operators must comply with the notification of intent to comply requirements of 40 CFR 63.1210(b) and 63.1212(a) before a permit modification can be

requested under this section for the purpose of technology changes needed to meet the 40 CFR 63.1215, 63.1216, 63.1217, 63.1218, 63.1219, 63.1220, and 63.1221 standards promulgated on October 12, 2005.

c. If the department does not approve or deny the requests within ninety days of receiving it, the request shall be deemed approved. The department may, at the department's discretion, extend this ninety-day deadline one time for up to thirty days by notifying the facility owner or operator.

11. Waiver of hazardous waste permit conditions in support of transition to the 40 CFR part 63 maximum achievable control technology standards.

a. The owner or operator may request to have specific hazardous waste operating and emissions limits waived by submitting a class 1 permit modification request under appendix I of this section, section L(10). The owner or operator must:

(1) Identify the specific hazardous waste permit operating and emissions limits which the owner or operator is requesting to waive;

(2) Provide an explanation of why the changes are necessary in order to minimize or eliminate conflicts between the hazardous waste permit and maximum achievable control technology compliance; and

(3) Discuss how the revised provisions will be sufficiently protective.

(4) The department shall approve or deny the request within thirty days of receipt of the request. The department may, at the department's discretion, extend this thirty-day deadline one time for up to thirty days by notifying the facility owner or operator.

b. To request this modification in conjunction with maximum achievable control technology performance testing where permit limits may only be waived during actual test events and pretesting, as defined under 40 CFR 63.1207(h)(2)(i) and (ii), for an aggregate time not to exceed seven hundred twenty hours of operation (renewable at the discretion of the department) the owner or operator must:

(1) Submit the modification request to the department at the same time the owner or operator submits the owner's or operator's test plans to the department; and

(2) The department may elect to approve or deny the request contingent upon approval of the test plans.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-15. Noncompliance and program reporting by the department.

The department shall submit any reports required under this section to the environmental protection agency regional administrator. For purposes of this section only, hazardous waste permittees includes facilities with operating status defined by subsection 5 of section 33.1-24-06-16, when appropriate.

1. **Quarterly reports.** The department shall submit quarterly narrative reports for major facilities as follows:

a. Format. The report must use the following format:

(1) An alphabetized list by permittee name. When two or more permittees have the same name, the lowest permit number must be entered first.

(2) For each entry on a list, include the following information in the following order:

(a) Name, location, and permit number of the noncomplying permittee.

(b) A brief description and date of each instance of noncompliance for that permittee. Instances of noncompliance may include one or more of the kinds set forth in subdivision b.

(c) The dates and a brief description of the actions taken by the department to ensure compliance.

(d) Status of the instances of noncompliance with the date of the review of the status or the date of resolution.

(e) Any details which tend to explain or mitigate the instances of noncompliance.

b. Instances of noncompliance to be reported. Any instances of noncompliance within the following categories must be reported in successive reports until the noncompliance is reported as resolved. Once noncompliance is reported as resolved, it need not appear in subsequent reports.

(1) Failure to complete construction elements. When the permittee has failed to complete, by the date specified in the permit, an element of a compliance schedule involving either planning for construction (e.g., award of a contract, preliminary plans), or a construction step (e.g., begin construction, attain operation level); and the permittee has not returned to compliance by accomplishing the requirement of the schedule within thirty days from the date a compliance schedule is due under the permit.

(2) Modifications to schedules of compliance. When a schedule of compliance in the permit has been modified under section 33.1-24-06-12 or 33.1-24-06-14 because of the permittee's noncompliance.

(3) Failure to complete or provide compliance schedule or monitoring reports. When the permittee has failed to complete or provide a report required in a permit compliance schedule (e.g., progress report or notice of noncompliance or compliance), or a monitoring report; and the permittee has not submitted the complete report within thirty days from the date it is due under the permit for compliance schedules, or from the date specified in the permit for monitoring reports.

(4) Deficient reports. When the required reports provided by the permittee are so deficient as to cause misunderstanding by the department and thus impede the review of the status of compliance.

(5) Noncompliance with other permit requirements. Noncompliance must be reported in the following circumstances:

(a) Whenever the permittee has violated a permit requirement (other than reported under paragraph 1 or 2), and has not returned to compliance within forty-five days from the date reporting of noncompliance was due under the permit; or

(b) When the department determines that a pattern of noncompliance exists for a major facility permittee over the most recent four consecutive reporting periods. This pattern includes any violation of the same requirement in two consecutive reporting periods, and any violation of one or more requirements in each of four consecutive reporting periods; or

(c) When the department determines significant permit noncompliance or other significant event has occurred, such as a fire or explosion or migration of fluids into an underground source of drinking water.

(6) All other. Statistical information must be reported quarterly on all other instances of noncompliance by major facilities with permit requirements not otherwise reported under this subsection.

c. The department shall submit, in a manner and form prescribed by the regional administrator, quarterly reports concerning noncompliance by transporters (e.g., recordkeeping requirements), and by generators that send their wastes to offsite treatment, storage, or disposal facilities.

2. Annual reports.

a. Annual noncompliance report. The department shall submit statistical reports on nonmajor hazardous waste management permittees indicating the total number reviewed, the number of noncomplying nonmajor permittees, the number of enforcement actions, and number of permit modifications extending compliance deadlines. The statistical information must be organized to follow the types of noncompliance listed in subsection 1.

b. In addition to the annual noncompliance report, the department shall prepare a "program report" which contains information (in a manner and form prescribed by the regional administrator) on generators and transporters, and the permit status of regulated facilities. The department shall include on a biennial basis summary information on the quantities and types of hazardous waste generated, transported, stored, treated, and disposed during the preceding odd-numbered year. This summary information must be reported in a manner and form prescribed by the regional administrator and according to environmental protection agency characteristics and lists of hazardous wastes at 40 CFR part 261.

3. Schedule.

a. For all quarterly reports, on the last working day of May, August, November, and February, the department shall submit to the regional administrator information concerning noncompliance with the hazardous waste management requirements in this state in accordance with the following schedule (Reports must also be made available to the public for inspection and copying on this date):

<u>January, February, and March</u>	<u>May 31</u>
<u>April, May, and June</u>	<u>August 31</u>
<u>July, August, and September</u>	<u>November 30</u>
<u>October, November, and December</u>	<u>February 28</u>

b. For annual reports, the period shall be for one calendar year ending December thirty-first, with reports completed and available to the public no more than sixty days later.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-06-16. Operating status prior to the final administrative disposition of the permit application.

1. [Reserved].

2. [Reserved].

3. [Reserved].

4. [Reserved].

5. During operating status prior to final administrative disposition of the permit application, owners or operators shall comply with the federal interim status standards, 40 CFR part 265 and subpart G of part 270, effective April 17, 2015.

6. Operating status prior to final administrative disposition of the permit application terminates when:

a. Final administrative disposition of a permit application, except an application for a remedial action plan under sections 33.1-24-06-30 through 33.1-24-06-35, is made; or

b. Operating status prior to final administrative disposition of the permit application is terminated as provided in paragraph 5 of subdivision a of subsection 7 of section 33.1-24-06-01.

7. Operating status prior to final administrative disposition of a permit application does not apply to any facility which has been previously denied a hazardous waste permit or if authority to operate the facility under article 33.1-24 has been previously terminated.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-17. Contents of a permit application.

1. Part A of the application must include the following information:

a. The activities conducted by the applicant which require it to obtain a hazardous waste permit.

b. Name, mailing address, and location of the facility for which the application is submitted.

c. Up to four standard industrial codes which best reflect the principal products or services provided by the facility.

d. The operator's name, address, telephone number, ownership status and status as a federal, state, private, public, or other entity.

e. A listing of all permits or construction approvals at all governmental levels received or applied for under any of the following programs:

(1) Hazardous waste management program under the Resource Conservation and Recovery Act.

(2) Underground injection control program under the Safe Drinking Water Act.

(3) North Dakota pollutant discharge elimination system program under the Clean Water Act.

- (4) Prevention of significant deterioration program under the Clean Air Act.
- (5) Nonattainment program under the Clean Air Act.
- (6) National emissions standards for hazardous air pollutants preconstruction approval under the Clean Air Act.
- (7) Dredge or fill permits under section 404 of the Clean Water Act.
- (8) Other relevant environmental permits.

- f. A topographic map (or other map if a topographic map is unavailable), extending one mile [1.61 kilometers] beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant in the map area.
- g. A brief description of the nature of the business.
- h. The latitude and longitude of the facility.
- i. The name, address, and telephone number of the owner of the facility.
- j. An indication of whether the facility is new or existing and whether it is a first or revised application.
- k. For existing facilities, a scale drawing of the facility showing the location of all past, present, and future treatment, storage, and disposal areas.
- l. For existing facilities, photographs of the facility clearly delineating all existing structures; existing treatment, storage, and disposal areas; and types of future treatment, storage, and disposal areas.
- m. A description of the processes to be used for treating, storing, and disposing of hazardous waste, and the design capacity of these items.
- n. A specification of the hazardous wastes listed or designated under chapter 33.1-24-02 to be treated, stored, or disposed at the facility; an estimate of the quantity of such waste to be treated, stored, or disposed annually; and a general description of the processes to be used for such wastes.
- o. For hazardous debris, a description of the debris categories and contaminant categories to be treated, stored, or disposed of at the facility.

2. The information requirements for part B of the permit application presented below reflect the standards in chapter 33.1-24-05. These information requirements are necessary in order for the department to determine compliance with chapter 33.1-24-05 standards. If owners and operators of hazardous waste management facilities can demonstrate that the information required for part B of the application cannot be provided to the extent required, the department may make allowances for submission of such information on a case-by-case basis. Information required for part B of the application must be submitted to the department and signed in accordance with requirements in section 33.1-24-06-03. Certain technical data, such as design drawings and specifications, and engineering studies must be certified by a qualified professional engineer. Part B of the application includes the following (information in subdivisions a through r is required for all hazardous waste management facilities except as section 33.1-24-05-01 provides otherwise; that in subdivisions s through y and hh is additional

information required for specific types of facilities; and that in subdivisions z through gg is additional information regarding protection of ground water, and is required for surface impoundments, piles, land treatment units, and landfills, except as otherwise provided in subsection 2 of section 33.1-24-05-47);

- a. General description of the facility.
- b. Chemical and physical analyses of the hazardous waste and hazardous debris to be handled at the facility. At a minimum, these analyses must contain all the information which must be known to treat, store, or dispose of the wastes properly in accordance with chapter 33.1-24-05.
- c. A copy of the waste analysis plan required by subsection 2 of section 33.1-24-05-04 and, if applicable, subsection 3 of section 33.1-24-05-04.
- d. A description of the security procedures and equipment required by section 33.1-24-05-05, or a justification demonstrating the reason for requesting a waiver of this requirement.
- e. A copy of the general inspection schedule required by subsection 2 of section 33.1-24-05-06; include, where applicable, as part of the inspection schedule, specific requirements in section 33.1-24-05-93, subsection 9 of section 33.1-24-05-106, sections 33.1-24-05-108, 33.1-24-05-120, 33.1-24-05-132, 33.1-24-05-163, 33.1-24-05-178, 33.1-24-05-302, 33.1-24-05-403, 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-428, 33.1-24-05-454, 33.1-24-05-455, 33.1-24-05-456, and 33.1-24-05-458.
- f. A justification of any request for waivers of the preparedness and prevention requirements of sections 33.1-24-05-15 through 33.1-24-05-25.
- g. A copy of the contingency plan required by sections 33.1-24-05-26 through 33.1-24-05-36. Include, where applicable, as part of the contingency plan, specific requirements in sections 33.1-24-05-98 and 33.1-24-05-121.
- h. A description of procedures, structures, or equipment used at the facility to:
 - (1) Prevent hazards in unloading operations, for example, ramps and special forklifts;
 - (2) Prevent runoff from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding, for example, berms, dikes, and trenches;
 - (3) Prevent contamination of water supplies;
 - (4) Mitigate effects of equipment failure and power outages;
 - (5) Prevent undue exposure of personnel to hazardous waste (for example, protective clothing); and
 - (6) Prevent releases to atmosphere.
- i. A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required to demonstrate compliance with section 33.1-24-05-08, including documentation demonstrating compliance with subsection 3 of section 33.1-24-05-08.
- j. Traffic pattern, estimated volume (number, type of vehicles) and control, for example, show turns across traffic lanes and stacking lanes, if appropriate; describe access road, surfacing and load-bearing capacity; show traffic control signals.

k. [Reserved].

l. An outline of both the introductory and continuing programs by owners or operators to prepare persons to operate and maintain a hazardous waste management facility in a safe manner as required to demonstrate compliance with section 33.1-24-05-07. A brief description of how training will be designed to meet actual job tasks in accordance with requirements in subdivision c of subsection 1 of section 33.1-24-05-07.

m. A copy of the closure plan and where applicable, the postclosure plan required by sections 33.1-24-05-61, 33.1-24-05-67, and 33.1-24-05-110. Include, where applicable, as part of the plans, specific requirements in sections 33.1-24-05-97, 33.1-24-05-110, 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-151, 33.1-24-05-167, 33.1-24-05-180, 33.1-24-05-301, and 33.1-24-05-303.

n. For hazardous waste disposal units that have been closed, documentation that notices required under section 33.1-24-05-68 have been filed.

o. The most recent closure and, where applicable, postclosure cost estimate for the facility prepared in accordance with section 33.1-24-05-76 and a copy of the documentation required to demonstrate financial assurance under section 33.1-24-05-77. For a new facility, a copy of the required documentation may be submitted sixty days prior to the initial receipt of hazardous waste, if that is later than the submission of the part B application.

p. Where applicable, a copy of the insurance policy or other documentation which comprises compliance with the requirements of section 33.1-24-05-79. For a new facility, documentation showing the amount of insurance meeting the specification of subsection 1, and subsection 2, if applicable, of section 33.1-24-05-79, that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment, storage, or disposal. A request for a variance in the amount of required coverage, for a new or existing facility, may be submitted as specified in subsection 3 of section 33.1-24-05-79.

q. A topographic map showing a distance of one thousand feet [304.8 meters] around the facility at a scale of two and five-tenths centimeters [1 inch] equal to not more than sixty-one meters [200 feet]. (The department may allow the use of other scales on a case-by-case basis.) Contours must be shown on the map. The contour interval must be sufficient to clearly show the pattern of surface water flow in the vicinity of and from each operational unit of the facility. For example, contours with an interval of one and five-tenths meters [5 feet], if relief is greater than six and one-tenth meters [20 feet], or an interval of six-tenths meter [2 feet], if relief is less than six and one-tenth meters [20 feet]. Owners and operators of hazardous waste management facilities located in mountainous areas should use larger contour intervals to adequately show topographic profiles of the facilities. The map must clearly show the following:

(1) Map scale and date.

(2) One hundred-year floodplain area.

(3) Surface waters including intermittent streams.

(4) Surrounding land uses (residential, commercial, agricultural, recreational).

(5) A wind rose, for example, prevailing wind speed and direction.

(6) Orientation of the map (north arrow).

(7) Legal boundaries of the hazardous waste management facility site.

(8) Access control (fences, gates).

(9) Injection and withdrawal wells, both onsite and offsite.

(10) Buildings; treatment, storage, or disposal operations; or other structures (recreation areas, runoff control systems, access and internal roads, storm, sanitary, and processed sewerage systems, loading and unloading areas, fire control facilities, etc.).

(11) Barriers for drainage or flood control.

(12) Location of operational units within the hazardous waste management facility site, where hazardous waste is (or will be) treated, stored, or disposed (include equipment cleanup areas).

r. Applicants may be required to submit such information as may be necessary to enable the department to carry out the department's duties under federal or other state laws as required in section 33.1-24-06-09.

s. For facilities that store containers of hazardous waste, except as otherwise provided in section 33.1-24-05-89:

(1) A description of the containment system to demonstrate compliance with section 33.1-24-05-94. Show at least the following:

(a) Basic design parameters, dimensions, and materials of construction.

(b) How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system.

(c) Capacity of the containment system relative to the number and volume of containers to be stored.

(d) Provisions for preventing or managing run-on.

(e) How accumulated liquids can be analyzed and removed to prevent overflow.

(2) For storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with subsection 3 of section 33.1-24-05-94, including:

(a) Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and

(b) A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids.

(3) Sketches, drawings, or data demonstrating compliance with section 33.1-24-05-95 (location of buffer zone and containers holding ignitable or reactive wastes) and subsection 3 of section 33.1-24-05-96 (location of incompatible wastes), where applicable.

(4) Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with subsections 1 and 2 of section 33.1-24-05-96 and subsections 2 and 3 of section 33.1-24-05-08.

(5) Information on air emission control equipment as required in subdivision hh.

t. Except as otherwise provided in section 33.1-24-05-103, owners and operators of facilities that use tanks to store or treat hazardous waste shall provide the following additional information:

(1) A written assessment that is reviewed and certified by a qualified professional engineer as to the structural integrity and suitability for handling hazardous waste of each tank system, as required under sections 33.1-24-05-104 and 33.1-24-05-105;

(2) Dimensions and capacity of each tank;

(3) Description of feed systems, safety cutoff, bypass systems, and pressure controls, for example, vents;

(4) A diagram of piping, instrumentation, and process flow for each tank system;

(5) A description of materials and equipment used to provide external corrosion protection, as required under paragraph 2 of subdivision c of subsection 1 of section 33.1-24-05-105;

(6) For new tank systems, a detailed description of how the tank systems will be installed in compliance with subsections 2, 3, 4, and 5 of section 33.1-24-05-105;

(7) Detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of subsections 1, 2, 3, 4, 5, and 6 of section 33.1-24-05-106;

(8) For tank systems for which a variance from the requirements of section 33.1-24-05-106 is sought (as provided by subsection 7 of section 33.1-24-05-106):

(a) Detailed plans and engineering and hydrogeologic reports, as appropriate, alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous waste or hazardous constituents into the ground water or surface water during the life of the facility; or

(b) A detailed assessment of the substantial present or potential hazards posed to human health or the environment should a release enter the environment;

(9) Description of controls and practices to prevent spills and overflows, as required under subsection 2 of section 33.1-24-05-107;

(10) For tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with the requirements of sections 33.1-24-05-111 and 33.1-24-05-112; and

(11) Information on air emission control equipment as required in subdivision hh.

u. For facilities that store, treat, or dispose of hazardous waste in surface impoundments, except as otherwise provided in section 33.1-24-05-01:

(1) A list of the hazardous wastes placed or to be placed in each surface impoundment.

(2) Detailed plans and an engineering report describing how the surface impoundment is designed and is or will be constructed, operated, and maintained to meet the requirements of sections 33.1-24-05-10, 33.1-24-05-119, 33.1-24-05-126, and

33.1-24-05-127. This submission must address the following items as specified in those sections.

- (a) The liner system (except for an existing portion of a surface impoundment). If an exemption from the requirement for a liner system is sought as provided by subsection 2 of section 33.1-24-05-119, submit detailed plans and engineering and hydrogeologic reports, as appropriate, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the ground water or surface water at any future time.
 - (b) The double liner and leak (leachate) detection, collection, and removal system, if the surface impoundment must meet the requirements of subsection 3 of section 33.1-24-05-119. If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by subsection 4, 5, or 6 of section 33.1-24-05-119, submit appropriate information.
 - (c) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system.
 - (d) The construction quality assurance plan if required under section 33.1-24-05-10.
 - (e) Proposed action leakage rate, with rationale, if required under section 33.1-24-05-126, and response action plan, if required under section 33.1-24-05-127.
 - (f) Prevention of overtopping.
 - (g) Structural integrity of dikes.
- (3) A description of how each surface impoundment, including the double liner system, leak detection system, cover system, and appurtenances for control of overtopping will be inspected in order to meet the requirements of subsections 1, 2, and 4 of section 33.1-24-05-120. This information must be included in the inspection plan submitted under subdivision e.
- (4) A certification by a qualified engineer which attests to the structural integrity of each dike as required under subsection 3 of section 33.1-24-05-120. For new units, the owner or operator must submit a statement by a qualified engineer that the engineer will provide such a certification upon completion of construction in accordance with the plans and specifications.
- (5) A description of the procedure to be used for removing a surface impoundment from service as required under subsections 2 and 3 of section 33.1-24-05-121. This information should be included in the contingency plan submitted under subdivision g.
- (6) A description of how hazardous waste residues and contaminated materials will be removed from the unit at closure as required under subdivision a of subsection 1 of section 33.1-24-05-122. For any wastes not to be removed from the unit upon closure, the owner or operator shall submit detailed plans and an engineering report describing how subsection 2 and subdivision b of subsection 1 of section 33.1-24-05-122 will be complied with. This information should be included in the

closure plan and where applicable, the postclosure plan submitted under subdivision m.

- (7) If ignitable or reactive wastes are to be placed in a surface impoundment, an explanation of how section 33.1-24-05-123 will be complied with.
- (8) If incompatible wastes or incompatible wastes and materials will be placed in the surface impoundment, an explanation of how section 33.1-24-05-124 will be complied with.
- (9) A waste management plan for hazardous wastes F020, F021, F022, F023, F026, and F027 describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of section 33.1-24-05-125. This submission must address the following items as specified in section 33.1-24-05-125:
 - (a) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere.
 - (b) The attenuative properties of underlying and surrounding soils or other materials.
 - (c) The mobilizing properties of other materials codisposed with these wastes.
 - (d) The effectiveness of additional treatment, design, or monitoring techniques.
- (10) Information on air emission control equipment as required in subdivision hh.

v. For facilities that treat or store hazardous waste in waste piles, except as otherwise provided in section 33.1-24-05-01:

- (1) A list of hazardous wastes placed, or to be placed, in each waste pile.
- (2) If an exemption is sought to section 33.1-24-05-131 and sections 33.1-24-05-47 through 33.1-24-05-58, as provided by subsection 3 of section 33.1-24-05-130 or subdivision b of subsection 2 of section 33.1-24-05-47, an explanation of how the requirements of subsection 3 of section 33.1-24-05-130 will be complied with or detailed plans and an engineering report describing how the requirements of subdivision b of subsection 2 of section 33.1-24-05-47 will be met.
- (3) Detailed plans and an engineering report describing how the waste pile is designed and is or will be constructed, operated, and maintained to meet the requirements of sections 33.1-24-05-10, 33.1-24-05-131, 33.1-24-05-137, and 33.1-24-05-138. This submission must address the following items as specified in those sections:
 - (a) The liner system.

[1] The liner system (except for an existing portion of a waste pile), if the waste pile must meet the requirements of subsection 1 of section 33.1-24-05-131. If an exemption from the requirement for a liner is sought as provided by subsection 2 of section 33.1-24-05-131, submit detailed plans, and engineering and hydrogeological reports, as appropriate, describing alternate designs and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the ground water or surface water at any future time;

[2] The double liner and leak (leachate) detection, collection, and removal system, if the waste pile must meet the requirements of subsection 2 of section 33.1-24-05-131. If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by subsection 3, 4, or 5 of section 33.1-24-05-131, submit appropriate information;

[3] If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

[4] The construction quality assurance plan if required under section 33.1-24-05-10; and

[5] Proposed action leakage rate, with rationale, if required under section 33.1-24-05-137, and response action plan, if required under section 33.1-24-05-138.

(b) Control of run-on.

(c) Control of runoff.

(d) Management of collection and holding units associated with run-on and runoff control systems.

(e) Control of wind dispersal of particulate matter, where applicable.

(4) A description of how each waste pile, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and runoff, will be inspected in order to meet the requirements of subsections 1, 2, and 3 of section 33.1-24-05-132. This information must be included in the inspection plan submitted under subdivision e.

(5) If treatment is carried out on or in the pile, details of the process and equipment used, and the nature and quality of the residuals.

(6) If ignitable or reactive wastes are to be placed in a waste pile, an explanation of how the requirements of section 33.1-24-05-133 will be complied with.

(7) If incompatible wastes or incompatible wastes and materials will be placed in a waste pile, an explanation of how section 33.1-24-05-134 will be complied with.

(8) A description of how hazardous waste residues and contaminated materials will be removed from the waste pile at the closure, as required under subsection 1 of section 33.1-24-05-135. For any wastes not to be removed from the waste pile upon closure, the owner or operator must submit detailed plans and an engineering report describing how subsections 1 and 2 of section 33.1-24-05-180 will be complied with. This information should be included in the closure plan and where applicable, the postclosure plan, submitted under subdivision m.

(9) A waste management plan for hazardous wastes F020, F021, F022, F023, F026, and F027 describing how a waste pile that is not enclosed (as defined in subsection 3 of section 33.1-24-05-130) is or will be designed, constructed, operated, and maintained to meet the requirements of section 33.1-24-05-136. This submission must address the following items as specified in section 33.1-24-05-136:

- (a) The volume, physical, and chemical characteristics of the wastes to be disposed in the waste pile, including their potential to migrate through soil or to volatilize or escape into the atmosphere.
- (b) The attenuative properties of underlying and surrounding soils or other materials.
- (c) The mobilizing properties of other materials codisposed with these wastes.
- (d) The effectiveness of additional treatment, design, or monitoring techniques.

w. For facilities that incinerate hazardous waste, except as section 33.1-24-05-144 and paragraph 5 provides otherwise, the owner or operator must fulfill the requirements of paragraphs 1, 2, or 3.

(1) When seeking an exemption under subsections 2 or 3 of section 33.1-24-05-144 (ignitable, corrosive, or reactive wastes only), submit documentation, that the waste to be burned:

(a) Is hazardous (either listed in sections 33.1-24-02-15 through 33.1-24-02-19 or fails the characteristic tests in sections 33.1-24-02-10 through 33.1-24-02-14) solely because it is:

[1] Ignitable, or corrosive, or both; or

[2] Listed in sections 33.1-24-02-15 through 33.1-24-02-19 as reactive for characteristics other than those in subdivisions d and e of subsection 1 of section 33.1-24-02-13, or fails the characteristic in subdivisions a, b, c, e, f, g, or h of subsection 1 of section 33.1-24-02-133, and will not be burned when other hazardous wastes are present in the combustion zone.

(2) Submit a trial burn plan or the results of a trial burn, including all required determinations in accordance with subsection 2 of section 33.1-24-06-19.

(3) In lieu of a trial burn, the applicant may submit the following information:

(a) An analysis of each waste or mixture of wastes to be burned, including:

[1] Heat value of the waste in the form and composition in which it will be burned.

[2] Viscosity (if applicable), or description of physical form of the waste.

[3] An identification of any hazardous organic constituents listed in chapter 33.1-24-02, appendix V, which are present in the waste to be burned, except that the applicant need not analyze for constituents listed in chapter 33.1-24-02, appendix V, which would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical techniques.

[4] An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by appropriate analytical methods.

[5] A quantification of those hazardous constituents in the waste which may be designated as principal organic hazardous constituents based on data

submitted from the other trial or operational burns which demonstrate compliance with the performance standard in section 33.1-24-05-147.

(b) A detailed engineering description of the incinerator, including:

[1] Manufacturer's name and model number of incinerator.

[2] Type of incinerator.

[3] Linear dimension of incinerator unit including cross-sectional area of combustion chamber.

[4] Description of auxiliary fuel system (type/feed).

[5] Capacity of prime mover.

[6] Description of automatic waste feed cutoff systems.

[7] Stack gas monitoring and pollution control monitoring system.

[8] Nozzle and burner design.

[9] Construction materials.

[10] Location and description and temperature, pressure, and flow indicating devices and control devices.

(c) A description and analysis of the waste to be burned compared with the waste for which data from operational or trial burns are provided to support the contention that a trial burn is not needed. The data should include those items listed in subparagraph a. This analysis should specify the principal organic hazardous constituents which the applicant has identified in the waste for which a permit is sought and any differences from the principal organic hazardous constituents in the waste for which burn data are provided.

(d) The design and operating conditions of the incinerator unit to be used, compared with that for which comparable burn data are available.

(e) A description of the results submitted from any previously conducted trial burns, including:

[1] Sampling and analysis techniques used to calculate performance standards in section 33.1-24-05-147.

[2] Methods and results of monitoring temperatures, waste feed rates, carbon monoxide, and an appropriate indicator of combustion gas velocity (including a statement concerning the precision and accuracy of this measurement).

(f) The expected incinerator operation information to demonstrate compliance with sections 33.1-24-05-147 and 33.1-24-05-149, including:

[1] Expected carbon monoxide level in the stack exhaust gas.

[2] Waste feed rate.

[3] Combustion zone temperature.

[4] Indication of combustion gas velocity.

- [5] Expected stack gas volume, flow rate, and temperature.
- [6] Computed residence time for waste in the combustion zone.
- [7] Expected hydrochloric acid removal efficiency.
- [8] Expected fugitive emissions and their control procedures.
- [9] Proposed waste feed cutoff limits based on the identified significant operating parameters.
- (g) Such supplemental information as the department finds necessary to achieve the purposes of this paragraph.
- (h) Waste analysis data, including that submitted in subparagraph a, sufficient to allow the department to specify as permit principal organic hazardous constituents those constituents for which destruction and removal efficiencies will be required.
- (4) The department shall approve a permit application without a trial burn if the department finds that:
 - (a) The wastes are sufficiently similar; and
 - (b) The incinerator units are sufficiently similar, and the data from other trial burns are adequate to specify (under section 33.1-24-05-149) operating conditions that will ensure that the performance standards in section 33.1-24-05-147 will be met.
- (5) When an owner or operator of a hazardous waste incineration unit becomes subject to hazardous waste permit requirements after October 12, 2005, or when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations in 40 CFR part 63, subpart EEE (for example, by conducting a comprehensive performance test and submitting a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of 40 CFR part 63, subpart EEE), the requirements of this subdivision do not apply, except those provisions the department determines are necessary to ensure compliance with subsections 1 and 3 of section 33.1-24-05-149 if the permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the department may apply the provisions of this subdivision, on a case-by-case basis, for purposes of information collection in accordance with subsections 11 and 12 of section 33.1-24-06-01 and subdivisions b and c of subsection 2 of section 33.1-24-06-05.
- x. For facilities that use land treatment to dispose of hazardous waste, except as otherwise provided in section 33.1-24-05-01:
 - (1) A description of plans to conduct a treatment demonstration as required under section 33.1-24-05-162. The description must include the following information:
 - (a) The wastes for which the demonstration will be made and the potential hazardous constituents in the waste.
 - (b) The data sources to be used to make the demonstration, for example, literature, laboratory data, field data, or operating data.

(c) Any specific laboratory or field test that will be conducted, including:

[1] The type of test, for example, column leaching, degradation.

[2] Materials and methods, including analytical procedures.

[3] Expected time for completion.

[4] Characteristics of the unit that will be simulated in the demonstration, including treatment zone characteristics, climatic conditions, and operating practices.

(2) A description of a land treatment program as required under section 33.1-24-05-161. This information must be submitted with the plans for the treatment demonstration and updated following the treatment demonstration. The land treatment program must address the following items:

(a) The wastes to be land treated.

(b) Design measures and operating practices necessary to maximize treatment in accordance with subsection 1 of section 33.1-24-05-163, including:

[1] Waste application method and rate.

[2] Measures to control soil pH.

[3] Enhancement of microbial or chemical reactions.

[4] Control of moisture content.

(c) Provisions for unsaturated zone monitoring, including:

[1] Sampling equipment, procedures, and frequency.

[2] Procedures for selecting sampling locations.

[3] Analytical procedures.

[4] Chain of custody control.

[5] Procedures for establishing background values.

[6] Statistical methods for interpreting results.

[7] Justification for any hazardous constituents recommended for selection as principal hazardous constituents in accordance with the criteria for such selection in subsection 1 of section 33.1-24-05-165.

(d) A list of hazardous constituents reasonably expected to be in, or derived from, the waste to be land treated based on waste analysis performed pursuant to section 33.1-24-05-04.

(e) The proposed dimensions of the treatment zone.

(3) A description of how the unit is, or will be designed, constructed, operated, and maintained in order to meet the requirements of section 33.1-24-05-163. This submission must address the following items:

(a) Control of run-on.

- (b) Collection and control of runoff.
 - (c) Minimization of runoff of hazardous constituents from the treatment zone.
 - (d) Management of collection and holding facilities associated with run-on and runoff control systems.
 - (e) Periodic inspection of the unit. This information should be included in the inspection plan submitted under subdivision e.
 - (f) Control of wind dispersal of particulate matter, if applicable.
- (4) If food chain crops are to be grown in or on the treatment zone of the land treatment unit, a description of how the demonstration required under subsection 1 of section 33.1-24-05-164 will be conducted, including:
- (a) Characteristics of the food chain crop for which the demonstration will be made.
 - (b) Characteristics of the waste treatment zone and waste application method and rate to be used in the demonstration.
 - (c) Procedures for crop growth, sample collection, sample analysis, and data evaluation.
 - (d) Characteristics of the comparison crop, including the location and conditions under which it was or will be grown.
- (5) If food chain crops are to be grown and cadmium is present in the land treated waste, a description of how the requirements of subsection 5 of section 33.1-24-05-164 will be complied with.
- (6) A description of the vegetative cover to be applied to closed portions of the facility and a plan for maintaining such cover during the postclosure care period as required under subdivision h of subsection 1 and subdivision b of subsection 3 of section 33.1-24-05-167. This information should be included in the closure plan and where applicable, the postclosure care plan submitted under subdivision m.
- (7) If ignitable or reactive wastes will be placed in or on the treatment zone, an explanation of how the requirements of section 33.1-24-05-168 will be complied with.
- (8) If incompatible wastes or incompatible wastes and materials will be placed in or on the same treatment zone, an explanation of how section 33.1-24-05-169 will be complied with.
- (9) A waste management plan for hazardous wastes F020, F021, F022, F023, F026, and F027 describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of section 33.1-24-05-170. This submission must address the following items as specified in section 33.1-24-05-170:
- (a) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere.
 - (b) The attenuative properties of underlying and surrounding soils or other materials.

(c) The mobilizing properties of other materials codisposed with these wastes.

(d) The effectiveness of additional treatment, design, or monitoring techniques.

y. For facilities that dispose of hazardous waste in landfills, except as otherwise provided in section 33.1-24-05-01:

(1) A list of the hazardous wastes placed or to be placed in each landfill or landfill cell.

(2) Detailed plans and an engineering report describing how the landfill is designed and is or will be constructed, operated, and maintained to comply with the requirements of sections 33.1-24-05-10, 33.1-24-05-177, 33.1-24-05-178, and 33.1-24-05-187. This submission must address the following items as specified in those sections:

(a) The liner system.

[1] The liner system (except for an existing portion of a landfill), if the landfill must meet the requirements of subsection 1 of section 33.1-24-05-177. If an exemption from the requirement for a liner is sought as provided by subsection 2 of section 33.1-24-05-177, submit detailed plans, and engineering and hydrogeological reports, as appropriate, describing alternate designs and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the ground water or surface water at any future time;

[2] The double liner and leak (leachate) detection, collection, and removal system, if the landfill must meet the requirements of subsection 3 of section 33.1-24-05-177. If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by subsections 4, 5, or 6 of section 33.1-24-05-177, submit appropriate information;

[3] If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

[4] The construction quality assurance plan if required under section 33.1-24-05-10; and

[5] Proposed action leakage rate, with rationale, if required under section 33.1-24-05-187, and response action plan, if required under section 33.1-24-05-178.

(b) Control of run-on.

(c) Control of runoff.

(d) Management of collection and holding facilities associated with run-on and runoff control systems.

(e) Control of wind dispersal of particulate matter where applicable.

(3) A description of how each landfill, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and runoff, will be inspected in order to meet the

requirements of subsections 1, 2, and 3 of section 33.1-24-05-178. This information must be included in the inspection plan submitted under subdivision e.

- (4) A description of how each landfill, including the liner and cover systems will be inspected in order to meet the requirements of subsections 1 and 2 of section 33.1-24-05-178. This information should be included in the inspection plan submitted under subdivision e.
- (5) Detailed plans and an engineering report describing the final cover which will be applied to each landfill or landfill cell at closure in accordance with subsection 1 of section 33.1-24-05-180 and a description of how each landfill will be maintained and monitored after closure in accordance with subsection 2 of section 33.1-24-05-180. This information should be included in the closure and postclosure plans submitted under subdivision m.
- (6) If ignitable or reactive wastes will be landfilled, an explanation of how the requirements of section 33.1-24-05-181 will be complied with.
- (7) If incompatible wastes or incompatible wastes and materials will be landfilled, an explanation of how section 33.1-24-05-182 will be complied with.
- (8) If containers of hazardous waste are to be landfilled, an explanation of how the requirements of section 33.1-24-05-184 or 33.1-24-05-185, as applicable, will be complied with.
- (9) A waste management plan for hazardous wastes F020, F021, F022, F023, F026, and F027 describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of section 33.1-24-05-186. This submission must address the following items as specified in section 33.1-24-05-186:
 - (a) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere.
 - (b) The attenuative properties of underlying and surrounding soils or other materials.
 - (c) The mobilizing properties of other materials codisposed with these wastes.
 - (d) The effectiveness of additional treatment, design, or monitoring techniques.

z. [Reserved].

aa. For land disposal facilities, if a case-by-case extension has been approved under section 33.1-24-05-254 or a petition has been approved under section 33.1-24-05-255, a copy of the notice of approval for the extension or petition is required.

bb. Except as otherwise provided in section 33.1-24-05-300, owners and operators of facilities that treat, store, or dispose of hazardous waste in miscellaneous units must provide the following additional information:

- (1) A detailed description of the unit being used or proposed for use, including the following:
 - (a) Physical characteristics, materials of construction, and dimensions of the unit;
 - (b) Detailed plans and engineering reports describing how the unit will be located, designed, constructed, operated, maintained, monitored, inspected, and closed

to comply with the requirements of sections 33.1-24-05-301 and 33.1-24-05-302; and

(c) For disposal units, a detailed description of the plans to comply with the postclosure requirements of section 33.1-24-05-303.

(2) Detailed hydrologic, geologic, and meteorologic assessments and land use maps for the region surrounding the site that address and ensure compliance of the unit with each factor in the environmental performance standards of section 33.1-24-05-301. If the applicant can demonstrate that the applicant does not violate the environmental performance standards of section 33.1-24-05-301 and the department agrees with such demonstration, preliminary hydrologic, geologic, and meteorologic assessments will suffice.

(3) Information on the potential pathways of exposure of humans or environmental receptors to hazardous waste or hazardous constituents and on the potential magnitude and nature of such exposures.

(4) For any treatment unit, a report on a demonstration of the effectiveness of the treatment based on laboratory or field data.

(5) Any additional information determined by the department to be necessary for evaluation of compliance of the unit with the environmental performance standards of section 33.1-24-05-301.

cc. Except as otherwise provided in section 33.1-24-05-01, owners and operators of facilities that have process vents to which sections 33.1-24-05-400 through 33.1-24-05-419 apply must provide the following additional information:

(1) For facilities that cannot install a closed-vent system and control device to comply with the provisions of sections 33.1-24-05-400 through 33.1-24-05-419 on the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-400 through 33.1-24-05-419, an implementation schedule as specified in subdivision b of subsection 1 of section 33.1-24-05-403.

(2) Documentation of compliance with the process vent standards in section 33.1-24-05-402, including:

(a) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility, for example, the total emissions for all affected vents at the facility, and the approximate location within the facility of each affected unit, for example, identify the hazardous waste management units on a facility plot plan.

(b) Information and data supporting estimates of vent emissions and emission reduction achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, estimates of vent emissions and emission reductions must be made using operating parameter values, for example, temperatures, flow rates, or concentrations, that represent the conditions that exist when the waste management unit is operating at the highest load or capacity level reasonably expected to occur.

(c) Information and data used to determine whether or not a process vent is subject to the requirements of section 33.1-24-05-402.

(3) If an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with the requirements of section 33.1-24-05-402, and chooses to use the test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-05-405.

(4) Documentation of compliance with section 33.1-24-05-403, including:

(a) A list of all information references and sources used in preparing the documentation.

(b) Records, including the dates, of each compliance test required by subsection 11 of section 33.1-24-05-403.

(c) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions" (incorporated by reference as specified in section 33.1-24-01-05) or other engineering texts acceptable to the department that present basic control device information. The design analysis shall address the vent stream characteristics and control device operation parameters as specified in paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.

(d) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur.

(e) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of ninety-five weight percent or greater unless the total organic emission limits of subsection 1 of section 33.1-24-05-402 for affected access vents at the facility can be attained by a control device involving vapor recovery at an efficiency level less than ninety-five weight percent.

dd. Except as otherwise provided in section 33.1-24-05-01, owners and operators of facilities that have equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 apply must provide the following additional information:

(1) For each piece of equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 apply:

(a) Equipment identification number and hazardous waste management unit identification.

(b) Approximate locations within the facility, for example, identify the hazardous waste management unit on a facility plot plan.

(c) Type of equipment, for example, a pump or pipeline valve.

(d) Percent by weight total organics in the hazardous waste stream at the equipment.

(e) Hazardous waste state at the equipment, for example, gas or vapor or liquid.

- (f) Method of compliance with the standard, for example, "monthly leak detection and repairs" or "equipped with dual mechanical seals".
- (2) For facilities that do not install a closed-vent system and control device to comply with the provisions of sections 33.1-24-05-420 through 33.1-24-05-449 on the effective date that the facility becomes subject to the provisions of sections 33.1-24-05-420 through 33.1-24-05-449, an implementation schedule as specified in subdivision b of subsection 1 of section 33.1-24-05-403.
- (3) If an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, and chooses to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-05-405.
- (4) Documentation that demonstrates compliance with the equipment standards in sections 33.1-24-05-422 to 33.1-24-05-429. This documentation must contain the records required under section 33.1-24-05-434. The department may request further documentation before deciding if compliance has been demonstrated.
- (5) Documentation to demonstrate compliance with section 33.1-24-05-430 must include the following information:
- (a) A list of all information references and sources used in preparing the documentation.
 - (b) Records, including the dates, of each compliance test required by subsection 10 of section 33.1-24-05-403.
 - (c) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on appropriate sections of "APTI Course 415: Control of Gaseous Emissions" (incorporated by reference as specified in section 33.1-24-01-05) or other engineering texts acceptable to the department that present basic control device information. The design analysis should address the vent stream characteristics and control device operation parameters as specified in paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.
 - (d) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonably expected to occur.
 - (e) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of ninety-five weight percent or greater.
- ee. Except as otherwise provided by section 33.1-24-05-01, owners and operators of hazardous waste treatment, storage, or disposal facilities that collect, store, or treat hazardous waste on drip pads must provide the following additional information:
- (1) A list of hazardous wastes placed or to be placed on each drip pad.
 - (2) If an exemption is sought to sections 33.1-24-05-47 through 33.1-24-05-58, as provided by section 33.1-24-05-47, detailed plans and an engineering report.

describing how the requirements of subdivision b of subsection 2 of section 33.1-24-05-47 will be met.

- (3) Detailed plans and an engineering report describing how the drip pad is or will be designed, constructed, operated, and maintained to meet the requirements of section 33.1-24-05-504, including the as-built drawings and specifications. This submission must address the following items as specified in section 33.1-24-05-502:
- (a) The design characteristics of the drip pad;
- (b) The liner system;
- (c) The leakage detection system, including the leak detection system and how it is designed to detect the failure of the drip pad or the presence of any releases of hazardous waste or accumulated liquid at the earliest practicable time;
- (d) Practices designed to maintain drip pads;
- (e) The associated collection system;
- (f) Control of run-on to the drip pad;
- (g) Control of runoff from the drip pad;
- (h) The interval at which drippage and other materials will be removed from the associated collection system and a statement demonstrating that the interval will be sufficient to prevent overflow onto the drip pad;
- (i) Procedures for cleaning the drip pad at least once every seven days to ensure the removal of any accumulated residues of waste or other materials, including rinsing, washing with detergents or other appropriate solvents, or steam cleaning and provisions for documenting the date, time, and cleaning procedure used each time the pad is cleaned;
- (j) Operating practices and procedures that will be followed to ensure that tracking of hazardous waste or waste constituents off the drip pad due to activities by personnel or equipment is minimized;
- (k) Procedures for ensuring that, after removal from the treatment vessel, treated wood from pressure and nonpressure processes is held on the drip pad until drippage has ceased, including recordkeeping practices;
- (l) Provisions for ensuring that collection and holding units associated with the run-on and runoff control systems are emptied or otherwise managed as soon as possible after storms to maintain design capacity of the system;
- (m) If treatment is carried out on the drip pad, details of the process equipment used, and the nature and quality of the residuals;
- (n) A description of how each drip pad, including appurtenances for control of run-on and runoff, will be inspected in order to meet the requirements of section 33.1-24-05-504. This information should be included in the inspection plan submitted under subdivision e;
- (o) A certification signed by a qualified, professional engineer, stating that the drip pad design meets the requirements of subsections 1 through 6 of section 33.1-24-05-504; and

(p) A description of how hazardous waste residues and contaminated materials will be removed from the drip pad at closure, as required under subsection 1 of section 33.1-24-05-506. For any waste not to be removed from the drip pad upon closure, the owner or operator must submit detailed plans and an engineering report describing how section 33.1-24-05-180 will be complied with. This information should be included in the closure plan and, where applicable, the postclosure plan submitted under subdivision m.

ff. When an owner or operator of a cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to hazardous waste permit requirements after October 12, 2005, or when an owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations in 40 CFR part 63, subpart EEE (for example, by conducting a comprehensive performance test and submitting a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of 40 CFR part 63, subpart EEE), the requirements of this subdivision do not apply. The requirements of this subdivision do apply, however, if the department determines certain provisions are necessary to ensure compliance with subdivision a of subsection 5 of section 33.1-24-05-527 and paragraph 3 of subdivision b of subsection 5 of section 33.1-24-05-527 if the permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the permittee is an area source and elects to comply with the sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and nonmercury metals; or the department determines certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with subsections 11 and 12 of section 33.1-24-06-01 and subdivisions b and c of subsection 2 of section 33.1-24-06-05.

(1) Trial burns.

(a) General. Except as provided below, owners and operators that are subject to the standards to control organic emissions provided by section 33.1-24-05-529, standards to control particulate matter provided by section 33.1-24-05-530, standards to control metals emissions provided by section 33.1-24-05-531, or standards to control hydrogen chloride or chlorine gas emissions provided by section 33.1-24-05-532 must conduct a trial burn to demonstrate conformance with those standards and must submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with subsection 4 of section 33.1-24-06-19.

[1] A trial burn to demonstrate conformance with a particular emission standard may be waived under provisions of sections 33.1-24-05-529 through 33.1-24-05-532 and subparagraphs b through e; and

[2] The owner or operator may submit data in lieu of a trial burn, as prescribed in subparagraph f.

(b) Waiver of trial burn for destruction and removal efficiency.

[1] Boilers operated under special operating requirements. When seeking to be permitted under subdivision d of subsection 1 of section 33.1-24-05-529 and section 33.1-24-05-535 that automatically waive the destruction and removal efficiency trial burn, the owner or operator of a

boiler must submit documentation that the boiler operates under the special operating requirements provided by section 33.1-24-05-535.

[2] Boilers and industrial furnaces burning low-risk waste. When seeking to be permitted under the provisions for low-risk waste provided by subdivision e of subsection 1 of section 33.1-24-05-529 and subsection 1 of section 33.1-24-05-534 that waive the destruction and removal efficiency trial burn, the owner or operator must submit:

[a] Documentation that the device is operated in conformance with the requirements of subdivision a of subsection 1 of section 33.1-24-05-534.

[b] Results of analyses of each waste to be burned, documenting the concentrations of nonmetal compounds listed in appendix V of chapter 33.1-24-02, except for those constituents that would reasonably not be expected to be in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion explained. The analysis must rely on appropriate analytical techniques.

[c] Documentation of hazardous waste firing rates and calculations of reasonable, worst-case emission rates of each constituent identified in subitem b using procedures provided by paragraph 2 of subdivision b of subsection 1 of section 33.1-24-05-534.

[d] Results of emissions dispersion modeling for emissions identified in subitem c using modeling procedures prescribed by subsection 8 of section 33.1-24-05-531. The department will review the emission modeling conducted by the applicant to determine conformance with these procedures. The department will either approve the modeling or determine that alternate or supplementary modeling is appropriate.

[e] Documentation that the maximum annual average ground level concentration of each constituent identified in subitem b quantified in conformance with subitem d does not exceed the allowable ambient level established in appendices XIX or XX of chapter 33.1-24-05. The acceptable ambient concentration for emitted constituents for which a specific reference air concentration has not been established in appendix XIX of chapter 33.1-24-05 or risk-specific dose has not been established in appendix XX of chapter 33.1-24-05 is one-tenth microgram per cubic meter, as noted in the footnote to appendix XIX of chapter 33.1-24-05.

(c) Waiver of trial burn for metals. When seeking to be permitted under the tier I (or adjusted tier I) metals feed rate screening limits provided by subsections 2 and 5 of section 33.1-24-05-531 that control metals emissions without requiring a trial burn, the owner or operator must submit:

[1] Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feedstocks;

[2] Documentation of the concentration of each metal controlled by subsection 2 or 5 of section 33.1-24-05-531 in the hazardous waste, other

fuels, and industrial furnace feedstocks, and calculations of the total feed rate of each metal;

[3] Documentation of how the applicant will ensure that the tier I feed rate screening limits provided by subsection 2 or 5 of section 33.1-24-05-531 will not be exceeded during the averaging period provided by that subsection;

[4] Documentation to support the determination of the terrain-adjusted effective stack height, good engineering practice stack height, terrain type, and land use as provided by subdivisions c through e of subsection 2 of section 33.1-24-05-531;

[5] Documentation of compliance with the provisions of subdivision f of subsection 2 of section 33.1-24-05-531, if applicable, for facilities with multiple stacks;

[6] Documentation that the facility does not fail the criteria provided by subdivision g of subsection 2 of section 33.1-24-05-531 for eligibility to comply with the screening limits; and

[7] Proposed sampling and metals analysis plan for the hazardous waste, other fuels, and industrial furnace feedstocks.

(d) Waiver of trial burn for particulate matter. When seeking to be permitted under the low-risk waste provisions of subsection 2 of section 33.1-24-05-534 which waives the particulate standard (and trial burn to demonstrate conformance with the particulate standard), applicants must submit documentation supporting conformance with item 2 of subparagraph b and subparagraph c.

(e) Waiver of trial burn for hydrogen chloride and chlorine. When seeking to be permitted under the tier I (or adjusted tier I) feed rate screening limits for total chloride and chlorine provided by subdivision a of subsection 2 and subsection 5 of section 33.1-24-05-532 that control emissions of hydrogen chloride and chlorine gas without requiring a trial burn, the owner or operator must submit:

[1] Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feedstocks;

[2] Documentation of the levels of total chloride and chlorine in the hazardous waste, other fuels, and industrial furnace feedstocks, and calculations of the total feed rate of total chloride and chlorine;

[3] Documentation of how the applicant will ensure that the tier I (or adjusted tier I) feed rate screening limits provided by subdivision a of subsection 2 or subsection 5 of section 33.1-24-05-532 will not be exceeded during the averaging period provided by that subsection;

[4] Documentation to support the determination of the terrain-adjusted effective stack height, good engineering practice stack height, terrain type, and land use as provided by subdivision c of subsection 2 of section 33.1-24-05-532;

[5] Documentation of compliance with the provisions of subdivision d of subsection 2 of section 33.1-24-05-532, if applicable, for facilities with multiple stacks;

[6] Documentation that the facility does not fail the criteria provided by subdivision c of subsection 2 of section 33.1-24-05-532 for eligibility to comply with the screening limits; and

[7] Proposed sampling and analysis plan for total chloride and chlorine for the hazardous waste, other fuels, and industrial furnace feedstocks.

(f) Data in lieu of trial burn. The owner or operator may seek an exemption from the trial burn requirements to demonstrate conformance with sections 33.1-24-05-529 through 33.1-24-05-532 and subsection 4 of section 33.1-24-06-19 by providing the information required by subsection 4 of section 33.1-24-06-19 from previous compliance testing of the device in conformance with section 33.1-24-05-528, or from compliance testing or trial or operational burns of similar boilers or industrial furnaces burning similar hazardous wastes under similar conditions. If data from a similar device is used to support a trial burn waiver, the design and operating information required by subsection 4 of section 33.1-24-06-19 must be provided for both the similar device and the device to which the data is to be applied, and a comparison of the design and operating information must be provided. The department shall approve a permit application without a trial burn if the department finds that the hazardous wastes are sufficiently similar, the devices are sufficiently similar, the operating conditions are sufficiently similar, and the data from other compliance tests, trial burns, or operational burns are adequate to specify (under section 33.1-24-05-527) operating conditions that will ensure conformance with subsection 3 of section 33.1-24-05-527. In addition, the following information shall be submitted:

[1] For a waiver from any trial burn:

[a] A description and analysis of the hazardous waste to be burned compared with the hazardous waste for which data from compliance testing, or operational or trial burns are provided to support the contention that a trial burn is not needed;

[b] The design and operating conditions of the boiler or industrial furnace to be used, compared with that for which comparative burn data are available; and

[c] Such supplemental information as the department finds necessary to achieve the purposes of this subparagraph.

[2] For a waiver of the destruction and removal efficiency trial burn, the basis for selection of principal organic hazardous constituents used in the other trial or operational burns which demonstrate compliance with the destruction and removal efficiency performance standard in subsection 1 of section 33.1-24-05-529. This analysis should specify the constituents in appendix V of chapter 33.1-24-02, that the applicant has identified in the hazardous waste for which a permit is sought, and any differences from the principal organic hazardous constituents in the hazardous waste for which burn data are provided.

(2) Alternative hydrocarbon limit for industrial furnaces with organic matter in raw materials. Owners and operators of industrial furnaces requesting an alternative hydrocarbon limit under subsection 6 of section 33.1-24-05-529 shall submit the following information at a minimum:

(a) Documentation that the furnace is designed and operated to minimize hydrocarbon emissions from fuels and raw materials;

(b) Documentation of the proposed baseline flue gas hydrocarbon (and carbon monoxide) concentration, including data on hydrocarbon (and carbon monoxide) levels during tests when the facility produced normal products under normal operating conditions from normal raw materials while burning normal fuels and when not burning hazardous waste;

(c) Test burn protocol to confirm the baseline hydrocarbon (and carbon monoxide) level, including information on the type and flow rate of all feed streams, point of introduction of all feed streams, total organic carbon content (or other appropriate measure of organic content) of all nonfuel feed streams, and operating conditions that affect combustion of fuels and destruction of hydrocarbon emissions from nonfuel sources;

(d) Trial burn plan to:

[1] Demonstrate that flue gas hydrocarbon (and carbon monoxide) concentrations when burning hazardous waste do not exceed the baseline hydrocarbon (and carbon monoxide) level; and

[2] Identify the types and concentrations of organic compounds listed in appendix V of chapter 33.1-24-02, that are emitted when burning hazardous waste in conformance with procedures prescribed by the department;

(e) Implementation plan to monitor over time changes in the operation of the facility that could reduce the baseline hydrocarbon level and procedures to periodically confirm the baseline hydrocarbon level; and

(f) Such other information as the department finds necessary to achieve the purposes of this paragraph.

(3) Alternative metals implementation approach. When seeking to be permitted under an alternative metals implementation approach under subsection 6 of section 33.1-24-05-531, the owner or operator must submit documentation specifying how the approach ensures compliance with the metals emissions standards of subsection 3 or 4 of section 33.1-24-05-531 and how the approach can be effectively implemented and monitored. Further, the owner or operator shall provide such other information that the department finds necessary to achieve the purposes of this paragraph.

(4) Automatic waste feed cutoff system. Owners and operators shall submit information describing the automatic waste feed cutoff system, including any prealarm systems that may be used.

(5) Direct transfer. Owners and operators that use direct transfer operations to feed hazardous waste from transport vehicles (containers, as defined in section 33.1-24-05-536) directly to the boiler or industrial furnace shall submit information supporting conformance with the standards for direct transfer provided by section 33.1-24-05-536.

(6) Residues. Owners and operators that claim that their residues are excluded from regulation under the provisions of section 33.1-24-05-537 must submit information adequate to demonstrate conformance with those provisions.

gg. A summary of the preapplication meeting, along with a list of attendees and their addresses, and copies of any written comments or materials submitted at the meeting, as required under subsection 3 of section 33.1-24-07-25.

hh. Except as otherwise provided in section 33.1-24-05-01, owners and operators of tanks, surface impoundments, or containers that use air emission controls in accordance with the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 must provide the following additional information:

(1) Documentation for each floating roof cover installed on a tank subject to subdivision a or b of subsection 4 of section 33.1-24-05-454 that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the applicable design specifications as listed in subdivision a of subsection 5 or subdivision a of subsection 6 of section 33.1-24-05-454.

(2) Identification of each container area subject to the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 and certification by the owner or operator that the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 are met.

(3) Documentation for each enclosure used to control air pollutant emissions from tanks or containers in accordance with the requirements of subdivision e of subsection 4 of section 33.1-24-05-454 or paragraph 2 of subdivision a of subsection 5 of section 33.1-24-05-456 that includes records for the most recent set of calculations and measurements performed by the owner or operator to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.

(4) Documentation for each floating membrane cover installed on a surface impoundment in accordance with the requirements of subsection 3 of section 33.1-24-05-455 that includes information prepared by the owner or operator or provided by the cover manufacturer or vendor describing the cover design, and certification by the owner or operator that the cover meets the specifications listed in subdivision a of subsection 3 of section 33.1-24-05-455.

(5) Documentation for each closed-vent system and control device installed in accordance with the requirements of section 33.1-24-05-457 that includes design and performance information as specified in paragraphs 3 and 4 of subdivision cc.

(6) An emission monitoring plan for both method 21 in 40 CFR part 60, appendix A and control device monitoring methods. This plan shall include the following information: monitoring point or points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

(7) When an owner or operator of a facility subject to sections 33.1-24-05-450 through 33.1-24-05-474 cannot comply with the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 by the date of permit issuance, the schedule of implementation required under 40 CFR 265.1082 as incorporated by reference at subsection 5 of section 33.1-24-06-16 must be provided.

3. Additional information requirements. The following additional information regarding protection of ground water is required from owners or operators of hazardous waste facilities containing a regulated unit except as provided in subsection 2 of section 33.1-24-05-47.

- a. A summary of the ground water monitoring data obtained during the interim status period under subsection 5 of section 33.1-24-06-16, where applicable.
- b. Identification of the uppermost aquifer and aquifers hydrologically interconnected beneath the facility property, including ground water flow direction and rate, and the basis for such identification, for example, the information obtained from hydrogeologic investigations of the facility area.
- c. On the topographic map required under subdivision q of subsection 2, a delineation of the waste management area, the property boundary, the proposed "point of compliance" as defined under section 33.1-24-05-52, the proposed location of ground water monitoring wells as required under section 33.1-24-05-54, and to the extent possible, the information required in subdivision b.
- d. A description of any plume of contamination that has entered the ground water from a regulated unit at the time that the application was submitted:
 - (1) Delineates the extent of the plume on the topographic map required under subdivision q of subsection 2; and
 - (2) Identifies the concentration of each appendix XII, of chapter 33.1-24-05, constituent throughout the plume or identifies the maximum concentrations of each appendix XII constituent in the plume.
- e. Detailed plans and an engineering report describing the proposed ground water monitoring program to be implemented to meet the requirements of section 33.1-24-05-54.
- f. If the presence of hazardous constituents has not been detected in the ground water at the time of permit application, the owner or operator must submit sufficient information, supporting data, and analysis to establish a detection monitoring program which meets the requirements of section 33.1-24-05-55. This submission must address the following items specified under section 33.1-24-05-55:
 - (1) A proposed list of indicator parameters, waste constituents, or reaction products that can provide a reliable indication of the presence of hazardous constituents in the ground water;
 - (2) A proposed ground water monitoring system;
 - (3) Background values for each proposed monitoring parameter or constituent, or procedures to calculate such values; and
 - (4) A description of proposed sampling, analysis, and statistical comparison procedures to be analyzed in evaluating ground water monitoring data.
- g. If the presence of hazardous constituents has been detected in the ground water at the point of compliance at the time of the permit application, the owner or operator must submit sufficient information, supporting data, and analysis to establish a compliance monitoring program which meets the requirements of section 33.1-24-05-56. Except as provided in subdivision e of subsection 8 of section 33.1-24-05-55, the owner or operator must also submit an engineering feasibility plan for a corrective action program necessary to meet the requirements of section 33.1-24-05-57 unless the owner or operator obtains a written authorization in advance from the department to submit a proposed permit schedule for submittal of such a plan. To demonstrate compliance with section 33.1-24-05-56, the owner or operator must address the following items:

- (1) A description of the wastes previously handled at the facility;
- (2) A characterization of the contaminated ground water, including concentrations of hazardous constituents;
- (3) A list of hazardous constituents for which compliance monitoring will be undertaken in accordance with sections 33.1-24-05-54 and 33.1-24-05-56;
- (4) Proposed concentration limits for each hazardous constituent, based on the criteria set forth in subsection 1 of section 33.1-24-05-51, including a justification for establishing any alternate concentration limit;
- (5) Detailed plans and an engineering report describing the proposed ground water monitoring system, in accordance with the requirements of section 33.1-24-05-54; and
- (6) A description of proposed sampling, analysis, and statistical comparison procedures to be utilized in evaluating ground water monitoring data.

h. If hazardous constituents have been measured in the ground water which exceed the concentration limits established under section 33.1-24-05-51, table 1, or if ground water monitoring conducted at the time of permit application under sections 33.1-24-05-47 through 33.1-24-05-51 at the waste boundary indicates the presence of hazardous constituents from the facility in ground water over the background concentrations, the owner or operator must submit sufficient information, supporting data, and analysis to establish a corrective action program which meets the requirements of section 33.1-24-05-57. However, an owner or operator is not required to submit information to establish a corrective action program if the owner or operator demonstrates to the department that alternate concentration limits will protect human health and the environment after considering the criteria listed in subsection 2 of section 33.1-24-05-51. An owner or operator who is not required to establish a corrective action program for this reason must instead submit sufficient information to establish a compliance monitoring program which meets the requirements of section 33.1-24-05-56 and subdivision f. To demonstrate compliance with section 33.1-24-05-57, the owner or operator must address, at a minimum, the following items:

- (1) A characterization of the contaminated ground water, including concentrations of hazardous constituents;
- (2) The concentration limit for each hazardous constituent found in the ground water as set forth in section 33.1-24-05-51;
- (3) Detailed plans and an engineering report describing the corrective action to be taken; and
- (4) A description of how the ground water monitoring program will demonstrate the adequacy of the corrective action.
- (5) The permit may contain a schedule for submittal of the information required in paragraphs 3 and 4 provided the owner or operator obtains written authorization from the department prior to submittal of the complete permit application.

4. Information requirements for solid waste management units.

a. The following information is required for each solid waste management unit at a facility seeking a permit:

- (1) The location of a unit on the topographic map required under subdivision g of subsection 2.
 - (2) Designation of type of unit.
 - (3) General dimensions and structural description (supply any available drawings).
 - (4) When the unit was operated.
 - (5) Specification of all wastes that have been managed at the unit to the extent available.
- b. The owner or operator of any facility containing one or more solid waste management units must submit all available information pertaining to any release of hazardous wastes or hazardous constituents from such unit or units.
 - c. The owner or operator must conduct and provide the results of sampling and analysis of ground water, land surface, and subsurface strata, surface water, or air, which may include the installation of wells, where the department ascertains it is necessary to complete a hazardous waste facility assessment that will determine if a more complete investigation is necessary.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-18. Permits by rule.

Notwithstanding any other provision of this chapter or chapter 33.1-24-07, the following are deemed to have a hazardous waste permit if the conditions listed are met:

1. **Injection wells.** The owner or operator of an injection well disposing of hazardous waste, if the owner or operator:
 - a. Has a permit for underground injection issued under 40 CFR part 144 or 145;
 - b. Complies with the conditions of that permit and the requirements of section 33.1-25-01-18 (requirements for wells managing hazardous waste) of article 33.1-25 (underground injection control); and
 - c. For underground injection control permits issued after November 8, 1984:
 - (1) Complies with section 33.1-24-05-58; and
 - (2) Where the underground injection control well is the only unit at a facility which requires a hazardous waste permit, complies with subsection 4 of section 33.1-24-06-17.
2. **Publicly owned treatment works.** The owner or operator of a publicly owned treatment works which accepts for treatment hazardous waste, if the owner or operator:
 - a. Has a North Dakota pollutant discharge elimination system permit;
 - b. Complies with the conditions of that permit; and
 - c. Complies with the following:
 - (1) Section 33.1-24-05-02, identification number.

- (2) Section 33.1-24-05-38, use of manifest system.
- (3) Section 33.1-24-05-39, manifest discrepancies.
- (4) Subsection 1 and subdivision a of subsection 2 of section 33.1-24-05-40, operating record.
- (5) Section 33.1-24-05-42, biennial report.
- (6) Section 33.1-24-05-43, unmanifested waste report.
- (7) Section 33.1-24-05-58, corrective action for solid waste management units.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-19. Special forms of permits.

1. **Emergency permits.** Notwithstanding any other provisions of this chapter or chapter 33.1-24-07, if the department finds an imminent and substantial endangerment to human health or the environment, the department may issue a temporary emergency permit to a nonpermitted facility to allow treatment, storage, or disposal of hazardous waste or a permitted facility to allow treatment, storage, or disposal of a hazardous waste not covered by an effective permit. This emergency permit:
 - a. May be oral or written. If oral, it shall be followed in five days by a written emergency permit;
 - b. May not exceed ninety days in duration;
 - c. Must clearly specify the hazardous wastes to be received and the manner and location of their treatment, storage, or disposal;
 - d. May be terminated by the department at any time without process if the department determines that termination is appropriate to protect human health and the environment;
 - e. Must be accompanied by a public notice published under subsection 2 of section 33.1-24-07-06, including:
 - (1) Name and address of the office granting the emergency authorization;
 - (2) Name and location of the permitted hazardous waste management facility;
 - (3) A brief description of the wastes involved;
 - (4) A brief description of the action authorized and reasons for authorizing it; and
 - (5) Duration of the emergency permit; and
 - f. Must incorporate, to the extent possible and not inconsistent with the emergency situation, all applicable requirements of this chapter and chapter 33.1-24-05.
2. **Hazardous waste incinerator permits.** When an owner or operator of a hazardous waste incineration unit becomes subject to hazardous waste permit requirements after October 12, 2005, or when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations in 40 CFR part 63, subpart EEE (for example, by conducting a comprehensive performance test and submitting a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting

compliance with all applicable requirements of 40 CFR part 63, subpart EEE), the requirements of this subsection do not apply, except those provisions the department determines are necessary to ensure compliance with subsections 1 and 3 of section 33.1-24-05-149 if the permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the department may apply the provisions of this subsection, on a case-by-case basis, for purposes of information collection in accordance with subsections 11 and 12 of section 33.1-24-06-01 and subdivisions b and c of subsection 2 of section 33.1-24-06-05.

a. For the purposes of determining operational readiness following completion of physical construction, the department shall establish permit conditions, including allowable waste feeds and operating conditions in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to bring the incinerator to a point of operational readiness sufficient to conduct a trial burn, not to exceed seven hundred twenty hours operating time for treatment of hazardous waste. The department may extend the duration of this operational period once for up to seven hundred twenty additional hours at the request of the applicant when good cause is shown. The permit may be modified to reflect the extension according to section 33.1-24-06-14.

(1) Applicants shall submit a statement with the permit application which suggests the conditions necessary to operate in compliance with the performance standards of section 33.1-24-05-147 during this period. This statement should include, at a minimum, restrictions on waste constituents, waste feed rates, and the operating parameters identified in section 33.1-24-05-149.

(2) The department will review this statement and any other relevant information submitted with the permit application and specify requirements for this period sufficient to meet the performance standards of section 33.1-24-05-147 based on the department's engineering judgment.

b. For the purposes of determining feasibility of compliance with the performance standards of section 33.1-24-05-147 and of determining adequate operating conditions under section 33.1-24-05-149, the department shall establish conditions in the permit for a new hazardous waste incinerator to be effective during the trial burn.

(1) Applicants must propose a trial burn plan prepared under paragraph 2 with the permit application.

(2) The trial burn plan must include the following information:

(a) An analysis of each waste or mixture of wastes to be burned which includes:

[1] Heat value of the waste in the form and composition in which it will be burned.

[2] Viscosity (if applicable), or description of physical form of the waste.

[3] An identification of any hazardous organic constituents listed in chapter 33.1-24-02, appendix V, which are present in the waste to be burned, except that the applicant need not analyze for constituents listed in chapter 33.1-24-02, appendix V, which would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical techniques.

[4] An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by appropriate analytical methods.

(b) A detailed engineering description of the incinerator for which the permit is sought, including:

[1] Manufacturer's name and model number of incinerator (if available).

[2] Type of incinerator.

[3] Linear dimensions of the incinerator unit, including cross-sectional area of combustion chamber.

[4] Description of the auxiliary fuel system (type/feed).

[5] Capacity of prime mover.

[6] Description of automatic waste feed cutoff system or systems.

[7] Stack gas monitoring and pollution control equipment.

[8] Nozzle and burner design.

[9] Construction materials.

[10] Location and description of temperature, pressure, and flow indicating and control devices.

(c) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

(d) A detailed test schedule for each waste for which the trial burn is planned, including dates, duration, quantity of waste to be burned, and other factors relevant to the department's decision under paragraph 5.

(e) A detailed test protocol, including, for each waste identified, the ranges of temperature, waste feed rate, combustion gas velocity, use of auxiliary fuel, and any other relevant parameters that will be varied to affect the destruction and removal efficiency of the incinerator.

(f) A description of, and planned operating conditions for, any emission control equipment which will be used.

(g) Procedures for rapidly stopping waste feed, shutting down the incinerator, and controlling emissions in the event of an equipment malfunction.

(h) Such other information as the department reasonably finds necessary to determine whether to approve the trial burn plan in light of the purposes of this paragraph and the criteria in paragraph 5.

(3) In reviewing the trial burn plan, the department shall evaluate the sufficiency of the information provided and may require the applicant to supplement this information, if necessary, to achieve the purposes of this subsection.

- (4) Based on the waste analysis data in the trial burn plan, the department will specify as trial principal organic hazardous constituents those constituents for which destruction and removal efficiencies must be calculated during the trial burn. These trial principal organic hazardous constituents will be specified by the department based on the department's estimate of the difficulty of incineration of the constituents identified in the waste analysis, their concentration or mass in the waste feed, and, for wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19, the hazardous waste organic constituent or constituents identified in appendix IV of chapter 33.1-24-02 as the basis for listing.
- (5) The department shall approve a trial burn plan if the department finds that:
- (a) The trial burn is likely to determine whether the incinerator performance standard required by section 33.1-24-05-147 can be met;
 - (b) The trial burn itself will not present an imminent hazard to human health or the environment;
 - (c) The trial burn will help the department determine operating requirements to be specified under section 33.1-24-05-149; and
 - (d) The information sought in subparagraphs a and c cannot reasonably be developed through other means.
- (6) The department must send a notice to all persons on the facility mailing list as set forth in paragraph 4 of subdivision a of subsection 3 of section 33.1-24-07-06 and to the appropriate units of state and local government as set forth in subdivision b of subsection 3 of section 33.1-24-07-06 announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the department has issued such notice.
- (a) This notice must be mailed within a reasonable time period before the scheduled trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the department.
 - (b) This notice must contain:
 - [1] The name and telephone number of the applicant's contact person;
 - [2] The name and telephone number of the department's contact office;
 - [3] The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and
 - [4] An expected time period for commencement and completion of the trial burn.
- (7) During each approved trial burn (or as soon after the burn as practicable), the applicant must make the following determinations:
- (a) A quantitative analysis of the trial principal organic hazardous constituents in the waste feed to the incinerator.
 - (b) A quantitative analysis of the exhaust gas for the concentration and mass emissions of the trial principal organic hazardous constituents, oxygen, and hydrogen chloride.

- (c) A quantitative analysis of the scrubber water (if any), ash residues, and other residues, for the purpose of estimating the fate of the trial principal organic hazardous constituents.
- (d) A computation of destruction and removal efficiency, in accordance with the destruction and removal efficiency formula specified in subsection 1 of section 33.1-24-05-147.
- (e) If the hydrogen chloride emission rate exceeds one and eight-tenths kilograms of hydrogen chloride per hour [4 pounds per hour], a computation of the hydrogen chloride removal efficiency in accordance with subsection 2 of section 33.1-24-05-147.
- (f) A computation of particulate emissions, in accordance with subsection 3 of section 33.1-24-05-147.
- (g) An identification of sources of fugitive emissions and their means of control.
- (h) A measurement of average, maximum, and minimum temperatures and combustion gas velocity.
- (i) A continuous measurement of carbon monoxides in the exhaust gas.
- (j) Such other information as the department may specify as necessary to ensure that the trial burn will determine compliance with the performance standard in section 33.1-24-05-147 and to establish the operating conditions required by section 33.1-24-05-149 as necessary to meet that performance standard.
- (8) The applicant shall submit to the department a certification that the trial burn has been carried out in accordance with the approved trial burn plan and shall submit the results of all the determinations required in paragraph 6. This submission must be made within ninety days of the completion of the trial burn, or later if approved by the department.
- (9) All data collected during any trial burn must be submitted to the department following the completion of the trial burn.
- (10) All submissions required by this subdivision must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under section 33.1-24-06-03.
- (11) Based on the results of the trial burn, the department shall set the operating requirements in the final permit according to section 33.1-24-05-149. The permit modification shall proceed according to section 33.1-24-06-14.
- c. For the purposes of allowing operation of a new hazardous waste incinerator following completion of the trial burn and prior to final modification of the permit conditions to reflect the trial burn results, the department may establish permit conditions, including allowable waste feeds and operating conditions sufficient to meet the requirements of section 33.1-24-05-149 in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to complete sample analysis, data computation, and submission of the trial burn results by the applicant, and modification of the facility permit by the department.
- (1) Applicants shall submit a statement with the permit application which identifies the conditions necessary to operate in compliance with the performance standards of section 33.1-24-05-147 during this period. This statement should include, at a

minimum, restrictions on waste constituents, waste feed rates, and the operating parameters identified in section 33.1-24-05-149.

(2) The department will review this statement and any other relevant information submitted with the permit application and specify those requirements for this period most likely to meet the performance standards of section 33.1-24-05-147 based on the department's engineering judgment.

d. For the purpose of determining feasibility of compliance with the performance standards of section 33.1-24-05-147 and of determining adequate operating conditions under section 33.1-24-05-149, the applicant for a permit for an existing hazardous waste incinerator must prepare and submit a trial burn plan and perform a trial burn in accordance with paragraph 2 of subdivision w of subsection 2 of section 33.1-24-06-17 and paragraphs 2 through 5 and 7 through 10 of subdivision b or, instead, submit other information as specified in paragraph 3 of subdivision w of subsection 2 of section 33.1-24-06-17. The department must announce the department's intention to approve the trial burn plan in accordance with the timing and distribution requirements of paragraph 6 of subdivision b. The contents of the notice must also include a schedule of the activities that are required prior to permit issuance. Applicants submitting information under paragraph 1 of subdivision w of subsection 2 of section 33.1-24-06-17 are exempt from compliance with sections 33.1-24-05-147 and 33.1-24-05-149 and, therefore, are exempt from the requirement to conduct a trial burn. Applicants who submit trial burn plans and receive approval before submission of a permit application must complete the trial burn and submit the results specified in paragraph 6 of subdivision b, with part B of the permit application. If completion of this process conflicts with the date set for submission of the part B application, the applicant must contact the department to establish a later date for submission of the part B application or the trial burn results. Trial burn results must be submitted prior to issuance of the permit. When the applicant submits a trial burn plan with part B of the permit application, the department will specify a time period prior to permit issuance in which the trial burn must be conducted and the results submitted.

3. Permits for land treatment demonstrations using field tests or laboratory analyses.

a. For the purpose of allowing an owner or operator to meet the treatment demonstration requirements of section 33.1-24-05-162, the department may issue a treatment demonstration permit. The permit must contain only those requirements necessary to meet the standards in subsection 3 of section 33.1-24-05-162. The permit may be issued either as a treatment or disposal permit covering only the field test or laboratory analyses or as a two-phase facility permit covering field tests or laboratory analyses and design construction, operation, and maintenance of the land treatment unit.

(1) The department may issue a two-phase facility permit if the department finds that based on information submitted in the permit application substantial, although incomplete or inconclusive, information already exists on which to base the issuance of a facility permit.

(2) If the department finds that not enough information exists upon which the department can establish permit conditions to attempt to provide for compliance with all the requirements of the land treatment requirements in sections 33.1-24-05-160 through 33.1-24-05-175, the department shall issue a treatment demonstration permit covering only the field test or laboratory analyses.

b. If the department finds that a phased permit may be issued, the department will establish as requirements in the first phase of the facility permit conditions for conducting a field test or laboratory analyses. These permit conditions will contain design and operating parameters (including the duration of the tests or analyses and, in the case of field tests,

the horizontal and vertical dimensions of the treatment zone), monitoring procedures, postdemonstration cleanup activities, and any other conditions which the department finds may be necessary under subsection 3 of section 33.1-24-05-162. The department will include conditions in the second phase of the facility permit to attempt to meet all the requirements in sections 33.1-24-05-160 through 33.1-24-05-175 pertaining to unit design, construction, operation, and maintenance. The department will establish these conditions in the second phase of the permit, based upon the substantial but incomplete or inconclusive information contained in the permit application.

(1) The first phase of the permit will be effective as provided in subsection 2 of section 33.1-24-07-11.

(2) The second phase of the permit will be effective as provided in subdivision d.

c. When the owner or operator who has been issued a two-phase permit has completed the treatment demonstration, the owner or operator shall submit to the department a certification signed by a person authorized to sign a permit application or report under section 33.1-24-06-03 that the field tests or laboratory analyses have been carried out in accordance with the conditions specified in phase one of the permit for conducting such tests or analyses. The owner or operator shall also submit all data collected during the field tests or laboratory analyses within ninety days of completion of those tests or analyses, unless the department approves a later date.

d. If the department determines that the results of the field tests or laboratory analyses meet the requirements of section 33.1-24-05-162, the department will modify the second phase of the permit to incorporate any requirements necessary for operation of the facility in compliance with sections 33.1-24-05-160 through 33.1-24-05-175, based upon the results of the field tests or laboratory analyses.

(1) This permit modification may proceed under section 33.1-24-06-14, or otherwise proceed as a modification under subdivision b of subsection 1 of section 33.1-24-06-12. If such modifications are necessary, the second phase of the permit will become effective only after those modifications have been made.

(2) If no modifications of the second phase of the permit are necessary, the department will give notice of the department's final decision to the permit applicant and to each person who submitted written comments on the phased permit or who requested notice of the final decision on the second phase of the permit. The second phase of the permit then will become effective as specified in subsection 2 of section 33.1-24-07-11.

4. Permits for boilers and industrial furnaces burning hazardous waste. When an owner or operator of a cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to hazardous waste permit requirements after October 12, 2005, or when an owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations in 40 CFR part 63, subpart EEE (for example, by conducting a comprehensive performance test and submitting a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of 40 CFR part 63, subpart EEE), the requirements of this subsection do not apply. The requirements of this subsection do apply, however, if the department determines certain provisions are necessary to ensure compliance with subdivision a of subsection 5 of section 33.1-24-05-527 and paragraph 3 of subdivision b of subsection 5 of section 33.1-24-05-527 if the permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the permittee is an

area source and elects to comply with the sections 33.1-24-05-530, 33.1-24-05-531, and 33.1-24-05-532 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and nonmercury metals; or the department determines certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with subsections 11 and 12 of section 33.1-24-06-01 and subdivisions b and c of subsection 2 of section 33.1-24-06-05.

a. General. Owners and operators of new boilers and industrial furnaces (those not operating under the interim status standards of section 33.1-24-05-528) are subject to subdivisions b through f. Boilers and industrial furnaces operating under the interim status standards of section 33.1-24-05-528 are subject to subdivision g.

b. Permit operating periods for new boilers and industrial furnaces. A permit for a new boiler or industrial furnace shall specify appropriate conditions for the following operating periods:

(1) Pretrial burn period. For the period beginning with initial introduction of hazardous waste and ending with initiation of the trial burn, and only for the minimum time required to bring the boiler or industrial furnace to a point of operational readiness to conduct a trial burn, not to exceed seven hundred twenty hours operating time when burning hazardous waste, the department must establish in the pretrial burn period of the permit conditions, including allowable hazardous waste feed rates and operating conditions. The department may extend the duration of this operational period once, for up to seven hundred twenty additional hours, at the request of the applicant when good cause is shown. The permit may be modified to reflect the extension according to section 33.1-24-06-14.

(a) Applicants must submit a statement, with part B of the permit application, that suggests the conditions necessary to operate in compliance with the standards of sections 33.1-24-05-529 through 33.1-24-05-532 during this period. This statement should include, at a minimum, restrictions on the applicable operating requirements identified in subsection 5 of section 33.1-24-05-527.

(b) The department will review this statement and any other relevant information submitted with part B of the permit application and specify requirements for this period sufficient to meet the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532 based on the department's engineering judgment.

(2) Trial burn period. For the duration of the trial burn, the department must establish conditions in the permit for the purposes of determining feasibility of compliance with the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532 and determining adequate operating conditions under subsection 5 of section 33.1-24-05-527. Applicants must propose a trial burn plan, prepared under subdivision c, to be submitted with part B of the permit application.

(3) Posttrial burn period.

(a) For the period immediately following completion of the trial burn, and only for the minimum period sufficient to allow sample analysis, data computation, and submission of the trial burn results by the applicant, and review of the trial burn results and modification of the facility permit by the department to reflect the trial burn results, the department will establish the operating requirements most likely to ensure compliance with the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532 based on the department's engineering judgment.

- (b) Applicants must submit a statement, with part B of the application, that identifies the conditions necessary to operate during this period in compliance with the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532. This statement should include, at a minimum, restrictions on the operating requirements provided by subsection 5 of section 33.1-24-05-527.
- (c) The department will review this statement and any other relevant information submitted with part B of the permit application and specify requirements for this period sufficient to meet the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532 based on the department's engineering judgment.
- (4) Final permit period. For the final period of operation, the department will develop operating requirements in conformance with subsection 5 of section 33.1-24-05-527 that reflect conditions in the trial burn plan and are likely to ensure compliance with the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532. Based on the trial burn results, the department shall make any necessary modifications to the operating requirements to ensure compliance with the performance standards. The permit modification shall proceed according to section 33.1-24-06-14.
- c. Requirements for trial burn plans. The trial burn plan must include the following information. The department, in reviewing the trial burn plan, shall evaluate the sufficiency of the information provided and may require the applicant to supplement this information, if necessary, to achieve the purposes of this subdivision:

 - (1) An analysis of each feed stream, including hazardous waste, other fuels, and industrial furnace feedstocks, as fired, that includes:

 - (a) Heating value, levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, thallium, total chlorine/chloride, and ash; and
 - (b) Viscosity or description of the physical form of the feed stream;
 - (2) An analysis of each hazardous waste, as fired, including:

 - (a) An identification of any hazardous organic constituents listed in appendix V of chapter 33.1-24-02, that are present in the feed stream, except that the applicant need not analyze for constituents listed in appendix V of chapter 33.1-24-02 that would reasonably not be expected to be found in the hazardous waste. The constituents excluded from analysis must be identified and the basis for this exclusion explained. The waste analysis must be conducted in accordance with appropriate analytical techniques.
 - (b) An approximate quantification of the hazardous constituents identified in the hazardous waste, within the precision produced by appropriate analytical methods.
 - (c) A description of blending procedures, if applicable, prior to firing the hazardous waste, including a detailed analysis of the hazardous waste prior to blending, an analysis of the material with which the hazardous waste is blended, and blending ratios.
 - (3) A detailed engineering description of the boiler or industrial furnace, including:

 - (a) Manufacturer's name and model number of the boiler or industrial furnace;

(b) Type of boiler or industrial furnace;

(c) Maximum design capacity in appropriate units;

(d) Description of the feed system for the hazardous waste, and, as appropriate, other fuels and industrial furnace feedstocks;

(e) Capacity of hazardous waste feed system;

(f) Description of automatic hazardous waste feed cutoff systems;

(g) Description of any air pollution control system; and

(h) Description of stack gas monitoring and any pollution control monitoring systems.

(4) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

(5) A detailed test schedule for each hazardous waste for which the trial burn is planned, including dates, duration, quantity of hazardous waste to be burned, and other factors relevant to the department's decision under paragraph 2 of subdivision b.

(6) A detailed test protocol, including, for each hazardous waste identified, the ranges of hazardous waste feed rate, and, as appropriate, the feed rates of other fuels and industrial furnace feedstocks, and any other relevant parameters that may affect the ability of the boiler or industrial furnace to meet the performance standards in sections 33.1-24-05-529 through 33.1-24-05-532.

(7) A description of, and planned operating conditions for, any emission control equipment that will be used.

(8) Procedures for rapidly stopping the hazardous waste feed and controlling emissions in the event of an equipment malfunction.

(9) Such other information as the department reasonably finds necessary to determine whether to approve the trial burn plan in light of the purposes of this subdivision and the criteria in paragraph 2 of subdivision b.

d. Trial burn procedures.

(1) A trial burn must be conducted to demonstrate conformance with the standards of sections 33.1-24-05-529 through 33.1-24-05-532 under an approved trial burn plan.

(2) The department shall approve a trial burn plan if the department finds that:

(a) The trial burn is likely to determine whether the boiler or industrial furnace can meet the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532;

(b) The trial burn itself will not present an imminent hazard to human health and the environment;

(c) The trial burn will help the department to determine operating requirements to be specified under subsection 5 of section 33.1-24-05-527; and

- (d) The information sought in the trial burn cannot reasonably be developed through other means.
- (3) The department must send a notice to all persons on the facility mailing list as set forth in subdivision a of subsection 3 of section 33.1-24-07-06 and to the appropriate units of local government as set forth in subdivision b of subsection 3 of section 33.1-24-07-06 announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the department has issued such notice. This notice must be mailed within a reasonable time period before the trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the department. This notice must contain:
 - (a) The name and telephone number of the applicant's contact person;
 - (b) The name and telephone number of the department contact;
 - (c) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and
 - (d) An expected time period for commencement and completion of the trial burn.
- (4) The applicant must submit to the department a certification that the trial burn has been carried out in accordance with the approved trial burn plan and must submit the results of all the determinations required in subdivision c. This submission shall be made within ninety days of completion of the trial burn, or later if approved by the department.
- (5) All data collected during any trial burn must be submitted to the department following completion of the trial burn.
- (6) All submissions required by this subdivision must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under section 33.1-24-06-03.
- e. Special procedures for destruction and removal efficiency trial burns. When a destruction and removal efficiency trial burn is required under subsection 1 of section 33.1-24-05-529, the department will specify (based on the hazardous waste analysis data and other information in the trial burn plan) as trial principal organic hazardous constituents those compounds for which destruction and removal efficiencies must be calculated during the trial burn. These trial principal organic hazardous constituents will be specified by the department based on information, including the department's estimate of the difficulty of destroying the constituents identified in the hazardous waste analysis, their concentrations or mass in the hazardous waste feed, and, for hazardous waste containing or derived from wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19, the hazardous waste organic constituent or constituents identified in appendix IV of chapter 33.1-24-02 as the basis for listing.
- f. Determinations based on trial burn. During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations:
 - (1) A quantitative analysis of the levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, thallium, silver, and chlorine/chloride, in the feed streams (hazardous waste, other fuels, and industrial furnace feedstocks);
 - (2) When a destruction and removal efficiency trial burn is required under subsection 1 of section 33.1-24-05-529:

- (a) A quantitative analysis of the trial principal organic hazardous constituents in the hazardous waste feed;
 - (b) A quantitative analysis of the stack gas for the concentration and mass emissions of the trial principal organic hazardous constituents; and
 - (c) A computation of destruction and removal efficiency, in accordance with the destruction and removal efficiency formula specified in subsection 1 of section 33.1-24-05-529;
- (3) When a trial burn for chlorinated dioxins and furans is required under subsection 5 of section 33.1-24-05-529, a quantitative analysis of the stack gas for the concentration and mass emission rate of the 2,3,7,8-chlorinated tetra-octa congeners of chlorinated dibenzo-p-dioxins and furans, and a computation showing conformance with the emission standard;
- (4) When a trial burn for particulate matter, metals, hydrogen chloride or chlorine is required under section 33.1-24-05-530, subsection 3 or 4 of section 33.1-24-05-531, or subdivision b of subsection 2 or subsection 3 of section 33.1-24-05-532, a quantitative analysis of the stack gas for the concentrations and mass emissions of particulate matter, metals, or hydrogen chloride and chlorine, and computations showing conformance with the applicable emission performance standards;
- (5) When a trial burn for destruction and removal efficiency, metals, or hydrogen chloride or chlorine is required under subsection 1 of section 33.1-24-05-529, subsection 3 or 4 of section 33.1-24-05-531, or subdivision b of subsection 2 or subsection 3 of section 33.1-24-05-532, a quantitative analysis of the scrubber water (if any), ash residues, other residues, and products for the purpose of estimating the fate of the trial principal organic hazardous constituents, metals, and chlorine/chloride;
- (6) An identification of sources of fugitive emissions and their means of control;
- (7) A continuous measurement of carbon monoxide, oxygen, and where required, hydrocarbons, in the stack gas; and
- (8) Such other information as the department may specify as necessary to ensure that the trial burn will determine compliance with the performance standards in sections 33.1-24-05-529 through 33.1-24-05-532 and to establish the operating conditions required by subsection 5 of section 33.1-24-05-527 as necessary to meet those performance standards.
- g. Interim status boilers and industrial furnaces. For the purpose of determining feasibility of compliance with the performance standards of sections 33.1-24-05-529 through 33.1-24-05-532 and of determining adequate operating conditions under section 33.1-24-05-528, applicants owning or operating existing boilers or industrial furnaces operated under the interim status standards of section 33.1-24-05-528 must either prepare and submit a trial burn plan and perform a trial burn in accordance with the requirements of this subsection or submit other information as specified in subparagraph f of paragraph 1 of subdivision ff of subsection 2 of section 33.1-24-06-17. The department must announce its intention to approve of the trial burn plan in accordance with the timing and distribution requirements of paragraph 3 of subdivision d. The contents of the notice must include: the name and telephone number of a contact person at the facility; the name and telephone number of the department contact; the location where the trial burn plan and any supporting documents can be reviewed and copied; and a schedule of the activities that are required prior to permit issuance.

including the anticipated time schedule for department approval of the plan and the time periods during which the trial burn would be conducted. Applicants who submit a trial burn plan and receive approval before submission of the part B permit application must complete the trial burn and submit the results specified in subdivision f with the part B permit application. If completion of this process conflicts with the date set for submission of the part B application, the applicant must contact the department to establish a later date for submission of the part B application or the trial burn results. If the applicant submits a trial burn plan with part B of the permit application, the trial burn must be conducted and the results submitted within a time period prior to permit issuance to be specified by the department.

5. **Remedial action plans.** Remedial action plans (RAPs) are special forms of permits that are regulated under sections 33.1-24-06-30 through 33.1-24-06-35.

6. **Hazardous waste standardized permits.** Standardized permits are special forms of permits for treatment, storage, or disposal owners or operators that:

a. Generate hazardous waste and then nonthermally treat or store the hazardous waste onsite in tanks, containers, or containment buildings; or

b. Receive hazardous waste generated offsite by a generator under the same ownership as the receiving facility, and then store or nonthermally treat the hazardous waste in containers, tanks, or containment buildings. Standardized permit facility owners or operators are regulated under sections 33.1-24-06-45 through 33.1-24-06-85, 33.1-24-07-40 through 33.1-24-07-54, and 33.1-24-05-950 through 33.1-24-05-1149.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-20. Research, development, and demonstration permits.

1. The department may issue a research, development, and demonstration permit for any hazardous waste treatment facility which proposes to utilize an innovative and experimental hazardous waste treatment technology or process for which permit standards for such experimental activity have not been promulgated under sections 33.1-24-05-01 through 33.1-24-05-249, 33.1-24-05-300 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-929. Any such permit must include such terms and conditions as will assure protection of human health and the environment. Such permits:

a. Must provide for the construction of such facilities as necessary, and for operation of a facility for not longer than one year unless renewed as provided in subsection 4;

b. Must provide for the receipt and treatment by the facility of only those types and quantities of hazardous waste which the department deems necessary for purposes of determining the efficacy and performance capabilities of the technology or process and the effects of such technology on human health and the environment; and

c. Must include such requirements as the department deems necessary to protect human health and the environment, including requirements regarding monitoring, operation, financial responsibility, closure, and remedial action, and such requirements as the department deems necessary regarding testing and providing of information to the department with respect to the operation of the facility.

2. For the purpose of expediting review and issuance of permits under this section, the department may, consistent with the protection of human health and the environment, modify or waive permit application and permit issuance requirements in chapters 33.1-24-06 and

33.1-24-07 except that there may be no modification or waiver of regulations regarding financial responsibility, including insurance or of procedures regarding public participation.

3. The department may order an immediate termination of all operations at the facility at any time the department determines that termination is necessary to protect human health and the environment.

4. Any permit issued under this section may be renewed not more than three times. Each such renewal is for a period of not more than one year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-21. Fees.

The department may assess and collect reasonable fees for activities associated with permit applications, and for the issuance, modification, revocation and reissuance, termination, renewal, and transfer of permits.

History: Effective January 1, 2019.

33.1-24-06-30. Remedial action plans - General information.

1. General information.

- a. A remedial action plan is a special form of hazardous waste permit that an owner or operator may obtain, instead of a permit issued under sections 33.1-24-06-01 through 33.1-24-06-15, 33.1-24-06-17, 33.1-24-06-18, subsections 1 through 4 of section 33.1-24-06-19, and section 33.1-24-06-20, to authorize the owner or operator to treat, store, or dispose of hazardous remediation waste (as defined in section 33.1-24-01-04) at a remediation waste management site. A remedial action plan may only be issued for the area of contamination where the remediation wastes to be managed under the remedial action plan originated, or areas in close proximity to the contaminated area, except as allowed in limited circumstances under subsection 1 of section 33.1-24-06-35.
- b. The requirements in sections 33.1-24-06-01 through 33.1-24-06-15, 33.1-24-06-17, 33.1-24-06-18, subsections 1 through 4 of section 33.1-24-01-19, and section 33.1-24-06-20 do not apply to remedial action plans unless those requirements for traditional hazardous waste permits are specifically required under sections 33.1-24-06-30 through 33.1-24-06-35.
- c. Notwithstanding any other provision of chapter 33.1-24-06 or 33.1-24-07, any document that meets the requirements in this section constitutes a hazardous waste permit under North Dakota Century Code section 23.1-04-08.
- d. A remedial action plan may be:
 - (1) A stand-alone document that includes only the information and conditions required by sections 33.1-24-06-30 through 33.1-24-06-35; or
 - (2) Part or parts of another document that includes information or conditions, or both, for other activities at the remediation waste management site, in addition to the information and conditions required by sections 33.1-24-06-30 through 33.1-24-06-35.
- e. If the owner or operator is treating, storing, or disposing of hazardous remediation wastes as part of a cleanup compelled by federal or state cleanup authorities, the remedial action plan does not affect the owner's or operator's obligations under those authorities in any way.
- f. If the owner or operator receives a remedial action plan at a facility operating under interim status, the remedial action plan does not terminate interim status.

2. A remedial action plan is necessary when:

- a. Whenever the owner or operator treats, stores, or disposes of hazardous remediation wastes in a manner that requires a hazardous waste permit, the owner or operator must either obtain:
 - (1) A hazardous waste permit according to sections 33.1-24-06-01 through 33.1-24-06-15, 33.1-24-06-17, 33.1-24-06-18, subsections 1 through 4 of section 33.1-24-06-19, and section 33.1-24-06-20; or
 - (2) A remedial action plan according to sections 33.1-24-06-30 through 33.1-24-06-35.

- b. Treatment units that use combustion of hazardous remediation wastes at a remediation waste management site are not eligible for remedial action plans under sections 33.1-24-06-30 through 33.1-24-06-35.
 - c. The owner or operator may obtain a remedial action plan for managing hazardous remediation waste at an already permitted hazardous waste facility. The owner or operator must have these remedial action plans approved as a modification to an existing permit according to the requirements of section 33.1-24-06-12 or 33.1-24-06-14 instead of the requirements in sections 33.1-24-06-30 through 33.1-24-06-35. When the owner or operator submits an application for such a modification, however, the information requirements in paragraph 1 of subdivision a of subsection 1, paragraph 4 of subdivision a of subsection 2, and paragraph 4 of subdivision a of subsection 3 of section 33.1-24-06-14 do not apply; instead, the owner or operator must submit the information required under subsection 4 of section 33.1-24-06-31. When the permit is modified, the remedial action plan becomes part of the hazardous waste permit. Therefore, when a permit (including the remedial action plan portion) is modified, revoked and reissued, terminated or when it expires, it will be modified according to the applicable requirements in sections 33.1-24-06-11, 33.1-24-06-12, and 33.1-24-06-14, revoked and reissued according to the applicable requirements in sections 33.1-24-06-12 and 33.1-24-06-13, terminated according to the applicable requirements in section 33.1-24-06-13, and expire according to the applicable requirements in sections 33.1-24-06-02 and 33.1-24-06-06.
3. Rights and obligations under a remedial action plan. The provisions of section 33.1-24-06-10 apply to remedial action plans. (Note: The provisions of subsection 1 of section 33.1-24-06-10 provide the owner or operator assurance that, as long as the owner or operator complies with the remedial action plan, the department will consider the owner or operator in compliance with this article and will not take enforcement actions against the owner or operator. However, the owner or operator should be aware of four exceptions to this provision that are listed in section 33.1-24-06-10.)

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-31. Remedial action plan application process.

1. To apply for a remedial action plan, the owner or operator must complete an application, sign it, and submit it to the department according to the requirements in sections 33.1-24-06-30 through 33.1-24-06-35.
2. Who applies. When a facility or remediation waste management site is owned by one person, but the treatment, storage, or disposal activities are operated by another person, it is the operator's duty to obtain a remedial action plan, except that the owner must also sign the remedial action plan application.
3. Signatory requirements. Both the owner and the operator must sign the remedial action plan application and any required reports according to subsections 1, 2, and 3 of section 33.1-24-06-03. In the application, both the owner and the operator must also make the certification required under subdivision a of subsection 4 of section 33.1-24-06-03. However, the owner may choose the alternative certification under subdivision b of subsection 4 of section 33.1-24-06-03 if the operator certifies under subdivision a of subsection 4 of section 33.1-24-06-03.
4. Information to be included in the application. The owner or operator must include the following information in the application for a remedial action plan:

- a. The name, address, and identification number of the remediation waste management site;
- b. The name, address, and telephone number of the owner and operator;
- c. The latitude and longitude of the site;
- d. The United States geological survey or county map showing the location of the remediation waste management site;
- e. A scaled drawing of the remediation waste management site showing:
 - (1) The remediation waste management site boundaries;
 - (2) Any significant physical structures; and
 - (3) The boundary of all areas onsite where remediation waste is to be treated, stored, or disposed;
- f. A specification of the hazardous remediation waste to be treated, stored, or disposed of at the facility or remediation waste management site. This must include information on:
 - (1) Constituent concentrations and other properties of the hazardous remediation wastes that may affect how such materials should be treated or otherwise managed;
 - (2) An estimate of the quantity of these wastes; and
 - (3) A description of the processes the owner or operator will use to treat, store, or dispose of this waste, including technologies, handling systems, and design and operating parameters the owner or operator will use to treat hazardous remediation wastes before disposing of them according to the land disposal restrictions standards of sections 33.1-24-05-250 through 33.1-24-05-299, as applicable;
- g. Enough information to demonstrate that operations that follow the provisions in the remedial action plan application will ensure compliance with applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929;
- h. Such information as may be necessary to enable the department to carry out the department's duties under other federal or other state laws as is required for traditional hazardous waste permits under subdivision r of subsection 2 of section 33.1-24-06-17; and
- i. Any other information the department decides is necessary for demonstrating compliance with sections 33.1-24-06-30 through 33.1-24-06-35 or for determining any additional remedial action plan conditions that are necessary to protect human health and the environment.

5. Confidentiality of remedial action plan information. The owner or operator may assert any such claim at the time that the owner or operator submits the remedial action plan application or other submissions by stamping the words "confidential business information" on each page containing such information. If the owner or operator asserts a claim at the time of the submission, the department will treat the information as confidential and will not release this information to the public. If the owner or operator does not assert a claim at the time of the submission, the department may make the information available to the public without further notice to the owner or operator. The department will deny any requests for confidentiality of an owner's or operator's name or address, or both.

6. The owner or operator must submit the completed, signed application for a remedial action plan to the department for approval.
7. If the owner or operator submits an application for a remedial action plan as a part of another document, the owner or operator must clearly identify the components of that document that constitute the remedial action plan application.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-32. Remedial action plan approval process.

1. Completeness and technical review. The department will not issue a permit before receiving a complete application for a remedial action plan. An application for a remedial action plan is complete when the department receives an application form and any supplemental information which is completed to the department's satisfaction. The completeness of any application for a permit shall be judged independently of the status of any other permit application or permit for the same facility or activity. An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in subsection 10 of section 33.1-24-06-01. The department may deny a permit for a remedial action plan before receiving a complete application for a permit.
 - a. If the department tentatively finds that a remedial action plan application includes all of the information required by subsection 4 of section 33.1-24-06-31 and that the proposed remediation waste management activities meet the regulatory standards, the department may make a tentative decision to approve the remedial action plan application. The department will then prepare a draft remedial action plan and provide an opportunity for public comment before making a final decision on the remedial action plan application, according to sections 33.1-24-06-30 through 33.1-24-06-35.
 - b. If the department tentatively finds that the remedial action plan application does not include all of the information required by subsection 4 of section 33.1-24-06-31 or that the proposed remediation waste management activities do not meet the regulatory standards, the department may request additional information or ask the owner or operator to correct deficiencies in the application. If the owner or operator fails or refuses to provide any additional information the department requests, or to correct any deficiencies in the remedial action plan application, the department may make a tentative decision to deny the remedial action plan application. After making this tentative decision, the department will prepare a notice of intent to deny the remedial action plan application ("notice of intent to deny") and provide an opportunity for public comment before making a final decision on the remedial action plan application, according to the requirements in sections 33.1-24-06-30 through 33.1-24-06-35. The department may deny the remedial action plan application either in its entirety or in part.
2. Contents of the draft remedial action plan. If the department prepares a draft remedial action plan, the department must include the following information:
 - a. Information required under subdivisions a through f of subsection 4 of section 33.1-24-06-31;
 - b. The following terms and conditions:
 - (1) Terms and conditions necessary to ensure that the operating requirements specified in the remedial action plan comply with applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929

(including any recordkeeping and reporting requirements). In satisfying this provision, the department may incorporate, expressly or by reference, applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929 into the remedial action plan or establish site-specific conditions as required or allowed by sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929;

(2) Terms and conditions in section 33.1-24-06-04;

(3) Terms and conditions for modifying, revoking and reissuing, and terminating the remedial action plan, as provided in subsection 1 of section 33.1-24-06-33; and

(4) Any additional terms or conditions that the department determines are necessary to protect human health and the environment, including any terms and conditions necessary to respond to spills and leaks during use of any units permitted under the remedial action plan; and

c. If the draft remedial action plan is part of another document, as described in paragraph 2 of subdivision d of subsection 1 of section 33.1-24-06-30, the department must clearly identify the components of that document that constitute the draft remedial action plan.

3. Once the department has prepared the draft remedial action plan or notice of intent to deny, then the department must also prepare the following documents:

a. A fact sheet that briefly describes the derivation of the conditions of the draft remedial action plan and the reasons for them, or the rationale for the notice of intent to deny;

b. The following documentation, including:

(1) The remedial action plan application, and any supporting data furnished by the applicant;

(2) The draft remedial action plan or notice of intent to deny;

(3) The fact sheet and all documents cited therein (material readily available at the department or published material that is generally available need not be physically included, as long as it is specifically referred to in the fact sheet); and

(4) Any other documents that support the decision to approve or deny the remedial action plan; and

c. Information contained in subdivision b must be available for review by the public upon request.

4. Procedures for public comment.

a. The department must:

(1) Send notice to the owner or operator of the intention to approve or deny the remedial action plan application and send the owner or operator a copy of the fact sheet;

(2) Publish a notice of the intention to approve or deny the remedial action plan application in a major local newspaper of general circulation;

(3) Broadcast the intention to approve or deny the remedial action plan application over a local radio station; and

(4) Send a notice of the intention to approve or deny the remedial action plan application to each unit of local government having jurisdiction over the area in which the site is located, and to each state agency having any authority under state law with respect to any construction or operations at the site.

b. The notice required by subdivision a must provide an opportunity for the public to submit written comments on the draft remedial action plan or notice of intent to deny within at least forty-five days.

c. The notice required by subdivision a must include:

(1) The name and address of the office processing the remedial action plan application;

(2) The name and address of the remedial action plan applicant, and if different, the remediation waste management site or activity the remedial action plan will regulate;

(3) A brief description of the activity the remedial action plan will regulate;

(4) The name, address, and telephone number of the department's person from whom interested persons may obtain further information, including copies of the draft remedial action plan or notice of intent to deny, fact sheet, and the remedial action plan application;

(5) A brief description of the comment procedures in this subsection, and any other procedures by which the public may participate in the remedial action plan decision;

(6) If a hearing is scheduled, the date, time, location, and purpose of the hearing;

(7) If a hearing is not scheduled, a statement of procedures to request a hearing;

(8) The location of additional information and times when it will be open for public inspection; and

(9) Any additional information the department considers necessary or proper.

d. If, within the comment period, the department receives written notice of opposition to the intention to approve or deny the remedial action plan application and a request for a hearing, the department must hold an informal public hearing to discuss issues relating to the approval or denial of the remedial action plan application. The department may also determine on the department's own initiative that an informal hearing is appropriate. The hearing must include an opportunity for any person to present written or oral comments. Whenever possible, the department must schedule this hearing at a location convenient to the nearest population center to the remediation waste management site and give notice according to the requirements in subdivision a. This notice must, at a minimum, include the information required by subdivision c and:

(1) Reference to the date of any previous public notices relating to the remedial action plan application;

(2) The date, time, and place of the hearing; and

(3) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

5. Basis for final decision.

- a. The department must consider and respond to any significant comments raised during the public comment period, or during any hearing on the draft remedial action plan or notice of intent to deny, and revise the draft remedial action plan based on those comments, as appropriate.
- b. If the department determines that the remedial action plan includes the information and terms and conditions required in subsection 2, then the department will issue a final decision approving the remedial action plan and, in writing, notify the owner or operator and all commenters on the draft remedial action plan that the remedial action plan application has been approved.
- c. If the department determines that the remedial action plan does not include the information required in subsection 2, then the department will issue a final decision denying the remedial action plan and, in writing, notify the owner or operator and all commenters on the draft remedial action plan that the remedial action plan application has been denied.
- d. If the department's final decision is that the tentative decision to deny the remedial action plan application was incorrect, the department will withdraw the notice of intent to deny and proceed to prepare a draft remedial action plan, according to the requirements in sections 33.1-24-06-30 through 33.1-24-06-35.
- e. When the department issues a final remedial action plan decision, the final decision must refer to the procedures for appealing the decision under subsection 6.
- f. The department shall maintain the following documents:
 - (1) All comments received during the public comment period;
 - (2) Tapes or transcripts of any hearings;
 - (3) Any written materials submitted at these hearings;
 - (4) The responses to comments;
 - (5) Any new material placed in the record since the draft remedial action plan was issued;
 - (6) Any other documents supporting the remedial action plan; and
 - (7) A copy of the final remedial action plan.
- g. The department must make information available for review by the public upon request.

6. Administrative appeal process of the department's decision to approve or deny a remedial action plan application.

- a. Any commenter on the draft remedial action plan or notice of intent to deny, or any participant in any public hearing on the draft remedial action plan, may appeal the department's decision to approve or deny the remedial action plan application. Any person who did not file comments, or did not participate in any public hearing on the draft remedial action plan, may petition for administrative review only to the extent of the changes from the draft to the final remedial action plan decision. Appeals of remedial action plans may be made to the same extent as for final permit decisions under section 33.1-24-07-11. Instead of the notice required under subsection 3 of section 33.1-24-07-14, and section 33.1-24-07-06, the department will give public notice of any

grant of review of remedial action plans through the same means used to provide notice under subsection 4 of section 33.1-24-06-32. The notice will include:

- (1) The briefing schedule for the appeal as provided by the department;
- (2) A statement that any interested person may file an amicus brief with the department; and
- (3) The information specified in subdivision c of subsection 4, as appropriate.

b. This appeal is a prerequisite to seeking judicial review of these department actions.

7. Effective date of a remedial action plan. A remedial action plan becomes effective thirty days after the department notifies the owner or operator and all commenters that the remedial action plan is approved unless:

- a. The department specifies a later effective date in the final decision;
- b. The owner or operator or another person has appealed the remedial action plan under subsection 6 (if the remedial action plan is appealed, and the request for review is granted under subsection 6, conditions of the remedial action plan are stayed according to section 33.1-24-07-12); or
- c. No commenters requested a change in the draft remedial action plan, in which case the remedial action plan becomes effective immediately when it is issued.

8. The owner or operator may not begin physical construction of new units permitted under the remedial action plan for treating, storing, or disposing of hazardous remediation waste before receiving a finally effective remedial action plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-33. Modification, revocation, and reissuance or termination of a remedial action plan.

1. In the remedial action plan, the department must specify, either directly or by reference, procedures for future modifications, revocations and reissuance, or terminations of the remedial action plan. These procedures must provide adequate opportunities for public review and comment on any modification, revocation and reissuance, or termination that would significantly change the management of the remediation waste, or that otherwise merits public review and comment. If the remedial action plan has been incorporated into a traditional hazardous waste permit, as allowed under subdivision c of subsection 2 of section 33.1-24-06-30, then the remedial action plan will be modified according to the applicable requirements in sections 33.1-24-06-11, 33.1-24-06-12, and 33.1-24-06-14, revoked and reissued according to the applicable requirements in sections 33.1-24-06-12 and 33.1-24-06-13, or terminated according to the applicable requirements of section 33.1-24-06-13.

2. Modifications by the department.

- a. The department may modify the final remedial action plan on the department's own initiative only if one or more of the following reasons exist. If one or more of these reasons do not exist, then the department will not modify the final remedial action plan, except at the request of the owner or operator. Reasons for modification are:

- (1) The owner or operator made material and substantial alterations or additions to the activity that justify applying different conditions;
- (2) The department finds new information that was not available at the time of remedial action plan issuance and would have justified applying different remedial action plan conditions at the time of issuance;
- (3) The standards or regulations on which the remedial action plan was based have changed because of new or amended statutes, standards, or regulations, or by judicial decision after the remedial action plan was issued;
- (4) If the remedial action plan includes any schedules of compliance, the department may find reasons to modify the compliance schedule, such as an act of God, strike, flood, or materials shortage or other events over which the owner or operator have little or no control and for which there is no reasonably available remedy;
- (5) The owner or operator is not in compliance with conditions of the remedial action plan;
- (6) The owner or operator failed in the application or during the remedial action plan issuance process to disclose fully all relevant facts, or the owner or operator misrepresented any relevant facts at the time;
- (7) The department has determined that the activity authorized by the remedial action plan endangers human health or the environment and can only be remedied by modifying; or
- (8) The owner or operator have notified the department (as required in the remedial action plan under subdivision c of subsection 12 of section 33.1-24-06-04) of a proposed transfer of a remedial action plan.

b. Notwithstanding any other provision in this subsection, when the department reviews a remedial action plan for a land disposal facility under subsection 6, the department may modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in chapters 33.1-24-01 through 33.1-24-04, 33.1-24-06, 33.1-24-07, sections 33.1-24-05-01 through 33.1-24-05-249, 33.1-24-05-300 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-929.

c. The department will not reevaluate the suitability of the facility location at the time of remedial action plan modification unless new information or standards indicate that a threat to human health or the environment exists that was unknown when the remedial action plan was issued.

3. Revocation and reissuance of a remedial action plan.

a. The department may revoke and reissue the final remedial action plan on the department's own initiative only if one or more reasons for revocation and reissuance exist. If one or more reasons do not exist, then the department will not modify or revoke and reissue the final remedial action plan, except at the request of the owner or operator. Reasons for modification or revocation and reissuance are the same as the reasons listed for remedial action plan modifications in paragraphs 5 through 8 of subdivision a of subsection 2 if the department determines that revocation and reissuance of the remedial action plan is appropriate.

b. The department will not reevaluate the suitability of the facility location at the time of remedial action plan revocation and reissuance, unless new information or standards

indicate that a threat to human health or the environment exists that was unknown when the remedial action plan was issued.

4. Termination or denial of a renewal application of a remedial action plan. The department may terminate the final remedial action plan on the department's own initiative, or deny the renewal application for the same reasons as those listed for remedial action plan modifications in paragraphs 5 through 7 of subdivision a of subsection 2 if the department determines that termination of the remedial action plan or denial of the remedial action plan renewal application is appropriate.
5. Administrative appeal of a decision to deny a modification, revocation and reissuance, or termination of a remedial action plan.
 - a. Any commenter on the modification, revocation and reissuance, or termination, or any person who participated in any hearing on these actions, may appeal the department's decision to approve a modification, revocation and reissuance, or termination of the remedial action plan, according to subsection 6 of section 33.1-24-06-32. Any person who did not file comments or did not participate in any public hearing on the modification, revocation and reissuance, or termination may petition for administrative review only of the changes from the draft to the final remedial action plan decision.
 - b. Any commenter on the modification, revocation and reissuance, or termination, or any person who participated in any hearing on these actions, may informally appeal the department's decision to deny a request for modification, revocation and reissuance, or termination to the department. Any person who did not file comments, or did not participate in any public hearing on the modification, revocation and reissuance, or termination may petition for administrative review only of the changes from the draft to the final remedial action plan decision.
 - c. The process for informal appeals of remedial action plans is as follows:
 - (1) The person appealing the decision must send a letter to the department. The letter must briefly set forth the relevant facts.
 - (2) The department has sixty days after receiving the letter to act on it.
 - (3) If the department does not take action on the letter within sixty days after receiving it, the appeal shall be considered denied.
 - d. This informal appeal is a prerequisite to seeking judicial review of these department actions.
6. Expiration of a remedial action plan. Remedial action plans are effective for a fixed term of five years. Every five years any remedial action plan for hazardous waste land disposal must be modified as necessary to assure that the owner or operator continues to comply with currently applicable requirements in North Dakota Century Code sections 23.1-04-05 and 23.1-04-08, and take into account improvements in technology as well as applicable rules.
7. Renewal. Any facility with an effective remedial action plan shall submit a new application at least one hundred eighty days before the expiration date of the effective remedial action plan unless permission for a later date has been granted by the department (the department shall not grant permission for applications to be submitted later than the expiration date of the existing remedial action plan). The owner or operator must follow the process for application and issuance of remedial action plans in sections 33.1-24-06-30 through 33.1-24-06-35.
8. Continuance of an expiring remedial action plan. The conditions of an expired remedial action plan continue in force until the effective date of a new remedial action plan if:

- a. The owner or operator has submitted a timely application which is a complete application for a new remedial action plan; and
- b. The department, through no fault of the owner or operator, does not issue a new remedial action plan with an effective date on or before the expiration date of the previous remedial action plan (for example, when issuance is impractical due to time or resource constraints) or the denial of the remedial action plan application.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-34. Remedial action plan operations.

1. Recordkeeping requirements. The owner or operator is required to keep records of:

- a. All data used to complete remedial action plan applications and any supplemental information that the owner or operator submits for a period of at least three years from the date the application is signed; and
- b. Any operating records and other records the department requires the owner or operator to maintain as a condition of the remedial action plan.

2. Time period computation.

- a. Any time period scheduled to begin on the occurrence of an act or event must begin on the day after the act or event. (For example, if the remedial action plan specifies that the owner or operator must close a staging pile within one hundred eighty days after the operating term for that staging pile expires, and the operating term expires on June first, then June second counts as day one of the one hundred eighty days, and the owner or operator would have to complete closure by November twenty-eighth.)
- b. Any time period scheduled to begin before the occurrence of an act or event must be computed so that the period ends on the day before the act or event. (For example, if the owner or operator is transferring ownership or operational control of the site, and transfers the remedial action plan to the new owner or operator, the new owner or operator must submit a revised remedial action plan application no later than ninety days before the scheduled change. Therefore, if the owner or operator plans to change ownership on January first, the new owner or operator must submit the revised remedial action plan application no later than October third, so that the ninetieth day would be December thirty-first.)
- c. If the final day of any time period falls on a weekend or legal holiday, the time period must be extended to the next working day. (For example, if the owner or operator wishes to appeal the department's decision to modify the remedial action plan, then the owner or operator must petition the department within thirty days after the department has issued the final remedial action plan decision. If the thirtieth day falls on Sunday, then the owner or operator may submit the appeal by the Monday after. If the thirtieth day falls on July fourth, then the owner or operator may submit the appeal by July fifth.)
- d. Whenever a party or interested person has the right to or is required to act within a prescribed period after the service of notice or other paper upon them by mail, three days must be added to the prescribed term. (For example, if the owner or operator wishes to appeal the department's decision to modify the remedial action plan, then the owner or operator must petition the department within thirty days after the department has issued the final remedial action plan decision. However, if the department notifies the owner or

operator of the decision by mail, then the owner or operator may have thirty-three days to petition the department.)

3. Transfer of a remedial action plan to a new owner or operator.

- a. An owner or operator may transfer the remedial action plan to a new owner or operator, provided the owner or operator follows the requirements specified in the remedial action plan for modification to identify the new owner or operator, and incorporate any other necessary requirements with prior approval of the department. These modifications do not constitute "significant" modifications for purposes of subsection 1 of section 33.1-24-05-33. The new owner or operator must submit a revised remedial action plan application no later than ninety days before the scheduled change along with a written agreement containing a specific date for transfer of remedial action plan responsibility between the owner or operator and the new owner or operator.
- b. When a transfer of ownership or operational control occurs, the owner or operator as the old owner or operator must comply with the applicable requirements in sections 33.1-24-05-74 through 33.1-24-05-88 until the new owner or operator has demonstrated compliance with the financial assurance requirements. The new owner or operator must demonstrate compliance with sections 33.1-24-05-74 through 33.1-24-05-88 within six months of the date of the change in ownership or operational control of the facility or remediation waste management site. When the new owner or operator demonstrates compliance with sections 33.1-24-05-74 through 33.1-24-05-88 to the department, the department will notify the old owner or operator that that person no longer needs to comply with sections 33.1-24-05-74 through 33.1-24-05-88 as of the date of demonstration.

4. Noncompliance and program reporting by the department. The department must report noncompliance with remedial action plans according to the provisions of section 33.1-24-06-15.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-15; S.L. 2017, ch. 199, § 19

33.1-24-06-35. Remedial action plans for offsite locations.

For offsite locations:

1. The owner or operator may request a remedial action plan for remediation waste management activities at a location removed from the area where the remediation wastes originated if the owner or operator believes such a location would be more protective than the contaminated area or areas in close proximity.
2. If the department determines that an alternative location, removed from the area where the remediation waste originated, is more protective than managing remediation waste at the area of contamination or areas in close proximity, then the department may approve a remedial action plan for this alternative location.
3. The owner or operator must request the remedial action plan, and the department will approve or deny the remedial action plan, according to the procedures and requirements in sections 33.1-24-06-30 through 33.1-24-06-35.
4. A remedial action plan for an alternative location must also meet the following requirements, which the department must include in the remedial action plan for such locations:

- a. The remedial action plan for the alternative location must be issued to the person responsible for the cleanup from which the remediation wastes originated;
 - b. The remedial action plan is subject to the expanded public participation requirements in sections 33.1-24-07-25 through 33.1-24-07-27; and
 - c. The remedial action plan is subject to the public notice requirements in subsection 3 of section 33.1-24-07-06.
5. These alternative locations are remediation waste management sites and retain the following benefits of remediation waste management sites:
- a. Exclusion from facilitywide corrective action under section 33.1-24-05-58; and
 - b. Application of subsection 10 of section 33.1-24-05-01 in lieu of sections 33.1-24-05-02 through 33.1-24-05-36.

History: Effective January 1, 2019.

33.1-24-06-45. Standardized permit - General information.

A hazardous waste standardized permit is a special type of permit that authorizes an owner or operator to manage hazardous waste. A standardized permit is issued under sections 33.1-24-07-40 through 33.1-24-07-54 and sections 33.1-24-06-45 through 33.1-24-06-85.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-46. [Reserved].

33.1-24-06-47. [Reserved].

33.1-24-06-48. Eligibility for a standardized permit.

1. The owner or operator may be eligible for a standardized permit if the facility:

- a. Generates hazardous waste and then stores or nonthermally treats the hazardous waste onsite in containers, tanks, or containment buildings; or
- b. Receives hazardous waste generated offsite by a generator under the same ownership as the receiving facility, and then stores or nonthermally treats the hazardous waste in containers, tanks, or containment buildings.
- c. The department will inform the owner or operator of eligibility when a decision is made on the permit application.

2. [Reserved].

33.1-24-06-52. Conditions applicable to a standardized permit.

The following requirements of chapter 33.1-24-06 apply to a standardized permit:

1. Sections 33.1-24-06-01, 33.1-24-06-09, 33.1-24-06-10, 33.1-24-06-15, 33.1-24-01-04, and subdivision a of subsection 3 of section 33.1-24-01-05.
2. Section 33.1-24-06-03, subsection 2 of section 33.1-24-06-13, and subsection 1 of section 33.1-24-06-17, and 33.1-24-01-16.
3. Sections 33.1-24-06-04, 33.1-24-06-05, 33.1-24-06-07, and 33.1-24-06-08.
4. Sections 33.1-24-06-11, 33.1-24-06-12, and subsection 1 of section 33.1-24-06-13.
5. Sections 33.1-24-06-02 and 33.1-24-06-06.
6. Subsection 6 of section 33.1-24-06-19.
7. Section 33.1-24-06-16.
8. Sections 33.1-24-06-45 through 33.1-24-06-85.

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-57. Standardized permit application.

The information in subsections 1 through 10 will be the basis of the standardized permit application. This information must be submitted to the department when submitting a notice of intent under subsection 2 of section 33.1-24-07-42 requesting coverage under a hazardous waste standardized permit:

1. The part A information described in subsection 1 of section 33.1-24-06-17.
2. A meeting summary and other materials required by section 33.1-24-07-25.

3. Documentation of compliance with the location standards of section 33.1-24-05-968.
4. Information that allows the department to carry out obligations under other state and federal laws required in section 33.1-24-06-09.
5. Solid waste management unit information required by subsection 4 of section 33.1-24-06-17.
6. A certification meeting the requirements of section 33.1-24-06-62, and an audit of the facility's compliance status with sections 33.1-24-05-950 through 33.1-24-05-1149 as required by section 33.1-24-06-62.
7. A closure plan prepared in accordance with sections 33.1-24-05-1040 through 33.1-24-05-1047.
8. The most recent closure cost estimate for the facility prepared under section 33.1-24-05-1062, and a copy of the documentation required to demonstrate financial assurance under section 33.1-24-05-1063. For a new facility, the required documentation must be compiled sixty days before the initial receipt of hazardous wastes.
9. If wastes generated offsite are managed, the waste analysis plan.
10. If waste generated from offsite are managed, documentation showing that the waste generator and the offsite facility are under the same ownership.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-58. [Reserved].

33.1-24-06-59. [Reserved].

33.1-24-06-60. [Reserved].

33.1-24-06-61. [Reserved].

33.1-24-06-62. Certification requirements.

A signed certification based on an audit of the facility's compliance with sections 33.1-24-05-950 through 33.1-24-05-1149 must be submitted.

1. The certification must read: I certify under penalty of law that:

- a. I have personally examined and am familiar with the report containing the results of an audit conducted of my facility's compliance status with sections 33.1-24-05-950 through 33.1-24-05-1149, which supports this certification. Based on my inquiry of those

individuals immediately responsible for conducting the audit and preparing the report, I believe that (include paragraph 1 and 2, whichever applies):

(1) My existing facility complies with all applicable requirements of sections 33.1-24-05-950 through 33.1-24-05-1149 and will continue to comply until the expiration of the permit; or

(2) My facility has been designed, and will be constructed and operated to comply with all applicable requirements of sections 33.1-24-05-950 through 33.1-24-05-1149, and will continue to comply until expiration of the permit.

b. I will make all information that I am required to maintain at my facility by sections 33.1-24-06-65 through 33.1-24-06-80 readily available for review by the department and the public; and

c. I will continue to make all information required by sections 33.1-24-06-65 through 33.1-24-06-80 available until the permit expires. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violation.

2. This certification must be signed following the requirements of subdivisions a through c of subsection 1 of section 33.1-24-06-03.

3. This certification must be based upon an audit that the owner or operator conducted of the facility's compliance status with sections 33.1-24-05-950 through 33.1-24-05-1149. A written audit report, signed and certified as accurate by the auditor, must be submitted to the department with the subsection 2 of section 33.1-24-07-42 notice of intent.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-63. [Reserved].

33.1-24-06-64. [Reserved].

33.1-24-06-65. Recordkeeping requirements.

The owner or operator must keep the following information at the facility:

1. A general description of the facility.

2. Chemical and physical analyses of the hazardous waste and hazardous debris handled at the facility. At a minimum, these analyses must contain all the information for treating or storing the wastes properly under the requirements of sections 33.1-24-05-950 through 33.1-24-05-1149.

3. A copy of the waste analysis plan required by subsection 2 of section 33.1-24-05-963.

4. A description of the security procedures and equipment required by section 33.1-24-05-964.

5. A copy of the general inspection schedule required by subsection 2 of section 33.1-24-05-965. The inspection schedule must include applicable requirements of sections 33.1-24-05-1084,

33.1-24-05-1103, 33.1-24-05-1105, 33.1-24-05-403, 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-428, and 33.1-24-05-458.

6. A justification of any modification of the preparedness and prevention requirements of sections 33.1-24-05-980 through 33.1-24-05-986.

7. A copy of the contingency plan required by sections 33.1-24-05-990 through 33.1-24-05-998.

8. A description of procedures, structures, or equipment used at the facility to:

a. Prevent hazards in unloading operations (for example, use ramps, special forklifts);

b. Prevent runoff from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding (for example, with berms, dikes, trenches);

c. Prevent contamination of water supplies;

d. Mitigate effects of equipment failure and power outages;

e. Prevent undue exposure of personnel to hazardous waste (for example, requiring protective clothing); and

f. Prevent releases to atmosphere.

9. A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required by section 33.1-24-05-967.

10. Traffic pattern, estimated volume (number, types of vehicles) and control (for example, show turns across traffic lanes, and stacking lanes; describe access road surfacing and load bearing capacity; show traffic control signals).

11. [Reserved].

12. An outline of both the introductory and continuing training programs used to prepare employees to operate or maintain the facility safely as required by section 33.1-24-05-966. A brief description of how training will be designed to meet actual job tasks under subdivision b of subsection 1 of section 33.1-24-05-966 requirements.

13. A copy of the closure plan required by section 33.1-24-05-1042. Include, where applicable, as part of the plans, specific requirements in sections 33.1-24-05-1086, 33.1-24-05-1111, and 33.1-24-05-1138.

14. [Reserved].

15. The most recent closure cost estimate for the facility prepared under section 33.1-24-05-1062 and a copy of the documentation required to demonstrate financial assurance under section 33.1-24-05-1063. For a new facility, the required documentation must be compiled sixty days before the initial receipt of hazardous wastes.

16. [Reserved].

17. Where applicable, a copy of the insurance policy or other documentation that complies with the liability requirements of section 33.1-24-05-1067. For a new facility, documentation showing the amount of insurance meeting the specification of subsection 1 of section 33.1-24-05-1067 that is planned to be in effect before initial receipt of hazardous waste for treatment or storage.

18. [Reserved].

19. A topographic map showing a distance of one thousand feet around the facility at a scale of two and one-half centimeters [1 inch] equal to not more than sixty-one meters [200 feet]. The map must show elevation contours. The contour interval must show the pattern of surface water flow in the vicinity of and from each operational unit of the facility. For example, contours with an interval of one and one-half meters [5 feet], if relief is greater than six and one-tenth meters [20 feet], or an interval of six-tenths meters [2 feet], if relief is less than six and one-tenth meters [20 feet]. If the facility is in a mountainous area, use large contour intervals to adequately show topographic profiles of facilities. The map must clearly show the following:

- a. Map scale and date;
- b. One hundred-year floodplain area;
- c. Surface waters, including intermittent streams;
- d. Surrounding land uses (residential, commercial, agricultural, recreational);
- e. A wind rose (for example, prevailing wind speed and direction);
- f. Orientation of the map (north arrow);
- g. Legal boundaries of the facility site;
- h. Access control (fences, gates);
- i. Injection and withdrawal wells both onsite and offsite;
- j. Buildings; treatment, storage, or disposal operations; or other structures (recreation areas, runoff control systems, access and internal roads, storm, sanitary, and process sewerage systems, loading and unloading areas, fire control facilities);
- k. Barriers for drainage or flood control; and
- l. Location of operational units within the facility, where hazardous waste is (or will be) treated or stored (including equipment cleanup areas).

History: Effective January 1, 2019.

33.1-24-06-68. [Reserved].

33.1-24-06-69. [Reserved].

33.1-24-06-70. Information required for containers.

If hazardous waste is stored or treated in containers, the following information must be kept at the facility:

1. A description of the containment system to demonstrate compliance with the container storage area provisions of section 33.1-24-05-1083. This description must show the following:
 - a. Basic design parameters, dimensions, and materials of construction;
 - b. How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system;
 - c. Capacity of the containment system relative to the number and volume of containers to be stored;
 - d. Provisions for preventing or managing run-on; and
 - e. How accumulated liquids can be analyzed and removed to prevent overflow.
2. For storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with subsection 3 of section 33.1-24-05-1083, including:
 - a. Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and
 - b. A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids.
3. Sketches, drawings, or data demonstrating compliance with section 33.1-24-05-1084 (location of buffer zone (fifteen meters or fifty feet) and containers holding ignitable or reactive wastes) and subsection 3 of section 33.1-24-05-1085 (location of incompatible wastes in relation to each other), where applicable.
4. Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with subsections 1 and 2 of section 33.1-24-05-1085 and subsections 2 and 3 of section 33.1-24-05-967.
5. Information on air emission control equipment as required by section 33.1-24-06-80.

33.1-24-06-71. [Reserved].

33.1-24-06-72. [Reserved].

33.1-24-06-73. Information required for tanks.

If hazardous waste is stored or treated in tanks, the following information must be kept at the facility:

1. A written assessment that is reviewed and certified by a qualified professional engineer on the structural integrity and suitability for handling hazardous waste of each tank system, as required under sections 33.1-24-05-1101 and 33.1-24-05-1102.
2. Dimensions and capacity of each tank.
3. Description of feed systems, safety cutoff, bypass systems, and pressure controls (for example, vents).
4. A diagram of piping, instrumentation, and process flow for each tank system.
5. A description of materials and equipment used to provide external corrosion protection, as required under section 33.1-24-05-1101.
6. For new tank systems, a detailed description of how the tank systems will be installed in compliance with sections 33.1-24-05-1102 and 33.1-24-05-1104.
7. Detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of sections 33.1-24-05-1105 and 33.1-24-05-1106.
8. [Reserved].
9. Description of controls and practices to prevent spills and overflows, as required under section 33.1-24-05-1108.
10. For tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with the requirements of sections 33.1-24-05-1112 and 33.1-24-05-1113.
11. Information on air emission control equipment as required by section 33.1-24-06-80.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-74. [Reserved].

33.1-24-06-75. [Reserved].

33.1-24-06-76. Information required for equipment.

If the facility has equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 applies, the following information must be kept at the facility:

1. For each piece of equipment to which sections 33.1-24-05-420 through 33.1-24-05-449 applies:
 - a. Equipment identification number and hazardous waste management unit identification;
 - b. Approximate locations within the facility (for example, identify the hazardous waste management unit on a facility plot plan);

- c. Type of equipment (for example, a pump or a pipeline valve);
- d. Percent by weight of total organics in the hazardous waste stream at the equipment;
- e. Hazardous waste state at the equipment (for example, gas or vapor, or both, or liquid);
and
- f. Method of compliance with the standard (for example, monthly leak detection and repair,
or equipped with dual mechanical seals).

2. For facilities that cannot install a closed-vent system and control device to comply with sections 33.1-24-05-420 through 33.1-24-05-449 on the effective date that the facility becomes subject to sections 33.1-24-05-420 through 33.1-24-05-449 provisions, an implementation schedule as specified in subdivision b of subsection 1 of section 33.1-24-05-403.

3. Documentation that demonstrates compliance with the equipment standards in sections 33.1-24-05-422 and 33.1-24-05-429. This documentation must contain the records required under section 33.1-24-05-434.

4. Documentation to demonstrate compliance with section 33.1-24-05-430 must include the following information:

- a. A list of all information references and sources used in preparing the documentation.
- b. Records, including the dates, of each compliance test required by subsection 10 of section 33.1-24-05-403.
- c. A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions" (incorporated by reference in section 33.1-24-01-05) or other engineering texts acceptable to the department that present basic control device design information. The design analysis must address the vent stream characteristics and control device operation parameters as specified in paragraph 3 of subdivision d of subsection 2 of section 33.1-24-05-405.
- d. A statement signed by the owner or operator and dated certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonable expected to occur.
- e. A statement signed by the owner or operator and dated certifying that the control device is designed to operate at an efficiency of ninety-five weight percent or greater.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-06-77. [Reserved].

33.1-24-06-78. [Reserved].

33.1-24-06-79. [Reserved].

33.1-24-06-80. Information required for air emissions control.

If the facility has air emission control equipment subject to sections 33.1-24-05-450 through 33.1-24-05-474, the following information must be kept at the facility:

1. Documentation for each floating roof cover installed on a tank subject to subdivisions a and b of subsection 4 of section 33.1-24-05-454 that includes information the owner or operator prepared or the cover manufacturer or vendor, or both, provided describing the cover design, and the owner's or operator's certification that the cover meets applicable design specifications listed in subdivision a of subsection 5 or subdivision a of subsection 6 of section 33.1-24-05-454.
2. Identification of each container area subject to the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 and the owner's or operator's certification that the requirements of sections 33.1-24-05-450 through 33.1-24-05-474 are met.
3. Documentation for each enclosure used to control air pollutant emissions from tanks or containers under the requirements of subdivision e of subsection 4 of section 33.1-24-05-454 or paragraph 2 of subdivision a of subsection 5 of section 33.1-24-05-456. The owner or operator must include records for the most recent set of calculations and measurements performed to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.
4. [Reserved].
5. Documentation for each closed-vent system and control device installed under the requirements of section 33.1-24-05-457 that includes design and performance information as specified in paragraphs 3 and 4 of subdivision cc of subsection 2 of section 33.1-24-06-17.
6. An emission monitoring plan for both Method 21 in 40 CFR part 60, appendix A, and control device monitoring methods. This plan must include the following information--monitoring points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

33.1-24-06-100. Options for incinerators, cement kilns, lightweight aggregate kilns, solid fuel boilers, liquid fuel boilers, and hydrochloric acid production furnaces to minimize emissions from startup, shutdown, and malfunction events.

1. Facilities with existing permits.

a. Revisions to permit conditions after documenting compliance with maximum achievable control technology. The owner or operator of a hazardous waste permitted incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace may request that the department address permit conditions that minimize emissions from startup, shutdown, and malfunction events under any of the following options when requesting removal of permit conditions that are no longer applicable according to subsection 2 of section 33.1-24-05-144 and subsection 2 of section 33.1-24-05-525:

(1) Retain relevant permit conditions. Under this option, the department will:

(a) Retain permit conditions that address releases during startup, shutdown, and malfunction events, including releases from emergency safety vents, as these events are defined in the facility's startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2); and

(b) Limit applicability of those permit conditions only to when the facility is operating under the facility's startup, shutdown, and malfunction plan.

(2) Revise relevant permit conditions.

(a) Under this option, the department will:

[1] Identify a subset of relevant existing permit requirements, or develop alternative permit requirements, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information, including the source's startup, shutdown, and malfunction plan, design, and operating history.

[2] Retain or add these permit requirements to the permit to apply only when the facility is operating under the facility's startup, shutdown, and malfunction plan.

(b) Changes that may significantly increase emissions.

[1] The permittee must notify the department in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. The permittee must notify the department of such changes within five days of making such changes. The permittee must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

[2] The department may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either:

[a] Upon permit renewal, or, if warranted;

[b] By modifying the permit under subsection 1 of section 33.1-24-06-12 or section 33.1-24-06-14.

[c] Remove permit conditions. Under this option:

The owner or operator must document that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the department under 40 CFR 63.1206(c)(2)(ii)(B); and

The department will remove permit conditions that are no longer applicable according to subsection 2 of section 33.1-24-05-144 and subsection 2 of section 33.1-24-05-525.

b. Addressing permit conditions upon permit reissuance. The owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that has conducted a comprehensive performance test and submitted to the department a notification of compliance documenting compliance with the standards of 40 CFR part 63, subpart EEE, may request in the application to reissue the permit for the combustion unit that the department control emissions from startup, shutdown, and malfunction events under any of the following options:

(1) Hazardous waste option A. Under this option, the department will:

(a) Include, in the permit, conditions that ensure compliance with subsections 1 and 3 of section 33.1-24-05-149 or subdivision a of subsection 5 of section 33.1-24-05-527 and paragraph 3 of subdivision b of subsection 5 of section 33.1-24-05-527 to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, including releases from emergency safety vents; and

(b) Specify that these permit requirements apply only when the facility is operating under the facility's startup, shutdown, and malfunction plan; or

(2) Hazardous waste option B.

(a) Under this option, the department will:

[1] Include in the permit conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information, including the source's startup, shutdown, and malfunction plan, design, and operating history; and

[2] Specify that these permit requirements apply only when the facility is operating under the facility's startup, shutdown, and malfunction plan.

(b) Changes that may significantly increase emissions.

[1] The permittee must notify the department in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. The permittee must notify the department of such changes within five days of making such changes. The permittee must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

[2] The department may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either:

[a] Upon permit renewal, or, if warranted;

[b] By modifying the permit under subsection 1 of section 33.1-24-06-12 or section 33.1-24-06-14; or

[c] Clean Air Act option. Under this option:

The owner or operator must document that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the department under 40 CFR 63.1206(c)(2)(ii)(B); and

The department will omit from the permit conditions that are not applicable under subsection 2 of section 33.1-24-05-144 and subsection 2 of section 33.1-24-05-525.

2. Interim status facilities.

a. Interim status operations. In compliance with subsection 5 of section 33.1-24-06-16 and subsection 2 of section 33.1-24-05-525, the owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of subsection 5 of section 33.1-24-06-16 or sections 33.1-24-05-191 through 33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, and 33.1-24-05-820 through 33.1-24-05-929 may control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options after conducting a comprehensive performance test and submitting to the department a notification of compliance documenting compliance with the standards of 40 CFR part 63, subpart EEE:

(1) Hazardous waste option. Under this option, the owner or operator continues to comply with the interim status emission standards and operating requirements of subsection 5 of section 33.1-24-06-16 or sections 33.1-24-05-191 through

33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, and 33.1-24-05-820 through 33.1-24-05-929 relevant to control of emissions from startup, shutdown, and malfunction events. Those standards and requirements apply only during startup, shutdown, and malfunction events; or

(2) Clean Air Act option. Under this option, the owner or operator is exempt from the interim status standards of subsection 5 of section 33.1-24-06-16 or sections 33.1-24-05-191 through 33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, and 33.1-24-05-820 through 33.1-24-05-929 relevant to control of emissions of toxic compounds during startup, shutdown, and malfunction events upon submission of written notification and documentation to the department that the startup, shutdown, and malfunction plan required under 40 CFR 63.1206(c)(2) has been approved by the department under 40 CFR 63.1206(c)(2)(ii)(B).

b. Operations under a subsequent hazardous waste permit. When an owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of subsection 5 of section 33.1-24-06-16 or sections 33.1-24-05-191 through 33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, and 33.1-24-05-820 through 33.1-24-05-949 submits a hazardous waste permit application, the owner or operator may request that the department control emissions from startup, shutdown, and malfunction events under any of the options provided by subitems a, b, or c of item 2 of subparagraph b of paragraph 2 of subdivision b of subsection 1.

3. **New units.** Hazardous waste incinerator, cement kiln, light weight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace units that become subject to hazardous waste permit requirements after October 12, 2005, must control emissions of toxic compounds during startup, shutdown, and malfunction events, under either of the following options:

a. Comply with the requirements specified in 40 CFR 63.1206(c)(2); or

b. Request to include in the hazardous waste permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan and design. The department will specify that these permit conditions apply only when the facility is operating under the facility's startup, shutdown, and malfunction plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

APPENDIX I
to Section 33.1-24-06-14 -
Classification of Permit Modification

<u>Modifications</u>	<u>Class</u>
<u>A. General Permit Provisions</u>	
1. <u>Administrative and informational changes.</u>	<u>1</u>
2. <u>Correction of typographical errors.</u>	<u>1</u>
3. <u>Equipment replacement or upgrading with functionally equivalent components (for example, pipes, valves, pumps, conveyors, controls).</u>	<u>1</u>
4. <u>Changes in the frequency of or procedures for monitoring, reporting, sampling, or maintenance activities by the permittee:</u>	
a. <u>To provide for more frequent monitoring, reporting, sampling, or maintenance.</u>	<u>1</u>
b. <u>Other changes.</u>	<u>2</u>
5. <u>Schedule of compliance:</u>	
a. <u>Changes in interim compliance dates, with prior approval of the department.</u>	<u>1¹</u>
b. <u>Extension of final compliance date.</u>	<u>3</u>
6. <u>Changes in expiration date of permit to allow earlier permit termination, with prior approval of the department.</u>	<u>1¹</u>
7. <u>Changes in ownership or operational control of a facility, provided the procedures of subsection 2 of section 33.1-24-06-11 are followed.</u>	<u>1¹</u>
8. <u>Changes to remove permit conditions that are no longer applicable (for example, because the standards upon which they are based are no longer applicable to the facility).</u>	<u>1¹</u>
9. <u>Changes to remove permit conditions applicable to a unit excluded under the provisions of section 33.1-24-02-04.</u>	<u>1¹</u>
10. <u>Changes in the expiration date of a permit issued to a facility at which all units are excluded under the provisions of section 33.1-24-02-04.</u>	<u>1¹</u>
<u>B. General Facility Standards</u>	
1. <u>Changes to waste sampling or analysis methods:</u>	
a. <u>To conform with department guidance or regulations.</u>	<u>1</u>
b. <u>To incorporate changes associated with F039 (multisource leachate) sampling or analysis methods.</u>	<u>1</u>
c. <u>To incorporate changes associated with underlying hazardous constituents in ignitable or corrosive wastes.</u>	<u>1¹</u>
d. <u>Other changes.</u>	
2. <u>Changes to analytical quality assurance/control plan:</u>	
a. <u>To conform with department guidance or regulations.</u>	<u>1</u>
b. <u>Other changes.</u>	<u>2</u>

Modifications	Class
3. <u>Changes in procedures for maintaining the operating record.</u>	1
4. <u>Changes in frequency or content of inspection schedules.</u>	2
5. <u>Changes in the training plan:</u>	
a. <u>That affect the type or decrease the amount of training given to employees.</u>	2
b. <u>Other changes.</u>	1
6. <u>Contingency plan:</u>	
a. <u>Changes in emergency procedures (for example, spill or release response procedures).</u>	2
b. <u>Replacement with functionally equivalent equipment, upgrade, or relocate emergency equipment listed.</u>	1
c. <u>Removal of equipment from emergency equipment list.</u>	2
d. <u>Changes in name, address, or telephone number of coordinators or other persons or agencies identified in the plan.</u>	1
7. <u>Construction quality assurance plan:</u>	
a. <u>Changes that the construction quality assurance officer certifies in the operating record will provide equivalent or better certainty that the unit components meet the design specifications.</u>	1
b. <u>Other changes.</u>	2
<u>Note: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change shall be reviewed under the same procedures as the permit modification.</u>	
<u>C. Ground Water Protection</u>	
1. <u>Changes to wells:</u>	
a. <u>Changes in the number, location, depth, or design of upgradient or downgradient wells of permitted ground water monitoring system.</u>	2
b. <u>Replacement of an existing well that has been damaged or rendered inoperable, without change to location, design, or depth of the well.</u>	1
2. <u>Changes in ground water sampling or analysis procedures or monitoring schedule, with prior approval of the department.</u>	1 ¹
3. <u>Changes in statistical procedure for determining whether a statistically significant change in ground water quality between upgradient and downgradient wells has occurred, with prior approval of the department.</u>	1 ¹
4. <u>Changes in point of compliance.</u>	2
5. <u>Changes in indicator parameters, hazardous constituents, or concentration limits (including alternate concentration limits):</u>	
a. <u>As specified in the ground water protection standard.</u>	3
b. <u>As specified in the detection monitoring program.</u>	2
6. <u>Changes to a detection monitoring program as required by subsection 8 of section 33.1-24-05-55, unless specified in this appendix.</u>	2
7. <u>Compliance monitoring program:</u>	

Modifications	Class
a. <u>Addition of compliance monitoring program as required by subdivision d of subsection 7 of section 33.1-24-05-55 and section 33.1-24-05-56.</u>	<u>3</u>
b. <u>Changes to a compliance monitoring program as required by subsection 10 of section 33.1-24-05-56, unless otherwise specified in this appendix.</u>	<u>2</u>
8. <u>Corrective action program:</u>	
a. <u>Addition of a corrective action program as required by subdivision b of subsection 8 of section 33.1-24-05-56 and section 33.1-24-05-57.</u>	<u>3</u>
b. <u>Changes to a corrective action program as required by subsection 8 of section 33.1-24-05-57, unless otherwise specified in this appendix.</u>	<u>2</u>
D. <u>Closure</u>	
1. <u>Changes to the closure plan:</u>	
a. <u>Changes in estimate of maximum extent of operations or maximum inventory of waste onsite at any time during the active life of the facility, with prior approval of the department.</u>	<u>1¹</u>
b. <u>Changes in the closure schedule for any unit, changes in the final closure schedule for the facility, or extension of the closure period, with prior approval of the department.</u>	<u>1¹</u>
c. <u>Changes in the expected year of final closure, where other permit conditions are not changed, with prior approval of the department.</u>	<u>1¹</u>
d. <u>Changes in procedures for decontamination of facility equipment or structures, with prior approval of the department.</u>	<u>1¹</u>
e. <u>Changes in approved closure plan resulting from unexpected events occurring during partial or final closure, unless otherwise specified in this appendix.</u>	<u>2</u>
2. <u>Creation of a new landfill unit as part of closure.</u>	<u>3</u>
3. <u>Addition of the following new units to be used temporarily for closure activities:</u>	
a. <u>Surface impoundments.</u>	<u>3</u>
b. <u>Incinerators.</u>	<u>3</u>
c. <u>Waste piles that do not comply with subsection 3 of section 33.1-24-05-130.</u>	<u>3</u>
d. <u>Waste piles that comply with subsection 3 of section 33.1-24-05-130.</u>	<u>2</u>
e. <u>Tanks or containers (other than specified below).</u>	<u>2</u>
f. <u>Tanks used for neutralization, dewatering, phase separation, or component separation, with prior approval of the department.</u>	<u>1¹</u>
g. <u>Staging piles.</u>	<u>2</u>
E. <u>Postclosure</u>	
1. <u>Changes in name, address, or telephone number of contact in postclosure plan.</u>	<u>1</u>
2. <u>Extension of postclosure care period.</u>	<u>2</u>
3. <u>Reduction in the postclosure care period.</u>	<u>3</u>

Modifications	Class
4. <u>Changes to the expected year of final closure, where other permit conditions are not changed.</u>	1
5. <u>Changes in postclosure plan necessitated by events occurring during the active life of the facility, including partial and final closure.</u>	2
<u>F. Containers</u>	
1. <u>Modification or addition of container units:</u>	
a. <u>Resulting in greater than 25% increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a) below.</u>	3
b. <u>Resulting in up to 25% increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a) below.</u>	2
c. <u>Or treatment processes necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards or to treat wastes to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" with prior approval of the department. This modification may also involve addition of new waste codes or narrative descriptions of wastes. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	1 ¹
2. a. <u>Modification of a container unit without increasing the capacity of the unit.</u>	2
b. <u>Addition of a roof to a container unit without alteration of the containment system.</u>	1
3. <u>Storage of different wastes in containers, except as provided in F(4) below:</u>	
a. <u>That require additional or different management practices from those authorized in the permit.</u>	3
b. <u>That do not require additional or different management practices from those authorized in the permit.</u>	2
<u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u>	
4. <u>Storage or treatment of different wastes in containers:</u>	
a. <u>That require addition of units or change in treatment process or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards, or that are to be treated to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in 40 CFR 268.8(a)(2)(ii) as contained in the most recent revised edition (July 1, 2003). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	1 ¹
b. <u>That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (for example, incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	1 ¹
<u>G. Tanks</u>	

Modifications	Class
1. a. <u>Modification or addition of tank units resulting in greater than 25% increase in the facility's tank capacity, except as provided in G(1)(c), G(1)(d), and G(1)(e) below.</u>	3
b. <u>Modification or addition of tank units resulting in up to 25% increase in the facility's tank capacity, except as provided in G(1)(d) and G(1)(e) below.</u>	2
c. <u>Addition of a new tank that will operate for more than 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.</u>	2
d. <u>After prior approval of the department, addition of a new tank that will operate for up to 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.</u>	1 ¹
e. <u>Modification or addition of tank units or treatment processes necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards or to treat wastes to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in 40 CFR 268.8(a)(2)(ii) as contained in the most recent revised edition (July 1, 2003), with prior approval of the department. This modification may also involve addition of new waste codes. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	1 ¹
2. <u>Modification of a tank unit or secondary containment system without increasing the capacity of the unit.</u>	2
3. <u>Replacement of a tank with a tank that meets the same design standards and has a capacity within +/- 10% of the replaced tank provided:</u> a. <u>The capacity difference is no more than 1,500 gallons;</u> b. <u>The facility's permitted tank capacity is not increased; and</u> c. <u>The replacement tank meets the same conditions in the permit.</u>	1
4. <u>Modification of a tank management practice.</u>	2
5. <u>Management of different wastes in tanks:</u> a. <u>That require additional or different management practices, tank design, different fire protection specifications, or significantly different tank treatment process from that authorized in the permit, except as provided in G(5)(c) below.</u> b. <u>That do not require additional or different management practices, tank design, different fire protection specifications, or significantly different tank treatment process than authorized in the permit, except as provided in G(5)(d).</u>	3 2

Modifications	Class
<p>c. <u>That require addition of units or change in treatment processes or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards or that are to be treated to satisfy (in whole or in part) the standard of "use of practically available technology that yields the greatest environmental benefit" contained in 40 CFR 268.8(a)(2)(ii) as contained in the most recent revised edition (July 1, 2003). The modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u></p>	1 ¹
<p>d. <u>That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (for example, incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u></p>	1
<p><u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u></p>	
<p><u>H. Surface Impoundments</u></p>	
<p>1. <u>Modification or addition of surface impoundment units that result in increasing the facility's surface impoundment storage or treatment capacity.</u></p>	3
<p>2. <u>Replacement of a surface impoundment unit.</u></p>	3
<p>3. <u>Modification of a surface impoundment unit without increasing the facility's surface impoundment storage or treatment capacity and without modifying the unit's liner, leak detection system, or leachate collection system.</u></p>	2
<p>4. <u>Modification of a surface impoundment management practice.</u></p>	2
<p>5. <u>Treatment, storage, or disposal of different wastes in surface impoundments:</u></p>	
<p>a. <u>That require additional or different management practices or different design of the liner or leak detection system than authorized in the permit.</u></p>	3
<p>b. <u>That do not require additional or different management practices or different design of the liner or leak detection system than authorized in the permit.</u></p>	2
<p>c. <u>That are wastes restricted from land disposal that meet the applicable treatment standards or that are treated to satisfy the standard of "use of practically available technology that yields the greatest environmental benefit" contained in 40 CFR 268.8(a)(2)(ii) as contained in the most recent revised edition (July 1, 2003), and provided that the unit meets the minimum technological requirements stated in subdivision b of subsection 8 of section 33.1-24-05-254. This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u></p>	1
<p>d. <u>That are residues from wastewater treatment or incineration, provided that disposal occurs in a unit that meets the minimum technological requirements stated in subdivision b of subsection 8 of section 33.1-24-05-254, and provided further that the surface impoundment has previously received wastes of the same type (for example, incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u></p>	1

Modifications	Class
6. <u>Modifications of unconstructed units to comply with subsection 3 of section 33.1-24-05-119, section 33.1-24-05-126, section 33.1-24-05-127, and subsection 4 of section 33.1-24-05-120.</u>	1 ¹
7. <u>Changes in response action plan:</u>	
a. <u>Increase in action leakage rate.</u>	3
b. <u>Change in a specific response reducing its frequency or effectiveness.</u>	3
c. <u>Other changes.</u>	2
<u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u>	
<u>I. Enclosed Waste Piles. For all waste piles except those complying with subsection 3 of section 33.1-24-05-130, modifications are treated the same as for a landfill. The following modifications are applicable only to waste piles complying with subsection 3 of section 33.1-24-05-130.</u>	
1. <u>Modification or addition of waste pile units:</u>	
a. <u>Resulting in greater than 25% increase in the facility's waste pile storage or treatment capacity.</u>	3
b. <u>Resulting in up to 25% increase in the facility's waste pile storage or treatment capacity.</u>	2
2. <u>Modification of waste pile unit without increasing the capacity of the unit.</u>	2
3. <u>Replacement of a waste pile unit with another waste pile unit of the same design and capacity and meeting all waste pile conditions in the permit.</u>	1
4. <u>Modification of a waste pile management practice.</u>	2
5. <u>Storage or treatment of different wastes in waste piles:</u>	
a. <u>That require additional or different management practices or different design of the unit.</u>	3
b. <u>That do not require additional or different management practices or different design of the unit.</u>	2
6. <u>Conversion of an enclosed waste pile to a containment building unit.</u>	2
<u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u>	
<u>J. Landfills and Unenclosed Waste Piles</u>	
1. <u>Modification or addition of landfill units that result in increasing the facility's disposal capacity.</u>	3
2. <u>Replacement of a landfill.</u>	3
3. <u>Addition or modification of a liner, leachate collection system, leachate detection system, runoff control, or final cover system.</u>	3
4. <u>Modification of a landfill unit without changing a liner, leachate collection system, leachate detection system, runoff control, or final cover system.</u>	2
5. <u>Modification of a landfill management practice.</u>	2
6. <u>Landfill different wastes:</u>	

Modifications	Class
a. <u>That require additional or different management practices or different design of the liner, leachate collection system, or leachate detection system.</u>	<u>3</u>
b. <u>That do not require additional or different management practices or different design of the liner, leachate collection system, or leachate detection system.</u>	<u>2</u>
c. <u>That are wastes restricted from land disposal that meet the applicable treatment standards or that are treated to satisfy the standard of "use of practically available technology that yields the greatest environmental benefit" contained in 40 CFR 268.8(a)(2)(ii) as contained in the most recent revised edition (July 1, 2003), and provided that the landfill unit meets the minimum technological requirements stated in subdivision b of subsection 8 of section 33.1-24-05-254. This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	<u>1</u>
d. <u>That are residues from wastewater treatment or incineration, provided that disposal occurs in a landfill unit that meets the minimum technological requirements stated in subdivision b of subsection 8 of section 33.1-24-05-254, and provided further that the landfill has previously received wastes of the same type (for example, incinerator ash). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).</u>	<u>1</u>
7. <u>Modifications of unconstructed units to comply with subsection 3 of section 33.1-24-05-131, section 33.1-24-05-137, section 33.1-24-05-138, subsection 3 of section 33.1-24-05-132, subsection 3 of section 33.1-24-05-177, section 33.1-24-05-187, subsection 3 of section 33.1-24-05-178, and section 33.1-24-05-188.</u>	<u>1</u>
8. <u>Changes in response action plan:</u>	
a. <u>Increase in action leakage rate.</u>	<u>3</u>
b. <u>Change in a specific response reducing its frequency or effectiveness.</u>	<u>3</u>
c. <u>Other changes.</u>	<u>2</u>
Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.	
K. <u>Land Treatment</u>	
1. <u>Lateral expansion of or other modification of a land treatment unit to increase areal extent.</u>	<u>3</u>
2. <u>Modification of run-on control system.</u>	<u>2</u>
3. <u>Modify runoff control system.</u>	<u>3</u>
4. <u>Other modifications of land treatment unit component specifications or standards required in permit.</u>	<u>2</u>
5. <u>Management of different wastes in land treatment units:</u>	
a. <u>That require a change in permit operating conditions or unit design specifications.</u>	<u>3</u>
b. <u>That do not require a change in permit operating conditions or unit design specifications.</u>	<u>2</u>

Modifications	Class
<u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u>	
6. <u>Modification of a land treatment unit management practice to:</u>	
a. <u>Increase rate or change method of waste application.</u>	3
b. <u>Decrease rate of waste application.</u>	1
7. <u>Modification of a land treatment unit management practice to change measures of pH or moisture content, or to enhance microbial or chemical reactions.</u>	2
8. <u>Modification of a land treatment unit management practice to grow food chain crops, to add to or replace existing permitted crops with different food chain crops, or to modify operating plans for distribution of animal feeds resulting from such crops.</u>	3
9. <u>Modification of operating practice due to detection of releases from the land treatment unit pursuant to subdivision b of subsection 7 of section 33.1-24-05-165.</u>	3
10. <u>Changes in the unsaturated zone monitoring system, resulting in a change to the location, depth, number of sampling points, or which replace unsaturated zone monitoring devices or components of devices with devices or components that have specifications different from permit requirements.</u>	3
11. <u>Changes in the unsaturated zone monitoring system that do not result in a change to the location, depth, number of sampling points, or which replace unsaturated zone monitoring devices or components of devices with devices or components having specifications different from permit requirements.</u>	2
12. <u>Changes in background values for hazardous constituents in soil and soil-pore liquid.</u>	2
13. <u>Changes in sampling, analysis, or statistical procedure.</u>	2
14. <u>Changes in land treatment demonstration program prior to or during the demonstration.</u>	2
15. <u>Changes in any condition specified in the permit for a land treatment unit to reflect results of the land treatment demonstration, provided performance standards are met, and the department's prior approval has been received.</u>	1 ¹
16. <u>Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, provided the conditions for the second demonstration are substantially the same as the conditions for the first demonstration and have received the prior approval of the department.</u>	1 ¹
17. <u>Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, where the conditions for the second demonstration are not substantially the same as the conditions for the first demonstration.</u>	3
18. <u>Changes in vegetative cover requirements for closure.</u>	2
L. <u>Incinerators, Boilers, and Industrial Furnaces:</u>	

Modifications	Class
1. <u>Changes to increase by more than 25% any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The department will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.</u>	3
2. <u>Changes to increase by up to 25% any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The department will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.</u>	2
3. <u>Modification of an incinerator, boiler, or industrial furnace unit by changing the internal size or geometry of the primary or secondary combustion units, by adding a primary or secondary combustion unit, by substantially changing the design of any component used to remove hydrogen chloride and chlorine metals, or particulate from the combustion gases, or by changing other features of the incinerator, boiler, or industrial furnace that could affect its capability to meet the regulatory performance standards. The department will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.</u>	3
4. <u>Modification of an incinerator, boiler, or industrial furnace unit in a manner that would not likely affect the capability of the unit to meet the regulatory performance standards but which would change the operating conditions or monitoring requirements specified in the permit. The department may require a new trial burn to demonstrate compliance with the regulatory performance standards.</u>	2
5. <u>Operating requirements:</u>	
a. <u>Modification of the limits specified in the permit for minimum or maximum combustion gas temperature, minimum combustion gas residence time, oxygen concentration in the secondary combustion chamber, flue gas carbon monoxide and hydrocarbon concentration, maximum temperature at the inlet to the particulate matter emission control system, or operating parameters for the air pollution control system. The department will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.</u>	3
b. <u>Modification of any stack gas emission limits specified in the permit, or modification of any conditions in the permit concerning emergency shutdown or automatic waste feed cutoff procedures or controls.</u>	3
c. <u>Modification of any other operating condition or any inspection or recordkeeping requirement specified in the permit.</u>	2
6. <u>Burning different wastes:</u>	

Modifications	Class
<p>a. <u>If the waste contains a POHC that is more difficult to burn than authorized by the permit or if burning of the waste requires compliance with different regulatory performance standards than specified in the permit. The department will require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.</u></p>	3
<p>b. <u>If the waste does not contain a POHC that is more difficult to burn than authorized by the permit and if burning of the waste does not require compliance with different regulatory performance standards than specified in the permit.</u></p>	2
<p><u>Note: See subsection 7 of section 33.1-24-06-14 for modification procedures to be used for the management of newly listed or identified wastes.</u></p>	
<p><u>7. Shakedown and trial burn:</u></p>	
<p>a. <u>Modification of the trial burn plan or any of the permit conditions applicable during the shakedown period for determining operational readiness after construction, the trial burn period, or the period immediately following the trial burn.</u></p>	2
<p>b. <u>Authorization of up to an additional 720 hours of waste burning during the shakedown period for determining operational readiness after construction, with the prior approval of the department.</u></p>	1 ¹
<p>c. <u>Changes in the operating requirements set in the permit for conducting a trial burn, provided the change is minor and has received the prior approval of the department.</u></p>	1 ¹
<p>d. <u>Changes in the ranges of the operating requirements set in the permit to reflect the results of the trial burn, provided the change is minor and has received the prior approval of the department.</u></p>	1 ¹
<p><u>8. Substitution of an alternative type of nonhazardous waste fuel that is not specified in the permit.</u></p>	1
<p><u>9. Technology changes needed to meet standards under 40 CFR part 63 (subpart EEE - national emission standards for hazardous air pollutants from hazardous waste combustors), provide the procedures of subsection 10 of section 33.1-24-06-14 are followed.</u></p>	1 ¹
<p><u>10. Changes to hazardous waste permit provisions needed to support transition to 40 CFR part 63 (subpart EEE - national emission standards for hazardous air pollutants from hazardous waste combustors), provided the procedures of subsection 11 of section 33.1-24-06-14 are followed.</u></p>	1 ¹
<p><u>M. Containment Buildings</u></p>	
<p><u>1. Modification or addition of containment building units:</u></p>	
<p>a. <u>Resulting in greater than 25% increase in the facility's containment building storage or treatment capacity.</u></p>	3
<p>b. <u>Resulting in up to 25% increase in the facility's containment building storage or treatment capacity.</u></p>	2
<p><u>2. Modification of a containment building unit or secondary containment system without increasing the capacity of the unit.</u></p>	2

Modifications	Class
3. <u>Replacement of a containment building with a containment building that meets the same design standards provided:</u>	
a. <u>The unit capacity is not increased.</u>	1
b. <u>The replacement containment building meets the same conditions in the permit.</u>	1
4. <u>Modification of a containment building management practice.</u>	2
5. <u>Storage or treatment of different wastes in containment buildings:</u>	
a. <u>That require additional or different management practices.</u>	3
b. <u>That do not require additional or different management practices.</u>	2
<u>N. Corrective Action</u>	
1. <u>Approval of a corrective action management unit pursuant to section 33.1-24-05-552.</u>	3
2. <u>Approval of a temporary unit or time extension for a temporary unit pursuant to section 33.1-24-05-553.</u>	2
3. <u>Approval of a staging pile or staging pile operating term extension pursuant to section 33.1-24-05-554.</u>	2
<u>O. Burden Reduction</u>	
1. <u>Development of one contingency plan based on integrated contingency plan guidance pursuant to subsection 2 of section 33.1-24-05-27.</u>	1
2. <u>Changes to recordkeeping and reporting requirements pursuant to subsection 9 of section 33.1-24-05-31 and subsection 7 of section 33.1-24-05-57.</u>	1
3. <u>Changes to inspection frequency for tank systems pursuant to subsection 2 of section 33.1-24-05-108.</u>	1
4. <u>Changes to detection and compliance monitoring program pursuant to subsection 4 of section 33.1-24-05-55, subdivisions b and c of subsection 7 of section 33.1-24-05-55, and subsections 6 and 7 of section 33.1-24-05-56.</u>	1

¹Class 1 modifications requiring prior department approval.

- 33.1-24-07-54 Significant Changes

33.1-24-07-01. Purpose and scope.

This chapter contains procedures for issuing, modifying, revoking and reissuing, or terminating all permits, other than "emergency permits" (see section 33.1-24-06-19) and "permits by rule" (see section 33.1-24-06-18). The latter kinds of permits are governed by chapter 33.1-24-06. Operating status prior to final administrative approval of the permit application is not a "permit" and is covered by specific provisions in chapter 33.1-24-06. The procedures of this chapter also apply to denial of a permit for the active life of a hazardous waste management facility or unit under subsection 2 of section 33.1-24-06-13.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-02. Application for a permit.

1. General requirements.

- a. Any person who requires a hazardous waste permit shall complete, sign, and submit to the department an application in accordance with chapter 33.1-24-06.
- b. The department shall not begin the processing of a permit until the applicant has fully complied with the application requirements for that permit. (See section 33.1-24-06-01.)
- c. Permit applications must comply with the signature and certification requirements of section 33.1-24-06-03.

2. The department shall review for completeness every application for a hazardous waste permit. Each application for a permit submitted by a new hazardous waste management facility should be reviewed for completeness by the department within thirty days of its receipt. Each application for a permit submitted by an existing hazardous waste management facility (both parts A and B of the application) should be reviewed for completeness within sixty days of receipt. Upon completing the review, the department shall notify the applicant in writing whether the application is complete. If the application is incomplete, the department shall list the information necessary to make the application complete. When the application is for an existing hazardous waste management facility, the department shall specify in the notice of deficiency a date for submitting the necessary information. The department shall notify the applicant that the application is complete upon receiving this information. After the application is completed, the department may request additional information from an applicant, but only when necessary to clarify, modify, or supplement previously submitted material. Requests for such additional information will not render an application incomplete.

3. If an applicant fails or refuses to correct deficiencies in the application, the permit may be denied and appropriate enforcement actions may be taken under the applicable statutory provisions.

4. If the department decides that a site visit is necessary for any reason in conjunction with the processing of an application, the department shall notify the applicant and a date shall be scheduled.

5. The effective date of an application is the date on which the department notifies the applicant that the application is complete as provided in subsection 2.
6. For each application from a major new hazardous waste management facility, the department shall, no later than the effective date of the application, prepare and mail to the applicant a project decision schedule. The schedule must specify target dates by which the department intends to:
 - a. Prepare a draft permit;
 - b. Give public notice;
 - c. Complete the public comment period, including any public hearings; and
 - d. Issue a final permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-03. Modification, revocation and reissuance, or termination of permits.

1. Permits may be modified, revoked and reissued, or terminated either at the request of any interested person (including the permittee) or upon the department's initiative. However, permits may only be modified, revoked and reissued, or terminated by the department for the reasons specified in section 33.1-24-06-12 or 33.1-24-06-13. All requests shall be in writing and shall contain facts or reasons supporting the request.
2. If the department decides the request is not justified, the department shall send the requester a brief written response giving a reason for the decision. Denials of requests for modification, revocation and reissuance, or termination are not subject to public notice, comments, or hearings. Denials by the department may be informally appealed to the department by letter briefly setting forth the relevant facts. The department may then begin modification, revocation and reissuance, or termination proceedings under subsection 3. The appeal shall be considered denied if the department takes no action on the letter within sixty days after receiving it.
3. Requirements to modify or revoke.
 - a. If the department tentatively decides to modify or revoke and reissue a permit under section 33.1-24-06-12 (other than subdivision c of subsection 2 of section 33.1-24-06-12) or subsection 3 of section 33.1-24-06-14, the department shall prepare a draft permit under section 33.1-24-07-04 incorporating the proposed changes. The department may request additional information and, in the case of a modified permit, may require the submission of an updated permit application. In the case of revoked and reissued permits, other than under subdivision c of subsection 2 of section 33.1-24-06-12, the department shall require the submission of a new application. In the case of revoked and reissued permits under subdivision c of subsection 2 of section 33.1-24-06-12, the department and the permittee shall comply with the appropriate requirements in sections 33.1-24-07-40 through 33.1-24-07-54 for hazardous waste standardized permits.
 - b. In a permit modification under this section, only those conditions to be modified shall be reopened when a new draft permit is prepared. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. When a permit is revoked and reissued under this section, the entire permit is reopened just as if the permit had expired and was being reissued. During any revocation and reissuance proceeding, the

permittee shall comply with all conditions of the existing permit until a new final permit is reissued.

c. "Class 1 and 2 modifications" as defined in section 33.1-24-06-14 are not subject to the requirements of this section.

4. If the department tentatively decides to terminate a permit under section 33.1-24-06-13, the department shall issue a notice of intent to terminate. A notice of intent to terminate is a type of draft permit which follows the same procedures as any draft permit prepared under section 33.1-24-07-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-04. Draft permits.

1. Once an application is complete, the department shall tentatively decide whether to prepare a draft permit or to deny the application.

2. If the department tentatively decides to deny the permit application, the department shall issue a notice of intent to deny. A notice of intent to deny the permit application is a type of draft permit which follows the same procedures as any draft permit prepared under this section. (See subsection 4.) If the department's final decision is that the tentative decision to deny the permit application was incorrect, the department shall withdraw the notice of intent to deny and proceed to prepare a draft permit under subsection 3.

3. If the department decides to prepare a draft permit, the department shall prepare a draft permit that contains the following information:

a. All conditions under sections 33.1-24-06-04 and 33.1-24-06-05.

b. All compliance schedules under section 33.1-24-06-07.

c. All monitoring requirements under section 33.1-24-06-08.

d. Standards for treatment, storage, and disposal and other permit conditions under section 33.1-24-06-04.

4. All draft permits prepared under this section shall be accompanied by a fact sheet (section 33.1-24-07-05), publicly noticed (section 33.1-24-07-06), and shall be made available for public comment (section 33.1-24-07-07). The department shall give notice of opportunity for a public hearing (section 33.1-24-07-08), issue a final decision (section 33.1-24-07-11) and respond to comments (section 33.1-24-07-13). An appeal may be taken under section 33.1-24-07-14.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-05. Fact sheet.

1. A fact sheet must be prepared for every draft permit for a major hazardous waste management facility or activity, and for every draft permit which the department finds is the subject of widespread public interest or raises major issues. The fact sheet must briefly set forth the principle facts and the significant factual, legal, methodological, and policy questions

considered in preparing the draft permit. The department shall send this fact sheet to the applicant and, on request, to any other person.

2. The fact sheet must include, when applicable:

- a. A brief description of the type of facility or activity which is the subject of the draft permit;
- b. The type and quantity of wastes, fluids, or pollutants which are proposed to be, or are being treated, stored, disposed of, injected, emitted, or discharged;
- c. A brief summary of the basis for the draft permit conditions, including references to applicable statutory or regulatory provisions;
- d. Reasons why any requested variances or alternatives to required standards do or do not appear justified;
- e. A description of the procedures for reaching a final decision on the draft permit, including:
 - (1) The beginning and ending dates of the comment period under section 33.1-24-07-06 and the address where comments will be received;
 - (2) Procedures for requesting a hearing and the nature of that hearing;
 - (3) Any other procedures by which the public may participate in the final decision; and
- f. Name and telephone number of a person to contact for additional information.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-06. Public notice of permit actions and public comment period.

1. Scope.

- a. The department shall give public notice that the following actions have occurred:
 - (1) A permit application has been tentatively denied under subsection 2 of section 33.1-24-07-04.
 - (2) A draft permit has been prepared under subsection 3 of section 33.1-24-07-04.
 - (3) A hearing has been scheduled under section 33.1-24-07-08.
 - (4) An appeal has been granted under subsection 3 of section 33.1-24-07-14.
- b. No public notice is required when a request for permit modification, revocation and reissuance, or termination is denied under subsection 2 of section 33.1-24-07-03. Written notice of that denial must be given to the requester and to the permittee.
- c. Public notices may describe more than one permit or permit action.

2. Timing.

- a. Public notice of the preparation of a draft permit (including a notice of intent to deny a permit application) required under subsection 1 must allow at least forty-five days for public comment.

b. Public notice of a public hearing must be given at least thirty days before the hearing. (Public notice of the hearing may be given at the same time as public notice of the draft permit and the two notices may be combined.)

3. **Methods.** Public notice of activities described in subdivision a of subsection 1 must be given by the following methods:

a. By mailing a copy of a notice to the following persons (any person otherwise entitled to receive notice under this subsection may waive that person's rights to receive notice for any classes and categories of permits):

(1) The applicant.

(2) Any other agency which the department knows has issued or is required to issue permits for the same facility or activity, including the environmental protection agency.

(3) Federal and state agencies with jurisdiction over fish, shellfish, and wildlife resources, the advisory council on historic preservation, state historic preservation officers, and other appropriate government authorities, including other affected states.

(4) Persons on a mailing list developed by:

(a) Including those who request in writing to be on the list;

(b) Soliciting persons for "area lists" from participants in past permit proceedings in that area; and

(c) Notifying the public of the opportunity to be put on the mailing list through periodic publication in the public press and in such publications as regional and state-funded newsletters, environmental bulletins, or state law journals. (The department may update the mailing list from time to time by requesting written indication of continued interest from those listed. The department may delete from the list the name of any person who fails to respond to such a request.)

(5) To any unit of local government having jurisdiction over the area where the facility is proposed to be located.

(6) To each state agency having any authority under state law with respect to construction or operation of such facility.

b. This notice must comply with subsection 6 of North Dakota Century Code section 23.1-04-08 and must be in a manner constituting legal notice to the public under state law.

c. Any other method reasonably calculated to give actual notice of the action in question to the persons potentially affected by it, including press releases or any other form or medium to elicit public participation.

4. **Contents.**

a. All public notices. All public notices issued under this chapter must contain the following minimum information:

(1) Name and address of the office processing the permit action for which notice is being given.

- (2) Name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit.
- (3) A brief description of the business conducted at the facility or activity described in the permit application or the draft permit.
- (4) Name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit, fact sheet, and the application.
- (5) A brief description of the comment procedures required by sections 33.1-24-07-07 and 33.1-24-07-08 and the time and place of any hearing that will be held, including a statement of procedures to request a hearing (unless a hearing has already been scheduled) and other procedures by which the public may participate in the final permit decision.
- (6) Any additional information considered necessary or proper.

b. Public notices for hearings. In addition to the general public notice described in subdivision a, the public notice of a hearing under section 33.1-24-07-08 must contain the following information:

- (1) Reference to the date of previous public notices relating to the permit.
- (2) Date, time, and place of the hearing.
- (3) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

5. **Distribution of copies.** In addition to the general public notice described in subdivision a of subsection 4, all persons identified in paragraphs 1, 2, and 3 of subdivision a of subsection 3 must be mailed a copy of the fact sheet, the permit application (if any), and the draft permit (if any).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-07. Public comments and requests for public hearings.

During the public comment period provided under section 33.1-24-07-06, any interested person may submit written comments on the draft permit and may request a public hearing, if no hearing has already been scheduled.

A request for a public hearing must be in writing and must state the nature of the issues proposed to be raised in the hearing. All comments must be considered in making the final decision and must be answered as provided in section 33.1-24-07-13.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-08. Public hearings.

1. The department shall hold a public hearing:

a. Whenever the department finds, on the basis of requests, a significant degree of public interest in a draft permit;

b. At the department's discretion, whenever for instance, such a hearing might clarify one or more issues involved in the permit decision; or

c. Whenever the department receives written notice of opposition to a draft permit and a request for a hearing within forty-five days of public notice under subdivision a of subsection 2 of section 33.1-24-07-06.

2. Whenever possible, the department shall schedule a hearing under this section at a location convenient to the nearest population center to the proposed facility.

3. Public notice of the hearing shall be given as specified in section 33.1-24-07-06.

4. Whenever a public hearing will be held, the department shall designate a presiding officer for the hearing who shall be responsible for its scheduling and orderly conduct.

5. Any person may submit oral or written statements and data concerning a draft permit. Reasonable limits may be set upon the time allowed for oral statements and the submission of statements in writing may be required. The public comment period under section 33.1-24-07-06 must automatically be extended to the close of any public hearing under this section. The hearing officer may also extend the comment period by so stating at the hearing.

6. A tape recording or written transcript of the hearing must be made available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-09. Obligation to raise issues and provide information during the public comment period.

All persons, including applicants, who believe any condition of a draft permit is inappropriate or that the department's tentative decision to deny an application, terminate a permit, or prepare a draft permit is inappropriate, shall raise all reasonably ascertainable issues and submit all reasonably available arguments and factual grounds supporting their position, including all supporting material, by the close of the public comment period (including any public hearing) under section 33.1-24-07-06. All supporting materials must be included in full and may not be incorporated by reference, unless they consist of state or federal statutes or regulations, or other generally available reference materials. Commenters shall make supporting material available to the department. (A comment period longer than thirty days will often be necessary in complicated proceedings to give commenters a reasonable opportunity to comply with the requirements of this section. Commenters may request longer comment periods and they should be freely established under section 33.1-24-07-06 to the extent that they appear necessary.)

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-10. Reopening of the public comment period.

1. If any data, information, or arguments submitted during the public comment period, including information or arguments required under section 33.1-24-07-09, appear to raise substantial new questions concerning a permit, the department may take one or more of the following actions:

a. Prepare a new draft permit, appropriately modified, under section 33.1-24-07-04.

- b. Prepare a revised fact sheet under section 33.1-24-07-05 and reopen the comment period under section 33.1-24-07-10.
 - c. Reopen or extend the comment period under section 33.1-24-07-06 to give interested persons an opportunity to comment on the information or arguments submitted.
2. Comments filed during the reopened comment period must be limited to the substantial new questions that caused its reopening. The public notice under section 33.1-24-07-06 defines the scope of the reopening.
 3. Public notice of any of the above actions must be issued under section 33.1-24-07-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-11. Issuance and effective date of permit.

1. After the close of the public comment period under section 33.1-24-07-06 on a draft permit, the department shall issue a final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or unit under subsection 2 of section 33.1-24-06-13). The department shall notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice must include reference to the procedures for appealing a decision on a permit or a decision to terminate a permit. For the purposes of this section, a final permit decision means a final decision to issue, deny, modify, revoke and reissue, or terminate a permit.
2. A final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or unit under subsection 2 of section 33.1-24-06-13) shall become effective thirty days after the service of notice of the decision under subsection 1, unless:
 - a. A later effective date is specified in the decision;
 - b. Review is requested under section 33.1-24-07-14; or
 - c. No comments required a change in the draft permit, in which case the permit shall become effective immediately upon issuance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-12. Stays of contested permit conditions.

1. Stays.
 - a. If a request for review of a permit under section 33.1-24-07-14 is granted, the effect of the contested permit conditions is stayed and is not subject to judicial review pending final department action. If the permit involves a new facility, the applicant is without a permit for the proposed new facility pending final agency action.
 - b. Uncontested conditions which are not severable from those contested must be stayed together with the contested conditions. Stayed provisions of permits for existing facilities must be identified by the department. All other provisions of the permit for the existing facility remain fully effective and enforceable.
2. Stays based on cross effects. A stay may be granted based on the grounds that an appeal to the department under section 33.1-24-07-14 of one permit may result in changes to another

permit only when each of the permits involved has been appealed to the department and the department has accepted each appeal.

3. Any facility or activity holding an existing permit shall:

- a. Comply with the conditions of that permit during any modification or revocation and reissuance proceedings under section 33.1-24-07-03; and
- b. To the extent conditions of any new permit are stayed under this section, comply with the conditions of the existing permit which corresponds to the stayed conditions, unless compliance with the existing conditions would be technologically incompatible with compliance with other conditions of the new permit which have not been stayed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-13. Response to comments.

- 1. At the time that a final permit is issued under section 33.1-24-07-11, the department shall issue a response to comments. This response must:
 - a. Specify which provisions, if any, of the draft permits have been changed in the final permit decision, and the reasons for the change; and
 - b. Briefly describe and respond to all significant comments on the draft permit raised during the public comment period or during any hearing.
- 2. The response to comments must be available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-14. Appeal of permit.

- 1. Within thirty days after a final permit decision (or a decision under subsection 2 of section 33.1-24-06-13 to deny a permit for the active life of a hazardous waste management facility or unit) has been issued under section 33.1-24-07-11, any person who filed comments on that draft permit or participated in the public hearing may petition the department to review any condition of the permit decision. Any person who failed to file comments or failed to participate in the public hearing on the draft permit may petition for administrative review only to the extent of the changes from the draft to the final permit decision. The thirty-day period within which a person may request review under this section begins with the service of notice of the department's action unless a later date is specified in that notice. The petition must include a statement of the reasons supporting that review, including a demonstration that any issues being raised were raised during the public comment period (including any public hearing) to the extent required by these rules and, when appropriate, a showing that the condition in question is based on:
 - a. A finding of fact or conclusion of law which is clearly erroneous; or
 - b. An exercise of discretion or an important policy consideration which the department should, in the department's discretion, review.

2. The department may also decide on the department's initiative to review any condition of any permit issued under this article. The department must act under this section within thirty days of the service date of notice of the department's action.
3. Within a reasonable time following the filing of the petition for review, the department shall issue an order either granting or denying the petition for review. To the extent review is denied, the conditions of the final permit decision become final department action. Public notice of any grant of review by the department under subsection 1 or 2 must be given as provided in section 33.1-24-07-06. Public notice must set forth a briefing schedule for the appeal and must state that any interested person may file an amicus brief. A notice of denial of review may be sent only to the person requesting review.
4. Final department action occurs when a final permit is issued or denied by the department and the department review procedures are exhausted. A final permit decision must be issued by the department:
 - a. When the department issues notice to the parties that review has been denied.
 - b. When the department issues a decision on the merits of the appeal and the decision does not include a remand of the proceedings; or upon the completion of remand proceedings if the proceedings are remanded, unless the department remand order specifically provides that appeal of the remand decision will be required to exhaust administrative remedies.

33.1-24-07-23. [Reserved].

33.1-24-07-24. [Reserved].

33.1-24-07-25. Preapplication public meeting and notice.

1. Applicability. The requirements of this section apply to all hazardous waste part B applications seeking initial permits for hazardous waste management units. The requirements of this section also apply to hazardous waste part B applications seeking renewal of permits for such units, where the renewal application is proposing a significant change in facility operations. For the purposes of this section, a "significant change" is any change that would qualify as a class 3 permit modification under section 33.1-24-06-14. The requirements of this section also apply to hazardous waste management facilities for which facility owners or operators are seeking coverage under a hazardous waste standardized permit (see sections 33.1-24-06-45 through 33.1-24-06-85), including renewal of a standardized permit for such units, where the renewal is proposing a significant change in facility operations, as defined at subsection 3 of section 33.1-24-07-51. The requirements of this section do not apply to permit modifications under section 33.1-24-06-14 or to applications that are submitted for the sole purpose of conducting postclosure activities or postclosure activities and corrective action at a facility.
2. Prior to the submission of a part B hazardous waste permit application for a facility, or to the submission of a written notice of intent to be covered by a hazardous waste standardized permit (see sections 33.1-24-06-45 through 33.1-24-06-85), the applicant must hold at least one meeting with the public in order to solicit questions from the community and inform the community of proposed hazardous waste management activities. The applicant shall post a sign-in sheet or otherwise provide a voluntary opportunity for attendees to provide their names and addresses.
3. The applicant shall submit a summary of the meeting, along with the list of attendees and their addresses developed under subsection 2, and copies of any written comments or materials submitted at the meeting, to the department as a part of the part B application, in accordance with subsection 2 of section 33.1-24-06-17, or with the written notice of intent to be covered by a hazardous waste standardized permit (see sections 33.1-24-06-45 through 33.1-24-06-85).
4. The applicant shall provide public notice of the preapplication meeting at least thirty days prior to the meeting. The applicant shall maintain, and provide to the department upon request, documentation of the notice.
 - a. The applicant shall provide public notice in all of the following forms:
 - (1) A newspaper advertisement. The applicant shall publish a notice, fulfilling the requirements in subdivision b, in a newspaper of general circulation in the county or

equivalent jurisdiction that hosts the proposed location of the facility. In addition, the department shall instruct the applicant to publish the notice in newspapers of general circulation in adjacent counties or equivalent jurisdictions, where the department determines that such publication is necessary to inform the affected public. The notice must be published as a display advertisement.

- (2) A visible and accessible sign. The applicant shall post a notice on a clearly marked sign at or near the facility, fulfilling the requirements in subdivision b. If the applicant places the sign on the facility property, then the sign must be large enough to be readable from the nearest point where the public would pass by the site.
- (3) A broadcast media announcement. The applicant shall broadcast a notice, fulfilling the requirements in subdivision b, at least once on at least one local radio station or television station. The applicant may employ another medium with prior approval of the department.
- (4) A notice to the department. The applicant shall send a copy of the newspaper notice to the department and to the appropriate units of state and local government, in accordance with subdivision b of subsection 3 of section 33.1-24-07-06.

b. The notices required under subdivision a must include:

- (1) The date, time, and location of the meeting;
- (2) A brief description of the purpose of the meeting;
- (3) A brief description of the facility and proposed operations, including the address or a map (for example, a sketched or copied street map) of the facility location;
- (4) A statement encouraging people to contact the facility at least seventy-two hours before the meeting if they need special access to participate in the meeting; and
- (5) The name, address, and telephone number of a contact person for the applicant.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-26. Public notice requirements at the application stage.

1. Applicability. The requirements of this section apply to all hazardous waste part B applications seeking initial permits for hazardous waste management units. The requirements of this section also apply to hazardous waste part B applications seeking renewal of permits for such units under section 33.1-24-06-02. The requirements of this section do not apply to hazardous waste units for which facility owners or operators are seeking coverage under a hazardous waste standardized permit (see sections 33.1-24-06-45 through 33.1-24-06-85). The requirements of this section also do not apply to permit modifications under section 33.1-24-06-14 or permit applications submitted for the sole purpose of conducting postclosure activities or postclosure activities and corrective action at a facility.
2. Notification at application submittal.
 - a. The department shall provide public notice as set forth in paragraph 4 of subdivision a of subsection 3 of section 33.1-24-07-06, and notice to appropriate units of state and local government as set forth in subdivision b of subsection 3 of section 33.1-24-07-06, that a part B permit application has been submitted to the department and is available for review.

b. The notice must be published within a reasonable period of time after the application is received by the department. The notice must include:

- (1) The name and telephone number of the applicant's contact person;
- (2) The name and telephone number of the department's contact office, and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process;
- (3) An address to which people can write in order to be put on the facility mailing list;
- (4) The location where copies of the permit application and any supporting documents can be viewed and copied;
- (5) A brief description of the facility and proposed operations, including the address or a map (for example, a sketched or copied street map) of the facility location on the front page of the notice; and
- (6) The date that the application was submitted.

3. Concurrent with the notice required under subsection 2, the department must place the permit application and any supporting documents in a location accessible to the public in the vicinity of the facility or at the department's office.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-27. Information repository.

1. Applicability. The requirements of this section apply to all applications seeking hazardous waste permits for hazardous waste management units.
2. The department may assess the need, on a case-by-case basis, for an information repository. When assessing the need for an information repository, the department shall consider a variety of factors, including the level of public interest; the type of facility; the presence of an existing repository; and the proximity to the nearest copy of the administrative record. If the department determines, at any time after submittal of a permit application, that there is a need for a repository, then the department shall notify the facility that it must establish and maintain an information repository. (See subsection 13 of section 33.1-24-06-04 for similar provisions relating to the information repository during the life of a permit.)
3. The information repository shall contain all documents, reports, data, and information deemed necessary by the department to fulfill the purposes for which the repository is established. The department may limit the contents of the repository.
4. The information repository must be located and maintained at a site chosen by the facility. If the department finds the site unsuitable for the purposes and persons for which it was established, due to problems with the location, hours of availability, access, or other relevant considerations, then the department shall specify a more appropriate site.
5. The department shall specify requirements for informing the public about the information repository. At a minimum, the department shall require the facility to provide a written notice about the information repository to all individuals on the facility mailing list.

6. The facility owner or operator shall be responsible for maintaining and updating the repository with appropriate information throughout a time period specified by the department. The department may close the repository at its discretion, based on the factors in subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-07-38. [Reserved].

33.1-24-07-39. [Reserved].

33.1-24-07-40. Standardized permit.

The standardized permit is a special form of hazardous waste permit which may consist of two parts: A uniform portion that the department issues in all cases, and a supplemental portion that the department issues at the department's discretion. Standardized permit is defined in section 33.1-24-01-04.

1. The uniform portion of a standardized permit consists of terms and conditions, relevant to the unit or units operating at the facility, contained in sections 33.1-24-05-950 through 33.1-24-05-1149. If the owner or operator intends to operate under the standardized permit, the owner or operator shall comply with these applicable terms and conditions.
2. The supplemental portion of a standardized permit consists of site specific terms and conditions, beyond those of the uniform portion, which the department may impose on the facility, as necessary to protect human health and the environment. If the department issues a supplemental portion, the owner or operator shall comply with the site specific terms and conditions the department imposes.
 - a. When required under section 33.1-24-05-1031, provisions to implement corrective action will be included in the supplemental portion.
 - b. Unless otherwise specified, these supplemental permit terms and conditions apply to the facility in addition to the terms and conditions of the uniform portion of the standardized permit and not in place of any of those terms and conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-41. Eligibility for a standardized permit.

1. The owner or operator may be eligible for a standardized permit if the facility:
 - a. Generates hazardous waste and then stores or nonthermally treats the hazardous waste onsite in containers, tanks, or containment buildings; or
 - b. Receives hazardous waste generated offsite by a generator under the same ownership as the receiving facility, and then stores or nonthermally treats the hazardous waste in containers, tanks, or containment buildings.
 - c. The department will inform the owner or operator of eligibility when a decision is made on the facility permit.
2. [Reserved].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-42. Applying for a standardized permit.

1. The owner or operator shall follow the requirements in sections 33.1-24-07-40 through 33.1-24-07-54, section 33.1-24-07-25, section 33.1-24-06-01, and sections 33.1-24-06-45 through 33.1-24-06-85.
2. The owner or operator shall submit to the department a written notice of intent to operate under the standardized permit and shall include the information and certifications required under sections 33.1-24-06-45 through 33.1-24-06-85.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-43. Switching from a hazardous waste permit to a standardized permit.

If all units in the hazardous waste permit are eligible for the standardized permit, the permittee may request the individual permit be revoked and reissued as a standardized permit, in accordance with section 33.1-24-07-03. If only some of the units in the hazardous waste permit are eligible for the standardized permit, the permittee may request the individual permit be modified to no longer include those units and issue a standardized permit for those units in accordance with section 33.1-24-07-44.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-44. Draft standardized permit.

1. The department shall:

- a. Review the notice of intent and supporting information submitted by the facility owner or operator.
- b. Determine whether the facility is or is not eligible to operate under the standardized permit.

(1) If the facility is eligible for the standardized permit, the department shall propose terms and conditions, if any, to include in a supplemental portion. If the department determines these terms and conditions are necessary to protect human health and the environment and cannot be imposed, the department tentatively shall deny coverage under the standardized permit.

(2) If the facility is not eligible for the standardized permit, the department tentatively shall deny coverage under the standardized permit. Cause for ineligibility may include the following:

- (a) Failure of the facility owner or operator to submit all the information required under section 33.1-24-06-57.
- (b) Information submitted that is required under section 33.1-24-06-57 is determined to be inadequate.
- (c) Facility does not meet the eligibility requirements (activities are outside the scope of the standardized permit).
- (d) Demonstrated history of significant noncompliance with applicable requirements.

(e) Permit conditions cannot ensure protection of human health and the environment.

c. Prepare a draft permit decision within one hundred twenty days after receiving the notice of intent and supporting documents from a facility owner or operator. A tentative determination under this section to deny or grant coverage under the standardized permit, including any proposed site specific conditions in a supplemental portion, constitutes a draft permit decision. A one-time extension of thirty-days to prepare the draft permit decision is allowed. When the use of the thirty-day extension is anticipated, the department should inform the permit applicant during the initial one-hundred-twenty-day review period. Reasons for an extension may include needing to complete review of submissions with the notice of intent (for example, closure plans, waste analysis plans, for facilities seeking to manage hazardous waste generated offsite).

2. The draft permit decision must be accompanied by a fact sheet. In preparing the draft permit decision, the following provisions apply:

a. Section 33.1-24-07-01.

b. Subsections 1 and 4 of section 33.1-24-07-02.

c. Section 33.1-24-07-05; however, in the context of the standardized permit, the reference to the public comment period is section 33.1-24-07-48 instead of section 33.1-24-07-06.

d. Paragraphs 4 and 5 of subdivision a of subsection 3 of section 33.1-24-07-06, and sections 33.1-24-07-47 through 33.1-24-07-49.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-45. Final standardized permit.

The department shall consider all comments received during the public comment period in making a final permit decision. In preparing a final permit decision, the following provisions apply:

1. Section 33.1-24-07-01.

2. Section 33.1-24-07-48.

3. Subsections 4, 5, and 6 of section 33.1-24-07-08.

4. Section 33.1-24-07-09; however, in the context of the standardized permit, the reference to the public comment period is section 33.1-24-07-48 instead of section 33.1-24-07-06.

5. Section 33.1-24-07-10; however, in the context of the standardized permit, use the following reference: in subdivision a of subsection 1 of section 33.1-24-07-10 use reference to section 33.1-24-07-44 instead of section 33.1-24-07-04; in subdivision c of subsection 1 of section 33.1-24-07-10 use reference to section 33.1-24-07-48 instead of section 33.1-24-07-06; in subsection 2 of section 33.1-24-07-10 use reference to section 33.1-24-07-47 instead of section 33.1-24-07-06.

6. Section 33.1-24-07-11; however, in the context of the standardized permit, the reference to the public comment period is section 33.1-24-07-48 instead of section 33.1-24-07-06.

7. Section 33.1-24-07-12.

8. Section 33.1-24-07-49.

9. Section 33.1-24-07-14.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-46. Situations requiring an application for an individual permit.

1. Cases where the department may determine a facility is not eligible for the standardized permit include the following:
 - a. The facility does not meet the criteria in section 33.1-24-07-41.
 - b. The facility has a demonstrated history of significant noncompliance with rules, regulations or permit conditions.
 - c. The facility has a demonstrated history of submitting incomplete or deficient permit application information.
 - d. The facility has submitted incomplete or inadequate materials with the notice of intent.
2. If the department determines a facility is not eligible for the standardized permit, the department shall inform the facility owner or operator that the facility owner or operator must apply for an individual hazardous waste permit.
3. The department may require any facility that has a standardized permit to apply for and obtain an individual hazardous waste permit. Any interested person may petition the department to take action under this subsection. Cases where the department may require an individual hazardous waste permit include the following:
 - a. The facility is not in compliance with the terms and conditions of the standardized permit.
 - b. Circumstances have changed since the time the facility owner or operator applied for the standardized permit, so that the facility's hazardous waste management practices are no longer appropriately controlled under the standardized permit.
4. The department may require any facility authorized by a standardized permit to apply for an individual hazardous waste permit only if the department has notified the facility owner or operator in writing that an individual permit application is required. The notice must include a brief statement of the reasons for the department's decision, a statement setting a deadline for the owner or operator to file the application, and a statement that, on the effective date of the individual hazardous waste permit, the facility's standardized permit automatically terminates. Additional time may be granted upon request from the facility owner or operator.
5. Issuance of an individual hazardous waste permit to an owner or operator otherwise subject to a standardized permit, the standardized permit for the facility will automatically cease to apply on the effective date of the individual permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-47. Public notice of permit actions and public involvement.

1. The department shall provide public notice of the department's draft permit decision and shall provide an opportunity for the public to submit comments and request a hearing on that decision. The public notice must be provided to:

- a. The applicant;
- b. Any other agency that the department knows has issued or is required to issue a hazardous waste permit for the same facility or activity, including the environmental protection agency;
- c. Federal and state agencies with jurisdiction over fish, shellfish, and wildlife resources and over coastal zone management plans, the advisory council on historic preservation, state historic preservation officers, including any affected states;
- d. To everyone on the facility mailing list developed according to the requirements in paragraph 4 of subdivision a of subsection 3 of section 33.1-24-07-06; and
- e. To any units of local government having jurisdiction over the area where the facility is proposed to be located and to each state agency having any authority under state law with respect to the construction or operation of the facility.

2. The public notice must be issued according to the following methods:

- a. Publication in a daily or weekly major local newspaper of general circulation and broadcast over local radio stations;
- b. In a manner constituting legal notice to the public under state law and must comply with subsection 6 of North Dakota Century Code section 23.1-04-08; and
- c. Any other method reasonably calculated to give actual notice of the draft permit decision to the persons potentially affected by it, including press releases or any other forum or medium to elicit public participation.

3. The following information must be included in the public notice:

- a. The name and telephone number of the contact person at the facility.
- b. The name and telephone number of the office processing the permit action, and a mailing address to which people may direct comments, information, opinions, or inquiries.
- c. An address to which people may write to be put on the facility mailing list.
- d. The location where people may view and make copies of the draft standardized permit and the notice of intent and supporting documents.
- e. A brief description of the facility and proposed operations, including the address or a map (for example, a sketched or copied street map) of the facility location on the front page of the notice.
- f. The date that the facility owner or operator submitted the notice of intent and supporting documents.

4. At the same time that the public notice is issued under this section, the draft standardized permit (including both the uniform portion and the supplemental portion, if any), the notice of intent and supporting documents, and the fact sheet must be placed in a location accessible to the public in the vicinity of the facility or at the department's office.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-48. Public comment and request for public hearings.

1. The public notice issued under section 33.1-24-07-47 must allow at least a forty-five day public comment period for people to submit written comments on the draft permit decision. The public comment period is automatically extended to the close of any public hearing under this section. The hearing officer may also extend the comment period by so stating at the hearing.
2. During the public comment period, any interested person may submit written comments on the draft permit and may request a public hearing. A request for a public hearing must be in writing and must state the nature of the issues proposed to be raised in the hearing.
3. The department shall hold a public hearing whenever it receives a written notice of opposition to a standardized permit and a request for a hearing within the public comment period under subsection 1. The department also may hold a public hearing at the department's discretion whenever such a hearing might clarify one or more issues involved in the permit decision.
4. Whenever possible, the department shall schedule a hearing under this section at a location convenient to the nearest population center to the facility. The department shall give public notice of the hearing at least thirty days before the date set for the hearing.
5. The department shall give public notice of the hearing according to the methods in subsections 1 and 2 of section 33.1-24-07-47. The hearing must be conducted according to the procedures in subsections 4, 5, and 6 of section 33.1-24-07-08.
6. In their written comments and during the public hearing, if held, interested parties may provide comments on the draft permit decision. These comments may include the facility's eligibility for the standardized permit, the tentative supplemental conditions proposed, and the need for additional supplemental conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-49. Response to comments.

1. At the time a final standardized permit is issued, the department shall respond to comments received during the public comment period on the draft permit. This response must:
 - a. Specify which additional conditions (for example, those in the supplemental portion), if any, have been changed in the final permit, and the reasons for the change.
 - b. Briefly describe and respond to all significant comments on the facility's ability to meet the general requirements (for example, those terms and conditions in the uniform portion) and on any additional conditions necessary to protect human health and the environment raised during the public comment period or during the hearing.
 - c. Make the comments and responses accessible to the public.
2. The department may request additional information from the facility owner or operator or inspect the facility if additional information is needed to adequately respond to significant comments or to make decisions about conditions that may need to be added to the supplemental portion of the standardized permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-50. Appeal of permit.

Any person may petition for administrative review of the department's final permit decision, including the decision that the facility is eligible for the standardized permit, according to the procedures of section 33.1-24-07-14. However, the terms and conditions of the uniform portion of the standardized permit are not subject to administrative review under this provision.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-51. Permit changes at the request of the permittee.

The permittee may make both routine changes, routine changes with prior department approval, and significant changes. For the purposes of this section:

1. "Routine changes" are any changes to the standardized permit that qualify as a class 1 permit modification (without prior department approval) under section 33.1-24-06-14, appendix I;
2. "Routine changes with prior department approval" are for those changes to the standardized permit that would qualify as a class 1 modification with prior department approval, or a class 2 permit modification under section 33.1-24-06-14, appendix I; and
3. "Significant changes" are any changes to the standardized permit which:
 - a. Qualify as a class 3 permit modification under section 33.1-24-06-14, appendix I;
 - b. Are not explicitly identified in section 33.1-24-06-14, appendix I; or
 - c. Amend any terms or conditions in the supplemental portion of the standardized permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-52. Routine changes.

1. The permittee may make routine changes to the standardized permit without obtaining approval from the department. However, the permittee first must determine whether the routine change will amend the information submitted under section 33.1-24-06-57 with the notice of intent to operate under the standardized permit.
2. If the routine changes will amend the information submitted under section 33.1-24-06-57 with the notice of intent to operate under the standardized permit, then before making the routine changes the permittee must:
 - a. Submit to the department the revised information pursuant to subdivision a of subsection 1 of section 33.1-24-06-57; and
 - b. Provide notice of the changes to the facility mailing list and to state and local governments in accordance with the procedures in paragraphs 4 through 6 of subdivision a of subsection 3 of section 33.1-24-07-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-53. Routine changes with prior approval.

1. Routine changes to the standardized permit with prior department approval may only be made with the prior written approval of the department.
2. The permittee also must follow the procedures in subdivisions a and b of subsection 2 of section 33.1-24-07-52.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-07-54. Significant changes.

1. The permittee shall first provide notice of and conduct a public meeting.
 - a. Public meeting. The permittee shall hold a meeting with the public to solicit questions from the community and inform the community of the permittee's proposed modifications to the permittee's hazardous waste management activities. The permittee must post a sign-in sheet or otherwise provide a voluntary opportunity for people attending the meeting to provide their names and addresses.
 - b. Public notice. At least thirty days before planning to hold the meeting, the permittee shall issue a public notice in accordance with the requirements of subsection 4 of section 33.1-24-07-25.
2. After holding the public meeting, the permittee shall submit a modification request to the department that:
 - a. Describes the exact change or changes and whether they are changes to information provided under section 33.1-24-06-57 or to terms and conditions in the supplemental portion of the standardized permit;
 - b. Explain why the modification is needed; and
 - c. Includes a summary of the public meeting under subsection 1, along with the list of attendees and their addresses and copies of any written comments or materials they submitted at the meeting.
3. Once the department receives the modification request, the department shall make a tentative determination within one hundred twenty days to approve or disapprove the request. The department is allowed a one-time extension of thirty days to prepare the draft permit decision. When the use of the thirty-day extension is anticipated, the department should inform the permittee during the initial one hundred twenty-day review period.
4. After the department makes this tentative determination, the procedures in section 33.1-24-07-45 and sections 33.1-24-07-47 through 33.1-24-07-50 for processing an initial request for coverage under the standardized permit apply to making the final determination on the modification request.

History: Effective January 1, 2019

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08; S.L. 2017, ch. 199, § 19

33.1-24-08-01. Applicability (technical standards and corrective action).

1. The requirements of this chapter apply to all owners and operators of an underground storage tank system as defined in section 33.1-24-08-03, except as otherwise provided in subsections 2, 3, and 4. Any underground storage tank system listed in subsection 3 must meet the requirements of section 33.1-24-08-02.
 - a. Previously deferred underground storage tank systems. Airport hydrant fuel distribution systems, underground storage tank systems with field-constructed tanks, and underground storage tank systems that store fuel solely for use by emergency power generators must meet the requirements of this chapter as follows:
 - (1) Airport hydrant fuel distribution systems and underground storage tank systems with field-constructed tanks must meet the requirements in sections 33.1-24-08-70 through 33.1-24-08-72.

(2) Underground storage tank systems that store fuel solely for use by emergency power generators installed on or before April 1, 2018, must meet the sections 33.1-24-08-30 through 33.1-24-08-35 requirements on or before April 1, 2021.

(3) Underground storage tank systems that store fuel solely for use by emergency power generators installed after April 1, 2018, must meet all applicable requirements of this chapter at installation.

2. The following underground storage tank systems are excluded from the requirements of this chapter:

a. Any underground storage tank system holding hazardous wastes listed or identified under North Dakota Century Code chapter 20-20.3, or a mixture of such hazardous waste and other regulated substances;

b. Any wastewater treatment tank system that is part of a wastewater treatment facility regulated under section 402 or 307(b) of the Clean Water Act;

c. Equipment or machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment tanks;

d. Any underground storage tank system whose capacity is one hundred ten gallons [416.39 liters] or less;

e. Any underground storage tank system that contains a de minimus concentration of regulated substances; or

f. Any emergency spill or overflow containment underground storage tank system that is expeditiously emptied after use.

3. Partial exclusions. Sections 33.1-24-08-10 through 33.1-24-08-43, sections 33.1-24-08-45 through 33.1-24-08-48, sections 33.1-24-08-60 through 33.1-24-08-64, and sections 33.1-24-08-70 through 33.1-24-08-72 do not apply to:

a. Wastewater treatment tank systems not covered under subdivision b of subsection 2;

b. Aboveground storage tanks associated with:

(1) Airport hydrant fuel distribution systems regulated under sections 33.1-24-08-70 through 33.1-24-08-73; and

(2) Underground storage tank systems with field-constructed tanks regulated under sections 33.1-24-08-70 through 33.1-24-08-73;

c. Any underground storage tank systems containing radioactive material that are regulated under the Atomic Energy Act of 1954 [42 U.S.C. 2011 and following]; and

d. Any underground storage tank system that is part of an emergency generator system at nuclear power generation facilities licensed by the nuclear regulatory commission and subject to nuclear regulatory commission requirements regarding design and quality criteria, including 10 CFR part 50.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-02. Installation requirements for partially excluded underground storage tank systems.

1. Owners and operators installing an underground storage tank system listed in subsection 3 of section 33.1-24-08-01 for the purpose of storing regulated substances (whether of single-wall or double-wall construction) shall meet the following requirements:
 - a. Will prevent releases due to corrosion or structural failure for the operational life of the underground storage tank system;
 - b. Is cathodically protected against corrosion, constructed of noncorrodible material, steel clad with a noncorrodible material, or designed in a manner to prevent the release or threatened release of any stored substance; and
 - c. Is constructed or lined with material that is compatible with the stored substance.
2. Notwithstanding subsection 1, an underground storage tank system without corrosion protection may be installed at a site that is determined by a corrosion expert not to be corrosive enough to cause it to have a release due to corrosion during its operating life. Owners and operators must maintain records that demonstrate compliance with the requirements of this subsection for the remaining life of the tank.

NOTE: The following codes of practice may be used as guidance for complying with this section:

- (a) National Association of Corrosion Engineers (NACE) International Standard "Practice SP 0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection";
- (b) National Association of Corrosion Engineers International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems";
- (c) American Petroleum Institute Recommended Practice 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems"; or
- (d) Steel Tank Institute Recommended Practice R892, "Recommended Practice for Corrosion Protection of Underground Piping Networks Associated with Liquid Storage and Dispensing Systems".

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-03. Definitions (technical standards, delivery prohibition, and corrective action).

1. "Aboveground release" means any release to the surface of the land or to surface water. This includes releases from the aboveground portion of an underground storage tank system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from an underground storage tank system.
2. "Ancillary equipment" means any devices including such devices as piping, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to and from an underground storage tank.
3. "Belowground release" means any release to the subsurface of the land and the ground water. This includes releases from the belowground portions of an underground storage tank system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from an underground storage tank.

4. "Beneath the surface of the ground" means beneath the ground surface or otherwise covered with earthen materials.
5. "Cathodic protection" is a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current.
6. "Cathodic protection tester" means a person who can demonstrate an understanding of the principles and measurements of all common types of cathodic protection systems as applied to buried or submerged metal piping and tank systems. At a minimum, such persons must have education and experience in soil resistivity, stray current, structure-to-soil potential, and component electrical isolation measurements of buried metal piping and tank systems.
7. "CERCLA" means the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended.
8. "Class A operator" means an individual who has primary responsibility to operate and maintain the underground storage tank system in accordance with applicable requirements established by the department. The class A operator typically manages resources and personnel, such as establishing work assignments, to achieve and maintain compliance with regulatory requirements.
9. "Class B operator" means the individual who has day-to-day responsibility for implementing applicable regulatory requirements established by the department. The class B operator typically implements in-field aspects of operation, maintenance, and associated recordkeeping for the underground storage tank system.
10. "Class C operator" means the individual responsible for initially addressing emergencies presented by a spill or release from an underground storage tank system. The class C operator typically controls or monitors the dispensing or sale of regulated substances.
11. "Community water system (CWS)" means a public water system which serves at least fifteen service connections used by year-round residents or regularly serves at least twenty-five year-round residents.
12. "Compatible" means the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the underground storage tank.
13. "Connected piping" means all underground piping including valves, elbows, joints, flanges, and flexible connectors attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual underground storage tank system, the piping that joins two underground storage tank systems should be allocated equally between them.
14. "Consumptive use" with respect to heating oil means consumed on the premises.
15. "Containment sump" means a liquid-tight container that protects the environment by containing leaks and spills of regulated substances from piping, dispensers, pumps, and related components in the containment area. Containment sumps may be single walled or secondarily contained and located at the top of the tank (tank top or submersible turbine pump sump), underneath the dispenser (under-dispenser containment sump), or at other points in the piping run (transition or intermediate sump).
16. "Corrosion expert" means a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion

control on buried or submerged piping systems and metal tanks. Such a person must be accredited or certified as being qualified by the national association of corrosion engineers or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control of buried or submerged metal piping systems and metal tanks.

17. "Department" means the department of environmental quality charged with the administration and enforcement of this chapter.

18. "Dielectric material" means a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate underground storage tank systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the underground storage tank system (for example, tank from piping).

19. "Dispenser" means equipment located aboveground that dispenses regulated substances from the underground storage tank system.

20. "Dispenser system" means the dispenser and the equipment necessary to connect the dispenser to the underground storage tank system.

21. "Electrical equipment" means underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electrical cable.

22. "Excavation zone" means the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the underground storage tank system is placed at the time of installation.

23. "Existing tank system" means a tank system used to contain an accumulation of regulated substances or for which installation has commenced on or before December 22, 1988. Installation is considered to have commenced if:

a. The owner or operator has obtained all federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system; and if,

b. Either:

(1) A continuous onsite physical construction or installation program has begun; or

(2) The owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction at the site or installation of the tank system to be completed within a reasonable time.

24. "Farm tank" is a tank located on a tract of land devoted to the production of crops or raising animals, including fish, and associated residences and improvements. A farm tank must be located on the farm property. "Farm" includes fish hatcheries, rangeland, and nurseries with growing operations.

25. "Flowthrough process tank" is a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flowthrough process tanks do not include tanks used for the storage of materials prior to their introduction into the production process or for the storage of finished products or byproducts from the production process.

26. "Free product" refers to a regulated substance that is present as a nonaqueous phase liquid (for example, liquid not dissolved in water).

27. "Gathering lines" means any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production or gathering operations.
28. "Hazardous substance underground storage tank system" means an underground storage tank system that contains a hazardous substance defined in section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and which is not a petroleum underground storage tank system.
29. "Heating oil" means petroleum that is No. 1, No. 2, No. 4-light, No. 4-heavy, No. 5-light, No. 5-heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including navy special fuel oil and bunker c); and other fuels when used as substitutes for one of these fuel oils. Heating oil is typically used in the operation of heating equipment, boilers, or furnaces.
30. "Hydraulic lift tank" means a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices.
31. "Liquid trap" means sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extraction operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream.
32. "Maintenance" means the normal operational upkeep to prevent an underground storage tank system from releasing product.
33. "Motor fuel" means a complex blend of hydrocarbons typically used in the operation of a motor engine, such as motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any blend containing one or more of these substances (for example: motor gasoline blended with alcohol).
34. "New tank system" means a tank system that will be used to contain an accumulation of regulated substances and for which installation has commenced after December 22, 1988. (See also "existing tank system".)
35. "Noncommercial purposes" with respect to motor fuel means not for resale.
36. "On the premises where stored" with respect to heating oil means underground storage tank systems located on the same property where the stored heating oil is used.
37. "Operational life" refers to the period beginning when installation of the tank system has commenced until the time the tank system is properly closed under sections 33.1-24-08-60 through 33.1-24-08-64.
38. "Operator" means any person in control of, or having responsibility for, the daily operation of the underground storage tank system.
39. "Overfill release" is a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment.
40. "Owner" means:
 - a. In the case of an underground storage tank system in use on November 8, 1984, or brought into use after that date, any person who owns an underground storage tank system used for storage, use, or dispensing of regulated substances; and

b. In the case of any underground storage tank system in use before November 8, 1984, but no longer in use on that date, any person who owned such underground storage tank immediately before the discontinuation of its use.

41. "Person" means an individual, trust, firm, joint stock company, federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body. "Person" also includes a consortium, a joint venture, a commercial entity, and the United States government.

42. "Petroleum underground storage tank system" means an underground storage tank system that contains petroleum or a mixture of petroleum with de minimus quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

43. "Pipe" or "piping" means a hollow cylinder or tubular conduit that is constructed of nonferrous materials that routinely contains and conveys regulated substances from the underground tank or tanks to the dispenser or dispensers, or other end-use equipment. Such piping includes any elbows, couplings, unions, valves, or other in-line fixtures that contain and convey regulated substances from the underground tank or tanks to the dispenser or dispensers. This definition does not include vent, vapor recovery, or fill lines.

44. "Pipeline facilities (including gathering lines)" are new and existing pipe rights of way and any associated equipment, facilities, or buildings.

45. "Potable drinking water well" means any hole (dug, driven, drilled, or bored) that extends into the earth until it meets ground water which:

a. Supplies water for a noncommunity public water system, or;

b. Otherwise supplies water for household use (consisting of drinking, bathing, and cooking, or other similar uses).

Such wells may provide water to entities such as a single-family residence, group of residences, businesses, schools, parks, campgrounds, and other permanent or seasonal communities.

46. "Public water system (PWS)" means a system for the provision to the public of water for human consumption through pipes, or, after August 5, 1998, other constructed conveyances, if such system has at least fifteen service connections or regularly serves an average of at least twenty-five individuals daily at least sixty days out of the year. Such term includes:

a. Any collection, treatment, storage, and distribution facilities under control of the operator of such system and used primarily in connection with such system; and

b. Any collection or pretreatment storage facilities not under such control which are used primarily in connection with such system.

Such term does not include any "special irrigation district". A public water system is either a "community water system" or a "noncommunity water system".

47. "Red tag" means a tag, device, or mechanism on the tank's fill pipes that clearly identifies an underground storage tank as ineligible for product delivery. The tag or device is easily visible to the transfer operator and clearly states and conveys that it is unlawful to deliver to, deposit into, or accept product into the ineligible underground storage tank. The tag, device, or mechanism is generally tamper resistant.

48. "Regulated substance" means:

- a. Any substance defined in section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (but not including any substance regulated as a hazardous waste under North Dakota Century Code chapter 23.1-04; and
- b. Petroleum, including crude oil or any fraction thereof that is liquid at standard conditions of temperature and pressure (sixty degrees Fahrenheit [10 degrees Celsius] and fourteen and seven-tenths pounds per square inch [101.3 kilopascals] absolute). The term "regulated substance" includes petroleum and petroleum-based substances comprised of a complex blend of hydrocarbons, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.

49. "Release" means any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from an underground storage tank into ground water, surface water, or subsurface soils.

50. "Release detection" means determining whether a release of a regulated substance has occurred from the underground storage tank system into the environment or a leak has occurred into the interstitial space between the underground storage tank system and its secondary barrier or secondary containment around it.

51. "Repair" means to restore to proper operating condition a tank pipe, spill prevention equipment, overfill prevention equipment, corrosion protection equipment, release detection equipment, or other underground storage tank system component that has caused a release of product from the underground storage tank system or has failed to function properly. Piping repair includes installation of a single run of up to ten feet of new piping to replace existing piping. Piping repair involving installation of a single run of more than ten feet of new piping to replace existing piping constitutes replacement as defined in subsection 52. Dispenser repair includes installation of a new dispenser to replace an existing dispenser so long as work is performed entirely on or above any shear valves and check valves. Installation of a new dispenser to replace an existing dispenser constitutes replacement as defined in subsection 52 if the work is performed beneath any shear valves or check valves, or on any flexible connectors, or unburied risers.

52. "Replace or replacement" means the installation of a new underground tank system or component in substantially the same location as another tank system or component in lieu of that tank system or component.

a. For a tank - To remove a tank and install another tank.

b. For piping - To remove ten feet or more of piping and install other piping, excluding connectors, connected to a single tank. For tanks with multiple piping runs, this definition applies independently to each piping run.

53. "Residential tank" is a tank located on property used primarily for dwelling purposes.

54. "SARA" means the Superfund Amendments and Reauthorization Act of 1986.

55. "Secondary containment or secondarily contained" means a release prevention and release detection system for a tank or piping. This system has an inner and outer barrier with an interstitial space that is monitored for leaks. This term includes containment sumps when used for interstitial monitoring of piping.

56. "Septic tank" is a watertight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed for disposal through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility.

57. "Storm water or wastewater collection system" means piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water runoff resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of storm water and wastewater does not include treatment except where incidental to conveyance.

58. "Surface impoundment" is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials) that is not an injection well.

59. "Tank" is a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (for example, concrete, steel, plastic) that provide structural support.

60. "Training program" means any program that provides information to and evaluates the knowledge of a class A, class B, or class C operator through testing, practical demonstration, or another approach acceptable to the department regarding requirements for underground storage tank systems that meet the requirements of sections 33.1-24-08-45 through 33.1-24-08-48.

61. "Transfer operator" means any person who delivers or deposits product into an underground storage tank. This term may include major oil companies, jobbers, petroleum transportation companies, or other product delivery entities.

62. "Under-dispenser containment (UDC)" means containment underneath a dispenser system designed to prevent leaks from the dispenser and piping within or above the under-dispenser containment from reaching soil or ground water. Such containment must:

a. Be liquid-tight on its sides, bottom, and at any penetrations;

b. Be compatible with the substance conveyed by the piping; and

c. Allow for visual inspection and access to the components in the containment system or be monitored.

63. "Underground area" means an underground room, such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor.

64. "Underground release" means any belowground release.

65. "Underground storage tank" means any one or combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of regulated substances, and the volume of which (including the volume of underground pipes connected thereto) is ten percent or more beneath the surface of the ground. This term does not include any:

a. Farm or residential tank of one thousand one hundred gallons [4,163.94 liters] or less capacity used for storing motor fuel for noncommercial purposes;

b. Tank used for storing heating oil for consumptive use on the premises where stored;

c. Septic tank;

d. Pipeline facility (including gathering lines) regulated under:

(1) Chapter 601 [Title 49 of the Pipeline Safety Statute]; or

(2) Which is an intrastate pipeline facility regulated under state laws as provided in chapter 601 of Title 49 of the Pipeline Safety Statute and which is determined by the United States secretary of transportation to be connected to a pipeline, or to be operated or intended to be capable of operating at pipeline pressure or as an integral part of a pipeline;

e. Surface impoundment, pit, pond, or lagoon;

f. Storm water or wastewater collection system;

g. Flowthrough process tank;

h. Liquid trap or associated gathering lines directly related to oil or gas production and gathering operations; or

i. Storage tank situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor.

The term "underground storage tank" does not include any pipes connected to any tank which is described in subdivisions a through i of this subsection.

66. "Unattended cardtrol facility" means a facility where control of the dispensing of a regulated substance is through a mechanical or electronic method without the constant onsite presence of a class A, class B, or class C operator.

67. "Underground storage tank system" or "tank system" means an underground storage tank, connected underground piping, underground ancillary equipment, and containment system, if any.

68. "Upgrade" means the addition or retrofit of some systems such as cathodic protection, lining, or spill and overfill controls to improve the ability of an underground storage tank system to prevent the release of product.

69. "Wastewater treatment tank" means a tank that is designed to receive and treat an influent wastewater through physical, chemical, or biological methods.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-04. [Reserved].

33.1-24-08-05. [Reserved].

33.1-24-08-06. [Reserved].

33.1-24-08-07. [Reserved].

33.1-24-08-08. [Reserved].

33.1-24-08-09. [Reserved].

33.1-24-08-10. Performance standards for new underground storage tank systems.

In order to prevent releases due to structural failure, corrosion, or spills and overfills for as long as the underground storage tank system is used to store regulated substances, all owners and operators of new underground storage tank systems must meet the following requirements. In addition, except for suction piping that meets the requirements of subparagraphs a through e of paragraph 2 of subdivision a of subsection 2 of section 33.1-24-08-31, tanks and piping installed or replaced after January 1, 2009, must be secondarily contained and use interstitial monitoring in accordance with subsection 7 of section 33.1-24-08-33. Secondary containment must be able to contain regulated substances leaked from the primary containment until they are detected and removed and prevent the release of regulated substances to the environment at any time during the operational life of the underground storage tank system. For cases where the piping is considered to be replaced, the entire piping run must be secondarily contained.

1. **Tanks.** Each tank must be properly designed and constructed, and any portion underground that routinely contains product must be protected from corrosion in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory as specified below:

a. The tank is constructed of fiberglass-reinforced plastic.

NOTE: The following codes of practice may be used to comply with this subdivision: Underwriters Laboratory Standard 1316, "Glass-Fiber-Reinforced Plastic Underground Storage Tanks for Petroleum Products Alcohols, and Alcohol-Gasoline Mixtures"; or Underwriters Laboratories of Canada S615, "Standard for Reinforced Plastic Underground Tanks for Flammable and Combustible Liquids".

b. The tank is constructed of steel and cathodically protected in the following manner:

(1) The tank is coated with a suitable dielectric material;

(2) Field-installed cathodic protection systems are designed by a corrosion expert;

(3) Impressed current systems are designed to allow determination of current operating status as required in subsection 3 of section 33.1-24-08-21; and

(4) Cathodic protection systems are operated and maintained in accordance with section 33.1-24-08-21 or according to guidelines established by the department.

NOTE: The following codes of practice may be used to comply with this subdivision: Steel Tank Institute "Specification STI-P3® Specification and Manual for External Corrosion Protection of Underground Steel Storage Tanks"; Underwriters Laboratories Standard 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks"; Underwriters Laboratories of Canada S603, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids", and S603.1, "Standard for External Corrosion Protection Systems for Steel Underground Tanks for Flammable and Combustible Liquids", and S631, "Standard for Isolating Bushings for Steel Underground Tanks Protected with External Corrosion Protection Systems"; Steel Tank Institute

Standard F841, "Standard for Dual Wall Underground Steel Storage Tanks"; or NACE International Standard Practice SP 0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection"; and Underwriters Laboratories Standard 58, "Standard for Steel Underground Tanks for Flammable and Combustible Liquids".

c. The tank is constructed of steel and clad or jacketed with a noncorridible material.

NOTE: The following codes of practice may be used to comply with this subdivision: Underwriters Laboratories Standard 1746, "External Corrosion Protection Systems for Steel Underground Storage Tanks"; Steel Tank Institute ACT-100® Specification F894, "Specification for External Corrosion Protection of FRP Composite Steel Underground Storage Tanks"; Steel Tank Institute ACT-100-U® Specification F961, "Specification for External Corrosion Protection of Composite Steel Underground Storage Tanks"; or Steel Tank Institute Specification F922, "Steel Tank Institute Specification for Permatank®".

d. The tank is constructed of metal without additional corrosion protection measures provided that:

(1) The tank is installed at a site that is determined by a corrosion expert not be corrosive enough to cause it to have a release due to corrosion during its operating life; and

(2) Owners and operators maintain records that demonstrate compliance with the requirements of paragraph 1 of this subdivision for the remaining life of the tank.

e. The tank construction and corrosion protection are determined by the department to be designed to prevent the release or threatened release of any stored regulated substance in a manner that is no less protective of human health and the environment than subdivisions a through d.

2. **Piping.** The piping that routinely contains regulated substances and is in contact with the ground must be properly designed, constructed, and protected from corrosion in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory as specified below:

a. The piping is constructed of a noncorrodible material.

NOTE: The following codes of practice may be used to comply with this subdivision: Underwriters Laboratories Standard 971, "Nonmetallic Underground Piping for Flammable Liquids"; Underwriters Laboratories of Canada Standard S660, "Standard for Nonmetallic Underground Piping for Flammable and Combustible Liquids".

b. The piping is constructed of steel and cathodically protected in the following manner:

(1) The piping is coated with a suitable dielectric material;

(2) Field-installed cathodic protection systems are designed by a corrosion expert;

(3) Impressed current systems are designed to allow determination of current operating status as required in subsection 3 of section 33.1-24-08-21; and

(4) Cathodic protection systems are operated and maintained in accordance with section 33.1-24-08-21 or guidelines established by the department.

NOTE: The following codes of practice may be used to comply with this subdivision: American Petroleum Institute Recommended Practice 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems"; Underwriters Laboratories

Subject 971A, "Outline of Investigation for Metallic Underground Fuel Pipe"; Steel Tank Institute Recommended Practice R892, "Recommended Practice for Corrosion Protection of Underground Piping Networks Associated with Liquid Storage and Dispensing Systems"; NACE International Standard Practice SP 0169 "Control of External Corrosion on Underground Submerged Metallic Piping Systems", NACE International Standard Practice SP 0285, "External Corrosion Control of Underground Storage Tank Systems by Cathodic Protection".

c. The piping is constructed of metal without additional corrosion protection measures provided that:

(1) The piping is installed at a site that is determined by a corrosion expert to not be corrosive enough to cause it to have a release due to corrosion during its operating life; and

(2) Owners and operators maintain records that demonstrate compliance with the requirements of paragraph 1 for the remaining life of the piping.

d. The piping construction and corrosion protection are determined by the department to be designed to prevent the release or threatened release of any stored regulated substance in a manner that is no less protective of human health and the environment than the requirements in subdivisions a through c.

3. Spill and overflow prevention equipment.

a. Except as provided in subdivisions b and c, to prevent spilling and overflowing associated with product transfer to the underground storage tank system, owners and operators must use the following spill and overflow prevention equipment:

(1) Spill prevention equipment that will prevent release of product to the environment when the transfer hose is detached from the fill pipe (for example, a spill catchment basin); and

(2) Overflow prevention equipment that will:

(a) Automatically shut off flow into the tank when the tank is no more than ninety-five percent full;

(b) Alert the transfer operator when the tank is no more than ninety percent full by restricting the flow into the tank or triggering a high-level alarm; or

(c) Restrict flow thirty minutes prior to overflowing, alert the transfer operator with a high-level alarm one minute before overflowing, or automatically shut off flow into the tank so that none of the fittings located on top of the tank are exposed to product due to overflowing.

b. Owners and operators are not required to use the spill and overflow prevention equipment specified in subdivision a if:

(1) Alternative equipment is used that is determined by the department to be no less protective of human health and the environment than the equipment specified in paragraphs 1 and 2 of subdivision a; or

(2) The underground storage tank system is filled by transfers of no more than twenty-five gallons [94.63 liters] at one time.

c. Flow restrictors used in vent lines may not be used to comply with paragraph 2 of subdivision a of subsection 3 when overfill prevention is installed or replaced after April 1, 2018.

d. Spill and overfill prevention equipment must be periodically tested or inspected in accordance with section 33.1-24-08-25.

4. Dispenser systems. Each underground storage tank system must be equipped with under-dispenser containment for any new dispenser system installed after September 28, 2018:

a. A dispenser system is considered new when both the dispenser and the equipment needed to connect the dispenser to the underground storage tank system are installed at an underground storage tank facility. The equipment necessary to connect the dispenser to the underground storage tank system includes check valves, shear valves, unburied risers or flexible connectors, or other transitional components that are underneath the dispenser and connect the dispenser to the underground piping.

b. Under-dispenser containment must be liquid-tight on its sides, bottom, and at any penetrations. Under-dispenser containment must allow for visual inspection and access to the components in the containment system or be periodically monitored for leaks from the dispenser system.

5. Installation. The underground storage tank system must be properly installed in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory and in accordance with the manufacturer's instructions.

NOTE: Tank and piping system installation practices and procedures described in the following codes of practice may be used to comply with the requirements of this subsection: American Petroleum Institute Publication 1615, "Installation of Underground Petroleum Storage System"; Petroleum Equipment Institute Publication RP100, "Recommended Practices for Installation of Underground Liquid Storage Systems"; or National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code" and Standard 30A, "Code for Motor Fuel Dispensing Facilities and Repair Garages".

6. Certification of installation. All owners and operators must ensure that one or more of the following methods of certification, testing, or inspection is used to demonstrate compliance with subsection 5 by providing a certification of compliance on the underground storage tank notification form in accordance with section 33.1-24-08-12:

a. The installer has been certified by the tank and piping manufacturers;

b. The installer has been certified or licensed by the department;

c. The installation has been inspected and certified by a registered professional engineer with education and experience in underground storage tank system installation;

d. The installation has been inspected and approved by the department;

e. All work listed in the manufacturer's installation checklists has been completed; or

f. The owner and operator have complied with another method for ensuring compliance with subsection 5 that is determined by the department to be no less protective of human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-11. Upgrading of existing underground storage tank systems.

Owners and operators must permanently close (in accordance with sections 33.1-24-08-60 through 33.1-24-08-64) any underground storage tank system that does not meet the new underground storage tank system performance standards in section 33.1-24-08-10 or has not been upgraded in accordance with subsections 2 through 4. This does not apply to previously deferred underground storage tank systems described in sections 33.1-24-08-70 to 33.1-24-08-72 and where an upgrade is determined to be appropriate by the department.

1. **Alternatives allowed.** All existing underground storage tank systems must comply with one of the following requirements:

a. New underground storage tank system performance standards under section 33.1-24-08-10;

b. The upgrading requirements in subsections 2 through 4; or

c. Closure requirements under sections 33.1-24-08-60 through 33.1-24-08-64, including applicable requirements for corrective action under sections 33.1-24-08-50 through 33.1-24-08-57.

2. **Tank upgrading requirements.** Steel tanks must be upgraded to meet one of the following requirements in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory:

a. Interior lining. Tanks upgraded by internal lining must meet the following:

(1) The lining was installed in accordance with the requirements of section 33.1-24-08-23; and

(2) Within ten years after lining, and every five years thereafter, the lined tank is internally inspected and found to be structurally sound with the lining still performing in accordance with original design specifications. If the internal lining is no longer performing in accordance with original design specifications and cannot be repaired in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory, then the lined tank must be permanently closed in accordance with sections 33.1-24-08-60 through 33.1-24-08-64.

NOTE: The following codes of practice may be used to comply with the periodic lining inspection requirement of this section: American Petroleum Institute Recommended Practice 1631, "Interior Lining and Periodic Inspection of Underground Storage Tanks"; National Leak Prevention Association Standard 631, Chapter B "Future Internal Inspection Requirements for Lined Tanks"; or Ken Wilcox Associates Recommended Practice, "Recommended Practice for Inspecting Buried Lined Steel Tanks Using a Video Camera".

b. Cathodic protection. Tanks upgraded by cathodic protection must meet the requirements of paragraphs 2, 3, and 4 of subdivision b of subsection 1 of section 33.1-24-08-10 and the integrity of the tank must have been ensured using one of the following methods:

(1) The tank was internally inspected and assessed to ensure that the tank is structurally sound and free of corrosion holes prior to installing the cathodic protection system;

(2) The tank had been installed for less than ten years and is monitored monthly for releases in accordance with subsections 4 through 9 of section 33.1-24-08-33;

(3) The tank had been installed for less than ten years and is assessed for corrosion holes by conducting two tightness tests that meet the requirements of subsection 3 of section 33.1-24-08-33. The first tightness test must have been conducted prior to installing the cathodic protection system. The second tightness test must have been conducted between three and six months following the first operation of the cathodic protection system; or

(4) The tank was assessed for corrosion holes by a method that is determined by the department to prevent releases in a manner that is no less protective of human health and the environment than paragraphs 1 through 3.

c. Internal lining combined with cathodic protection. Tanks upgraded by both internal lining and cathodic protection must meet the following:

(1) The lining was installed in accordance with the requirements of section 33.1-24-08-23; and

(2) The cathodic protection system meets the requirements of paragraphs 2, 3, and 4 of subdivision b of subsection 1 of section 33.1-24-08-10.

NOTE: The following historical codes of practice were listed as options for complying with this section: American Petroleum Institute Publication 1631, "Recommended Practice for the Interior Lining of Existing Steel Underground Storage Tanks"; National Leak Prevention Association Standard 631, "Spill Prevention, Minimum 10 Year Life Extension of Existing Steel Underground Tanks by Lining Without the Addition of Cathodic Protection"; National Association of Corrosion Engineers Standard RP-02-85, "Control of External Corrosion on Metallic Buried, Partially Buried, or Submerged Liquid Storage Systems"; and American Petroleum Institute Recommended Practice 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems".

3. **Piping upgrading requirements.** Metal piping that routinely contains regulated substances and is in contact with the ground must be cathodically protected in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory and must meet the requirements of paragraphs 2, 3, and 4 of subdivision b of subsection 2 of section 33.1-24-08-10.

NOTE: The codes of practice listed in the note following subdivision b of subsection 2 of section 33.1-24-08-10 may be used to comply with this requirement.

4. **Spill and overflow prevention equipment.** To prevent spilling and overflowing associated with product transfer to the underground storage tank system, all existing underground storage tank systems must comply with new underground storage tank system spill and overflow prevention equipment requirements specified in subsection 3 of section 33.1-24-08-10.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-12. Notification requirements.

1. After May 8, 1986, an owner must submit notice of a tank system's existence to the department within thirty days of bringing the underground storage tank system into use. Owners must use the form prescribed in appendix I.

NOTE: Owners and operators of underground storage tank systems that were in the ground on or after May 8, 1986, unless taken out of operation on or before January 1, 1974, were required to notify the designated state or local agency in accordance with the Hazardous and

Solid Waste Amendments of 1984, Public Law 98-616, on a form published by the environmental protection agency on November 8, 1985, (50 Federal Register 46602) unless notice was given pursuant to section 103(c) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980. Owners and operators who have not complied with the notification requirements may use portions I through VI of the notification form contained in appendix I.

2. Within thirty days of acquisition, any person who assumes ownership of a regulated underground storage tank system, except as described in subsection 1, must submit a notice of the ownership change to the department, using the form in appendix I, state form in accordance with subsection 3.
3. Owners required to submit notices under subsections 1 and 2 must provide notices to the department for each tank they own. Owners may provide notice for several tanks using one notification form, but owners who own tanks located at more than one place of operation must file a separate notification form for each separate place of operation.
4. Notices required to be submitted under subsection 1 must provide all of the information in sections I through VI of the prescribed form for each tank for which notice must be given.
5. All owners and operators of new underground storage tank systems must certify in the notification form compliance with the following requirements:
 - a. Installation of tanks and piping under subsection 6 of section 33.1-24-08-10;
 - b. Cathodic protection of steel tanks and piping under subsections 1 and 2 of section 33.1-24-08-10;
 - c. Financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106; and
 - d. Release detection under sections 33.1-24-08-31 and 33.1-24-08-32.
6. Beginning October 24, 1988, any person who sells a tank intended to be used as an underground storage tank must notify the purchaser of such tank of the owner's notification obligations under subsection 1. The statement provided in appendix II, when used on shipping tickets and invoices, may be used to comply with this requirement.
7. All owners and operators of new underground storage tank systems must ensure that the installer certifies in the notification form that the methods used to install the tanks and piping complies with the requirements in subsection 5 of section 33.1-24-08-10.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-13. [Reserved].

33.1-24-08-14. [Reserved].

33.1-24-08-15. [Reserved].

33.1-24-08-16. [Reserved].

33.1-24-08-17. [Reserved].

33.1-24-08-18. [Reserved].

33.1-24-08-19. [Reserved].

33.1-24-08-20. Spill and overfill control.

1. Owners and operators must ensure that releases due to spilling or overfilling do not occur. The owner and operator must ensure that the volume available in the tank is greater than the volume of product to be transferred to the tank before the transfer is made and that the transfer operation is monitored constantly to prevent overfilling and spilling.

NOTE: The transfer procedures described in National Fire Protection Association Standard 385 "Standard for Tank Vehicles for Flammable and Combustible Liquids" or American Petroleum Institute Recommended Practice 1007, "Loading and Unloading of MC 306/DOT 406 Cargo Tank Motor Vehicles" may be used to comply with this subsection. Further guidance on spill and overfill prevention appears in American Petroleum Institute Recommended Practice 1621, "Bulk Liquid Stock Control at Retail Outlets".

2. The owner and operator must report, investigate, and clean up any spills and overfills in accordance with section 33.1-24-08-43.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-21. Operation and maintenance of corrosion protection.

All owners and operators of metal underground storage tank systems with corrosion protection must comply with the following requirements to ensure that releases due to corrosion are prevented until the underground storage tank system is permanently closed or undergoes a change-in-service pursuant to section 33.1-24-08-61:

1. All corrosion protection systems must be operated and maintained to continuously provide corrosion protection to the metal components of that portion of the tank and piping that routinely contain regulated substances and are in contact with the ground;
2. All underground storage tank systems equipped with cathodic protection systems must be inspected for proper operation by a qualified cathodic protection tester in accordance with the following requirements:
 - a. Frequency. All cathodic protection systems must be tested within six months of installation and at least every three years thereafter or according to another reasonable timeframe established by the department;

- b. Inspection criteria. The criteria that are used to determine that cathodic protection is adequate as required by this section must be in accordance with a code of practice developed by a nationally recognized association;

NOTE: The following codes of practice may be used to comply with subsection 2: NACE International Test Method TM0101, "Measurement Techniques Related to Criteria for Cathodic Protection of Underground Storage Tank Systems"; NACE International Test Method TM0497, "Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems"; Steel Tank Institute Recommended Practice R051, "Cathodic Protection Testing Procedures for STI-P3® USTs"; NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection"; or NACE International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems".

3. Underground storage tank systems with impressed current cathodic protection systems must also be inspected every sixty days to ensure the equipment is running properly; and
4. For underground storage tank systems using cathodic protection, records of the operation of the cathodic protection must be maintained (in accordance with section 33.1-24-08-24) to demonstrate compliance with the performance standards. These records must provide the following:
 - a. The results of the last three inspections required in subsection 3; and
 - b. The results of testing from the last two inspections required in subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-22. Compatibility.

1. Owners and operators must use an underground storage tank system made of or lined with materials that are compatible with the substance stored in the underground storage tank system.
2. Owners and operators must notify the department at least thirty days prior to switching to a regulated substance containing greater than ten percent ethanol, greater than twenty percent biodiesel, or any other regulated substance identified by the department. In addition, owners and operators with underground storage tank systems storing these regulated substances must meet one of the following:
 - a. Demonstrate compatibility of the underground storage tank system, including the tank, piping, containment sumps, pumping equipment, release detection equipment, spill equipment, and overfill equipment. Owners and operators may demonstrate compatibility of the underground storage tank system by using one of the following options:
 - (1) Certification or listing of underground storage tank system equipment or components by a nationally recognized, independent testing laboratory for use with the regulated substance stored; or
 - (2) Equipment or component manufacturer approval. The manufacturer's approval must be in writing, indicate an affirmative statement of compatibility, specify the range of biofuel blends the equipment or component is compatible with, and be from the equipment or component manufacturer; or

b. Use another option determined by the department to be no less protective of human health and the environment than the options listed in subdivision a.

3. Owners and operators must maintain records in accordance with subsection 2 of section 33.1-24-08-24 documenting compliance with subsection 2 for as long as the underground storage tank system is used to store the regulated substance.

NOTE: The following code of practice may be useful in complying with this section: American Petroleum Institute Recommended Practice 1626, "Storing and Handling Ethanol and Gasoline-Ethanol Blends at Distribution Terminals and Filling Stations".

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-23. Repairs allowed.

Owners and operators of underground storage tank systems must ensure that repairs will prevent releases due to structural failure or corrosion as long as the underground storage tank system is used to store regulated substances. The repairs must meet the following requirements:

1. Repairs to underground storage tank systems must be properly conducted in accordance with a code of practice developed by a nationally recognized association or an independent testing laboratory;

NOTE: The following codes of practice may be used to comply with this subsection: National Fire Protection Association Standard 30, "Flammable and Combustible Liquids Code"; American Petroleum Institute Recommended Practice RP 2200, "Repairing Crude Oil, Liquefied Petroleum Gas, and Product Pipelines"; American Petroleum Institute Recommended Practice RP 1631, "Recommended Practice for the Interior Lining and Periodic Inspection Underground Storage Tanks"; National Fire Protection Association Standard 326, "Standard for the Safeguarding of Tanks and Containers for Entry, Cleaning, or Repair"; National Leak Prevention Association Standard 631, Chapter A, "Entry, Cleaning, Interior Inspection, Repair, and Lining of Underground Storage Tanks"; Steel Tank Institute Recommended Practice R972, "Recommended Practice for the Addition of Supplemental Anodes to STI-P3® Tanks"; NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection"; or Fiberglass Tank and Pipe Institute Recommended Practice T-95-02, "Remanufacturing of Fiberglass Reinforced Plastic (FRP) Underground Storage Tanks".

2. Repairs to fiberglass-reinforced plastic tanks may be made by the manufacturer's authorized representatives or in accordance with a code of practice developed by a nationally recognized association or an independent testing laboratory;

3. Metal pipe sections and fittings that have released product as a result of corrosion or other damage must be replaced. Noncorrodible pipes and fittings may be repaired in accordance with the manufacturer's specifications;

4. Repairs to secondary containment areas of tanks and piping used for interstitial monitoring and to containment sumps used for interstitial monitoring of piping must have the secondary containment tested for tightness according to the manufacturer's instructions, a code of practice developed by a nationally recognized association or independent testing laboratory, or according to requirements established by the department within thirty days following the date of completion of the repair. All other repairs to tanks and piping must be tightness tested in accordance with subsection 3 of section 33.1-24-08-33 and subsection 2 of section

33.1-24-08-34 within thirty days following the date of the completion of the repair except as provided in subdivisions a through c:

- a. The repaired tank is internally inspected in accordance with a code of practice developed by a nationally recognized association or an independent testing laboratory;
- b. The repaired portion of the underground storage tank system is monitored monthly for releases in accordance with a method specified in subsections 4 through 9 of section 33.1-24-08-33; or
- c. Another test method is used that is determined by the department to be no less protective of human health and the environment than those listed above;

NOTE: The following codes of practice may be used to comply with subsection 4 of this subsection: Steel Tank Institute Recommended Practice R012, "Recommended Practice for Interstitial Tightness Testing of Existing Underground Double Wall Steel Tanks"; or Fiberglass Tank and Pipe Institute Protocol, "Field Test Protocol for Testing the Annular Space of Installed Underground Fiberglass Double and Triple-Wall Tanks with Dry Annular Space"; Petroleum Equipment Institute Recommended Practice RP1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities".

5. Within six months following the repair of any cathodically protected underground storage tank system, the cathodic protection system must be tested in accordance with subsections 2 and 3 of section 33.1-24-08-21 to ensure that it is operating properly; and
6. Within thirty days following any repair to spill or overfill prevention equipment, the repaired spill or overfill prevention equipment must be tested or inspected, as appropriate, in accordance with section 33.1-24-08-25 to ensure it is operating properly.
7. Underground storage tank system owners and operators must maintain records, in accordance with section 33.1-24-08-24, of each repair until the underground storage tank system is permanently closed or undergoes a change-in-service pursuant to section 33.1-24-08-61.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-24. Reporting and recordkeeping.

Owners and operators of underground storage tank systems must cooperate fully with inspections, monitoring, and testing conducted by the department, as well as requests for document submission, testing, and monitoring by the owner or operator pursuant to North Dakota Century Code section 23.1-04-06.

1. **Reporting.** Owners and operators must submit the following information to the department:
 - a. Notification for all underground storage tank systems (section 33.1-24-08-12), which includes certification of installation for new underground storage tank systems (subsection 6 of section 33.1-24-08-10), and notification when any person assumes ownership of an underground storage tank system (subsection 2 of section 33.1-24-08-12);
 - b. Notification prior to underground storage tank systems switching to certain regulated substances (subsection 2 of section 33.1-24-08-22);

- c. Reports of all releases, including suspected releases (section 33.1-24-08-40), spills and overfills (section 33.1-24-08-43), and confirmed releases (section 33.1-24-08-51);
- d. Corrective actions planned or taken, including initial abatement measures (section 33.1-24-08-52), initial site characterization (section 33.1-24-08-53), free product removal (section 33.1-24-08-54), investigation of soil and ground water cleanup (section 33.1-24-08-55), and corrective action plan (section 33.1-24-08-56); and
- e. A notification before permanent closure or change in service (section 33.1-24-08-61).

2. Recordkeeping. Owners and operators must maintain the following information:

- a. A corrosion expert's analysis of site corrosion potential if corrosion protection equipment is not used (subdivision d of subsection 1 of section 33.1-24-08-10 and subdivision c of subsection 2 of section 33.1-24-08-10);
- b. Documentation of operation of corrosion protection equipment (section 33.1-24-08-21);
- c. Documentation of compatibility for underground storage tank systems (subsection 3 of section 33.1-24-08-22);
- d. Documentation of underground storage tank system repairs (subsection 7 of section 33.1-24-08-23);
- e. Documentation of compliance for spill and overfill prevention equipment and containment sumps used for interstitial monitoring of piping (subsection 3 of section 33.1-24-08-25);
- f. Documentation of periodic walkthrough inspections (subsection 2 of section 33.1-24-08-26);
- g. Documentation of compliance with release detection requirements (section 33.1-24-08-35); and
- h. Results of the site investigation conducted at permanent closure (section 33.1-24-08-64).

3. Availability and maintenance of records. Owners and operators must keep the records required either:

- a. At the underground storage tank site and immediately available for inspection by the department;
- b. At a readily available alternative site and be provided for inspection to the department upon request; or
- c. In case of permanent closure records required under section 33.1-24-08-64, owners and operators are also provided with the additional alternative of mailing closure records to the department if they cannot be kept at the site or an alternative site as indicated above.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-25. Periodic testing of spill prevention equipment and containment sumps used for interstitial monitoring of piping and periodic inspection of overfill prevention equipment.

- 1. Owners and operators of underground storage tank systems with spill and overfill prevention equipment and containment sumps used for interstitial monitoring of piping must meet these

requirements to ensure the equipment is operating properly and will prevent releases to the environment:

a. Spill prevention equipment, such as a catchment basin, spill bucket, or other spill containment device, and containment sumps used for interstitial monitoring of piping must prevent releases to the environment by meeting one of the following:

(1) The equipment is double walled and the integrity of both walls is periodically monitored at a frequency not less than the frequency of the walkthrough inspections described in section 33.1-24-08-26. Owners and operators shall begin fulfilling paragraph 2 of subdivision a of subsection 1 and conduct a test within thirty days of discontinuing periodic monitoring of this equipment; or

(2) The spill prevention equipment and containment sumps used for interstitial monitoring of piping are tested at least once every three years to ensure the equipment is liquid tight by using vacuum, pressure, or liquid testing in accordance with one of the following criteria:

(a) Requirements developed by the manufacturer;

NOTE: Owners and operators may use this option only if the manufacturer has developed requirements.

(b) Code of practice developed by a nationally recognized association or independent testing laboratory; or

(c) Requirements determined by the department to be no less protective of human health and the environment than the requirements listed in subparagraphs a and b of paragraph 2 of subdivision a of subsection 1.

b. Overfill prevention equipment must be inspected at least once every three years. At a minimum, the inspection must ensure that overfill prevention equipment is set to activate at the correct level specified in subsection 3 of section 33.1-24-08-10 and will activate when a regulated substance reaches that level. Inspections must be conducted in accordance with one of the criteria in subparagraphs a through c of paragraph 2 of subdivision a of subsection 1.

2. Owners and operators must begin meeting these requirements as follows:

a. For underground storage tank systems in use on or before April 1, 2018, the initial spill prevention equipment test, containment sump test, and overfill prevention equipment inspection must be conducted not later than April 1, 2021.

b. For underground storage tank systems brought into use after April 1, 2018, these requirements apply at installation.

3. Owners and operators must maintain records as follows, in accordance with section 33.1-24-08-24, for spill prevention equipment, containment sumps used for interstitial monitoring of piping, and overfill prevention equipment:

a. All records of testing or inspection must be maintained for three years; and

b. For spill prevention equipment and containment sumps used for interstitial monitoring of piping not tested every three years, documentation showing that the prevention equipment is double walled and the integrity of both walls is periodically monitored must be maintained for as long as the equipment is periodically monitored.

NOTE: To paragraph 2 of subdivision a of subsection 1 and subdivision b of subsection 1 the following code of practice may be used to comply with paragraph 2 of subdivision a of subsection 1 and subdivision b of subsection 1: Petroleum Equipment Institute Publication RP1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities".

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-26. Periodic operation and maintenance walkthrough inspections.

1. To properly operate and maintain underground storage tank systems, not later than April 1, 2021, owners and operators shall meet one of the following:

a. Conduct a walkthrough inspection that, at a minimum, checks the following equipment as specified below:

(1) **Every thirty days** (Exception: spill prevention equipment at underground storage tank systems receiving deliveries at intervals greater than every thirty days may be checked prior to each delivery):

(a) Spill prevention equipment - Visually check for damage; remove liquid or debris; check for and remove obstructions in the fill pipe; check the fill cap to make sure it is securely on the fill pipe; and, for double walled spill prevention equipment with interstitial monitoring, check for a leak in the interstitial area; and

(b) Release detection equipment - Check to make sure the release detection equipment is operating with no alarms or other unusual operating conditions present, and ensure records of release detection testing are reviewed and current; and

(2) **Annually:**

(a) Containment sumps - Visually check for damage, leaks to the containment area, or releases to the environment; remove liquid (in contained sumps) or debris; and, for double walled sumps with interstitial monitoring, check for a leak in the interstitial area; and

(b) Hand-held release detection equipment - Check devices, such as tank gauge sticks or ground water bailers for operability and serviceability;

b. Conduct operation and maintenance walkthrough inspections according to a standard code of practice developed by a nationally recognized association or independent testing laboratory that checks equipment comparable to subdivision a of subsection 1 of section 33.1-24-08-25; or

NOTE: The following code of practice may be used to comply with subdivision b of subsection 1 of section 33.1-24-08-26: Petroleum Equipment Institute Recommended Practice RP 900, "Recommended Practices for the Inspection and Maintenance of UST Systems".

c. Conduct operation and maintenance walkthrough inspections developed by the department that checks equipment comparable to subdivision a of subsection 1.

- 2 Owners and operators shall maintain records, in accordance with section 33.1-24-08-24, of operation and maintenance walkthrough inspections for one year. Records must include a list of each area checked, whether each area checked was acceptable or needed action taken, a description of actions taken to correct an issue, and delivery records if spill prevention equipment is checked less frequently than every thirty days due to infrequent deliveries.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-27. [Reserved].

33.1-24-08-28. [Reserved].

33.1-24-08-29. [Reserved].

33.1-24-08-30. General release detection requirements for all underground storage tank systems.

1. Owners and operators of underground storage tank systems must provide a method, or combination of methods, of release detection that:
 - a. Can detect a release from any portion of the tank and the connected underground piping that routinely contains product;
 - b. Is installed and calibrated in accordance with the manufacturer's instructions;
 - c. Beginning on April 1, 2021, is operated and maintained, and electronic and mechanical components are tested for proper operation, in accordance with one of the following: manufacturer's instructions, a code of practice developed by a nationally recognized association or independent testing laboratory, or requirements determined by the department to be no less protective of human health and the environment than the two options listed above. A test of the proper operation must be performed at least annually and, at a minimum, as applicable to the facility, cover the following components and criteria:
 - (1) Automatic tank gauge and other controllers: test alarm, verify system configuration, and test battery backup;
 - (2) Probes and sensors: inspect for residual buildup, ensure floats move freely, ensure shaft is not damaged, ensure cables are free of kinks and breaks, and test alarm operability and communication with controller;
 - (3) Automatic line leak detector: test operation to meet criteria in subsection 1 of section 33.1-24-08-34 by simulating a leak;
 - (4) Vacuum pumps and pressure gauges: ensure proper communication with sensors and controller; and

- (5) Hand-held electronic sampling equipment associated with groundwater and vapor monitoring: ensure proper operation.

NOTE: The following code of practice may be used to comply with subdivision c of subsection 1: Petroleum Equipment Institute Publication RP1200, "Recommended Practices for the Testing and Verification of Spill, Overfill, Leak Detection and Secondary Containment Equipment at UST Facilities".

- d. Meets the performance requirements in sections 33.1-24-08-33, 33.1-24-08-34, 33.1-24-08-70, 33.1-24-08-71, or 33.1-24-08-72, as applicable, with any performance claims and their manner of determination described in writing by the equipment manufacturer or installer. In addition, the methods listed in subsections 2, 3, and 4 of section 33.1-24-08-33; subsections 1 and 2 of section 33.1-24-08-34; and sections 33.1-24-08-70, 33.1-24-08-71, or 33.1-24-08-72, must be capable of detecting the leak rate or quantity specified for that method in the corresponding section of the rule with a probability of detection of ninety-five hundredths and a probability of false alarm of five hundredths.

2. When a release detection method operated in accordance with the performance standards in sections 33.1-24-08-33 and 33.1-24-08-34; and either 33.1-24-08-70, 33.1-24-08-71, or 33.1-24-08-72 indicates a release may have occurred, owners and operators must notify the department in accordance with sections 33.1-24-08-40 through 33.1-24-08-43.

3. Any underground storage tank system that cannot apply a method of release detection that complies with the requirements of this section must complete the closure procedures in sections 33.1-24-08-60 through 33.1-24-08-64. For previously deferred underground storage tank systems described in sections 33.1-24-08-01, 33.1-24-08-02, or 33.1-24-08-03; and 33.1-24-08-70, 33.1-24-08-71, or 33.1-24-08-72, this requirement applies after the effective dates described in paragraphs 2 and 3 of subdivision a of subsection 1 of section 33.1-24-08-01 and subsection 1 of section 33.1-24-08-71.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-31. Release detection requirements for petroleum underground storage tank systems.

Owners and operators of petroleum underground storage tank systems must provide release detection for tanks and piping as follows:

1. **Tanks.** Tanks must be monitored for releases as follows:

- a. Tanks installed on or before September 28, 2018, must be monitored for releases at least every thirty days using one of the methods listed in subsections 4 through 9 of section 33.1-24-08-33 except that:

- (1) Underground storage tank systems that meet the performance standards in section 33.1-24-08-10 or 33.1-24-08-11, and the monthly inventory control requirements in subsection 1 or 2 of section 33.1-24-08-33, may use tank tightness testing (conducted in accordance with subsection 3 of section 33.1-24-08-33) at least every five years until ten years after the tank was installed and tanks with capacity of five hundred fifty gallons [2081.98 liters] or less and tanks with a capacity of five hundred fifty-one to one thousand gallons which meet the tank diameter criteria in subsection 2 of section 33.1-24-08-33 may use manual tank gauging (conducted in accordance with subsection 2 of section 33.1-24-08-33).

(2) Tanks installed after September 28, 2018, must be monitored for releases at least every thirty days in accordance with subsection 7 of section 33.1-24-08-33.

2. **Piping.** Underground piping that routinely contains regulated substances must be monitored for releases in a manner that meets one of the following requirements:

a. Piping installed on or before September 28, 2018, must meet one of the following:

(1) Pressurized piping. Underground piping that conveys regulated substances under pressure must:

(a) Be equipped with an automatic line leak detector conducted in accordance with subsection 1 of section 33.1-24-08-34; and

(b) Have an annual line tightness test conducted in accordance with subsection 2 of section 33.1-24-08-34 or have monthly monitoring conducted in accordance with subsection 3 of section 33.1-24-08-34.

(2) Suction piping. Underground piping that conveys regulated substances under suction must either have a line tightness test conducted at least every three years and in accordance with subsection 2 of section 33.1-24-08-34, or use a monthly monitoring method conducted in accordance with subsection 3 of section 33.1-24-08-34. No release detection is required for suction piping that is designed and constructed to meet the following standards:

(a) The below-grade piping operates at less than atmospheric pressure;

(b) The below-grade piping is sloped so that the contents of the pipe will drain back into the storage tank if the suction is released;

(c) Only one check valve is included in each suction line;

(d) The check valve is located directly below and as close as practical to the suction pump; and

(e) A method is provided that allows compliance with subparagraphs b through d to be readily determined.

b. Piping installed or replaced after September 28, 2018, must meet one of the following:

(1) Pressurized piping must be monitored for releases at least every thirty days in accordance with subsection 7 of section 33.1-24-08-33 and be equipped with an automatic line leak detector in accordance with subsection 1 of section 33.1-24-08-34; or

(2) Suction piping must be monitored for releases at least every thirty days in accordance with subsection 7 of section 33.1-24-08-33. No release detection is required for suction piping that meets subparagraphs a through e of paragraph 2 of subdivision a of subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-32. Release detection requirements for hazardous substance underground storage tank systems.

Owners and operators of hazardous substance underground storage tank systems must provide containment that meets the following requirements and monitor these systems using subsection 7 of section 33.1-24-08-33 at least every thirty days:

1. Secondary containment systems must be designed, constructed, and installed:

- a. Contain regulated substances leaked from the primary containment until they are detected and removed;
- b. Prevent the release of regulated substances to the environment at any time during the operational life of the underground storage tank system; and
- c. Be checked for evidence of a release at least every thirty days.

NOTE: The provisions of section 33.1-24-05-106 may be used to comply with this subsection for tanks installed on or before April 1, 2018.

2. Double-walled tanks must be designed, constructed, and installed to:

- a. Contain a leak from any portion of the inner tank within the outer wall; and
- b. Detect the failure of the inner wall.

3. External liners (including vaults) must be designed, constructed, and installed to:

- a. Contain one hundred percent of the capacity of the largest tank within its boundary;
- b. Prevent the interference of precipitation or ground water intrusion with the ability to contain or detect a release of regulated substances; and
- c. Surround the tank completely (for example, it is capable of preventing lateral as well as vertical migration of regulated substances).

4. Underground piping must be equipped with secondary containment that satisfies the requirements of subsection 1 (for example, trench liners, double-walled pipe). In addition, underground piping that conveys regulated substances under pressure must be equipped with an automatic line leak detector in accordance with subsection 1 of section 33.1-24-08-34.

5. For hazardous substance underground storage tank systems installed on or before April 1, 2018, other methods of release detection may be used if owners and operators:

- a. Demonstrate to the department that an alternate method can detect a release of the stored substance as effectively as any of the methods allowed in subsections 2 through 9 of section 33.1-24-08-33 can detect a release of petroleum;
- b. Provide information to the department on effective corrective action technologies, health risks, and chemical and physical properties of the stored substance, and the characteristics of the underground storage tank site; and
- c. Obtain approval from the department to use the alternate release detection method before the installation and operation of the new underground storage tank system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-33. Methods of release detection for tanks.

Each method of release detection for tanks used to meet the requirements of section 33.1-24-08-31 must be conducted in accordance with the following:

1. **Inventory control.** Product inventory control (for another test of equivalent performance) must be conducted monthly to detect a release of at least one percent of flowthrough plus one hundred thirty gallons [492.10 liters] on a monthly basis in the following manner:
 - a. Inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the tank are recorded each operating day;
 - b. The equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest one-eighth of an inch [3.05 millimeters];
 - c. The regulated substance inputs are reconciled with delivery receipts by measurement of the tank inventory volume before and after delivery;
 - d. Deliveries are made through a drop tube that extends to within one foot [0.30 meters] of the tank bottom;
 - e. Product dispensing is metered and recorded within the local standards for meter calibration or an accuracy of six cubic inches [98.32 milliliters] for every five gallons [18.93 liters] of product withdrawn; and
 - f. The measurement of any water level in the bottom of the tank is made to the nearest one-eighth of an inch [3.05 millimeters] at least once a month.

NOTE: Practices described in the American Petroleum Institute, Recommended Practice RP 1621, "Bulk Liquid Stock Control at Retail Outlets", may be used, where applicable, as guidance in meeting the requirements.

2. **Manual tank gauging.** Manual tank gauging must meet the following requirements:

- a. Tank liquid level measurements are taken at the beginning and ending of a period using the appropriate minimum duration of test value in the table below during which no liquid is added to or removed from the tank;
- b. Level measurements are based on an average of two consecutive stick readings at both the beginning and ending of the period;
- c. The equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest one-eighth of an inch [3.05 millimeters];
- d. A release is suspected and subject to the requirements of sections 33.1-24-08-40 through 33.1-24-08-43 if the variation between beginning and ending measurements exceeds the weekly or monthly standards in the following table:

<u>Nominal Tank Capacity</u>	<u>Minimum Duration of Test</u>	<u>Weekly Standard (One Test)</u>	<u>Monthly Standard (Average of Four Tests)</u>
<u>550 gallons or less</u>	<u>36 hours</u>	<u>10 gallons</u>	<u>5 gallons</u>
<u>551-1,000 gallons (when tank diameter is 64 inches)</u>	<u>44 hours</u>	<u>9 gallons</u>	<u>4 gallons</u>

<u>551-1,000 gallons (when tank diameter is 48 inches)</u>	<u>58 hours</u>	<u>12 gallons</u>	<u>6 gallons</u>
<u>551-1,000 gallons (also requires periodic tank tightness testing)</u>	<u>36 hours</u>	<u>13 gallons</u>	<u>7 gallons</u>
<u>1,001-2,000 gallons (also requires periodic tank tightness testing)</u>	<u>36 hours</u>	<u>26 gallons</u>	<u>13 gallons</u>

e. Tanks of five hundred fifty gallons [2,081.98 liters] or less nominal capacity and tanks with a nominal capacity of five hundred fifty-one to one thousand gallons [2,085.76 to 3,785.41 liters] which meet the tank diameter criteria in the table in subdivision d may use this as the sole method of release detection. All other tanks with a nominal capacity of five hundred fifty-one to two thousand gallons [2,085.76 to 7,570.80 liters] may use this method in place of inventory control in subsection 1. Tanks of greater than two thousand gallons [7,570.80 liters] nominal capacity may not use this method to meet the requirements of sections 33.1-24-08-30 through 33.1-24-08-35.

3. **Tank tightness testing.** Tank tightness testing (or another test of equivalent performance) must be capable of detecting a one-tenth gallon [.38 liter] per hour leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.

4. **Automatic tank gauging.** Equipment for automatic tank gauging that tests for the loss of product and conducts inventory control must meet the following requirements:

a. The automatic product level monitor test can detect a two-tenths gallon [.76 liter] per hour leak rate from any portion of the tank that routinely contains product;

b. The automatic tank gauging equipment must meet the inventory control (or other test of equivalent performance) requirements of subsection 1; and

c. The test must be performed with the system operating in one of the following modes:

(1) In-tank static testing conducted at least once every thirty days; or

(2) Continuous in-tank leak detection operating on an uninterrupted basis or operating within a process that allows the system to gather incremental measurements to determine the leak status of the tank at least once every thirty days.

5. **Vapor monitoring.** Testing or monitoring for vapors within the soil gas of the excavation zone must meet the following requirements:

a. The materials used as backfill are sufficiently porous (for example, gravel, sand, crushed rock) to readily allow diffusion of vapors from releases into the excavation area;

b. The stored regulated substance, or a tracer compound placed in the tank system, is sufficiently volatile (for example, gasoline) to result in a vapor level that is detectable by the monitoring devices located in the excavation zone in the event of a release from the tank;

- c. The measurement of vapors by the monitoring device is not rendered inoperative by the ground water, rainfall, or soil moisture or other known interferences so that a release could go undetected for more than thirty days;
- d. The level of background contamination in the excavation zone will not interfere with the method used to detect releases from the tank;
- e. The vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the tank system, a component or components of that substance, or a tracer compound placed in the tank system;
- f. In the underground storage tank excavation zone, the site is assessed to ensure compliance with the requirements in subdivisions a through d and to establish the number and positioning of monitoring wells that will detect releases within the excavation zone from any portion of the tank that routinely contains product; and
- g. Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

6. **Ground water monitoring.** Testing or monitoring for liquids on the ground water must meet the following requirements:

- a. The regulated substance stored is immiscible in water and has a specific gravity of less than one;
- b. Ground water is never more than twenty feet [6.07 meters] from the ground surface and the hydraulic conductivity of the soils between the underground storage tank system and the monitoring wells or devices is not less than one one-hundredths centimeter per second (for example, the soil should consist of gravels, coarse-to-medium sands, coarse silts or other permeable materials);
- c. The slotted portion of the monitoring well casing must be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low ground water conditions;
- d. Monitoring wells must be sealed from the ground surface to the top of the filter pack;
- e. Monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible;
- f. The continuous monitoring devices or manual methods used can detect the presence of at least one-eighth of an inch [3.05 millimeters] of free product on top of the ground water in the monitoring wells;
- g. Within and immediately below the underground storage tank system excavation zone, the site is assessed to ensure compliance with the requirements in subdivisions a through e and to establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product; and
- h. Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

7. **Interstitial monitoring.** Interstitial monitoring between the underground storage tank system and a secondary barrier immediately around or beneath it may be used, but only if the system is designed, constructed, and installed to detect a leak from any portion of the tank that routinely contains product and also meets one of the following requirements:

- a. For double-walled underground storage tank systems, the sampling or testing method can detect a leak through the inner wall in any portion of the tank that routinely contains product;
- b. For underground storage tank systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a leak between the underground storage tank system and the secondary barrier;
 - (1) The secondary barrier around or beneath the underground storage tank system consists of artificially constructed material that is sufficiently thick and impermeable (at least 10^{-6} centimeter per second for the regulated substance stored) to direct a leak to the monitoring point and permit its detection;
 - (2) The barrier is compatible with the regulated substance stored so that a release from the underground storage tank system will not cause a deterioration of the barrier allowing a release to pass through undetected;
 - (3) For cathodically protected tanks, the secondary barrier must be installed so that it does not interfere with the proper operation of the cathodic protection system;
 - (4) The ground water, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than thirty days;
 - (5) The site is assessed to ensure the secondary barrier is always above the ground water and not in a twenty-five-year floodplain, unless the barrier and monitoring designs are for use under such conditions; and
 - (6) Monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.
- c. For tanks with an internally fitted liner, an automated device can detect a leak between the inner wall of the tank and the liner, and the liner is compatible with the substance stored.

8. **Statistical inventory reconciliation.** Release detection methods based on the application of statistical principles to inventory data similar to those described in subsection 1 must meet the following requirements:

- a. Report a quantitative result with a calculated leak rate;
- b. Be capable of detecting a leak rate of two-tenths gallon per hour or a release of one hundred fifty gallons within thirty days; and
- c. Use a threshold that does not exceed one-half the minimum detectible leak rate.

9. **Other methods.** Any other type of release detection method, or combination of methods, can be used if:

- a. It can detect a two-tenths gallon [.76 liter] per hour leak rate or a release of one hundred fifty gallons [567.81 liters] within a month with a probability of detection of ninety-five hundredths and a probability of false alarm of five one-hundredths; or
- b. The department may approve another method if the owner and operator can demonstrate that the method can detect a release as effectively as any of the methods allowed in subsections 3 through 8. In comparing methods, the department shall consider the size of release the method can detect and the frequency and reliability with which it

can be detected. If the method is approved, the owner and operator must comply with any conditions imposed by the department on its use to ensure the protection of human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-34. Methods of release detection for piping.

Each method of release detection for piping used to meet the requirements of subsection 2 of section 33.1-24-08-10 and section 33.1-24-08-31 must be conducted in accordance with the following:

1. **Automatic line leak detectors.** Methods which alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping or triggering an audible or visual alarm may be used only if they detect leaks of three gallons [11.36 liters] per hour at ten pounds per square inch line pressure within one hour. An annual test of the operation of the leak detector must be conducted in accordance with subdivision c of subsection 1 of section 33-24-08-30.
2. **Line tightness testing.** A periodic test of piping may be conducted only if it can detect a one-tenth gallon [.38 liter] per hour leak rate at one and one-half times the operating pressure.
3. **Applicable tank methods.** Except as described in subsection 1 of section 33.1-24-08-31, any of the methods in subsections 5 through 9 of section 33.1-24-08-33 may be used if they are designed to detect a release from any portion of the underground piping that routinely contains regulated substances.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-35. Release detection recordkeeping.

All underground storage tank system owners and operators must maintain records in accordance with section 33.1-24-08-24 demonstrating compliance with all applicable requirements of sections 33.1-24-08-30 through 33.1-24-08-35. These records must include the following:

1. All written performance claims pertaining to any release detection system used, and the manner in which these claims have been justified or tested by the equipment manufacturer or installer, must be maintained for five years or for another reasonable period of time determined by the department, from the date of installation. Not later than April 1, 2021, records of site assessments required under subdivision f of subsection 5 and subdivision g of subsection 6 of section 33.1-24-08-33 must be maintained for as long as the methods are used. Records of site assessments developed after April 1, 2018, must be signed by a professional engineer or professional geologist, or equivalent licensed professional with experience in environmental engineering, hydrogeology, or other relevant technical discipline acceptable to the department.
2. The results of any sampling, testing, or monitoring must be maintained for at least one year, or for another reasonable period of time determined by the department, except as follows:
 - a. The results of annual operation tests conducted in accordance with subdivision c of subsection 1 of section 33.1-24-08-30 must be maintained for three years. At a minimum, the results must list each component tested, indicate whether each component tested meets criteria in subdivision c of subsection 1 of section 33.1-24-08-30 or needs to have action taken, and describe any action taken to correct an issue; and

- b. The results of tank tightness testing conducted in accordance with subsection 3 of section 33.1-24-08-33 must be retained until the next test is conducted; and
 - c. The results of tank tightness testing, line tightness testing, and vapor monitoring using a tracer compound placed in the tank system conducted in accordance with subsection 4 of section 33.1-24-08-72 must be retained until the next test is conducted.
3. Written documentation of all calibration, maintenance, and repair of release detection equipment permanently located onsite must be maintained for at least one year after the servicing work is completed, or for another reasonable time period determined by the department. Any schedules of required calibration and maintenance provided by the release detection equipment manufacturer must be retained for five years from the date of installation.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-36. Applicability (delivery prohibition).

1. Tank owners and operators and transfer operators are responsible for ensuring that product is not delivered, deposited, or accepted into an underground storage tank identified by the department as ineligible to receive product.
2. For purposes of this section the term "underground storage tank" means those tanks that satisfy the definition of petroleum underground storage tank system in section 33.1-24-08-03, except for those tanks identified as excluded or deferred storage tanks.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-37. Criteria for delivery prohibition.

1. An underground storage tank shall be classified as ineligible for delivery, deposit, or acceptance of product upon determination by the department that the underground storage tank meets one or more of the following conditions:
 - a. Spill prevention equipment as required by this chapter is not installed;
 - b. Overfill protection equipment as required by this chapter is not installed;
 - c. Leak detection equipment as required by this chapter is not installed;
 - d. Corrosion protection equipment as required by this chapter is not installed; or
 - e. Other conditions which the department determines may present an imminent and substantial endangerment to public health and the environment.
2. The department may also classify an underground storage tank as ineligible for delivery, deposit, or acceptance of product if the owner or operator of that tank has been issued a written warning or citation (for example, field citation, warning letter, notice of violation), and has failed to take corrective action, within a reasonable period of time determined by the department, under any of the following circumstances:
 - a. Failure to properly operate or maintain leak detection equipment;
 - b. Failure to properly operate or maintain spill, overfill, or corrosion protection equipment;

- c. Failure to insure owners and operators of underground storage tank systems have designated class A, class B, and class C operators;
 - d. Failure to maintain financial responsibility;
 - e. Failure to protect a buried metal flexible connector from corrosion; or
 - f. Other conditions which the department determines may present an imminent and substantial endangerment to public health and the environment.
3. The department shall retain the discretion to decide whether to identify an underground storage tank as ineligible to deliver, deposit, or accept product based on whether the prohibition is in the best interest of the public. In those cases where prohibition of delivery, deposit, or acceptance of product to an underground storage tank is not in the best interest of the public (for example, certain emergency generator underground storage tanks), the department may classify an underground storage tank as ineligible to receive product, but authorize an emergency delivery.
 4. The department may also consider not treating an underground storage tank as ineligible for delivery, deposit, or acceptance of product if such treatment would jeopardize the availability of, or access to, motor fuel in any rural and remote areas. The department shall only defer application of delivery prohibition for up to one hundred eighty days after determining an underground storage tank is ineligible for delivery, deposit, or acceptance of product.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-38. Mechanisms for designating tanks ineligible for delivery.

1. Upon identifying an underground storage tank as ineligible for delivery, deposit, or acceptance of product, the department shall notify tank owners or operators in writing (for example, field notification or mail) prior to prohibiting the delivery, deposit, or acceptance of product into the ineligible tank.
2. After reasonable effort is made to notify the underground storage tank owner or operator in writing, the department may affix a "red tag" to the fill pipe of the noncompliant underground storage tank system using a tamper-resistant strap or straps, fill pipe bag, or any combination thereof so the tag clearly identifies the tank as ineligible to receive product.
3. The department shall develop a process and procedure for notifying transfer operators when an underground storage tank is ineligible for delivery, deposit, or acceptance of product. Notice shall be made available (for example, electronic listing) to transfer operators within twenty-four hours of an underground storage tank being identified as ineligible to receive product.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-39. Reclassifying ineligible tanks as eligible for delivery.

1. Upon notification by the owner or operator that the violation or violations has or have been corrected, the department shall confirm compliance.
2. The department shall reclassify an ineligible underground storage tank as eligible to receive product the same day the department confirms the underground storage tank has been

returned to compliance. Likewise, notice shall be made available to transfer operators the same day an ineligible tank has been reclassified as eligible to receive product.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-40. Reporting of suspected releases.

Owners and operators of underground storage tank systems must report to the department within twenty-four hours, or another reasonable period specified by the department, and follow the procedures in section 33.1-24-08-42 for any of the following conditions:

1. The discovery by owners and operators or others of released regulated substances at the underground storage tank site or in the surrounding area (such as the presence of free product or vapors in soils, basements, sewer and utility lines, and nearby surface water);
2. Unusual operating conditions observed by owners and operators (such as the erratic behavior of product dispensing equipment, the sudden loss of product from the underground storage tank system, an unexplained presence of water in the tank, or liquid in the interstitial space of secondarily contained systems), unless:
 - a. The system equipment or component is found not to be releasing regulated substances to the environment;
 - b. Any defective system equipment or component is immediately repaired or replaced; and
 - c. For secondarily contained systems, except as provided for in paragraph 4 of subdivision b of subsection 7 of section 33.1-24-08-33, any liquid in the interstitial space not used as part of the interstitial monitoring method (for example, brine filled) is immediately removed.
3. Monitoring results, including investigation of an alarm, from a release detection method required under sections 33.1-24-08-31 and 33.1-24-08-32 that indicate a release may have occurred unless:
 - a. The monitoring device is found to be defective, and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial result;
 - b. The leak is contained in the secondary containment and:
 - (1) Except as provided for in paragraph 4 of subdivision b of subsection 7 of section 33.1-24-08-33, any liquid in the interstitial space not used as part of the interstitial monitoring method (for example, brine filled) is immediately removed; and
 - (2) Any defective system equipment or component is immediately repaired or replaced.
 - c. In the case of inventory control, described in subsection 1 of section 33.1-24-08-33, a second month of data does not confirm the initial result or the investigation determines no release has occurred; or
 - d. The alarm was investigated and determined to be a nonrelease event (for example, from a power surge or caused by filling the tank during release detection testing).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-41. Investigation due to offsite impacts.

When required by the department, owners and operators of underground storage tank systems must follow the procedures in section 33.1-24-08-42 to determine if the underground storage tank system is the source of offsite impacts. These impacts include the discovery of regulated substances (such as the presence of free product or vapors in soils, basements, sewer and utility lines, and nearby surface and drinking waters) that has been observed by the department or brought to its attention by another party.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-42. Release investigation and confirmation steps.

Unless corrective action is initiated in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, owners and operators must immediately investigate and confirm all suspected releases of regulated substances requiring reporting under section 33.1-24-08-40 within seven days, or another reasonable time period specified by the department, using either the following steps or another procedure approved by the department:

1. **System test.** Owners and operators must conduct tests (according to the requirements for tightness testing in subsection 3 of section 33.1-24-08-33 and subsection 2 of section 33.1-24-08-34 or, as appropriate, secondary containment testing described in subsection 4 of section 33.1-24-08-23).
 - a. The test must determine whether:
 - (1) A leak exists in that portion of the tank that routinely contains product, or the attached delivery piping; or
 - (2) A breach of either wall of the secondary containment has occurred.
 - b. If the system test confirms a leak into the interstice or a release, owners and operators must repair, replace, upgrade, or close the underground storage tank system, and begin corrective action in accordance with sections 33.1-24-08-50 through 33.1-24-08-57 if the test results for the system, tank, or delivery piping indicate that a release exists.
 - c. Further investigation is not required if the test results for the system, tank, and delivery piping do not indicate that a release exists and if environmental contamination is not the basis for suspecting a release.
 - d. Owners and operators must conduct a site check as described in subsection 2 if the test results for the system, tank, and delivery piping do not indicate that a release exists but environmental contamination is the basis for suspecting a release.
2. **Site check.** Owners and operators must measure for the presence of a release where contamination is most likely to be present at the underground storage tank site. In selecting sample types, sample locations, and measurement methods, owners and operators must consider the nature of the stored substance, the type of initial alarm or cause for suspicion, the type of backfill, the depth of ground water, and other factors appropriate for identifying the presence and source of the release.
 - a. If the test results for the excavation zone or the underground storage tank site indicate that a release has occurred, owners and operators must begin corrective action in accordance with sections 33.1-24-08-50 through 33.1-24-08-57.

- b. If the test results for the excavation zone or the underground storage tank site do not indicate that a release has occurred, further investigation is not required.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-43. Reporting and cleanup of spills and overfills.

1. Owners and operators of underground storage tank systems must contain and immediately clean up a spill or overfill and report to the department within twenty-four hours, or another reasonable time period specified by the department, and begin corrective action in accordance with sections 33.1-24-08-50 through 33.1-24-08-57 in the following cases:
 - a. Spill or overfill of petroleum that results in a release to the environment that exceeds twenty-five gallons [94.63 liters] or another reasonable amount specified by the department, or that causes a sheen on nearby surface water; and
 - b. Spill or overfill of a hazardous substance that results in a release to the environment that equals or exceeds its reportable quantity under the Comprehensive Environmental Response, Compensation, and Liability Act [40 CFR 302].
2. Owners and operators of underground storage tank systems must contain and immediately clean up a spill or overfill of petroleum that is less than twenty-five gallons [94.63 liters] or another reasonable amount specified by the department, and a spill or overfill of a hazardous substance that is less than the reportable quantity. If cleanup cannot be accomplished within twenty-four hours, or another reasonable time period established by the department, owners and operators must immediately notify the department.

NOTE: A release of a hazardous substance equal to or in excess of its reportable quantity must also be reported immediately (rather than within twenty-four hours) to the National Response Center under sections 102 and 103 of the Comprehensive Environmental Response, Compensation, and Liability Act and to appropriate state and local authorities under title III of the Superfund Amendments and Reauthorization Act.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-44. Unattended cardtroll facilities.

A facility that normally has no employee or other responsible person onsite, or is open to dispense fuel at times when no employee or responsible person is onsite, shall have a sign posted in a conspicuous place, giving the name and telephone number of the facility owner, operator, or local emergency responders, and an emergency shutoff device, if the facility dispenses fuel.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-45. Operator designations and requirements for operator training.

All owners and operators of underground storage tank systems shall ensure they have designated class A, class B, and class C operators who meet the requirements of sections 33.1-24-08-45 through 33.1-24-08-48. Owners or operators of underground storage tank systems must designate a class A, class B, and class C operator for each tank system, except unattended cardtroll facilities which are not required to designate a class C operator. Either a class A, or class B, or class C operator must be

present onsite during the operation of the tank system, except unattended cardtrol facilities which must have a posted sign in accordance with section 33.1-24-08-44.

Separate individuals may be designated for each class of operator or an individual may be designated to more than one operator class. An individual who is designated to more than one operator class must be trained in each operator class for which the individual is designated. Owners or operators must notify the department (for example, written or electronic notice: name of owner, business location address, city, state, zip code, and telephone number), and provide the name of the designated class A and class B operator for each underground storage tank facility owned. The owner or operator shall notify the department of any change of designated class A or class B operators within thirty days of the change. Documentation identifying the designated class C operators shall be maintained at each facility.

1. The class A operator has primary responsibility to operate and maintain the underground storage tank system. The class A operator's responsibilities include managing resources and personnel to achieve and maintain compliance with regulatory requirements.

Each designated class A operator must either be trained in accordance with subdivisions a and b, or pass a comparable examination in accordance with subsection 5.

- a. At a minimum, the training program for the class A operator must provide general knowledge of the requirements in this subdivision. At a minimum, the training must teach the class A operators, as applicable, about the purpose, methods, and function of:

- (1) Spill and overfill prevention;
- (2) Release detection;
- (3) Corrosion protection;
- (4) Emergency response;
- (5) Product and equipment compatibility and demonstration;
- (6) Financial responsibility;
- (7) Notification and storage tank registration;
- (8) Temporary and permanent closure;
- (9) Related reporting, recordkeeping, testing, and inspections;
- (10) Environmental and regulatory consequences of releases; and
- (11) Training requirements for class B and class C operators.

- b. At a minimum, the training program must evaluate class A operators to determine these individuals have the knowledge and skills to make informed decisions regarding compliance and determine whether appropriate individuals are fulfilling the operation, maintenance, and recordkeeping requirements for underground storage tank systems in accordance with subdivision a.

2. The class B operator has primary responsibility for implementing the routine daily aspects of operation, maintenance, and recordkeeping for the underground storage tank system.

Each designated class B operator must either receive training in accordance with subdivisions a and b, or pass a comparable examination in accordance with subsection 5.

a. At a minimum, the training program for the class B operator must cover either general requirements that encompass all regulatory requirements and typical equipment used at underground storage tank facilities, or site-specific requirements which address only the regulatory requirements and equipment specific to the facility. At a minimum, the training program for class B operators must teach the class B operator, as applicable, about the purpose, methods, and function of:

(1) Operation and maintenance;

(2) Spill and overflow prevention;

(3) Release detection and related reporting;

(4) Corrosion protection;

(5) Emergency response;

(6) Product and equipment compatibility and demonstration;

(7) Reporting, recordkeeping, testing, and inspections;

(8) Environmental and regulatory consequences of releases; and

(9) Training requirements for class C operators.

b. At a minimum, the training program must evaluate class B operators to determine these individuals have the knowledge and skills to implement applicable underground storage tank regulatory requirements in the field on the components of typical underground storage tank systems or, as applicable, site-specific equipment used at an underground storage tank facility in accordance with subdivision a.

c. The class B operator shall ensure the performance and documentation of the onsite operator inspection in accordance with section 33.1-24-08-49.

3. Each designated class C operator either must be trained by a class A or class B operator in accordance with subdivisions a and b, complete a training program in accordance with subdivisions a and b, or pass a comparable examination in accordance with subsection 5.

a. At a minimum, the training program for the class C operator must teach the class C operators to take appropriate actions (including notifying appropriate authorities) in response to emergencies or alarms caused by spills or releases resulting from the operation of the underground storage tank system.

b. At a minimum, the training program must evaluate class C operators to determine these individuals have the knowledge and skills to take appropriate action (including notifying appropriate authorities) in response to emergencies or alarms caused by spills or releases from an underground storage tank system.

4. Training program. Any training program must meet the minimum requirements of this section and include an evaluation through testing, a practical demonstration, or another approach acceptable to the department.

5. Comparable examination. A comparable examination must, at a minimum, test the knowledge of the class A, class B, or class C operators in accordance with the requirements of subsections 1, 2, or 3, as applicable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-46. Timing of operator training and reciprocity.

Operator training must evaluate operator knowledge in the areas described for each class of operator in accordance with subsections 1, 2, and 3 of section 33.1-24-08-45.

1. By August 8, 2012, the owner or operator of an underground storage tank system regulated by this chapter, except those excluded by regulation in subsection 2 of section 33.1-24-08-01, and those deferred by regulation in subsection 3 of section 33.1-24-08-01, shall have trained class A, class B, and class C operators for each facility owned.
2. After August 8, 2012, class A and class B operators must be trained within thirty days or another reasonable period specified by the department, after assuming operation and maintenance responsibilities of the underground storage tank system. Class C operators must be trained before assuming responsibility for responding to emergencies.
3. Training of underground storage tank system operators shall be performed by the department or by a third-party trainer approved by the department, except that a trained class A, or class B, operator may train a class C operator.
4. Training reciprocity. The department may accept operator training certification verification from other states that have equivalent operator training requirements.

NOTE: The following alternate third-party methods may be used to comply with this section: a certificate issued by a nationally recognized underground storage tank operator examination approved by the department, or written proof of successful completion of an equivalent operator training and testing program that has received prior approval from the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-47. Operator retraining.

Class A and class B operators of underground storage tank systems determined by the department to be out of compliance shall complete a training program or comparable examination in accordance with requirements in section 33.1-24-18-45. The training program or comparable examination must be developed or administered by an independent organization, the department, or a recognized authority. At a minimum, the training must cover the area determined to be out of compliance. Underground storage tank system owners and operators shall ensure class A and class B operators are retrained pursuant to this section no later than thirty days from the date the department determines the facility is out of compliance except in one of the following situations:

1. Class A and class B operators take annual refresher training. Refresher training for class A and class B operators must cover all applicable requirements in section 33.1-24-18-45; or
2. The department, at its discretion, waives this retraining requirement for either the class A or class B operator or both.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-48. Operator training documentation.

Owners and operators of underground storage tank systems shall maintain a list of designated class A, class B, and class C operators and maintain records verifying that training and retraining, as applicable, have been completed, in accordance with section 33.1-24-18-24 as follows:

1. The list must:
 - a. Identify all class A, class B, and class C operators currently designated for the facility; and
 - b. Include names, class of operator trained, date assumed duties, date each completed initial training, and any retraining.
2. Records verifying completion of training or retraining must be a paper or electronic record for class A, class B, and class C operators. The records, at a minimum, must identify name of trainee, date trained, operator training class completed, and list the name of the trainer or examiner and the training company name, address, and telephone number. Owners and operators shall maintain these records for as long as class A, class B, and class C operators are designated. The following requirements also apply to the following types of training:
 - a. Records from classroom or field training programs, including class C operator training provided by the class A or class B operator, or a comparable examination, at a minimum, must be signed by the trainer or examiner;
 - b. Records from computer-based training, at a minimum, must indicate the name of the training program and web address, if internet based; and
 - c. Records of retraining must include those areas on which the class A or class B operator has been retrained.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199 § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199 § 19

33.1-24-08-49. [Reserved].

33.1-24-08-50. General release response and corrective action for underground storage tank systems containing petroleum or hazardous substances.

Owners and operators of petroleum or hazardous substance underground storage tank systems must, in response to a confirmed release from the underground storage tank system, comply with the requirements of this section except for underground storage tanks excluded under subsection 2 of section 33.1-24-08-01 and underground storage tank systems subject to the hazardous waste provisions of North Dakota Century Code chapter 23.1-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-51. Initial response.

Upon confirmation of a release in accordance with section 33.1-24-08-42 or after a release from the underground storage tank system is identified in any other manner, owners and operators must perform the following initial response actions within twenty-four hours of a release or within another reasonable period of time determined by the department:

1. Report the release to the department (for example, by telephone or electronic mail);
2. Take immediate action to prevent any further release of the regulated substance into the environment; and
3. Identify and mitigate fire, explosion, and vapor hazards.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-52. Initial abatement measures and site check.

1. Unless directed to do otherwise by the department, owners and operators must perform the following abatement measures:
 - a. Remove as much of the regulated substance from the underground storage tank system as is necessary to prevent further release to the environment;
 - b. Visually inspect any aboveground releases or exposed belowground releases and prevent further migration of the released substance into surrounding soils and ground water;
 - c. Continue to monitor and mitigate any additional fire and safety hazards posed by vapors or free product that have migrated from the underground storage tank excavation zone and entered into subsurface structures (such as sewers or basements);
 - d. Remedy hazards posed by contaminated soils that are excavated or exposed as a result of release confirmation, site investigation, abatement, or corrective action activities. If these remedies include treatment or disposal of soils, the owner and operator must comply with applicable state and local requirements;
 - e. Measure for the presence of a release where contamination is most likely to be present at the underground storage tank site, unless the presence and source of the release have been confirmed in accordance with the site check required by subsection 2 of section 33.1-24-08-42 or the closure site assessment of subsection 1 of section 33.1-24-08-62. In selecting sample types, sample locations, and measurement methods, the owner and operator must consider the nature of the stored substance, the type of backfill, depth to ground water, and other factors as appropriate for identifying the presence and source of the release; and
 - f. Investigate to determine the possible presence of free product, and begin free product removal as soon as practicable and in accordance with section 33.1-24-08-54.
2. Within twenty days after release confirmation, or within another reasonable period of time determined by the department, owners and operators must submit a report to the department summarizing the initial abatement steps taken under subsection 1 and any resulting information or data.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-53. Initial site characterization.

1. Unless directed to do otherwise by the department, owners and operators must assemble information about the site and the nature of the release, including information gained while confirming the release or completing the initial abatement measures in sections 33.1-24-08-50 and 33.1-24-08-51. This information must include, but is not necessarily limited to, the following:
 - a. Data on the nature and estimated quantity of release;
 - b. Data from available sources or site investigations, or both, concerning the following factors: surrounding populations, water quality, use and approximate locations of wells potentially affected by the release, subsurface soil conditions, locations of subsurface sewers, climatological conditions, and land use;
 - c. Results of the site check required under subdivision e of subsection 1 of section 33.1-24-08-52; and
 - d. Results of the free product investigations required under subdivision f of subsection 1 of section 33.1-24-08-52, to be used by owners and operators to determine whether free product must be recovered under section 33.1-24-08-54.
2. Within forty-five days of release confirmation or another reasonable period of time determined by the department, owners and operators must submit the information collected in compliance with subsection 1 to the department in a manner that demonstrates its applicability and technical adequacy, or in a format and according to the schedule required by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-54. Free product removal.

At sites where investigations under subdivision f of subsection 1 of section 33.1-24-08-52 indicate the presence of free product, owners and operators must remove free product to the maximum extent practicable as determined by the department while continuing, as necessary, any actions initiated under sections 33.1-24-08-51 through 33.1-24-08-53, or preparing for actions required under sections 33.1-24-08-55 and 33.1-24-08-56. In meeting the requirements of this section, owners and operators must:

1. Conduct free product removal in a manner that minimizes the spread of contamination into previously uncontaminated zones by using recovery and disposal techniques appropriate to the hydrogeologic conditions at the site, and that properly treats, discharges, or disposes of recovery byproducts in compliance with applicable local, state, and federal regulations;
2. Use abatement of free product migration as a minimum objective for the design of the free product removal systems;
3. Handle any flammable products in a safe and competent manner to prevent fires or explosions; and
4. Unless directed to do otherwise by the department, prepare and submit to the department, within forty-five days after confirming a release, a free product removal report that provides at least the following information:

- a. The name of the persons responsible for implementing the free product removal measures;
- b. The estimated quantity, type, and thickness of free product observed or measured in wells, boreholes, and excavations;
- c. The type of free product recovery system used;
- d. Whether any discharge will take place onsite or offsite during the recovery operation and where this discharge will be located;
- e. The type of treatment applied to, and the effluent quality expected from, any discharge;
- f. The steps that have been or are being taken to obtain necessary permits for any discharge; and
- g. The disposition of the recovered free product.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-55. Investigations for soil and ground water cleanup.

1. In order to determine the full extent and location of soils contaminated by the release and the presence and concentrations of dissolved product contamination in the ground water, owners and operators must conduct investigations of the release, the release site, and the surrounding area possibly affected by the release if any of the following conditions exist:
 - a. There is evidence that ground water wells have been affected by the release (for example, as found during release confirmation or previous corrective action measures);
 - b. Free product is found to need recovery in compliance with section 33.1-24-08-54;
 - c. There is evidence that contaminated soils may be in contact with ground water (for example, as found during conduct of the initial response measures or investigations required under sections 33.1-24-08-50 through 33.1-24-08-54); and
 - d. The department requests an investigation, based on the potential effects of contaminated soil or ground water on nearby surface water and ground water resources.
2. Owners and operators must submit the information collected under subsection 1 as soon as practicable or in accordance with a schedule established by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-56. Corrective action plan.

1. At any point after reviewing the information submitted in compliance with sections 33.1-24-08-51 through 33.1-24-08-53, the department may require owners and operators to submit additional information or to develop and submit a corrective action plan for responding to contaminated soils and ground water. If a plan is required, owners and operators must submit the plan according to a schedule and format established by the department. Alternatively, owners and operators may, after fulfilling the requirements of sections 33.1-24-08-51 through 33.1-24-08-53, choose to submit a corrective action plan for responding to contaminated soil and ground water. In either case, owners and operators are

responsible for submitting a plan that provides for adequate protection of human health and the environment as determined by the department, and must modify their plan as necessary to meet this standard.

2. The department will approve the corrective action plan only after ensuring that implementation of the plan will adequately protect human health, safety, and the environment. In making this determination, the department should consider the following factors as appropriate:

a. The physical and chemical characteristics of the regulated substance, including its toxicity, persistence, and potential for migration;

b. The hydrogeologic characteristics of the facility and the surrounding area;

c. The proximity, quality, and current and future uses of nearby surface water and ground water;

d. The potential effects of residual contamination on nearby surface water and ground water;

e. An exposure assessment; and

f. Any information assembled in compliance with sections 33.1-24-08-50 through 33.1-24-08-57.

3. Upon approval of the corrective action plan or as directed by the department, owners and operators must implement the plan, including modifications to the plan made by the department. They must monitor, evaluate, and report the results of implementing the plan in accordance with a schedule and in a format established by the department.

4. Owners and operators may, in the interest of minimizing environmental contamination and promoting more effective cleanup, begin cleanup of soil and ground water before the corrective action plan is approved provided they:

a. Notify the department of their intention to begin cleanup;

b. Comply with any conditions imposed by the department, including halting cleanup or mitigating adverse consequences from cleanup activities; and

c. Incorporate these self-initiated cleanup measures in the corrective action plan that is submitted to the department for approval.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-57. Public participation.

1. For each confirmed release that requires a corrective action plan, the department must provide notice to the public by means designed to reach those members of the public directly affected by the release and the planned corrective action. This notice may include, but is not limited to, public announcements, publication in a state register, letters to individual households, or personal contacts by field staff.

2. The department must ensure that site release information and decisions concerning the corrective action plan are made available to the public for inspection upon request.

3. Before approving a corrective action plan, the department may hold a public meeting to consider comments on the proposed corrective action plan if there is sufficient public interest, or for any other reason.
4. The department must give public notice that complies with subsection 1 if implementation of an approved corrective action plan does not achieve the established cleanup levels in the plan and termination of that plan is under consideration by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-58. [Reserved].

33.1-24-08-59. [Reserved].

33.1-24-08-60. Temporary closure.

1. When an underground storage tank system is temporarily closed, owners and operators must continue operation and maintenance of corrosion protection in accordance with section 33.1-24-08-21, and any release detection in accordance with sections 33.1-24-08-30 through 33.1-24-08-35 and sections 33.1-24-08-70 through 33.1-24-08-72. Sections 33.1-24-08-40 through 33.1-24-08-43 and sections 33.1-24-08-50 through 33.1-24-08-57 must be complied with if a release is suspected or confirmed. However, release detection and release detection operation and maintenance testing and inspections in sections 33.1-24-08-20 through 33.1-24-08-26 and sections 33.1-24-08-30 through 33.1-24-08-35 are not required as long as the underground storage tank system is empty. The underground storage tank system is empty when all materials have been removed using commonly employed practices so that no more than two and five-tenths centimeters [1 inch] of residue, or three-tenths of one percent by weight of the total capacity of the underground storage tank system, remain in the system. In addition, spill and overfill operation and maintenance testing and inspections in sections 33.1-24-08-20 through 33.1-24-08-26 are not required.
2. When an underground storage tank system is temporarily closed for three months or more, owners and operators must also comply with the following requirements:
 - a. Leave vent lines open and functioning; and
 - b. Cap and secure all other lines, pumps, manways, and ancillary equipment.
3. When an underground storage tank system is temporarily closed for more than twelve months, owners and operators must permanently close the underground storage tank system if it does not meet either performance standards in section 33.1-24-08-10 for new underground storage tank systems or the upgrading requirements in section 33.1-24-08-11, except that the spill and overfill equipment requirements do not have to be met. Owners and operators must permanently close the substandard underground storage tank systems at the end of this twelve-month period in accordance with sections 33.1-24-08-61 through 33.1-24-08-64, unless the department provides an extension of the twelve-month temporary closure period. Owners and operators must complete a site assessment in accordance with section 33.1-24-08-62 before such an extension can be applied for.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-61. Permanent closure and changes in service.

1. At least thirty days before beginning either permanent closure or a change in service under subsections 2 and 3, or within another reasonable time period determined by the department, owners and operators must notify the department of their intent to permanently close or make the change in service, unless such action is in response to corrective action. The required assessment of the excavation zone under section 33.1-24-08-62 must be performed after notifying the department, but before completion of the permanent closure or a change in service.
2. To permanently close a tank, owners and operators must empty and clean it by removing all liquids and accumulated sludges. All tanks taken out of service permanently must be removed from the ground, filled with an inert solid material, or closed in place in a manner approved by the department.
3. Continued use of an underground storage tank system to store a nonregulated substance is considered a change in service. Before a change in service, owners and operators must empty and clean the tank by removing all liquid and accumulated sludge and conduct a site assessment in accordance with section 33.1-24-08-62.

NOTE: The following cleaning and closure procedures may be used to comply with this section: American Petroleum Institute Recommended Practice RP 1604, "Closure of Underground Petroleum Storage Tanks"; American Petroleum Institute Standard 2015, "Safe Entry and Cleaning of Petroleum Storage Tanks, Planning and Managing Tank Entry From Decommission Through Recommissioning"; American Petroleum Institute Recommended Practice 2016, "Guidelines and Procedures for Entering and Cleaning Petroleum Storage Tanks", American Petroleum Institute Recommended Practice RP 1631, "Interior Lining and Periodic Inspection of Underground Storage Tanks", may be used as guidance for compliance with this section; National Fire Protection Association Standard 326, "Standard for the Safeguarding of Tanks and Containers for Entry, Cleaning, or Repair"; and The National Institute for Occupational Safety and Health Publication 80-106 "Criteria for a Recommended Standard: Working in Confined Spaces" may be used as guidance for conducting safe closure procedures at some hazardous substance tanks.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-62. Assessing the site at closure or change in service.

1. Before permanent closure or a change in service is completed, owners and operators must measure for the presence of a release where contamination is most likely to be present at the underground storage tank site. In selecting sample types, sample locations, and measurement methods, owners and operators must consider the method of closure, the nature of the stored substance, the type of backfill, the depth to ground water, and other factors appropriate for identifying the presence of a release. The requirements of this section are satisfied if one of the external release detection methods allowed in subsections 5 and 6 of section 33.1-24-08-33 is operating in accordance with the requirements in section 33.1-24-08-33 at the time of closure, and indicates no release has occurred.
2. If contaminated soils, contaminated ground water, or free product as a liquid or vapor is discovered under subsection 1, or by any other manner, owners and operators must begin corrective action in accordance with sections 33.1-24-08-50 through 33.1-24-08-57.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-63. Applicability to previously closed underground storage tank systems.

When directed by the department, the owner and operator of an underground storage tank system permanently closed before December 22, 1988, must assess the excavation zone and close the underground storage tank system in accordance with sections 33.1-24-08-60 through 33.1-24-08-64 if releases from the underground storage tank may, in the judgment of the department, pose a current or potential threat to human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-64. Closure records.

Owners and operators must maintain records in accordance with section 33.1-24-08-24 that are capable of demonstrating compliance with closure requirements under sections 33.1-24-08-60 through 33.1-24-08-64. The results of the excavation zone assessment required in section 33.1-24-08-62 must be maintained for at least three years after completion of permanent closure or change in service in one of the following ways:

1. By the owners and operators who took the underground storage tank system out of service;
2. By the current owners and operators of the underground storage tank system site; or
3. By mailing these records to the department if they cannot be maintained at the closed facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-65. [Reserved].

33.1-24-08-66. [Reserved].

33.1-24-08-68. [Reserved].

33.1-24-08-69. [Reserved].

33.1-24-08-70. Underground storage tank systems with field-constructed tanks and airport hydrant fuel distribution systems definitions.

For purposes of this section, the following definitions apply:

1. "Airport hydrant fuel distribution system" (also called airport hydrant system) means an underground storage tank system which fuels aircraft and operates under high pressure with large diameter piping that typically terminates into one or more hydrants (fill stands). The airport hydrant system begins where fuel enters one or more tanks from an external source, such as a pipeline, barge, rail car, or other motor fuel carrier.
2. "Field-constructed tank" means a tank constructed in the field. For example, a tank constructed of concrete that is poured in the field, or a steel or fiberglass tank primarily fabricated in the field is considered field-constructed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-71. General requirements.

1. Implementation of requirements. Owners and operators shall comply with the requirements of this chapter for underground storage tank systems with field-constructed tanks and airport hydrant systems as follows:

- a. For underground storage tank systems installed on or before April 1, 2018, the requirements are effective according to the following schedule:

<u>Requirement</u>	<u>Effective Date</u>
<u>Upgrading underground storage tank systems, general operating requirements, and operator training</u>	<u>April 1, 2021</u>
<u>Release detection</u>	<u>April 1, 2021</u>
<u>Release reporting, response, and investigation; closure; financial responsibility and notification (except as provided in subsection 2)</u>	<u>April 1, 2018</u>

- b. For underground storage tank systems installed after April 1, 2018, the requirements apply at installation.

2. No later than April 1, 2021, all owners of previously deferred underground storage tank systems shall submit a one-time notice of tank system existence to the department, using the state form in appendix I, in accordance with subsection 3 of section 33.1-24-08-12. Owners and operators of underground storage tank systems in use as of April 1, 2018, shall demonstrate financial responsibility at the time of submission of the notification form.
3. Except as provided in section 33.1-24-08-72, owners and operators shall comply with the requirements of sections 33.1-24-08-01 through 33.1-24-08-106.
4. In addition to the codes of practice listed in section 33.1-24-08-10, owners and operators may use military construction criteria, such as Unified Facilities Criteria 3-460-01, Petroleum Fuel Facilities, when designing, constructing, and installing airport hydrant systems and underground storage tank systems with field-constructed tanks.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-72. Additions, exceptions, and alternatives for underground storage tank systems with field-constructed tanks and airport hydrant systems.

1. Exception to piping secondary containment requirements. Owners and operators may use single-walled piping when installing or replacing piping associated with underground storage tank systems with field-constructed tanks greater than fifty thousand gallons and piping associated with airport hydrant systems. Piping associated with underground storage tank systems with field-constructed tanks less than or equal to fifty thousand gallons not part of an airport hydrant system must meet the secondary containment requirement when installed or replaced.

2. Upgrade requirements. No later than April 1, 2021, airport hydrant systems and underground storage tank systems with field-constructed tanks where installation commenced on or before April 1, 2018, must meet the following requirements or be permanently closed pursuant to sections 33.1-24-08-60 through 33.1-24-08-64.
 - a. Corrosion protection. Underground storage tank system components in contact with the ground that routinely contain regulated substances must meet one of the following:
 - (1) Except as provided in subsection 1, the new underground storage tank system performance standards for tanks at subsection 1 of section 33.1-24-08-10 and for piping at subsection 2 of section 33.1-24-08-10; or
 - (2) Be constructed of metal and cathodically protected according to a code of practice developed by a nationally recognized association or independent testing laboratory and meets the following:
 - (a) Cathodic protection must meet the requirements of paragraphs 2 through 4 of subdivision b of subsection 1 of section 33.1-24-08-10 for tanks, and paragraphs 2 through 4 of subdivision b of subsection 2 of section 33.1-24-08-10 for piping.
 - (b) Tanks greater than ten years old without cathodic protection must be assessed to ensure the tank is structurally sound and free of corrosion holes prior to adding cathodic protection. The assessment must be by internal inspection or another method determined by the department to adequately assess the tank for structural soundness and corrosion holes.

 - (NOTE: The following codes of practice may be used to comply with this section: NACE International Standard Practice SP 0285, "External Control of Underground Storage Tank Systems by Cathodic Protection", NACE International Standard Practice SP 0169, "Control of External Corrosion on Underground or Submerged Metallic Piping Systems"; National Leak Prevention Association Standard 631, Chapter C, "Internal Inspection of Steel Tanks for Retrofit of Cathodic Protection"; or American Society for Testing and Materials Standard G158, "Standard Guide for Three Methods of Assessing Buried Steel Tanks".)

 - b. Spill and overflow prevention equipment. To prevent spilling and overflowing associated with product transfer to the underground storage tank system, all underground storage tank systems with field-constructed tanks and airport hydrant systems must comply with new underground storage tank system spill and overflow prevention equipment requirements specified in subsection 3 of section 33.1-24-08-10.

3. Walkthrough inspections. In addition to the walkthrough inspection requirements in section 33.1-24-08-26, owners and operators shall inspect the following additional areas for airport

hydrant systems at least once every thirty days if confined space entry according to the occupational safety and health administration (see 29 CFR part 1910) is not required or at least annually if confined space entry is required and keep documentation of the inspection according to subsection 2 of section 33.1-24-08-26.

a. Hydrant pits - Visually check for any damage, remove any liquid or debris, and check for any leaks; and

b. Hydrant piping vaults - Check for any hydrant piping leaks.

4. Release detection. Owners and operators of underground storage tank systems with field-constructed tanks and airport hydrant systems shall begin meeting the release detection requirements described in sections 33.1-24-08-70 through 33.1-24-08-72 no later than April 1, 2021.

a. Methods of release detection for field-constructed tanks. Owners and operators of field-constructed tanks with a capacity less than or equal to fifty thousand gallons shall meet the release detection requirements in sections 33.1-24-08-30 through 33.1-24-08-35. Owners and operators of field-constructed tanks with a capacity greater than fifty thousand gallons shall meet either the requirements in sections 33.1-24-08-30 through 33.1-24-08-35 (except subsections 5 and 6 of section 33.1-24-08-33 must be combined with inventory control as stated below) of this chapter or use one or a combination of the following alternative methods of release detection:

(1) Conduct an annual tank tightness test that can detect a one-half gallon per hour leak rate;

(2) Use an automatic tank gauging system to perform release detection at least every thirty days that can detect a leak rate less than or equal to one gallon per hour. This method must be combined with a tank tightness test that can detect a two-tenths gallon per hour leak rate performed at least every three years;

(3) Use an automatic tank gauging system to perform release detection at least every thirty days that can detect a leak rate less than or equal to two gallons per hour. This method must be combined with a tank tightness test that can detect a two-tenths gallon per hour leak rate performed at least every two years;

(4) Perform vapor monitoring (conducted in accordance with subsection 5 of section 33.1-24-08-33 for a tracer compound placed in the tank system) capable of detecting a one-tenth gallon per hour leak rate at least every two years;

(5) Perform inventory control (conducted in accordance with department of defense Directive 4140.25, ATA Airport Fuel Facility Operations and Maintenance Guidance Manual, or equivalent procedures) at least every thirty days that can detect a leak equal to or less than one-half percent of flowthrough; and

(a) Perform a tank tightness test that can detect a one-half gallon per hour leak rate at least every two years; or

(b) Perform vapor monitoring or groundwater monitoring (conducted in accordance with subsections 5 and 6 of section 33.1-24-08-33, respectively, for the stored regulated substance) at least every thirty days; or

(6) Another method approved by the department if the owner and operator can demonstrate the method can detect a release as effectively as any of the methods allowed in paragraphs 1 through 5. In comparing methods, the department shall

consider the size of release the method can detect and the frequency and reliability of detection.

- b. Methods of release detection for piping. Owners and operators of underground piping associated with field-constructed tanks less than or equal to fifty thousand gallons shall meet the release detection requirements in sections 33.1-24-08-30 through 33.1-24-08-35. Owners and operators of underground piping associated with airport hydrant systems and field-constructed tanks greater than fifty thousand gallons shall follow either the requirements in sections 33.1-24-08-30 through 33.1-24-08-35 (except subsections 5 and 6 of section 33.1-24-08-33 must be combined with inventory control as stated below) of this chapter or use one or a combination of the following alternative methods of release detection:

- (1) Perform a semiannual or annual line tightness test at or above the piping operating pressure in accordance with the table below.

Maximum Leak Detection Rate Per Test Section Volume		
Test Section Volume (Gallons)	Semiannual Test - Leak Detection Rate Not To Exceed (Gallons Per Hour)	Annual Test - Leak Detection Rate Not To Exceed (Gallons Per Hour)
<u><50,000</u>	<u>1.0</u>	<u>0.5</u>
<u>≥50,000 to < 75,000</u>	<u>4.5</u>	<u>0.75</u>
<u>≥75,000 to < 100,000</u>	<u>2.0</u>	<u>1.0</u>
<u>≥100,000</u>	<u>3.0</u>	<u>1.5</u>

Piping segment volumes greater than or equal to one hundred thousand gallons not capable of meeting the maximum three gallon per hour leak rate for the semiannual test may be tested at a leak rate up to six gallons per hour according to the following schedule:

Phase-In For Piping Segments ≥ 100,000 Gallons In Volume	
<u>First test</u>	<u>Not later than April 1, 2021, (may use up to 6.0 gph leak rate)</u>
<u>Second test</u>	<u>Between April 1, 2021, and April 1, 2024, (may use up to 6.0 gph leak rate)</u>
<u>Third test</u>	<u>Between April 1, 2024, and April 1, 2025, (must use 3.0 gph for leak rate)</u>
<u>Subsequent tests</u>	<u>After April 1, 2025, begin using semiannual or annual line testing according to the Maximum Leak Detection Rate Per Test Section Volume table above</u>

- (2) Perform vapor monitoring (conducted in accordance with subsection 5 of section 33.1-24-08-33 for a tracer compound placed in the tank system) capable of detecting a one-tenth gallon per hour leak rate at least every two years;

- (3) Perform inventory control (conducted in accordance with department of defense Directive 4140.25, ATA Airport Fuel Facility Operations and Maintenance Guidance Manual, or equivalent procedures) at least every thirty days that can detect a leak equal to or less than one-half percent of flowthrough; and

(a) Perform a line tightness test (conducted in accordance with paragraph 1 of subdivision b using the leak rates for the semiannual test) at least every two years; or

(b) Perform vapor monitoring or groundwater monitoring (conducted in accordance with subsections 5 and 6 of section 33.1-24-08-33, respectively, for the stored regulated substance) at least every thirty days; or

(4) Another method approved by the department if the owner and operator can demonstrate the method can detect a release as effectively as any of the methods allowed in paragraphs 1 through 3. In comparing methods, the department shall consider the size of release the method can detect and the frequency and reliability of detection.

c. Recordkeeping for release detection. Owners and operators shall maintain release detection records according to the recordkeeping requirements in section 33.1-24-08-35.

5. Applicability of closure requirements to previously closed underground storage tank systems. When directed by the department, the owner and operator of an underground storage tank system with field-constructed tanks or airport hydrant system permanently closed before April 1, 2018, shall assess the excavation zone and close the underground storage tank system in accordance with sections 33.1-24-08-60 through 33.1-24-08-64 if releases from the underground storage tank may, in the judgment of the department, pose a current or potential threat to human health and the environment.

History: Effective January 1, 2019

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-73. [Reserved].

33.1-24-08-74. [Reserved].

33.1-24-08-75. [Reserved].

33.1-24-08-76. [Reserved].

33.1-24-08-77. [Reserved].

33.1-24-08-78. [Reserved].

33.1-24-08-79. [Reserved].

33.1-24-08-80. Applicability (financial responsibility).

1. Sections 33.1-24-08-80 through 33.1-24-08-106 apply to owners and operators of all petroleum underground storage tank systems except as otherwise provided.
2. Owners and operators of petroleum underground storage tank systems are subject to these requirements in accordance with section 33.1-24-08-81.
3. State and federal government entities whose debts and liabilities are the debts and liabilities of a state or the United States are exempt from the requirements of sections 33.1-24-08-80 through 33.1-24-08-106.
4. The requirements of sections 33.1-24-08-80 through 33.1-24-08-106 do not apply to owners or operators of any underground storage tank system described in subsections 2 and 3 of section 33.1-24-08-01.
5. If the owner and operator of a petroleum underground storage tank are separate persons, only one person is required to demonstrate financial responsibility; however, both parties are liable in the event of noncompliance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-81. Financial responsibility compliance dates.

Owners of petroleum underground storage tanks shall immediately comply with the requirements of sections 33.1-24-08-80 through 33.1-24-08-106.

Owners of previously deferred systems shall comply with the requirements of this section according to the schedule in subsection 1 of section 33.1-24-08-71.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-82. Definitions (financial responsibility).

When used in sections 33.1-24-08-80 through 33.1-24-08-106, the following terms have the meanings given below:

1. "Accidental release" means any sudden or nonsudden release of petroleum arising from operating an underground storage tank that results in a need for corrective action or compensation for bodily injury or property damage, or both, neither expected nor intended by the tank owner or operator.
2. "Bodily injury" has the meaning given to this term by applicable state law; however, this term does not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury.
3. "Chief financial officer", in the case of local government owners and operators, means the individual with overall authority and responsibility for the collection, disbursement, and use of funds by the local government.

4. "Controlling interest" means direct ownership of at least fifty percent of the voting stock of another entity.
5. "Department" means the North Dakota state department of health.
6. "Financial reporting year" means the latest consecutive twelve-month period for which any of the following reports used to support a financial test is prepared:
- a. A 10-K report submitted to the securities and exchange commission;
 - b. An annual report of tangible net worth submitted to dun and bradstreet; or
 - c. Annual reports submitted to the energy information administration or the rural utilities service.
- "Financial reporting year" may thus comprise a fiscal-year or a calendar-year period.
7. "Legal defense cost" is any expense that an owner or operator or provider of financial assurance incurs in defending against claims or actions brought:
- a. By the environmental protection agency or a state to require corrective action or to recover the costs of corrective action;
 - b. By or on behalf of a third party for bodily injury or property damage caused by an accidental release; or
 - c. By any person to enforce the terms of a financial assurance mechanism.
8. "Local government" has the meaning given this term by applicable state law. The term is generally intended to include:
- a. Counties, municipalities, townships, separately chartered and operated special districts (including local government public transit systems and redevelopment authorities), and independent school districts authorized as governmental bodies by state charter or constitution; and
 - b. Special districts and independent school districts established by counties, municipalities, townships, and other general purpose governments to provide essential services.
9. "Occurrence" means an accident, including continuous or repeated exposure to conditions, which results in a release from an underground storage tank.
- NOTE: This definition is intended to assist in the understanding of these rules and is not intended either to limit the meaning of "occurrence" in a way that conflicts with standard insurance usage or to prevent the use of other standard insurance terms in place of "occurrence".
10. "Owner or operator", when the owner or operator are separate parties, refers to the party that is obtaining or has obtained financial assurances.
11. "Petroleum marketing facilities" include all facilities at which petroleum is produced or refined and all facilities from which petroleum is sold or transferred to other petroleum marketers or to the public.
12. "Property damage" has the meaning given this term by applicable state law. This term does not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for property damage. However, such

exclusions for property damage shall not include corrective action associated with releases from tanks which are covered by the policy.

13. "Provider of financial assurance" means an entity that provides financial assurance to an owner or operator of an underground storage tank through one of the mechanisms listed in sections 33.1-24-08-85 through 33.1-24-08-97, including a guarantor, insurer, risk retention group, surety, issuer of a letter of credit, issuer of a state-required mechanism, or a state.
14. "Substantial business relationship" means the extent of a business relationship necessary under applicable state law to make a guarantee contract issued incident to that relationship valid and enforceable. A guarantee contract is issued "incident to that relationship" if it arises from and depends on existing economic transactions between the guarantor and the owner or operator.
15. "Substantial governmental relationship" means the extent of a governmental relationship necessary under applicable state law to make an added guarantee contract issued incident to that relationship valid and enforceable. A guarantee contract is insured incident to that relationship if it arises from a clear commonality of interest in the event of an underground storage tank release, such as coterminous boundaries, overlapping constituencies, common ground water aquifer, or other relationship other than monetary compensation that provides a motivation for the guarantor to provide a guarantee.
16. "Tangible net worth" means the tangible assets that remain after deducting liabilities, such assets do not include intangibles such as goodwill and rights to patents or royalties. For purposes of this definition, "assets" means all existing and all probable future economic benefits obtained or controlled by a particular entity as a result of past transactions.
17. "Termination" under subdivisions a and b of subsection 2 of section 33.1-24-08-87 means only those changes that could result in a gap in coverage as where the insured has not obtained substitute coverage or has obtained substitute coverage with a different retroactive date than the retroactive date of the original policy.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-83. Amount and scope of required financial responsibility.

1. Owners or operators of petroleum underground storage tanks must demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks in at least the following per-occurrence amounts:
 - a. For owners or operators of petroleum underground storage tanks that are located at petroleum marketing facilities, or that handle an average of more than ten thousand gallons [37,854 liters] of petroleum per month based on annual throughput for the previous calendar year, one million dollars; and
 - b. For all other owners or operators of petroleum underground storage tanks, five hundred thousand dollars.
2. Owners or operators of petroleum underground storage tanks must demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks in at least the following annual aggregate amounts:

- a. For owners or operators of one to one hundred petroleum underground storage tanks, one million dollars; and
- b. For owners or operators of one hundred one or more petroleum underground storage tanks, two million dollars.
3. For the purposes of subsections 2 and 6 only, "a petroleum underground storage tank" means a single containment unit and does not mean combinations of single containment units.
4. Except as provided in subsection 5, if the owner or operator uses separate mechanisms or separate combinations of mechanisms to demonstrate financial responsibility for:
 - a. Taking corrective action;
 - b. Compensating third parties for bodily injury and property damage caused by sudden accidental releases; or
 - c. Compensating third parties for bodily injury and property damage caused by nonsudden accidental releases, the amount of assurance provided by each mechanism, or combination of mechanisms must be in the full amount specified in subsections 1 and 2.
5. If an owner or operator uses separate mechanisms or separate combinations of mechanisms to demonstrate financial responsibility for different petroleum underground storage tanks, the annual aggregate required must be based on the number of tanks covered by each such separate mechanism or combination of mechanisms.
6. Owners or operators shall review the amount of aggregate assurance provided whenever additional petroleum underground storage tanks are acquired or installed. If the number of petroleum underground storage tanks for which assurance must be provided exceeds one hundred, the owner or operator shall demonstrate financial responsibility in the amount of at least two million dollars of annual aggregate assurance by the anniversary of the date on which the mechanism demonstrating financial responsibility became effective. If assurance is being demonstrated by a combination of mechanisms, the owner or operator shall demonstrate financial responsibility in the amount of at least two million dollars of annual aggregate assurance by the first-occurring effective date anniversary of any one of the mechanisms combined (other than a financial test or guarantee) to provide assurance.
7. The amounts of assurance required under this section exclude legal defense costs.
8. The required per-occurrence and annual aggregate coverage amounts do not in any way limit the liability of the owner or operator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-84. Allowable mechanisms and combinations of mechanisms.

1. Subject to the limitations of subsections 2 and 3, an owner or operator, including a local government owner or operator may use any one or combination of the mechanisms listed in sections 33.1-24-08-85 through 33.1-24-08-93 to demonstrate financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106 for one or more underground storage tanks.
2. A local government owner or operator may use any one or combination of the mechanisms listed in sections 33.1-24-08-94 through 33.1-24-08-97 to demonstrate financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106 for one or more underground storage tanks.

3. An owner or operator may use a guarantee under section 33.1-24-08-86 or surety bond under section 33.1-24-08-88 to establish financial responsibility only if the attorney general has submitted a written statement to the department that a guarantee or surety bond executed as described in this section is a legally valid and enforceable obligation in the state.
4. An owner or operator may use self-insurance in combination with a guarantee only if, for the purpose of meeting the requirements of the financial test under this chapter, the financial statements of the owner or operator are not consolidated with the financial statements of the guarantor.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-85. Financial test of self-insurance.

1. An owner or operator, or guarantor, or both, may satisfy the requirements of section 33.1-24-08-83 by passing a financial test as specified in this section. To pass the financial test of self-insurance, the owner or operator, or guarantor, or both, must meet the criteria of subsection 2 or 3 based on year-end financial statements for the latest completed fiscal year.

2. The following apply:

a. The owner or operator, or guarantor, or both, must have a tangible net worth of at least ten times:

(1) The total of the applicable aggregate amount required by section 33.1-24-08-83, based on the number of underground storage tanks for which a financial test is used to demonstrate financial responsibility to the department;

(2) The sum of the corrective action cost estimates, the current closure and postclosure care cost estimates, and amount of liability coverage for which a financial test is used to demonstrate financial responsibility to the department under sections 33.1-24-05-58, 33.1-24-05-77, and 33.1-24-05-79; and

(3) The sum of current plugging and abandonment cost estimates for which a financial test is used to demonstrate financial responsibility to the department under chapter 33.1-25-01.

b. The owner or operator, or guarantor, or both, must have a tangible net worth of at least ten million dollars.

c. The owner or operator, or guarantor, or both, must have a letter signed by the chief financial officer worded as specified in subsection 4.

d. The owner or operator, or guarantor, or both, must either:

(1) File financial statements annually with the United States securities and exchange commission, the energy information administration, or the rural utilities service; or

(2) Report annually the firm's tangible net worth to dun and bradstreet, and dun and bradstreet must have assigned the firm a financial strength rating of 4A or 5A.

e. The firm's year-end financial statements, if independently audited, cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification.

3. The following apply:

- a. The owner or operator, or guarantor, or both, must meet the financial test requirements of subdivision a of subsection 6 of section 33.1-24-05-79, substituting the appropriate amounts specified in subdivisions a and b of subsection 2 of section 33.1-24-08-83 for the "amount of liability coverage" each time specified in that section;
- b. The fiscal year-end financial statements of the owner or operator, or guarantor, or both, must be examined by an independent certified public accountant and be accompanied by the accountant's report of the examination;
- c. The firm's year-end financial statements cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification;
- d. The owner or operator, or guarantor, or both, must have a letter signed by the chief financial officer, worded as specified in subsection 4; and
- e. If the financial statements of the owner or operator, or guarantor, or both, are not submitted annually to the United States securities and exchange commission, the energy information administration, or the rural utilities service, the owner or operator, or guarantor, or both, must obtain a special report by an independent certified public accountant stating that:
 - (1) The certified public accountant has compared the data that the letter from the chief financial officer specifies as having been derived from the latest year-end financial statements of the owner or operator, or guarantor, or both, with the amounts in such financial statements; and
 - (2) In connection with that comparison, no matters came to the certified public accountant's attention which caused the certified public accountant to believe the specified data should be adjusted.

4. To demonstrate that it meets the financial test under subsection 2 or 3, the chief financial officer of the owner or operator, or guarantor, must sign, within one hundred twenty days of the close of each financial reporting year, as defined by the twelve-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of the owner or operator, or guarantor]. This letter is in support of the use of [insert: "the financial test of self-insurance", and/or "guarantee"] to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" and/or "nonsudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank(s).

Underground storage tanks at the following facilities are assured by this financial test by this [insert: "owner or operator", and/or "guarantor"]: [List for each facility: the name and address of the facility where tanks assured by this financial test are located, and whether tanks are assured by this financial test. If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each tank assured by this financial test by the tank identification number provided in the notification submitted pursuant to state requirements.]

A [insert: "financial test", and/or "guarantee"] is also used by this [insert: "owner or operator", or "guarantor"] to demonstrate evidence of financial responsibility in the following amounts

under other environmental protection agency regulations or state programs authorized by the environmental protection agency under 40 CFR Parts 271 and 145:

<u>EPA Regulations</u>	<u>Amount</u>
<u>Closure [§§264.143 and 265.143]</u>	\$ _____
<u>Post-Closure Care [§§264.145 and 265.145]</u>	\$ _____
<u>Liability Coverage [§§264.147 and 265.147]</u>	\$ _____
<u>Corrective Action [§264.101(b)]</u>	\$ _____
<u>Plugging and Abandonment [§144.63]</u>	\$ _____
<u>Closure</u>	\$ _____
<u>Post-Closure Care</u>	\$ _____
<u>Liability Coverage</u>	\$ _____
<u>Corrective Action</u>	\$ _____
<u>Plugging and Abandonment</u>	\$ _____
 <u>Total</u>	 \$ _____

This [insert: "owner or operator", or "guarantor"] has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

[Fill in the information for Alternative I if the criteria of subsection 2 of section 33.1-24-08-85 are being used to demonstrate compliance with the financial test requirements. Fill in the information for Alternative II if the criteria of subsection 3 of section 33.1-24-08-85 are being used to demonstrate compliance with the financial test requirements.]

5. If an owner or operator using the test to provide financial assurance finds the owner or operator no longer meets the requirements of the financial test based on the year-end financial statements, the owner or operator must obtain alternative coverage within one hundred fifty days of the end of the year for which financial statements have been prepared.

6. The department may require reports of financial condition at any time from the owner or operator, or guarantor, or both. If the department finds, on the basis of such reports or other information, that the owner or operator, or guarantor, or both, no longer meets the financial test requirements of subsections 2 or 3 and 4 of section 33.1-24-08-85, the owner or operator must obtain alternate coverage within thirty days after notification of such a finding.

7. If the owner or operator fails to obtain alternate assurance within one hundred fifty days of finding the owner or operator no longer meets the requirements of the financial test based on the year-end financial statements, or within thirty days of notification by the department that the owner or operator no longer meets the requirements of the financial test, the owner or operator must notify the department of such failure within ten days.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-86. Guarantee.

1. An owner or operator may satisfy the requirements of section 33.1-24-08-83 by obtaining a guarantee that conforms to the requirements of this section. The guarantor must be:

a. A firm that:

- (1) Possesses a controlling interest in the owner or operator;
- (2) Possesses a controlling interest in a firm described under paragraph 1 of subdivision a of subsection 1; or
- (3) Is controlled through stock ownership by a common parent firm that possesses a controlling interest in the owner or operator; or

b. A firm engaged in a substantial business relationship with the owner or operator and issuing the guarantee as an act incident to that business relationship.

2. Within one hundred twenty days of the close of each financial reporting year the guarantor must demonstrate that it meets the financial test criteria of section 33.1-24-08-85 based on year-end financial statements for the latest completed financial reporting year by completing the letter from the chief financial officer described in subsection 4 of section 33.1-24-08-85 and must deliver the letter to the owner or operator. If the guarantor fails to meet the requirements of the financial test at the end of any financial reporting year, within one hundred twenty days of the end of that financial reporting year the guarantor shall send via certified mail, before cancellation or nonrenewal of the guarantee, notice to the owner or operator. If the department notifies the guarantor that the guarantor no longer meets the requirements of the financial test of subsections 2 or 3 and 4 of section 33.1-24-08-85, the guarantor must notify the owner or operator within ten days of receiving such notification from the department. In both cases, the guarantee will terminate no less than one hundred twenty days after the date the owner or operator receives the notification, as evidenced by the return receipt. The owner or operator must obtain alternative coverage as specified in subsection 3 of section 33.1-24-08-104.

3. The guarantee must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

GUARANTEE

Guarantee made this [date] by [name of guaranteeing entity], a business entity organized under the laws of the state of [name of state], herein referred to as guarantor, to the department and to any and all third parties, and obligees, on behalf of [owner or operator] of [business address].

Recitals.

(1) Guarantor meets or exceeds the financial test criteria of subsections 2 or 3 and 4 of section 33.1-24-08-85 and agrees to comply with the requirements for guarantors as specified in subsection 2 of section 33.1-24-08-86.

(2) [Owner or operator] owns or operates the following underground storage tank(s) covered by this guarantee: [List the number of tank(s) at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12, and the name and address of the facility. This guarantee satisfies sections 33.1-24-08-80 through 33.1-24-08-106 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank(s) in the

amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate.

- (3) [Insert appropriate phrase: "On behalf of our subsidiary" (if guarantor is corporate parent of the owner or operator); "On behalf of our affiliate" (if guarantor is a related firm of the owner or operator); or "Incident to our business relationship with" (if guarantor is providing the guarantee as an incident to a substantial business relationship with owner or operator)][owner or operator], guarantor guarantees to the department and to any and all third parties that:

In the event that [owner or operator] fails to provide alternative coverage within sixty days after receipt of a notice of cancellation of this guarantee and the department has determined or suspects a release has occurred at an underground storage tank covered by this guarantee, the guarantor, upon instructions from the department shall fund a standby trust fund in accordance with the provisions of section 33.1-24-08-102, in an amount not to exceed the coverage limits specified above.

In the event that the department determines that [owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, the guarantor upon written instructions from the department shall fund a standby trust in accordance with the provisions of section 33.1-24-08-102, in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from, or alleged to arise from, such injury or damage, the guarantor, upon written instructions from the department, shall fund a standby trust in accordance with the provisions of section 33.1-24-08-102 to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

- (4) Guarantor agrees that if, at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet the financial test criteria of subsections 2 or 3 and 4 of section 33.1-24-08-85, guarantor shall send within one hundred twenty days of such failure, by certified mail, notice to [owner or operator]. The guarantee will terminate one hundred twenty days from the date of receipt of the notice by [owner or operator], as evidenced by the return receipt.

- (5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code naming guarantor as debtor, within ten days after commencement of the proceeding.

- (6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to chapter 33.1-24-08.

- (7) Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable financial responsibility requirements of sections 33.1-24-08-80 through 33.1-24-08-106 for the above-identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than one hundred twenty days after receipt of such notice by [owner or operator], as evidenced by the return receipt.

- (8) The guarantor's obligation does not apply to any of the following:

- (a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
 - (e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.
- (9) Guarantor expressly waives notice of acceptance of this guarantee by the department, by any or all third parties, or by [owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 3 of section 33.1-24-08-86 as such rules were constituted on the effective date shown immediately below.

Effective date: _____

[Title of person signing]

Signature of witness or notary:

4. An owner or operator who uses a guarantee to satisfy the requirements of section 33.1-24-08-83 must establish a standby trust fund when the guarantee is obtained. Under the terms of the guarantee, all amounts paid by the guarantor under the guarantee will be deposited directly into the standby trust fund in accordance with instructions from the department under section 33.1-24-08-102. The standby trust fund must meet the requirements specified in section 33.1-24-08-93.

History: Effective January 1, 2019.

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-87. Insurance and risk retention group coverage.

1. An owner or operator may satisfy the requirements of section 33.1-24-08-83 by obtaining liability insurance that conforms to the requirements of this section from a qualified insurer or risk retention group. Such insurance may be in the form of a separate insurance policy or an endorsement to an existing insurance policy.

2. Each insurance policy must be amended by an endorsement worded as specified in subdivision a, or evidenced by a certificate of insurance worded as specified in subdivision b, except that instructions in brackets must be replaced with the relevant information and the brackets deleted:

a. Endorsement

Period of Coverage: [current policy period] _____

Name of [insurer or risk retention group]: _____

Address of [insurer or risk retention group]: _____

Name of Insured: _____

Address of Insured: _____

Endorsement:

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering the following underground storage tanks:

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12, and the name and address of the facility.]

For [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the underground storage tank(s) identified above.

The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's or group's liability; if the amount of coverage is different for different types of coverage or for different underground storage tanks or locations, indicate the amount of coverage for each type of coverage and/or for each underground storage tank or location], exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under [policy number]. The effective date of said policy is [date].

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with subsections a through e of this paragraph are hereby amended to conform with subsections a through e:

a. Bankruptcy or insolvency of the insured shall not relieve the ["insurer" or "group"] of its obligations under the policy to which this endorsement is attached.

b. The ["insurer" or "group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third party, with a right of reimbursement by the insured for any such payment made by the ["insurer" or "group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in sections 33.1-24-08-85 through 33.1-24-08-92 and 33.1-24-08-97.

c. Whenever requested by the department, the ["insurer" or "group"] agrees to furnish to the department a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the ["insurer" or "group"]; except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of sixty days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of ten days after a copy of such written notice is received by the insured.

[Insert for claims-made policies:

e. The insurance covers claims otherwise covered by the policy that are reported to the ["insurer" or "group"] within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.]

I hereby certify that the wording of this instrument is identical to the wording in subdivision a of subsection 2 of section 33.1-24-08-87 and that the ["insurer" or "group"] is ["licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states"].

Address of [insurer or risk retention group]:

Name of Insured:

Address of Insured:

Certification:

1. [Name of insurer or risk retention group], [the "insurer" or "group"], as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s):

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12, and the name and address of the facility.]

For [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the underground storage tank(s) identified above.

The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's or group's liability; if the amount of coverage is different for different types of coverage or for different underground storage tanks or locations, indicate the amount of coverage for each type of coverage and/or for each underground storage tank or location], exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under [policy number]. The effective date of said policy is [date].

2. The ["insurer" or "group"] further certifies the following with respect to the insurance described in paragraph 1:

- a. Bankruptcy or insolvency of the insured shall not relieve the ["insurer" or "group"] of its obligations under the policy to which this certificate applies.
- b. The ["insurer" or "group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third party, with a right of reimbursement by the insured for any such payment made by the ["insurer" or "group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in sections 33.1-24-08-85 through 33.1-24-08-92 and 33.1-24-08-97.
- c. Whenever requested by the department, the ["insurer" or "group"] agrees to furnish to the department a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the ["insurer" or "group"], except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of sixty days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of ten days after a copy of such written notice is received by the insured.

[Insert for claims-made policies:

e. The insurance covers claims otherwise covered by the policy that are reported to the ["insurer" or "group"] within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such an extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.]

I hereby certify that the wording of this instrument is identical to the wording in subdivision b of subsection 2 of section 33.1-24-08-87 and that the ["insurer" or "group"] is ["licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states"].

[Signature of authorized representative of insurer]

[Type name]

[Title], Authorized Representative of [name of insurer or risk retention group]

[Address of representative]

3. Each insurance policy must be issued by an insurer or a risk retention group that, at a minimum, is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-88. Surety bond.

1. An owner or operator may satisfy the requirements of section 33.1-24-08-83 by obtaining a surety bond that conforms to the requirements of this section. The surety company issuing the bond must be among those listed as acceptable sureties on federal bonds in the latest circular 570 of the United States department of the treasury.

2. The surety bond must be worded as follows, except that instructions in brackets must be replaced with the relevant information and the brackets deleted:

Performance Bond

Date bond executed:

Period of coverage:

Principal: [legal name and business address of owner or operator]:

Type of organization: [insert "individual", "joint venture", "partnership", or "corporation"]:

State of incorporation (if applicable):

Surety(ies): [name(s) and business address(es)]:

Scope of Coverage: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12, and the name and address of the facility. List the coverage guaranteed by the bond: "taking corrective action" provided in the notification submitted pursuant to and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases" "arising from operating the underground storage tank"].

Penal sums of bond:

Per occurrence \$ _____

Annual aggregate \$ _____

Surety's bond number: _____

Know all Persons by These Presents, that we, the Principal and Surety(ies), hereto are firmly bound to the department, in the above penal sums for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally; provided that, where the Surety(ies) are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sums jointly and severally only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sums only as is set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sums.

Whereas said Principal is required under North Dakota Century Code section 23.1-04-06 to provide financial assurance for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the underground storage tanks identified above, and

Whereas said Principal shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the Principal shall faithfully ["take corrective action, in accordance with sections 33.1-24-08-50 through 33.1-24-08-57 and the department's instructions for", and/or "compensate injured third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] arising from operating the tank(s) identified above, or if the Principal shall provide alternate financial assurance, as specified in sections 33.1-24-08-80 through 33.1-24-08-106, within one hundred twenty days after the date the notice of cancellation is received by the Principal from the Surety(ies), then this obligation shall be null and void; otherwise it is to remain in full force and effect.

Such obligation does not apply to any of the following:

- (a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
- (e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.

The Surety(ies) shall become liable on this bond obligation only when the Principal has failed to fulfill the conditions described above.

Upon notification by the department that the Principal has failed to ["take corrective action, in accordance with chapter 33.1-24-08, sections 33.1-24-08-50 through 33.1-24-08-57 and the department's instructions", and/or "compensate injured third parties"] as guaranteed by this bond, the Surety(ies) shall either perform ["corrective action in accordance with chapter 33.1-24-08 and the department's instructions", and/or "third-party liability compensation"] or place funds in an amount up to the annual aggregate penal sum into the standby trust fund as directed by the department under section 33.1-24-08-102.

Upon notification by the department that the Principal has failed to provide alternate financial assurance within sixty days after the date the notice of cancellation is received by the Principal from the Surety(ies) and that the department has determined or suspects that a release has occurred, the Surety(ies) shall place funds in an amount not exceeding the annual aggregate penal sum into the standby trust fund as directed by the department under section 33.1-24-08-102.

The Surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agrees that no such amendment shall in any way alleviate its(their) obligation on this bond.

The liability of the Surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the annual aggregate to the penal sum shown on the face of the bond, but in no event shall the obligation of the Surety(ies) hereunder exceed the amount of said annual aggregate penal sum.

The Surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the Principal; provided, however, that cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by the Principal, as evidenced by the return receipt.

The Principal may terminate this bond by sending written notice to the Surety(ies).

In Witness Whereof, the Principal and Surety(ies) have executed this Bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the Principal and Surety(ies) and that the wording of this surety bond is identical to the wording specified in subsection 2 of section 33.1-24-08-88 as such rules were constituted on the date this bond was executed.

Bond premium: \$ _____

3. Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. In all cases, the surety's liability is limited to the per-occurrence and annual aggregate penal sums.

4. The owner or operator who uses a surety bond to satisfy the requirements of section 33.1-24-08-83 must establish a standby trust fund when the surety bond is acquired. Under the terms of the bond, all amounts paid by the surety under the bond will be deposited directly into the standby trust fund in accordance with instructions from the department under section 33.1-24-08-98. This standby trust fund must meet the requirements specified in section 33.1-24-08-93.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-89. Letter of credit.

1. An owner or operator may satisfy the requirements of section 33.1-24-08-83 by obtaining an irrevocable standby letter of credit that conforms to the requirements of this section. The issuing institution must be an entity that has the authority to issue letters of credit in each state where used and whose letter-of-credit operations are regulated and examined by a federal or state agency.
2. The letter of credit must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Irrevocable Standby Letter of Credit

[Name and address of issuing institution]

[Name and address of the department]

Dear Sir or Madam: We hereby establish our Irrevocable Standby Letter of Credit No. _____ in your favor, at the request and for the account of [owner or operator name] of [address] up to the aggregate amount of [in words] U.S. dollars (\$[insert dollar amount]), available upon presentation [insert, if more than one department is a beneficiary, "by any one of you"] of

- (1) Your sight draft, bearing reference to this letter of credit, No. _____, and
- (2) Your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to rules issued under authority of North Dakota Century Code Section 23.1-04-06".

This letter of credit may be drawn on to cover [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] arising from operating the underground storage tank(s) identified below in the amount of [in words] \$ [insert dollar amount] per occurrence and [in words] \$ [insert dollar amount] annual aggregate:

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12, and the name and address of the facility.]

The letter of credit may not be drawn on to cover any of the following:

- (a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or

(e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.

This letter of credit is effective as of [date] and shall expire on [date], but such expiration date shall be automatically extended for a period of [at least the length of the original term] on [expiration date] and on each successive expiration date, unless, at least one hundred twenty days before the current expiration date, we notify [owner or operator] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event that [owner or operator] is so notified, any unused portion of the credit shall be available upon presentation of your sight draft for one hundred twenty days after the date of receipt by [owner or operator], as shown on the signed return receipt.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us, and we shall deposit the amount of the draft directly into the standby trust fund of [owner or operator] in accordance with your instructions.

We certify that the wording of this letter of credit is identical to the wording specified in subsection 2 of section 33.1-24-08-89 as such rules were constituted on the date shown immediately below.

[Signature(s) and title(s) of official(s) of issuing institution]

[Date]

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published by the International Chamber of Commerce", or "the Uniform Commercial Code"].

3. An owner or operator who uses a letter of credit to satisfy the requirements of section 33.1-24-08-83 must also establish a standby trust fund when the letter of credit is acquired. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the department will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the department under section 33.1-24-08-102. This standby trust fund must meet the requirements specified in section 33.1-24-08-93.

4. The letter of credit must be irrevocable with a term specified by the issuing institution. The letter of credit must provide that credit be automatically renewed for the same term as the original term, unless, at least one hundred twenty days before the current expiration date, the issuing institution notifies the owner or operator by certified mail of its decision not to renew the letter of credit. Under the terms of the letter of credit, the one hundred twenty days will begin on the date when the owner or operator receives the notice, as evidenced by the return receipt.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-90. [Reserved].

33.1-24-08-91. [Reserved].

33.1-24-08-92. Trust fund.

1. An owner or operator may satisfy the requirements of section 33.1-24-08-83 by establishing a trust fund that conforms to the requirements of this section. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal agency or an agency of the state in which the fund is established.
2. The wording of the trust agreement must be identical to the wording specified in subdivision a of subsection 2 of section 33.1-24-08-93, and must be accompanied by a formal certification of acknowledgment as specified in subdivision b of subsection 2 of section 33.1-24-08-93.
3. The trust fund, when established, must be funded for the full required amount of coverage, or funded for part of the required amount of coverage and used in combination with other mechanisms that provide the remaining required coverage.
4. If the value of the trust fund is greater than the required amount of coverage, the owner or operator may submit a written request to the department for release of the excess.
5. If other financial assurance as specified in sections 33.1-24-08-80 through 33.1-24-08-106 is substituted for all or part of the trust fund, the owner or operator may submit a written request to the department for release of the excess.
6. Within sixty days after receiving a request from the owner or operator for release of funds as specified in subsection 4 or 5, the department will instruct the trustee to release to the owner or operator such funds as the department specifies in writing.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-93. Standby trust fund.

1. An owner or operator using any one of the mechanisms authorized by section 33.1-24-08-86, 33.1-24-08-88, or 33.1-24-08-89 must establish a standby trust fund when the mechanism is acquired. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal agency or an agency of the state in which the fund is established.
2. The following apply:
 - a. The standby trust agreement, or trust agreement, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Trust Agreement

Trust agreement, the "Agreement", entered into as of [date] by and between [name of the owner or operator], a [name of state] [insert "corporation", "partnership", "association", or "proprietorship"], the "Grantor", and [name of corporate trustee], [insert "Incorporated in the state of _____" or "a national bank"], the "Trustee".

Whereas, the department has established certain rules applicable to the Grantor, requiring that an owner or operator of an underground storage tank shall provide assurance that funds will be available when needed for corrective action and third-party compensation for bodily injury and property damage caused by sudden and nonsudden accidental releases arising from the operation of the underground storage tank. The attached schedule A lists the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks

are located that are covered by the standby [insert "standby" where trust agreement is standby trust agreement] trust agreement.

[Whereas, the Grantor has elected to establish [insert either "a guarantee", "surety bond", or "letter of credit"] to provide all or part of such financial assurance for the underground storage tanks identified herein and is required to establish a standby trust fund able to accept payments from the instrument (This paragraph is only applicable to the standby trust agreement.);]

[Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this agreement, and the Trustee is willing to act as trustee;

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions.

As used in this Agreement:

- (a) The term "Grantor" means the owner or operator who enters into this Agreement and any successors or assigns of the Grantor.
- (b) The term "Trustee" means the Trustee who enters into this Agreement and any successor Trustee.

Section 2. Identification of the Financial Assurance Mechanism.

This Agreement pertains to the [identify the financial assurance mechanism, either a guarantee, surety bond, or letter of credit, from which the standby trust fund is established to receive payments (This paragraph is only applicable to the standby trust agreement.).]

Section 3. Establishment of Fund.

The Grantor and the Trustee hereby establish a trust fund, the "Fund", for the benefit of [the department]. The Grantor and the Trustee intend that no third party have access to the Fund except as herein provided. [The Fund is established initially as a standby to receive payments and shall not consist of any property.] Payments made by the provider of financial assurance pursuant to the [department's] instruction are transferred to the Trustee and are referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor as provider of financial assurance, any payments necessary to discharge any liability of the Grantor established by the department.

Section 4. Payment for ["Corrective Action" and/or "Third-Party Liability Claims"].

The Trustee shall make payments from the Fund as [the department] shall direct, in writing, to provide for the payment of the costs of [insert: "taking corrective action" and/or "compensating third-parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] arising from operating the tanks covered by the financial assurance mechanism identified in this Agreement.

The Fund may not be drawn upon to cover any of the following:

- (a) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;

- (b) Bodily injury to an employee of [insert owner or operator] arising from, and in the course of employment by [insert owner or operator];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
- (e) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.

The Trustee shall reimburse the Grantor, or other persons as specified by the department, from the Fund for corrective action expenditures and/or third-party liability claims in such amounts as the department shall direct in writing. In addition, the Trustee shall refund to the Grantor such amounts as the department specifies in writing. Upon refund, such funds shall no longer constitute part of the Fund as defined herein.

Section 5. Payments Comprising the Fund.

Payments made to the Trustee for the Fund shall consist of cash and securities acceptable to the Trustee.

Section 6. Trustee Management.

The Trustee shall invest and reinvest the principal and income of the Fund and keep the Fund invested as a single fund, without distinction between principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject; however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge the duties of the Trustee with respect to the trust fund solely in the interest of the beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (i) Securities or other obligations of the Grantor, or any other owner or operator of the tanks, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 480a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;
- (ii) The Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the federal or state government; and
- (iii) The Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment.

The Trustee is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the Trustee in which the Fund is eligible to participate, subject to all the provisions thereof, to be commingled with the assets of other trusts participating therein; and

- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee.

Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;
- (c) To register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;
- (d) To deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses.

All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Advice of Counsel.

The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any questions arising as to the construction of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. Trustee Compensation.

The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 12. Successor Trustee.

The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in writing sent to the Grantor and the present Trustee by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 13. Instructions to the Trustee.

All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in the attached Schedule B or such other designees as the Grantor may designate by amendment to Schedule B. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by the department to the Trustee shall be in writing, signed by the department, and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the department hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the department, except as provided for herein.

Section 14. Amendment of Agreement.

This Agreement may be amended by an instrument in writing executed by the Grantor and the Trustee, or by the Trustee and [the department] if the Grantor ceases to exist.

Section 15. Irrevocability and Termination.

Subject to the right of the parties to amend this Agreement as provided in Section 14, this Trust shall be irrevocable and shall continue until terminated at the written direction of the Grantor and the Trustee, or by the Trustee and the department, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

Section 16. Immunity and Indemnification.

The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or the department issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 17. Choice of Law.

This agreement shall be administered, construed, and enforced according to the laws of the state of North Dakota, or the Comptroller of the Currency in the case of National Association of Banks.

Section 18. Interpretation.

As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness whereof the parties have caused this Agreement to be executed by their respective officers duly authorized and their corporate seals (if applicable) to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in subdivision a of subsection 2 of section 33.1-24-08-93 as such rules were constituted on the date written above.

b. The standby trust agreement, or trust agreement, must be accompanied by a formal certification of acknowledgment similar to the following.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that the owner or operator resides at [address], that the owner or operator is [title] of [corporation], the corporation described in and which executed the above instrument; that the owner or operator knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation; and that the owner or operator signed their name thereto by like order.

[Signature of Notary Public]

[Name of Notary Public]

3. The department will instruct the trustee to refund the balance of the standby trust fund to the provider of financial assurance if the department determines that no additional corrective action costs or third-party liability claims will occur as a result of a release covered by the financial assurance mechanism for which the standby trust fund was established.
4. An owner or operator may establish one trust fund as the depository mechanism for all funds assured in compliance with this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-94. Local government bond rating test.

1. A general purpose local government owner or operator, or local government, or both, serving as a guarantor may satisfy the requirements of section 33.1-24-08-83 currently outstanding issue or issues of general obligation bonds of one million dollars or more, excluding refunded obligations, with a Moody's rating of Aaa, Aa, A, or Baa, or a Standard and Poor's rating of AAA, AA, A, or BBB. Where a local government has multiple outstanding issues, or where a local government's bonds are rated by both Moody's and Standard and Poor's, the lowest rating must be used to determine eligibility. Bonds that are backed by credit enhancement other than municipal bond insurance may not be considered in determining the amount of applicable bonds outstanding.
2. A local government owner or operator or local government serving as a guarantor that is not a general purpose local government and does not have the legal authority to issue general obligation bonds may satisfy the requirements of section 33.1-24-08-83 by having a currently outstanding issue or issues of revenue bonds of one million dollars or more, excluding refunded issues and by also having a Moody's rating of Aaa, Aa, A, or Baa, or a Standard and Poor's rating of AAA, AA, A, or BBB as the lowest rating for any rated revenue bond issued by the local government. Where bonds are rated by both Moody's and Standard and Poor's, the lower rating for each bond must be used to determine eligibility. Bonds that are backed by credit enhancement may not be considered in determining the amount of applicable bonds outstanding.
3. The local government owner or operator or guarantor, or both, must maintain a copy of its bond rating published within the last twelve months by Moody's or Standard and Poor's.
4. To demonstrate that it meets the local government bond rating test, the chief financial officer of a general purpose local government owner or operator, or guarantor, or both, must sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" and/or "nonsudden accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank or tanks.

Underground storage tanks at the following facilities are assured by this bond rating test: [List for each facility: the name and address of the facility where tanks are assured by the bond rating test].

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding bond issues that are being used by [name of local government owner or operator, or guarantor] to demonstrate financial responsibility are as follows: [complete table]

<u>Issue Date</u>	<u>Maturity Date</u>	<u>Outstanding Amount</u>	<u>Bond Rating</u>	<u>Rating Agency</u>
				<u>[Moody's or Standard and Poor's]</u>

The total outstanding obligation of [insert amount], excluding refunded bond issues, exceeds the minimum amount of one million dollars. All outstanding general obligation bonds issued by this government that have been rated by Moody's or Standard and Poor's are rated as at least investment grade (Moody's Baa or Standard and Poor's BBB) based on the most recent ratings published within the last twelve months. Neither rating service has provided notification within the last twelve months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in subsection 4 of section 33.1-24-08-94 as such rules were constituted on the date shown immediately below.

5. To demonstrate that it meets the local government bond rating test, the chief financial officer of the local government owner or operator, or guarantor, or both, other than a general purpose government must sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

The total outstanding obligation of [insert amount], excluding refunded bond issues, exceeds the minimum amount of one million dollars. All outstanding revenue bonds issued by this government that have been rated by Moody's or Standard and Poor's are rated as at least investment grade (Moody's Baa or Standard and Poor's BBB) based on the most recent ratings published within the last twelve months. The revenue bonds listed are not backed by third-party credit enhancement or are insured by a municipal bond insurance company. Neither rating service has provided notification within the last twelve months of downgrading of bond ratings below an investment grade nor of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in subsection 5 of section 33.1-24-08-94 as such rules were constituted on the date shown immediately below.

[Date]

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating

third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" and/or "nonsudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating an underground storage tank or tanks. This local government is not organized to provide general governmental services and does not have the legal authority under state law or constitutional provisions to issue general obligation debt.

Underground storage tanks at the following facilities are assured by this bond rating test: [List for each facility: the name and address of the facility where tanks are assured by the bond rating test].

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding revenue bond issues that are being used by [name of local government owner or operator, or guarantor] to demonstrate financial responsibility are as follows: [complete table]

<u>Issue Date</u>	<u>Maturity Date</u>	<u>Outstanding Amount</u>	<u>Bond Rating</u>	<u>Rating Agency</u>
				[Moody's or Standard and Poor's]

The total outstanding obligation of [insert amount], excluding refunded bond issues, exceeds the minimum amount of \$1 million. All outstanding revenue bonds issued by this government that have been rated by Moody's or Standard and Poor's are rated as at least investment grade (Moody's Baa or Standard and Poor's BBB) based on the most recent ratings published within the last twelve months. The revenue bonds listed are not backed by third-party credit enhancement or are insured by a municipal bond insurance company. Neither rating service has provided notification within the last twelve months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in subsection 5 of section 33.1-24-08-94 as such regulations were constituted on the date shown immediately below.

6. The department may require reports of financial condition at any time from the local government owner or operator, or local government guarantor, or both. If the department finds, on the basis of such reports or other information, that the local government owner or operator, or guarantor, or both, no longer meets the local government bond rating test requirements of this section, the local government owner or operator must obtain alternative coverage within thirty days after notification of such a finding.
7. If a local government owner or operator using the bond rating test to provide financial assurance finds that it no longer meets the bond rating test requirements, the local government owner or operator must obtain alternative coverage within one hundred fifty days of the change in status.
8. If the local government owner or operator fails to obtain alternate assurance within one hundred fifty days of finding that it no longer meets the requirements of the bond rating test or

within thirty days of notification by the department that it no longer meets the requirements of the bond rating test, the owner or operator shall notify the department of such failure within ten days.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-95. Local government financial test.

1. A local government owner or operator may satisfy the requirements of section 33.1-24-08-83 by passing the financial test specified in this section. To be eligible to use the financial test, the local government owner or operator must have the ability and authority to assess and levy taxes or to freely establish fees and charges. To pass the local government financial test, the owner or operator must meet the criteria of subdivision b of subsection 2 and subdivision c of subsection 2 based on year-end financial statements for the latest completed fiscal year.
2. The local government owner or operator must have the following information available, as shown in the year-end financial statements for the latest completed fiscal year:
 - a. The following apply:
 - (1) Total revenues: Consists of the sum of general fund operating and nonoperating revenues, including net local taxes, licenses and permits, fines and forfeitures, revenues from use of money and property, charges for services, investment earnings, sales (property, publications, etc.), intergovernmental revenues (restricted and unrestricted), and total revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity. For purposes of this test, the calculation of total revenues shall exclude all transfers between funds under the direct control of the local government using the financial test (interfund transfers), liquidation of investments, and issuance of debt.
 - (2) Total expenditures: Consists of the sum of general fund operating and nonoperating expenditures, including public safety, public utilities, transportation, public works, environmental protection, cultural and recreational, community development, revenue sharing, employee benefits and compensation, office management, planning and zoning, capital projects, interest payments on debt, payments for retirement of debt principal, and total expenditures from all other governmental funds including enterprises, debt service, capital projects, and special revenues. For purposes of this test, the calculation of total expenditures shall include all transfers between funds under the direct control of the local government using the financial test (interfund transfers).
 - (3) Local revenues: Consists of total revenues minus the sum of all transfers from other governmental entities, including all moneys received from federal, state, or local government sources.
 - (4) Debt service: Consists of the sum of all interest and principal payments on all long-term credit obligations and all interest-bearing short-term credit obligations. Includes interest and principal payments on general obligation bonds, revenue bonds, notes, mortgages, judgments, and interest-bearing warrants. Excludes payments on noninterest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, and advances and contingent loans from other governments.

(5) Total funds: Consists of the sum of cash and investment securities from all funds, including general, enterprise, debt service, capital projects, and special revenue funds, but excluding employee retirement funds, at the end of the local government's financial reporting year. Includes federal securities, federal agency securities, state and local government securities, and other securities such as bonds, notes, and mortgages. For purposes of this test, the calculation of total funds shall exclude agency funds, private trust funds, accounts receivable, value of real property, and other nonsecurity assets.

(6) Population: Consists of the number of people in the area served by the local government.

b. The local government's year-end financial statements, if independently audited, cannot include an adverse auditor's opinion or a disclaimer of opinion. The local government cannot have outstanding issues of general obligation or revenue bonds that are rated as less than investment grade.

c. The local government owner or operator must have a letter signed by the chief financial officer worded as specified in subsection 3.

3. To demonstrate that it meets the financial test under subsection 2, the chief financial officer of the local government owner or operator, must sign, within one hundred twenty days of the close of each financial reporting year, as defined by the twelve-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of the owner or operator]. This letter is in support of the use of the local government financial test to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank(s).

Underground storage tanks at the following facilities are assured by this financial test [list for each facility: the name and address of the facility where tanks assured by this financial test are located. If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each tank assured by this financial test by the tank identification number provided in the notification submitted pursuant to section 33.1-24-08-12].

This owner or operator has not received an adverse opinion, or a disclaimer of opinion from an independent auditor on its financial statements for the latest completed fiscal year. Any outstanding issues of general obligation or revenue bonds, if rated, have a Moody's rating of Aaa, Aa, A, or Baa or a Standard and Poor's rating of AAA, AA, A, or BBB; if rated by both firms, the bonds have a Moody's rating of Aaa, Aa, A, or Baa and a Standard and Poor's rating of AAA, AA, A, or BBB.

WORKSHEET FOR MUNICIPAL FINANCIAL TEST

Part I. Basic Information

1. Total Revenues

a. Revenues (dollars) _____

Value of revenues excludes liquidation of investments and issuance of debt. Value includes all general fund operating and nonoperating revenues, as well as all revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity.

b. Subtract interfund transfers (dollars) _____

c. Total Revenues (dollars) _____

2. Total Expenditures

a. Expenditures (dollars) _____

Value consists of the sum of general fund operating and nonoperating expenditures including interest payments on debt, payments for retirement of debt principal, and total expenditures from all other governmental funds including enterprise, debt service, capital projects, and special revenues.

b. Subtract interfund transfers (dollars) _____

c. Total Expenditures (dollars) _____

3. Local Revenues

a. Total Revenues (from 1c) (dollars) _____

b. Subtract total intergovernmental transfers (dollars) _____

c. Local Revenues (dollars) _____

4. Debt Service

a. Interest and fiscal charges (dollars) _____

b. Add debt retirement (dollars) _____

c. Total Debt Service (dollars) _____

5. Total Funds (Dollars) _____

(Sum of amounts held as cash and investment securities from all funds, excluding amounts held for employee retirement funds, agency funds, and trust funds.)

6. Population (Persons) _____

Part II: Application of Test

7. Total Revenues to Population

a. Total Revenues (from 1c) _____

b. Population (from 6) _____

c. Divide 7a by 7b _____

d. Subtract 417 _____

e. Divide by 5.212 _____

f. Multiply by 4.095 _____

8. Total Expenses to Population

a. Total Expenses (from 2c)

b. Population (from 6)

c. Divide 8a by 8b

d. Subtract 524

e. Divide by 5.401

f. Multiply by 4.095

9. Local Revenues to Total Revenues

a. Local Revenues (from 3c)

b. Total Revenues (from 1c)

c. Divide 9a by 9b

d. Subtract .695

e. Divide by .205

f. Multiply by 2.840

10. Debt Service to Population

a. Debt Service (from 4c)

b. Population (from 6)

c. Divide 10a by 10b

d. Subtract 51

e. Divide by 1.038

f. Multiply by -1.866

11. Debt Service to Total Revenues

a. Debt Service (from 4c)

b. Total Revenues (from 1c)

c. Divide 11a by 11b

d. Subtract .068

e. Divide by .259

f. Multiply by -3.533

12. Total Revenues to Total Expenses

a. Total Revenues (from 1c)

b. Total Expenses (from 2c)

c. Divide 12a by 12b _____

d. Subtract .910 _____

e. Divide by .899 _____

f. Multiply by 3.458 _____

13. Funds Balance to Total Revenues

a. Total Funds (from 5) _____

b. Total Revenues (from 1c) _____

c. Divide 13a by 13b _____

d. Subtract .891 _____

e. Divide by 9.156 _____

f. Multiply by 3.270 _____

14. Funds Balance to Total Expenses

a. Total Funds (from 5) _____

b. Total Expenses (from 2c) _____

c. Divide 14a by 14b _____

d. Subtract .866 _____

e. Divide by 6.409 _____

f. Multiply by 3.270 _____

15. Total Funds to Population _____

a. Total Funds (from 5) _____

b. Population (from 6) _____

c. Divide 15a by 15b _____

d. Subtract 270 _____

e. Divide by 4.548 _____

f. Multiply by 1.866 _____

16. Add $7f + 8f + 9f + 10f + 11f + 12f + 13f + 14f + 15f + 4.937$

I hereby certify that the financial index shown on line 16 of the worksheet is greater than zero and that the wording of this letter is identical to the wording specified in subsection 3 of section 33.1-24-08-95 as such rules were constituted on the date shown immediately below.

4. If a local government owner or operator using the test to provide financial assurance finds that it no longer meets the requirements of the financial test based on the year-end financial statements, the owner or operator must obtain alternative coverage within one hundred fifty days of the end of the year for which financial statements have been prepared.
5. The department may require reports of financial condition at any time from the local government owner or operator. If the department finds, on the basis of such reports or other information, that the local government owner or operator no longer meets the financial test requirements of subsections 2 and 5, the owner or operator must obtain alternative coverage within thirty days after notification of such a finding.
6. If the local government owner or operator fails to obtain alternate assurance within one hundred fifty days of finding that it no longer meets the requirements of the financial test based on the year-end financial statements or within thirty days of notification by the department that it no longer meets the requirements of the financial test, the owner or operator must notify the department of such failure within ten days.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-96. Local government guarantee.

1. A local government owner or operator may satisfy the requirements of section 33.1-24-08-83 by obtaining a guarantee that conforms to the requirements of this section. The guarantor must be either the estate in which the local government owner or operator is located or a local government having a "substantial governmental relationship" with the owner and operator and issuing the guarantee as an act incident to that relationship. A local government acting as the guarantor must:
 - a. Demonstrate that it meets the bond rating test requirement of section 33.1-24-08-94 and deliver a copy of the chief financial officer's letter as contained in subsections 4 and 5 of section 33.1-24-08-94 to the local government owner or operator.
 - b. Demonstrate that it meets the worksheet test requirements of section 33.1-24-08-95 and deliver a copy of the chief financial officer's letter as contained in subsection 3 of section 33.1-24-08-95.
 - c. Demonstrate that it meets the local government fund requirements of subsection 1, 2, or 3 of section 33.1-24-08-97, and deliver a copy of the chief financial officer's letter as contained in section 33.1-24-08-97 to the local government owner or operator.
2. If the local government guarantor is unable to demonstrate financial assurance under sections 33.1-24-08-94, 33.1-24-08-95, subsection 1 of section 33.1-24-08-97, subsection 2 of section 33.1-24-08-97, or subsection 3 of section 33.1-24-08-97, at the end of the financial reporting year, the guarantor shall send by certified mail, before cancellation or nonrenewal of the guarantee, notice to the owner or operator. The guarantee will terminate no less than one hundred twenty days after the date the owner or operator receives the notification, as evidenced by the return receipt. The owner or operator must obtain alternative coverage as specified in subsection 5 of section 33.1-24-08-104.
3. The guarantee agreement must be worded as specified in subsection 4 or 5, depending on which of the following alternative guarantee arrangements is selected:

a. If, in the default or incapacity of the owner or operator, the guarantor guarantees to fund a standby trust as directed by the department, the guarantee shall be worded as specified in subsection 4.

b. If in the default or incapacity of the owner or operator, the guarantor guarantees to make payments as directed by the department for taking corrective action or compensating third parties for bodily injury and property damage, the guarantee shall be worded as specified in subsection 5.

4. If the guarantor is a state, the local government guarantee with standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

LOCAL GOVERNMENT GUARANTEE WITH STANDBY TRUST MADE BY A STATE

Guarantee made this [date] by North Dakota, herein referred to as guarantor, to the department and to any and all third parties, and obligees, on behalf of [local government owner or operator].

Recitals.

(1) Guarantor is a state.

(2) [Local government owner or operator] owns or operates the following underground storage tank or tanks, covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to chapter 33.1-24-08, and the name and address of the facility.] This guarantee satisfies sections 33.1-24-08-80 through 33.1-24-08-106 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases", or "nonsudden accidental releases", or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank or tanks in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate.

(3) Guarantor guarantees to the department and to any and all third parties that:

In the event that [local government owner or operator] fails to provide alternative coverage within sixty days after receipt of a notice of cancellation of this guarantee and the department has determined or suspects that a release has occurred at an underground storage tank covered by this guarantee, the guarantor, upon instructions from the department shall fund a standby trust fund in accordance with the provisions of section 33.1-24-08-102, in an amount not to exceed the coverage limits specified above.

In the event that the department determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank or tanks in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, the guarantor upon written instructions from the department shall fund a standby trust fund in accordance with the provisions of section 33.1-24-08-102, in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank

or tanks, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instruction from the department, shall fund a standby trust in accordance with the provisions of section 33.1-24-08-102, satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

- (4) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to chapter 33.1-24-08.
- (6) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] must comply with the applicable financial responsibility requirements of sections 33.1-24-08-80 through 33.1-24-08-106, for the above-identified tank or tanks, except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than one hundred twenty days after receipt of such notice by [owner or operator], as evidenced by the return receipt.
- (7) The guarantor's obligation does not apply to any of the following:
- (a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
 - (e) Bodily injury or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.
- (8) Guarantor expressly waives notice of acceptance of this guarantee by department, by any or all third parties, or by [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 4 of section 33.1-24-08-96 as such rules were constituted on the effective date shown immediately below.

Effective date: _____

If the guarantor is a local government, the local government guarantee with standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

LOCAL GOVERNMENT GUARANTEE WITH STANDBY TRUST MADE BY A LOCAL GOVERNMENT

Guarantee made this [date] by [name of guaranteeing entity], a local government organized under the laws of North Dakota, herein referred to a guarantor, to the department, and to any and all third parties, and obliges, on behalf of [local government owner or operator].

Recitals.

(1) Guarantor meets or exceeds [select one: the local government bond rating test requirements of section 33.1-24-08-94, the local government financial test requirements of section 33.1-24-08-95, or the local government fund under subsection 1, 2, or 3 of section 33.1-24-08-97.

(2) [Local government owner or operator] owns or operates the following underground storage tank or tanks covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to chapter 33.1-24-08, and the name and address of the facility.] This guarantee satisfies sections 33.1-24-08-80 through 33.1-24-08-106 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank or tanks in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate.

(3) Incident to our substantial governmental relationship with [local government owner or operator], guarantor guarantees to the department and to any and all third parties that:

In the event that [local government owner or operator] fails to provide alternative coverage within sixty days after receipt of a notice of cancellation of this guarantee and the department has determined or suspects that a release has occurred at an underground storage tank covered by this guarantee, the guarantor, upon instructions from the department shall fund a standby trust fund in accordance with the provisions of section 33.1-24-08-102 in an amount not to exceed the coverage limits specified above.

In the event that the department determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank or tanks in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, the guarantor upon written instructions from the department shall fund a standby trust fund in accordance with the provisions of section 33.1-24-08-102, in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank or tanks, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the department shall fund a standby trust in accordance with the provisions of section 33.1-24-08-102 to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

- (4) Guarantor agrees that, if at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in paragraph 1, guarantor shall send within one hundred twenty days of such failure, by certified mail, notice to [local government owner or operator], as evidenced by the return receipt.
- (5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to chapter 33.1-24-08.
- (7) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] must comply with the applicable financial responsibility requirements of sections 33.1-24-08-80 through 33.1-24-08-106 for the above-identified tank or tanks, except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than one hundred twenty days after receipt of such notice by [owner or operator], as evidenced by the return receipt.
- (8) The guarantor's obligation does not apply to any of the following:
 - (a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [insert: local government owner or operator];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
 - (e) Bodily injury or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.
- (9) Guarantor expressly waives notice of acceptance of this guarantee by the department, by any or all third parties, or by [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 4 of section 33.1-24-08-96 as such rules were constituted on the effective date shown immediately below.

5. If the guarantor is a state, the local government guarantee without standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

LOCAL GOVERNMENT GUARANTEE WITHOUT STANDBY TRUST MADE BY A STATE

Guarantee made this [date] by North Dakota, herein referred to as guarantor, to the department and to any and all third parties, and obligees, on behalf of [local government owner or operator].

Recitals.

(1) Guarantor is a state.

(2) [Local government owner or operator] owns or operates the following underground storage tank or tanks covered by this guarantee: [list the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tank or tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to chapter 33.1-24-08, and the name and address of the facility]. This guarantee satisfies sections 33.1-24-08-80 through 33.1-24-08-106 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank or tanks in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate.

(3) Guarantor guarantees to the department and to any and all third parties and obligees that:

In the event that [local government owner or operator] fails to provide alternative coverage within sixty days after receipt of a notice of cancellation of this guarantee and the department has determined or suspects that a release has occurred at an underground storage tank covered by this guarantee, the guarantor, upon written instructions from the department shall make funds available to pay for corrective actions and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the department determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank or tanks in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, the guarantor, upon written instructions from the department, shall make

funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank or tanks, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the department, shall make funds available to compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

- (4) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to chapter 33.1-24-08.
- (6) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] must comply with the applicable financial responsibility requirements of sections 33.1-24-08-80 through 33.1-24-08-106, for the above-identified tank or tanks, except that guarantor may cancel this guarantee by sending notice of certified mail to [owner or operator], such cancellation to become effective no earlier than one hundred twenty days after receipt of such notice by [owner or operator], as evidenced by the return receipt. If notified of a probable release, the guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.
- (7) The guarantor's obligation does not apply to any of the following:
 - (a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or
 - (e) Bodily injury or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.
- (8) Guarantor expressly waives notice of acceptance of this guarantee by the department, by any or all third parties, or by [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 5 of section 33.1-24-08-96 as such rules were constituted on the effective date shown immediately below.

If the guarantor is a local government, the local government guarantee without standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

LOCAL GOVERNMENT GUARANTEE WITHOUT STANDBY TRUST MADE BY A LOCAL GOVERNMENT

Guarantee made this [date] by [name of guaranteeing entity], a local government organized under the laws of North Dakota, herein referred to as guarantor, to the department and to any and all third parties, and obligees, on behalf of [local government owner or operator].

Recitals.

- (1) Guarantor meets or exceeds [select one: the local government bond rating test requirements of section 33.1-24-08-94, the local government financial test requirements of section 33.1-24-08-95, or the local government fund under subsection 1, 2, or 3 of section 33.1-24-08-97].
- (2) [Local government owner or operator] owns or operates the following underground storage tank or tanks covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the notification submitted pursuant to chapter 33.1-24-08, and the name and address of the facility.] This guarantee satisfies sections 33.1-24-08-80 through 33.1-24-08-106 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank or tanks in the amount of [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate.
- (3) Incident to our substantial governmental relationship with [local government owner or operator], guarantor guarantees to the department and to any and all third parties and obligees that:

In the event that [local government owner or operator] fails to provide alternative coverage within sixty days after receipt of a notice of cancellation of this guarantee and the department has determined or suspects that a release has occurred at an underground storage tank covered by this guarantee, the guarantor, upon written instructions from the department shall make funds available to pay for corrective actions

and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the department determines that [local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank or tanks in accordance with sections 33.1-24-08-50 through 33.1-24-08-57, the guarantor, upon written instructions from the department, shall make funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank or tanks, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the department, shall make funds available to compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

- (4) Guarantor agrees that if at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in paragraph 1, guarantor shall send within one hundred twenty days of such failure, by certified mail, notice to [local government owner or operator], as evidenced by the return receipt.
- (5) Guarantor agrees to notify [owner or operator] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [owner or operator] pursuant to chapter 33.1-24-08.
- (7) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] must comply with the applicable financial responsibility requirements of sections 33.1-24-08-80 through 33.1-24-08-106 for the above-identified tank or tanks, except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator], such cancellation to become effective no earlier than one hundred twenty days after receipt of such notice by [owner or operator], as evidenced by the return receipt. If notified of a probable release, the guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.
- (8) The guarantor's obligation does not apply to any of the following:
 - (a) Any obligation of [local government owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [insert: local government owner or operator] arising from, and in the course of, employment by [insert: local government owner or operator];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;

(d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert: local government owner or operator] that is not the direct result of a release from a petroleum underground storage tank; or

(e) Bodily injury or property damage for which [insert: owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of section 33.1-24-08-83.

(9) Guarantor expressly waives notice of acceptance of this guarantee by the department, by any or all third parties, or by the [local government owner or operator].

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 5 of section 33.1-24-08-96 as such rules were constituted on the effective date shown immediately below.

Effective date: _____

[Name of guarantor]

[Authorized signature for guarantor]

[Name of person signing]

[Title of person signing]

Signature of witness or notary: _____

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-97. Local government fund.

A local government owner or operator may satisfy the requirements of section 33.1-24-08-83 establishing a dedicated fund account that conforms to the requirements of this section. Except as specified in subsection 2, a dedicated fund may not be commingled with other funds or otherwise used in normal operations. A dedicated fund will be considered eligible if it meets one of the following requirements:

1. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks and is funded for the full amount of coverage required under section 33.1-24-08-83 or funded for part of the required amount of coverage and used in combination with other mechanism or mechanisms that provide the remaining coverage.
2. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order as a contingency fund for general emergencies, including taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks, and is funded for five times the full amount of coverage required under section 33.1-24-08-83, or funded for part of the required amount of coverage and used in combination with other mechanisms that provide the remaining coverage. If the fund is funded for less than five times the amount of coverage required under section 33.1-24-08-83, the amount of financial responsibility demonstrated by the fund may not exceed one-fifth the amount in the fund.

3. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks. A payment is made to the fund once every year for seven years until the fund is fully funded. This seven-year period is hereafter referred to as the "pay-in-period". The amount of each payment must be determined by this formula:

TF - CF

Y

Where TF is the total required financial assurance for the owner or operator, CF is the current amount in the fund, and Y is the number of years remaining in the pay-in-period, and:

- a. The local government owner or operator has available bonding authority, approved through voter referendum (if such approval is necessary prior to the issuance of bonds), for an amount equal to the difference between the required amount of coverage and the amount held in the dedicated fund. This bonding authority shall be available for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks; or
- b. The local government owner or operator has a letter signed by the appropriate state attorney general stating that the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws. The letter must also state that prior voter approval is not necessary before use of the bonding authority.
4. To demonstrate that it meets the requirements of the local government fund, the chief financial officer of the local government owner or operator or guarantor, or both, must sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM THE CHIEF FINANCIAL OFFICER

I am the chief financial officer of [insert: name and address of local government owner or operator, or guarantor]. This letter is in support of the use of the local government fund mechanism to demonstrate financial responsibility for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"] caused by [insert: "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] in the amount of at least [insert: dollar amount] per occurrence and [insert: dollar amount] annual aggregate arising from operating (an) underground storage tank(s).

Underground storage tanks at the following facilities are assured by this local government fund mechanism: [list for each facility: the name and address of the facility where tanks are assured by the local government fund].

[Insert: "The local government fund is funded for the full amount of coverage required under section 33.1-24-08-83, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage", or "The local government fund is funded for five times the full amount of coverage required under section 33.1-24-08-83, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage", or "A payment is made to the fund once every year for seven years until the fund is fully funded and [name of local government owner or operator] has available bonding authority, approved through voter referendum, of an amount equal to the difference between the required amount of coverage

and the amount held in the dedicated fund" or "A payment is made to the fund once every year for seven years until the fund is fully funded and I have attached a letter signed by the state attorney general stating that (1) the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws and (2) that prior voter approval is not necessary before use of the bonding authority"].

The details of the local government fund are as follows:

Amount in fund (market value of fund at the close of last fiscal year): \$ _____

[if fund balance is incrementally funded as specified in subsection 3, insert:

Amount added to fund in the most recently completed fiscal year: \$ _____

[Number of years remaining in the pay-in-period:]

A copy of the state constitutional provision, or local government statute, charter, ordinance or order dedicating the fund is attached.

I hereby certify that the wording of this letter is identical to the wording specified in subsection 4 of section 33.1-24-08-97, as such rules were constituted on the date shown immediately below:

[Date]

[Signature]

[Name]

[Title]

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-98. Substitution of financial assurance mechanisms by owner or operator.

1. An owner or operator may substitute any alternate financial assurance mechanisms as specified in sections 33.1-24-08-80 through 33.1-24-08-106, provided that at all times the owner or operator maintains an effective financial assurance mechanism or combination of mechanisms that satisfies the requirements of section 33.1-24-08-83.
2. After obtaining alternate financial assurance as specified in sections 33.1-24-08-80 through 33.1-24-08-106, an owner or operator may cancel a financial assurance mechanism by providing notice to the provider of financial assurance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-99. Cancellation or nonrenewal by a provider of financial assurance.

1. Except as otherwise provided, a provider of financial assurance may cancel or fail to renew an assurance mechanism by sending a notice of termination by certified mail to the owner or operator.
 - a. Termination of a guarantee, a surety bond, or a letter of credit may not occur until one hundred twenty days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt.

b. Termination of insurance or risk retention group coverage, except for nonpayment or misrepresentation by the insured, or state-funded assurance may not occur until sixty days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt. Termination for nonpayment of premium or misrepresentation by the insured may not occur until a minimum of ten days after the date on which the owner or operator receives the notice of termination, as evidenced by the return receipt.

2. If a provider of financial responsibility cancels or fails to renew for reasons other than incapacity of the provider as specified in section 33.1-24-08-104, the owner or operator must obtain alternate coverage as specified in this section within sixty days after receipt of the notice of termination. If the owner or operator fails to obtain alternate coverage within sixty days after receipt of the notice of termination, the owner or operator must notify the department of such failure and submit:

a. The name and address of the provider of financial assurance;

b. The effective date of termination; and

c. The evidence of the financial assistance mechanism subject to the termination maintained in accordance with subsection 2 of section 33.1-24-08-101.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-100. Reporting by owner or operator.

1. An owner or operator must submit the appropriate forms listed in subsection 2 of section 33.1-24-08-101 documenting current evidence of financial responsibility to the department:

a. Within thirty days after the owner or operator identifies a release from an underground storage tank required to be reported under section 33.1-24-08-43 or 33.1-24-08-51;

b. If the owner or operator fails to obtain alternate coverage as required by sections 33.1-24-08-80 through 33.1-24-08-106, within thirty days after the owner or operator receives notice of:

(1) Commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code, naming a provider of financial assurance as a debtor;

(2) Suspension or revocation of the authority of a provider of financial assurance to issue a financial assurance mechanism;

(3) Failure of a guarantor to meet the requirements of the financial test; or

(4) Other incapacity of a provider of financial assurance; or

c. As required by subsection 7 of section 33.1-24-08-85 and subsection 2 of section 33.1-24-08-99.

2. An owner or operator must certify compliance with the financial responsibility requirements of chapter 33.1-24-08 as specified in the new tank notification form when notifying the department of the installation of a new underground storage tank under section 33.1-24-08-12.

3. The department may require an owner or operator to submit evidence of financial assurance as described in subsection 2 of section 33.1-24-08-101 or other information relevant to compliance with sections 33.1-24-08-80 through 33.1-24-08-106 at any time.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-101. Recordkeeping.

1. Owners or operators must maintain evidence of all financial assurance mechanisms used to demonstrate financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106 for an underground storage tank until released from the requirements of sections 33.1-24-08-80 through 33.1-24-08-106 under section 33.1-24-08-103. An owner or operator must maintain such evidence at the underground storage tank site or the owner's or operator's place of business. Records maintained offsite must be made available upon request of the department.
2. An owner or operator must maintain the following types of evidence of financial responsibility:
 - a. An owner or operator using an assurance mechanism specified in sections 33.1-24-08-85 through 33.1-24-08-90, or section 33.1-24-08-92, or sections 33.1-24-08-94 through 33.1-24-08-97, must maintain a copy of the instrument worded as specified;
 - b. An owner or operator using a financial test or guarantee, or a local government financial test, or a local government guarantee supported by a local government financial test, must maintain a copy of the chief financial officer's letter based on year-end financial statements for the most recent completed financial reporting year. Such evidence must be on file no later than one hundred twenty days after the close of the financial reporting year;
 - c. An owner or operator using a guarantee, surety bond, or letter of credit must maintain a copy of the signed standby trust fund agreement and copies of any amendments to the agreement;
 - d. A local government owner or operator using a local government guarantee under subsection 4 of section 33.1-24-08-96 must maintain a copy of the signed standby trust fund agreement and copies of any amendments to the agreement;
 - e. A local government owner or operator using the local government bond rating test under section 33.1-24-08-94 must maintain a copy of its bond rating published within the last twelve months by Moody's or Standard and Poor's;
 - f. A local government owner or operator using the local government guarantee under section 33.1-24-08-96, where the guarantor's demonstration of financial responsibility relies on the bond rating test under section 33.1-24-08-94 must maintain a copy of the guarantor's bond rating published within the last twelve months by Moody's or Standard and Poor's;
 - g. An owner or operator using an insurance policy or risk retention group coverage must maintain a copy of the signed insurance policy or risk retention group coverage policy, with the endorsement or certificate of insurance and any amendments to the agreements;
 - h. An owner or operator covered by a state fund or other state assurance must maintain on file a copy of any evidence of coverage supplied by or required by the state under subsection 4 of section 33.1-24-08-91;

- i. An owner or operator using a local government fund under section 33.1-24-08-97 must maintain the following documents:
 - (1) A copy of the state constitutional provision or local government statute, charter, ordinance or order dedicating the fund;
 - (2) Year-end financial statements for the most recent completed financial reporting year showing the amount in the fund. If the fund is established under subsection 3 of section 33.1-24-08-97 using incremental funding backed by bonding authority, the financial statements must show the previous year's balance, the amount of funding during the year, and the closing balance in the fund; and
 - (3) If the fund is established under subsection 3 of section 33.1-24-08-97 using incremental funding backed by bonding authority, the owner or operator must also maintain documentation of the required bonding authority, including either the results of a voter referendum, under subdivision a of subsection 3 of section 33.1-24-08-97, or attestation by the state attorney general as specified under subdivision b of subsection 3 of section 33.1-24-08-97;
- j. A local government owner or operator using the local government guarantee supported by the local government fund must maintain a copy of the guarantor's year-end financial statements for the most recent completed financial reporting year showing the amount of the fund; or
- k. An owner or operator using an assurance mechanism specified in sections 33.1-24-08-85 through 33.1-24-08-97 must maintain an updated copy of a certification of financial responsibility worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Financial Responsibility

[Owner or operator] hereby certifies that it is in compliance with the requirements of sections 33.1-24-08-80 through 33.1-24-08-106.

The financial assurance mechanism(s) used to demonstrate financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106 is [are] as follows:

[For each mechanism, list the type of mechanism, name of issuer, mechanism number (if applicable), amount of coverage, effective period of coverage, and whether the mechanism covers "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases".]

[Signature of owner or operator]

[Name of owner or operator]

[Title]

[Date]

[Signature of witness or notary]

[Name of witness or notary]

[Date]

The owner or operator must update this certification whenever the financial assurance mechanism(s) used to demonstrate financial responsibility change(s).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-102. Drawing on financial assurance mechanisms.

1. Except as specified in subsection 4, the department shall require the guarantor, surety, or institution issuing a letter of credit to place the amount of funds stipulated by the department, up to the limit of funds provided by the financial assurance mechanism, into the standby trust if:

a. The following conditions exist:

(1) The owner or operator fails to establish alternate financial assurance within sixty days after receiving notice of cancellation of the guarantee, surety bond, letter of credit, or, as applicable, other financial assurance mechanisms; and

(2) The department determines or suspects that a release from an underground storage tank covered by the mechanism has occurred and so notifies the owner or operator or the owner or operator has notified the department pursuant to sections 33.1-24-08-40 through 33.1-24-08-43 or 33.1-24-08-50 through 33.1-24-08-57 of a release from an underground storage tank covered by the mechanism; or

b. The conditions of subdivision a of subsection 2 or paragraph 1 or 2 of subdivision b of subsection 2 are satisfied.

2. The department may draw on a standby trust fund when:

a. The department makes a final determination that a release has occurred and immediate or long-term corrective action for the release is needed, and the owner or operator, after appropriate notice and opportunity to comply, has not conducted corrective action as required under sections 33.1-24-08-50 through 33.1-24-08-57; or

b. The department has received either:

(1) Certification from the owner or operator and the third-party liability claimant or claimants and from attorneys representing the owner or operator and the third-party liability claimant or claimants that a third-party liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as principals and as legal representatives of [insert owner or operator] and [insert name and address of third-party claimant], hereby certify that the claim of bodily injury [and/or] property damage caused by an accidental release arising from operating [owner's or operator's] underground storage tank should be paid in the amount of \$[_____].

[Signatures]

Owner or Operator

Attorney for Owner or Operator

[Notary]

Date

[Signature(s)]

Claimant(s)

Attorney(s) for Claimant(s)

[Notary]

Date _____ or

(2) A valid final court order establishing a judgment against the owner or operator for bodily injury or property damage caused by an accidental release from an underground storage tank covered by financial assurance under sections 33.1-24-08-80 through 33.1-24-08-106 and the department determines that the owner or operator has not satisfied the judgment.

3. If the department determines that the amount of corrective action costs and third-party liability claims eligible for payment under subsection 2 may exceed the balance of the standby trust fund and the obligation of the provider of financial assurance, the first priority for payment shall be corrective action costs necessary to protect human health and the environment. The department shall pay third-party liability claims in the order in which the department receives certifications under paragraph 1 of subdivision b of subsection 2 and valid court orders under paragraph 2 of subdivision b of subsection 2.

4. A government entity acting as guarantor under subsection 5 of section 33.1-24-08-96, the local government guarantee without standby trust, shall make payments as directed by the department under the circumstances described in subsections 1, 2, and 3.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-103. Release from requirements.

An owner or operator is no longer required to maintain financial responsibility under sections 33.1-24-08-80 through 33.1-24-08-106 for an underground storage tank after the tank has been permanently closed or undergoes a change-in-service or, if corrective action is required, after corrective action has been completed and the tank has been permanently closed or undergoes a change-in-service as required by sections 33.1-24-08-60 through 33.1-24-08-64.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-104. Bankruptcy or other incapacity of owner or operator or provider of financial assurance.

1. Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code, naming an owner or operator as debtor, the owner or operator must notify the department by certified mail of such commencement and submit the appropriate forms listed in subsection 2 of section 33.1-24-08-101 documenting current financial responsibility.

2. Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code, naming a guarantor providing financial assurance as debtor, such guarantor must notify the owner or operator by certified mail of such commencement as required under the terms of the guarantee specified in section 33.1-24-08-86.
3. Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code, naming a local government owner or operator as debtor, the local government owner or operator must notify the department by certified mail of such commencement and submit the appropriate forms listed in subsection 2 of section 33.1-24-08-101 documenting current financial responsibility.
4. Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy) United States Code, naming a guarantor providing a local government financial assurance as debtor, such guarantor must notify the local government owner or operator by certified mail of such commencement as required under the terms of the guarantee specified in section 33.1-24-08-96.
5. An owner or operator who obtains financial assurance by a mechanism other than the financial test of self-insurance will be deemed to be without the required financial assurance in the event of a bankruptcy or incapacity of its provider of financial assurance, or a suspension or revocation of the authority of the provider of financial assurance to issue a guarantee, insurance policy, risk retention group coverage policy, surety bond, letter of credit, or state-required mechanism. The owner or operator must obtain alternate financial assurance as specified in sections 33.1-24-08-80 through 33.1-24-08-106 within thirty days after receiving notice of such an event. If the owner or operator does not obtain alternate coverage within thirty days after such notification, the owner or operator must notify the department.
6. Within thirty days after receipt of notification that a state fund or other state assurance has become incapable of paying for assured corrective action or third-party compensation costs, the owner or operator must obtain alternate financial assurance.

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-105. Replenishment of guarantees, letters of credit, or surety bonds.

1. If at any time after a standby trust is funded upon the instruction of the department with funds drawn from a guarantee, local government, letter of credit, or surety bond, and the amount in the standby trust is reduced below the full amount of coverage required, the owner or operator shall by the anniversary date of the financial mechanism from which the funds were drawn:
 - a. Replenish the value of financial assurance to equal the full amount of coverage required;
or
 - b. Acquire another financial assurance mechanism for the amount which funds in the standby trust have been reduced.
2. For purposes of this section, the full amount of coverage required is the amount of coverage to be provided by section 33.1-24-08-83. If a combination of mechanisms was used to provide the assurance funds which were drawn upon, replenishment shall occur by the earliest anniversary date among the mechanisms.

33.1-24-08-114. [Reserved].

33.1-24-08-115. Definitions (lender liability).

1. "Borrower, debtor, or obligor" is a person whose underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located is encumbered by a security interest. These terms may be used interchangeably.
2. "Holder" is a person who, upon the effective date of this rule, or in the future, maintains indicia of ownership, as defined in subsection 3, primarily to protect a security interest, as defined in subdivision a of subsection 6, in a petroleum underground storage tank or underground storage tank system or facility or property on which a petroleum underground storage tank or underground storage tank system is located. A holder includes the initial holder (such as a loan originator); any subsequent holder (such as a successor-in-interest or subsequent purchaser of the security interest on the secondary market); a guarantor of an obligation.

surety, or any other person who holds ownership indicia primarily to protect a security interest; or a receiver or other person who acts on behalf or for the benefit of a holder.

3. "Indicia of ownership" means evidence of a secured interest, evidence of an interest in a security interest, or evidence of an interest in real or personal property securing a loan or other obligation, including any legal or equitable title or deed to real or personal property acquired through or incident to foreclosure. Evidence of such interests include mortgages, deeds of trust, liens, surety bonds and guarantees of obligations, title held pursuant to a lease financing transaction in which the lessor does not select initially the leased property (hereinafter "lease financing transaction"), and legal or equitable title obtained pursuant to foreclosure. Evidence of such interests also includes assignments, pledges, or other rights to or other forms of encumbrance against property that are held primarily to protect a security interest. A person is not required to hold title or a security interest in order to maintain indicia of ownership.

4. "Operation" means, for purposes of this section, the use, storage, filling, or dispensing of petroleum contained in an underground storage tank or underground storage tank system.

5. Petroleum production, refining, and marketing.

a. "Petroleum marketing" means the distribution, transfer, or sale of petroleum or petroleum products for wholesale or retail purposes.

b. "Petroleum production" means the production of crude oil or other forms of petroleum, as defined in section 33.1-24-08-03, as well as the production of petroleum products from purchased materials.

c. "Petroleum refining" means the cracking, distillation, separation, conversion, upgrading, and finishing of refined petroleum or petroleum products.

6. "Primarily to protect a security interest" means that the holder's indicia of ownership are held primarily for the purpose of securing payment or performance of an obligation.

a. "Primarily to protect a security interest", as used in sections 33.1-24-08-115 through 33.1-24-08-130, does not include indicia of ownership held primarily for investment purposes, nor ownership indicia held primarily for purposes other than as protection for a security interest. A holder may have other, secondary reasons for maintaining indicia of ownership, but the primary reason why any ownership indicia are held must be as protection for a security interest.

b. "Security interest" means an interest in a petroleum underground storage tank or underground storage tank system or in the facility or property on which a petroleum underground storage tank or underground storage tank system is located, created, or established for the purpose of securing a loan or other obligation. Security interests include mortgages, deeds of trusts, liens, and title pursuant to lease financing transactions. Security interests may also arise from transactions such as sale and leasebacks, conditional sales, installment sales, trust receipt transactions, certain assignments, factoring agreements, accounts receivable financing arrangements, and consignments, if the transaction creates or establishes an interest in an underground storage tank or underground storage tank system or in the facility or property on which the underground storage tank or underground storage tank system is located, for the purpose of securing a loan or other obligation.

7. "Underground storage tank technical standards", as used in sections 33.1-24-08-115 through 33.1-24-08-130, refers to the underground storage preventative and operating requirements

under sections 33.1-24-08-10 through 33.1-24-08-35, sections 33.1-24-08-60 through 33.1-24-08-64, and section 33.1-24-08-40.

History: Effective January 1, 2019.

33.1-24-08-118. [Reserved].

33.1-24-08-119. [Reserved].

33.1-24-08-120. Participation in management (lender liability).

The term "participating in the management of an underground storage tank or underground storage tank system" means that, subsequent to December 6, 1995, the holder was engaging in decisionmaking control of, or activities related to, operation of the underground storage tank or underground storage tank system, as defined herein.

1. Actions that are participation in management.

a. Participation in the management of an underground storage tank or underground storage tank system means, for purposes of sections 33.1-24-08-115 through 33.1-24-08-130, actual participation by the holder in the management or control of decisionmaking related to the operation of an underground storage tank or underground storage tank system. Participation in management does not include the mere capacity or ability to influence or the unexercised right to control underground storage tank or underground storage tank system operations. A holder is participating in the management of the underground storage tank or underground storage tank system only if the holder either:

(1) Exercises decisionmaking control over the operational (as opposed to financial or administrative) aspects of the underground storage tank or underground storage tank system, such that the holder has undertaken responsibility for all or substantially all of the management of the underground storage tank or underground storage tank system; or

(2) Exercises control at a level comparable to that of a manager of the borrower's enterprise, such that the holder has assumed or manifested responsibility for the overall management of the enterprise encompassing the day-to-day decisionmaking of the enterprise with respect to all, or substantially all, of the operational (as opposed to financial or administrative) aspects of the enterprise.

b. Operational aspects of the enterprise relate to the use, storage, filling, or dispensing of petroleum contained in an underground storage tank or underground storage tank

system, and include functions such as that of a facility or plant manager, operations manager, chief operating officer, or chief executive officer. Financial or administrative aspects include functions such as that of a credit manager, personnel manager, controller, chief financial officer, or similar functions. Operational aspects of the enterprise do not include the financial or administrative aspects of the enterprise, or actions associated with environmental compliance, or actions undertaken voluntarily to protect the environment in accordance with applicable requirements in chapter 33.1-24-08.

2. Actions that are not participation in management preforeclosure.

a. Actions at the inception of the loan or other transaction. No act or omission prior to the time that indicia of ownership are held primarily to protect a security interest constitutes evidence of participation in management within the meaning of sections 33.1-24-08-115 through 33.1-24-08-130. A prospective holder who undertakes or requires an environmental investigation (which could include one or more of the following: a site assessment, inspection, or audit) of the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located (in which indicia of ownership are to be held), or requires a prospective borrower to clean up contamination from the underground storage tank or underground storage tank system or to comply or come into compliance (whether prior or subsequent to the time that indicia of ownership are held primarily to protect a security interest) with any applicable law or regulation, is not by such action considered to be participating in the management of the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located.

b. Loan policing and work out. Actions that are consistent with holding ownership indicia primarily to protect a security interest do not constitute participation in management for purposes of sections 33.1-24-08-115 through 33.1-24-08-130. The authority for the holder to take such actions may, but need not, be contained in contractual or other documents specifying requirements for financial, environmental, and other warranties, covenants, conditions, representations, or promises from the borrower. Loan policing and work out activities cover and include all such activities up to foreclosure, exclusive of any activities that constitute participation in management.

(1) Policing the security interest or loan.

(a) A holder who engages in policing activities prior to foreclosure will remain within the exemption provided that the holder does not together with other actions participate in the management of the underground storage tank or underground storage tank system as provided in subsection 1. Such policing actions include requiring the borrower to clean up contamination from the underground storage tank or underground storage tank system during the term of the security interest; requiring the borrower to comply or come into compliance with applicable federal, state, and local environmental and other laws, rules, and regulations during the term of the security interest; securing or exercising authority to monitor or inspect the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located (including onsite inspections) in which indicia of ownership are maintained, or the borrower's business or financial condition during the term of the security interest; or taking other actions to adequately police the loan or security interest (such as requiring a borrower to comply with any warranties, covenants, conditions, representations, or promises from the borrower).

(b) Policing activities also include undertaking by the holder of underground storage tank environmental compliance actions and voluntary environmental actions taken in compliance with chapter 33.1-24-08, provided that the holder does not otherwise participate in the management or daily operation of the underground storage tank or underground storage tank system as provided in subsection 1 of section 33.1-24-08-120 and section 33.1-24-08-130. Such allowable actions include release detection and release reporting, release response and corrective action, temporary or permanent closure of an underground storage tank or underground storage tank system, underground storage tank upgrading or replacement, and maintenance of corrosion protection. A holder who undertakes these actions must do so in compliance with the applicable requirements in chapter 33.1-24-08. A holder may directly oversee these environmental compliance actions and voluntary environmental actions, and directly hire contractors to perform the work, and is not by such action considered to be participating in the management of the underground storage tank or underground storage tank system.

(2) Loan work out. A holder who engages in work out activities prior to foreclosure will remain within the exemption provided that the holder does not together with other actions participate in the management of the underground storage tank or underground storage tank system as provided in subsection 1. For purposes of this rule, "work out" refers to those actions by which a holder, at any time prior to foreclosure, seeks to prevent, cure, or mitigate a default by the borrower or obligor; or to preserve, or prevent the diminution of, the value of the security. Work out activities include restructuring or renegotiating the terms of the security interest; requiring payment of additional rent or interest; exercising forbearance; requiring or exercising rights pursuant to an assignment of accounts or other amounts owing to an obligor; requiring or exercising rights pursuant to an escrow agreement pertaining to amounts owing to an obligor; providing specific or general financial or other advice, suggestions, counseling, or guidance; and exercising any right or remedy the holder is entitled to by law or under any warranties, covenants, conditions, representations, or promises from the borrower.

3. Foreclosure on an underground storage tank or underground storage tank system or facility or property on which an underground storage tank or underground storage tank system is located, and participation in management activities postforeclosure.

a. Foreclosure.

(1) Indicia of ownership that are held primarily to protect a security interest include legal or equitable title or deed to real or personal property acquired through or incident to foreclosure. For purposes of sections 33.1-24-08-115 through 33.1-24-08-130, the term "foreclosure" means that legal, marketable, or equitable title or deed has been issued, approved, and recorded, and that the holder has obtained access to the underground storage tank, or underground storage tank system, underground storage tank facility, and property on which the underground storage tank or underground storage tank system is located, provided that the holder acted diligently to acquire marketable title or deed and to gain access to the underground storage tank, underground storage tank system, underground storage tank facility, and property on which the underground storage tank or underground storage tank system is located. The indicia of ownership held after foreclosure continue to be maintained primarily as protection for a security interest provided that the holder undertakes to sell, release an underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, held pursuant to a lease financing

transaction (whether by a new lease financing transaction or substitution of the lessee), or otherwise divest itself of the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, in a reasonably expeditious manner, using whatever commercially reasonable means are relevant or appropriate with respect to the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, taking all facts and circumstances into consideration, and provided that the holder does not participate in management as defined in subsection 1 prior to or after foreclosure.

(2) For purposes of establishing that a holder is seeking to sell, release pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), or divest in a reasonably expeditious manner an underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, the holder may use whatever commercially reasonable means as are relevant or appropriate with respect to the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, or may employ the means specified in subdivision b of subsection 3. A holder that outbids, rejects, or fails to act upon a written bona fide, firm offer of fair consideration for the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, as provided in subdivision b of subsection 3, is not considered to hold indicia of ownership primarily to protect a security interest.

b. Holding foreclosed property for disposition and liquidation. A holder, who does not participate in management prior to or after foreclosure, may sell, release, pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), an underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, liquidate, wind up operations, and take measures, prior to sale or other disposition, to preserve, protect, or prepare the secured underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located. A holder may also arrange for an existing or new operator to continue or initiate operation of the underground storage tank or underground storage tank system. The holder may conduct these activities without voiding the security interest exemption, subject to the requirements of sections 33.1-24-08-115 through 33.1-24-08-130.

(1) A holder establishes that the ownership indicia maintained after foreclosure continue to be held primarily to protect a security interest by, within twelve months following foreclosure, listing the underground storage tank or underground storage tank system or the facility or property on which the underground storage tank or underground storage tank system is located, with a broker, dealer, or agent who deals with the type of property in question, or by advertising the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, as being for sale or disposition on at least a monthly basis in either a real estate publication or a traded or other publication suitable for the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, or a newspaper of general circulation (defined as one with a circulation more than ten thousand, or one

suitable under any applicable federal, state, or local rules of court for publication required by court order or rules of civil procedure) covering the location of the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located. For purposes of this provision, the twelve-month period begins to run from December 6, 1995, or from the date that the marketable title or deed has been issued, approved and recorded, and the holder has obtained access to the underground storage tank or underground storage tank system, underground storage tank facility and property on which the underground storage tank or underground storage tank system is located, whichever is later, provided that the holder acted diligently to acquire marketable title or deed and to obtain access to the underground storage tank or underground storage tank system, underground storage tank facility and property on which the underground storage tank or underground storage tank system is located. If the holder fails to act diligently to acquire marketable title or deed or to gain access to the underground storage tank or underground storage tank system, the twelve-month period begins to run from December 6, 1995, or from the date on which the holder first acquires either title to or possession of the secured underground storage tank or underground storage tank system, or facility or property on which the underground storage tank or underground storage tank system is located, whichever is later.

(2) A holder that outbids, rejects, or fails to act upon an offer of fair consideration for the underground storage tank or underground storage tank system or the facility or property on which the underground storage tank or underground storage tank system is located, establishes by such outbidding, rejection, or failure to act, that the ownership indicia in the secured underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located are not held primarily to protect the security interest, unless the holder is required, in order to avoid liability under federal or state law, to make a higher bid, to obtain a higher offer, or to seek or obtain an offer in a different manner.

(a) Fair consideration, in the case of a holder maintaining indicia of ownership primarily to protect a senior security interest in the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, is the value of the security interest as defined in this section. The value of the security interest includes all debt and costs incurred by the security interest holder, and is calculated as an amount equal to or in excess of the sum of the outstanding principal (or comparable amount in the case of a lease that constitutes a security interest) owed to the holder immediately preceding the acquisition of full title (or possession in the case of a lease financing transaction) pursuant to foreclosure, plus any unpaid interest, rent, or penalties (whether arising before or after foreclosure). The value of the security interest also includes all reasonable and necessary costs, fees, or other charges incurred by the holder incident to work out, foreclosure, retention, preserving, protecting, and preparing, prior to sale, the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, release, pursuant to a lease financing transaction (whether by a new lease financing transaction or substitution of the lessee), of an underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, or other disposition. The value of the security interest also includes environmental investigation costs (which could include one or more of the following: a site

assessment, inspection, or audit of the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located), and corrective action costs incurred under sections 33.1-24-08-41 through 33.1-24-08-57, or any other costs incurred as a result of reasonable efforts to comply with any other applicable federal, state, or local law or regulation; less any amounts received by the holder in connection with any partial disposition of the property and any amounts paid by the borrower (if not already applied to the borrower's obligations) subsequent to the acquisition of full title (or possession in the case of a lease financing transaction) pursuant to foreclosure. In the case of a holder maintaining indicia of ownership primarily to protect a junior security interest, fair consideration is the value of all outstanding higher priority security interests plus the value of the security interest held by the junior holder, each calculated as set forth in this subparagraph.

(b) Outbids, rejects, or fails to act upon an offer of fair consideration means that the holder outbids, rejects, or fails to act upon within ninety days of receipt, a written, bona fide, firm offer of fair consideration for the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located received at any time after six months following foreclosure, as defined in subsection 3. A "written, bona fide, firm offer" means a legally enforceable, commercially reasonable, cash offer solely for the foreclosed underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, including all material terms of the transaction, from a ready, willing, and able purchaser who demonstrates to the holder's satisfaction the ability to perform. For purposes of this provision, the six-month period begins to run from December 6, 1995, or from the date that marketable title or deed has been issued, approved and recorded to the holder, and the holder has obtained access to the underground storage tank or underground storage tank system, underground storage tank facility and property on which the underground storage tank or underground storage tank system is located, whichever is later, provided that the holder was acting diligently to acquire marketable title or deed or to gain access to the underground storage tank or underground storage tank system, underground storage tank facility and property on which the underground storage tank or underground storage tank system is located. If the holder fails to act diligently to acquire marketable title or deed or to gain access to the underground storage tank or underground storage tank system, the six-month period begins to run from December 6, 1995, or from the date on which the holder first acquires either title to or possession of the secured underground storage tank or underground storage tank system, or facility or property on which the underground storage tank or underground storage tank system is located, whichever is later.

c. Actions that are not participation in management postforeclosure. A holder is not considered to be participating in the management of an underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located when undertaking actions under chapter 33.1-24-08, provided that the holder does not otherwise participate in the management or daily operation of the underground storage tank or underground storage tank system as provided in subsection 1 of section 33.1-24-08-120 and section 33.1-24-08-130. Such allowable actions include release detection and release reporting, release response and corrective action, temporary or permanent closure of the

underground storage tank or underground storage tank system, underground storage tank upgrading or replacement, and maintenance of corrosion protection. A holder who undertakes these actions must do so in compliance with the applicable requirements in chapter 33.1-24-08. A holder may directly oversee these environmental compliance actions and voluntary environmental actions, and directly hire contractors to perform the work, and is not by such action considered to be participating in the management of the underground storage tank or underground storage tank system.

History: Effective January 1, 2019.

33.1-24-08-125. Ownership of an underground storage tank or underground storage tank system or facility or property on which an underground storage tank or underground storage tank system is located (lender liability).

A holder is not an "owner" of a petroleum underground storage tank or underground storage tank system or facility or property on which a petroleum underground storage tank or underground storage tank system is located for purposes of compliance with the underground storage tank technical standards as defined in subsection 1, the underground storage tank corrective action requirements under sections 33.1-24-08-41 through 33.1-24-08-57, and the underground storage tank financial responsibility requirements under sections 33.1-24-08-80 through 33.1-24-08-101, provided the person:

1. Does not participate in the management of the underground storage tank or underground storage tank system as defined in section 33.1-24-08-120; and
2. Does not engage in petroleum production, refining, and marketing as defined in subsection 2 of section 33.1-24-08-115.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-06; S.L. 2017, ch. 199, § 19

33.1-24-08-128. [Reserved].

33.1-24-08-129. [Reserved].

33.1-24-08-130. Operating an underground storage tank or underground storage tank system (lender liability).

1. Operating an underground storage tank or underground storage tank system prior to foreclosure. A holder, prior to foreclosure, as defined in subsection 3 of section 33.1-24-08-120, is not an "operator" of a petroleum underground storage tank or underground storage tank system for purposes of compliance with the underground storage tank technical standards as defined in subsection 1 of section 33.1-24-08-115, the underground storage tank corrective action requirements under sections 33.1-24-08-41 through 33.1-24-08-57, and the underground storage tank financial responsibility requirements under sections 33.1-24-08-80 through 33.1-24-08-101, provided that, after December 6, 1995, the holder is not in control of or does not have responsibility for the daily operation of the underground storage tank or underground storage tank system.
2. Operating an underground storage tank or underground storage tank system after foreclosure. The following provisions apply to a holder who, through foreclosure, as defined in subsection 3 of section 33.1-24-08-120, acquires a petroleum underground storage tank or underground storage tank system or facility or property on which a petroleum underground storage tank or underground storage tank system is located.
 - a. A holder is not an "operator" of a petroleum underground storage tank or underground storage tank system for purposes of compliance with chapter 33.1-24-08 if there is an operator, other than the holder, who is in control of or has responsibility for the daily operation of the underground storage tank or underground storage tank system, and who can be held responsible for compliance with applicable requirements of chapter 33.1-24-08.
 - b. If another operator does not exist, as provided for under subdivision a, a holder is not an "operator" of the underground storage tank or underground storage tank system, for purposes of compliance with the underground storage tank technical standards as defined in subsection 1 of section 33.1-24-08-115, the underground storage tank corrective action requirements under sections 33.1-24-08-41 through 33.1-24-08-57, and the underground storage tank financial responsibility requirements under sections 33.1-24-08-80 through 33.1-24-08-101, provided that the holder:
 - (1) Empties all of its known underground storage tanks or underground storage tank systems within sixty calendar days after foreclosure or within sixty calendar days after December 6, 1995, whichever is later, or another reasonable time period specified by the department, so that no more than two and one-half centimeters [1 inch] of residue, or three-tenths of one percent by weight of the total capacity of the underground storage tank system, remains in the system; leaves vent lines

open and functioning; and caps and secures all other lines, pumps, manways, and ancillary equipment; and

(2) Empties those underground storage tanks and underground storage tank systems that are discovered after foreclosure within sixty calendar days after discovery or within sixty calendar days after December 6, 1995, whichever is later, or another reasonable time period specified by the department, so that no more than two and one-half centimeters [1 inch] of residue, or three-tenths of one percent by weight of the total capacity of the underground storage tank system, remains in the system; leaves vent lines open and functioning; and caps and secures all other lines, pumps, manways, and ancillary equipment.

c. If another operator does not exist, as provided for under subdivision a, in addition to satisfying the conditions under subdivision b, the holder must either:

(1) Permanently close the underground storage tank or underground storage tank system in accordance with sections 33.1-24-08-61 through 33.1-24-08-64, except subsection 2 of section 33.1-24-08-62; or

(2) Temporarily close the underground storage tank or underground storage tank system in accordance with the following applicable provisions of section 33.1-24-08-60:

(a) Continue operation and maintenance of corrosion protection in accordance with section 33.1-24-08-21;

(b) Report suspected releases to the department; and

(c) Conduct a site assessment in accordance with subsection 1 of section 33.1-24-08-62 if the underground storage tank system is temporarily closed for more than twelve months and the underground storage tank system does not meet either the performance standards in section 33.1-24-08-10 for new underground storage tank systems or the upgrading requirements in section 33.1-24-08-11, except that the spill and overflow equipment requirements do not have to be met. The holder must report any suspected releases to the department. For purposes of this provision, the twelve-month period begins to run December 6, 1995, or from the date on which the underground storage tank system is emptied and secured under subdivision b, whichever is later.

d. The underground storage tank system can remain in temporary closure until a subsequent purchaser has acquired marketable title to the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located. Once a subsequent purchaser acquires marketable title to the underground storage tank or underground storage tank system or facility or property on which the underground storage tank or underground storage tank system is located, the purchaser must decide whether to operate or close the underground storage tank or underground storage tank system in accordance with applicable requirements in chapter 33.1-24-08.

Appendix II
Statement for Shipping Tickets and Invoices

NOTE: A federal law (the Resource Conservation and Recovery Act (RCRA), as amended (Pub. L. 98-616)) requires owners of certain underground storage tanks to notify designated state or local agencies by May 8, 1986, of the existence of their tanks. Notifications for tanks brought into use after May 8, 1986, must be made within thirty days. Consult the environmental protection agency's regulations, issued on November 8, 1985, (40 CFR part 280) to determine if you are affected by this law.

33.1-25-01-01. Definitions.

1. "Abandoned well" means a well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be used for its intended purpose or for observation purposes.
2. "Area of review" means the area of review surrounding an injection well described according to the criteria under title 40 CFR part 146, sections 146.6 and 146.63.
3. "Casing" means a pipe or tubing of appropriate material, of varying diameter and weight, lowered into a borehole during or after drilling in order to support the sides of the hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground, or to prevent water, gas, or other fluid from entering or leaving the hole.
4. "Catastrophic collapse" means the sudden and utter failure of overlying strata caused by removal of underlying materials.
5. "Cesspool" means a drywell that receives untreated sanitary waste containing human excreta and which sometimes has an open bottom or perforated sides, or both.
6. "Director" means the director of the division of water quality of the department of environmental quality.
7. "Drywell" means a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids.
8. "Exempted aquifer" means an aquifer or its portion that meets the criteria in the definition of "underground source of drinking water" but which has been exempted according to the procedures of subsection 2 of section 33.1-25-01-05.

9. "Fluid" means material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state.
10. "Formation" means a body of rock characterized by a degree of lithologic homogeneity which is prevailing, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.
11. "Hazardous waste" means a hazardous waste as defined under title 40 CFR part 261, section 261.3.
12. "Improved sinkhole" means a naturally occurring karst depression or other natural crevice found in volcanic terrain and other geologic settings which have been modified by man for the purpose of directing and emplacing fluids into the subsurface.
13. "Injection zone" means a geological formation, group of formations, or part of a formation receiving fluids through a well.
14. "Packer" means a device lowered into a well to produce a fluidtight seal.
15. "Plugging" means the act or process of stopping the flow of water, oil, or gas into and out of a formation through a borehole or well penetrating that formation.
16. "Point of injection" means the last accessible sampling point prior to waste fluids being released into the subsurface environment through a class V injection well. For example, the point of injection of a class V septic system might be the distribution box--the last accessible sampling point before the waste fluids drain into the underlying soils. For a drywell, it is likely to be the well bore itself.
17. "Radioactive waste" means any waste which contains radioactive material in concentrations which exceed those listed under title 10 CFR part 20, appendix B, table II, column 2.
18. "Sanitary waste" means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities provided the waste is not mixed with industrial waste.
19. "Septic system" means a well that is used to emplace sanitary waste below the surface and is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.
20. "Subsurface fluid distribution system" means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground.
21. "Well" means a bored, drilled or driven shaft, or a dug hole, whose depth is greater than the largest surface dimension; or an improved sinkhole; or a subsurface fluid distribution system.
22. "Well injection" means the subsurface emplacement of fluids through a well.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-25-01-02. Classification of injection wells.

Injection wells are classified as follows:

1. **Class I.** Wells used to inject hazardous waste, radioactive waste, and other industrial and municipal disposal wells which inject fluids beneath the lowermost formation containing, within one quarter mile [402.34 meters] of the well bore, an underground source of drinking water.
2. **Class II.** Wells which inject fluids:
 - a. Which are brought to the surface in connection with natural gas storage operations, or conventional oil or natural gas production and may be commingled with wastewaters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection;
 - b. For enhanced recovery of oil or natural gas; and
 - c. For storage of hydrocarbons which are liquid at standard temperature and pressure.
3. **Class III.** Wells which inject for extraction of minerals or energy.
4. **Class IV.** Wells used to dispose of hazardous wastes or radioactive wastes into or above a formation which, within one quarter mile [402.34 meters] of the well, contains an underground source of drinking water and wells used to dispose of hazardous wastes which cannot be classified under class I wells, e.g., wells used to dispose of hazardous wastes into or above a formation which contains an exempted aquifer.
5. **Class V.** Injection wells not included in class I, II, III, IV, or class VI.
6. **Class VI.** Wells that are not experimental in nature that are used for geologic sequestration of carbon dioxide beneath the lowermost formation containing an underground source of drinking water; or wells used for geologic sequestration of carbon dioxide that have been granted a waiver of the injection depth requirements pursuant to requirements at title 40 CFR part 146, section 146.95, or, wells used for geologic sequestration of carbon dioxide that have received an expansion to the areal extent of an existing class II enhanced oil recovery or enhanced gas recovery aquifer exemptions pursuant to title 40 CFR part 146, section 146.4 and title 40 CFR part 144, section 144.7(d).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-03. Prohibition of unauthorized injection.

Any underground injection (except class II, class III, and class VI) is prohibited except as authorized by permit or rule issued under this section. Also the construction of any well required to have a permit under this section is prohibited until the permit has been issued. These include the well types specifically identified in title 40 CFR part 144, section 144.1(g) and title 40 CFR part 144, section 144.81.

The following well types are not covered by these rules:

1. Individual or single-family residential waste disposal systems such as domestic cesspools or septic systems.
2. Nonresidential cesspools, septic systems, or similar waste disposal systems if such systems are used solely for the disposal of sanitary waste and have the capacity to serve fewer than twenty persons a day.

3. Injection wells used for injection of hydrocarbons which are of pipeline quality and are gases at standard temperature and pressure for the purpose of storage.
4. Any dug hole, drilled hole, bored shaft, improved sinkhole, or subsurface fluid distribution system which is not used for emplacement of fluids underground.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28-06

33.1-25-01-04. Prohibition of movement of fluid into underground sources of drinking water.

1. No owner or operator shall construct, operate, maintain, convert, plug, abandon, or conduct any underground injection activity in a manner which causes, or allows, movement of fluid containing any contaminant into an underground source of drinking water if the presence of that contaminant may cause a violation of any maximum contaminant level under chapter 33.1-17-01 or which may adversely affect the health of persons. The applicant for a permit shall have the burden of showing that the requirements of this section are met.
2. The director shall prescribe additional requirements in accordance with title 40 CFR part 144, section 144.12(b) through (e) for all injection wells which may cause a violation of a maximum contaminant level under chapter 33.1-17-01 or which may adversely affect the health of persons.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-25-01-05. Identification of underground sources of drinking water and exempted aquifers.

1. The director may identify and shall protect as an underground source of drinking water all aquifers or parts of aquifers which:
 - a. Supply any public water system; or
 - b. Contain a sufficient quantity of ground water to supply a public water system and:
 - (1) Currently supply drinking water for human consumption; or
 - (2) Contain fewer than ten thousand milligrams per liter total dissolved solids; and
 - (3) Are not exempted aquifers.
2. After notice and opportunity for a public hearing the director may designate, identify, and describe in geographic or geometric terms, or both, which are clear and definite exempted aquifers or parts thereof using the following criteria:
 - a. It does not currently serve as a source of drinking water; and
 - b. (1) It cannot now and will not in the future serve as a source of drinking water for any of the following reasons:
 - (a) It produces mineral, hydrocarbon, or geothermal energy;
 - (b) It is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical;

(c) It is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption; or

(d) It is located over a class III well mining area subject to subsidence or catastrophic collapse; or

(2) The total dissolved solids content of the ground water is more than three thousand and less than ten thousand milligrams per liter and it is not reasonably expected to supply a public water system.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-25-01-06. Permitting.

1. Application for a permit.

a. Any person who is required to have a permit shall complete, sign, and submit an application to the director.

b. When the owner and operator are different, it is the operator's duty to obtain a permit.

c. The application must be complete before the permit is issued.

d. All applicants of class I wells shall provide information specified under title 40 CFR parts 144 and 146, sections 144.31(e) and 146.14(a) and (c) (for class I nonhazardous waste injection wells) or title 40 CFR part 146, sections 146.70(a), 146.71(a), and 146.72(a) (for class I hazardous waste injection wells).

e. Applicants shall keep records of all data used to complete permit applications and supplemental information for at least three years from the date the application is signed.

f. Operators of new injection wells, unless covered by an existing area permit, shall submit an application within a reasonable time before construction is expected to begin.

2. Signatories to permit applications.

a. All permits shall be signed as follows:

(1) For a corporation: by a principal executive officer of at least the level of vice president.

(2) For a partnership or sole proprietor: by a general partner or proprietor.

(3) For a municipality, state, federal, or other public agency: by either a principal officer or authorized representative.

b. A person is a duly authorized representative if the authorization:

(1) Is made in writing by the legal signatory;

(2) Specifies an individual or position having responsibility for the overall operation; and

(3) Is submitted to the director either prior to or along with documents signed by the authorized representative.

c. Changes in authorization must be in writing and submitted to the director.

3. Duration of permits.

- a. Underground injection control permits for class I and class V wells shall be effective for a fixed term of not more than ten years;
- b. Except as provided in title 40 CFR part 144, section 37, the term of a permit shall not be extended by modification beyond the maximum duration specified in title 40 CFR part 144, section 144.36; and
- c. Any temporary permit issued under subsection 6 will be for no longer than ninety days, except that if a permit application has been submitted prior to the expiration of the ninety-day period, the director may extend the temporary permit until final action on the application.

4. Transfer of permits.

- a. Any class V permit may be automatically transferred to a new permittee if:
 - (1) The current permittee notifies the director at least thirty days prior to the proposed transfer date; and
 - (2) The notice includes a written agreement between the existing and new permittee containing:
 - (a) A specific date for transfer of permit responsibility, coverage, and liability; and
 - (b) A demonstration that the new permittee meets the financial responsibility requirements.
- b. Permits for class I wells may be transferred only if the permit has been modified or revoked and reissued.

5. Modification, revocation and reissuance, or termination of permits.

- a. Permits may be modified, revoked and reissued, or terminated at the request of any interested person or at the director's initiative if cause exists as specified under title 40 CFR part 144, section 144.39. All requests shall be in writing and shall contain facts or reasons supporting the request.
- b. If the director tentatively decides to modify or revoke and reissue a permit, the director shall prepare a draft permit incorporating the proposed changes. The director may request additional information and, in the case of a modified permit, may require the submission of an updated permit application. In the case of revoked and reissued permits, the director shall require the submission of a new application.
- c. The following are causes for terminating a permit during its term or for denying a permit renewal application:
 - (1) Noncompliance by the permittee with any permit condition;
 - (2) Failure by the permittee to fully disclose all relevant facts or misrepresentation of relevant facts; or
 - (3) A determination that the permitted activity endangers human health or the environment.
- d. If the director tentatively decides to terminate a permit, the director shall issue notice of intent to terminate.

6. **Emergency permits.** The director may issue a temporary injection permit in accordance with title 40 CFR part 144, section 144.34, subject to the provisions of title 40 CFR part 144, section 144.34(a)(1), (2), and (3).

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28-06

33.1-25-01-07. Area permits.

1. The director may issue a permit on an area basis, rather than for each well individually; provided, that the permit is for injection wells:
 - a. Described and identified by location in permit applications, if they are existing wells;
 - b. Within the same well field, facility site, reservoir, project, or similar unit in the same state;
 - c. Of similar construction;
 - d. Of the same class;
 - e. Operated by a single owner or operator; and
 - f. Used to inject other than hazardous waste.
2. Area permits shall specify:
 - a. The area within which underground injections are authorized; and
 - b. The requirements for construction, monitoring, reporting, operation, and abandonment for all wells authorized by the permit.
3. The area permit may authorize the permittee to construct and operate, convert, or plug and abandon wells within the permit area, provided:
 - a. The permittee notifies the director at such time as the permit requires;
 - b. The additional well meets the area permit criteria; and
 - c. The cumulative effects of drilling and operation of additional injection wells are acceptable to the director.
4. If the director determines that any additional well does not meet the area permit requirements, the director may modify or terminate the permit or take enforcement action.
5. If the director determines the cumulative effects are unacceptable, the permit may be modified.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28-06

33.1-25-01-08. Draft permits and fact sheets.

1. **Draft permits.**
 - a. When the application is complete, the director shall tentatively decide to either prepare a draft permit or deny the application.

b. If the director decides to prepare the draft permit, it shall contain the following information:

(1) All required permit conditions;

(2) All compliance schedule requirements;

(3) All monitoring requirements; and

(4) All specific requirements for construction, corrective action, operation, hazardous waste management, reporting, plugging and abandonment, financial responsibility, mechanical integrity, and any other conditions the director may impose.

2. Fact sheets.

a. A fact sheet shall be prepared for:

(1) Every draft permit for a major facility or activity.

(2) Every draft permit which the director finds is the subject of widespread public interest or raises major issues.

b. If a fact sheet is required, it:

(1) Shall be sent to the applicant;

(2) In addition to the general public notice described in title 40 CFR part 124, section 124.10(d)(1), all persons identified in paragraphs (c)(1)(ii), (iii), and (iv) of title 40 CFR part 124, section 124.10(c) shall be mailed a copy of the fact sheet, the permit application (if any), and the draft permit (if any); and

(3) Shall include:

(a) A brief description of the type of facility or activity.

(b) The type and quantity of wastes, fluids, or pollutants which are proposed to be or are being injected.

(c) A brief summary of the basis for the draft permit conditions.

(d) The reasons why any requested variances or alternatives to required standards do or do not appear justified.

(e) A description of the procedures for reaching a final decision, including:

[1] Beginning and ending dates of comment period;

[2] Address where comments will be received;

[3] Procedures for requesting a hearing and the nature of the hearing; and

[4] Any other procedures by which the public may participate.

(f) The name and telephone number of a person to contact for additional information.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-25-01-09. Public notice and comment - Requests for hearings - Public hearings - Response to comments.

1. Public notice.

a. The director shall give public notice that the following actions have occurred:

(1) A draft permit has been prepared.

(2) A hearing has been scheduled.

(3) Intent to deny a permit application.

b. Public notice shall be given to allow thirty days for public comment on the draft permit.

c. Public notice of a public hearing shall be given at least thirty days before the hearing.

d. Public notice shall be given by the methods specified under title 40 CFR part 124, section 124.10(c).

e. Public notices and public notices for hearings shall at a minimum contain the information specified under title 40 CFR part 124, section 124.10(d).

2. Public comment.

a. During the public comment period, any interested person may submit written or oral comments and, if no public hearing is scheduled, request a public hearing in writing, stating the nature of the issues.

b. All comments shall be considered in making the final decision and shall be answered when the final permit decision is made.

3. Public hearing. The director shall hold a public hearing whenever there is a significant degree of public interest in a draft permit. The director also may hold a public hearing at the director's discretion.

4. Response to comments.

a. The director shall issue a response to comments when a final permit decision is made. The response shall:

(1) Specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change; and

(2) Briefly describe and respond to all significant comments on the draft permit raised during the public comment period, or during any hearing.

b. The response to comments shall be available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-25-01-10. Conditions applicable to all permits.

1. The general conditions contained under title 40 CFR part 144, section 144.51 apply to class I and class V underground injection control permits. All conditions shall be incorporated into the permits, either expressly or by reference.

2. A permittee may not commence injection into a new injection well until:
 - a. Construction is complete;
 - b. The permittee has submitted notice to the director that construction is complete; and
 - c. The director has inspected or reviewed the new injection well and finds it in compliance with the permit, or the permittee has not received notice from the director of intent to inspect within thirteen days of the permittee's completion notice.
3. The director shall impose on a case-by-case basis such additional conditions as are necessary to prevent the migration of fluids into underground sources of drinking water.
4. In addition to conditions required in all permits the director shall establish conditions in permits as required on a case-by-case basis to provide for and assure compliance with all applicable requirements of the Safe Drinking Water Act and of title 40 CFR parts 124, 144, 145, and 146.
5. The permit shall require the permittee to maintain financial responsibility and resources to close, plug, and abandon the underground injection operation in a manner prescribed by the director. The permittee must show evidence of financial responsibility to the director by the submission of surety bond, or other adequate assurance, such as financial statements or other materials acceptable to the director. Operators of class I hazardous waste injection wells must maintain the resources to close, plug, or abandon the well and for postclosure care pursuant to title 40 CFR part 144, subpart F and title 40 CFR part 146, sections 146.71 and 146.72.
6. The permittee shall retain all records concerning the nature and composition of injected fluids until three years after completion of plugging and abandonment of the well.
7. The following information shall be reported within twenty-four hours:
 - a. Any monitoring or other information which indicates that any contaminant may cause an endangerment to an underground source of drinking water.
 - b. Any noncompliance with a permit condition or malfunction of the injection system which may cause fluid migration into or between underground sources of drinking water.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-11. Technical requirements.

1. Construction requirements.
 - a. (1) Existing wells shall achieve compliance with construction requirements prior to permitting or according to a compliance schedule established as a permit condition.
 - (2) New injection wells shall submit plans for testing, drilling, and construction as part of the permit application.
 - (3) New injection wells shall be in compliance with construction requirements prior to commencing injection operations.
 - (4) Changes in construction plans require approval of the director.

b. Class I well construction shall conform to the requirements contained under title 40 CFR part 146, section 146.12 (nonhazardous waste injection wells) or title 40 CFR part 146, section 146.65 (hazardous waste injection wells).

2. Corrective action.

a. Applicants for class I nonhazardous waste injection well permits shall identify all known wells which penetrate the injection zone within the area of review.

b. Applicants for class I hazardous waste injection well permits are subject to the corrective action requirements of title 40 CFR part 146, section 146.64 and shall as part of the permit application submit a plan to the director outlining the protocol used to:

(1) Identify all wells penetrating the confining zone or injection zone within the area of review; and

(2) Determine whether wells are adequately completed or plugged.

c. All class I injection wells are subject to the following:

(1) For wells in the area of review which are improperly sealed, completed, or abandoned, or for which plugging or completion information is unavailable, the applicant shall also submit a corrective action plan consisting of such steps or modifications as are necessary to prevent movement of fluid into an underground source of drinking water.

(2) The director's review of the corrective action plan shall consider all of the following criteria and factors:

(a) Toxicity and volume of the injected fluid.

(b) Toxicity of native fluids or byproducts of injection.

(c) Potentially affected population.

(d) Geology.

(e) Hydrology.

(f) History of the injection operation.

(g) Completion and plugging records.

(h) Abandonment procedures in effect at the time the well was abandoned.

(i) Hydraulic connections with an underground source of drinking water.

(j) Reliability of the procedures used to identify abandoned wells.

(k) Any other factors which might affect the movement of fluids into or between underground sources of drinking water.

(3) Where the corrective action plan is adequate, the director shall incorporate the plan into the permit as a condition.

(4) Where the corrective action plan is inadequate, the director shall:

(a) Require the applicant to revise the plan;

(b) Prescribe a corrective action plan as a permit condition; or

(c) Deny the permit.

(5) Permits for existing injection wells that require corrective action shall include a compliance schedule requiring corrective action as soon as possible.

(6) New injection wells may not be permitted until all required corrective action has been taken.

(7) The director may require as a permit condition that injection pressure be so limited that pressure in the injection zone does not exceed hydrostatic pressure at the site of an improperly completed or abandoned well within the area of review. This pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation can be part of a compliance schedule and last until all other required corrective action has been taken.

3. All class I hazardous waste injection wells must be sited in accordance with title 40 CFR part 146, section 146.62.

4. Operating, monitoring, and reporting requirements for class I wells shall at a minimum include the items contained under title 40 CFR part 146, section 146.13 (for nonhazardous waste injection wells) or title 40 CFR part 146, sections 146.67, 146.68, and 146.69 (for hazardous waste injection wells).

5. In authorizing a new class I well, the director shall require the submission of all the information specified under title 40 CFR parts 144 and 146, sections 144.31 and 146.14 (for nonhazardous waste injection wells) or title 40 CFR parts 144 and 146, sections 144.31, 146.70(a), 146.71(a), and 146.72(a) (for hazardous waste injection wells).

6. Prior to granting approval for the operation of a class I well, the operator shall submit for review by the director information listed under title 40 CFR part 146, section 146.14(b) (for nonhazardous waste injection wells) or title 40 CFR part 146, sections 146.66 and 146.70(b) (for hazardous waste injection wells).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-12. Plugging and abandonment.

1. Any class I permit shall include, and any class V permit may include, a plan for plugging and abandonment which shall be incorporated into the permit as a condition to ensure that movement of fluids either into an underground source of drinking water or between underground sources of drinking water is not allowed.

2. After a cessation of operations of two years the owner or operator shall plug and abandon the well in accordance with the plan unless the owner or operator:

a. Provides notice to the director; and

b. Describes actions or procedures, satisfactory to the director, that the owner or operator will take to ensure that the well will not endanger underground sources of drinking water during the period of temporary abandonment. These actions and procedures shall include compliance with the technical requirements applicable to active injection wells unless waived by the director.

3. The permittee shall notify the director at such times as the permit requires before conversion or abandonment of the well or in the case of area permits before closure of the project. Owners and operators of class V wells authorized by section 33.1-25-01-16 must notify the director at least thirty days prior to closure.
4. Prior to granting approval for plugging and abandonment of a class I well, the director shall consider the plan submitted by the operator which contains the information listed under title 40 CFR part 146, section 146.14(c) (for nonhazardous waste injection wells) or title 40 CFR part 146, sections 146.71(a)(4) and 146.72(a) (for hazardous waste injection wells).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-13. Mechanical integrity.

1. A permit for any class I well shall include, and for any class V well may include, a condition prohibiting injection operations until the permittee shows to the satisfaction of the director that the well has mechanical integrity.
2. An injection well has mechanical integrity if:
 - a. There is no significant leak in the casing, tubing, or packer; and
 - b. There is no significant fluid movement into an underground source of drinking water through vertical channels adjacent to the injection well bore.
3. The mechanical integrity of a class I nonhazardous waste well must be demonstrated using the methods listed under title 40 CFR part 146, section 146.8(b), (c), (d), and (e). The director may also allow the use of a radioactive tracer survey (timed run method) for detecting leaks in the tubing, casing, or packer and for demonstrating the absence of fluid movement behind the casing (where the injection zone immediately underlies the lowermost underground source of drinking water on a case-by-case basis).
4. The mechanical integrity of a class I hazardous waste injection as defined by title 40 CFR part 146, section 146.8 must be demonstrated as established by title 40 CFR part 146, section 146.68(d).
5. The mechanical integrity of a class I nonhazardous waste injection well must be demonstrated at least once every five years and whenever there has been a well workover.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-14. Area of review.

The area of review for each injection well or each field, project, or area of the state shall be determined according to title 40 CFR part 146, section 146.6 (for nonhazardous waste injection wells) or title 40 CFR part 146, section 146.63 (for hazardous waste injection wells).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04; S.L. 2017, ch. 199, § 19

33.1-25-01-15. Schedules of compliance.

1. The compliance schedule of a class I nonhazardous waste injection well or a class V injection well must require compliance as soon as possible, and not later than three years after the effective date of the permit.
2. If the schedule of compliance is for more than one year, then interim requirements and completion dates (not to exceed one year) must be incorporated into the compliance schedule and permit.
3. No later than thirty days following each interim and final date, the permittee shall submit progress reports to the director.
4. No owner or operator of a class I hazardous waste injection well may begin injection until all corrective action as required under title 40 CFR part 146, section 146.64 has been taken.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, §§ 19, 69

33.1-25-01-16. Authorization of class V underground injection wells.

1. Authorization of injection into a class V well is authorized indefinitely, subject to the requirements of subsections 4, 5, and 6 of section 33.1-25-01-10 and subsection 3 of section 33.1-25-01-12, and title 40 CFR part 144, sections 144.84(b)(1) through (4).
2. The owner or operator of any existing class V well shall, within one year of the effective date of an underground injection control program, notify the director of the existence of any well meeting the definitions of class V under the owner's or operator's control, and submit the following inventory information:
 - a. Name of facility and location;
 - b. Name and address of legal contact;
 - c. Name and address of well owner or operator;
 - d. Number of wells and location by township, range, and section;
 - e. Nature and volume of injected fluids;
 - f. Construction features of the well, including well depth, screened interval, and casing size and type;
 - g. Operating status of the injection well; and
 - h. Any other information which the director requests.
3. All owners or operators of new class V wells shall be in compliance with article 43-35 and submit to the director a log of formations penetrated and the inventory information requested in subsection 2.
4. a. The director may require the operator of a class V well authorized by rule to apply for and obtain an individual or area permit. Cases where permits may be required include:
 - (1) The injection well is not in compliance with the applicable rule.
 - (2) The injection well is not or no longer is within the category of wells and types of well operations authorized by rule.

(3) Protection of an underground source of drinking water requires the injection operation be regulated by requirements not contained in the rules.

b. Any owner or operator authorized by rule may request and be granted a permit and hence be excluded from coverage by rule.

c. All injection wells regulated by rule shall submit inventory information to the director.

d. Upon program approval, the director shall notify owners or operators of injection wells of their duty to submit inventory information.

e. Failure to submit required inventory information for a class V well within one year of program approval will result in authorization removal for that well.

5. All owners or operators of class V wells shall be in compliance with title 40 CFR part 144, subpart G.

a. New large capacity cesspools that receive waste from multiple dwellings or have the capacity to receive waste from twenty or more persons per day are prohibited after April 5, 2000. Existing large capacity cesspools must be closed by April 5, 2005.

b. New motor vehicle waste disposal wells that receive waste fluids from vehicular repair or maintenance activities, such as auto body repair shops, automotive repair shops, new or used motor vehicle dealerships, specialty repair shops (e.g., transmission or muffler repair shops), or any vehicular repair works are prohibited after April 5, 2000.

c. Existing motor vehicle waste disposal wells in ground water protection areas designated by the director must be closed or permitted within one year of completion of the ground water protection area designation or one year after June 1, 2001, whichever is later. Existing motor vehicle waste disposal wells in sensitive ground water areas designated by the director must be closed or permitted by January 1, 2007.

d. (1) Ground water protection areas are geographic areas near or surrounding community and nontransient noncommunity water systems that use ground water as a source of drinking water. They are equivalent to wellhead protection areas delineated by the director through the wellhead protection program, which is defined in section 1428 of the Safe Drinking Water Act.

(2) Sensitive ground water areas are vulnerable hydrogeologic settings such as glacial outwash deposits or alluvial or aeolian sand deposits that are critical to protecting current or future underground sources of drinking water. Areas designated as sensitive ground water areas by the director are alluvial or aeolian sand deposits shown on Geologic Map of North Dakota (Clayton, 1980, North Dakota geological survey) and glacial drift aquifers listed in North Dakota Geographic Targeting System for Groundwater Monitoring (Radig, 1997, North Dakota department of health), or most recent editions of these publications, with DRASTIC scores greater than or equal to 100 based on methodology described in DRASTIC: A Standardized System For Evaluating Groundwater Pollution Potential (Ailer et al., 1987, United States environmental protection agency).

e. Location outside of a designated ground water protection area or sensitive ground water area does not relieve an owner or operator of a class V well from meeting all other requirements of this article and title 40 CFR part 144, subpart G.

f. In limited cases, the underground injection control director may authorize the conversion (reclassification) of a motor vehicle waste disposal well to another type of class V well. Motor vehicle wells may only be converted if all motor vehicle fluids are segregated by

physical barriers and are not allowed to enter the well; and, injection of motor vehicle waste is unlikely based on a facility's compliance history and records showing proper waste disposal. The use of a semipermanent plug as the means to segregate waste is not sufficient to convert a motor vehicle waste disposal well to another type of class V well.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-25-01-17. Requirements for hazardous waste injection wells.

The owner or operator of all wells injecting hazardous waste shall comply with the requirements for hazardous waste management facilities as specified under title 40 CFR parts 144, 146, including subpart G, part 148 and including specifically section 144.14.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-05, 23.1-04-08, 61-28-04, 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-05, 23.1-04-08, 61-28-04; S.L. 2017, ch. 199, § 19

33.1-25-01-18. Class IV wells.

All class IV wells are prohibited except wells used to inject contaminated ground water that has been treated and is being injected into the same formation from which it was drawn if such injection is approved by the director in accordance with title 40 CFR part 144, section 144.23(c).

History: Effective January 1, 2019.

33.1-34-01-01 Analytical Specifications

33.1-34-01-02 Labeling Specifications

33.1-34-01-01. Analytical specifications.

1. **Petroleum and fuel product specifications.** Petroleum and fuel products, including gasoline, alcohol-blended gasoline, diesel, tractor fuel, fuel oil (heating oil), kerosene, biodiesel, biodiesel blends, and all other alternative fuels shall comply with the most current applicable specifications of American society for testing and materials (ASTM), which are found in section 5 - petroleum products, lubricants, and fossil fuels of that organization's publication "Annual Book of ASTM Standards" and supplements thereto or revisions thereof as may be designated by ASTM, except as modified or rejected by this chapter or any rule promulgated pursuant to chapter 19-10 of the North Dakota Century Code. If gasoline is blended with ethanol, it shall be blended under any of the following three options:

a. The base gasoline used in such blends shall meet the requirements of ASTM D4814;

b. The blend shall meet the requirements of ASTM D4814; or

c. The base gasoline used in such blends shall meet all the requirements of ASTM D4814 except distillation, and the blend shall meet the distillations requirements of the ASTM specification.

The volatility standards for blends of gasoline and ethanol shall be the same as those adopted under the rules, regulations, and Clean Air Act waivers of the environmental protection agency of the United States department of the interior. Fuel products shall not be blended at a retail location with products commonly and commercially known as casing head gasoline, absorption gasoline, condensation gasoline, drip gasoline, or natural gasoline.

2. **Ethanol specifications.** The denatured ethanol at the time of blending with gasoline shall conform to the most recent version of ASTM D4806, "Standard Specification for Denatured Fuel Ethanol for Blending with Gasolines for Use as Automotive Spark-Ignition Engine Fuel", except as modified or rejected by this chapter or any rule promulgated pursuant to chapter 19-10 of the North Dakota Century Code.

3. **Permissible levels of alcohol.** The maximum permitted level or levels of ethanol, methanol, or other alcohol, in gasoline or alcohol-blended gasoline must be in accord with any levels as established by the environmental protection agency of the United States department of the interior. Any blender or wholesaler distributing a gasoline containing methanol which has been granted an exemption or waiver by the environmental protection agency in reference to this section shall inform the department of environmental quality and the retailer of the blended product of this exemption or waiver in writing prior to distribution.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-13-02, 23.1-13-12; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-13-12; S.L. 2017, ch. 199, § 28

33.1-34-01-02. Labeling specifications.

1. **Posted octane rating.** The posted octane rating of a gasoline or alcohol-blended gasoline is the mathematical average of the octane as determined by the ASTM D2699 Research Method engine test and the octane as determined by the ASTM D2700 Motor Method engine test.

- a. The posted octane rating must be conspicuously placed on the dispenser's front panel in a type not less than one inch [2.54 centimeters] high.
- b. Only gasoline or alcohol-blended gasoline with a posted octane rating greater than or equal to ninety-one may be labeled "premium", "supreme", or "high test".
- c. Only gasoline or alcohol-blended gasoline with a posted octane rating greater than or equal to eighty-nine may be labeled "super", "plus", or "midgrade".
- d. Octane of unleaded and leaded gasoline or alcohol-blended gasoline must be at least eighty-seven. Unleaded gasoline or alcohol-blended gasoline means that gasoline or alcohol-blended gasoline produced without the intentional use of any lead additive and which contains not more than five one-hundredths grams of lead per gallon and not more than five one-thousandths grams of phosphorus per gallon. Leaded gasoline or alcohol-blended gasoline means gasoline or alcohol-blended gasoline which contains more than five one-thousandths grams of phosphorus per gallon, or any fuel to which lead or phosphorus is intentionally added.

2. Alcohol-blended gasolines.

- a. All gasoline or alcohol-blended gasoline sold or offered for sale containing ethanol, methanol, or cosolvent alcohol, or any combination thereof, shall be labeled with the conventional name or names of the alcohol contained in the gasoline or alcohol-blended gasoline if the gasoline or alcohol-blended gasoline consists of one percent or more by volume of any alcohol or combinations of alcohols. The label must be on any price advertising and the dispenser's front panel next to the gasoline or alcohol-blended gasoline grade label in a position that is clear and conspicuous from the driver's position. The dispensing unit label shall also identify the maximum percentage by volume, to the nearest whole percent, of ethanol, methanol, or cosolvent alcohol, or any combination thereof contained in the gasoline or alcohol-blended gasoline. If gasoline or alcohol-blended gasoline consists of one percent or more by volume of ethanol, the dispensing unit shall bear the ethanol promotion and information council label or logo.
- b. Maximum percentage of methanol and cosolvent alcohol must both be conspicuously displayed or labeled if the product contains three percent or more by volume of methanol.
- c. No person may sell gasoline or alcohol-blended gasoline in any manner, including coloring, which shall deceive, tend to deceive, or has the effect of deceiving the purchaser as to grade or type.
- d. Suppliers of alcohol-blended gasoline to retail service stations or to other resuppliers must provide to the retailer or other reseller an invoice or delivery ticket indicating to within one percentage point the specific content by volume of any alcohol contained if the gasoline or alcohol-blended gasoline consists of one percent or more by volume of any alcohol or combinations of alcohols. This information must be made readily available to the consumer of an alcohol-blended gasoline.

3. **Gasoline grade designations.** All gasolines or alcohol-blended gasolines sold or offered for sale must bear on the dispenser's front panel and on any price advertising the appropriate leaded or lead-free grade designation. This label must be posted in a position that is clear and conspicuous from the driver's position.

4. **Biodiesel.**

a. Biodiesel and biodiesel blends shall be identified by the capital letter "B" followed by the numerical value representing the volume percentage of biodiesel fuel.

b. Each retail dispenser of biodiesel blend containing more than five percent and up to and including twenty percent biodiesel shall be labeled with either the capital letter "B" followed by the numerical value representing the volume percentage of biodiesel fuel and ending with "biodiesel blend" or the phrase "biodiesel blend between 5% and 20%" or similar words.

c. Each retail dispenser of biodiesel or biodiesel blend containing more than twenty percent biodiesel shall be labeled with the capital letter "B" followed by the numerical value representing the volume percentage of biodiesel fuel and ending with either "biodiesel" or "biodiesel blend".

d. Suppliers of biodiesel or biodiesel blend to retail service stations or to other resuppliers must provide to the retailer or reseller a declaration of the volume percent biodiesel on an invoice or delivery ticket. This documentation is for dispenser labeling purposes only. It is the responsibility of any potential blender to determine the amount of biodiesel in the diesel fuel prior to blending.

33.1-35-01-01. Definitions.

For the purpose of this chapter, the following definitions apply:

1. "Act" means the federal Water Pollution Control Act of 1972, Public Law 92-500, as amended by the Water Quality Act of 1987 [Pub. L. 100-4; 33 U.S.C. 1251-1376].
2. "Bank of North Dakota" means the Bank of North Dakota as created by North Dakota Century Code chapter 6-09.
3. "Public finance authority" means the North Dakota public finance authority created by North Dakota Century Code chapter 6-09.4, or a public body and instrumentality of the state which succeeds to the powers, duties, and functions of the bond bank.
4. "Construction" means the erection, acquisition, alteration, reconstruction, improvement, or extension of wastewater treatment works or section 319 projects, including preliminary planning to determine the economic feasibility; the engineering, architectural, legal, fiscal, and economic investigations and studies; surveys; designs; plans; procedures; and other similar action necessary in the building and inspection supervision of the construction of wastewater treatment works or section 319 projects.
5. "Department" means the department of environmental quality.

6. "Director" means the director of the division of municipal facilities, the department of environmental quality.
7. "Facility plan" means an engineering evaluation of present and future treatment needs, an evaluation of several treatment alternatives, and the selection and justification of a final treatment alternative.
8. "Financial agent" means the North Dakota public finance authority or such other agent as the department selects.
9. "Financial assistance" means the lending of funds from the state revolving fund by the department and its financial agent to a political subdivision through the purchase of its bond, note, warrant, or other evidence of indebtedness issued to finance or refinance all or part of the construction of wastewater treatment works or section 319 projects. Financial assistance also includes all other forms of eligible assistance under the Act.
10. "Intended use plan" means a document prepared annually by the department on behalf of the state which provides assurances and specific proposals, including a list of potential projects eligible for assistance from the state revolving fund and a federal payment schedule.
11. "Political subdivision" means any municipality, intermunicipal or interstate agencies, or any other entity constituting a political subdivision under the laws of North Dakota.
12. "Project cost" means the cost of construction of wastewater treatment works and the capitalized interest necessary for the construction financing.
13. "Section 319 project" means a project authorized and undertaken in conformance with section 319 of the Act [33 U.S.C. 1329] that uses some form of land treatment, watershed treatment, or best management practices to improve water quality.
14. "State revolving fund" means the state water pollution control revolving loan fund as established in North Dakota Century Code chapter 61-28.2.
15. "Wastewater treatment works" means a facility used for the disposal of pollutants which may include wastewater treatment facilities, infiltration or inflow correction, major sewer system rehabilitation, new collector sewers, new interceptors and appurtenances, combined sewer correction, and storm sewer projects.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-02. Eligibility.

1. A political subdivision is eligible for financial assistance under the state revolving fund if its project is included in the current intended use plan.
2. Loans may be made only to political subdivisions that:
 - a. Demonstrate tangible financial capability to assure sufficient revenues to operate and maintain the facility for its useful life and to repay the loan.
 - b. Establish an acceptable method of repayment of the loan.
 - c. Agree to maintain financial records in accordance with governmental accounting standards and to conduct an annual audit of the facility's financial records.

d. Provide such assurances as are required by the Act and as reasonably requested by the department.

e. Provide a department-approved facility plan.

3. Financial assistance may be awarded for projects included in the intended use plan for the following activities:

a. The financing or refinancing of construction or other assistance of publicly owned wastewater treatment works as defined in section 212 of the Act that appear on North Dakota's project priority list and included in the intended use plan. This includes planning, design, and construction of storm sewers after September 30, 1990; or

b. Implementation of a nonpoint source pollution control management program under section 319 of the Act.

c. Operation and maintenance manual preparation and operator startup training.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-03. Refinancing.

Loans may be made to political subdivisions to refinance existing debt obligations if they were incurred and building was initiated after March 7, 1985, and if the debts were used to finance projects identified in the intended use plan. In addition, the projects must satisfy the statutory requirements contained in section 602(b)(6) of the Act.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-04. Intended use plan.

The department will annually prepare a wastewater treatment works construction priority list according to the department's review and point award. All proposed wastewater treatment works must be on the priority list in order to be funded under the state revolving fund program. It is not necessary for section 319 projects to be on the priority list, but they must appear in the intended use plan. The priority list also must be incorporated into the annual intended use plan.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-05. Annual public hearing on proposed intended use plan.

Upon tentative completion of the annual revision of the intended use plan, the department shall conduct a hearing to receive oral and written comments from the public on the proposed intended use plan. At least thirty calendar days' notice must be given of the public hearing in at least two newspapers of general circulation in different parts of the state. Written comments must be accepted during this period. After all comments are received, the department shall compile and adopt the final list at the hearing.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-06. Emergency amendment of intended use plan.

The department may add a project to the intended use plan, by emergency amendment, if the proposed project will alleviate or mitigate a dire physical threat to the health and safety of persons or if the proposed project is necessary to take advantage of an unexpected economic development opportunity which will be lost unless action is taken. Economic opportunity considerations will not be the primary focus of any state revolving fund project. The primary considerations in every project will be public health, water quality, and public safety issues.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-07. Project priority list removal procedure.

The department may remove a project from the intended use plan if the project has been fully funded or the project is no longer eligible under the priority system or the political subdivision responsible for the project has expressed in writing no interest in the program.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-08. Project bypass procedure.

The department may bypass the priority established for funding as follows:

1. The political subdivision being bypassed provides to the state a written statement endorsing the bypass; or
2. The political subdivision being bypassed fails to submit information within the timeframe required by written notice from the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-09. Deadline for application.

Project assistance applications may be submitted at any time by eligible political subdivisions.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-10. Reserve for section 319 nonpoint source management projects.

The department may set aside a portion of the available funds for section 319 nonpoint source projects for the first six months of each fiscal year. The amount of the set-aside must be determined by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-11. Application procedure.

The application procedure will be designed by the department and approved by the environmental protection agency to include all necessary requirements as contained in the Act and applicable federal regulations, state laws, and rules. The application procedure will be contained in the state revolving fund procedures handbook.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-12. Loan agreement.

1. The loan agreement will be a legally binding contract between the financial agent and the political subdivision. The agreement will contain general conditions and may, if necessary, contain special conditions.
2. The general conditions of a loan agreement will include the requirements of laws, rules, and policies of the state of North Dakota.
3. The special conditions of the loan agreement will relate to specific provisions unique for an individual project including time schedules and performance requirements and such other requirements as are reasonably requested by the financial agent.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-13. Release.

By its acceptance of the loan agreement, the political subdivision releases and discharges the department, its officers, agents (including its financial agent), and employees from all liabilities, obligations, and claims arising out of the project work under the loan agreement.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-14. Loan amendments.

The loan agreement may be amended in writing according to the terms of the respective loan agreement including an amendment when the amount of loan funds necessary to pay project costs are greater than the original amount in the loan agreement.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-15. Inspections.

During the building of the project, the political subdivision shall provide inspection services sufficient to ensure that the project is constructed in accordance with approved plans and specifications. The department will conduct interim project inspections to determine compliance with approved plans and specifications and loan agreement, as appropriate.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-16. Loan default.

The political subdivision must agree that upon default in the payments of principal and accrued interest on the loan or in the performance of any covenant or condition of the loan agreement, the department, through its financial agent, may at its option, do one or more of the following:

1. Declare immediately due and payable the entire principal amount then outstanding and the accrued interest;
2. Incur and pay reasonable expenses, through the account of the political subdivision, for repair, maintenance, and operation of the facility, and other expenses necessary to cure the cause of default; or
3. Proceed to enforce payment of such interest or principle or other amount then due and payable pursuant to applicable provisions of law or loan agreement.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-17. Financing method.

1. A loan shall be made for a period of time not to exceed thirty years or the design life of the wastewater treatment works facility, whichever is shorter.
2. Interest on the loan accrues and must be paid as provided in the loan agreement.
3. All repayment schedules must be established by the terms and conditions of the loan agreement. The repayment by the political subdivision of the loan will begin within one year after the project is capable of operation or:
 - a. For special assessment warrants, upon a date which is sufficient to allow time for special assessments to be spread in the tax levy year for the political subdivision; and
 - b. For revenue bonds, at the time specified in the respective loan agreement which shall reasonably attempt to begin after the project is in full operation.

In all cases, repayments must begin within one year after the project is capable of operation.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-18. Interest rate determination.

The interest rate on a loan will be determined by the department with consultation from the financial agent and must be based on the combined costs related to the total financial state revolving fund loan package. The interest rates on individual loans may vary; however, the rate will not exceed the interest rate generally available for a comparable financing at the time the rate is established.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-19. Amount of financial assistance.

A political subdivision may apply for any amount of financial assistance. The department may award less than the amount requested in the application. In determining the financial assistance for

each political subdivision, the department may consider the proposed construction and the proposed project costs of such activities, the resources available to the department within the state revolving fund, and the ability to carry out the proposed project, including the ability to repay the financial assistance.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-20. Files and records.

All files and records pertaining to the project must be maintained by the political subdivision throughout the project and made accessible to the department and the environmental protection agency and their agents according to state and federal law. These files and records must be retained by the political subdivision for at least three years beyond the term of the loan.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

33.1-35-01-21. Reservation of rights.

1. Nothing in this chapter prohibits a political subdivision from requiring more assurances, guarantees, indemnity, or other contractual requirements from any party performing project work.
2. Nothing in this chapter affects the department's right to take remedial action, including administrative enforcement action and actions for breach of contract against a political subdivision that fails to carry out its obligations under this chapter. Any remedial action contemplated by the department or its financial agent will be coordinated with the best interests of the state revolving fund.
3. Review or approval of facility plans, design drawings and specifications, or other documents by or for the department, does not relieve the political subdivision of its responsibility to properly plan, design, build, and effectively operate and maintain the treatment works as required by state or federal law, permits, the loan agreement, and good management practices. The department is not responsible for increased costs resulting from defects in the plans, design drawings and specifications, or other subagreement documents.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.2-01; S.L. 2017, ch. 199, § 70

TITLE 69.5
RACING COMMISSION, NORTH DAKOTA

OCTOBER 2018

CHAPTER 69.5-01-08

69.5-01-08-04. Calculation and distribution of pools.

1. **General.** The only pari-mutuel wagering pools permitted are, those designated in the association of racing commissioners international model rules of racing version 6.0, rules ARCI-004-105 part I, A through X, and pari-mutuel plus, pick 1-2-3, pick 1-2-3-4-5, 123racing Pick-n Wager©, Tote-X© win, and tournament wager. In each pool there must be a separate and independent calculation and distribution. From each pool there must be deducted by each association or licensee the commissions as provided by state law. The remainder of the moneys in the pool must be distributed as payoff to ticketholders as set out therein.
2. **Pari-mutuel plus.**
 - a. The pari-mutuel plus pool requires selection of the order of any designated number of finishers, in their exact positions, in designated contests. The service provider must obtain written approval from the commission concerning the scheduling of the pari-mutuel plus contests and designate the percentage of the amount of carryover. The pari-mutuel plus pool consists of a pool and jackpot carryover and must have predetermined percentages set aside for the pool designated to winners who selected the designated number of finishers. The pool will be distributed to the winners who selected the finishers, in their exact positions, and they will then be eligible for the random drawing of the randomly generated numbers assigned to the wager's ticket to be drawn for the awarding of the jackpot pool. To be awarded the jackpot pool, the winner of the pool must have the matching randomly generated number on the person's ticket that is drawn randomly from the group of designated numbers. Any changes to the approved pari-mutuel plus format require prior approval from the commission.
 - b. Unless otherwise stated, the major share of the net pari-mutuel plus pool shall be distributed as a single price pool to those who selected the designated number of finishers, in exact positions, based upon the official order of finish.
 - c. The pari-mutuel plus pool shall be apportioned with no minor pool and carryover by choosing the designated number of horses in exact order of finish. The service provider must make a written request to the commission for approval to offer consolation and minor pools in the pari-mutuel plus pool, and be granted approval before implementation.
 - (1) The net pari-mutuel plus pool shall be distributed in accordance with the method for distributing the major share to all winners who selected the designated number of finishers, in exact positions.

- (2) If there are no wagers qualifying for the major share, the net major share shall be added to the carryover.
- d. If there is a dead heat in the pari-mutuel plus pool involving:
 - (1) Contestants representing the same betting interest, the pool will be distributed as if no dead heat occurred.
 - (2) Contestants representing two or more betting interests, the pool will be distributed as a single price pool with each winning wager receiving an equal share of the profit.
- e. The pari-mutuel plus pool shall be canceled and all pari-mutuel plus wagers for the individual performance shall be refunded under the following conditions:
 - (1) If the pari-mutuel plus contests are canceled or declared no contest prior to the first pari-mutuel plus contest being declared official, the entire pari-mutuel plus pool shall be refunded on wagers for those contests.
 - (2) If all remaining pari-mutuel plus contests are canceled or declared no contests after the first pari-mutuel plus contest is declared official, the entire net pari-mutuel plus pool, but not the pari-mutuel plus carryover, shall be distributed as a single price pool to wagers selecting the winning combination in the pari-mutuel plus contest. However, if there are no wagers selecting the winning combination in the pari-mutuel plus contest, the entire pool shall be refunded on wagers for those contests.
- f. Mandatory distribution.
 - (1) The service provider must submit a written request to the commission for permission to distribute the pari-mutuel plus carryover on a specific performance. The request to the commission shall contain justification for the mandatory distribution, an explanation of the benefit to be derived, and the intended date and performance of the distribution. The service provider must notify the commission at least ten days prior to implementation. If the pari-mutuel plus pool cannot be distributed during a designated performance, the mandatory distribution shall resume on the next approved mandatory distribution performance.
 - (2) If the pari-mutuel plus carryover is designated for distribution on a specific date and performance, and if there are no wagers qualifying for the major share, which is sixty-five percent of the pool, then the following precedence shall be followed in determining the winning wagers for the pari-mutuel plus pool and carryover pool:
 - (a) The major share and the pari-mutuel plus carryover shall be distributed as a single price pool to those who selected the designated number of finishers, in exact positions, based upon the official order of finish, and who have received a matching random number selected through a drawing of one of a designated group of numbers, minus the service provider or racetrack take-out.
 - (b) The major share and the pari-mutuel plus carryover shall be distributed as a single price pool to those who correctly selected the most finishers, in their exact positions, based upon the official order of finish.
- g. If for any reason, the pari-mutuel plus carryover must be held over to the corresponding pari-mutuel plus pool of a subsequent pari-mutuel plus contest, the carryover shall be deposited in an interest-bearing account approved by the commission. The pari-mutuel plus carryover plus accrued interest shall then be added to the pari-mutuel plus pool of the following meet on a date and performance so designated by the commission.

- h. With written approval of the commission, the service provider may contribute to the pari-mutuel plus carryover a sum of money to be designated by the service provider or the racetrack. Moneys contributed to the pool may be withdrawn when the pool accumulation totals the moneys contributed.
 - i. Providing information to any person regarding covered combinations, amounts wagered on specific combinations, number of tickets sold, or number of live tickets remaining is strictly prohibited. This shall not prohibit necessary communication between totalizator and pari-mutuel department employees for processing of pool data.
 - j. The service provider may suspend previously approved pari-mutuel plus wagering with prior approval from the commission. Any carryover shall be held until the suspended pari-mutuel plus wagering is reinstated. A service provider may request approval of the pari-mutuel plus wager or a separate pari-mutuel plus wagering pool for specific performances.
3. **Pick 1-2-3 pool.** The pick 1-2-3 pool requires selection of the first three finishers, irrespective of order, in each of three designated contests. Payment of the ticket may be made only to the purchaser who has selected the qualifying finishers in three designated races.
- a. Pick 1-2-3 requires a selection of a combination of either nine, eight, seven, or six, first, second, and third place finishers, in any order, in three consecutive races that are designated as pick 1-2-3 races to qualify for a payout. There will be no monetary award for the winning combination for winning the first pick 1-2-3 race or any combination of five or less qualifiers in each of the three races.
 - b. The service provider must obtain written approval from the commission concerning the scheduling of the pick 1-2-3 contests, the designation of qualifying races, and the cap to be set on the carryover. Any changes to the pick 1-2-3 wager format requires prior approval from the commission.
 - c. The pick 1-2-3 pool and carryover, if any, shall be distributed as a single price pool to those who selected the winning combination of the top three finishers in three races, or a decreasing scale of qualifiers eight of nine, seven of nine, or six of nine, in the following payout method:
 - (1) Fifty percent of net pool and accumulated jackpot divided between players selecting nine of nine.
 - (2) Thirty percent of net pool divided between players selecting eight of nine.
 - (3) Fifteen percent of net pool divided between players selecting seven of nine.
 - (4) Five percent of net pool divided between players selecting six of nine.
 - (5) If there are no winning wagers for the nine of nine winners, then fifty percent of the net pool carryover will be added to the next pick 1-2-3 race in the race meet schedule.
 - (6) If there are no winning wagers for the eight of nine winners, then thirty percent of the net pool carryover will be added to the next pick 1-2-3 race in the race meet schedule.
 - (7) If there are no winning wagers for the seven of nine winners, then fifteen percent of the net pool carryover will be added to the next pick 1-2-3 race in the race meet schedule.

- (8) If there are no winning wagers for the six of nine winners, then five percent of the net pool carryover will be added to the next pick 1-2-3 race in the race meet schedule.
 - d. Dead heats. In the event of a dead heat in any of the position pick 1-2-3 contests based upon the official order of finish for the purposes of determining whether a wager correctly selected the finishers in exact position, contestants in a dead heat are deemed to jointly occupy both or all positions in the dead heat. For example, if five and six finish in a dead heat for first, then a selection of five for either first or second is correct and a selection of six for either first or second is also correct.
 - e. Scratches.
 - (1) If, due to a late scratch, the number of betting interests in a contest of the pick 1-2-3 pool is reduced to fewer than six contestants, for the purposes of the pick 1-2-3 pool only, such contests shall be declared no contest and the pick 1-2-3 pool shall be declared a canceled contest.
 - (2) Should a betting interest in any contest of the pick 1-2-3 pool be scratched or excused from the contest, no more wagers shall be accepted selecting that scratched contestant.
 - (3) Scratch contestant losers:
 - (a) The scratch contestant is deemed to be a loser, for the purposes of the pick 1-2-3 pool only.
 - (b) Other correctly selected finishers in the pick 1-2-3 shall continue to count toward winning, as usual.
 - f. Canceled contests.
 - (1) If any of the pick 1-2-3 contests are canceled or declared no contest prior to the first pick 1-2-3 contest being declared official, the daily pick 1-2-3 pool shall be refunded on the pick 1-2-3 wagers for those contests.
 - (2) If all remaining pick 1-2-3 contests are canceled or declared no contest after the first pick 1-2-3 contest is declared official, the entire net pick 1-2-3 pool, but not the pick 1-2-3 carryover, shall be distributed as a single price pool to wagers selecting the winning combination in the first pick 1-2-3 contest. However, if there are no wagers selecting the winning combination in the first pick 1-2-3 contest, the daily pick 1-2-3 pool shall be refunded on pick 1-2-3 wagers for those contests.
 - g. Mandatory distribution. The service provider must submit a written request for permission to distribute the pick 1-2-3 carryover on a specific performance to the commission. The request shall contain justification for the mandatory distribution, an explanation of the benefit to be derived, and the intended date and performance for the distribution. The service provider must notify the commission at least ten days prior to implementation. If the pick 1-2-3 pool cannot be distributed during a designated performance, the mandatory distribution shall resume on the next approved mandatory distribution performance.
4. **Pick 1-2-3-4-5 pool.** Pick 1-2-3-4-5 requires selection of the first five finishers, irrespective of order, in each of three designated contests. Payment of the ticket may be made only to the purchaser who has selected the qualifying finishers in three designated races.

- a. Pick 1-2-3-4-5 requires the selection of a combination of either fifteen, fourteen, thirteen, or twelve first, second, third, fourth, and fifth place finishers, in any order, in three consecutive races that are designed as pick 1-2-3-4-5 races to qualify for a payout. There will be no monetary award for the winning combination for winning the first pick 1-2-3-4-5 race or any combination of eleven or less qualifiers in each of the three races.
- b. The service provider must obtain written approval from the commission concerning the scheduling of the pick 1-2-3-4-5 contests, the designation of qualifying races and the cap to be set on the carryover. Any changes to the pick 1-2-3-4-5 wager format require prior approval from the commission.
- c. The pick 1-2-3-4-5 pool and carryover, if any, shall be distributed as a single price pool to those who selected the first five finishers in three races or a decreasing scale of qualifiers fifteen of fifteen, fourteen of fifteen, thirteen of fifteen, or twelve of fifteen in the following payout method:
 - (1) Fifty percent of net pool and accumulated jackpot divided between players selecting fifteen of fifteen.
 - (2) Thirty percent of net pool divided between players selecting fourteen of fifteen.
 - (3) Fifteen percent of net pool divided between players selecting thirteen of fifteen.
 - (4) Five percent of net pool divided between players selecting twelve of fifteen.
 - (5) If there are no winning wagers for the fifteen of fifteen winners, then fifty percent of the net pool carryover will be added to the next pick 1-2-3-4-5 race in the race meet schedule.
 - (6) If there are no winning wagers for the fourteen of fifteen winners, then thirty percent of the net pool carryover will be added to the next pick 1-2-3-4-5 race in the race meet schedule.
 - (7) If there are no winning wagers for the thirteen of fifteen winners, then fifteen percent of the net pool carryover will be added to the next pick 1-2-3-4-5 race in the race meet schedule.
 - (8) If there are no winning wagers for the twelve of fifteen winners, then five percent of the net pool carryover will be added to the next pick 1-2-3-4-5 race in the race meet schedule.
- d. Dead heats. In the event of a dead heat in any of the position pick 1-2-3-4-5 contests based upon the official order of finish for the purposes of determining whether a wager correctly selected the finishers in exact position, contestants in a dead heat are deemed to jointly occupy both or all positions in the dead heat. For example, if five and six finish in a dead heat for first, then a selection of five for either first or second is correct and a selection of six for either first or second is also correct.
- e. Scratches.
 - (1) If, due to a late scratch, the pick 1-2-3-4-5 pool is reduced to fewer than six contestants, for the purposes of the pick 1-2-3-4-5 pool only, such contests shall be declared no contest and the pick 1-2-3-4-5 pool shall be declared a canceled contest.

- (2) Should a betting interest in any contest of the pick 1-2-3-4-5 pool be scratched or excused from the contest, no more wagers shall be accepted selecting that scratched contestant.
 - (3) Scratch contestant losers:
 - (a) The scratch contestant is deemed to be a loser, for the purposes of the pick 1-2-3-4-5 pool only.
 - (b) Other correctly selected finishers in the pick 1-2-3-4-5 shall continue to count toward winning, as usual.
 - f. Canceled contests.
 - (1) If any of the pick 1-2-3-4-5 contests are canceled or declared no contest prior to the first pick 1-2-3-4-5 contest being declared official, the entire pick 1-2-3-4-5 pool shall be refunded on the pick 1-2-3-4-5 wagers for those contests.
 - (2) If all remaining pick 1-2-3-4-5 contests are canceled or declared no contest after the first pick 1-2-3-4-5 contest is declared official, the entire net pick 1-2-3-4-5 pool, but not the pick 1-2-3-4-5 carryover, shall be distributed as a single price pool to wagers selecting the winning combination in the first pick 1-2-3-4-5 contest. However, if there are no wagers selecting the winning combination in the first pick 1-2-3-4-5 contest, the entire pick 1-2-3-4-5 pool shall be refunded on pick 1-2-3-4-5 wagers for those contests.
 - g. Mandatory distribution. The service provider must submit a written request for permission to distribute the pick 1-2-3-4-5 carryover on a specific performance to the commission. The request shall contain justification for the mandatory distribution, an explanation of the benefit to be derived, and the intended date and performance for the distribution. The service provider must notify the commission at least ten days prior to implementation. If the pick 1-2-3-4-5 pool cannot be distributed during a designated performance, the mandatory distribution shall resume on the next approved mandatory distribution performances.
 - h. Coupled entries and mutuel fields. Coupled entries and mutuel fields are not permitted in pick 1-2-3-4-5 contests.
5. **123racing Pick-n Wager**®.
- a. The 123racing Pick-n Wager is a separate pari-mutuel pool wager established by the association or licensee on a designated number of races. The gross pool consists of the total amount wagered for the multiple race bet. Winning wagers are determined by the highest points totals earned after all rounds have been completed, based on cumulative mythical two dollar win, place, show wagers (a fantasy two dollar across the board wager), on one betting interest per wagering race. It is not a parlay and has no connection with or relation to other pools conducted by the association or licensee other than the utilization of live race payouts as a means of calculating players' fantasy points.
 - b. A valid 123racing Pick-n Wager ticket shall be evidence of a binding contract between the holder of the ticket and the association or licensee, and shall constitute an acceptance of 123racing Pick-n Wager provisions and rules contained in this chapter.
 - c. A licensee may establish a minimum and maximum number of entries per tournament. If the minimum number of entries are not received, the licensee may cancel and refund all wagers in that tournament. The minimum entries for each tournament must be published in advance of the opening of the tournament.

d. A licensee may limit the number of entries per player. The maximum entries per player for each tournament must be published in advance of the opening of the tournament.

e. A 123racing bet may not be retracted once it has been purchased.

d.f. A 123racing Pick-n Wager may be given a distinctive name by the association conducting the meeting or licensee, subject to commission approval, and existing license, copyrights, and patents.

e.g. 123racing Pick-n Wagers shall be conducted as follows:

- (1) Each player wagers into the gross pool and selects one betting interest per wagering race.
- (2) The number of races that complete the wager varies depending on the specifics of "tournament", as determined by the host racing association or licensee, but shall include no less than four races.
- (3) Each round of the "tournament" consists of a mythical win, place, show wager on one betting interest per race.
- (4) Official program numbers must be used for all wagers. All players are responsible for ensuring each wager is placed correctly.
- (5) Live race payouts are used to calculate players' fantasy points totals.
- (6) As part of the announced tournament rules, and as approved by the commission, the host racing association or licensee may opt to cap the maximum odds on all fantasy payouts.
- (7) Each player's fantasy points will be reflected in their cumulative fantasy points totals at the end of each race.
- (8) Following a race being declared "official", the actual pari-mutuel pool payout for a fantasy across-the-board wager will be translated to points and added to a player's cumulative fantasy points totals. The host racing association or licensee may specify a maximum number of points that can be accumulated by any one wager per contest race subject to commission approval.
- (9) Of the bettors, the players with the highest fantasy points totals after the last leg are the "winners".
- (10) A portion of the net pari-mutuel pool as determined in advance of the contest by the host racing association or licensee and approved by the commission, designated the "major net pool" is distributed in accordance with subdivision i.
- (11) In addition to the major net pool, a host racing association or licensee may designate in advance of the contest and as approved by the commission a portion of the net pari-mutuel pool for carryover as follows:
 - (a) A "perfect pick carryover pool" is carried over to subsequent contests until a bettor successfully selects the winning runners of all designated contests in the current contest, in which case the perfect pick carryover pool will be equally divided between the bettors successfully selecting every winning runner.
 - (b) A "place carryover pool" is carried over to subsequent contests until a bettor successfully selects runners finishing first or second in all designated contests in the current contest, in which case the place carryover pool will be equally

divided between the bettors successfully selecting runners finishing first or second in all designated contests.

- (c) A "show carryover pool" is carried over to subsequent contests until a bettor successfully selects runners finishing first, second, or third in all designated contests in the current contest, in which case the show carryover pool will be divided between the bettors successfully selecting runners finishing first, second, or third in all designated contests.
- (d) A host racing association or licensee may designate a contest on which a perfect pick carryover pool, place carryover pool, or show carryover pool is terminated and fully distributed to the best performing bettor or bettors in that contest.

f.h. A fantasy wager on a coupled entry or field is considered a wager on the remaining part of the coupled entry or field as determined by the rules of the live corresponding race.

g.i. If a selection in any race designates a betting interest that was scratched, excused, or determined by the stewards to be a nonstarter in the race, the fantasy wager will be on the tote favorite in that race.

h.j. Points for dead heats will be determined by the payouts of the live corresponding race.

i.k. The takeout and its distribution for the 123racing Pick-n Wager shall be set and approved by the host regulatory commission, but shall include the distribution of the negotiated proprietary fee.

j.l. All tickets shall be refunded if all races comprising the 123racing Pick-n Wager are canceled or declared as a no contest. The entire pool shall be refunded if less than four races are completed and if four or more races are completed the net pool shall be distributed pursuant to subdivision l.

k.m. After wagering closes on the first race comprising the 123racing Pick-n Wager, the tournament shall be deemed closed and no entry ticket shall be sold, exchanged, or canceled. No person shall be determined to hold a winning 123racing Pick-n Wager ticket until the last designated race has been declared official.

l.n. In accordance with the following provisions, the host racing association or licensee shall distribute the net pool to the holders of valid tickets that correctly selected the combination of first-place, second-place, and third-place place finishers that generated the top three highest points totals through the designated races or rounds comprising the 123racing Pick-n Wager as follows, unless otherwise approved by the host racing commission:

- (1) Sixty percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holder of the pari-mutuel ticket with the wager which has the highest fantasy points totals after all races have been completed.
- (2) Thirty percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holder of the pari-mutuel ticket with the wager which has the second-highest points totals after all races have been completed.
- (3) Ten percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holder of the pari-mutuel ticket with

the wager which has the third-highest points totals after all races have been completed.

- (4) If there are two pari-mutuel wagers that equal the highest points totals after all races have been completed, ninety percent of the net amount in the pari-mutuel pool subject to distribution shall be distributed to those ticket holders. Ten percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holders of pari-mutuel tickets with wagers which have the third-highest points totals after all races have been completed.
- (5) If there are three pari-mutuel wagers that equal the highest points totals after all races have been completed, one hundred percent of the net amount in the pari-mutuel pool subject to distribution shall be distributed to those ticket holders.
- (6) If one pari-mutuel ticket wager scores the highest points totals, and two or more pari-mutuel tickets wagers equal the second-highest points totals after all races have been completed, sixty percent of the net amount in the pari-mutuel pool subject to distribution shall be distributed to the highest-scoring ticket holder, and forty percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holders of pari-mutuel tickets which have the second-highest points totals after all races have been completed.
- (7) If one pari-mutuel ticket wager scores the highest points totals, one pari-mutuel ticket wager scores the second-highest points totals, and two or more pari-mutuel ticket wagers score the third-highest points totals after all races have been completed, then sixty percent of the net amount in the pari-mutuel pool subject to distribution shall be distributed to the highest-scoring ticket holder, thirty percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the second-highest scoring ticket holder, and ten percent of the net amount in the pari-mutuel pool subject to distribution among winning ticket holders shall be distributed to the holders of pari-mutuel tickets which have the third-highest points totals.

m.o. Should circumstances occur which are not addressed by these rules, questions arising thereby shall be resolved in accordance with general pari-mutuel practice. Decisions regarding distribution of the 123racing Pick-n Wager pool made by the commission are final.

6. **Tote-X win.**

- a. The Tote-X wagering platform uses a conventional pari-mutuel betting system and a separate pari-mutuel pool to allow ticket holders to wager among themselves on the results of individual races. However, at the time the bet is placed on a selected race through the Tote-X platform, the customer is allocated a fixed number of redeemable units ("RUs") based upon the then-current odds of the horse being wagered upon using proprietary algorithms. The algorithms are applied uniformly to all wagers in the pool. These RUs are then held within the Tote-X platform specific to that bettor. When the odds of the horses in that race change after the initial wager is placed, the value of the issued RUs fluctuates in accordance with the change in odds. The customer may then choose to redeem all or part of their RUs for the current cash value of the RUs at any time prior to the close of wagering on the selected race. The Tote-X platform calculates the final pool by combining all bets made into the Tote-X win pool on a given event and then deducting commission, refunds, redemption payouts, and applicable taxes and fees.
- b. For each Tote-X win pool:

- (1) All bets are placed into the Tote-X win pool for a specific race.
- (2) A valid Tote-X ticket or unique electronic identifier shall be evidence of a binding contract between the holder of the ticket and the host racing association or licensee, and shall constitute an acceptance of Tote-X provisions and rules contained in this chapter.
- (3) Official program numbers must be used for all Tote-X wagers. All players are responsible for ensuring each wager is placed correctly.
- (4) The odds calculations for Tote-X are performed on the same basis as for a conventional pari-mutuel pool. In the Tote-X platform, the proprietary mathematical algorithms will then automatically recalculate the RU values for each horse after each transaction or batch of transactions (bet or redemption), reflecting the change in the current Tote-X pool odds.
- (5) The Tote-X proprietary algorithms shall be applied uniformly to all wagers in the pool.
- (6) As approved by the commission, the host racing association or licensee may opt to cap the maximum odds on all Tote-X payouts.
- (7) A Tote-X wager on a coupled entry or field is considered a wager on the remaining part of the coupled entry or field as determined by the rules of the live corresponding race.
- (8) The customer may choose to redeem all or part of their RUs for their then-current value at any time prior to the close of the relevant pool if a horse or combination of horses has not been excused by the stewards or declared a nonstarter and the pool operator has not otherwise suspended the capacity for ticket holders to redeem their wagers.
- (9) A Tote-X wager may not be rescinded once it has been purchased other than through proper redemption of RUs in accordance with these rules.
- (10) A redemption requires the customer to surrender all or part of the underlying wager. In the event of a redemption of all RUs issued for a specific wager, the original wager shall be surrendered in its entirety. In the event of a partial redemption of the RUs issued for a specific wager, the original wager will be surrendered in proportion to the percentage of RUs being redeemed;
- (11) Subsequent to the deduction from the pool of each redemption payout, the remainder of the funds in the pool shall constitute the new value of all RUs which are available for subsequent redemptions. Thereafter, those RUs which are not redeemed prior to the closure of the pool constitute the net pool for distribution as payoff to ticket holders of wagers following a race being declared "official".
- (12) Once the Tote-X win pool is closed prior to the race, ticket holders may no longer redeem any of their RUs.
- (13) Each customer holding a successful bet after the race is declared "official" is entitled to collect according to the relevant final odds.
- (14) From each redemption and final pool payout a commission shall be deducted by the host racing association or licensee in accordance with state law.

- (15) The commission and its distribution for the Tote-X wager shall be approved by the commission.
- c. Notwithstanding any language to the contrary, the funds remaining in the Tote-X win pool following the payment of redemptions prior to the closure of the pool constitute the net pool for the purpose of distribution as payoff to winning ticket holders.
 - d. Any funds remaining after the closing of the Tote-X win pool will be distributed as payoff to the winning ticket holders in the same manner as a win pool pursuant to subsection 2.
 - e. Notwithstanding subsection 20 or any language to the contrary contained in this chapter, if, after wagering has commenced on a race, a horse not coupled with another as a betting interest is excused by the stewards or declared a nonstarter, an amount based on the then-current odds as represented by the current value of the RUs on such horse shall be deducted from the pools and refunded upon presentation and surrender of affected pari-mutuel tickets or unique electronic identifier. If more than one horse represents a single betting interest by reason of coupling as a mutuel entry or mutuel field, such single betting interest being the sole subject of a wager, then there may be no refund unless all of the horses representing such single betting interest as excused by the stewards or declared a nonstarter, or both.
 - f. Notwithstanding subsection 21 or any language to the contrary contained in this chapter, if, after wagering has commenced on a race, the race is thereafter canceled or declared a "no race" by the stewards, and no redemptions have occurred prior to such, then all wagering thereon shall be refunded upon presentation and surrender of affected pari-mutuel tickets or unique electronic identifier. However, if one or more redemptions have occurred prior to the stewards canceling or declaring a "no race", then all wagering thereon shall be refunded at the then-current odds, as represented by the current value of the RUs, at the time of cancellation upon presentation and surrender of affected pari-mutuel tickets or unique electronic identifier.
 - g. Notwithstanding subsection 22 or any language to the contrary contained in this chapter, in the event of an irreparable breakdown of the totalizator system during the wagering on a race, all Tote-X wagering thereon shall be refunded at the then-current odds, as represented by the current value of the RUs, at the time of irreparable breakdown upon presentation and surrender of affected pari-mutuel tickets or unique electronic identifier.
 - h. Notwithstanding section 69.5-01-08-05 or any language to the contrary contained in this chapter, there is no minimum payoff for a Tote-X redemption. However, any distribution made after closing of the Tote-X win pool shall be subject to the minimum payoff provisions of section 69.5-01-08-05.
 - i. Should circumstances occur which are not addressed by these rules, questions arising therefrom shall be resolved in accordance with general pari-mutuel practice. Decisions regarding distribution of the Tote-X pool made by the stewards are final.

7. Tournament wager.

- a. The tournament wager is a separate pari-mutuel pool wager established by the licensee on a designated number of races. The gross pool consists of the total amount wagered for the multiple race bet. Winning wagers are determined by the highest points totals earned after all races have been completed. It is not a parlay and has no connection with or relation to other pools conducted by the licensee other than the utilization of live race payouts as a means of calculating players' points.

- b. A valid tournament wager ticket is evidence of a binding contract between the holder of the ticket and the association, and constitutes an acceptance of tournament wager provisions and rules contained in this chapter.
- c. A tournament wager ticket may not be retracted within two hours of post time ~~unless otherwise approved by the commission~~except in accordance with previously published rules. A tournament wager ticket may be canceled only with the approval of the licensee.
- d. A licensee may establish a minimum and maximum number of entries per tournament. If the minimum number of entries are not received, the licensee may cancel and refund all wagers in that tournament. The ~~regarding~~ minimum entries for each tournament must be ~~approved by the commission and~~ published in advance of the opening of the tournament.
- e. A licensee may limit the number of entries per player. The maximum entries per player for each tournament must be published in advance of the opening of the tournament.
- f. A tournament wager may be given a distinctive name by the licensee, subject to commission approval.

~~f.g.~~ Tournament wagers must be conducted as follows:

(1) Mythical win/place and win/place/show tournament:

- (a) Players select one or more primary betting ~~interest~~interests for each designated tournament race in accordance with published tournament rules.
- (b) Players may select an alternate betting ~~interest~~interests in accordance with published tournament rules. If there is a scratch of the player's primary selection, the alternate will be substituted. If there is also a scratch of the player's alternate selection, or if no alternate selection has been made, the selection will default to the remaining betting interest with the best post time odds as determined by win pool odds.
- (c) Players accrue earnings based on the actual pari-mutuel win, place, or show payouts for any correct selections, determined from tote payouts, based on a mythical win/place or win/place/show wager of a dollar value established by the licensee in advance of the contest. The licensee may establish maximum mythical earnings in advance of the opening of the contest. As an example, for a two-dollar win/place/show tournament, the maximum payout may be forty-two dollars for a successful win selection, twenty-two dollars for a successful place selection, and twelve dollars for a successful show selection.
- (d) Should there be a tie in earnings in the contest, ties will be broken in accordance with the following procedures:
 - [1] The entry with the most number of winners selected will win the tie, if a tie still remains, then;
 - [2] The entry selecting the horse with the highest mutuel win payout will win the tie, if a tie still remains, then;
 - [3] The entry with the most number of place horses selected will win the tie, if a tie still remains, then;
 - [4] The entry with the highest mutuel place payout will win the tie, if a tie still remains, then;

- [5] The entry with the most number of show (third place finishers that did not win or place) horses selected will win the tie, if a tie still remains, then; and
- [6] The winning entry will be determined by a random draw among eligible entries.
- (e) A licensee may provide qualification for future or online tournaments for the entry based on their final ranking, including any tie breakers. Such an offering must be included in the tournament rules published in advance of the opening of the tournament.
- (f) Pari-mutuel distributions are made at the conclusion of the tournaments that are based on the pari-mutuel distribution schedule published by the licensee in advance of the opening of the tournament.
- (2) Survivor tournament:
- (a) Players select one primary betting interest for each designated tournament race. Players remain in the tournament if the player's betting interest finishes in a win, place, or show position. A player may remain in a tournament if the player's betting interest finishes in third position where show wagering has been canceled by the track if provided by published tournament rules. Players whose betting interest does not finish win, place, or show must be eliminated from the tournament. If no players select a betting interest finishing win, place, or show in a designated tournament race, the licensee may continue the tournament to the next race with all then remaining players if provided by published tournament rules.
- (b) Players may select an alternate betting interest. If there is a scratch of the player's primary selection, the alternate will be substituted. If there is also a scratch of the player's alternate selection, or if no alternate selection has been made, the selection will default to the remaining betting interest with the best post time odds as determined by win pool odds.
- (c) Players earn one point per correct selection of a betting interest finishing in a win, place, or show position as determined by existence of a pari-mutuel payout for that position.
- (d) If the size of the field or other circumstances produce only win/place or only win payouts, only those horses will be considered to be correct selections for the purposes of scoring.
- (e) In the discretion of the licensee, tiebreakers may be applied in survivor tournaments pursuant to the terms published in advance of the opening of the tournament.
- (f) Pari-mutuel distributions are made at the conclusion of the tournaments that are based on the pari-mutuel distribution schedule published by the licensee in advance of the opening of the contest.
- (3) Exacta box tournament:
- (a) Players select three primary betting interests for each designated tournament race.

- (b) Players may select an alternate betting interest for each of their three primary selections. If there is a scratch of the player's primary selection, the alternate will be substituted. If there is also a scratch of the player's alternate selection, or if no alternate selection has been made, the selection will default to the remaining betting interest with the best post time odds as determined by win pool odds.
- (c) Players accrue earnings based on the actual pari-mutuel exacta payout for any correct selections regardless of order, determined from tote payouts, based on a mythical exacta wager of a dollar value established by the licensee in advance of the contest. The licensee may establish maximum mythical earnings in advance of the opening of the contest.
- (d) In the discretion of the licensee, tiebreakers may be applied in exacta box tournaments pursuant to the terms published in advance of the opening of the tournament.
- (e) Pari-mutuel distributions are made at the conclusion of the tournaments that are based on the pari-mutuel distribution schedule published by the licensee in advance of the opening of the contest.

g.h. A fantasy wager on a coupled entry or field is considered a wager on the remaining part of the coupled entry or field as determined by the rules of the live corresponding race.

h.i. Earnings or points for dead heats will be determined by the payouts of the live corresponding race.

i.j. The takeout and its distribution for the tournament wager shall be set and approved by the host regulatory commission.

j.k. All tickets must be refunded if all races comprising the tournament wager are canceled or declared as a no contest. The entire pool must be refunded if less than seventy percent of the tournament's designated races remain.

k.l. After wagering closes on the first race comprising the tournament wager, the tournament is deemed closed and no entry ticket may be sold, exchanged, or canceled. No person shall be determined to hold a winning tournament wager ticket until the last designated race has been declared official.

l.m. The licensee shall distribute the net pool to the holders of valid tickets that correctly selected the combination of finishers that generated the highest fantasy earnings or points totals through the designated races/rounds comprising the tournament wager. In advance of the opening of the tournament, the licensee shall submit a payout schedule to the racing commission for approval providing the number of places to be paid and the percentage of payout for each place. Approved payout schedules must be published in advance of the opening of the tournament to which they apply.

m.n. Should circumstances occur which are not addressed by these rules, questions arising thereby must be resolved in accordance with general pari-mutuel practice. Decisions regarding distribution of the tournament wager pool made by the commission are final.

8. **Refunds.** Unless otherwise provided, after wagering has commenced, if a horse not coupled with another as a betting interest is excused by the stewards or is prevented from racing because of failure of the starting gate door to open properly, the wagers on such horse must be deducted from the pools, and refunded upon presentation and surrender thereof. If more than one horse represents a single betting interest by reason of coupling as a mutuel entry or mutuel field, such single betting interest being the sole subject of a wager or part of a

combination then there may be no refund unless all of the horses representing such single betting interest are excused by the stewards or are prevented from racing because of failure of the starting gate doors to open properly, or both.

9. **Race canceled.** If for any reason a race is canceled or declared "no race" by the stewards after wagering has commenced on such race, then all wagering thereon must be refunded upon presentation and surrender of pari-mutuel tickets thereon; except as otherwise provided.
10. **Totalizator breakdown.** In the event of an irreparable breakdown of the totalizator during the wagering on a race, the wagering on that race must be declared closed and the payoff must be computed on the sums wagered in each pool up to the time of the breakdown.

History: Effective July 1, 1989; amended effective January 1, 2008; July 1, 2011; October 1, 2013; July 1, 2014; April 1, 2016; January 1, 2017; [October 1, 2018](#).

CHAPTER 69.5-01-09

69.5-01-09-10. Distribution of funds for North Dakota-bred pari-mutuel races.

1. Sixty percent of the moneys accruing to the North Dakota breeders' fund shall be awarded to accredited North Dakota-bred horses who qualify for awards at licensed races outside the state and forty percent shall be awarded to accredited North Dakota-bred horses who win awards at licensed races within the state. Any race considered in this category must have a minimum purse of one thousand dollars and, if a claiming race, must have a minimum claiming price of two thousand five hundred dollars. All amount minimums will be determined in United States currency.
2. The official order-of-finish distribution amounts accredited must be as follows:
 - a. Fifty percent of the total scheduled award payment to a winning accredited North Dakota-bred horse and the accredited North Dakota-bred broodmare and sire of such horse, if any;
 - b. Thirty percent of the total scheduled award payment to the placing accredited North Dakota-bred horse and the accredited North Dakota-bred broodmare and sire of such horse, if any; and
 - c. Twenty percent of the total scheduled award payment to the showing accredited North Dakota-bred horse and the accredited North Dakota-bred broodmare and sire of such horse, if any.
3. The North Dakota racing commission shall establish a point system assigning monetary values for each win, place, or show by North Dakota-bred horses at licensed race meets within the state and outside the state. The point system will assign values based on the relative moneys available for distribution inside the state and outside the state, and the number of horses that qualify for such awards inside the state and outside the state. The North Dakota racing commission shall award additional points within the system it establishes for qualifying performances by accredited North Dakota-bred horses who win, place, or show in a race at a licensed race meet outside the state where the purse is ten thousand dollars or more as follows:
 - a. Purse of ten thousand dollars or more but less than twenty-five thousand dollars is worth double points.
 - b. Purse of twenty-five thousand dollars or more but less than fifty thousand dollars is worth triple points.
 - c. Purse of fifty thousand dollars or more is worth quadruple points.
4. Distribution points for win, place, or show shall be established by the North Dakota racing commission for such performances by North Dakota-bred horses. Separate pools shall be established for moneys to be awarded to North Dakota-bred horses that earn awards at licensed races outside the state and for North Dakota-bred horses who earn awards at licensed races within the state.
5. The distribution of North Dakota breeders' fund award payments must be as follows:
 - a. Sixty percent of the scheduled award payment to owners of accredited North Dakota-breds who earn such awards, provided however, that if either the dam or sire, or both, are not duly registered in the program as broodmares or stallions, that the award percentages that would have accrued to them, had they been in the program, be paid to the owner of the accredited foal up to one hundred percent of the scheduled award.

- b. Thirty percent of the scheduled award payment to the ~~owner of the dam~~breeder of an accredited North Dakota-bred who earns awards, provided that the dam was registered in the North Dakota breeders' fund program as a broodmare at the time the accredited North Dakota-bred was foaled.
 - c. Ten percent of the scheduled award payment to the owner of the sire at the time of conception of an accredited North Dakota-bred who earns awards provided that the sire was registered in the North Dakota breeders' fund program as a breeding stallion at the time the foal was conceived.
6. No more than a total of ten race awards per horse will be permitted. The owner may select the ten races (win, place, or show) for breeders' fund awards. Applications for breeders' fund awards of the preceding year's races must be received in the North Dakota racing commission office on approved forms by January fifteenth of the year, following those races.
 7. Award checks must have imprinted on them "This check is void if not cashed within sixty days after date of issuance". This statement is binding and checks not cashed within sixty days of issuance shall revert to the commission to be redeposited in the breeders' fund for future distribution awards with the exception that in the event the commission is unable to locate and award the recipient by United States first-class mail, the commission shall be given an additional sixty days beyond the void date of the award check to attempt to locate the payee. If unable to locate the payee within the additional sixty days, any such award shall revert back to the commission to be held in the breeders' fund for future distribution. Any subsequent claims for such awards by the person or entities not cashing award checks as prescribed or not located as defined by this section shall not be allowed.
 8. In no event may North Dakota breeders' fund moneys be used to subsidize restricted races, other than those restricted to North Dakota-breds.
 9. All broodmare and stallion awards must be calculated at the end of the year for distribution.
 10. All owner's awards may be distributed with purse distribution or, until such time as sufficient criteria is established, may be calculated at yearend for distribution.
 11. No breeders' fund moneys will be payable to the owner or owners of the sire or dam unless the owner or owners of the runner makes application for and receives an award.

TITLE 75
DEPARTMENT OF HUMAN SERVICES

OCTOBER 2018

CHAPTER 75-02-01.3

75-02-01.3-06. Payments to providers - Child care certificate.

1. Unless a provider otherwise elects in a signed and dated writing, all payments of child care assistance must be made to a provider.
2. No payment may be made except on presentation of a claim in a form and manner required by the department for periods during which all caretakers in the child care assistance unit were engaged in an allowable activity.
3. No payment to a provider may be made at a rate in excess of that charged by the provider for services to individuals who do not receive child care assistance. The provider may request for an exception if the provider is providing quality child care services to children in vulnerable populations as determined by the department. Exceptions will be reviewed by the department on a case-by-case basis. The department may deny an exemption request or revoke an exception granted under this subsection. The decision to deny or revoke an exception is not an appealable decision.
4. The department shall issue to the eligible caretaker a child care certificate.

CHAPTER 75-02-04.2

75-02-04.2-02. Fees for child support enforcement services.

1. For purposes of this section, "year" means federal fiscal year.
2. Unless subsection 3 applies, an individual who is an obligee in a IV-D case and who has never received assistance under the aid to families with dependent children program or temporary assistance for needy families program and for whom the child support agency has collected and disbursed at least five hundred ~~twenty-five~~ fifty dollars in child support in any given year will be assessed an annual fee of ~~twenty-five~~ thirty-five dollars. The child support agency will retain the fee from child support collected on behalf of the obligee.
3. An obligee in a IV-D case is exempt from the fee assessed under subsection 2 if:
 - a. The child support agency is providing services as a responding jurisdiction in an interjurisdictional case; or
 - b. The obligee is a ~~medicaid~~ Medicaid recipient who has opted out of child support enforcement services.
4. Unless subsection 5 applies, an individual who is an obligee in a non-IV-D case, or who is an obligee in a IV-D case but who has opted out of child support enforcement services, and for whom child support has been received in a given month will be assessed a monthly fee of ~~two~~ five dollars ~~and ten cents~~ or the amount of child support received for that month, whichever is less. The child support agency will retain the fee from support received.
5. A non-IV-D case is exempt from the fee assessed under subsection 4 if the case is a former IV-D case that was closed by the child support agency because:
 - a. The obligor's location was unknown;
 - b. The ~~obligor~~ obligation was ~~institutionalized in a psychiatric facility, incarcerated with no chance of parole, or has a medically verified total and permanent disability~~ with uncollectible because the obligor could not pay support and showed no evidence of support potential; ~~or~~
 - c. The obligor was a citizen and resident of a foreign country with which the state does not have a treaty or reciprocity; or
 - d. The past-due support balance is under five hundred dollars and is not collectible through commercially reasonable efforts.

TITLE 109
PEACE OFFICER STANDARDS AND TRAINING BOARD

OCTOBER 2018

CHAPTER 109-02-01

109-02-01-01. Definitions.

The terms used throughout this article have the same meaning as in the North Dakota Century Code except:

1. "Agency" means a criminal justice agency, or an agency of the state of North Dakota or one of its political subdivisions, authorized to employ licensed peace officers. For purposes of this title, an agency includes the North Dakota stockmen's association and a railroad that employs licensed peace officers.
2. "Basic full-time peace officer training course" means a board-certified entrance-level training course based on performance objectives essential for full-time licensed peace officers in the state of North Dakota.
3. "Basic part-time peace officer training course" means a board-certified entrance-level training course based on performance objectives essential for part-time licensed peace officers in the state of North Dakota.
4. "Certified instructor" means an instructor certified by the board to instruct law enforcement or basic correctional officer training courses.
5. "Certified shooting course" means a shooting course that meets the requirements of these rules.
6. "Certified training" means training approved by the board.
7. "College credits" means credits earned for studies satisfactorily completed through an accredited institution of higher learning in a program leading to an academic degree.
8. "Controlling agent" means the peace officer who is the main point of contact with the confidential informant for the controlled buy, controlled sale, or surreptitious recording.
9. "Crime of violence" means any violation of law where a person purposely or knowingly causes or threatens to cause death or physical bodily injury to another person or persons.
10. "Criminal justice agency" means a unit of government of the state of North Dakota or one of its political subdivisions charged by law with criminal law enforcement duties.

- ~~9.11.~~ "Duty equipment" means the equipment issued or approved by the peace officer's employing agency and normally carried by a peace officer in the performance of the peace officer's duties.
- ~~40.12.~~ "Duty weapon" means the sidearm issued or approved by the peace officer's employing agency and normally carried by the peace officer in the performance of the peace officer's duties.
- ~~41.13.~~ "Full-time peace officer" means a full-time salaried public servant employed by an agency of the state of North Dakota or one of its political subdivisions, or a peace officer employed by the North Dakota stockmen's association or a railroad, to enforce the law or to conduct or engage in investigations or prosecutions for violations of law.
- ~~42.14.~~ "Law enforcement training academy" means the highway patrol law enforcement training center.
- ~~43.15.~~ "License requirement" means any term or condition established by the board that must be met before the board may issue, renew, or reinstate a peace officer's license.
- ~~44.16.~~ "Limited license" means a conditional license granted by the board to an individual who has been hired or appointed by an agency but who has not completed a basic full-time peace officer training course and has not successfully passed the licensing examination.
- ~~45.17.~~ "Moral turpitude" means conduct that:
- a. Involves falsification or fraud;
 - b. Involves harm or injury directed to another individual or entity or another individual's or entity's property; or
 - c. Is in violation of North Dakota Century Code chapter 12.1-20, 12.1-27.1, or 12.1-27.2 or the equivalent laws of another state or the federal government.
- ~~46.18.~~ "Part-time peace officer" means a public servant who has a part-time peace officer license and is employed or appointed by a criminal justice agency of the state of North Dakota or one of its political subdivisions to enforce the law or to conduct or engage in investigations or prosecutions for violations of law within the scope of the part-time peace officer's training.
- ~~47.19.~~ "Peace officer" means a salaried public servant employed by a criminal justice agency of the state of North Dakota or one of its political subdivisions, or a peace officer employed by the North Dakota stockmen's association or a railroad, to enforce the law or to conduct or engage in investigations or prosecutions for violations of law.
- ~~48.20.~~ "Peace officer license" means a license issued by the board.
- ~~49.21.~~ "School" means a facility, agency, or academy that conducts board-certified basic, advanced, and specialized peace officer training courses or basic correctional officer training courses.
- ~~20.22.~~ "Sidearm" means a handgun, including a semiautomatic handgun or revolver, carried by a peace officer as the officer's authorized duty weapon.
- ~~24.23.~~ "Sidearm qualification" means the test a peace officer must complete on a certified shooting course with the peace officer's duty weapon.
- ~~22.24.~~ "Training provider" means an individual, school, facility, or academy that conducts certified basic, advanced, specialized peace officer training courses, or basic correctional officer training courses.

~~23.25.~~ "Weapon" includes a handgun, shotgun, and rifle.

History: Effective October 1, 2004; amended effective July 1, 2006; April 1, 2014; [July 1, 2018](#).

General Authority: NDCC 12-63-02.1(7), 12-63-04(2)(d)

Law Implemented: NDCC 12-44.1-01(10), 12-44.1-04(4), 12-63-02.1, 12-63-04

CHAPTER 109-02-06

109-02-06-01. Confidential informants.

1. A peace officer utilizing a confidential informant should take reasonable steps to ensure the safety of the confidential informant and shall document that relationship using a written informant agreement agreed to by the parties prior to any controlled buy, controlled sale, or surreptitious recording taking place.
2. A peace officer shall review the confidential informant agreement with each confidential informant. Each informant agreement must be in writing on a form approved by the board and must be signed by the confidential informant and the controlling agent who must be a peace officer. The peace officer shall maintain and control access to the written informant agreement.
3. A peace officer shall keep all confidential informant records secret with access limited to persons with a need to know or subject to a court order for disclosure.
4. When a controlling agent gets removed from an investigation using a confidential informant, that peace officer shall document this information on the informant agreement and notify the confidential informant. If the investigation continues, the peace officer assuming control of the confidential informant shall enter a new informant agreement with the confidential informant.
5. A peace officer who is acting as the controlling agent for a confidential informant shall request a criminal history report on all known target offenders of the investigation and verbally report the propensity for crimes of violence for each target offender to the confidential informant.
6. The controlling agent shall provide an operational/safety plan for each controlled buy, controlled sale, or in-person surreptitious recording attempted by a confidential informant.
7. A peace officer shall inform a paid confidential informant in writing of the compensation amounts prior to any controlled buy, controlled sale, or surreptitious recording taking place.
8. A peace officer may not have any sexual contact or sexual relationship with any confidential informant.
9. A peace officer shall communicate to the confidential informant, if possible, when the confidential informant is deactivated. A peace officer shall enter a dated, written notation on the informant agreement when the confidential informant is deactivated.
10. A peace officer may not violate North Dakota Century Code chapter 29-29.5.

History: Effective July 1, 2018.
