TITLE 10
ATTORNEY GENERAL

OCTOBER 2018

CHAPTER 10-16-01

10-16-01-01. Definitions.

As used in this article:

1. "Applicant's agent" means a general manager, sole proprietor, partner of a partnership, or, for a corporation, an officer or director who is primarily responsible for financial affairs or a shareholder who owns ten percent or more of the common stock, of a business that is applying for or renewing a license. A general manager is a person who regularly is onsite and primarily responsible and accountable for managing and controlling the day-to-day operation of the business.
2. "Cash voucher" means a voucher generated by the lottery's player-activated terminal that can be validated for cash at the retailer's lottery terminal.
3. "Draw" means the formal process of randomly selecting winning numbers, letters, or symbols that determine the number of winning plays for each prize level of a game.
4. "Deposit account" means the account to which funds are deposited and from which ~~subscription~~online play purchases are made.
5. "Game" means an on-line game authorized by the lottery.
6. "Game group" means a group of lotteries that have joined together to offer a game on a multi-state basis according to the terms of the MUSL or the game group's rules or both.
7. "Grand prize" means the top prize that can be won in a game.
8. "Group play" means two or more individuals sharing a purchase made.
9. "Lottery" means the North Dakota lottery.
10. "Multi-state lottery" means a lottery game that spans the individual borders of a state, jurisdiction, province, district, commonwealth, territory, or country.
11. "MUSL" means the multi-state lottery association.
12. "North Dakota Lottery Players ~~Club~~SMClub[®]" means a program that players can join to earn exclusive benefits and rewards.
13. "Online gaming system" means a computer system designed to control, monitor, communicate with a terminal, and record play transactions and accounting data.

14. "Online play" means the purchase of a draw game play for drawing up to one year.
15. "Pick & Click" means the name of the online play service formerly known as subscriptions.
16. "Play" means the numbers, letters, or symbols that are on a ticket or properly and validly registered ~~subscription~~online play to be played by a player in a draw, excluding a lottery promotion.
- ~~15.17.~~ "Play area" means the area of a play slip that contains one or more sets of numbered squares to be marked by a player for a game. Each set contains a certain number of numbers, letters, or symbols that correspond to the game.
- ~~16.18.~~ "Play slip" means a physical or electronic means by which a player communicates their intended play selection to the retailer as defined and approved by the lottery.
- ~~17.19.~~ "Player-activated terminal" means a device authorized by the lottery and operated by a player to function in an online, interactive mode with the lottery's computer system to receive and process lottery transactions, including the purchase and issuance of a ticket, the validation of a ticket, and the issuance of a cash voucher.
- ~~18.20.~~ "Points for Drawings™" means a program where players can enter drawings by using points received from the submission of valid tickets.
- ~~19.21.~~ "Points for Prizes®" means a rewards program where players can earn points by becoming registered members and submitting valid tickets.
- ~~20.22.~~ "Quick pick" means a random selection of numbers, letters, or symbols by a computer system that are printed on a ticket or properly and validly registered ~~subscription~~online play and played by a player for a draw in a game.
- ~~21.23.~~ "Retailer fraud" means an owner or employee of a licensed retailer who knowingly and intentionally:
- a. Fails to properly validate a player's winning ticket;
 - b. Fails to pay the player the proper prize amount on a winning ticket;
 - c. Fails to provide the player the proper exchange ticket on a winning multi-draw ticket; or
 - d. Performs any other act that causes financial harm to a player in violation of the lottery law or rules.
- ~~22.24.~~ "Set prize" means all prizes, except the grand prize for a game that are to be paid by a single cash payment and, except as provided by rule, will be equal to the prize amount established by the MUSL and/or the game group for the prize level of the game.
- ~~23.~~ ~~"Subscription" means a purchase of a draw game play for drawings up to one year.~~
- ~~24.25.~~ "Terminal" means a device authorized by the lottery and operated by a retailer or the lottery to function in an on-line, interactive mode with the lottery's computer system to issue a ticket and enter, receive, and process a lottery transaction, including a purchase, validation of a ticket, and issuance of a report.
- ~~25.26.~~ "Ticket holder" means a person who has signed a ticket or possesses an unsigned ticket.
- ~~26.27.~~ "Top prize" means the first prize that can be won in a game.

27.28. "Validation" means the process of determining whether a ticket presented for a prize is a winning ticket.

28.29. "Winning account" means the account to which ~~subscription~~online play winnings are deposited and from which player withdrawals are made.

29.30. "Winning numbers" means the numbers, letters, or symbols randomly selected in a draw to determine a winning play contained on a ticket or properly and validly registered ~~subscription~~online play or randomly selected in a lottery promotion to determine a winning prize stated on a ticket or coupon.

History: Effective February 1, 2004; amended effective April 1, 2006; July 1, 2008; July 6, 2014; January 31, 2016; February 1, 2016; October 29, 2017; May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-01-05. Restrictions, requirements, and authorizations.

1. An employee of the lottery or a member of the immediate family or a person who regularly resides in the same household of the employee may not receive a gift, gratuity, or other thing of value, excluding food, nonalcoholic beverage, or incidental item, from an applicant for a license, licensed retailer, or online gaming system or advertising vendor.
2. The lottery may waive a rule when it is in the best interest of the state, lottery industry, or public.
3. In applying subdivision d of subsection 1 of North Dakota Century Code section 53-12.1-11, personal information on a winning player does not include an amount won or the player's city or state of residence. If the player signs a release, the lottery may disclose or publish personal information that the player authorizes to be released. Subdivision d of subsection 1 of North Dakota Century Code section 53-12.1-11 does not apply to cash, merchandise, ~~a~~subscriptionan online play, gift certificate, or ticket that the lottery awards as a prize in a promotion.
4. If a lottery rule conflicts with an official or updated MUSL or game group rule or game rule, the official or updated MUSL or game group rule or game rule supersedes the lottery rule. The official MUSL or game group rule or game rule governs the administration of a game.
5. The lottery may conduct a promotion that includes a prize and shall prescribe promotional rules. The prize may be cash, gift certificate, ticket, ~~subscription~~online play, or merchandise.
6. The lottery may immediately withdraw a lottery terminal, equipment, and supplies from a retailer's site if the retailer's license is inactive, suspended, revoked, or the retailer's license was not renewed.

History: Effective February 1, 2004; amended effective April 1, 2006; July 1, 2006; April 1, 2008; May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-02, 53-12.1-08, 53-12.1-11, 53-12.1-13

CHAPTER 10-16-02

10-16-02-07. Sales commission and bonus.

1. The lottery shall credit a retailer's account for:
 - a. A sales commission of five percent of the retail price of a ticket sold or otherwise issued by the retailer;
 - b. A sales commission of five percent of the amount of ~~a subscription~~an online play sale that is transacted through the North Dakota Lottery Players ~~ClubSM~~Club[®] when a player chooses a specific retailer. The retailer must be currently licensed when the ~~subscription~~online play is purchased; and
 - c. A sales bonus for selling a ticket with a winning play, for a game as stated below. However, the retailer must be currently licensed when a draw is conducted that results in the winning play of a ticket. If the winning play for POWERBALL[®] has the power play option, or the winning play for MEGA MILLIONS[®] has the Megaplier[®] option, or the winning play for LOTTO AMERICASM has the All Star BonusSM option, the retailer's account must also be credited for an additional bonus as stated below:

<u>Prize</u>	<u>Bonus</u>	<u>Additional Bonus</u>
POWERBALL[®]		
Grand prize	\$50,000	Additional \$50,000 with power play
\$1,000,000	\$5,000	Additional \$5,000 with power play
\$50,000	\$1,000	Additional \$1,000 with power play
MEGA MILLIONS[®]		
Grand prize	\$50,000	Additional \$50,000 with Megaplier [®]
\$1,000,000	\$5,000	Additional \$5,000 with Megaplier [®]
\$10,000	\$500	Additional \$500 with Megaplier [®]
LUCKY FOR LIFE[®]		
\$7,000/week for life	\$25,000	
\$25,000/year for life	\$2,500	
\$5,000	\$250	
2BY2[®]		
Grand prize		
\$22,000	\$500	
\$44,000*	\$1,000	
*Tuesday draw double grand prize winning play on a qualifying multi-draw ticket.		
LOTTO AMERICASM		
Grand prize	\$5,000	Additional \$5,000 with All Star Bonus SM
\$20,000	\$500	Additional \$500 with All Star Bonus SM

2. The lottery may credit a retailer's account for a fixed or graduated sales commission or bonus for a special promotion, including power play, Megaplier®, and All Star BonusSM, that the lottery conducts for a certain period of time based on parameters set by the lottery.

History: Effective February 1, 2004; amended effective January 1, 2006; January 3, 2008; January 31, 2010; January 15, 2012; October 19, 2013; July 6, 2014; October 4, 2015; February 25, 2016; October 29, 2017; [May 14, 2018](#).

10-16-03-02. Ineligible player.

A ticket issued by a retailer or ~~a subscription~~an online play may not be bought by, or a prize won by that ticket or ~~subscription~~online play or lottery-related promotion may not be paid or issued to:

1. An employee, officer, or director of the lottery's online gaming system vendor or the MUSL;
2. A person who regularly resides in the same household of a person described in subsection 1; or
3. A minor.

History: Effective February 1, 2004; amended effective November 8, 2005; April 1, 2008; January 1, 2011; May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-02, 53-12.1-08, 53-12.1-13

10-16-03-08.1. ~~Subscription~~Pick & Click online play.

1. A player shall purchase ~~a subscription~~an online play only from, and the financial transaction for that ~~subscription~~online play must be only with, the lottery through the North Dakota Lottery Players ~~Club~~SMClub® website and payment processor. A player may use automated clearinghouse, debit card, or authorized credit card to pay for ~~a subscription~~an online play.
2. A person must be at least eighteen years of age.
3. A person must provide the following information when registering as a player, or a member of a group, for the lottery ~~subscription~~online play service:
 - a. Name;
 - b. Address;
 - c. Date of birth;
 - d. Telephone number;
 - e. Valid email address; and
 - f. Last four digits of their social security number.

4. A person, whether individually or as a member of a group, must have a North Dakota mailing address, must be physically located within the borders of North Dakota, and must pass all verification processes used by the lottery during the player's registration process.
5. A player may purchase one or more subscriptionsonline plays for one or more games. Each subscriptiononline play is limited to one play for a draw for one game. A player may purchase a subscriptionan online play for up to fifty-two weeks. A subscriptionAn online play is not refundable or cancelable by a player unless the game group makes a matrix change to the game at which time, the subscriptiononline play would be canceled by the lottery and funds used to purchase the subscriptiononline play would be refunded to the player's deposit account through the lottery's subscriptiononline play service, based on the number of draws actually held under the former game matrix in relation to the total number of draws purchased.
6. To be valid, a subscriptionan online play must be properly and validly registered with the lottery on its subscriberplayer data base at its central computer site which meets the requirements established by the product group and MUSL security and integrity committee. All data on a subscriberplayer is confidential.
7. The owner of a subscriptionan online play is the person whose name is validly and properly registered with the lottery. However, the lottery may split a prize among two or more persons who are registered members of a group play.
8. After the lottery properly and validly registers a subscriptionan online play, the lottery shall send a confirmation email to the subscriberplayer. The confirmation email is the player's evidence of an actual play in a draw and there is no actual ticket. The confirmation email must include:
 - a. Name of game. For the game of POWERBALL®, indication of whether the play has the power play option. For the game of MEGA MILLIONS®, indication of whether the play has the Megaplier® option. For the game of LOTTO AMERICASM, indication whether the play has the All Star BonusSM option;
 - b. Number of and starting and ending dates of the draws;
 - c. Numbers, letters, or symbols of the play;
 - d. The subscriberplayer is responsible for ensuring that all subscriberplayer information and game play numbers, letters, or symbols are correct; and
 - e. Explanation of how a prize will be awarded.
9. Except as provided by subsection 10, a subscriptionan online play is valid for only the date range of draws specified in the confirmation email. The effective date of a new subscriptiononline play will be valid for the present draw in the game, if it is purchased by 8:30 p.m. central time for LUCKY FOR LIFE® or by 8:58 p.m. central time for POWERBALL®, LOTTO AMERICASM, MEGA MILLIONS®, and 2BY2®.
10. If the value of a prize on a winning POWERBALL®, LOTTO AMERICASM, MEGA MILLIONS®, LUCKY FOR LIFE®, or 2BY2® subscriptiononline play for a draw is:
 - a. Less than six hundred dollars, the lottery shall automatically deposit the funds into the player's winning account.
 - b. Equal to or more than six hundred dollars, the lottery shall contact the player by email and phone to arrange payment of the prize, less withholding of income tax required by federal or state law and any debt setoff according to North Dakota Century Code section 53-12.1-12.

11. If the owner of ~~a subscription~~an online play changes the owner's name, the owner shall provide the lottery with a notarized letter of the change. If the owner of ~~a subscription~~an online play dies, the lawful representative of the owner's estate shall provide the lottery with a notarized statement of the death and the lottery shall change the ownership of the ~~subscription~~online play to "The Estate of" the owner.

History: Effective November 8, 2005; amended effective January 3, 2008; November 1, 2008; July 1, 2010; October 19, 2013; July 6, 2014; January 31, 2016; February 1, 2016; October 29, 2017; May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-01, 53-12.1-02, 53-12.1-03, 53-12.1-08, 53-12.1-13

CHAPTER 10-16-07

10-16-07-04. Tuesday draw double prize feature.

If a player purchases ~~a subscription~~an online play for seven draws, in increments of seven, or a multi-draw ticket of one or more plays for 7, 14, 21, 28, 35, or 42 consecutive draws, the value of the player's prize, including the grand prize, that is won on a Tuesday draw automatically doubles in value.

History: Effective February 22, 2008; amended effective July 6, 2014; May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1.13

CHAPTER 10-16-09

10-16-09-01. General.

1. The North Dakota Lottery and its designated agents Scientific Games International, Inc., and MDI Entertainment, LLC, a subsidiary of Scientific Games International, Inc., will operate the Points for Prizes® program.
2. Points for Prizes® program is a rewards program that is part of the North Dakota Lottery's North Dakota Lottery Players ClubSMClub®. Players can earn points by becoming registered members of the program and submitting valid tickets at club.lottery.nd.gov. Players can redeem their points for items at the Points for Prizes® store at store.lottery.nd.gov.
3. The Points for Prizes® program is void where prohibited by law.
4. The North Dakota Lottery reserves the right to change Points for Prizes® in any way and at any time or to terminate Points for Prizes® entirely upon reasonable and appropriate public notice.
5. By submitting a ticker to earn Points for Prizes® points, an entrant agrees to and is bound by the Points for Prizes® rules, the North Dakota Lottery Players ClubSMClub® terms of service, all other applicable North Dakota Lottery rules and laws, and the laws of the state of North Dakota.
6. The North Dakota Lottery may use, without limitation, an entrant's name, hometown, likeness, and/or voice in any promotions, research, marketing, publications, or other advertising media including, but not limited to, North Dakota Lottery websites, without compensation or additional release.
7. The North Dakota Lottery reserves the right to use the names, addresses, and telephone numbers of all entrants for research and marketing purposes.

History: Effective July 6, 2014; amended effective October 4, 2015; [May 14, 2018](#).

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-02. Eligibility for points.

1. A terminal ticket or player-activated terminal ticket eligible for points is any ticket that includes a twenty-five digit alphanumeric draw game code printed on the ticket.
2. Any ~~subscription~~[online play](#) purchase will automatically receive points after confirmation of purchase. No entry code is generated nor is entry of any code required. Players will receive notification of points earned for ~~a subscription~~[an online play](#) purchase.
3. Exchange tickets will not print an entry code. Entry codes are only printed once on the original ticket.
4. North Dakota Lottery Players ClubSMClub® members must be at least eighteen years old and have a valid United States address in order to register as a member of the North Dakota Lottery Players ClubSMClub® and participate in Points for Prizes®.
5. Players will be limited to earn up to seven hundred fifty points per week as part of the North Dakota Lottery's North Dakota Lottery Players ClubSMClub®. A week is defined as Sunday at midnight until the following Saturday at 11:59:59 p.m. central time. The North Dakota Lottery reserves the right to change, without notice, the limit on the amount of points that can be earned weekly.

6. The North Dakota Lottery reserves the right to discontinue eligibility for any game.
7. Entries for Points for Prizes® may also automatically receive entry into other promotions.
8. Once the seven hundred fifty point-per-week maximum is reached, players will still be eligible to enter tickets for second chance drawings or any additional ticket entry eligible promotion. These tickets will not earn points.

History: Effective July 6, 2014; [amended effective May 14, 2018.](#)

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-03. Registration.

1. To access Points for Prizes®, a player must first register to become a North Dakota Lottery Players [ClubSMClub®](#) member and establish a North Dakota Lottery Players [ClubSMClub®](#) account at club.lottery.nd.gov.
2. Once registered, a player will be able to log in to submit entries or participate in other North Dakota Lottery Players [ClubSMClub®](#) programs that may be provided from time to time.
3. Registration to be a member of the North Dakota Lottery Players [ClubSMClub®](#) requires the player to provide their birth date, email address, password, last four digits of social security number, and contact information.
4. Failure to fully provide required information will cause a player's request to register to be rejected.
5. The North Dakota Lottery, Scientific Games International, Inc., and MDI Entertainment, LLC, assume no responsibility for incorrect information provided by a player on the registration form. After completing registration, a player is responsible for updating account information as needed by logging in and going to their account page.
6. A player may have no more than one account. A player is not permitted to create additional accounts in the event that their email or other relevant information changes. The player may log in with their existing account credentials and make any desired changes at any time.

History: Effective July 6, 2014; [amended effective May 14, 2018.](#)

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-04. Points for Prizes® points.

1. Players earn Points for Prizes® for eligible [subscriptiononline play](#) purchases (after purchase confirmation) or for terminal tickets or player-activated terminal tickets entered through the North Dakota Lottery Players [ClubSMClub®](#) at club.lottery.nd.gov.
2. Points are nonmonetary numerical values assigned to eligible tickets.
3. Points for Prizes® provide points for each eligible ticket or [subscriptiononline play](#) purchase. Cash shall not be awarded in lieu of points awarded or rewards items.
4. Each eligible ticket or [subscriptiononline play](#) purchase has a point value based on a range of values assigned by the North Dakota Lottery. The North Dakota Lottery reserves the right to change the point value assigned.

5. The point value, associated with each valid ticket or ~~subscription~~[online play](#) purchase, will be revealed to the player and applied to their account at club.lottery.nd.gov upon successful submission of each eligible ticket or after purchase confirmation of ~~subscriptions~~[an online play](#).
6. Points are not transferable. Point balances from more than one account may not be combined.
7. Points shall be valid for use only within the North Dakota Lottery's Points for Prizes® program or Points for Drawings™ program.
8. The North Dakota Lottery may credit a player's account at its sole discretion.
9. Points may expire. The North Dakota Lottery reserves the right to establish, modify, or delete a rule regarding the expiration of points at its own discretion at any time.

History: Effective July 6, 2014; [amended effective May 14, 2018](#).

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-05. Submitting tickets.

1. To submit a ticket, a player must first log in to the club.lottery.nd.gov using their unique North Dakota Lottery Players ~~Club~~SM[Club](#)® account information.
 - a. Once logged in, a player submits an entry according to the instructions on the "Ticket Entry" (Rewards) page of the website. Required entry information for a terminal ticket or player-activated terminal ticket is the twenty-five digit alphanumeric draw game code printed on the ticket. ~~Subscribers~~[Players that purchase an online play](#) will receive notification of points received for their purchase.
 - b. To prevent fraudulent submissions, after ten consecutive attempts to submit tickets that are not recognized as eligible tickets, a player will be unable to submit tickets for twenty-four hours.
 - c. Unless a player has a need to retain their ticket (example: remaining draws or prize claim for winning ticket), players are encouraged to properly dispose of the ticket after submission.
2. A list of previously submitted tickets is available within a player's account and can be found within the "My History" page.
3. An eligible ticket may be submitted one time only. The system will reject a ticket that has been previously submitted.

History: Effective July 6, 2014; [amended effective May 14, 2018](#).

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-07. Item selection.

1. A player may use some or all points for items offered in the Points for Prizes® store.
2. A player must first log in to their North Dakota Lottery Players ~~Club~~SM[Club](#)® account at club.lottery.nd.gov.
3. To redeem points, a player must select the item or items, designate the quantity of each item requested, and select the appropriate button to submit the order.

4. It is the responsibility of the player to ensure that the appropriate item and quantity are selected.
5. Once the order has been submitted, points will be deducted from the player's North Dakota Lottery Players ~~ClubSM~~Club® account.
6. Orders cannot be changed, canceled, or returned once placed.

History: Effective July 6, 2014; amended effective May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-09-08. Additional conditions.

1. The North Dakota Lottery does not warrant or guarantee product quality or availability of products.
2. The North Dakota Lottery is not responsible for any prizes lost, damaged, or stolen during shipment, pickup, or use.
3. The North Dakota Lottery is not responsible for any damages, injury, or loss of life resulting from any item awarded.
4. Players are responsible for any applicable taxes.
5. Players are solely responsible for maintaining and keeping account information current or accurate. The North Dakota Lottery assumes no responsibility or liability whatsoever for technical or computer malfunctions or for the player's failure to keep account information current.
6. By participating in the North Dakota Lottery Players ~~ClubSM~~Club®, each player and their heirs, legal representatives, and assignees agree to indemnify, defend, release, and discharge the North Dakota Lottery, Scientific Games International, Inc., MDI Entertainment LLC, the state of North Dakota, their employees, officers, and directors, from and against any loss, claim, damage, suit, or injury arising out of or relating to the North Dakota Lottery Players ~~ClubSM~~Club® products or any action taken pursuant to these rules.
7. No one under eighteen years of age and no one otherwise prohibited by North Dakota Century Code section 53-12.1-08 from playing North Dakota Lottery games are eligible to participate in the Points for Prizes® program.

History: Effective July 6, 2014; amended effective May 14, 2018.

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

CHAPTER 10-16-10

10-16-10-01. General.

1. The North Dakota Lottery and its designated agents Scientific Games International, Inc., and MDI Entertainment, LLC, a subsidiary of Scientific Games International, Inc., will operate the Points for Drawings™ program.
2. Points for Drawings™ is part of the Points for Prizes® program that is part of the North Dakota Lottery's North Dakota Lottery Players ClubSMClub®. Players can enter drawings by using some or all points received from submission of eligible tickets or [subscription online play](#) purchases at club.lottery.nd.gov.
3. Drawing entries may be submitted at store.lottery.nd.gov.
4. The Points for Drawings™ program is void where prohibited by law.
5. The North Dakota Lottery reserves the right to change Points for Drawings™ in any way and at any time or to terminate Points for Drawings™ entirely upon reasonable and appropriate public notice.
6. By submitting an entry into Points for Drawings™, an entrant agrees to and is bound by the Points for Drawings™ rules, the Points for Prizes® rules, the North Dakota Lottery Players ClubSMClub® terms of use, all other applicable North Dakota Lottery rules and laws, and the laws of the state of North Dakota.
7. North Dakota Lottery may use, without limitation, an entrant's name, hometown, likeness, and/or voice in any promotions, research, marketing, publications, or other advertising media including, but not limited to, North Dakota Lottery websites, without compensation or additional release.
8. The North Dakota Lottery reserves the right to use the names, addresses, and telephone numbers of all entrants for research and marketing purposes.

History: Effective July 6, 2014; amended effective October 4, 2016; [May 14, 2018](#).

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-10-02. Eligibility.

1. Only points accumulated within the Points for Prizes® program in the player's North Dakota Lottery Players ClubSMClub® account may be used to enter any Points for Drawings™ drawing.
2. Entrants must have a valid U.S. address in order to register and participate.

History: Effective July 6, 2014; [amended effective May 14, 2018](#).

General Authority: NDCC 53-12.1-13

Law Implemented: NDCC 53-12.1-13

10-16-10-03. Submitting entries into Points for Drawings.

1. A detailed description of each Points for Drawings™ drawing will be located on the North Dakota Lottery's North Dakota Lottery Players ClubSMClub® website and will include a description of the prize, entry dates, drawing date, rules and regulations, and the number of points necessary for entry into the drawing.

2. The number of points needed for entry into each Points for Drawings™ drawing may vary by drawing.
3. To submit an entry, a player must first log in to club.lottery.nd.gov using their North Dakota Lottery Players ClubSMClub® account information.
4. Following login, players may submit entries by visiting the Points for Prizes® store and select the desired Points for Drawings™ drawing. Players enter the number of entries desired, select "Update Quantity" followed by "Submit Entries".
5. It is the responsibility of the player to ensure that the appropriate Points for Drawings™ drawing and number of entries are selected.
6. Once the selected number of entries has been submitted, points from the player's North Dakota Lottery Player's ClubSMClub® Points for Prizes® account will be deducted.
7. Unless otherwise specified in the rules and regulations for a specific Points for Drawings™, entries are created only for the drawing for which points were used by the player. Drawing entries are eligible for one Points for Drawings™ drawing only.
8. A player may submit as many entries as allowed by their North Dakota Players ClubSMClub® account balance, but the player may only win once per Points for Drawings™ drawing.
9. Once an entry into the Points for Drawings™ drawing is submitted, it cannot be changed, canceled, or returned. Once an entry is submitted, points will not be refunded.
10. Entries submitted after the Points for Drawings™ drawing deadline for a given drawing will not be accepted.

History: Effective July 6, 2014; [amended effective May 14, 2018](#).

10-16-10-04. Additional conditions.

1. The North Dakota Lottery does not warrant or guarantee product quality or availability of products.
2. The North Dakota Lottery is not responsible for any prizes lost, damaged, or stolen during shipment, pickup, or use.
3. The North Dakota Lottery is not responsible for any damages, injury, or loss of life resulting from any item awarded.
4. The North Dakota Lottery is not responsible for the electronic misdelivery, late delivery, or failure to receive entry information entered electronically, risk of loss remains with the entrant regardless of the cause of the transmission failure.
5. If required, a player will receive a W-2G form for prizes, either cash or merchandise.
6. The prize winner is responsible for all applicable state and federal taxes.
7. Winners' cash prizes are subject to debt setoff of certain governmental debts. Unless otherwise noted on the North Dakota Lottery Players ClubSMClub® website, if a winner fails to satisfy an outstanding debt within thirty days of notification of the debt, the North Dakota Lottery may, at its sole discretion, disqualify the winner, and the next alternate will become the winner.

8. Players are solely responsible for maintaining and keeping account information current and accurate. The North Dakota Lottery assumes no responsibility or liability whatsoever for technical or computer malfunctions or for the player's failure to keep account information current.
9. By accepting the prize, each winner, their heirs, legal representatives, and assignees agree to indemnify and hold harmless, defend, release, and discharge the North Dakota Lottery, Scientific Games International, Inc., MDI Entertainment LLC, the state of North Dakota, their employees, officers, and directors, from and against any loss, claim, damage, suit, or injury arising out of or relating to the acceptance of the prize.
10. The North Dakota Lottery is not responsible for any rules, regulations, or restrictions imposed by its promotional partners. The North Dakota Lottery is not responsible for and has no obligation regarding the condition, quality, defects, or other attributes of the prizes awarded during a promotion and expressly disclaims all warranties, expressed or implied, including, but not limited to, all implied warranties of merchantability and fitness for particular purpose.
11. The North Dakota Lottery reserves the right, in its sole discretion, to modify, suspend, postpone, or cancel, with or without notice, any portion of this promotion at any time and for any reason, including the award of any prize with the approval of the North Dakota Lottery's director or the director's designee.
12. In the event that interpretation of these rules is necessary, the decision of the North Dakota Lottery's director or designee, after legal consultation with the assistant attorney general, if necessary, will be final.
13. No one under eighteen years of age and no one otherwise prohibited by North Dakota Century Code section 53-12.1-08 from playing North Dakota Lottery games are eligible to participate in this promotion or win any prize.

TITLE 25
STATE BOARD OF FUNERAL SERVICE

OCTOBER 2018

CHAPTER 25-02-02

25-02-02-06. Intern embalmer.

1. **Application.** The application for registration as an intern embalmer shall be made upon a form approved by the board and verified by the applicant and accompanied by a fee of fifty dollars. The application shall include the name and home address of the intern embalmer, the date the internship begins, and the name, license number, and business address of the supervising funeral practitioner. The registration is valid for one year and may be renewed by filing a renewal application with the board and by payment of the renewal fee of twenty-five dollars. The registration may not be renewed more than three times. A registered intern embalmer must notify the board within thirty days if he/she withdraws from the internship.
2. **Qualifications.** In order to qualify as an intern embalmer, the applicant shall meet all the following requirements:
 - a. Be eighteen years of age.
 - b. Be of good moral character.
 - c. Furnish evidence of having completed an accredited four-year high school course of study.
 - d. ~~In addition to the education required by subdivision e, furnish~~ **Furnish** evidence of completion of ~~two years~~ **one year** of accredited college or university studies, or provide proof of substantial completion, as determined by the board, of ~~two years~~ **one year** accredited college or university studies. For purposes of this subdivision only, ~~two years~~ **one year** means ~~sixty~~ **thirty** semester hours or ~~ninety~~ **forty-five** quarter hours.
 - e. ~~Graduated from an accredited college of mortuary science.~~
3. **Certification.** The state board of funeral service shall pass upon every intern embalmer application at its regular meeting.
4. **Intern embalmer register.** The executive secretary of the board shall keep a separate register for intern embalmers.
5. **Lapsed certificate.** In case an intern embalmer has allowed the certificate of registration to lapse for thirty days or more, no reregistration shall be permitted so as to make the intern embalmer's registration continuous from the date of the intern embalmer's original registration.

6. **Monthly report.** Each registered intern embalmer shall submit a report to the executive secretary of the board by the fifteenth of the month stating all cases in which the intern embalmer has assisted during the preceding month. This report is to be made on forms furnished by the board. Reports must be signed by the supervising funeral practitioner. Ten reports of funeral arrangements and funeral services must be submitted during the final six months of internship.

History: Amended effective April 1, 1979; July 1, 1983; May 1, 1993; May 1, 1998; January 1, 2015; [October 1, 2018](#).

CHAPTER 25-05-01

25-05-01-07. Cremation requirements.

1. All crematoriums shall clean their retorts at the conclusion of each cremation, and bone fragments that remain must be duly reduced by equipment sanctioned by the cremation association of North America, placed in a rigid sealed container of fiberglass, metal, wood, or plastic, and duly marked with the name of the person cremated, the name of the funeral director involved in the cremation, the age and date of birth and death of the person cremated, and the name and complete address of the crematorium.
2. If cremated remains are to be shipped by a common carrier, they must be ~~duly marked, sealed, insured, and~~ shipped only by a method which ~~has~~uses an internal tracking system ~~available~~. Cremated remains shall be shipped to the address as stated on the cremation authorization form signed by the authorizing agent.
3. Cremated remains to be shipped must be packed in a method which complies with United States postal service requirements for packaging and shipping cremated remains, including USPS publication 139. Further,
 - a. Cremated remains must be placed in a heavy duty plastic bag with a metal identification tag attached to the bag.
 - b. The bag must be placed inside a temporary shipping container or urn, and sealed with durable tape.
 - c. The temporary shipping container or urn must be placed in a corrugated cardboard box with identification of the deceased, the recipient's and the sender's addresses both within the box and written or secured to the outside of the box, adequate padding must be supplied, and the box must be sealed with durable tape.
 - d. The cardboard box containing the temporary shipping container or urn must be placed in a durable outer container, such as the United States postal service's priority two-day express mail shipping box, appropriately padded and sealed with durable tape. The recipient's address, the return address, and tracking number must be legibly written on or attached to the box, and the contents must be insured in the amount requested by the authorizing agent. The box containing the temporary shipping container or urn may not be shipped in a bag or envelope, such as the United States postal service's express envelopes.
 - e. The crematorium or funeral practitioner must monitor the shipment using the tracking number, and must supply the tracking number to the intended recipient by phone or email on the day of shipment.
 - f. The crematorium or funeral practitioner must contact the intended recipient to confirm receipt of the package.

TITLE 33
STATE DEPARTMENT OF HEALTH

OCTOBER 2018

CHAPTER 33-16-01

33-16-01-01. General - Definitions - Permit effect - Incorporation by reference.

1. **Authority.** The authority for this chapter relating to the control, prevention, and abatement of pollution of natural surface and underground waters is provided by North Dakota Century Code section 61-28-04.
2. **Scope and purpose.** This chapter establishes procedures governing the application for, and the issuance, denial, modification, and revocation of, permits for the discharge of pollutants into the waters of the state, as defined by subsection 6 of North Dakota Century Code section 61-28-02. The establishment of such procedures is required as a condition precedent to participation by North Dakota in the national pollutant discharge elimination system, pursuant to the provisions of section 402(b) of the Federal Water Pollution Control Act [33 U.S.C. 1251 et seq.].
3. **Definitions.** As used in this chapter, unless the context otherwise indicates:
 - a. "Administrator" means the administrator of the United States environmental protection agency.
 - b. "Applicable water quality standards" means all water quality standards to which a discharge is subject under the Federal Water Pollution Control Act and which have been:
 - (1) Approved or permitted to remain in effect by the administrator following submission to the administrator pursuant to section 303(a) of the Federal Water Pollution Control Act; or
 - (2) Promulgated by the administrator pursuant to section 303(b) or (c) of the Federal Water Pollution Control Act.
 - c. "Biological monitoring" means the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants:
 - (1) By techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent; and
 - (2) At appropriate frequencies and locations.
 - d. "Department" means the North Dakota state department of health.

- e. "Discharge" when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.
- f. "Discharge of a pollutant" and "discharge of pollutants" each means any addition of any pollutant to the waters of the state from any source, including the disposal of pollutants into wells.
- g. "Effluent standard" or "effluent limitation" means any restriction established by the department on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into the waters of the state. Such restrictions shall be at least as stringent as standards adopted by the administrator pursuant to the provisions of the Federal Water Pollution Control Act. Such restrictions shall include, but not be limited to, effluent limitations and applicable compliance schedules, standards of performance, toxic effluent standards and prohibitions, and pretreatment standards adopted by the administrator pursuant to the aforesaid Act.
- h. "EPA" means the United States environmental protection agency.
- i. "Industrial user" means a source of indirect discharge as defined in section 33-16-01.1-01.
- j. "Major facility" means any facility or activity subject to regulation under the national pollutant discharge elimination system which has been identified as a major facility by the regional administrator in conjunction with the department.
- k. "Minor discharge" means any discharge from a facility or activity which has not been identified as a major facility.
- l. "Municipality" means a city, county, district, association, or other public body created by or pursuant to state law and having jurisdiction over disposal of wastes, as the term is defined by subsection 2 of North Dakota Century Code section 61-28-02, or a designated and approved management agency under section 209 of the Federal Water Pollution Control Act.
- m. "National data bank" means a facility or system established or to be established by the administrator for the purposes of assembling, organizing, and analyzing data pertaining to water quality and the discharge of pollutants.
- n. "National pollutant discharge elimination system (NPDES)" means the national system for the issuance of permits under section 402 of the Federal Water Pollution Control Act of 1972 and includes any state or interstate program which has been approved by the administrator pursuant to section 402 of the Federal Water Pollution Control Act.
- o. "National pollutant discharge elimination system application" or "application" means the uniform national forms, including subsequent additions, revisions, or modifications duly promulgated by the administrator pursuant to the Federal Water Pollution Control Act, for application for a national pollutant discharge elimination system permit and any state form that has been approved for use by the administrator.
- p. "National pollutant discharge elimination system form" means any issued national pollutant discharge elimination system permit and any uniform national form developed for use in the national pollutant discharge elimination system and prescribed in regulations promulgated by the administrator and any state form that has been approved for use by the administrator.
- q. "National pollutant discharge elimination system permit" means any permit issued by the department pursuant to its authority under North Dakota Century Code section 61-28-04,

and subsequent to approval by the administrator as described in subsection 5 of section 33-16-01-04.

- r. "National pollutant discharge elimination system reporting form" means the uniform national forms, including subsequent additions, revisions, or modifications duly promulgated by the administrator pursuant to the Federal Water Pollution Control Act, for reporting data and information pursuant to monitoring and other conditions of national pollutant discharge elimination system permits and any state form that has been approved for use by the administrator.
- s. "Person" means the state or any agency or institution thereof, any municipality, political subdivision, public or private corporation, individual, partnership, association, any agency or instrumentality of the United States government, or other entity, and includes any officer or governing or managing body of any municipality, political subdivision, or public or private corporation.
- t. "Pollutant" means "wastes" as defined in subsection 2 of North Dakota Century Code section 61-28-02, including dredged spoil, solid waste, incinerator residue, garbage, sewage, sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water.
- u. "Refuse Act application" means the application for a permit under section 13 of the River and Harbor Act of 1899 [33 U.S.C. 407].
- v. "Regional administrator" means the regional administrator of region VIII of the environmental protection agency, which includes within its jurisdiction North Dakota.
- w. "Schedule of compliance" means a schedule of remedial measures, including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.
- x. "Toxic pollutant" means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation, or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions including malfunctions in reproduction, or physical deformations, in such organisms or their offspring.
- y. "Waters of the state" means all water included within the definitions given in subsection 615 of North Dakota Century Code section 61-28-02 or North Dakota Century Code section 61-01-01.

4. **Effect of a permit.**

- a. Except for any toxic effluent standards and prohibitions and standards for sewage sludge use or disposal, compliance with a permit constitutes compliance with sections 301, 302, 307, 318, 403, and 405(a) and (b) of the Clean Water Act.
- b. The issuance of a permit does not convey any property rights of any sort or any exclusive privilege.

5. **Incorporation by reference.**

- a. The subchapters, parts, subparts, and appendices of title 40, Code of Federal Regulations, which are incorporated by reference into this chapter shall be treated as if

they were published in full in this chapter. ~~Unless~~Except as provided in section 33-16-01-31 or otherwise specified, any incorporation by reference shall be as it exists on ~~October 1, 2002~~January 1, 2018.

- b. Any reference to "waters of the United States" or "waters of the U.S." in any corporation by reference shall include "waters of the state" as defined in this section.

History: Amended effective October 1, 1989; October 1, 2002; December 1, 2004; October 1, 2018.

33-16-01-01.1. Additional point sources subject to regulation.

1. The 40 Code of Federal Regulations, part 122.23, concentrated animal feeding operations, [40 CFR 122.23], ~~as it exists on February 12, 2003~~, is incorporated into this chapter by reference. The department regulates livestock operations under chapter 33-16-03, including those which are not subject to this subsection.
2. The 40 Code of Federal Regulations, part 122.24, concentrated aquatic animal production facilities, [40 CFR 122.24] is incorporated into this chapter by reference.
3. The 40 Code of Federal Regulations, part 122.25, aquaculture projects, [40 CFR 122.25] is incorporated into this chapter by reference.
4. The 40 Code of Federal Regulations, part 122.26, storm water discharges, [40 CFR 122.26] is incorporated into this chapter by reference.
5. The 40 Code of Federal Regulations, part 122.27, silvicultural activities, [40 CFR 122.27] is incorporated into this chapter by reference.

History: Effective October 1, 2002; amended effective December 1, 2004; October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-01-02. Acquisition of data.

1. Application for a national pollutant discharge elimination system permit. Any person who discharges any waste through a point source into a surface water or conducts any activity which requires a valid permit under North Dakota Century Code section 61-28-06 must file a completed national pollutant discharge elimination system application.
2. Any person who commences discharge of any waste through a point source into a surface water or conduct of any activity which requires a valid permit under North Dakota Century Code section 61-28-06 after the effective date of this chapter shall either:
 - a. File a completed national pollutant discharge elimination system application no less than one hundred eighty days prior to the day on which it is desired to commence operation of the waste disposal operation; or
 - b. File a completed national pollutant discharge elimination system application in sufficient time prior to the commencement of waste disposal operations to allow the department to ensure compliance with any applicable water quality standards and effluent standards and the requirements of sections 306 and 208(b) and (c) of the Federal Water Pollution Control Act.
3. Application requirements.

- a. All applications must comply with 40 Code of Federal Regulations, part 122.21(f), which is incorporated into this chapter by reference.
 - b. Applications by manufacturing, commercial, mining, and silvicultural dischargers shall comply with 40 Code of Federal Regulations, part 122.21(g), which is incorporated into this chapter by reference.
 - c. Applications by manufacturing, commercial, mining, and silvicultural facilities that discharge only nonprocess wastewater shall comply with 40 Code of Federal Regulations, part 122.21(h), which is incorporated into this chapter by reference.
 - d. Applications by concentrated animal feeding operations and aquatic animal production facilities shall comply with 40 Code of Federal Regulations, part 122.21(i), ~~as it exists on February 12, 2003~~, which is incorporated into this chapter by reference.
 - e. Applications from publicly owned treatment works shall comply with 40 Code of Federal Regulations, part 122.21(j), which is incorporated into this chapter by reference.
 - f. Applications from new sources shall comply with 40 Code of Federal Regulations, part 122.21(k), which is incorporated into this chapter by reference.
4. The department may require whatever additional information is necessary to complete the processing of the application. No application will be processed by the department until all of the requested information is supplied and the application is complete.
 5. When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit.
 6. Applicants shall keep records of all data used to complete permit applications and any supplemental information submitted with an application for a period of at least three years from the date the application is signed.

33-16-01-07. Public notice.

1. Public notice of every national pollutant discharge elimination system draft permit shall be circulated in a manner designed to inform interested and potentially interested persons of the proposed discharge and of the proposed determination to issue or deny a national pollutant discharge elimination system permit for the proposed discharge. Procedures for the circulation of public notice shall include at least the following:
 - a. Notice of a major facility permit or general permit shall be published in a daily or weekly newspaper within the area affected by the facility or activity.
 - b. Notice of all other permits shall be circulated within the geographical areas of the proposed discharge; such circulation may include any or all of the following:
 - (1) Posting in the post office and public places of the municipality nearest the premises of the applicant in which the effluent source is located.
 - (2) Posting near the entrance to the applicant's premises and in nearby places.
 - (3) Publishing in local newspapers and periodicals, or, if appropriate, in a daily newspaper of general circulation.

- (4) Any other method, including press releases, which will reasonably provide actual notice of the proposed action to the persons potentially affected.
 - c. Notice shall be mailed to the following persons:
 - (1) Any user identified in the permit application of a privately owned treatment works.
 - (2) Persons who are on the mailing list.
 - (3) Local governmental units which have jurisdiction over the area where the facility is proposed to be located and each state agency which has authority with respect to the facility's construction or operation.
 - d. Notice, a copy of the permit application, the statement of basis or fact sheet if required by section 33-16-01-08, and the draft permit prepared pursuant to section 33-16-01-06 shall be mailed to the following persons:
 - (1) The applicant, except for those national pollutant discharge elimination system general permits for which there is no applicant.
 - (2) Any other agency which is known to have issued or to be required to issue an environmental control permit for the same facility or activity.
 - (3) Federal and state agencies with jurisdiction over fish, shellfish, and wildlife resources, the advisory council on historic preservation, and the state historic preservation officers, including any affected states or Indian tribes.
 - (4) Any state agency responsible for plan development under sections 208(b)(2), 208(b)(4), and 303(e) of the Clean Water Act, the United States army corps of engineers, the United States fish and wildlife service, and the national marine fisheries service.
 - e. The department shall add the name of any person or group upon request to the mailing list. The department shall also [publish post on its website](#) annually an invitation to be added to the mailing list.
2. The department shall provide a period of not less than thirty days following the date of the public notice during which time interested persons may submit their written views on the tentative determinations with respect to the national pollutant discharge elimination system application. All written comments submitted during the thirty-day comment period shall be retained by the department and considered in the formulation of its final determinations with respect to the national pollutant discharge elimination system application. The period for comment may be extended at the discretion of the department.
3. The contents of public notice of applications for a national pollutant discharge elimination system permit shall include at least the following:
 - a. Name, address, and telephone number of the agency issuing the public notice.
 - b. Name and address of each applicant and facility, except for public notices of general permits.
 - c. Brief description of each applicant's activities or operations which result in the discharge described in the national pollutant discharge elimination system application or draft general permit, e.g., municipal waste treatment plant, steel manufacturing, or drainage for mining activities.

- d. Name of waterway to which each discharge is made and a short description of the location of each discharge on the waterway indicating whether such discharge is a new or an existing discharge. For general permits, the public notice shall include a description of the permit area.
- e. A statement of the tentative determination to issue or deny a national pollutant discharge elimination system permit for the discharge described in the national pollutant discharge elimination system application.
- f. A brief description of the procedures for the formulation of final determinations, including the thirty-day comment period required by subsection 2, the right to request a public hearing, and any other means by which interested persons may influence or comment upon those determinations.
- g. Address and telephone number of the department, where interested persons may obtain further information or request a copy of the draft permit prepared pursuant to section 33-16-01-06, request a copy of the fact sheet prepared pursuant to section 33-16-01-08, and inspect and copy national pollutant discharge elimination system forms and related documents.
- h. The date, time, and location of any public hearing or meeting which has been scheduled.

33-16-01-12. Terms and conditions of national pollutant discharge elimination system permits.

1. The following discharges into the waters of the state are prohibited:
 - a. Any radiological, chemical, or biological warfare agent or high-level radioactive waste.
 - b. Any discharge into the navigable waters that the secretary of the army acting through the chief of engineers finds would substantially impair anchorage and navigation.
 - c. Any discharge to which the regional administrator has objected in writing.
 - d. Any discharge from a point source which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Federal Water Pollution Control Act.
 - e. Any discharge requiring certification under section 401 of the Federal Water Pollution Control Act and 40 Code of Federal Regulations, part 124.53, for which the department has neither granted nor waived the certification.
 - f. Any discharge from a new source or new discharger which causes or contributes to the violation of applicable water quality standards, unless the owner or operator of the new source or new discharger demonstrates that:
 - (1) The existing dischargers to the stream segment are subject to compliance schedules designed to bring the stream segment into compliance; and
 - (2) Remaining pollutant load allocations are sufficient to allow for the discharge.
2. All national pollutant discharge elimination system permits shall contain, either expressly or by reference, the permit conditions listed in 40 Code of Federal Regulations, part 122.41, [40 CFR 122.41], which is incorporated into this chapter by reference.

3. National pollutant discharge elimination system permits shall contain all applicable permit conditions listed in 40 Code of Federal Regulations, part 122.42, [40 CFR 122.42], ~~as it exists on February 12, 2003~~, which is incorporated into this chapter by reference.
4. National pollutant discharge elimination system permit conditions shall be established in compliance with 40 Code of Federal Regulations, part 122.43, [40 CFR 122.43], which is incorporated into this chapter by reference.
5. National pollutant discharge elimination system permits shall include requirements for recording and reporting of monitoring results in compliance with 40 Code of Federal Regulations, part 122.48, [40 CFR 122.48], which is incorporated into this chapter by reference.

33-16-01-26.1. General permits.

1. **Coverage.** The department may issue a general permit in accordance with the following:
 - a. **Area.** The general permit will be written to cover a category of discharges described in the permit under subdivision b, except those covered by individual permits, within a designated area. The area will correspond to existing geographic or political boundaries or any other appropriate division or combination of boundaries.
 - b. **Sources.** The general permit may be written to regulate, within the designated area as described in subdivision a, categories of point sources if the sources all:
 - (1) Involve the same or substantially similar types of operations;
 - (2) Discharge the same types of wastes;
 - (3) Require the same effluent limitations or operating conditions;
 - (4) Require the same or similar monitoring; and
 - (5) In the opinion of the department, are more appropriately controlled under a general permit than under individual permits.
 - c. **Storm water.** The general permit may be written to regulate storm water point sources within the designated area as described in subdivision a.
2. **Administration.**
 - a. General permits may be issued, modified, revoked and reissued, or terminated in accordance with applicable requirements of chapter 33-16-01.
 - b. Requiring an individual permit.
 - (1) The department may require any person authorized by a general permit to apply for and obtain an individual North Dakota pollutant discharge elimination system permit. Any interested person may petition the director to take action under this paragraph. Cases when an individual North Dakota pollutant discharge elimination system permit may be required include the following:
 - (a) The discharge is a significant contributor of pollution as determined by the factors set forth in chapter 33-16-01;

- (b) The discharger is not in compliance with the conditions of the general North Dakota pollutant discharge elimination system permit;
 - (c) A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source;
 - (d) Effluent limitation guidelines are promulgated for point sources covered by the general North Dakota pollutant discharge elimination system permit;
 - (e) A North Dakota water quality management plan containing requirements applicable to such point sources is approved;
 - (f) Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit or either a temporary or permanent reduction or elimination of the authorized discharge is necessary; or
 - (g) The requirements of subsection 1 are not met.
- (2) Any owner or operator authorized by a general permit may request to be excluded from the coverage of the general permit by applying for an individual permit. The owner or operator shall submit an application under section 33-16-01-02 to the department with reasons supporting the request. The request must be submitted no later than ninety days after the notice by the department in accordance with section 33-16-01-07. The request must be processed under chapter 33-16-01. If the reasons cited by the owner or operator are adequate to support the request, the department may issue an individual permit.
 - (3) When an individual North Dakota pollutant discharge elimination system permit is issued to an owner or operator otherwise subject to a general North Dakota pollutant discharge elimination system permit, the applicability of the general permit to the individual North Dakota pollutant discharge elimination system permittee is automatically terminated on the effective date of the individual permit.
 - (4) A permittee, excluded from a general permit solely because the permittee already has an individual permit, may request that the individual permit be revoked. The permittee shall then request to be covered by the general permit. Upon revocation of the individual permit, the general permit shall apply to the source.
3. **Federal requirements.** The 40 Code of Federal Regulations, part 122.28, general permits, [40 CFR 122.28], ~~as it exists on February 12, 2003~~, is incorporated into this chapter by reference.

History: Effective October 1, 1989; amended effective October 1, 2002; December 1, 2004; [October 1, 2018](#).

CHAPTER 33-16-01.1 PRETREATMENT REGULATIONS

Section

33-16-01.1-01	Definitions
<u>33-16-01.1-01.1</u>	<u>Purpose and Applicability</u>
33-16-01.1-02	Prohibited Discharges
33-16-01.1-03	Local Limits
<u>33-16-01.1-03.1</u>	<u>Local Law</u>
33-16-01.1-04	Categorical Pretreatment Standards
33-16-01.1-05	Publicly Owned Treatment Works Pretreatment Programs - <u>Development by Publicly Owned Treatment Works</u>
33-16-01.1-06	Publicly Owned Treatment Works Pretreatment Program Requirements
33-16-01.1-07	Publicly Owned Treatment Works Pretreatment Program Submission Packages
33-16-01.1-08	Approval Process for Publicly Owned Treatment Works Pretreatment Programs and Requests for Authority to Grant Removal Credits
33-16-01.1-09	Public Notice
33-16-01.1-10	Opportunity for Hearing
33-16-01.1-11	General Monitoring and Reporting Requirements
33-16-01.1-12	Industrial User Monitoring and Reporting Requirements
33-16-01.1-13	Publicly Owned Treatment Works Reporting Requirements
33-16-01.1-14	Removal Credits
33-16-01.1-15	Variances From Categorical Pretreatment Standards for Fundamentally Different Factors
33-16-01.1-16	Net/Gross Adjustments
33-16-01.1-17	Upset
33-16-01.1-18	Bypass
33-16-01.1-19	Pretreatment Program Modifications
33-16-01.1-20	Right of Entry
33-16-01.1-21	Enforcement

33-16-01.1-01. Definitions.

The definitions in section 33-16-01-01 apply to this chapter unless defined differently below.

1. "Act" means Federal Water Pollution Control Act, also known as the Clean Water Act, as amended [33 U.S.C. 1251, et seq.].
2. "Approval authority" means the department.
3. "Best management practices" or "BMPs" means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in 40 CFR 403.5(a)(1) and (b). Best management practices also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage.
- ~~2-4.~~ "Bypass" means the intentional diversion of wastestreams from any portion of an industrial user's treatment facility.
- ~~3-5.~~ "Categorical industrial user" means an industrial user that is subject to a categorical pretreatment standard for an industry category or categorical standard.
6. "Categorical pretreatment standard" or "categorical standard" means any regulation containing pollutant discharge limits promulgated by the environmental protection agency in accordance with sections 307(b) and (c) of the Act (33 U.S.C. section 1317) that apply to a specific category of users and that appear in 40 CFR chapter I, subchapter N, parts 405 through 471.

4.7. "Control authority" means either:

- a. The publicly owned treatment works, if the publicly owned treatment works which receives the indirect discharge administers an approved pretreatment program in accordance with sections 33-16-01.1-06 and 33-16-01.1-08; or
- b. The department, if the publicly owned treatment works which receives the indirect discharge does not administer an approved pretreatment program in accordance with sections 33-16-01.1-06 and 33-16-01.1-08.

5.8. "Director" means the department.

6.9. "Indirect discharge" means the introduction of pollutants into a publicly owned treatment works from any nondomestic source regulated under section 307(b),(c), or (d) of the Federal Water Pollution Control Act.

7.10. "Industrial user" or "user" means a source of indirect discharge.

8.11. "Interference" means an indirect discharge which, alone or in conjunction with any other indirect discharges, both:

- a. Inhibits or disrupts the publicly owned treatment works processes or operations, or its sludge processes, use, or disposal; and
- b. Causes a violation of any requirement of the publicly owned treatment works North Dakota pollutant discharge elimination system permit, including an increase in the magnitude or duration of a violation or prevents sewage sludge use or disposal in compliance with federal or state law or statute.

9.12. "New source" means:

- a. Any building, structure, facility, or installation for which construction commenced after the publication of proposed pretreatment standards which will apply to such source after promulgation, from which there is or may be an indirect discharge, provided that:
 - (1) The building, structure, facility, or installation is constructed at a site at which no other source is located;
 - (2) The building, structure, facility, or installation totally replaces the process or production equipment that causes the indirect discharge at an existing source; or
 - (3) The production or wastewater generating processes of the building, structure, facility, or installation is substantially independent of an existing source at the same site. In determining whether these are substantially independent factors, such as the extent to which the new facility is integrated with the existing plant and the extent to which the new facility is engaged in the same general type of activity as the existing source, should be considered.
- b. Construction on a site at which an existing source is located results in a modification rather than a new source if the construction does not create a new building, structure, facility, or installation meeting the criteria of paragraphs 2 and 3 of subdivision a, but otherwise alters, replaces, or adds to existing process or production equipment.
- c. Construction of a new source as defined under this subsection has commenced if the owner or operator has ~~undertaken any of the following~~:
 - (1) Begun, or caused to begin, as part of a continuous onsite construction program:

- (a) Any placement, assembly, or installation of facilities or equipment; or
 - (b) Significant site preparation work which is necessary for the placement, assembly, or installation of new source facilities or equipment; or
- (2) Entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation under this subsection.

~~40.13.~~ "Passthrough" means ~~an indirect~~ discharge which exits the publicly owned treatment works into waters of the state in quantities or concentrations which, alone or in conjunction with ~~any other discharges~~ a discharge or discharges from other sources, is a cause of a violation of any requirement of the publicly owned treatment works North Dakota pollutant discharge elimination system permit, including an increase in the magnitude or duration of a violation.

~~41.14.~~ "Pretreatment" means the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a publicly owned treatment works. The reduction or alteration may be obtained by physical, chemical, or biological processes, process changes or by other means, except as prohibited by 40 CFR 403.6(d). Appropriate pretreatment technology includes control equipment, such as equalization tanks or facilities, for protection against surges or slug loadings that might interfere with or otherwise be incompatible with the publicly owned treatment works. However, where wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or with wastewater from another regulated process, the effluent from the equalization facility must meet an adjusted pretreatment limit calculated in accordance with 40 CFR 403.6(e).

~~42.15.~~ "Pretreatment requirements" means any substantive or procedural requirement related to pretreatment, other than a pretreatment standard, imposed on an industrial user.

~~43.16.~~ "Pretreatment standards" means any regulation which applies to industrial users that contains pollutant discharge limits promulgated by the environmental protection agency in accordance with the Federal Water Pollution Control Act, including prohibitive discharge limits established pursuant to section 33-16-01.1-02.

~~44.17.~~ "Publicly owned treatment works" or "POTW" means a treatment works as defined by section 212 of the Federal Water Pollution Control Act, which is owned by a state or municipality, including any devices or systems used in the storage, treatment, recycling, and reclamation of municipal sewage or liquid industrial wastes, as well as sewers, pipes, and other conveyances that convey wastewater to a publicly owned treatment works treatment plant. This term also means the municipality that has jurisdiction over the indirect discharges to and the discharges from the treatment works.

~~45.18.~~ "Publicly owned treatment works treatment plant" means that portion of the publicly owned treatment works which is designed to provide treatment of municipal sewage and industrial waste.

~~46.19.~~ "Severe property damage" means substantial physical damage to property, damage to treatment facilities which ~~renders~~ causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. ~~Severe property damage~~ does not mean economic loss caused by delays in production.

~~47.20.~~ "Significant industrial user" means:

- a. All industrial users subject to categorical pretreatment standards under sections 33-16-01-31 and 33-16-01.1-04; ~~and~~
- b. Any other industrial user that meets at least one of the following criteria:
 - (1) Discharges an average of twenty-five thousand gallons [94,635 liters] per day or more of process wastewater to the publicly owned treatment works, excluding sanitary wastewater, noncontact cooling water, and boiler blowdown wastewater;
 - (2) Contributes a process wastestream which makes up five percent or more of the average dry weather hydraulic or organic capacity of the publicly owned treatment works treatment plant; or
 - (3) Is designated as a significant industrial user by the control authority on the basis that the user has a reasonable potential for adversely affecting the publicly owned treatment works operation or for violating any pretreatment standard or requirement.

c. The control authority may determine that an industrial user subject to categorical pretreatment standards under 40 CFR 403.6 and 40 CFR chapter I, subchapter N is a nonsignificant categorical industrial user rather than a significant industrial user on a finding that the industrial user never discharges more than one hundred gallons per day (gpd) of total categorical wastewater (excluding sanitary, noncontact cooling and boiler blowdown wastewater, unless specifically included in the pretreatment standard) and the following conditions are met:

- (1) The industrial user, prior to the control authority's finding, has consistently complied with all applicable categorical pretreatment standards and requirements;
- (2) The industrial user annually submits the certification statement required in 40 CFR 403.12(q) together with any additional information necessary to support the certification statement; and
- (3) The industrial user never discharges any untreated concentrated wastewater.

~~e.d.~~ Upon a finding that an industrial user which meets the criteria of subdivision b has no reasonable potential for adversely affecting the publicly owned treatment works operation or for violating any pretreatment standard or requirement, the control authority may, at any time, determine that the industrial user is not a significant industrial user.

~~48.21.~~ "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with categorical pretreatment standards because of factors beyond the reasonable control of the industrial user. Upset does not include noncompliance to the extent caused by operational error, inadequate or improperly designed treatment facilities, lack of preventive maintenance, or careless or improper operation.

~~49.22.~~ "Water management division director" means the director of the water management division of the regional office of the United States environmental protection agency or this person's delegated representative.

History: Effective October 1, 2002; amended effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

33-16-01.1-01.1. Purpose and applicability.

1. This chapter establishes responsibilities of state and local government, industry, and the public to implement the national pretreatment standards to control pollutants, which pass

through or interfere with treatment processes in publicly owned treatment works or which contaminate sewage sludge.

2. The regulations in this chapter apply:

- a. To pollutants from nondomestic sources covered by pretreatment regulations, which are indirectly discharged into or transported by truck or rail or otherwise introduced into publicly owned treatment works;
- b. To publicly owned treatment works which receive wastewater from sources subject to pretreatment regulations; and
- c. Any new or existing sources subject to pretreatment regulations. Pretreatment regulations do not apply to sources which discharge to a sewer which is not connected to a publicly owned treatment works treatment plant.

History: Effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

33-16-01.1-02. Prohibited discharges.

The following prohibitions apply to each industrial user whether or not the user is subject to other pretreatment standards or any national, state, or local pretreatment requirements:

- 1. **General prohibitions.** An industrial user may not introduce into a publicly owned treatment works any pollutant which causes passthrough or interference.
- 2. **Affirmative defenses.** A user shall have an affirmative defense in any action brought against it alleging a violation of the general prohibitions established in subsection 1 and the specific prohibitions in subdivisions c through g of subsection 3 where the user can demonstrate that:
 - a. The user did not know or have reason to know that its discharge, alone or in conjunction with a discharge or discharges from other sources, would cause passthrough or interference; and
 - b. (1) A local limit designed to prevent passthrough or interference, or both, as the case may be, was developed in accordance with section 33-16-01.1-03 for each pollutant in the user's discharge that caused passthrough or interference, and the user was in compliance with each such local limit directly prior to and during the passthrough or interference; or
 - (2) If a local limit designed to prevent passthrough or interference, or both, as the case may be, has not been developed in accordance with section 33-16-01.1-03 for the pollutant that caused the passthrough or interference, the user's discharge directly prior to and during the passthrough or interference did not change substantially in nature or constituents from the user's prior discharge activity when the publicly owned treatment works was regularly in compliance with the publicly owned treatment works' North Dakota pollutant discharge elimination system permit requirements and, in the case of interference, applicable requirements for sewage sludge use or disposal.
- 3. **The Specific prohibitions.** In addition, the following pollutants may not be introduced into a publicly owned treatment works from any source:
 - a. Pollutants which create a fire or explosion hazard in the publicly owned treatment works, including wastestreams with a closed cup flashpoint of less than sixty degrees Celsius

[140 degrees Fahrenheit] using the test methods specified in ~~40 Code of Federal Regulations, part 261.21, [40 CFR 261.21]~~.

- b. Pollutants which will cause corrosive structural damage to the publicly owned treatment works, but in no case discharges with pH lower than 5.0, unless the publicly owned treatment works is specifically designed to accommodate such discharges.
- c. Solid or viscous pollutants in amounts which will cause obstruction to the flow in the publicly owned treatment works resulting in interference.
- d. Any pollutant released in a discharge at a flow rate or pollutant concentration which will cause interference.
- e. Heat in amounts which will inhibit biological activity in the publicly owned treatment works resulting in interference, but in no case heat in such quantities that the temperature at the publicly owned treatment works treatment plant exceeds forty degrees Celsius [104 degrees Fahrenheit], unless the department, upon request of the publicly owned treatment works, approves alternate temperature limits.
- f. Petroleum oil, nonbiodegradable cutting oil, or products of mineral oil origin in amounts that will cause interference or passthrough.
- g. Pollutants which result in the presence of toxic gases, vapors, or fumes within the publicly owned treatment works in a quantity that may cause acute worker health and safety problems.
- h. Any trucked or hauled pollutants, except at discharge points designated by the publicly owned treatment works.

History: Effective October 1, 2002; amended effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04, 61-28-06

33-16-01.1-03. Local limits.

- 1. Each publicly owned treatment works developing an approved pretreatment program shall develop and enforce specific limits to implement the prohibitions of section 33-16-01.1-02. Each publicly owned treatment works with an approved pretreatment program shall continue to develop these limits as necessary and effectively enforce such limits.
- 2. All other publicly owned treatment works shall, if pollutants contributed by a user or users result in interference or passthrough and such violation is likely to recur, develop and enforce specific effluent limits for indirect discharges which, together with appropriate changes in the publicly owned treatment works treatment plant facilities or operation, are necessary to ensure renewed and continued compliance with the publicly owned treatment works North Dakota pollutant discharge elimination system permit or sludge use or disposal practices.
- 3. Specific effluent limits shall not be developed and enforced without individual notice to persons or groups that have requested such notice and an opportunity to respond.
- 4. Publicly owned treatment works may develop best management practices to implement subsections 1 and 2 of this section. Such best management practices shall be considered local limits and pretreatment standards for the purposes of this chapter and section 307(d) of the Act.

5. When specific prohibitions or limits on pollutants are developed by a publicly owned treatment works in accordance with this section, the limits shall be deemed pretreatment ~~requirements~~standards.

History: Effective October 1, 2002; amended effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04, 61-28-06

33-16-01.1-03.1. Local law.

Nothing in this chapter is intended to affect any pretreatment requirements, including any standards or prohibitions, established by local law as long as the local requirements are not less stringent than any set forth in national or state pretreatment standards or regulations, or any other requirements or prohibitions established by the department.

History: Effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

33-16-01.1-04. Categorical pretreatment standards.

1. Industrial users shall comply with all applicable pretreatment standards and requirements.
2. ~~Section 33-16-01-31 contains national pretreatment standards which specify quantities or concentrations of pollutants which may be discharged to a publicly owned treatment works by existing or new industrial users in specific industrial categories. Industrial users are subject to all applicable effluent guidelines and standards~~Pretreatment standards and regulations specifying quantities or concentrations of pollutants or pollutant properties which may be discharged to a publicly owned treatment works by existing or new industrial users in specific industrial subcategories will be established as separate regulations under the appropriate subpart of 40 CFR chapter I, subchapter N. These standards, unless specifically noted otherwise, shall be in addition to all applicable pretreatment standards and requirements set forth in this regulation.
3. ~~The 40 Code of Federal Regulations, part 403.6(a), category~~Category determination request, ~~[40 CFR 403.6(a)]~~, is incorporated into this chapter by reference.
4. Categorical industrial users shall comply with the following deadlines for compliance with categorical pretreatment standards:
 - a. Compliance by existing sources with categorical pretreatment standards shall be within three years of the date the standard is effective, unless a shorter compliance time is specified in the specific standard.
 - b. New sources shall have all pollution control equipment required to meet applicable pretreatment standards installed and operational before beginning to discharge. Within the shortest feasible time, but within ninety days, new sources shall meet all applicable pretreatment standards.
 - c. An existing source which becomes an industrial user after the promulgation of an applicable categorical pretreatment standard shall be considered an existing industrial user, unless the existing source is a new source.
5. ~~The 40 Code of Federal Regulations, part 403.6(c), concentration~~Concentration and mass limits, ~~[40 CFR 403.6(c)]~~, is incorporated into this chapter by reference.

6. Except when expressly authorized to do so by an applicable pretreatment standard or pretreatment requirement, an industrial user may not increase the use of process water, or in any other way attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with a pretreatment standard or pretreatment requirement. The control authority may impose mass limitations on industrial users which are using dilution to meet applicable pretreatment standards or pretreatment requirements, or in other cases when the imposition of mass limitations is appropriate.
7. ~~The 40 Code of Federal Regulations, part 403.6(e), combined~~ Combined wastestream formula, [40 CFR 403.6(e)], is incorporated into this chapter by reference. When wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or wastewater from another regulated process, the effluent from the equalization facility shall meet the adjusted pretreatment limit or limits calculated using the combined wastestream formula.

History: Effective October 1, 2002; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 23-01-04.1, 61-28-04

33-16-01.1-05. Publicly owned treatment works pretreatment programs - [Development by publicly owned treatment works](#).

1. The following publicly owned treatment works shall develop and submit for department approval a pretreatment program within one year after receiving notice that program development is required:
 - a. Any publicly owned treatment works with a total design flow of greater than five million gallons [18,927,058 liters] per day that receives from any industrial user pollutants which pass through or interfere with the treatment process or are otherwise subject to pretreatment standards.
 - b. Any other publicly owned treatment works for which the department determines a pretreatment program is warranted.
2. Upon development or modification of a pretreatment program, the publicly owned treatment works North Dakota pollutant discharge elimination system permit shall be modified to incorporate the approved or modified program conditions as enforceable conditions of the North Dakota pollutant discharge elimination system permit.

History: Effective October 1, 2002; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

33-16-01.1-11. General monitoring and reporting requirements.

1. Publicly owned treatment works ~~which~~[that](#) are required to develop a pretreatment program and industrial users which are subject to pretreatment standards shall install, calibrate, use, and maintain the monitoring equipment or methods, including if appropriate, biological monitoring methods, necessary to determine continued compliance with pretreatment standards and requirements.
2. All reports submitted by a user or publicly owned treatment works shall conform to the signatory requirements of [subsection 12 of section 33-16-01-05](#)[33-16-01.1-12](#).
3. In addition to the requirements of sections 33-16-01.1-12 and 33-16-01.1-13, industrial users and publicly owned treatment works shall submit any other information and reports required

under the North Dakota pollutant discharge elimination system or pretreatment regulation or under state law.

4. All information submitted to the state or publicly owned treatment works shall be available to the public at least to the extent provided by ~~40 Code of Federal Regulations, part 2.302, [40 CFR 2.302]~~. Monitoring data and other such data as is necessary to determine whether a user is in compliance with applicable pretreatment standards shall be available to the public without restriction.
5. All records of monitoring activity pursuant to sections 33-16-01.1-12 and 33-16-01.1-13 shall conform to the requirements of section 33-16-01-22. The monitoring record shall also include the sampling methods used. The period of retention shall be extended during the course of any unresolved litigation regarding an indirect discharge or the operations of the publicly owned treatment works pretreatment program, or when requested by the department or the administrator of the environmental protection agency. Such records shall be made available for inspection and copying for a reasonable fee by the department and the regional administrator.
6. Any publicly owned treatment works to which reports are submitted by industrial users pursuant to section 33-16-01.1-12 shall make such reports available for inspection and copying by the department and the regional administrator. The publicly owned treatment works shall retain such reports for a minimum of three years. The retention period shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the industrial user or the operation of the publicly owned treatment works pretreatment program, or when requested by the department or the administrator of the environmental protection agency.

7. Provisions governing fraud and false statements. The reports and other documents required to be submitted or maintained under this section shall be subject to:

a. The provisions of 18 U.S.C. 1001 relating to fraud and false statements;

b. The provisions of section 309(c)(4) of the Act, governing false statements, representation or certification; and

c. The provisions of section 309(c)(6) of the Act, regarding responsible corporate officers.

History: Effective October 1, 2002; amended effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

33-16-01.1-12. Industrial user monitoring and reporting requirements.

1. Each categorical industrial user shall submit a complete baseline monitoring report to the control authority.

a. The baseline monitoring report shall be submitted on the appropriate baseline monitoring reporting form, ~~which can be obtained from the department~~ in accordance with 40 CFR 403.12(b).

In cases where the standard requires compliance with a best management practice or pollution prevention alternative, the user shall submit documentation as required by the control authority or the applicable standards to determine with the standard.

Where an alternate concentration or mass limit has been calculated in accordance with 40 CFR 403.6(e) this adjusted limit along with supporting data shall be submitted to the control authority.

- b. For existing industrial users, the report shall be due one hundred eighty days after the effective date of the applicable categorical pretreatment standard or the final administrative decision made upon a category determination submission, whichever is later.
 - c. For new sources and sources that become industrial users after the promulgation of an applicable categorical pretreatment standard, the report shall be due ninety days prior to the commencement of the indirect discharge.
2. If a baseline monitoring report contains a compliance schedule for meeting categorical pretreatment standards, the industrial user shall submit compliance schedule progress reports to the control authority. The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the construction and operation of additional pretreatment required for the industrial user to meet the applicable categorical pretreatment standards (e.g., hiring an engineer, completing preliminary plans, completing final plans, executing contract for major components, commencing construction, completing construction, etc.). No increment of the compliance schedule shall exceed nine months.
- a. Each compliance schedule progress report shall be due fourteen days after the applicable progress date in the compliance schedule.
 - b. Each compliance schedule progress report shall include:
 - (1) A statement whether the user achieved the scheduled action on the applicable date; and
 - (2) If the user has not achieved the scheduled action, the date on which the user expects to achieve the action, the reason for delay, and the steps being taken to return the construction to the established schedule.
 - c. In no case shall more than nine months elapse between compliance schedule progress report submittals.
3. Each categorical industrial user shall submit to the control authority a complete ninety-day compliance report for each applicable pretreatment standard, in accordance with 40 CFR 403.12(d). For industrial users subject to equivalent mass or concentration limits established by the control authority in accordance with the procedures in 40 CFR 403.6(c), this report shall contain a reasonable measure of the user's long-term production rate. For all other industrial users subject to categorical pretreatment standards expressed in terms of allowable pollutant discharge per unit of production (or other measure of operation), this report shall include the user's actual production during the appropriate sampling period.
- a. ~~Each~~ For facilities covered when the department is the control authority, each ninety-day compliance report shall be submitted on a ninety-day compliance reporting form, which can be obtained from the department.
 - b. For existing industrial users, each report shall be due ninety days after the date for final compliance with the applicable categorical pretreatment standard.
 - c. For new sources and sources that become industrial users after the date for final compliance with the applicable categorical pretreatment standard, each report shall be due thirty days after commencement of the indirect discharge.
4. Each categorical industrial user shall submit complete periodic compliance reports to the control authority.

- a. Periodic compliance reports submitted to the department shall be submitted on a periodic compliance reporting form, which will be supplied to the user by the department. If the publicly owned treatment works is the control authority, periodic compliance reports shall require, at a minimum, the data listed in 40 ~~Code of Federal Regulations~~, CFR part 403.12(e) and part 403.12(g).

(1) In cases where the pretreatment standard requires compliance with a best management practice (or pollution prevention alternative), the user shall submit documentation required by the control authority or the pretreatment standard necessary to determine the compliance of the user.

(2) The control authority may authorize the industrial user subject to a categorical pretreatment standard to forego sampling of a pollutant regulated by a categorical pretreatment standard if the industrial user has demonstrated through sampling and other technical factors that the pollutant is neither present nor expected to be present in the discharge, or is present only at background levels from intake water and without any increase in the pollutant due to activities of the industrial user. This authorization is subject to the following conditions:

(a) The control authority may authorize a waiver where a pollutant is determined to be present solely due to sanitary wastewater discharged from the facility provided that the sanitary wastewater is not regulated by an applicable categorical standard and otherwise includes no process wastewater.

(b) The monitoring waiver is valid only for the duration of the effective period of the permit or other equivalent individual control mechanism, but in no case longer than five years. The user must submit a new request for the waiver before the waiver can be granted for each subsequent control mechanism.

(c) In making a demonstration that a pollutant is not present, the industrial user must provide data from at least one sampling of the facility's process wastewater prior to any treatment present at the facility that is representative of all wastewater from all processes.

The request for a monitoring waiver must be signed in accordance with subsection 12 and include the certification statement in 40 CFR 403.6(a)(2)(ii). Nondetectable sample results may only be used as a demonstration that a pollutant is not present if the environmental protection agency-approved method from 40 CFR part 136 with the lowest minimum detection level for that pollutant was used in the analysis.

(d) Any grant of the monitoring waiver by the control authority must be included as a condition in the user's control mechanism. The reasons supporting the waiver and any information submitted by the user in its request for the waiver must be maintained by the control authority for three years after expiration of the waiver.

(e) Upon approval of the monitoring waiver and revision of the user's control mechanism by the control authority, the industrial user must certify on each report with the statement below, that there has been no increase in the pollutant in its wastestream due to activities of the industrial user:

Based on my inquiry of the person or persons directly responsible for managing compliance with the pretreatment standard 40 CFR _____ [specify applicable national pretreatment standard part(s)], I certify that, to the best of my knowledge and belief, there has been no increase in the level of _____ [list

pollutant(s)] in the wastewaters due to the activities at the facility since filing of the last periodic report under 40 CFR 403.12(e)(1).

(f) In the event that a waived pollutant is found to be present or is expected to be present based on changes that occur in the user's operations, the user must immediately comply with the monitoring requirements of this subdivision or other more frequent monitoring requirements imposed by the control authority; and notify the control authority.

(g) This provision does not supersede certification processes and requirements established in categorical pretreatment standards, except as otherwise specified in the categorical pretreatment standard.

(3) The control authority may reduce the requirement in this subdivision to a requirement to report no less frequently than once a year, unless required more frequently in the pretreatment standard or by the approval authority, where the industrial user meets all of the following conditions:

(a) The industrial user's total categorical wastewater flow does not exceed any of the following:

[1] 0.01 percent of the design dry weather hydraulic capacity of the publicly owned treatment works, or five thousand gallons per day, whichever is smaller, as measured by a continuous effluent flow monitoring device unless the industrial user discharges in batches;

[2] 0.01 percent of the design dry weather organic treatment capacity of the publicly owned treatment works; and

[3] 0.01 percent of the maximum allowable headworks loading for any pollutant regulated by the applicable categorical pretreatment standard for which approved local limits were developed by a publicly owned treatment works in accordance with subsections 1 through 5 of section 33-16-01.1-03.

(b) The industrial user has not been in significant noncompliance, as defined in appendix A procedure 7, for any time in the past two years;

(c) The industrial user does not have daily flow rates, production levels, or pollutant levels that vary so significantly that decreasing the reporting requirement for this industrial user would result in data that are not representative of conditions occurring during the reporting period pursuant to this subdivision;

(d) The industrial user must notify the control authority immediately of any changes at its facility causing it to no longer meet conditions of subparagraph a or b of this paragraph. Upon notification, the industrial user must immediately begin complying with the minimum reporting in this subdivision; and

(e) The control authority must retain documentation to support the control authority's determination that a specific industrial user qualifies for reduced reporting requirements under this paragraph for a period of three years after the expiration of the term of the control mechanism.

(4) For industrial users subject to equivalent mass or concentration limits established by the control authority in accordance with the procedures in 40 CFR 403.6(c), the report required by this subdivision must contain a reasonable measure of the user's

long-term production rate. For all other industrial users subject to categorical pretreatment standards expressed only in terms of allowable pollutant discharge per unit of production (or other measure of operation), the report required by this subdivision must include the user's actual average production rate for the reporting period.

- b. Periodic compliance reports shall be submitted in accordance with a reporting schedule prescribed by the control authority. Reporting schedules shall be consistent with any applicable pretreatment standard requirements. In no case shall the reporting frequency be less than twice per year.
5. Each industrial user shall notify the publicly owned treatment works immediately of all discharges that could cause problems to the publicly owned treatment works, including any slug loadings.
6. ~~The 40 Code of Federal Regulations, part 403.12(p), [40 CFR 403.12(p)]~~, which concerns hazardous waste notification, is incorporated into this chapter by reference.
7. All industrial users shall promptly notify the control authority and the publicly owned treatment works in advance of any substantial change in the volume or characteristic of pollutants in their discharge, including the listed or characteristic hazardous wastes for which the user has submitted initial notification under subsection 6.
8. The indirect discharge from each industrial user shall be sampled and analyzed in accordance with a monitoring schedule prescribed by the control authority. The monitoring schedule shall be adequate to allow assessment of the indirect discharge. All analyses shall be performed in accordance with the procedures contained in ~~40 Code of Federal Regulations, part 136, [40 CFR 136]~~ or with any other test procedure approved by the administrator of the environmental protection agency.
9. Each noncategorical significant industrial user of a publicly owned treatment works which administers an approved pretreatment program shall submit to the publicly owned treatment works, at least semiannually, on dates specified by the publicly owned treatment works, a description of the discharge, including self-monitoring results as required by the publicly owned treatment works. In cases where a local limit requires compliance with a best management practice or pollution prevention alternative, the user must submit documentation required by the control authority to determine the compliance status of the user.
10. Annual certification by nonsignificant categorical industrial users. A facility determined to be a nonsignificant categorical industrial user pursuant to 40 CFR 403.3(v)(2) must annually submit the following certification statement, signed in accordance with the signatory requirements in subsection 12. This certification must accompany any alternative report required by the control authority:

Based on my inquiry of the person or persons directly responsible for managing compliance with the categorical pretreatment standards under 40 CFR _____, I certify that, to the best of my knowledge and belief that during the period from _____ to _____ [months, days, year]:

- a. The facility described as _____ [facility name] met the definition of a nonsignificant categorical industrial user as described in 40 CFR 403.3(v)(2);
- b. The facility complied with all applicable pretreatment standards and requirements during this reporting period; and
- c. The facility never discharged more than one hundred gallons of total categorical wastewater on any given day during this reporting period.

This compliance certification is based upon the following information: [Insert the information].

11. The control authority that chooses to receive electronic documents must satisfy the requirements of 40 CFR part 3 (electronic reporting).

12. Signatory requirements for industrial user reports. The reports required in this chapter must include the certification statement as set forth in 40 CFR 403.6(a)(2)(ii), and must be signed as follows:

a. By a responsible corporate officer, if the industrial user submitting the reports is a corporation, including a limited liability company. A responsible corporate officer means:

1. A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policymaking or decisionmaking functions for the corporation; or

2. The manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for control mechanism requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

b. By a general partner or proprietor if the user submitting the reports is a partnership, or sole proprietorship respectively.

c. By a duly authorized representative of the individual designated in subdivision a or b if:

1. The authorization is made in writing by the authorized representative defined in this section:

2. The authorization specifies either an individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company: and

3. The written authorization is submitted to the control authority.

d. If an authorization of this section is no longer accurate because a different individual or position has responsibility for environmental matters for the company, a new authorization satisfying the requirements of this section must be submitted to the control authority prior to or together with any reports to be signed by an authorized representative.

History: Effective October 1, 2002; amended effective October 1, 2018.

Law Implemented: NDCC 61-28-04

33-16-01.1-13. Publicly owned treatment works reporting requirements.

1. Publicly owned treatment works with approved pretreatment programs shall submit to the department on an annual basis a report describing the program activities. Reports shall be due March twenty-eighth. Each report shall include, at a minimum:
 - a. An updated list of the publicly owned treatment works industrial users, including the name and address of each user, and identifying the categorical standards applicable to each user. The list shall indicate which users are subject to local standards that are more stringent than the categorical pretreatment standards and shall also include users that are subject only to local requirements. The list must also identify industrial users subject to categorical pretreatment standards that are subject to reduced reporting requirements under paragraph 3 of subdivision a of subsection 4 of section 33-16-01.1-12, and identify which industrial users are nonsignificant categorical industrial users. The publicly owned treatment works shall provide an explanation for each deletion from the previous list;
 - b. A summary of the status of industrial user compliance over the reporting period;
 - c. A summary of compliance and enforcement activities, including inspections, conducted by the publicly owned treatment works during the reporting period;
 - d. A summary of changes to the publicly owned treatment works pretreatment program that have not been previously reported to the department; and
 - e. Any other relevant information requested by the department.
2. If a publicly owned treatment works is under a compliance schedule for pretreatment program development, the publicly owned treatment works shall submit compliance schedule progress reports to the department.

The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the development and implementation of a publicly owned treatment works pretreatment program (e.g., acquiring required authorities, developing funding mechanisms, acquiring equipment).

- a. Each compliance schedule progress report shall be due fourteen days after the applicable progress date in the compliance schedule.
- b. Each compliance schedule progress report shall include:
 - (1) A statement whether the publicly owned treatment works achieved the scheduled action on the applicable date; and
 - (2) If the publicly owned treatment works has not achieved the scheduled action, the date on which the publicly owned treatment works expects to achieve the action, the reason for delay, and the steps being taken to return to the established schedule.
- c. In no case shall more than nine months elapse between compliance schedule progress report submittals.

3. Signatory requirements for publicly owned treatment works reports. Reports submitted to the department by the publicly owned treatment works in accordance with this section shall be signed by a principal executive officer, ranking elected official or other duly authorized employee. The duly authorized employee must be an individual or position having responsibility for the overall operation of the facility or the pretreatment program. This authorization must be made in writing by the principal executive officer or ranking elected

official, and submitted to the approval authority prior to or together with the report being submitted.

33-16-01.1-18. Bypass.

1. An industrial user may allow any bypass to occur which does not cause pretreatment standards or pretreatment requirements to be violated, but only if it also is for essential maintenance to assure efficient operation. Such bypasses are not subject to subsections 2 and 3.
2. The industrial user shall provide notification to the control authority of a bypass under the following circumstances:
 - a. If the user knows in advance of the need for a bypass, prior notice shall be submitted, at least ten days before the date of the bypass, if possible.
 - b. The user shall submit oral notice of an unanticipated bypass that exceeds applicable pretreatment standards within twenty-four hours from the time the user becomes aware of the bypass. A written submission shall also be provided within five days of the time the user becomes aware of the bypass. The control authority may waive the written report on a case-by-case basis if the oral report has been received within twenty-four hours.
 - c. The written submission shall contain the following items:
 - (1) A description of the bypass and its cause;
 - (2) The duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and
 - (3) The steps taken or planned to reduce, eliminate, and prevent reoccurrence of the bypass.
3. Bypasses are prohibited unless the following conditions are met. The control authority may approve an anticipated bypass, if the following conditions are met:
 - a. The bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
 - b. There were no feasible alternatives to the bypass. This condition is not satisfied if adequate backup equipment was not installed to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
 - c. The user submitted the notification required in subsection 2.

4. The control authority may approve an anticipated bypass, after considering its adverse effects, if the control authority determines that it will meet the three conditions listed in subsection 3.

Law Implemented: NDCC 23-01-04.1, 61-28-04

33-16-01.1-21. Enforcement.

The department shall evaluate all reports, notifications, and data submitted to or obtained by the department in compliance with this chapter and shall investigate and follow up all apparent violations for possible enforcement action pursuant to North Dakota Century Code section 61-28-08. The department shall have authority to seek judicial relief and may also use administrative penalty authority when the publicly owned treatment works has sought a monetary penalty which the approval authority believes to be insufficient.

History: Effective October 1, 2002; amended effective October 1, 2018.

APPENDIX A

REQUIRED POTW PUBLICLY OWNED TREATMENT WORKS PRETREATMENT PROGRAM ELEMENTS

~~Legal authority.~~ **Legal authority.** The publicly owned treatment works (POTWs) shall operate pursuant to legal authority enforceable in federal, state, or local courts, which authorizes or enables the POTW publicly owned treatment works to apply and to enforce the requirements of sections 307(b) and (c), and 402(b)(8) of the Federal Water Pollution Control Act and any regulations implementing those sections. Such authority may be contained in a statute, ordinance, joint powers agreements, or similar mechanisms which the POTW publicly owned treatment works is authorized to enact, enter into, or implement, and which are authorized by state law. At a minimum, this legal authority shall enable the POTW publicly owned treatment works to accomplish each of the following actions:

1. Deny or condition new or increased contributions of pollutants, or changes in the nature of pollutants, to the POTW publicly owned treatment works by industrial users if such contributions do not meet applicable pretreatment standards and requirements or if such contributions would cause the POTW publicly owned treatment works to violate its ~~NDPDES~~ North Dakota pollutant discharge elimination system permit.
2. Require compliance with applicable pretreatment standards and requirements by industrial users.
3. Control through permit, order, or similar means the contribution to the POTW publicly owned treatment works by each industrial user to ensure compliance with applicable pretreatment standards and requirements. In the case of significant industrial users, this control shall be achieved through permits or equivalent individual control mechanisms issued to each such user. ~~Such control mechanisms must be enforceable and contain, at a minimum, the following conditions:~~
 - a. At the discretion of the publicly owned treatment works, this control may include use of general control mechanisms if the following conditions are met. All of the facilities to be covered must:
 - (1) Involve the same or substantially similar types of operations;
 - (2) Discharge the same types of wastes;
 - (3) Require the same effluent limitations;
 - (4) Require the same or similar monitoring; and
 - (5) In the opinion of the publicly owned treatment works, are more appropriately controlled under a general control mechanism than under individual control mechanisms.
 - b. To be covered by the general control mechanism, the significant industrial user must file a written request for coverage that identifies its contact information, production processes, the types of wastes generated, the location for monitoring all wastes covered by the general control mechanism, any requests in accordance with 40 CFR 403.12(e)(2) for a monitoring waiver for a pollutant neither present nor expected to be present in the discharge, and any other information the publicly owned treatment works deems appropriate. A monitoring waiver for a pollutant neither present nor expected to be present in the discharge is not effective in the general control mechanism until after the publicly owned treatment works has provided written notice to the significant industrial user that such a waiver request has been granted in accordance with 40 CFR 403.12(e)(2). The publicly owned treatment works must retain a copy of the general control mechanism documentation to support the publicly owned treatment works'

determination that a specific significant industrial user meets the criteria in paragraphs 1 through 5 of subdivision a of this subsection, and a copy of the user's written request for coverage for three years after the expiration of the general control mechanism. A publicly owned treatment works may not control a significant industrial user through a general control mechanism where the facility is subject to production-based categorical pretreatment standards or categorical pretreatment standards expressed as mass of pollutant discharged per day or for industrial users whose limits are based on the combined wastestream formula or net/gross calculations 40 CFR 403.6(e) and 40 CFR 403.15. Both individual and general control mechanisms must be enforceable and contain, at a minimum, the following conditions:

- a. (1) Statement of duration (in no case more than five years);
- b. (2) Statement of nontransferability without, at a minimum, prior notification to the ~~POTW~~publicly owned treatment works and provision of a copy of the existing control mechanism to the new owner or operator;
- e. (3) Effluent limits, include best management practices, based on applicable general pretreatment standards in chapter 33-16-01.1, categorical pretreatment standards, local limits, and state and local law;
- d. (4) Self-monitoring, sampling, reporting, notification, and recordkeeping requirements, including an identification of the pollutants to be monitored, (including the process for seeking a waiver for a pollutant neither present nor expected to be present in the discharge in accordance with 40 CFR 403.12(e)(2), or a specific waived pollutant in the case of an individual control mechanism), sampling location, sampling frequency, and sample type, based on the applicable general pretreatment standards in chapter 33-16-01.1, categorical pretreatment standards, local limits, and state and local law; ~~and~~
- e. (5) Statement of applicable civil and criminal penalties for violation of pretreatment standards and requirements, and any applicable compliance schedule. Such schedules may not extend the compliance date beyond applicable federal deadlines; and
- (6) Requirements to control slug discharges, if determined by the publicly owned treatment works to be necessary.

4. Require:

- a. The development of a compliance schedule by each industrial user for the installation of technology required to meet applicable pretreatment standards and requirements; and
 - b. The submissions of all notices and self-monitoring reports from industrial users as are necessary to assess and assure their compliance with pretreatment standards and requirements, including the reports required in section 33-16-01.1-12.
5. Carry out all inspection, surveillance, and monitoring procedures necessary to determine, independent of information supplied by industrial users, compliance or noncompliance with applicable pretreatment standards and requirements by industrial users. Representatives of the ~~POTW~~publicly owned treatment works shall be authorized to enter any premises of any industrial user in which a discharge source or treatment system is located or in which records are required to be kept under subsection 5 of section 33-16-01.1-11 to assure compliance with pretreatment standards and requirements. Such authority shall be at least as extensive as the authority provided under section 308 of the Federal Water Pollution Control Act.

6. a. Obtain remedies for noncompliance by any industrial user with any pretreatment standards and requirements. All POTWspublicly owned treatment works shall be able to seek injunctive relief for noncompliance by industrial users with pretreatment standards and requirements. All POTWspublicly owned treatment works shall also have authority to seek or assess civil or criminal penalties in at least the amount of one thousand dollars a day for each violation by industrial users of pretreatment standards and requirements.
 - b. Pretreatment standards and requirements which will be enforced through these remedies will include the duty to allow or carry out inspections, entry, or monitoring activities; any rules, regulations, or orders issued by the POTWspublicly owned treatment works; any requirements set forth in individual control mechanisms issued by the POTWspublicly owned treatment works; or any reporting requirements imposed by the POTWspublicly owned treatment works or state or federal regulations. The POTWspublicly owned treatment works shall have authority and procedures after informal notice to the discharger immediately and effectively to halt or prevent any discharge of pollutants to the POTWspublicly owned treatment works which reasonably appears to present an imminent endangerment to the health or welfare of persons. The POTWspublicly owned treatment works shall also have authority and procedures which shall include notice to the affected industrial users and an opportunity to respond to halt or prevent any discharge to the POTWspublicly owned treatment works which presents or may present an endangerment to the environment or which threatens to interfere with the operation of the POTWspublicly owned treatment works.
7. Comply with the confidentiality requirements set forth in subsection 4 of section 33-16-01.1-11.

Procedures:Procedures. The POTWspublicly owned treatment works shall develop and implement procedures to ensure compliance with the requirements of a pretreatment program. At a minimum, these procedures shall enable the POTWspublicly owned treatment works to accomplish each of the following actions:

1. Identify and locate all possible industrial users which might be subject to the POTWspublicly owned treatment works pretreatment program. Any compilation, index, or inventory of industrial users made under this subsection shall be made available to the department or regional administrator upon request.
2. Identify the character and volume of pollutants contributed to the POTWspublicly owned treatment works by the industrial users which are subject to the POTWspublicly owned treatment works pretreatment program. This information shall be made available to the department or regional administrator upon request.
3. Notify industrial users which are subject to the POTWspublicly owned treatment works pretreatment program of applicable pretreatment standards and any applicable requirements under sections 204(b) and 405 of the Federal Water Pollution Control Act and subtitles C and D of the Resource Conservation and Recovery Act. Within thirty days of departmental approval of a significant industrial user's list (see ~~"Significant industrial users"~~ "Significant industrial users"), notify each significant industrial user of its status as such and of all requirements applicable to it as a result of such status.
4. Receive and analyze self-monitoring reports and other notices submitted by industrial users in accordance with the self-monitoring requirements in section 33-16-01.1-12.
5. Randomly sample and analyze the effluent from industrial users and conduct surveillance activities in order to identify, independent of information supplied by industrial users, occasional and continuing noncompliance with pretreatment standards. Inspect and sample the effluent from each significant industrial user at least once a year. ~~Evaluate, at least once every two years, whether each such significant industrial user needs a plan to control slug~~

~~discharges. For purposes of this subsection, a slug discharges any discharge of a nonroutine, episodic nature, including an accidental spill or a noncustomary batch discharge. The results of such activities shall be available to the department upon request. If the POTWs decides that a slug control plan is needed, the plan shall contain, at a minimum, the following elements, except as otherwise below:~~

a. Where the publicly owned treatment works has authorized the industrial user subject to a categorical pretreatment standard to forego sampling of a pollutant regulated by a categorical pretreatment standard in accordance with 40 CFR 403.12(e)(3), the publicly owned treatment works must sample for the waived pollutant at least once during the term of the categorical industrial user's control mechanism. In the event that the publicly owned treatment works subsequently determines that a waived pollutant is present or is expected to be present in the industrial user's wastewater based on changes that occur in the user's operations, the publicly owned treatment works must immediately begin at least annual effluent monitoring of the user's discharge and inspection.

b. Where the publicly owned treatment works has determined that an industrial user meets the criteria for classification as a nonsignificant categorical industrial user, the publicly owned treatment works must evaluate, at least once per year, whether an industrial user continues to meet the criteria in 40 CFR 403.3(v)(2).

c. In the case of industrial users subject to reduced reporting requirements under 40 CFR 403.12(e)(3), the publicly owned treatment works must randomly sample and analyze the effluent from industrial users and conduct inspections at least once every two years. If the industrial user no longer meets the conditions for reduced reporting in 40 CFR 403.12(e)(3), the publicly owned treatment works must immediately begin sampling and inspecting the industrial user at least once per year.

6. Evaluate, at least once every two years, whether each such significant industrial user needs a plan to control slug discharges. For purposes of this subsection, a slug discharge is any discharge of a nonroutine, episodic nature, including an accidental spill or a noncustomary batch discharge. The results of such activities shall be available to the department upon request. If the publicly owned treatment works decides that a slug control plan is needed, the plan shall contain, at a minimum, the following elements:

a. Description of discharge practices, including nonroutine batch discharges;

b. Description of stored chemicals;

c. Procedures for immediately notifying the ~~POTW~~publicly owned treatment works of slug discharges, including any discharge that would violate a prohibition under subsection 2 of section 33-16-01.1-02, with procedures for followup written notification within five days; and

d. If necessary, procedures to prevent adverse impact from accidental spills, including ~~but not limited to~~ inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operations, control of plant site runoff, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants (including solvents), and measures and equipment for emergency response.

~~6.7.~~ Investigate instances of noncompliance with pretreatment standards and requirements, as indicated in the reports and notices required under section 33-16-01.1-12, or indicated by analysis, inspection, and surveillance activities. Sample ~~taking~~collecting and analysis and the collection of other information shall be performed with sufficient care to produce evidence admissible in enforcement proceedings or in judicial actions.

~~7.8.~~ Comply with the public participation requirements of ~~40 Code of Federal Regulations, part 25,~~ [40 CFR 25] in the enforcement of national pretreatment standards. These procedures shall include provision for at least annual public notification, in the largest daily newspaper published in the municipality in which the POTWspublicly owned treatment works is located, of industrial users which, at any time during the previous twelve months, were in significant noncompliance with applicable pretreatment requirements. For the purposes of this provision, an industrial user is in significant noncompliance if its violation meets one or more of the following criteria:

- a. Chronic violations of wastewater discharge limits, defined here as those in which sixty-six percent or more of all of the measurements taken during a six-month period exceed by any magnitude ~~the daily maximum limit or the average limit for the same pollutant parameter~~ a numeric pretreatment standard or requirement, including instantaneous limits, as defined by 40 CFR 403.3(l);
- b. Technical ~~Review Criteria (TRC)~~ review criteria violations, defined here as those in which thirty-three percent or more of all of the measurements for each pollutant parameter taken during a six-month period equal or exceed the product of ~~the daily maximum limit or the average~~ a numeric pretreatment standard or requirement, including instantaneous limits, as defined by 40 CFR 403.3(l) limit multiplied by the applicable ~~TRC~~ (TRC=technical review criteria (equal to 1.4 for five-day biochemical oxygen demand, total suspended solids, fats, oil, and grease, and 1.2 for all other pollutants except pH);
- c. Any other violation of a pretreatment ~~effluent limit (daily maximum or longer-term average)~~ standard or requirement as defined by 40 CFR 403.3(l) (daily maximum, long-term average, instantaneous limit, or narrative standard) that the control authority determines has caused, alone or in combination with other discharges, interference, or passthrough (including endangering the health of ~~POTWsthe publicly owned treatment works'~~ the publicly owned treatment works' personnel or the general public);
- d. Any discharge of a pollutant that has caused imminent endangerment to human health, welfare, or to the environment or has resulted in the ~~POTWspublicly owned treatment works'~~ the publicly owned treatment works' exercise of its emergency authority to halt or prevent such a discharge;
- e. Failure to meet, within ninety days after the schedule date, a compliance schedule milestone contained in a local control mechanism or enforcement order for starting construction, completing construction, or attaining final compliance;
- f. Failure to provide, within thirty days after the due date, required reports such as baseline monitoring reports, ninety-day compliance reports, periodic self-monitoring reports, and compliance schedule progress reports;
- g. Failure to accurately report noncompliance; or
- h. Any other violation or group of violations, which may include a violation of best management practices, which the control authority determines will adversely affect the operation or implementation of the local pretreatment program.

Funding-Funding. The POTWspublicly owned treatment works shall have sufficient resources and qualified personnel to carry out the authorities and procedures described in ~~"Legal authority"~~ "Legal authority" and ~~"Procedures."~~ "Procedures." In some limited circumstances, funding and personnel may be delayed when the POTWspublicly owned treatment works has adequate legal authority and procedures to carry out these pretreatment program requirements, and a limited aspect of the pretreatment program does not need to be implemented immediately (see subsection 2 of section 33-16-01.1-06).

~~Local limits.~~**Local limits.** The ~~POTW~~publicly owned treatment works shall develop local limits as required in section 33-16-01.1-03 or demonstrate that they are not necessary.

~~Enforcement response plan.~~**Enforcement response plan.** The ~~POTW~~publicly owned treatment works shall develop and implement an enforcement response plan. This plan shall contain detailed procedures indicating how a ~~POTW~~publicly owned treatment works will investigate and respond to instances of an industrial user noncompliance. The plan shall, at a minimum:

1. Describe how the ~~POTW~~publicly owned treatment works will investigate the instances of noncompliance;
2. Describe the types of escalating enforcement responses the ~~POTW~~publicly owned treatment works will take in response to all anticipated types of industrial user violations and the time periods within which responses will take place;
3. Identify (by title) the official(s) responsible for each type of response; and
4. Adequately reflect the ~~POTW~~publicly owned treatment works primary responsibility to enforce all applicable pretreatment requirements and standards, as detailed in ~~"Legal authority."~~"Legal Authority" and ~~"Procedures."~~"Procedures."

~~Significant industrial users.~~**Significant industrial users.** The ~~POTW~~publicly owned treatment works shall prepare a list of its significant industrial users. The list shall identify the criteria in subsection 17 of section 33-16-01.1-01 applicable to each industrial user and, for industrial users meeting the criteria in subdivision b of subsection 17 of section 33-16-01.1-01, shall also indicate whether the ~~POTW~~publicly owned treatment works has made a determination pursuant to subdivision c of subsection 17 of section 33-16-01.1-01 that such industrial user should not be considered a significant industrial user. The initial list shall be submitted to the department as a nonsubstantial modification pursuant to section 33-16-01.1-19. Modifications to the list shall be submitted to the department pursuant to subdivision a of subsection 1 of section 33-16-01.1-13.

A publicly owned treatment works that chooses to receive electronic documents must satisfy the requirements of 40 CFR part 3 (electronic reporting).

APPENDIX B

POTWSPUBLICLY OWNED TREATMENT WORKS PRETREATMENT PROGRAM SUBMISSION PACKAGES

A POTWspublicly owned treatment works requesting approval of a POTWspublicly owned treatment works pretreatment program shall develop a program description, which includes the following information:

A statement from the city solicitor or a city official acting in a comparable capacity (or the attorney for those POTWspublicly owned treatment works which have independent legal counsel) that the POTWspublicly owned treatment works has authority adequate to carry out the programs described in Appendix A. This statement ~~shall~~must:

1. Identify the provision of legal authority which provides the basis for each procedure described in ~~"Procedures"~~"Procedures" in Appendix A;
2. Identify the manner in which the POTWspublicly owned treatment works will implement the program requirements set forth in Appendix A, including the means by which pretreatment standards will be applied to individual industrial users (e.g., by order, permit, ordinance, etc.); and
3. Identify how the POTWspublicly owned treatment works intends to ensure compliance with pretreatment standards and requirements, and to enforce them in the event of noncompliance by industrial users.

A copy of any statutes, ordinances, regulations, agreements, or other authorities relied upon by the POTWspublicly owned treatment works for its administration of the program. This submission shall include a statement reflecting the endorsement or approval of the local boards or bodies responsible for supervising or funding the POTWspublicly owned treatment works pretreatment program, or both, if approved;

A brief description, including organization charts, of the POTWspublicly owned treatment works organization which will administer the pretreatment program. If more than one agency is responsible for administration of the program, the responsible agencies should be identified, their respective responsibilities delineated, and their procedures for coordination set forth; and

A description of the funding levels and full-time and part-time manpower available to implement the program.

CHAPTER 33-16-02.1 STANDARDS OF QUALITY FOR WATERS OF THE STATE

Section

33-16-02.1-01	Authority
33-16-02.1-02	Purpose
33-16-02.1-03	Applicability
33-16-02.1-04	Definitions
33-16-02.1-05	<u>Variances and Compliance Schedules</u>
33-16-02.1-06	Severability
33-16-02.1-07	Classification of Waters of the State
33-16-02.1-08	General Water Quality Standards
33-16-02.1-09	Surface Water Classifications, Mixing Zones, and Numeric Standards
33-16-02.1-10	Ground Water Classifications and Standards
33-16-02.1-11	Discharge of Wastes

33-16-02.1-04. Definitions.

The terms used in this chapter have the same meaning as in North Dakota Century Code chapter 61-28, except:

1. "Acute standard" means the one-hour average concentration does not exceed the listed concentration more than once every three years.
2. "Best management practices" are methods, measures, or procedures selected by the department to control nonpoint source pollution. Best management practices include, but are not limited to, structural and nonstructural measures and operation and maintenance procedures.
3. "Chronic standard" means the four-day average concentration does not exceed the listed concentration more than once every three years.
4. "Consecutive thirty-day average" is the average of samples taken during any consecutive thirty-day period. It is not a requirement for thirty consecutive daily samples.
5. "Department" means the North Dakota state department of health.
6. A standard defined as "dissolved" means the total quantity of a given material present in a filtered water sample, regardless of the form or nature of its occurrence.
7. "Eutrophication" means the process of enrichment of rivers, streams, lakes, reservoirs, and wetlands with nutrients needed to maintain primary production.
8. "Nutrients" mean the chemical elements, primarily nitrogen and phosphorus, which are critical to the growth of aquatic plants and animals.
- ~~7.9.~~ "Pollution" means such contamination, or other alteration of the physical, chemical, or biological properties, of any waters of the state, including change in temperature, taste, color, turbidity, or odor. Pollution includes discharge of any liquid, gaseous, solid, radioactive, or other substance into any waters of the state that will or is likely to create a nuisance or render such waters harmful, detrimental, or injurious to public health, safety, or welfare; domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses; or livestock, wild animals, birds, fish, or other aquatic biota.
- ~~8.10.~~ "Site-specific standards" mean water quality criteria developed to reflect local environmental conditions to protect the uses of a specific water body.

~~9-11.~~ A standard defined as "total" means the entire quantity of a given material present in an unfiltered water sample regardless of the form or nature of its occurrence. This includes both dissolved and suspended forms of a substance, including the entire amount of the substance present as a constituent of the particulate material. Total recoverable is the quantity of a given material in an unfiltered aqueous sample following digestion by refluxing with hot dilute mineral acid.

~~10-12.~~ "Water usage". The best usage for the waters shall be those uses determined to be the most consistent with present and potential uses in accordance with the economic and social development of the area. Present principal best uses are those defined in subdivisions a, b, c, d, and e. These are not to be construed to be the only possible usages.

- a. Municipal and domestic water. Waters suitable for use as a source of water supply for drinking and culinary purposes after treatment to a level approved by the department.
- b. Fish and aquatic biota. Waters suitable for the propagation and support of fish and other aquatic biota and waters that will not adversely affect wildlife in the area. Low flows or natural physical and chemical conditions in some waters may limit their value for fish propagation or aquatic biota.
- c. Recreation. Primary recreational waters are suitable for recreation where direct body contact is involved, such as bathing and swimming, and where secondary recreational activities such as boating, fishing, and wading are involved. Natural high turbidities in some waters and physical characteristics of banks and streambeds of many streams are factors that limit their value for bathing.
- d. Agricultural uses. Waters suitable for irrigation, stock watering, and other agricultural uses, but not suitable for use as a source of domestic supply for the farm unless satisfactory treatment is provided.
- e. Industrial water. Waters suitable for industrial purposes, including food processing, after treatment. Treatment may include that necessary for prevention of boiler scale and corrosion.

History: Effective June 1, 2001; amended effective October 1, 2006; April 1, 2014; [October 1, 2018](#).

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 23-33, 61-28

33-16-02.1-05. Variances [and compliance schedules](#).

Upon written application by the responsible discharger, the department finds that by reason of substantial and widespread economic and social impacts the strict enforcement of state water quality criteria is not feasible, the department can permit a variance to the water quality standard for the affected segment. The department can set conditions and time limitations with the intent that progress toward improvements in water quality will be made. This can include interim criteria which must be reviewed at least once every three years. A variance will be granted only after fulfillment of [the approved requirements at 40 CFR section 131.14, including](#) public participation requirements and environmental protection agency approval. A variance will not preclude an existing use.

[A North Dakota pollutant discharge elimination system permit may contain a schedule to return a permittee to compliance with water quality based effluent limits consistent with federal and state regulations. Compliance schedules in North Dakota pollutant discharge elimination system permits are subject to the requirements of section 33-16-01-15 and cannot be issued for new discharges or sources.](#)

History: Effective June 1, 2001; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04, 61-28-05

33-16-02.1-08. General water quality standards.

1. Narrative standards.

- a. The following minimum conditions are applicable to all waters of the state except for class II ground waters. All waters of the state shall be:
 - (1) Free from substances attributable to municipal, industrial, or other discharges or agricultural practices that will cause the formation of putrescent or otherwise objectionable sludge deposits.
 - (2) Free from floating debris, oil, scum, and other floating materials attributable to municipal, industrial, or other discharges or agricultural practices in sufficient amounts to be unsightly or deleterious.
 - (3) Free from materials attributable to municipal, industrial, or other discharges or agricultural practices producing color, odor, or other conditions to such a degree as to create a nuisance or render any undesirable taste to fish flesh or, in any way, make fish inedible.
 - (4) Free from substances attributable to municipal, industrial, or other discharges or agricultural practices in concentrations or combinations which are toxic or harmful to humans, animals, plants, or resident aquatic biota. For surface water, this standard will be enforced in part through appropriate whole effluent toxicity requirements in North Dakota pollutant discharge elimination system permits.
 - (5) Free from oil or grease residue attributable to wastewater, which causes a visible film or sheen upon the waters or any discoloration of the surface of adjoining shoreline or causes a sludge or emulsion to be deposited beneath the surface of the water or upon the adjoining shorelines or prevents classified uses of such waters.
 - (6) Free from nutrients attributed to municipal, industrial, or other discharges or agricultural practices, in concentrations or loadings which will cause accelerated eutrophication resulting in the objectionable growth of aquatic vegetation or algae or other impairments to the extent that it threatens public health or welfare or impairs present or future beneficial uses.
- b. There shall be no materials such as garbage, rubbish, offal, trash, cans, bottles, drums, or any unwanted or discarded material disposed of into the waters of the state.
- c. There shall be no disposal of livestock or domestic animals in waters of the state.
- d. The department shall propose and submit to the state engineer the minimum streamflows of major rivers in the state necessary to protect the public health and welfare. The department's determination shall address the present and prospective future use of the rivers for public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, and agricultural, industrial, and other legitimate uses.
- e. No discharge of pollutants, which alone or in combination with other substances, shall:
 - (1) Cause a public health hazard or injury to environmental resources;
 - (2) Impair existing or reasonable beneficial uses of the receiving waters; or
 - (3) Directly or indirectly cause concentrations of pollutants to exceed applicable standards of the receiving waters.

- f. If the department determines that site-specific criteria are necessary and appropriate for the protection of designated uses, procedures described in the environmental protection agency's Water Quality Standards Handbook 1994 or other defensible methods may be utilized to determine maximum limits. Where natural chemical, physical, and biological characteristics result in exceedences of the limits set forth in this section, the department may derive site-specific criteria based on the natural background level or condition. All available information shall be examined, and all possible sources of a contaminant will be identified in determining the naturally occurring concentration. All site-specific criteria shall be noticed for public comment and subjected to other applicable public participation requirements prior to being adopted.

2. Narrative biological goal.

- a. Goal. The biological condition of surface waters shall be similar to that of sites or water bodies determined by the department to be regional reference sites.
- b. Definitions.
 - (1) "Assemblage" means an association of aquatic organisms of similar taxonomic classification living in the same area. Examples of assemblages include fish, macroinvertebrates, algae, and vascular plants.
 - (2) "Aquatic organism" means any plant or animal which lives at least part of its life cycle in water.
 - (3) "Biological condition" means the taxonomic composition, richness, and functional organization of an assemblage of aquatic organisms at a site or within a water body.
 - (4) "Functional organization" means the number of species or abundance of organisms within an assemblage which perform the same or similar ecological functions.
 - (5) "Metric" means an expression of biological community composition, richness, or function which displays a predictable, measurable change in value along a gradient of pollution or other anthropogenic disturbance.
 - (6) "Regional reference sites" are sites or water bodies which are determined by the department to be representative of sites or water bodies of similar type (e.g., hydrology and ecoregion) and are least impaired with respect to habitat, water quality, watershed land use, and riparian and biological condition.
 - (7) "Richness" means the absolute number of taxa in an assemblage at a site or within a water body.
 - (8) "Taxonomic composition" means the identity and abundance of species or taxonomic groupings within an assemblage at a site or within a water body.
- c. Implementation. The intent of the state in adopting a narrative biological goal is solely to provide an additional assessment method that can be used to identify impaired surface waters. Regulatory or enforcement actions based solely on a narrative biological goal, such as the development and enforcement of North Dakota pollutant discharge elimination system permit limits, are not authorized. However, adequate and representative biological assessment information may be used in combination with other information to assist in determining whether designated uses are attained and to assist in determining whether new or revised chemical-specific permit limitations may be needed. Implementation will be based on the comparison of current biological conditions at a particular site to the biological conditions deemed attainable based on regional reference sites. In implementing a narrative biological goal, biological condition may be expressed

through an index composed of multiple metrics or through appropriate statistical procedures.

History: Effective June 1, 2001; [amended effective October 1, 2018](#).

Law Implemented: NDCC 23-33, 61-28

33-16-02.1-09. Surface water classifications, mixing zones, and numeric standards.

1. **Surface water classifications.** Procedures for the classifications of streams and lakes of the state shall follow this subsection. Classifications of streams and lakes are listed in appendix I and appendix II, respectively.

- a. Class I streams. The quality of the waters in this class shall be suitable for the propagation or protection, or both, of resident fish species and other aquatic biota and for swimming, boating, and other water recreation. The quality of the waters shall be suitable for irrigation, stock watering, and wildlife without injurious effects. After treatment consisting of coagulation, settling, filtration, and chlorination, or equivalent treatment processes, the water quality shall meet the bacteriological, physical, and chemical requirements of the department for municipal or domestic use.
- b. Class IA streams. The quality of the waters in this class shall be the same as the quality of class I streams, except that where natural conditions exceed class I criteria for municipal and domestic use, the availability of softening or other treatment methods may be considered in determining whether ambient water quality meets the drinking water requirements of the department.

The Sheyenne River from its headwaters to one-tenth mile downstream from Baldhill Dam is not classified for municipal or domestic use.

- c. Class II streams. The quality of the waters in this class shall be the same as the quality of class I streams, except that additional treatment may be required to meet the drinking water requirements of the department. Streams in this classification may be intermittent in nature which would make these waters of limited value for beneficial uses such as municipal water, fish life, irrigation, bathing, or swimming.
- d. Class III streams. The quality of the waters in this class shall be suitable for agricultural and industrial uses. Streams in this class generally have low average flows with prolonged periods of no flow. During periods of no flow, they are of limited value for recreation and fish and aquatic biota. The quality of these waters must be maintained to protect secondary contact recreation uses (e.g., wading), fish and aquatic biota, and wildlife uses.
- e. Wetlands. These water bodies, including isolated ponds, sloughs, and marshes, are to be considered waters of the state and will be protected under section 33-16-02.1-08.
- f. Lakes and reservoirs. The type of fishery a lake or reservoir may be capable of supporting is based on the lake's or reservoir's geophysical characteristics. The capability of a lake or reservoir to support a fishery may be affected by seasonal or climatic variability or other natural occurrences, which may alter the physical and chemical characteristics of the lake or reservoir.

Class	Characteristics
1	Cold water fishery. Waters capable of supporting growth of cold water fish species (e.g., salmonids) and associated aquatic biota.

- 2 Cool water fishery. Waters capable of supporting natural reproduction and growth of cool water fishes (e.g., northern pike and walleye) and associated aquatic biota. These waters are also capable of supporting the growth and marginal survival of cold water species and associated biota.
- 3 Warm water fishery. Waters capable of supporting natural reproduction and growth of warm water fishes (e.g., largemouth bass and bluegill) and associated aquatic biota. Some cool water species may also be present.
- 4 Marginal fishery. Waters capable of supporting a fishery on a short-term or seasonal basis (generally a "put and take" fishery).
- 5 Not capable of supporting a fishery due to high salinity.

2. **Mixing zones.** North Dakota mixing zone and dilution policy is contained in appendix III.

3. **Numeric standards.**

- a. Class I streams. ~~Unless stated otherwise, maximum limits~~The physical and chemical criteria for class I streams are listed in table 1 and table 2.
- b. Class IA streams. The physical and chemical criteria shall be those for class I streams, with the ~~following~~ exceptions: for chloride, percent sodium, and sulfate as listed in Table 1.

Substance or Characteristic	Maximum Limit
Chlorides (total)	175 mg/l (30-day arithmetic average)
Sodium	60% of total cations as mEq/l
Sulfate (total)	450 mg/l (30-day arithmetic average)

~~Site-Specific Sulfate (total) Standard~~

~~The following site-specific standard applies to the Sheyenne River from its headwaters to one-tenth mile downstream from Baldhill Dam.~~

Sulfate (total)	750 mg/l
----------------------------	---------------------

~~131.10(b) requirement~~

~~The water quality standards for the Red River and the portions of the Sheyenne River located downstream from the segment of the Sheyenne River to which the site-specific sulfate standard applies must continue to be maintained. The Sheyenne River from 0.1 mile downstream from Baldhill Dam to the confluence with the Red River shall not exceed 450 mg/l sulfate (total) 30-day arithmetic average and the Red River shall not exceed 250 mg/l sulfate (total) 30-day arithmetic average after mixing, downstream from the confluence of the Sheyenne River. Regulated pollution control efforts must be developed to achieve compliance with these water quality standards.~~

- c. Site-specific sulfate standard. The physical and chemical criteria for the Sheyenne River from its headwaters to one-tenth of a mile downstream from Baldhill Dam shall be those for class IA streams, with the exception of sulfate as listed in Table 1.

d. Class II streams. The physical and chemical criteria shall be those for class IA, with the following exceptions: for chloride and pH as listed in Table 1.

Substance or Characteristic	Maximum Limit
Chlorides (total)	250 mg/l (30-day arithmetic average)
pH	6.0-9.0 (up to 10% of representative samples collected during any 3-year period may exceed this range provided that lethal conditions are avoided)

d.e. Class III streams. The physical and chemical criteria shall be those for class II, with the following exceptions: for sulfate as listed in Table 1.

Substance or Characteristic	Maximum Limit
Sulfate (total)	750 mg/l (30-day arithmetic average)

e.f. Wetlands, including isolated ponds, class 4 lakes not listed in appendix II, sloughs and marshes. The physical and chemical criteria shall be those for class III streams, with exceptions for temperature, dissolved oxygen as listed in paragraph 6 of subdivision g, and other conditions not attributable to municipal, industrial, domestic, or agricultural sources.

g. Lakes and reservoirs.

- ~~(1) The beneficial uses and parameter limitations designated for class I streams shall apply to all classified lakes or reservoirs. However, specific background studies and information may require that the department revise a standard for any specific parameter. The physical and chemical criteria for class I streams shall apply to all classified lakes or reservoirs listed in appendix II.~~
- (2) In addition, a guideline for use as a goal in any lake or reservoir improvement or maintenance program is a growing season (April through November) average chlorophyll-a concentration of 20.0 µg/l.
- (3) The temperature standard for class I streams does not apply to Nelson Lake in Oliver County. The temperature of any discharge to Nelson Lake shall not have an adverse effect on fish, aquatic biota, recreation, and wildlife.
- (4) A numeric temperature standard of not greater than fifty-nine degrees Fahrenheit [15 degrees Celsius] shall be maintained in the hypolimnion of class I lakes and reservoirs during periods of thermal stratification.
- (5) The numeric dissolved oxygen standard of five mg/l as a daily minimum does not apply to the hypolimnion of class III and IV lakes and reservoirs during periods of thermal stratification.
- (6) The numeric dissolved oxygen standard of five milligrams per liter (mg/l) as a daily minimum and the maximum temperature of eighty-five degrees Fahrenheit [29.44 degrees Celsius] shall not apply to wetlands and class 4 lakes.
- (7) Lake Sakakawea must maintain a minimum volume of water of five hundred thousand-acre feet [61674-hectare meters] that has a temperature of fifty-nine

degrees Fahrenheit [15 degrees Celsius] or less and a dissolved oxygen concentration of not less than five mg/l.

History: Effective June 1, 2001; amended effective October 1, 2006; July 1, 2010; April 1, 2014; [October 1, 2018](#).

Law Implemented: NDCC 23-33, 61-28

TABLE 4

MAXIMUM LIMITS FOR SUBSTANCES IN
OR CHARACTERISTICS OF CLASS I STREAMS

<u>CAS⁺ No.</u>	<u>Substance or Characteristic</u>	<u>Maximum Limit</u>
7429905	Aluminum	<p>Acute Standard</p> <p>750 ug/l</p> <p>Chronic Standard</p> <p>87 ug/l</p> <p>Where the pH is equal to or greater than 7.0, and the hardness is equal to or greater than 50 mg/l as CaCO₃ in the receiving water after mixing, the 87 ug/l chronic total recoverable aluminum criterion will not apply, and aluminum will be regulated based on compliance with the 750 ug/l acute total recoverable aluminum criterion.</p>
7446-41-7	Ammonia (Total as N)	<p>Acute Standard</p> <p>The one-hour average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula:</p> $\frac{0.411}{1 + 10^{7.204 - \text{pH}}} + \frac{58.4}{1 + 10^{\text{pH} - 7.204}};$ <p>where salmonids are absent; or</p> $\frac{0.275}{1 + 10^{7.204 - \text{pH}}} + \frac{39.0}{1 + 10^{\text{pH} - 7.204}};$ <p>where salmonids are present.</p> <p>Chronic Standard</p> <p>The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:</p> $= \left(\frac{0.0577}{1 + 10^{7.688 - \text{pH}}} + \frac{2.487}{1 + 10^{\text{pH} - 7.688}} \right) \square \text{Criteria-Variable (CV);}$ <p>where CV = 2.85, when T ≤ 14° C; or</p> $\text{CV} = 1.45 \times 10^{0.028 \cdot (25 - T)}, \text{ when } T > 14^\circ \text{ C.}$ <p>Site-Specific Chronic Standard</p> <p>The following site-specific standard applies to the Red River of the North beginning at the 12th Avenue North bridge in Fargo, North Dakota, and extending approximately 32 miles downstream to its confluence with the Buffalo River, Minnesota. This site-specific</p>

<u>GAS¹ No.</u>	<u>Substance or Characteristic</u>	<u>Maximum Limit</u>
		<p>standard applies only during the months of October, November, December, January, and February. During the months of March through September, the statewide chronic ammonia standard applies.</p> <p>The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:</p> $= \left(\frac{0.0577}{1 + 10^{7.688 - \text{pH}}} + \frac{2.487}{1 + 10^{\text{pH} - 7.688}} \right) \square \text{CV};$ <p>where CV = 4.63, when T ≤ 7° C; or CV = 1.45 x 10^{0.028(25-T)}, when T > 7° C.</p>
7440-39-3	Barium (Total)	1.0 mg/l (one-day arithmetic average)
	Boron (Total)	.75 mg/l (30-day arithmetic average)
16887-00-6	Chlorides (Total)	100 mg/l (30-day arithmetic average)
7782-50-5	Chlorine Residual (Total)	Acute .019 mg/l Chronic .011 mg/l
7782-44-7	Dissolved Oxygen	5 mg/l as a daily minimum (up to 10% of representative samples collected during any 3-year period may be less than this value provided that lethal conditions are avoided)
	E. coli ³	Not to exceed 126 organisms per 100 ml as a geometric mean of representative samples collected during any 30-day consecutive period, nor shall more than 10 percent of samples collected during any 30-day consecutive period individually exceed 409 organisms per 100 ml. For assessment purposes, the 30-day consecutive period shall follow the calendar month. This standard shall apply only during the recreation season May 1 to September 30.
14797-55-8	Nitrates (N) (Diss.) ²	1.0 mg/l (up to 10% of samples may exceed)
	pH	7.0-9.0 (up to 10% of representative samples collected during any three-year period may exceed this range, provided that lethal conditions are avoided)
108-95-2	Phenols (Total)	0.3 mg/l (organoleptic criterion) (one-day arithmetic average)
	Sodium	50 percent of total cations as mEq/l
	Sulfates (Total as SO ₄)	250 mg/l (30-day arithmetic average)
	Temperature	Eighty-five degrees Fahrenheit [29.44 degrees Celsius]. The maximum increase shall not be greater than five degrees

<u>CAS⁴ No.</u>	<u>Substance or Characteristic</u>	<u>Maximum Limit</u>
		Fahrenheit [2.78 degrees Celsius] above natural background conditions.
	Combined radium-226 and radium-228 (Total)	5 pCi/l (30-day arithmetic average)
	Gross alpha particle activity, including radium-226, but excluding radon and uranium	15 pCi/l (30-day arithmetic average)

⁴ CAS No. is the chemical abstract service registry number. The registry database contains records for specific substances identified by the chemical abstract service.

² The standard for nitrates (N) is intended as an interim guideline limit. Since each stream or lake has unique characteristics which determine the concentration of this constituent that will cause excessive plant growth (eutrophication), the department reserves the right to review this standard after additional study and to set specific limitations on any waters of the state. However, in no case shall the concentration for nitrate plus nitrite N exceed 10 mg/l for any waters used as a municipal or domestic drinking water supply.

³ Where the E. coli criteria are exceeded and there are natural sources, the criteria may be considered attained, provided there is reasonable basis for concluding that the indicator bacteria density attributable to anthropogenic sources is consistent with the level of water quality required by the criteria. This may be the situation, for example, in headwater streams that are minimally affected by anthropogenic activities.

⁴ Except for the aquatic life values for metals, the values given in this appendix refer to the total (dissolved plus suspended) amount of each substance. For the aquatic life values for metals, the values refer to the total recoverable method for ambient metals analyses.

- ² Based on two routes of exposure – ingestion of contaminated aquatic organisms and drinking water.
- ³ Based on one route of exposure – ingestion of contaminated aquatic organisms only.
- ⁴ Substance classified as a carcinogen, with the value based on an incremental risk of one additional instance of cancer in one million persons.
- ⁵ Chemicals which are not individually classified as carcinogens but which are contained within a class of chemicals, with carcinogenicity as the basis for the criteria derivation for that class of chemicals; an individual carcinogenicity assessment for these chemicals is pending.
- ⁶ Hardness dependent criteria. Value given is an example only and is based on a CaCO₃ hardness of 100 mg/l. Criteria for each case must be calculated using the following formula:

For the Criterion Maximum Concentration (CMC):

Cadmium	$CMC = e^{(1.0166[\ln(\text{hardness})] - 3.9240)}$
Chromium (III)	$CMC = e^{(0.8190[\ln(\text{hardness})] + 3.7256)}$
Copper	$CMC = e^{(0.9422[\ln(\text{hardness})] - 1.7000)}$
Lead	$CMC = e^{(1.2730[\ln(\text{hardness})] - 1.4600)}$
Nickel	$CMC = e^{(0.8460[\ln(\text{hardness})] + 2.2550)}$
Silver	$CMC = e^{(1.7200[\ln(\text{hardness})] - 6.5900)}$
Zinc	$CMC = e^{(0.8473[\ln(\text{hardness})] + 0.8840)}$

GMC = Criterion Continuous Concentration (acute exposure value)

The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and their uses if the one-hour concentration does not exceed that GMC value more than once every three years on the average.

For the Criterion Continuous Concentration (CCC):

Cadmium	$CMC = e^{(0.7409[\ln(\text{hardness})] - 4.7190)}$
Chromium (III)	$CMC = e^{(0.8190[\ln(\text{hardness})] + 0.6848)}$
Copper	$CMC = e^{(0.8545[\ln(\text{hardness})] - 1.7020)}$
Lead	$CMC = e^{(1.2730[\ln(\text{hardness})] - 4.7050)}$
Nickel	$CMC = e^{(0.8460[\ln(\text{hardness})] + 0.0584)}$
Silver	No CCC criterion for silver
Zinc	$CMC = e^{(0.8473[\ln(\text{hardness})] + 0.8840)}$

CCC = Criterion Continuous Concentration (chronic exposure value)

The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and their uses if the four-day concentration does not exceed that CCC value more than once every three years on the average.

- ⁷ Safe Drinking Water Act (MCL):

- ⁸ Freshwater aquatic life criteria for pentachlorophenol are expressed as a function of pH. Values displayed in the table correspond to a pH of 7.8 and are calculated as follows:

$$GMC = \exp [1.005 (\text{pH}) - 4.869]$$

$$CCC = \exp [1.005 (\text{pH}) - 5.134]$$

- ⁹ This criterion applies to total arsenic.

- ¹⁰ This criterion applies to total PCBs (i.e., the sum of all congener or all isomer or homolog or Arochlor analyses).

- ¹¹ This criterion applies to the sum of alpha-endosulfan and beta-endosulfan.

- ¹² This criterion applies to DDT and its metabolites (i.e., the total concentration of DDT and its metabolites should not exceed this value).

- ¹³ The nonylphenol criteria address CAS numbers 84852-15-3 and 25154-52-3.

- ¹⁴ The criterion is for a total measurement of 5 haloacetic acids, dichloroacetic acid, trichloroacetic acid, monochloroacetic acid, bromoacetic acid, and dibromoacetic acid.

- ¹⁵ Hardness values shall be no greater than 400 mg/l. For waters with hardness concentrations greater than 400 mg/l. The actual ambient hardness may be used where a site-specific water effect ratio has been determined consistent with the environmental protection agency's water effect ratio procedure.

TABLE 1

MAXIMUM LIMITS FOR SUBSTANCES IN
OR CHARACTERISTICS OF CLASSES I, IA, II, AND III STREAMS

<u>CAS¹ No.</u>	<u>Substance or Characteristic</u> (a = aquatic life) (b = municipal & domestic drinking water) (c = agricultural, irrigation, industrial) (d = recreation)	<u>Maximum Limit</u>
7429905	Aluminum (a)	<p>Acute Standard 750 micrograms per liter (µg/l)</p> <p>Chronic Standard 87 µg/l Where the pH is equal to or greater than 7.0, and the hardness is equal to or greater than 50 mg/l as CaCO₃ in the receiving water after mixing, the 87 µg/l chronic total recoverable aluminum criterion will not apply, and aluminum will be regulated based on compliance with the 750 µg/l acute total recoverable aluminum criterion.</p>
7446-41-7	Ammonia (Total as N) (a)	<p>Acute Standard The one-hour average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula:</p> $\frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ <p>where salmonids are absent; or</p> $\frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ <p>where salmonids are present.</p> <p>Chronic Standard The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:</p>

$$(CV) \left(\frac{0.0577}{1 + 10^{7.688 - pH}} \right) + \left(\frac{2.487}{1 + 10^{pH - 7.688}} \right)$$

where CV = 2.85, when temperature (T) is ≤ 14°C;

or

where:

$$(CV) = 1.45^{10^{0.028(25 - T)}}$$

when T > 14°C

Site-Specific Chronic Standard

The following site-specific standard applies to the Red River of the North beginning at the 12th Avenue North bridge in Fargo, North Dakota, and extending approximately 32 miles downstream to its confluence with the Buffalo River, Minnesota. This site-specific standard applies only during the months of October, November, December, January, and February. During the months of March through September, the statewide chronic ammonia standard applies.

The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:

$$(CV) \left(\frac{0.0577}{1 + 10^{7.688 - pH}} \right) + \left(\frac{2.487}{1 + 10^{pH - 7.688}} \right)$$

where CV = 4.63, when T ≤ 7° C; or

or

where:

$$(CV) = 1.45^{10^{0.028(25 - T)}}$$

when T > 7°C

7440-39-3	Barium (Total) (b)	1.0 mg/l (1-day arithmetic average)
7440-42-8	Boron (Total) (c)	0.75 mg/l (30-day arithmetic average)
16887-00-6	Chloride (Total) (a, b, c)	Class I: 100 mg/l (30-day arithmetic average) Class IA: 175 mg/l (30-day arithmetic average) Class II and Class III: 250 mg/l (30-day arithmetic average)
7782-50-5	Chlorine	Acute: 0.019 mg/l

	<u>Residual (Total) (a)</u>	Chronic: 0.011 mg/l
<u>7782-44-7</u>	<u>Dissolved Oxygen (a)</u>	<u>5 mg/l as a daily minimum (up to 10% of representative samples collected during any 3-year period may be less than this value provided that lethal conditions are avoided)</u>
<u>14797-55-8</u>	<u>Nitrate as N² (a, b)</u>	<u>1.0 mg/l (up to 10% of samples may exceed)</u>
<u>14797-65-0</u>	<u>Nitrite as N (b)</u>	<u>1.0 mg/l</u>
	<u>E. coli³ (d)</u>	<u>Not to exceed 126 organisms per 100 ml as a geometric mean of representative samples collected during any 30-day consecutive period, nor shall more than 10 percent of samples collected during any 30-day consecutive period individually exceed 409 organisms per 100 ml. For assessment purposes, the 30-day consecutive period shall follow the calendar month. This standard shall apply only during the recreation season May 1 to September 30.</u>
	<u>pH (a)</u>	<u>Class I and IA: 7.0 - 9.0 (up to 10% of representative samples collected during any 3-year period may exceed this range, provided that lethal conditions are avoided).</u> <u>Class II and Class III: 6.0 - 9.0 (up to 10% of representative samples collected during any 3-year period may exceed this range, provided that lethal conditions are avoided).</u>
<u>108-95-2</u>	<u>Phenols (Total) (b)</u>	<u>0.3 mg/l (organoleptic criterion) (one-day arithmetic average)</u>
<u>7440-23-5</u>	<u>Sodium (b, c)</u>	<u>Class I: 50 percent of total cations as milliequivalents per liter (mEq/l)</u> <u>Class IA, II, and III: 60 percent of total cations as mEq/l</u>
<u>18785-72-3</u>	<u>Sulfates (Total as SO₄) (b)</u>	<u>Class I: 250 mg/l (30-day arithmetic average)</u> <u>Class IA and II: 450 mg/l (30-day arithmetic average)</u> <u>Class III: 750 mg/l (30-day arithmetic average)</u>
	<u>Sulfates (Total as SO₄) (a, b)</u>	<u>Site Specific: 750 mg/l (maximum) applies to the Sheyenne River from its headwaters to 0.1 mile downstream from Baldhill Dam</u> <u>131.10(b) requirement: The water quality standards for the Red River and the portions of the Sheyenne River located downstream from the segment of the Sheyenne River to which the site-specific sulfate standard applies must continue to be maintained. The Sheyenne River from 0.1 mile downstream from Baldhill Dam to the confluence with the Red River shall not exceed 450 mg/l sulfate (total) 30-day arithmetic average, and the Red River shall not exceed 250 mg/l sulfate (total) 30-day arithmetic average after mixing downstream from the confluence of the Sheyenne River. Regulated pollution control efforts must be developed to achieve compliance with these water quality standards.</u>
	<u>Temperature (a)</u>	<u>Eighty-five degrees Fahrenheit [29.44 degrees Celsius]. The maximum increase shall not be greater than five degrees Fahrenheit [2.78 degrees Celsius] above natural background conditions.</u>

Combined radium 226 and radium 228 (Total) (b) 5 pCi/l (30-day arithmetic average)

Gross alpha particle activity, including radium 226, but excluding radon and uranium (b) 15 pCi/l (30-day arithmetic average)

¹ CAS No. is the chemical abstract service registry number. The registry database contains records for specific substances identified by the chemical abstract service.

² The standard for nitrates (N) is intended as benchmark concentration when stream or lake specific data is insufficient to determine the concentration that will cause excessive plant growth (eutrophication). However, in no case shall the concentration for nitrate plus nitrite N exceed 10 mg/l for any waters used as a municipal or domestic drinking water supply.

³ Where the E. Coli criteria are exceeded and there are natural sources, the criteria may be considered attained, provided there is reasonable basis for concluding that the indicator bacteria density attributable to anthropogenic sources is consistent with the level of water quality required by the criteria. This may be the situation, for example, in headwater streams that are minimally affected by anthropogenic activities.

7440-66-6	Zinc	120 ^{6,15}	120 ^{6,15}	7,400	26,000

¹ Except for the aquatic life values for metals, the values given in this appendix refer to the total (dissolved plus suspended) amount of each substance. For the aquatic life values for metals, the values refer to the total recoverable method for ambient metals analyses.

² Based on two routes of exposure - ingestion of contaminated aquatic organisms and drinking water.

³ Based on one route of exposure - ingestion of contaminated aquatic organisms only.

⁴ Substance classified as a carcinogen, with the value based on an incremental risk of one additional instance of cancer in one million persons.

⁵ Chemicals which are not individually classified as carcinogens but which are contained within a class of chemicals, with carcinogenicity as the basis for the criteria derivation for that class of chemicals; an individual carcinogenicity assessment for these chemicals is pending.

⁶ Hardness dependent criteria. Value given is an example only and is based on a CaCO₃ hardness of 100 mg/l. Criteria for each case must be calculated using the following formula:

For the Criterion Maximum Concentration (CMC):

Cadmium CMC = 0.9789[ln (hardness)] - 3.8660

Chromium (III) CMC = 0.8190[ln (hardness)] + 3.7256

Copper CMC = 0.9422[ln (hardness)] - 1.7000

Lead CMC = 1.2730[ln (hardness)] - 1.4600

Nickel CMC = 0.8460[ln (hardness)] + 2.2550

Silver CMC = 1.7200[ln (hardness)] - 6.5900

Zinc CMC = 0.8473[ln (hardness)] + 0.8840

CMC = Criterion Maximum Concentration (acute exposure value)
The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and their uses if the one-hour concentration does not exceed that CMC value more than once every three years on the average.

For the Criterion Continuous Concentration (CCC):

<u>Cadmium</u>	<u>CCC = 0.7977[ln (hardness)]</u>
<u>Chromium (III)</u>	<u>CCC = 0.8190[ln (hardness)] + 0.6848</u>
<u>Copper</u>	<u>CCC = 0.8545[ln (hardness)] - 1.7020</u>
<u>Lead</u>	<u>CCC = 1.2730[ln (hardness)] - 4.7050</u>
<u>Nickel</u>	<u>CCC = 0.8460[ln (hardness)] + 0.0584</u>
<u>Silver</u>	<u>No CCC criterion for silver</u>
<u>Zinc</u>	<u>CCC = 0.8473[ln (hardness)] + 0.8840</u>

CCC = Criterion Continuous Concentration (chronic exposure value)
The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and their uses if the four-day concentration does not exceed that CCC value more than once every three years on the average.

7 Safe Drinking Water Act (MCL).

8 Freshwater aquatic life criteria for pentachlorophenol are expressed as a function of pH. Values displayed in the table correspond to a pH of 7.8 and are calculated as follows:

$$\text{CMC} = \exp [1.005 (\text{pH}) - 4.869] \qquad \text{CCC} = \exp [1.005 (\text{pH}) - 5.134]$$

9 This criterion applies to total arsenic.

10 This criterion applies to total PCBs (i.e., the sum of all congener or all isomer or homolog or Arochlor analyses).

11 This criterion applies to the sum of alpha-endosulfan and beta-endosulfan.

12 This criterion applies to DDT and its metabolites (i.e., the total concentration of DDT and its metabolites should not exceed this value).

13 The nonylphenol criteria address CAS numbers 84852-15-3 and 25154-52-3.

14 The criterion is for a total measurement of 5 haloacetic acids, dichloroacetic acid, trichloroacetic acid, monochloroacetic acid, bromoacetic acid, and dibromoacetic acid.

15 Hardness values shall be no greater than 400 mg/l. For waters with hardness concentrations greater than 400 mg/l, the actual ambient hardness may be used where a site-specific water effect ratio has been determined consistent with the environmental protection agency's water effect ratio procedure.

16 The department will recognize the biotic ligand model as an appropriate tool for developing site-specific limits for copper as well as the water-effects ratio (WER) method.

33-16-02.1-10. Ground water classifications and standards.

1. Class I ground waters. Class I ground waters ~~shall have~~are those with a total dissolved solids concentration of less than 10,000 mg/l. The minimum conditions described in subsection 1 of section 33-16-02.1-08 apply. Class I ground waters are not exempt under the North Dakota underground injection control program in section 33-25-01-05.
2. Class II ground waters. Class II ground waters ~~shall have~~are those with a total dissolved solids concentration of 10,000 mg/l or greater. Class II ground waters are exempt under the North Dakota underground injection control program in section 33-25-01-05.

History: Effective June 1, 2001; amended effective April 1, 2014; October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-05

Law Implemented: NDCC 61-28-04

APPENDIX I

STREAM CLASSIFICATIONS

The following intrastate and interstate streams are classified as the class of water quality which is to be maintained in the specified stream or segments noted. ~~There are a number of minor or intermittently flowing watercourses, unnamed creeks, or draws, etc., which are not listed.~~ All tributaries, minor or intermittently flowing watercourses, unnamed creeks, or draws not specifically mentioned are classified as Class III streams.

RIVER BASINS, SUBBASINS, AND TRIBUTARIES	CLASSIFICATION
Missouri River, including Lake Sakakawea and Oahe Reservoir	I
Yellowstone	I
Little Muddy Creek near Williston	II
White Earth River	II
Little Missouri River	II
Knife River	II
Spring Creek	IA
Square Butte Creek below Nelson Lake	IA
Heart River	IA
Green River	IA
Antelope Creek	II
Muddy Creek	II
Apple Creek	II
Cannonball River	II
Cedar Creek	II
Beaver Creek near Linton	II
Grand River	IA
Spring Creek	II
Souris River	IA
Des Lacs River	II
Willow Creek	II
Deep River	III
Mauvais Coulee	I
James River	IA
Pipestem	IA
Cottonwood Creek	II
Beaver Creek	II
Elm River	II
Maple River	II

RIVER BASINS, SUBBASINS, AND TRIBUTARIES	CLASSIFICATION
Bois de Sioux	I
Red River	I
Wild Rice River	II
Antelope Creek	III
Sheyenne River (except as noted below)	IA
Baldhill Creek	II
Maple River	II
Rush River	III
Elm River	II
Goose River	IA
Turtle River	II
Forest River	II
North Branch	III
Park River	II
North Branch	III
South Branch	II
Middle Branch	III
Cart Creek	III
Pembina River	IA
Tongue River	II

The Sheyenne River from its headwaters to 0.1 mile downstream from Baldhill Dam is not classified for municipal or domestic use.

APPENDIX II

LAKE AND RESERVOIR CLASSIFICATION

Lakes and reservoirs are classified according to the water characteristics which are to be maintained in the specified lakes and reservoirs. The ~~beneficial water uses and parameter limitations designated~~ physical and chemical criteria for Class I streams shall apply to all classified lakes and reservoirs listed. For lakes and other lentic water bodies not listed, the ~~following default classification applies: Class 4~~ physical and chemical criteria designated for Class III streams shall apply.

33-16-03.1-13	Public Participation

33-16-03.1-03. Definitions.

~~As used in this chapter, unless the context otherwise indicates~~The terms used throughout this chapter have the same meaning as in North Dakota Century Code chapter 61-28, except:

1. "Animal feeding operation" means a lot or facility, other than an aquatic animal production facility, where the following conditions are met:
 - a. Animals, other than aquatic animals, have been, are, or will be stabled or confined and fed or maintained for a total of forty-five days or more in any twelve-month period; and
 - b. Crops, vegetation, forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility.
2. "Bedding material" means an absorbent substance applied to dirt or concrete flooring systems, including wood shavings, wood chips, sawdust, shredded paper, cardboard, hay, straw, hulls, sand, and other similar, locally available materials.
3. "Best management practices" means schedules of activities, prohibitions of practices, conservation practices, maintenance procedures, and other management strategies to prevent or reduce the pollution of waters of the state. Best management practices also include treatment requirements, operating procedures, and practices to control production area and land application area runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.
4. "Concentrated animal feeding operation" means an animal feeding operation that is defined as a large, medium, or small concentrated animal feeding operation, ~~as a medium concentrated animal feeding operation, or is a small or other type of~~ or any animal feeding operation designated as a concentrated animal feeding operation ~~in accordance with~~ under section 33-16-03.1-04. For purposes of determining animal numbers, two or more feeding operations under common ownership are considered to be a single animal feeding operation if they adjoin each other or if they use a common area or system for the disposal of wastes. ~~All concentrated animal feeding operations are required to obtain a North Dakota pollutant discharge elimination system permit pursuant to chapter 33-16-01.~~
5. ~~"Department" means the North Dakota state department of health.~~

- ~~6.~~ "Discharge of a pollutant" and "discharge of pollutants" each means any addition of any pollutant to the waters of the state from any source, including the disposal of pollutants into wells.
- ~~7.~~ "Earthen storage pond" or "pond" means a topographic depression either below or above ground level, manmade excavation, or diked area formed primarily of earthen materials, although it may be lined with manmade materials or other seepage control materials, and used to store manure or process wastewater and runoff from the production area of a ~~livestock~~ facility.
- ~~8.6.~~ "Engineer" means a professional engineer registered to practice in the state of North Dakota.
- ~~9.7.~~ "Facility ~~or livestock facility~~" ~~has the same meaning as~~ an animal feeding operation ~~or concentrated animal feeding operation~~.
- ~~10.8.~~ "General permit" means ~~a general North Dakota pollutant discharge elimination system permit~~ ~~or~~ a general state animal feeding operation permit. This is a permit issued to cover multiple facilities of the same or similar type, without requiring each facility to be covered under an individual permit.
- ~~11.9.~~ "Large concentrated animal feeding operation" means any animal feeding operation that stables or confines as many as or more than the numbers of animals, not including unweaned young, specified in any of the following categories:
- a. Seven hundred mature dairy cows, whether milked or dry;
 - b. One thousand veal calves;
 - c. One thousand cattle other than mature dairy cows or veal calves. For purposes of this subdivision, "cattle" includes heifers, steers, bulls, and cow-calf pairs;
 - d. Two thousand five hundred swine, each weighing fifty-five pounds [24.95 kilograms] or more;
 - e. Ten thousand swine, each weighing less than fifty-five pounds [24.95 kilograms];
 - f. Five hundred horses;
 - g. Ten thousand sheep or lambs;
 - h. Fifty-five thousand turkeys;
 - i. Thirty thousand laying hens or broilers, if the animal feeding operation uses a liquid manure handling system;
 - j. One hundred twenty-five thousand chickens, other than laying hens, if the animal feeding operation uses other than a liquid manure handling system;
 - k. Eighty-two thousand laying hens, if the animal feeding operation uses other than a liquid manure handling system;
 - l. Thirty thousand ducks, if the animal feeding operation uses other than a liquid manure handling system; or
 - m. Five thousand ducks, if the animal feeding operation uses a liquid manure handling system.

- 42.10. "Litter" means a mixture of fecal material, urine, animal bedding material, and sometimes waste feed.
- 43.11. "Manure" ~~or "livestock manure"~~ means fecal material and urine, animal-housing wash water, bedding material, litter, compost, rainwater, or snowmelt that comes in contact with fecal material and urine, and raw or other materials commingled with fecal material and urine or set aside for disposal.
- 44.12. "Manure handling system" means all of the water pollution control structures used at the production area of a ~~livestock~~ facility.
- 45.13. "Manure storage pond" means an earthen storage pond that stores liquid manure and process wastewater from indoor confined animal feeding operations.
- 46.14. "Manure storage structure" means any water pollution control structure used to contain or store manure or process wastewater. It includes earthen manure storage ponds; runoff ponds; concrete, metal, plastic, or other tanks; and stacking facilities.
- 47.15. "Medium animal feeding operation" means any animal feeding operation that stables or confines the numbers of animals, not including unweaned young, specified within any of the following ranges:
- a. Two hundred to six hundred ninety-nine mature dairy cows, whether milked or dry;
 - b. Three hundred to nine hundred ninety-nine veal calves;
 - c. Three hundred to nine hundred ninety-nine cattle other than mature dairy cows or veal calves. For purposes of this subdivision, "cattle" includes heifers, steers, bulls, and cow-calf pairs;
 - d. Seven hundred fifty to two thousand four hundred ninety-nine swine, each weighing fifty-five pounds [24.95 kilograms] or more;
 - e. Three thousand to nine thousand nine hundred ninety-nine swine, each weighing less than fifty-five pounds [24.95 kilograms];
 - f. One hundred fifty to four hundred ninety-nine horses;
 - g. Three thousand to nine thousand nine hundred ninety-nine sheep or lambs;
 - h. Sixteen thousand five hundred to fifty-four thousand nine hundred ninety-nine turkeys;
 - i. Nine thousand to twenty-nine thousand nine hundred ninety-nine laying hens or broilers, if the animal feeding operation uses a liquid manure handling system;
 - j. Thirty-seven thousand five hundred to one hundred twenty-four thousand nine hundred ninety-nine chickens, other than laying hens, if the animal feeding operation uses other than a liquid manure handling system;
 - k. Twenty-five thousand to eighty-one thousand nine hundred ninety-nine laying hens, if the animal feeding operation uses other than a liquid manure handling system;
 - l. Ten thousand to twenty-nine thousand nine hundred ninety-nine ducks, if the animal feeding operation uses other than a liquid manure handling system; or
 - m. One thousand five hundred to four thousand nine hundred ninety-nine ducks, if the animal feeding operation uses a liquid manure handling system.

- ~~18.16.~~ "Medium concentrated animal feeding operation" means a medium animal feeding operation that meets either one of the following conditions:
- Pollutants are discharged into waters of the state through a manmade ditch, flushing system, or other similar manmade device; or
 - Pollutants are discharged directly into waters of the state which originate outside of and pass over, across, or through the facility or otherwise come into direct contact with the animals confined in the operation.
- ~~19.~~ ~~"North Dakota pollutant discharge elimination system permit" means the permit issued by the department pursuant to chapter 33-16-01 to a concentrated animal feeding operation that the department has determined will not cause, nor likely cause, pollution to waters of the state.~~
- ~~20.17.~~ "North Dakota Livestock Program Design Manual" means the guidelines established for use by the department in the review and permitting process for animal feeding operations.
18. "Nutrient management plan" means a written description of the equipment, methods, and schedules by which:
- Manure, litter, and process wastewater is beneficially reused in an environmentally safe manner such as being applied to land at appropriate agronomic rates as nutrients or fertilizers; and
 - Water pollution and air pollution, including odors, are controlled sufficiently to protect the environment and public health.
- ~~21.19.~~ "Open lot" means livestock pens, feeding, or holding areas at the production area of an animal feeding operation which are outside and not under roof, and where rain can fall directly on the lot area.
- ~~22.20.~~ "Open manure storage structure" means an earthen pond or storage tank for holding liquid manure which is not covered so rainfall can fall directly into the pond or tank.
- ~~23.21.~~ "Operation and maintenance plan" means a written description of the equipment, methods, and schedules for:
- Inspection, monitoring, operation, and maintenance of the animal feeding operation, including manure storage structures, water pollution control structures, and the production area; and
 - Controlling water pollution and air pollution, including odors, sufficient to protect the environment and public health.
- It includes emergency response actions for spills, discharges, or failure of a collection, storage, treatment, or transfer component.
- ~~24.22.~~ "Operator" means an individual or group of individuals, partnership, corporation, joint venture, or any other entity owning or controlling, in whole or in part, one or more animal feeding operations.
- ~~25.23.~~ "Overflow" means the discharge of manure or process wastewater resulting from the filling of wastewater or manure storage structures beyond the point at which no more manure, process wastewater, or storm water can be contained by the structure.
- ~~26.24.~~ "Pollutant" means wastes as defined in North Dakota Century Code section 61-28-02, including dredged spoil, solid waste, incinerator residue, garbage, sewage, sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded

equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water.

- ~~27-25~~. "Process wastewater" means water directly or indirectly used in the operation of the animal feeding operation for any or all of the following: spillage or overflow from animal or poultry watering systems; washing, cleaning, or flushing pens, barns, manure pits, or other animal feeding operation facilities; direct contact swimming, washing, or spray cooling of animals; or dust control. Process wastewater also includes any water which comes into contact with any raw materials, products, or byproducts, including manure, litter, feed, milk, eggs, or bedding material.
- ~~28-26~~. "Production area" means those areas of an animal feeding operation used for animal confinement, manure storage, raw materials storage, and waste containment. The animal confinement area includes open lots, housed lots, feedlots, confinement houses, stall barns, free stall barns, milking rooms, milking centers, cattle yards, barnyards, medication pens, walkers, animal walkways, and stables. The manure storage area includes lagoons, runoff ponds, storage sheds, stockpiles, under-house or pit storages, liquid impoundments, static piles, and composting piles. The raw materials storage area includes feed silos, silage bunkers, and bedding materials. The waste containment area includes settling basins, areas within berms, and diversions which separate uncontaminated storm water. Also included in the definition of production area is any egg washing or egg processing facility and any area used in the storage, handling, treatment, or disposal of mortalities.
- ~~29-27~~. "Runoff" means rainwater or snowmelt that comes in contact with manure at an open lot or open manure storage area and, therefore, is defined as manure.
- ~~30-28~~. "Runoff pond" means an earthen storage pond that is used to collect and store runoff from an open lot or from a manure storage area.
- ~~31-29~~. "Seepage" means the volume of flow through a manure storage structure.
- ~~32-30~~. "Sensitive ground water area" means vulnerable hydrogeologic settings as determined by the department such as glacial outwash deposits or alluvial or aeolian sand deposits that are critical to protecting current or future underground sources of drinking water. Areas designated as sensitive ground water areas by the department include alluvial or aeolian sand deposits shown on Geologic Map of North Dakota (Clayton, 1980, North Dakota geological survey) and glacial drift aquifers listed in North Dakota Geographic Targeting System for Groundwater Monitoring (Radig, 1997, North Dakota state department of health), or most recent editions of these publications, with DRASTIC scores greater than or equal to 100 based on methodology described in DRASTIC: A Standardized System for Evaluating Groundwater Pollution Potential (Aller et al., 1987, United States environmental protection agency).
- ~~33-31~~. "Small animal feeding operation" means any animal feeding operation that stables or confines less than the numbers of animals specified for a medium animal feeding operation.
- ~~34-32~~. "Small concentrated animal feeding operation" means any a small animal feeding operation ~~that stables or confines less than the numbers of animals specified for a medium animal feeding operation and is~~ designated as a concentrated animal feeding operation ~~in accordance with~~under section 33-16-03.1-04.
- ~~35-33~~. "State animal feeding operation permit" means a permit issued by the department pursuant to~~under~~ this chapter to an animal feeding operation ~~that the department has determined will not cause, nor likely cause, pollution to waters of the state.~~
- ~~36-34~~. "Surface water" means waters of the state that are located on the ground surface, including all streams, lakes, ponds, impounding reservoirs, marshes, watercourses, waterways, and all

other bodies or accumulations of water on the surface of the earth, natural or artificial, public or private.

~~37.35.~~ "Unconfined glacial drift aquifer" means a glacial drift aquifer that does not have an impervious soil layer which acts to prevent or minimize movement of water into, through, or out of the aquifer.

~~38.36.~~ "Water pollution control structure" means a structure built or used for handling, holding, transferring, or treating manure or process wastewater, so as to prevent it from entering the waters of the state. The term also includes berms, ditches, or other structures used to prevent clean water from coming in contact with manure.

~~39.37.~~ "Water quality standards" means the water quality standards contained in chapter 33-16-02.1.

~~40.~~ "~~Waters of the state~~" means ~~all waters within the jurisdiction of this state, including all streams, lakes, ponds, impounding reservoirs, marshes, watercourses, waterways, and all other bodies or accumulations of water on or under the surface of the earth, natural or artificial, public or private, situated wholly or partly within or bordering upon the state, except those private waters that do not combine or effect a junction with natural surface or underground waters just defined.~~

History: Effective December 1, 2004; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-04. Designation of concentrated animal feeding operations.

1. The department may designate any [small](#) animal feeding operation as a concentrated animal feeding operation upon determining that it is a significant contributor of pollutants to waters of the state. In making this designation, the department shall consider the following factors:
 - a. The size of the animal feeding operation and the amount of wastes reaching waters of the state;
 - b. The location of the animal feeding operation relative to waters of the state;
 - c. The means of conveyance of animal wastes, manure, and process wastewater into waters of the state; and
 - d. The slope, vegetation, rainfall, and other factors affecting the likelihood or frequency of discharge of animal wastes, manure, and process wastewater into waters of the state.
2. No ~~medium or~~ small animal feeding operation shall be designated a concentrated animal feeding operation under this section unless the department has conducted an onsite inspection ~~of the operation and determined that the operation should and could be regulated under chapter 33-16-01~~. In addition, no small animal feeding operation ~~with numbers of animals below those established in subsection 17 of section 33-16-03.1-03~~ may be designated as a concentrated animal feeding operation unless:
 - a. Pollutants are discharged into waters of the state through a manmade ditch, flushing system, or other similar manmade device; or
 - b. Pollutants are discharged directly into waters of the state which originate outside the facility and pass over, across, or through the facility or otherwise come into direct contact with the animals confined in the operation.

History: Effective December 1, 2004; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-05. Operations requiring a permit.

The operator of an animal feeding operation shall apply for a state animal feeding operation permit as follows:

1. Any animal feeding operation that has been defined as a concentrated animal feeding operation in section 33-16-03.1-03 or designated a concentrated animal feeding operation under section 33-16-03.1-04 must obtain a ~~North Dakota pollutant discharge elimination system~~state animal feeding operation permit ~~pursuant to chapter 33-16-04.~~
2. Any medium animal feeding operation where manure or process wastewater from the operation causes or is likely to cause water pollution ~~or those that are~~and is located within one-fourth mile [.40 kilometer] of a stream or surface water that contains water, except for infrequent periods of severe drought, ~~must~~shall apply for a state animal feeding operation permit ~~pursuant to this chapter~~ or a "no potential to pollute" determination pursuant to section 33-16-03.1-06. Waters completely contained on an owner's property and which do not combine or effect a junction with natural surface or underground waters are not included.
3. A medium or small animal feeding operation shall apply for a state animal feeding operation permit ~~pursuant to this chapter~~ when the department has determined that manure or process wastewater from the operation causes or is likely to cause water pollution. In making this determination, the department shall consider the following factors:
 - a. The size of the animal feeding operation and the amount of wastes reaching waters of the state;
 - b. The location of the animal feeding operation relative to waters of the state;
 - c. The means of conveyance of animal wastes, manure, and process wastewater into waters of the state; and
 - d. The slope, vegetation, rainfall, and other factors affecting the likelihood or frequency of discharge of animal wastes, manure, and process wastewater into waters of the state.
4. An animal feeding operation which stables or confines animals, other than the types of animals specified in the definition of medium animal feeding operation, shall apply for a state animal feeding operation permit ~~pursuant to this chapter~~ when the department has determined that manure or process wastewater from the operation causes or is likely to cause water pollution.

History: Effective December 1, 2004; amended effective October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-06. No potential to pollute determination.

Repealed effective October 1, 2018.

- ~~1. The department, upon request, may make a case-specific determination that a livestock facility that is not a concentrated animal feeding operation has no potential to discharge pollutants to waters of the state and does not require a state animal feeding operation permit. The department shall review the determination at least every five years.~~

- ~~2. The department retains the authority to subsequently require a state animal feeding operation permit if circumstances at the facility change, if new information becomes available, or if there are other reasons for the department to determine that the operation has a potential to discharge pollutants into waters of the state.~~
- ~~3. No potential to pollute means the facility is located where there is:
 - ~~a. No discharge of pollutants to ground water and no discharge of pollutants to surface water from a rainfall event that is less than or equal to a twenty-five-year, twenty-four-hour rainfall event; and~~
 - ~~b. The facility follows a nutrient management plan for the utilization of manure and process wastewater that is consistent with this chapter.~~~~

History: Effective December 1, 2004.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-07. Permit application content and procedures.

- 1. Any new ~~livestock facility~~ or existing ~~livestock~~ facility that is proposing an increase in the number of ~~livestock~~ **animals** above the level allowed in the current permit or above the level at which a permit is required under section 33-16-03.1-05 shall apply for and obtain a state animal feeding operation permit ~~or a North Dakota pollutant discharge elimination system permit~~ prior to construction or expansion. Any ~~livestock~~ facility that is proposing to expand the production area, or update or change the manure handling system, and which requires a permit under section 33-16-03.1-05, shall apply for and obtain a state animal feeding operation permit ~~or a North Dakota pollutant discharge elimination system permit~~ prior to construction.
- ~~2. An existing concentrated animal feeding operation shall submit a permit application pursuant to chapter 33-16-01 by February 12, 2006.~~
- ~~3. An existing medium animal feeding operation for which a permit is required as per section 33-16-03.1-05 shall submit a permit application pursuant to this chapter by July 1, 2008, or earlier if requested by the department when concerns of potential or actual pollution of waters of the state are documented.~~
- 4. Application forms for state animal feeding operation permits are available from the department. An operator shall furnish information requested by the department that is consistent with this chapter. The department will not process an application unless all of the necessary information is provided. The information within or attached to an application must include the following:
 - a. The owner's and operator's name and mailing addresses.
 - b. The facility's legal location and mailing address.
 - c. A topographic map of the area where the facility is or proposes to be located and showing the specific production area.
 - d. Specific information about the number, size, and type of animals proposed for the facility; the number of days per year animals will be handled; and the type of confinement (open or housed under roof).
 - e. The type of containment and storage (anaerobic lagoon, roofed storage shed, ponds, under-floor pits, aboveground storage tanks, underground storage tanks, concrete pad,

impervious soil pad, water spreading system, other) and total capacity for manure, litter, and process wastewater storage (tons or gallons), or other measures to meet department requirements to prevent discharge of pollutants to waters of the state.

- f. The total number of acres under control of the applicant and available for land application of manure, litter, or process wastewater.
- g. Estimated amounts of manure, litter, and process wastewater generated per year (tons or gallons).
- h. Estimated amounts of manure, litter, and process wastewater transferred to other persons per year (tons or gallons).
- i. Designs, including location, for all manure storage and water pollution control structures and site-specific background information as specified in the North Dakota Livestock Program Design Manual. Design plans developed by anyone other than the facility owner must be signed by the engineer who prepared or supervised the preparation of the plans under North Dakota Century Code chapter 43-19.1.
- j. Site-specific information on topography, surface water, ground water, and soil geology.
- k. A nutrient management plan or information related to a nutrient management plan as specified in subsections 4 and 5 of section 33-16-03.1-08.
- l. The signatures of individuals responsible for the animal feeding operation.
- m. A description of how ~~dead animals~~animal mortalities will be handled and disposed of by the facility operator.

In preparing an application, the operator shall follow the North Dakota Livestock Program Design Manual.

The operator of an existing animal feeding operation may reference any information previously submitted to the department rather than resubmitting it. Existing information shall be updated if changes to the operation have been made since the prior application.

5-3. Permit conditions. The department may impose any conditions upon a state animal feeding operation permit to ensure proper operation of the facility to protect water and air quality, including:

- a. Sampling, testing, and monitoring at or adjacent to the facility of manure, process wastewater, ground water, or runoff.
- b. Steps to prevent the facility from causing exceedances of water quality standards or air quality standards and to minimize odors during land application of manure.
- c. Recordkeeping and reporting.
- d. Compliance schedules for upgrades at facilities to meet the requirements of this chapter.

6-4. If the department determines that the animal feeding operation will not cause nor likely cause pollution of waters of the state, either after upgrades are made or at its current status, and the department determines that it is not likely to exceed air quality standards, a state animal feeding operation permit ~~or a no-potential-to-pollute determination~~ will be issued.

7-5. If manure storage or water pollution control structures were required at the facility, the operator shall notify the department within thirty days of construction completion and provide certification from an engineer or the designer that construction of manure storage and water

pollution control structures was completed according to designs provided with the application or to department-approved changes.

~~8-6.~~ The permit shall be valid until its expiration date as long as the animal feeding operation is not materially changed or waters of the state are not impacted pursuant to chapter 33-16-02.1. If an operator plans to change the type or increase the number of animals or change the facility, including expanding barns or pens or changing manure storage or water pollution control structures, the operator shall inform the department in writing prior to implementation of these changes.

~~9-7.~~ Expiration of permits. Every state animal feeding operation permit issued by the department shall have a fixed term not to exceed five years.

~~10-8.~~ Renewal of permits. One hundred eighty days prior to the expiration of an existing permit, an application for permit renewal shall be submitted to the department for review. If an operator submits a complete application for a permit renewal at least one hundred eighty days prior to the expiration date, but the department, through no fault of the operator, fails to issue a new permit prior to the expiration of the previous permit, the department may extend the expired permit until the permit is reissued. All conditions and stipulations of permits extended under this subsection remain fully effective and enforceable.

~~11-9.~~ Transfer of permits. The holder of a state animal feeding operation permit may transfer it by notifying the department in writing at least thirty days in advance of the proposed transfer date. The notice shall include a written agreement between the current and new owners or operators and contain a specific date for the permit transfer and the name and address of the individual responsible for compliance with the permit.

~~12-10.~~ General permits. The department may issue a general state animal feeding operation permit covering similar facilities. Any general permit shall comply with all requirements of this chapter and shall identify criteria by which facilities may qualify for the general permit. Facilities that would qualify for a general permit shall apply to the department for coverage under the terms of the general permit. The department may grant a facility's request to construct and operate under a general permit or, at its discretion, issue an individual permit if circumstances warrant.

~~13-11.~~ Confidentiality. ~~If the department determines that certain information should be accorded confidential status for reason of being a trade secret, it shall disclose such information to the administrator upon the latter's request. The administrator shall maintain the disclosed information in confidence, unless the administrator determines that such information, if made public, would not divulge methods of processes entitled to protection as trade secrets. The department will follow the requirement of North Dakota Century Code chapter 44-04 for all requests for facility information.~~

12. Setback. For the purpose of determining setbacks under subsection 7 of North Dakota Century Code section 23-25-11, unweaned young are not included when calculating animal units, except a cow-calf pair equals 1.0 animal unit.

History: Effective December 1, 2004; amended effective January 7, 2005; October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-08. Facility requirements.

1. A ~~livestock~~ facility requiring a permit under this chapter must be located, designed, built, maintained, and operated to limit or prevent pollution of or the discharge of pollutants into waters of the state consistent with the North Dakota Livestock Program Design Manual, best professional judgment, best management practices, and pursuant to the requirements of

North Dakota Century Code chapter 61-28, this chapter, and the facility's state animal feeding operation permit.

2. ~~All concentrated animal feeding operations must be located, designed, built, maintained, and operated to limit or prevent pollution of or the discharge of pollutants into waters of the state consistent with the North Dakota Livestock Program Design Manual, best professional judgment, best management practices, and pursuant to the requirements of North Dakota Century Code chapter 61-28, North Dakota Administrative Code chapter 33-16-01, this chapter, and the operation's North Dakota pollutant discharge elimination system permit.~~

3. Nutrient management plan. A nutrient management plan must be developed and a copy maintained onsite by the owner or operator of any ~~livestock~~ facility that land applies manure, litter, or process wastewater to cropland or grassland and is required to obtain a permit ~~or a no potential to pollute determination pursuant to this chapter or chapter 33-16-01~~. These facilities must land apply manure litter or process wastewater in accordance with the current properly developed nutrient management plan. At a minimum the nutrient management plan must contain the following information:

- a. Description of the land to which an operator has access for applying manure or process wastewater, or both, and adequate information to demonstrate that manure or process wastewater, or both, will be applied at agronomic rates. The agronomic rate for nitrogen must not exceed the plant utilization rate for the cropping year. Phosphorous must not be applied at rates exceeding the recommendations based on either the North Dakota phosphorous index, the North Dakota state university extension service soil tests, or other risk assessment methods approved by the department.
- b. The proposed method and timing of land application of manure and process wastewater.
- c. The precautions that will be taken to:
 - (1) Prevent manure and process wastewater from reaching waters of the state or areas where they have the potential to impact waters of the state; and
 - (2) Minimize odors to residences and public areas where people are present during transport and land application of manure.
- d. Other information specified in the North Dakota Livestock Program Design Manual.

- 4.3. Of the facilities identified in subsection ~~32~~, the following facilities must submit a copy of their current nutrient management plans to the department along with their application or design, or both, plans:

- a. Concentrated animal feeding operations;
- b. ~~Livestock facilities~~ **Facilities** that plan to apply manure on frozen ground;
- c. ~~Livestock facilities~~ **Facilities** with land that is designated for manure application and which also has soil phosphorous levels that meet or exceed the very high levels for crop production based on North Dakota state university extension service information;
- d. ~~Livestock facilities~~ **Facilities** that daily haul and land apply manure; and
- e. ~~Livestock facilities~~ **Facilities** that fail to comply with these rules or permit conditions.

- 5.4. ~~Livestock facilities~~ **Facilities** identified in subsection ~~32~~, which do not meet conditions in subsection ~~43~~, must submit to the department, along with their application or design, or both, plans, the following information:

- a. An indication that the facility has a nutrient management plan that meets the department requirements;
- b. The name of the individual who developed the nutrient management plan and the organization with which that individual is affiliated;
- c. The amount of land available for land application of manure;
- d. The type of crops or vegetation grown on this land;
- e. The typical manure application rate for each crop or vegetation grown;
- f. The method and timing of application;
- g. The precautions used to prevent manure from reaching waters of the state; and
- h. The precautions, if needed, used to minimize odors to residences and public areas where people are present during transport and land application of manure.

6.5. Manure storage structures. All ~~livestock~~ facilities requiring permits under ~~chapter 33-16-01 and~~ this chapter, ~~which are constructed or expanded after the effective date of the respective rule,~~ must meet the following requirements:

- a. All facilities regulated under this chapter shall have manure storage structures designed and constructed to store runoff from a twenty-five-year, twenty-four-hour rainfall event, except swine, chicken, turkey, and veal calf facilities which shall be designed and constructed to store runoff from a one hundred-year, twenty-four-hour rainfall event. In addition, all facilities shall collect and store all manure, process wastewater, and runoff for a minimum of two hundred seventy days. Overflows from a properly operated manure storage structure due to a chronic or catastrophic rainfall event in excess of those specified or seepage from the storage structure that is within the standards as specified in the North Dakota Livestock Program Design Manual are not considered violations of this chapter.
- b. A ground water site assessment is required for all manure storage structures.
- c. All manure storage structures must be designed and maintained to withstand natural forces, to prevent impacts to waters of the state, and minimize seepage.
- d. All earthen storage ponds shall have a properly designed and constructed liner to minimize seepage, unless the department has determined a liner is not necessary based on site conditions.
- e. Other manure storage structure requirements specified in the North Dakota Livestock Program Design Manual must be met.
- f. The department may specify additional design or monitoring requirements as needed to ensure facilities will satisfactorily prevent pollution to waters of the state.

7.6. Liquid storage facilities. All ~~livestock~~ facilities requiring permits under this chapter ~~and all concentrated animal feeding operations requiring permits under chapter 33-16-01~~ which store liquid manure, process wastewater, or manure-contaminated runoff must meet the following requirements:

- a. New facilities, expanding facilities significantly increasing their number of ~~livestock~~ animals, or those facilities that have not housed ~~livestock~~ animals within five years must not be located over an unconfined glacial drift aquifer unless approved by the department.

- b. All ~~livestock~~ facilities requiring permits under ~~chapter 33-16-01 or this chapter, which are constructed or expanded after the effective date of the respective rule~~, must be designed by the facility owner or designed by or under the direct supervision of an engineer. If designed by an engineer, all final drawings, specifications, plans, reports, or other engineering documents, when issued, shall be signed by the engineers or land surveyors who supervised the preparation of these documents under North Dakota Century Code chapter 43-19.1. After construction completion, an engineer or the designer shall certify that the construction was completed according to the design plan.
- c. Other requirements specified in the North Dakota Livestock Program Design Manual.

~~8.7.~~ Odor management. An operator shall manage a facility to minimize the impact of odors on neighboring residents and public areas and comply with the odor requirements of North Dakota Century Code section 23-25-11, North Dakota Administrative Code chapter 33-15-16, and the North Dakota Livestock Program Design Manual.

~~9.8.~~ Best management practices. An operator of a ~~livestock~~ facility requiring a permit under this chapter ~~or a concentrated animal feeding operation requiring a permit under chapter 33-16-01~~ is responsible for applying best management practices to ensure compliance with the requirements of this chapter and the permit and to prevent pollution of waters of the state. The best management practices used must be included in the design plans or in the nutrient management plan.

~~10.9.~~ Additional requirements which the department may require for ~~livestock~~ facilities requiring permits under this chapter ~~and concentrated animal feeding operations requiring permits under chapter 33-16-01~~. The department may:

- a. Require the operator to install and collect routine samples from monitoring wells to ensure that potentially usable ground water resources are not adversely impacted.
- b. Require odor control for manure storage and ~~livestock~~animal housing areas and require steps to minimize odors to residences or public areas during transport and land application of manure.
- c. Based on site-specific conditions, specify additional design or monitoring requirements as needed to ensure the facility will satisfactorily prevent pollution of waters of the state.

History: Effective December 1, 2004; amended effective January 7, 2005; October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-09. Recordkeeping and reporting requirements.

- 1. The operator of a ~~livestock~~ facility requiring a permit under this chapter shall record and maintain the following for a period of not less than three years:
 - a. Any sampling, testing, and monitoring results as required by this chapter or by the department;
 - b. Maintenance and inspection records for water pollution control structures;
 - c. Reports and data required by this chapter, the North Dakota Livestock Program Design Manual, and the permit; and
 - d. A copy of this permit.

The department may request an extension of the record retention period if a facility has failed to comply with these rules or permit conditions or during the course of any unresolved litigation regarding the discharge of pollutants by the operation. The information shall be provided to department representatives upon request. ~~A concentrated animal feeding operation must keep records as required under chapter 33-16-01.~~

2. Reports shall be submitted to the department in accordance with the schedule prescribed and on the appropriate forms supplied by the department or in a manner specified by the department if required as a condition of the state animal feeding operation permit ~~or the North Dakota pollutant discharge elimination system permit for concentrated animal feeding operations~~ or based on site-specific conditions. Information requested may include sampling, testing, and monitoring results; maintenance and inspection records; records related to facility operation; or nutrient management plan information or records.

History: Effective December 1, 2004; amended effective January 7, 2005; [October 1, 2018](#).

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-10. Enforcement and compliance.

1. The department shall evaluate all reports, notifications, and data submitted by an operator in compliance with this chapter and the state animal feeding operation permit. The department shall investigate all apparent violations for possible enforcement action pursuant to North Dakota Century Code section 61-28-08.
2. No person may knowingly make a false statement, representation, or certification in any application, record, report, plan, or other document filed or required under this chapter or the permit. No person may knowingly falsify, tamper with, or provide inaccurate information regarding a monitoring well or other device required under this chapter or the permit.
3. Operators of permitted facilities that are not operating properly shall update those facilities to achieve compliance with this chapter and the conditions of the permit within a timeframe approved by the department.
4. If the department finds that a facility, which has not been covered by a state animal feeding operation permit ~~or a North Dakota pollution discharge elimination system permit~~ within the last five years, is causing or is likely to cause pollution of waters of the state, or poses a significant threat to public health or safety, the operator will be notified that actions shall be taken to prevent the pollution.
5. Within one hundred twenty days following the notification described in subsection 4, the operator shall submit a compliance plan to prevent the facility from impacting waters of the state.
 - a. The compliance plan shall be prepared in accordance with the minimum requirements of this chapter and the North Dakota Livestock Program Design Manual. The plan shall contain adequate information to enable the department to determine whether the proposed measures will abate or prevent pollution of waters of the state. The operator also shall present a proposed schedule for plan implementation and completion.
 - b. If the compliance plan allows for operation of the facility in a manner that will not cause nor likely cause pollution of waters of the state, the department will issue a permit with a compliance schedule for construction. Approval of the permit shall be contingent upon any changes which may be required by the department after its review of the proposed plan. The construction must be completed within the timeframe specified in the compliance schedule.

c. If the approved compliance plan needs to be modified or amended during construction, the operator shall notify the department prior to making any modifications or amendments and they must be approved by the department.

6. A permit may be modified, suspended, revoked, or denied by the department for reasons pertaining to: circumstances which do not meet the purpose and provisions of this article, the provisions of the permit, or the plans and specifications submitted as part of the application for permit; or, violations of any applicable laws or rules. The department shall provide written notice to the permittee.

7. If the department revokes a state animal feeding operation permit for cause, the operator can finish feeding the animals for up to one hundred twenty days from the date of revocation, provided public and environmental health are not threatened. The operator will not be allowed to bring any other animals into the facility until the requirements of the permit, this chapter, and the North Dakota Livestock Program Design Manual have been met as approved by the department.

History: Effective December 1, 2004; amended effective October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-11. Departmental inspection.

Authorized representatives of the department may request access to a facility site under authority of North Dakota Century Code section 61-28-04. The owner or operator of a ~~livestock~~ facility may request to see the representatives' credentials. Authorized representatives of the department shall be allowed:

1. To enter the facility site or area in which any records required to be kept under terms and conditions of the permit are stored;
2. To have access to and copy any records required to be kept under terms and conditions of the permit;
3. To inspect any monitoring equipment or water pollution control structures at the facility; or
4. To sample any discharge of pollutants.

The department representatives will abide by all security measures implemented by the owner or operator to protect the health and safety of the workers and the animals at the facility.

History: Effective December 1, 2004; amended effective October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-12. Prohibited activities.

It shall be unlawful for any person:

1. To feed any livestock on the ice cover of streams or lakes.
2. To create or maintain an immediate threat to human, public, or environmental health.
3. To dispose of an animal carcass along or in any stream, lake, river, or other surface water; to bury the carcass near any such surface water; to dispose of a carcass in an area that will discharge into waters of the state; to dispose of a carcass in any structure used to store or treat liquid manure, process wastewater, or storm water unless the department-approved system is designed for such a purpose; or to dispose of a carcass in a manner that is in

violation of North Dakota Administrative Code article 33-20 or North Dakota Century Code chapter 36-14.

4. To cause pollution of waters of the state or to place or cause to be placed any wastes in a location where they are likely to cause pollution of waters of the state.
5. To discharge any pollutants into waters of the state thereby reducing the quality so as not to comply with the water quality standards established by the department, except facilities that are in compliance with subsection 6.
6. To discharge manure or process wastewater from a ~~livestock~~ facility except:
 - a. The overflow of a properly operated manure storage structure due to a chronic or catastrophic rainfall greater than a twenty-five-year, twenty-four-hour event or greater than a one hundred-year, twenty-four-hour event for swine, chicken, turkey, or veal calf facilities; or
 - b. Seepage from the manure storage structures that is within the standards as specified in the North Dakota Livestock Program Design Manual.

History: Effective December 1, 2004; amended effective October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-16-03.1-13. Public participation.

1. If the department determines a significant degree of public interest exists regarding new or expanding facilities, or significant revisions to a facility's nutrient management plan, it shall issue a public notice requesting comment on applications for both individual permits and general state animal feeding operation permits.
2. The department shall provide a period of not less than thirty days during which time interested persons may submit comments. The period of comment may be extended at the discretion of the department.
3. The public notice must be placed in the official county newspaper or other daily or weekly newspaper circulated in the area of the proposed animal feeding operation. In the case of draft general permits, the public notice will be placed in applicable official county newspapers. The department may also use any other reasonable means to provide the public notice information to parties potentially affected.
4. The public notice must include at least the following:
 - a. Name, address, and telephone number of the agency issuing the public notice.
 - b. Name and address of the applicant and a brief description of the application information, including the proposed location of the facility. The exception would be draft general permits for which there is no specific applicant.
 - c. The date, time, and location of any scheduled public meeting or hearing.
 - d. An explanation of how to view or obtain materials (e.g., copy of design plans) related to the application and the department's review.
 - e. An explanation of how to submit comments.

5. The department shall send copies of the public notice to the applicant and to local governmental entities which have jurisdiction over the area where the facility is located or is proposed to be located.
6. The department shall hold a public meeting or hearing as it deems appropriate to allow additional public input or to provide information to the public concerning the department's review of the facility.
7. In making its final decision on the application or draft permit, the department shall consider all comments submitted within a timeframe specified in the public notice and all comments received at any public hearing. Within twenty days of the close of the public comment period, the applicant, if any, may submit a written response to the public comments. The department shall consider the applicant's response in making its final decision.
8. Pursuant to the requirements of this chapter and within sixty days of the applicant's response to the public comments, the department shall make a final determination as to whether the permit should be approved, approved with conditions, or denied.
9. The department shall notify the applicant in writing of its final determination and provide to the applicant a copy of the final permit, if issued. Upon request, other interested individuals may also obtain copies of the final permit.
10. Once finalized, information on general permits and their availability must be provided to potentially eligible or affected facilities.
11. The department may combine proceedings under this chapter with proceedings to issue a North Dakota pollutant discharge elimination system permit under chapter 33-16-01. The combined proceedings will be subject to the public participation procedures in chapter 33-16-01.

History: Effective December 1, 2004; amended effective January 7, 2005; October 1, 2018.

Law Implemented: NDCC 61-28-04

CHAPTER 33-21-02

33-21-02-01. Authority.

The ~~state~~ department ~~of health~~ has been authorized to provide and administer this chapter relating to septic system servicing under the provisions of North Dakota Century Code section 61-28-04.1.

History: Effective January 1, 2014; amended effective October 1, 2018.

General Authority: NDCC 61-28-04, 61-28-04.1

Law Implemented: NDCC 61-28-04.1

33-21-02-05. Permit application and renewal.

1. Permit required. A person wishing to engage in the business of servicing septic systems, portable restrooms, holding tanks, and similar devices that receive domestic wastewater shall submit an application for a permit to the department on a form provided by the department.
2. Applicant information. All applicants shall provide the following information to the department:
 - a. The full name and physical business address of the applicant;
 - b. The mailing address of the applicant, if different from the physical address;
 - c. Septic system servicers that have held a permit in North Dakota within the past five years must submit records in accordance with subsection 4;
 - d. A copy of a North Dakota state training certificate or other acceptable training course as preapproved by the department;
 - e. A list of all counties in which business is conducted;
 - f. A list of all disposal methods and land application sites, not exempted under North Dakota Century Code section 61-28-04.1, that the applicant proposes to use, if applicable; and
 - g. The signature of the landowner, facility operator, or designated representative of the owner or operator, on a designated form granting permission to use the site for land application, disposal, or treatment.
3. Land application. Class I septic system servicers shall obtain the department's approval of all land application sites under subsection 2 of section 33-21-02-08. In addition, class I applicants shall include the following information on all land application sites--even sites that have already been approved--that they propose to use for the permit period:
 - a. The name of the property owner;
 - b. The street address or directions to the site;
 - c. The location of the property by township, range, section, and quarter section or the latitude and longitude of the property in degrees decimal;
 - d. The type of vegetation on the land application site (fallow land, pasture, range, forest, or other) and the nitrogen requirements for the vegetation;
 - e. The estimated depth in feet to seasonally high ground water at the site and the basis for the estimates;
 - f. A statement of the specific soil type (clay, gravel, sandy loam, or other) at each site;

- g. The approximate slope of the land;
 - h. The acreage available for land application;
 - i. A proposed summer and winter disposal operation and maintenance plan for each land application site, including provisions for access control and the types and sources of wastes to be managed on the site; and
 - j. Indicate land application sites to be utilized between November fifteenth and April first.
4. Permit renewals. A permit shall expire on December thirty-first of each year. A permit holder shall have a grace period to submit a renewal application with the appropriate application fee to the department by March first of the following year. After March first, a new permit application with the appropriate application fee shall be submitted to the department. Until the new permit application is approved by the department, a septic system servicer is not permitted to operate.
- a. An applicant for permit renewal must submit the same information required of a new permit applicant.
 - b. In addition, septic system servicers shall submit an annual report of disposal activities to the department when applying for a permit renewal. The annual report must include:
 - (1) A list of the disposal sites used, including all multiple-use land application sites and wastewater treatment facilities;
 - (2) The type of treatment done to address pathogen and vector control requirements;
 - (3) The total volume of gallons handled; and
 - (4) A record of all spills.
5. Permit transfers. Septic system servicers must notify the department upon sale or transfer of business within ninety days. Upon notification and the new owner's written agreement to comply with the permit's terms, the new owner becomes the permit holder for the remainder of the calendar year and shall submit a renewal application in accordance with subsection 4.
6. Fees. An applicant shall pay the permit or renewal fee to the department at the time the permit or renewal application is submitted. A permit may not be issued or renewed prior to payment of the appropriate fee as follows:
- a. A new permit applicant shall pay an application fee of one hundred dollars and a fifty dollar fee per servicing vehicle.
 - b. A permit holder shall pay a renewal fee of fifty dollars per servicing vehicle.
 - c. A new servicing unit may be added to an existing permit for a fee of fifty dollars.
 - d. A permit replacement fee of twenty-five dollars shall apply. Examples include lost or damaged plates.
 - e. An applicant who holds a valid plumber's license under North Dakota Century Code chapter 43-18 and operates no more than one septic servicing unit is exempt from these fees.
7. Application review. The department shall review each submitted application for a new or renewed permit. If additional information is required, the department shall notify the applicant within thirty days after the department receives the application and processing shall be

postponed until the application is complete. If the department does not receive the requested information within ninety days of the request, a new application may be required. The department shall review the completed application and either issue, deny, or renew a permit within thirty days after the completed application is received.

History: Effective January 1, 2014; [amended effective October 1, 2018](#).

General Authority: NDCC 61-28-04, 61-28-04.1

Law Implemented: NDCC 61-28-04.1

CHAPTER 33-25-01

33-25-01-01. Definitions.

1. "Abandoned well" means a well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be used for its intended purpose or for observation purposes.
2. "Area of review" means the area of review surrounding an injection well described according to the criteria under title 40 C.F.R. part 146, sections 146.6 and 146.63.
3. "Casing" means a pipe or tubing of appropriate material, of varying diameter and weight, lowered into a borehole during or after drilling in order to support the sides of the hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground, or to prevent water, gas, or other fluid from entering or leaving the hole.
4. "Catastrophic collapse" means the sudden and utter failure of overlying strata caused by removal of underlying materials.
5. "Cesspool" means a drywell that receives untreated sanitary waste containing human excreta and which sometimes has an open bottom or perforated sides, or both.
6. ~~"C.F.R." means Code of Federal Regulations as of August 3, 2000.~~
- ~~7.~~ "Director" means the director of the division of water quality of the state department of health.
- ~~8.~~7. "Drywell" means a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids.
- ~~9.~~8. "Exempted aquifer" means an aquifer or its portion that meets the criteria in the definition of "underground source of drinking water" but which has been exempted according to the procedures of subsection 2 of section 33-25-01-05.
- ~~10.~~9. "Fluid" means material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state.
- ~~11.~~10. "Formation" means a body of rock characterized by a degree of lithologic homogeneity which is prevailing, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.
- ~~12.~~11. "Hazardous waste" means a hazardous waste as defined under title 40 C.F.R. part 261, section 261.3.
- ~~13.~~12. "Improved sinkhole" means a naturally occurring karst depression or other natural crevice found in volcanic terrain and other geologic settings which have been modified by man for the purpose of directing and emplacing fluids into the subsurface.
- ~~14.~~13. "Injection zone" means a geological formation, group of formations, or part of a formation receiving fluids through a well.
- ~~15.~~14. "Packer" means a device lowered into a well to produce a fluidtight seal.
- ~~16.~~15. "Plugging" means the act or process of stopping the flow of water, oil, or gas into and out of a formation through a borehole or well penetrating that formation.
- ~~17.~~16. "Point of injection" means the last accessible sampling point prior to waste fluids being released into the subsurface environment through a class V injection well. For example, the

point of injection of a class V septic system might be the distribution box--the last accessible sampling point before the waste fluids drain into the underlying soils. For a drywell, it is likely to be the well bore itself.

- | ~~18-17~~. "Radioactive waste" means any waste which contains hazardous material in concentrations which exceed those listed under title 10 C.F.R. part 20, appendix B, table II, column 2.
- | ~~19-18~~. "Sanitary waste" means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities provided the waste is not mixed with industrial waste.
- | ~~20-19~~. "Septic system" means a well that is used to emplace sanitary waste below the surface and is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.
- | ~~21-20~~. "Subsurface fluid distribution system" means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground.
- | ~~22-21~~. "Well" means a bored, drilled or driver shaft, or a dug hole, whose depth is greater than the largest surface dimension; or an improved sinkhole; or a subsurface fluid distribution system.
- | ~~23-22~~. "Well injection" means the subsurface emplacement of fluids through a well.

History: Effective June 1, 1983; amended effective November 1, 1989; June 1, 2001; [October 1, 2018](#).

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04

33-25-01-02. Classification of injection wells.

Injection wells are classified as follows:

1. **Class I.** Wells used to inject hazardous waste, radioactive waste, and other industrial and municipal disposal wells which inject fluids beneath the lowermost formation containing, within one quarter mile [402.34 meters] of the well bore, an underground source of drinking water.
2. **Class II.** Wells which inject fluids:
 - a. Which are brought to the surface in connection with [natural gas storage operations, or](#) conventional oil or natural gas production and may be commingled with wastewaters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection;
 - b. For enhanced recovery of oil or natural gas; and
 - c. For storage of hydrocarbons which are liquid at standard temperature and pressure.
3. **Class III.** Wells which inject for extraction of minerals or energy.
4. **Class IV.** Wells used to dispose of hazardous wastes or radioactive wastes into or above a formation which, within one quarter mile [402.34 meters] of the well, contains an underground source of drinking water and wells used to dispose of hazardous wastes which cannot be classified under class I wells, e.g., wells used to dispose of hazardous wastes into or above a formation which contains an exempted aquifer.

5. **Class V.** Injection wells not included in class I, II, III, ~~or IV,~~ or VI.

6. **Class VI.** Wells that are not experimental in nature that are used for geologic sequestration of carbon dioxide beneath the lowermost formation containing an underground source of drinking water; or wells used for geologic sequestration of carbon dioxide that have been granted a waiver of the injection depth requirements pursuant to requirements at title 40 CFR part 146, section 146.95, or, wells used for geologic sequestration of carbon dioxide that have received an expansion to the areal extent of an existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemptions pursuant to title 40 CFR part 146, section 146.4 and title 40 CFR part 144, section 144.7(d).

History: Effective June 1, 1983; amended effective November 1, 1989; June 1, 2001; October 1, 2018.

General Authority: NDCC 23-20.3, 61-28-04, 61-28.1-03

Law Implemented: NDCC 23-20.3, 61-28-04, 61-28.1-03

33-25-01-03. Prohibition of unauthorized injection.

Any underground injection (except class II, class III, and class VI) is prohibited except as authorized by permit or rule issued under this section. Also the construction of any well required to have a permit under this section is prohibited until the permit has been issued. These include the well types specifically identified in title 40 CFR part 144, section 144.1(g) and title 40 CFR part 144, section 144.81.

The following well types are not covered by these rules:

1. Individual or single-family residential waste disposal systems such as domestic cesspools or septic systems.
2. Nonresidential cesspools, septic systems, or similar waste disposal systems if such systems are used solely for the disposal of sanitary waste and have the capacity to serve fewer than twenty persons a day.
3. Injection wells used for injection of hydrocarbons which are of pipeline quality and are gases at standard temperature and pressure for the purpose of storage.
4. Any dug hole, drilled hole, ~~or~~-bored shaft, improved sinkhole, or subsurface fluid distribution system which is not used for emplacement of fluids underground.

History: Effective June 1, 1983; amended effective June 1, 2001; October 1, 2018.

General Authority: NDCC 61-28-04

Law Implemented: NDCC 61-28-04, 61-28-06

33-25-01-04. Prohibition of movement of fluid into underground sources of drinking water.

1. No owner or operator shall construct, operate, maintain, convert, plug, abandon, or conduct any ~~other~~-underground injection activity in a manner which causes, or allows, movement of fluid containing any contaminant into an underground source of drinking water if the presence of that contaminant may cause a violation of any maximum contaminant level under chapter 33-17-01 or which may adversely affect the health of persons. The applicant for a permit shall have the burden of showing that the requirements of this section are met.
2. The director shall prescribe additional requirements in accordance with title 40 CFR part 144, section 144.12(b) through (e) for all injection wells which may cause a violation of a maximum contaminant level under chapter 33-17-01 or which may adversely affect the health of persons.

History: Effective June 1, 1983; amended effective November 1, 1989; June 1, 2001; October 1, 2018.

General Authority: NDCC 61-28-04, 61-28.1-03

Law Implemented: NDCC 61-28-04, 61-28.1-03

33-25-01-16. Authorization of class V underground injection wells.

1. Authorization of injection into a class V well is authorized indefinitely, subject to the requirements of subsections 4, 5, and 6 of section 33-25-01-10 and subsection 3 of section 33-25-01-12, and title 40 CFR part 144, sections 144.84(b)~~(2)~~(1) through ~~(5)~~(4).
2. The owner or operator of any existing class V well shall, within one year of the effective date of an underground injection control program, notify the director of the existence of any well meeting the definitions of class V under the owner's or operator's control, and submit the following inventory information:
 - a. Name of owner or operator of the well and legal contact;
 - b. Number of wells and location by township, range, and section;
 - c. Nature and volume of injected fluids;
 - d. Construction features of the well, including well depth, screened interval, and casing size and type; and
 - e. Any other information which the director requests.
3. All owners or operators of new class V wells shall be in compliance with article 43-35 and submit to the director a log of formations penetrated and the inventory information requested in subsection 2.
4.
 - a. The director may require the operator of a class V well authorized by rule to apply for and obtain an individual or area permit. Cases where permits may be required include:
 - (1) The injection well is not in compliance with the applicable rule.
 - (2) The injection well is not or no longer is within the category of wells and types of well operations authorized by rule.
 - (3) Protection of an underground source of drinking water requires the injection operation be regulated by requirements not contained in the rules.
 - b. Any owner or operator authorized by rule may request and be granted a permit and hence be excluded from coverage by rule.
 - c. All injection wells regulated by rule shall submit inventory information to the director.
 - d. Upon program approval, the director shall notify owners or operators of injection wells of their duty to submit inventory information.
 - e. Failure to submit required inventory information for a class V well within one year of program approval will result in authorization removal for that well.
5. All owners or operators of class V wells shall be in compliance with title 40 CFR part 144, subpart G.
 - a. New large capacity cesspools that receive waste from multiple dwellings or have the capacity to receive waste from twenty or more persons per day are prohibited after April 5, 2000. Existing large capacity cesspools must be closed by April 5, 2005.

- b. New motor vehicle waste disposal wells that receive waste fluids from vehicular repair or maintenance activities, such as auto body repair shops, automotive repair shops, new or used motor vehicle dealerships, specialty repair shops (e.g., transmission or muffler repair shops), or any vehicular repair works are prohibited after April 5, 2000.
- c. Existing motor vehicle waste disposal wells in groundwater protection areas designated by the director must be closed or permitted within one year of completion of the groundwater protection area designation or one year after June 1, 2001, whichever is later. Existing motor vehicle waste disposal wells in sensitive groundwater areas designated by the director must be closed or permitted by January 1, 2007.
- d.
 - (1) Groundwater protection areas are geographic areas near or surrounding community and nontransient noncommunity water systems that use groundwater as a source of drinking water. They are equivalent to wellhead protection areas delineated by the director through the wellhead protection program, which is defined in section 1428 of the Safe Drinking Water Act.
 - (2) Sensitive groundwater areas are vulnerable hydrogeologic settings such as glacial outwash deposits or alluvial or aeolian sand deposits that are critical to protecting current or future underground sources of drinking water. Areas designated as sensitive groundwater areas by the director are alluvial or aeolian sand deposits shown on Geologic Map of North Dakota (Clayton, 1980, North Dakota geological survey) and glacial drift aquifers listed in North Dakota Geographic Targeting System for Groundwater Monitoring (Radig, 1997, North Dakota department of health), or most recent editions of these publications, with DRASTIC scores greater than or equal to 100 based on methodology described in DRASTIC: A Standardized System For Evaluating Groundwater Pollution Potential (Aller et al, 1987, United States environmental protection agency).
- e. Location outside of a designated groundwater protection area or sensitive groundwater area does not relieve an owner or operator of a class V well from meeting all other requirements of this article and title 40 CFR part 144, subpart G.
- f. In limited cases, the underground injection control director may authorize the conversion (reclassification) of a motor vehicle waste disposal well to another type of class V well. Motor vehicle wells may only be converted if all motor vehicle fluids are segregated by physical barriers and are not allowed to enter the well; and, injection of motor vehicle waste is unlikely based on a facility's compliance history and records showing proper waste disposal. The use of a semipermanent plug as the means to segregate waste is not sufficient to convert a motor vehicle waste disposal well to another type of class V well.

History: Effective June 1, 1983; amended effective June 1, 2001; [October 1, 2018](#).

CHAPTER 33.1-03-08
APPROVAL OF PLANS AND SPECIFICATIONS PRIOR TO CONSTRUCTION OF WATER
WORKS AND SEWERAGE SYSTEMS

Section

- 33.1-03-08-01 Plans and Specifications Required
- 33.1-03-08-02 Submission of Plans and Specifications for Review
- 33.1-03-08-03 Approval of Plans and Specifications
- 33.1-03-08-04 Approved Plans and Specifications Required

33.1-03-08-01. Plans and specifications required.

It is required that plans and specifications be prepared for all water works and sewerage systems contemplated for use by the general public. It is further required that such plans and specifications, together with other pertinent information, be submitted to the department of environmental quality for review prior to construction of the facility or facilities.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 16

33.1-03-08-02. Submission of plans and specifications for review.

Plans and specifications shall be submitted to the department of environmental quality in accordance with such directions as the department may promulgate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 16

33.1-03-08-03. Approval of plans and specifications.

Plans and specifications reviewed by the department of environmental quality will be approved only when such plans and specifications fully meet and comply with existing statutes and sanitary standards established by the department of environmental quality. Plans and specifications upon which approval is being withheld will be returned with the reasons for withholding approval.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-01-03; S.L. 2017, ch. 199, § 16

33.1-03-08-04. Approved plans and specifications required.

Water works and sewerage systems constructed for use by the general public must be constructed in accordance with plans and specifications approved by the department of environmental quality.

33.1-10-01-01. Purpose.

It is the purpose of this article to state such requirements as shall be applied in the use of all sources of ionizing radiation within North Dakota. This article provides for the protection of public health and maximum safety to all persons at, or in the vicinity of the place of use and storage of sources of ionizing radiation and in addition with respect to radioactive materials, or devices containing radioactive materials, the disposal thereof. This article is intended to be consistent with the best use of ionizing radiation.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-02. Scope.

Except as otherwise specifically provided, this article applies to all persons who receive, possess, use, transfer, own, or acquire any source of radiation, provided; however, that nothing in this article shall apply to any person to the extent such person is subject to regulation by the United States nuclear regulatory commission. Attention is directed to the fact that regulation by this state of source material, byproduct material, and special nuclear material in quantities not sufficient to form a critical mass is subject to the provisions of the agreement between this state and the United States nuclear regulatory commission and to part 150 of the commission's regulations [10 CFR part 150].

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-03. Authority.

The department of environmental quality has been authorized to provide and administer this article under the provisions of North Dakota Century Code chapter 23.1-03.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-04. Definitions.

As used in this article, these terms have the definitions set forth below. Additional definitions used only in a certain section will be found in that section. Terms not defined in this article shall have the meaning given them in North Dakota Century Code chapter 23.1-03.

1. "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.
2. "Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).
3. "Becquerel" (Bq) means the SI unit of activity. One becquerel is equal to one disintegration or transformation per second (dps or tps).

4. "Byproduct material" means:

- a. Any radioactive material, except special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material; and
- b. The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute "byproduct material" within this definition.

5. "Calibration" means the determination of:

- a. The response or reading of an instrument relative to a series of known radiation values over the range of the instrument; or
- b. The strength of a source of radiation relative to a standard.

6. "CFR" means Code of Federal Regulations.

7. "Chelating agent" means amine polycarboxylic acids (e.g., EDTA, DTPA), hydroxycarboxylic acids, and polycarboxylic acids (e.g., citric acid, carbonic acid, and gluconic acid).

8. "Curie" means a unit of measurement of activity. One curie (Ci) is that quantity of radioactive material which decays at the rate of 3.7×10^{10} disintegrations or transformations per second (dps or tps).

9. "Department" means the department of environmental quality.

10. "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, "radiation dose" is an equivalent term.

11. "Dose equivalent (H_T)" means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

12. "Dose limits" means the permissible upper bounds of radiation doses established in accordance with these rules. For purposes of these rules, "limits" is an equivalent term.

13. "Exposure" means being exposed to ionizing radiation or to radioactive material.

14. "Gray" (Gy) means the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram [100 rad].

15. "Hazardous waste" means those wastes designated as hazardous by United States environmental protection agency regulations in 40 CFR part 261 and 33.1-24.

16. "Healing arts" means diagnostic or healing treatment of human and animal maladies including, but not limited to, the following which are duly licensed by the state of North Dakota for the lawful practice of: medicine and its associated specialties, dentistry, veterinary medicine, osteopathy, chiropractic, and podiatry.

17. "Human use" means the internal or external administration of radiation or radioactive material to human beings.

18. "Inspection" means an official examination or observation including tests, surveys, and monitoring to determine compliance with rules, regulations, orders, requirements, and conditions of the department.
19. "License" means a general or specific license issued by the department in accordance with the regulations adopted by the department.
20. "Licensee" means any person who is licensed by the department in accordance with this article and North Dakota Century Code chapter 23.1-03.
21. "Licensing state" means any state with regulations equivalent to the Suggested State Regulations for Control of Radiation relating to, and an effective program for, the regulatory control of NARM and which has been granted final designation by the conference of radiation control program directors, incorporated.
22. "Major processor" means a user processing, handling, or manufacturing radioactive material exceeding type A quantities as unsealed sources or material, or exceeding four times type B quantities as sealed sources, but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. The terms "type A quantity" and "type B quantity" are defined in chapter 33.1-10-13.1.
23. "Monitoring" means the measurement of radiation, radioactive material concentrations, surface area activities or quantities of radioactive material, and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, "radiation monitoring" and "radiation protection monitoring" are equivalent terms.
24. "Natural radioactivity" means radioactivity of naturally occurring nuclides.
25. "Nuclear regulatory commission (NRC)" means the United States nuclear regulatory commission or its duly authorized representatives.
26. "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof, and any legal successor, representative, agent, or agency of the foregoing, other than the commission, or any successor thereto and other than federal government agencies licensed by the commission or any successor thereto.
27. "Protective apron" means an apron made of radiation-attenuating materials used to reduce exposure to radiation.
28. "Quality factor" (Q) means the modifying factor, listed in tables I and II of section 33.1-10-01-14, that is used to derive dose equivalent from absorbed dose.
29. "Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of one hundred erg per gram or one one-hundredths joule per kilogram [0.01 gray].
30. "Radiation" means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. For purposes of these rules, ionizing radiation is an equivalent term. Radiation, as used in these rules, does not include nonionizing radiation, such as radiowaves or microwaves, visible, infrared, or ultraviolet light.
31. "Radiation exposure" means the quotient of dQ by dm where "dQ" is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass "dm" are completely stopped in air. The SI unit of exposure is the coulomb per kilogram (C/kg). (See section

33.1-10-01-14 units of radiation exposure, dose, and activity for the special unit equivalent "roentgen" (R).

32. "Radiation exposure rate" means the radiation exposure per unit of time, such as R/min, mR/h, etc.

33. "Radiation machine" means any device capable of producing radiation except, those devices with radioactive material as the only source of radiation.

34. "Radiation safety officer" means an individual who has the knowledge and responsibility to apply appropriate radiation protection requirements.

35. "Radioactive material" means any material (solid, liquid, or gas) which emits radiation spontaneously.

36. "Radioactivity" means the disintegration of unstable atomic nuclei by the emission of radiation.

37. "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to this article and North Dakota Century Code chapter 23.1-03.

38. "Registration" means the notification of the department of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.

39. "Regulations of the United States department of transportation" means the regulations in 49 CFR part 100-189.

40. "Rem" means the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 sievert (Sv)).

41. "Roentgen" (R) means the special unit of exposure. One roentgen equals two hundred fifty-eight millionths of a coulomb per kilogram of air. (See "exposure")

42. "Sealed source" means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.

43. "SI" means the abbreviation for the international system of units.

44. "Sievert" means the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rems).

45. "Source material" means:

a. Uranium or thorium, or any combination thereof, in any physical or chemical form; or

b. Ores that contain by weight one-twentieth of one percent (0.05 percent) or more of uranium, thorium, or any combination of uranium and thorium. Source material does not include special nuclear material.

46. "Source material milling" means any activity that results in the production of byproduct material as defined in subdivision b of subsection 4.

47. "Source of radiation" means any radioactive material, or any device or equipment emitting or capable of producing radiation.

48. "Special nuclear material" means:

- a. Plutonium, uranium 233, uranium enriched in the isotope 233 or in the isotope 235, and any other material that the United States nuclear regulatory commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determined to be special nuclear material, but does not include source material; or
- b. Any material artificially enriched by any of the foregoing but does not include source material.

49. "Test" means a method for determining the characteristics or condition of sources of radiation or components thereof. "Test" may also mean the process of verifying compliance with this article.

50. "These rules" means all parts of this article and any subsequent changes or additions thereto.

51. "Uranium fuel cycle" means the operations of milling of uranium ore, chemical conversion of uranium, isotopic enrichment of uranium, fabrication of uranium fuel, generation of electricity by a light water cooled nuclear power plant using uranium fuel, and reprocessing of spent uranium fuel to the extent that these activities directly support the production of electrical power for public use. Uranium fuel cycle does not include mining operations, operations at waste disposal sites, transportation of radioactive material in support of these operations, and the reuse of recovered nonuranium special nuclear and byproduct materials from the cycle.

52. "Waste handling licensees" means persons licensed to receive and store radioactive wastes prior to disposal or persons licensed to dispose of radioactive waste or both.

53. "Worker" means an individual engaged in work under a license or registration issued by the department and controlled by a licensee or registrant.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-05. Exemptions.

1. **General provision.** The department may, upon application therefore or upon its own initiative, grant such exemptions or exceptions from the requirements of this article as it determines are authorized by law and will not result in undue hazard to public health and safety or property.

2. **United States department of energy contractors and United States nuclear regulatory commission contractors.** Any United States department of energy contractor or subcontractor and any United States nuclear regulatory commission contractor or subcontractor of the following categories operating within this state is exempt from this article to the extent that such contractor or subcontractor under the contractor's or subcontractor's contract receives, possesses, uses, transfers, or acquires sources of radiation:

- a. Prime contractors performing work for the United States department of energy at United States government-owned or government-controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation.
- b. Prime contractors of the United States department of energy performing research in, or development, manufacture, storage, testing, or transportation of, atomic weapons or components thereof.

- c. Prime contractors of the United States department of energy using or operating nuclear reactors or other nuclear devices in a United States government-owned vehicle or vessel.
- d. Any other prime contractor or subcontractor of the United States department of energy or the nuclear regulatory commission when the state and the nuclear regulatory commission jointly determine that:
 - (1) Under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety; and
 - (2) The exemption of the prime contractor or subcontractor is authorized by law.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-07, 23.1-03-08; S.L. 2017, ch. 199, § 18

33.1-10-01-06. Records.

Each licensee and registrant shall maintain records showing the receipt, transfer, and disposal of all sources of radiation. Additional record requirements are specified elsewhere in this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-01-07. Inspections.

- 1. Each licensee and registrant shall afford the department at all reasonable times, opportunity to inspect sources of radiation and the premises and facilities wherein such sources of radiation are used or stored.
- 2. Each licensee and registrant shall make available to the department for inspection, upon reasonable notice, records maintained pursuant to this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-08. Tests.

Each licensee and registrant shall perform upon instructions from the department or shall permit the department to perform such reasonable tests as the department deems appropriate or necessary including tests of:

- 1. Sources of radiation.
- 2. Facilities where sources of radiation are used or stored.
- 3. Radiation detection and monitoring instruments.
- 4. Other equipment and devices used in connection with utilization or storage of licensed or registered sources of radiation.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-01-09. Additional requirements.

The department may, by rule or order, impose upon any licensee or registrant such requirements in addition to those established in this article as it deems appropriate or necessary to minimize danger to public health and safety or property.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-08; S.L. 2017, ch. 199, § 18

33.1-10-01-10. Violations.

An injunction or other court order may be obtained prohibiting any violation of any provision of North Dakota Century Code chapter 23.1-03 or any rules or order issued thereunder. Any person who violates any provision of North Dakota Century Code chapter 23.1-03 or any rule or order issued thereunder, and, upon conviction thereof, may be punished as provided by law.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

33.1-10-01-11. Impounding.

Sources of radiation shall be subject to impounding pursuant to North Dakota Century Code section 23.1-03-14.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-14; S.L. 2017, ch. 199, § 18

33.1-10-01-12. Prohibited uses.

The following sources of ionizing radiation are prohibited:

1. A hand held fluoroscopic screen shall not be used with x-ray equipment unless it has been listed in the registry of sealed source and devices or accepted for certification by the United States food and drug administration, center for devices and radiological health.
2. Shoe-fitting fluoroscopic devices shall not be used.
3. Those sources of ionizing radiation when found to be detrimental to health and safety or in violation of this article.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-13; S.L. 2017, ch. 199, § 18

33.1-10-01-13. Communications.

All communications and reports concerning this article and applications filed thereunder shall be addressed to the department as follows:

Mailing and shipping address:

Department of Environmental Quality
Division of Air Quality
918 East Divide Avenue, Second Floor
Bismarck, ND 58501-1947

Telephone (701)328-5188
 Facsimile (Fax) (701)328-5185
 24-hour emergency in state 800-472-2121; out-of-state (701)328-9921

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-07; S.L. 2017, ch. 199, § 18

33.1-10-01-14. Units of exposure, dose, and activity.

1. As used in these rules, the unit of exposure is the coulomb per kilogram (C/kg) of air. One roentgen is equal to two hundred fifty-eight millionths coulomb per kilogram of air.
2. As used in these rules, the units of dose are:
 - a. Rad is the special unit of absorbed dose. One rad is equal to an absorbed dose of one hundred erg per gram or one one-hundredths (1/100) joule per kilogram (0.01 Gy).
 - b. Gray (Gy) is the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram (100 rad).
 - c. Rem is the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 Sv).
 - d. Sievert is the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rem).
3. As used in these rules, the quality factors for converting absorbed dose to dose equivalent are shown in table I.

Table I
QUALITY FACTORS AND ABSORBED DOSE EQUIVALENTS

<u>TYPE OF RADIATION</u>	<u>Quality Factor (Q)</u>	<u>Absorbed Dose Equal to a Unit Dose Equivalent*</u>
X, gamma, or beta radiation and high-speed electrons	1	1
Alpha particles, multiple-charged particles, fission fragments, and heavy particles of unknown charge	20	0.05
Neutrons of unknown energy	10	0.1
High-energy protons	10	0.1

* Absorbed dose in rad equal to one rem or the absorbed dose in gray equal to one sievert.

4. If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in rem per hour or sievert per hour, as provided in subsection 3, one one hundredth sievert [1 rem] of neutron radiation of unknown energies may, for purposes of these rules, be assumed to result from a total fluence of twenty-five million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee or registrant may use the fluence rate per unit dose equivalent or the appropriate Q value from table II to convert a measured tissue dose in gray or rad to dose equivalent in rem or sievert.

Table II

	<u>4E+2</u>	<u>3.5</u>	<u>14E+6</u>	<u>14E+8</u>

^a Value of quality factor (Q) at the point where the dose equivalent is maximum in a 30-centimeter diameter cylinder tissue-equivalent phantom.

^b Monoenergetic neutrons incident normally on a 30-centimeter diameter cylinder tissue-equivalent phantom.

5. For purposes of these rules, activity is expressed in the special unit of curie (Ci) or in the international system (SI) unit of becquerel (Bq), or their multiples, or disintegrations or transformations per unit of time.

a. One curie (Ci) = 3.7E+10 disintegrations or transformations per second (dps or tps) = 3.7E+10 becquerel (Bq) = 2.22E+12 disintegrations or transformations per minute (dpm or tpm).

b. One becquerel (Bq) = one disintegration or transformation per second (dps or tps).

6. SI numerical prefix conversions. See table III for a listing of numerical prefixes to convert SI units or special units by appropriate multiples:

Table III

CHAPTER 33.1-10-02
REGISTRATION OF RADIATION MACHINE FACILITIES AND SERVICES

Section

- 33.1-10-02-01 Purpose and Scope
- 33.1-10-02-01.1 Definitions
- 33.1-10-02-02 Exemptions
- 33.1-10-02-03 Application for Registration of Radiation Machine Facilities
- 33.1-10-02-04 Application for Registration of Servicing and Services
- 33.1-10-02-05 Issuance of Notice of Registration
- 33.1-10-02-06 Expiration of Notice of Registration
- 33.1-10-02-07 Renewal of Notice of Registration
- 33.1-10-02-08 Report of Changes
- 33.1-10-02-09 Approval Not Implied
- 33.1-10-02-10 Assembler and Transferor Obligation
- 33.1-10-02-11 Out-of-State Radiation Machines

33.1-10-02-01. Purpose and scope.

1. This chapter provides for the registration of radiation machine facilities and for the registration of persons providing radiation machine installation, servicing, or services.
2. In addition to the requirements of this chapter, all registrants are subject to the applicable provisions of other chapters of this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-01.1. Definitions.

As used in this chapter, "facility" means the location at which one or more devices or sources are installed or located, or both, within one building, vehicle, or under one roof and are under the same administrative control.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02, 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-02. Exemptions.

1. Electronic equipment that produces radiation incidental to its operation for other purposes is exempt from the registration and notification requirements of this chapter, providing that the dose equivalent rate averaged over an area of ten square centimeters does not exceed five microsievert [0.5 millirem] per hour at five centimeters from any accessible surface of such equipment. The production, testing, or factory servicing of such equipment shall not be exempt.
2. Radiation machines while in transit or storage incident thereto are exempt from the requirements of this chapter.
3. Domestic television receivers are exempt from the requirements of this chapter.

History: Effective January 1, 2019

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-03. Application for registration of radiation machine facilities.

Each person having a radiation machine facility shall:

1. Apply for registration of such facility with the department prior to the operation of a radiation machine facility. Application for registration shall be completed on forms furnished by the department and shall contain all the information required by the form and accompanying instructions.
2. Designate on the application form an individual to be responsible for radiation protection.
3. Each registrant shall prohibit any person from furnishing radiation machine servicing or services as described in subsection 4 of section 33.1-10-02-04, to the registrant's radiation machine facility until such person provides evidence that the service person has been registered with the department as a provider of services in accordance with section 33.1-10-02-04.
4. Each application for registration shall be accompanied by the fee prescribed in chapter 33.1-10-11.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-02-04. Application for registration of servicing and services.

1. Each person who is engaged in the business of installing or offering to install radiation machines or is engaged in the business of furnishing or offering to furnish radiation machine servicing or services in this state shall apply for registration of such services with the department prior to furnishing or offering to furnish any such services.
2. Application for registration shall be completed on forms furnished by the department and shall contain all information required by the department as indicated on the forms and accompanying instructions.
3. Each person applying for registration under this chapter shall specify:
 - a. That the person has read and understands the requirements of this article.
 - b. The services for which the person is applying for registration.
 - c. The training and experience that qualify the person to discharge the services for which the person is applying for registration.
 - d. The type of measurement instrument to be used, frequency of calibration, and source of calibration.
 - e. The type of personnel dosimeters supplied, frequency of reading, and replacement or exchange schedule.
4. For the purpose of this section, services may include:
 - a. Installation or servicing, or both, of radiation machines and associated radiation machine components.
 - b. Calibration of radiation machines or radiation measurement instruments or devices.
 - c. Radiation protection or health physics consultations or surveys.

d. Personnel dosimetry services.

5. No individual may perform services which are not specifically stated for that individual on the notice of registration issued by the department.

6. Each application for registration shall be accompanied by the fee prescribed in chapter 33.1-10-11. The fee will cover the period from June first, through May thirty-first of each year, regardless of the application date.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-02-05. Issuance of notice of registration.

1. Upon a determination that an applicant meets the requirements of the article, the department shall issue a notice of registration.

2. The department may incorporate in the notice of registration at the time of issuance or thereafter by appropriate rule, or order, such additional requirements and conditions with respect to the registrant's receipt, possession, use, and transfer of radiation machines as it deems appropriate or necessary.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-06. Expiration of notice of registration.

Except as provided by subsection 2 of section 33.1-10-02-07, each notice of registration shall expire at the end of the first day in the month and year stated therein.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-07. Renewal of notice of registration.

1. Application for renewal of registration shall be filed in accordance with subsection 1 of section 33.1-10-02-03 or subsection 2 of section 33.1-10-02-04. Each application for registration shall be accompanied by the fee prescribed in chapter 33.1-10-11.

2. In any case in which a registrant not less than thirty days prior to the expiration of this existing notice of registration has filed an application in proper form for renewal, such existing notice of registration shall not expire until the application status has been finally determined by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-08. Report of changes.

The registrant shall notify the department, in writing, before making any change which would render the information contained in the application for registration or the notice of registration no longer accurate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-09. Approval not implied.

No person, in any advertisement, shall refer to the fact that the person or the person's facility is registered with the department pursuant to the provisions of subsection 1 of section 33.1-10-02-03 or subsection 2 of section 33.1-10-02-04 and no person shall state or imply that any activity under such registration has been approved by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-10. Assembler and transferor obligation.

1. Any person who sells, leases, transfers, lends, disposes, assembles, or installs radiation machines in this state shall notify the department within fifteen days of:

a. The name and address of persons who have received these machines.

b. The manufacturer, model, and serial number of each radiation machine transferred.

c. The date of transfer of each radiation machine.

2. No person shall make, sell, lease, transfer, lend, assemble, or install radiation machines or the supplies used in connection with such machines unless such supplies and equipment, when properly placed in operation and used, shall meet the requirements of this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-02-11. Out-of-state radiation machines.

1. Whenever any radiation machine is to be brought into the state, for any temporary use, the person proposing to bring such machine into the state shall give written notice to the department at least three days before such machine is to be used in the state. The notice shall include:

a. The type of radiation machine.

b. The nature, duration, and scope of use.

c. The exact locations where the radiation machine is to be used.

d. States in which this machine is registered.

e. The names and addresses where the machine users can be reached while in the state.

f. Payment of the annual reciprocity fee prescribed in chapter 33.1-10-11.

2. If, for a specific case, the three-day notification period would impose an undue hardship on the person, upon application to the department, permission to proceed sooner may be granted.

3. The person referred to in subsection 1 shall:

a. Comply with this article.

b. Supply the department with such other information as the department may request.

c. Not operate within the state on a temporary basis in excess of one hundred eighty calendar days per year.

d. Reapply for reciprocity privileges annually.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-03.1
RULES OF GENERAL APPLICABILITY TO DOMESTIC LICENSING BY BYPRODUCT
MATERIAL

Section

33.1-10-03.1-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 30

33.1-10-03.1-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 30.

10 Code of Federal Regulations 30.1, 30.2, 30.3, 30.4, 30.7, 30.9, 30.10, 30.11, 30.12, 30.13, 30.14, 30.15, 30.18, 30.19, 30.20, 30.21, 30.22, 30.31, 30.32, 30.33, 30.34, 30.35, 30.36, 30.37, 30.38, 30.39, 30.41, 30.50, 30.51, 30.52, 30.53, 30.61, 30.62, 30.70, 30.71, and 30.72 and appendix A through appendix E to part 30 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference is 10 Code of Federal Regulations 30.21(c), 30.3(b)(1), 30.3(b)(2), 30.3(b)(3), 30.34(d), 30.34(e)(1), 30.34(e)(3), 30.41(b)(6), paragraph (2) of the definition of "commencement of construction", and paragraph (9)(ii) of the definition of "construction".
2. Requirements in 10 Code of Federal Regulations part 30 that apply to "byproduct material" also apply to naturally occurring or accelerator produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", "NRC regional office", or "administrator of the appropriate regional office" appear in 10 Code of Federal Regulations part 30, substitute the words "department of environmental quality" except when used in 10 Code of Federal Regulations 30.12, 30.21(c), 30.34(h)(1), and 30.50(c)(1).
4. 10 Code of Federal Regulations 30.7 employee protection also applies to violations of North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
6. North Dakota state form number 8418, "application for radioactive material license", must be used instead of NRC form 313 as specified in 10 Code of Federal Regulations part 30.
7. North Dakota state form number 8414, "notice to employees", must be posted instead of United States nuclear regulatory commission form 3 that is specified in 10 Code of Federal Regulations part 30.
8. The department of environmental quality radioactive material license replaces NRC form 374, "byproduct material license", as specified in 10 Code of Federal Regulations part 30.
9. North Dakota state form number 18941, "certificate: disposition of radioactive material", must be used instead of NRC form 314 as specified in 10 Code of Federal Regulations part 30.
10. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

- 33.1-10-04.2-07 Additional Requirements - Vacating Premises

33.1-10-04.2-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 20.

10 Code of Federal Regulations 20.1001, 20.1002, 20.1003, 20.1004, 20.1005, 20.1008, 20.1101, 20.1201, 20.1202, 20.1203, 20.1204, 20.1206, 20.1207, 20.1208, 20.1301, 20.1302, 20.1401, 20.1402, 20.1403, 20.1404, 20.1405, 20.1406, 20.1501, 20.1502, 20.1601, 20.1602, 20.1701, 20.1702, 20.1703, 20.1704, 20.1705, 20.1801, 20.1802, 20.1901, 20.1902, 20.1903, 20.1904, 20.1905, 20.1906, 20.2001, 20.2002, 20.2003, 20.2004, 20.2005, 20.2006, 20.2007, 20.2008, 20.2101, 20.2102, 20.2103, 20.2104, 20.2105, 20.2106, 20.2107, 20.2108, 20.2110, 20.2201, 20.2202, 20.2203, 20.2204, 20.2205, 20.2206, 20.2207, 20.2301, and 20.2302, appendix A through C to part 20, appendix E to part 20, and appendix G to part 20 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference are 10 Code of Federal Regulations (CFR) 20.1406(b), 20.1905(g), 20.2203(c), and 20.2206(a)(1), (a)(3), (a)(4), and (a)(5).
2. All of the requirements in chapter 33.1-10-04.2 apply to both licensees and registrants. A reference in 10 CFR part 20 to "license" includes "registration", a reference to "licensee" includes "registrant", a reference to "licensed" includes "registered", a reference to "licensed material(s)" includes "registered source of radiation", and a reference to "licensed radioactive material" includes "registered source of radiation". "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to article 33.1-10 and North Dakota Century Code chapter 23.1-03. "Registration" means the notification of the department of environmental quality of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
3. Where the words "NRC", "commission", "administrator of the appropriate NRC regional office", "administrator of the nearest commission regional office", or "NRC regional office" appear in 10 CFR part 20, substitute the words "department of environmental quality".
4. Requirements in 10 CFR part 20 that apply to "byproduct material" also apply to naturally occurring or accelerator produced radioactive material.
5. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
6. North Dakota state form number 19443, "occupational radiation exposure history", must be used instead of NRC form 4 as specified in 10 CFR part 20.
7. North Dakota state form number 8416, "current occupational radiation exposure", must be used instead of NRC form 5 as specified in 10 CFR part 20.
8. NRC form 748 shall not be used as described in 10 CFR part 20.

9. The words "in the Federal Register and" shall be omitted from 10 CFR 20.1405(b).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-02. Individuals working with medical fluoroscopic equipment.

Each registrant shall provide dose monitoring and shall monitor occupational exposure to ensure compliance for:

1. Occupational dose limits to adults pursuant to 10 CFR 20.1201.
2. Occupational dose limits to minors pursuant to 10 CFR 20.1207.
3. The dose equivalent to an embryo/fetus pursuant to 10 CFR 20.1208.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-03. Location of individual monitoring devices.

Each licensee or registrant shall ensure that individuals who are required to monitor occupational doses in accordance with 10 CFR 20.1502 wear individual monitoring devices as follows:

1. An individual monitoring device used for monitoring the dose to the whole body shall be worn at the unshielded location of the whole body likely to receive the highest exposure. When a protective apron is worn, the location of the individual monitoring device is typically at the neck (collar);
2. An individual monitoring device used for monitoring the dose to an embryo or fetus of a declared pregnant woman, pursuant to 10 CFR 20.1208, shall be located at the waist under any protective apron being worn by the woman;
3. An individual monitoring device used for monitoring the lens dose equivalent, to demonstrate compliance with subparagraph a of 10 CFR 20.1201, shall be located at the neck (collar), outside any protective apron being worn by the monitored individual, or at an unshielded location closer to the eye; and
4. An individual monitoring device used for monitoring the dose to the extremities, to demonstrate compliance with subparagraph a of 10 CFR 20.1201, shall be worn on the extremity likely to receive the highest exposure. Each individual monitoring device shall be oriented to measure the highest dose to the extremity being monitored.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-04. Effective dose equivalent determination during medical fluoroscopy.

When a protective apron is worn while working with medical fluoroscopic equipment and monitoring is conducted as specified in subdivision d, the effective dose equivalent for external radiation shall be determined as follows:

1. When only one individual monitoring device is used and it is located at the neck (collar) outside the protective apron, the reported deep dose equivalent shall be the effective dose equivalent for external radiation.

2. When only one individual monitoring device is used and it is located at the neck (collar) outside the protective apron, and the reported dose exceeds twenty-five percent of the limit specified in 10 CFR 20.1201, the reported deep dose equivalent value multiplied by three-tenths shall be the effective dose equivalent for external radiation.
3. When two individual monitoring devices are worn, one under the protective apron at the waist and the other outside the protective apron at the neck (collar), the effective dose equivalent for external radiation shall be assigned the value of the sum of the deep dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by one and five-tenths and the deep dose equivalent reported for the individual monitoring device located at the neck (collar) outside the protective apron multiplied by four-hundredths.
4. Subdivisions b and c only apply when all of the following conditions are met:
 - a. The individual monitoring devices have not been exposed to radiation from radioactive material.
 - b. Leaded glasses, a thyroid shield, and a wraparound protective apron have been worn whenever using the medical fluoroscopic equipment.
 - c. The area around the medical fluoroscopic equipment has been equipped with lead shielding or transparent protective barriers for control of scattered radiation.
 - d. The medical fluoroscopic procedures have been performed in a way that minimizes beam on time, such as utilizing last image hold.
 - e. Users of the medical fluoroscopic equipment must have had formal training in radiation safety and operation of medical fluoroscopic equipment.
 - f. Performance of the medical fluoroscopic equipment must be monitored and maintained via a quality assurance program.
 - g. Patient and staff radiation exposures from medical fluoroscopic equipment must be monitored and actions taken to correct problems.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-05. Radiation machine security and prevention of unauthorized use.

1. The registrant shall secure registered radiation machines from unauthorized removal.
2. The registrant shall use devices or administrative procedures to prevent unauthorized use of registered radiation machines.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-06. Radiation machine labels.

Each registrant shall ensure that each radiation machine is labeled in a conspicuous manner which cautions individuals that radiation is produced when it is energized.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-04.2-07. Additional requirements - Vacating premises.

Each specific licensee or registrant shall, no less than thirty days before vacating or relinquishing possession or control of premises which may have been contaminated with radioactive material as a result of the licensee's or registrant's activities, notify the department in writing of intent to vacate. When deemed necessary by the department, the licensee shall decontaminate the premises in accordance with the following or in such other manner as the department may specify.

1. **Premises.** Each licensee before vacating any premise, or transferring the premise, shall permanently decontaminate such premises to meet the criteria for decommissioning in 10 CFR part 20, subpart E as adopted by this chapter. A survey shall be made after such decontamination and the department and the landlord or subsequent tenant or transferee shall be provided with a copy of such survey no less than thirty days before vacating or relinquishing possession or control of premises. No such premise may be vacated, sold, or transferred until the decontamination survey has been verified and accepted by the department. For naturally occurring radioactive materials (NORM) and technologically enhanced naturally occurring radioactive materials (TENORM), decontamination shall meet the standards found in table 4.2-07.1.
2. **Equipment.** No machinery, instruments, laboratory equipment, or any other property used in contact with, or close proximity to, NORM or TENORM, or both, at a licensed premise may be assigned, sold, leased, or transferred to an unlicensed person unless such property has been permanently decontaminated below or equal to the standards specified in 10 CFR part 20, subpart E as adopted by this chapter. A survey shall be made after such decontamination and the department and subsequent transferee or owner shall be provided with a copy of such survey. No such equipment may be assigned, sold, leased, or transferred until such documentation survey has been verified and accepted by the department.

History: Effective January 1, 2019.

	<u>1.665 Bq =</u> <u>100 cm²</u>	<u>45.0 pCi =</u> <u>100 cm²</u>	<u>100 dpm</u> <u>100 cm²</u>	<u>maximum</u>
(ii) <u>Total (fixed):</u>	<u>166.5 Bq =</u> <u>100 cm²</u>	<u>150.0 pCi =</u> <u>100 cm²</u>	<u>1,000 dpm</u> <u>100 cm²</u>	<u>average over</u> <u>any one surface</u>
	<u>832.5 Bq =</u> <u>100 cm²</u>	<u>2,250.0 pCi =</u> <u>100 cm²</u>	<u>5,000 dpm</u> <u>100 cm²</u>	<u>maximum</u>
	<u>2.5 μSv =</u> <u>hr</u>	<u>(0.25 mrem) =</u> <u>hr</u>	<u>maximum at 1 cm from surface</u>	

(2) Beta-gamma emitters

(i) <u>Removable:</u>	<u>3.7 Bq =</u> <u>100 cm²</u>	<u>100.0 pCi =</u> <u>100 cm²</u>	<u>average over any one surface</u>	
	<u>18.5 Bq =</u> <u>100 cm²</u>	<u>500.0 pCi =</u> <u>100 cm²</u>	<u>maximum</u>	
(ii) <u>Total (fixed)</u>	<u>2.5 μSv =</u> <u>hr</u>	<u>(0.25 mrem) =</u> <u>hr</u>	<u>maximum at 1 cm from surface</u>	

(b) Concentration in air and water: Appendix B to part 20, Table 2 of section 33.1-10-04.2-01.

(c) Concentrations in soil and other materials except water:

(1) Radium in soil: Concentration of radionuclides above background concentrations for total radium, averaged over areas of one hundred square meters, shall not exceed:

(i) Five (5.0) picocuries per gram of soil, averaged over layers of fifteen centimeters thickness more than fifteen centimeters below the surface.

(ii) Five (5.0) picocuries per gram of dry soil, averaged over layers of fifteen centimeters thickness more than fifteen centimeters below the surface.

(2) Radium in other materials: Concentration of radionuclides above background concentrations for total radium shall not exceed five (5.0) picocuries per gram.

(d) The level of gamma radiation measured at a distance of hundred centimeters from the surface shall not exceed background.

CHAPTER 33.1-10-05

[Reserved]

CHAPTER 33.1-10-05.1

RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL RADIOGRAPHIC OPERATIONS

Section

33.1-10-05.1-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 34

33.1-10-05.1-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 34.

10 Code of Federal Regulations 34.1, 34.3, 34.11, 34.13, 34.20, 34.21, 34.23, 34.25, 34.27, 34.29, 34.31, 34.33, 34.35, 34.41, 34.42, 34.43, 34.45, 34.46, 34.47, 34.49, 34.51, 34.53, 34.61, 34.63, 34.65, 34.67, 34.69, 34.71, 34.73, 34.75, 34.79, 34.81, 34.83, 34.85, 34.87, 34.89, 34.101, and 34.111 and appendix A to part 34 are adopted by reference as they exist on October 1, 2015, with the following exceptions:

1. All of the requirements in chapter 33.1-10-05.1 apply to both licensees and registrants. A reference in 10 Code of Federal Regulations part 34 to "license" includes "registration", a reference to "licensee" includes "registrant", a reference to "licensed" includes "registered", and a reference to "licensed material" includes "registered source of radiation". "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to article 33.1-10 and North Dakota Century Code chapter 23.1-03. "Registration" means the notification of the department of environmental quality of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
2. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", "NRC regional administrator", "NRC regional office", "administrator of the appropriate nuclear regulatory commission's regional office", or "NRC's office of nuclear material safety and safeguards, division of industrial and medical nuclear safety" appear in 10 Code of Federal Regulations part 34, substitute the words "department of environmental quality".
3. Requirements in 10 Code of Federal Regulations part 34 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
4. North Dakota state form number 8418, "application for radioactive material license", must be used instead of NRC form 313 as specified in 10 Code of Federal Regulations part 34.
5. For references to 10 Code of Federal Regulations parts 170 and 171, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-01. Scope.

This chapter establishes requirements, for which a registrant is responsible, for use of x-ray equipment and imaging systems by or under the supervision of an individual authorized by and licensed in accordance with state statutes to engage in the healing arts or veterinary medicine. The requirements of this chapter are in addition to, and not in substitution for, other applicable requirements of this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-02. Definitions.

As used in this chapter, the following definitions apply:

1. "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.
2. "Accessible surface" means surface of equipment or of an equipment part that can be touched by persons without the use of a tool.
3. "Added filtration" means any filtration which is in addition to the inherent filtration.
4. "Air kerma" means kerma in air (see "kerma").
5. "Air kerma rate" means the air kerma per unit of time.
6. "AKR" means air kerma rate.
7. "Allied health" means occupations of medical personnel who are not physicians and are qualified by special training to undergo cross-training into x-ray as a limited x-ray machine operator. Refer to appendix G for qualifying professions.
8. "Aluminum equivalent" means the thickness of type 1100 aluminum alloy affording the same attenuation, under specified conditions, as the material in question. (The nominal chemical composition of type 1100 aluminum alloy is ninety-nine percent minimum aluminum, twelve-hundredths percent copper.)

9. "As low as reasonably achievable" (ALARA) means making every reasonable effort to maintain the exposures to radiation as far below dose limits as is practicable.
10. "Assembler" means any person engaged in the business of assembling, replacing, or installing one or more components into an x-ray system or subsystem. The term includes the owner of an x-ray system or the employee or agent who assembles components into an x-ray system that is subsequently used to provide professional or commercial services.
11. "Attenuation block" means a block or stack, having dimensions twenty centimeters by twenty centimeters by three and eight-tenths centimeters, of type 1100 aluminum alloy or other materials having equivalent attenuation.
12. "Automatic exposure control" means a device which automatically controls one or more technique factors in order to obtain at a preselected location or locations a required quantity of radiation (includes devices such as phototimers and ion chambers).
13. "Barrier" (see "protective barrier").
14. "Beam axis" means the axis of rotation of the beam-limiting device from the source through the centers of the x-ray fields.
15. "Beam-limiting device" means a device which provides a means to restrict the dimensions of the useful beam.
16. "Biennium" means a two-year cycle.
17. "Board certified" means an individual who has completed an accredited school of medical radiography or chiropractic radiography and has passed a national registry examination.
18. "Board eligible" means an individual who has obtained eligibility to take a national registry examination in radiologic technology or chiropractic radiologic technology.
19. "Bone densitometry system" means a medical device which uses electronically produced ionizing radiation to determine the density of bone structures of human patients.
20. "Calibration" means the determination of:
 - a. The response or reading of an instrument relative to a series of known radiation values over the range of the instrument; or
 - b. The strength of a source of radiation relative to a standard.
21. "C-arm x-ray system" means an x-ray system in which the image receptor and x-ray tube housing assembly are connected by a common mechanical support system in order to maintain a desired spatial relationship. This system is designed to allow a change in the projection of the beam through the patient without a change in the position of the patient.
22. "Cephalometric device" means a device intended for the radiographic visualization and measurement of the dimensions of the human head.
23. "Certified components" means components of x-ray systems which are subject to regulations promulgated under the Radiation Control for Health and Safety Act of 1968 [Pub. L. 90-602].
24. "Certified system" means any x-ray system which has one or more certified component or components.
25. "CEU" (see "continuing education unit").

26. "CFR" means Code of Federal Regulations.
27. "Changeable filters" means any filter, exclusive of inherent filtration, which can be removed from the useful beam through any electronic, mechanical, or physical process.
28. "Coefficient of variation" or "C" means the ratio of the standard deviation to the mean value of a set of observations. It is estimated using the following equation:

$$C = \frac{s}{\bar{X}} = \frac{1}{\bar{X}} \left[\sum_{i=1}^n \frac{(X_i - \bar{X})^2}{n-1} \right]^{1/2}$$

where:

- s ≡ Estimated standard deviation of the population.
- \bar{X} ≡ Mean value of observations in sample.
- X_i ≡ i^{th} observation in sample.
- n ≡ Number of observations in sample.

29. "Computed tomography" means the production of a tomogram by the acquisition and computer processing of x-ray transmission data.
30. "Contact therapy system" means an x-ray system used for therapy with the x-ray tube port placed in contact with or within five centimeters of the surface being treated.
31. "Continuing education" means a planned, organized, and administered learning activity that enhances the knowledge and underlying skills of an x-ray operator.
32. "Continuing education unit" means a unit of measure for continuing education. One continuing education unit is equal to one contact hour.
33. "Control panel" means that part of the x-ray control upon which are mounted the switches, knobs, pushbuttons, and other hardware necessary for manually setting the technique factors.
34. "Cooling curve" means the graphical relationship between heat units stored and cooling time.
35. "CT" (see "computed tomography").
36. "Dead-man switch" means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.
37. "Department" means the department of environmental quality.
38. "Detector" (see "radiation detector").
39. "Diagnostic source assembly" means the tube housing assembly with a beam-limiting device attached.
40. "Diagnostic x-ray imaging system" means an assemblage of components for the generation, emission, and reception of x-rays and the transformation, storage, and visual display of the resultant x-ray image.

41. "Diagnostic x-ray system" means an x-ray system designed for irradiation of any part of the human or animal body for the purpose of diagnosis or visualization.
42. "Direct scattered radiation" means that scattered radiation which has been deviated in direction only by materials irradiated by the useful beam (see "scattered radiation").
43. "Direct supervision" requires direct observation and observer must be in the room during the time the x-ray image is obtained.
44. "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, "radiation dose" is an equivalent term.
45. "Dose limits" means the permissible upper bounds of radiation of doses established in accordance with these rules.
46. "Entrance exposure rate" means the radiation exposure free in air per unit time at the point where the center of the useful beam enters the patient.
47. "Equipment" (see "x-ray equipment").
48. "Exposure" means being exposed to ionizing radiation.
49. "Field emission equipment" means equipment which uses an x-ray tube in which electron emission from the cathode is due solely to the action of an electric field.
50. "Filter" means material placed in the useful beam to absorb preferentially selected radiations.
51. "Fluoroscopic imaging assembly" means a subsystem in which x-ray photons produce a visible image. It includes the image receptor or receptors such as the image intensifier and spot-film device, electrical interlocks, if any, and structural material providing linkage between the image receptor and diagnostic source assembly.
52. "Focal spot" means the location projected on the anode of the x-ray tube bombarded by the electrons accelerated from the cathode and from which the useful beam originates.
53. "General diagnostic operator" means an individual who is American registry of radiologic technologists (ARRT) or American chiropractic registry of radiologic technologists (ACRRT) board certified, is or has been board eligible, or has the equivalent educational and clinical training and received specific authorization from the department.
54. "General purpose radiographic x-ray system" means any radiographic x-ray system which, by design, is not limited to radiographic examination of specific anatomical regions.
55. "Gonad shield" means a protective barrier for the testes or ovaries.
56. "Gray" (Gy) means the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram or 100 rad.
57. "Half-value layer" means the thickness of specified material which attenuates x-radiation or gamma radiation to an extent such that the air kerma rate, exposure rate or absorbed dose rate is reduced to one-half of the value measured without the material at the same point.
58. "Hand-held dental x-ray equipment" (see "x-ray equipment").
59. "Healing arts" means diagnostic or healing treatment of human and animal maladies, including the following which are duly licensed by the state of North Dakota for the lawful practice of

medicine and its associated specialties, dentistry, veterinary medicine, osteopathy, chiropractic, and podiatry.

60. "Healing arts screening" means the testing of human beings using x-ray machines for the detection or evaluation of health indications when such tests are not specifically and individually ordered by a licensed practitioner of the healing arts legally authorized to prescribe such x-ray tests for the purpose of diagnosis or treatment.

61. "Heat unit" means a unit of energy equal to the product of the peak kilovoltage, milliamperes, and seconds, i.e., kVp x mA x seconds.

62. "HVL" (see "half-value layer").

63. "Image intensifier" means a device, installed in its housing, which instantaneously converts an x-ray pattern into a corresponding light image of higher energy density.

64. "Image receptor" means any device, such as a fluorescent screen or radiographic film, which transforms incident x-ray photons either into a visible image or into another form which can be made into a visible image by further transformations.

65. "Image receptor support" means, for mammographic systems, that part of the system designed to support the image receptor during a mammographic examination.

66. "Inherent filtration" means the filtration of the useful beam provided by the permanently installed components of the tube housing assembly.

67. "Inspection" means an official examination or observation, including tests, surveys, and monitoring to determine compliance with rules, regulations, requirements, and conditions of the department.

68. "Irradiation" means the exposure of matter to ionizing radiation.

69. "Kerma" means the sum of the initial kinetic energies of all the charged ionizing particles liberated by uncharged ionizing particles per unit mass of a specified material. The SI unit of measure is joule per kilogram, or gray (Gy).

70. "Kilovolts peak" (see "peak tube potential").

71. "kV" means kilovolts.

72. "kVp" (see "peak tube potential").

73. "kWs" means kilowatt second. It is equivalent to 10^3 kV . mA . s, i.e.,

$$\text{kWs} = (X)\text{kV} \times (Y)\text{mA} \times (Z)\text{s} \times 10^{-3} \equiv \frac{XYZ}{10^3}$$

74. "Lead equivalent" means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

75. "Leakage radiation" means radiation emanating from the diagnostic or therapeutic source assembly except for:

a. The useful beam; and

b. Radiation produced when the exposure switch or timer is not activated.

76. "Leakage technique factors" means the technique factors associated with the diagnostic or therapeutic assembly which are used in measuring leakage radiation. They are defined as follows:
- a. For diagnostic source assemblies intended for capacitor energy storage equipment, the maximum-rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum-rated peak tube potential with the quantity of charge per exposure being ten millicoulombs, i.e., ten milliamperere seconds, or the minimum obtainable from the unit, whichever is larger.
 - b. For diagnostic source assemblies intended for field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and the maximum-rated number of x-ray pulses in an hour for operation at the maximum-rated peak tube potential.
 - c. For all other diagnostic or therapeutic source assemblies, the maximum-rated peak tube potential and the maximum-rated continuous tube current for the maximum-rated peak tube potential.
77. "Light field" means the area illuminated by light, simulating the radiation field.
78. "Limited x-ray machine operator" means any individual who has completed the necessary didactic and clinical training required to perform limited scope x-ray procedures.
79. "Linear attenuation coefficient" or "u" means the quotient of dN/N divided by dl when dN/N is the fraction of uncharged ionizing radiation that experience interactions in traversing a distance dl in a specified material.
80. "mA" means milliamperere.
81. "mAs" means milliamperere second.
82. "Milliamperere" as used in this chapter applies to x-ray tube current.
83. "Milliamperere second" as used in this chapter is the product of the tube current and x-ray exposure time measured in seconds.
84. "Mobile x-ray equipment" (see "x-ray equipment").
85. "Monitoring" means the measurement of radiation and the use of the measured results to evaluate potential exposures and doses.
86. "Patient" means an individual or animal subjected to radiation for the purposes of diagnosis or treatment.
87. "PBL" has the same meaning as "positive beam limitation".
88. "Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.
89. "Phantom" means a volume of material behaving in a manner similar to tissue with respect to the absorption and scattering of the ionizing radiation in question.
90. "Phototimer" means a method for controlling radiation exposures to image receptors by the amount of radiation which reaches a radiation monitoring device. The radiation monitoring device is part of an electronic circuit which controls the duration of time the tube is activated (see "automatic exposure control").

91. "Physician" means a medical doctor, doctor of osteopathy, doctor of podiatry, or chiropractor licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico.
92. "Portable x-ray equipment" (see "x-ray equipment").
93. "Position indicating device" means a device on dental x-ray equipment used to indicate the beam position and to establish a definite source surface (skin) distance. It may or may not incorporate or serve as a beam-limiting device.
94. "Positive beam limitation" means the automatic or semiautomatic adjustment of an x-ray beam to the size of the selected image receptor, whereby exposures cannot be made without such adjustment.
95. "Primary dose monitoring system" means a system which will monitor the useful beam during irradiation and which will terminate irradiation when a preselected number of dose monitor units have been delivered.
96. "Primary protective barrier" (see "protective barrier").
97. "Protective apron" means an apron made of radiation attenuating materials used to reduce radiation exposure.
98. "Protective barrier" means a barrier of radiation absorbing material or materials used to reduce radiation exposure. The types of protective barriers are as follows:
- a. "Primary protective barrier" means the material, excluding filters, placed in the useful beam; and
 - b. "Secondary protective barrier" means the material which attenuates stray radiation.
99. "Protective glove" means a glove made of radiation absorbing materials used to reduce radiation exposure.
100. "Qualified expert" means an individual having the knowledge, training, and experience to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs, for example, individuals certified in the appropriate field by the American board of radiology, or the American board of health physics, or the American board of medical physics, or those having equivalent qualifications. With reference to the calibration of radiation therapy equipment, "qualified expert" means an individual having, in addition to the above qualifications, training and experience in the clinical applications of radiation physics to radiation therapy, for example, individuals certified in therapeutic radiological physics or x-ray and radium physics by the American board of radiology, or those having equivalent qualifications.
101. "Radiation" means x-rays and gamma rays, which are capable of producing ions. For purposes of this chapter, ionizing radiation is an equivalent term.
102. "Radiation detector" means a device which in the presence of radiation provides a signal or other indication suitable for use in measuring one or more quantities of incident radiation.
103. "Radiation exposure" means the quotient of dQ by dm where " dQ " is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass " dm " are completely stopped in air. The SI unit of radiation exposure is the coulomb per kilogram (C/kg). (See section 33.1-10-01-14 units of exposure, dose, and activity for the special unit equivalent "roentgen" (R).)

104. "Radiation exposure rate" means the radiation exposure per unit of time, such as R/min, mR/h, etc.
105. "Radiation machine" means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.
106. "Radiation therapy simulation system" means a radiographic, fluoroscopic, or computed tomography x-ray system intended for localizing the volume to be exposed during radiation therapy and confirming the position and size of the therapeutic irradiation field.
107. "Radiograph" means an image receptor on which the image is created directly or indirectly by an x-ray pattern and results in a permanent record.
108. "Radiographic imaging system" means any system whereby a permanent or temporary image is recorded on an image receptor by the action of ionizing radiation.
109. "Radiological physicist" means an individual who:
- a. Is certified by the American board of radiology in therapeutic radiological physics, radiological physics, or x-ray and gamma-ray physics;
 - b. Has a bachelor's degree in one of the physical sciences or engineering and three year's full-time experience working in therapeutic or diagnostic radiological physics under the direction of a physicist certified by the American board of radiology. The work duties must include duties involving the calibration and spot checks of a medical accelerator or a sealed source teletherapy unit; or
 - c. Has a master's or a doctor's degree in physics, biophysics, radiological physics, health physics, or engineering; has had one year's full-time training in therapeutic or diagnostic radiological physics; and has had one year's full-time work experience in a radiotherapy facility where the individual's duties involve calibration and spot checks of a medical accelerator or a sealed source teletherapy unit.
110. "Rating" means the operating limits as specified by the component manufacturer.
111. "Recording" means producing a permanent form of an image resulting from x-ray photons.
112. "Registrant" means any person, group, or facility who is registered with the department and is legally obligated to register with the department pursuant to North Dakota Century Code chapter 23.1-02.
113. "Roentgen" or "(R)" means the special unit of exposure. One roentgen equals two hundred fifty-eight millionth of a coulomb per kilogram of air.
114. "Scattered radiation" means radiation that, during passage through matter, has been deviated in direction (see "direct scattered radiation").
115. "Secondary dose monitoring system" means a system which will terminate irradiation in the event of failure of the primary dose monitoring system.
116. "Secondary protective barrier" (see "protective barrier").
117. "Shutter" means a device attached to the tube housing assembly which can intercept the entire cross-sectional area of the useful beam and which has a lead equivalency not less than that of the tube housing assembly.
118. "SI" means the abbreviation for the international system of units.

119. "SID" has the same meaning as "source-image receptor distance".
120. "Source" means the location or material, or both, from which the radiation emanates.
121. "Source-image receptor distance" means the distance from the source to the center of the input surface of the image receptor.
122. "Spot check" means a procedure which is performed to assure that a previous calibration continues to be valid.
123. "Spot film" means a radiograph which is made during a fluoroscopic examination to permanently record conditions which exist during that fluoroscopic procedure.
124. "Spot-film device" means a device intended to transport or position a radiographic image receptor between the x-ray source and fluoroscopic image receptor. It includes a device intended to hold a cassette over the input end of an image intensifier for the purpose of making a radiograph.
125. "Stationary x-ray equipment" (see "x-ray equipment").
126. "Stray radiation" means the sum of leakage and scattered radiation.
127. "Survey" means an evaluation of the radiological conditions which may include tests, physical examinations, and measurements of levels of radiation.
128. "Technique factors" means the conditions of operation. They are specified as follows:
- a. For capacitor energy storage equipment, peak tube potential in kilovolts and quantity of charge in milliamperere second.
 - b. For field emission equipment rated for pulsed operation, peak tube potential in kilovolts and number of x-ray pulses.
 - c. For CT x-ray systems designed for pulsed operation, peak tube potential in kilovolts, scan time in seconds, and either tube current in milliamperere, x-ray pulse width in seconds, and the number of x-ray pulses per scan, or the product of tube current, x-ray pulse width, and the number of x-ray pulses in milliamperere second.
 - d. For CT x-ray systems not designed for pulsed operation, peak tube potential in kilovolts, and either tube current in milliamperere and scan time in seconds, or the product of tube current and exposure time in milliamperere second and the scan time when the scan time and exposure time are equivalent.
 - e. For all other equipment, peak tube potential in kilovolt and either tube current in milliamperere and exposure time in seconds, or the product of tube current and exposure time in milliamperere second.
129. "Termination of irradiation" means the stopping of irradiation in a fashion which will not permit continuance of irradiation without the resetting of operating conditions at the control panel.
130. "Tomogram" means the depiction of x-ray attenuation properties of a section through the body.
131. "Traceable to a national standard" means that a quantity or a measurement has been compared to a national standard directly or indirectly through one or more intermediate steps and that all comparisons have been documented.
132. "Tube" means an x-ray tube, unless otherwise specified.

133. "Tube housing assembly" means the tube housing with tube installed. It includes high-voltage or filament transformers, or both, and other appropriate elements when such are contained within the tube housing.
134. "Tube rating chart" means the set of curves which specify the rated limits of operation of the tube in terms of the technique factors.
135. "Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam limiting device when the exposure controls are in a mode to cause the system to produce radiation.
136. "Variable-aperture beam-limiting device" means a beam-limiting device which has capacity for stepless adjustment of the x-ray field size at a given source-image receptor distance.
137. "Visible area" means that portion of the input surface of the image receptor over which incident x-ray photons are producing a visible image.
138. "Wedge filter" means an added filter effecting continuous progressive attenuation on all or part of the useful beam.
139. "Whole body" means for purposes of external exposure, head, trunk including male gonads, arms above the elbows, or legs below the knees.
140. "X-ray exposure control" means a device, switch, button, or other similar means by which the operator initiates or terminates, or both, the radiation exposure. It may include equipment such as timers, phototimers, automatic brightness stabilizers, and similar devices.
141. "X-ray equipment" means an x-ray system, subsystem, or component thereof. Types of x-ray equipment are as follows:
- a. "Hand-held dental x-ray equipment" means any dental x-ray equipment which is designated to be physically held during x-ray exposure.
 - b. "Mobile x-ray equipment" means x-ray equipment mounted on a permanent base with wheels or casters for moving while completely assembled.
 - c. "Portable x-ray equipment" means x-ray equipment designed to be hand-carried.
 - d. "Stationary x-ray equipment" means x-ray equipment which is installed in a fixed location.
142. "X-ray field" means that area of the intersection of the useful beam and any one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the radiation exposure rate is one-fourth of the maximum in the intersection.
143. "X-ray high-voltage generator" means a device which transforms electrical energy from the potential supplied by the x-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the x-ray tube, high-voltage switches, electrical protective devices, and other appropriate elements.
144. "X-ray system" means an assemblage of components for the controlled production of x-rays. It includes minimally an x-ray high-voltage generator, an x-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.
145. "X-ray tube" means any electron tube which is designed for the conversion of electrical energy into x-ray energy.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-03. General requirements.

1. Administrative controls.

a. Registrant. The registrant shall be responsible for directing the operation of the x-ray systems which have been registered with the department. The registrant or the registrant's agent shall assure that the requirements are met in the operation of the x-ray system.

(1) An x-ray system which does not meet the requirements of this article shall not be operated for diagnostic or therapeutic purposes.

(2) All individuals, except those listed in part 1 of appendix G, prior to operating the x-ray systems shall be adequately instructed in the safe operating procedures and be competent in the safe use of the equipment commensurate with the size, scope, and nature of the service as outlined in appendix F. In addition, all individuals shall meet the specific requirements as outlined in subparagraph a or b. The department may use interview, observation, or testing to determine compliance. Records must be maintained by the registrant to demonstrate compliance with this paragraph.

(a) General diagnostic operators are not limited in scope of practice. Obtaining general diagnostic operator status will consist of one of the following:

[1] Obtain board eligibility or board certification with the American registry of radiologic technologists (ARRT);

[2] Obtain board eligibility or board certification with the American chiropractic registry of radiologic technologists (ACRRT); and only perform x-ray examinations for chiropractic services;

[3] Receive department approval, through individual consideration, by demonstration of an acceptable level of education and clinical training; or

[4] Demonstrate current enrollment in an educational program accredited by a process acceptable to the department, and provide documentation of competency in all routine radiographic procedures and specialty views.

(b) Limited x-ray machine operators are limited in scope of practice to only those procedures listed in appendix I, except as allowed in subparagraph c. Limited x-ray machine operators must meet the prerequisite qualifications, receive training, and demonstrate competence as follows:

[1] Limited x-ray machine operators shall have successfully completed the course of training required by one of the allied health professions listed in part 2 of appendix G;

[2] Complete at least eighty hours of didactic instruction at a single training program providing didactic instruction in accordance with part 1 of appendix H;

[3] Complete the three hour self-study course designed by the department of environmental quality; and

[4] Complete the clinical experience requirements in part 2 of appendix H.

(c) Limited x-ray machine operators may only conduct diagnostic x-ray examinations outside the scope of practice of appendix I in accordance with the following:

[1] When it is determined to be an emergency and ordered by individuals listed in part 3 of appendix G. The individual requesting the procedures must comply with subitems a, b, and c.

[a] The requesting individual must provide a written order specifying what types of diagnostic x-ray examinations outside the scope of procedures listed in appendix I are requested. The order shall contain an explanation of the emergency nature or medical reason for the order.

[b] The requesting individual must provide direct supervision during the time the x-ray image is obtained.

[c] The facility must keep records of all emergency x-ray procedures ordered under this subparagraph.

[2] When a practice requires a specific view or examination outside the scope of practice listed in appendix I to be conducted on a routine basis, and the facility has only limited x-ray machine operators, application may be made to the department requesting approval for a limited x-ray machine operator to perform the procedure. This allowance shall be limited to the facility, the specific individual, and the procedure requested. After an allowance has been granted, reapplication and reauthorization are not necessary for the same procedure. The application for allowance should include the following:

[a] Documentation which demonstrates the need for the specific view;

[b] Documentation on forms supplied by the department indicating that each individual for which the request is made has demonstrated competence in the procedure; and

[c] Proof of additional didactic instruction or completion of examination as deemed necessary by the department for each individual.

[3] When it is not a computed tomography examination.

(d) Limited x-ray machine operator implementation period. Individuals who begin taking x-rays after one year from March 1, 2003, will have to meet all of the requirements of this paragraph before operating the x-ray system.

(3) General diagnostic and limited diagnostic x-ray operators shall maintain continuing education units as outlined in appendix K.

(4) A chart shall be provided in the vicinity of the diagnostic x-ray system's control panel, which specifies for all examinations performed with that system the following information:

(a) Patient's body part and anatomical size or body thickness, or age (for pediatrics), versus technique factors to be utilized.

(b) Type and size of the film or film screen combination to be used.

(c) Type and focal distance of the grid to be used, if any.

(d) Source-image receptor distance to be used (except for dental intraoral radiography).

(e) Type and location of placement of gonad shielding to be used.

(f) For mammography, indication of kVp/target/filter combination.

(5) The registrant of a facility shall create and make available to x-ray operators written safety procedures, including patient holding restrictions and any restrictions of the operating technique required for the safe operation of the particular x-ray system. The operator shall be able to demonstrate familiarity with these procedures.

(6) Except for human patients who cannot be moved out of the room, only the staff and ancillary personnel or other persons required for the medical procedure or training shall be in the room during the radiographic exposure. Other than the patient being examined:

(a) All individuals shall be positioned such that no part of the body will be struck by the useful beam unless protected by not less than five-tenths millimeter lead equivalent material.

(b) The x-ray operator, other staff, ancillary personnel, and other persons required for the x-ray procedure shall be protected from the direct scatter radiation by protective aprons or whole body protective barriers of not less than twenty-five one-hundredths millimeter lead equivalent material.

(c) Human patients who cannot be removed from the room shall be protected from the direct scatter radiation by whole body protective barriers of not less than twenty-five one-hundredths millimeter lead equivalent material or shall be so positioned that the nearest portion of the body is at least two meters from both the tube head and the nearest edge of the image receptor.

(7) Gonad shielding of not less than five-tenths millimeter lead equivalent material must be used for human patients who have not passed the reproductive age during radiographic procedures in which the gonads are in the useful beam, except for cases in which this would interfere with the diagnostic procedure.

(8) Individuals may not be exposed to the useful beam except for healing arts purposes and when such exposure has been authorized by a licensed practitioner of the healing arts. This provision specifically prohibits deliberate exposure for the following purposes:

(a) Exposure of an individual for training, demonstration, or other non-healing-arts purposes.

(b) Exposure of an individual for the purpose of healing arts screening except as authorized by paragraph 12.

(9) When a patient or film must be provided with auxiliary support during a radiation exposure:

- (a) Mechanical holding devices shall be used when the technique permits. The safety rules, required by this section shall list individual projections where holding devices cannot be utilized.
 - (b) Written safety procedures, as required by paragraph 4, shall indicate the requirements for selecting a holder and the procedure the holder shall follow.
 - (c) The human holder shall be instructed in personal radiation safety and protected as required by paragraph 6.
 - (d) No individual shall be used routinely to hold film or patients.
 - (e) In those cases where the patient must hold the film, except during intraoral examinations, any portion of the body other than the area of clinical interest struck by the useful beam shall be protected by not less than five-tenths millimeter lead equivalent material.
 - (f) A record shall be made of the examination and shall include the name of the human holder, date of the examination, number of exposures, and technique factors utilized for the exposure.
 - (g) Each facility shall have leaded aprons and gloves available in sufficient numbers to provide protection to all personnel who are involved with x-ray operations and who are otherwise not shielded.
- (10) Procedures and auxiliary equipment designed to minimize patient and personnel exposure commensurate with the needed diagnostic information shall be utilized. This is interpreted to include:
- (a) The speed of film and screen combinations shall be the fastest speed consistent with the diagnostic objective of the examinations. Film cassettes without intensifying screens shall not be used for any routine diagnostic radiological imaging, with the exception of veterinary radiography, therapeutic portal imaging, and standard film packets for intraoral use in dental radiography.
 - (b) The radiation exposure to the patient shall be the minimum exposure required to produce images of good diagnostic quality.
 - (c) Proper film handling and processing procedures. Each installation using a radiographic x-ray system and using analog image receptors (e.g., radiographic film) shall have available suitable equipment for handling and processing radiographic film in accordance with appendix D.
 - (d) Portable or mobile equipment shall be used only for examinations where it is impractical to transfer the patients to a stationary x-ray installation.
 - (e) X-ray systems subject to section 33.1-10-06-06 shall not be utilized in procedures where the source to patient distance is less than thirty centimeters, except for veterinary systems.
 - (f) If grids are used between the patient and the image receptor to decrease scatter to the film and improve contrast, the grid shall:
 - [1] Be positioned properly, for example, tube side facing the right direction and grid centered to the central ray; and

[2] If the grid is of the focused type, be of the proper focal distance for the source-image distances being used.

(11) All individuals who are associated with the operation of an x-ray system are subject to the requirements of section 33.1-10-04.2-01 [10 CFR 20.1201, 20.1207, and 20.1208]. In addition:

(a) When protective clothing or devices are worn on portions of the body and a monitoring device is required, at least one such monitoring device shall be utilized as follows:

[1] When an apron is worn, the monitoring device shall be worn at the collar outside of the apron.

[2] The dose to the whole body based on the maximum dose attributed to the most critical organ shall be recorded in the reports required by section 33.1-10-04.2-01 [10 CFR 20.2206]. If more than one device is used and a record is made of the data, each dose shall be identified with the area where the device was worn on the body.

(b) Exposure of a personnel monitoring device to deceptively indicate a dose delivered to an individual is prohibited.

(12) Healing arts screening. Any person proposing to conduct a healing arts screening program shall not initiate such a program without prior approval of the department. When requesting such approval, that person shall submit the information outlined in appendix E. If any information submitted to the department becomes invalid or outdated, the department shall be immediately notified.

b. Information and maintenance record and associated information. The registrant shall maintain the following information for each x-ray system for inspection by the department:

(1) Maximum rating of technique factors.

(2) Model and serial numbers of all major components and user's manuals for those components.

(3) Aluminum equivalent filtration of the useful beam, including any routine variation.

(4) Tube rating charts and cooling curves.

(5) Records of surveys, calibrations, maintenance, and modifications performed on the x-ray system with the names of persons who performed such services.

(6) A scale drawing of the room in which a stationary x-ray system is located with such drawing indicating the use of areas adjacent to the room and an estimation of the extent of occupancy by an individual in such areas. In addition, the drawing shall include:

(a) The results of a survey for radiation levels present at the operator's position and at pertinent points outside the room at specified test conditions; or

(b) The type and thickness of materials, or lead equivalency, of each protective barrier.

(7) A copy of all correspondence with this department regarding that x-ray system.

c. X-ray log.

- (1) Except for veterinary facilities, each facility shall maintain an x-ray log containing the patient's name, the type of examinations, the dates those examinations were performed, and the name of the x-ray operator. When the patient or film must be provided with human auxiliary support, the name of the human holder shall be recorded.
- (2) Veterinary facilities shall maintain an x-ray utilization log indicating the type of examinations, the date of the examinations and if the patient or film was provided with human auxiliary support, the name of the human holder.

2. **Plan review.**

- a. Prior to construction, the floor plans, shielding specifications, and equipment arrangement of all new installations, or modifications of existing installations, utilizing ionizing radiation machines shall be submitted to the department for review and approval. The required information is denoted in appendices A, B, and C.
- b. The department may require the applicant to utilize the services of a qualified expert to determine the shielding requirements prior to the plan review and approval.
- c. The approval of such plans shall not preclude the requirement of additional modifications should a subsequent analysis of operating conditions indicate the possibility of an individual receiving a dose in excess of the limits prescribed in section 33.1-10-04.2-01 [10 CFR 20.1201, 20.1207, 20.1208, and 20.1301].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-04. General requirements for all diagnostic x-ray systems.

In addition to other requirements of this chapter, all diagnostic x-ray systems shall meet the following requirements:

1. **Warning label.** The control panel containing the main power switch shall bear the warning statement, legible and accessible to view: "WARNING: This x-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed."
2. **Battery charge indicator.** On battery-powered x-ray generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation.
3. **Leakage radiation from the diagnostic source assembly.** The leakage radiation from the diagnostic source assembly measured at a distance of one meter in any direction from the source shall not exceed one hundred milliroentgens in one hour when the x-ray tube is operated at its leakage technique factors. Compliance shall be determined by measurements averaged over an area of one hundred square centimeters with no linear dimension greater than twenty centimeters.
4. **Radiation from components other than the diagnostic source assembly.** The radiation emitted by a component other than the diagnostic source assembly shall not exceed two milliroentgens in one hour at five centimeters from any accessible surface of the component when it is operated in an assembled x-ray system under any conditions for which it was designed. Compliance shall be determined by measurements averaged over an area of one hundred square centimeters with no linear dimension greater than twenty centimeters.

5. Beam quality.

a. Half-value layer.

- (1) The half-value layer (HVL) of the useful beam for a given x-ray tube potential shall not be less than the values shown in table I. If it is necessary to determine such half value layer at an x-ray tube potential which is not listed in table I, linear interpolation or extrapolation may be made.

<u>TABLE I</u>				
<u>Half-Value Layer in Millimeters Aluminum</u>				
<u>Design Operating Range (Kilovolts Peak)</u>	<u>Measured Potential (Kilovolts Peak)</u>	<u>Dental Intraoral Manufactured Before Aug. 1, 1974, and on or After Dec. 1, 1980</u>	<u>Diagnostic X-Ray Systems Manufactured Prior to June 10, 2006</u>	<u>Diagnostic X-Ray Systems Manufactured on or After June 10, 2006</u>

- (2) For capacitor energy storage equipment, compliance with the requirements of this subsection shall be determined with the system fully charged and a setting of ten mAs for each exposure.
- (3) The required minimal aluminum equivalent filtration shall include the filtration contributed by all materials which are permanently present between the source and the patient.
- (4) For mammography systems with molybdenum filter and molybdenum target, measured half-value layer (HVL) with compression device in the x-ray beam shall be greater than or equal to the kilovolts peak (kVp) divided by one hundred, millimeters aluminum and less than or equal to the kilovolts peak (kVp) divided by one hundred plus one-tenth millimeter aluminum.

$$\text{HVL} > (\text{kVp}/100) \text{ mmAl and } < (\text{kVp}/100) + 0.1 \text{ mmAl}$$

b. Filtration controls. For x-ray systems which have variable kilovolts peak and variable filtration for the useful beam, a device shall link the kilovolts peak selector with the filters and shall prevent an exposure unless the minimum amount of filtration required by paragraph 1 of subdivision a is in the useful beam for the given kilovolts peak which has been selected.

6. **Multiple tubes.** Where two or more radiographic tubes are controlled by one exposure switch, the tube or tubes which have been selected shall be clearly indicated prior to initiation of the exposure. This indication shall be both on the x-ray control panel and at or near the tube housing assembly which has been selected.

7. **Mechanical support of tube head.** The tube housing assembly supports shall be adjusted such that the tube housing assembly will remain stable during an exposure unless tube housing movement is a designed function of the x-ray system.

8. **Technique indicators.**

a. The technique factors to be used during an exposure shall be indicated before the exposure begins, except when automatic exposure controls are used, in which case the technique factors which are set prior to the exposure shall be indicated.

b. The requirements of subdivision a may be met by permanent markings on equipment having fixed technique factors. Indication of technique factors shall be visible from the operator's position except in the case of spot films made by the fluoroscopist.

9. **Maintaining compliance.** Diagnostic x-ray systems and their associated components used on humans and certified pursuant to the federal x-ray equipment performance standard (21 CFR part 1020) shall be maintained in compliance with applicable requirements of that standard.

10. **Locks.** All position locking, holding, and centering devices on x-ray system components and systems shall function as intended.

11. **Structural shielding requirements** (see appendix C).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-05. Fluoroscopic x-ray systems.

All fluoroscopic x-ray systems shall be image-intensified and meet the following requirements:

1. **Limitation of useful beam.**

a. Primary barrier.

(1) The fluoroscopic imaging assembly shall be provided with a primary protective barrier which intercepts the entire cross-section of the useful beam at any source-image receptor distance (SID).

(2) The x-ray tube used for fluoroscopy shall not produce x-rays unless the barrier is in position to intercept the entire useful beam.

b. X-ray field.

- (1) For certified fluoroscopic systems with or without a spot-film device, neither the length nor the width of the x-ray field in the plane of the image receptor shall exceed that of the visible area of the image receptor by more than three percent of the source-image receptor distance. The sum of the excess length and the excess width shall be no greater than four percent of the source-image receptor distance.
- (2) For uncertified fluoroscopic systems with a spot-film device, the x-ray beam with the shutters fully opened (during fluoroscopy or spot filming) shall be no larger than the largest spot-film size for which the device is designed. Measurements shall be made at the maximum source-image distance available but at no less than twenty centimeters tabletop to the film plane distance.
- (3) For uncertified fluoroscopic systems without a spot-film device, the requirements of paragraph 1 apply.
- (4) Other requirements for fluoroscopic beam limitation:
 - (a) Means shall be provided to permit further limitation of the field. Beam-limiting devices manufactured after May 22, 1979, and incorporated in equipment with a variable source-image receptor distance and/or a visible area of greater than three hundred square centimeters shall be provided with means for stepless adjustment of the x-ray field.
 - (b) All equipment with a fixed source-image receptor distance and a visible area of three hundred square centimeters or less shall be provided with either stepless adjustment of the x-ray field or with means to further limit the x-ray field size at the plane of the image receptor to one hundred twenty-five square centimeters or less. Stepless adjustment shall, at the greatest source-image receptor distance, provide continuous field sizes from the maximum obtainable to a field size of five centimeters by five centimeters or less.
 - (c) For equipment manufactured after February 25, 1978, when the angle between the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor.
 - (d) Compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor. For noncircular x-ray fields used with circular image receptors, the error in alignment shall be determined along the length and width dimensions of the x-ray field which pass through the center of the visible area of the image receptor.
- (5) Spot-film devices shall meet the following additional requirements:
 - (a) Means shall be provided between the source and the patient for adjustment of the x-ray field size in the plane of the film to the size of that portion of the film which has been selected on the spot-film selector. Such adjustment shall be automatically accomplished except when the x-ray field size in the plane of the film is smaller than that of the selected portion of the film. For spot-film devices manufactured after June 21, 1979, if the x-ray field size is less than the size of the selected portion of the film, the means for adjustment of the field size shall be only at the operator's option.
 - (b) Neither the length nor the width of the x-ray field in the plane of the image receptor shall differ from the corresponding dimensions of the selected portion of the image receptor by more than three percent of the source-image receptor

distance when adjusted for full coverage of the selected portion of the image receptor. The sum, without regard to sign, of the length and width differences shall not exceed four percent of the source-image receptor distance.

(c) It shall be possible to adjust the x-ray field size in the plane of the film to a size smaller than the selected portion of the film. The minimum field size at the greatest source-image receptor distance shall be equal to, or less than, five centimeters by five centimeters.

(d) The center of the x-ray field in the plane of the film shall be aligned with the center of the selected portion of the film to within two percent of the source-image receptor distance.

(e) On spot-film devices manufactured after February 25, 1978, if the angle between the plane of the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, and compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor.

(6) If a means exists to override any of the automatic x-ray field size adjustments required in subdivision b of subsection 1 that means:

(a) Must be designed for use only in the event of system failure.

(b) Must incorporate a signal visible at the fluoroscopist's position which will indicate whenever the automatic field size adjustment is overridden.

(c) Must be clearly and durably labeled as follows:

FOR X-RAY FIELD
LIMITATION SYSTEM FAILURE

2. **Activation of the fluoroscopic tube.** X-ray production in the fluoroscopic mode shall be controlled by a device which requires continuous pressure by the fluoroscopist for the entire time of any exposure. When recording serial fluoroscopic images, the fluoroscopist shall be able to terminate the x-ray exposure or exposures at any time, but means may be provided to permit completion of any single exposure of the series in process.

3. **Radiation exposure rate limits.**

a. Entrance exposure rate allowable limits.

(1) Fluoroscopic equipment which is provided with automatic exposure rate control:

(a) The radiation exposure measured at the point where the center of the useful beam enters the patient shall not exceed two and fifty-eight hundredths millicoulomb per kilogram [10 roentgens] per minute, except during recording of fluoroscopic images or when provided with optional high-level control.

(b) When provided with optional high-level control, the equipment shall not be operable at any combination of tube potential and current which will result in a radiation exposure rate in excess of one and twenty-nine hundredths millicoulomb per kilogram [5 roentgens] per minute at the point where the center of the useful beam enters the patient unless the high-level control is activated.

[1] When the high-level control is activated, the equipment shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of five and sixteen hundredths millicoulomb per kilogram [20 roentgens] per minute at the point where the center of the useful beam enters the patient.

[2] Special means of activation of high-level controls shall be required. The high-level control only shall be operable when continuous manual activation is provided by the operator.

[3] A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(2) Fluoroscopic equipment which is not provided with automatic exposure rate control:

(a) The radiation exposure measured at the point where the center of the useful beam enters the patient shall not exceed one and twenty-nine hundredths millicoulomb per kilogram [5 roentgens] per minute, except during recording of fluoroscopic images or when provided with an optional high-level control and the high-level control is activated.

[1] When the high-level control is activated, the equipment shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of five and sixteen hundredths millicoulomb per kilogram [20 roentgens] per minute at the point where the center of the useful beam enters the patient.

[2] Special means of activation of high-level controls shall be required. The high-level control shall only be operable when continuous manual activation is provided by the operator.

[3] A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(3) Compliance with the requirements of subsection 3 of this section shall be determined as follows:

(a) Movable grids and compression devices shall be removed from the useful beam during the measurement.

(b) If the source is below the table, the radiation exposure rate shall be measured one centimeter above the tabletop or cradle.

(c) If the source is above the table, the radiation exposure rate shall be measured at thirty centimeters above the tabletop with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement.

(d) In a C arm type of fluoroscope, both stationary and mobile units shall meet the entrance exposure rate limits specified in paragraphs 1, 2, and 3 of subdivision a of subsection 3, shall be measured thirty centimeters from the input surface of the fluoroscopic imaging assembly with the source positioned at any available source-image receptor distance provided that the end of the spacer assembly or beam-limiting device is not closer than thirty centimeters from the input surface of the fluoroscopic imaging assembly.

(e) In a lateral type of fluoroscope, the exposure rate shall be measured at a point fifteen centimeters from the centerline of the x-ray table and in the direction of the x-ray source with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement. If the tabletop is movable, it shall be positioned as closely as possible to the lateral x-ray source, with the end of the beam-limiting device or spacer no closer than fifteen centimeters to the centerline of the x-ray table.

(4) Periodic measurement of entrance exposure rate shall be performed by a qualified expert for both typical and maximum values as follows:

(a) Such measurements shall be made annually or after any maintenance of the system which might affect the radiation exposure rate.

(b) Results of these measurements shall be posted where any fluoroscopist may have ready access to such results while using the fluoroscope and in the record required in paragraph 5 of subdivision b of subsection 1 of section 33.1-10-06-03. Results of the measurements shall include the roentgen per minute, as well as the technique factors used to determine such results. The name of the person performing the measurements and the date the measurements were performed shall be included in the results.

(c) Conditions of periodic measurements of typical entrance exposure rate are as follows:

[1] The measurement shall be made under the conditions that satisfy the requirements of paragraph 4.

[2] The kilovolts peak, mA, and other selectable parameters shall be the settings typical of clinical use on a twenty-three centimeters thick abdominal patient.

[3] The x-ray systems that incorporate automatic exposure control shall have sufficient material placed in the useful beam to produce a milliamperage or kilovoltage, or both, to satisfy the conditions of item 2.

[4] X-ray systems that do not incorporate an automatic exposure control shall utilize a milliamperage typical of clinical use of the x-ray system. Materials should be placed in the useful beam when conducting these periodic measurements to protect the imaging system.

(d) Conditions of periodic measurements of maximum entrance exposure rate are as follows:

[1] The measurement shall be made under the conditions that satisfy the requirements of paragraph 3.

[2] The kVp, mA, and other selectable parameters shall be the maximum selectable parameters of clinical use of the x-ray system.

[3] The x-ray systems that incorporate automatic exposure control shall have sufficient material placed in the useful beam to produce a kVp, mA, and other selectable parameters to satisfy the conditions of item 2.

[4] X-ray systems that do not incorporate an automatic exposure control shall utilize the maximum kVp, mA, and other selectable parameters of clinical use of the x-ray system. Materials should be placed in the useful beam

when conducting these periodic measurements to protect the imaging system.

4. Barrier transmitted radiation rate limits.

a. The radiation exposure rate due to transmission through the primary protective barrier with the attenuation block in the useful beam, combined with radiation from the image intensifier, shall not exceed five hundred sixteen thousandths microcoulomb per kilogram [2 milliroentgens] per hour at ten centimeters from any accessible surface of the fluoroscopic imaging assembly beyond the plane of the image receptor for each roentgen (C/kg) per minute of entrance exposure rate.

b. Measuring compliance of barrier transmission.

(1) The radiation exposure rate due to transmission through the primary protective barrier combined with radiation from the image intensifier shall be determined by measurements averaged over an area of one hundred square centimeters with no linear dimension greater than twenty centimeters.

(2) If the source is below the tabletop, the measurement shall be made with the input surface of the fluoroscopic imaging assembly positioned thirty centimeters above the tabletop.

(3) If the source is above the tabletop and the source-image receptor distance is variable, the measurement shall be made with the end of the beam-limiting device or spacer as close to the tabletop as it can be placed, provided that it shall not be closer than thirty centimeters.

(4) Movable grids and compression devices shall be removed from the useful beam during the measurement.

5. Indication of potential and current. During fluoroscopy and cinefluorography, the kilovolt and the milliampere shall be continuously indicated.

6. Indication of air kerma rate and cumulative air kerma. Machines manufactured on or after June 10, 2006, shall provide displays of values of air kerma rate and cumulative air kerma and shall be viewable from the x-ray operator position.

a. When the x-ray tube is activated and the number of images produced per unit time is greater than six images per second, the air kerma rate in mGy/minute shall be continuously displayed and updated at least once every second.

b. The cumulative air kerma in units of mGy shall be displayed either within five seconds of termination of an exposure or displayed continuously and updated at least once every five seconds.

c. The display of the air kerma rate shall be clearly distinguishable from the display of the cumulative air kerma.

d. The air kerma rate and cumulative air kerma shall represent the value of conditions of free-in-air irradiation at one of the following reference locations specified according to the type of fluoroscope.

(1) For fluoroscopies with x-ray source below the x-ray table, x-ray source above the table, or of lateral type, the reference locations shall be the respective locations specified in subparagraphs b, c, and e of paragraph 3 of subdivision a of subsection 3 for measuring compliance with air kerma rate limits.

(2) For C-arm fluoroscopies, the reference location shall be fifteen centimeters from the isocenter toward the x-ray source along the beam axis. Alternatively, the reference location shall be at a point specified by the manufacturer to represent the location of the intersection of the x-ray beam with the patient's skin.

e. Means shall be provided to reset to zero the display of cumulative air kerma prior to the commencement of a new examination or procedure.

f. The displayed air kerma rate and cumulative air kerma shall not deviate from the actual values by more than plus or minus thirty-five percent over the range of six mGy/minute (0.6 R/min) and one hundred mGy (10 R) to the maximum indication of air kerma rate and cumulative air kerma, respectively. Compliance shall be determined with an irradiation time greater than three seconds.

7. Source skin distance. The source to skin distance shall not be less than:

a. Thirty eight centimeters on stationary fluoroscopes installed after August 1, 1974.

b. Thirty-five and one-half centimeters on stationary fluoroscopes which were in operation prior to August 1, 1974.

c. Thirty centimeters on all mobile fluoroscopes.

d. Twenty centimeters for all mobile fluoroscopes used for specific surgical applications.

8. Fluoroscopic timer.

a. Means shall be provided to preset the cumulative on-time of the fluoroscopic tube. The maximum cumulative time of the timing device shall not exceed five minutes without resetting.

b. A signal audible to the fluoroscopist shall indicate the completion of any preset cumulative on-time. Such signal shall continue to sound while x-rays are produced until the timing device is reset.

9. Control of scattered radiation.

a. Fluoroscopic table designs when combined with procedures utilized shall be such that no unprotected part of any staff or ancillary individual's body shall be exposed to unattenuated scattered radiation which originates from under the table. The attenuation required shall be not less than twenty-five one hundredths millimeter lead equivalent.

b. Equipment configuration when combined with procedures shall be such that no portion of any staff or ancillary individual's body, except the extremities, shall be exposed to the unattenuated scattered radiation emanating from above the tabletop unless that individual:

(1) Is at least one hundred twenty centimeters from the center of the useful beam; or

(2) The radiation has passed through not less than twenty-five one hundredths millimeter lead equivalent material, including drapes, bucky-slot cover-sliding or folding panel, or self supporting curtains, in addition to any lead equivalency provided by the protective apron referred to in paragraph 5 of subdivision a of subsection 1 of section 33.1-10-06-03.

c. The department may grant exceptions to subdivision b of this subsection in some special procedures where a sterile field will not permit the use of the normal protective barriers.

Where the use of prefitted sterilized covers for the barriers is practical, the department shall not permit such exception.

10. **Spot-film exposure reproducibility.** Fluoroscopic systems equipped with spot-film mode shall meet the exposure reproducibility requirements of subsection 5 of section 33.1-10-06-06 when operating in the spot-film mode.

11. **Radiation therapy simulation system.** Radiation therapy simulation systems shall be exempt from all the requirements of subsections 1, 3, 4, and 8 provided that:

a. Such systems are designed and used in such a manner that no individual other than the patient is in the x-ray room during periods of time when the system is producing x-rays; and

b. Such systems as do not meet the requirements of subsection 7 are provided with a means of indicating the cumulative time that an individual patient has been exposed to x-rays. Procedures shall require in such cases that the timer be reset between examinations.

12. **Structural shielding requirements** (see appendix E).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-06. Radiographic systems other than fluoroscopic, dental intraoral, bone densitometry, or computed tomography x-ray systems.

1. **Beam limitation requirements for systems without positive beam limitation including portable x-ray systems.** The useful beam shall be limited to the area of clinical interest.

a. General purpose stationary and mobile x-ray systems including veterinary systems (other than portable) installed after January 1, 1998.

(1) There shall be provided a means for independent length and width stepless adjustment to the size of the x-ray field.

(2) Means shall be provided for visually defining the perimeter of the x-ray field. The total misalignment of the edges of the visually defined field with the respective edges of the x-ray field along either the length or width of the visually defined field shall not exceed two percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the x-ray beam.

(3) The department may grant an exemption to paragraphs 1 and 2 on noncertified x-ray systems, provided the registrant makes a written application for such exemption and demonstrates in the application:

(a) That it is impractical to comply with paragraphs 1 and 2; and

(b) The purpose of paragraphs 1 and 2 will be met by other means.

b. Additional requirements for stationary general purpose x-ray systems. In addition to the requirements of subdivision a, all stationary x-ray systems both certified and noncertified shall meet the following requirements:

(1) Means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, to align the center of the x-ray field

with respect to the center of the image receptor to within two percent of the source-image receptor distance, and to indicate the source-image receptor distance to within two percent.

(2) The beam-limiting device shall numerically indicate the field size in the plane of the image receptor to which it is adjusted.

(3) Indication of field size dimensions and source-image receptor distances shall be specified in inches or centimeters, and shall be such that aperture adjustments result in x-ray field dimensions in the plane of the image receptor which correspond to those indicated by the beam-limiting device to within two percent of the source-image receptor distance when the beam axis is indicated to be perpendicular to the plane of the image receptor.

c. X-ray systems designed for one image receptor size. Radiographic equipment designed for only one image receptor size at the fixed source-image receptor distance shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater than those of the image receptor, and to align the center of the x-ray field with the center of the image receptor to within two percent of the source-image receptor distance, or shall be provided with means to both size and align the x-ray field such that the x-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor.

d. Systems designed for or provided with special attachments for mammography. Radiographic systems designed only for mammography shall be provided with means to limit the useful beam such that the x-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor at any designated source-image receptor distance except the edge of the image receptor designed to be adjacent to the chest wall where the x-ray field may not extend beyond this edge by more than two percent of the source-image receptor distance. This requirement can be met with a system which performs as prescribed in paragraph 3 of subdivision e. When the beam-limiting device and image receptor support device are designed to be used to immobilize the breast during a mammographic procedure and the source-image receptor distance may vary, the source-image receptor distance indication specified in subparagraphs a and b of paragraph 3 of subdivision e shall be the maximum source-image receptor distance for which beam limiting device or aperture is designed. In addition, each image receptor support intended for installation on a system designed only for mammography shall have clear and permanent markings to indicate the maximum image receptor size for which it is designed.

e. X-ray systems other than those described in subdivisions a, b, c, and d and veterinary systems installed prior to January 1, 1998, and all portable veterinary x-ray systems.

(1) Means shall be provided to limit the x-ray field in the plane of the image receptor so that such field does not exceed each dimension of the image receptor by more than two percent of the source-image receptor distance when the axis of the x-ray beam is perpendicular to the plane of the image receptor.

(2) Means shall be provided to align the center of the x-ray field with the center of the image receptor to within two percent of the source-image receptor distance, or means shall be provided to both size and align the x-ray field such that the x-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor. Compliance shall be determined with the axis of the x-ray beam perpendicular to the plane of the image receptor.

(3) Paragraphs 1 and 2 may be met with a system that meets the requirements for a general purpose x-ray system as specified in subsection 1, or, when alignment means are also provided, may be met with either:

(a) An assortment of removable, fixed aperture, beam-limiting devices sufficient to meet the requirement for each combination of image receptor size and source-image receptor distance for which the unit is designed with each such device having clear and permanent markings to indicate the image receptor size and source-image receptor distance for which it is designed; or

(b) A beam-limiting device having multiple fixed apertures sufficient to meet the requirement for each combination of image receptor size and source-image receptor distance for which the unit is designed. Permanent, clearly legible markings shall indicate the image receptor size and source-image receptor distance for which each aperture is designed and shall indicate which aperture is in position for use.

2. **Beam limitation requirements applicable to certified systems only.** Diagnostic x-ray systems incorporating one or more certified components shall be required to comply with the following additional requirements which relate to those certified components.

a. Beam limitation for stationary and mobile general purpose x-ray systems.

(1) There shall be provided a means of independent length and width stepless adjustment of the size of the x-ray field. The minimum field size at a source-image receptor distance of one hundred centimeters shall be equal to or less than five centimeters by five centimeters.

(2) When a light localizer is used to define the x-ray field, it shall provide an average illumination of not less than one hundred sixty lux or fifteen foot candles at one hundred centimeters or at the maximum source-image receptor distance, whichever is less. The average illumination shall be based upon measurements made in the approximate center of each quadrant of the light field.

(3) The edge of the light field at one hundred centimeters or at the maximum source-image receptor distance, whichever is less, shall have a contrast ratio, corrected for ambient lighting, of not less than four in the case of beam-limiting devices designed for use on stationary equipment, and a contrast ratio of not less than three in the case of beam-limiting devices designed for use on mobile equipment. The contrast ratio is defined as I_1/I_2 where I_1 is the illumination three millimeters from the edge of the light field toward the center of field; and I_2 is the illumination three millimeters from the edge of the light field away from the center of the field. Compliance shall be determined with a measuring instrument aperture of one millimeter in diameter.

b. Beam limitation for portable x-ray systems. Beam limitation for portable x-ray systems shall meet the beam limitation requirements of subdivision a of subsection 1 and subdivision a of this subsection.

c. Beam limitation and alignment on stationary general purpose x-ray systems equipped with positive beam limitation (PBL). The useful beam shall be limited to the area of clinical interest. This shall be deemed to have been met if a positive beam-limiting device meeting manufacturer's specifications and the requirements of this subdivision have been properly used.

(1) Positive beam limitation (PBL), when provided, shall function as described in paragraph 2 whenever all of the following conditions are met:

(a) The image receptor is inserted into a permanently mounted cassette holder.

(b) The image receptor length and width are each less than fifty centimeters.

(c) The x-ray beam axis is within plus or minus three degrees of vertical and the source-image receptor distance is ninety centimeters to one hundred thirty centimeters inclusive, or the x-ray beam axis is within plus or minus three degrees of horizontal and the source-image receptor distance is ninety centimeters to two hundred five centimeters inclusive.

(d) The x-ray beam axis is perpendicular to the plane of the image receptor to within plus or minus three degrees.

(e) Neither tomographic nor stereoscopic radiography is being performed.

(f) The positive beam limitation system has not been intentionally overridden. The override provision is subject to paragraph 3.

(2) Positive beam limitation (PBL), when provided, shall prevent the production of x-rays when:

(a) Either the length or width of the x-ray field in the plane of the image receptor differs, except as permitted by paragraph 5, from the corresponding image receptor dimensions by more than three percent of the source-image receptor distance.

(b) The sum of the length and width differences as stated in subparagraph a, without regard to sign, exceeds four percent of the source-image receptor distance.

(c) The beam-limiting device is at a source-image receptor distance for which positive beam limitation (PBL) is not designed for sizing.

(3) If a means of overriding the positive beam limitation (PBL) system exists, that method:

(a) If located in a position that the operator would consider it part of the operational controls or if it is referenced in the operator's manual or in other materials intended for the operator.

[1] Must require that a key be utilized to defeat the positive beam limitation;

[2] Must require that the key remain in place during the entire time the positive beam limitation system is overridden; and

[3] Must require that the key or key switch be clearly and durably labeled as follows:

FOR X-RAY FIELD LIMITATION
SYSTEM FAILURE

(b) Must include a label visible to the operator that override of the positive beam limitation system is engaged.

- (4) Compliance with paragraph 2 must be determined when the requirements of paragraph 1 are met. Compliance must be determined no sooner than five seconds after insertion of the image receptor.
- (5) The positive beam limitation system must be capable of operation, at the discretion of the operator, such that the size of the field may be made smaller than the size of the image receptor through stepless adjustment of the field size. The minimum field size at the source-image receptor distance of one hundred centimeters must be equal to or less than five centimeters by five centimeters.
- (6) The positive beam limitation system must be designed such that if a change in image receptor does not cause an automatic return to positive beam limitation function as described in paragraph 2, then any change of image receptor size or source-image receptor distance must cause the automatic return.

3. Radiation exposure control.

- a. Exposure initiation. Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, such as the depression of a switch. Radiation exposure shall not be initiated without such an action. In addition, it shall not be possible to initiate an exposure when the timer is set to a "zero" or "off" position if either position is provided.
- b. Exposure indication. Means shall be provided for visual indication observable at or from the operator's protected position whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.
- c. Exposure termination. Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. Except for dental panoramic systems, termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "zero". It shall not be possible to make an exposure when the timer is set to a zero or off position if either position is provided.

(1) Manual exposure control. An x-ray control which shall be the equivalent of a dead-man switch shall be incorporated into each x-ray system such that an exposure can be terminated by the operator at any time except for:

- (a) Exposure of one-half second or less; or
- (b) During serial radiography when means shall be provided to permit completion of any single exposure of the series in process.

(2) Automatic exposure controls. When an automatic exposure control is provided:

- (a) Indication shall be made on the control panel when this mode of operation is selected;
- (b) If the x-ray tube potential is equal to or greater than fifty kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than a time interval equivalent to two pulses;
- (c) The minimum exposure time for all equipment other than that specified in subparagraph b shall be equal to or less than one-sixtieth second or a time interval required to deliver five mAs, whichever is greater;

(d) Either the product of peak x-ray tube potential, current, and exposure time shall be limited to not more than sixty kW per exposure, or the product of x-ray tube current and exposure time shall be limited to not more than six hundred mAs per exposure except that, when the x-ray tube potential is less than fifty kVp, the product of x-ray tube current and exposure time shall be limited to not more than two thousand mAs per exposure; and

(e) A visible signal shall indicate when an exposure has been terminated at the limits required by subparagraph d, and manual resetting shall be required before further automatically timed exposures can be made.

d. Exposure duration (timer) linearity. For systems having independent selection of exposure time settings, the average ratios $[X_1]$ of exposure to the indicated timer setting, in units of coulombs per kilogram per second [milliroentgen per second], obtained at any two clinically used timer settings shall not differ by more than ten-hundredths times their sum. This is written as:

$$(X_1 - X_2) < 0.1 (X_1 + X_2)$$

where X_1 and X_2 are the average $C\ kg^{-1}s^{-1}$ (mR/s) values.

e. Exposure control location. The x-ray exposure control shall be so placed that the operator can view the patient while making exposures (see appendix B).

f. Operator protection, except veterinary systems.

(1) Stationary systems. Stationary x-ray systems shall be required to have the x-ray control permanently mounted in a protected area so that the operator is required to remain in that protected area during the entire exposure (see appendix B).

(2) Mobile and portable systems. Mobile and portable x-ray systems which are:

(a) Used continuously for greater than one week in the same location, i.e., a room or suite, shall meet the requirements of paragraph 1; and

(b) Used for less than one week at the same location shall be provided with either a protective barrier at least two meters [6.5 feet] high for operator protection during exposures, or means shall be provided to allow the operator to be at least two and seven-tenths meters [9 feet] from the tube housing assembly during the exposure.

(3) Mammography systems shall be operable from a shielded position.

g. Operator protection for veterinary systems. All stationary, mobile, or portable x-ray systems used for veterinary work shall be provided with either a two-meter [6.5-foot] high protection barrier for operator protection during exposures, or shall be provided with means to allow the operator to be at least two and seven-tenths meters [9 feet] from the tube housing assembly during exposures.

4. **Source-to-skin distance.** All mobile or portable radiographic systems shall be provided with means to limit the source-to-skin distance equal to or greater than thirty centimeters, except for veterinary systems.

5. **Radiation exposure reproducibility.** When all technique factors are held constant, including control panel selections associated with automatic exposure control systems, the coefficient of variation of exposure for both manual and automatic exposure control systems shall not

exceed five hundredths. This requirement applies to clinically used techniques. This requirement shall be deemed to have been met if, when four radiation exposures are made at identical technique factors, the value of the average radiation exposure (E) is greater than or equal to five times the maximum radiation exposure (E_{max}) minus the minimum radiation exposure (E_{min}).

$$\bar{E} \geq 5(E_{max} - E_{min})$$

6. **Radiation from capacitor energy storage equipment in standby status.** Radiation emitted from the x-ray tube when the system is fully charged and the exposure switch or timer is not activated shall not exceed a rate of two milliroentgens per hour at five centimeters from any accessible surface of the diagnostic source assembly, with the beam-limiting device fully open.
7. **Accuracy.** Deviation of measured technique factors from indicated values of kVp and exposure time shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications, the deviation shall not exceed ten percent of the indicated value for kVp and twenty percent for time.
8. **mA/mAs linearity.** The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for any fixed x-ray tube potential within the range of forty percent to one hundred percent of the maximum rated:

- a. Equipment having independent selection of x-ray tube current (mA). The average ratios (X_1) of exposure to the indicated milliamperere-seconds product in units of coulombs per kilogram per milliamperere second (or milliroentgen per milliamperere seconds) obtained at any two consecutive tube current settings shall not differ by more than ten hundredths times their sum:

$$X_1 - X_2 \leq 0.10 (X_1 + X_2)$$

where X_1 and X_2 are the average values obtained at each of two consecutive tube current settings, or at two settings differing by no more than a factor of two where the tube current selection is continuous.

- b. Equipment having a combined x-ray tube current exposure time product (mAs) selector, but not a separate tube current (mA) selector. The average ratio (X_1) of exposure to the indicated milliamperere-seconds product, in units of coulombs per kilogram per milliamperere second (or milliroentgen per milliamperere seconds), obtained at any two consecutive mAs selector settings shall not differ by more than ten hundredths times their sum:

$$X_1 - X_2 < 0.10 (X_1 + X_2)$$

where X_1 and X_2 are the average values obtained at any two consecutive mAs selector settings, or at two settings differing by no more than a factor of two where the mAs selector provided continuous selection.

- c. **Measuring compliance.** Determination of compliance shall be based on four exposures taken within a time period of one hour, at each of the two settings. These two settings may include any two focal spot sizes except where one is equal to or less than forty-five hundredths millimeters and the other is greater than forty-five hundredths millimeters. For purposes of this requirement, focal spot size is the nominal focal spot size specified by the x-ray tube manufacturer.

9. Other requirements:

- a. Transmission limit for image receptor supporting devices used for mammography. For x-ray systems manufactured after September 5, 1978, which are designed only for mammography, the transmission of the primary beams through the image receptor support provided with the system will be limited such that the exposure five centimeters from any accessible surface beyond the plane of the image receptor supporting device does not exceed twenty-five and eight-tenths microcoulomb per kilogram [.01 milliroentgen] for each activation of the tube. Exposure shall be measured with the system operated at the minimum source-image receptor distance for which it is designed. Compliance shall be determined at the maximum rated peak tube potential for the system and at the maximum rated product of tube current and exposure time (milliampere second) for that peak tube potential. Compliance shall be determined by measurements averaged over an area of one hundred square centimeters with no linear dimension greater than twenty centimeters.
- b. Tube stands for portable x-ray systems. A tube stand or other mechanical support shall be used for portable x-ray systems, so that the x-ray tube housing assembly need not be handheld during exposures.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-02-03, 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, §§ 17, 18

33.1-10-06-07. Intraoral dental radiographic systems.

In addition to the requirements of sections 33.1-10-06-03 and 33.1-10-06-04, the requirements of this section apply to x-ray equipment and associated facilities used for dental radiography. Criteria for extraoral dental radiographic systems are covered in section 33.1-10-06-06. Only systems meeting the requirements of this section shall be used.

1. **Source-to-skin distance.** X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance to not less than:
 - a. Eighteen centimeters if operable above fifty kilovolts peak.
 - b. Ten centimeters if operable at fifty kilovolts peak only.
2. **Beam limitation.** Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the x-ray beam such that:
 - a. The x-ray beam, at the minimum source-to-skin distance, shall be containable in a circle having a diameter of no more than seven centimeters.
 - b. An open-ended shielded position indicating device shall be used. The shielding shall be equivalent to the requirements of subsection 4 of section 33.1-10-06-04.
3. **Radiation exposure control.**
 - a. Exposure initiation.
 - (1) Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, such as the depression of a switch. Radiation exposure shall not be initiated without such an action.
 - (2) It shall not be possible to make an exposure when the timer is set to a "zero" or "off" position if either position is provided.

- b. Exposure indication. Means shall be provided for visual indication observable at or from the operator's protected position whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.
- c. Exposure termination.
- (1) Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor.
 - (2) An x-ray exposure control shall be incorporated into each x-ray system such that an exposure can be terminated by the operator at any time, except for exposures of one-half second or less.
 - (3) Termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "zero".
- d. Exposure duration (timer) linearity. For systems having independent selection of exposure time settings, the average ratios (X_1) of exposure to the indicated timer setting, in units of coulombs per kilogram per second [milliroentgen per second], obtained at any two clinically used timer settings shall not differ by more than ten hundredths times their sum.

$$(X_1 - X_2) < 0.1 (X_1 + X_2)$$

where X_1 and X_2 are the average values.

- e. Exposure control location and operator protection.
- (1) Stationary x-ray systems shall be required to have the x-ray exposure control permanently mounted in a protected area, so that the operator is required to remain in that protected area during the entire exposure and so the operator can view the patient while making the exposure.
 - (2) Mobile and portable x-ray systems which are:
 - (a) Used for greater than one week in the same location, i.e., a room or suite, shall meet the requirements of paragraph 1.
 - (b) Used for less than one week in the same location shall be provided with either a protective barrier at least two meters [6.5 feet] high for operator protection, or means to allow the operator to be at least two and seven-tenths meters [9 feet] from the tube housing assembly while making exposures.
 - (3) Hand-held dental x-ray equipment:
 - (a) Operators shall use all safety devices and follow safety procedures according to the manufacturer.
 - (b) Operators shall wear a protective apron during exposure in accordance with subparagraph b of paragraph 6 of subdivision a of subsection 1.
 - (c) Operators shall have dose monitoring in accordance with section 33.1-10-04.2-01 [10 CFR 20.1502].

4. **Reproducibility.** When the equipment is operated on an adequate power supply as specified by the manufacturer, the estimated coefficient of variation of radiation exposures shall be no greater than five hundredths for any specific combination of selected technique factors.

5. **mA/mAs linearity.** The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for any fixed x-ray tube potential within the range of forty percent to one hundred percent of the maximum rated.

a. Equipment having independent selection of x-ray tube current (mA). The average ratios (X_1) of exposure to the indicated milliamperere seconds product, in units of coulombs per kilogram per milliamperere second (or milliroentgen per milliamperere seconds), obtained at any two consecutive tube current settings shall not differ by more than ten hundredths times their sum:

$$X_1 - X_2 < 0.10 (X_1 + X_2)$$

where X_1 and X_2 are the average values obtained at any two consecutive tube current settings, or at two settings differing by no more than a factor of two where the tube current selection is continuous.

b. Equipment having a combined x-ray tube current exposure time product (mAs) selector, but not a separate tube current (mA) selector. The average ratios (X_1) of exposure to the indicated milliamperere-seconds product, in units of coulombs per kilogram per milliamperere second (or mR/mAs), obtained at any two consecutive mAs selector settings shall not differ by more than ten hundredths times their sum:

$$X_1 - X_2 < 0.10 (X_1 + X_2)$$

where X_1 and X_2 are the average values obtained by any two mAs selector settings, or at two settings differing by no more than a factor of two where the mAs selector provides continuous selection.

c. Measuring compliance. Determination of compliance shall be based on ten exposures taken within a time period of one hour, at each of the two settings. These two settings may include any two focal spot sizes except where one is equal to or less than forty-five hundredths millimeters and the other is greater than forty-five hundredths millimeters. For purposes of this requirement, focal spot size is the nominal focal spot size specified by the x-ray tube manufacturer.

6. **Accuracy.** Deviation of technique factors from values for kVp and exposure time (if time is independently selectable) shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications, the deviation shall not exceed ten percent of the indicated value for kVp and twenty percent for time.

7. **kVp limitations.** Dental x-ray machines with a nominal fixed kVp of less than fifty kVp shall not be used to make diagnostic dental radiographs of humans.

8. **Beam quality.** All dental x-ray systems are subject to the filtration requirements of subdivision a of subsection 5 of section 33.1-10-06-04

9. **Administrative controls.**

a. Patient and film holding devices shall be used when the techniques permit.

- b. The tube housing and the position indicating device shall not be handheld during an exposure unless the system was specifically designed as a hand-held dental x-ray machine.
- c. The x-ray system shall be operated in such a manner that the useful beam at the patient's skin does not exceed the requirements of subdivision a of subsection 2.
- d. Dental fluoroscopy without image intensification shall not be used.
- e. Security for portable dental systems. A means shall be provided to prevent unauthorized use whenever the x-ray system is not under the control and constant surveillance of the registrant or an authorized operator.

10. **Structural shielding requirements** (see appendix C).

33.1-10-06-09. [Reserved].

33.1-10-06-10. [Reserved].

33.1-10-06-11. Computed tomography x-ray systems.

1. **Definitions.** In addition to the definitions provided in sections 33.1-10-01-04 and 33.1-10-06-02, the following definitions are applicable to this section:

- a. "Computed tomography dose index" means the integral from -7T to +7T of the dose profile along a line perpendicular to the tomographic plane divided by the product of the nominal tomographic section thickness and the number of tomograms produced in a single scan, that is:
where:

$$CTDI = \frac{1}{nT} \int_{-7T}^{+7T} D(z) dz$$

z = Position along a line perpendicular to the tomographic plane.

D(z) = Dose at position z.

T = Nominal tomographic section thickness.

n = Number of tomograms produced in a single scan.

This definition assumes that the dose profile is centered around $z = 0$ and that, for a multiple tomogram system, the scan increment between adjacent scans is nT .

- b. "Contrast scale" means the change in the linear attenuation coefficient per computed tomography number relative to water, that is:

$$CS = \frac{\mu_x - \mu_w}{(CTN)_x - (CTN)_w}$$

where:

μ_x = Linear attenuation coefficient of the material of interest.

μ_w = Linear attenuation coefficient of water.

$(CTN)_x$ = CTN of the material of interest.

$(CTN)_w$ = CTN of water.

- c. "CS" (see "contrast scale").
- d. "CT" means a radiologic imaging technique that produces images of "slices" through a patient's body.
- e. "CT conditions of operation" means all selectable parameters governing the operation of a CT x-ray system, including nominal tomographic section thickness, filtration, and the technique factors as defined in section 33.1-10-06-02.
- f. "CTDI" (see "computed tomography dose index").
- g. "CT gantry" means the tube housing assemblies, beam-limiting devices, detectors, and the supporting structures and frames which hold these components.
- h. "CTN" (see "CT number").
- i. "CT number" means the number used to represent the x-ray attenuation associated with each elemental area of the CT image.

$$CTN = \frac{k(\mu_x - \mu_w)}{\mu_w}$$

where:

k = A constant (The constant has a normal value of one thousand when the Hounsfield scale of CTN is used.)

μ_x = Linear attenuation coefficient of the material of interest.

μ_w = Linear attenuation coefficient of water.

- j. "Dose profile" means the dose as a function of position along a line.
- k. "Elemental area" means the smallest area within a tomogram for which the x-ray attenuation properties of a body are depicted. (see also "picture element").

l. "Multiple tomogram system" means a computed tomography x-ray system which obtains x-ray transmission data simultaneously during a single scan to produce more than one tomogram.

m. "Noise" means the standard deviation of the fluctuations in computed tomography number expressed as a percentage of the attenuation coefficient of water. Its estimate (S_n) is calculated using the following expression:

where:

$$S_n = \frac{100 \times CS \times s}{\mu_w}$$

CS = Contrast scale.

μ_w = Linear attenuation coefficient of water.

s = Estimated standard deviation of the CTN of picture elements in a specified area of the CT image.

n. "Nominal tomographic section thickness" means the full width at half maximum of the sensitivity profile taken at the center of the cross sectional volume over which x-ray transmission data are collected.

o. "Picture element" means an elemental area of a tomogram.

p. "Reference plane" means a plane which is displaced from and parallel to the tomographic plane.

q. "Scan" means the complete process of collecting x-ray transmission data for the production of a tomogram. Data can be collected simultaneously during a single scan for the production of one or more tomograms.

r. "Scan increment" means the amount of relative displacement of the patient with respect to the CT x-ray system between successive scans measured along the direction of such displacement.

s. "Scan sequence" means a preselected set of two or more scans performed consecutively under preselected CT conditions of operation.

t. "Scan time" means the period of time between the beginning and end of x-ray transmission data accumulation for a single scan.

u. "Single tomogram system" means a CT x-ray system which obtains x-ray transmission data during a scan to produce a single tomogram.

v. "Tomographic plane" means that geometric plane which is identified as corresponding to the output tomogram.

w. "Tomographic section" means the volume of an object whose x-ray attenuation properties are imaged in a tomogram.

2. Requirements for equipment.

a. Termination of exposure.

- (1) Means must be provided to terminate the x-ray exposure automatically by either de-energizing the x-ray source or shuttering the x-ray beam in the event of equipment failure affecting data collection. Such termination must occur within an interval that limits the total scan time to no more than one hundred ten percent of its preset value through the use of either a backup timer or devices which monitor equipment function.
- (2) A visible signal must indicate when the x-ray exposure has been terminated through the means required by paragraph 1.
- (3) The operator must be able to terminate the x-ray exposure at any time during a scan, or series of scans under computed tomography x-ray system control, of greater than one-half second duration.

b. Tomographic plane indication and alignment.

- (1) For any single tomogram system, means must be provided to permit visual determination of the tomographic plane or a reference plane offset from the tomographic plane.
- (2) For any multiple tomogram system, means shall be provided to permit visual determination of the location of a reference plane. This reference plane can be offset from the location of the tomographic planes.
- (3) If a device using a light source is used to satisfy paragraph 1 or 2, the light source must provide illumination levels sufficient to permit visual determination of the location of the tomographic plane or reference plane under ambient light conditions of up to five hundred lux.

c. Beam-on and shutter status indicators and control switches.

- (1) The computed tomography x-ray control and gantry must provide visual indication whenever x-rays are produced and, if applicable, whether the shutter is open or closed.
- (2) Each emergency button or switch must be clearly labeled as to its function.

d. Indication of computed tomography conditions of operation. The computed tomography x-ray system must be designed such that the computed tomography conditions of operation to be used during a scan or a scan sequence must be indicated prior to the initiation of a scan or a scan sequence. On equipment having all or some of these conditions of operation at fixed values, this requirement may be met by permanent markings. Indication of computed tomography conditions of operation must be visible from any position from which scan initiation is possible.

e. Extraneous radiation. When data are not being collected for image production, the radiation adjacent to the tube port may not exceed that permitted by subsection 3 of section 33.1-10-06-04.

f. Maximum surface computed tomography dose index identification. The angular position where the maximum surface computed tomography dose index occurs must be identified to allow for reproducible positioning of a computed tomography dosimetry phantom.

g. Additional requirements applicable to computed tomography x-ray systems containing a gantry manufactured after September 3, 1985.

- (1) The total error in the indicated location of the tomographic plane or reference plane may not exceed five millimeters.
- (2) If the x-ray production period is less than one-half second, the indication of x-ray production must be actuated for at least one-half second. Indicators at or near the gantry must be discernible from any point external to the patient opening where insertion of any part of the human body into the primary beam is possible.
- (3) The deviation of indicated scan increment versus actual increment may not exceed plus or minus one millimeter with any mass from zero to one hundred kilograms resting on the support device. The patient support device must be incremented from a typical starting position to the maximum incremented distance or thirty centimeters, whichever is less, and then returned to the starting position. Measurement of actual versus indicated scan increment may be taken anywhere along this travel.
- (4) Premature termination of the x-ray exposure by the operator shall necessitate resetting of the computed tomography conditions of operation prior to the initiation of another scan.

h. Facility design requirements.

- (1) All CT capable systems shall be required to have the x-ray control permanently mounted in a protected area during the entire exposure (see appendix B).
- (2) Aural communication. Provision must be made for two-way aural communication between the patient and the operator at the control panel.

i. Surveys, calibrations, spot checks, and operating procedures.

(1) Surveys.

- (a) All computed tomography x-ray systems installed after March 1, 1992, and those systems not previously surveyed shall have a survey made by, or under the direction of, a qualified expert. In addition, such surveys must be done after any change in the facility or equipment which might cause a significant increase in radiation hazard.
- (b) The registrant shall obtain a written report of the survey from the qualified expert, and a copy of the report must be made available to the department upon request.

(2) Radiation calibrations.

- (a) The calibration of the radiation output of the computed tomography x-ray system must be performed by, or under the direction of, a qualified expert who is physically present at the facility during such calibration.
- (b) The calibration of a computed tomography x-ray system must be performed at intervals specified by a qualified expert and after any change or replacement of components which, in the opinion of the qualified expert, could cause a change in the radiation output.
- (c) The calibration of the radiation output of a computed tomography x-ray system must be performed with a calibrated dosimetry system. The calibration of such system must be traceable to a national standard. The dosimetry system must have been calibrated within the preceding two years.

(d) Computed tomography dosimetry phantoms must be used in determining the radiation output of a computed tomography x-ray system. Such phantoms must meet the following specifications and conditions of use:

[1] Computed tomography dosimetry phantoms must be right circular cylinders of polymethyl methacrylate of density one point nineteen plus or minus point zero one grams per cubic centimeter. The phantoms must be at least fourteen centimeters in length and must have diameters of thirty-two centimeters for testing computed tomography x-ray systems designed to image any section of the body and sixteen centimeters for systems designed to image the head or for whole-body scanners operated in the head scanning mode.

[2] Computed tomography dosimetry phantoms must provide means for the placement of a dosimeter along the axis of rotation and along a line parallel to the axis of rotation one centimeter from the outer surface and within the phantom. Means for the placement of dosimeters or alignment devices at other locations may be provided.

[3] Any effects on the doses measured due to the removal of phantom material to accommodate dosimeters must be accounted for through appropriate corrections to the reported data or included in the statement of maximum deviation for the values obtained using the phantom.

[4] All dose measurements must be performed with the computed tomography dosimetry phantom placed on the patient couch or support device without additional attenuation materials present.

(e) The calibration shall be required for each type of head, body, or whole-body scan performed at the facility.

(f) Calibration must meet the following requirements:

[1] The dose profile along the center axis of the computed tomography dosimetry phantom for the minimum, maximum, and midrange values of the nominal tomographic section thickness used by the registrant shall be measurable. Where less than three nominal tomographic thicknesses can be selected, the dose profile determination must be performed for each available nominal tomographic section thickness.

[2] The computed tomography dose index (For the purpose of determining the computed tomography dose index, the manufacturer's statement as to the nominal tomographic section thickness for that particular system may be utilized.) along the two axes specified in item 2 of subparagraph d must be measured. The computed tomography dosimetry phantom must be oriented so that the measurement point one centimeter from the outer surface and within the phantom is in the same angular position within the gantry as the point of maximum surface computed tomography dose index identified. The computed tomography conditions of operation must correspond to typical values used by the registrant.

[3] The spot checks specified in paragraph 3 of subdivision i must be made.

(g) Calibration procedures must be in writing. Records of calibrations performed must be maintained for inspection by the department.

(3) Spot checks.

- (a) The spot check procedures must be in writing and must have been developed by a qualified expert.
- (b) The spot check procedures must incorporate the use of a computed tomography dosimetry phantom which has a capability of providing an indication of contrast scale, noise, nominal tomographic section thickness, the resolution capability of the system for low and high contrast objects, and measuring the mean computed tomography number for water or other reference material.
- (c) All spot checks must be included in the calibration required by paragraph 2 and at time intervals and under system conditions specified by a qualified expert.
- (d) Spot checks must include acquisition of images obtained with the computed tomography dosimetry phantoms using the same processing mode and computed tomography conditions of operation as are used to perform calibrations required by paragraph 2 of subdivision i. The images must be retained, until a new calibration is performed, in two forms as follows:
 - [1] Photographic copies of the images obtained from the image display device; and
 - [2] Images stored in digital form on a storage medium compatible with the computed tomography x-ray system.
- (e) Written records of the spot checks performed shall be maintained for inspection by the department.
- (4) Operating procedures.
 - (a) The computed tomography x-ray system may not be operated except by an individual who has been specifically trained in its operation.
 - (b) Information must be available at the control panel regarding the operation and calibration of the system. Such information must include the following:
 - [1] Dates of the latest calibration and spot checks and the location within the facility where the results of those tests may be obtained;
 - [2] Instructions on the use of the computed tomography dosimetry phantoms, including a schedule of spot checks appropriate for the system, allowable variations for the indicated parameters, and the results of at least the most recent spot checks conducted on the system;
 - [3] The distance in millimeters between the tomographic plane and the reference plane if a reference plane is utilized; and
 - [4] A current technique chart available at the control panel which specifies for each routine examination the computed tomography conditions of operation and the number of scans per examination.
 - (c) If the calibration or spot check of the computed tomography x-ray system identifies that a system operating parameter has exceeded a tolerance established by the qualified expert, use of the computed tomography x-ray system on patients must be limited to those uses permitted by established written instructions of the qualified expert.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-06-12. Bone densitometry.

1. Bone densitometry systems shall be:

- a. Certified by the manufacturer pursuant to the Medical Device Act and part C - electronic product radiation control (EPRC) of chapter V of the Federal Food, Drug and Cosmetic Act;
- b. Registered in accordance with chapter 33.1-10-02 of these regulations; and
- c. Maintained and operated in accordance with the manufacturer's specifications.

2. Equipment requirements. Systems with stepless collimators shall be provided with means to both size and align the x-ray field such that the x-ray field at the plane of the image receptor does not extend beyond two percent of the source-image receptor distance.

3. Operators of bone densitometry systems shall complete a training course on the bone densitometry which is acceptable to the department. The training course shall include:

- a. Basic radiation protection;
- b. Operating procedures for bone densitometry systems, to include use of various system functions, safety, and maintenance; and
- c. Patient positioning for the type of examinations performed.

4. During the operation of any bone densitometry system:

- a. The operator, ancillary personnel, and members of the general public shall be positioned as far away as practical but not less than two meters from the patient and bone densitometry system during the examination.
- b. The operator shall advise the patient that the bone densitometry examination is a type of x-ray procedure.

5. The registrant shall keep maintenance records for bone densitometry systems as prescribed by subdivision b of subsection 1 of section 33.1-10-06-03. These records shall be maintained for inspection by the department.

6. Bone densitometry on human patients shall be conducted only:

- a. Under a prescription of a licensed practitioner of the healing arts; or
- b. Under a screening program approved by the department.

7. Any person proposing to conduct a bone densitometry screening program shall submit the information outlined in appendix E.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

APPENDIX A

INFORMATION ON RADIATION SHIELDING REQUIRED FOR PLAN REVIEWS

In order for the department to provide an evaluation, technical advice, and official approval on shielding requirements for a radiation installation, the following information shall be submitted:

1. The plans should show, as a minimum, the following:

- a. The normal location of the x-ray system's radiation port; the port's travel and traverse limits; general direction or directions of the useful beam; locations of any windows and doors; the location of the operator's booth; and the location of the x-ray control panel.
- b. Structural composition and thickness or lead equivalent of all walls, doors, partitions, floor, and ceiling of the room or rooms concerned.
- c. The dimensions of the room or rooms concerned.
- d. The type of occupancy of all adjacent areas inclusive of space above and below the room or rooms concerned. If there is an exterior wall, show distance to the closest area or areas where it is likely that individuals may be present.
- e. The make and model of the x-ray equipment and the maximum technique factors.
- f. The type of examinations or treatments which will be performed with the equipment, e.g., dental, orthodontal, chest, gastrointestinal, fluoroscopic, podiatry, fixed therapy, rotational therapy, etc.

2. Information on the anticipated workload of the x-ray systems.

3. If the services of a qualified expert have been utilized to determine the shielding requirements, a report, including all basic assumptions used, must be submitted with the plans.

History: Effective January 1, 2019.

APPENDIX B

MINIMUM DESIGN REQUIREMENTS FOR AN X-RAY MACHINE OPERATOR'S BOOTH

1. Space requirements.

- a. The operator shall be allotted not less than seven and five-tenths square feet [0.697 square meter] of unobstructed floor space in the booth.
- b. The operator's booth may be any geometric configuration with no dimension of less than two feet [0.61 meters].
- c. The space shall be allotted excluding any encumbrance by the console, such as overhang, cables, or other similar encroachments.
- d. The booth must be located or constructed such that unattenuated direct scatter radiation originating on the examination table or at the wall cassette not reach the operator's station in the booth.

2. Structural requirements.

- a. The booth walls shall be permanently fixed barriers of at least seven feet [2.13 meters] high.
- b. When a door or movable panel is used as an integral part of the booth structure, it must have an interlock which will prevent an exposure when the door or panel is not closed.
- c. Shielding must be provided to meet the requirements of chapter 33.1-10-04.2 of these rules.

3. X-ray control placement. The x-ray control for the system shall be fixed within the booth and:

- a. Shall be at least forty inches [1.02 meters] from any open edge of the booth wall which is nearest to the examining table.
- b. Shall allow the operator to use the majority of the available viewing windows.

4. Viewing system requirements.

- a. Each booth shall have at least one viewing device which will:
 - (1) Be so placed that the operator can view the patient during any exposure; and
 - (2) The device shall be so placed that the operator can have full view of any occupant of the room and should be so placed that the operator can view any entry into the room. If any door, which allows access to the room, cannot be seen from the booth, then that door must have an interlock controlling the exposure which will prevent the exposure if the door is not closed.
- b. When the viewing system is a window, the following requirements also apply:
 - (1) The viewing area must be at least one square foot [0.0929 square meter].
 - (2) The design of the booth must be such that the operator's expected position when viewing the patient and operating the x-ray system is at least eighteen inches [0.457 meter] from the edge of the booth.
 - (3) The material constituting the window must have the same lead equivalence as that required in the booth's wall in which it is mounted.

c. When the viewing system is by mirrors, the mirrors must be so located as to accomplish the general requirements of subdivision a.

d. When the viewing system is by electronic means:

(1) The camera shall be so located as to accomplish the general requirements in subdivision a; and

(2) There shall be an alternate viewing system as a backup for the primary system.

History: Effective January 1, 2019 .

APPENDIX C

STRUCTURAL SHIELDING REQUIREMENTS

1. General requirements.

- a. Each installation must be provided with such primary or secondary barriers as are necessary to assure compliance with section 33.1-10-04.2-01 [10 CFR 20.1201, 20.1207, 20.1208, and 20.1301]. This requirement must be deemed to be met if the thicknesses of such barriers are equivalent to those as computed in accordance with appendices B, C, and D of the National Council on Radiation Protection and Measurements Report No. 49, "Medical X-Ray and Gamma-Ray Protection for Energies Up to 10 MeV", modified to meet current dose limits.
- b. Lead barriers must be mounted in such manner that they will not sag or cold-flow because of their own weight and shall be protected against mechanical damage.
- c. Joints between different kinds of protective materials must be designed so that the overall protection of the barrier is not impaired.
- d. Joints at the floor and ceiling must be so designed that the overall protection is not impaired.
- e. Windows, window frames, doors, and door frames must have the same lead equivalent as that required of the adjacent wall.
- f. Holes in protective barriers must be covered so that overall attenuation is not impaired.

2. Fluoroscopic x-ray systems. Ordinarily only secondary barriers are necessary except combined fluoroscopic-radiographic installations.

3. Radiographic systems other than fluoroscopic, dental intraoral, or veterinarian systems:

- a. All wall, floor, and ceiling areas exposed to the useful beam must have primary barriers. Primary barriers in walls must extend to a minimum height of eighty-four inches [2.13 meters] above the floor.
- b. Secondary barriers must be provided in all wall, floor, and ceiling areas not having primary barriers or where the primary barrier requirements are lower than the secondary requirements.
- c. The operator's station at the control shall be behind a protective barrier, either in a separate room, in a protected booth, or behind a shield which will intercept the useful beam and any radiation which has been scattered only once.
- d. A window of lead equivalent glass equal to that required by the adjacent barrier or a mirror system shall be provided large enough and so placed that the operator can see the patient without having to leave the protected area during exposure.
- e. For mobile and portable x-ray systems which are used for greater than one week in one location (one room or suite), the requirements of this appendix shall apply.

4. Intraoral dental radiographic systems.

- a. Dental rooms containing x-ray machines shall be provided with primary barriers at all areas struck by the useful beam. Consideration shall be given to the attenuation provided by the patient.

b. When dental x-ray units are installed in adjacent rooms or areas, protective barriers shall be provided between the rooms or areas.

Note: In many cases, structural materials of ordinary walls suffice as a protective barrier without addition of special shielding material.

5. Therapeutic x-ray installations. The structural shielding requirements shall be deemed to be met if the barriers have been designed and constructed in accordance with the National Council on Radiation Protection and Measurements Report No. 49, "Medical X-Ray and Gamma-Ray Protection for Energies Up to 10 MeV", modified to meet current dose limits.

6. Veterinary medicine radiographic installations.

a. All wall, floor, and ceiling areas exposed to the useful beam shall have primary barriers. Primary barriers in walls shall extend to a minimum height of eighty-four inches [2.13 meters] above the floor.

b. Secondary barriers shall be provided in all wall, floor, and ceiling areas not having primary barriers or where the primary barrier requirements are lower than the secondary requirements.

History: Effective January 1, 2019 .

<u>16</u>	<u>:</u> <u>60</u>	<u>9 1/2</u>

Processing of Film

1. Manual processing of film.

a. Where film is developed manually, processing tanks should be made of mechanically rigid, corrosion resistant material and the temperature of solutions in the tanks shall be maintained within the range of sixteen degrees Celsius to twenty-seven degrees Celsius [60-80 degrees Fahrenheit]. Film shall be developed in accordance with the time-temperature relationships recommended by the film manufacturer, or, in the absence of such recommendations, with the above time-temperature chart.

b. Devices shall be available which will give all of the following:

(1) The actual temperature of the developer.

(2) An audible or visible signal, after a preset time (in minutes of duration).

2. Automatic processors and other closed processing systems.

a. Film shall be developed in accordance with the time-temperature relationships recommended by the film manufacturer.

- b. The specified developer temperature and immersion time shall be posted in the darkroom or on the automatic processor.
 - c. Preventive maintenance shall be performed on the unit, except for extended periods of nonuse, on a frequency basis which is not less than that schedule recommended by the manufacturer. In the event that no schedule is available from the manufacturer a maintenance schedule shall be established which will preserve good film quality.
 - d. After a full cleansing of the processor a film shall be exposed to a density of approximately one, with one-half of the film protected exposure. It will be developed and then kept near the unit and daily at least one test film (exposed under techniques identical with those used for the original test film) shall be compared with the original test film to evaluate the adequacy of the unit's developing capability and base fog level.
3. Processing deviations from the requirements of appendix D shall be documented by the registrant in such manner that the requirements are shown to be met or exceeded (e.g., extended processing, and special rapid chemistry).
4. Other requirements:
- a. Pass boxes, if provided, shall be so constructed as to exclude light from the darkroom when cassettes are placed in or removed from the boxes, and shall incorporate adequate shielding from stray radiation to prevent exposure of undeveloped film.
 - b. The darkroom shall be light tight and use proper safelighting such that any film type in use exposed in a cassette to x-radiation sufficient to produce an optical density from one to two when processed shall not suffer an increase in density greater than 0.1 (0.05 for mammography) when exposed in the darkroom for two minutes with all safelights on. If used, daylight film handling boxes shall preclude fogging of the film.
 - c. Darkrooms typically used by more than one individual shall be provided a method to prevent accidental entry while undeveloped films are being handled or processed.
 - d. Film shall be stored in a cool, dry place and shall be protected from exposure to stray radiation. Film in open packages shall be stored in a light tight container.
 - e. Film cassettes and intensifying screens shall be inspected periodically and shall be cleaned and replaced as necessary to best assure radiographs of good diagnostic quality.
 - f. Outdated x-ray film shall not be used for diagnostic radiographs, unless the film has been stored in accordance with the manufacturer's recommendations and a sample of the film passes a sensitometric test for normal ranges of base plus fog and speed.
 - g. Film developing solutions shall be prepared in accordance with the directions given by the manufacturer, and shall be maintained in strength by replenishment or renewal so that full development is accomplished within the time specified by the manufacturer.

History: Effective January 1, 2019 .

APPENDIX E

INFORMATION TO BE SUBMITTED BY PERSONS PROPOSING TO CONDUCT HEALING ARTS SCREENING

Persons requesting that the department approve a healing arts screening program shall submit the following information and evaluation:

1. Name and address of the applicant and, where applicable, the names and addresses of agents within this state.
2. Diseases or conditions for which the x-ray examinations are to be used in diagnoses.
3. A detailed description of the x-ray examinations proposed in the screening program.
4. Description of the population to be examined in the screening program, i.e., age, sex, physical condition, and other appropriate information.
5. An evaluation of any known alternate methods not involving ionizing radiation which could achieve the goals of the screening program and why these methods are not used instead of the x-ray examinations.
6. An evaluation by a qualified expert on the x-ray systems to be used in the screening program. The evaluation by the qualified expert shall show that such systems do satisfy all requirements of this article. The evaluation shall include a measurement of patient exposures from the x-ray examinations to be performed.
7. A description of the diagnostic x-ray quality control program.
8. A copy of the technique chart for the x-ray examination procedures to be used.
9. The qualifications of each individual who will be operating the x-ray systems.
10. The qualifications of the individual who will be supervising the operators of the x-ray systems. The extent of supervision and the method of work performance evaluation shall be specified.
11. The name and address of the individual who will interpret the radiographs.
12. A description of the procedures to be used in advising the individuals screened and their private practitioners of the healing arts of the results of the screening procedure and any further medical needs indicated.
13. A description of the procedures for the retention or disposition of the radiographs and other records pertaining to the x-ray examinations.
14. An indication of the frequency of screening and the duration of the entire screening program.

History: Effective January 1, 2019 .

APPENDIX F

GENERAL TRAINING REQUIREMENTS FOR ALL X-RAY OPERATORS

The department may use interview, observation or testing, or both, to determine compliance. The following are areas in which an individual shall have expertise for the competent operation of x-ray equipment:

1. Fundamentals of radiation safety.

a. Characteristics of x-radiation.

b. Units of radiation dose (mrem).

c. Hazards of exposure to radiation.

d. Levels of radiation from sources of radiation.

e. Methods of controlling radiation dose.

(1) Working time.

(2) Working distance.

(3) Shielding.

(4) Collimation.

(5) Filtration.

(6) Gonad shielding and other patient protection devices.

(7) Restriction of x-ray beam to the image receptor.

(8) Grid utilization.

(9) Utilization of mechanical immobilization device.

2. Familiarization with equipment.

a. Identification of controls.

b. Function of each control.

c. How to use a technique chart.

3. Film processing.

a. Film speed as related to patient exposure.

b. Film processing parameters.

c. Quality assurance program.

4. Emergency procedures. Termination of exposure in event of automatic timing device failure.

5. Proper use of personnel dosimetry.

a. Location of dosimeter.

| b. Interpretation of personnel monitoring reports.

| 6. Anatomy and positioning.

| a. Relevant human anatomy.

| b. Relevant human physiology.

| c. Radiographic positioning.

| 7. The requirements of pertinent federal and state rules.

| 8. The licensee's or registrant's written operating and emergency procedures.

| **History:** Effective January 1, 2019 .

APPENDIX G

The following are individuals that qualify for training exemptions, approved Allied Health professions which qualify for cross-training into diagnostic x-ray as a limited x-ray machine operator and individuals who may order diagnostic x-rays to be taken by a limited x-ray machine operator outside the scope of procedures in appendix I:

1. Individuals exempt from minimum training requirements in subparagraph b of paragraph 2 of subdivision a of subsection 1 of section 33.1-10-06-03.

a. Medical doctors.

b. Chiropractors.

c. Doctors of osteopathy.

d. Podiatrists.

2. Prerequisite qualification: Individuals who qualify for cross-training as a limited x-ray machine operator.

a. Nurse practitioner, registered nurse, licensed practical nurse.

b. Emergency medical technician paramedic.

c. Physical therapist, physical therapy assistant.

d. Occupational therapist, occupational therapy assistant.

e. Medical technologist, medical lab technician, clinical lab technician.

f. Physician assistant.

g. Orthopedic physician assistant.

3. Individuals who may order emergency x-ray examinations outside the scope of procedures in appendix I to be taken by limited x-ray machine operators:

a. Medical doctor.

b. Doctor of osteopathy.

c. Physician assistant.

d. Nurse practitioner.

e. Chiropractor.

History: Effective January 1, 2019 .

APPENDIX H

LIMITED X-RAY MACHINE OPERATOR TRAINING REQUIREMENTS

Students must meet the prerequisite requirements of item 1 of subparagraph b of paragraph 2 of subdivision a of subsection 1 of section 33.1-10-06-03 and complete the training requirements of this appendix.

Training requirements have been divided into two sections, didactic instruction and clinical experience/supervision. Upon completion of didactic training, the individual must complete the clinical experience requirements of either subdivision a or b of subsection 2 and demonstrate competence for examinations listed in appendix I. Records must be maintained to demonstrate compliance with these requirements.

1. Didactic instruction section: Individuals shall complete a minimum of eighty hours of didactic training at a single course providing the minimum hours of instruction in the subjects below. Correspondence coursework cannot exceed twenty percent of the eighty-hour course (sixteen hours maximum). The course content should approximate the outline below. The eighty-hour course is subject to department approval. Individuals must also complete the three-hour self study course designed by the state health department. An examination is required to demonstrate successful completion of a course.

- a. Basic X-Ray Physics 12 hrs.
 - General description of production of x-rays
 - Function of filtration and effects it has on x-ray beam
 - Collimation
 - Types and function of beam-limiting devices
 - Design, features, and function of x-ray tube

- b. Radiobiology 1 hr.
 - Effects of ionizing radiation to the human body
 - Factors that cause somatic and genetic damage

- c. Radiation Protection 6 hrs.
 - ALARA concept
 - Shielding materials
 - Radiation quantity and units of measurement
 - Basic interactions of x-ray with matter
 - Primary and secondary scatter
 - Importance of time, distance, shielding
 - Maximum permissible dose-occupational/public
 - Latency period
 - Patient protection

- | | | |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| d. | <u>Principles of Exposure</u> | 15 hrs. |
| | <ul style="list-style-type: none"> - <u>Factors that control and influence radiographic quality</u> - <u>Properties of x-rays</u> - <u>Size distortion caused by geometric parameters</u> - <u>Parameters which cause shape distortion</u> - <u>Technique factor selection</u> - <u>15% rule, mAs and kVp relationship</u> - <u>Grid-types, ratios, and how they affect image quality</u> - <u>Intensifying screens</u> - <u>X-ray film</u> - <u>Artifacts</u> - <u>Inverse square law</u> | |
| e. | <u>Darkroom Procedure and Processing</u> | 4 hrs. |
| | <ul style="list-style-type: none"> - <u>Film storage and handling</u> - <u>Film processing and troubleshooting</u> - <u>Design, features, and function of a processor</u> - <u>Silver recovery</u> - <u>Quality assurance/quality control</u> | |
| f. | <u>Anatomy and Positioning</u> | |
| | 1. <u>Chest</u> | 4 hrs. |
| | 2. <u>Abdomen</u> | 4 hrs. |
| | 3. <u>Extremity</u> | 8 hrs. |
| | 4. <u>Spine</u> | 8 hrs. |
| | 5. <u>Skull</u> | 8 hrs. |
| g. | <u>Pediatric</u> | 2 hrs. |
| h. | <u>Rules and Regulations</u> | 1 hr. |

2. Clinical experience/supervision section. Individuals must complete either a or b below. If the individual is unable to demonstrate clinical competence in a procedure due to a lack of opportunity, the student shall complete the three prerequisite examinations required by appendix J using simulation for subdivisions a through k of subsection 1 of appendix J. Final demonstration of competence in subdivisions a through s of subsection 1 of appendix J should be completed as soon as there is a patient requiring the procedure. No individual may perform an unsupervised procedure for which they have not successfully completed the final demonstration of competence.

- a. The individual must complete three months of clinical training during which time they may perform x-ray examinations only under direct supervision.
 - (1) Direct supervision and evaluation of competence shall be performed by a general diagnostic operator or a limited x-ray machine operator with two years' experience.
 - (2) The individual shall utilize proper procedure as indicated in appendix J.
 - (3) The individual shall be evaluated on procedure, performance, and competency on forms provided by the department for each of the examinations listed in appendix I; or

- b. Individuals must complete at least one hundred twenty hours of clinical training at a facility where there is routinely fifty or more limited diagnostic x-ray examinations performed per week. During this time they may perform x-ray examinations only under direct supervision. After completing the one hundred twenty hours of training, the individual must complete an additional three-month probationary training period as outlined in number 4 of this part.
 - (1) Direct supervision and evaluation of competence shall be performed by a general diagnostic operator or a limited x-ray machine operator with two years' experience.
 - (2) The individual shall utilize proper procedure as indicated in appendix J.
 - (3) The individual shall be evaluated on procedure, performance, and competency on forms provided by the department for each of the examinations listed in appendix I.
 - (4) Upon completion of one hundred twenty clinical hours and demonstration of competence in accordance with appendix J for limited x-ray machine operator examinations:
 - (a) Individuals must complete a three-month probationary training period during which time they may independently perform limited x-ray machine operator examinations for the procedures which they have successfully demonstrated competence.
 - (b) During the three-month probationary training, a general diagnostic operator, or a limited x-ray machine operator with two years' experience, or a radiologist must evaluate all films and conduct at least six hours of direct supervision on a weekly basis and give feedback on any needed improvements.
 - [1] All films, including repeat and waste films, must be kept for evaluation.
 - [2] Evaluation must be done on forms supplied by the department.

History: Effective January 1, 2019.

APPENDIX I

Specific examinations that are allowed in the scope of practice for limited x-ray machine operators.

<u>Chest:</u>	<u>PA, lateral, decubitus</u>
<u>Ribs:</u>	<u>AP, PA, obliques</u>
<u>Abdomen:</u>	<u>KUB, upright abdomen</u>
<u>Hand & fingers:</u>	<u>PA, lateral, oblique</u>
<u>Wrist:</u>	<u>PA, lateral, oblique</u>
<u>Forearm:</u>	<u>AP, lateral</u>
<u>Elbow:</u>	<u>AP, lateral</u>
<u>Humerus:</u>	<u>AP, lateral</u>
<u>Shoulder:</u>	<u>AP, internal & external rotation, y-view</u>
<u>Clavicle:</u>	<u>AP, AP axial</u>
<u>Pelvis:</u>	<u>AP</u>
<u>Hips:</u>	<u>AP, frog leg lateral, cross-table lateral</u>
<u>Femur:</u>	<u>AP, lateral</u>
<u>Knee:</u>	<u>AP, lateral, obliques</u>
<u>Patella:</u>	<u>AP, lateral, sunrise</u>
<u>Tibia-Fibula:</u>	<u>AP, lateral</u>
<u>Ankle:</u>	<u>AP, lateral, obliques</u>
<u>Calcaneous:</u>	<u>Plantodorsal, lateral</u>
<u>Foot & toes:</u>	<u>AP, lateral, obliques</u>
<u>Sinuses:</u>	<u>Water's, lateral</u>
<u>Skull:</u>	<u>AP/PA, lateral</u>
<u>Facial bones:</u>	<u>PA, lateral</u>
<u>Nasal bones:</u>	<u>Water's, lateral</u>
<u>C-spine:</u>	<u>AP, lateral, odontoid, (not trauma), swimmer's (not trauma)</u>
<u>T-spine:</u>	<u>AP, lateral, swimmer's (not trauma)</u>
<u>L-spine:</u>	<u>AP, lateral, L5-S1 lateral</u>

Any situation deemed an emergency and requiring a limited x-ray machine operator to conduct procedures not specifically listed above, requires a written order from an individual listed in part 3 of appendix G and direct supervision from the individual ordering the examination in accordance with item 1 of subparagraph c of paragraph 2 of subdivision a of subsection 1 of section 33.1-10-06-03.

History: Effective January 1, 2019 .

APPENDIX J

X-RAY PROCEDURE AND IMAGE COMPETENCY CRITERIA

An individual must perform at least three examinations prior to requesting a final competency evaluation for each of the limited scope examinations listed in appendix I. The three pre-evaluation examinations should be on actual patients but may be simulated if there is an insufficient number of patients requiring the procedure during the students clinical competency training period. The evaluations shall be documented on forms provided by the department. The final competency evaluation must be on an actual patient. To pass a final competency evaluation, the individual must receive an acceptable rating in each of the criteria listed below.

1. At a minimum, the following criteria must be evaluated during a procedure and image competency evaluation involving an actual patient. Simulated procedures need to evaluate only subdivisions a through k below:

- a. Select appropriate film size.
- b. Select appropriate technique.
- c. Use correct source-to-image distance.
- d. Establish proper direction of central ray.
- e. Execute proper patient position.
- f. Collimate if appropriate.
- g. Provide gonadal shielding if appropriate.
- h. Use correct film markers.
- i. Give proper patient instruction.
- j. Place patient information correctly on the film.
- k. Complete examination in an acceptable time limit.
- l. All anatomical parts included on the film.
- m. Correct positioning of anatomical parts.
- n. Appropriate contrast.
- o. Adequate density.
- p. Correct use of right and left markers.
- q. Proper accessory markers as needed.
- r. No visible motion.
- s. Patient information correct and clearly visible.

2. If the individual is unable to demonstrate clinical competence while completing the requirements for clinical supervision in either subdivision a or b of subsection 2 of appendix H due to a lack of opportunities to conduct certain procedures, the student shall complete the three prerequisite examinations using simulation for subdivisions a through k of subsection 1. Final demonstration of competence in subdivisions a through s of subsection 1 should be

completed as soon as there is a patient requiring the procedure. No individual may perform an unsupervised procedure for which they have not successfully completed the final demonstration of competence.

History: Effective January 1, 2019.

APPENDIX K

CONTINUING EDUCATION REQUIREMENTS

Continuing education units (CEUs) are required for all limited x-ray machine operators and general diagnostic operators as defined by subparagraphs a and b of paragraph 2 of subdivision a of subsection 1 of section 33.1-10-06-03 of the North Dakota radiological health rules. Continuing education unit requirements will be associated with a two-year cycle (biennium).

1. General diagnostic operators shall obtain a minimum of 24 CEUs per biennium.

2. Limited x-ray machine operators shall obtain a minimum of 12 CEUs per biennium.

3. Units from one biennium cannot be carried forward or applied to the following biennium.

4. Determining the beginning of a biennium.

a. For limited x-ray machine operators and general diagnostic operators not certified through an accrediting body, the biennium will begin January 1, 2009.

b. For general diagnostic operators certified through an accrediting body, the biennium will be defined by the registration requirements through their accrediting body and shall begin on the first due date following January 1, 2009.

5. Continuing education unit activities must be approved by an accrediting body.

History: Effective January 1, 2019 .

33.1-10-07.2-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 35

33.1-10-07.2-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 35.

10 Code of Federal Regulations 35.1, 35.2, 35.5, 35.6, 35.7, 35.10, 35.11, 35.12, 35.13, 35.14, 35.15, 35.18, 35.19, 35.24, 35.26, 35.27, 35.40, 35.41, 35.49, 35.50, 35.51, 35.55, 35.57, 35.59, 35.60, 35.61, 35.63, 35.65, 35.67, 35.69, 35.70, 35.75, 35.80, 35.92, 35.100, 35.190, 35.200, 35.204, 35.290, 35.300, 35.310, 35.315, 35.390, 35.392, 35.394, 35.396, 35.400, 35.404, 35.406, 35.410, 35.415, 35.432, 35.433, 35.457, 35.490, 35.491, 35.500, 35.590, 35.600, 35.604, 35.605, 35.610, 35.615, 35.630, 35.632, 35.633, 35.635, 35.642, 35.643, 35.645, 35.647, 35.652, 35.655, 35.657, 35.690, 35.1000, 35.2024, 35.2026, 35.2040, 35.2041, 35.2060, 35.2061, 35.2063, 35.2067, 35.2070, 35.2075, 35.2080, 35.2092, 35.2204, 35.2310, 35.2404, 35.2406, 35.2432, 35.2433, 35.2605, 35.2610, 35.2630, 35.2632, 35.2642, 35.2643, 35.2645, 35.2647, 35.2652, 35.2655, 35.3045, 35.3047, and 35.3067 are adopted by reference as they exist on January 1, 2010, with the following exceptions:

1. Not adopted by reference are 10 CFR 35.11(c)(1) and 35.13(a)(1).
2. Requirements in 10 Code of Federal Regulations part 35 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "NRC regional office", or "director, office of nuclear material safety and safeguards" appear in 10 Code of Federal Regulations part 35, substitute the words "department of environmental quality".
4. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. North Dakota state form number 8418, "application for radioactive material license", must be used instead of NRC form 313 as specified in 10 Code of Federal Regulations part 34.
6. For references to 10 Code of Federal Regulations parts 170 and 171, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-08 RADIATION SAFETY REQUIREMENTS FOR ANALYTICAL X-RAY EQUIPMENT

Section

- 33.1-10-08-01 Purpose and Scope
- 33.1-10-08-02 Definitions
- 33.1-10-08-03 Equipment Requirements
- 33.1-10-08-04 Area Requirements
- 33.1-10-08-05 Operating Requirements
- 33.1-10-08-06 Personnel Requirements

33.1-10-08-01. Purpose and scope.

This chapter provides special requirements for analytical x-ray equipment. The requirements of this chapter are in addition to, and not in substitution for, applicable requirements in other chapters of this article.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-08-02. Definitions.

As used in this chapter, the following definitions apply:

1. "Analytical x-ray equipment" means equipment used for x-ray diffraction or fluorescence analysis.
2. "Analytical x-ray system" means a group of components utilizing x-rays or gamma rays to determine the elemental composition or to examine the microstructure of materials.
3. "Fail-safe characteristics" means a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.
4. "Local components" means part of an analytical x-ray system and includes areas that are struck by x-rays, such as radiation source housings, port and shutter assemblies, collimators, sample holders, cameras, goniometers, detectors and shielding, but do not include power supplies, transformers, amplifiers, readout devices, and control panels.
5. "Normal operating procedures" means step-by-step instructions necessary to accomplish the analysis. These procedures must include sample insertion and manipulation, equipment alignment, routine maintenance by the registrant, and data recording procedures, which are related to radiation safety.
6. "Open-beam configuration" means an analytical x-ray system in which an individual could accidentally place some part of the individual's body in the primary beam path during normal operation.
7. "Primary beam" means ionizing radiation which passes through an aperture of the source housing by a direct path from the x-ray tube or a radioactive source located in the radiation source housing.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-08-03. Equipment requirements.

1. **Safety device.** A device which prevents the entry of any portion of an individual's body into the primary x-ray beam path or which causes the beam to be shut off upon entry into its path shall be provided on all open-beam configurations. A registrant may apply to the department for an exemption from the requirement of a safety device. Such application shall include:

- a. A description of the various safety devices that have been evaluated.
- b. The reason each of these devices cannot be used.
- c. A description of the alternative methods that will be employed to minimize the possibility of an accidental exposure, including procedures to assure that operators and others in the area will be informed of the absence of safety devices.

2. **Warning devices.**

- a. Open-beam configurations shall be provided with a readily discernible indication of:
 - (1) X-ray tube (ON-OFF) status located near the radiation source housing, if the primary beam is controlled in this manner.
 - (2) Shutter status (OPEN-CLOSED) located near each port on the radiation source housing, if the primary beam is controlled in this manner.
- b. An easily visible warning light labeled with the words "X-RAY ON", or word sharing a similar intent, must be located:
 - (1) Near any switch that energizes an x-ray tube and shall be illuminated only when the tube is energized.
 - (2) In the case of a radioactive source, near any switch that opens a housing shutter and must be illuminated only when the shutter is open.
- c. Warning devices shall be labeled so that their purpose is easily identified. On equipment installed after August 1, 1979, warning devices shall have fail-safe characteristics.

3. **Ports.** Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening.

4. **Labeling.** All analytical x-ray equipment shall be labeled with a readily discernible sign or signs bearing the radiation symbol and the words:

- a. "CAUTION - HIGH-INTENSITY X-RAY BEAM", or words having a similar intent, on the x-ray source housing; and
- b. "CAUTION RADIATION - THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED", or words having a similar intent, near any switch that energizes an x-ray tube if the radiation source is an x-ray tube; or
- c. "CAUTION - RADIOACTIVE MATERIAL", or words having a similar intent, on the source housing in accordance with chapter 33.1-10-04.2 if the radiation source is a radionuclide.

5. **Shutters.** On open-beam configurations installed after August 1, 1979, each port on the radiation source housing shall be equipped with a shutter that cannot be opened unless a collimator or a coupling has been connected to the port.

6. **Warning lights.**

- a. An easily visible warning light labeled with the words "X-RAY ON", or words having a similar intent, shall be located:
 - (1) Near any switch that energizes an x-ray tube and shall be illuminated only when the tube is energized; or
 - (2) In the case of a radioactive source, near any switch that opens a housing shutter, and shall be illuminated only when the shutter is open.
- b. On equipment installed after August 1, 1979, warning lights shall have fail-safe characteristics.

7. Radiation source housing. Each radiation source housing is subject to the following requirements:

- a. Each x-ray tube housing shall be equipped with an interlock that shuts off the tube if it is removed from the radiation source housing or if the housing is disassembled.
- b. Each radioactive source housing or port cover or each x-ray tube housing shall be so constructed that, with all shutters closed, the radiation measured at a distance of five centimeters from its surface is not capable of producing a dose in excess of twenty-five hundredths millisieverts [2.5 millirems] in one hour. For systems utilizing x-ray tubes, this limit shall be met at any specified tube rating.

8. Generator cabinet. Each x-ray generator shall be supplied with a protective cabinet which limits leakage radiation measured at a distance of five centimeters from its surface such that it is not capable of producing a dose in excess of two and one-half microsieverts [0.25 millirem] in one hour.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-08-04. Area requirements.

1. Radiation levels. The local components of an analytical x-ray system shall be located and arranged and shall include sufficient shielding or access control such that no radiation levels exist in any area surrounding the local component group which could result in a dose to an individual present therein in excess of the dose limits given in chapter 33.1-10-04.2. For systems utilizing x-ray tubes, these levels shall be met at any specified tube rating.

2. Surveys.

- a. Radiation surveys, as required by chapter 33.1-10-04.2, of all analytical x-ray systems sufficient to show compliance with subsection 1 shall be performed:
 - (1) Upon installation of the equipment, and at least once every twelve months thereafter.
 - (2) Following any change in the initial arrangement, number, or type of local components in the system.
 - (3) Following any maintenance requiring the disassembly or removal of a local component in the system.
 - (4) During the performance of maintenance and alignment procedures if the procedures require the presence of a primary x-ray beam when any local component in the system is disassembled or removed.

(5) Any time a visual inspection of the local components in the system reveals an abnormal condition.

(6) Whenever personnel monitoring devices show a significant increase over the previous monitoring period or the readings are approaching the limits specified in chapter 33.1-10-04.2.

b. Radiation survey measurements shall not be required if a registrant can demonstrate compliance with subsection 1 to the satisfaction of the department.

3. **Posting.** Each area or room containing analytical x-ray equipment shall be conspicuously posted with a sign or signs bearing the radiation symbol and the words "CAUTION - X-RAY EQUIPMENT", or words having a similar intent in accordance with chapter 33.1-10-04.2.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-08-05. Operating requirements.

1. **Procedures.** Normal operating procedures shall be written and available to all analytical x-ray equipment workers. No individual shall be permitted to operate analytical x-ray equipment in any manner other than that specified in the procedures unless such individual has obtained written approval of the radiation safety officer.

2. **Bypassing.** No individual shall bypass a safety device or interlock unless such individual has obtained the approval of the radiation safety officer. Such approval shall be for a specified period of time. When a safety device or interlock has been bypassed, a readily discernible sign bearing the words "SAFETY DEVICE NOT WORKING", or words having a similar intent, shall be placed on the radiation source housing.

3. **Repair or modification of x-ray tube systems.** Except as specified in subsection 2, no operation involving removal of covers, shielding materials, or tube housings or modifications to shutters, collimators, or beam stops shall be performed without ascertaining that the tube is off and will remain off until safe conditions have been restored. The main switch, rather than interlocks, shall be used for routine shutdown in preparation for repairs.

4. **Radioactive source replacement, testing, or repair.** Radioactive source housings shall be opened for source replacement, leak testing, or other maintenance or repair procedures only by individuals authorized to specifically conduct such procedures under a license issued by the United States nuclear regulatory commission, an agreement state, or a licensing state.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-08-06. Personnel requirements.

1. **Instruction.** No individual shall be permitted to operate or maintain analytical x-ray equipment unless such individual has received instruction in and demonstrated competence as to all of the following:

a. Identification of radiation hazards associated with the use of the equipment.

b. Significance of the various radiation warning, safety devices, and interlocks incorporated into the equipment, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in such cases.

c. Proper operating procedures for the equipment.

d. Recognition of symptoms of an acute localized exposure.

e. Proper procedures for reporting an actual or suspected exposure.

2. Personnel monitoring.

a. Finger or wrist dosimetric devices shall be provided to and shall be used by:

(1) Analytical x-ray equipment workers using systems having an open-beam configuration and not equipped with a safety device.

(2) Personnel maintaining analytical x-ray equipment if the maintenance procedures require the presence of a primary x-ray beam when any local component in the analytical x-ray system is disassembled or removed.

b. Reported dose values shall not be used for the purpose of determining compliance with chapter 33.1-10-04.2 unless evaluated by a qualified expert.

History: Effective January 1, 2019.

General Authority: NDCC 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-09

RADIATION SAFETY REQUIREMENTS FOR PARTICLE ACCELERATORS

Section

33.1-10-09-01 Purpose and Scope

33.1-10-09-02 Registration Procedure

33.1-10-09-03 Radiation Safety Requirements for the Use of Particle Accelerators

33.1-10-09-01. Purpose and scope.

1. This chapter establishes procedures for the registration and the use of particle accelerators.
2. In addition to the requirements of this chapter, all registrants are subject to the requirements of chapters 33.1-10-01, 33.1-10-02, 33.1-10-04.2, and 33.1-10-10.1. Registrants engaged in industrial radiographic operations are subject to the requirements of chapter 33.1-10-05.1 and registrants engaged in the healing arts are subject to the requirements of chapter 33.1-10-06 or 33.1-10-07.2, or both. Registrants whose operations result in the production of radioactive material are subject to the requirements of chapter 33.1-10-03.1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-09-02. Registration procedure.

1. **Registration requirements.** No person shall receive, possess, use, transfer, own, or acquire a particle accelerator except as authorized in a registration issued pursuant to chapter 33.1-10-02.
2. **General requirements for the issuance of a registration for particle accelerators.** (Refer to chapter 33.1-10-02.) In addition to the requirements of chapter 33.1-10-02, a registration application for use of a particle accelerator will be approved only if the department determines all of the following:
 - a. The applicant is qualified by reason of training and experience to use the accelerator in question for the purpose requested in accordance with this chapter and chapters 33.1-10-04.2 and 33.1-10-10.1 in such a manner as to minimize danger to public health and safety or property.
 - b. The applicant's proposed or existing equipment, facilities, operating, and emergency procedures are adequate to protect health and minimize danger to public health and safety or property.
 - c. The issuance of the registration will not be inimical to the health and safety of the public, and the applicant satisfies any applicable special requirement in subsection 3.
 - d. The applicant has appointed a radiation safety officer.
 - e. The applicant or the applicant's staff has substantial experience in the use of particle accelerators and training sufficient for application to its intended uses.
 - f. The applicant has established a radiation safety committee to approve, in advance, proposals for uses of particle accelerators, whenever deemed necessary by the department.
 - g. The applicant has an adequate training program for particle accelerator operators.

3. **Human use of particle accelerators.** In addition to the requirements set forth in chapter 33.1-10-02, a registration for use of a particle accelerator in the healing arts will be issued only if all of the following are met:

- a. Whenever deemed necessary by the department, the applicant has appointed a medical committee of at least three members to evaluate all proposals for research, diagnostic, and therapeutic use of a particle accelerator. Membership of the committee should include physicians expert in internal medicine, hematology, therapeutic radiology, and a person experienced in depth dose calculations and protection against radiation.
- b. The individuals designated on the application as the users have substantial training and experience in deep therapy techniques or in the use of particle accelerators to treat humans.
- c. The individual designated on the application as the user must be a physician.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-09-03. Radiation safety requirements for the use of particle accelerators.

1. General requirements.

- a. This section establishes radiation safety requirements for the use of particle accelerators. The requirements of this section are in addition to, and not in substitution for, other applicable requirements of the chapter.
- b. The registrant shall be responsible for assuring that all requirements of this chapter are met.

2. Limitations.

- a. No registrant shall permit any individual to act as an operator of a particle accelerator until such individual has:
 - (1) Been instructed in radiation safety and shall have demonstrated an understanding thereof.
 - (2) Received copies of and instruction in this chapter and the applicable requirements of chapters 33.1-10-04.2 and 33.1-10-10.1, pertinent registration conditions and the registrant's operating and emergency procedures, and shall have demonstrated understanding thereof.
 - (3) Demonstrated competence to use the particle accelerator, related equipment, and survey instruments which will be employed.
- b. The radiation safety committee or the radiation safety officer shall have the authority to terminate the operations at a particle accelerator facility if such action is deemed necessary to protect health and minimize danger to public health and safety or property.

3. Shielding and safety design requirements.

- a. A qualified expert, specifically approved by the department, shall be consulted in the design of a particle accelerator installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation.

- b. Each particle accelerator installation shall be provided with such primary or secondary barriers as are necessary to assure compliance with chapter 33.1-10-04.2.

4. Particle accelerator controls and interlock systems.

- a. Instrumentation, readouts, and controls on the particle accelerator control console shall be clearly identified and easily discernible.
- b. Each entrance into a target room or other high radiation area shall be provided with a safety interlock that shuts down the machine under conditions of barrier penetration.
- c. Each safety interlock shall be on a circuit which shall allow its operation independently of all other safety interlocks.
- d. All safety interlocks shall be designed so that any defect or component failure in the interlock system prevents operation of the accelerator.
- e. When a safety interlock system has been tripped, it shall only be possible to resume operation of the accelerator by manually resetting controls at the position where the interlock has been tripped, and lastly at the main control console.
- f. A scram button or other emergency power cutoff switch shall be located and easily identifiable in all high radiation areas. Such a cutoff switch shall include a manual reset so that the accelerator cannot be restarted from the accelerator control console without resetting the cutoff switch.

5. Warning devices.

- a. All locations designated as high radiation areas, and entrances to such locations, shall be equipped with easily observable warning lights that operate when, and only when, radiation is being produced.
- b. Except in facilities designed for human exposure, each high radiation area shall have an audible warning device which shall be activated for fifteen seconds prior to the possible creation of such high radiation area. Such warning device shall be clearly discernible in all high radiation areas and all areas immediately adjacent to the high radiation areas.
- c. Barriers, temporary or otherwise, and pathways leading to high radiation areas shall be posted in accordance with chapter 33.1-10-04.2.

6. Operating procedures.

- a. Particle accelerators, when not in operation, shall be secured to prevent unauthorized use.
- b. The safety interlock system shall not be used to turn off the accelerator beam except in an emergency.
- c. All safety and warning devices, including interlocks, shall be checked for proper operability at intervals not to exceed three months. Results of such tests shall be maintained at the accelerator facility for inspection by the department.
- d. Electrical circuit diagrams of the accelerator and the associated interlock systems shall be kept current and maintained for inspection by the department and shall be available to the operator at each accelerator facility.
- e. If, for any reason, it is necessary to intentionally bypass a safety interlock or interlocks, such action shall be:

- (1) Authorized by the radiation safety committee or radiation safety officer.
- (2) Recorded in a permanent log and a notice posted at the accelerator control console.
- (3) Terminated as soon as possible.
- f. A copy of the current operating and the emergency procedures shall be maintained at the accelerator control panel.

7. Radiation monitoring requirements.

- a. There shall be available at each particle accelerator facility, appropriate portable monitoring equipment which is operable and has been appropriately calibrated for the radiations being produced at the facility. Such equipment shall be tested for proper operation daily and calibrated at intervals not to exceed one year, and after each servicing and repair.
- b. A radiation protection survey shall be performed and documented by a qualified expert, specifically approved by the department, when changes have been made in shielding, operation, equipment, or occupancy of adjacent areas.
- c. Radiation levels in all high radiation areas shall be continuously monitored. The monitoring devices shall be electrically independent of the accelerator control and safety interlock systems and capable of providing a readout at the control panel.
- d. All area monitors shall be calibrated at intervals not to exceed one year and after each servicing and repair.
- e. Whenever applicable, periodic surveys shall be made to determine the amount of airborne particulate radioactivity present.
- f. Whenever applicable, periodic wipe test surveys shall be made to determine the degree of contamination.
- g. All surveys shall be made in accordance with the written procedures established by a qualified expert, specifically approved by the department, or the radiation safety officer of the particle accelerator facility.
- h. Records of all radiation protection surveys, calibration results, instrumentation tests and wipe test results must be maintained at the accelerator facility for inspection by the department.

8. Ventilation systems.

- a. Means shall be provided to ensure that personnel entering any area where airborne radioactivity may be produced will not be exposed to airborne radioactive material in excess of those limits specified in chapter 33.1-10-04.2, appendix B.
- b. A registrant, as required by chapter 33.1-10-04.2, shall not vent, release, or otherwise discharge airborne radioactive material to an unrestricted area which exceeds the limits specified in chapter 33.1-10-04.2, appendix B, table II, except as authorized pursuant to chapter 33.1-10-04.2. For purposes of this subdivision, concentrations may be averaged over a period not greater than one year. Every reasonable effort should be made to maintain releases of radioactive material to unrestricted areas, as far below these limits as is reasonably achievable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-10-10

[Reserved]

CHAPTER 33.1-10-10.1
NOTICES, INSTRUCTIONS, AND REPORTS TO WORKERS - INSPECTIONS

Section

33.1-10-10.1-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 19

33.1-10-10.1-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 19.

10 Code of Federal Regulations 19.1, 19.2, 19.3, 19.5, 19.11, 19.12, 19.13, 19.14, 19.15, 19.16, 19.17, 19.18, 19.20, 19.31, and 19.32 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference is 10 Code of Federal Regulations 19.14(a).
2. All of the requirements in chapter 33.1-10-10.1 apply to both licensees and registrants. A reference in 10 Code of Federal Regulations part 19 to "license" includes "registration", a reference to "licensee" includes "registrant", a reference to "licensed" includes "registered", and a reference to "licensed radioactive material" includes "registered source of radiation". "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to article 33.1-10 and North Dakota Century Code chapter 23.1-03. "Registration" means the notification of the department of environmental quality of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", "administrator of the appropriate commission regional office", "administrator of the appropriate regional office", "regional office administrator", "executive director for operations", "regional administrator of the appropriate United States nuclear regulatory commission regional office", or "agency" appear in 10 Code of Federal Regulations part 19, substitute the words "department of environmental quality".
4. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. State form number 8414, "notice to employees", must be posted in place of United States nuclear regulatory commission form 3 that is specified in 10 Code of Federal Regulations part 19.
6. Where 10 Code of Federal Regulations part 19 specifies contacting the United States nuclear regulatory commission, contact the department of environmental quality.

<u>33.1-10-11-05</u>	<u>Failure by Applicant or Licensee to Pay Prescribed Fees</u>

33.1-10-11-01. Purpose.

This chapter establishes fees charged for the issuance of licenses and registration certificates by the department. This chapter also establishes fees charged to recover costs associated with nonroutine regulatory inspections and surveys of licensees and registrants.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-11-02. Scope.

This chapter applies to a person who is an applicant for, or a holder of, a radioactive material license or a registration certificate issued by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-11-03. Exemptions.

No application fees, license fees, amendment fees, renewal fees, or special project fees, shall be required for:

1. A license authorizing the use of source material as shielding only in devices and containers provided; however, that all other licensed byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material in the device or container will be subject to the fees prescribed in appendix A of this chapter.
2. Nonprofit educational institutions are exempt from the fees prescribed in appendices A and B of this chapter. This exemption does not apply to those radioactive material licenses or machine registration certificates which authorize any of the following:
 - a. Human use.
 - b. Remunerated services to other persons.
 - c. Distribution of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material, or products containing byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material.
 - d. Activities performed under a government contract.

3. The department may, upon application by an interested person, or upon its own initiative, grant such exemptions from the requirements of this chapter as it determines are authorized by law and are otherwise in the public interest.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-11-04. Payment of fees.

The following fees are nonrefundable:

1. **License and registration fees.** The appropriate licensing or registration fee shall accompany the application for licensure or registration when filed with the department. For new radioactive material licenses, the application fee is equal to the appropriate annual fee.
2. **Amendment fees.** The amendment fee given in appendix A category 24 shall accompany the application for amendment when filed with the department.
3. **Reciprocity fee.** The appropriate reciprocity fee shall accompany the written notification as required in chapters 33.1-10-03.1 and 33.1-10-02.
4. **Special project fees.** Fees for special projects are payable upon notification by the department when the review of the project is completed. Special projects mean those projects submitted to the department for review and for which specific fees are not prescribed in this chapter. Special project fees will be based upon the current professional staff hourly rate (thirty-three percent of the current nuclear regulatory commission rate listed in 10 CFR 170).
5. **Annual fees.** Annual fees are required to be paid by all radioactive material licensees no later than January first of each year the license is active, except that the annual fee due on January first of the year following the issuance of a new license shall be prorated to the number of months the license was in effect the first calendar year (example: for a new license issued in May the annual fee due January first would be seven-twelfths [June-December] of the annual fee listed in appendix A).
6. **Inspection and survey fees.** Fees for regulatory inspections and surveys of North Dakota licensees are included in the registration or annual fees for each registration or license type. Nonroutine inspections will require the nonroutine inspection fee to be paid upon notification by the department when the inspection has been completed.
7. **Annual fees for small entities.** If a licensee qualifies as a small entity and provides the department with the proper certification, the small entity fee of sixty percent of the applicable annual fee listed in appendix A shall be paid.
 - a. "Small business" means a business entity, including its affiliates, which:
 - (1) Is independently owned and operated; and
 - (2) Employs fewer than twenty-five full-time employees or has gross annual sales of less than two million five hundred thousand dollars;
 - b. "Small entity" includes small business, small organization, and small political subdivision;
 - c. "Small organization" means any not-for-profit enterprise that is independently owned and operated and is not dominant in its field;
 - d. "Small political subdivision" means a political subdivision with a population of less than five thousand;

e. A licensee who seeks to establish status as a small entity for purposes of paying the fees required under this chapter shall file a certification statement with the department. The licensee shall:

(1) Certify, on the business's letterhead, that the business meets the conditions in this subsection;

(2) Sign the certification as the chief executive officer of the business or as an official designee; and

(3) Have the certification notarized.

f. A licensee who seeks to qualify as a small entity shall submit the certification with the reduced annual fee payment; and

g. For purposes of this chapter, the licensee shall submit a new certification with its annual fee payment each year.

8. **Method of payment.** Fee payments shall be by check, draft, or money order made payable to the department of environmental quality.

9. **Submittal of application and fee payment.** The application for licensure or registration shall be accompanied by the fee payment and shall be submitted to:

Department of Environmental Quality
Division of Air Quality
918 East Divide Avenue, Second Floor
Bismarck, ND 58501-1947

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

33.1-10-11-05. Failure by applicant or licensee to pay prescribed fees.

1. In any case where the department finds that an applicant or a licensee has failed to pay a prescribed fee required in this chapter, the department will not process any application and may suspend or revoke any license or approval involved or may issue an order with respect to licensed activities as the department determines to be appropriate or necessary in order to carry out the provisions of this chapter and of the North Dakota Century Code.

2. In any case where the department does not receive the prescribed fee by the stated due date, an additional fee shall be levied as stated in category 27 of appendix A.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

Appendix A - Schedule of Fees for 2016 Radioactive Material Licenses

Applicants for radioactive material licenses and other regulatory services and holders of radioactive material licenses shall pay the following fees.

<u>Category</u>	<u>Description</u>	<u>Base Fees (USD)</u>		<u>Additional Charges</u>
<u>1. SPECIAL NUCLEAR MATERIAL</u>				
<u>A</u>	<u>Licenses for possession and use of 200 grams or more of plutonium in unsealed form or 350 grams or more of contained U-235 in unsealed form or 200 grams or more of U-233 in unsealed form. This includes applications to terminate licenses as well as licenses authorizing possession only.</u>	<u>Nonroutine inspection</u>	<u>Full cost</u>	<u>Items 23 and/or 27 as applicable</u>
		<u>Annual fee</u>	<u>\$221,640</u>	
<u>B</u>	<u>Licenses for receipt and storage of spent fuel at an independent spent fuel storage installation (regulated by NRC)</u>	<u>Nonroutine inspection</u>	<u>N/A</u>	<u>Items 23 and/or 27 as applicable</u>
		<u>Annual fee</u>	<u>N/A</u>	
<u>C</u>	<u>Licenses for possession and use of special nuclear material in sealed sources contained in devices used in industrial measuring systems, including x-ray fluorescence analyzers</u>	<u>Nonroutine inspection</u>	<u>\$1,370</u>	<u>Items 23 and/or 27 as applicable</u>
		<u>Annual fee</u>	<u>\$1,910</u>	
<u>D</u>	<u>All other special nuclear material licenses except licenses authorizing special nuclear material in unsealed form in combination that would constitute a critical quantity</u>	<u>Nonroutine inspection</u>	<u>\$1,370</u>	<u>Items 23 and/or 27 as applicable</u>
		<u>Annual fee</u>	<u>\$2,830</u>	

Category	Description		Base Fees (USD)		Additional Charges
2. SOURCE MATERIAL					
A	Licenses for possession and use of source material in recovery operations, such as milling, in situ leaching, heap-leaching, refining uranium mill concentrates to uranium hexafluoride, or buying stations, ion exchange facilities, and in processing of ores containing source material for extraction of metals other than uranium or thorium, including licenses authorizing the possession of byproduct waste material (tailings) from source material recovery operations, as well as licenses authorizing the possession and maintenance of a facility in a standby mode		Nonroutine inspection	Full cost	Items 23 and/or 27 as applicable
			Annual fee	\$1,152,420	
B	Licenses for possession, use and or installation of source material for shielding only		Nonroutine inspection	\$410	Items 23 and/or 27 as applicable
			Annual fee	\$670	
C	All other source material licenses		Nonroutine inspection	\$1,530	Items 23 and/or 27 as applicable
			Annual fee	\$4,730	
3. BYPRODUCT, NATURALLY OCCURRING OR ACCELERATOR-PRODUCED RADIOACTIVE MATERIAL					

Category	Description		Base Fees (USD)		Additional Charges
A	<u>Licenses of broad scope for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material issued pursuant to chapter 33.1-10-03.1 for processing or manufacturing of items containing byproduct material or naturally occurring or accelerator-produced radioactive material for commercial distribution</u>		<u>Nonroutine inspection</u>	\$3,260	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	\$13,490	
B	<u>Other licenses for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material issued pursuant to chapter 33.1-10-03.1 for processing or manufacturing of items containing byproduct material or naturally occurring or accelerator-produced radioactive material for commercial distribution</u>		<u>Nonroutine inspection</u>	\$2,030	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	\$6,210	

Category	Description		Base Fees (USD)		Additional Charges
<u>C</u>	<u>Licenses issued pursuant to chapter 33.1-10-03.1 authorizing the processing or manufacturing and distribution or redistribution of radiopharmaceuticals, generators, reagent kits and/or sources and devices containing byproduct material or naturally occurring or accelerator-produced radioactive material</u>		<u>Nonroutine inspection</u>	<u>\$1,940</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$13,490</u>	
<u>D</u>	<u>Licenses and approvals issued pursuant to chapter 33.1-10-03.1 authorizing distribution or redistribution of radiopharmaceuticals, generators, reagent kits and/or sources or devices not involving processing of byproduct material or naturally occurring or accelerator-produced radioactive material</u>		<u>Nonroutine inspection</u>	<u>\$1,220</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$5,390</u>	
<u>E</u>	<u>Licenses for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material in sealed sources for irradiation of materials in which the source is not removed from its shield (self-shielded units)</u>		<u>Nonroutine inspection</u>	<u>\$720</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$2,440</u>	

Category	Description		Base Fees (USD)		Additional Charges
F	Licenses for possession and use of less than 370 terabecquerels [10,000 curies] of byproduct material or naturally occurring or accelerator-produced radioactive material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes		Nonroutine inspection	\$790	Items 23 and/or 27 as applicable
			Annual fee	\$2,370	
G	Licenses for possession and use of 370 terabecquerels [10,000 curies] or more of byproduct material or naturally occurring or accelerator-produced radioactive material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes		Nonroutine inspection	\$1,400	Items 23 and/or 27 as applicable
			Annual fee	\$21,610	

Category	Description		Base Fees (USD)		Additional Charges
H	<u>Licenses issued pursuant to chapter 33.1-10-03.1 to distribute items containing byproduct material or naturally occurring or accelerator-produced radioactive material that require device review to persons exempt from the licensing requirements of chapter 33.1-10-03.1, except specific licenses authorizing redistribution of items that have been authorized for distribution to persons exempt from the licenses of chapter 33.1-10-03.1</u>		<u>Nonroutine inspection</u>	\$1,070	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	\$7,020	

Category	Description		Base Fees (USD)		Additional Charges
	<u>Licenses issued pursuant to chapter 33.1-10-03.1 to distribute items containing byproduct material or naturally occurring or accelerator-produced radioactive material, or quantities of byproduct material or naturally occurring or accelerator-produced radioactive material that do not require device evaluation to persons exempt from the licensing requirements of chapter 33.1-10-03.1, except for specific licenses authorizing redistribution of items that have been authorized for distribution to persons exempt from the licensing requirements of chapter 33.1-10-03.1</u>		<u>Nonroutine inspection</u>	<u>\$720</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$9,740</u>	

Category	Description		Base Fees (USD)		Additional Charges
K	<u>Licenses issued pursuant to chapter 33.1-10-03.1 to distribute items containing byproduct material or naturally occurring or accelerator-produced radioactive material, or quantities of byproduct material or naturally occurring or accelerator-produced radioactive material that do not require sealed source and/or device review to persons generally licensed under this chapter, except specific licenses authorizing for redistribution of items that have been authorized for distribution to persons generally licensed under this chapter</u>		<u>Nonroutine inspection</u> <u>Annual fee</u>	<u>\$1,060</u> <u>\$2,700</u>	<u>Items 23 and/or 27 as applicable</u>
L	<u>Licenses of broad scope for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material issued pursuant to chapter 33.1-10-03.1 for research and development that do not authorize commercial distribution</u>		<u>Nonroutine inspection</u> <u>Annual fee</u>	<u>\$1,220</u> <u>\$4,050</u>	<u>Items 23 and/or 27 as applicable</u>

Category	Description		Base Fees (USD)		Additional Charges
M	Other licenses for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material issued pursuant to chapter 33.1-10-03.1 for research and development that do not authorize commercial distribution		Nonroutine inspection	\$930	Items 23 and/or 30 as applicable
			Annual fee	\$3,780	
N	Licenses that authorize services for other licensees, except (1) licenses that authorize calibration or leak testing services only are subject to the fees specified in fee Categories 15 and 16, and (2) licenses that authorize waste disposal services are subject to the fees specified in fee Categories 4A, 4B, and 4C.		Nonroutine inspection	\$1,060	Items 23 and/or 27 as applicable
			Annual fee	\$6,110	
O	Licenses for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material issued pursuant to chapter 33.1-10-05.1 for industrial radiographic operations		Nonroutine inspection	\$2,550	Items 23 and/or 27 as applicable
			Annual fee	\$8,250	

<u>Category</u>	<u>Description</u>		<u>Base Fees (USD)</u>		<u>Additional Charges</u>
P	<u>All other specific byproduct material or naturally occurring or accelerator-produced radioactive material licenses, except as described in item 1 below or listed in Categories 4A through 9</u>		<u>Nonroutine inspection</u>	<u>\$1,830</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$2,370</u>	
	<u>Portable x-ray fluorescence analyzers only</u>		<u>Nonroutine inspection</u>	<u>\$300</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$590</u>	
Q.	<u>Registration of a device(s) generally licensed under chapter 33.1-10-03.1</u>		<u>Nonroutine inspection</u>	<u>\$670</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$1,370</u>	
	<u>(Each address or location where the device(s) are used or stored represents a separate general license and requires a separate registration and fee.)</u>				
<u>4. WASTE DISPOSAL AND PROCESSING</u>					

Category	Description		Base Fees (USD)		Additional Charges
A	<u>Licenses specifically authorizing the receipt of waste byproduct material, naturally occurring, technologically enhanced, or accelerator-produced radioactive material, source material, or special nuclear material from other persons for the purpose of contingency storage or commercial land disposal by the licensee; or licenses authorizing contingency storage of low-level radioactive waste at the site of nuclear power reactors; or licenses for receipt of waste from other persons for incineration or other treatment, packaging of resulting waste and residues, and transfer of packages to another person authorized to receive or dispose of waste material</u>		<u>Nonroutine inspection</u>	<u>Full cost</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$134,720</u>	

Category	Description	Base Fees (USD)		Additional Charges
B	Licenses specifically authorizing the receipt of waste byproduct material, naturally occurring, technologically enhanced, or accelerator-produced radioactive material, source material, or special nuclear material from other persons for the purpose of packaging or repackaging the material. The licensee will dispose of the material by transfer to another person authorized to receive or dispose of the material.	Nonroutine inspection	\$2,140	Items 23 and/or 27 as applicable
		Annual fee	\$16,180	
C	Licenses specifically authorizing the receipt of prepackaged waste byproduct material, naturally occurring, technologically enhanced, or accelerator-produced radioactive material, source material, or special nuclear material from other persons. The licensee will dispose of the material by transfer to another person authorized to receive or dispose of the material.	Nonroutine inspection	\$2,140	Items 23 and/or 27 as applicable
		Annual fee	\$7,550	
5. WELL LOGGING				

Category	Description		Base Fees (USD)		Additional Charges
A	Licenses for possession and use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, and/or special nuclear material for well logging, well surveys, and tracer studies other than field flooding tracer studies		Nonroutine inspection	\$1,220	Items 23 and/or 27 as applicable
			Annual fee	\$6,750	
B	Licenses for possession and use of byproduct material or naturally occurring or accelerator-produced radioactive material, for field flooding tracer studies		Nonroutine inspection	Full cost	Items 23 and/or 27 as applicable
			Annual fee	\$15,640	
6. NUCLEAR LAUNDRY					
A	Licenses for commercial collection and laundry of items contaminated with byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material		Nonroutine inspection	\$1,940	Items 23 and/or 27 as applicable
			Annual fee	\$7,290	
7. HUMAN USE OF BYPRODUCT, NATURALLY OCCURRING OR ACCELERATOR-PRODUCED, SOURCE, OR SPECIAL NUCLEAR MATERIAL					

Category	Description		Base Fees (USD)		Additional Charges
A	Licenses issued pursuant to chapter 33.1-10-03.1 for human use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material in sealed sources contained in teletherapy devices		Nonroutine inspection	\$1,940	Items 23 and/or 27 as applicable
			Annual fee	\$16,770	
B	Licenses of broad scope issued to medical institutions or two or more physicians pursuant to chapter 33.1-10-03.1 authorizing research and development, including human use of byproduct material, except licenses for byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material in sealed sources contained in teletherapy devices		Nonroutine inspection	\$1,830	Items 23 and/or 27 as applicable
			Annual fee	\$17,550	

Category	Description	Base Fees (USD)		Additional Charges
C	Other licenses issued pursuant to chapter 33.1-10-03.1 for human use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, and/or special nuclear material, except licenses for byproduct material, source material, naturally occurring or accelerator-produced radioactive material, and special nuclear material in sealed sources contained in teletherapy devices	Nonroutine inspection	\$1,530	Items 23 and/or 27 as applicable
		Annual fee	\$5,950	
8. VETERINARY MEDICINE				
A	Licenses issued for the veterinary use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material in animals for diagnostic procedures only	Nonroutine inspection	\$1,220	Items 23 and/or 27 as applicable
		Annual fee	\$3,530	
B	Licenses issued for the veterinary use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material in animals for diagnostic and/or therapeutic procedures	Nonroutine inspection	\$1,220	Items 23 and/or 27 as applicable
		Annual fee	\$4,050	

Category	Description		Base Fees (USD)		Additional Charges
9.	<u>Civil defense licenses for possession and use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material for civil defense activities</u>		<u>Nonroutine inspection</u>	<u>\$720</u> <u>\$1,910</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>		
10. DEVICE, PRODUCT OR SEALED SOURCE SAFETY EVALUATION (Regulated by NRC)					
11.	<u>Licenses for possession and use of byproduct material, naturally occurring or accelerator-produced radioactive material, source material, or special nuclear material for civil defense activities</u>		<u>Nonroutine inspection</u>	<u>\$720</u> <u>\$1,910</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>		
12. SPENT FUEL STORAGE (Regulated by NRC)					
13. IMPORT AND EXPORT LICENSES (Regulated by NRC)					
14.	<u>Reciprocity: Other agreement state and/or NRC licensees who conduct activities in North Dakota under the reciprocity provisions of chapters 33.1-10-03 and 33.1-10-19</u>		<u>Annual fee</u>	<u>Same as annual fee for license type</u>	<u>Items 23 and/or 27 as applicable</u>
	<u>(Application fee is due three working days prior to entering the state.)</u>		<u>Nonroutine inspection</u>	<u>Same as inspection fee for license type</u>	
15. SERVICES FOR OTHER LICENSED ENTITIES					
A	<u>Leak test and analysis services (for other licensed entities) only</u>		<u>Nonroutine inspection</u>	<u>\$930</u> <u>\$1,760</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>		

Category	Description		Base Fees (USD)		Additional Charges
B	<u>Instrument calibration services (for other licensed entities) only</u>		<u>Nonroutine inspection</u>	<u>\$930</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$1,760</u>	
16.	<u>Combination leak test and analysis services and instrument calibration services (for other licensed entities) only</u>		<u>Nonroutine inspection</u>	<u>\$1,070</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$2,370</u>	
17.	<u>Calibration and/or reference sources (not for providing service to other licensed entities) only</u>		<u>Nonroutine inspection</u>	<u>\$670</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$1,220</u>	
18.	<u>Storage of radioactive material only</u>		<u>Nonroutine inspection</u>	<u>\$930</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$1,630</u>	
19.	<u>Providing deliberate operations to reduce or remove residual radioactivity from equipment, facilities, and land owned, possessed, or controlled by other persons to a level that permits release of equipment, facilities, and land for unrestricted use and/or termination of a license rendered from a fixed facility or a mobile unit</u>		<u>Nonroutine inspection</u>	<u>\$1,370</u>	<u>Items 23 and/or 27 as applicable</u>
			<u>Annual fee</u>	<u>\$21,610</u>	
20.	<u>Radiation training courses involving the use of licensed material by the instructor and/or the participants</u>		<u>Annual fee</u>	<u>\$540</u>	<u>Item 27 as applicable</u>
21.	<u>Demonstration and sales of devices containing radioactive materials</u>		<u>Annual fee</u>	<u>\$540</u>	<u>Item 27 as applicable</u>

<u>Category</u>	<u>Description</u>		<u>Base Fees (USD)</u>		<u>Additional Charges</u>
<u>22.</u>	<u>Installation, removal, repair, and servicing of devices containing radioactive materials</u>		<u>Annual fee</u>	<u>\$2,070</u>	<u>Item 27 as applicable</u>
<u>23.</u>	<u>Multiple offices: Add the following fees per additional office location (This does not apply to additional locations in Category 21 above.)</u>		<u>Annual fee</u>	<u>25 percent of base fee for category type per location</u>	<u>Item 27 as applicable</u>
<u>24.</u>	<u>Administrative fee for all license amendments</u>		<u>Amendment</u>	<u>\$280</u>	<u>Item 27 as applicable</u>
<u>25.</u>	<u>Inspection of radioactive materials package shipments to low-level radioactive waste disposal facility</u>		<u>Inspection</u>	<u>Full cost</u>	<u>Item 27 as applicable</u>
<u>26.</u>	<u>Certificate - In vitro testing with radioactive material under general license</u>		<u>Certificate (valid for three years)</u>	<u>\$330</u>	<u>Item 27 as applicable</u>
<u>27.</u>	<u>Late payment of any fees described in items 1 through 26 above</u>		<u>From payment due date</u>	<u>\$1</u>	<u>An additional fee per day after 30 days late</u>

Note 1: All fee amounts are shown in United States dollars (USD).

Note 2: The fees established under this appendix may be adjusted on an annual basis to account for any increase in the consumer price index published by the department of labor, as of the close of the twelve-month period ending on August thirty-first of each calendar year. Fee adjustments will be rounded off to the nearest dollar amount (example: for a value of 0.50 or greater, the number would be rounded up; for a value of 0.49 or less, the number would be rounded down).

Note 3: A current list of fees established under this appendix will be maintained on the department of environmental quality website.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-09, 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

Appendix B

2016 Schedule of Fees for Registration Certifications and Inspection

Applications for registration of radiation machines and other regulatory services shall pay the following fees for each machine that they possess and use at their facilities. The fees cover a three-year registration period and the renewal fee is the amount listed.

<u>Registration Category</u>	<u>Fee/Machine (in U.S. Dollars)</u>
<u>Dentistry</u>	<u>\$230</u>
<u>Medical:</u>	
<u>A. Radiographic machine (including computer tomography)</u>	<u>\$350</u>
<u>B. Fluoroscopic machine</u>	<u>\$530</u>
<u>C. Combined radiographic-fluoroscopic</u>	<u>\$700</u>
<u>D. (1) Therapeutic: Linear accelerator (less than 10 MeV)</u>	<u>\$530</u>
<u>(2) Therapeutic: Linear accelerator (greater than 10 MeV)</u>	<u>\$850</u>
<u>E. Superficial x-ray</u>	<u>\$260</u>
<u>Chiropractic</u>	<u>\$320</u>
<u>Podiatry</u>	<u>\$260</u>
<u>Veterinary medicine</u>	<u>\$230</u>
<u>Industrial radiography</u>	<u>\$850</u>
<u>Accelerators (industrial and research)</u>	<u>\$530</u>
<u>Education and research</u>	<u>\$530</u>
	<u>Annual Service Fees</u>
<u>Other Registration Fees and Services</u>	<u>(in U.S. Dollars)</u>
<u>X-ray services and installers</u>	<u>\$530</u>
<u>Radiation training courses</u>	<u>\$350</u>
<u>X-ray sales and demonstrations</u>	<u>\$530</u>
<u>Combined sales and service (assembler)</u>	<u>\$700</u>
<u>Dosimeterists and physicists</u>	<u>\$350</u>
<u>Shielding evaluations (routine)</u>	<u>\$530 per evaluation</u>
<u>Shielding evaluations (nonroutine)</u>	<u>Full cost</u>
<u>Reciprocity (x-ray producing machines)</u>	<u>\$530 per year per machine</u>

Note 1: All fee amounts are shown in United States dollars (USD).

Note 2: The fees established under this appendix may be adjusted on an annual basis to account for any increase in the consumer price index published by the department of labor, as of the close of the twelve-month period ending on August thirty-first of each calendar year. Fee adjustments will be rounded off to the nearest dollar amount (example: for a value of 0.50 or greater, the number would be rounded up; for a value of 0.49 or less, the number would be rounded down).

Note 3: A current list of fees established under this appendix will be maintained on the department of environmental quality website.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-09, 28-32-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-03-09; S.L. 2017, ch. 199, § 18

[Reserved]

CHAPTER 33.1-10-12.1
LICENSES AND RADIATION SAFETY REQUIREMENTS FOR WELL LOGGING

Section

33.1-10-12.1-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 39

33.1-10-12.1-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 39.

10 Code of Federal Regulations 39.1, 39.2, 39.11, 39.13, 39.15, 39.17, 39.31, 39.33, 39.35, 39.37, 39.39, 39.41, 39.43, 39.45, 39.47, 39.49, 39.51, 39.53, 39.55, 39.61, 39.63, 39.65, 39.67, 39.69, 39.71, 39.73, 39.75, 39.77, and 39.91 are adopted by reference as they exist on October 1, 2015, with the following exceptions:

1. All of the requirements in chapter 33.1-10-12.1 apply to both licensees and registrants. A reference in 10 Code of Federal Regulations part 39 to "license" includes "registration", a reference to "licensee" includes "registrant", a reference to "licensed" includes "registered", a reference to "licensed material" includes "registered source of radiation", and a reference to "licensed radioactive materials" includes "registered source of radiation". "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to article 33.1-10 and North Dakota Century Code chapter 23.1-03. "Registration" means the notification of the department of environmental quality of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
2. Where the words "NRC", "commission", or "NRC regional office" appear in 10 Code of Federal Regulations part 39, substitute the words "department of environmental quality".
3. Requirements in 10 Code of Federal Regulations part 39 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
4. North Dakota state form number 8418, "application for radioactive material license", must be used instead of NRC form 313 as specified in 10 Code of Federal Regulations part 39.
5. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-13

[Reserved]

CHAPTER 33.1-10-13.1
PACKAGING AND TRANSPORTATION OF RADIOACTIVE MATERIAL

Section

33.1-10-13.1-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 71

33.1-10-13.1-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 71.

10 Code of Federal Regulations 71.0, 71.3, 71.4, 71.5, 71.7, 71.8, 71.9, 71.10, 71.12, 71.13, 71.14, 71.15, 71.17, 71.21, 71.22, 71.23, 71.47, 71.81, 71.83, 71.85, 71.87, 71.88, 71.89, 71.91, 71.93, 71.95, 71.97, 71.101, 71.103, 71.105, 71.106, 71.127, 71.129, 71.131, 71.133, 71.135, and 71.137 and appendix A to part 71 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference are 10 Code of Federal Regulations 71.0(d), 71.14(b), 71.85(a)-(c), 71.91(b), 71.101(c)(2), (d), and (e).
2. Requirements in 10 Code of Federal Regulations part 71 that apply to "licensed material" or "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", or "administrator of the appropriate regional office" appear in 10 Code of Federal Regulations part 71, substitute the words "department of environmental quality" except when used in 10 Code of Federal Regulations 71.5(b), 71.10, 71.17(c)(3) and (e), 71.85(c), 71.88(a)(4), 71.93(c), 71.95, 71.97(c), and (c)(3)(iii), and (f).
4. The terms "certificate of compliance, compliance holder or applicant" used in 10 Code of Federal Regulations 71.91(c) and (d), 71.101(a)-(c), 71.103(a), and 71.135 apply only to the United States nuclear regulatory commission (NRC) as the NRC is the sole authority for issuing a package's certificate of compliance.
5. 10 Code of Federal Regulations 71.9 employee protection also applies to violations of North Dakota Century Code chapters 23.1-02 and 23.1-03.
6. State form number 8414, "notice to employees", must be posted instead of United States nuclear regulatory commission form 3 that is specified in 10 Code of Federal Regulations part 71.

History: Effective January 1, 2019.

33.1-10-15-01. Scope.

1. This chapter establishes requirements, for which the registrant is responsible, for use of therapeutic radiation machines. The provisions of this chapter are in addition to, and not in substitution for, other applicable provisions of these regulations.
2. The use of therapeutic radiation machines shall be by, or under the supervision of, a licensed practitioner of the healing arts who meets the training and experience criteria established by subsection 3 of section 33.1-10-15-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-02. Definitions.

As used in this chapter, the following definitions apply:

1. "Absorbed dose (D)" means the mean energy imparted by ionizing radiation to matter. Absorbed dose is determined as the quotient of dE by dM, where dE is the mean energy imparted by ionizing radiation to matter of mass dM. The SI unit of absorbed dose is joule per kilogram and the special name of the unit of absorbed dose is the gray (Gy). The previously used special unit of absorbed dose (rad) is being replaced by the gray.
2. "Absorbed dose rate" means absorbed dose per unit time, for machines with timers, or dose monitor unit per unit time for linear accelerators.
3. "Accelerator-produced material" means any material made radioactive by exposing it in a particle accelerator.
4. "Accessible surface" means surface of equipment or of an equipment part that can be touched by persons without the use of a tool.
5. "Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).
6. "Added filtration" means any filtration which is in addition to the inherent filtration.
7. "Air kerma (K)" means the kinetic energy released in air by ionizing radiation. Kerma is determined as the quotient of dE by dM, where dE is the sum of the initial kinetic energies of

all the charged ionizing particles liberated by uncharged ionizing particles in air of mass dM . The SI unit of air kerma is joule per kilogram and the special name for the unit of kerma is the gray (Gy).

8. "Barrier" (see "protective barrier").
9. "Beam axis" means the axis of rotation of the beam-limiting device from the source through the centers of the x-ray field.
10. "Beam-limiting device" means a device which provides a means to restrict the dimensions of the useful beam.
11. "Beam-monitoring system" means a system designed and installed in the radiation head to detect and measure the radiation present in the useful beam.
12. "Beam-scattering foil" means a thin piece of material (usually metallic) placed in the beam to scatter a beam of electrons in order to provide a more uniform electron distribution in the useful beam.
13. "Bent-beam linear accelerator" means a linear accelerator geometry in which the accelerated electron beam must change direction by passing through a bending magnet.
14. "Brachytherapy" means a method of radiation therapy in which sealed sources are utilized to deliver a radiation dose at a distance of up to a few centimeters, by surface, intracavitary, or interstitial application.
15. "Calibration" means the determination of:
 - a. The response or reading of an instrument relative to a series of known radiation values over the range of the instrument; or
 - b. The strength of a source of radiation relative to a standard.
16. "CFR" means the Code of Federal Regulations.
17. "Changeable filters" means any filter, exclusive of inherent filtration, which can be removed from the useful beam through any electronic, mechanical, or physical process.
18. "Contact therapy system" means an x-ray system used for therapy with the x-ray tube port placed in contact with or within five centimeters of the surface being treated.
19. "Department" means the department of environmental quality.
20. "Detector" (see "radiation detector").
21. "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, "radiation dose" is an equivalent term.
22. "Dose equivalent H_T " means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.
23. "Dose monitor unit (DMU)" means a unit response from the beam-monitoring system from which the absorbed dose can be calculated.

24. "Electron applicator" means any accessory device utilized during electron therapy which determines the extent of the treatment area at a given distance from the source.
25. "Entrance" means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed or registered radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.
26. "Exposure" means being exposed to ionizing radiation or to radioactive material.
27. "External beam radiation therapy" means therapeutic irradiation in which the source of radiation is at a distance from the body.
28. "Field-flattening filter" means a filter used to homogenize the absorbed dose rate over the radiation field.
29. "Filter" means material placed in the useful beam to absorb preferentially selected radiations.
30. "Gantry" means that part of a radiation therapy system supporting and allowing movements of the radiation head about a center of rotation.
31. "Gray (Gy)" means the SI unit of absorbed dose, kerma, and specific energy imparted equal to one joule per kilogram. The previous unit of absorbed dose (rad) is being replaced by the gray. [1 Gy = 100 rad].
32. "Half-value layer (HVL)" means the thickness of a specified material which attenuates x-radiation or gamma radiation to an extent such that the air kerma rate, exposure rate, or absorbed dose rate is reduced to one-half of the value measured without the material at the same point.
33. "Healing arts" means diagnostic or healing treatment of human and animal maladies, including the following which are duly licensed by the state of North Dakota for the lawful practice of: medicine and its associated specialties, dentistry, veterinary medicine, osteopathy, chiropractic, and podiatry.
34. "Individual" means any human being.
35. "Inspection" means an official examination or observation, including tests, surveys, and monitoring to determine compliance with rules, regulations, orders, requirements, and conditions of the department.
36. "Interlock" means a device preventing the start or continued operation of equipment unless certain predetermined conditions prevail.
37. "Interruption of irradiation" means the stopping of irradiation with the possibility of continuing irradiation without resetting of operating conditions at the control panel.
38. "Irradiation" means the exposure of a living being or matter to ionizing radiation.
39. "Isocenter" means the center of the sphere through which the useful beam axis passes while the gantry moves through its full range of motions.
40. "Kilovolt (kV) [kilo electron volt (keV)]" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one thousand volts in a vacuum. [Note: Current convention is to use kV for photons and keV for electrons.]
41. "Lead equivalent" means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

42. "Leakage radiation" means radiation emanating from the diagnostic or therapeutic source assembly except for:
- a. The useful beam; and
 - b. Radiation produced when the exposure switch or timer is not activated.
43. "Light field" means the area illuminated by light, simulating the radiation field.
44. "mA" means milliampere.
45. "Medical use" means the intentional internal or external administration of radiation or radioactive material or the radiation therefrom to patients or human research subjects under the supervision of an authorized user as defined in chapter 33.1-10-07.2-01 [10 CFR 35.2].
46. "Megavolt (MV) [megaelectron volt (MeV)]" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one million volts in a vacuum. [Note: Current convention is to use MV for photons and MeV for electrons.]
47. "Monitor unit (MU)" (see "dose monitor unit").
48. "Monitoring" means the measurement of radiation and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, "radiation monitoring" and "radiation protection monitoring" are equivalent terms.
49. "Moving beam radiation therapy" means radiation therapy with any planned displacement of radiation field or patient relative to each other, or with any planned change of absorbed dose distribution. It includes arc, skip, conformal, intensity modulation, and rotational therapy.
50. "Nominal treatment distance" means:
- a. For electron irradiation, the distance from the scattering foil, virtual source, or exit window of the electron beam to the entrance surface of the irradiated object along the central axis of the useful beam.
 - b. For x-ray irradiation, the virtual source or target to isocenter distance along the central axis of the useful beam. For non-isocentric equipment, this distance shall be that specified by the manufacturer.
51. "Patient" means an individual or animal subjected to radiation for the purposes of diagnosis or treatment.
52. "Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.
53. "Periodic quality assurance check" means a procedure which is performed to ensure that a previous calibration continues to be valid.
54. "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof, and any legal successor, representative, agent, or agency of the foregoing, other than the commission, or any successor thereto and other than federal government agencies licensed by the commission or any successor thereto.
55. "Phantom" means a volume of material behaving in a manner similar to tissue with respect to absorption and scattering of the ionizing radiation in question.

56. "Physician" means a medical doctor or doctor of osteopathy licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to prescribe drugs in the practice of medicine.
57. "Practical range of electrons" corresponds to classical electron range where the only remaining contribution to dose is from bremsstrahlung x-rays. A further explanation may be found in "clinical electron beam dosimetry: report of AAPM radiation therapy committee task group 25" [Medical Physics 18(1): 73-109, Jan./Feb. 1991] and ICRU report 35, "radiation dosimetry: electron beams with energies between 1 and 50 MeV", international commission on radiation units and measurements, September 15, 1984.
58. "Primary dose monitoring system" means a system which will monitor the useful beam during irradiation and which will terminate irradiation when a preselected number of dose monitor units have been delivered.
59. "Primary protective barrier" (see "protective barrier").
60. "Protective barrier" means a barrier of radiation absorbing materials used to reduce radiation exposure. The types of protective barriers are as follows:
- "Primary protective barrier" means the material, excluding filters, placed in the useful beam.
 - "Secondary protective barrier" means the material which attenuates stray radiation.
61. "Qualified expert" means an individual having the knowledge, training, and experience to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs, for example, individuals certified in the appropriate field by the American board of medical physics, or those having equivalent qualifications. With reference to the calibration of radiation therapy equipment, "qualified expert" means an individual having, in addition to the above qualifications, training and experience in the clinical applications of radiation physics to radiation therapy, for example, individuals certified in therapeutic radiological physics or x-ray and radium physics by the American board of radiology, or those having equivalent qualifications.
62. "Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of one hundred erg per gram or one one-hundredth joule per kilogram (0.01 gray).
63. "Radiation" means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. For purposes of these rules, ionizing radiation is an equivalent term. Radiation, as used in these rules, does not include nonionizing radiation, such as radiowaves or microwaves, visible, infrared, or ultraviolet light.
64. "Radiation detector" means a device which in the presence of radiation provides a signal or other indication suitable for use in measuring one or more quantities of incident radiation.
65. "Radiation exposure" means the quotient of dQ by dm where " dQ " is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass " dm " are completely stopped in air. The SI unit of radiation exposure is the coulomb per kilogram (C/kg). (See section 33.1-10-01-14 units of exposure, dose, and activity for the special unit equivalent "roentgen" (R).)
66. "Radiation exposure rate" means the radiation exposure per unit of time, such as R/min, mR/h, etc.

67. "Radiation field" (see "useful beam").
68. "Radiation head" means the structure from which the useful beam emerges.
69. "Radiation machine" means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.
70. "Radiation therapy physicist" means an individual qualified in accordance with subsection 4 of section 33.1-10-15-03.
71. "Radiation therapy simulation system" means a radiographic or fluoroscopic x-ray system intended for localizing the volume to be exposed during radiation therapy and confirming the position and size of the therapeutic irradiation field.
72. "Redundant beam-monitoring system" means a combination of two dose monitoring systems in which each system is designed to terminate irradiation in accordance with a preselected number of dose monitor units.
73. "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to this article and North Dakota Century Code chapter 23.1-03.
74. "Registration" means the notification of the department of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
75. "Rem" (see "sievert").
76. "Restricted area" means an area, access to which is limited by the licensee or registrant for the purpose of protecting individuals against undue risks from exposure to sources of radiation or radioactive material. "Restricted area" does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.
77. "Scattered radiation" means radiation that, during passage through matter, has been deviated in direction.
78. "Secondary dose-monitoring system" means a system which will terminate irradiation in the event of failure of the primary dose-monitoring system.
79. "Secondary protective barrier" (see "protective barrier").
80. "Shadow tray" means a device attached to the radiation head to support auxiliary beam-blocking material.
81. "Shutter" means a device attached to the tube housing assembly which can intercept the entire cross-sectional area of the useful beam and which has a lead equivalency not less than that of the tube housing assembly.
82. "Sievert (Sv)" means the SI unit of dose equivalent. The unit of dose equivalent is the joule per kilogram. The previous unit of dose equivalent (rem) is being replaced by the sievert. [1 Sv = 100 rem].
83. "Source" means the region or material, or both, from which the radiation emanates.
84. "Source-skin distance (SSD)" (see "target-skin distance").
85. "Stationary beam radiation therapy" means radiation therapy without displacement of one or more mechanical axis relative to the patient during irradiation.

86. "Stray radiation" means the sum of leakage and scattered radiation.
87. "Target" means that part of an x-ray tube or accelerator onto which a beam of accelerated particles is directed to produce ionizing radiation or other particles.
88. "Target-skin distance (TSD)" means the distance measured along the beam axis from the center of the front surface of the x-ray target or electron virtual source, or both, to the surface of the irradiated object or patient.
89. "Tenth-value layer (TVL)" means the thickness of a specified material which attenuates x-radiation or gamma radiation to an extent such that the air kerma rate, exposure rate, or absorbed dose rate is reduced to one-tenth of the value measured without the material at the same point.
90. "Termination of irradiation" means the stopping of irradiation in a fashion which will not permit continuance of irradiation without the resetting of operating conditions at the control panel.
91. "Test" means a method for determining the characteristics or condition of sources of radiation or components thereof. "Test" may also mean the process of verifying compliance with this article.
92. "Therapeutic radiation machine" means x-ray or electron-producing equipment designed and used for external beam radiation therapy.
93. "Tube" means an x-ray tube, unless otherwise specified.
94. "Tube housing assembly" means the tube housing with tube installed. It includes high-voltage or filament transformers, or both, and other appropriate elements when such are contained within the tube housing.
95. "Unrestricted area" means an area, access to which is neither limited nor controlled by the licensee or registrant.
96. "Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam-limiting device when the exposure controls are in a mode to cause the system to produce radiation.
97. "Virtual source" means a point from which radiation appears to originate.
98. "Wedge filter" means an added filter effecting continuous progressive attenuation on all or a part of the useful beam.
99. "X-ray tube" means any electron tube which is designed for conversion of electrical energy into x-ray energy.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-03. General administration requirements.

1. Administrative controls. The registrant shall be responsible for directing the operation of the therapeutic radiation machines that have been registered with the department. The registrant or the registrant's agent shall ensure that the requirements of chapter 33.1-10-15 are met in the operation of the therapeutic radiation machines.
2. A therapeutic radiation machine that does not meet the provisions of these regulations shall not be used for irradiation of patients.

3. Training for external beam radiation therapy authorized users. The registrant for any therapeutic radiation machine subject to section 33.1-10-15-06 or 33.1-10-15-07 shall require the authorized user to be a physician who:

a. Is certified in:

- (1) Radiology or therapeutic radiology by the American board of radiology;
- (2) Radiation oncology by the American osteopathic board of radiology;
- (3) Radiology, with specialization in radiotherapy, as a British "fellow of the faculty of radiology" or "fellow of the royal college of radiology"; or
- (4) Therapeutic radiology by the Canadian royal college of physicians and surgeons; or

b. Is in the active practice of therapeutic radiology, and has completed two hundred hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy unit, five hundred hours of supervised work experience, and a minimum of three years of supervised clinical experience.

(1) To satisfy the requirement for instruction, the classroom and laboratory training shall include:

- (a) Radiation physics and instrumentation;
- (b) Radiation protection;
- (c) Mathematics pertaining to the use and measurement of ionization radiation; and
- (d) Radiation biology.

(2) To satisfy the requirement for supervised work experience, training shall be under the supervision of an authorized user and shall include:

- (a) Review of the full calibration measurements and periodic quality assurance checks;
- (b) Evaluation of prepared treatment plans and calculation of treatment times and patient treatment settings;
- (c) Using administrative controls to prevent misadministrations;
- (d) Implementing emergency procedures to be followed in the event of the abnormal operation of an external beam radiation therapy unit or console; and
- (e) Checking and using radiation survey meters.

(3) To satisfy the requirement for a period of supervised clinical experience, training shall include one year in a formal training program approved by the residency review committee for radiology of the accreditation council for graduate medical education or the committee on postdoctoral training of the American osteopathic association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user. The supervised clinical experience shall include:

- (a) Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and any limitations or contraindications;
 - (b) Selecting proper dose and how it is to be administered;
 - (c) Calculating the external beam radiation therapy doses and collaborating with the authorized user in the review of patients' progress and consideration of the need to modify originally prescribed doses or treatment plans, or both, as warranted by patients' reaction to radiation; and
 - (d) Postadministration followup and review of case histories.
- c. Notwithstanding the requirements of subdivision a or b, the registrant for any therapeutic radiation machine subject to section 33.1-10-15-06 may also submit the training of the prospective authorized user physician for department review on a case-by-case basis.
- d. A physician shall not act as an authorized user for any therapeutic radiation machine until such time as said physician's training has been reviewed and approved by the facility and is determined to meet the requirements.
- 4. Training for radiation therapy physicist. The registrant for any therapeutic radiation machine subject to section 33.1-10-15-06 or 33.1-10-15-07 shall require the radiation therapy physicist to:
 - a. Be registered with the department, under the provisions of chapter 33.1-10-02, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units; and
 - b. Be certified or eligible for certification by the American board of radiology in:
 - (1) Therapeutic radiological physics;
 - (2) Roentgen-ray and gamma-ray physics;
 - (3) X-ray and radium physics; or
 - (4) Radiological physics;
 - c. Be certified or eligible for certification by the American board of medical physics in radiation oncology physics;
 - d. Be certified or eligible for certification by the Canadian college of medical physics; or
 - e. Hold a master's or doctor's degree in physics, biophysics, radiological physics, or health physics, and have completed one year of full-time training in therapeutic radiological physics and also one year of full-time work experience under the supervision of a radiation therapy physicist at a medical institution. To meet this requirement, the individual shall have performed the tasks listed in subsection 2 of section 33.1-10-15-04, subsection 16 of section 33.1-10-15-06, subsection 20 of section 33.1-10-15-07, subsection 17 of section 33.1-10-15-06, and subsection 21 of section 33.1-10-15-07 under the supervision of a radiation therapy physicist during the year of work experience.

5. Qualifications of operators.

- a. Individuals who will be operating a therapeutic radiation machine for medical use shall be American registry of radiologic technologists (ARRT) registered radiation therapy technologists. Individuals who are not ARRT registered radiation therapy technologists

shall submit evidence that they have satisfactorily completed a radiation therapy technologist training program that complies with the requirements of the joint review committee on education in radiologic technology.

b. The names and training of all personnel currently operating a therapeutic radiation machine shall be kept on file at the facility. Information on former operators shall be retained for a period of at least two years beyond the last date they were authorized to operate a therapeutic radiation machine at that facility.

6. Written safety procedures and rules shall be developed by a radiation therapy physicist and shall be available in the control area of a therapeutic radiation machine, including any restrictions required for the safe operation of the particular therapeutic radiation machine. The operator shall be able to demonstrate familiarity with these rules.

7. Individuals shall not be exposed to the useful beam except for medical therapy purposes and unless such exposure has been ordered in writing by a licensed practitioner of the healing arts who meets the requirements of subsection 3. This provision specifically prohibits deliberate exposure of an individual for training, demonstration, or other non-healing-arts purposes.

8. Visiting authorized user. Notwithstanding the provisions of subsection 7, a registrant may permit any physician to act as a visiting authorized user under the term of the registrant's certificate of registration for up to sixty days per calendar year under the following conditions:

a. The visiting authorized user has the prior written permission of the registrant's management and, if the use occurs on behalf of an institution, the institution's radiation safety committee;

b. The visiting authorized user meets the requirements established for authorized users in subdivisions a and b of subsection 3; and

c. The registrant maintains copies of all records specified by this subsection for five years from the date of the last visit.

9. All individuals associated with the operation of a therapeutic radiation machine shall be instructed in and shall comply with the provisions of the registrant's quality management program. In addition to the requirements of this chapter, these individuals are also subject to the requirements of chapter 33.1-10-04.2-01 [10 CFR 20.1203 and 10 CFR 20.1502].

10. Information and maintenance record and associated information. The registrant shall maintain the following information in a separate file or package for each therapeutic radiation machine, for inspection by the department:

a. Report of acceptance testing;

b. Records of all surveys, calibrations, and periodic quality assurance checks of the therapeutic radiation machine required by this chapter, as well as the names of persons who performed such activities;

c. Records of maintenance or modifications, or both, performed on the therapeutic radiation machine on or after January 1, 2011, as well as the names of persons who performed such services; and

d. Signature of person authorizing the return of therapeutic radiation machine to clinical use after service, repair, or upgrade.

11. Records retention. All records required by this chapter shall be retained until disposal is authorized by the department unless another retention period is specifically authorized in this

chapter. All required records shall be retained in an active file from at least the time of generation until the next department inspection. Any required record generated prior to the last department inspection may be microfilmed or otherwise archived as long as a complete copy of said record can be retrieved until such time as the department authorizes final disposal.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-04. General technical requirements.

1. Protection surveys.

a. The registrant shall ensure that radiation protection surveys of all new facilities, and existing facilities not previously surveyed, are performed with an operable radiation measurement survey instrument calibrated in accordance with section 33.1-10-15-08. The radiation protection survey shall be performed by, or under the direction of, a radiation therapy physicist or a qualified expert and shall verify that, with the therapeutic radiation machine in a "BEAM-ON" condition, with the largest clinically available treatment field and with a scattering phantom in the useful beam of radiation:

(1) Radiation levels in restricted areas are not likely to cause personnel exposures in excess of the limits specified in chapter 33.1-10-04.2-01 [10 CFR 20.1201]; and

(2) Radiation levels in unrestricted areas do not exceed the limits specified in chapter 33.1-10-04.2-01 [10 CFR 20.1301].

b. In addition to the requirements of subdivision a, a radiation protection survey shall also be performed prior to any subsequent medical use and:

(1) After making any change in the treatment room shielding;

(2) After making any change in the location of the therapeutic radiation machine within the treatment room;

(3) After relocating the therapeutic radiation machine; or

(4) Before using the therapeutic radiation machine in a manner that could result in increased radiation levels in areas outside the external beam radiation therapy treatment room.

c. The survey record shall indicate all instances where the facility, in the opinion of the radiation therapy physicist or a qualified expert, is in violation of applicable regulations. The survey record shall also include the date of the measurements, the reason the survey is required, the manufacturer's name, model number and serial number of the therapeutic radiation machine, the instruments used to measure radiation levels, a plan of the areas surrounding the treatment room that were surveyed, the measured dose rate at several points in each area expressed in microsieverts or millirems per hour, the calculated maximum level of radiation over a period of one week for each restricted and unrestricted area, and the signature of the individual responsible for conducting the survey;

d. If the results of the surveys required by subdivision a or b indicate any radiation levels in excess of the respective limit specified in subdivision a, the registrant shall lock the control in the "OFF" position and not use the unit;

(1) Except as may be necessary to repair, replace, or test the therapeutic radiation machine, the therapeutic radiation machine shielding, or the treatment room shielding; or

(2) Until the registrant has received a specific exemption from the department.

2. Modification of radiation therapy unit or room before beginning a treatment program. If the survey required by subsection 1 indicates that an individual in an unrestricted area may be exposed to levels of radiation greater than those permitted by chapter 33.1-10-04.2-01 [10 CFR 20.1301], before beginning the treatment program the registrant shall:

a. Either equip the unit with beam direction interlocks or add additional radiation shielding to ensure compliance with chapter 33.1-10-04.2-01 [10 CFR 20.1301];

b. Perform the survey required by subsection 1 again; and

c. Include in the report required by subsection 4 the results of the initial survey, a description of the modification made to comply with subdivision a, and the results of the second survey; or

d. Request and receive a registration amendment under chapter 33.1-10-04.2-01 [10 CFR 20.1301] that authorizes radiation levels in unrestricted areas greater than those permitted by chapter 33.1-10-04.2-01 [10 CFR 20.1301(a) and 10 CFR 20.1301(b)].

3. Dosimetry equipment.

a. The registrant shall have a calibrated dosimetry system available for use. The system shall have been calibrated by the national institute for standards and technology (NIST) or by an American association of physicists in medicine (AAPM) accredited dosimetry calibration laboratory (ADCL). The calibration shall have been performed within the previous twenty-four months and after any servicing that may have affected system calibration. An independent survey shall be conducted by a qualified expert or radiation therapy physicist other than the person performing the original survey prior to the equipment being used except as described in subdivision d of subsection 1.

(1) For beams with energies greater than one million volts (1 Mv) or one million electron volts (1 MeV), the dosimetry system shall have been calibrated for cobalt-60; or

(2) For beams with energies equal to or less than one million volts (1 Mv) or one million electron volts (1 MeV), the dosimetry system shall have been calibrated at an energy appropriate for the radiation being measured;

b. The registrant shall have available for use a dosimetry system for quality assurance check measurements. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with subdivision a. This comparison shall have been performed within the previous twelve months and after each servicing that may have affected system calibration. The quality assurance check system may be the same system used to meet the requirement in subdivision a; and

c. The registrant shall maintain a record of each dosimetry system calibration, intercomparison, and comparison for the duration of the registration. For each calibration, intercomparison, or comparison, the record shall include the date; the model numbers and serial numbers of the instruments that were calibrated, intercompared, or compared as required by subdivisions a and b; the correction factors that were determined; the names of the individuals who performed the calibration, intercomparison, or comparison; and evidence that the intercomparison was performed by, or under the direct supervision and in the physical presence of, a radiation therapy physicist.

4. Reports of external beam radiation therapy surveys and measurements. The registrant for any therapeutic radiation machine subject to section 33.1-10-15-06 or 33.1-10-15-07 shall furnish a copy of the records required in subsections 1 and 2 to the department within thirty days following completion of the action that initiated the record requirement.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-05. Quality management program.

The facility shall implement a quality management program. The facility may use the quality management programs found in either appendix B or C.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-06. Therapeutic radiation machines of less than five hundred kilovolts.

1. Leakage radiation. When the x-ray tube is operated at its maximum rated tube current for the maximum kilovolts, the leakage air kerma rate shall not exceed the value specified at the distance specified for that classification of therapeutic radiation machine:

- a. Five to fifty kilovolts systems. The leakage air kerma rate measured at any position five centimeters from the tube housing assembly shall not exceed one milligray (100 mrad) in any one hour.
- b. Greater than fifty and less than five hundred kilovolts systems. The leakage air kerma rate measured at a distance of one meter from the target in any direction shall not exceed one centigray (1 rad) in any one hour. This air kerma rate measurement may be averaged over areas no larger than one hundred square centimeters. In addition, the air kerma rate at a distance of five centimeters from the surface of the tube housing assembly shall not exceed thirty centigray (30 rad) per hour.
- c. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in subdivisions a and b for the specified operating conditions. Records on leakage radiation measurements shall be maintained at the installation for inspection by the department.

2. Permanent beam-limiting devices. Permanent diaphragms or cones used for limiting the useful beam shall provide at least the same degree of attenuation as required for the tube housing assembly.

3. Adjustable or removable beam-limiting devices.

- a. All adjustable or removable beam-limiting devices, diaphragms, cones, or blocks shall not transmit more than five percent of the useful beam for the most penetrating beam used; and
- b. When adjustable beam-limiting devices are used, the position and shape of the radiation field shall be indicated by a light beam.

4. Filter system. The filter system shall be so designed that:

- a. Filters cannot be accidentally displaced at any possible tube orientation;
- b. An interlock system prevents irradiation if the proper filter is not in place;

- c. The air kerma rate escaping from the filter slot shall not exceed one centigray (1 rad) per hour at one meter under any operating conditions; and
- d. Each filter shall be marked as to its material of construction and its thickness. For wedge filters, the nominal wedge angle shall appear on the wedge or wedge tray, if permanently mounted to the tray.

5. Tube immobilization.

- a. The x-ray tube shall be so mounted that it cannot accidentally turn or slide with respect to the housing aperture; and
- b. The tube housing assembly shall be capable of being immobilized for stationary portal treatments.

6. Source marking. The tube housing assembly shall be so marked that it is possible to determine the location of the source to within five millimeters, and such marking shall be readily accessible for use during calibration procedures.

7. Beam block. Contact therapy tube housing assemblies shall have a removable shield of material, equivalent in attenuation to five-tenths millimeters of lead at one hundred kilovolts, which can be positioned over the entire useful beam exit port during periods when the beam is not in use.

8. Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a preset time interval.

- a. A timer with a display shall be provided at the treatment control panel. The timer shall have a preset time selector and an elapsed time or time remaining indicator;
- b. The timer shall be a cumulative timer that activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;
- c. The timer shall terminate irradiation when a preselected time has elapsed, if any dose-monitoring system present has not previously terminated irradiation;
- d. The timer shall permit accurate presetting and determination of exposure times as short as one second;
- e. The timer shall not permit an exposure if set at zero;
- f. The timer shall not activate until the shutter is opened when irradiation is controlled by a shutter mechanism unless calibration includes a timer error correction to compensate for mechanical lag; and
- g. Timer shall be accurate to within one percent of the selected value or one second, whichever is greater.

9. Control panel functions. The control panel, in addition to the displays required by other provisions in this section, shall have:

- a. An indication of whether electrical power is available at the control panel and if activation of the x-ray tube is possible;
- b. An indication of whether x-rays are being produced;

- c. A means for indicating x-ray tube potential and current;
- d. The means for terminating an exposure at any time;
- e. A locking device which will prevent unauthorized use of the therapeutic radiation machine; and
- f. A positive display of specific filters in the beam.

10. Multiple tubes. When a control panel may energize more than one x-ray tube:

- a. It shall be possible to activate only one x-ray tube at any time;
- b. There shall be an indication at the control panel identifying which x-ray tube is activated; and
- c. There shall be an indication at the tube housing assembly when that tube is energized.

11. Target-to-skin distance (TSD). There shall be a means of determining the central axis target-to-skin distance to within one centimeter and of reproducing this measurement to within two millimeters thereafter.

12. Shutters. Unless it is possible to bring the x-ray output to the prescribed exposure parameters within five seconds after the x-ray "ON" switch is energized, the beam shall be attenuated by a shutter having a lead equivalency not less than that of the tube housing assembly. In addition, after the unit is at operating parameters, the shutter shall be controlled by the operator from the control panel. An indication of shutter position shall appear at the control panel.

13. Low filtration x-ray tubes. Each therapeutic radiation machine equipped with a beryllium or other low-filtration window shall be clearly labeled as such upon the tube housing assembly and shall be provided with a permanent warning device on the control panel that is activated when no additional filtration is present, to indicate that the dose rate is very high.

14. Facility design requirements for therapeutic radiation machines capable of operating in the range fifty kilovolts to five hundred kilovolts. In addition to shielding adequate to meet requirements of section 33.1-10-15-09, the treatment room shall meet the following design requirements:

- a. Aural communication. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel.
- b. Viewing systems. Provision shall be made to permit continuous observation of the patient during irradiation and the viewing system shall be so located that the operator can observe the patient from the control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational.

15. Additional requirements. Treatment rooms that contain a therapeutic radiation machine capable of operating above one hundred fifty kilovolts shall meet the following additional requirements:

- a. All protective barriers shall be fixed except for entrance doors or beam interceptors;
- b. The control panel shall be located outside the treatment room or in a totally enclosed booth, which has a ceiling, inside the room;
- c. Interlocks shall be provided such that all entrance doors, including doors to any interior booths, shall be closed before treatment can be initiated or continued. If the radiation beam is interrupted by any door opening, it shall not be possible to restore the machine

to operation without closing the door and reinitiating irradiation by manual action at the control panel; and

- d. When any door referred to in subdivision c is opened while the x-ray tube is activated, the air kerma rate at a distance of one meter from the source shall be reduced to less than one milligray (100 mrad) per hour.

16. Full calibration measurements.

- a. Full calibration of a therapeutic radiation machine subject to this section shall be performed by, or under the direct supervision of, a radiation therapy physicist:

(1) Before the first medical use following installation or reinstallation of the therapeutic radiation machine;

(2) At intervals not exceeding one year; and

(3) Before medical use under the following conditions:

(a) Whenever quality assurance check measurements indicate that the radiation output differs by more than five percent from the value obtained at the last full calibration and the difference cannot be reconciled; and

(b) Following any component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam.

(4) Notwithstanding the requirements of paragraph 3:

(a) Full calibration of therapeutic radiation machines with multi-energy capabilities is required only for those modes or energies, or both, that are not within their acceptable range; and

(b) If the repair, replacement, or modification does not affect all energies, full calibration shall be performed on the affected energy that is in most frequent clinical use at the facility. The remaining energies may be validated with quality assurance check procedures against the criteria in subparagraph a of paragraph 3.

- b. To satisfy the requirement of subdivision a, full calibration shall include all measurements recommended for annual calibration by NCRP report 69, "dosimetry of x-ray and gamma ray beams for radiation therapy in the energy range ten keV to fifty MeV" (1981).

- c. The registrant shall maintain a record of each calibration for the duration of the registration. The record shall include the date of the calibration; the manufacturer's name, model number, and serial number for both the therapeutic radiation machine and the x-ray tube; the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine; and the signature of the radiation therapy physicist responsible for performing the calibration.

17. Periodic quality assurance checks.

- a. Periodic quality assurance checks shall be performed on therapeutic radiation machines subject to this section, which are capable of operation at greater than or equal to fifty kilovolts.

- b. To satisfy the requirement of subdivision a, quality assurance checks shall meet the following requirements:

- (1) The registrant shall perform quality assurance checks in accordance with written procedures established by the radiation therapy physicist; and
 - (2) The quality assurance check procedures shall specify the frequency at which tests or measurements are to be performed. The quality assurance check procedures shall specify that the quality assurance check shall be performed during the calibration specified in subdivision a of subsection 16. The acceptable tolerance for each parameter measured in the quality assurance check, when compared to the value for that parameter determined in the calibration specified in subdivision a of subsection 16, shall be stated.
- c. The cause for a parameter exceeding a tolerance set by the radiation therapy physicist shall be investigated and corrected before the system is used for patient irradiation.
 - d. Whenever a quality assurance check indicates a significant change in the operating characteristics of a system, as specified in the radiation therapy physicist's quality assurance check procedures, the system shall be recalibrated as required in subdivision a of subsection 16.
 - e. The registrant shall use the dosimetry system described in subdivision b of subsection 3 of section 33.1-10-15-04 to make the quality assurance check required in subdivision b.
 - f. The registrant shall have the radiation therapy physicist review and sign the results of each radiation output quality assurance check within one month of the date that the check was performed.
 - g. The registrant shall ensure that safety quality assurance checks of therapeutic radiation machines subject to section 33.1-10-15-06 are performed at intervals not to exceed one month.
 - h. Notwithstanding the requirements of subdivisions f and g, the registrant shall ensure that no therapeutic radiation machine is used to administer radiation to humans unless the quality assurance checks required by subdivisions f and g have been performed within the thirty-day period immediately prior to said administration.
 - i. To satisfy the requirement of subdivision g, safety quality assurance checks shall ensure proper operation of:
 - (1) Electrical interlocks at each external beam radiation therapy room entrance;
 - (2) The "BEAM-ON" and termination switches;
 - (3) Beam condition indicator lights on the access doors, control console, and in the radiation therapy room;
 - (4) Viewing systems; and
 - (5) If applicable, electrically operated treatment room doors from inside and outside the treatment room.
 - j. The registrant shall maintain a record of each quality assurance check required by subdivision g for three years. The record shall include the date of the quality assurance check; the manufacturer's name, model number, and serial number of the therapeutic radiation machine; the manufacturer's name, model number, and serial number for the instruments used to measure the radiation output of the therapeutic radiation machine; and the signature of the individual who performed the periodic quality assurance check.

18. Operating procedures.

- a. The therapeutic radiation machine shall not be used for irradiation of patients unless the requirements of subsection 16 of section 33.1-10-15-06 and subsection 17 of this section have been met;
- b. Therapeutic radiation machines shall not be left unattended unless secured pursuant to subdivision e of subsection 9;
- c. When a patient must be held in position for radiation therapy, mechanical supporting or restraining devices shall be used;
- d. The tube housing assembly shall not be held by an individual during operation unless the assembly is designed to require such holding and the peak tube potential of the system does not exceed fifty kilovolts. In such cases, the holder shall wear protective gloves and apron of not less than five-tenths millimeters lead equivalency at one hundred kilovolts;
- e. A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console; and
- f. No individual other than the patient shall be in the treatment room during exposures from therapeutic radiation machines operating above one hundred fifty kilovolts. At energies less than or equal to one hundred fifty kilovolts, any individual, other than the patient, in the treatment room shall be protected by a barrier sufficient to meet the requirements of chapter 33.1-10-04.2-01 [10 CFR 20.1201].

19. Possession of survey instruments. Each facility location authorized to use a therapeutic radiation machine in accordance with this section shall possess appropriately calibrated portable monitoring equipment. As a minimum, such equipment shall include a portable radiation measurement survey instrument capable of measuring dose rates over the range ten microsievert (1 mrem) per hour to ten millisievert (1,000 mrem) per hour. The survey instruments shall be operable and calibrated in accordance with section 33.1-10-15-08.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-07. Therapeutic radiation machines - Photon therapy systems (five hundred kilovolts and above) and electron therapy systems (five hundred kilo electron volts and above).

1. Possession of survey instruments. Each facility location authorized to use a therapeutic radiation machine in accordance with this section shall possess appropriately calibrated portable monitoring equipment. As a minimum, such equipment shall include a portable radiation measurement survey instrument capable of measuring dose rates over the range of ten microsieverts (1 mrem) per hour to ten millisieverts (1,000 mrem) per hour. The survey instruments shall be operable and calibrated in accordance with section 33.1-10-15-08.
2. Leakage radiation outside the maximum useful beam in photon and electron modes.
 - a. The absorbed dose due to leakage radiation (excluding neutrons) at any point outside the maximum-sized useful beam, but within a circular plane of radius two meters which is perpendicular to and centered on the central axis of the useful beam at the nominal treatment distance (i.e., patient plane), shall not exceed a maximum of two-tenths percent and an average of one-tenth percent of the absorbed dose on the beam axis at the nominal treatment distance. Measurements shall be averaged over an area not exceeding one hundred square centimeters at a minimum of sixteen points uniformly distributed in the plane;

- b. Except for the area defined in subdivision a, the absorbed dose due to leakage radiation (excluding neutrons) at one meter from the electron path between the electron source and the target or electron window shall not exceed five-tenths percent of the absorbed dose on the central axis of the beam at the nominal treatment distance. Measurements shall be averaged over an area not exceeding one hundred square centimeters;
- c. For equipment manufactured after January 1, 2011, the neutron absorbed dose outside the useful beam shall be in compliance with international electrotechnical commission (IEC) document 601-2-1 (most current revision); and
- d. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in subdivisions a and c for the specified operating conditions. Records on leakage radiation measurements shall be maintained at the installation for inspection by the department.

3. Leakage radiation through beam-limiting devices.

- a. Photon radiation. All adjustable or interchangeable beam-limiting devices shall attenuate the useful beam such that at the nominal treatment distance, the maximum absorbed dose anywhere in the area shielded by the beam-limiting devices shall not exceed two percent of the maximum absorbed dose on the central axis of the useful beam measured in a ten centimeter by ten centimeter radiation field.
- b. Electron radiation. All adjustable or interchangeable electron applicators shall attenuate the radiation, including photon radiation generated by electrons incident on the beam-limiting device and electron applicator and other parts of the radiation head, such that the absorbed dose in a plane perpendicular to the central axis of the useful beam at the nominal treatment distance shall not exceed:

- (1) A maximum of two percent and average of five-tenths percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line seven centimeters outside the periphery of the useful beam; and
- (2) A maximum of ten percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line two centimeters outside the periphery of the useful beam.

c. Measurement of leakage radiation.

- (1) Photon radiation. Measurements of leakage radiation through the beam-limiting devices shall be made with the beam-limiting devices closed and any residual aperture blocked by at least two tenth-value layers of suitable absorbing material. In the case of overlapping beam-limiting devices, the leakage radiation through each set shall be measured independently at the depth of maximum dose. Measurements shall be made using a radiation detector of area not exceeding ten square centimeters; and
- (2) Electron radiation. Measurements of leakage radiation through the electron applicators shall be made with the electron beam directed into the air and using a radiation detector of area up to but not exceeding one square centimeter suitably protected against radiation which has been scattered from material beyond the radiation detector. Measurements shall be made using one centimeter of water equivalent buildup material.

4. Filters and wedges.

- a. Each wedge filter that is removable from the system shall be clearly marked with an identification number. For removable wedge filters, the nominal wedge angle shall appear on the wedge or wedge tray (if permanently mounted to the tray). If the wedge or wedge tray is significantly damaged, the wedge transmission factor shall be redetermined;
 - b. If the absorbed dose rate information required by subsection 2 relates exclusively to operation with a field-flattening filter or beam-scattering foil in place, such foil or filter shall be removable only by the use of tools; and
 - c. For equipment which utilizes wedge filters, interchangeable field-flattening filters, or interchangeable beam-scattering foils:
 - (1) Irradiation shall not be possible until a selection of a filter or a positive selection to use "no filter" has been made at the treatment control panel, either manually or automatically;
 - (2) An interlock system shall be provided to prevent irradiation if the filter selected is not in the correct position;
 - (3) A display shall be provided at the treatment control panel showing the wedge filters, interchangeable field-flattening filters, or interchangeable beam-scattering foils, or both, in use; and
 - (4) An interlock shall be provided to prevent irradiation if any filter or beam-scattering foil selection operation, or both, carried out in the treatment room does not agree with the filter or beam-scattering foil selection operation, or both, carried out at the treatment control panel.
5. Stray radiation in the useful beam. For equipment manufactured after January 1, 2011, the registrant shall determine during acceptance testing, or obtain from the manufacturer, data sufficient to ensure that x-ray stray radiation, in the useful electron beam, absorbed dose at the surface during x-ray irradiation, and stray neutron radiation in the useful x-ray beam are in compliance with international electrotechnical commission (IEC) document 601-2-1 (most current revision).
6. Beam monitors. All therapeutic radiation machines subject to this section shall be provided with redundant beam-monitoring systems. The sensors for these systems shall be fixed in the useful beam during treatment to indicate the dose monitor unit rate.
- a. Equipment shall be provided with at least two independently powered integrating dose meters. Alternatively, common elements may be used if the production of radiation is terminated upon failure of any common element.
 - b. The detector and the system into which that detector is incorporated shall meet the following requirements:
 - (1) Each detector shall be removable only with tools and, if movable, shall be interlocked to prevent incorrect positioning;
 - (2) Each detector shall form part of a beam-monitoring system from whose readings in dose monitor units the absorbed dose at a reference point can be calculated;
 - (3) Each beam-monitoring system shall be capable of independently monitoring, interrupting, and terminating irradiation; and
 - (4) The design of the beam-monitoring systems shall ensure that the:

- (a) Malfunctioning of one system shall not affect the correct functioning of the other systems; and
- (b) Failure of either system shall terminate irradiation or prevent the initiation of radiation; and
- (5) Each beam-monitoring system shall have a legible display at the treatment control panel. Each display shall:
 - (a) Maintain a reading until intentionally reset;
 - (b) Have only one scale and no electrical or mechanical scale multiplying factors;
 - (c) Utilize a design such that increasing dose is displayed by increasing numbers; and
 - (d) In the event of power failure, the beam-monitoring information required in subparagraph c displayed at the control panel at the time of failure shall be retrievable in at least one system for a twenty-minute period of time.

7. Beam symmetry.

- a. Bent-beam linear accelerators subject to this section shall be provided with auxiliary devices to monitor beam symmetry;
- b. The devices referenced in subdivision a shall be able to detect field asymmetry greater than five percent; and
- c. The devices referenced in subdivision a shall be configured to terminate irradiation if the specifications in subdivision b cannot be maintained.

8. Selection and display of dose monitor units.

- a. Irradiation shall not be possible until a new selection of a number of dose monitor units has been made at the treatment control panel;
- b. The preselected number of dose monitor units shall be displayed at the treatment control panel until reset manually for the next irradiation;
- c. After termination of irradiation, it shall be necessary to reset the dosimeter display before subsequent treatment can be initiated; and
- d. After termination of irradiation, it shall be necessary for the operator to reset the preselected dose monitor units before irradiation can be initiated.

9. Air kerma rate or absorbed dose rate. A system shall be provided from whose readings the air kerma rate or absorbed dose rate at a reference point can be calculated. The radiation detectors specified in subsection 6 may form part of this system. In addition:

- a. The dose monitor unit rate shall be displayed at the treatment control panel;
- b. If the equipment can deliver under any conditions an air kerma rate or absorbed dose rate at the nominal treatment distance more than twice the maximum value specified by the manufacturer, a device shall be provided which terminates irradiation when the air kerma rate or absorbed dose rate exceeds a value twice the specified maximum. The dose rate at which the irradiation will be terminated shall be a record maintained by the registrant;

c. If the equipment can deliver under any fault conditions an air kerma rate or absorbed dose rate at the nominal treatment distance more than ten times the maximum value specified by the manufacturer, a device shall be provided to prevent the air kerma rate or absorbed dose rate anywhere in the radiation field from exceeding twice the specified maximum value and to terminate irradiation if the excess absorbed dose at the nominal treatment distance exceeds four gray (400 rad); and

d. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the maximum values specified in subdivisions b and c for the specified operating conditions. Records of these maximum values shall be maintained at the installation for inspection by the department.

10. Termination of irradiation by the beam-monitoring system or systems during stationary beam radiation therapy.

a. Each primary system shall terminate irradiation when the preselected number of dose monitor units has been detected by the system;

b. If the original design of the equipment included a secondary dose monitoring system, that system shall be capable of terminating irradiation when not more than fifteen percent or forty dose monitor units above the preselected number of dose monitor units set at the control panel has been detected by the secondary dose monitoring system; and

c. An indicator on the control panel shall show which monitoring system has terminated irradiation.

d. For new equipment, a secondary dose monitoring system must be present. That system must be capable of terminating irradiation when not more than ten percent or twenty-five dose monitoring units above the preselected number of dose monitor units set at the control panel has been detected by the secondary dose monitoring system.

11. Termination of irradiation. It shall be possible to terminate irradiation and equipment movement or go from an interruption condition to termination condition at any time from the operator's position at the treatment control panel.

12. Interruption of irradiation. It shall be possible to interrupt irradiation and equipment movements at any time from the treatment control panel. Following an interruption it shall be possible to restart irradiation by operator action without any reselection of operating conditions. If any change is made of a preselected value during an interruption, irradiation and equipment movements shall be automatically terminated.

13. Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a preset time interval.

a. A timer shall be provided which has a display at the treatment control panel. The timer shall have a preset time selector and an elapsed time indicator;

b. The timer shall be a cumulative timer that activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;

c. After termination of irradiation and before irradiation can be reinitiated, it shall be necessary to reset the preset time selector; and

d. The timer shall terminate irradiation when a preselected time has elapsed, if the dose monitoring systems have not previously terminated irradiation.

14. Selection of radiation type. Equipment capable of both x-ray therapy and electron therapy shall meet the following additional requirements:

- a. Irradiation shall not be possible until a selection of radiation type (x-rays or electrons) has been made at the treatment control panel;
- b. The radiation type selected shall be displayed at the treatment control panel before and during irradiation;
- c. An interlock system shall be provided to ensure that the equipment can principally emit only the radiation type that has been selected;
- d. An interlock system shall be provided to prevent irradiation with x-rays, except to obtain an image, when electron applicators are fitted;
- e. An interlock system shall be provided to prevent irradiation with electrons when accessories specific for x-ray therapy are fitted; and
- f. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations carried out at the treatment control panel.

15. Selection of energy. Equipment capable of generating radiation beams of different energies shall meet the following requirements:

- a. Irradiation shall not be possible until a selection of energy has been made at the treatment control panel;
- b. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations carried out at the treatment control panel;
- c. The nominal energy value selected shall be displayed at the treatment control panel until reset manually for the next irradiation. After termination of irradiation, it shall be necessary to reset the nominal energy value selected before subsequent treatment can be initiated;
- d. Irradiation shall not be possible until the appropriate flattening filter or scattering foil for the selected energy is in its proper location;
- e. An interlock system shall be provided to terminate irradiation if the energy of the electrons striking the x-ray target or electron window deviates by more than twenty percent or three megaelectron volts, whichever is smaller, from the selected nominal energy; and
- f. For equipment manufactured after January 1, 2011, the selection of energy shall be in compliance with international electrotechnical commission (IEC) document 601-2-1 (most current revision).

16. Selection of stationary beam radiation therapy or moving beam radiation therapy. Therapeutic radiation machines capable of both stationary beam radiation therapy and moving beam radiation therapy shall meet the following requirements:

- a. Irradiation shall not be possible until a selection of stationary beam radiation therapy or moving beam radiation therapy has been made at the treatment control panel;
- b. The mode of operation shall be displayed at the treatment control panel;

- c. An interlock system shall be provided to ensure that the equipment can operate only in the mode that has been selected;
- d. An interlock system shall be provided to prevent irradiation if any selected parameter in the treatment room does not agree with the selected parameter at the treatment control panel;
- e. Moving beam radiation therapy shall be controlled to obtain the selected relationships between incremental dose monitor units and incremental movement.
 - (1) An interlock system shall be provided to terminate irradiation if the number of dose monitor units delivered in any ten degrees of rotation or one centimeter of linear motion differs by more than twenty percent from the selected value;
 - (2) Where the angle terminates the irradiation in moving beam radiation therapy, the dose monitor units delivered shall differ by less than five percent from the dose monitor unit value selected;
 - (3) An interlock shall be provided to prevent motion of more than five degrees or one centimeter beyond the selected limits during moving beam radiation therapy;
 - (4) An interlock shall be provided to require that a selection of direction be made at the treatment control panel in all units which are capable of both clockwise and counterclockwise moving beam radiation therapy; and
 - (5) Moving beam radiation therapy shall be controlled with both primary position sensors and secondary position sensors to obtain the selected relationships between incremental dose monitor units and incremental movement;
- f. Where the beam monitor system terminates the irradiation in moving beam radiation therapy, the termination of irradiation shall be as required by subsection 10; and
- g. An interlock system shall be provided to terminate irradiation if movement:
 - (1) Occurs during stationary beam radiation therapy; or
 - (2) Does not start or stops during moving beam radiation therapy unless such stoppage is a preplanned function.

17. Facility design requirements for therapeutic radiation machines operating above five hundred kilovolts. In addition to shielding adequate to meet requirements of section 33.1-10-15-09, the following design requirements are made:

- a. Protective barriers. All protective barriers shall be fixed, except for access doors to the treatment room or movable beam interceptors;
- b. Control panel. In addition to other requirements specified in this chapter, the control panel shall also:
 - (1) Be located outside the treatment room;
 - (2) Provide an indication of whether electrical power is available at the control panel and if activation of the radiation is possible;
 - (3) Provide an indication of whether radiation is being produced; and
 - (4) Include an access control (locking) device that will prevent unauthorized use of the therapeutic radiation machine;

- c. Viewing systems. Windows, mirrors, closed-circuit television, or an equivalent viewing system shall be provided to permit continuous observation of the patient following positioning and during irradiation and shall be so located that the operator may observe the patient from the treatment control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational;
- d. Aural communications. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel. The therapeutic radiation machine shall not be used for irradiation of patients unless continuous two-way aural communication is possible;
- e. Room entrances. Treatment room entrances shall be provided with warning lights in a readily observable position near the outside of all access doors, which will indicate when the useful beam is "ON" and when it is "OFF";
- f. Entrance interlocks. Interlocks shall be provided such that all access controls are activated before treatment can be initiated or continued. If the radiation beam is interrupted by any access control, it shall not be possible to restore the machine to operation without resetting the access control and reinitiating irradiation by manual action at the control panel;
- g. Beam interceptor interlocks. If the shielding material in any protective barrier requires the presence of a beam interceptor to ensure compliance with chapter 33.1-10-04.2 [10 CFR 20.1301a and 10 CFR 20.1301b] of these regulations, interlocks shall be provided to prevent the production of radiation, unless the beam interceptor is in place, whenever the useful beam is directed at the designated barriers;
- h. Emergency cutoff switches. At least one emergency power cutoff switch shall be located in the radiation therapy room and shall terminate all equipment electrical power, including radiation and mechanical motion. This switch is in addition to the termination switch required by subsection 11. All emergency power cutoff switches shall include a manual reset so that the therapeutic radiation machine cannot be restarted from the unit's control console without resetting the emergency cutoff switch;
- i. Safety interlocks. All safety interlocks shall be designed so that any defect or component failure in the safety interlock system prevents or terminates operation of the therapeutic radiation machine; and
- j. Surveys for residual radiation. Surveys for residual activity shall be conducted on all therapeutic radiation machines capable of generating photon and electron energies above ten million volts prior to machining, removing, or working on therapeutic radiation machine components which may have become activated due to photo-neutron production.

18. Radiation therapy physicist support.

- a. The services of a radiation therapy physicist shall be required in facilities having therapeutic radiation machines with energies of five hundred kilovolts and above. The radiation therapy physicist shall be responsible for:
 - (1) Full calibrations required by subsection 20 and protection surveys required by subsection 1 of section 33.1-10-15-04;
 - (2) Supervision and review of dosimetry;
 - (3) Beam data acquisition and transfer for computerized dosimetry, and supervision of its use;

(4) Quality assurance, including quality assurance check review required by subdivision e of subsection 21;

(5) Consultation with the authorized user in treatment planning, as needed; and

(6) Perform calculations and assessments regarding misadministrations.

b. If the radiation therapy physicist is not a full-time employee of the registrant, the operating procedures required by subsection 17 shall also specifically address how the radiation therapy physicist is to be contacted for problems or emergencies, as well as the specific actions, if any, to be taken until the radiation therapy physicist can be contacted.

19. Operating procedures.

a. No individual, other than the patient, shall be in the treatment room during treatment or during any irradiation for testing or calibration purposes;

b. Therapeutic radiation machines shall not be made available for medical use unless the requirements of subsection 1 of section 33.1-10-15-04 and subsections 20 and 21 of this section have been met;

c. Therapeutic radiation machines, when not in operation, shall be secured to prevent unauthorized use;

d. When adjustable beam-limiting devices are used, the position and shape of the radiation field shall be indicated by a light field;

e. If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used; and

f. A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console.

20. Acceptance testing, commissioning, and full calibration measurements.

a. Acceptance testing, commissioning, and full calibration of a therapeutic radiation machine subject to this section shall be performed by, or under the direct supervision of, a radiation therapy physicist.

b. Acceptance testing and commissioning shall be performed in accordance with "American association of physicists in medicine code of practice for radiotherapy accelerators: report of American association of physicists in medicine radiation therapy task group 45" and shall be conducted before the first medical use following installation or reinstallation of the therapeutic radiation machine.

c. Full calibration shall include measurement of all parameters required by table II of "comprehensive QA for radiation oncology: report of American association of physicists in medicine radiation therapy committee task group 40" and shall be performed in accordance with "American association of physicists in medicine code of practice for radiotherapy accelerators: report of American association of physicists in medicine radiation therapy task group 45". Although it shall not be necessary to complete all elements of a full calibration at the same time, all parameters (for all energies) shall be completed at intervals not exceeding twelve calendar months, unless a more frequent interval is required in table II.

d. The radiation therapy physicist shall perform all elements of a full calibration necessary to determine that all parameters are within acceptable limits:

(1) Whenever quality assurance check measurements indicate that the radiation output differs by more than five percent from the value obtained at the last full calibration and the difference cannot be reconciled. Therapeutic radiation machines with multi-energy or multimode capabilities, or both, shall only require measurements for those modes or energies, or both, which are not within their acceptable range; and

(2) Following any component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam. If the repair, replacement, or modification does not affect all modes or energies, measurements shall be performed on the affected mode or energy that is in most frequent clinical use at the facility. The remaining energies or modes may be validated with quality assurance check procedures against the criteria in paragraph 1.

e. The registrant shall maintain a record of each calibration in an auditable form for the duration of the registration. The record shall include the date of the calibration; the manufacturer's name, model number, and serial number for the therapeutic radiation machine; the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine; and the signature of the radiation therapy physicist responsible for performing the calibration.

21. Periodic quality assurance checks.

a. Periodic quality assurance checks shall be performed on all therapeutic radiation machines subject to this section at intervals not to exceed those specified in "comprehensive QA for radiation oncology: report of American association of physicists in medicine radiation therapy committee task group 40";

b. To satisfy the requirement of subdivision a, quality assurance checks shall include determination of central axis radiation output and a representative sampling of periodic quality assurance checks contained in "comprehensive QA for radiation oncology: report of American association of physicists in medicine radiation therapy committee task group 40". Representative sampling shall include all referenced periodic quality assurance checks in an interval not to exceed twelve consecutive calendar months;

c. The registrant shall use a dosimetry system that has been intercompared within the previous twelve months with the dosimetry system described in subdivision a of subsection 3 of section 33.1-10-15-04 to make the periodic quality assurance checks required in subdivision b;

d. The registrant shall perform periodic quality assurance checks required by subdivision a in accordance with procedures established by the radiation therapy physicist;

e. The registrant shall review the results of each periodic radiation output check according to the following procedures:

(1) The authorized user and radiation therapy physicist shall be immediately notified if any parameter is not within its acceptable tolerance. The therapeutic radiation machine shall not be made available for subsequent medical use until the radiation therapy physicist has determined that all parameters are within their acceptable tolerances;

(2) If all quality assurance check parameters appear to be within their acceptable range, the quality assurance check shall be reviewed and signed by either the authorized user or radiation therapy physicist within three treatment days; and

(3) The radiation therapy physicist shall review and sign the results of each radiation output quality assurance check at intervals not to exceed one month;

- f. Therapeutic radiation machines subject to this section shall have safety quality assurance checks listed in "comprehensive QA for radiation oncology: report of American association of physicists in medicine radiation therapy committee task group 40" performed at intervals not to exceed one week;
- g. To satisfy the requirement of subdivision e, safety quality assurance checks shall ensure proper operation of:
 - (1) Electrical interlocks at each external beam radiation therapy room entrance;
 - (2) Proper operation of the "BEAM-ON", interrupt, and termination switches;
 - (3) Beam condition indicator lights on the access doors, on the control console, and in the radiation therapy room;
 - (4) Viewing systems;
 - (5) Electrically operated treatment room doors from inside and outside the treatment room; and
 - (6) At least one emergency power cutoff switch. If more than one emergency power cutoff switch is installed and not all switches are tested at once, each switch shall be tested on a rotating basis. Safety quality assurance checks of the emergency power cutoff switches may be conducted at the end of the treatment day in order to minimize possible stability problems with the therapeutic radiation machine;
- h. The registrant shall promptly repair any system identified in subdivision g that is not operating properly; and
- i. The registrant shall maintain a record of each quality assurance check required by subdivisions a and b for three years. The record shall include the date of the quality assurance check; the manufacturer's name, model number, and serial number of the therapeutic radiation machine; the manufacturer's name, model number, and serial number for the instruments used to measure the radiation output of the therapeutic radiation machine; and the signature of the individual who performed the periodic quality assurance check.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-08. Calibration of survey instruments.

- 1. The registrant shall ensure that the survey instruments used to show compliance with this chapter have been calibrated before first use, at intervals not to exceed twelve months, and following repair;
- 2. To satisfy the requirements of subsection 1, the registrant shall:
 - a. Calibrate all required scale readings up to ten millisieverts (1,000 mrem) per hour with an appropriate radiation source that is traceable to the national institute of standards and technology (NIST); and
 - b. Calibrate at least two points on each scale to be calibrated. These points should be at approximately one-third and two-thirds of full scale;
- 3. To satisfy the requirements of subsection 2, the registrant shall:

- a. Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than ten percent; and
 - b. Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than twenty percent if a correction factor or graph is conspicuously attached to the instrument;
4. The registrant shall retain a record of each calibration required in subsection 1 for three years. The record shall include:
 - a. A description of the calibration procedure; and
 - b. A description of the source used and the certified dose rates from the source, and the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration; and
 5. The registrant may obtain the services of individuals registered by the department, or licensed by the United States nuclear regulatory commission, an agreement state, or a licensing state to perform calibrations of survey instruments. Records of calibrations that contain information required by subsection 4 shall be maintained by the registrant.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

33.1-10-15-09. Shielding and safety design requirements.

1. Each therapeutic radiation machine subject to section 33.1-10-15-06 or 33.1-10-15-07 shall be provided with such primary or secondary barriers, or both, as are necessary to ensure compliance with chapter 33.1-10-04.2 [10 CFR 20.1201 and 10 CFR 20.1301].
2. Facility design information for all new installations of a therapeutic radiation machine or installations of a therapeutic radiation machine of higher energy into a room not previously approved for that energy shall be submitted for department approval prior to actual installation of the therapeutic radiation machine. The minimum facility design information that must be submitted is contained in appendix A.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-02; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03; S.L. 2017, ch. 199, § 18

APPENDIX A

INFORMATION ON RADIATION SHIELDING REQUIRED FOR PLAN REVIEWS

1. All therapeutic radiation machines.

- a. Basic facility information, including name, telephone number, and department registration number of the individual responsible for preparation of the shielding plan; name and telephone number of the facility supervisor; and the street address (including room number) of the therapeutic radiation machine facility. The plan should also indicate whether this is a new structure or a modification to existing structures.
- b. All wall, floor, and ceiling areas struck by the useful beam shall have primary barriers.
- c. Secondary barriers shall be provided in all wall, floor, and ceiling areas not having primary barriers.

2. Therapeutic radiation machines up to 150 Kv (photons only). In addition to the requirements listed in subsection 1, therapeutic radiation machine facilities which produce only photons with a maximum energy less than or equal to 150 kilovolts shall submit shielding plans which contain, as a minimum, the following additional information:

- a. Equipment specifications, including the manufacturer and model number of the therapeutic radiation machine, as well as the maximum technique factors;
- b. Maximum design workload for the facility, including total weekly radiation output, (expressed in gray (rad) or air kerma at 1 meter), total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week;
- c. A facility blueprint or drawing indicating: scale (0.25 inch = 1 foot is typical); direction of north, normal location of the therapeutic radiation machine's radiation ports, the port's travel and traverse limits, general directions of the useful beam, locations of any windows and doors, and the location of the therapeutic radiation machine control panel. If the control panel is located inside the therapeutic radiation machine treatment room, the location of the operator's booth shall be noted on the plan and the operator's station at the control panel shall be behind a protective barrier sufficient to ensure compliance with subsection 1 of section 33.1-10-04.2-06 [10 CFR 20.1201] of these regulations;
- d. The structural composition and thickness or lead or concrete equivalent of all walls, doors, partitions, floor, and ceiling of the rooms concerned;
- e. The type of occupancy of all adjacent areas inclusive of space above and below the rooms concerned. If there is an exterior wall, showing distance to the closest areas where it is likely that individuals may be present; and
- f. At least one example calculation which shows the methodology used to determine the amount of shielding required for each physical condition (i.e., primary and secondary leakage barriers, restricted and unrestricted areas, entry doors) and shielding material in the facility:
 - (1) If commercial software is used to generate shielding requirements, please also identify the software used and the version or revision date.
 - (2) If the software used to generate shielding requirements is not in the open literature, please also submit quality control sample calculations to verify the result obtained with the software.

3. Therapeutic radiation machines over 150 kilovolts.

In addition to the requirements listed in subsection 1, therapeutic radiation machine facilities that produce photons with a maximum energy in excess of 150 kilovolts or electrons shall submit shielding plans which contain, as a minimum, the following additional information:

- a. Equipment specifications, including the manufacturer and model number of the therapeutic radiation machine, and gray (rad) at the isocenter and the energies and types of radiation produced (i.e., photon, electron). The target to isocenter distance shall be specified;
- b. Maximum design workload for the facility, including total weekly radiation output (expressed in gray (rad) at 1 meter), total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week;
- c. Facility blueprint or drawing (including both floor plan and elevation view) indicating relative orientation of the therapeutic radiation machine, scale (0.25 inch = 1 foot is typical), types, thickness, and minimum density of shielding materials, direction of north, the locations and size of all penetrations through each shielding barrier (ceiling, walls, and floor), as well as details of the doors and maze;
- d. The structural composition and thickness or concrete equivalent of all walls, doors, partitions, floor, and ceiling of the rooms concerned;
- e. The type of occupancy of all adjacent areas inclusive of space above and below the rooms concerned. If there is an exterior wall, showing distance to the closest areas where it is likely that individuals may be present;
- f. Description of all assumptions that were in shielding calculations, including design energy (i.e., room may be designed for 6 MV unit although only a 4 MV unit is currently proposed), workload, presence of integral beam-stop in unit, occupancy and uses of adjacent areas, fraction of time that useful beam will intercept each permanent barrier (walls, floor, and ceiling), and "allowed" radiation exposure in both restricted and unrestricted areas; and
- g. At least one example calculation which shows the methodology used to determine the amount of shielding required for each physical condition (i.e., primary and secondary or leakage barriers, restricted and unrestricted areas, small angle scatter, entry doors and maze) and shielding material in the facility:
 - (1) If commercial software is used to generate shielding requirements, also identify the software used and the version or revision date; and
 - (2) If the software used to generate shielding requirements is not in the open literature, also submit quality control sample calculations to verify the result obtained with the software.

4. Neutron shielding.

In addition to the requirements listed in subsection 3, therapeutic radiation machine facilities that are capable of operating above 10 MV shall submit shielding plans which contain, as a minimum, the following additional information:

- a. The structural composition, thickness, minimum density, and location of all neutron shielding material;

- b. Description of all assumptions that were used in neutron shielding calculations, including neutron spectra as a function of energy, neutron fluence rate, absorbed dose, and dose equivalent (due to neutrons) in both restricted and unrestricted areas;
- c. At least one example calculation which shows the methodology used to determine the amount of neutron shielding required for each physical condition (i.e., restricted and unrestricted areas, entry doors and maze) and neutron shielding material utilized in the facility:
 - (1) If commercial software is used to generate shielding requirements, also identify the software used and the version or revision date; and
 - (2) If the software used to generate shielding requirements is not in the open literature, also submit quality control sample calculations to verify the result obtained with the software.
- d. The methods and instrumentation that will be used to verify the adequacy of all neutron shielding installed in the facility.

5. References.

History: Effective January 1, 2019.

APPENDIX B

QUALITY MANAGEMENT PROGRAM

1. In addition to the definitions in section 33.1-10-15-02, the following definitions are applicable to this appendix B:

a. "Misadministration" means the administration of an external beam radiation therapy dose:

(1) Involving the wrong patient, wrong treatment modality, or wrong treatment site;

(2) When the treatment consists of three or fewer fractions and the calculated total administered dose differs from the total prescribed dose by more than ten percent of the total prescribed dose;

(3) When the calculated weekly administered dose differs from the weekly prescribed dose by more than thirty percent; or

(4) When the calculated total administered dose differs from the total prescribed dose by more than twenty percent of the total prescribed dose.

b. "Prescribed dose" means the total dose and dose per fraction as documented in the written directive. The prescribed dose is an estimation from measured data from a specified therapeutic radiation machine using assumptions that are clinically acceptable for that treatment technique and historically consistent with the clinical calculations previously used for patients treated with the same clinical technique.

c. "Recordable event" means the administration of an external beam radiation therapy dose when the calculated weekly administered dose differs by fifteen percent or more from the weekly prescribed dose.

d. "Written directive" means an order in writing for a specific patient, dated and signed by an authorized user prior to the administration of radiation, containing the following information: total dose, dose per fraction, treatment site, and overall treatment period.

2. Scope and applicability. Each applicant or registrant subject to section 33.1-10-15-06 or 33.1-10-15-07 shall establish and maintain a written quality management program to provide high confidence that radiation will be administered as directed by the authorized user. The quality management program shall include written policies and procedures to meet the following specific objectives:

a. Prior to administration, a written directive is prepared for any external beam radiation therapy dose:

(1) Notwithstanding subdivision a, a written revision to an existing written directive may be made provided that the revision is dated and signed by an authorized user prior to administration of the external beam radiation therapy dose or the next external beam radiation therapy fractional dose;

(2) Notwithstanding subdivision a, if, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive shall be acceptable, provided that the oral revision is documented immediately in the patient's record and a revised written directive is signed by an authorized user within forty-eight hours of the oral revision; and

(3) Notwithstanding subdivision a, if, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive shall be acceptable, provided that the information contained in the oral directive is documented immediately in the patient's record and a written directive is prepared and signed by an authorized user within twenty-four hours of the oral directive;

b. Prior to the administration of each course of radiation treatments, the patient's identity is verified, by more than one method, as the individual named in the written directive;

c. External beam radiation therapy final plans of treatment and related calculations are in accordance with the respective written directives;

d. Each administration is in accordance with the written directive; and

e. Any unintended deviation from the written directive is identified and evaluated, and appropriate action is taken.

3. Development of quality management program.

a. Each application for registration subject to section 33.1-10-15-06 or 33.1-10-15-07 shall include a quality management program, that specifies staff, duties, and responsibilities, and equipment and procedures as part of the application required by chapter 33.1-10-02. The registrant shall implement the program upon issuance of a certificate of registration by the department; and

b. Each existing registrant subject to section 33.1-10-15-06 or 33.1-10-15-07 shall, within thirty days of January 1, 2011, submit to the department a written certification that a quality management program has been implemented.

4. As a part of the quality management program, the registrant shall:

a. Develop procedures for, and conduct a review of, the quality management program, including since the last review, an evaluation of a representative sample of patient administrations, all recordable events, and all misadministrations to verify compliance with all aspects of the quality management program;

b. Conduct these reviews at intervals not to exceed twelve months;

c. Evaluate each of these reviews to determine the effectiveness of the quality management program and, if required, make modifications to meet the requirements of subsection 2; and

d. Maintain records of each review, including the evaluations and findings of the review, in an auditable form, for three years.

5. The registrant shall evaluate and respond, within thirty days after discovery of the recordable event, to each recordable event by:

a. Assembling the relevant facts, including the cause;

b. Identifying what, if any, corrective action is required to prevent recurrence; and

c. Retaining a record, in an auditable form, for three years, of the relevant facts and what corrective action, if any, was taken.

6. The registrant shall retain:

- a. Each written directive; and
 - b. A record of each administered radiation dose, in an auditable form, for three years after the date of administration.
7. The registrant may make modifications to the quality management program to increase the program's efficiency provided the program's effectiveness is not decreased.
8. The registrant shall evaluate each misadministration and shall take the following actions in response to a misadministration:
- a. Notify the department by telephone no later than the next calendar day after discovery of the misadministration;
 - b. Submit a written report to the department within fifteen days after discovery of the misadministration. The written report shall include the registrant's name; the prescribing physician's name; a brief description of the event; why the event occurred; the effect on the patient; what improvements are needed to prevent recurrence; actions taken to prevent recurrence; whether the registrant notified the patient or the patient's responsible relative or guardian (this person will subsequently be referred to as "the patient"), and if not, why not, and if the patient was notified, what information was provided to the patient. The report shall not include the patient's name or other information that could lead to identification of the patient;
 - c. Notify the referring physician and also notify the patient of the misadministration no later than twenty-four hours after its discovery, unless the referring physician personally informs the registrant either that he/she will inform the patient or that, based on medical judgment, telling the patient would be harmful. The registrant is not required to notify the patient without first consulting with the referring physician. If the referring physician or patient cannot be reached within twenty-four hours, the registrant shall notify the patient as soon as possible. The registrant shall not delay any appropriate medical care for the patient, including any necessary remedial care as a result of the misadministration, because of any delay in notification;
 - d. Retain a record of each misadministration for five years. The record shall contain the names of all individuals involved (including the prescribing physician, allied health personnel, the patient, and the patient's referring physician), the patient's social security number or identification number if one has been assigned, a brief description of the event, why it occurred, the effect on the patient, what improvements are needed to prevent recurrence, and the actions taken to prevent recurrence; and
 - e. If the patient was notified, furnish, within fifteen days after discovery of the misadministration, a written report to the patient by sending either a copy of the report that was submitted to the department, or a brief description of both the event and the consequences as they may effect the patient, provided a statement is included that the report submitted to the department can be obtained from the registrant.
9. Aside from the notification requirement, nothing in subsection 8 of section 33.1-10-15-05 affects any rights or duties of registrants and physicians in relation to each other, patients, or the patient's responsible relatives or guardians.

History: Effective January 1, 2019.

APPENDIX C

ALTERNATIVE QUALITY MANAGEMENT PROGRAM

1. In addition to the definitions in section 33.1-10-15-02, the following definitions are applicable to this appendix C:
 - a. "Misadministration" means the administration of an external beam radiation therapy dose:
 - (1) Involving the wrong patient, wrong treatment modality, or wrong treatment site;
 - (2) When the treatment consists of three or fewer fractions and the calculated total administered dose differs from the total prescribed dose by more than ten percent of the total prescribed dose;
 - (3) When the calculated weekly administered dose differs from the weekly prescribed dose by more than thirty percent; or
 - (4) When the calculated total administered dose differs from the total prescribed dose by more than twenty percent of the total prescribed dose;
 - b. "Recordable event" means the administration of an external beam radiation therapy dose when the calculated weekly administered dose differs by fifteen percent or more from the weekly prescribed dose; and
 - c. "Written directive" means an order in writing for a specific patient, dated and signed by an authorized user prior to the administration of radiation, containing the following information: total dose, dose per fraction, treatment site, and overall treatment period.
2. Each registrant shall establish and maintain a written program to provide assurance that radiation is administered to humans as directed by the authorized user. The program shall include the following elements:
 - a. Procedure for preparing written directives for the administration of radiation; however, a written directive is not required when an authorized user personally administers a dosage provided the pertinent facts are documented as otherwise required;
 - b. Procedure for verifying by more than one method the identity of the individual to be administered radiation;
 - c. Procedure for updating the therapy operating and emergency procedures manual;
 - d. Procedure for verifying that final plans of treatment and related calculations for brachytherapy, teletherapy, and gamma stereotactic radiosurgery are in accordance with the respective written directives;
 - e. Procedures assuring that administration of radiation is carried out as specified in the written directive or the therapy operating and emergency procedures manual; and
 - f. Procedures for identifying and evaluating unintended deviations from the written directive or the therapy operating and emergency procedures manual including taking appropriate action for recordable events and misadministrations.
3. Each registrant shall evaluate each misadministration and shall take the following actions in response to a misadministration:

a. Notify the department by telephone no later than the next calendar day after discovery of the misadministration;

b. Submit a written report to the department within fifteen days after discovery of the misadministration. The written report shall include the registrant's name; the prescribing physician's name; a brief description of the event; why the event occurred; the effect on the patient; what improvements are needed to prevent recurrence; actions taken to prevent recurrence; whether the registrant notified the patient or the patient's responsible relative or guardian (this person will subsequently be referred to as "the patient"), and if not, why not, and if the patient was notified, what information was provided to the patient. The report shall not include the patient's name or other information that could lead to identification of the patient;

c. Notify the referring physician and also notify the patient of the misadministration no later than twenty-four hours after its discovery, unless the referring physician personally informs the registrant either that the physician will inform the patient or that, based on medical judgment, telling the patient would be harmful. The registrant is not required to notify the patient without first consulting with the referring physician. If the referring physician or patient cannot be reached within twenty-four hours, the registrant shall notify the patient as soon as possible. The registrant shall not delay any appropriate medical care for the patient, including any necessary medical care as a result of the misadministrations, because of any delay in notification;

d. Retain a record of each misadministration for five years. The record shall contain the names of all individuals involved (including the prescribing physician, allied health personnel, the patient, and the patient's referring physician), the patient's social security number or identification number if one has been assigned, a brief description of the event, why it occurred, the effect on the patient, what improvements are needed to prevent recurrence, and the action taken to prevent recurrence; and

e. If the patient was notified, furnish, within fifteen days after discovery of the misadministration, a written report to the patient by sending either a copy of the report that was submitted to the department, or a brief description or both the event and the consequences as they may affect the report submitted to the department can be obtained from the registrant.

4. Each registrant shall evaluate and respond to recordable events within thirty days after discovery by assembling the relevant facts, identifying the cause of the recordable event, and taking appropriate action, if any is required, to prevent recurrence.

5. Each registrant shall conduct an annual evaluation of the human administration program, including any recommendations for changes to be made as well as any modifications made since the last evaluation and, if required, revise procedures to assure that the radiation is administered as directed by the authorized user. Modifications made to the program shall not decrease the effectiveness of the program.

6. Each registrant shall retain, in auditable form, for three years:

a. Each written directive;

b. A record of each administered radiation dose where a written directive is required;

c. A record of each annual review of the program, including the evaluations and findings of the review; and

d. A record of each recordable event, the relevant facts, and any corrective actions taken.

| **History:** Effective January 1, 2019.

CHAPTER 33.1-10-16
DOMESTIC LICENSING OF SOURCE MATERIAL

Section

33.1-10-16-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 40

33.1-10-16-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 40.

10 Code of Federal Regulations 40.1, 40.2, 40.3, 40.4, 40.7, 40.9, 40.10, 40.11, 40.12, 40.13, 40.14, 40.20, 40.21, 40.22, 40.25, 40.26, 40.31, 40.32, 40.34, 40.35, 40.36, 40.41, 40.42, 40.43, 40.44, 40.45, 40.46, 40.51, 40.54, 40.55, 40.60, 40.61, 40.62, 40.63, 40.65, and 40.71 and appendix A to part 40 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference are 10 Code of Federal Regulations 40.12(b); 40.31(j), (k), and (l); 40.32(d), (e), and (g); 40.41(d), (e)(1), (e)(3), and (g); 40.51(b)(6); appendix A, criterion 11A through F and criterion 12; paragraph (2) of the definition of "commencement of construction"; and paragraph (9)(ii) of the definition of "construction".
2. Requirements in 10 Code of Federal Regulations part 40 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", "NRC regional administrator", or "administrator of the appropriate regional office" appear in 10 Code of Federal Regulations part 40, substitute the words "department of environmental quality" except when used in 10 Code of Federal Regulations 40.11.
4. 10 Code of Federal Regulations part 40 employee protection also applies to violations of North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
6. North Dakota state form number 8414, "notice to employees", must be posted instead of NRC form 3 that is specified in 10 Code of Federal Regulations part 40.
7. North Dakota state form number 16092, "registration certificate: use of depleted uranium under general license", must be used instead of nuclear regulatory commission form 244 that is specified in 10 Code of Federal Regulations part 40.
8. North Dakota state form number 8418, "application for radioactive material license", must be used instead of NRC form 313 as specified in 10 Code of Federal Regulations part 40.
9. North Dakota state form number 18941, "certificate: disposition of radioactive material", must be used instead of NRC form 314 as specified in 10 Code of Federal Regulations part 40.
10. For references to 10 Code of Federal Regulations parts 170 and 171, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-17
DOMESTIC LICENSING OF SPECIAL NUCLEAR MATERIAL

Section

33.1-10-17-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 70

33.1-10-17-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 70.

10 Code of Federal Regulations 70.1, 70.2, 70.3, 70.4, 70.7, 70.9, 70.10, 70.11, 70.12, 70.17, 70.18, 70.19, 70.20, 70.21, 70.22, 70.23, 70.25, 70.31, 70.32, 70.33, 70.34, 70.35, 70.36, 70.38, 70.39, 70.41, 70.42, 70.50, 70.51, 70.56, and 70.81 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. The following are not adopted by reference: 10 Code of Federal Regulations 70.1(c), (d), and (e); 70.20a; 70.20b; 70.21(a)(1), (c), (f), (g), and (h); 70.22(b), (c), (f), (g), (h), (i), (j), (k), (l), (m), and (n); 70.23(a)(6), (a)(7), (a)(8), (a)(9), (a)(10), (a)(11), (a)(12), and (b); 70.23a; 70.25(a)(1); 70.31(c), (d), and (e); 70.32(a)(1), (a)(4), (a)(5), (a)(6), (a)(7), (b)(1), (b)(3), (b)(4), (c), (d), (e), (f), (g), (h), (i), (j), and (k); 70.42(b)(6); 70.51(c); paragraph (2) of the definition of "commencement of construction"; and paragraph (9)(ii) of the definition of "construction".
2. Requirements in 10 Code of Federal Regulations part 70 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", "NRC regional administrator", "NRC regional office", "administrator of the appropriate nuclear regulatory commission's regional office", "administrator of the appropriate regional office", or "nuclear regulatory commission's office of nuclear material safety and safeguards, division of industrial and medical nuclear safety" appear in 10 Code of Federal Regulations part 70, substitute the words "department of environmental quality".
4. 10 Code of Federal Regulations 70.7 employee protection also applies to violations of North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
6. North Dakota state form number 8418, "application for radioactive material license", must be used instead of nuclear regulatory commission form 313 as specified in 10 Code of Federal Regulations part 70.
7. North Dakota state form number 8414, "notice to employees", must be posted instead of United States nuclear regulatory commission form 3 that is specified in 10 Code of Federal Regulations part 70.
8. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-18
GENERAL DOMESTIC LICENSES FOR BYPRODUCT MATERIAL

Section

33.1-10-18-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 31

33.1-10-18-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 31.

10 Code of Federal Regulations 31.1, 31.2, 31.3, 31.5, 31.6, 31.7, 31.8, 31.9, 31.10, 31.11, and 31.12 are adopted by reference as they exist on October 1, 2015, with the following exceptions:

1. Not adopted by reference are 10 Code of Federal Regulations 31.3(b) and (c) and 31.6(a).
2. Requirements in 10 Code of Federal Regulations part 31 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "United States nuclear regulatory commission", or "director of nuclear material safety and safeguards" appear in 10 Code of Federal Regulations part 31, substitute the words "department of environmental quality" except when used in 10 Code of Federal Regulations 31.8(c)(2) and 31.11(d)(2).
4. Reporting required in 10 Code of Federal Regulations 31.5(c)(5), 31.5(c)(8)(ii), 31.5(c)(9)(i), 31.5(c)(11), and 31.5(c)(14) shall be submitted to the department of environmental quality as follows:

a. By mail addressed to:

Radiation Control Program
Department of Environmental Quality
918 East Divide Avenue, Second Floor
Bismarck, ND 58501-1947

b. By hand delivery to:

Radiation Control Program
Department of Environmental Quality
915 East Divide Avenue, Second Floor
Bismarck, ND

c. By electronic submission to ram@nd.gov. Electronic submissions must be made in a manner that enables the department of environmental quality to receive, read, authenticate, distribute, and archive the submission, and process and retrieve it a single page at a time.

5. North Dakota state form number 8423, "certificate - in vitro testing with radioactive material under general license", must be used instead of nuclear regulatory commission form 483 as specified in 10 Code of Federal Regulations part 31.
6. References in 10 Code of Federal Regulations part 31 to specific licenses issued by an agreement state also include specific licenses issued by the United States nuclear regulatory commission.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-19

RECIPROCAL RECOGNITION OF LICENSES

Section

33.1-10-19-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations
Part 150

33.1-10-19-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 150.

10 Code of Federal Regulations 150.1, 150.2, 150.3, 150.11, 150.20, 150.31, and 150.32 are
adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference is 10 Code of Federal Regulations 150.3 foreign obligations.
2. Requirements in 10 Code of Federal Regulations part 150 that apply to "byproduct material"
also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "nuclear regulatory commission", "regional
administrator", "United States nuclear regulatory commission", "region", or "regional
administrator of the United States nuclear regulatory commission regional office" appear in
10 Code of Federal Regulations part 150, substitute the words "department of environmental
quality" except when used in section 150.5.
4. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
5. North Dakota state form number 58230, "radioactive material reciprocity request", must be
used instead of nuclear regulatory commission form 241 as specified in 10 Code of Federal
Regulations part 150.
6. Where the words "non-agreement states", "areas of exclusive federal jurisdiction within
agreement states", or "offshore waters" are used in 10 Code of Federal Regulations 150.20(a)
(1)(i), (ii) and (iii) and 150.20(b), (b)(3), and (b)(4) substitute the words "state of North Dakota".
7. Where the words "agreement states license" are used in 10 Code of Federal Regulations
150.20, also add the words "nuclear regulatory commission license". Where the words
"license issued by an agreement state" are used in 10 Code of Federal Regulations 150.20
also add the words "license issued by the nuclear regulatory commission". Where the words
"license from an agreement state" are used in 10 Code of Federal Regulations 150.20 also
add the words "license from the nuclear regulatory commission".
8. The words "for the first time in a calendar year" are stricken from 10 Code of Federal
Regulations 150.20(b)(1).
9. Where the words "in any calendar year, except that the general license in paragraph (a) of this
section concerning activities in offshore water authorizes that person to possess or use
radioactive materials, or engage in the activities authorized, for an unlimited period of time"
are used in 10 Code of Federal Regulations 150.20(b)(4), substitutes the words "in a 365-day
period".
10. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for
applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-20
SPECIFIC DOMESTIC LICENSES TO MANUFACTURE OR TRANSFER CERTAIN ITEMS
CONTAINING BYPRODUCT MATERIAL

Section

33.1-10-20-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 32

33.1-10-20-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 32.

10 Code of Federal Regulations 32.1, 32.2, 32.3, 32.13, 32.17, 32.24, 32.51, 32.51(a), 32.52, 32.53, 32.54, 32.55, 32.56, 32.57, 32.58, 32.59, 32.61, 32.62, 32.71, 32.72, 32.74, 32.101, 32.102, 32.103, 32.110, 32.201, 32.210, and 32.301 are adopted by reference as they exist on October 1, 2015, with the following exceptions:

1. Not adopted by reference is 10 Code of Federal Regulations 32.1(c)(1).
2. Requirements in 10 Code of Federal Regulations part 32 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
3. Where the words "NRC", "commission", "NRC regional office", or "director of nuclear material safety and safeguards" appear in 10 Code of Federal Regulations part 32, substitute the words "department of environmental quality" except when used in 32.51(a)(3)(iii), 32.54(a), 32.58, 32.71(d), 32.72(b)(5), and 32.74(a)(3).
4. Reporting required in 10 Code of Federal Regulations 32.56(a) shall be submitted to the department of environmental quality as follows:

a. By mail addressed to:

Radiation Control Program
Department of Environmental Quality
918 East Divide Avenue, Second Floor
Bismarck, ND 58501-1947

b. By hand delivery to:

Radiation Control Program
Department of Environmental Quality
918 East Divide Avenue, Second Floor
Bismarck, ND

c. By electronic submission to ram@nd.gov. Electronic submissions must be made in a manner that enables the department of environmental quality to receive, read, authenticate, distribute, and archive the submission, and process and retrieve it a single page at a time.

5. North Dakota state form number 8418, "application for radioactive material license", must be used instead of nuclear regulatory commission form 313 as specified in 10 Code of Federal Regulations part 32.

6. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-10-21
SPECIFIC DOMESTIC LICENSES OF BROAD SCOPE FOR BYPRODUCT MATERIAL

Section

33.1-10-21-01 Adoption by Reference of Several Sections in 10 Code Federal Regulations Part 33

33.1-10-21-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 33.

10 Code of Federal Regulations 33.1, 33.11, 33.12, 33.13, 33.14, 33.15, 33.16, 33.17, and 33.100 are adopted by reference as they exist on January 1, 2010, with the following exceptions:

1. Requirements in 10 Code of Federal Regulations part 33 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
2. Where the word "commission" appears in 10 Code of Federal Regulations part 33, substitute the words "department of environmental quality".
3. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.
4. North Dakota state form number 8418, "application for radioactive material license", must be used instead of nuclear regulatory commission form 313 as specified in 10 Code of Federal Regulations part 33.
5. For references to 10 Code of Federal Regulations part 170, see chapter 33.1-10-11 for applicable fee schedules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

CHAPTER 33.1-10-22
PHYSICAL PROTECTION OF CATEGORY 1 AND CATEGORY 2 QUANTITIES OF
RADIOACTIVE MATERIAL

Section

33.1-10-22-01 Adoption by Reference of Several Sections in 10 Code of Federal Regulations Part 37

33.1-10-22-01. Adoption by reference of several sections in 10 Code of Federal Regulations part 37.

10 Code of Federal Regulations 37.1, 37.3, 37.5, 37.11, 37.21, 37.23, 37.25, 37.27, 37.29, 37.31, 37.33, 37.41, 37.43, 37.45, 37.47, 37.49, 37.51, 37.53, 37.55, 37.57, 37.71, 37.73, 37.75, 37.77, 37.79, 37.81, 37.101, 37.103, 37.105, and appendix A to part 37 are adopted by reference as they exist on December 1, 2015, with the following exceptions:

1. Not adopted by reference is 10 Code of Federal Regulations (CFR) 37.11(b) and 37.43(d)(9).
2. All of the requirements in chapter 33.1-10-22 apply to both licensees and registrants. A reference in 10 CFR part 37 to "license" includes "registration", a reference to "licensee" includes "registrant", a reference to "licensed" includes "registered", a reference to "licensed material(s)" includes "registered source of radiation" and a reference to "licensed radioactive material" includes "registered source of radiation". "Registrant" means any person who is registered with the department and is legally obligated to register with the department pursuant to article 33.1-10 and North Dakota Century Code chapter 23.1-03. "Registration" means the notification of the department of environmental quality of possession of a source of radiation and the furnishing of information with respect thereto, in accordance with North Dakota Century Code chapter 23.1-02.
3. Where the word "NRC" appears in 10 CFR 37.31(d), 37.43(c)(3)(iii), 37.57(a), 37.57(c), 37.77 [with the exception of "the NRC's Web site" in 37.77(a)(1)], and 37.81(g), substitute the words "department of environmental quality".
4. Where the word "Commission" appears in 10 CFR 37.5 (definitions of "byproduct material" and "person"), 37.11(a), 37.43(a)(3), 37.43(c)(1)(ii), 37.101, 37.103, and 37.105, substitute the words "department of environmental quality".
5. Where the words "NRC regional office" appear in 10 CFR 37.41(a)(3) and 37.81, substitute the words "department of environmental quality".
6. Where the words "appropriate NRC regional office listed in § 30.6(a)(2) of this chapter" appear in 10 CFR 37.45(b), substitute the words "department of environmental quality".
7. Where the words "NRC's Operational Center (301-816-5100)" appear in 10 CFR 37.57(a), 37.57(b), and 37.81, substitute the words "department of environmental quality".
8. Where the words "NRC's Operational Center" appear in 10 CFR 37.81, substitute the words "department of environmental quality".
9. Where the words "NRC's Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555-0001. The notification to the NRC may be made by email to RAMQC_SHIPMENTS@nrc.gov or by fax to 301-816-5151" appear in 10 CFR 37.77(a)(1), substitute the words "department of environmental quality".

10. Where the words "NRC's Director of Nuclear Security, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555-0001" appear in 10 CFR 37.77(c)(1), substitute the words "department of environmental quality".
11. Where the words "NRC's Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555-0001" appear in 10 CFR 37.77(c)(2) and 37.77(d), substitute the words "department of environmental quality".
12. Where the words "Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555-0001" appear in 10 CFR 37.81(g), substitute the words "department of environmental quality".
13. Requirements in 10 CFR part 37 that apply to "byproduct material" also apply to naturally occurring or accelerator-produced radioactive material.
14. "Act" includes North Dakota Century Code chapters 23.1-02 and 23.1-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

33.1-10-23-01. Purpose.

This chapter establishes radiation protection standards for technologically enhanced naturally occurring radioactive material (TENORM). These standards include the possession, use, processing, manufacture, distribution, transfer, and disposal of TENORM and of products containing TENORM. This chapter also provides for the licensing of TENORM, including license termination. The provisions of this chapter are in addition to the definitions and applicable requirements of chapters 33.1-10-01, 33.1-10-03.1, 33.1-10-04.2, 33.1-10-10.1, and 33.1-10-13.1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-02. Scope.

1. Except as otherwise provided, this chapter applies to any person who receives, possesses, uses, processes, transfers, distributes, or disposes of TENORM.

2. The manufacture and distribution of products containing TENORM, in which the TENORM's emitted radiation is considered beneficial to the products, are licensed pursuant to the provisions of chapter 33.1-10-03.1.
3. This chapter addresses the introduction of TENORM into products in which the radiation emitted from the TENORM is not considered to be beneficial to the products.
4. This chapter does not apply to source material and byproduct material as both are defined in the Atomic Energy Act of 1954, as amended [42 U.S.C. 2011 et seq.] and relevant regulations implemented by the United States nuclear regulatory commission.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-03. Definitions.

The terms used throughout this chapter have the same meaning as in North Dakota Century Code chapter 23.1-03, except:

1. "Applicant" means a person applying for a license under this chapter and includes any individual or entity that owns or controls the applicant.
2. "Beneficial to the product" means that the radioactivity of the TENORM is necessary to the use of the product.
3. "Conditional release" means release by a licensee for a specified use other than release for unrestricted use.
4. "Consumer" means a member of the public exposed to TENORM from final end-use products available on a retail basis.
5. "Consumer or retail product" means any product, article, or component part thereof, produced, distributed, or sold for use by a consumer in or around a permanent or temporary household or residence, or for the personal use, consumption, or enjoyment of a consumer, or for use in or around a school or playground.
6. "Critical group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.
7. "Generator" means any person whose act or process produces TENORM or whose act first causes the TENORM to become subject to regulation.
8. "Purposeful dilution" means a deliberate act of the mixing of clean or unlike materials with contaminated materials for the purpose of changing waste classification or concentration of waste.
9. "Product" means something produced, made, manufactured, refined, or beneficiated.
10. "Radiation safety officer" means an individual with the responsibility for the overall radiation safety program on behalf of the licensee and who meets the requirements of section 33.1-10-23-28.
11. "Reasonably maximally exposed individual" means a representative of a population who is exposed to TENORM at the maximum TENORM concentration measured in environmental media found at a site along with reasonable maximum case exposure assumptions. The exposure is determined by using maximum values for one or more of the most sensitive

parameters affecting exposure, based on cautious but reasonable assumptions, while leaving the others at their mean value.

12. "Reclaiming" means returning property to a condition or state such that the property no longer presents a health or safety hazard or threat to the environment; the term "reclaiming" includes those activities necessary to decommission the licensed facility (i.e., to remove, as a facility, safely from service and reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the license).

13. "Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of chapter 33.1-10-04.2.

14. "Tank" means a stationary device, other than a container as described in subsection 2 of section 33.1-10-23-08, designed to contain an accumulation of TENORM waste, which is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, or plastic), which provide structural support.

15. "Technologically enhanced naturally occurring radioactive material (TENORM)" means naturally occurring radioactive material whose radionuclide concentrations are increased by or as a result of past or present human practices. TENORM does not include background radiation or the natural radioactivity of rocks or soils. TENORM does not include "source material" and "byproduct material" as both are defined in the Atomic Energy Act of 1954, as amended [42 U.S.C. 2011 et seq.] and relevant regulations implemented by the United States nuclear regulatory commission.

16. "Transfer" means the physical relocation of TENORM within a business' operation or between general or specific licensees. This term does not include commercial distribution or a change in legal title to TENORM that does not involve physical movement of those materials.

17. "Total effective dose equivalent" or "TEDE" means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-04. Exemptions.

1. Persons who receive, possess, use, process, transfer, distribute, or dispose of TENORM are exempt from the requirements of this chapter with respect to any combination of radium-226 and radium-228 if the materials contain, or are contaminated at, concentrations less than one hundred eighty five becquerel per kilogram [five picocuries per gram (5.0 pCi/g)] excluding natural background radiation. The progeny of the exempt TENORM radium-226 and radium-228 are also exempt.

2. Persons who receive products or materials containing TENORM distributed in accordance with a specific license issued by the department pursuant to subsection 1 of section 33.1-10-23-11, or to an equivalent license issued by another licensing state, are exempt from this chapter with regard to those products or materials.

3. Persons who receive, possess, use, process, transfer, and distribute, including preparation of custom blends for distribution, phosphate or potash ore-based fertilizers containing TENORM are exempt from this chapter.
4. Persons who receive, possess, use, process, transfer, dispose into a permitted landfill, and distribute, including preparation of custom blends for distribution, zirconia, zircon, and products of zirconia and zircon containing TENORM are exempt from this chapter. A facility that manufactures zirconia or zircon from ore is not exempt from this chapter. A facility that chemically processes zirconia or zircon resulting in increased environmental mobility of TENORM is not exempt from this chapter.
5. Persons who possess TENORM waste regulated by the Comprehensive Environmental Response, Compensation and Liability Act, as amended [42 U.S.C. 9601 et seq.] or by the Resource Conservation and Recovery Act, as amended [42 U.S.C. 6901 et seq.] or equivalent state authority are exempt from this chapter for the TENORM waste regulated by either of these federal acts.
6. Other persons who possess or use TENORM shall be exempt when the department makes a determination, upon its own initiative or upon request for such determination, that the reasonably maximally exposed individual will not receive a public dose with a TEDE of more than one millisievert [one hundred millirem] in one year from all licensed or registered sources of radiation including TENORM.
7. Persons who possess TENORM in the form of coal combustion residuals (i.e., fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste) from energy conversion facilities are exempt from this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-05. Standards for radiation protection for members of the public.

1. All licensees shall conduct operations with TENORM so that individual members of the public will not exceed one millisievert [one hundred millirem] TEDE in a year, exclusive of the dose contributions from background radiation, from all licensed or registered sources of radiation, including TENORM. Doses from inhalation of indoor radon and its short half-life (less than one hour) progeny shall not be included in calculations of the TEDE, except when the dose is due to releases from licensed operations involving the handling or processing of TENORM.
2. Persons subject to a specific or general license under this chapter shall comply with the radiation protection standards in chapter 33.1-10-04.2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-06. Protection of workers during operations.

Each person subject to a specific or general license under this chapter shall conduct operations so that protection of workers complies with the radiation protection standards in chapters 33.1-10-04.2 and 33.1-10-10.1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-07. Unrestricted use and conditional release.

Each general or specific licensee shall, no less than thirty days before vacating or relinquishing possession or control of premises which may have been contaminated with TENORM as a result of the licensee's activities, notify the department in writing of intent to vacate. When deemed necessary by the department, the licensee shall decontaminate the premises in accordance with the following or in such other manner as the department may specify.

1. Each licensee before vacating or transferring any premises shall permanently decontaminate the premises to meet the criteria for decommissioning in 10 CFR part 20, subpart E. The licensee shall make a survey after the decontamination and provide a copy to the department and any landlord, subsequent tenant, or transferee. The premises may not be vacated, sold, or transferred until the department verifies and accepts the decontamination survey.
2. No machinery, instruments, laboratory equipment, or any other property used in contact with, or close proximity to TENORM at a licensed premises may be assigned, sold, leased, or transferred to an unlicensed person unless such property has been permanently decontaminated below or equal to the standards specified in table 4.2-07.1 of chapter 33.1-10-04.2. The licensee shall make a survey after the decontamination and provide a copy to the department and subsequent transferee or owner. The equipment may not be assigned, sold, leased, or transferred until the department verifies and accepts the decontamination survey.
3. Persons with a specific license must also comply with the requirements of subdivisions f and g of subsection 1 of section 33.1-10-23-17 and section 33.1-10-23-18 that are applicable to remediation and license termination.
4. Persons with a general license must notify the department in writing before beginning activities to reclaim the site. Decontamination activities require a specific license under section 33.1-10-23-11.
5. Notification of site or area closure. When the general licensee has permanently ceased use of radioactive materials at a site or portion of a site or facility or when an area has not been used for a period of two years, the licensee shall, within sixty days, provide the following information in writing to the department:
 - a. The location of the site or area; and
 - b. The plan for reclaiming or decontaminating the site or area.
6. Actions taken to confine TENORM on site or to remediate sites shall be based on expected longevity-related controls for one thousand years or longer.
7. Conditional release of metal for recycle. Conditionally released metal for recycle shall be done only under the condition that metal contaminated with TENORM does not exceed a maximum exposure level of fifty microrentgens per hour, including background radiation, at any accessible location of the metal surface prior to release from the site.
8. Equipment not released for unrestricted use. Equipment contaminated with TENORM in excess of levels specified in section 33.1-10-23-26 may be transferred pursuant to subsection 4 of section 33.1-10-23-10.
9. Other transfers of TENORM. Other transfers of TENORM shall be in accordance with sections 33.1-10-23-08, 33.1-10-23-10, or 33.1-10-23-11.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

33.1-10-23-08. Disposal and transfer of waste for disposal.

1. Each person subject to this chapter's general and specific licensing requirements shall manage and dispose of wastes containing TENORM:

- a. By transfer of the wastes for storage, treatment, or disposal at a facility authorized to accept wastes containing TENORM by the department or other applicable state or federal agency;
- b. By transfer for disposal in another state as otherwise approved by the applicable governmental authority; or
- c. In accordance with alternate methods authorized by the department or other applicable state or federal agency.

2. Containers:

- a. TENORM waste shall be kept in a leak-proof container.
- b. The licensee shall use a container made of, or lined with, materials that will not react with, or be incompatible with the TENORM waste to be stored so that the ability of the container to contain the waste is not impaired or compromised.
- c. A container containing TENORM waste shall always be closed or covered to prevent loss of material and entrance of outside elements during storage or while in transport, except when it is necessary to add or remove waste.
- d. A container containing TENORM waste shall not be opened, handled, or stored in a manner that may rupture the container or cause it to leak.
- e. At least quarterly, the licensee shall inspect areas where containers of TENORM waste are stored, looking for leaking or deteriorating containers or containment systems.
- f. All containers of TENORM waste shall be stacked in such a manner that each container identification label can be read from the access aisle or area.
- g. Each container of TENORM waste shall be labeled with the following information prior to storage:
 - (1) Name and address of generator.
 - (2) Type of material (e.g., sludge, scale, dirt, scrap metal, etc.).
 - (3) Date stored.
 - (4) Labeled as radioactive material.
- h. Records of inspections shall be maintained by the licensee for inspection by the department for five years.

3. Tanks containing TENORM.

The licensee shall develop a schedule and procedure for assessing the condition of each tank containing TENORM waste. The schedule and procedure must be adequate to detect cracks, leaks, corrosion, and erosion that may lead to cracks, leaks, or wall thinning to less than the required thickness to maintain vessel integrity. Procedures for emptying a tank to allow entry, procedures for personnel protection, and inspection of the interior must be established when

necessary to detect corrosion of the tank sides and bottom. The frequency of these inspections shall be performed at intervals not to exceed twelve months. Records shall be maintained for a period of five years.

4. Each shipment of TENORM shall be accompanied by a manifest containing all of the following information prior to leaving the licensee's site:

a. The licensee's (generator's) name, physical site address, and telephone number;

b. The name, address, telephone number, and radioactive material license number of each transporter;

c. The name, address, and telephone number of the designated disposal facility;

d. The description of the waste material; and

e. The total quantity of all TENORM waste by units of weight in tons or cubic yards and the number and type of containers.

5. The following certification must appear on the manifest and be signed and dated by the licensee as follows:

"I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport according to applicable international and national government regulations."

6. The licensee shall:

a. Sign and date the manifest upon initial transporter acceptance of the waste material;

b. Obtain the signature of the initial transporter and date of the acceptance of the manifest;

c. Retain one copy for a period of not less than three years;

d. Provide the initial transporter the remaining copies of the manifest; and

e. Receive the fully signed copy of the manifest from the designated disposal facility within forty-five days from the delivery to the initial transporter. In the event the licensee does not receive the signed manifest within this period, the licensee shall:

(1) Notify the department within seven days;

(2) Conduct an investigation into the reason the manifest was not received; and

(3) Report the results of the investigation to the department within thirty days.

7. The licensee shall file with the department a quarterly summary report stating the date, type, and total quantity by weight in tons or cubic yards, generator and final disposal facility of each TENORM transferred. Each report shall be filed within thirty days of the end of each quarter. If no transfers of TENORM have been made during the reporting period, the report must so indicate. Quarterly summary reports shall be maintained for a period of three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-09. Prohibition - Purposeful dilution.

Purposeful dilution to render TENORM exempt shall not be performed without prior department approval.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-10. General license.

1. A general license is hereby issued to possess, use, transfer, distribute, or dispose of TENORM without regard to quantity, except for those activities requiring a specific license.
2. Employees or contractors under control and supervision of a general licensee may perform routine maintenance on equipment, facilities, and land owned or controlled by the general licensee. Maintenance that provides a pathway for exposure different from that found in periodic maintenance operations and that increases the potential for additional exposure is not considered routine maintenance. The decontamination of equipment, facilities, and land shall be performed only by persons specifically licensed by the department, an agreement state, or another licensing agency to conduct such work.
3. Any person subject to the general license issued under this section shall notify the department within sixty days of the effective date of this chapter or of becoming subject to the general license. The notification shall include the following:
 - a. Name and address of the licensee;
 - b. Location and description of the facility, facilities, or portion of a facility where the TENORM is situated; and
 - c. Description of the TENORM, including estimates of the amount and extent of TENORM.
4. Transfer of material, equipment, or real property.
 - a. The transfer of TENORM, not exempt from article 33.1-10, from one general licensee to another general licensee is authorized if:
 - (1) The equipment and facilities contaminated with TENORM are to be used by the recipient for a similar purpose, provided that no member of the public shall receive a dose in excess of that allowed under subsection 1 of section 33.1-10-23-05; or
 - (2) The transfer of control or ownership of land contaminated with TENORM includes an annotation of the deed records to indicate the presence of TENORM.
 - b. For transfers not made in accordance with subdivision a, the transferor shall obtain the department's prior written approval for the transfer.
 - c. For transfers made under subdivision a, the transferor shall assess the amount and extent of TENORM contamination or material present, inform the general licensee receiving the TENORM of these assessments prior to such transfer, and maintain records that include:
 - (1) The date, recipient name, and location;
 - (2) A description and quantity of the material; and

(3) A description of the procedures and mechanisms used to ensure that material will not be released in another manner, such as an unrestricted release.

d. A general licensee intending to transfer material or real property for unrestricted use shall document compliance with the requirements of section 33.1-10-23-07. Records of such compliance shall be maintained for ten years.

5. Distribution of TENORM products between general licensees. The distribution of TENORM products from one general licensee to another general licensee is authorized provided the product is accompanied by labels or manifests which identify the type and amount of TENORM.

6. The department may, by written notice, require any person authorized by a general license to apply for and obtain a specific license if the department determines that specific licensure is necessary to ensure that exposures do not exceed the criteria of sections 33.1-10-23-05 and 33.1-10-23-06. The notice shall state the reason or reasons for requiring a specific license.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-11. Specific licenses.

1. A specific license is required to manufacture and distribute any consumer or retail product containing TENORM unless the manufacture and distribution are:

a. Authorized as specified by section 33.1-10-23-10;

b. Licensed under the provisions of chapter 33.1-10-03.1; or

c. Otherwise exempt in accordance with another chapter of article 33.1-10.

2. A specific license is required to decontaminate equipment or land not exempted under the provisions of section 33.1-10-23-04 or to decontaminate facilities contaminated with TENORM in excess of the levels in section 33.1-10-23-07. For purposes of this subsection, the term "decontaminate" shall not include routine maintenance which results in the incidental removal of contamination.

3. A specific license is required to receive TENORM from other persons for storage.

4. A specific license is required to possess or use TENORM for the purposes of processing, treatment, or disposal.

5. A specific license is required to transport TENORM upon public roadways.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-12. Application and background review for specific licenses.

1. Applications for specific licenses shall be in English and filed in a manner and on a form prescribed by the department.

2. The department may at any time after the filing of the original application, and before the termination of the license, require further statements in order to enable the department to determine whether the application shall be granted or denied or whether a license shall be modified or revoked.

3. An applicant must provide information required by the department to complete an environmental compliance background review, including:

a. Consent to a criminal history check under North Dakota Century Code section 12-60-24.

b. Disclosure of personal and business information on a form provided by the department, executed under oath or affirmation, which includes:

(1) The person's name and address;

(2) A description of the person's experience in managing the type of TENORM that will be managed under the license;

(3) A description of every civil and administrative complaint against the person for the violation of any state or federal environmental protection law which has resulted in a fine or penalty of more than ten thousand dollars within five years before the date of the submission of the application;

(4) A description of every settlement agreement entered into by the person with a federal or state agency to resolve any alleged violation of any state or federal environmental protection law which has resulted in a payment of more than ten thousand dollars within five years before the date of the submission of the application;

(5) A description of every pending notice of violation, civil complaint, administrative complaint, or criminal complaint alleging the violation of any state or federal environmental protection law;

(6) A description of every judgment of criminal conviction entered against the applicant within five years before the date of submission of the application for the violation of any state or federal environmental protection law;

(7) A description of every judgment of criminal conviction of a felony constituting a crime involving fraud or misrepresentation under the laws of any state or of the United States which has been entered against the applicant within five years before the date of submission of the application; and

(8) Any other information the department deems relevant.

c. In addition to the applicant, the following related individuals and entities may be required to submit personal and business disclosure information:

(1) Each entity that is, or is proposed to be:

(a) A partner;

(b) An entity contracted with the applicant to operate, manage, or supervise the facility or activities for which approval is being sought;

(c) An entity holding of ten percent or more of the applicant's debt;

(d) An entity holding ten percent or more of the applicant's equity; or

(e) The parent corporation, holding corporation, and any other entity that exercises control over the facility or activities for which approval is being sought.

(2) Each individual which has, or is proposed to have, any of the following relationships with the applicant:

(a) Director;

(b) Partner;

(c) Officer;

(d) All individuals having managerial or supervisory or substantial decisionmaking authority and responsibility for the management of operations involving TENORM;

(e) Holder of ten percent or more of the applicant's debt; or

(f) Holder of ten percent or more of the applicant's equity.

4. The department may deny an application for the issuance, renewal, transfer, or major modification based on its environmental compliance background review.

a. Circumstances justifying denial include:

(1) The applicant has intentionally misrepresented or concealed any material fact in a statement required under this section;

(2) The applicant or related individual or entity has been convicted of a felony or pleaded guilty or nolo contendere to a felony involving the laws of any state or the federal government within five years preceding the application for the license;

(3) The applicant or related individual or entity has been adjudicated in contempt of an order of any court enforcing the laws of this state or any other state or the federal government within five years preceding the application for the license; or

(4) The applicant or related individual or entity has repeatedly violated any state or federal environmental protection laws.

b. The department shall consider the relevance of the offense to the business to which the license is issued, the nature and seriousness of the offense, the circumstances under which the offense occurred, the date of the offense, and the ownership and management structure in place at the time of the offense.

5. Each application shall be signed by the applicant or a person duly authorized to act for and on the applicant's behalf.

6. An application for a license may include a request for a license authorizing one or more activities.

7. Each application for a specific license shall be accompanied by the fee prescribed in chapter 33.1-10-11.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-13. Requirements for the issuance of specific licenses.

1. A license application will be approved if the department determines that:

a. The applicant is qualified by reason of training and experience to use the TENORM in question for the purpose requested in accordance with article 33.1-10 in such a manner as to protect the public health and safety or property;

- b. The applicant's proposed equipment, facilities, and procedures are adequate to protect the public health and safety or property;
 - c. The issuance of the license will not constitute a significant risk to the health and safety of the public;
 - d. The applicant satisfied all applicable special requirements in this chapter;
 - e. The applicant has met the financial assurance requirements of section 33.1-10-23-25;
 - f. The applicant has adequately addressed the following items in the application:
 - (1) Procedures and equipment for monitoring and protecting workers;
 - (2) An evaluation of the radiation levels and concentrations of contamination expected during normal operations;
 - (3) Operating and emergency procedures, including procedures for waste reduction and quality assurance of items released for unrestricted use; and
 - (4) A method for managing the radioactive material removed from contaminated equipment, facilities, and land.
 - g. For each location to be listed on the license as an authorized use location, the applicant shall submit either:
 - (1) A statement that the applicant owns the facility where radioactive material is to be used or stored; or
 - (2) A statement verifying that the facility owner has been informed, in writing, of the use or storage of radioactive material at the facility, and that the use of such material is subject to the rules of the department.
2. An application for a specific license to transfer or manufacture or distribute consumer or retail products containing TENORM to persons exempted from this chapter under subsection 2 of section 33.1-10-23-04 will be approved if:
- a. The applicant satisfies the general requirements specified in subsection 1;
 - b. The TENORM is not contained in any food, beverage, cosmetic, drug, or other commodity designed for ingestion or inhalation by, or application to, a human being; and
 - c. The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, and conditions of handling, storage, use, and disposal of the TENORM product to demonstrate that the product will meet the safety criteria set forth in section 33.1-10-23-14. The information shall include:
 - (1) A description of the product and its intended use or uses;
 - (2) The type, quantity, and concentration of TENORM in each product;
 - (3) The chemical and physical form of the TENORM in the product, and changes in chemical and physical form that may occur during the useful life of the product;
 - (4) An analysis of the solubility in water and body fluids of the radionuclides in the product;

- (5) The details of manufacture and design of the product relating to containment and shielding of the TENORM and other safety features under normal and severe conditions of handling, storage, use, reuse, and disposal of the product;
- (6) The degree of access of human beings to the TENORM product during normal handling, use, and disposal;
- (7) The total quantity of TENORM expected to be distributed annually in the product;
- (8) The expected useful life of the product;
- (9) The proposed method of labeling or marking each unit of the product with identification of the manufacturer or initial transferor of the product and the radionuclides and quantity of TENORM in the product;
- (10) The procedures for prototype testing of the product to demonstrate the effectiveness of the containment, shielding, and other safety features under both normal and severe conditions of handling, storage, use, reuse, and disposal;
- (11) The results of the prototype testing of the product, including any change in the form of the TENORM contained in it, the extent to which the TENORM may be released to the environment, any change in radiation levels, and any other changes in safety features;
- (12) The estimated external radiation doses and committed dose equivalent relevant to the safety criteria in section 33.1-10-23-14 and the basis for such estimates;
- (13) A determination that the probabilities with respect to doses referred to in section 33.1-10-23-14 meet the safety criteria;
- (14) The quality control procedures to be followed in the processing of production lots of the product, and the quality control standards the product will be required to meet; and
- (15) Any additional information, including experimental studies and tests, required by the department to facilitate a determination of the radiation safety of the product.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-14. Safety criteria for consumer and retail products.

An applicant for a license under subsection 2 of section 33.1-10-23-13 shall demonstrate that the product is designed and will be manufactured so that:

1. In normal use and disposal of a single exempt item, and in normal handling and storage of the quantities of exempt items likely to accumulate in one location during marketing, distribution, installation, and servicing of the product, it is unlikely that the dose in any one year, to a suitable sample of the group of individuals expected to be most highly exposed to radiation or radioactive material from the product will exceed the doses in column I of section 33.1-10-23-15.
2. In use and disposal of a single exempt item and in handling and storage of the quantities of exempt items likely to accumulate in one location during marketing, distribution, installation, and servicing of the product, the probability is low that the containment, shielding, or other safety features of the product would fail under such circumstances that a person would

receive an external radiation dose or committed dose equivalent in excess of the dose to the appropriate part of the body as specified in column II of section 33.1-10-23-15 and the probability is negligible that a person would receive an external radiation dose or committed dose equivalent in excess of the dose to the appropriate part of the body as specified in column III of section 33.1-10-23-15.

3. It is unlikely that there will be a significant reduction in the effectiveness of the containment, shielding, or other safety features of the product from wear and abuse likely to occur in normal handling and use of the product during its useful life.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-15. Table of doses.

The dose limits in this section are the doses above background from the product.

1. Column I doses are:

- a. For the whole body; head and trunk; active blood-forming organs; gonads; or lens of eye - fifty microsieverts [five millirem].
- b. For the hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than one square centimeter - seven hundred fifty microsieverts [seventy-five millirem].
- c. For other organs - one hundred fifty microsieverts [fifteen millirem].

2. Column II doses are:

- a. For the whole body; head and trunk; active blood-forming organs; gonads; or lens of eye - five millisieverts [five hundred millirem].
- b. For the hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than one square centimeter - seventy-five millisieverts [seven thousand five hundred millirem].
- c. For other organs - fifteen millisieverts [one thousand five hundred millirem].

3. Column III doses are:

- a. For the whole body; head and trunk; active blood-forming organs; gonads; or lens of eye - one hundred fifty millisieverts [fifteen rem].
- b. For ankles and forearms; feet and ankles; localized areas of skin averaged over areas no larger than one square centimeter - two thousand millisieverts [two hundred rem].
- c. For other organs - five hundred millisieverts [fifty rem].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-16. Issuance of specific licenses.

1. Upon a determination that an application meets the requirements of article 33.1-10, the department will issue a specific license authorizing the proposed activity in such form and containing such conditions and limitations as it deems appropriate or necessary.
2. The department may incorporate in any license at the time of issuance, or thereafter by amendment, such additional requirements and conditions with respect to the licensee's receipt, possession, use, and transfer of TENORM subject to this chapter as it deems appropriate or necessary in order to:
 - a. Protect public health and safety or property;
 - b. Require such reports and the keeping of such records, and to provide for such inspections of activities under the license as may be appropriate or necessary; and
 - c. Prevent loss, theft, or loss of control of TENORM subject to this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-17. Conditions of specific licenses.

1. General terms and conditions.
 - a. Each specific license issued under this chapter shall be subject to all the provisions of North Dakota Century Code chapters 23.1-02, 23.1-03, and 23.1-05, now or hereafter in effect, and to all rules and orders of the department.
 - b. No specific license issued or granted under this chapter and no right to possess or utilize TENORM granted by any license issued under this chapter shall be transferred, assigned, or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person unless the department shall, after securing full information, find that the transfer is in accordance with the provisions of North Dakota Century Code chapters 23.1-02, 23.1-03, and 23.1-05, and shall give its consent in writing.
 - c. Each person specifically licensed under this chapter shall confine use and possession of the TENORM licensed to the locations and purposes authorized in the specific license.
 - d. Transfer of control.

Within thirty days of the existence of any new controlling individual or entity, the licensee shall submit to the department the name of the controlling individual or entity and a statement signed by the controlling individual or entity in which the controlling individual or entity agrees to accept responsibility for the license. The controlling individual or entity must undergo an environmental compliance background review under section 33.1-10-23-12.

- e. Notification of bankruptcy.

(1) Each licensee shall notify the department, in writing, immediately following the filing of a voluntary or involuntary petition for bankruptcy under any chapters of Title 11 (bankruptcy) of the United States Code by or against:

- (a) The licensee;

(b) An entity [as that term is defined in 11 U.S.C. 101(15)] controlling a licensee or listing the license or licensee as property of the estate; or

(c) An affiliate [as that term is defined in 11 U.S.C. 101(2)] of the licensee.

(2) This notification shall indicate:

(a) The bankruptcy court in which the petition for bankruptcy was filed; and

(b) The date of the filing of the petition.

f. Each licensee shall notify the department in writing prior to commencing activities to reclaim the licensed facility and site.

g. Notification of site or area closure. When a licensee has permanently ceased use of radioactive materials at a site or portion of a facility and the licensee has not decontaminated the area, or when an area has not been used for a period of two years, the licensee shall, within sixty days, provide the following information in writing to the department:

(1) The location of the facility, site, or area;

(2) The plan for reclaiming or decontaminating the facility, site, or area; and

(3) An evaluation of any changes to the financial assurance submitted in accordance with section 33.1-10-23-25.

h. Temporary jobsites.

(1) When temporary jobsites are authorized on a specific license, TENORM may be used at temporary jobsites throughout North Dakota in accordance with the reciprocal recognition provisions of section 33.1-10-23-24 or chapter 33.1-10-19, in areas not under exclusive federal jurisdiction.

(2) Before TENORM can be used at a temporary jobsite at any federal facility within North Dakota, the jurisdictional status of the jobsite shall be determined as it pertains to the TENORM. Authorization for use of TENORM at jobsites under exclusive federal jurisdiction shall be obtained from the applicable federal agency.

2. Quality control, labeling, and reports of transfer. Each person licensed under subsection 2 of section 33.1-10-23-13 shall:

a. Carry out adequate control procedures in the manufacture of the product to assure that each production lot meets the quality control standards approved by the department;

b. Label or mark each unit so that the manufacturer, processor, producer, or initial transferor of the product and the TENORM in the product can be identified; and

c. Maintain records identifying, by name and address, each person to whom TENORM is transferred for use under subsection 2 of section 33.1-10-23-04 or the equivalent rules of another licensing state, and stating the kinds, quantities, and uses of TENORM transferred. An annual summary report stating the total quantity of each radionuclide transferred under the specific license shall be filed with the department. Each report shall cover the year ending December 31, and shall be filed within ninety days thereafter. If no transfers of TENORM have been made pursuant to subsection 2 of section 33.1-10-23-13 during the reporting period, the report shall so indicate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-18. Expiration and termination of specific licenses.

1. Except as provided in subsection 2 of section 33.1-10-23-19, the authority to engage in licensed activities as specified in the specific license shall expire at the end of the specified day in the month and year stated therein. Any expiration date on a specific license applies only to the authority to engage in licensed activities. Expiration of a specific license shall not relieve the licensee of responsibility for decommissioning its facility and terminating the specific license.
2. Each licensee shall notify the department immediately, in writing, and request termination of the license when the licensee decides to terminate all activities involving radioactive materials authorized under the license. This notification and request for termination shall include the documents required by subsection 4 and shall otherwise substantiate that the licensee has met all of the requirements in subsection 4.
3. No less than thirty days before the expiration date specified in a specific license, the licensee shall either:
 - a. Submit an application for license renewal pursuant to section 33.1-10-23-19; or
 - b. Notify the department, in writing, if the licensee decides not to renew the license. The licensee requesting termination of a license shall comply with the requirements of subsection 4;
4. Termination of licenses.
 - a. If a licensee does not submit a complete application for license renewal pursuant to section 33.1-10-23-19, the licensee shall, on or before the expiration date specified in the license:
 - (1) Terminate use of the TENORM specified in the license;
 - (2) Remove radioactive contamination to the level outlined in section 33.1-10-23-07, to the extent practicable;
 - (3) Properly dispose of the TENORM specified in the license;
 - (4) Submit a completed department form "Certificate: Disposition of Radioactive Material" (SFN 18941); and
 - (5) Submit a radiation monitoring report to confirm the absence of TENORM specified in the license or to establish the levels of residual radioactive contamination, unless the licensee demonstrates the absence of residual radioactive contamination in some other manner acceptable to the department. The radiation monitoring report shall specify the instrumentation used and certify that each instrument was properly calibrated and tested. The licensee shall, as applicable, report levels or quantities of:
 - (a) Beta and gamma radiation at one centimeter from surfaces in units, multiples, or subunits of sieverts or rem per hour or microrentgens per hour;
 - (b) Gamma radiation at one meter from surfaces in units, multiples, or subunits of sieverts or rem per hour or microrentgens per hour;

(c) Removable radioactivity on surfaces in units, multiples, or subunits of becquerels or curies per one hundred square centimeters of surface area or in disintegrations (transformations) per minute per one hundred square centimeters of surface area;

(d) Fixed radioactivity on surfaces in units, multiples, or subunits of becquerels or curies per one hundred square centimeters of surface area or in disintegrations (transformations) per minute per one hundred square centimeters of surface area;

(e) Radioactivity in contaminated liquids such as water, oils, or solvents in units, multiples, or subunits of becquerels or curies per milliliter of volume or per gram of liquid; and

(f) Radioactivity in contaminated solids such as soils or concrete in units, multiples, or subunits of becquerels or curies per gram of solid.

b. If levels of residual radioactive contamination attributable to activities conducted under the license are less than those established in section 33.1-10-23-07, the licensee shall so certify. If the department determines that this certification and the information submitted under subdivision a is adequate and monitoring confirms the findings, then the department will notify the licensee, in writing, of the termination of the license.

c. If residual radioactive contamination attributable to activities conducted under the license are not in conformance with criteria established in section 33.1-10-23-07:

(1) The license continues in effect beyond the expiration date, if necessary, with respect to possession of residual TENORM present as contamination until the department notifies the licensee in writing that the license is terminated. During this time the licensee is subject to the provisions of subsection 5.

(2) In addition to the information submitted under subdivision a of subsection 4, the licensee shall submit a plan for decontamination and disposal, if required, as regards residual TENORM contamination remaining at the time the license expires.

5. Each licensee who possesses TENORM under subdivision c of subsection 4, following the expiration date specified in the license, shall:

a. Limit actions involving TENORM as specified in the license to those related to decontamination and other activities related to preparation for release for unrestricted use; and

b. Continue to control entry to restricted areas until they are suitable for release for unrestricted use and the department notifies the licensee in writing that the license is terminated.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-19. Renewal of specific licenses.

1. Applications for renewal of specific licenses shall be filed in accordance with section 33.1-10-23-12.

2. In any case in which a licensee, not less than thirty days prior to expiration of an existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, the existing license shall not expire until final action by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-20. Amendment of specific licenses at request of licensee.

Applications for amendment of a license shall be filed in accordance with section 33.1-10-23-12 and shall specify the respects in which the licensee desires the license to be amended and the grounds for such amendment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-21. Department action on applications to renew and amend specific licenses.

In considering an application by a licensee to renew or amend the license, the department will apply the criteria set forth in section 33.1-10-23-13.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-22. Modification and revocation of specific licenses.

1. The terms and conditions of all licenses shall be subject to amendment, revision, or modification or the license may be suspended or revoked by reason of amendments to North Dakota Century Code chapters 23-20.2, 23.1-02, 23.1-03, or 23.1-05, or by reason of rules and orders issued by the department.

2. Any license may be revoked, suspended, or modified, in whole or in part, for any material false statement in the application or because of conditions revealed by such application or any report, record, or inspection or other means which would warrant the department to refuse to grant a license on an original application, or for violation of, or failure to observe any of the terms and conditions of North Dakota Century Code chapters 23.1-02, 23.1-03, or 23.1-05, or of the license, or of any rule or order of the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-23. Recordkeeping requirements for site reclamation.

Each licensee shall keep records of information important to the safe and effective reclamation of a facility in an identified location until the license is terminated by the department. If records of relevant information are maintained for other purposes, reference to these records and their locations may be used. The records must include the following information:

1. Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, or site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage

into porous materials such as concrete. These records shall include any known information on identification of involved radionuclides, quantities, forms, and concentrations.

2. As-built drawings and modifications of structures and equipment in restricted areas where radioactive materials are used or stored, and of locations of possible inaccessible contamination, such as buried pipes which may be subject to contamination. If required drawings are referenced, each relevant document need not be indexed individually. If drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations.
3. If required by section 33.1-10-23-25, records of this reclaiming cost estimate prepared for the amount approved by the department for reclaiming.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-24. Reciprocal recognition of specific licenses.

1. Any person who holds a specific license from another agreement state or licensing state, issued by the agency having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in such licensing document within North Dakota for a period not in excess of one hundred eighty days in any twelve-month period, provided that:
 - a. A current copy of the licensing document or equivalent authorization is on file with the department and the authorized activities are not limited to specified installations or locations;
 - b. The out-of-state licensee notifies the department at least three days before engaging in such activity. Such notification shall indicate the location, period, and type of proposed possession and use within North Dakota. Upon receipt from the out-of-state licensee of a written request containing a schedule of activities to be conducted within North Dakota, the department may waive the requirement for additional notifications during the twelve-month period following the receipt of the initial notification;
 - c. The out-of-state licensee complies with all applicable rules of the department including sections 33.1-10-23-11 and 33.1-10-23-12 and with all the terms and conditions of the licensing document or equivalent authorization, except any such terms and conditions which may be inconsistent with article 33.1-10;
 - d. The out-of-state licensee supplies any other information necessary to show compliance with article 33.1-10; and
 - e. The out-of-state licensee shall not transfer or dispose of TENORM possessed or used under the general license, except by transfer to a person:
 - (1) Specifically licensed by the department or by another licensing state to receive such TENORM; or
 - (2) Exempt from the requirements for a license for such TENORM under section 33.1-10-23-04.
2. The department may withdraw, limit, or qualify its acceptance of any specific license or equivalent authorization issued by a licensing state, or any product distributed pursuant to such license or equivalent authorization, if the department determines that, had the

out-of-state licensee been licensed by North Dakota, the licensee's license would have been subject to action under section 33.1-10-23-22.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-25. Financial assurance arrangements.

Each licensee or applicant for a specific license shall post with the department financial assurance, or security, to ensure the protection of the public health and safety and the environment in the event of abandonment, default, or other inability or unwillingness of the licensee to meet the requirements of article 33.1-10 and North Dakota Century Code chapter 23.1-03. Financial assurance arrangements shall:

1. Consist of surety bonds, government securities, irrevocable letters of credit, corporate guarantees, insurance, state funds, or any combination of these;
2. Be in an amount sufficient to meet the applicant's or licensee's obligations under article 33.1-10 and North Dakota Century Code chapter 23.1-03 and shall be based upon department approved cost estimates;
3. Be established prior to issuance of the license or the commencement of operations to assure that sufficient funds will be available to carry out the decontamination and decommissioning of the facility;
4. Be continuous for the duration of the license and for a period coincident with the applicant or licensee's responsibility under article 33.1-10 and North Dakota Century Code chapter 23.1-03;
5. Be available in North Dakota subject to judicial process and execution in the event required for the purposes set forth; and
6. Be established within ninety days of the initial effective date of this chapter for licenses in effect on that date.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-26. Acceptable surface contamination levels for TENORM.

1. Where surface contamination by both alpha and beta-gamma emitting nuclides exists, the limits established for alpha and beta-gamma emitting nuclides shall apply independently.
2. As used in this section, "disintegrations per minute" means the rate of emission by radioactive material as determined by correcting the counts per minute observed by an appropriate detector for background, efficiency, and geometric factors associated with the instrumentation.
3. Average contamination level.
 - a. For surface contamination by alpha emitting nuclides, the average contamination level shall not exceed five thousand disintegrations per minute per one hundred square centimeters of surface area.
 - b. For surface contamination by beta-gamma emitting nuclides, the average contamination level shall not exceed five thousand disintegrations per minute per one hundred square centimeters of surface area.

- c. Measurements of average contamination level shall not be averaged over more than one square meter. For objects of less surface area, the average shall be derived for each object.
- d. The average radiation levels associated with surface contamination resulting from beta-gamma emitters shall not exceed two microgray per hour [two tenths millirad per hour] at one centimeter and ten microgray per hour [one millirad per hour] at one centimeter, respectively, measured through not more than seven milligrams per square centimeter of total absorber.

4. Maximum contamination level.

- a. For surface contamination by alpha emitting nuclides, the maximum contamination level shall not exceed fifteen thousand disintegrations per minute per one hundred square centimeters of surface area.
- b. For surface contamination by beta-gamma emitting nuclides, the maximum contamination level shall not exceed fifteen thousand disintegrations per minute per one hundred square centimeters of surface area.
- c. The maximum contamination level applies to an area of not more than one hundred square centimeters.
- d. The maximum radiation levels associated with surface contamination resulting from beta-gamma emitters shall not exceed two microgray per hour [two tenths millirad per hour] at one centimeter and ten microgray per hour [one millirad per hour] at one centimeter, respectively, measured through not more than seven milligrams per square centimeter of total absorber.

5. Limits on removable contamination.

- a. For surface contamination by alpha emitting nuclides, the removable contamination shall not exceed one thousand disintegrations per minute per one hundred square centimeters of surface area.
- b. For surface contamination by beta-gamma emitting nuclides, the removable contamination shall not exceed one thousand disintegrations per minute per one hundred square centimeters of surface area.
- c. Measurements of average contamination level shall not be averaged over more than one square meter. For objects of less surface area, the average shall be derived for each object.
- d. The amount of removable radioactive material per one hundred square centimeters of surface area shall be determined by wiping that area with dry filter or soft absorbent paper, applying moderate pressure, and assessing the amount of radioactive material on the wipe with an appropriate instrument of known efficiency. When removable contamination on objects of surface area A (where A is less than one hundred square centimeters) is determined, the entire surface shall be wiped and the contamination level multiplied by the quantity [one hundred divided by A] to convert to a "per one hundred square centimeter" basis.
- e. The maximum radiation levels associated with surface contamination resulting from beta-gamma emitters shall not exceed two microgray per hour [two tenths millirad per hour] at one centimeter and ten microgray per hour [one millirad per hour] at one centimeter, respectively, measured through not more than seven milligrams per square centimeter of total absorber.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-27. Specific licenses - Radiation protection program required.

1. A licensee shall appoint a radiation safety officer, who agrees, in writing, to be responsible for implementing the radiation protection program. The licensee, through the radiation safety officer, shall ensure that radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements.
2. A licensee shall establish, in writing, the radiation safety officer's authority, duties, and responsibilities.
3. A licensee shall provide the radiation safety officer sufficient authority, organizational freedom, time, resources, and management prerogative, to:
 - a. Identify radiation safety problems;
 - b. Initiate, recommend, or provide corrective actions;
 - c. Stop unsafe operations; and
 - d. Verify implementation of corrective actions.
4. A licensee shall retain a record of actions taken under subsections 1 and 2 of this section for five years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04; S.L. 2017, ch. 199, § 18

33.1-10-23-28. Radiation safety officer - Qualifications.

1. Except for licenses exclusive to the transport of TENORM waste, the specific licensee shall require an individual fulfilling the responsibilities of the radiation safety officer as provided in section 33.1-10-23-27 to be an individual who has completed a department approved training program consisting of forty hours of classroom training in the following areas:
 - a. Characteristics of radiation;
 - b. Units of radiation dose and quantity of radioactivity;
 - c. Hazards of exposure to radiation;
 - d. Radiation detection and measurement;
 - e. Minimizing radiation exposure (time, distance, shielding, and respiratory precautions);
 - f. Use and types of personnel-monitoring equipment;
 - g. Proper use of protective equipment; and
 - h. Transportation of licensed material.
2. For licenses exclusive to the transport of TENORM waste, the licensee shall require an individual fulfilling the responsibilities of the radiation safety officer to be an individual who has completed a department approved training program consisting of eight hours of classroom training in the following areas:

- | a. Characteristics of radiation;
- | b. Units of radiation dose and quantity of radioactivity;
- | c. Hazards of exposure to radiation;
- | d. Radiation detection and measurement;
- | e. Minimizing radiation exposure (time, distance, shielding, and respiratory precautions);
- | f. Use and types of personnel-monitoring equipment;
- | g. Proper use of protective equipment; and
- | h. Transportation of licensed material.

33.1-15-01-01. Purpose.

It is the purpose of these air quality standards and emission regulations to state such requirements as shall be required to achieve and maintain the best air quality possible, consistent with the best available control technology, to protect human health, welfare, and property to prevent injury to plant and animal life, to promote the economic and social development of this state, to foster the comfort and convenience for the people, and to facilitate the enjoyment of the natural attractions of this state.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-02; S.L. 2017, ch. 199, § 21

33.1-15-01-02. Scope.

These air quality standards and emission regulations apply to any source or emission existing partially or wholly within North Dakota.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-03. Authority.

The department of environmental quality has been authorized to provide and administer this article under the provisions of North Dakota Century Code chapter 23.1-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-04. Definitions.

As used in this article, except as otherwise specifically provided or when the context indicates otherwise, the following words shall have the meanings ascribed to them in this section:

1. "Act" means North Dakota Century Code chapter 23.1-06.
2. "Air contaminant" means any solid, liquid, gas, or odorous substance or any combination thereof emitted to the ambient air.
3. "Air pollution" means the presence in the outdoor atmosphere of one or more air contaminants in such quantities and duration as is or may be injurious to human health, welfare, or property or animal or plant life, or which unreasonably interferes with the enjoyment of life or property.
4. "Ambient air" means the surrounding outside air.
5. "ASME" means the American society of mechanical engineers.
6. "Coal conversion facility" means any of the following:
 - a. An electrical generating plant, and all additions thereto, which processes or converts coal from its natural form into electrical power and which has at least one single electrical energy generation unit with a generator nameplate capacity of twenty-five megawatts or more.
 - b. A plant, and all additions thereto, which processes or converts coal from its natural form into a form substantially different in chemical or physical properties, including coal

gasification, coal liquefaction, and the manufacture of fertilizer and other products and which uses or is designed to use over five hundred thousand tons of coal per year.

c. A coal beneficiation plant, and all additions thereto, which improve the physical, environmental, or combustion qualities of coal and are built in conjunction with a facility defined in subdivision a or b.

7. "Control equipment" means any device or contrivance which prevents or reduces emissions.

8. "Department" means the department of environmental quality.

9. "Emission" means a release of air contaminants into the ambient air.

10. "Excess emissions" means the release of an air contaminant into the ambient air in excess of an applicable emission limit or emission standard specified in this article or a permit issued pursuant to this article.

11. "Existing" means equipment, machines, devices, articles, contrivances, or installations which are in being on or before July 1, 1970, unless specifically designated within this article; except that any existing equipment, machine, device, contrivance, or installation which is altered, repaired, or rebuilt after July 1, 1970, must be reclassified as "new" if such alteration, rebuilding, or repair results in the emission of an additional or greater amount of air contaminants.

12. "Federally enforceable" means all limitations and conditions which are enforceable by the administrator of the United States environmental protection agency, including those requirements developed pursuant to title 40 Code of Federal Regulations parts 60 and 61, requirements within any applicable state implementation plan, any permit requirements established pursuant to title 40 Code of Federal Regulations 52.21 or under regulations approved pursuant to title 40 Code of Federal Regulations part 51, subpart I, including operating permits issued under a United States environmental protection agency-approved program that is incorporated into the state implementation plan and expressly requires adherence to any permit issued under such program.

13. "Fuel burning equipment" means any furnace, boiler apparatus, stack, or appurtenances thereto used in the process of burning fuel or other combustible material for the primary purpose of producing heat or power by indirect heat transfer.

14. "Fugitive emissions" means solid airborne particulate matter, fumes, gases, mist, smoke, odorous matter, vapors, or any combination thereof generated incidental to an operation process procedure or emitted from any source other than through a well-defined stack or chimney.

15. "Garbage" means putrescible animal and vegetable wastes resulting from the handling, preparation, cooking, and consumption of food, including wastes from markets, storage facilities, handling, and sale of produce and other food products.

16. "Hazardous waste" has the same meaning as given by chapter 33.1-24-02.

17. "Heat input" means the aggregate heat content of all fuels whose products of combustion pass through a stack or stacks. The heat input value to be used shall be the equipment manufacturer's or designer's guaranteed maximum input, whichever is greater.

18. "Incinerator" means any article, machine, equipment, device, contrivance, structure, or part of a structure used for the destruction of garbage, rubbish, or other wastes by burning or to process salvageable material by burning.

19. "Industrial waste" means solid waste that is not a hazardous waste regulated under North Dakota Century Code chapter 23.1-04, generated from the combustion or gasification of municipal waste and from industrial and manufacturing processes. The term does not include municipal waste or special waste.
20. "Inhalable particulate matter" means particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers.
21. "Installation" means any property, real or personal, including processing equipment, manufacturing equipment, fuel burning equipment, incinerators, or any other equipment, or construction, capable of creating or causing emissions.
22. "Multiple chamber incinerator" means any article, machine, equipment, contrivance, structure, or part of a structure used to burn combustible refuse, consisting of two or more refractory lined combustion furnaces in series physically separated by refractory walls, interconnected by gas passage ports or ducts and employing adequate parameters necessary for maximum combustion of the material to be burned.
23. "Municipal waste" means solid waste that includes garbage, refuse, and trash generated by households, motels, hotels, and recreation facilities, by public and private facilities, and by commercial, wholesale, and private and retail businesses. The term does not include special waste or industrial waste.
24. "New" means equipment, machines, devices, articles, contrivances, or installations built or installed on or after July 1, 1970, unless specifically designated within this article, and installations existing at said stated time which are later altered, repaired, or rebuilt and result in the emission of an additional or greater amount of air contaminants.
25. "Opacity" means the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.
26. "Open burning" means the burning of any matter in such a manner that the products of combustion resulting from the burning are emitted directly into the ambient air without passing through an adequate stack, duct, or chimney.
27. "Particulate matter" means any airborne finely divided solid or liquid material with an aerodynamic diameter smaller than one hundred micrometers.
28. "Particulate matter emissions" means all finely divided solid or liquid material, other than uncombined water, emitted to the ambient air.
29. "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof and any legal successor, representative agent, or agency of the foregoing.
30. "Pesticide" includes:
 - a. Any agent, substance, or mixture of substances intended to prevent, destroy, control, or mitigate any insect, rodent, nematode, predatory animal, snail, slug, bacterium, weed, and any other form of plant or animal life, fungus, or virus, that may infect or be detrimental to persons, vegetation, crops, animals, structures, or households or be present in any environment or which the department may declare to be a pest, except those bacteria, fungi, protozoa, or viruses on or in living man or other animals;
 - b. Any agent, substance, or mixture of substances intended to be used as a plant regulator, defoliant, or desiccant; and

c. Any other similar substance so designated by the department, including herbicides, insecticides, fungicides, nematocides, molluscicides, rodenticides, lampreycides, plant regulators, gametocides, post-harvest decay preventatives, and antioxidants.

31. "Petroleum refinery" means an installation that is engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, or other products through distillation of petroleum, or through the redistillation, cracking, or reforming of unfinished petroleum derivatives.

32. "PM_{2.5}" means particulate matter with an aerodynamic diameter less than or equal to a nominal two and five-tenths micrometers.

33. "PM₁₀" means particulate matter with an aerodynamic diameter less than or equal to a nominal ten micrometers.

34. "PM₁₀ emissions" means finely divided solid or liquid material with an aerodynamic diameter less than or equal to a nominal ten micrometers emitted to the ambient air.

35. "Pipeline quality natural gas" means natural gas that contains two grains, or less, of sulfur per one hundred standard cubic feet [2.83 cubic meters].

36. "Premises" means any property, piece of land or real estate, or building.

37. "Process weight" means the total weight of all materials introduced into any specific process which may cause emissions. Solid fuels charged will be considered as part of the process weight, but liquid and gaseous fuels and combustion air will not.

38. "Process weight rate" means the rate established as follows:

a. For continuous or longrun steady state operations, the total process weight for the entire period of continuous operation or for a typical portion thereof, divided by the number of hours of such period or portion thereof.

b. For cyclical or batch operations, the total process weight for a period that covers a complete operation or an integral number of cycles, divided by the hours of actual process operation during such a period. If the nature of any process or operation or the design of any equipment is such as to permit more than one interpretation of this definition, the interpretation that results in the minimum value for allowable emission shall apply.

39. "Radioactive waste" means solid waste containing radioactive material and subject to the requirements of article 33.1-10.

40. "Refuse" means any municipal waste, trade waste, rubbish, or garbage, exclusive of industrial waste, special waste, radioactive waste, hazardous waste, and infectious waste.

41. "Rubbish" means nonputrescible solid wastes consisting of both combustible and noncombustible wastes. Combustible rubbish includes paper, rags, cartons, wood, furniture, rubber, plastics, yard trimmings, leaves, and similar materials. Noncombustible rubbish includes glass, crockery, cans, dust, metal furniture, and like materials which will not burn at ordinary incinerator temperatures (one thousand six hundred to one thousand eight hundred degrees Fahrenheit [1,144 degrees Kelvin to 1,255 degrees Kelvin]).

42. "Salvage operation" means any operation conducted in whole or in part for the salvaging or reclaiming of any product or material.

43. "Smoke" means small gasborne particles resulting from incomplete combustion, consisting predominantly, but not exclusively, of carbon, ash, and other combustible material, that form a visible plume in the air.
44. "Source" means any property, real or personal, or person contributing to air pollution.
45. "Source operation" means the last operation preceding emission which operation:
- a. Results in the separation of the air contaminant from the process materials or in the conversion of the process materials into air contaminants, as in the case of combustion fuel; and
 - b. Is not an air pollution abatement operation.
46. "Special waste" means solid waste that is not a hazardous waste regulated under North Dakota Century Code chapter 23.1-04 and includes waste generated from energy conversion facilities; waste from crude oil and natural gas exploration and production; waste from mineral and or mining, beneficiation, and extraction; and waste generated by surface coal mining operations. The term does not include municipal waste or industrial waste.
47. "Stack or chimney" means any flue, conduit, or duct arranged to conduct emissions.
48. "Standard conditions" means a dry gas temperature of sixty-eight degrees Fahrenheit [293 degrees Kelvin] and a gas pressure of fourteen and seven-tenths pounds per square inch absolute [101.3 kilopascals].
49. "Submerged fill pipe" means any fill pipe the discharge opening of which is entirely submerged when the liquid level is six inches [15.24 centimeters] above the bottom of the tank; or when applied to a tank which is loaded from the side, means any fill pipe the discharge opening of which is entirely submerged when the liquid level is one and one-half times the fill pipe diameter in inches [centimeters] above the bottom of the tank.
50. "Trade waste" means solid, liquid, or gaseous waste material resulting from construction or the conduct of any business, trade, or industry, or any demolition operation, including wood, wood containing preservatives, plastics, cartons, grease, oil, chemicals, and cinders.
51. "Trash" means refuse commonly generated by food warehouses, wholesalers, and retailers which is comprised only of nonrecyclable paper, paper products, cartons, cardboard, wood, wood scraps, and floor sweepings and other similar materials. Trash may not contain more than five percent by volume of each of the following: plastics, animal and vegetable materials, or rubber and rubber scraps. Trash must be free of grease, oil, pesticides, yard waste, scrap tires, infectious waste, and similar substances.
52. "Volatile organic compounds" means the definition of volatile organic compounds in 40 Code of Federal Regulations 51.100(s) as it exists on July 1, 2015, which is incorporated by reference.
53. "Waste classification" means the seven classifications of waste as defined by the incinerator institute of America and American society of mechanical engineers.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-06. Entry onto premises - Authority.

Entry onto premises and onsite inspection shall be made pursuant to North Dakota Century Code section 23.1-06-11.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-11; S.L. 2017, ch. 199, § 21

33.1-15-01-07. Variances.

1. Where upon written application of the responsible person or persons the department finds that by reason of exceptional circumstances strict conformity with any provisions of this article would cause undue hardship, would be unreasonable, impractical, or not feasible under the circumstances, the department may permit a variance from this article upon such conditions and within such time limitations as it may prescribe for prevention, control, or abatement of air pollution in harmony with the intent of the state and any applicable federal laws.
2. No variance may permit or authorize the creation or continuation of a public nuisance, or a danger to public health or safety.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-08. Circumvention.

No person shall cause or permit the installation or use of any device or any means which conceals or dilutes an emission of air contaminant which would otherwise violate this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-09. Severability.

If any provision of this article or the application thereof to any person or circumstances is held to be invalid, such invalidity shall not affect other provisions or application of any other part of this article which can be given effect without the invalid provision or application, and to this end the provisions of this article and the various applications thereof are declared to be severable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-10. Land use plans and zoning regulations.

1. Planning agency land use plans.

a. The department will provide to planning agencies, for use in preparing land use plans, information concerning:

- (1) Air quality.
- (2) Air pollutant emissions.
- (3) Air pollutant meteorology.
- (4) Air quality goals.
- (5) Air pollution effects.

b. The department will review all land use plans and prepare recommendations for consideration in the plan adoption process.

2. Zoning agency regulations.

a. The department will provide to zoning control agencies, for use in preparing regulations, information concerning:

- (1) Air quality.
- (2) Air pollutant emissions.
- (3) Air pollution meteorology.
- (4) Air quality goals.
- (5) Air pollution effects.

b. The department will review all zoning regulations and prepare recommendations for consideration in the regulation adoption process.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-11. [Reserved].

33.1-15-01-12. Measurement of emissions of air contaminants.

1. **Sampling and testing.** The department may reasonably require any person responsible for emission of air contaminants to make or have made tests, at a reasonable time or interval, to determine the emission of air contaminants from any source, for the purpose of determining whether the person is in violation of any standard under this article or to satisfy other requirements under the North Dakota Century Code chapter 23.1-06. All tests shall be made and the results calculated in accordance with test procedures approved or specified by the department. All tests shall be conducted by reputable, qualified personnel. The department

shall be given a copy of the test results in writing and signed by the person responsible for the tests.

The owner or operator of a source shall notify the department using forms supplied by the department, or its equivalent, at least thirty calendar days in advance of any tests of emissions of air contaminants required by the department. Advanced notification for all other testing will be consistent with the requirements of the appropriate regulations but in no case will be less than thirty calendar days. If the owner or operator of a source is unable to conduct the performance test on the scheduled date, the owner or operator of a source shall notify the department as soon as practicable when conditions warrant and shall coordinate a new test date with the department.

Failure to give the proper notification may prevent the department from observing the test. If the department is unable to observe the test because of improper notification, the test results may be rejected.

2. **The department may make tests.** The department may conduct tests of emissions of air contaminants from any source. Upon request of the department, the person responsible for the source to be tested shall provide necessary holes in stacks or ducts and such other safe and proper sampling and testing facilities, exclusive of instruments and sensing devices as may be necessary for proper determination of the emission of air contaminants.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-01-13. Shutdown and malfunction of an installation - Requirement for notification.

1. **Maintenance shutdowns.** In the case of shutdown of air pollution control equipment for necessary scheduled maintenance, the intent to shut down such equipment shall be reported to the department at least twenty-four hours prior to the planned shutdown provided that the air contaminating source will be operated while the control equipment is not in service. Such prior notice shall include the following:

- a. Identification of the specific facility to be taken out of service as well as its location and permit number.
- b. The expected length of time that the air pollution control equipment will be out of service.
- c. The nature and estimated quantity of emissions of air pollutants likely to be emitted during the shutdown period.
- d. Measures such as the use of off-shift labor and equipment that will be taken to minimize the length of the shutdown period.
- e. The reasons that it would be impossible or impractical to shut down the source operation during the maintenance period.
- f. Nothing in this subsection shall in any manner be construed as authorizing or legalizing the emission of air contaminants in excess of the rate allowed by this article or a permit issued pursuant to this article.

2. **Malfunctions.**

- a. When a malfunction in any installation occurs that can be expected to last longer than twenty-four hours and cause the emission of air contaminants in violation of this article or other applicable rules and regulations, the person responsible for such installation shall

notify the department of such malfunction as soon as possible during normal working hours. The notification must contain a statement giving all pertinent facts, including the estimated duration of the breakdown. The department shall be notified when the condition causing the malfunction has been corrected.

b. Immediate notification to the department is required for any malfunction that would threaten health or welfare, or pose an imminent danger. During normal working hours the department can be contacted at 701-328-5188. After hours the department can be contacted through the twenty-four-hour state radio emergency number 1-800-472-2121. If calling from out of state, the twenty-four-hour number is 701-328-9921.

c. Unavoidable malfunction. The owner or operator of a source who believes any excess emissions resulted from an unavoidable malfunction shall submit a written report to the department which includes evidence that:

(1) The excess emissions were caused by a sudden, unavoidable breakdown of technology that was beyond the reasonable control of the owner or operator.

(2) The excess emissions could not have been avoided by better operation and maintenance, did not stem from an activity or event that could have been foreseen and avoided or planned for.

(3) To the extent practicable, the source maintained and operated the air pollution control equipment and process equipment in a manner consistent with good practice for minimizing emissions, including minimizing any bypass emissions.

(4) Any necessary repairs were made as quickly as practicable, using off-shift labor and overtime as needed and possible.

(5) All practicable steps were taken to minimize the potential impact of the excess emissions on ambient air quality.

(6) The excess emissions are not part of a recurring pattern that may have been caused by inadequate operation or maintenance or inadequate design of the malfunctioning equipment.

The report shall be submitted within thirty days of the end of the calendar quarter in which the malfunction occurred or within thirty days of a written request by the department, whichever is sooner.

The burden of proof is on the owner or operator of the source to provide sufficient information to demonstrate that an unavoidable equipment malfunction occurred. The department may elect not to pursue enforcement action after considering whether excess emissions resulted from an unavoidable equipment malfunction. The department will evaluate, on a case-by-case basis, the information submitted by the owner or operator to determine whether to pursue enforcement action.

3. **Continuous emission monitoring system failures.** When a failure of a continuous emission monitoring system occurs, an alternative method for measuring or estimating emissions must be undertaken as soon as possible. The owner or operator of a source that uses an alternative method shall have the burden of demonstrating that the method is accurate. Timely repair of the emission monitoring system must be made. The provisions of this subsection do not apply to sources that are subject to monitoring requirements in chapter 33.1-15-21.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-01-14. Time schedule for compliance.

Except as otherwise specified, compliance with the provisions of this article shall be according to the following time schedule:

1. **New installations.** Every new installation shall comply as of going into continuous routine operation for its intended purpose.
2. **Existing installations.** Every existing installation shall be in compliance as of July 1, 1970, unless the owner or person responsible for the operation of the installation shall have submitted to the department in a form and manner satisfactory to it, a program and schedule for achieving compliance, such program and schedule to contain a date on or before which full compliance will be attained, and such other information as the department may require. If approved by the department, such date will be the date on which the person shall comply. The department may require persons submitting such program to submit subsequent periodic reports on progress in achieving compliance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-01-15. Prohibition of air pollution.

1. No person shall permit or cause air pollution, as defined in section 33.1-15-01-04.
2. Nothing in any other part of this article concerning emission of air contaminants or any other regulation relating to air pollution shall in any manner be construed as authorizing or legalizing the creation or maintenance of air pollution.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-01-16. Confidentiality of records.

1. **Public inspection.** Any record, report, or information obtained or submitted pursuant to this article will be available to the public for inspection and copying during normal working hours unless the department certifies that the information is confidential. Anyone requesting department assistance in collecting, copying, certifying, or mailing public information must tender, in advance, the reasonable cost of those services.
2. **Information submitted as trade secrets.** The department may certify records, reports, or information, or particular part thereof, other than emission data, as confidential upon a showing that the information would, if made public, divulge methods or processes entitled to protection as trade secrets. Any person submitting trade secret information must present the information to the department in a sealed envelope marked "CONFIDENTIAL". Each page of any document claimed confidential must be clearly marked with the word "CONFIDENTIAL". The submission must contain two parts:
 - a. The material claimed to contain trade secret information; and
 - b. A request for confidential treatment including:
 - (1) All information for which no claim is being made;
 - (2) An affidavit stating how and why the information fulfills the conditions of confidentiality under this subsection; and

(3) An index to and summary of the information submitted which is suitable for release to the public.

3. **Accepted trade secret claims.** All information which meets the test of subsection 2 must be marked by the department as "ACCEPTED" and protected as confidential information.

4. **Rejected trade secret claims.** If the department determines that information submitted pursuant to subsection 2 does not meet the criteria of that subsection for confidential treatment, the department shall promptly notify the person submitting the information of that determination. The department shall in that event give that person at least twenty days in which to:

a. Accept the determination of the department;

b. Request that the information be returned to the person;

c. Further justify the contention that the information deserves protection as a trade secret;
or

d. Further limit the scope of information for which a claim of confidentiality is made.

If the person who submitted the information fails within the time period allowed by the department to demonstrate satisfactorily to the department that the information in the form presented qualifies for confidential treatment, the department shall promptly notify that person of that determination. If the person submitting the information did not request that it be returned, the department shall mark the information "REJECTED" and treat it as public information. The department's action on a reconsideration constitutes final agency action for purposes of judicial review. Appeal of this action must be to an appropriate district court.

5. **Appeal of nondisclosure claims.** Any person who identifies and tenders the reasonable cost of collecting, copying, certifying, and mailing particular information held by the department under subsection 2 may file with the department a petition for reconsideration stating how and why the public's interest would be better served by the release of the requested information than by its retention as confidential by the department. The department shall then reconsider the confidential status of the information. The department action on a petition for reconsideration constitutes final agency action for purposes of judicial review. Appeal of the department's action must be to an appropriate district court.

6. **Retention of confidential information.** All information which is accepted by the department as confidential must be stored in locked filing cabinets. Only those personnel of the department specifically designated by the department shall have access to the information contained therein. The department may not designate any person to have access to confidential information unless that person requires such access in order to carry out that person's responsibilities and duties. No person may disclose any confidential information except in accordance with the provisions of this section. No copies may be made except as strictly necessary for internal department use or as specified in subsection 8.

7. **Maintenance of log.** Persons designated by the department to maintain confidential files as herein provided shall maintain a log showing the persons who have had access to the confidential files and the date of such access.

8. **Transmittals of confidential information.** As necessary, confidential information acquired by the department under the provisions of the act, or this article, may be transmitted to such federal, state, or local agencies, when necessary for purposes of administration of any federal, state, or local air pollution control laws, which make an adequate showing of need to the department, provided that such transmittal is made under a continuing assurance of confidentiality.

9. **Relationship to issuance of permits.** The department may not process any application for a permit to construct or operate pursuant to chapter 33.1-15-14 or 33.1-15-15 until final agency action on confidential trade secret claims has been completed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-12; S.L. 2017, ch. 199, § 21

33.1-15-01-17. Enforcement.

1. Enforcement action will be consistent with procedures as approved by the United States environmental protection agency.
2. Notwithstanding any other provision in this article, any credible evidence may be used for the purpose of establishing whether a person has violated or is in violation of this article.
 - a. Information from the use of the following methods is presumptively credible evidence of whether a violation has occurred at a source:
 - (1) A compliance assurance monitoring protocol approved for the source pursuant to subsection 10 of section 33.1-15-14-06.
 - (2) A monitoring method approved for the source pursuant to paragraph 3 of subdivision a of subsection 5 of section 33.1-15-14-06 and incorporated in a federally enforceable title V permit to operate.
 - (3) Compliance test methods specified in this article.
 - b. The following testing, monitoring, and information-gathering methods are presumptively credible testing, monitoring, or information-gathering methods:
 - (1) Any federally enforceable monitoring or testing methods, including those under title 40 Code of Federal Regulations parts 50, 51, 60, 61, 63, and 75.
 - (2) Other testing, monitoring, or information-gathering methods that produce information comparable to that produced by any method in paragraph 1 or in subdivision a.
3.
 - a. No person may knowingly make a false statement, representation, or certification in any application, record, report, plan, or other document filed or required under this article.
 - b. No person may knowingly falsify, tamper with, or provide inaccurate information regarding a monitoring device or method required under this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-01-18. Compliance certifications.

Notwithstanding any other provision in this article, for the purpose of submission of compliance certifications the owner or operator is not prohibited from using the following in addition to any specified compliance methods:

1. A compliance assurance monitoring protocol approved for the source pursuant to subsection 10 of section 33.1-15-14-06.

2. Any other monitoring method approved for the source under paragraph 3 of subdivision a of subsection 5 of section 33.1-15-14-06 and incorporated into a federally enforceable title V permit to operate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-02 AMBIENT AIR QUALITY STANDARDS

Section

- 33.1-15-02-01 Scope
- 33.1-15-02-02 Purpose
- 33.1-15-02-03 Air Quality Guidelines
- 33.1-15-02-04 Ambient Air Quality Standards
- 33.1-15-02-05 Methods of Sampling and Analysis
- 33.1-15-02-06 Reference Conditions
- 33.1-15-02-07 Concentrations of Air Contaminants in the Ambient Air Restricted

33.1-15-02-01. Scope.

The ambient air quality standards as presented in this chapter pertain to the ambient air within the boundaries of North Dakota.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-02. Purpose.

It is the purpose of these air quality standards to set forth levels of air quality for the maintenance of public health and welfare and to provide guidance to governmental and other parties interested in abating air pollution. Since the ambient air in North Dakota is generally cleaner than these standards, the standards are not a permit for the unnecessary degradation of air quality.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-03. Air quality guidelines.

In keeping with the purpose of these ambient air quality standards, the quality should be such that:

1. The public health will be protected including sensitive or susceptible segments of the population.
2. Concentrations of pollutants will not cause public nuisance or annoyance.
3. Agricultural crops, animals, forest, and other plant life will be protected.
4. Visibility will be protected.
5. Metals or other materials will be protected from abnormal corrosion or damage.
6. Fabrics will not be soiled, deteriorated, or their colors affected.
7. Natural scenery will not be obscured.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-04. Ambient air quality standards.

- 1. Particulates and gases.** The standards of ambient air quality listed in table 1 and table 2 define the limits of air contamination by particulates and gases. Any air contaminant which exceeds these limits is hereby declared to be unacceptable and requires air pollution control measures. The stated limits include normal background levels of particulates and gases.
- 2. Radioactive substances.** The ambient air shall not contain any radioactive substances exceeding the concentrations specified in article 33.1-10.
- 3. Other air contaminants.** The ambient air shall not contain air contaminants in concentrations that would be injurious to human health or well being or unreasonably interfere with the enjoyment of property or that would injure plant or animal life. The department may establish, on a case-by-case basis, specific limits of concentration for these contaminants.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-05. Methods of sampling and analysis.

Air contaminants listed under table 1 shall be measured by the method or methods listed in title 40 Code of Federal Regulations parts 50 and 53. Hydrogen sulfide sampling equipment and methods must be approved by the department. Hydrogen sulfide analyzers must be designed for use as ambient air quality monitors and must be capable of meeting performance specifications as determined by the department.

The sampling and analytical procedures employed and the number, duration, and location of samples to be taken to measure ambient levels of air contaminants shall be consistent with obtaining results which are precise, accurate, and representative of the conditions being evaluated.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-06. Reference conditions.

The standards of ambient air quality listed in table 1 are corrected to a reference temperature of twenty-five degrees Celsius [298 degrees Kelvin] and a reference pressure of seven hundred sixty millimeters of mercury [101.3 kilopascals].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-02-07. Concentrations of air contaminants in the ambient air restricted.

- 1. No person may cause or permit the emission of contaminants to the ambient air from any source in such a manner and amount that causes or contributes to a violation in the ambient air of those standards stated in section 33.1-15-02-04.**
- 2. Nothing in any other part or section of this article may in any manner be construed as authorizing or legalizing the emission of air contaminants in such manner as prohibited in subsection 1.**

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

TABLE 1. AMBIENT AIR QUALITY STANDARDS

<u>Air Contaminants</u>	<u>Standards</u> <u>(Maximum Permissible Concentrations)</u>
<u>Inhalable Particulates</u> <u>PM₁₀</u>	<u>150 micrograms per cubic meter, 24-hour average concentration. The standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 micrograms per cubic meter, as determined in accordance with 40 CFR 50, Appendix K, is equal to or less than one.</u>
<u>PM_{2.5}</u>	<u>12.0 micrograms per cubic meter annual arithmetic mean concentration. The standard is met when the annual arithmetic mean concentration, as determined in accordance with 40 CFR 50, Appendix N, is less than or equal to 12.0 micrograms per cubic meter.</u> <u>35 micrograms per cubic meter 24-hour average concentration. The standard is met when the 98th percentile 24-hour concentration, as determined in accordance with 40 CFR 50, Appendix N, is less than or equal to 35 micrograms per cubic meter.</u>
<u>Sulfur Dioxide</u>	<u>0.075 parts per million (196 micrograms per cubic meter) 1-hour average concentration. The standard is met when the 3-year average of the annual 99th percentile of the daily maximum 1-hour average concentration is less than or equal to 0.075 parts per million, as determined in accordance with 40 CFR 50, Appendix T.</u> <u>0.5 parts per million (1,309 micrograms per cubic meter of air) maximum 3-hour concentration, not to be exceeded more than once per calendar year.</u>
<u>Hydrogen Sulfide</u>	<u>10.0 parts per million (14 milligrams per cubic meter of air), maximum instantaneous (ceiling) concentration not to be exceeded.</u> <u>0.20 parts per million (280 micrograms per cubic meter of air), maximum 1-hour average concentration not to be exceeded more than once per month.</u> <u>0.10 parts per million (140 micrograms per cubic meter of air), maximum 24-hour average concentration not to be exceeded more than once per year.</u> <u>0.02 parts per million (28 micrograms per cubic meter of air), maximum arithmetic mean concentration averaged over three consecutive months.</u>
<u>Carbon Monoxide</u>	<u>9 parts per million (10 milligrams per cubic meter of air), maximum 8-hour concentration not to be exceeded more than once per year.</u> <u>35 parts per million (40 milligrams per cubic meter of air), maximum 1-hour concentration not to be exceeded more than once per year.</u>
<u>Ozone</u>	<u>0.075 parts per million (147 micrograms per cubic meter of air) daily maximum 8-hour average concentration. The standard is met when the 3-year average of the annual fourth-highest daily maximum 8-hour average concentration at an ambient air quality monitoring site is less than or equal to 0.075 ppm, as determined in accordance with 40 CFR 50, Appendix P.</u>
<u>Nitrogen Dioxide</u>	<u>0.053 parts per million (100 micrograms per cubic meter of air), maximum annual arithmetic mean.</u>

Air Contaminants Standards
(Maximum Permissible Concentrations)

0.100 parts per million (188 micrograms per cubic meter) 1-hour average concentration. The standard is met when the 3-year average of the annual 98th percentile of the daily maximum 1-hour average concentration is less than or equal to 0.100 parts per million, as determined in accordance with 40 CFR 50, Appendix S.

Lead

0.15 micrograms per cubic meter of air, arithmetic mean averaged over a 3-month rolling period. The standard is met when the maximum 3-month mean concentration for a 3-year period, as determined in accordance with 40 CFR 50, Appendix R, is less than or equal to 0.15 micrograms per cubic meter.

History: Effective January 1, 2019.

TABLE 2. NATIONAL AMBIENT AIR QUALITY STANDARDS

<u>Air Contaminant</u>	<u>Standards</u> <u>(Maximum Permissible Concentrations)</u>
<u>Sulfur oxides</u> <u>(sulfur dioxide)</u>	<u>0.030 parts per million (80 micrograms per cubic meter of air) maximum annual arithmetic mean concentration, not to be exceeded in a calendar year.</u>
	<u>0.14 parts per million (365 micrograms per cubic meter of air) maximum 24-hour concentration, not to be exceeded more than once per calendar year.</u>

The standards in Table 2 will remain in effect until one year after the effective date of the designation for the one-hour sulfur dioxide standard pursuant to Section 107 of the Federal Clean Air Act except for areas designated nonattainment with respect to the standards in Table 2 and areas not meeting the requirements of a state implementation plan with respect to requirements for the national ambient air quality standards in Table 2. The standards in Table 2 will apply to those areas until that area submits, and the environmental protection agency approves, an implementation plan providing for attainment of the one-hour sulfur dioxide standard.

History: Effective January 1, 2019.

CHAPTER 33.1-15-03

RESTRICTION OF EMISSION OF VISIBLE AIR CONTAMINANTS

Section

- 33.1-15-03-01 Restrictions Applicable to Existing Installations
- 33.1-15-03-02 Restrictions Applicable to New Installations and All Incinerators
- 33.1-15-03-03 Restrictions Applicable to Fugitive Emissions
- 33.1-15-03-03.1 Restrictions Applicable to Flares
- 33.1-15-03-04 Exceptions
- 33.1-15-03-05 Method of Measurement

33.1-15-03-01. Restrictions applicable to existing installations.

No person may discharge into the ambient air from any single source of emission whatsoever, with the exception of existing incinerators, any air contaminant which exhibits an opacity greater than forty percent except that a maximum of sixty percent opacity shall be permissible for not more than one six-minute period per hour. Provided, however:

1. In consideration of public health and welfare, when it becomes both technically and economically feasible, the source shall comply with visible air contaminant restrictions as outlined in section 33.1-15-03-02 when directed by the department.
2. Any existing source which has installed control technology capable of complying with the visible air contaminant restrictions applicable to new installations shall comply with section 33.1-15-03-02 when directed by the department.
3. If any party is aggrieved by the department's decision as referenced in subsections 1 and 2, that party may request a hearing before the department to review such decision. Such hearing must be conducted according to North Dakota Century Code chapter 28-32. If a hearing is requested, the requirements of section 33.1-15-03-02 are not effective until ordered by the department at the conclusion of the hearing process.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-03-02. Restrictions applicable to new installations and all incinerators.

No person may discharge into the ambient air from any single source of emission whatsoever any air contaminant which exhibits an opacity greater than twenty percent except that a maximum of forty percent opacity is permissible for not more than one six-minute period per hour.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-03-03. Restrictions applicable to fugitive emissions.

No person may discharge into the ambient air from any source of fugitive emissions, as determined or identified by the department, any air contaminant which exhibits an opacity greater than forty percent for more than one six-minute period per hour. Such visible emissions shall have been visibly transported off the property of emission origination and remains visible to an observer positioned off said property when sighting along a line which does not cross the property of emission origination.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-03-03.1. Restrictions applicable to flares.

No person may discharge into the ambient air from any single source of emission whatsoever any air contaminant which exhibits an opacity greater than twenty percent except that a maximum of sixty percent opacity is permissible for not more than one six-minute period per hour.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-03-04. Exceptions.

The provisions of sections 33.1-15-03-01, 33.1-15-03-02, 33.1-15-03-03, and 33.1-15-03-03.1 shall not apply in the following circumstances:

1. Where the presence of uncombined water is the only reason for failure of an emission to meet the requirements.
2. When smoke is emitted for the purpose of training or research when approved by the department, including training schools for firefighting personnel.
3. [Reserved].
4. [Reserved].
5. Where fugitive emissions are caused by agricultural activities related to the normal operations of a farm. However, agricultural practices such as tilling of land, application of fertilizers, harvesting of crops, and other activities shall be managed in such a manner as to minimize dust from becoming airborne.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-03-05. Method of measurement.

1. Method 9. Compliance with visible emission standards in chapter 33.1-15-03 shall be determined by conducting observations in accordance with Reference Method 9 of Appendix A to chapter 33.1-15-12. Per hour for Reference Method 9 means any contiguous sixty-minute time period. When Reference Method 9 opacity readings are not available, continuous opacity monitors may be substituted. Per hour for monitors means any sixty-minute period commencing on the hour. The results of continuous monitoring by transmissometer, which indicate that the opacity at the time visible emissions were taken, were not in excess of the standard, are probative but not conclusive evidence of the actual opacity of an emission; provided, that the source shall meet the burden of proving that the instrument used meets (at the time of the alleged violation) Performance Specification 1 in Appendix B, has been properly maintained and (at the time of the alleged violation) calibrated, and that the resulting data have not been tampered with in any way.
2. Method 22. When a visible emissions limit is specified in a permit issued in accordance with this article as zero percent opacity except for a certain frequency, compliance shall be determined using Reference Method 22 of Appendix A to chapter 33.1-15-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-15-04

OPEN BURNING RESTRICTIONS

Section

33.1-15-04-01 Refuse Burning Restrictions

33.1-15-04-02 Permissible Open Burning

33.1-15-04-01. Refuse burning restrictions.

No person may cause, conduct, or permit open burning of refuse, trade waste, or other combustible material, except as provided for in section 33.1-15-04-02 or 33.1-15-10-02, and no person may conduct, cause, or permit the conduct of a salvage operation by open burning.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-04-02. Permissible open burning.

The open burning of refuse or other combustible material may be conducted as specified in this section if the burning is not prohibited by, and is conducted in compliance with, other applicable laws, ordinances, and regulations. Burning is prohibited if the fire index is in the extreme category as issued by the national weather service or if a burning ban is declared by state or local officials. The authority to conduct open burning under this section does not exempt or excuse a person from the consequences, damages, or injuries that may result therefrom.

1. The following types of burning are specifically authorized but are subject to the conditions listed in subsection 2 as well as any condition included as part of this subsection:
 - a. Fires purposely set for the instruction and training of public and industrial firefighting personnel.
 - b. Fires set for the elimination of a fire hazard that cannot be abated by any other means when authorized by the department or its designee.
 - c. Fires set for the removal of dangerous or hazardous material, where there is no other practical or lawful method of disposal and burning is approved in advance by the department. Where there is imminent danger to human health or safety and where there is no other practical or lawful method of disposal, burning may be initiated without prior notice to the department, provided notice is furnished as soon as practical.
 - d. Campfires and other fires used solely for recreational purposes, for ceremonial occasions, or for outdoor preparation of food.
 - e. Fires purposely set to forest or rangelands for a specific reason in the management of forest, rangeland, or game in accordance with practices recommended by state or federal agencies, as appropriate, and the burning is approved in advance by the department. The state or federal agency shall, upon request by the department, submit an annual report that estimates the number of acres burned, the fuel loading, and the amount of emissions.
 - f. The burning of trees, brush, grass, wood, and other vegetable matter in the clearing of land, right-of-way maintenance operations, and agricultural crop burning.
 - g. The burning of refuse and other combustible materials generated in the operation of a domestic household if the following conditions are met:

(1) No collection and disposal service is required or directed by a municipality or other government entity.

(2) The material to be burned is from a building accommodating no more than one family.

(3) The burning is conducted on the property on which the waste is generated.

h. The burning of liquid hydrocarbons that are spilled or lost as a result of pipeline breaks or other accidents involving the transportation of such materials or which are generated as wastes as the result of oil exploration, development, production, refining, or processing operations if the following conditions are met:

(1) The material cannot be practicably recovered or otherwise lawfully disposed of in some other manner.

(2) The burning must be approved in advance by the department, except as provided in subdivision c.

2. The following conditions apply to all types of permissible burning listed in subsection 1.

a. Air pollution, as defined in section 33.1-15-01-04, will not be created.

b. The burning must not be conducted upwind of, or in proximity to, an occupied building such that the ambient air of such occupied building may be adversely affected by the air contaminants being emitted.

c. Care must be used to minimize the amount of dirt on the material being burned and the material must be dry enough to burn cleanly.

d. Oils, rubber, and other materials that produce unreasonable amounts of air contaminants may not be burned.

e. The burning may be conducted only when meteorological conditions favor smoke dispersion and air mixing.

f. The burning must not be conducted adjacent to any highway or public road so as to create a traffic hazard.

g. The burning must not be conducted adjacent to any operational military, commercial, county, municipal, or private airport or landing strip in such a manner as to create a hazard.

h. Except in an emergency, burning may not be conducted in such proximity of any class I area, as defined in chapter 33.1-15-15, that the ambient air of such area is adversely impacted.

i. Except in an emergency, the visibility of any class I area cannot be adversely impacted as defined in chapter 33.1-15-19.

j. Burning activities must be attended and supervised at all times burning is in progress.

k. If state or local fire officials determine conditions to be unsafe for open burning, such burning must cease until conditions are deemed safe by such officials.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-05
EMISSIONS OF PARTICULATE MATTER RESTRICTED

Section

- 33.1-15-05-01 Restriction of Emission of Particulate Matter From Industrial Processes
- 33.1-15-05-02 Maximum Allowable Emission of Particulate Matter From Fuel Burning Equipment Used for Indirect Heating
- 33.1-15-05-03 Refuse Incinerators
- 33.1-15-05-03.1 Other Waste Incinerators
- 33.1-15-05-04 Methods of Measurement

33.1-15-05-01. Restriction of emission of particulate matter from industrial processes.

1. General provisions.

- a. This section applies to any operation, process, or activity from which particulate matter is emitted except the burning of fuel for indirect heating in which the products of combustion do not come into direct contact with process materials, the burning of refuse, and the processing of salvable material by burning.
- b. The process weight rate per hour referred to in this section shall be based upon the normal operation maximum capacity of the equipment, and if such normal maximum capacity should be increased by process or equipment changes, the new normal maximum capacity shall be used as the process weight in determining the allowable emissions.

2. Emission limitations. No person shall cause, suffer, allow, or permit the emission of particulate matter in any one hour from any source in excess of the amount shown in table 3 for the process weight allocated to such source.

a. Exceptions.

(1) [Reserved].

(2) The department may prescribe air quality control requirements that are more restrictive and more extensive than provided in subsection 2 if the particulate matter emitted is a radioactive, toxic, or deleterious substance which may affect human health or well-being or that would cause significant damage to animal or plant life.

(3) Any existing emission source which has particulate collection equipment with a collection efficiency of ninety-nine and seven-tenths percent or more by weight shall be considered as meeting the provisions of subsection 2. The efficiency of the particulate collection equipment shall be determined as outlined in section 33.1-15-05-04 with the process being served by the particulate collection equipment being run at normal operation maximum capacity.

(4) Any portable emission source, not operated at the same premise for more than six months, shall be considered as meeting the provisions of subsection 2 if the source stack or stacks are equipped with particulate collection efficiency of eighty-five percent or more by weight as determined in paragraph 3, and all of the following conditions are met:

(a) The source must not be located within a city.

(b) The source must not be located within one-half mile [.80 kilometers] of any occupied residence, and within one mile [1.61 kilometers] of the source there shall be no more than two occupied residences.

(c) The source must not be located within one-quarter mile [.40 kilometers] of any highway or public road.

b. Grievance procedure. If any party is aggrieved by the department's decision as referenced in paragraph 2 of subdivision a, that party may request a hearing before the department to review such decision. Such hearing must be conducted according to North Dakota Century Code chapter 28-32. If a hearing is requested, the requirements of paragraph 2 of subdivision a are not effective until ordered by the department at the conclusion of the hearing process.

Table 3. Maximum Allowable Rates of Emission of Particulate Matter from Industrial Processes

<u>English</u>		<u>Metric</u>	
<u>Process Weight Rate (p)</u>	<u>Allowable Emission Rate (E)</u>	<u>Process Weight Rate (p)</u>	<u>Allowable Emission Rate (E)</u>
<u>tons/hr</u>	<u>lb/hr</u>	<u>metric tons/hr</u>	<u>kg/hr</u>
<u>0.05</u>	<u>0.551</u>	<u>0.045</u>	<u>0.25</u>
<u>0.25</u>	<u>1.62</u>	<u>0.23</u>	<u>0.74</u>
<u>0.50</u>	<u>2.58</u>	<u>0.45</u>	<u>1.16</u>
<u>2.50</u>	<u>7.58</u>	<u>2.27</u>	<u>3.43</u>
<u>5.00</u>	<u>12.05</u>	<u>4.54</u>	<u>5.46</u>
<u>10.00</u>	<u>19.18</u>	<u>9.07</u>	<u>8.67</u>
<u>25.00</u>	<u>35.43</u>	<u>22.68</u>	<u>16.03</u>
<u>50.00</u>	<u>44.58</u>	<u>45.36</u>	<u>20.21</u>
<u>250.00</u>	<u>60.96</u>	<u>226.80</u>	<u>27.65</u>
<u>500.00</u>	<u>68.96</u>	<u>453.59</u>	<u>31.29</u>
<u>1,000.00</u>	<u>77.59</u>	<u>907.19</u>	<u>35.21</u>
<u>2,500.00</u>	<u>90.06</u>	<u>2,267.96</u>	<u>40.87</u>

Interpolation of the data in this table for process weight rates up to 30 tons/hr [27.21 metric tons/hr] shall be accomplished by the use of the equations:

$$E = 4.10 p^{0.67} \text{ (English units)}$$

$$E = 1.98 p^{0.67} \text{ (Metric units)}$$

and interpolation and extrapolation of the data for process weight rates in excess of 30 tons/hr [27.21 metric tons/hr] shall be accomplished by the use of the equations:

$$E = 55.0 p^{0.11} - 40 \text{ (English units)}$$

$$E = 25.25 p^{0.11} - 18.2 \text{ (Metric units)}$$

where E = allowable emission rate in lb/hr [kg/hr] and p = process weight rate in tons/hr [metric tons/hr].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-13; S.L. 2017, ch. 199, § 21

33.1-15-05-02. Maximum allowable emission of particulate matter from fuel burning equipment used for indirect heating.

1. General provisions.

- a. This section applies to installations in which fuel is burned for the primary purpose of producing steam, hot water, hot air, or other indirect heating of liquids, gases, or solids and, in the course of doing so, the products of combustion do not come into direct contact with process materials. Fuels include those such as coal, coke, lignite, coke breeze, fuel oil, and wood but do not include refuse. When any products or byproducts of a manufacturing process are burned for the same purpose or in conjunction with any fuel, the same maximum emission limitations shall apply.
- b. The maximum allowable particulate matter which may be emitted from fuel burning units at a source is determined by the maximum or manufacturer's rated heat input of each unit.
- c. Fuel burning equipment that meets the applicability requirements of subdivision a in which a gaseous fuel is burned alone or in combination with other gaseous fuels is exempt from the emission limitations in subsection 2. Fuel burning equipment that burns a gaseous fuel, or fuels, in combination with other fuels is subject to the emission limitations in subsection 2.

2. Emission limitations.

- a. Existing installations. No person shall cause or permit the emission of particulate matter, caused by combustion of fuel in any existing fuel burning equipment, from any stack or chimney in excess of eighty-hundredths pounds of particulates per million British thermal units [344 nanograms per joule] heat input. Provided, however, as technology develops for making new control equipment compatible, both technically and economically, with present plants they shall comply with limitations on emissions of particulate matter from fuel burning installations as outlined in subdivision b when directed by the department.
- b. New installations. No person shall cause or permit the emission of particulate matter, caused by the combustion of fuel in any new fuel burning equipment, from any stack or chimney in excess of the quantity set forth in table 4.
- c. Means shall be provided in all newly constructed units and wherever practicable in existing units to allow the periodic measurement of fly ash and other particulate matter.
- d. No person may burn or cause or permit the burning of refuse, including preservative treated wood, in any installation which was designed for the sole purpose of burning fuel unless approved by the department.
- e. Existing or new installations, with a heat input of not more than ten million British thermal units per hour and sources with multiple boilers with a total aggregate heat input of not more than ten million British thermal units per hour, shall be exempt from the applicable

allowable emission rate set forth in subdivision a or in table 4, respectively. These sources shall be subject to visible emission and ambient air quality standards.

f. Any new or existing source whose heat input is greater than two hundred fifty million British thermal units per hour and is equipped with state-of-the-art control technology capable of complying with the particulate emission limitations of subparagraph 1 of paragraph a of section 60.42 of subpart D of chapter 33.1-15-12 [40 CFR 60.42(a)(1)] shall comply with such limitations when directed by the department.

g. If any party is aggrieved by the department's decision as referenced in subdivision a or f, that party may request a hearing before the department to review such decision. Such hearing must be conducted according to North Dakota Century Code chapter 28-32. If a hearing is requested, the emission limitations as referenced in subdivision a or f (whichever is applicable) are not effective until ordered by the department at the conclusion of the hearing process.

Table 4. Maximum Allowable Rates of Emission of Particulate Matter from New Fuel Burning Equipment

<u>Heat Input (H)</u>	<u>Allowable Emission Rate (E)</u>	<u>Heat Input (H)</u>	<u>Allowable Emission Rate (E)</u>
<u>10⁶ Btu/hr</u>	<u>lb/10⁶ Btu</u>	<u>joules/hr</u>	<u>nanogram/joule</u>
<u>10 or less</u>	<u>0.600</u>	<u>1.05 x 10¹⁰</u>	<u>258</u>
<u>20</u>	<u>0.548</u>	<u>2.11 x 10¹⁰</u>	<u>235</u>
<u>30</u>	<u>0.519</u>	<u>3.16 x 10¹⁰</u>	<u>224</u>
<u>40</u>	<u>0.500</u>	<u>4.22 x 10¹⁰</u>	<u>215</u>
<u>50</u>	<u>0.486</u>	<u>5.27 x 10¹⁰</u>	<u>209</u>
<u>100</u>	<u>0.444</u>	<u>1.05 x 10¹¹</u>	<u>191</u>
<u>150</u>	<u>0.421</u>	<u>1.58 x 10¹¹</u>	<u>181</u>
<u>200</u>	<u>0.405</u>	<u>2.11 x 10¹¹</u>	<u>174</u>
<u>250</u>	<u>0.394</u>	<u>2.64 x 10¹¹</u>	<u>169</u>

Interpolation and extrapolation of the data in this table shall be accomplished by the use of equations:

$$E = 0.811 H^{-0.131} \text{ (English units)}$$

$$E = 5.307 H^{-0.131} \text{ (Metric units)}$$

where E = allowable emission rate in lb/million Btu of heat input [nanogram/joule] and H = heat input in millions of Btu/hr [joules/hr].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-13; S.L. 2017, ch. 199, § 21

33.1-15-05-03. Refuse incinerators.

1. Applicability.

- a. The owner or operator of an incinerator of any design capacity for refuse, except trash and refuse derived fuel, must comply with 40 CFR part 60, subpart Ea, which is incorporated by reference in chapter 33.1-15-12.
- b. Beginning August 1, 1996, no owner or operator of an incinerator for refuse may incinerate materials of any type or form which are recyclable, unless the owner demonstrates to the department that recycling for a waste material is not reasonably available. Documents subject to state or federal privacy regulations may be incinerated when no other acceptable method of disposal is reasonably available.
- c. Beginning August 1, 1997, each existing incinerator for trash must meet the same standards as a new incinerator for trash.
- d. As used in this section, "new incinerator" means an incinerator, the construction for which has not been approved by the department prior to August 1, 1995.

2. Existing trash incinerators. This subsection applies to any owner or operator of an incinerator for trash of any design capacity existing on August 1, 1995.

- a. Prohibited waste. No infectious waste, radioactive waste, hazardous waste, special waste, industrial waste, or any other solid waste may be burned in an incinerator designed for trash unless the incinerator's performance, design, and operating standards for those solid wastes are also met.
- b. Operator training. The owner or operator of an incinerator for trash shall provide both written and oral instructions for each operator in the proper operation of the incinerator.
- c. Recordkeeping and reporting.
 - (1) The owner or operator of an incinerator for trash shall keep a log indicating the dates and approximate quantities of waste received from an onsite source, and from each offsite source, including the transporter. The log shall be kept and maintained for a minimum period of three years from the date waste is received.
 - (2) An owner or operator of an incinerator for trash shall record in the log any operational error or failure of one-hour or more duration of combustion equipment, emission control equipment, waste charging equipment, or monitoring equipment.
 - (3) When requested by the department, the owner or operator of an incinerator for trash shall provide a summary of the daily burning and hours of operation.

3. New trash incinerators. In addition to subsection 2, this subsection applies to an owner or operator of a new incinerator for trash.

- a. Design. Each new incinerator for trash must be equipped with a primary combustion chamber or zone which provides complete combustion of solid waste and a secondary combustion chamber or zone which provides turbulent mixing. Auxiliary fuel burners are required in all chambers. The department may approve an alternate design provided the design achieves the performance requirements of this section.
- b. Opacity. No owner or operator of a new incinerator for trash may allow to be discharged into the atmosphere any air contaminant which exhibits an opacity greater than

ten percent except that a maximum of twenty percent opacity is permissible for not more than one 6-minute period per hour.

- c. Operating temperature. Each new incinerator for trash shall maintain the flue gas temperature in the secondary combustion chamber or zone at one thousand five hundred degrees Fahrenheit [815 degrees Celsius] or greater for a minimum of one-half-second retention time.
- d. Monitoring. Each new incinerator for trash shall be equipped with a continuous temperature monitor, with readout, to monitor the temperature of the gases exiting the secondary combustion chamber or zone.
- e. Stack height. Each new incinerator for trash shall be equipped with a stack for the discharge of flue gases of sufficient height to prevent ambient concentrations of air contaminants greater than allowed by chapter 33.1-15-02. The minimum stack height is forty feet [12.2 meters] unless it is demonstrated that a stack height less than forty feet [12.2 meters] will meet the standards of chapter 33.1-15-02. The department may require taller stacks when it is necessary to meet the standards of chapter 33.1-15-02.
- f. Waste charging.
 - (1) The waste charging system for a new incinerator for trash must be designed to prevent disruption of the combustion process as waste is charged.
 - (2) The waste charging system must be designed to prevent overcharging to assure complete combustion. No owner or operator may cause an incinerator for trash to operate at a load greater than one hundred percent of design capacity.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-05-03.1. Other waste incinerators.

- 1. **Salvage incinerators.** The department may require construction, operational, and recordkeeping standards and procedures for salvage incinerators. No industrial waste, radioactive waste, hazardous waste, or infectious waste may be burned in a salvage incinerator, unless specifically approved by the department.
- 2. **Air curtain destructors.** The department may require construction, operational, and recordkeeping standards and procedures for air curtain destructors based upon factors such as characteristics and quantities of materials to be destroyed by burning and site location.
- 3. **Industrial waste and special waste incinerators.** The department may require construction, operational, emission, monitoring, recordkeeping, and reporting standards and procedures for incinerators of industrial waste based upon factors such as characteristics and quantities of the industrial waste and site location.
- 4. **Crematoriums.**
 - a. No owner or operator of combustion units operated as a human or animal crematorium or in an animal farm operation for animal disposal may burn any other type or form of materials or solid waste unless specifically approved by the department.
 - b. No owner or operator of a crematorium may allow to be discharged into the atmosphere any air contaminant, which exhibits an opacity greater than ten percent except that a

maximum of twenty percent is permissible for not more than one 6-minute period per hour.

- c. A crematorium constructed and operated after August 1, 1995, must be equipped with two or more chambers and with auxiliary fuel burners, designed to assure a temperature in a secondary chamber of at least one thousand six hundred degrees Fahrenheit [871 degrees Celsius] for a minimum of one-second retention time.
- d. Monitoring. Each new crematorium must be equipped with a continuous temperature monitor, with readout, to monitor the temperature of the gases exiting the secondary combustion chamber or zone. Each human crematorium installed or reinstalled after September 1, 2002, must be equipped with a temperature recorder.
- e. Charging. A crematorium must be charged in accordance with the manufacturer's procedures or recommendations. Deviations from these procedures or recommendations are allowed provided credible evidence has been submitted to the department that indicates the deviations will reduce air contaminant emissions. Such evidence shall be provided prior to implementation of the deviations.
- f. Operation. Operators of human crematoriums shall be trained in the proper operation of the unit. A copy of the operation and maintenance manual for the unit shall be available onsite. A trained crematorium operator must be onsite at a human crematorium while the cremation process is taking place.
- g. General. The department may establish additional construction, operational, emission, monitoring, recordkeeping, and reporting standards and procedures for crematoriums based upon factors such as quantities of material charged, emissions, and site location.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-05-04. Methods of measurement.

- 1. The reference methods in appendix A to chapter 33.1-15-12, its replacement or other methods, as approved by the department shall be used to determine compliance with sections 33.1-15-05-01 and 33.1-15-05-02 as follows:
 - a. Method 1 for selection of sampling site and sample traverses.
 - b. Method 2 for determination of stack gas velocity and volumetric flow rate.
 - c. Method 3 for gas analysis.
 - d. Method 4 for determination of moisture in the stack gas.
 - e. Method 5 for concentration of particulate matter and the associated moisture content. The sampling time for each run shall be at least sixty minutes and the minimum sampling volume shall be thirty dry cubic feet at standard conditions [0.85 dry cubic meter at standard conditions] except that smaller sampling times or volumes when necessitated by process variables or other factors may be approved by the department.
 - (1) For each run using method 5 for fuel burning equipment, the emissions expressed in pounds per million British thermal units [nanograms per joule] shall be determined by the following procedures:

$$E = CF_d \left(\frac{20.9}{20.9 - \%O_2} \right) \quad \text{or} \quad E = CF_c \left(\frac{100}{\%CO_2} \right)$$

where:

- (a) E = pollutant emission, lb/million Btu [ng/j].
- (b) C = pollutant concentration, lb/dscf [ng/dscm].
- (c) %O₂ = oxygen content by volume, dry basis.
- (d) %CO₂ = carbon dioxide content by volume, dry basis.

The percent oxygen and percent carbon dioxide shall be determined by using the integrated or grab sampling and analysis procedures of method 3, 3A, 3B, or 3C, as appropriate, by traversing the duct at the same sampling locations used for each run of method 5.

- (e) F_d and F_c = factors as listed in method 19 appendix A of chapter 33.1-15-12.

- (2) For each run using method 5 for industrial processes, the emission rate expressed in pounds per hour shall be determined by the equation lb/hr = (Q_s) (c) where:

Q_s = volumetric flow rate of the total effluent in dscf/hr and

c = particulate concentration in lb/dscf.

- 2. The heat content of fuels shall be determined in accordance with A.S.T.M. methods D2015-66(72) (solid fuels), D240-64(73) (liquid fuels), or D1826-64(70) (gaseous fuels), as applicable.
- 3. The determination of particulate matter emissions with an aerodynamic diameter less than or equal to ten micrometers [PM₁₀] and particulate matter emissions with an aerodynamic diameter less than or equal to two and one-half micrometers [PM_{2.5}] must be made in accordance with the methods established in 40 Code of Federal Regulations part 51, appendix M, as applicable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-06
EMISSIONS OF SULFUR COMPOUNDS RESTRICTED

Section

- 33.1-15-06-01 Restriction of Emissions of Sulfur Dioxide From Use of Fuel
- 33.1-15-06-02 Restriction of Emissions of Sulfur Oxides From Industrial Processes
- 33.1-15-06-03 Methods of Measurement
- 33.1-15-06-04 Continuous Emission Monitoring Requirements
- 33.1-15-06-05 Reporting and Recordkeeping Requirements

33.1-15-06-01. Restriction of emissions of sulfur dioxide from use of fuel.

1. General provisions.

- a. Except as provided in subdivision c, this section applies to any installation in which fuel is burned and in which the sulfur dioxide emissions are substantially due to the content of the fuel burned, and in which the fuel is burned primarily to produce heat.
- b. For purposes of this section, a fuel burning installation is any single fuel burning furnace or boiler or other unit, device, or contrivance in which fuel is burned or any grouping of two or more such furnaces or boilers or other units, devices, or contrivances on the same premises or otherwise located in close proximity to each other and under control of the same person. The capacity of such installations shall be the manufacturer's or designer's guaranteed maximum heat input rate.
- c. This chapter does not apply to installations which are subject to a sulfur dioxide emission limit under chapter 33.1-15-12.
- d. For purposes of this chapter, equipment at an oil and gas production facility, as defined in chapter 33.1-15-20, is considered industrial process equipment.
- e. This chapter does not apply to installations that burn pipeline quality natural gas or A.S.T.M. commercial propane alone or in combination with each other. Installations that burn pipeline quality natural gas or A.S.T.M. commercial propane in combination with other fuels are subject to the requirements of this chapter.

- 2. Restrictions applicable to fuel burning installations.** No person shall cause or permit the emission of sulfur dioxide to the ambient air from any fuel burning installation in an amount greater than three and zero-tenths pounds of sulfur dioxide per million British thermal units [1,290 nanograms/joule] of heat input to the installation on a one-hour-block-average basis. The department may establish alternative averaging periods provided the requirements of chapter 33.1-15-02 are met. All averaging periods must begin on the hour and averaging periods greater than one hour must be rolling averages.

- 3.** The department shall establish more restrictive emission limits for a source if it is determined that such source is causing the ambient air quality standards of chapter 33.1-15-02 or the prevention of significant deterioration increments of chapter 33.1-15-15 for sulfur dioxide to be exceeded. However, the department may consider alternative measures which will achieve compliance with the ambient air quality standards or prevention of significant deterioration increments.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-06-02. Restriction of emissions of sulfur oxides from industrial processes.

1. **General provisions.** This section applies to all emissions except those in which all of the following are met:
 - a. Fuel is burned primarily to produce heat.
 - b. The sulfur compound emission is due primarily to the sulfur in the fuel burned.
2. **Concentration of sulfur compounds in emissions restricted.** The department shall establish emission limitations on the amount of sulfur dioxide, sulfur trioxide, and sulfuric acid which may be emitted into the ambient air from any source specified in subsection 1 in any area, if it is determined that such source is causing the ambient air quality standards of chapter 33.1-15-02 or the prevention of significant deterioration increments of chapter 33.1-15-15 for sulfur dioxide to be exceeded.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-06-03. Methods of measurement.

Testing must be done in accordance with the provisions of chapter 33.1-15-12, as applicable. The reference methods in appendix A to chapter 33.1-15-12, its replacement or applicable alternative methods as approved by the department, shall be used to determine compliance with this chapter as follows:

1. Method 1 for selection of sampling site and sample traverses.
2. Method 2 for stack gas velocity and volumetric flow rate.
3. Method 3 for gas analysis.
4. Method 4 for moisture content.
5. Method 6, 6A, 6C, and 20, as applicable, for concentration of sulfur dioxide. The minimum sampling time shall be at least sixty minutes per run and a test must consist of three runs.

For each run using method 6 for fuel burning equipment the emissions expressed in pounds per million British thermal units [nanogram per joule] shall be determined by the following procedures:

$$E = CF_d \left(\frac{20.9}{20.9 - \%O_2} \right) \quad \text{or} \quad E = CF_c \left(\frac{100}{\%CO_2} \right)$$

where:

- (1) E = pollutant emission, lb/million Btu [ng/j].
- (2) C = pollutant concentrations, lb/dscf [ng/dscm].
- (3) %O₂ = oxygen content by volume, dry basis.
- (4) %CO₂ = carbon dioxide content by volume, dry basis.

The percent oxygen and percent carbon dioxide shall be determined by using the integrated sampling and analysis procedures of method 3.

(5) F_d and F_c = factors listed in method 19 of appendix A of chapter 33.1-15-12.

For facilities firing combinations of fuels the F_d or F_c factors designated in this section shall be prorated in accordance with the applicable formula as follows:

$$F_d = \sum_{i=1}^n x_i (F_d)_i \quad \text{or} \quad F_c = \sum_{i=1}^n x_i (F_c)_i$$

where:

x_i = the fraction of total heat input derived from each type of fuel.

$(F_d)_i$ or $(F_c)_i$ = the applicable F_d or F_c factor for each fuel type.

n = the number of fuels being burned in combination.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-06-04. Continuous emission monitoring requirements.

1. General provisions.

- a. For sources subject to continuous emission monitoring requirements in their permit to operate, the monitoring systems must be used to demonstrate compliance with emission limits on a continuous basis after the initial compliance test and certification of the system.
- b. Emission rates must be recorded in the units of the applicable standard. Conversion of monitor data to an emission rate expressed in pounds per million British thermal units [nanogram per joule] shall be calculated in accordance with the equations in section 33.1-15-06-03. Equations for calculating emission rates with different units will be supplied by the department.

2. Installation, operation, and certification. The installation operation, and certification of continuous monitoring systems and monitoring devices must comply with the provisions of chapter 33.1-15-12 that apply to monitoring systems and monitoring devices.

3. Quality assurance. All continuous monitoring systems and monitoring devices must be recertified in accordance with the provisions of appendix B of chapter 33.1-15-12 every three years unless otherwise directed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-06-05. Reporting and recordkeeping requirements.

1. Excess emissions reports. Not later than thirty days following the end of a calendar quarter, any owner or operator required to monitor emissions in accordance with section 33.1-15-06-04 shall submit a report of excess emissions to the department. The report must include the following information:

- a. The magnitude of excess emissions, any conversion factor or factors used, and the date and time of commencement and completion of each time period of excess emissions.

- b. Specific identification of each period of excess emissions that occurs during startups, shutdowns, and malfunctions of the affected facility. The nature and cause of any malfunction (if known), the corrective action taken or preventative measures adopted.
- c. The date and time identifying each period during which the continuous monitoring system was inoperative except for zero and span checks and the nature of the system repairs or adjustments.
- d. When no excess emissions have occurred or the continuous monitoring systems have not been inoperative, repaired, or adjusted, such information must be stated in the report.

2. **Records.** Any owner or operator subject to continuous emission monitoring requirements shall maintain a file of all measurements, including continuous monitoring system, monitoring device, and performance testing measurements; all continuous monitoring system performance evaluations; all continuous monitoring system or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices; and all other information required by the department recorded in a permanent form suitable for inspection. The file must be retained for at least two years following the date of such measurements, maintenance, reports, and records.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-07

CONTROL OF ORGANIC COMPOUNDS EMISSIONS

Section

33.1-15-07-01 Requirements for Construction of Organic Compounds Facilities

33.1-15-07-02 Requirements for Organic Compounds Gas Disposal

33.1-15-07-01. Requirements for construction of organic compounds facilities.

1. **Scope.** This section applies only to those facilities considered "new" as defined in section 33.1-15-01-04.
2. **Water separation from petroleum products.** No person may build or install any single or multiple compartment volatile organic compounds - water separator which normally receives effluent water containing two hundred gallons [757.08 liters] per day or more of any volatile organic liquid from any equipment processing, refining, treating, storing, or handling volatile organic compounds unless such compartment is equipped with a closed-vent system and control device as defined in 40 CFR, part 60, subpart QQQ, section 60.691, as adopted in chapter 33.1-15-12, or a floating roof as described in 40 CFR, part 60, subpart QQQ, section 60.693-2, as adopted in chapter 33.1-15-12, which is properly installed and in good working order. For the purposes of this section, a volatile organic compounds - water separator means a device used to separate an oil water mixture into its separate components, which include volatile organic compounds and water, by gravity separation and skimming.
3. **Submerged fill pipes required.** No person may build or install or permit the building or installation of a stationary volatile organic compounds storage tank with a capacity of one thousand gallons [3,785.41 liters] or more unless such tank is equipped with a submerged fill pipe during filling operations or is a pressure tank as described in 40 CFR, part 60, subpart K, subparagraph 60.111(a)(1), as adopted in chapter 33.1-15-12, or fitted with a vapor recovery system also defined in 40 CFR, part 60, subpart K, paragraph 60.111(k), as adopted in chapter 33.1-15-12.
4. **Volatile organic compounds loading facilities.** No person may build or install or permit the building or installation of volatile organic compounds tank car or tank truck loading facilities handling twenty thousand gallons [75,708.24 liters] per day or more unless such facilities are operated with a submerged filling arm or other vapor emission control system. Any emissions control system utilized must have a minimum control efficiency necessary to meet the requirements of chapters 33.1-15-02 and 33.1-15-16.
5. **Pumps and compressors.** All rotating pumps and compressors handling volatile organic compounds must be equipped and operated with properly maintained seals designed for their specific product service and operating conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-07-02. Requirements for organic compounds gas disposal.

1. No person may cause or permit the emission of organic compounds gases and vapors, except from an emergency vapor blowdown system or emergency relief system, unless these gases and vapors are burned by flares, or an equally effective control device as approved by the department. Minor sources, as determined by the department and not subject to New Source Performance Standards (NSPS), may be granted exemptions to this subsection.

2. Organic compounds gases and vapors which are generated as wastes as the result of storage, refining, or processing operations and which contain hydrogen sulfide, shall be incinerated, flared, or treated in an equally effective manner before being released to the ambient air. The emissions from all devices designed for incinerating, flaring, or treating waste organic compounds gases and vapors shall result in compliance with chapters 33.1-15-02 and 33.1-15-16.
3. Each flare required under this section must be equipped and operated with an automatic igniter or a continuous burning pilot.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-08
CONTROL OF AIR POLLUTION FROM VEHICLES
AND OTHER INTERNAL COMBUSTION ENGINES

Section

33.1-15-08-01 Internal Combustion Engine Emissions Restricted

33.1-15-08-02 Removal or Disabling of Motor Vehicle Pollution Control Devices Prohibited

33.1-15-08-01. Internal combustion engine emissions restricted.

No person shall operate, or cause to be operated, any internal combustion engine which emits from any source any unreasonable and excessive smoke, obnoxious or noxious gases, fumes or vapor.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-08-02. Removal or disabling of motor vehicle pollution control devices prohibited.

1. No person shall intentionally remove, alter, or otherwise render inoperative, exhaust emission control, crankcase ventilation, or any other air pollution control device which has been installed as a requirement of federal law or regulation.
2. No person shall operate a motor vehicle originally equipped with air pollution control devices as required by federal law or regulation unless such devices are in place and in operating condition.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-09
[RESERVED]

CHAPTER 33.1-15-10 CONTROL OF PESTICIDES

Section

33.1-15-10-01 Pesticide Use Restricted

33.1-15-10-02 Restrictions on the Disposal of Surplus Pesticides and Empty Pesticide Containers

33.1-15-10-01. Pesticide use restricted.

1. No person shall use or permit the use of pesticides in such manner that will cause the airborne drift of pesticides off the premises on which they are being applied in such quantities that cause damage or injury to human health, crops, domestic animals, pollinating insects, vegetation, fish, and wildlife.
2. No person shall aerial spray or permit the aerial spraying of pesticides over a city in the state without the approval of the department. Such spraying will be allowed only for well-thought-out public health purposes and even then only in emergencies or potential emergencies.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-10-02. Restrictions on the disposal of surplus pesticides and empty pesticide containers.

1. No person shall dispose of or permit the disposal of surplus pesticides and empty pesticide containers in such a manner as may cause pesticides to become airborne in such quantities that may cause injury or damage to human health, crops, domestic animals, pollinating insects, vegetation, fish, and wildlife.
2. No person shall dispose of or permit the disposal of surplus pesticides by open burning.
3. Burning of empty pesticide containers is not allowed except where no municipal collection and disposal service is available and all of the following conditions are met:
 - a. Only plastics composed of carbon, hydrogen, or oxygen may be burned. Plastics composed of polymers of nitrogen, halogens including chlorine, or sulfur may not be burned.
 - b. The containers must be empty and triple rinsed before being burned. Containers such as bags or liners must be thoroughly emptied of pesticides prior to burning.
 - c. The open burning must be conducted on the farm by the farmers who generated the empty containers.
 - d. The open burning shall be conducted in an open area away from buildings and residences, and only when the wind direction disperses the smoke away from any human or animal.
 - e. Burning may not be conducted by commercial applicators or to dispose of large stockpiles of empty containers.

The authority to conduct such open burning does not exempt or excuse a person from the consequences, damages, or injuries which may result therefrom.

4. The disposal of surplus pesticides and empty pesticide containers must be in accordance with rules promulgated pursuant to authorities of the Solid Waste Management and Land Protection Act and the Hazardous Waste Management Act of the North Dakota Century Code.
5. The handling and disposal of pesticide containers, including burning, must comply with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended October 25, 1988.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-11
PREVENTION OF AIR POLLUTION EMERGENCY EPISODES

Section

- 33.1-15-11-01 Air Pollution Emergency
- 33.1-15-11-02 Air Pollution Episode Criteria
- 33.1-15-11-03 Abatement Strategies Emission Reduction Plans
- 33.1-15-11-04 Preplanned Abatement Strategies Plans

33.1-15-11-01. Air pollution emergency.

This chapter is designed to prevent the excessive buildup of air contaminants during air pollution episodes, thereby preventing the occurrence of an emergency due to the effects of these air contaminants on human health.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-11-02. Air pollution episode criteria.

Conditions justifying the proclamation of an air pollution alert, air pollution warning, or air pollution emergency shall be deemed to exist whenever the department determines that the accumulation of air contaminants in any place within North Dakota is attaining or has attained levels which could, if such levels are sustained or exceeded, lead to a substantial threat to human health. In making this determination, the department will be guided by the criteria listed in table 6.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-11-03. Abatement strategies emission reduction plans.

1. When the department declares an air pollution alert, air pollution warning, or air pollution emergency, any person responsible for the operation of a source of air contaminants as set forth in table 7 shall take all actions as required by table 7 for such source of air contaminants for the level declared and shall put into effect the preplanned abatement strategies plan for the level declared. The department shall notify the public by means of a public announcement whenever an air pollution alert, air pollution warning, or air pollution emergency has been determined to exist.

2. When the department determines that a specified criteria level has been reached at one or more monitoring sites solely because of emissions from a limited number of sources, the department shall notify such source or sources that the actions set forth in table 7 or the preplanned abatement strategies plans are required, insofar as it applies to such source or sources and shall be put into effect until the criteria of the specified level are no longer met.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-11-04. Preplanned abatement strategies plans.

1. Any person responsible for the operation of a source of air contaminants as set forth in table 7 shall prepare abatement strategies plans for reducing the emission of air contaminants during periods of an air pollution alert, air pollution warning, and air pollution emergency. Abatement strategies plans shall be designed to reduce or eliminate emissions of air contaminants in accordance with the objectives set forth in table 7.
2. Any person responsible for the operation of a source of air contaminants not set forth under subsection 1 shall, when requested by the department, in writing, prepare abatement strategies plans for reducing the emission of air contaminants during periods of an air pollution alert, air pollution warning, and air pollution emergency. Abatement strategies plans shall be designed to reduce or eliminate emissions of air contaminants in accordance with the objectives set forth in table 7.
3. Abatement strategies plans as required under subsections 1 and 2 shall be in writing and identify the sources of air contaminants, the approximate amount of reduction of air contaminants, and a brief description of the manner in which the reduction will be achieved during an air pollution alert, air pollution warning, and air pollution emergency.
4. During a condition of air pollution alert, air pollution warning, and air pollution emergency, abatement strategies plans as required by subsections 1 and 2 shall be made available on the premises to any person authorized to enforce the provisions of applicable rules and regulations.
5. Abatement strategies plans as required by subsections 1 and 2 shall be submitted to the department upon request within thirty days of the receipt of such request; such abatement strategies plans shall be subject to review and approval by the department. If, in the opinion of the department an abatement strategies plan does not effectively carry out the objectives as set forth in table 7, the department may disapprove it, state the reasons for disapproval, and order the preparation of an amended abatement strategies plan within the time period specified in the order.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

Table 6.

Air Pollution Episode Criteria

1. Air pollution forecast:

An internal watch by the department shall be actuated by a national weather service advisory that an atmospheric stagnation advisory is in effect or the equivalent local forecast of a stagnant atmospheric condition.

2. Air pollution alert:

The alert level is that concentration of contaminants at which first stage control actions are to begin. An alert will be declared when any one of the following levels is reached at any monitoring site:

SO₂-800 µg/m (0.3 ppm), 24-hour average.

PM₁₀ - 350 µg/m³, 24-hour average.

CO-17 mg/m³ (15 ppm), 8-hour average.

Ozone (O₃) - 400 µg/m³ (0.2 ppm), 1-hour average.

NO₂ - 1,130 µg/m³ (0.6 ppm), 1-hour average; 282 µg/m³ (0.15 ppm), 24-hour average.

In addition to the levels listed for the above pollutants, meteorological conditions are such that pollutant concentrations can be expected to remain at the above levels for twelve or more hours or increase, or in the case of ozone, the situation is likely to recur within the next twenty-four hours unless control actions are taken.

3. Air pollution warning:

The warning level indicates that air quality is continuing to degrade and that additional control actions are necessary. A warning will be declared when any one of the following levels is reached at any monitoring site:

SO₂ - 1,600 µg/m³ (0.6 ppm), 24-hour average.

PM₁₀ - 420 µg/m³, 24-hour average.

CO-34 mg/m³ (30 ppm), 8-hour average.

Ozone (O₃) - 800 µg/m³ (0.4 ppm), 1-hour average.

NO₂ - 2,260 µg/m³ (1.2 ppm), 1-hour average; 565 µg/m³ (0.3 ppm), 24-hour average.

In addition to the levels listed for the above pollutants, meteorological conditions are such that pollutant concentrations can be expected to remain at the above levels for twelve or more hours or increase, or in the case of ozone, the situation is likely to recur within the next twenty-four hours unless control actions are taken.

4. Air pollution emergency:

The emergency level indicates that air quality is continuing to degrade toward a level of significant harm to the health of persons and that the most stringent control actions are necessary. An emergency will be declared when any one of the following levels is reached at any monitoring site:

SO₂ - 2,100 µg/m³ (0.8 ppm), 24-hour average.

PM₁₀ - 500 µg/m³, 24-hour average.

CO-46 mg/m³ (40 ppm), 8-hour average.

Ozone (O₃) - 1,000 µg/m³ (0.5 ppm), 1-hour average.

NO₂ - 3,000 µg/m³ (1.6 ppm), 1-hour average; 750 µg/m³ (0.4 ppm), 24-hour average.

In addition to the levels listed for the above pollutants, meteorological conditions are such that pollutant concentrations can be expected to remain at the above levels for twelve or more hours or increase, or in the case of ozone, the situation is likely to recur within the next twenty-four hours unless control actions are taken.

5. Termination:

Once declared, any status reached by application of these criteria will remain in effect until the criteria for that level are no longer met. At such time, the next lower status will be assumed.

Table 7.

Abatement Strategies Emission Reduction Plans
Air Pollution Alert Level
Part A. General

1. There shall be no open burning by any persons of tree waste, vegetation, refuse, or debris in any form.
2. The use of incinerators for the disposal of any form of solid waste shall be limited to the hours between twelve noon and four p.m.
3. Persons operating fuel-burning equipment which requires boiler lancing or soot blowing shall perform such operations only between the hours of twelve noon and four p.m.
4. Persons operating motor vehicles should eliminate all unnecessary operations.

Part B. Source Curtailment

Any person responsible for the operation of a source of air contaminants listed below shall take all required control actions for this alert level.

<u>Source of Air Contaminants</u>	<u>Control Action</u>
<u>1. Coal- or oil-fired electric power generating facilities.</u>	<u>a. Substantial reduction by utilization of fuels having low ash and sulfur content.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing and soot blowing.</u> <u>c. Substantial reduction by diverting electric power generation to facilities outside of alert area.</u>
<u>2. Coal- and oil-fired process steam generating facilities.</u>	<u>a. Substantial reduction by utilization of fuels having low ash and sulfur content.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing and soot blowing.</u> <u>c. Substantial reduction of steam load demands consistent with continuing plant operations.</u>
<u>3. Manufacturing industries of the following classifications:</u> <u>Primary metals industry.</u> <u>Petroleum refining operations.</u> <u>Chemical industries.</u> <u>Mineral processing industries.</u> <u>Grain industry.</u> <u>Paper and allied products.</u> <u>Other energy and fuel facilities.</u>	<u>a. Substantial reduction of air contaminants from manufacturing operations by curtailing, postponing, or deferring production and all operations.</u> <u>b. Maximum reduction by deferring trade waste disposal operations which emit solid particles, gas vapors, and malodorous substances.</u> <u>c. Maximum reduction of heat load demands by processing.</u> <u>d. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing or soot blowing.</u>

Air Pollution Warning Level

Part A. General

1. There shall be no open burning by any persons of tree waste, vegetation, refuse, or debris in any form.
2. The use of incinerators for the disposal of any form of solid waste or liquid waste shall be prohibited.
3. Persons operating fuel-burning equipment which requires boiler lancing or soot blowing shall perform such operations only between the hours of twelve noon and four p.m.
4. Persons operating motor vehicles must reduce operations by the use of car pools and increased use of public transportation and elimination of unnecessary operation.

Part B. Source Curtailment

Any person responsible for the operation of a source of air contaminants listed below shall take all required control actions for this warning level.

<u>Source of Air Contaminants</u>	<u>Control Action</u>
<u>1. Coal- or oil-fired electric power generating facilities.</u>	<u>a. Maximum reduction by utilization of fuels having lowest ash and sulfur content.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing and soot blowing.</u> <u>c. Maximum reduction by diverting electric power generation to facilities outside of warning area.</u>
<u>2. Coal- and oil-fired process steam generating facilities.</u>	<u>a. Maximum reduction by utilization of fuels having the lowest available ash and sulfur content.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing and soot blowing.</u> <u>c. Making ready for use a plan of action to be taken if an emergency develops.</u>
<u>3. Manufacturing industries which require considerable lead time for shutdown including the following classifications:</u> <u>Petroleum refining.</u> <u>Chemical industries.</u> <u>Primary metals industries.</u> <u>Glass industry.</u> <u>Paper and allied products.</u> <u>Other energy and fuel facilities.</u>	<u>a. Maximum reduction of air contaminants from manufacturing operations by, if necessary, assuming reasonable economic hardships by postponing production and allied operation.</u> <u>b. Maximum reduction by deferring trade waste disposal operations which emit solid particles, gases, vapors, or malodorous substances.</u> <u>c. Maximum reduction of heat load demands for processing.</u> <u>d. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing or soot blowing.</u>
<u>4. Manufacturing industries which require relatively short lead times for shutdown including the following classifications:</u> <u>Primary metals industries.</u> <u>Chemical industries.</u> <u>Grain industry.</u> <u>Mineral processing industries.</u>	<u>a. Elimination of air contaminants from manufacturing operations by ceasing, curtailing, postponing, or deferring production and allied operations to the extent possible without causing injury to persons or damage to equipment.</u> <u>b. Elimination of air contaminants from industrial waste disposal which emits solid particles, gases, vapors, or malodorous substances.</u> <u>c. Maximum reduction of heat load demands for processing.</u> <u>d. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing or soot blowing.</u>

Air Pollution Emergency Level
Part A. General

1. There shall be no open burning by any persons of tree waste, vegetation, refuse, or debris in any form.
2. The use of incinerators for the disposal of any form of solid or liquid waste shall be prohibited.
3. All places of employment described below shall immediately cease operations:
 - a. Mining and quarrying of nonmetallic minerals.
 - b. All construction work except that which must proceed to avoid emergent physical harm.
 - c. All manufacturing establishments except those required to have in force an air pollution emergency abatement strategies plan.
 - d. All wholesale trade establishments; i.e., places of business primarily engaged in selling merchandise to retailers, or industrial, commercial, institutional or professional users, or to other wholesalers, or acting as agents in buying merchandise for or selling merchandise to such persons or companies, except those engaged in the distribution of drugs, surgical supplies, and food.
 - e. All offices of local, county, and state government, including authorities, joint meetings, and other public bodies excepting such agencies which are determined by the chief administrative officer of local, county, or state government, authorities, joint meetings, and other public bodies to be vital for public safety and welfare and the enforcement of the provisions of this order.
 - f. All retail trade establishments except pharmacies, surgical supply distributors, and stores primarily engaged in the sale of food.
 - g. Banks, credit agencies other than banks, securities and commodities brokers, dealers, exchanges and services; offices of insurance carriers, agents and brokers, real estate offices.
 - h. Wholesale and retail laundries, laundry services and cleaning and dyeing establishments; photographic studios; beauty shops, barber shops, shoe repair shops.
 - i. Advertising offices; consumer credit reporting, adjustment and collection agencies; duplicating, addressing, blueprinting; photocopying, mailing, mailing list and stenographic services; equipment rental services, commercial testing laboratories.
 - j. Automobile repair, automobile services, garages.
 - k. Establishments rendering amusement and recreational services including motion picture theaters.
 - l. Elementary and secondary schools, colleges, universities, professional schools, junior colleges, vocational schools, and public and private libraries.
4. All commercial and manufacturing establishments not included in this order will institute such actions as will result in maximum reduction of air contaminants from their operation by ceasing, curtailing, or postponing operations which emit air contaminants to the extent possible without causing injury to persons or damage to equipment.
5. The use of motor vehicles is prohibited except in emergencies with the approval of local police or state highway patrol.

Part B. Source Curtailment

Any person responsible for the operation of a source of air contaminants listed below shall take all required control actions for this emergency level.

<u>Source of Air Contaminants</u>	<u>Control Action</u>
<u>1. Coal- or oil-fired electric power generating facilities.</u>	<u>a. Maximum reduction by utilization of fuels having lowest ash and sulfur content.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing or soot blowing.</u> <u>c. Maximum reduction by diverting electric power generation to facilities outside of emergency area.</u>
<u>2. Coal- and oil-fired process steam generating facilities.</u>	<u>a. Maximum reduction by reducing heat and steam demands to absolute necessities consistent with preventing equipment damage.</u> <u>b. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing and soot blowing.</u> <u>c. Taking the action called for in the abatement strategies plan for the emergency level.</u>
<u>3. Manufacturing industries of the following classifications:</u> <u>Primary metals industries.</u> <u>Petroleum refining.</u> <u>Chemical industries.</u> <u>Mineral processing industries.</u> <u>Grain industry.</u> <u>Paper and allied products.</u> <u>Other energy and fuel facilities.</u>	<u>a. Elimination of air contaminants from manufacturing operations by ceasing, curtailing, postponing, or deferring production and allied operations to the extent possible without causing injury to persons or damage to equipment.</u> <u>b. Elimination of air contaminants from trade waste disposal processes which emit solid particles, gases, vapors, or malodorous substances.</u> <u>c. Maximum reduction of heat load demands for processing.</u> <u>d. Maximum utilization of midday (twelve noon to four p.m.) atmospheric turbulence for boiler lancing or soot blowing.</u>

CHAPTER 33.1-15-12
STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

Section

33.1-15-12-01 [Reserved]

33.1-15-12-01.1 Scope

33.1-15-12-02 Standards of Performance

33.1-15-12-01. [Reserved].

33.1-15-12-01.1. Scope.

Except as noted below the title of the subpart, the subparts and appendices of title 40, Code of Federal Regulations, part 60, as they exist on July 1, 2015, which are listed under section 33.1-15-12-02 are incorporated into this chapter by reference. Any changes to the standards of performance are listed below the title of the standard.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-12-02. Standards of performance.

Subpart A - General provisions.

*60.2. The definition of administrator is deleted and replaced with the following:

Administrator means the department except for those duties that cannot be delegated by the United States environmental protection agency. For those duties that cannot be delegated, administrator means the administrator of the United States environmental protection agency.

Subpart C - Emission guidelines and compliance times.

Subpart Cc - Emissions guidelines and compliance times for municipal solid waste landfills.

Designated facilities to which this subpart applies shall comply with the requirements for state plan approval in 40 CFR parts 60.33c, 60.34c, and 60.35c, except that quarterly surface monitoring for methane under part 60.34c shall only be required during the second, third, and fourth quarters of the calendar year.

Designated facilities under this subpart shall:

1. Submit a final control plan for department review and approval within twelve months of the date of the United States environmental protection agency's approval of this rule, or within twelve months of becoming subject to this rule, whichever occurs later.
2. Award contracts for control systems/process modification within twenty-four months of the date of the United States environmental protection agency's approval of this rule, or within twenty-four months of becoming subject to the rule, whichever occurs later.
3. Initiate onsite construction or installation of the air pollution control device or process changes within twenty-seven months of the date of the United States environmental protection agency's approval of this rule, or within twenty-seven months of becoming subject to the rule, whichever occurs later.

4. Complete onsite construction or installation of the air pollution control device or devices or process changes within twenty-nine months of the United States environmental protection agency's approval of this rule, or within twenty-nine months of becoming subject to the rule, whichever is later.
5. Conduct the initial performance test within one hundred eighty days of the installation of the collection and control equipment. A notice of intent to conduct the performance test must be submitted to the department at least thirty days prior to the test.
6. Be in final compliance within thirty months of the United States environmental protection agency's approval of this rule, or within thirty months of becoming subject to the rule, whichever is later.

Subpart Ce - Emission guidelines and compliance times for hospital/medical/infectious waste incinerators.

Except as noted below, designated facilities to which this rule applies shall comply with the minimum requirements for state plan approval listed in subpart Ce.

*60.39e(a) is deleted in its entirety.

*60.39e(b) is deleted in its entirety and replaced with the following:

- (b) Except as provided in paragraphs c and d of this section, designated facilities shall comply with all requirements of this subpart within one year of the United States environmental protection agency's approval of the state plan for hospital/medical/infectious waste incinerators regardless of whether a designated facility is identified in the state plan. Owners or operators of designated facilities who will cease operation of their incinerator to comply with this rule shall notify the department of their intention within six months of state plan approval.

*60.39e(c) is deleted in its entirety and replaced with the following:

- (c) Owners or operators of designated facilities planning to install the necessary air pollution control equipment to comply with the applicable requirements may petition the department for an extension of the compliance time of up to three years after the United States environmental protection agency's approval of the state plan, but not later than September 16, 2002, for the emission guidelines promulgated on September 15, 1997, and not later than October 6, 2014, for the emission guidelines promulgated on October 6, 2009, provided the facility owner or operator complies with the following:
 1. Submits a petition to the department for site specific operating parameters under 40 CFR 60.56c(i) of subpart Ec within thirty months of approval of the state plan and sixty days prior to the performance test.
 2. Provides proof to the department of a contract for obtaining services of an architectural or engineering firm or architectural and engineering firm regarding the air pollution control device within nine months of state plan approval.
 3. Submits design drawings to the department of the air pollution control device within twelve months of state plan approval.
 4. Submits to the department a copy of the purchase order or other documentation indicating an order has been placed for the major components of the air pollution control device within sixteen months after state plan approval.

5. Submits to the department the schedule for delivery of the major components of the air pollution control device within twenty months after state plan approval.
6. Begins initiation of site preparation for installation of the air pollution control device within twenty-two months after state plan approval.
7. Begins initiation of installation of the air pollution control device within twenty-five months after state plan approval.
8. Starts up the air pollution control device within twenty-eight months after state plan approval.
9. Notifies the department of the performance test thirty days prior to the test.
10. Conducts the performance test within one hundred eighty days of the installation of the air pollution control device.
11. Submits a performance test report which demonstrates compliance within thirty-six months of state plan approval.

*60.39e(d) is deleted in its entirety and replaced with the following:

1. Designated facilities petitioning for an extension of the compliance time in paragraph b of this section shall, within six months after the United States environmental protection agency's approval of the state plan, submit:
 - i. Documentation of the analyses undertaken to support the need for more than one year to comply, including an explanation of why up to three years after United States environmental protection agency approval of the state plan is sufficient to comply with this subpart while one year is not. The documentation shall also include an evaluation of the option to transport the waste offsite to a commercial medical waste treatment and disposal facility on a temporary or permanent basis; and
 - ii. Documentation of measurable and enforceable incremental steps of progress to be taken toward compliance with this subpart.
2. The department shall review any petitions for the extension of compliance times within thirty days of receipt of a complete petition and make a decision regarding approval or denial. The department shall notify the petitioner in writing of its decision within forty-five days of the receipt of the petition. All extension approvals must include incremental steps of progress. For those sources planning on installing air pollution control equipment to comply with this subpart, the incremental steps of progress included in 40 CFR 60.39e(c) shall be included as conditions of approval of the extension.
3. Owners or operators of facilities which received an extension to the compliance time in this subpart shall be in compliance with the applicable requirements on or before the date three years after United States environmental protection agency approval of the state plan but not later than September 16, 2002, for the emission guidelines promulgated on September 15, 1997. For the amended emission guidelines published on October 6, 2009, compliance with the applicable requirements shall be attained on or before the date three years after United States environmental protection agency approval of the amended state plan but not later than October 6, 2014.

*60.39e(f) is deleted in its entirety.

After the compliance dates specified in this subpart, an owner or operator of a facility to which this subpart applies shall not operate any such unit in violation of this subpart.

Subpart D - Standards of performance for fossil-fuel fired steam generators for which construction is commenced after August 17, 1971.

Subpart Da - Standards of performance for electric utility steam generating units for which construction is commenced after September 18, 1978.

*The limits and other requirements for mercury are deleted.

Subpart Db - Standards of performance for industrial-commercial-institutional steam generating units.

Subpart Dc - Standards of performance for small industrial-commercial-institutional steam generating units.

Subpart E - Standards of performance for incinerators.

Subpart Ea - Standards of performance for municipal waste combustors for which construction is commenced after December 20, 1989, and on or before September 20, 1994.

Subpart Ec - Standards of performance for hospital/medical/infectious waste incinerators for which construction is commenced after June 20, 1996.

Subpart F - Standards of performance for portland cement plants.

Subpart G - Standards of performance for nitric acid plants.

Subpart H - Standards of performance for sulfuric acid plants.

Subpart I - Standards of performance for hot mix asphalt facilities.

Subpart J - Standards of performance for petroleum refineries.

Subpart Ja - Standards of performance for petroleum refineries for which construction, reconstruction, or modification commenced after May 14, 2007.

Those portions of the subpart that have been stayed are not adopted.

Subpart K - Standards of performance for storage vessels for petroleum liquids for which construction, reconstruction, or modification commenced after June 11, 1973, and prior to May 19, 1978.

*60.110(c) is deleted in its entirety and replaced with the following:

(c) Any facility under part 60.110(a) that commenced construction, reconstruction, or modification after July 1, 1970, and prior to May 19, 1978, is subject to the requirements of this subpart.

Subpart Ka - Standards of performance for storage vessels for petroleum liquids for which construction, reconstruction, or modification commenced after May 18, 1978, and prior to July 23, 1984.

Subpart Kb - Standards of performance for volatile organic liquid storage vessels (including petroleum liquid storage vessels) for which construction, reconstruction, or modification commenced after July 23, 1984.

Subpart O - Standards of performance for sewage treatment plants.

Subpart T - Standards of performance for the phosphate fertilizer industry: wet-process phosphoric acid plants.

Subpart U - Standards of performance for the phosphate fertilizer industry: superphosphoric acid plants.

Subpart V - Standards of performance for the phosphate fertilizer industry: diammonium phosphate plants.

Subpart W - Standards of performance for the phosphate fertilizer industry: triple superphosphate plants.

Subpart X - Standards of performance for the phosphate fertilizer industry: granular triple superphosphate storage facilities.

Subpart Y - Standards of performance for coal preparation plants.

Subpart Z - Standards of performance for ferroalloy production facilities.

Subpart AA - Standards of performance for steel plants: electric arc furnaces: constructed after October 21, 1974, and before August 17, 1983.

Subpart AAa - Standards of performance for steel plants: electric arc furnaces and argon-oxygen decarburization vessels constructed after August 17, 1983.

Subpart CC - Standards of performance for glass manufacturing plants.

Subpart DD - Standards of performance for grain elevators.

Subpart EE - Standards of performance for surface coatings of metal furniture.

Subpart FF - [Reserved]

Subpart GG - Standards of performance for stationary gas turbines.

Subpart HH - Standards of performance for lime manufacturing plants.

Subpart KK - Standards of performance for lead-acid battery manufacturing plants.

Subpart LL - Standards of performance for metallic mineral processing plants.

Subpart MM - Standards of performance for automobile and light-duty truck surface coating operations.

Subpart NN - Standards of performance for phosphate rock plants.

Subpart PP - Standards of performance for ammonium sulfate manufacture.

Subpart QQ - Standards of performance for the graphic arts industry: publication rotogravure printing.

Subpart RR - Standards of performance for pressure-sensitive tape and label surface coating operations.

Subpart SS - Standards of performance for industrial surface coating: large appliances.

Subpart TT - Standards of performance for metal coil surface coating.

Subpart UU - Standards of performance for asphalt processing and asphalt roofing manufacture.

Subpart VV - Standards of performance for equipment leaks of volatile organic compound (VOC) emissions in the synthetic organic chemicals manufacturing industry.

Subpart VVa - Standards of performance for equipment leaks of VOC in the synthetic organic chemicals manufacturing industry for which construction, reconstruction, or modification commenced after November 7, 2006.

Subpart WW - Standards of performance for the beverage can surface coating industry.

Subpart XX - Standards of performance for bulk gasoline terminals.

Subpart AAA - Standards of performance for new residential wood heaters.

Subpart BBB - Standards of performance for the rubber tire manufacturing industry.

Subpart CCC - [Reserved]

Subpart DDD - Standards of performance for volatile organic compound (VOC) emissions for the polymer manufacturing industry.

Subpart EEE - [Reserved]

Subpart FFF - Standards of performance for flexible vinyl and urethane coating and printing.

Subpart GGG - Standards of performance for equipment leaks of volatile organic compound (VOC) emissions in petroleum refineries.

Subpart GGGa - Standards of performance for equipment leaks of VOC in petroleum refineries for which construction, reconstruction, or modification commenced after November 7, 2006.

Those portions of the subpart that are stayed are not adopted.

Subpart HHH - Standards of performance for synthetic fiber production facilities.

Subpart III - Standards of performance for volatile organic compound (VOC) emissions from the synthetic organic chemical manufacturing industry (SOCMI) air oxidation unit processes.

Subpart JJJ - Standards of performance for petroleum drycleaners.

Subpart KKK - Standards of performance for equipment leaks of volatile organic compound (VOC) emissions from onshore natural gas processing plants.

Subpart LLL - Standards of performance for onshore natural gas processing; SO₂ emissions.

Subpart MMM - [Reserved]

Subpart NNN - Standards of performance for volatile organic compound (VOC) emissions from synthetic organic chemical manufacturing industry (SOCMI) distillation operations.

Subpart OOO - Standards of performance for nonmetallic mineral processing plants.

Subpart PPP - Standards of performance for wool fiberglass insulation manufacturing plants.

Subpart QQQ - Standards of performance for volatile organic compound (VOC) emissions from petroleum refinery wastewater systems.

Subpart RRR - Standards of performance for volatile organic compound (VOC) emissions from synthetic organic chemical manufacturing industry (SOCMI) reactor processes.

Subpart SSS - Standards of performance for magnetic tape coating facilities.

Subpart TTT - Standards of performance for industrial surface coating: surface coating of plastic parts for business machines.

Subpart UUU - Standards of performance for calciners and dryers in mineral industries.

Subpart VVV - Standards of performance for polymeric coating of supporting substrates facilities.

Subpart WWW - Standards of performance for municipal solid waste landfills.

Subpart AAAA - Standards of performance for small municipal waste combustion units for which construction is commenced after August 30, 1999, or for which modification or reconstruction is commenced after June 6, 2001.

Subpart CCCC - Standards of performance for commercial and industrial solid waste incineration units.

Subpart DDDD - Emission guidelines and compliance times for commercial and industrial solid waste incineration units.

Except as provided below, designated facilities to which this rule applies shall comply with 40 CFR 60.2575 through 60.2875, including tables 1 through 9.

In the rule, you means the owner or operator of a commercial or industrial solid waste incineration unit.

Table 1 of the rule is deleted and replaced with the following:

<u>Table 1 to Subpart DDDD - Model Rule Increments of Progress and Compliance Schedules</u>	
<u>CISWI Units That Commenced Construction on or Before November 30, 1999</u>	
<u>Comply with these increments of progress</u>	<u>By these dates</u>
<u>Increment 1 - Submit final control plan</u>	<u>One year after EPA approval of the state plan or December 1, 2004, whichever comes first.</u>
<u>Increment 2 - Final compliance</u>	<u>Three years after EPA approval of the state plan or December 1, 2005, whichever comes first.</u>

<u>Incinerator CISWI units that commenced construction after November 30, 1999, but no later than June 4, 2010, or commenced modification or reconstruction after June 1, 2001, but no later than August 7, 2013. CISWI units other than incinerator units that commenced construction on or before June 4, 2010, or commenced modification or reconstruction after June 4, 2010, but no later than August 7, 2013.</u>	
<u>Comply with these increments of progress</u>	<u>By these dates</u>
<u>Increment 1 - Submit final control plan</u>	<u>One year after EPA approval of the state plan or February 7, 2017, whichever comes first.</u>
<u>Increment 2 - Final compliance</u>	<u>Three years after EPA approval of the state plan or February 7, 2018, whichever comes first.</u>

Subpart GGGG - [Reserved]

Subpart IIII - Standards of performance for stationary compression ignition internal combustion engines.

Subpart JJJJ - Standards of performance for stationary sparks ignition internal combustion engines.

Subpart KKKK - Standards of performance for stationary combustion turbines.

Appendix A - Test methods.

Appendix B - Performance specifications.

Appendix C - Determination of emission rate changes.

Appendix D - Required emission inventory information.

Appendix E - [Reserved]

Appendix F - Quality assurance procedures.

Appendix I - Removable label and owner's manual.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-13
EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

Section

33.1-15-13-01 [Reserved]

33.1-15-13-01.1 Scope

33.1-15-13-01.2 Emission Standards

33.1-15-13-02 Emission Standard for Asbestos

33.1-15-13-01. [Reserved].

33.1-15-13-01.1. Scope.

The subparts and appendices of title 40 Code of Federal Regulations part 61, as they exist on July 2, 2010, which are listed under section 33.1-15-13-01.2 are incorporated into this chapter by reference. Any changes to the emission standard are listed below the title of the standard.

History: Effective January 1, 2019 .

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-13-01.2. Emission standards.

Subpart A - General provisions.

*61.02 - The definition of administrator is deleted and replaced with the following:

Administrator means the department except for those duties that cannot be delegated by the United States environmental protection agency. For those duties that cannot be delegated, administrator means the administrator of the United States environmental protection agency.

The following definition is added:

"Waiver of compliance" means a permit to operate with a compliance schedule.

*Sections 61.07 and 61.08 are deleted in their entirety and replaced with the following:

Application for permit to construct. The owner or operator of any new source to which a standard prescribed under these subparts is applicable, prior to the date on which construction or modification is planned to commence, shall apply for and receive a permit to construct as provided in section 33.1-15-14-02. For those sources on which construction or modification has commenced and initial startup has not occurred prior to the effective date of a standard of this chapter, the owner or operator shall apply for a permit to construct within thirty days after the effective date of the standard.

Neither the submission of an application for a permit to construct nor the administrator's approval of construction or modification shall:

- (1) Relieve an owner or operator of legal responsibility for compliance with any applicable provisions of this chapter or of any other applicable federal, state, or local requirement; or
- (2) Prevent the administrator from implementing or enforcing this chapter or taking any other action under this article.

*61.09(b) is deleted in its entirety.

*61.11(f) is deleted in its entirety and replaced with the following:

- (f) The granting of a permit under this section does not abrogate the department's authority under section 33.1-15-01-06 and subsection 9 of section 33.1-15-14-02, and subsection 6 of section 33.1-15-14-03.

*61.16 is deleted in its entirety and replaced with the following:

Availability of information.

a. Emission data provided to, or otherwise obtained by, the department in accordance with the provisions of this chapter must be available to the public.

b. Any records, reports, or information, other than emission data, provided to, or otherwise obtained by, the department in accordance with the provisions of this chapter must be available to the public, except that upon a showing satisfactory to the department by any person that such records, reports, or information, or particular part thereof (other than emission data), if made public, would divulge methods or processes entitled to protection as trade secrets of such person, the department will consider such records, reports, or information, or particular part thereof, confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such records, reports, or information, or particular part thereof, may be disclosed to other officers, employees, or authorized representatives of the state and federal government concerned with carrying out the provisions of North Dakota Century Code chapter 23.1-06 or when relevant in any proceeding under North Dakota Century Code chapter 23.1-06.

*61.17 is deleted in its entirety.

Subpart G - [Reserved].

Subpart J - National emission standard for equipment leaks (fugitive emission sources) of benzene.

Subpart S - [Reserved].

Subpart U - [Reserved].

Subpart V - National emission standard for equipment leaks (fugitive emission sources).

Subpart FF - National emission standard for benzene waste operations.

Appendix A - National emission standards for hazardous air pollutants, compliance status information.

Appendix B - Test methods.

Appendix C - Quality assurance procedures.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-13-02. Emission standard for asbestos.

1. **Applicability.** The provisions of this section are applicable to those sources specified in subsections 3 through 17.

2. **Definitions.** All terms that are used in this section and are not defined below are given the same meaning as in North Dakota Century Code chapter 23.1-06 and in section 33.1-15-13-01.2.

- a. "Active waste disposal site" means any disposal site other than an inactive site.
- b. "Adequately wet" means to sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from asbestos-containing material, then that material has not been adequately wetted; however, the absence of visible emissions is not sufficient evidence of being adequately wet.
- c. "Asbestos" means the asbestiform varieties of serpentinite (chrysotile), riebeckite (crocidolite), cummingtonite-grunerite (amosite), anthophyllite, and actinolite-tremolite.
- d. "Asbestos abatement" means any demolition, renovation, salvage, repair, or construction activity which involves the repair, enclosure, encapsulation, removal, operation and maintenance, handling, or disposal of more than three square feet [0.28 square meters] or three linear feet [0.91 meters] of friable asbestos material. Asbestos abatement also means any inspections, preparation of management plans, and abatement project design for both friable and nonfriable asbestos material.
- e. "Asbestos abatement project designer" means any person who develops the plans, specifications, and designs for an asbestos abatement project.
- f. "Asbestos abatement project monitor" means any person, employed to monitor an asbestos removal project to ensure any of the following:
 - (1) The removal is conducted in accordance with state and federal regulations.
 - (2) State-of-the-art work practices are employed.
 - (3) The abatement is conducted as designed.
 - (4) Personal and ambient air samples are collected properly.

Persons acting as the project designer who are not responsible for the proper collection of personal and ambient air samples and employees of the asbestos removal contractor or facility owner are excluded from this definition.
- g. "Asbestos abatement supervisor" means any person employed by the asbestos contractor who supervises workers engaged in asbestos removal, encapsulation, enclosure, and repair. Supervisors may include those individuals with the position title of foreman, working foreman, or leadman pursuant to collective bargaining agreements.
- h. "Asbestos-containing waste material" means asbestos mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of this section. This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term includes regulated asbestos-containing material waste and materials contaminated with asbestos, including disposable equipment and clothing.
- i. "Asbestos contractor" means any partnership, firm, association, operation, or sole proprietorship that contracts to perform asbestos abatement for another.
- j. "Asbestos inspector" means any person who inspects facilities for asbestos-containing materials.

- k. "Asbestos management planner" means any person who develops facility plans for the management of asbestos-containing materials.
- l. "Asbestos mill" means any facility engaged in converting, or in any intermediate step in converting, asbestos ore into commercial asbestos. Outside storage of asbestos materials is not considered a part of the asbestos mill.
- m. "Asbestos tailings" means any solid waste that contains asbestos and is a product of asbestos mining or milling operations.
- n. "Asbestos waste from control devices" means any waste material that contains asbestos and is collected by a pollution control device.
- o. "Asbestos worker" means an employee or agent of an asbestos contractor, or a public employee engaged in the abatement of more than three square feet [0.28 square meters] or three linear feet [0.91 meters] of friable asbestos material, except for individuals engaged in abatement at their private residence.
- p. "Category I nonfriable asbestos-containing material" means asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than one percent asbestos as determined using the methods specified in appendix A, subpart F, title 40 Code of Federal Regulations part 763, section 1, polarized light microscopy.
- q. "Category II nonfriable asbestos-containing material" means any material, excluding category I nonfriable asbestos-containing material, containing more than one percent asbestos as determined using the methods specified in appendix A, subpart F, title 40, Code of Federal Regulations, part 763, section 1, polarized light microscopy that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure or by mechanical forces expected to act on the material.
- r. "Commercial asbestos" means any material containing asbestos that is extracted from ore and has value because of its asbestos content.
- s. "Cutting" means to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching.
- t. "Demolition" means the wrecking or taking out of any load-supporting structural member of a facility, together with any related handling operations or the intentional burning of any facility.
- u. "Emergency renovation operation" means a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment from damage, or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment.
- v. "Encapsulation" means a method of asbestos abatement that includes the treatment of asbestos-containing materials with a sealant material that completely surrounds or embeds asbestos fibers in an adhesive matrix to prevent the release of fibers. A bridging encapsulant creates a membrane over the surface while a penetrating encapsulant penetrates the material and binds the material's components together.
- w. "Enclosure" means a method of asbestos abatement that includes the construction of a permanent, airtight, impermeable barrier around asbestos-containing material to prevent the release of asbestos fibers into the air.

- x. "Fabricating" means any processing (e.g., cutting, sawing, drilling) of a manufactured product that contains commercial asbestos, with the exception of processing at temporary sites (field fabricating) for the construction or restoration of facilities. In the case of friction products, fabricating includes bonding, debonding, grinding, sawing, drilling, or other similar operations performed as part of fabricating.
- y. "Facility" means any institutional, commercial, public, industrial, or residential structure, installation, or building, including any structure, installation, or building containing condominiums or individual dwelling units operated as a residential cooperative, but excluding residential buildings having four or fewer dwelling units; any ship; and any active or inactive waste disposal site. For purposes of this definition, any building, structure, or installation that contains a loft used as a dwelling is not considered a residential structure, installation, or building. Any structure, installation, or building that was previously subject to this section is not excluded, regardless of its current use or function.
- z. "Facility component" means any part of a facility including equipment.
- aa. "Friable asbestos-containing material" means any material containing more than one percent asbestos that hand pressure or mechanical forces expected to act on the material can crumble, pulverize, or reduce to powder when dry. The term includes nonfriable asbestos-containing material after such previously nonfriable material becomes damaged to the extent that when dry, it may be crumbled, pulverized, or reduced to powder by hand pressure. The percentage of asbestos is determined using the method specified in appendix A, subpart F, title 40 Code of Federal Regulations part 763, section 1, polarized light microscopy. If the asbestos content is greater than zero percent, assume the material contains greater than one percent asbestos or verify the asbestos content by point counting using polarized light microscopy. If a result obtained by point count is different from a result obtained by visual estimation, the point count result will be used.
- bb. "Fugitive source" means any source of emissions not controlled by an air pollution control device.
- cc. "Glove-bag" means a sealed compartment with attached inner gloves used for the handling of asbestos-containing materials. Properly installed and used, glove-bags provide a small work area enclosure typically used for small-scale asbestos stripping operations. Information on glove-bag installation, equipment and supplies, and work practices is contained in the occupational safety and health administration's (OSHA's) final rule on occupational exposure to asbestos, appendix G, title 29 Code of Federal Regulations 1926.58.
- dd. "Grinding" means to reduce to powder or small fragments and includes mechanical chipping or drilling.
- ee. "In poor condition" means the binding of the material is losing its integrity as indicated by peeling, cracking, or crumbling of the material.
- ff. "Inactive waste disposal site" means any disposal site or portion of it where additional asbestos-containing waste material has not been deposited within the past year.
- gg. "Inspection" means any activity undertaken in a school building, or a public or commercial building, to determine the presence or location, or to assess the condition of, friable or nonfriable asbestos-containing material or suspected asbestos-containing material, whether by visual or physical examination, or by collecting samples of such material. This term includes reinspections of friable and nonfriable, known or assumed

asbestos-containing material which has been previously identified. The term does not include the following:

- (1) Periodic surveillance of the type described in title 40 Code of Federal Regulations 763.92(b), solely for the purpose of recording or reporting a change in the condition of known or assumed asbestos-containing material;
- (2) Inspections performed by employees or agents of federal, state, or local governments solely for the purpose of determining compliance with applicable statutes or regulations; or
- (3) Visual inspections of the types described in title 40 Code of Federal Regulations 763.90(l), solely for the purpose of determining completion of response actions.

hh. "Installation" means any building or structure or any group of buildings or structures at a single demolition or renovation site that are under the control of the same owner or operator (or owner or operator under common control).

ii. "Leaktight" means that solids or liquids cannot escape or spill out. It also means dusttight.

jj. "Malfunction" means any sudden and unavoidable failure of air pollution control equipment or process equipment or of a process to operate in a normal or usual manner so that emissions of asbestos are increased. Failures of equipment shall not be considered malfunctions if they are caused in any way by poor maintenance, careless operations, or any other preventable upset conditions, equipment breakdown, or process failure.

kk. "Manufacturing" means the combining of commercial asbestos, or in the case of woven friction products, the combining of textiles containing commercial asbestos, with any other materials, including commercial asbestos, and the processing of this combination into a product. Chlorine production is considered a part of manufacturing.

ll. "Natural barrier" means a natural object that effectively precludes or deters access. Natural barriers include physical obstacles such as cliffs, lakes, or other large bodies of water, deep and wide ravines, and mountains. Remoteness by itself is not a natural barrier.

mm. "Nonfriable asbestos-containing material" means any material containing more than one percent asbestos as determined using the method specified in appendix A, subpart F, title 40 Code of Federal Regulations part 763, section 1, polarized light microscopy, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure or mechanical forces expected to act on the material.

nn. "Nonscheduled renovation operation" means a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted.

oo. "Outside air" means the air outside buildings and structures, including the air under a bridge or in an open ferry dock.

pp. "Owner or operator of a demolition or renovation activity" means any person who owns, leases, operates, controls, or supervises a facility being demolished or renovated or any person who owns, leases, operates, controls, or supervises the demolition or renovation operations, or both.

- qq. "Particulate asbestos material" means finely divided particles of asbestos or material containing asbestos.
- rr. "Planned renovation operations" means a renovation operation, or a number of such operations, in which some regulated asbestos-containing material will be removed or stripped within a given period of time and that can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time based on operating experience.
- ss. "Public and commercial building" means the interior space of any building which is not a school building, except that the term does not include any residential apartment building of fewer than ten units or detached single-family homes. The term includes, industrial and office buildings, residential apartment buildings and condominiums of ten or more dwelling units, government-owned buildings, colleges, museums, airports, hospitals, churches, preschools, stores, warehouses, and factories. Interior space includes exterior hallways connecting buildings, porticos, and mechanical systems used to condition interior space.
- tt. "Public employee" for the purpose of this chapter means any person employed by the United States government or the state of North Dakota or any of its political subdivisions who provides service for which compensation is paid. This includes employment by appointment or election.
- uu. "Regulated asbestos-containing material (RACM)" means:
- (1) Friable asbestos material.
 - (2) Category I nonfriable asbestos-containing material that has become friable.
 - (3) Category I nonfriable asbestos-containing material that will be or has been subjected to sanding, grinding, cutting, or abrading.
 - (4) Category II nonfriable asbestos-containing material that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces acting on or expected to act on the material in the course of demolition or renovation operations regulated by this section.
- vv. "Remove" means to take out regulated asbestos-containing material or facility components that contain or are covered with regulated asbestos-containing material from any facility.
- ww. "Renovation" means altering in any way a facility or facility components, including the stripping or removal of regulated asbestos-containing material from a facility component. Operations in which load-supporting structural members are wrecked or taken out are demolitions.
- xx. "Repair" means returning damaged asbestos-containing materials to an undamaged condition or to an intact state so as to prevent asbestos fiber release.
- yy. "Resilient floor covering" means asbestos-containing floor tile, including asphalt and vinyl floor tiles and sheet vinyl floor covering containing more than one percent asbestos as determined using polarized light microscopy according to the methods specified in appendix A, subpart F, title 40 Code of Federal Regulations part 763, section 1, polarized light microscopy.
- zz. "Roadways" means surfaces on which motor vehicles travel. This term includes public and private highways, roads, streets, parking areas, and driveways.

- aaa. "Strip" means to take off regulated asbestos-containing material from any part of any facility or facility components.
- bbb. "Structural member" means any member of a facility, such as beams, walls, ceilings, floors, etc.
- ccc. "Visible emissions" means any emissions which are visually detectable without the aid of instruments, coming from regulated asbestos-containing material or asbestos-containing waste material, or from any asbestos milling, manufacturing, or fabricating operations. This does not include condensed uncombined water vapor.
- ddd. "Waste generator" means any owner or operator of a source covered by this section whose act or process produces asbestos-containing waste material.
- eee. "Waste shipment record" means the shipping document, required to be originated and signed by the waste generator and is used to track and substantiate the disposition of asbestos-containing waste material.
- fff. "Working day" means any day Monday through Friday and includes holidays that fall on any day Monday through Friday.

3. Standard for asbestos mills.

- a. Each owner or operator of an asbestos mill shall either discharge no visible emissions to the outside air from that asbestos mill, including fugitive sources, or use the methods specified by subsection 13 to clean emissions containing asbestos material before they escape to, or are vented to, the outside air.
- b. Each owner or operator of an asbestos mill shall meet the following requirements:
 - (1) Monitor each potential source of asbestos emissions from any part of the mill facility, including air-cleaning devices, process equipment, and buildings that house equipment for material processing and handling, at least once each day during daylight hours for visible emissions to the outside air during periods of operation. The monitoring must be by visual observation of at least fifteen seconds duration per source of emissions.
 - (2) Inspect each air-cleaning device at least once each week for proper operation and for changes that signal the potential for malfunction, including, to the maximum extent possible without dismantling other than opening the device, the presence of tears, holes, and abrasions in filter bags and for dust deposits on the clean side of bags. For air-cleaning devices that can not be inspected on a weekly basis according to this paragraph, submit to the department, and revise as necessary, a written maintenance plan to include, at a minimum, the following:
 - (a) Maintenance schedule.
 - (b) Recordkeeping plan.
 - (3) Maintain records of the results of visible emissions monitoring and air-cleaning device inspections using a suitable form which includes the following information:
 - (a) Date and time of each inspection.
 - (b) Presence or absence of visible emissions.
 - (c) Condition of fabric filters, including presence of any tears, holes, and abrasions.

(d) Presence of dust deposits on clean side of fabric filters.

(e) Brief description of corrective actions taken including date and time.

(f) Daily hours of operation for each air-cleaning device.

(4) Furnish upon request and make available at the affected facility during normal business hours for inspection by the department all records required under this subdivision.

(5) Retain a copy of all monitoring inspection records for at least two years.

(6) Submit quarterly a copy of visible emissions monitoring records to the department if visible emissions occurred during the report period. Quarterly reports must be postmarked by the thirtieth day following the end of the calendar quarter.

4. **Standard for roadways.** No person may surface a roadway with asbestos tailings or asbestos-containing waste material.

5. **Standard for manufacturing.**

a. Applicability. This section applies to the following manufacturing operations using commercial asbestos.

(1) The manufacture of cloth, cord, wicks, tubing, tape, twine, rope, thread, yarn, roving, lap, or other textile materials.

(2) The manufacture of cement products.

(3) The manufacture of fireproofing and insulating materials.

(4) The manufacture of friction products.

(5) The manufacture of paper, millboard, and felt.

(6) The manufacture of resilient floor covering.

(7) The manufacture of paints, coatings, caulks, adhesives, and sealants.

(8) The manufacture of plastics and rubber materials.

(9) The manufacture of chlorine utilizing asbestos diaphragm technology.

(10) The manufacture of shotgun shell wads.

(11) The manufacture of asphalt concrete.

b. Standard. Each owner or operator of any of the manufacturing operations to which this section applies shall either:

(1) Discharge no visible emissions to the outside air from these operations or from any building or structure in which they are conducted or from any other fugitive sources.

(2) Use the methods specified by subsection 13 to clean emissions containing asbestos material from these operations before they escape to, or are vented to, the outside air.

(3) Monitor each potential source of asbestos emissions from any part of the manufacturing facility, including air-cleaning devices, process equipment, and

buildings housing material processing and handling equipment, at least once each day during daylight hours for visible emission to the outside air during periods of operation. The monitoring must be by visual observation of at least fifteen seconds duration per source of emissions.

(4) Inspect each air-cleaning device at least once each week for proper operation and for changes that signal the potential for malfunctions, including, to the maximum extent possible without dismantling other than opening the device, the presence of tears, holes, and abrasions in filter bags and for dust deposits on the clean side of bags. For air-cleaning devices that cannot be inspected on a weekly basis according to this paragraph, submit to the department, and revise as necessary, a written maintenance plan to include, at a minimum, the following:

(a) Maintenance schedule.

(b) Recordkeeping plans.

(5) Maintain records of the results of visible emission monitoring and air-cleaning device inspections using a suitable form which includes the following information:

(a) Date and time of each inspection.

(b) Presence or absence of visible emissions.

(c) Condition of fabric filters, including presence of any tears, holes, and abrasions.

(d) Presence of dust deposits on clean side of fabric filters.

(e) Brief description of corrective action taken, including date and time.

(f) Daily hours of operation for each air-cleaning device.

(6) Furnish upon request and make available at the affected facility during normal business hours for inspection by the department all records required under this subdivision.

(7) Retain a copy of all monitoring and inspection records for at least two years.

(8) Submit quarterly a copy of the visible emissions monitoring records to the department if visible emissions occurred during the report period. Quarterly reports must be postmarked by the thirtieth day following the end of the calendar quarter.

6. Standard for demolition and renovation.

a. Applicability. To determine which requirements of subdivisions a, b, and c of this subsection apply to the owner or operator of a demolition or renovation activity and prior to the commencement of the demolition or renovation, thoroughly inspect the affected facility, or part of the facility where the demolition or renovation operation will occur, for the presence of asbestos, including category I and category II nonfriable asbestos-containing material. The requirements of subdivisions b and c of this subsection apply to each owner or operator of an asbestos demolition or renovation operation, including the removal of regulated asbestos-containing material, as follows:

(1) For a demolition or renovation project involving the stripping or removal of more than three square feet [0.28 square meters] or three linear feet [0.91 meters] of regulated asbestos-containing material, all the procedural requirements of subdivision c apply, except for ordered demolitions as provided in paragraph 4.

(2) For any facility being demolished, all the notification requirements of subdivision b apply.

(3) For a renovation project where at least one hundred sixty square feet [14.9 square meters] of regulated asbestos-containing material on facility components or at least two hundred sixty linear feet [79.3 meters] of regulated asbestos-containing material on pipes or a total of thirty-five cubic feet [1 cubic meter] of regulated asbestos-containing material on or off facility components are to be stripped, removed, dislodged, cut, drilled, or similarly disturbed at a facility all the notification requirements of subdivision b apply.

(a) To determine whether this paragraph applies to planned renovation operations involving individual nonscheduled operations, predict the additive amount of regulated asbestos-containing material to be removed or stripped over the maximum period of time a prediction can be made, not to exceed one calendar year of January first through December thirty-first.

(b) To determine whether this paragraph applies to emergency renovation operations, estimate the amount of regulated asbestos-containing material to be removed or stripped as a result of the sudden unexpected event that necessitated the renovation.

(4) If the facility is being demolished under an order of a state or local government agency, issued because the facility is structurally unsound and in danger of imminent collapse, only the requirements of subdivision b and paragraphs 4, 5, 6, 7, and 8 of subdivision c apply.

(5) Owners or operators of demolition or renovation operations are exempt from the requirements of 61.05(a), 61.07, and 61.09 of the general provisions of this chapter.

b. Notification requirements. Each owner or operator to which this section applies shall:

(1) Provide the department with written notice of the intention to demolish or renovate.

(2) Indicate whether the notice is an original or a revised notification and update the notice as necessary, including when the amount of asbestos affected changes by at least twenty percent.

(3) Postmark or deliver the notice as follows:

(a) At least ten working days before demolition begins, except as provided in subparagraph b.

(b) As early as possible before, but not later than the following working day after, demolition begins if the operation is described in paragraph 4 of subdivision a or for an emergency renovation as described in subparagraph b of paragraph 3 of subdivision a of this subsection.

(c) At least ten working days before the end of the calendar year preceding the year for which notice is being given for renovations described in subparagraph a of paragraph 3 of subdivision a of this subsection.

(d) At least ten working days before renovation begins. When necessary, the department may accept a telephone notification followed by the written notification.

(e) In no event may an operation covered by this subsection begin on a date other than the date contained in the written notice unless the department has been supplied a properly amended notification following the timetables outlined above.

(4) Include the following information on a notification form provided by the department:

(a) Name, address, and telephone number of both the owner and operator and the asbestos removal contractor.

(b) Description of the facility or affected part of the facility being demolished or renovated, including the size, age, and prior and present use of the facility.

(c) An estimate of the amount of regulated asbestos-containing material to be removed from the facility in terms of square feet, linear feet, or cubic feet, as appropriate. Also estimate the approximate amount of category I and category II nonfriable asbestos-containing material in the affected part of the facility that will not be removed before demolition. Also provide the procedures and analytical methods used to detect the presence and determine the quantity of regulated asbestos-containing material and category I and category II nonfriable asbestos-containing material.

(d) Location of the facility being demolished or renovated to include the street address, city, county, and state.

(e) Scheduled starting and completion dates of the asbestos abatement work or any other activity that would break up, dislodge, or similarly disturb asbestos material.

(f) Scheduled starting and completion dates of the demolition or renovation.

(g) Type of operation: demolition or renovation.

(h) A description of the demolition or renovation work to be performed, including the demolition or renovation techniques and methods to be employed during the activity and a description of the affected facility components.

(i) Description of work practices and engineering controls to be used to comply with the requirements of this section, including asbestos removal and waste handling emission control procedures.

(j) The name and location of the waste disposal site where the asbestos-containing waste material will be deposited.

(k) The name, address, and telephone number of the waste transporter.

(l) For emergency renovations, provide the date and hour that the emergency occurred, a description of the sudden unexpected event, and an explanation of how the event caused an unsafe condition or would cause equipment damage or an unreasonable financial burden.

(m) Description of procedures to be followed in the event that unexpected regulated asbestos-containing material is found or category II nonfriable asbestos-containing material becomes crumbled, pulverized, or reduced to powder during the operation.

(n) For facilities described in paragraph 4 of subdivision a, the name, title, and authority of the state or local governmental representative who has ordered the demolition, the date that the order was issued, and the date on which the demolition was ordered to begin. A copy of the order must be attached to the notification.

(o) A signed statement by the contractor that all asbestos abatement supervisors and asbestos workers assigned to this project are certified by the department, in accordance with subsection 16.

c. Procedures for asbestos emission control. Each owner or asbestos contractor to whom this subsection applies shall comply with the following procedures:

(1) Remove all regulated asbestos-containing material from a facility being demolished or renovated before any activity begins that would break up, dislodge, or similarly disturb the materials or preclude access to the materials for subsequent removal. Asbestos-containing material need not be removed before demolition if:

(a) It is category I nonfriable asbestos-containing material that is not in poor condition and is not friable.

(b) It is on a facility component that is encased in concrete or other similarly hard material and adequately wetted whenever exposed during demolition and maintained wet until it is disposed of in accordance with subsection 11.

(c) It was not accessible for testing and therefore was not discovered before demolition began and the material cannot be safely removed. If not removed for safety reasons, these materials must be adequately wetted when exposed during demolition and maintained wet until they are disposed of in accordance with subsection 11.

(d) They are category II nonfriable asbestos-containing material and the probability is low that the materials will become crumbled, pulverized, or reduced to powder during demolition.

(2) When a facility component that contains, is covered with, or is coated with regulated asbestos-containing material is being taken out of the facility as a unit or in sections:

(a) Adequately wet all regulated asbestos-containing material exposed during cutting or disjoining operations; and

(b) Carefully wrap or otherwise contain the facility member with an impermeable covering prior to the disjoining operation;

(c) Carefully lower the units or sections to the floor and to ground level, not dropping, throwing, sliding, or otherwise damaging or disturbing the regulated asbestos-containing material.

(3) When regulated asbestos-containing material is being stripped from a facility component while it remains in place in a facility, adequately wet the material during the stripping operation.

(a) In renovation operations, wetting that would unavoidably damage equipment or present a safety hazard is not required if:

[1] The owner or operator has obtained prior written approval from the department based on a written application that wetting to comply with this

paragraph would unavoidably damage equipment or present a safety hazard; and

[2] The owner or operator uses one of the following emission control methods:

[a] A local exhaust ventilation and collection system designed and operated to capture the particulate asbestos material produced by the stripping and removal of the asbestos materials. The system must exhibit no visible emissions to the outside air and be equipped with high efficiency particulate air filtration or be designed and operated in accordance with the requirements in subsection 13.

[b] A glove-bag system designed and operated to contain the particulate asbestos material produced by the stripping of the asbestos materials.

[c] Leaktight wrapping to contain all regulated asbestos-containing material prior to dismantlement.

(b) In renovation operations where wetting would result in equipment damage or a safety hazard and the methods allowed in subparagraph a of paragraph 3 of this subdivision cannot be used, another method may be used after obtaining written approval from the department based upon a determination that it is equivalent to wetting in controlling emissions or to the methods allowed in paragraph 3 of this subdivision.

(c) A copy of the department's written approval must be kept at the worksite and made available for inspection.

(4) After a facility component covered with, coated with, or containing regulated asbestos-containing material has been taken out of the facility as units or in sections pursuant to paragraph 2 of this subdivision it must be kept contained in leaktight wrapping or:

(a) Adequately wet the regulated asbestos-containing material during stripping; or

(b) Use a local exhaust ventilation and collection system designed and operated to capture the particulate asbestos material produced by the stripping. The system must exhibit no visible emissions to the outside air and be equipped with high-efficiency particulate air filtration or be designed and operated in accordance with the requirements in subsection 13.

(5) For large facility components such as reactor vessels, large tanks, and steam generators, but not beams (which must be handled in accordance with paragraphs 2, 3, and 4 of this subdivision) the regulated asbestos-containing material is not required to be stripped if the following requirements are met:

(a) The component is removed, transported, stored, disposed of, or reused without disturbing or damaging the regulated asbestos-containing material;

(b) The component is encased in a leaktight wrapping; and

(c) The leaktight wrapping is labeled according to subsection 11 during all loading and unloading operations and during storage.

- (6) For all regulated asbestos-containing material, including material that has been removed or stripped:
 - (a) Adequately wet the material and ensure that it remains wet until collected for disposal in accordance with subsection 11;
 - (b) Carefully lower the materials to the ground or a lower floor, not dropping, throwing, sliding, or otherwise damaging or disturbing the material; and
 - (c) Transport the materials to the ground via leaktight chutes or containers if they have been removed or stripped more than fifty feet [15.24 meters] above ground level and were not removed as units or in sections.

Regulated asbestos-containing material contained in leaktight wrapping that has been removed in accordance with paragraph 4 of this subdivision and subitem c of item 2 of subparagraph a of paragraph 3 of this subdivision need not be wetted.

- (7) When the temperature at the point of wetting is below zero degrees Celsius [32 degrees Fahrenheit], the owner or operator:
 - (a) Need not comply with the wetting requirements of subparagraph a of paragraph 2 of subdivision c of subsection 4 and paragraph 3 of this subdivision. The owner or operator shall comply with the other requirements in this subdivision;
 - (b) Remove facility components containing, coated with or covered with friable asbestos materials as units or in sections to the maximum extent possible; and
 - (c) During periods when wetting operations are suspended due to freezing temperatures, the owner or operator must record the temperature in the area containing the facility components at the beginning, middle, and end of each workday and keep daily temperature records. These records must be available for inspection by the department during normal business hours at the demolition or renovation site. The owner or operator shall retain the temperature records for at least two years.
- (8) No regulated asbestos-containing material may be stripped, removed, or otherwise handled or disturbed at a facility regulated by this subsection unless at least one onsite representative such as a supervisor, foreman or management level person, or other authorized representative who has completed the supervisor training requirements of subparagraph a of paragraph 2 and paragraph 4 of subdivision b of subsection 16 is present. Evidence that the required training has been completed shall be posted and made available for inspection by the department at the demolition or renovation site.
- (9) For facilities described in paragraph 4 of subdivision a, adequately wet the portion of the facility that contains friable asbestos materials during the wrecking operation.
- (10) If a facility is demolished by intentional burning, all regulated asbestos-containing material, including category I and category II nonfriable asbestos-containing material must be removed in accordance with this subsection before burning.
- (11) When a demolition or renovation project that involves the disturbance of regulated asbestos-containing material is conducted in the ambient air, the owner or operator shall designate the boundaries of the work area by appropriate means.

7. **Standard for spraying.** The owner or operator of an operation in which asbestos-containing materials are spray-applied shall use only those materials that contain one percent asbestos or less for spray-on application.
8. **Standard for fabricating.**
- a. Applicability. This subsection applies to the following fabricating operations using commercial asbestos:
- (1) The fabrication of cement building products.
 - (2) The fabrication of friction products, except those operations that primarily install asbestos friction materials on motor vehicles.
 - (3) The fabrication of cement or silicate board for ventilation hoods; ovens; electrical panels; laboratory furniture; bulkheads, partitions, and ceilings for marine construction; and flow control devices for the molten metal industry.
- b. Standard. Each owner or operator of any of the fabricating operations to which this subsection applies shall:
- (1) Discharge no visible emissions to the outside air from any of the operations or from any building or structure in which they are conducted or from any other fugitive sources; or
 - (2) Use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.
 - (3) Monitor each potential source of asbestos emissions from any part of the fabricating facility, including air-cleaning devices, process equipment, and buildings that house equipment for material processing and handling, at least once each day during daylight hours, for visible emissions to the outside air during periods of operation. The monitoring must be by visual observation of at least fifteen seconds duration per source of emissions.
 - (4) Inspect each air-cleaning device at least once each week for proper operation and for changes that signal the potential for malfunction, including, to the maximum extent possible without dismantling other than opening the device, the presence of tears, holes, and abrasions in filter bags and for dust deposits on the clean side of bags. For air-cleaning devices that cannot be inspected on a weekly basis according to this paragraph, submit to the department, and revise as necessary, a written maintenance plan to include at a minimum, the following:
 - (a) Maintenance schedule.
 - (b) Recordkeeping plan.
 - (5) Maintain records of the results of visible emission monitoring and air-cleaning device inspections using a suitable form which includes the following information:
 - (a) Date and time of each inspection.
 - (b) Presence or absence of visible emissions.
 - (c) Condition of fabric filters, including the presence of any tears, holes, and abrasions.
 - (d) Presence of dust deposits on clean side of fabric filters.

(e) Brief description of corrective actions taken, including date and time.

(f) Daily hours of operation for each air-cleaning device.

(6) Furnish upon request and make available at the affected facility during normal business hours, for inspection by the department, all records required under this section.

(7) Retain a copy of all monitoring and inspection records for at least two years.

(8) Submit quarterly a copy of the visible emission monitoring record to the department if visible emissions occurred during the report period. Quarterly reports must be postmarked by the thirtieth day following the end of the calendar quarter.

9. **Standard for insulating materials.** No owner or operator of a facility may install or reinstall on a facility component any insulating materials that contain commercial asbestos if the materials are either molded and friable or wet-applied and friable after drying. The provisions of this subsection do not apply to spray-applied insulating materials regulated under subsection 7.

10. **Standard for waste disposal for asbestos mills.** Each owner or operator of any source covered under the provisions of subsection 3 shall:

a. Deposit all asbestos-containing waste material at department-approved waste disposal sites operated in accordance with the provisions of subsection 15.

b. Discharge no visible emissions to the outside air from the transfer of asbestos waste from control devices to the tailings conveyor, or use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air. Dispose of the asbestos waste from control devices in accordance with subdivision b of subsection 11 or subdivision c of this subsection.

c. Discharge no visible emissions to the outside air during the collection, processing, packaging, transporting, or deposition of any asbestos-containing waste material, or use one of the disposal methods as follows:

(1) Use a wetting agent as follows:

(a) Adequately mix all asbestos-containing waste material with a wetting agent recommended by the manufacturer of the agent to effectively wet dust and tailings, before depositing the material at a waste disposal site. Use the agent as recommended for the particular dust by the manufacturer of the agent.

(b) Discharge no visible emissions to the outside air from the wetting operation or use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.

(c) Wetting may be suspended when the ambient temperature at the waste disposal site is less than fifteen degrees Fahrenheit [-9.44 degrees Celsius] as determined by an appropriate measurement method with an accuracy of plus or minus two degrees Fahrenheit [1.11 degrees Celsius]. During periods when wetting operations are suspended, the temperature must be recorded at least at hourly intervals, and records must be retained for at least two years in a form suitable for inspection.

(2) Use an alternative emission control and treatment method that has received prior written approval by the department and administrator. To obtain approval for an alternative method, a written application must be submitted to the department and the administrator of the United States environmental protection agency demonstrating that the following criteria are met:

(a) The alternative method will control asbestos emissions equivalent to currently required methods.

(b) That the alternative method is suitable for the intended application.

(c) The alternative method will not violate other regulations.

(d) The alternative method will not result in increased water pollution, land pollution, or occupational hazards.

(3) When waste is transported by vehicle to a disposal site, all of the requirements of subdivision d of subsection 11 must be complied with.

11. Standard for waste disposal for manufacturing, demolition, renovation, spraying, and fabricating operations. Each owner or operator of any source covered under any of the provisions of subsection 5, 6, 7, or 8 shall comply with all the provisions of this subsection. Each owner or operator of any source covered by subsection 10 shall comply with subdivision d of this subsection.

a. Discharge no visible emissions to the outside air during the collection, processing (including incineration), packaging, transporting, or deposition of any asbestos-containing waste material generated by the source, or use one of the emission control and waste treatment methods as follows:

(1) Adequately wet asbestos-containing waste material as follows:

(a) Mix asbestos waste from control devices with water to form a slurry; adequately wet other asbestos-containing waste material;

(b) Discharge no visible emissions to the outside air from collection, mixing, and wetting operations, or use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air;

(c) After wetting, seal all asbestos-containing waste material in leaktight containers while wet. For materials that will not fit into containers without additional breaking, put materials into leaktight wrapping;

(d) Label the containers or wrapped materials specified above as follows:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

Alternatively, use warning labels currently specified by occupational safety and health standards of the department of labor, occupational safety and health administration (OSHA) under title 29 Code of Federal Regulations 1910.1001 or title 29 Code of Federal Regulations 1926.1101(k)(8); and

(e) For asbestos-containing waste material to be transported off the facility site, label containers or wrapped materials with the name of the waste generator and the location at which the waste was generated.

(2) Process asbestos-containing waste material into nonfriable forms as follows:

(a) Form all asbestos-containing waste material into nonfriable pellets or other shapes.

(b) Discharge no visible emissions to the outside air from the collection and processing operations, including incineration, or use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to, or are vented to, the outside air.

(3) For facilities demolished where the regulated asbestos-containing material is not removed prior to demolition according to paragraph 4 of subdivision a and subparagraphs a, b, c, and d of paragraph 1 of subdivision c of subsection 6 adequately wet asbestos-containing waste material at all times during and after demolition and keep wet during handling and loading for transport to a disposal site. Asbestos-containing waste materials covered by this paragraph do not have to be sealed in leaktight containers or wrapping but may be transported by covered hauling and disposed of in bulk.

(4) Use an alternative disposal method that has received prior approval by the department and administrator of the United States environmental protection agency.

(5) As applied to demolition and renovation, the requirements of subdivision a of this subsection do not apply to category I or category II nonfriable asbestos-containing material waste that is not or will not become crumbled, pulverized, or reduced to powder.

b. Deposit all asbestos-containing waste material as soon as practical at:

(1) Department-approved waste disposal sites operated in accordance with the provisions of subsection 15.

(2) A United States environmental protection agency-approved site that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos free) material according to the provisions of subsection 17.

(3) The requirements of this subdivision do not apply to category I nonfriable asbestos-containing material that is not or will not become regulated asbestos-containing material.

c. All facilities used for the temporary storage of asbestos-containing waste material must be controlled and the material must be stored in leaktight containers.

(1) Post a warning sign at the entrances to the temporary storage facility with a label as follows:

DANGER
ASBESTOS
CANCER AND LUNG DISEASE HAZARD
AUTHORIZED PERSONNEL ONLY

Alternatively, use warning labels currently specified by occupational safety and health standards of the department of labor, occupational safety and health administration (OSHA) under title 29 Code of Federal Regulations 1910.1001 or title 29 Code of Federal Regulations 1926.58.

- (2) Take necessary precautions to prevent or restrict access to the temporary storage facility.
- (3) The temporary storage facility must be inspected at least once per week to ensure that good structural integrity of the storage facility is maintained and that the facility remains secure.
- (4) The maximum length of time allowed for temporary storage of an asbestos-containing waste material may not exceed one hundred eighty days.

d. Mark vehicles used to transport asbestos-containing waste material during the loading and unloading of waste so that the signs are visible. The markings must:

- (1) Be displayed in such a manner and location that a person can easily read the legend.
- (2) Conform to the requirements for twenty-inch by fourteen-inch [50.8-centimeter by 35.56-centimeter] upright format signs specified in title 29 Code of Federal Regulations 1910.145(d)(4) and this paragraph.
- (3) Display the following legend in the lower panel with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

<u>Legend</u>	<u>Notation</u>
<u>DANGER</u>	<u>2.5 cm [1 in.] Sans Serif, Gothic, or Block.</u>
<u>ASBESTOS DUST HAZARD</u>	<u>2.5 cm [1 in.] Sans Serif, Gothic, or Block.</u>
<u>CANCER AND LUNG DISEASE HAZARD</u>	<u>1.9 cm [3/4 in.] Sans Serif, Gothic, or Block.</u>
<u>Authorized Personnel Only</u>	<u>14 Point Gothic.</u>

Spacing between any two lines must be at least equal to the height of the upper of the two lines.

e. Prior to transportation of more than three square feet [0.28 square meters] or three linear feet [0.91 meters] of asbestos-containing waste material off the facility site:

- (1) The owner or operator and the transporter shall ensure that a waste shipment record has been appropriately completed and signed by the generator, and accompanies the waste to the disposal site. The waste shipment record must include the following information:
 - (a) Name, address, and telephone number of the facility owner or operator where the asbestos-containing waste materials were generated.
 - (b) Location of the facility where asbestos-containing waste material was generated.
 - (c) The name and address of this department as being the responsible agency for administering the asbestos NESHAP program.

(d) Estimated quantity of asbestos-containing waste material in cubic yards.

(e) Name and physical site location of the waste disposal site where the asbestos-containing waste will be deposited.

(f) The name and telephone number of the disposal site operator.

(g) The date transported.

(h) The name, address, and telephone number of the transporters.

(i) A certification that the contents of this consignment are fully and accurately described by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and government regulations.

(2) Provide a copy of the waste shipment record to the disposal site owner or operator at the same time as the asbestos-containing waste material is delivered to the disposal site.

(3) For waste shipments where a copy of the waste shipment record signed by the owner or operator of the designated disposal site is not received by the waste generator within thirty-five days of the date the waste was accepted by the initial transporter, contact the transporter or the owner or operator, or both, of the designated disposal site to determine the status of the waste shipment.

(4) Report in writing to this department if a copy of the waste shipment record signed by the owner or operator of the designated waste disposal site is not received by the waste generator within forty-five days of the date the waste was accepted by the initial transporter. Include in the report the following information:

(a) A copy of the waste shipment record for which a confirmation of delivery was not received; and

(b) A cover letter signed by the waste generator explaining the efforts taken to locate the asbestos waste shipment and the result of those efforts.

(5) Retain a copy of all waste shipment records, including a copy of the waste shipment record signed by the owner or operator of the designated waste disposal site for at least two years.

(6) A copy of the completed waste shipment record must be submitted to the department by the owner or operator of the facility no later than ten days after the owner or operator of the facility receives the completed waste shipment record from the landfill operator.

f. Furnish upon request, and make available for inspection by the department, all records required under this section.

g. If an acceptable disposal site, as determined by subsection 15, is located on the same property as the facility where asbestos-containing waste materials were generated, then the recordkeeping requirements of subdivision e of this subsection do not apply. The owner shall maintain records which include information on the quantity, location, and date of asbestos-containing waste disposal activities.

12. **Standard for inactive waste disposal sites for asbestos mills and manufacturing and fabricating operations.** Each owner or operator of any inactive waste disposal site that

received deposits of asbestos-containing waste material generated by sources covered under subsection 3, 5, 8, or 10, shall:

a. Comply with one of the following:

- (1) Discharge no visible emissions to the outside air from an inactive waste disposal site subject to this subsection;
- (2) Cover the asbestos-containing waste material with at least fifteen centimeters [6 inches] of compacted non-asbestos-containing material, and grow and maintain a cover of vegetation on the area adequate to prevent exposure of the asbestos-containing waste material;
- (3) In areas where vegetation would be difficult to maintain, cover the asbestos-containing waste material with at least sixty centimeters [2 feet] of compacted non-asbestos-containing material, and maintain it to prevent exposure of the asbestos-containing waste or cover with at least six inches [15.24 centimeters] of compacted non-asbestos-containing material and at least an additional three inches [7.62 centimeters] of a nonasbestos crushed rock cover in place of the vegetation;
or
- (4) For inactive waste disposal sites for asbestos tailings, apply a resinous-based or petroleum-based dust suppression agent that effectively binds dust to control surface air emissions. Use the agent in the manner and frequency recommended for the particular asbestos tailings by the manufacturer of the dust suppression agent. Obtain prior approval of the department to use other equally effective dust suppression agents. For purposes of this paragraph, used, spent, or other wasteoil is not considered a dust suppression agent.

b. Unless a natural barrier adequately deters access by the general public, install and maintain warning signs and fencing as follows, or comply with paragraph 2 or 3 of subdivision a of this subsection.

- (1) Display warning signs at all entrances and at intervals of three hundred twenty-eight feet [100 meters] or less along the property line of the site or along the perimeter of the sections of the site where asbestos-containing waste material was deposited. The warning signs must:
 - (a) Be posted in such a manner and location that a person can easily read the legend.
 - (b) Conform to the requirements for fifty-one-centimeter by thirty-six-centimeter [20-inch by 14-inch] upright format signs specified in title 29 Code of Federal Regulations 1910.145(d)(4) and this subdivision.
 - (c) Display the following legend in the lower panel with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

<u>Legend</u>	<u>Notation</u>
<u>DANGER</u>	<u>2.5 cm [1 in.] Sans Serif, Gothic, or Block.</u>
<u>ASBESTOS DUST HAZARD</u>	<u>2.5 cm [1 in.] Sans Serif, Gothic, or Block.</u>
<u>CANCER AND LUNG DISEASE HAZARD</u>	<u>1.9 cm [3/4 in.] Sans Serif, Gothic, or Block.</u>
<u>Authorized Personnel Only</u>	<u>14 Point Gothic.</u>

Spacing between any two lines must be at least equal to the height of the upper two lines.

(2) Fence the perimeter of the site in a manner adequate to deter access by the general public.

(3) Upon request and supply of appropriate information, the department will determine whether a fence or a natural barrier adequately deters access by the general public.

c. The owner or operator may use an alternative control method that has received prior approval of the department and administrator of the United States environmental protection agency rather than comply with the requirements of subdivision a or b of this subsection.

d. Notify the department, in writing, at least forty-five days prior to excavating or otherwise disturbing any asbestos-containing waste material that has been deposited at a waste disposal site under this section and follow the procedures specified in the notification. If the excavation will begin on a date other than the one contained in the original notice, notice of a new start date must be provided to the department at least ten days before excavation begins and in no event shall excavation begin earlier than the date specified in the original notification. Include the following information in the notice:

(1) Scheduled starting and completion dates.

(2) Reason for disturbing the waste.

(3) Procedures to be used to control emissions during the excavation, storage, transport, and ultimate disposal of the excavated asbestos-containing waste material. If deemed necessary, the department may require changes in the emission control procedures to be used.

(4) Location of any temporary storage site and the final disposal site.

e. Within sixty days of a site becoming inactive, record in accordance with state law a notation on the deed to the facility property and on any instrument that would normally be examined during a title search. This notation will in perpetuity notify any potential purchaser of the property that:

(1) The land has been used for the disposal of asbestos-containing waste material;

(2) The survey plot and record of the location and quantity of asbestos-containing waste disposed of within the disposal site required in subdivision f of subsection 15 have been filed with the department; and

(3) The site is subject to this section.

13. Air-cleaning.

a. The owner or operator who elects to use air-cleaning, as permitted in subsections 3, 5, 6, 7, 8, 10, and 11 shall:

(1) Use fabric filter collection devices except as noted in subdivision b of this subsection, doing all of the following:

(a) Ensuring that the airflow permeability, as determined by A.S.T.M. method D737-75, does not exceed nine $m^3/min/m^2$ [$30 ft^3/min/ft^2$] for woven fabrics or eleven $m^3/min/m^2$ [$35 ft^3/min/ft^2$] for felted fabrics, except that twelve $m^3/min/m^2$

[40 ft³/min/ft²] for woven and fourteen m³/min/m² [45 ft³/min/ft²] for felted fabrics is allowed for filtering air from asbestos ore dryers.

(b) Ensuring that felted fabric weighs at least four hundred seventy-five grams per square meter [14 ounces per square yard] and is at least one and six-tenths millimeters [1/16 inch] thick throughout.

(c) Avoiding the use of synthetic fabrics that contain fill yarn other than that which is spun.

(2) Properly install, use, operate, and maintain all air-cleaning equipment authorized by this subsection. Bypass devices may be used only during upset or emergency conditions and then only for so long as it takes to shut down the operation generating the asbestos material.

(3) For fabric filters installed after January 10, 1989, provide for easy inspection for faulty bags.

b. There are the following exceptions to paragraph 1 of subdivision a:

(1) If the use of fabric creates a fire or explosion hazard or the department determines that a fabric filter is not feasible, the department may authorize as a substitute the use of wet collectors designed to operate with a unit contacting energy of at least 9.95 kilopascals [40 inches water gauge pressure].

(2) Use a high-efficiency particulate air filter that is certified to be at least ninety-nine and ninety-seven hundredths percent efficient for particles with a diameter size of three-tenths microns and greater.

(3) The department and administrator of the United States environmental protection agency may authorize the use of filtering equipment other than that described in subdivisions a and b of this subsection if the owner or operator demonstrates to the administrator and the department's satisfaction that it is equivalent to the described equipment in filtering asbestos material.

14. Reporting.

a. Any existing source to which this section applies (with the exception of sources subject to subsections 4, 6, 7, and 9) which has not previously supplied a notice to this department or the administrator, shall provide such notice within ninety days of the effective date of this regulation. Any new source to which this section applies shall provide notice to this department within ninety days of the effective startup date of the source. Changes to the information provided in a notice must be submitted to this department within thirty days of the change taking place. The notice shall provide the following information to the department:

(1) A description of the emission control equipment used for each process.

(2) If a fabric filter device is used to control emissions:

(a) The airflow permeability in m³/min/m² if the fabric filter device uses a woven fabric and, if the fabric is synthetic, whether the fill yarn is spun or not spun.

(b) If the fabric filter device uses a felted fabric, the density in g/m², the minimum thickness in millimeters, and the airflow permeability in m³/min/m².

(3) If a high-efficiency particulate air filter is used to control emissions, the certified efficiency.

(4) For sources subject to subsections 10 and 11:

(a) A brief description of each process that generates asbestos-containing waste material;

(b) The average volume of asbestos-containing waste material disposed of in cubic yards per day;

(c) The emission control methods used in all stages of waste disposal; and

(d) The type of disposal site used for ultimate disposal, the name of the site operator, and the name and location of the disposal site.

(5) For sources subject to subsections 12 and 15:

(a) A brief description of the site; and

(b) The method or methods used to comply with the standard, or alternative procedures to be used.

b. The information required by subdivision a of this subsection must accompany the information required by 40 Code of Federal Regulations 61.10. Active waste disposal sites subject to subsection 15 shall also comply with this provision. Roadways, demolition and renovations, spraying, and insulating materials are exempted from the requirements of 40 Code of Federal Regulations 61.10(a).

15. **Standard for active waste disposal sites.** To be an acceptable site for disposal of asbestos-containing waste material under subsections 10, 11, and 17, an active waste disposal site must meet the requirements of this subsection.

a. Either there shall be no visible emissions to the outside air from any active waste disposal site where asbestos-containing waste material has been deposited, or the requirements of subdivisions c and d of this subsection must be met.

b. Unless a natural barrier adequately deters access by the general public, either warning signs and fencing must be installed and maintained as follows, or the requirements of paragraph 1 of subdivision c of this subsection must be met.

(1) Warning signs must be displayed at all entrances and at intervals of three hundred twenty-eight feet [100 meters] or less along the property line of the site or along the perimeter of the sections of the site where asbestos-containing waste material is deposited. The warning signs must:

(a) Be posted in such a manner and location that a person may easily read the legend.

(b) Conform to the requirements of fifty-one centimeters by thirty-six centimeters [20 inches by 14 inches] upright format signs specified in title 29 Code of Federal Regulations 1910.145(d)(4), and this subsection.

(c) Display the following legend in the lower panel, with letter sizes and styles of a visibility at least equal to those specified in this paragraph.

Legend

Notation

<u>Asbestos Waste Disposal Site</u>	<u>2.5 cm [1 in.] Sans Serif, Gothic, or Block.</u>
<u>Avoid Creating Dust</u>	<u>1.9 cm [3/4 in.] Sans Serif, Gothic, or Block.</u>
<u>Breathing Asbestos Dust May Cause Lung Disease and Cancer</u>	<u>14 Point Gothic.</u>

Spacing between lines must be at least equal to the height of the upper two lines.

(2) The perimeter of the disposal site must be fenced in order to adequately deter access by the general public.

(3) Upon request and supply of appropriate information, the department will determine whether a fence or a natural barrier adequately deters access by the general public.

c. Rather than meet the no visible emission requirements of subdivision a of this subsection, an active waste disposal site would be an acceptable site if at the end of each operating day, or at least once every twenty-four-hour period while the site is in continuous operation, the asbestos-containing waste material which was deposited at the site during the operating day or previous twenty-four-hour period is covered with either:

(1) At least fifteen centimeters [6 inches] of compacted non-asbestos-containing material; or

(2) A resinous-based or petroleum-based dust suppression agent that effectively binds dust and controls wind erosion. This agent must be used in the manner and frequency recommended for the particular dust by the manufacturer of the dust suppression agent. Other equally effective dust suppression agents may be used upon prior approval by the department. For purposes of this paragraph, used, spent, or other wasteoil is not considered a dust suppression agent.

d. Rather than meet the no visible emission requirements of subdivision a of this subsection, use an alternative emission control method that has received prior approval by the department and administrator of the United States environmental protection agency.

e. For all asbestos-containing waste material received, the owner or operator of the active waste disposal site shall:

(1) Maintain waste shipment records which include the following information:

(a) The name, address, and telephone number of the waste generator.

(b) The name, address, and telephone number of the transporters.

(c) The quantity of the asbestos-containing material in cubic yards.

(d) The presence of improperly enclosed or uncovered wastes or any asbestos-containing waste material not sealed in leaktight containers. Report in writing to this department by the following working day, the presence of a significant amount of improperly enclosed or uncovered waste. Submit a copy of the waste shipment record along with the report.

(e) The date of the receipt.

(2) As soon as possible and no longer than thirty days after receipt of the waste send a copy of the signed waste shipment record to the waste generator.

(3) Upon discovering a discrepancy between the quantity of waste designated on the waste shipment records and the quantity actually received, attempt to reconcile the discrepancy with the waste generator. If the discrepancy is not resolved within fifteen days after receiving the waste, immediately report in writing to this department. Describe the discrepancy and attempts to reconcile it, and submit a copy of the waste shipment record along with the report.

(4) Retain a copy of all records and reports required by this subdivision for at least two years.

f. Maintain until closure, records of the location, depth and area, and quantity in cubic yards of asbestos-containing waste material within the disposal site on a map or diagram of the disposal area.

g. Upon closure, comply with all the provisions of subsection 12.

h. Submit to this department, upon closure of the facility, a copy of records of asbestos waste disposal locations and quantities.

i. Furnish upon request and make available during normal business for inspection by this department, all records required under this section.

j. Comply with subdivision d of subsection 12 if it becomes necessary to excavate or otherwise disturb asbestos-containing waste material that has been previously covered.

16. Asbestos abatement licensing and certification. No public employees or employees of asbestos contractors shall engage in any asbestos abatement activity or provide asbestos abatement project monitoring unless they are certified with the department as provided in this subsection. No person shall engage in any asbestos abatement activity in a public or commercial building unless the person is certified with the department as provided in this subsection. Certification will be for a period of one year from the completion date of the initial training course or the last refresher course in the appropriate discipline. All asbestos contractors and firms who provide asbestos abatement or asbestos abatement project monitoring services, must be licensed with this department, as provided in this subsection, prior to beginning asbestos abatement or asbestos abatement project monitoring activities. At least one person having completed the requirements for supervisor certification of subdivision b of this subsection is required to be at the worksite at all times while work is in progress, if the work involves repair, removal, encapsulation, enclosure, or handling of regulated asbestos-containing material if the work is being conducted by an asbestos contractor or public employees. At least one onsite individual having completed the supervisor training requirement of subdivision b of this subsection is required to be present if the activity is regulated by subsection 6 and the work is being conducted by employees of the owner.

a. Asbestos workers. All asbestos workers employed by asbestos abatement contractors and all public employees and all other asbestos workers in public and commercial buildings engaged in the repair, removal, enclosure, encapsulation, or handling of regulated asbestos-containing material, must obtain certification as outlined in all paragraphs of this subdivision except as provided in subdivision h.

(1) Application. Any applicant desiring certification as an asbestos worker shall make an application to the department on forms supplied by the department. Each application shall be accompanied by a nonrefundable fee of fifty dollars except as

provided in subdivision g. This fee includes the processing of the initial examination specified in paragraph 3 of this subdivision.

- (2) Initial training. Any applicant desiring certification as an asbestos worker shall complete the initial training requirements for asbestos worker accreditation under title 40 Code of Federal Regulations part 763, appendix C to subpart E - environmental protection agency model contractor accreditation plan as amended February 3, 1994, by attending and successfully completing a training course designed for asbestos workers. The training course must have received approval from the environmental protection agency or the department.
- (3) Examination. Any applicant for certification shall pass a written examination administered by the department. The department may accept proof of successful completion of an examination administered by an environmental protection agency- or department-approved training course provider. The examination and the results of the examination must be available to the department upon request. Any applicant who fails to obtain a minimum seventy percent passing score on the examination shall be eligible to take a subsequent examination no earlier than one week following the previous examination. A twenty-five dollar fee is required for each examination. No more than three examinations may be given before requiring attendance of another initial training course. Information concerning the testing arrangements can be obtained from the department.
- (4) Refresher training. Any asbestos worker who has received initial training and has established full certification with the department, and who wishes to maintain continuous certification, shall complete a refresher training course as required by the model contractor accreditation plan as amended February 3, 1994, within one year of completing the initial training course. The course content must include a review of the changes in federal and state regulations, a discussion of the developments in state-of-the-art procedures and equipment as well as an overview of key aspects of the initial training course. Thereafter, the asbestos worker shall complete a refresher course within one year of the last refresher course.
- (5) Certification renewal. Any asbestos worker who desires to renew their certification must have attended a refresher training course within twelve months prior to submittal of the renewal application. The renewal application shall include proof of attendance at such course and a recertification fee of fifty dollars. Certification is current for a period of twelve months from the date of the training course. If an asbestos worker does not satisfy the refresher training requirements of this subdivision within two years of the date of the initial training course or of the last refresher training course, then the individual shall complete the initial training requirements provided in paragraph 2 of this subdivision to reestablish full certification.
- (6) The certification card issued by the department must be available at the worksite for each asbestos worker.

- b. Other asbestos disciplines. Any individual, except asbestos workers, acting as or acting on behalf of an asbestos contractor or as a public employee who performs an asbestos abatement service or any individual who performs asbestos abatement project monitoring on behalf of a contracting firm or as a public employee or any other individual who performs asbestos abatement in a public or commercial building must obtain certification as outlined in all paragraphs of this subdivision. This certification requirement applies to asbestos abatement supervisors, asbestos inspectors, asbestos management

planners, asbestos abatement project designers, and asbestos abatement project monitors except as provided in subdivision h.

(1) Application. Any person desiring certification in the disciplines of asbestos inspector, asbestos management planner, asbestos abatement project designer, asbestos abatement project monitor, and asbestos abatement supervisor shall make an application to the department on forms supplied by the department. Each application shall be accompanied by a nonrefundable fee of fifty dollars for each discipline within which the applicant is seeking certification except as provided in subdivision g. This fee includes the processing of the initial examination specified in paragraph 3 of this subdivision.

(2) The initial training requirements are as follows:

(a) Any applicant desiring certification as an asbestos inspector, asbestos management planner, asbestos abatement project designer, or asbestos abatement supervisor or any individual required to meet the training requirements of paragraph 8 of subdivision c of subsection 6 shall complete the initial training requirements set forth in title 40 Code of Federal Regulations part 763, appendix C to subpart E - environmental protection agency model contractor accreditation plan as amended February 3, 1994, by attending and successfully completing a training course in the appropriate discipline. The training course must have received approval in the respective discipline from the environmental protection agency or the department.

(b) Asbestos abatement project monitors must have a valid state certification as asbestos abatement supervisor or asbestos abatement project designer and shall have completed a NIOSH 582 or equivalent air sampling course of not less than four days in length.

(3) Examination. Any applicant for certification in a specific discipline except asbestos abatement project monitor shall pass a written examination administered by the department for that discipline. The department may accept proof of successful completion of an examination administered by an environmental protection agency or department approved training course provider. The examination and the results of the examination must be available to the department upon request. Any applicant who fails to obtain a minimum seventy percent passing score on the examination shall be eligible to take a subsequent examination no earlier than one week following the previous examination. A twenty-five dollar fee is required for each examination. No more than three examinations shall be given before requiring attendance of another initial training course.

(4) Refresher training. Any asbestos abatement supervisor, asbestos inspector, asbestos management planner, or asbestos abatement project designer who has received initial training and has established full certification with the department, and who wishes to maintain continuous certification, or any individual who must meet the training requirements of paragraph 8 of subdivision c of subsection 6 shall complete a refresher training course as required by the model contractor accreditation plan as amended February 3, 1994, within one year of completing the initial training course. The course content must include a review of the changes in the federal and state regulations, a discussion of the developments in state-of-the-art procedures and equipment as well as an overview of key aspects of the initial training course. Thereafter, these persons shall complete a refresher course designed for the respective disciplines within one year of the last refresher course.

(5) Certification renewal. Any asbestos abatement supervisor, asbestos inspector, asbestos management planner, asbestos abatement project designer, or asbestos abatement project monitor who desires to renew the person's certification must have attended a refresher training course in the appropriate discipline within twelve months prior to submittal of the renewal application. The renewal application shall include proof of attendance at such a course and a recertification fee of fifty dollars per discipline. Certification is current for a period of twelve months from the date of the training course. If an individual does not satisfy the refresher training requirements of this subdivision in their respective discipline within two years of the date of the initial training or of the last refresher training, then that individual shall complete the initial training requirements provided in paragraph 2 of this subdivision to reestablish full certification. Refresher training of the air sampling course for project monitors is not required.

(6) The certification card issued by the department must be available at the worksite.

c. Asbestos contractor license. Each contractor who performs asbestos abatement services or performs asbestos abatement project monitoring services in the state shall obtain an asbestos contractor license except as provided in subdivision h.

(1) Submit an application to the department on forms supplied by the department. An application shall be accompanied by a nonrefundable fee of one hundred fifty dollars.

(2) The license fee will cover the period from January first through December thirty-first of each year unless the license is suspended, revoked, or denied as specified in subdivision f. The fee shall be one hundred fifty dollars regardless of the application date. Following the initial submittal, the renewal fee shall be due and payable by January thirtieth of the following year.

(3) A contractor seeking an asbestos contractor license must have completed the appropriate training and certification requirements in subdivision b of this subsection. The contractor may designate an employee who has completed this requirement to serve as the contractor's agent for the purposes of obtaining an asbestos contractor license.

(4) Asbestos contractors who provide multiple services are not required to pay additional license fees.

(5) All certifiable services offered by an asbestos contractor must be performed by persons certified in accordance with subdivisions a and b of this subsection.

(6) A copy of the asbestos contractor license shall be made available at the worksite.

(7) This license does not exempt, supersede, or replace any other state or local licensing or permitting requirements.

d. Approved initial and refresher training courses. The department will maintain and provide a listing of approved initial and refresher training courses. Applicants seeking approval of courses, other than those present on the department list, must submit information on the course content to the department. The course content must satisfy the minimum requirements of the model contractor accreditation plan as amended February 3, 1994. The department will advise the applicant whether the course is approved within thirty days of receipt of the necessary information. Training course providers will be required to meet all applicable requirements contained in title 40 Code of Federal Regulations part 763, appendix C to subpart E as amended February 3, 1994.

- e. Reciprocity. Each applicant for asbestos worker or asbestos contractor certification who is licensed or certified for asbestos abatement in another state may petition the department for certification without written examination. The department shall evaluate the requirements in such other states and shall issue the certification without examination if the department determines that the requirements in such other states are at least as stringent as the requirements for certification in North Dakota. Each application for certification pursuant to this subdivision shall submit an application accompanied by a nonrefundable fee of fifty dollars.
- f. Suspension, revocation, or denial. An asbestos certification or license may be suspended, revoked, or denied if:
- (1) Violations of the requirements of this section are noted;
 - (2) Another state has revoked, suspended, or denied a license or certification for violations of applicable standards;
 - (3) An incomplete application is filed; or
 - (4) The required fee is not submitted.
- g. Public employees will not be required to pay the fifty dollar certification or recertification fees.
- h. Any individual or asbestos contractor engaged in repair, removal, enclosure, or encapsulation activities involving less than or equal to three square feet [0.28 square meters] or three linear feet [0.91 meters] of asbestos-containing materials, are exempt from the certification and licensing requirements of this subsection.
- i. Upon written request, the department, at its discretion, may review training course material and conduct an audit of a training course to determine if the course and examination meet the training requirements of title 40 Code of Federal Regulations part 763, appendix C to subpart E - environmental protection agency model contractor accreditation plan as amended February 3, 1994. Under the authority granted to this department by the environmental protection agency courses that this department determine to meet the model contractor accreditation plan shall be listed in the federal register list of approved courses.
- (1) Training courses seeking department approval shall submit the material necessary for the department to conduct the review, including the submittal requirements listed in title 40 Code of Federal Regulations part 763, appendix C, subpart E, model contractor accreditation plan as amended February 3, 1994.
 - (2) The department must be provided access, without cost, to any asbestos course conducted in this state to determine if the course meets the requirement of the environmental protection agency model contractor accreditation plan as amended February 3, 1994. Following such an audit, the department may rescind approval or refuse to accept as adequate any course determined not to meet the training requirements of the environmental protection agency model contractor accreditation plan.
 - (3) Any training provider requesting a review of the provider's course for approval by this department shall submit a filing fee of one hundred fifty dollars plus an application processing fee. The application processing fee will be based on the actual processing costs, including time spent by this department to conduct the course review and course audit, and any travel and lodging expenses the department incurs conducting these items. Following the course review and audit,

and after making a determination on the accreditation status of the course, a statement will be sent to the applicant listing the remaining application processing costs. The statement must be sent within fifteen months of the submittal of the initial filing fee.

17. Standard for operations that convert asbestos-containing waste material into nonasbestos (asbestos-free) material. Each owner or operator of an operation that converts regulated asbestos-containing material and asbestos-containing waste material into nonasbestos (asbestos-free) material shall:

a. Obtain the prior written approval of this department and the administrator of the United States environmental protection agency to construct the facility. To obtain approval, the owner or operator shall provide the department and the administrator of the United States environmental protection agency with the following information:

(1) Application to construct pursuant to chapter 33.1-15-14.

(2) In addition to the information requirements of chapter 33.1-15-14, provide a:

(a) Description of the waste feed handling and temporary storage.

(b) Description of process operating conditions.

(c) Description of the handling and temporary storage of the end products.

(d) Description of the protocol to be followed when analyzing output materials by transmission electron microscopy.

(3) Performance test protocol, including provisions for obtaining information required under subdivision b of this subsection.

(4) The department may require that a demonstration of the process be performed prior to approval of the application to construct.

b. Conduct a startup performance test. Test results must include:

(1) A detailed description of the types and quantities of nonasbestos material, regulated asbestos-containing material, and asbestos-containing waste material processed (e.g., asbestos cement products, friable asbestos insulation, plaster, wood, plastic, wire, etc.). Test feed is to include the full range of materials that will be encountered in actual operation of the process.

(2) Results of analyses, using polarized light microscopy, that document the asbestos content of the wastes processed.

(3) Results of analyses using transmission electron microscopy, that document that the output materials are free of asbestos. Samples for analysis are to be collected as eight-hour composite samples (one 200-gram [seven-ounce] sample per hour), beginning with the initial introduction of regulated asbestos-containing material or asbestos-containing waste material and continuing until the end of the performance test.

(4) A description of operating parameters, such as temperature and residence times, defining the full range over which the process is expected to operate to produce nonasbestos (asbestos-free) materials. Specify the limits for each operating parameter within which the process will produce nonasbestos (asbestos-free) materials.

(5) The length of the test.

c. During the initial ninety days of operation:

- (1) Continuously monitor and log the operating parameters identified during startup performance tests that are intended to ensure the production of nonasbestos (asbestos-free) output material.
- (2) Monitor input materials to ensure that they are consistent with the test feed materials described during startup performance tests in paragraph 1 of this subdivision.
- (3) Collect and analyze samples taken as ten-day composite samples (one 200-gram [seven-ounce] sample collected every eight hours of operation) of all output materials for the presence of asbestos. Composite samples may be for fewer than ten days. Transmission electron microscopy must be used to analyze the output materials for the presence of asbestos. During the initial ninety-day period, all output materials must be stored onsite until analysis shows the material to be asbestos-free or be disposed of as asbestos-containing waste material according to subsection 11.

d. After the initial ninety days of operation:

- (1) Continuously monitor and record the operating parameters identified during startup performance testing and any subsequent performance testing. Any output produced during a period of deviation from the range of operating conditions established to ensure the production of nonasbestos (asbestos-free) output material shall be:
 - (a) Disposed of as asbestos-containing waste material according to subsection 11;
 - (b) Recycled as waste feed during process operations within the established range of operating conditions; or
 - (c) Stored temporarily onsite in a leaktight container until analyzed for asbestos content. Any product material that is not asbestos-free shall either be disposed of as asbestos-containing waste material or recycled as waste feed to the process.
- (2) Collect and analyze monthly composite samples (one 200-gram [seven-ounce] sample collected every eight hours of operation) of the output material. Transmission electron microscopy must be used to analyze the output material for the presence of asbestos.

e. Discharge no visible emissions to the outside air from any part of the operation or use the methods specified by subsection 13 to clean emissions containing particulate asbestos material before they escape to or are vented to the outside air.

f. Maintain records onsite and include the following information:

- (1) Results of startup performance testing and all subsequent performance testing, including operating parameters, feed characteristics, and analyses of output materials.
- (2) Results of the composite analysis required during the initial ninety days of operation under subdivision c of this subsection.

- (3) Results of the monthly composite analysis required under subdivision d of this subsection.
- (4) Results of continuous monitoring and logs of process operating parameters required under subdivisions c and d of this subsection.
- (5) Information on waste shipments received as required in subdivision e of subsection 15.
- (6) For output materials when no analyses were performed to determine the presence of asbestos, record the name and location of the purchaser or disposal site to which output materials were sold or deposited and the date of sale or disposal.
- (7) Retain records required by this subdivision for at least two years.

g. Submit the following reports to the department:

- (1) A report for each analysis of product composite samples performed during the initial ninety days of operation.
- (2) A quarterly report, including the following information concerning activities during each consecutive three-month period:
 - (a) Results of analyses of monthly product composite samples.
 - (b) A description of any deviation from the operating parameters established during performance testing, the duration of the deviation, and steps taken to correct the deviation.
 - (c) Disposition of any product produced during a period of deviation, including whether it was recycled, disposed of as asbestos-containing waste material, or stored temporarily onsite until analyzed for asbestos content.
 - (d) The information on waste disposal activities as required in subdivision f of subsection 15.

h. Nonasbestos (asbestos-free) output material is not subject to any of the provisions of this section. Output material in which asbestos is detected, or output materials produced when the operating parameters deviated from those established during the startup performance testing, unless shown by transmission electron microscopy analysis to be asbestos-free shall be considered to be asbestos-containing waste and must be handled and disposed of in accordance with subsections 11 and 15 or reprocessed while all of the established operating parameters are being met.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-25-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-25-05; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-14
DESIGNATED AIR CONTAMINANT SOURCES, PERMIT TO CONSTRUCT, MINOR
SOURCE PERMIT TO OPERATE, TITLE V PERMIT TO OPERATE

Section

- 33.1-15-14-01 Designated Air Contaminant Sources
- 33.1-15-14-01.1 Definitions
- 33.1-15-14-02 Permit to Construct
- 33.1-15-14-03 Minor Source Permit to Operate
- 33.1-15-14-04 [Reserved]
- 33.1-15-14-05 [Reserved]
- 33.1-15-14-06 Title V Permit to Operate
- 33.1-15-14-07 Source Exclusions From Title V Permit to Operate Requirements

33.1-15-14-01. Designated air contaminant sources.

Pursuant to subsection 1 of North Dakota Century Code section 23.1-06-08, stationary sources within the following source categories are designated as air contaminant sources capable of causing or contributing to air pollution, either directly or indirectly.

1. The following chemical process facilities:

- a. Adipic acid.
- b. Ammonia.
- c. Ammonium nitrate.
- d. Carbon black.
- e. Charcoal.
- f. Chlorine.
- g. Chlor-alkali manufacturing.
- h. Detergent and soap.
- i. Explosives (trinitrotoluene and nitrocellulose).
- j. Hydrochloric acid.
- k. Hydrofluoric acid.
- l. Nitric acid.
- m. Paint and varnish manufacturing.
- n. Phosphoric acid.
- o. Phthalic anhydride.
- p. Plastics manufacturing.
- q. Printing ink manufacturing.
- r. Sodium carbonate.

s. Sulfur production and recovery.

t. Sulfuric acid.

u. Synthetic fibers.

v. Synthetic rubber.

w. Terephthalic acid.

x. Alcohol.

y. Cresylic acids.

z. Phenol.

aa. Polymer manufacturing and coating operations.

2. The following food and agricultural facilities:

a. Agricultural drying and dehydrating operations.

b. Ammonium nitrate.

c. Cheese whey drying and processing.

d. Coffee roasting.

e. Cotton ginning.

f. Feed, grain, and seed handling and processing.

g. Fermentation processes.

h. Fertilizers.

i. Fishmeal processing.

j. Meat smokehouses.

k. Orchard heaters.

l. Potato processing.

m. Rendering plants.

n. Starch manufacturing.

o. Sugarbeet processing.

3. The following metallurgical facilities:

a. Primary metals facilities:

(1) Aluminum ore reduction.

(2) Copper smelters.

(3) Ferroalloy production.

(4) Iron and steel mills.

- | _____ (5) Lead smelters.
- | _____ (6) Metallurgical coke manufacturing.
- | _____ (7) Zinc.
- | _____ b. Secondary metals facilities:
- | _____ (1) Aluminum operations.
- | _____ (2) Brass and bronze smelting.
- | _____ (3) Ferroalloys.
- | _____ (4) Ferrous foundries.
- | _____ (5) Gray iron foundries.
- | _____ (6) Lead smelting.
- | _____ (7) Magnesium smelting.
- | _____ (8) Nonferrous foundries.
- | _____ (9) Steel foundries.
- | _____ (10) Zinc processes.
- | _____ c. Electrolytic plating operations.
- | _____ 4. The following mineral products facilities:
- | _____ a. Asphalt roofing.
- | _____ b. Asphaltic concrete plants.
- | _____ c. Bricks and related clay refractories.
- | _____ d. Calcium carbide.
- | _____ e. Ceramic and clay processes.
- | _____ f. Clay and fly ash sintering.
- | _____ g. Coal cleaning.
- | _____ h. Coal drying.
- | _____ i. Coal mining.
- | _____ j. Coal handling and processing.
- | _____ k. Concrete batching.
- | _____ l. Fiberglass manufacturing.
- | _____ m. Frit manufacturing.
- | _____ n. Glass manufacturing.
- | _____ o. Gypsum manufacturing.

- p. Leonardite mining, drying, and processing.
- q. Lime manufacturing.
- r. Mineral wool manufacturing.
- s. Paperboard manufacturing.
- t. Perlite manufacturing.
- u. Phosphate rock preparation.
- v. Portland cement manufacturing, bulk handling, and storage.
- w. Rock, stone, gravel, and sand quarrying and processing.
- x. Uranium mining, milling, and enrichment.
- y. Calciners and dryers.

5. The following energy and fuel facilities:

- a. Coal gasification.
- b. Coal liquefaction.
- c. Crude oil and natural gas production.
- d. Fossil fuel steam electric plants.
- e. Fuel conversion plants.
- f. Natural gas processing.
- g. Petroleum refining and petrochemical operations.
- h. Petroleum storage (storage tanks and bulk terminals).

6. The following wood processing facilities:

- a. Plywood veneer and layout operations.
- b. Pulpboard manufacturing.
- c. Wood pulping.
- d. Sawmills.
- e. Wood products manufacturing.

7. The following waste management units or facilities:

- a. Afterburners.
- b. Automobile body incinerators.
- c. Conical burners.
- d. Flares.
- e. Gaseous and liquid organic compounds incinerators.

f. Industrial waste incinerators.

g. Open burning.

h. Open pit incinerators.

i. Infectious waste incinerators.

j. Refuse incinerators.

k. Salvage incinerators.

l. Sewage sludge incinerators.

m. Wood waste incinerators.

n. Municipal waste combustors.

8. The following miscellaneous facilities:

a. Drycleaning and laundry operations.

b. Fuel burning equipment.

c. Internal combustion engines.

d. Surface coating operations.

e. Wastewater treatment plants.

f. Water cooling towers and water cooling ponds.

g. Stationary gas turbines.

h. Lead acid battery manufacturing.

i. Hydrocarbon contaminated soil remediation projects.

9. Any source for which an applicable federal standard of performance [40 CFR 60] has been adopted in chapter 33.1-15-12.

10. Any source for which an applicable national emission standard for hazardous air pollutants [40 CFR 61] has been adopted in chapter 33.1-15-13.

11. Any source which is subject to review under federal prevention of significant deterioration of air quality regulations [40 CFR 51.166].

12. Any source which is determined by the department to cause or contribute to a violation of any state ambient air quality standard or violates the other provisions of chapter 33.1-15-02.

13. Any source subject to title V permitting requirements in section 33.1-15-14-06.

14. Any major source to which a national emission standard for hazardous air pollutants for source categories [40 CFR 63] would apply.

15. Other stationary sources subject to a standard or requirement under the federal Clean Air Act as amended.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-14-01.1. Definitions.

For the purposes of this chapter:

1. "Complete" means, in reference to an application for a permit, that the application contains all the information necessary for processing the application. Designating an application complete for purposes of permit processing does not preclude the department from requesting or accepting any additional information.
2. "Construction, installation, or establishment" means:
 - a. For sources subject to a standard or requirement under chapters 33.1-15-13, 33.1-15-15 (excluding increment consumption by nonmajor sources), and 33.1-15-22, it shall have the meaning given for construction in each of the respective chapters.
 - b. For all other sources it means the placement or erection, including fabrication, demolition, or modification, of an air contaminant emissions unit and any equipment, process, or structure that will be used to reduce, physically or chemically change, or transmit to the atmosphere any air contaminant. This does not include the building that houses the source, site work, foundations, or other equipment which does not affect the amount, ambient concentration, or type of air contaminants that are emitted. With respect to a physical change or a change in the method of operation it means those onsite activities which will affect an existing emissions unit or establishment of a new unit that emits to the atmosphere.
3. "Emissions unit" has the meaning given to it in section 33.1-15-14-06.
4. "Minor source" means any designated air contaminant source under section 33.1-15-14-01 which is not required to obtain a title V permit to operate under section 33.1-15-14-06.
5. "Potential to emit" has the meaning given to it in section 33.1-15-14-06.
6. "Stationary source" has the meaning given to it in section 33.1-15-14-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-14-02. Permit to construct.

1. Permit to construct required.

- a. No construction, installation, or establishment of a new stationary source within a source category designated in section 33.1-15-14-01 may be commenced unless the owner or operator thereof shall file an application for, and receive, a permit to construct in accordance with this chapter.
- b. The initiation of activities that are exempt from the definition of construction, installation, or establishment in section 33.1-15-14-01.1, prior to obtaining a permit to construct, are at the owner's or operator's own risk. These activities have no impact on the department's decision to issue a permit to construct. The initiation or completion of such activities conveys no rights to a permit to construct under this section.
- c. General permits. The department may issue a general permit to construct covering numerous similar sources which are not subject to permitting requirements under chapter 33.1-15-13 or 33.1-15-15 or subpart B of section 33.1-15-22-03. Any general permit shall

comply with all requirements applicable to other permits to construct and shall identify criteria by which sources may qualify for the general permit. A proposed general permit, any changes to a general permit, and any renewal of a general permit is subject to public comment. The public comment procedures under subsection 6 of section 33.1-15-14-02 shall be used. To sources that qualify, the department shall grant the conditions and terms of the general permit. Sources that would qualify for a general permit must apply to the department for coverage under the terms of the general permit or apply for an individual permit to construct. Without repeating the public participation procedures under subsection 6 of section 33.1-15-14-02, the department may grant a source's request for authorization to construct under the general permit.

2. Application for permit to construct.

- a. Application for a permit to construct a new installation or source must be made by the owner or operator thereof on forms furnished by the department.
- b. A separate application is required for each new installation or source subject to this chapter.
- c. Each application must be signed by the applicant, which signature shall constitute an agreement that the applicant will assume responsibility for the construction or operation of the new installation or source in accordance with this article and will notify the department, in writing, of the startup of operation of such source.

3. Alterations to source.

- a. The addition to or enlargement of or replacement of or alteration in any stationary source, already existing, which is undertaken pursuant to an approved compliance schedule for the reduction of emissions therefrom, shall be exempt from the requirements of this section.
- b. Any physical change in, or change in the method of operation of, a stationary source already existing which increases or may increase the emission rate or increase the ambient concentration by an amount greater than that specified in subdivision a of subsection 5 of any pollutant for which an ambient air quality standard has been promulgated under this article or which results in the emission of any such pollutant not previously emitted must be considered to be construction, installation, or establishment of a new source, except that:
 - (1) Routine maintenance, repair, and replacement may not be considered a physical change.
 - (2) The following may not be considered a change in the method of operation:
 - (a) An increase in the production rate, if such increase does not exceed the operating design capacity of the source and it is not limited by a permit condition.
 - (b) An increase in the hours of operation if it is not limited by a permit condition.
 - (c) Changes from one operating scenario to another provided the alternative operating scenarios are identified and approved in a permit to operate.
 - (d) Trading of emissions within a facility provided:
 - [1] These trades have been identified and approved in a permit to operate;
 - and

[2] The total facility emissions do not exceed the facility emissions cap established in the permit to operate.

(e) Trading and utilizing acid rain allowances provided compliance is maintained with all other applicable requirements.

c. Any owner or operator of a source who requests an increase in the allowable sulfur dioxide emission rate for the source pursuant to section 33.1-15-02-07 shall demonstrate through a dispersion modeling analysis that the revised allowable emissions will not cause or contribute to a violation of the national ambient air quality standards for sulfur oxides (sulfur dioxide) or the prevention of significant deterioration increments for sulfur dioxide. The owner or operator shall also demonstrate that the revised allowable emission rate will not violate any other requirement of this article or the Federal Clean Air Act. Requests for emission limit changes shall be subject to review by the public and the environmental protection agency in accordance with subsection 6.

4. **Submission of plans - Deficiencies in application.** As part of an application for a permit to construct, the department may require the submission of plans, specifications, siting information, emission information, descriptions and drawings showing the design of the installation or source, the manner in which it will be operated and controlled, the emissions expected from it, and the effects on ambient air quality. Any additional information, plans, specifications, evidence, or documentation that the department may require must be furnished upon request. Within twenty days of the receipt of the application, the department shall advise the owner or operator of the proposed source of any deficiencies in the application. In the event of a deficiency, the date of receipt of the application is the date upon which all requested information is received.

a. Determination of the effects on ambient air quality as may be required under this section must be based on the applicable requirements specified in the "Guideline on Air Quality Models (Revised)" (United States environmental protection agency, office of air quality planning and standards, Research Triangle Park, North Carolina 27711) as supplemented by the "North Dakota Guideline for Air Quality Modeling Analyses" (North Dakota state department of health, division of air quality). These documents are incorporated by reference.

b. When an air quality impact model specified in the documents incorporated by reference in subdivision a is inappropriate, the model may be modified or another model substituted provided:

(1) Any modified or nonguideline model must be subject to notice and opportunity for public comment under subsection 6.

(2) The applicant must provide to the department adequate information to evaluate the applicability of the modified or nonguideline model. Such information must include, but is not limited to, methods like those outlined in the "Interim Procedures for Evaluating Air Quality Models (Revised)" (United States environmental protection agency, office of air quality planning and standards, Research Triangle Park, North Carolina 27709).

(3) Written approval from the department must be obtained for any modification or substitution.

(4) Written approval from the United States environmental protection agency must be obtained for any modification or substitution prior to the granting of a permit under this chapter.

5. **Review of application - Standard for granting permits to construct.** The department shall review any plans, specifications, and other information submitted in application for a permit to construct and from such review shall, within ninety days of the receipt of the completed application, make the following preliminary determinations:

a. Whether the proposed project will be in accord with this article, including whether the operation of any new stationary source at the proposed location will cause or contribute to a violation of any applicable ambient air quality standard. A new stationary source will be considered to cause or contribute to a violation of an ambient air quality standard when such source would, at a minimum, exceed the following significance levels at any locality that does not or would not meet the applicable ambient standard:

Contaminant	Averaging Time (hours)				
	Annual ($\mu\text{g}/\text{m}^3$)	24 ($\mu\text{g}/\text{m}^3$)	8 ($\mu\text{g}/\text{m}^3$)	3 ($\mu\text{g}/\text{m}^3$)	1 ($\mu\text{g}/\text{m}^3$)
SO ₂	1.0	5		25	7.8
PM ₁₀		5			
NO ₂	1.0				7.5
CO			500		2000
PM _{2.5}	0.3	1.2			

b. Whether the proposed project will provide all necessary and reasonable methods of emission control. Whenever a standard of performance is applicable to the source, compliance with this criterion will require provision for emission control which will, at least, satisfy such standards.

6. **Public participation - Final action on application.**

a. The following source categories are subject to the public participation procedures under this subsection:

- (1) Those affected facilities designated under chapter 33.1-15-13.
- (2) New sources that will be required to obtain a permit to operate under section 33.1-15-14-06.
- (3) Modifications to an existing facility which will increase the potential to emit from the facility by the following amounts:
 - (a) One hundred tons [90.72 metric tons] per year or more of particulate matter, sulfur dioxide, nitrogen oxides, hydrogen sulfide, carbon monoxide, or volatile organic compounds;
 - (b) Ten tons [9.07 metric tons] per year or more of any contaminant listed under section 112(b) of the federal Clean Air Act; or
 - (c) Twenty-five tons [22.68 metric tons] per year or more of any combination of contaminants listed under section 112(b) of the federal Clean Air Act.
- (4) Sources which the department has determined to have a major impact on air quality.

- (5) Those for which a request for a public comment period has been received from the public.
- (6) Sources for which a significant degree of public interest exists regarding air quality issues.
- (7) Those sources which request a federally enforceable permit which limits their potential to emit.

b. With respect to the permit to construct application, the department shall:

- (1) Within ninety days of receipt of a complete application, make a preliminary determination concerning issuance of a permit to construct.
- (2) Within ninety days of the receipt of the complete application, make available in at least one location in the county or counties in which the proposed project is to be located or on the department's website, a copy of its preliminary determinations and copies of or a summary of the information considered in making such preliminary determinations.
- (3) Publish notice to the public by prominent advertisement, within ninety days of the receipt of the complete application, in the region affected, of the opportunity for written comment on the preliminary determinations. The public notice must include the proposed location of the source.
- (4) Within ninety days of the receipt of the complete application, deliver a copy of the notice to the applicant and to officials and agencies having cognizance over the locations where the source will be situated as follows: the chief executive of the city and county; any comprehensive regional land use planning agency; and any state, federal land manager, or Indian governing body whose lands will be significantly affected by the source's emissions.
- (5) Within ninety days of receipt of a complete application, provide a copy of the proposed permit and all information considered in the development of the permit and the public notice to the regional administrator of the United States environmental protection agency.
- (6) Allow thirty days for public comment.
- (7) Consider all public comments properly received, in making the final decision on the application.
- (8) Allow the applicant to submit written responses to public comments received by the department. The applicant's responses must be submitted to the department within twenty days of the close of the public comment period.
- (9) Take final action on the application within thirty days of the applicant's response to the public comments.
- (10) Provide a copy of the final permit, if issued, to the applicant, the regional administrator of the United States environmental protection agency, and anyone who requests a copy.

c. For those sources subject to the requirements of chapter 33.1-15-15, the public participation procedures under section 33.1-15-15-01.2 shall be followed.

7. **Denial of permit to construct.** If, after review of all information received, including public comment with respect to any proposed project, the department makes the determination of any one of subdivision a or b of subsection 5 in the negative, it shall deny the permit and notify the applicant, in writing, of the denial to issue a permit to construct.

If a permit to construct is denied, the construction, installation, or establishment of the new stationary source shall be unlawful. No permit to construct or modify may be granted if such construction, or modification, or installation, will result in a violation of this article.

8. **Issuance of permit to construct.** If, after review of all information received, including public comment with respect to any proposed project, the department makes the determination of subdivision a or b of subsection 5 in the affirmative, the department shall issue a permit to construct. The permit may provide for conditions of operation as provided in subsection 9.

9. **Permit to construct - Conditions.** The department may impose any reasonable conditions upon a permit to construct, including conditions concerning:

- a. Sampling, testing, and monitoring of the facilities or the ambient air or both.
- b. Trial operation and performance testing.
- c. Prevention and abatement of nuisance conditions caused by operation of the facility.
- d. Recordkeeping and reporting.
- e. Compliance with applicable rules and regulations in accordance with a compliance schedule.
- f. Limitation on hours of operation, production rate, processing rate, or fuel usage when necessary to assure compliance with this article.

The violation of any conditions so imposed may result in revocation or suspension of the permit or other appropriate enforcement action.

10. **Scope.**

- a. The issuance of a permit to construct for any source does not affect the responsibility of an owner or operator to comply with applicable portions of a control strategy affecting the source.
- b. A permit to construct shall become invalid if construction is not commenced within eighteen months after receipt of such permit, if construction is discontinued for a period of eighteen months or more; or if construction is not completed within a reasonable time. The department may extend the eighteen-month period upon a satisfactory showing that an extension is justified. This provision does not apply to the time period between construction of the approved phases of a phased construction project; each phase must commence construction within eighteen months of the projected and approved commencement date. In cases of major construction projects involving long lead times and substantial financial commitments, the department may provide by a condition to the permit a time period greater than eighteen months when such time extension is supported by sufficient documentation by the applicant.

11. **Transfer of permit to construct.** To ensure the responsible owners or operators, or both, are identified, the holder of a permit to construct may not transfer such permit without prior approval of the department.

12. **[Reserved].**

13. **Exemptions.** A permit to construct is not required for the following stationary sources provided there is no federal requirement for a permit or approval for construction or operation.

a. Maintenance, structural changes, or minor repair of process equipment, fuel burning equipment, control equipment, or incinerators which do not change capacity of such process equipment, fuel burning equipment, control equipment, or incinerators and which do not involve any change in the quality, nature, or quantity of emissions therefrom.

b. Fossil fuel burning equipment, other than smokehouse generators, which meet all of the following criteria:

(1) The heat input per unit does not exceed ten million British thermal units per hour.

(2) The total aggregate heat input from all equipment does not exceed ten million British thermal units per hour.

(3) The actual emissions, as defined in chapter 33.1-15-15, from all equipment do not exceed twenty-five tons [22.67 metric tons] per year of any air contaminant and the potential to emit any air contaminant for which an ambient air quality standard has been promulgated in chapter 33.1-15-02 is less than one hundred tons [90.68 metric tons] per year.

c. (1) Any single internal combustion engine with less than five hundred brake horsepower, or multiple engines with a combined brake horsepower rating less than five hundred brake horsepower.

(2) Any single internal combustion engine with a maximum rating of less than one thousand brake horsepower, or multiple engines with a combined brake horsepower rating of less than one thousand brake horsepower, and which operates a total of five hundred hours or less in a rolling twelve-month period.

(3) Any internal combustion engine, or multiple engines at the same facility, with a total combined actual emission rate of five tons [4.54 metric tons] per year or less of any air contaminant for which an ambient air quality standard has been promulgated in section 33.1-15-02-04.

(4) The exemptions listed in paragraphs 1, 2, and 3 do not apply to engines that are a utility unit as defined in section 33.1-15-21-08.1.

d. Bench scale laboratory equipment used exclusively for chemical or physical analysis or experimentation.

e. Portable brazing, soldering, or welding equipment.

f. The following equipment:

(1) Comfort air-conditioners or comfort ventilating systems which are not designed and not intended to be used to remove emissions generated by or released from specific units or equipment.

(2) Water cooling towers and water cooling ponds unless used for evaporative cooling of process water, or for evaporative cooling of water from barometric jets or barometric condensers or used in conjunction with an installation requiring a permit.

(3) Equipment used exclusively for steam cleaning.

(4) Porcelain enameling furnaces or porcelain enameling drying ovens.

(5) Unheated solvent dispensing containers or unheated solvent rinsing containers of sixty gallons [227.12 liters] capacity or less.

(6) Equipment used for hydraulic or hydrostatic testing.

g. The following equipment or any exhaust system or collector serving exclusively such equipment:

(1) Blast cleaning equipment using a suspension of abrasive in water.

(2) Bakery ovens if the products are edible and intended for human consumption.

(3) Kilns for firing ceramic ware, heated exclusively by gaseous fuels, singly or in combinations, and electricity.

(4) Confection cookers if the products are edible and intended for human consumption.

(5) Drop hammers or hydraulic presses for forging or metalworking.

(6) Diecasting machines.

(7) Photographic process equipment through which an image is reproduced upon material through the use of sensitized radiant energy.

(8) Equipment for drilling, carving, cutting, routing, turning, sawing, planing, spindle sanding, or disc sanding of wood or wood products, which is located within a facility that does not vent to the outside air.

(9) Equipment for surface preparation of metals by use of aqueous solutions, except for acid solutions.

(10) Equipment for washing or drying products fabricated from metal or glass; provided, that no volatile organic materials are used in the process and that no oil or solid fuel is burned.

(11) Laundry dryers, extractors, or tumblers for fabrics cleaned with only water solutions of bleach or detergents.

h. Natural draft hoods or natural draft ventilators.

i. Containers, reservoirs, or tanks used exclusively for:

(1) Dipping operations for coating objects with oils, waxes, or greases, if no organic solvents are used.

(2) Dipping operations for applying coatings of natural or synthetic resins which contain no organic solvents.

(3) Storage of butane, propane, or liquefied petroleum or natural gas.

(4) Storage of lubricating oils.

(5) Storage of petroleum liquids except those containers, reservoirs, or tanks subject to the requirements of chapter 33.1-15-12.

j. Gaseous fuel-fired or electrically heated furnaces for heat treating glass or metals, the use of which does not involve molten materials.

k. Crucible furnaces, pot furnaces, or induction furnaces, with a capacity of one thousand pounds [453.59 kilograms] or less each, unless otherwise noted, in which no sweating or distilling is conducted, nor any fluxing conducted utilizing chloride, fluoride, or ammonium compounds, and from which only the following metals are poured or in which only the following metals are held in a molten state:

(1) Aluminum or any alloy containing over fifty percent aluminum; provided, that no gaseous chlorine compounds, chlorine, aluminum chloride, or aluminum fluoride are used.

(2) Magnesium or any alloy containing over fifty percent magnesium.

(3) Lead or any alloy containing over fifty percent lead, in a furnace with a capacity of five hundred fifty pounds [249.48 kilograms] or less.

(4) Tin or any alloy containing over fifty percent tin.

(5) Zinc or any alloy containing over fifty percent zinc.

(6) Copper.

(7) Precious metals.

l. Open burning activities within the scope of section 33.1-15-04-02.

m. Flares used to indicate some danger to the public.

n. Sources or alterations to a source which are of minor significance as determined by the department.

o. Oil and gas production facilities as defined in chapter 33.1-15-20 which are not a major source as defined in section 33.1-15-14-06.

14. Performance and emission testing.

a. Emission tests or performance tests or both shall be conducted by the owner or operator of a facility and data reduced in accordance with the applicable procedure, limitations, standards, and test methods established by this article. Such tests must be conducted under the owner's or operator's permit to construct, and such permit is subject to the faithful completion of the test in accordance with this article.

b. All dates and periods of trial operation for the purpose of performance or emission testing pursuant to a permit to construct must be approved in advance by the department. Trial operation shall cease if the department determines, on the basis of the test results, that continued operation will result in the violation of this article. Upon completion of any test conducted under a permit to construct, the department may order the cessation of the operation of the tested equipment or facility until such time as a permit to operate has been issued by the department.

c. Upon review of the performance data resulting from any test, the department may require the installation of such additional control equipment as will bring the facility into compliance with this article.

d. Nothing in this article may be construed to prevent the department from conducting any test upon its own initiative, or from requiring the owner or operator to conduct any test at such time as the department may determine.

15. Responsibility to comply.

a. Possession of a permit to construct does not relieve any person of the responsibility to comply with this article.

b. The exemption of any stationary source from the requirements of a permit to construct by reason of inclusion in subsection 13 does not relieve the owner or operator of such source of the responsibility to comply with any other applicable portions of this article.

16. **Portable sources.** Sources which are designated to be portable and which are not subject to the requirements of chapter 33.1-15-15 are exempt from requirements to obtain a permit to construct. The owner or operator shall submit an application for a permit to operate prior to initiating operations.

17. **Registration of exempted stationary sources.** The department may require that the owner or operator of any stationary source exempted under subsection 13 shall register the source with the department within such time limits and on such forms as the department may prescribe.

18. **Extensions of time.** The department may extend any of the time periods specified in subsections 4, 5, and 6 upon notification of the applicant by the department.

19. **Amendment of permits.** The department may, when the public interest requires or when necessary to ensure the accuracy of the permit, modify any condition or information contained in the permit to construct. Modification shall be made only upon the department's own motion and the procedure shall, at a minimum, conform to any requirements of federal and state law. In the event that the modification would be a major modification as defined in chapter 33.1-15-15, the department shall follow the procedures established in chapter 33.1-15-15. For those of concern to the public, the department will provide:

a. Reasonable notice to the public, in the area to be affected, of the opportunity for comment on the proposed modification, and the opportunity for a public hearing, upon request, as well as written public comment.

b. A minimum of a thirty-day period for written public comment, with the opportunity for a public hearing during that thirty-day period, upon request.

c. Consideration by the department of all comments received in its order for modification.

The department may require the submission of such maps, plans, specifications, emission information, and compliance schedules as it deems necessary prior to the issuance of an amendment. It is the intention of the department that this subsection shall apply only in those instances allowed by federal rules and regulations and only in those instances in which the granting of a variance pursuant to section 33.1-15-01-06 and enforcement of existing permit conditions are manifestly inappropriate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-14-03. Minor source permit to operate.

1. Permit to operate required.

a. Except as provided in subdivisions c and d, no person may operate or cause the routine operation of an installation or source designated in section 33.1-15-14-01 without applying for and obtaining, in accordance with this section, a permit to operate. Application for a permit to operate a new installation or source must be made at least thirty days prior to startup of routine operation. Those sources that received a permit to

construct under section 33.1-15-14-02, need only submit a thirty-day prior notice of proposed startup to satisfy the requirement to apply for a permit to operate under this subdivision.

- b. No person may operate or cause the operation of an installation or source in violation of any permit to operate or any condition imposed upon a permit to operate or in violation of this article.
- c. Sources that are subject to the title V permitting requirements of section 33.1-15-14-06 are exempt from the requirements of this section.
- d. Sources that are exempt from the requirement to obtain a permit to construct under subsection 13 of section 33.1-15-14-02 are exempt from this section.
- e. Sources which are subject to the title V permitting requirements in section 33.1-15-14-06 based solely on their potential to emit may apply for a federally enforceable minor source permit to operate which would limit their potential to emit to a level below the title V permit to operate applicability threshold.
- f. Permits which are issued under this section which do not conform to the requirements of this section, including public participation under subdivision a of subsection 5 of section 33.1-15-14-03, and the requirements of any United States environmental protection agency regulations may be deemed not federally enforceable by the United States environmental protection agency.
- g. General permits. The department may issue a general permit covering numerous similar sources. Any general permit shall comply with all requirements applicable to other minor source permits to operate and shall identify criteria by which sources may qualify for the general permit. To sources that qualify, the department shall grant the conditions and terms of the general permit. Sources that would qualify for a general permit must apply to the department for coverage under the terms of the general permit or apply for an individual minor source permit to operate. Without repeating the public participation procedures under subsection 5 of section 33.1-15-14-03, the department may grant a source's request for authorization to operate under a general permit.

2. Application for permit to operate.

- a. Application for a permit to operate must be made by the owner or operator thereof on forms furnished by the department.
- b. Each application for a permit to operate must be accompanied by such performance tests results, information, and records as may be required by the department to determine whether the requirements of this article will be met. Such information may also be required by the department at any time when the source is being operated to determine compliance with this article.
- c. Each application must be signed by the applicant, which signature shall constitute an agreement that the applicant will assume responsibility for the operation of the installation or source in accordance with this article.

3. Standards for granting permits to operate. No permit to operate may be granted unless the applicant shows to the satisfaction of the department that the source is in compliance with this article.

4. Performance testing.

- a. Before a permit to operate is granted, the applicant, if required by the department, shall conduct performance tests in accordance with methods and procedures required by this article or methods and procedures approved by the department. Such tests must be made at the expense of the applicant. The department may monitor such tests and may also conduct performance tests.
- b. Emission tests or performance tests or both shall be conducted by the owner or operator of a facility and data reduced in accordance with the applicable procedure, limitations, standards, and test methods established by this article. Issuance of a minor source permit to operate is subject to the faithful completion of the test in accordance with this article.
- c. All dates and periods of trial operation for the purpose of performance or emission testing pursuant to a permit to operate must be approved in advance by the department. Trial operation shall cease if the department determines, on the basis of the test results, that continued operation will result in the violation of this article. Upon completion of any test conducted under a permit to construct, the department may order the cessation of the operation of the tested equipment or facility until such time as a permit to operate has been issued by the department.
- d. Upon review of the performance data resulting from any test, the department may require the installation of such additional control equipment as will bring the facility into compliance with this article.
- e. Nothing in this article may be construed to prevent the department from conducting any test upon its own initiative or from requiring the owner or operator to conduct any test at such time as the department may determine.

5. Action on applications.

- a. Public participation. This subdivision is applicable to only those sources which apply for a federally enforceable minor source permit to operate which limits their potential to emit an air contaminant. The department shall:
 - (1) Within ninety days of receipt of a complete application:
 - (a) Make a preliminary determination concerning issuance of the permit to operate.
 - (b) Make available in at least one location in the county or counties in which the source is located or on the department's website, a copy of the proposed permit and copies of or a summary of the information considered in developing the permit.
 - (c) Publish notice to the public by prominent advertisement, in the region affected, of the opportunity for written comment on the proposed permit. The public notice must include the proposed location of the source.
 - (d) Provide notice of the proposed permit and public notice to any state or federal land manager, or Indian governing body whose lands will be significantly affected by the source's emissions. For purposes of this subparagraph, lands will be considered to be significantly affected if the source is located within thirty-one and seven hundredths miles [50 kilometers] of such land.
 - (e) Provide a copy of the proposed permit, all information considered in the development of the permit and the public notice to the regional administrator of the United States environmental protection agency.

(2) Allow thirty days for public comment.

(3) Consider all public comments properly received, in making the final decision on the application.

(4) Allow the applicant to submit written responses to public comments received by the department. The applicant's responses must be submitted to the department within twenty days of the close of the public comment period.

(5) Take final action on the application within thirty days of the applicant's response to the public comments.

(6) Provide a copy of the final permit, if issued, to the applicant, the regional administrator of the United States environmental protection agency, and anyone who requests a copy.

b. For those sources not subject to public participation under subdivision a, the department shall act within thirty days after receipt of an application for a permit to operate a new installation or source, and within thirty days after receipt of an application to operate an existing installation or source, and shall notify the applicant, in writing, of the approval, conditional approval, or denial of the application.

c. The department shall set forth in any notice of denial the reasons for denial. A denial must be without prejudice to the applicant's right to a hearing before the department or for filing a further application after revisions are made to meet objections specified as reasons for the denial.

6. **Permit to operate - Conditions.** The department may impose any reasonable conditions upon a permit to operate. All emission limitations, controls, and other requirements imposed by conditions on the permit to operate must be at least as stringent as any applicable limitation or requirement contained in this article. Permit to operate conditions may include:

a. Sampling, testing, and monitoring of the facilities or ambient air or both.

b. Trial operation and performance testing.

c. Prevention and abatement of nuisance conditions caused by operation of the facility.

d. Recordkeeping and reporting.

e. Compliance with applicable rules and regulations in accordance with a compliance schedule.

f. Limits on the hours of operation of a source or its processing rate, fuel usage, or production rate when necessary to assure compliance with this article.

7. **Suspension or revocation of permit to operate.**

a. The department may suspend or revoke a permit to operate for violation of this article, violations of a permit condition, or failure to respond to a notice of violation or any order issued pursuant to this article.

b. Suspension or revocation of a permit to operate shall become final ten days after serving notice on the holder of the permit.

c. A permit to operate which has been revoked pursuant to this article must be surrendered forthwith to the department.

d. No person may operate or cause the operation of an installation or source if the department denies or revokes a permit to operate.

8. **Transfer of permit to operate.** The holder of a permit to operate may not transfer it without the prior approval of the department.

9. **Renewal of permit to operate.** Every permit to operate issued by the department after February 9, 1976, must have a maximum term of five years. Applications for renewal of such permits must be submitted ninety days prior to the expiration date stated in the permit. The department shall approve or disapprove such application within ninety days. If a source submits a complete application for a permit renewal at least ninety days prior to the expiration date, the source's failure to have a minor source permit to operate is not a violation of this section until the department takes final action on the renewal application.

10. **[Reserved].**

11. **[Reserved].**

12. **Responsibility to comply.**

a. Possession of a minor source permit to operate does not relieve any person of the responsibility to comply with this article.

b. The exemption of any stationary source from the requirements to obtain a minor source permit to operate does not relieve the owner or operator of such source of the responsibility to comply with any other applicable portions of this article.

13. **Portable sources.** Sources which are designed to be portable and which are operated at temporary jobsites across the state may not be considered a new source by virtue of location changes. One application for a permit to operate any portable source may be filed in accordance with this chapter, and subsequent applications are not required for each temporary jobsite. The permit to operate issued by the department shall be conditioned by such specific requirements as the department deems appropriate to carry out the provisions of sections 33.1-15-01-07 and 33.1-15-01-15.

14. **Registration of exempted stationary sources.** The department may require that the owner or operator of any stationary source exempted from the requirement to obtain a minor source permit to operate to register the source with the department within such time limits and on such forms as the department may prescribe.

15. **Extensions of time.** The department may extend any of the time periods specified in this section upon notification of the applicant by the department.

16. **Amendment of permits.** When the public interest requires or when necessary to ensure the accuracy of the permit, the department may modify any condition or information contained in a minor source permit to operate. Modification shall be made only upon the department's own motion and the procedure shall, at a minimum, conform to any requirements of federal and state law. In the event that the modification would be a major modification as defined in chapter 33.1-15-15, the department shall follow the procedures established in chapter 33.1-15-15. For those of concern to the public, or modify a condition which limits the potential to emit of a source which possesses a federally enforceable permit, the department will provide:

a. Reasonable notice to the public, in the area to be affected, of the opportunity for comment on the proposed modification and the opportunity for a public hearing, upon request, as well as written public comment.

b. A minimum of a thirty-day period for written public comment with the opportunity for a public hearing during that thirty-day period, upon request.

c. Consideration by the department of all comments received.

The department may require the submission of such maps, plans, specifications, emission information, and compliance schedules as it deems necessary prior to the issuance of an amendment. It is the intention of the department that this subsection shall apply only in those instances allowed by federal rules and regulations and only in those instances in which the granting of a variance pursuant to section 33.1-15-01-06 and enforcement of existing permit conditions are manifestly inappropriate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-14-04. [Reserved].

33.1-15-14-05. [Reserved].

33.1-15-14-06. Title V permit to operate.

1. **Definitions.** For purposes of this section:

a. "Affected source" means any source that includes one or more affected units.

b. "Affected state" means any state that is contiguous to North Dakota whose air quality may be affected by a source subject to a proposed title V permit, permit modification, or permit renewal or which is within fifty miles [80.47 kilometers] of the permitted source.

c. "Affected unit" means a unit that is subject to any acid rain emissions reduction requirement or acid rain emissions limitation under title IV of the federal Clean Air Act.

d. "Alternative operating scenario (AOS)" means a scenario authorized in a title V permit that involves a change at the title V source for a particular emissions unit, and that either results in the unit being subject to one or more applicable requirements which differ from those applicable to the emissions unit prior to implementation of the change or renders inapplicable one or more requirements previously applicable to the emissions unit prior to implementation of the change.

e. "Applicable requirement" means all of the following as they apply to emissions units at a source that is subject to requirements of this section (including requirements that have been promulgated or approved by the United States environmental protection agency through rulemaking at the time of issuance but have future-effective compliance dates):

(1) Any standard or other requirement provided for in the North Dakota state implementation plan approved or promulgated by the United States environmental protection agency through rulemaking under title I of the federal Clean Air Act that implements the relevant requirements of the federal Clean Air Act, including any revisions to that plan.

(2) Any term or condition of any permit to construct issued pursuant to this chapter.

- (3) Any standard or other requirement under section 111 including section 111(d) of the federal Clean Air Act.
- (4) Any standard or other requirement under section 112 of the federal Clean Air Act including any requirement concerning accident prevention under section 112(r)(7) of the federal Clean Air Act.
- (5) Any standard or other requirement of the acid rain program under title IV of the federal Clean Air Act.
- (6) Any requirements established pursuant to section 504(b) or section 114(a)(3) of the federal Clean Air Act.
- (7) Any standard or other requirement governing solid waste incineration, under section 129 of the federal Clean Air Act.
- (8) Any standard or other requirement for consumer and commercial products, under section 183(e) of the federal Clean Air Act.
- (9) Any standard or other requirement for tank vessels under section 183(f) of the federal Clean Air Act.
- (10) Any standard or other requirement of the program to control air pollution from outer continental shelf sources, under section 328 of the federal Clean Air Act.
- (11) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under title VI of the federal Clean Air Act, unless the administrator of the United States environmental protection agency has determined that such requirements need not be contained in a title V permit.
- (12) Any national ambient air quality standard or increment or visibility requirement under part C of title I of the federal Clean Air Act, but only as it would apply to temporary sources permitted pursuant to section 504(e) of the federal Clean Air Act.

f. "Approved replicable methodology (ARM)" means title V permit terms that:

- (1) Specify a protocol which is consistent with and implements an applicable requirement, or requirement of this section, such that the protocol is based on sound scientific or mathematical principles, or both, and provides reproducible results using the same inputs; and
- (2) Require the results of that protocol to be recorded and used for assuring compliance with such applicable requirement, any other applicable requirement implicated by implementation of the approved replicable methodology, or requirement of this section, including where an approved replicable methodology is used for determining applicability of a specific requirement to a particular change.

g. "Designated representative" means a responsible natural person authorized by the owners and operators of an affected source and of all affected units at the source, as evidenced by a certificate of representation submitted in accordance with subpart B of 40 CFR 72, to represent and legally bind each owner and operator, as a matter of federal law, in matters pertaining to the acid rain program. Whenever the term "responsible official" is used in this section, or in any other regulations implementing title V of the federal Clean Air Act, it shall be deemed to refer to the "designated representative" with regard to all matters under the acid rain program.

- h. "Draft permit" means the version of a permit for which the department offers public participation or affected state review.
- i. "Emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the title V permit to operate, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.
- j. "Emissions allowable under the permit" means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard) or a federally enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.
- k. "Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air contaminant or any contaminant listed under section 112(b) of the federal Clean Air Act. This term does not alter or affect the definition of unit for purposes of title IV of the federal Clean Air Act.
- l. "Environmental protection agency" or the "administrator" means the administrator of the United States environmental protection agency or the administrator's designee.
- m. "Federal Clean Air Act" means the federal Clean Air Act, as amended [42 U.S.C. 7401 et seq.].
- n. "Final permit" means the version of a title V permit issued by the department that has completed all review procedures required in this section.
- o. "Fugitive emissions" are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.
- p. "General permit" means a title V permit to operate that meets the requirements of subdivision d of subsection 5.
- q. "Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that are described in paragraph 1 or 2. For the purposes of defining "major source", a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the contaminant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same major group (i.e., all have the same two-digit code) as described in the standard industrial classification manual, 1987.

(1) A major source under section 112 of the federal Clean Air Act, which is defined as:

- (a) For contaminants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, ten tons [9.07 metric tons] per year (tpy) or more of any hazardous air contaminant which has been listed pursuant to section 112(b) of the federal Clean Air Act, twenty-five tons [22.67 metric tons] per year or more of any combination of such hazardous air contaminants, or such lesser quantity as the administrator of the United States environmental protection agency may establish by rule. Notwithstanding the

preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources.

(b) For radionuclides, "major source" shall have the meaning specified by the administrator of the United States environmental protection agency by rule.

(2) A major stationary source of air contaminants, that directly emits or has the potential to emit, one hundred tons [90.68 metric tons] per year or more of any air contaminant subject to regulation (including any major source of fugitive emissions of any such contaminant, as determined by rule by the administrator of the United States environmental protection agency). For purposes of this definition, air contaminant subject to regulation does not include greenhouse gases as defined in title 40 Code of Federal Regulations 86.1818-12(a). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of this section, unless the source belongs to one of the following categories of stationary source:

(a) Coal cleaning plants (with thermal dryers).

(b) Kraft pulp mills.

(c) Portland cement plants.

(d) Primary zinc smelters.

(e) Iron and steel mills.

(f) Primary aluminum ore reduction plants.

(g) Primary copper smelters.

(h) Municipal incinerators capable of charging more than two hundred fifty tons [226.80 metric tons] of refuse per day.

(i) Hydrofluoric, sulfuric, or nitric acid plants.

(j) Petroleum refineries.

(k) Lime plants.

(l) Phosphate rock processing plants.

(m) Coke oven batteries.

(n) Sulfur recovery plants.

(o) Carbon black plants (furnace process).

(p) Primary lead smelters.

(q) Fuel conversion plants.

(r) Sintering plants.

(s) Secondary metal production plants.

- (t) Chemical process plants.
 - (u) Fossil-fuel boilers (or combination thereof) totaling more than two hundred fifty million British thermal units per hour heat input.
 - (v) Petroleum storage and transfer units with a total storage capacity exceeding three hundred thousand barrels.
 - (w) Taconite ore processing plants.
 - (x) Glass fiber processing plants.
 - (y) Charcoal production plants.
 - (z) Fossil-fuel-fired steam electric plants of more than two hundred fifty million British thermal units per hour heat input.
 - (aa) Any other stationary source category which as of August 7, 1980, is being regulated under section 111 or 112 of the federal Clean Air Act.
- r. "Permit modification" means a revision to a title V permit that meets the requirements of subdivision e of subsection 6.
- s. "Permit program costs" means all reasonable (direct and indirect) costs required to develop and administer a permit program, under this section (whether such costs are incurred by the department or other state or local agencies that do not issue permits directly, but that support permit issuance or administration).
- t. "Permit revision" means any permit modification or administrative permit amendment.
- u. "Potential to emit" means the maximum capacity of a stationary source to emit any air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of a source to emit an air contaminant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation is enforceable by the administrator of the United States environmental protection agency and the department.
- v. "Proposed permit" means the version of a permit that the department proposes to issue and forwards to the administrator of the United States environmental protection agency for review.
- w. "Regulated air contaminant" means the following:
- (1) Nitrogen oxides or any volatile organic compounds.
 - (2) Any contaminant for which a national ambient air quality standard has been promulgated.
 - (3) Any contaminant that is subject to any standard promulgated under section 111 of the federal Clean Air Act.
 - (4) Any class I or II substance subject to a standard promulgated under or established by title VI of the federal Clean Air Act.
 - (5) Any contaminant subject to a standard promulgated under section 112 or other requirements established under section 112 of the federal Clean Air Act, including sections 112(g), (j), and (r) of the federal Clean Air Act, including the following:

(a) Any contaminant subject to requirements under section 112(j) of the federal Clean Air Act. If the administrator fails to promulgate a standard by the date established pursuant to section 112(e) of the federal Clean Air Act, any contaminant for which a subject source would be major shall be considered to be regulated on the date eighteen months after the applicable date established pursuant to section 112(e) of the federal Clean Air Act; and

(b) Any contaminant for which the requirements of section 112(g)(2) of the federal Clean Air Act have been met, but only with respect to the individual source subject to section 112(g)(2) of the federal Clean Air Act requirement.

x. "Regulated contaminant" for fee calculation, which is used only for chapter 33.1-15-23, means any "regulated air contaminant" except the following:

(1) Carbon monoxide.

(2) Any contaminant that is a regulated air contaminant solely because it is a class I or II substance subject to a standard promulgated under or established by title VI of the federal Clean Air Act.

(3) Any contaminant that is a regulated air contaminant solely because it is subject to a standard or regulation under section 112(r) of the federal Clean Air Act.

(4) Greenhouse gases.

y. "Renewal" means the process by which a permit is reissued at the end of its term.

z. "Responsible official" means one of the following:

(1) For a corporation: a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decisionmaking functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(a) The facilities employ more than two hundred fifty persons or have gross annual sales or expenditures exceeding twenty-five million dollars (in second quarter 1980 dollars).

(b) The delegation of authority to such representatives is approved in advance by the department.

(2) For a partnership or sole proprietorship: a general partner or the proprietor, respectively.

(3) For a municipality, state, federal, or other public agency: either a principal executive officer or ranking elected official. For the purposes of this section, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a regional administrator of the United States environmental protection agency).

(4) For affected sources:

(a) The designated representative insofar as actions, standards, requirements, or prohibitions under title IV of the federal Clean Air Act or the regulations promulgated thereunder are concerned.

(b) The designated representative for any other purposes under this section.

aa. "Section 502(b)(10) changes" are changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene federally enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements.

bb. "Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air contaminant or any contaminant listed under section 112(b) of the federal Clean Air Act.

cc. "Subject to regulation" means, for any air contaminant, that the air contaminant is subject to either a provision in the federal Clean Air Act, or a nationally applicable regulation codified by the administrator of the United States environmental protection agency in title 40 Code of Federal Regulations chapter I, subchapter C, that requires actual control of the quantity of emissions of that air contaminant, and that such a control requirement has taken effect and is operative to control, limit, or restrict the quantity of emissions of that air contaminant release from the regulated activity.

dd. "Title V permit to operate or permit" (unless the context suggests otherwise) means any permit or group of permits covering a source that is subject to this section that is issued, renewed, amended, or revised pursuant to this section.

ee. "Title V source" means any source subject to the permitting requirements of this section, as provided in subsection 2.

2. Applicability.

a. This section is applicable to the following sources:

(1) Any major source.

(2) Any source, including an area source, subject to a standard, limitation, or other requirement under section 111 of the federal Clean Air Act.

(3) Any source, including an area source, subject to a standard or other requirement under section 112 of the federal Clean Air Act, except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under section 112(r) of the federal Clean Air Act.

(4) Any affected source.

(5) Any source in a source category designated by the administrator of the United States environmental protection agency.

b. The following source categories are exempt from the requirements of this section:

(1) All sources listed in subdivision a that are not major sources, affected sources, or solid waste incineration units required to obtain a permit pursuant to section 129(e) of the federal Clean Air Act, are exempt from the obligation to obtain a title V permit until such time as the administrator of the United States environmental protection

agency completes a rulemaking to determine how the program should be structured for nonmajor sources and the appropriateness of any permanent exemptions.

(2) In the case of nonmajor sources subject to a standard or other requirement under either section 111 or 112 of the federal Clean Air Act after July 21, 1992, those the administrator of the United States environmental protection agency determines to be exempt from the requirement to obtain a title V source permit at the time that the new standard is promulgated.

(3) Any source listed as exempt from the requirement to obtain a permit under this section may opt to apply for a title V permit. Sources that are exempted by paragraphs 1 and 2 and which do not opt to apply for a title V permit to operate are subject to the requirements of section 33.1-15-14-03.

(4) The following source categories are exempted from the obligation to obtain a permit under this section.

(a) All sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR 60, subpart AAA - standards of performance for new residential wood heaters.

(b) All sources and source categories that would be required to obtain a permit solely because they are subject to 40 CFR 61, subpart M - national emission standard for hazardous air pollutants for asbestos, section 61.145, standard for demolition and renovation.

c. For major sources, the department will include in the permit all applicable requirements for all relevant emissions units in the major source.

For any nonmajor source subject to the requirements of this section, the department will include in the permit all applicable requirements applicable to the emissions units that cause the source to be subject to this section.

d. Fugitive emissions from a source subject to the requirements of this section shall be included in the permit application and the permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source.

3. **Scope.** Nothing within this section shall relieve the owner or operator of a source of the requirement to obtain a permit to construct under section 33.1-15-14-02 or to comply with any other applicable standard or requirement of this article.

4. Permit applications.

a. Duty to apply. For each title V source, the owner or operator shall submit a timely and complete permit application in accordance with this subdivision.

(1) Timely application.

(a) A timely application for a source applying for a title V permit for the first time is one that is submitted within one year of the source becoming subject to this section.

(b) Title V sources required to meet the requirements under section 112(g) of the federal Clean Air Act, or to have a permit to construct under section 33.1-15-14-02, shall file a complete application to obtain the title V permit or permit revision within twelve months after commencing operation. Where an

existing title V permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing operation.

(c) For purposes of permit renewal, a timely application is one that is submitted at least six months, but not more than eighteen months, prior to the date of permit expiration.

(2) Complete application. To be deemed complete, an application must provide all information required pursuant to subdivision c, except that applications for a permit revision need supply such information only if it is related to the proposed change. Information required under subdivision c must be sufficient to evaluate the subject source and its application and to determine all applicable requirements. A responsible official must certify the submitted information consistent with subdivision d. Unless the department determines that an application is not complete within sixty days of receipt of the application, such application shall be deemed to be complete, except as otherwise provided in paragraph 3 of subdivision a of subsection 6. If, while processing an application that has been determined or deemed to be complete, the department determines that additional information is necessary to evaluate or take final action on that application, it may request such information in writing and set a reasonable deadline for a response. The source's ability to operate without a permit, as set forth in subdivision b of subsection 6, shall be in effect from the date the application is determined or deemed to be complete until the final permit is issued, provided that the applicant submits any requested additional information by the deadline specified by the department.

(3) Confidential information. If a source has submitted information to the department under a claim of confidentiality, the source must also submit a copy of such information directly to the administrator of the United States environmental protection agency when directed to do so by the department.

b. Duty to supplement or correct application. Any applicant who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

c. Standard application form and required information. All applications for a title V permit to operate shall be made on forms supplied by the department. Information as described below for each emissions unit at a title V source shall be included in the application. Detailed information for emissions units or activities that have the potential to emit less than the following quantities of air contaminants (insignificant units or activities) need not be included in permit applications:

Particulate: 2 tons [1.81 metric tons] per year.

Inhalable particulate: 2 tons [1.81 metric tons] per year.

Sulfur dioxide: 2 tons [1.81 metric tons] per year.

Hydrogen sulfide: 2 tons [1.81 metric tons] per year.

Carbon monoxide: 2 tons [1.81 metric tons] per year.

Nitrogen oxides: 2 tons [1.81 metric tons] per year.

Ozone: 2 tons [1.81 metric tons] per year.

Reduced sulfur compounds: 2 tons [1.81 metric tons] per year.

Volatile organic compounds: 2 tons [1.81 metric tons].

All other regulated contaminants including those in section 112(b) of the federal Clean Air Act: 0.5 tons [0.45 metric tons] per year.

Where a contaminant could be placed in more than one category, the smallest emission level applies.

However, for insignificant activities or emissions units, a list of such activities or units must be included in the application. An applicant may not omit information needed to determine the applicability of, or to impose, any applicable requirement, or to evaluate the fee amount required under section 33.1-15-23-04. The application, shall, as a minimum, include the elements specified below:

- (1) Identifying information, including company name and address (or plant name and address if different from the company name), owner's name and agent, and telephone number and names of plant site manager or contact.
- (2) A description of the source's processes and products (by Standard Industrial Classification Code) including those associated with any proposed alternative operating scenario identified by the source.
- (3) The following emissions-related information:
 - (a) All emissions of contaminants for which the source is major, and all emissions of regulated air contaminants. A permit application shall describe all emissions of regulated air contaminants emitted from any emissions unit, except when such units are exempted under this subdivision.
 - (b) Identification and description of all points of emissions described in subparagraph a in sufficient detail to establish the basis for fees and applicability of requirements of the federal Clean Air Act and this article.
 - (c) Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable standard reference test method. For emissions units subject to an annual emissions cap, tons per year can be reported as part of the aggregate emissions associated with the cap, except where more specific information is needed, including where necessary to determine or assure compliance with, or both, an applicable requirement.
 - (d) Fuels, fuel use, raw materials, production rates, and operating schedules.
 - (e) Identification and description of air pollution control equipment and compliance monitoring devices or activities.
 - (f) Limitations on source operation affecting emissions or any work practice standards, when applicable, for all regulated contaminants.
 - (g) Other information required by any applicable requirement including information related to stack height limitations developed pursuant to chapter 33.1-15-18.
 - (h) Calculations on which the information in subparagraphs a through g is based.
- (4) The following air pollution control requirements:

- (a) Citation and description of all applicable requirements; and
 - (b) Description of or reference to any applicable test method for determining compliance with each applicable requirement.
- (5) Other specific information that may be necessary to implement and enforce other applicable requirements of the federal Clean Air Act or of this article or to determine the applicability of such requirements.
- (6) An explanation of any proposed exemptions from otherwise applicable requirements.
- (7) Additional information as determined to be necessary by the department to define proposed alternative operating scenarios identified by the source pursuant to paragraph 9 of subdivision a of subsection 5 or to define permit terms and conditions implementing any alternative operating scenario under paragraph 9 of subdivision a of subsection 5 or implementing paragraph 2 of subdivision b of subsection 6, paragraph 3 of subdivision b of subsection 6, paragraph 8 of subdivision a of subsection 5, or paragraph 10 of subdivision a of subsection 5. The permit application shall include documentation demonstrating that the source has obtained all authorizations required under the applicable requirements relevant to any proposed alternative operating scenarios, or a certification that the source has submitted all relevant materials to the department for obtaining such authorizations.
- (8) A compliance plan for all title V sources that contains all the following:
 - (a) A description of the compliance status of the source with respect to all applicable requirements.
 - (b) A description as follows:
 - [1] For applicable requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.
 - [2] For applicable requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis.
 - [3] For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.
 - [4] For applicable requirements associated with a proposed alternative operating scenario, a statement that the source will meet such requirements upon implementation of the alternative operating scenario. If a proposed alternative operating scenario would implicate an applicable requirement that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis.
 - (c) A compliance schedule as follows:
 - [1] For applicable requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.
 - [2] For applicable requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable

requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

[3] A schedule of compliance for sources that are not in compliance with all applicable requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be at least as stringent as that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based.

[4] For applicable requirements associated with a proposed alternative operating scenario, a statement that the source will meet such requirements upon implementation of the alternative operating scenario. If a proposed alternative operating scenario would implicate an applicable requirement that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term will satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(d) A schedule for submission of certified progress reports no less frequently than every six months for sources required to have a schedule of compliance to remedy a violation.

(e) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under title IV of the federal Clean Air Act with regard to the schedule and method or methods the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including the following:

(a) A certification of compliance with all applicable requirements by a responsible official consistent with subdivision d and section 114(a)(3) of the federal Clean Air Act;

(b) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test methods;

(c) A schedule for submission of compliance certifications during the permit term, to be submitted annually, or more frequently if specified by the underlying applicable requirement; and

(d) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the federal Clean Air Act.

(10) The use of nationally standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under title IV of the federal Clean Air Act.

d. Any application form, report, or compliance certification submitted pursuant to these rules shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under this section shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

5. Permit content.

a. Standard permit requirements. Each permit issued under this section shall include, as a minimum, the following elements:

(1) Emissions limitations and standards, including those operational requirements and limitations that assure compliance with all applicable requirements at the time of permit issuance. Such requirements and limitations may include approved replicable methodologies identified by the source in its title V permit application as approved by the department, provided that no approved replicable methodology shall contravene any terms needed to comply with any otherwise applicable requirement or requirement of this section or circumvent any applicable requirement that would apply as a result of implementing the approved replicable methodology.

(a) The permit must specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement upon which the term or condition is based.

(b) The permit must state that, if an applicable requirement of the federal Clean Air Act is more stringent than an applicable requirement of regulations promulgated under title IV of the federal Clean Air Act, both provisions shall be incorporated into the permit and shall be enforceable by the administrator of the United States environmental protection agency and the department.

(c) If the state implementation plan allows a determination of an alternative emissions limit at a title V source, equivalent to that contained in the plan, to be made in the permit issuance, renewal, or significant modification process, and the department elects to use such process, any permit containing such equivalency determination shall contain provisions to ensure that any resulting emissions limit has been demonstrated to be quantifiable, accountable, enforceable, and based on replicable procedures.

(2) Permit duration. For all sources, the term of the permit may not exceed five years. The permit expires on the date listed on the permit.

(3) Monitoring and related recordkeeping and reporting requirements.

(a) Each permit shall contain the following requirements with respect to monitoring:

[1] All monitoring and analysis procedures or test methods required under applicable monitoring and testing requirements, including subsection 10 and any procedures and methods promulgated pursuant to sections 504(b) or 114(a)(3) of the federal Clean Air Act. If more than one monitoring or testing requirement applies, the permit may specify a streamlined set of monitoring or testing provisions provided the specified monitoring or testing is adequate to assure compliance at least to the

same extent as the monitoring or testing applicable requirements that are not included in the permit as a result of such streamlining;

[2] If the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit, as reported pursuant to subparagraph c. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement. Recordkeeping provisions may be sufficient to meet the requirements of this item; and

[3] As necessary, requirements concerning the use, maintenance, and, if appropriate, installation of monitoring equipment or methods.

(b) With respect to recordkeeping, the permit shall incorporate all applicable recordkeeping requirements and require, if applicable, the following:

[1] Records of required monitoring information that include the following:

[a] The date, place as defined in the permit, and time of sampling or measurements;

[b] The dates analyses were performed;

[c] The company or entity that performed the analyses;

[d] The analytical techniques or methods used;

[e] The results of such analyses; and

[f] The operating conditions as existing at the time of sampling or measurement;

[2] Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

(c) With respect to reporting, the permit shall incorporate all applicable reporting requirements and require the following:

[1] Submittal of reports of any required monitoring at least every six months. All instances of deviations from permit requirements must be clearly identified in such reports. All required reports must be certified by a responsible official consistent with subdivision d of subsection 4.

[2] Prompt reporting of deviations from permit requirements, including those attributable to upset conditions as defined in the permit, the probable cause of such deviations, and any corrective actions or preventive measures taken. The department shall define "prompt" in the permit consistent with chapter 33.1-15-01 and the applicable requirements.

- (4) A permit condition prohibiting emissions exceeding any allowances that the source lawfully holds under title IV of the federal Clean Air Act or the regulations promulgated thereunder.
- (a) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to title IV of the federal Clean Air Act, or the regulations promulgated thereunder, provided that such increases do not require a permit revision under any other applicable requirement.
- (b) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.
- (c) Any such allowance shall be accounted for according to the procedures established in regulations promulgated under title IV of the federal Clean Air Act.
- (5) A severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.
- (6) Provisions stating the following:
- (a) The permittee must comply with all conditions of the title V permit. Any permit noncompliance constitutes a violation of the federal Clean Air Act and this article and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.
- (b) It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.
- (c) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.
- (d) The permit does not convey any property rights of any sort, or any exclusive privilege.
- (e) The permittee must furnish to the department, within a reasonable time, any information that the department may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee must also furnish to the department copies of records required to be kept by the permit or, for information claimed to be confidential, the permittee must also furnish such records directly to the administrator of the United States environmental protection agency along with a claim of confidentiality.
- (7) A provision to ensure that the source pays fees to the department consistent with the fee schedule in chapter 33.1-15-23.
- (8) Emissions trading. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit and the state implementation plan.

(9) Terms and conditions for reasonably anticipated alternative operating scenarios identified by the source in its application as approved by the department. Such terms and conditions:

(a) Shall require the source, contemporaneously with making a change from one operating scenario to another, to record in a log at the permitted facility a record of the alternative operating scenario under which it is operating;

(b) Shall extend the permit shield described in subdivision f to all terms and conditions under each such alternative operating scenario; and

(c) Must ensure that the terms and conditions of each such alternative scenario meet all applicable requirements and the requirements of this section. The department shall not approve a proposed alternative operating scenario into the title V permit until the source has obtained all authorizations required under any applicable requirement relevant to that alternative operating scenario.

(10) Terms and conditions, if the permit applicant requests them, for the trading of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements, including the state implementation plan, provide for trading such increases and decreases without a case-by-case approval of each emissions trade. Such terms and conditions:

(a) Shall include all terms required under subdivisions a and c to determine compliance;

(b) Shall extend the permit shield described in subdivision f to all terms and conditions that allow such increases and decreases in emissions; and

(c) Must meet all applicable requirements and requirements of this section.

(11) If a permit applicant requests it, the department shall issue permits that contain terms and conditions, including all terms required under subdivisions a and c to determine compliance, allowing for the trading of emissions increases and decreases in the permitted facility solely for the purpose of complying with a federally enforceable emissions cap that is established in the permit independent of otherwise applicable requirements provided the changes in emissions are not modifications under title I of the federal Clean Air Act and the changes do not exceed the emissions allowable under the permit. The permit applicant shall include in its application proposed replicable procedures and permit terms that ensure the emissions trades are quantifiable and enforceable. The department shall not be required to include in the emissions trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades. The permit shall also require compliance with all applicable requirements. The permittee shall supply written notification at least seven days prior to the change to the department and the administrator of the United States environmental protection agency and shall state when the change will occur and shall describe the changes in emissions that will result and how these increases and decreases in emissions will comply with the terms and conditions of the permit. The permit shield described in subdivision f shall extend to terms and conditions that allow such increases and decreases in emissions.

b. Federally enforceable requirements.

- (1) All terms and conditions in a title V permit, including any provisions designed to limit a source's potential to emit, are enforceable by the administrator of the United States environmental protection agency and citizens under the federal Clean Air Act.
- (2) Notwithstanding paragraph 1, the department shall specifically designate as not being federally enforceable under the federal Clean Air Act any terms and conditions included in the permit that are not required under the federal Clean Air Act or under any of its applicable requirements. Terms and conditions so designated are not subject to the requirements of subsections 6 and 7, or of this subsection, other than those contained in this subdivision.

c. Compliance requirements. All title V permits shall contain the following elements with respect to compliance:

- (1) Consistent with paragraph 3 of subdivision a, compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document, including reports, required by a title V permit shall contain a certification by a responsible official that meets the requirements of subdivision d of subsection 4.
- (2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow the department or an authorized representative to perform the following:
 - (a) Enter upon the permittee's premises where a title V source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;
 - (b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;
 - (c) Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
 - (d) As authorized by the federal Clean Air Act and this article, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit or applicable requirements.
- (3) A schedule of compliance consistent with paragraph 8 of subdivision c of subsection 4.
- (4) Progress reports consistent with an applicable schedule of compliance and paragraph 8 of subdivision c of subsection 4 to be submitted at least semiannually, or at a more frequent period if specified in the applicable requirement or by the department. Such progress reports shall contain the following:
 - (a) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones, or compliance were achieved; and
 - (b) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.
- (5) Requirements for compliance certification with terms and conditions contained in the permit, including emissions limitations, standards, or work practices. Permits shall include each of the following:

- (a) The frequency, which is annually or such more frequent periods as specified in the applicable requirement or by the department, of submissions of compliance certifications;
- (b) In accordance with paragraph 3 of subdivision a, a means for monitoring the compliance of the source with its emissions limitations, standards, and work practices. The means for monitoring shall be contained in applicable requirements or United States environmental protection agency guidance;
- (c) A requirement that the compliance certification include all of the following (provided that the identification of applicable information may cross-reference the permit or previous reports, as applicable):
 - [1] The identification of each term or condition of the permit that is the basis of the certification;
 - [2] The identification of the methods or other means used by the owner or operator for determining the compliance status with each term and condition during the certification period. Such methods and other means shall include, at a minimum, the methods and means required under paragraph 3 of subdivision a. If necessary, the owner or operator also shall identify any other material information that must be included in the certification to comply with section 113(c)(2) of the federal Clean Air Act, which prohibits knowingly making a false certification or omitting material information;
 - [3] The status of compliance with the terms and conditions of the permit for the period covered by the certification, including whether compliance during the period was continuous or intermittent. The certification shall be based on the method or means designated in item 2. The certification shall identify each deviation and take it into account in the compliance certification. The certification shall also identify as possible exceptions to compliance any periods during which compliance is required and in which an excursion or exceedance as defined under subsection 10 occurred; and
 - [4] Such other facts as the department may require to determine the compliance status of the source;
- (d) A requirement that all compliance certifications be submitted to the administrator of the United States environmental protection agency as well as to the department; and
- (e) Such additional requirements as may be specified pursuant to sections 114(a)(3) and 504(b) of the federal Clean Air Act.
- (6) Such other provisions as the department may require.

d. General permits.

- (1) The department may, after notice and opportunity for public participation provided under subdivision h of subsection 6, issue a general permit covering numerous similar sources. Any general permit shall comply with all requirements applicable to other title V permits and shall identify criteria by which sources may qualify for the general permit. To sources that qualify, the department shall grant the conditions and terms of the general permit. Notwithstanding the shield provisions of subdivision f, the source shall be subject to enforcement action for operation without

a title V permit to operate if the source is later determined not to qualify for the conditions and terms of the general permit. General permits shall not be authorized for affected sources under the acid rain program unless otherwise provided in regulations promulgated under title IV of the federal Clean Air Act. The department is not required to issue a general permit in lieu of individual title V permits.

(2) Title V sources that would qualify for a general permit must apply to the department for coverage under the terms of the general permit or must apply for a title V permit to operate consistent with subsection 4. The department may, in the general permit, provide for applications which deviate from the requirements of subsection 4, provided that such applications meet the requirements of title V of the federal Clean Air Act, and include all information necessary to determine qualification for, and to assure compliance with, the general permit. Without repeating the public participation procedures required under subdivision h of subsection 6, the department may grant a source's request for authorization to operate under a general permit, but such a grant shall not be a final permit action for purposes of judicial review.

e. Temporary sources. The department may issue a single permit authorizing emissions from similar operations by the same source owner or operator at multiple temporary locations. The operation must be temporary and involve at least one change of location during the term of the permit. No affected source shall be permitted as a temporary source. Permits for temporary sources shall include the following:

(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;

(2) Requirements that the owner or operator notify the department at least ten days in advance of each change in location; and

(3) Conditions that assure compliance with all other provisions of this section.

f. Permit shield.

(1) Except as provided in this section, upon written request by the applicant, the department shall include in a title V permit to operate a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirement as of the date of permit issuance, provided that:

(a) Such applicable requirements are included and are specifically identified in the permit; or

(b) The department, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

(2) A title V permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(3) Nothing in this subdivision or in any title V permit shall alter or affect the following:

(a) The provisions of section 303 of the federal Clean Air Act (emergency orders), including the authority of the administrator of the United States environmental protection agency under that section;

- (b) The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance;
- (c) The applicable requirements of the acid rain program, consistent with section 408(a) of the federal Clean Air Act; or
- (d) The ability of the United States environmental protection agency to obtain information from a source pursuant to section 114 of the federal Clean Air Act.

g. Emergency provision.

- (1) An "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emissions limitation under the title V permit to operate, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.
- (2) Effect of an emergency. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emissions limitations if the conditions of paragraph 3 are met.
- (3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:
 - (a) An emergency occurred and that the permittee can identify the causes of the emergency;
 - (b) The permitted facility was at the time being properly operated;
 - (c) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emissions standards, or other requirements in the permit; and
 - (d) The permittee submitted notice of the emergency to the department within one working day of the time when emissions limitations were exceeded due to the emergency. This notice fulfills the requirement of item 2 of subparagraph c of paragraph 3 of subdivision a. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.
- (4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.
- (5) This provision is in addition to any emergency or upset provision contained in any applicable requirement and the malfunction notification required under subdivision b of subsection 2 of section 33.1-15-01-13 when a threat to health and welfare would exist.

6. Permit issuance, renewal, reopenings, and revisions.

a. Action on application.

- (1) A permit, permit modification, or permit renewal may be issued only if all of the following conditions have been met:

- (a) The department has received a complete application for a permit, permit modification, or permit renewal, except that a complete application need not be received before issuance of a general permit under subdivision d of subsection 5;
- (b) Except for modifications qualifying for minor permit modification procedures under paragraphs 1 and 2 of subdivision e, the department has complied with the requirements for public participation under subdivision h;
- (c) The department has complied with the requirements for notifying and responding to affected states under subdivision b of subsection 7;
- (d) The conditions of the permit provide for compliance with all applicable requirements and the requirements of this section; and
- (e) The administrator of the United States environmental protection agency has received a copy of the proposed permit and any notices required under subdivisions a and b of subsection 7, and has not objected to issuance of the permit under subdivision c of subsection 7 within the time period specified therein.

(2) Except for applications received during the initial transitional period described in 40 CFR 70.4(b)(11) or under regulations promulgated under title IV or title V of the federal Clean Air Act for the permitting of affected sources under the acid rain program, the department shall take final action on each permit application, including a request for permit modification or renewal, within eighteen months after receiving a complete application.

(3) The department shall provide notice to the applicant of whether the application is complete. Unless the department requests additional information or otherwise notifies the applicant of incompleteness within sixty days of receipt of an application, the application shall be deemed complete. For modifications processed through the minor permit modification procedures, in paragraphs 1 and 2 of subdivision e, a completeness determination is not required.

(4) The department shall provide a statement that sets forth the legal and factual basis for the draft permit conditions, including references to the applicable statutory or regulatory provisions. The department shall send this statement to the United States environmental protection agency and to any other person who requests it.

(5) The submittal of a complete application shall not affect the requirement that any source have a permit to construct under section 33.1-15-14-02.

b. Requirement for a permit.

(1) Except as provided in the following sentence, paragraphs 2 and 3, subparagraph e of paragraph 1 of subdivision e, and subparagraph e of paragraph 2 of subdivision e, no title V source may operate after the time that it is required to submit a timely and complete application under this section, except in compliance with a permit issued under this section. If a title V source submits a timely and complete application for permit issuance, including for renewal, the source's failure to have a title V permit is not a violation of this section until the department takes final action on the permit application, except as noted in this subsection. This protection shall cease to apply if, subsequent to the completeness determination made pursuant to paragraph 3 of subdivision a, and as required by paragraph 2 of subdivision a of subsection 4, the applicant fails to submit by the deadline specified

in writing by the department any additional information identified as being needed to process the application. For timely and complete renewal applications for which the department has failed to issue or deny the renewal permit before the expiration date of the previous permit, all the terms and conditions of the permit, including the permit shield that was granted pursuant to subdivision f of subsection 5 shall remain in effect until the renewal permit has been issued or denied.

(2) A permit revision is not required for section 502(b)(10) changes provided:

- (a) The changes are not modifications under chapters 33.1-15-12, 33.1-15-13, and 33.1-15-15 or title I of the federal Clean Air Act.
- (b) The changes do not exceed the emissions allowable under the title V permit whether expressed therein as a rate of emissions or in terms of total emissions.
- (c) A permit to construct under section 33.1-15-14-02 has been issued, if required.
- (d) The facility provides the department and the administrator of the United States environmental protection agency with written notification at least seven days in advance of the proposed change. The written notification shall include a description of each change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change.

The permit shield described in subdivision f of subsection 5 shall not apply to any change made pursuant to this paragraph.

(3) A permit revision is not required for changes that are not addressed or prohibited by the permit provided:

- (a) Each such change shall meet all applicable requirements and shall not violate any existing permit term or condition.
- (b) The source must provide contemporaneous written notice to the department and the administrator of the United States environmental protection agency of each such change, except for changes that qualify as insignificant under the provisions of subdivision c of subsection 4. Such written notice shall describe each such change, including the date, any change in emissions, contaminants emitted, and any applicable requirement that would apply as a result of the change.
- (c) The permittee shall keep a record describing changes made at the source that result in emissions of a regulated air contaminant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes.
- (d) The changes are not subject to any requirements under title IV of the federal Clean Air Act.
- (e) The changes are not modifications under chapters 33.1-15-12, 33.1-15-13, and 33.1-15-15 or any provision of title I of the federal Clean Air Act.
- (f) A permit to construct under section 33.1-15-14-02 has been issued, if required.

The permit shield described in subdivision f of subsection 5 shall not apply to any change made pursuant to this paragraph.

c. Permit renewal and expiration.

- (1) Permits being renewed are subject to the same procedural requirements, including those for public participation, affected state and the United States environmental protection agency review, that apply to initial permit issuance; and
- (2) Permit expiration terminates the source's right to operate unless a timely and complete renewal application has been submitted consistent with subdivision b of subsection 6 and subparagraph c of paragraph 1 of subdivision a of subsection 4.

d. Administrative permit amendments.

- (1) An "administrative permit amendment" is a permit revision that:
 - (a) Corrects typographical errors;
 - (b) Identifies a change in the name, address, or telephone number of any person identified in the permit, or provides a similar minor administrative change at the source;
 - (c) Requires more frequent monitoring or reporting by the permittee;
 - (d) Allows for a change in ownership or operational control of a source if the department determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the department;
 - (e) Incorporates into the title V permit the requirements from a permit to construct, provided that the permit to construct review procedure is substantially equivalent to the requirements of subsections 6 and 7 that would be applicable to the change if it were subject to review as a permit modification, and compliance requirements substantially equivalent to those contained in subsection 5; or
 - (f) Incorporates any other type of change which the administrator of the United States environmental protection agency has approved as being an administrative permit amendment as part of the approved title V operating permit program.
- (2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under title IV of the federal Clean Air Act.
- (3) Administrative permit amendment procedures. An administrative permit amendment may be made by the department consistent with the following:
 - (a) The department shall take no more than sixty days from receipt of a request for an administrative permit amendment to take final action on such request, and may incorporate such changes without providing notice to the public or affected states provided that it designates any such permit revisions as having been made pursuant to this subdivision.
 - (b) The department shall submit a copy of the revised permit to the administrator of the United States environmental protection agency.

(c) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request provided a permit to construct under section 33.1-15-14-02 has been issued, if required.

(4) The department may, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield in subdivision f of subsection 5 for administrative permit amendments made pursuant to subparagraph e of paragraph 1 of subdivision d which meet the relevant requirements of subsections 5, 6, and 7 for significant permit modifications.

e. Permit modification. A permit modification is any revision to a title V permit that cannot be accomplished under the provisions for administrative permit amendments under subdivision d. A permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under title IV of the federal Clean Air Act.

(1) Minor permit modification procedures.

(a) Criteria.

[1] Minor permit modification procedures may be used only for those permit modifications that:

[a] Do not violate any applicable requirement;

[b] Do not involve significant changes to existing monitoring, reporting, or recordkeeping requirements in the permit;

[c] Do not require or change a case-by-case determination of an emissions limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

[d] Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such terms and conditions include a federally enforceable emissions cap assumed to avoid classification as a modification under any provision of title I of the federal Clean Air Act; and an alternative emissions limit approved pursuant to regulations promulgated under section 112(i)(5) of the federal Clean Air Act;

[e] Are not modifications under chapters 33.1-15-12, 33.1-15-13, and 33.1-15-15 or any provision of title I of the federal Clean Air Act; and

[f] Are not required to be processed as a significant modification.

[2] Notwithstanding item 1 and subparagraph a of paragraph 2 of subdivision e, minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the state implementation plan, or in applicable requirements promulgated by the United States environmental protection agency.

- (b) Application. An application requesting the use of minor permit modification procedures shall meet the requirements of subdivision c of subsection 4 and shall include the following:
- [1] A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
 - [2] The source's suggested draft permit;
 - [3] Certification by a responsible official, consistent with subdivision d of subsection 4, that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
 - [4] Completed forms for the department to use to notify the administrator of the United States environmental protection agency and affected states as required under subsection 7.
- (c) United States environmental protection agency and affected state notification. Within five working days of receipt of a complete permit modification application, the department shall notify the administrator of the United States environmental protection agency and affected states of the requested permit modification. The department shall promptly send any notice required under paragraph 2 of subdivision b of subsection 7 to the administrator of the United States environmental protection agency.
- (d) Timetable for issuance. The department may not issue a final permit modification until after the United States environmental protection agency forty-five-day review period or until the United States environmental protection agency has notified the department that the United States environmental protection agency will not object to issuance of the permit modification, whichever is first, although the department can approve the permit modification prior to that time. Within ninety days of the department's receipt of an application under minor permit modification procedures or fifteen days after the end of the administrator's forty-five-day review period under subdivision c of subsection 7, whichever is later, the department shall:
- [1] Issue the permit modification as proposed;
 - [2] Deny the permit modification application;
 - [3] Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures; or
 - [4] Revise the draft permit modification and transmit to the administrator the new proposed permit modification as required by subdivision a of subsection 7.
- (e) Source's ability to make change. A source may make the change proposed in its minor permit modification application only after it files such application and the department approves the change in writing. If the department allows the source to make the proposed change prior to taking action specified in items 1, 2, and 3 of subparagraph d, the source must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the source need not comply with the existing permit terms and conditions it seeks to modify. However, if the source

fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(f) The permit shield under subdivision f of subsection 5 shall not extend to minor permit modifications.

(2) Group processing of minor permit modifications. Consistent with this paragraph, the department may modify the procedure outlined in paragraph 1 to process groups of a source's applications for certain modifications eligible for minor permit modification processing.

(a) Criteria. Group processing of modifications may be used only for those permit modifications:

[1] That meet the criteria for minor permit modification procedures under item 1 of subparagraph a of paragraph 1 of subdivision e; and

[2] That collectively are below the threshold level which is ten percent of the emissions allowed by the permit for the emissions unit for which the change is requested, twenty percent of the applicable definition of major source in subsection 1, or five tons [4.54 metric tons] per year, whichever is least.

(b) Application. An application requesting the use of group processing procedures shall meet the requirements of subdivision c of subsection 4 and shall include the following:

[1] A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs.

[2] The source's suggested draft permit.

[3] Certification by a responsible official, consistent with subdivision d of subsection 4, that the proposed modification meets the criteria for use of group processing procedures and a request that such procedures be used.

[4] A list of the source's other pending applications awaiting group processing, and a determination of whether the requested modification, aggregated with these other applications, equals or exceeds the threshold set under item 2 of subparagraph a of paragraph 2 of subdivision e.

[5] Certification, consistent with subdivision d of subsection 4, that the source has notified the United States environmental protection agency of the proposed modification. Such notification need only contain a brief description of the requested modification.

[6] Completed forms for the department to use to notify the administrator of the United States environmental protection agency and affected states as required under subsection 7.

(c) United States environmental protection agency and affected state notification. On a quarterly basis or within five business days of receipt of an application demonstrating that the aggregate of a source's pending applications equals or exceeds the threshold level set under item 2 of subparagraph a of paragraph 2 of subdivision e, whichever is earlier, the department shall meet its obligation

under paragraph 1 of subdivision a of subsection 7 and paragraph 1 of subdivision b of subsection 7 to notify the administrator of the United States environmental protection agency and affected states of the requested permit modifications. The department shall send any notice required under paragraph 2 of subdivision b of subsection 7 to the administrator of the United States environmental protection agency.

(d) Timetable for issuance. The provisions of subparagraph d of paragraph 1 of subdivision e shall apply to modifications eligible for group processing, except that the department shall take one of the actions specified in items 1 through 4 of subparagraph d of paragraph 1 of subdivision e within one hundred eighty days of receipt of the application or fifteen days after the end of the administrator's forty-five-day review period under subdivision c of subsection 7, whichever is later.

(e) Source's ability to make change. The provisions of subparagraph e of paragraph 1 apply to modifications eligible for group processing.

(f) The permit shield under subdivision f of subsection 5 shall not extend to group processing of minor permit modifications.

(3) Significant modification procedures.

(a) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that do not qualify as minor permit modifications or as administrative amendments. Every significant change in existing monitoring permit terms or conditions and every relaxation of reporting or recordkeeping permit terms or conditions shall be considered significant. Nothing herein shall be construed to preclude the permittee from making changes consistent with this subsection that would render existing permit compliance terms and conditions irrelevant.

(b) Significant permit modifications shall meet all requirements of this section, including those for applications, public participation, review by affected states, and review by the United States environmental protection agency, as they apply to permit issuance and permit renewal. The department shall complete review of significant permit modifications within nine months after receipt of a complete application.

f. Reopening for cause.

(1) Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration of the permit. A permit shall be reopened and revised under any of the following circumstances:

(a) Additional applicable requirements under the federal Clean Air Act become applicable to a major title V source with a remaining permit term of three or more years. Such a reopening shall be completed not later than eighteen months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions has been extended.

(b) Additional requirements, including excess emissions requirements, become applicable to an affected source under title IV of the federal Clean Air Act or the regulations promulgated thereunder. Upon approval by the administrator of the

United States environmental protection agency, excess emissions offset plans shall be deemed to be incorporated into the permit.

(c) The department or the United States environmental protection agency determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

(d) The administrator of the United States environmental protection agency or the department determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(2) Proceedings to reopen and issue a permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of the permit for which cause to reopen exists. Such reopening shall be made as expeditiously as practicable.

(3) Reopenings under paragraph 1 shall not be initiated before a notice of such intent is provided to the title V source by the department at least thirty days in advance of the date that the permit is to be reopened, except that the department may provide a shorter time period in the case of an emergency.

g. Reopenings for cause by the United States environmental protection agency.

(1) If the administrator of the United States environmental protection agency finds that cause exists to terminate, modify, or revoke and reissue a permit pursuant to subdivision f, within ninety days after receipt of such notification, the department shall forward to the United States environmental protection agency a proposed determination of termination, modification, or revocation and reissuance, as appropriate.

(2) The administrator of the United States environmental protection agency will review the proposed determination from the department within ninety days of receipt.

(3) The department shall have ninety days from receipt of the United States environmental protection agency objection to resolve any objection that the United States environmental protection agency makes and to terminate, modify, or revoke and reissue the permit in accordance with the administrator's objection.

(4) If the department fails to submit a proposed determination or fails to resolve any objection, the administrator of the United States environmental protection agency will terminate, modify, or revoke and reissue the permit after taking the following actions:

(a) Providing at least thirty days' notice to the permittee in writing of the reasons for any such action.

(b) Providing the permittee an opportunity for comment on the administrator's proposed action and an opportunity for a hearing.

h. Public participation. Except for modifications qualifying for minor permit modification procedures, all permit proceedings, including initial permit issuance, significant modifications, and renewals, shall be subject to procedures for public notice including offering an opportunity for public comment and a hearing on the draft permit. These procedures shall include the following:

- (1) Notice shall be given by publication in a newspaper of general circulation in the area where the source is located or in a state publication designed to give general public notice; to persons on a mailing list developed by the department, including those who request in writing to be on the list; and by other means if necessary to assure adequate notice to the affected public;
- (2) The notice shall identify the affected facility; the name and address of the permittee; the name and address of the department; the activity or activities involved in the permit action; the emissions change involved in any permit modification; the name, address, and telephone number of a person from whom interested persons may obtain additional information, including copies of the permit draft, the application, all relevant supporting materials, and all other materials available to the department that are relevant to the permit decision; a brief description of the comment procedures required by this subsection; and the time and place of any hearing that may be held, including a statement of procedures to request a hearing, unless a hearing has already been scheduled;
- (3) The department shall provide such notice and opportunity for participation by affected states as is provided for by subsection 7;
- (4) The department shall provide at least thirty days for public comment and shall give notice of any public hearing at least thirty days in advance of the hearing; and
- (5) The department shall keep a record of the commenters and also of the issues raised during the public participation process. These records shall be available to the public.

7. Permit review by the United States environmental protection agency and affected states.

a. Transmission of information to the administrator.

- (1) The department shall provide a copy of each permit application including any application for a permit modification (including the compliance plan), to the administrator of the United States environmental protection agency except that the applicant shall provide such information directly to the administrator of the United States environmental protection agency when directed to do so by the department. The department shall provide a copy of each proposed permit and each final title V permit to operate to the administrator of the United States environmental protection agency. To the extent practicable, the preceding information shall be provided in computer-readable format compatible with the United States environmental protection agency's national database management system.
- (2) The department may waive the requirements of paragraph 1 and paragraph 1 of subdivision b for any category of sources (including any class, type, or size within such category) other than major sources upon approval by the administrator of the United States environmental protection agency.
- (3) The department shall keep these records for at least five years.

b. Review by affected states.

- (1) The department shall give notice of each draft permit to any affected state on or before the time that the notice to the public under subdivision h of subsection 6 is given, except to the extent paragraphs 1 and 2 of subdivision e of subsection 6 require the timing of the notice to be different.

(2) As part of the submittal of the proposed permit to the administrator of the United States environmental protection agency (or as soon as possible after the submittal for minor permit modification procedures allowed under paragraphs 1 and 2 of subdivision e of subsection 6) the department shall notify the administrator of the United States environmental protection agency and any affected state in writing of any refusal by the department to accept all recommendations for the proposed permit that the affected state submitted during the public or affected state review period. The notice shall include the department's reasons for not accepting any such recommendation. The department is not required to accept recommendations that are not based on applicable requirements or the requirements of this section.

c. United States environmental protection agency objection. No permit for which an application must be transmitted to the administrator of the United States environmental protection agency under subdivision a shall be issued if the administrator of the United States environmental protection agency objects to its issuance in writing within forty-five days of receipt of the proposed permit and all necessary supporting information.

d. Public petitions to the administrator of the United States environmental protection agency. If the administrator of the United States environmental protection agency does not object in writing under subdivision c, any person may petition the administrator of the United States environmental protection agency within sixty days after the expiration of the administrator's forty-five-day review period to make such objection. Any such petition shall be based only on objections to the permit that were raised with reasonable specificity during the public comment period provided for in subdivision h of subsection 6, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period. If the administrator of the United States environmental protection agency objects to the permit as a result of a petition filed under this subdivision, the department shall not issue the permit until the United States environmental protection agency's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the forty-five-day review period and prior to the United States environmental protection agency's objection. If the department has issued a permit prior to receipt of the United States environmental protection agency's objection under this subdivision, the department may thereafter issue only a revised permit that satisfies the United States environmental protection agency's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

e. Prohibition on default issuance. The department shall issue no title V permit to operate, including a permit renewal or modification, until affected states and the United States environmental protection agency have had an opportunity to review the proposed permit as required under this subsection.

8. Judicial review of title V permit to operate decisions.

a. The applicant, any person who participated in the department's public participation process, and any other person who could obtain judicial review under North Dakota Century Code section 28-32-42 may obtain judicial review provided such appeal is filed in accordance with North Dakota Century Code section 28-32-42 within thirty days after notice of the final permit action.

b. The department's failure to take final action on an application for a permit, permit renewal, or permit revision within the timeframes referenced in this section shall be appealable in accordance with North Dakota Century Code section 28-32-42 within thirty days after expiration of the applicable timeframes.

- c. In accordance with North Dakota Century Code chapter 28-32, the mechanisms outlined in this subsection shall be the exclusive means for judicial review of permit decisions referenced in this section.
- d. Solely for the purpose of obtaining judicial review in state court, final permit action shall include the failure of the department to take final action on an application for a permit, permit renewal, or permit revision within the timeframes referenced in this section.
- e. Failure to take final action within ninety days of receipt of an application requesting minor permit modification procedures (or one hundred eighty days for modifications subject to group processing requirements) shall be considered final action and subject to judicial review in state court.

9. **Enforcement.** The department may suspend, revoke, or terminate a permit for violations of this article, violation of any permit condition or for failure to respond to a notice of violation or any order issued pursuant to this article. A permit to operate which has been revoked or terminated pursuant to this article must be surrendered forthwith to the department. No person may operate or cause the operation of a source if the department denies, terminates, revokes, or suspends a permit to operate.

10. **Compliance assurance monitoring.** Except as noted below, title 40 Code of Federal Regulations part 64 compliance assurance monitoring, as it exists on July 2, 2010, is incorporated by reference.

- a. "Administrator" means the department except for those duties that cannot be delegated by the United States environmental protection agency. For those duties that cannot be delegated, administrator means the department and the administrator of the United States environmental protection agency.
- b. "Part 70 permit" means a title V permit to operate.
- c. "Permitting authority" means the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09, 23.1-06-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09, 23.1-06-10; S.L. 2017, ch. 199, § 21

33.1-15-14-07. Source exclusions from title V permit to operate requirements.

1. **Purpose.** The purpose of this section is to clarify which sources are minor sources with respect to section 33.1-15-14-06. The owner or operator of any source that would be classified as a major source under section 33.1-15-14-06 and which is not specifically excluded by this section shall comply with the requirements of section 33.1-15-14-06.

2. **Definitions.** For purposes of this section:

- a. "Bulk gasoline plant" means any bulk gasoline distribution facility that has a gasoline throughput less than or equal to twenty thousand gallons [75,700 liters] per day and that receives gasoline by truck rather than by rail.
- b. "Coatings" means coatings plus diluents plus cleanup solvents.
- c. "Fountain solution additives" includes isopropyl alcohol, n-propyl alcohol, n-butanol, and alcohol substitutes.
- d. "Hazardous air contaminant" means any air contaminant listed pursuant to subsection 112(b) of the federal Clean Air Act.

e. "Refueling positions" means the number of vehicles that could be dispensing simultaneously at a gasoline service station.

3. Applicability.

a. The owner or operator of the following stationary sources is not required to obtain a title V permit to operate under section 33.1-15-14-06 if the conditions of this section are met:

- (1) Gasoline service stations.
- (2) Gasoline bulk plants.
- (3) Coating sources.
- (4) Printing, publishing, and packaging operations.
- (5) Degreasers using volatile organic solvents.
- (6) Hot mix asphalt plants.

b. Any facility obtaining coverage under this section must submit a notification in writing to the department within ninety days of publication of this section unless specifically exempted from this requirement in the applicable subdivision of this section. The notification must contain the following information:

- (1) Facility name, location, and nature of business.
- (2) A list of all the sources of air contaminants at the facility.
- (3) The condition of this section which is applicable to the facility.
- (4) Total material usage, source capacity, or throughput for the previous month or twelve months at the facility, in accordance with the subdivision that is applicable to the facility.
- (5) A signed statement accepting the throughput or usage limitation.

c. Complying with the conditions of this section does not exempt the owner or operator of a facility from the obligation to apply for and obtain a permit to construct or a minor source permit to operate unless specifically exempted in section 33.1-15-14-02 or 33.1-15-14-03.

d. The owner or operator of any facility listed in subdivision a which has potential emissions that would classify it as a major source even after the conditions of this section are met, or are not able to comply with the applicable conditions, shall obtain a title V permit to operate or a minor source permit to operate which limits the potential to emit of the source to a level below the major source threshold.

e. Complying with the conditions of this section does not relieve the owner or operator of a source of the responsibility to comply with any other applicable requirements of this article.

f. If the facility deviates from any condition, limit, or requirement of this section, a report must be submitted to the department within thirty days of the deviation containing the following information:

- (1) The facility's name and location.

- (2) Applicable condition, limit, or requirement for the facility for which a deviation occurred.
- (3) A summary of the records showing the deviation, accompanied by an explanation of the deviation.
- (4) A plan of action to prevent future occurrences of any deviation at the facility.

g. All records required by this section must be maintained for a period of five years from the last date of entry. The records must be available for inspection or submittal to the department upon request. If a facility is limited by a material usage, capacity, or throughput based on a twelve-month rolling period, a log must be updated monthly to include the previous twelve months' total material usage, capacity, or throughput.

4. Exclusion standards.

a. Gasoline service stations. The owner or operator of sources where gasoline dispensing operations account for more than ninety percent of all emissions from the facility is not required to obtain a title V permit to operate if the following conditions are met:

(1) No vapor recovery is used:

(a) The source's total sales of gasoline must not exceed three hundred eighty thousand gallons [1,438,300 liters] per month in any calendar month. To demonstrate compliance with this limit, monthly records of throughput must be maintained at the source.

(b) If the number of refueling positions is no more than seventeen at the source, then the source is exempt from formal application to the department under subdivision b of subsection 3.

(2) Stage I vapor recovery is used:

(a) The source's total sales of gasoline must not exceed six hundred thirty thousand gallons [2,384,800 liters] per month in any calendar year. To demonstrate compliance with this limit, monthly records of throughput must be maintained at the source.

(b) If the number of refueling positions is no more than twenty-nine at the source, then the source is exempt from formal application to the department under subdivision b of subsection 3.

b. Gasoline bulk plants. The owner or operator of gasoline bulk plants where gasoline loading and unloading operations account for more than ninety percent of all emissions from the source are covered by this subdivision. To demonstrate compliance with the twenty thousand gallons [75,700 liters] per day of gasoline definition of a bulk plant, monthly records of throughput must be maintained at the source.

c. Coating sources.

(1) The owner or operator of sources where surface coating operations account for more than ninety percent of all hazardous air contaminant emissions from the facility is not required to obtain a title V permit to operate if the conditions in subparagraph a or b are met.

(a) The source's total usage of surface coatings must not exceed two hundred fifty gallons [946.25 liters] of coatings per month in any calendar month nor exceed

three thousand gallons [11,355 liters] of coatings per twelve-month period. The coatings are limited to six pounds per gallon [719 grams per liter] of any individual hazardous air contaminant. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(b) The source's total hazardous air contaminant emissions shall not exceed ten tons per twelve-month period. Hazardous air contaminant emissions must be calculated by multiplying the surface coating material usage in gallons by the individual hazardous air contaminant content in pounds per gallon. To demonstrate compliance with the emissions limitation, the emissions must be calculated on a monthly basis and recorded in a log. All records of material usage, hazardous air contaminant content, and emissions must be maintained at the facility.

(2) The owner or operator of an automobile refinishing shop where operations account for more than ninety percent of volatile organic compound emissions and hazardous air contaminant emissions is not required to obtain a title V permit to operate if the usage of coatings is less than two hundred fifty gallons [946.25 liters] per month or three thousand gallons [11,355 liters] of coatings per twelve-month period. This item does not apply to facilities capable of refinishing vehicles other than automobiles or trucks. Sources are exempt from the notification requirements under subdivision b of subsection 3 if:

(a) The auto refinishing shop business is entirely, or almost entirely, for collision repairs and the business has two or fewer bays;

(b) Substantial portions of the auto refinishing shop business are devoted to repainting entire vehicles and the business only has one bay devoted to painting; or

(c) The auto refinishing shop business does not have the physical or operational capability to do more than fifty jobs per week.

d. Printing, publishing, and packaging operations.

(1) The owner or operator of facilities where sheetfed (nonheatset) offset lithography or nonheatset web offset lithography printing operations are conducted is not required to obtain a title V permit to operate if the conditions in subparagraphs a, b, and c are met.

(a) The facility must use less than fourteen thousand two hundred seventy-five gallons [54,030 liters] of cleaning solvent and fountain solution additives in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(b) The facility must use less than three thousand three hundred thirty-three gallons [12,615 liters] of materials containing multiple hazardous air contaminants in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(c) The facility must use less than one thousand three hundred thirty-three gallons [5,045 liters] of material containing any individual hazardous air contaminant in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

- (2) The owner or operator of facilities where heatset web offset lithography printing operations are conducted is not required to obtain a title V permit to operate if the conditions in subparagraphs a, b, and c are met.
- (a) The facility must use less than one hundred thousand pounds [45.36 megagrams] of ink, cleaning solvent, and fountain solution additives in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (b) The facility must use less than three thousand three hundred thirty-three gallons [12,615 liters] of materials containing multiple hazardous air contaminants in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (c) The facility must use less than one thousand three hundred thirty-three gallons [5,045 liters] of material containing any individual hazardous air contaminant in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (3) The owner or operator of facilities where screen printing operations are conducted is not required to obtain a title V permit to operate if the conditions in subparagraphs a, b, and c are met.
- (a) The facility must use less than fourteen thousand two hundred seventy-five gallons [54,030 liters] of the sum of solvent-based inks, cleaning solvents, adhesives, and coatings in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (b) The facility must use less than three thousand three hundred thirty-three gallons [12,615 liters] of materials containing multiple hazardous air contaminants in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (c) The facility must use less than one thousand three hundred thirty-three gallons [5,045 liters] of material containing any individual hazardous air contaminant in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (4) The owner or operator of facilities, where flexography, or rotogravure printing operations with water-based or ultraviolet-cured inks, coatings, and adhesives are conducted, is not required to obtain a title V permit to operate if the conditions in subparagraphs a, b, and c are met.
- (a) The facility must use less than four hundred thousand pounds [181 megagrams] of the sum of solvent-based inks, cleaning solvents, and adhesives in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.
- (b) The facility must use less than three thousand three hundred thirty-three gallons [12,615 liters] of materials containing multiple hazardous air contaminants in any twelve-month rolling period. To demonstrate compliance

with the usage limit, monthly records of material usage must be maintained at the facility.

(c) The facility must use less than one thousand three hundred thirty-three gallons [5,045 liters] of material containing any individual hazardous air contaminant in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(5) The owner or operator of facilities where flexography or rotogravure printing operations with solvent inks are conducted is not required to obtain a title V permit to operate if the conditions in subparagraphs a, b, and c are met.

(a) The facility must use less than one hundred thousand pounds [45.36 megagrams] of the sum of ink, coatings, adhesives, dilution solvents, and cleaning solvents in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(b) The facility must use less than three thousand three hundred thirty-three gallons [12,615 liters] of materials containing multiple hazardous air contaminants in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

(c) The facility must use less than one thousand three hundred thirty-three gallons [5,045 liters] of material containing any individual hazardous air contaminant in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of material usage must be maintained at the facility.

e. Degreasers using volatile organic solvents. The owner or operator of facilities where degreasing operations account for more than ninety percent of all volatile organic compound emissions and hazardous air contaminant emissions from the facility is not required to obtain a title V permit to operate if the conditions in paragraph 1 or 2 are met.

(1) If non-halogenated solvents are used, the usage is limited to two thousand two hundred gallons [8,327 liters] of any one solvent-containing material and five thousand four hundred gallons [20,439 liters] of any combination of solvent-containing materials in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of solvent usage must be maintained at the facility.

(2) If halogenated solvents are used, including methyl chloroform, trichloroethane, and methylene chloride, the usage is limited to one thousand two hundred gallons [4,542 liters] of any one solvent-containing material and two thousand nine hundred gallons [10,976 liters] of any combination of solvent-containing materials in any twelve-month rolling period. To demonstrate compliance with the usage limit, monthly records of solvent usage must be maintained at the facility.

f. Hot mix asphalt plants. The owner or operator of facilities where hot mix asphalt production operations account for more than ninety percent of all emissions from the facility is not required to obtain a title V permit to operate if the amount of hot mix asphalt produced does not exceed two hundred fifty thousand tons [226,757 metric tons] in any twelve-month rolling period. To demonstrate compliance with this limit, monthly records of hot mix asphalt produced must be maintained at the facility. Sources that are excluded under this subdivision must obtain a minor source permit to operate under section 33.1-15-14-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-15
PREVENTION OF SIGNIFICANT DETERIORATION OF AIR QUALITY

Section

33.1-15-15-01 [Reserved]

33.1-15-15-01.1 Purpose

33.1-15-15-01.2 Scope

33.1-15-15-02 Reclassification

33.1-15-15-01. [Reserved].

33.1-15-15-01.1. Purpose.

The purpose of this chapter is to adopt by reference federal provisions for the prevention of significant deterioration program in North Dakota. The department will continue to implement the prevention of significant deterioration program as part of the state implementation plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-15-01.2. Scope.

The provisions of title 40 Code of Federal Regulations part 52, section 21, paragraphs (a)(2) through (e), (h) through (r), (v), (w), (aa), and (bb) as they exist on July 1, 2015, are incorporated by reference into this chapter. This includes revisions to the rules that were published as a final rule in the Federal Register by this date but had not been published in the Code of Federal Regulations yet. Any changes or additions to the provisions are listed below the affected paragraph.

For purposes of this chapter, administrator means the department except for those duties that cannot be delegated by the United States environmental protection agency. For those duties listed below, or any others that cannot be delegated, administrator means the administrator of the United States environmental protection agency:

(b)(17) - Definition of federally enforceable.

(b)(37)(i) - Definition of repowering.

(b)(43) - Definition of prevention of significant deterioration.

(b)(48)(ii)(c) - Definition of baseline actual emissions.

(b)(50)(i) - Definition of regulated NSR pollutant.

(1)(2) - Air quality models.

(p)(2) - Consultation with the federal land manager.

For purposes of this chapter, permit or approval to construct means a permit to construct. The procedures for obtaining a permit to construct are specified in section 33.1-15-14-02 and this chapter. When there is a conflict in the requirements between this chapter and section 33.1-15-14-02, the requirements of this chapter shall apply.

For purposes of this chapter, the term "40 CFR 52.21" is replaced with "this chapter".

<u>40 CFR 52.21(b)(1)</u>	<u>The following is added:</u>
	<u>For purposes of this definition, regulated NSR pollutant does not include greenhouse gases as defined in 40 CFR 86.1818-12(a).</u>
<u>40 CFR 52.21(b)(2)</u>	<u>The following is added:</u>
	<u>For purposes of this definition, regulated NSR pollutant does not include greenhouse gases as defined in 40 CFR 86.1818-12(a).</u>
<u>40 CFR 52.21(b)(2)(iii)(a)</u>	<u>The following is deleted:</u>
	<u>Routine maintenance, repair and replacement shall include, but not be limited to, any activity(s) that meets the requirements of the equipment replacement provisions contained in paragraph (cc).</u>
<u>40 CFR 52.21(b)(3)(iii)(a)</u>	<u>The words "the administrator or other reviewing authority" are replaced with "the department or the administrator of the United States environmental protection agency".</u>
<u>40 CFR 52.21(b)(14)</u>	<u>The following is added:</u>
	<u>(v) The department shall provide a list of baseline dates for each contaminant for each baseline area.</u>
<u>40 CFR 52.21(b)(15)</u>	<u>The following is added:</u>
	<u>(iv) North Dakota is divided into two intrastate areas under section 107(d)(1)(D) or (E) of the Federal Clean Air Act [Pub. L. 95-95]: the Cass County portion of region no. 130, the metropolitan Fargo-Moorhead interstate air quality control region; and region no. 172, the North Dakota intrastate air quality control region (the remaining fifty-two counties).</u>
<u>40 CFR 52.21(23)(i)</u>	<u>The following is added:</u>
	<u>Greenhouse gases: 75,000 tpy CO₂ equivalent.</u>
<u>40 CFR 52.21(b)(22)</u>	<u>The following is added:</u>
	<u>Designating an application complete for purposes of permit processing does not preclude the department from requesting or accepting any additional information.</u>
<u>40 CFR 52.21(b)(29)</u>	<u>The following is added:</u>
	<u>This term does not include effects on integral vistas.</u>
<u>40 CFR 52.21(b)(30)</u>	<u>The term section 51.100(s) of this chapter is deleted and replaced with "40 CFR 51.100(s)".</u>
<u>40 CFR 52.21(b)(43)</u>	<u>The paragraph is deleted in its entirety and replaced with the following:</u>
	<u>Prevention of significant deterioration (PSD) program means a major source preconstruction permit program administered by the department that has been approved by the administrator of the United States environmental protection agency and incorporated into the state implementation plan pursuant to 40 CFR 51.166 to</u>

implement the requirements of that section. Any permit issued by the department under the program is a major NSR permit.

40 CFR 52.21(b) (48)(ii) The following words are deleted:
"by the administrator for a permit required under this section or".

40 CFR 52.21(b) (49) The following words are deleted "administrator in subchapter C of this chapter" and replaced with the following:

Administrator of the United States environmental protection agency in title 40, Code of Federal Regulations, chapter I subchapter C.

40 CFR 52.21(b) (49)(i) "\$ 86.181-12(a) of this chapter" is deleted and replaced with: 40 CFR 86.1818-12(a).

40 CFR 52.21(b) (49)(ii)(a) "Table A-1 to subpart A of part 98 of this chapter" is deleted and replaced with the following: 40 CFR 98, subpart A, table A-1.

The following is deleted:

For purposes of this paragraph, prior to July 21, 2014, the mass of the greenhouse gas carbon dioxide shall not include carbon dioxide emissions resulting from the combustion or decomposition of nonfossilized and biodegradable organic material originating from plants, animals, or micro-organisms (including products, byproducts, residues and waste from agriculture, forestry and related industries as well as the nonfossilized and biodegradable organic fractions of industrial and municipal wastes, including gases and liquids recovered from the decomposition of nonfossilized and biodegradable organic material).

40 CFR 52.21(b) (50)(i)(c) This paragraph is deleted in its entirety and replaced with the following:

Nitrogen oxides are a precursor to PM_{2.5} in all attainment and unclassifiable areas.

40 CFR 52.21(b) (50)(i)(d) This paragraph is deleted in its entirety and replaced with the following:

Volatile organic compounds are not a precursor to PM_{2.5} in any attainment or unclassifiable areas.

40 CFR 52.21(b) (51) The paragraph is deleted in its entirety and replaced with the following:

Reviewing authority means the department.

40 CFR 52.21(b) (53) This paragraph is deleted in its entirety and replaced with the following:

Lowest achievable emission rate (LAER) has the meaning given in 40 CFR 51.165(a)(1)(xiii) which is incorporated by reference.

40 CFR 52.21(b) (54) This paragraph is deleted in its entirety and replaced with the following:

Reasonably available control technology (RACT) has the meaning given in 40 CFR 51.100(o) which is incorporated by reference.

40 CFR 52.21(b) (58) This paragraph is deleted in its entirety.

40 CFR 52.21(d) The paragraph is deleted and replaced with the following:

No concentration of a contaminant shall exceed:

(1) The concentration permitted under the national primary and secondary

ambient air quality standards.

- (2) The concentration permitted by the ambient air quality standards in chapter 33.1-15-02.

40 CFR 52.21(e) The following is added:

- (5) The class I areas in North Dakota are the Theodore Roosevelt National Park - north and south units and the Theodore Roosevelt Elkhorn Ranch Site in Billings County - and the Lostwood National Wilderness Area in Burke County.

40 CFR 52.21(h) The paragraph is deleted and replaced with the following:

The stack height of any source subject to this chapter must meet the requirements of chapter 33.1-15-18.

40 CFR 52.21(i) The following subparagraphs are added:

- (11) The class I area increment limitations of the Theodore Roosevelt Elkhorn Ranch Site of the Theodore Roosevelt National Park shall apply to sources or modifications for which complete applications were filed after July 1, 1982. The impact of emissions from sources or modifications for which permits under this chapter have been issued or complete applications have already been filed will be counted against the increments after July 1, 1982.
- (12) Provided that all necessary requirements of this article have been met, permits will be issued on a first-come, first-served basis as determined by the completion date of the applications.

40 CFR 52.21(k) This subparagraph is deleted and replaced with the following:

(1)

- (1) Any national ambient air quality standard or any standard in chapter 33.1-15-02.

40 CFR 52.21(l) This subparagraph is deleted and replaced with the following:

(1)

All estimates of ambient concentrations required under this chapter shall be based on applicable air quality models, technical data bases (including quality assured air quality monitoring results), and other requirements specified in appendix W of 40 CFR 51 ("guideline on air quality models" as it exists on January 1, 2012) as supplemented by department guidance. Technical inputs for these models shall be based upon credible technical data approved in advance by the department. In making such determinations, the department shall review such technical data to determine whether it is representative of actual source, meteorological, topographical, or local air quality circumstances.

40 CFR 52.21(m)(3) "Appendix B to part 58 of this chapter" is replaced with 40 CFR 58, appendix B.

40 CFR 52.21(p) "paragraph (q)(4)" is replaced with "paragraph (p)(4)" and "(q)(7)" is replaced with "(p)(7)".

40 CFR 52.21(p) "paragraph (q)(7)" is replaced with "paragraph (p)(7)".

40 CFR 52.21(p) "paragraphs (q)(5) or (6)" is replaced with "paragraphs (p)(5) or (6)".

40 CFR 52.21(p) The following is added:

- (9) Notice to the United States environmental protection agency. The department shall transmit to the administrator of the United States environmental

protection agency through the region VIII regional administrator a copy of each permit application relating to a major stationary source or major modification received by the department and provide notice to the administrator of every action related to the consideration of such permit.

40 CFR 52.21(q) This paragraph is deleted and replaced with the following:

q. Public participation.

- (1) Within thirty days after receipt of an application to construct a source or modification subject to this chapter, or any addition to such application, the department shall advise the applicant as to the completeness of the application or of any deficiency in the application or information submitted. In the event of such a deficiency, the date of receipt of the application, for the purpose of this chapter, shall be the date on which all required information to form a complete application is received by the department.
- (2) With respect to a completed application, the department shall:
 - (a) Within one year after receipt, make a preliminary determination whether the source should be approved, approved with conditions, or disapproved pursuant to the requirements of this chapter.
 - (b) Make available, in at least one location in each region in which the proposed source or modification would be constructed or on the department's website, a copy of all materials submitted by the applicant, a copy of the department's preliminary determination, and a copy or summary of other materials, if any, considered by the department in making a preliminary determination.
 - (c) Notify the public, by prominent advertisement in newspapers of general circulation in each region in which the proposed source or modification would be constructed, of the application, the preliminary determination, the degree of increment consumption that is expected from the source or modification, and the opportunity for comment at a public hearing as well as written public comment on the information submitted by the owner or operator and the department's preliminary determination on the approvability of the source. The department shall allow at least thirty days for public comment.
 - (d) Send a copy of the notice required in subparagraph c to the applicant, the United States environmental protection agency administrator, and to officials and agencies having cognizance over the location where the source or modification will be situated as follows: the chief executive of the city and county where the source or modification would be located; any comprehensive regional land use planning agency; and any state, federal land manager, or Indian governing body whose lands may be significantly affected by emissions from the source or modification.
 - (e) Hold a public hearing whenever, on the basis of written requests, a significant degree of public interest exists or at its discretion when issues involved in the permit decision need to be clarified. A public hearing would be held during the public comment period for interested persons, including representatives of the United States environmental protection agency administrator, to appear and submit written or oral comments on the air quality impact of the source or modification, alternatives to the

source or modification, the control technology required, and other appropriate considerations.

(f) Consider all public comments submitted in writing within a time specified in the public notice required in subparagraph c and all comments received at any public hearing conducted pursuant to subparagraph e in making its final decision on the approvability of the application. No later than thirty days after the close of the public comment period, the applicant may submit a written response to any comments submitted by the public. The department may extend the time to respond to comments based on a written request by the applicant. The department shall consider the applicant's response in making its final decision. All comments must be made available for public inspection in the same locations where the department made available preconstruction information relating to the source or modification.

(g) Make a final determination whether the source should be approved, approved with conditions, or disapproved pursuant to the requirements of this chapter.

(h) Notify the applicant in writing of the department's final determination. The notification must be made available for public inspection in the same locations where the department made available preconstruction information and public comments relating to the source or modification.

40 CFR 52.21(r)(2)

The following is added:

In cases of major construction projects involving long lead times and substantial financial commitments, the department may provide by a condition to the permit to construct a time period greater than eighteen months when such time extension is supported by sufficient documentation by the applicant.

40 CFR 52.21(v)(1)

This subparagraph is deleted and replaced with the following:

(1) An owner or operator of any proposed major stationary source or major modification may request the department to approve a system of innovative control technology.

40 CFR 52.21(v)(2)(iv)
(a)

This subitem is deleted and replaced with the following:

(a) Cause or contribute to a violation of an applicable national ambient air quality standard or any ambient air quality standard in chapter 33.1-15-02; or

40 CFR 52.21(w)(1)

This subparagraph is deleted and replaced with the following:

(1) Any permit issued under this chapter or a prior version of this chapter shall remain in effect, unless and until it expires under 40 CFR 52.21(r) or is rescinded.

40 CFR 52.21(aa)(15)

This paragraph is deleted in its entirety.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-15-02. Reclassification.

1. **Reclassification of areas.** All areas (except as otherwise provided under 40 CFR 52.21(e)) must be designated either class I, class II, or class III. Any designation other than class II is subject to the redesignation procedures of this section. Redesignation (except as otherwise precluded by 40 CFR 52.21(e)) is subject to approval by the administrator of the United States environmental protection agency.

a. **Reclassification by petition.**

(1) **Filing of petition.** After twenty percent of the qualified electors in any county, as determined by the vote cast for the office of governor at the last preceding gubernatorial election, shall petition the department to reclassify any area within such county (except as precluded by 40 CFR 52.21(e)) to class I, class II, or class III, the department shall hold a hearing and take such other action as specified in subsection 3. The department shall reclassify the area proposed in the petition for reclassification only if such reclassification is substantially supported by the hearing record.

(2) **Contents of petition.** The petition to reclassify any area to either class I, class II, or class III must contain a legal description of the area which the petition is to affect; an explanation of the meaning and purpose of the petition and reclassification; a statement to the effect that those persons signing the petition desire the described area to be reclassified to either class I, class II, or class III and such statement must specify which class; a list of those persons or person circulating such petition, which persons must be designated "Committee of Petitioners"; an affidavit to be attached to each petition and sworn to under oath before a notary public by the person circulating each petition attesting to the fact that the person circulated such petition and that each of the signatures to such petition is the genuine signature of the person whose name it purports to be, and that each such person is a qualified elector in the county in which the petition was circulated; all petitions' signatures must be numbered and dated by month, day, and year, and the name must be written with residence address and post office address including the county of residence followed by state of North Dakota.

b. **Reclassification upon department's own motion.** At such time as the department may determine, it may hold a public hearing and take such other action as specified in subsection 2 in order to reclassify any area of this state (except as precluded by 40 CFR 52.21(e)) to class I, class II, or class III. The department shall reclassify the area proposed for reclassification only if such reclassification is substantially supported by the hearing record.

2. Procedures for reclassification.

a. Except as precluded by 40 CFR 52.21(e), the department may reclassify any area of this state, including any federally owned lands, but excluding lands within the exterior boundaries of any Indian reservations, to either class I or class II pursuant to subdivisions a and b of subsection 1, provided that:

(1) At least one public hearing is held in or near the area affected and this public hearing is held in accordance with the procedures established in subsection 3.

(2) Other states, Indian governing bodies, and federal land managers whose lands may be affected by the proposed redesignation are notified at least thirty days prior to the public hearing.

(3) A discussion of the reasons for the proposed redesignation including a satisfactory description and analysis of the health, environmental, economic, social, and energy effects of the proposed redesignation is prepared and made available for public inspection at least thirty days prior to the hearing and the notice announcing the hearing contains appropriate notification of the availability of such discussion.

(4) Prior to the issuance of notice respecting the redesignation of any area that includes any federal lands, the state shall provide written notice to the appropriate federal land manager and afford adequate opportunity (but not in excess of sixty days) to confer with the state respecting the redesignation and to submit written comments and recommendations with respect to such redesignation. In redesignating any area with respect to which any federal land manager has submitted written comments and recommendations, the state shall publish a list of any inconsistency between such redesignation and such comments and recommendations and an explanation of such inconsistency (together with the reasons for making such redesignation against the recommendation of the federal land manager).

(5) The proposed redesignation is based on the record of the state's hearing, which must reflect the basis for the proposed redesignation, including consideration of:

(a) Growth anticipated in the area.

(b) The social, environmental, health, energy, and economic effects of such redesignation upon the area being proposed for redesignation and upon other areas and states.

(c) Any impacts of such proposed redesignation upon regional or national interests. Anticipated growth shall include growth resulting both directly and indirectly from proposed development.

(6) The redesignation is proposed after consultation with the elected leadership of local and other substate general purpose governments in the area covered by the proposed redesignation.

b. Except as precluded by 40 CFR 52.21(e), the department may reclassify any area of this state, including any federally owned lands, but excluding lands within the exterior boundaries of any Indian reservations, to class III if:

(1) Such redesignation would meet the requirements of subdivision a.

(2) Such redesignation has been specifically approved by the governor of the state, after consultation with the appropriate committees of the legislative assembly if it is in session or with the leadership of the legislative assembly if it is not in session, and if general purpose units of local government representing a majority of the residents of the area so redesignated enact legislation or pass resolutions concurring the state's redesignation.

(3) Such redesignation will not cause, or contribute to, a concentration of any air contaminant which would exceed any maximum allowable increase permitted under the classification of any other area, or any applicable ambient air quality standard.

(4) Prior to any public hearing on redesignation of any area, there must be available, insofar as is practicable for public inspection, any specific plans for any new major stationary source or major modification which may be permitted to be constructed and operated only if the area in question is redesignated as class III.

3. Reclassification hearings.

a. Any hearing required by subsection 2 shall be held only after reasonable notice, which shall be considered to include, at least thirty days prior to the date of such hearing:

(1) Notice given to the public by prominent advertisement in the region affected announcing the date, time, and place of such hearing.

(2) Availability of each proposed plan or revision for public inspection in at least one location in each region to which it will apply, and the availability of each compliance schedule for public inspection in at least one location in the region in which the affected source is located.

(3) Notification to the administrator of the United States environmental protection agency (through the appropriate regional office).

(4) Notification to each local air pollution control agency in each region to which the plan, schedule, or revision will apply.

(5) In the case of an interstate region, notification to any other states included, in whole or in part, in the region.

(6) Notification to any states, Indian governing bodies, and federal land managers whose lands may be affected by the proposed redesignation.

b. The department shall prepare and retain for inspection a record of each hearing. The record must contain, as a minimum, a list of witnesses together with the text of each presentation.

c. Any hearing held pursuant to the provisions of this subsection must be held only for the purpose of considering such reclassification as has been noticed under the provisions of subsection 2, and consideration of reclassification to other classes not so noticed shall not be allowed.

d. Any hearing held pursuant to these provisions may be continued for such purposes and for such periods of time as the department may determine.

4. **Time limitation.** Notwithstanding any other regulation herein, the department shall rule upon any proposed reclassification within eighteen months of the official public notification of such proposed redesignation by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-16

RESTRICTION OF ODOROUS AIR CONTAMINANTS

Section

- 33.1-15-16-01 General Provisions
- 33.1-15-16-02 Emissions of Odorous Substances Restricted
- 33.1-15-16-02.1 Emissions of Hydrogen Sulfide Restricted
- 33.1-15-16-03 [Reserved]
- 33.1-15-16-04 Method of Measurement
- 33.1-15-16-04.1 Regulation Restriction

33.1-15-16-01. General provisions.

1. An odor will be considered objectionable when a department certified inspector or at least thirty percent of a randomly selected group of persons, or an odor panel exposed to the odor would deem that odor objectionable if the odor were present in their place of residence.
2. An "odor concentration unit" is defined as a volume of odor-free air mixed with an equal volume of odorous air such that the combination would be at the threshold level of the olfactory senses. The intensity of an odor is determined by the ratio of the volume of odor-free air that must be mixed with a standard volume of odorous air so that a department-certified inspector or at least fifty percent of an odor panel can still detect the odor in the diluted mixture.
3. A department-certified inspector is any person designated by the department who has successfully completed a department-sponsored odor certification course and demonstrated the ability to distinguish various odorous samples and concentrations. In the case of hydrogen sulfide (H₂S) complaints, the inspector will be competent with the hydrogen sulfide (H₂S) detection equipment being used.
4. An odor panel, if used, must consist of a minimum of five persons who have successfully completed a department-sponsored odor certification course and demonstrated the ability to distinguish various odorous samples and concentrations.
5. Odor emissions in excess of the limits stated in section 33.1-15-16-02 or 33.1-15-16-02.1, or both, will be addressed on a complaint basis.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-16-02. Emissions of odorous substances restricted.

1. In areas located within a city or the area over which a city has exercised extraterritorial zoning as defined in North Dakota Century Code section 40-47-01.1, a person may not discharge into the ambient air any objectionable odorous air contaminant that measures seven odor concentration units or higher outside the property boundary where the discharge is occurring. If an agricultural operation as defined by North Dakota Century Code section 42-04-01 has been in operation for more than one year, as provided by North Dakota Century Code section 42-04-02, and the business or residence making the odor complaint was built or established after the agricultural operation was established, the measurement for compliance with the seven odor concentration units standard must be taken within one hundred feet [30.48 meters] of the subsequently established residence, church, school, business, or public building making the complaint rather than at the property boundary of the agricultural operation. The

measurement may not be taken within five hundred feet [.15 kilometer] of the property boundary of the agricultural operation.

2. In areas located outside a city or outside the area over which a city has exercised extraterritorial zoning as defined in North Dakota Century Code section 40-47-01.1, a person may not discharge into the ambient air any objectionable odorous air contaminant that causes odors that measure seven odor concentration units or higher as measured at any of the following locations:
 - a. Within one hundred feet [30.48 meters] of any residence, church, school, business, or public building, or within a campground or public park. An odor measurement may not be taken at the residence of the owner or operator of the source of the odor, or at any residence, church, school, business, or public building, or within a campground or public park, that is built or established within one-half mile [.80 kilometer] of the source of the odor after the source of the odor has been built or established;
 - b. At any point located beyond one-half mile [.80 kilometer] from the source of the odor, except for property owned by the owner or operator of the source of the odor, or over which the owner or operator of the source of the odor has purchased an odor easement; or
 - c. If a county or township has zoned or established a setback distance for an animal feeding operation which is greater than one-half mile [.80 kilometer] under either North Dakota Century Code section 11-33-02 or 58-03-11, or if the setback distance under subsection 7 of North Dakota Century Code section 23.1-06-15 is greater than one-half mile [.80 kilometer], measurements for compliance with the seven odor concentration units standard must be taken at the setback distance rather than one-half mile [.80 kilometer] from the facility under subdivision b, except for any residence, church, school, business, public building, park, or campground within the setback distance which was built or established before the animal feeding operation was established, unless the animal feeding operation has obtained an odor easement from the preexisting facility.
3. A person is exempt from this section while spreading or applying animal manure or other recycled agricultural material to land in accordance with a nutrient management plan approved by the department. A person is exempt from this section while spreading or applying animal manure or other recycled agricultural material to land owned or leased by that person in accordance with rules adopted by the department, including articles 33.1-16 and 33.1-20. An owner or operator of a lagoon or waste storage pond permitted by the department is exempt from this section in the spring from the time when the cover of the permitted lagoon or pond begins to melt until fourteen days after all the ice cover on the lagoon or pond has completely melted. Notwithstanding these exemptions, all persons shall manage their property and systems to minimize the impact of odors on their neighbors.
4. This section does not apply to chemical compounds that can be individually measured by instruments, other than a scentometer, that have been designed and proven to measure the individual chemical or chemical compound, such as hydrogen sulfide, to a reasonable degree of scientific certainty, and for which the department has established a specific limitation by rule.
5. For purposes of this section, a public park is a park established by the federal government, the state, or a political subdivision of the state in the manner prescribed by law. For purposes of this section, a campground is a public or private area of land used exclusively for camping and open to the public for a fee on a regular or seasonal basis.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-16-02.1. Emissions of hydrogen sulfide restricted.

No person may discharge into the ambient air hydrogen sulfide (H₂S) in concentrations that would be objectionable on land owned or leased by the complainant or in areas normally accessed by the general public. For the purpose of complaint resolution under this section, two samples with concentrations greater than 0.05 parts per million (50 parts per billion) sampled at least fifteen minutes apart within a two-hour period and measured in accordance with section 33.1-15-16-04 constitute a violation.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-16-03. [Reserved].

33.1-15-16-04. Method of measurement.

An odor measurement may be taken only with a properly maintained scentometer, by an odor panel, or by another instrument or method approved by the department, and only by inspectors certified by the department who have successfully completed a department-sponsored odor certification course and demonstrated the ability to distinguish various odor samples and concentrations. If a certified inspector measures a violation of this chapter, the department may send a certified letter of apparent noncompliance to the person causing the apparent violation and may negotiate with the owner or operator for the establishment of an odor management plan and best management practices to address the apparent violation. The department shall give the owner or operator at least fifteen days to implement the odor management plan. If the odor problem persists, the department may proceed with an enforcement action provided at least two certified inspectors at the same time each measure a violation and then confirm the violation by a second odor measurement taken by each certified inspector, at least fifteen minutes, but no more than two hours, after the first measurement. In the case of hydrogen sulfide (H₂S) emissions, an ambient air analyzer designed for monitoring hydrogen sulfide (H₂S) must be the method used for determining the concentrations of emissions at the point of measurement, or other instrumental methods as approved by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-16-04.1. Regulation restriction.

Compliance with the provisions of this chapter does not operate as a defense to any legal action which is based upon the theory of public or private nuisance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-17

RESTRICTION OF FUGITIVE EMISSIONS

Section

33.1-15-17-01 General Provisions - Applicability and Designation of Affected Facilities

33.1-15-17-02 Restriction of Fugitive Particulate Emissions

33.1-15-17-03 Reasonable Precautions for Abating and Preventing Fugitive Particulate Emissions

33.1-15-17-04 Restriction of Fugitive Gaseous Emissions

33.1-15-17-01. General provisions - Applicability and designation of affected facilities.

1. The provisions of this chapter apply to the owner or operator of any source of fugitive emissions whatsoever.
2. No person shall cause or permit fugitive emissions from any source whatsoever, including a building, its appurtenances, or a road, to be used, constructed, altered, repaired, or demolished; or activities such as loading, unloading, storing, handling, or transporting of materials without taking reasonable precautions to prevent such emissions from causing air pollution as defined in section 33.1-15-01-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-17-02. Restriction of fugitive particulate emissions.

No person shall emit or cause to be emitted into the ambient air from any source of fugitive emissions as specified in section 33.1-15-17-01 any particulate matter which:

1. [Reserved].
2. Exceed the ambient air quality standards of chapter 33.1-15-02 at or beyond the property line of the source.
3. Exceed the prevention of significant deterioration of air quality increments of chapter 33.1-15-15 at or beyond the property line of the source for sources subject to chapter 33.1-15-15.
4. Exceed the restrictions on the emission of visible air contaminants of chapter 33.1-15-03, at or beyond the property line of the source, except as provided in section 33.1-15-03-04.
5. Would have an adverse impact on visibility, as defined in chapter 33.1-15-19, on any class I federal area.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-17-03. Reasonable precautions for abating and preventing fugitive particulate emissions.

1. Unpaved roads and unpaved parking areas. Abatement and preventive measures include frequent watering, addition of dust palliatives, detouring, paving, closure, speed control, or other means such as surface treatment with penetration chemicals (ligninsulfonates, oil, water, cutbacks, etc.) or methods of equal or greater effectiveness in reducing the air contamination produced.

2. Demolition, wrecking and explosive detonation activities, earth and construction material moving, mining, and excavation activities.

a. Abatement and preventive fugitive particulate control measures include:

- (1) Wetting down, including prewatering.
- (2) Landscaping and replanting with native vegetation.
- (3) Covering, shielding, or enclosing the area.
- (4) Paving, temporary or permanent.
- (5) Treating, the use of dust palliatives and chemical stabilization.
- (6) Detouring.
- (7) Restricting the speed of vehicles on sites.
- (8) Preventing the deposit of dirt and mud on improved streets and roads.
- (9) Minimizing topsoil disturbance and reclaiming as soon as possible.

b. Sequential blasting be employed whenever or wherever feasible to reduce the amounts of particulate matter.

c. Such dust control strategies as revegetation, delay of topsoil disturbance until necessary, or surface compaction and sealing, be applied.

d. Haulage equipment be washed or wetted down, treated, or covered when necessary to minimize the amount of dust becoming airborne in transit and in loading.

e. Stockpile of materials be treated to prevent blowing or the material be contained in silos or other suitable enclosures.

f. Waste disposal sites be so operated and constructed as to prevent particulate matter from becoming airborne.

g. All conveyors, transfer points, crushers, screens, and dryers be so constructed, protected, or treated as to prevent particulate matter from becoming airborne.

h. These measures also be used during periods when actual construction work is not being conducted, such as on weekends and holidays.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-17-04. Restriction of fugitive gaseous emissions.

No person shall emit or cause to be emitted into the ambient air from any source of fugitive emissions as specified in section 33.1-15-17-01 any gases which:

1. Exceed the ambient air quality standards of chapter 33.1-15-02 at or beyond the property line of the source.
2. Exceed the prevention of significant deterioration of air quality increments of chapter 33.1-15-15 at or beyond the property line of the source for sources subject to chapter 33.1-15-15.

3. Exceed the emission restrictions for odorous substances of chapter 33.1-15-16 at or beyond the property line of the source.
4. Exceed the restrictions on the emission of visible air contaminants of chapter 33.1-15-03 at or beyond the property line of the source.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-18 STACK HEIGHTS

Section

33.1-15-18-01 General Provisions

33.1-15-18-02 Good Engineering Practice Demonstrations

33.1-15-18-03 Exemptions

33.1-15-18-01. General provisions.

1. The degree of emission limitation required of any source for control of any air contaminant must not be affected by so much of any source's stack height that exceeds good engineering practice or by any other dispersion technique, except as provided in section 33.1-15-18-03.

2. Definitions. As used in this chapter, all terms not defined herein shall have the meaning given them in section 33.1-15-01-04 or in North Dakota Century Code chapter 23.1-06.

a. "A stack in existence" means that the owner or operator had:

(1) Begun, or caused to begin, a continuous program of physical onsite construction of the stack; or

(2) Entered into binding agreements or contractual obligations, which could not be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

b. (1) "Dispersion technique" means any technique which attempts to affect the concentration of a pollutant in the ambient air by:

(a) Using that portion of a stack which exceeds good engineering practice stack height;

(b) Varying the rate of emission of a pollutant according to atmospheric conditions or ambient concentrations of that pollutant; or

(c) Increasing final exhaust gas plume rise by manipulating source process parameters, exhaust gas parameters, stack parameters, or combining exhaust gases from several existing stacks into one stack; or other selective handling of exhaust gas streams so as to increase the exhaust gas plume rise.

(2) The preceding sentence does not include:

(a) The reheating of a gas stream, following use of a pollution control system, for the purpose of returning the gas to the temperature at which it was originally discharged from the facility generating the gas stream;

(b) The merging of exhaust gas streams where:

[1] The source owner or operator demonstrates that the facility was originally designed and constructed with such merged gas streams;

[2] After July 8, 1985, such merging is part of a change in operation at the facility that includes the installation of pollution controls and is accompanied by a net reduction in the allowable emissions of a pollutant. This exclusion from the definition of "dispersion techniques" shall apply

only to the emission limitation for the pollutant affected by such change in operation; or

[3] Before July 8, 1985, such merging was part of a change in operation at the facility that included the installation of emissions control equipment or was carried out for sound economic or engineering reasons. Where there was an increase in the emission limitation or, in the event that no emission limitation was in existence prior to the merging, an increase in the quantity of pollutants actually emitted prior to the merging, the reviewing agency shall presume that merging was significantly motivated by an intent to gain emissions credit for greater dispersion. Absent a demonstration by the source owner or operator that merging was not significantly motivated by such intent, the reviewing agency shall deny credit for the effects of such merging in calculating the allowable emissions for the source.

(c) Smoke management in prescribed agricultural or silvicultural burning programs;

(d) Episodic restrictions on residential woodburning and open burning; or

(e) Techniques under subparagraph c of paragraph 1 which increase final exhaust gas plume rise where the resulting allowable emissions of sulfur dioxide from the facility do not exceed five thousand tons per year.

c. "Excessive concentration" is defined for the purpose of determining good engineering practice stack height under paragraph 3 of subdivision d and means:

(1) For sources seeking credit for stack height exceeding that established under paragraph 2 of subdivision d, a maximum ground-level concentration due to emissions from a stack due in whole or in part to downwash, wakes, and eddy effects produced by nearby structures or nearby terrain features which individually is at least forty percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and which contributes to a total concentration due to emissions from all sources that is greater than an ambient air quality standard. For sources subject to chapter 33.1-15-15, prevention of significant deterioration of air quality, an excessive concentration alternatively means a maximum ground-level concentration due to emissions from a stack due in whole or in part to downwash, wakes, or eddy effects produced by nearby structures or nearby terrain features which individually is at least forty percent in excess of the maximum concentration experienced in the absence of such downwash, wakes, or eddy effects and greater than a prevention of significant deterioration increment. The allowable emission rate to be used in making demonstrations under this part must be prescribed by the new source performance standard that is applicable to the source category unless the owner or operator demonstrates that this emission rate is infeasible. Where such demonstrations are approved by the department, an alternative emission rate must be established in consultation with the source owner or operator;

(2) For sources seeking credit after October 11, 1983, for increases in existing stack heights up to the heights established under paragraph 2 of subdivision d, either:

(a) A maximum ground-level concentration due in whole or part to downwash, wakes, or eddy effects as provided in paragraph 1, except that the emission rate specified by the department (or, in the absence of such a limit, the actual emission rate) shall be used; or

(b) The actual presence of a local nuisance caused by the existing stack, as determined by the department; and

(3) For sources seeking credit after January 12, 1979, for a stack height determined under paragraph 2 of subdivision d where the department requires the use of a field study or fluid model to verify good engineering practice stack height, for sources seeking stack height credit after November 9, 1984, based on the aerodynamic influence of cooling towers, and for sources seeking stack height credit after December 31, 1970, based on the aerodynamic influence of structures not adequately represented by the equations in paragraph 2 of subdivision d, a maximum ground-level concentration due in whole or in part to downwash, wakes, or eddy effects that is at least forty percent in excess of the maximum concentration experience in the absence of such downwash, wakes, or eddy effects.

d. "Good engineering practice" (GEP) stack height means the greater of:

(1) Sixty-five meters [213.25 feet], measured from the ground-level elevation at the base of the stack;

(2) (a) For stacks in existence on January 12, 1979, and for which the owner or operator had obtained all applicable permits or approvals required by article 33.1-15, air pollution control, $H_g = 2.5H$, provided the owner or operator produces evidence that this equation was actually relied on in establishing an emission limitation.

(b) For all other stacks:

$$H_g = H + 1.5L$$

where:

H_g = good engineering practice stack height, measured from the ground-level elevation at the base of the stack.

H = height of nearby structures measured from the ground-level elevation at the base of the stack.

L = lesser dimension, height or projected width, of nearby structures, provided that the department may require the use of a field study or fluid model to verify good engineering practice stack height for the source.

(3) The height demonstrated by a fluid model or a field study approved by the environmental protection agency, state or local control agency, which ensures that the emissions from a stack do not result in excessive concentrations of any air contaminant as a result of atmospheric downwash, wakes, or eddy effects created by the source itself, nearby structures, or nearby terrain features.

e. "Nearby" as used in subdivision d is defined for a specific structure or terrain feature and:

(1) For purposes of applying the formulae provided in paragraph 2 of subdivision d means that distance up to five times the lesser of the height or the width dimension of a structure, but not greater than eight-tenths kilometer [0.5 mile]; and

(2) For conducting demonstrations under paragraph 3 of subdivision d means not greater than eight-tenths kilometer [0.5 mile], except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to ten times the maximum height (H_t) of the feature not to exceed 3.22 kilometers [2 miles]

if such feature achieves a height (H_f) eight-tenths kilometer [0.5 mile] from the stack that is at least forty percent of the good engineering practice stack height determined by the formulae provided in subparagraph b of paragraph 2 of subdivision d or twenty-six meters [85.30 feet], whichever is greater, as measured from the ground-level elevation at the base of the stack. The height of the structure or terrain feature is measured from the ground-level elevation at the base of the stack.

- f. "Stack" means any point in a source designed to emit solids, liquids, or gases into the air, including a pipe or duct but not including flares.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-18-02. Good engineering practice demonstrations.

Before a new or revised emission limitation is approved that is based on a good engineering practice stack height that exceeds the height allowed by paragraph a or b of subdivision d of subsection 2 of section 33.1-15-18-01, the department shall notify the public of the availability of the demonstration study and must provide opportunity for public hearing on it. In no event may the department prohibit any increase in stack height or restrict the stack height of any source.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-18-03. Exemptions.

The provisions of this chapter do not apply to stack heights in existence, or dispersion techniques implemented on or before December 31, 1970, except where pollutants are being emitted from such stacks or using such dispersion techniques by sources which were constructed, or reconstructed, or for which major modifications, were carried out after December 31, 1970.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-19 VISIBILITY PROTECTION

Section

33.1-15-19-01 General Provisions

33.1-15-19-02 Review of New Major Stationary Sources and Major Modifications

33.1-15-19-03 Visibility Monitoring

33.1-15-19-01. General provisions.

1. **Applicability.** The provisions of this chapter apply to the owner or operator of a major stationary source or major modification, as defined in section 33.1-15-15-01, whose construction or modification is commenced after August 12, 1985. The standards shall be applied in conjunction with the procedures set forth in chapters 33.1-15-12, 33.1-15-14, and 33.1-15-15.
2. **Definitions.** As used in this chapter, all terms not defined herein shall have the meaning given them in section 33.1-15-01-04, 33.1-15-12-01, or 33.1-15-15-01 or in North Dakota Century Code chapter 23.1-06.
 - a. "Adverse impact on visibility" means visibility impairment which interferes with the management, protection, preservation, or enjoyment of the visitor's visual experience of the federal class I area. This determination must be made on a case-by-case basis taking into account the geographic extent, intensity, duration, frequency, and time of visibility impairment, and how these factors correlate with times of visitor use of the federal class I area, and the frequency and timing of natural conditions that reduce visibility.
 - b. "Natural conditions" include naturally occurring phenomena that reduce visibility as measured in terms of visual range, contrast, or coloration.
 - c. "Visibility impairment" means any humanly perceptible change in visual range, contrast, or coloration from that which would have existed under natural conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-19-02. Review of new major stationary sources and major modifications.

1. **Visibility impact analysis.** The owner or operator of a major stationary source or major modification, subject to subsection 1 of section 33.1-15-19-01, shall demonstrate to the department that the actual emissions from the major stationary source or major modification, including fugitive emissions, will not cause or contribute to adverse impact on visibility within any federal class I area. The owner or operator of a proposed major stationary source or major modification shall submit all information necessary to support any analysis or determination made. The owner or operator of a proposed major stationary source or major modification, subject to the requirements of this subsection, shall provide a visibility impact analysis of the visibility impact likely to occur as a result of general commercial, residential, industrial, and other growth associated with the source or major modification.
2. **Visibility models.** All estimates of visibility impact required under this section must be based on those models contained in "Workbook for Estimating Visibility Impairment" (EPA-450/4-80-031, November 1980). Equivalent models may be used subject to prior approval by the department.

3. **Notification of permit application.** The department shall provide written notice of any permit application for a proposed major stationary source or major modification, the emissions from which may affect a class I area, to the federal land manager and the federal official charged with direct responsibility for management of any lands within any such area. Such notification must include a copy of all information relevant to the permit application and must be given within thirty days of receipt and at least sixty days prior to any public hearing on the application for a permit to construct. Such notification must include an analysis of the proposed source's anticipated impacts on visibility in the federal class I area. The department shall also provide the federal land manager and such federal officials with a copy of the preliminary determination of anticipated impacts on visibility in any federal class I area, and shall make available to them any materials used in making that determination, promptly after the department makes such determination. The department shall also notify all affected federal land manager's within thirty days of receipt of any advance notification of any such permit application.
4. **Federal land manager review.** The department shall consider any analysis performed by the federal land manager, provided within thirty days of the notification required by subsection 3 of this section, that shows that a proposed new major stationary source or major modification may have an adverse impact on visibility in any federal class I area. Where the department finds that such an analysis does not demonstrate to the satisfaction of the department that an adverse impact on visibility will result in the federal class I area, the department will, in the notice of opportunity for public hearing on the permit application, either explain its decision or give notice as to where the explanation can be obtained.
5. **Permits.** No source subject to this chapter may be issued a permit to construct if the department determines that an adverse impact on visibility in any federal class I area will occur because of the proposed source or major modification.
6. **Public participation.** Where a permit application has been filed for a source subject to the provisions of this chapter, the public must be given an opportunity for review of the permit application and the department's determination as described in subsection 5 of section 33.1-15-15-01.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-19-03. Visibility monitoring.

The department may require monitoring of visibility in any federal class I area near the proposed new stationary source or major modification for such purposes and by such means as the department deems necessary and appropriate. This can include preconstruction, concurrent with construction, or postconstruction monitoring or any combination thereof.

The department shall provide its proposed requirements for visibility monitoring by the owner or operator to the federal land manager prior to issuing a permit to construct. The department shall consider the federal land manager's comments on the proposed monitoring in any final determinations to be placed on a permit to construct or permit to operate, or both.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-20
CONTROL OF EMISSIONS FROM OIL AND GAS WELL PRODUCTION FACILITIES

Section

33.1-15-20-01 General Provisions

33.1-15-20-02 Registration and Reporting Requirements

33.1-15-20-03 Prevention of Significant Deterioration Applicability and Source Information Requirements

33.1-15-20-04 Requirements for Control of Production Facility Emissions

33.1-15-20-01. General provisions.

1. **Applicability.** The provisions of this chapter apply to any oil or gas well facility which emits air contaminants to the atmosphere.
2. **Definitions.** As used in this chapter, all terms not defined herein shall have the meaning given them in section 33.1-15-01-04 or in North Dakota Century Code chapter 23.1-06.
 - a. "Actively producing" means a well has been producing for thirty days or more from initial production through the wellhead equipment.
 - b. "Casinghead gas" means any gas or vapor, or both gas and vapor, indigenous to and produced from a pool classified as an oil pool by the North Dakota state industrial commission.
 - c. "Completion" means an oil well must be considered completed when the first oil is produced through wellhead equipment into lease tanks from the ultimate producing interval after casing has been run. A gas well must be considered complete when the well is capable of producing gas through wellhead equipment from the ultimate producing zone after casing has been run. A dry hole must be considered complete when all North Dakota state industrial commission provisions of plugging are complied with.
 - d. "Condensate" means the liquid hydrocarbons recovered at the surface that result from condensation due to reduced pressure or temperature of petroleum hydrocarbons existing in a gaseous phase in the reservoir.
 - e. "Continuous burning pilot" means a stable auxiliary flame supported by a reliable fuel source which is independent of wellhead production.
 - f. "Cubic foot of gas" means that volume of gas contained in one cubic foot [28.32 liters] of space and computed at a pressure of fourteen and seven-tenths pounds per square inch [1,034 grams per square centimeter] absolute at a base temperature of sixty degrees Fahrenheit [15.5 degrees Celsius].
 - g. "Gas well" means a well producing gas or natural gas from a common source of gas supply as determined by the North Dakota state industrial commission.
 - h. "Natural gas or gas" means and includes all natural gas and all other fluid hydrocarbons not herein defined as oil.
 - i. "Oil" means and includes crude petroleum oil and other hydrocarbons regardless of specific gravity which are produced at the wellhead in liquid form and the liquid hydrocarbons known as distillate or condensate recovered or extracted from gas, other than gas produced in association with oil and commonly known as casinghead gas.

- j. "Oil well" means any well capable of producing oil or oil and casinghead gas from a common source of supply as determined by the North Dakota state industrial commission.
- k. "Operator" means any person or persons who, duly authorized, is in charge of the development of a lease or the operation of a producing property.
- l. "Owner" means the person who has the right to drill into and produce from a pool and to appropriate the oil or gas the person produces.
- m. "Pool" means an underground reservoir containing a common accumulation of oil or gas or both; each zone of a structure which is completely separated from any other zone in the same structure is a pool.
- n. "Production facility" means all equipment, wells, flow lines, separators, treaters, tanks, flares, gathering lines, and auxiliary nontransportation-related equipment used in the exploration, development, or subsequent production or handling of oil and gas from an oil or gas well or wells which are located on one or more contiguous or adjacent surface properties, and are under the control of the same person (or persons under common control).
- o. "Recomplete" or "recompletion" means the subsequent completion of a well in a different pool from the pool in which it was originally completed.
- p. "Reservoir" means pool or common source of supply.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-20-02. Registration and reporting requirements.

1. The owner or operator of any actively producing oil or gas well that is completed or recompleted on or after July 1, 1987, shall submit an oil and gas well registration form available from the department, and an analysis of any gas produced from the well. The registration form and gas analysis must be submitted to the department within ninety days of the well achieving active production status. The registration form must contain sufficient information to allow the department to determine if the oil or gas well and associated production facility is in compliance with all applicable sections of this chapter.
2. [Reserved].
3. The owner or operator of any oil or gas well subject to this section shall inform the department of any change to the information contained on the registration form for a particular well and shall submit a new gas analysis if the composition or the volume of the gas produced from the well has changed from the previous analysis to cause an increase of ten tons per year or more of sulfur (all sulfur compounds expressed as S).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-20-03. Prevention of significant deterioration applicability and source information requirements.

1. Any oil or gas well production facility that is a major stationary source or a major modification as defined in chapter 33.1-15-15, shall comply with the permitting requirements of chapter 33.1-15-15.
2. To determine prevention of significant deterioration of air quality (PSD) applicability for sulfur dioxide, the following formula must be used:

$$E = 0.00084 (R)(T) (\% \text{ H}_2\text{S})$$

Where:

E = sulfur dioxide emission rate (tons/year).

R = the average daily amount of gas burned, incinerated and/or flared (thousand cubic feet per day at 60°F and 14.7 pisa-MCFD) based upon a thirty-day period. The thirty-day period must be the last thirty operating days of a one hundred eighty-day period following the completion or recompletion of a well. In cases where the well is shut in for extended periods during the one hundred eighty-day period following completion or recompletion, a case-by-case determination of PSD can be requested of the department.

T = days of operation per year (day/year). This number must be three hundred sixty-five unless there are verifiable physical limitations or a federally enforceable permit that limits the number of operating days.

% H₂S = mole percent hydrogen sulfide content as determined by the most recent gas analysis.

The formula is derived as follows:

$$E = \frac{(\text{Mcf}) (1000 \text{ cf}) (\% \text{ H}_2\text{S}) (\text{lb-mole}) (64.06 \text{ lb SO}_2) (\text{days}) (\text{ton})}{\text{day} \quad \text{Mcf} \quad 100 \quad 379.5 \text{ cf} \quad \text{lb-mole} \quad \text{year} \quad 2000 \text{ lb}}$$
$$E = 0.00084 \frac{(\text{Mcf}) (\text{days of operation}) (\% \text{ H}_2\text{S})}{\text{day} \quad \text{year}}$$

Emissions from all onsite equipment at the production facility must be included in the total annual emission determination.

3. The owner or operator of any oil or gas well production facility subject to subsection 1 of this section shall provide information to demonstrate that emissions from the facility do not significantly contribute to exceeding the ambient air quality standards, as defined in chapter 33.1-15-02, or class I or class II increments, as defined in chapter 33.1-15-15; and shall address other requirements as specified in chapter 33.1-15-15.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-20-04. Requirements for control of production facility emissions.

1. The emissions from all treaters, separators, engines, incinerators, flares, tanks, and other onsite equipment must comply with the requirements of subsection 5.

2. Each flare used for treating gas containing hydrogen sulfide (H₂S), must be equipped and operated with an automatic ignitor or a continuous burning pilot which must be maintained in good working order. This is required even if the flare is used for emergency purposes only. A continuous burning pilot is required if this department determines that an automatic ignition system is ineffective due to production characteristics. The flare stack must be of sufficient height to allow for adequate dispersion of sulfur dioxide (SO₂) necessary to meet the requirements of this article.
3. Any volatile organic compound gas or vapor may be subject to controls as specified in chapter 33.1-15-07.
4. Routine inspections and maintenance of tanks, hatches, compressors, vent lines, pressure relief valves, packing elements, and couplings must be conducted to minimize emissions from equipment used for gas containing hydrogen sulfide (H₂S). Tank hatches must hold a positive working pressure or must be repaired or replaced.
5. The owner or operator of any oil or gas well production facility shall install equipment necessary to ensure that emissions comply with the ambient air quality standards of chapter 33.1-15-02, including hydrogen sulfide and sulfur dioxide; the class I and class II increments for sulfur dioxide, nitrogen dioxide, and particulate matter of chapter 33.1-15-15, if applicable; the odor concentration limits of chapter 33.1-15-16; and any other applicable chapter of this article. For the purpose of this chapter, compliance must be determined outside the surface boundary of the production facility.
6. When a malfunction, the correction of a malfunction, or maintenance at any oil and gas well production facility occurs that can be expected to cause the emission of air contaminants in violation of this article for longer than twenty-four hours, the person responsible for such installation shall notify the department of such malfunction or maintenance as set forth in section 33.1-15-01-13. This subsection pertains only to the reporting of malfunctions and maintenance and does not obviate the source's responsibility to comply with the remainder of this chapter or article.
7. The owner or operator of any oil and gas well production facility completed prior to the effective date of section 33.1-15-20-04 shall comply with the requirements of this chapter within six months of the effective date of these revisions. The owner or operator of any oil and gas well production facility completed after the effective date of the revisions to section 33.1-15-20-04 shall comply with the requirements of this chapter within ninety days of the completion of the well.

33.1-15-21-08.1. Permits.

The provisions of title 40 Code of Federal Regulations part 72 and its appendices, as they exist on January 1, 2012, for purposes of implementing an acid rain program that meets the requirements of title IV of the federal Clean Air Act, are incorporated into this chapter by reference. The term "administrator" means the department except for those duties that cannot be delegated to the department. For those duties that cannot be delegated, "administrator" means the administrator of the United States environmental protection agency. If the provisions or requirements of title 40 Code of Federal Regulations part 72 conflict with or are not included in section 33.1-15-14-06, the provisions of part 72 shall apply and take precedence.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08, 23.1-06-09; S.L. 2017, ch. 199, § 21

33.1-15-21-09. Continuous emissions monitoring.

1. **General.** The monitoring, recordkeeping, and reporting of sulfur dioxide, nitrogen oxides, and carbon dioxide emissions, volumetric flow, and opacity data from affected units under the acid rain program shall be conducted in accordance with title 40 Code of Federal Regulations part 75. Title 40 Code of Federal Regulations part 75 and its appendices, as they exist on January 1, 2012, are incorporated by reference.
2. **Exceptions.** Those portions of title 40 Code of Federal Regulations part 75 that are controlled and administered completely by the United States environmental protection agency will not be enforced by the state. This should not be construed as precluding the United States environmental protection agency from exercising its statutory authority under the Clean Air Act, as amended, or an affected source from complying with the authority or the requirements of the federal acid rain program.

History: Effective January 1, 2019.

CHAPTER 33.1-15-22
EMISSIONS STANDARDS FOR HAZARDOUS
AIR POLLUTANTS FOR SOURCE CATEGORIES

Section

33.1-15-22-01 Scope

33.1-15-22-02 Definition

33.1-15-22-03 Emissions Standards

33.1-15-22-01. Scope.

The subparts and appendices of title 40 Code of Federal Regulations part 63, as they exist on July 1, 2015, which are listed in section 33.1-15-22-03 are incorporated into this chapter by reference. Any changes to an emissions standard are listed below the title of the standard.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-22-02. Definition.

For the purposes of this chapter, "administrator" means the department except for those duties that cannot be delegated by the United States environmental protection agency. For those duties that cannot be delegated, administrator means the administrator of the United States environmental protection agency.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-22-03. Emissions standards.

Subpart A - General provisions.

Subpart B - Requirements for control technology determinations for major sources in accordance with federal Clean Air Act sections 112(g) and 112(j).

*Sections 63.42(a) and 63.42(b) are deleted in their entirety.

Subpart C - List of hazardous air pollutants, petitions process, lesser quantity designations, and source category list.

Subpart D - Regulations governing compliance extensions for early reductions of hazardous air pollutants.

Subpart F - National emissions standards for organic hazardous air pollutants from the synthetic organic chemical manufacturing industry.

Subpart G - National emissions standards for organic hazardous air pollutants from synthetic organic chemical manufacturing industry for process vents, storage vessels, transfer operations, and wastewater.

Subpart H - National emissions standards for organic hazardous air pollutants for equipment leaks.

Subpart I - National emissions standards for organic hazardous air pollutants for certain processes subject to the negotiated regulation for equipment leaks.

Subpart M - National perchloroethylene air emissions standards for drycleaning facilities.

Subpart N - National emissions standards for chromium emissions from hard and decorative chromium electroplating and chromium anodizing tanks.

Subpart O - Ethylene oxide emissions standards for sterilization facilities.

Subpart Q - National emissions standards for hazardous air pollutants for industrial process cooling towers.

Subpart R - National emissions standards for gasoline distribution facilities (bulk gasoline terminals and pipeline breakout stations).

Subpart T - National emissions standards for halogenated solvent cleaning.

Appendix A to subpart T - Test of solvent cleaning procedures.

Appendix B to subpart T - General provisions applicability to subpart T.

Subpart CC - National emissions standards for hazardous air pollutants from petroleum refineries.

Subpart GG - National emissions standards for aerospace manufacturing and rework facilities.

Subpart HH - National emissions standards for hazardous air pollutants from oil and natural gas production facilities.

*Only the requirements that are applicable to major sources of hazardous air pollutants are adopted.

Subpart JJ - National emissions standards for wood furniture manufacturing operations.

Subpart KK - National emissions standards for the printing and publishing industry.

Table 1 to subpart KK - Applicability of general provisions to subpart KK.

Appendix A to subpart KK - Data quality objective and lower confidence limit approaches for alternative capture efficiency protocols and test methods.

Subpart OO - National emissions standards for tanks - Level 1.

Subpart PP - National emissions standards for containers.

Subpart QQ - National emissions standards for surface impoundments.

Subpart RR - National emissions standards for individual drain systems.

Subpart SS - National emissions standards for closed-vent systems, control devices, recovery devices, and routing to a fuel gas system or a process.

Subpart TT - National emissions standards for equipment leaks - Control level 1.

Subpart UU - National emissions standards for equipment leaks - Control level 2 standards.

Subpart VV - National emissions standards for oil-water separators and organic water separators.

Subpart WW - National emissions standards for storage vessels (tanks) - Control level 2.

Subpart YY - National emissions standards for hazardous air pollutants for source categories: generic maximum achievable control technology standards.

Subpart HHH - National emissions standards for hazardous air pollutants from natural gas transmission and storage facilities.

Subpart RRR - National emission standards for hazardous air pollutants for secondary aluminum production.

Table 1 to subpart RRR - Emission standards for new and existing affected sources.

Table 2 to subpart RRR - Summary of operating requirements for new and existing affected sources and emission units.

Table 3 to subpart RRR - Summary of monitoring requirements for new and existing affected sources and emission units.

Appendix A to subpart RRR - General provisions applicability to subpart RRR.

Subpart UUU - National emission standards for hazardous air pollutants for petroleum refineries: catalytic cracking units, catalytic reforming units, and sulfur recovery units.

Subpart AAAA - National emission standards for hazardous air pollutants: municipal solid waste landfills.

Subpart CCCC - National emission standards for hazardous air pollutants: manufacturing of nutritional yeast.

Subpart EEEE - National emission standards for hazardous air pollutants: organic liquids distribution (nongasoline).

Subpart FFFF - National emission standards for hazardous air pollutants: miscellaneous organic chemical manufacturing.

Subpart GGGG - National emission standards for hazardous air pollutants: solvent extraction for vegetable oil production.

Subpart MMMM - National emission standards for hazardous air pollutants for surface coating of miscellaneous metal parts and products.

Subpart VVVV - National emission standards for hazardous air pollutants for boat manufacturing.

Subpart WWWW - National emissions standards for hazardous air pollutants: reinforced plastics composites production.

Subpart YYYYY - National emission standards for hazardous air pollutants for stationary combustion turbines.

Subpart ZZZZ - National emission standards for hazardous air pollutants for stationary reciprocating internal combustion engines.

*Only the requirements that are applicable to major sources of hazardous air pollutants are adopted.

Subpart DDDDD - National emission standards for hazardous air pollutants for industrial, commercial, and institutional boilers and process heaters.

Subpart GGGGG - National emission standards for hazardous air pollutants: site remediation.

Subpart UUUUU - National emission standards for hazardous air pollutants: coal-fired and oil-fired electric utility steam generating units.

Subpart JJJJJJ - National emission standards for hazardous air pollutants for industrial, commercial, and institutional boilers area sources.

*Only the requirements that are applicable to boilers with a heat input of ten million Btu per hour or more are adopted.

Appendix A to part 63 - Test methods.

Appendix B to part 63 - Sources defined for early reduction provisions.

Appendix C to part 63 - Determination of the fraction biodegraded (f_{bio}) in a biological treatment unit.

Appendix D to part 63 - Alternative validation procedure for environmental protection agency waste and wastewater methods.

Authority: 42 U.S.C. 7401 et seq.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-23 FEES

Section

- 33.1-15-23-01 Definitions
- 33.1-15-23-02 Permit to Construct Fees
- 33.1-15-23-03 Minor Source Permit to Operate Fees
- 33.1-15-23-04 Major Source Permit to Operate Fees
- 33.1-15-23-05 Phase I Substitution Units
- 33.1-15-23-06 Oil and Gas Well Production Facilities

33.1-15-23-01. Definitions.

For purposes of this chapter:

1. "Major source" means any source that has been issued or is required by this article to obtain a title V permit to operate. This includes sources that have begun operation but have not yet applied for a title V permit to operate.
2. "Minor source" has the meaning given to it in section 33.1-15-14-01.1.
3. "Regulated contaminant" means any "regulated air contaminant", as defined in section 33.1-15-14-06, except the following:
 - a. Carbon monoxide.
 - b. Any contaminant that is a regulated air contaminant solely because it is a class I or II substance subject to a standard promulgated under or established by title VI of the federal Clean Air Act.
 - c. Any contaminant that is a regulated air contaminant solely because it is subject to a standard or regulation under section 112(r) of the federal Clean Air Act.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-23-02. Permit to construct fees.

Any person constructing, installing, or establishing a new stationary source or altering an existing source which requires a permit to construct under subsections 1 and 3 of section 33.1-15-14-02 is required to pay a permit to construct application filing fee and a permit to construct processing fee to the department.

1. **Application fee.** A nonrefundable filing fee of three hundred twenty-five dollars must be submitted with the permit application.
2. **Processing fee.** The applicant shall pay a processing fee based on actual processing costs, including computer data processing costs, incurred by the department for all sources which would involve a major analysis the cost of which would exceed three hundred twenty-five dollars as determined by the department. The following procedures and criteria will be utilized in establishing the fee:
 - a. A record of all permit to construct application processing costs incurred must be maintained by the department.

- b. Upon request, the department, in consultation with the applicant, will prepare an estimate of the processing fee and the billing schedule that will be utilized in processing the application.
- c. Statements will be sent to the applicant containing the actual processing costs incurred by the department.
- d. The applicant must pay the processing fee regardless of whether a permit to construct is issued, denied, or withdrawn.
- e. Any source that initiates operation under a permit to construct prior to receiving a permit to operate is subject to the fees outlined in section 33.1-15-23-03 or 33.1-15-23-04, whichever is applicable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 21

33.1-15-23-03. Minor source permit to operate fees.

- 1. The owner or operator of each installation subject to a permit issued under section 33.1-15-14-03 shall pay an annual permit fee based on the following table:

<u>Classification</u>	<u>Annual Fee</u>
<u>Designated</u>	<u>\$300</u>
<u>Other</u>	<u>\$100</u>
<u>State and local government</u>	<u>\$0</u>
<u>Exempt</u>	<u>\$0</u>

The following criteria are used to classify sources for determining minor source annual fees:

<u>Designated:</u>	<u>A source that is designated for scheduled inspections.</u>
<u>Other:</u>	<u>As designated by the department.</u>
<u>State and local government:</u>	<u>Any installation owned by the state of North Dakota or a local government.</u>
<u>Exempt:</u>	<u>As designated by the department.</u>

- 2. The following activities conducted by the department are not included in the annual costs and will be charged to affected sources based on the actual costs incurred by the department:

- a. Observation of source or performance specification testing, or both.
- b. Audits of source operated ambient air monitoring networks.

An accounting of the actual costs incurred under this subsection must accompany the notice of the annual permit fee.

- 3. Annual emissions are derived using representative source test data, "compilation of air pollution emission factors (AP-42)" or other reliable data.

4. The classification of "other" and "exempt" shall be designated by the department on a case-by-case basis.
5. The department shall send a notice, identifying the amount of the annual permit fee, to the owner or operator of each affected source. The fee is due within sixty days following the date of such notice.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-10; S.L. 2017, ch. 199, § 21

33.1-15-23-04. Major source permit to operate fees.

1. The owner or operator of each installation that meets the applicability requirements of subsection 2 of section 33.1-15-14-06 shall pay an annual fee. The fee is determined by the actual annual emissions of regulated contaminants. Fugitive emissions will be included in the fee calculation for sources that are required to count them when determining applicability under section 33.1-15-14-06.
2. Effective January 1, 2005, the annual fee shall be assessed at a rate of twenty-five dollars per ton of emissions of each regulated contaminant identified in section 112(b) of the federal Clean Air Act. All other regulated contaminants will be assessed a fee at a rate of twelve dollars per ton. The minimum fee will be five hundred dollars per source.
3. In determining the amount due, that portion of any regulated contaminant which is emitted in excess of four thousand tons [3,628.74 metric tons] per year will be exempt from the fee calculation.
4. Each boiler with a heat input greater than two hundred fifty million British thermal units per hour will be assessed fees on an individual basis and independent of the fees associated with the rest of the installation. The four thousand ton [3,628.74 metric ton] per year cap referenced in subsection 3 is applied to each boiler.
5. Any state-owned or local government-owned facility is exempt from the fee.
6. The fee calculation must be based upon actual annual emissions from the previous calendar year.
7. The fee must be calculated independently for each installation, facility, source, or unit which has been issued a separate permit to operate.
8. The fee rates and the limits established under subsection 2 may be adjusted on an annual basis to account for any increase in the consumer price index published by the department of labor, as of the close of the twelve-month period ending on August thirty-first of each calendar year.
9. Any source that qualifies as a "small business" under section 507 of the federal Clean Air Act may petition the department to reduce or exempt any fee required under this section. Sufficient documentation of the petitioner's financial status must be submitted with the request to allow the department to evaluate the request.
10. The department shall send a notice, identifying the amount of the annual permit fee, to the owner or operator of each affected source. The fee is due within sixty days following the date of such notice.
11. Greenhouse gases are exempt from the fees in this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 21

33.1-15-23-05. Phase I substitution units.

Substitution units, as defined in 40 CFR part 72, shall pay an annual administrative fee equal to one hundred thousand dollars per source. This fee must be adjusted on an annual basis to account for any increase in the consumer price index. The adjustment shall be made on August thirty-first of each year and shall be based on the department of labor's published change in the index.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-10; S.L. 2017, ch. 199, § 21

33.1-15-23-06. Oil and gas well production facilities.

The owner or operator of an oil and gas well production facility that is required to register the facility in accordance with section 33.1-15-20-02 shall pay a nonrefundable filing fee of one hundred fifty dollars per well. The filing fee must be submitted with the registration form.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-10; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-15-24 STANDARDS FOR LEAD-BASED PAINT ACTIVITIES

Section

33.1-15-24-01 Scope

33.1-15-24-02 Standards for Activities

33.1-15-24-03 Notification Requirements

33.1-15-24-04 Lead-Based Paint Abatement Licensing, Certification, and Course Approval Fees

33.1-15-24-01. Scope.

The sections of title 40 Code of Federal Regulations part 745, as they exist on January 31, 2002, which are listed under section 33.1-15-24-02 are incorporated into this chapter by reference. Any changes to the standards are listed below the title of the section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-24-02. Standards for activities.

745.220 Scope and applicability is amended as follows:

- (a) This subpart contains procedures and requirements for the accreditation of lead-based paint activities training programs, procedures, and requirements for the certification of individuals and the licensing of firms engaged in lead-based paint activities and work practice standards for performing such activities. This subpart also requires that, except as discussed below, all lead-based paint activities, as defined in this subpart, be performed by certified individuals and licensed firms.
- (b) This subpart applies to all individuals and firms who are engaged in lead-based paint activities as defined in subpart 745.223, except persons who conduct these activities within residential dwellings that they own, unless the residential dwelling is occupied by a person or persons other than the owner or the owner's immediate family while these activities are being performed, or a child residing in the building has been identified as having an elevated blood lead level.
- (c) Each department, agency, and instrumentality of the executive, legislative, and judicial branches of the federal government having jurisdiction over any property or facility, or engaged in any activity resulting, or which may result, in a lead-based paint hazard, and each officer, agent, or employee thereof shall be subject to, and comply with, all federal, state, interstate, and local requirements, both substantive and procedural, including the requirements of this subpart regarding lead-based paint, lead-based paint activities, and lead-based paint hazards.
- (d) While this subpart establishes specific requirements for performing lead-based paint activities should they be undertaken, nothing in this subpart requires that the owner or occupant undertake any particular lead-based paint activity.

745.223 Definitions

The terms United States environmental protection agency administrator and agency are deleted and replaced with department, except for those duties that cannot be delegated by the United States environmental protection agency. For those duties that cannot be delegated, environmental protection agency means the United States environmental protection agency and administrator means the administrator of the United States environmental protection agency.

"Authorized state" is added and means a state that has been authorized in accordance with title 40 Code of Federal Regulations part 745, subpart Q, to administer and enforce sections 745.225, 745.226, and 745.227.

The acronym "EPA" is added and means the United States environmental protection agency or authorized state when used in the phrases "accredited by EPA" and "certified by EPA" or when referring to EPA accreditation of a training course or referring to EPA certification of an individual.

Certified firm is amended as follows: delete the words certified and certificate and replace with licensed and license.

"Child-occupied facility" means a building, or portion of a building, constructed prior to 1978, visited regularly by the same child, six years of age or under, on at least two different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least three hours and the combined weekly visit lasts at least six hours, and the combined annual visits last at least sixty hours. Child-occupied facilities may include day care centers, preschools, and kindergarten classrooms.

"Elevated blood lead level" is changed from twenty micrograms of lead per deciliter of whole blood for a single venous test to ten micrograms of lead per deciliter of whole blood for a single venous test. The remainder of the definition is deleted.

"Lead-based paint activities" means in the case of target housing and child-occupied facilities, inspection, risk assessment, and abatement, as defined in this subpart.

"Lead-based paint hazard" is amended as defined in 40 CFR 745.223 and as defined in 40 CFR 745.63 and means hazardous lead-based paint, dust-lead hazard or soil-lead hazard or any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, or lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects as identified by the administrator pursuant to TSCA section 403.

"Licensed firm" is added and means a company, partnership, corporation, sole proprietorship, association, or other business entity that performs lead-based paint activities to which the department has issued a license approval pursuant to North Dakota Administrative Code chapter 33.1-15-24.

"Target housing" means any housing constructed prior to 1978, except housing for the elderly or persons with disabilities (unless any one or more children age six years or under resides or is expected to reside in such housing for the elderly or persons with disabilities) or any zero-bedroom dwelling.

The following definitions are incorporated into section 745.223:

"Chewable surface" as defined in 40 CFR 745.63.

"Concentration" as defined in 40 CFR 745.63.

"Dripline" as defined in 40 CFR 745.63.

"Dust-lead hazard" as defined in 40 CFR 745.65(b).

"Friction surface" as defined in 40 CFR 745.63.

"Impact surface" as defined in 40 CFR 745.63.

"Paint-lead hazard" as defined in 40 CFR 745.65(a).

"Play area" as defined in 40 CFR 745.63.

"Renovation" as defined in 40 CFR 745.83.

"Soil-lead hazard" as defined in 40 CFR 745.65(c).

"Soil sample" as defined in 40 CFR 745.63.

"Wipe sample" as defined in 40 CFR 745.63.

"Work practice requirements" as defined in 40 CFR 745.65(d).

745.225 Accreditation of training programs: Target housing and child-occupied facilities.

745.225(a)(2) is deleted.

In 745.225(b)(4), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.225(f)(3)(v), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.225(h)(4)(iv), the number fifteen is deleted and replaced with ten.

In 745.225(h)(5), the references to section 14 of TSCA or by part 2 of this title is deleted and replaced with North Dakota Administrative Code section 33.1-15-01-16.

745.226 Certification of individuals and firms engaged in lead-based paint activities: target housing and child-occupied facilities.

745.226(a)(2) is deleted.

In 745.226(a)(6), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.226(b)(1)(ii) after EPA add: or an authorized state.

745.226(d) is deleted and replaced with: Certification based on prior training or prior certification with the United States environmental protection agency or an authorized state.

(1) Anyone who has completed an approved lead training course within nine months of the effective date of this rule and has not completed a certification examination will have six months from the effective date of this rule to complete a certification examination and make application to the state.

(2) Anyone who is certified by the United States environmental protection agency or an authorized state prior to the effective date of this rule will have six months from the effective date of this rule to apply for reciprocal lead-based paint certification and license in North Dakota. Reciprocity applicants should submit an application, proof of training and certification, and the appropriate fee in accordance with North Dakota Administrative Code section 33.1-15-24-04. Certification will be for a period of three years from the date of the last training course attended.

In 745.226(e)(3), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.226(f), delete the words certification and certified and replace with licensing and licensed.

745.226(f)(5) is deleted.

In 745.226(f)(6), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.226(f)(7), the reference to section 745.238 is deleted and replaced with North Dakota Administrative Code section 33.1-15-24-04.

In 745.226(h), delete the word certification and replace with license.

In 745.226(i), delete the words certification and certified and replace with license and licensed when referring to a firm.

In 745.226(i)(4)(iv), the number fifteen is deleted and replaced with ten.

In 745.226(i)(5), the references to TSCA section 14 or by part 2 of this title is deleted and replaced with North Dakota Administrative Code section 33.1-15-01-16.

745.227 Work practice standards for conducting lead-based paint activities: target housing and child-occupied facilities.

In 745.227(e)(3), certified firm is deleted and replaced with licensed firm.

745.227(e)(4) is deleted in its entirety and replaced with North Dakota Administrative Code section 33.1-15-24-03.

745.227(i) is added as follows:

- (i) Recordkeeping. All reports or plans required in this section shall be maintained by the licensed firm or individual who prepared the report for no fewer than three years. The licensed firm or individual shall also provide copies of these reports to the building owner who contracted for its services.

745.233 Lead-based paint activities requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-24-03. Notification requirements.

1. Notification.

- a. Notification of commencement of lead-based paint abatement activities in a residential dwelling or child-occupied facility or as a result of a federal, state, or local order shall be given to the department ten days prior to the commencement of the abatement activities. The notification shall be provided on a form provided by the department.
- b. Notification of all lead-based paint accredited training courses offered in North Dakota shall be provided to the department at least ten days prior to the commencement of the course. Notification of completion of the course shall be provided to the department within ten days after the course has been completed. Both notifications shall be provided on a form provided by the department.

2. Notification requirements. Each owner or operator to which this chapter applies shall:

- a. Provide the department with written notice of intent to abate lead-based paint.

b. Indicate whether the notice is original or a revised notification and update the notice as necessary, including but not limited to:

(1) Update notification for new start dates.

(2) Update notification for change in job location.

(3) Update notification for cancellations.

c. Postmark or deliver the notice as follows:

(1) At least ten working days before abatement begins.

(2) As early as possible before, but not later than, the following working day after abatement begins if the abatement is the result of an order from a federal, state, or local government.

3. **Required information.** Each owner or operator to which this chapter applies shall include the following information in the notification required by subsection 1:

a. The name, address, and telephone number of the owner of the facility.

b. The name, address, and telephone number of the abatement company.

c. A description of the facility or the affected part of the facility being abated, including the size, age, and present use of the facility.

d. An estimate of the amount of lead-based paint to be abated from the facility in terms of square feet.

e. The location of the facility being abated, including the street address, city, county, and state if different from that required by subdivision a.

f. The scheduled starting date and completion date of the abatement work.

g. A description of the abatement work to be performed, including the abatement techniques and methods to be employed during the activities and a description of the affected facility components.

h. The name and location of the waste disposal site where the lead-based paint containing waste material will be deposited.

i. The name, address, and telephone number of the waste transporter.

j. A signed statement by the lead-based paint contractor that all lead-based paint abatement supervisors and lead-based paint workers assigned to this project are certified by the department, in accordance with section 33.1-15-24-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

33.1-15-24-04. Lead-based paint abatement licensing, certification, and course approval fees.

1. **Purpose.** This section establishes fees charged for the issuance of licenses and certificates by the department for lead-based paint activities. This section also establishes fees charged to recover costs associated with regulatory activities involving lead-based paint.

2. **Scope.** This section applies to a person or company who is an applicant for a lead-based paint certificate, license, or course approval issued by the department.

3. **Exemptions.**

a. No application fees, license fees, amendment fees, or renewal fees shall be required for:

(1) Nonprofit educational institutions are exempt from the fees prescribed in this section. This exemption does not apply to institutions which perform any of the following:

(a) Remunerated services to other persons.

(b) Activities performed under a government contract.

(2) Public employees.

(3) Firms which perform only in house lead-based paint activities.

b. The department may, upon application by an interested person, or upon its own initiative, grant such exemptions from the requirements of this section as it determines are authorized by law and are otherwise in the public interest.

4. **Payment of fees.** Any fees required by this subsection are not refundable.

a. License, certification, and course approval fees. The appropriate licensing, certification, or course approval fee shall accompany the application when filed with the department.

b. Renewal fees. The appropriate renewal fee shall accompany the renewal application when filed with the department.

c. Special project fees. Special project means those projects submitted to the department for review and for which specific fees are not prescribed in this chapter. Special project fees will be based upon the current professional staff hourly rate. Fees for special projects are payable upon notification by the department that review of the project is completed.

d. Method of payment. Fee payments shall be made by check, draft, or money order made payable to the department.

e. Submittal of application and fee payment. The application for licensure or certification shall be submitted to:

North Dakota Department of Environmental Quality
Division of Air Quality
1200 Missouri Avenue, Room 304
P.O. Box 5520
Bismarck, ND 58506-5520

5. **Failure by applicant or licensee to pay prescribed fees.** If the department finds that an applicant or a licensee has failed to pay a prescribed fee required in this section, the

department will not process any application and may suspend or revoke any certification, license, or course approval involved or may issue an order with respect to licensed activities as the department determines to be appropriate or necessary in order to carry out the provisions of this chapter and of the North Dakota Century Code.

6. Schedule of fees for lead based paint activities.

a. Applicants for lead-based paint licenses, certifications, and course approvals shall pay the following fees:

<u>Fee Category</u>	<u>Term</u>	<u>Fee</u>
<u>Contractor license</u>	<u>3 years</u>	<u>\$450.00</u>
<u>Individual certifications</u>	<u>3 years</u>	<u>\$150.00 (per discipline)</u>

b. Training course approvals. Any training provider requesting a review of the provider's course for approval by the department shall submit a filing fee of one hundred fifty dollars and pay an application processing fee. The application processing fee will be based on the actual processing costs, including time spent by the department to conduct the course review and course audit, and any travel and lodging expenses the department incurs conducting these activities. Following the course review and audit, and after making a determination on the accreditation status of the course, a statement will be sent to the applicant listing the remaining application processing costs. The course provider must conduct a course in North Dakota for audit purposes within fifteen months of the submittal of the initial filing fee or the initial filing fee and any application processing fees paid will be forfeited.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04; S.L. 2017, ch. 199, § 21

CHAPTER 33.1-15-25 REGIONAL HAZE REQUIREMENTS

Section

- 33.1-15-25-01 Definitions
- 33.1-15-25-02 Best Available Retrofit Technology
- 33.1-15-25-03 [Reserved]
- 33.1-15-25-04 Monitoring, Recordkeeping, and Reporting

33.1-15-25-01. Definitions.

The definitions in title 40 Code of Federal Regulations part 51, section 301, as they exist on October 1, 2005, are incorporated by reference into this chapter. For purposes of this chapter only:

1. "Boiler operating day" means any twenty-four-hour period between midnight and the following midnight during which any fuel is combusted at any time at the steam generating unit.
2. "Contributes to visibility impairment" means a change in visibility impairment in a class I federal area of five-tenths deciviews or more (twenty-four-hour average) above the average natural visibility baseline. A source exceeds the threshold when the ninety-eighth percentile (eighth highest value) of the modeling results based on any one year of the three years of meteorological data modeled exceeds five-tenths deciviews.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-25-02. Best available retrofit technology.

1. [Reserved].
2. **Installation of best available retrofit technology.** The owner or operator of any existing stationary facility as defined in title 40 Code of Federal Regulations section 301, which contributes to visibility impairment in a class I federal area shall install and operate best available retrofit technology. The equipment shall be installed and operating as expeditiously as practicable but in no event later than five years after the United States environmental protection agency's approval of North Dakota's state implementation plan revision for best available retrofit technology.
3. **Operation and maintenance of best available retrofit technology.** The owner or operator of a facility required to install best available retrofit technology under subsection 1 shall establish procedures to ensure such equipment is properly operated and maintained.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-06-04, 23.1-06-08; S.L. 2017, ch. 199, § 21

33.1-15-25-03. [Reserved].

33.1-15-25-04. Monitoring, recordkeeping, and reporting.

The owner or operator of any existing stationary facility that is required to install best available retrofit technology shall conduct monitoring, recordkeeping, and reporting sufficient to show compliance

or noncompliance. Monitoring for sulfur dioxide and nitrogen oxides from the main stack of a fossil-fuel-fired steam electric plant shall be conducted using continuous emissions monitoring systems which comply with the requirements of section 33.1-15-21-09. Particulate monitoring shall be in accordance with the requirements of subsection 10 of section 33.1-15-14-06. Recordkeeping and reporting shall comply with the requirements of section 33.1-15-14-06. Monitoring, recordkeeping, and reporting for other source units shall comply with the requirements of section 33.1-15-14-06.

History: Effective January 1, 2019.

33.1-16-01-01. General - Definitions - Permit effect - Incorporation by reference.

1. **Authority.** The authority for this chapter relating to the control, prevention, and abatement of pollution of natural surface and underground waters is provided by North Dakota Century Code section 61-28-04.
2. **Scope and purpose.** This chapter establishes procedures governing the application for, and the issuance, denial, modification, and revocation of, permits for the discharge of pollutants into the waters of the state, as defined by subsection 6 of North Dakota Century Code section 61-28-02. The establishment of such procedures is required as a condition precedent to participation by North Dakota in the national pollutant discharge elimination system, pursuant to the provisions of section 402(b) of the Federal Water Pollution Control Act [33 U.S.C. 1251 et seq.].
3. **Definitions.** As used in this chapter, unless the context otherwise indicates:
 - a. "Administrator" means the administrator of the United States environmental protection agency.
 - b. "Applicable water quality standards" means all water quality standards to which a discharge is subject under the Federal Water Pollution Control Act and which have been:
 - (1) Approved or permitted to remain in effect by the administrator following submission to the administrator pursuant to section 303(a) of the Federal Water Pollution Control Act; or
 - (2) Promulgated by the administrator pursuant to section 303(b) or (c) of the Federal Water Pollution Control Act.
 - c. "Biological monitoring" means the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants:
 - (1) By techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent; and
 - (2) At appropriate frequencies and locations.
 - d. "Department" means the department of environmental quality.
 - e. "Discharge" when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.
 - f. "Discharge of a pollutant" and "discharge of pollutants" each means any addition of any pollutant to the waters of the state from any source, including the disposal of pollutants into wells.
 - g. "Effluent standard" or "effluent limitation" means any restriction established by the department on quantities, rates, and concentrations of chemical, physical, biological, and

other constituents which are discharged from point sources into the waters of the state. Such restrictions shall be at least as stringent as standards adopted by the administrator pursuant to the provisions of the Federal Water Pollution Control Act. Such restrictions shall include effluent limitations and applicable compliance schedules, standards of performance, toxic effluent standards and prohibitions, and pretreatment standards adopted by the administrator pursuant to the aforesaid Act.

h. "EPA" means the United States environmental protection agency.

i. "Industrial user" means a source of indirect discharge as defined in section 33.1-16-01.1-01.

j. "Major facility" means any facility or activity subject to regulation under the national pollutant discharge elimination system which has been identified as a major facility by the regional administrator in conjunction with the department.

k. "Minor discharge" means any discharge from a facility or activity which has not been identified as a major facility.

l. "Municipality" means a city, county, district, association, or other public body created by or pursuant to state law and having jurisdiction over disposal of wastes, as the term is defined by subsection 2 of North Dakota Century Code section 61-28-02, or a designated and approved management agency under section 209 of the Federal Water Pollution Control Act.

m. "National data bank" means a facility or system established or to be established by the administrator for the purposes of assembling, organizing, and analyzing data pertaining to water quality and the discharge of pollutants.

n. "National pollutant discharge elimination system (NPDES)" means the national system for the issuance of permits under section 402 of the Federal Water Pollution Control Act of 1972 and includes any state or interstate program which has been approved by the administrator pursuant to section 402 of the Federal Water Pollution Control Act.

o. "National pollutant discharge elimination system application" or "application" means the uniform national forms, including subsequent additions, revisions, or modifications duly promulgated by the administrator pursuant to the Federal Water Pollution Control Act, for application for a national pollutant discharge elimination system permit and any state form that has been approved for use by the administrator.

p. "National pollutant discharge elimination system form" means any issued national pollutant discharge elimination system permit and any uniform national form developed for use in the national pollutant discharge elimination system and prescribed in regulations promulgated by the administrator and any state form that has been approved for use by the administrator.

q. "National pollutant discharge elimination system permit" means any permit issued by the department pursuant to its authority under North Dakota Century Code section 61-28-04, and subsequent to approval by the administrator as described in subsection 5 of section 33.1-16-01-04.

r. "National pollutant discharge elimination system reporting form" means the uniform national forms, including subsequent additions, revisions, or modifications duly promulgated by the administrator pursuant to the Federal Water Pollution Control Act, for reporting data and information pursuant to monitoring and other conditions of national pollutant discharge elimination system permits and any state form that has been approved for use by the administrator.

- s. "Person" means the state or any agency or institution thereof, any municipality, political subdivision, public or private corporation, individual, partnership, association, any agency or instrumentality of the United States government, or other entity, and includes any officer or governing or managing body of any municipality, political subdivision, or public or private corporation.
- t. "Pollutant" means "wastes" as defined in subsection 2 of North Dakota Century Code section 61-28-02, including dredged spoil, solid waste, incinerator residue, garbage, sewage, sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water.
- u. "Refuse Act application" means the application for a permit under section 13 of the River and Harbor Act of 1899 [33 U.S.C. 407].
- v. "Regional administrator" means the regional administrator of region VIII of the environmental protection agency, which includes within its jurisdiction North Dakota.
- w. "Schedule of compliance" means a schedule of remedial measures, including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.
- x. "Toxic pollutant" means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation, or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions including malfunctions in reproduction, or physical deformations, in such organisms or their offspring.
- y. "Waters of the state" means all water included within the definitions given in subsection 15 of North Dakota Century Code section 61-28-02 or North Dakota Century Code section 61-01-01.

4. Effect of a permit.

- a. Except for any toxic effluent standards and prohibitions and standards for sewage sludge use or disposal, compliance with a permit constitutes compliance with sections 301, 302, 307, 318, 403, and 405(a) and (b) of the Clean Water Act.
- b. The issuance of a permit does not convey any property rights of any sort or any exclusive privilege.

5. Incorporation by reference.

- a. The subchapters, parts, subparts, and appendices of title 40 Code of Federal Regulations which are incorporated by reference into this chapter shall be treated as if they were published in full in this chapter. Except as provided in section 33.1-16-01-31 or otherwise specified, any incorporation by reference shall be as it exists on January 1, 2018.
- b. Any reference to "waters of the United States" or "waters of the U.S." in any corporation by reference shall include "waters of the state" as defined in this section.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-01.1. Additional point sources subject to regulation.

1. Concentrated animal feeding operations, 40 CFR 122.23, is incorporated into this chapter by reference. The department regulates livestock operations under chapter 33.1-16-03, including those which are not subject to this subsection.
2. Concentrated aquatic animal production facilities, 40 CFR 122.24, is incorporated into this chapter by reference.
3. Aquaculture projects, 40 CFR 122.25, is incorporated into this chapter by reference.
4. Storm water discharges, 40 CFR 122.26, is incorporated into this chapter by reference.
5. Silvicultural activities, 40 CFR 122.27, is incorporated into this chapter by reference.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-02. Acquisition of data.

1. Application for a national pollutant discharge elimination system permit. Any person who discharges any waste through a point source into a surface water or conducts any activity which requires a valid permit under North Dakota Century Code section 61-28-06 must file a completed national pollutant discharge elimination system application.
2. Any person who commences discharge of any waste through a point source into a surface water or conduct of any activity which requires a valid permit under North Dakota Century Code section 61-28-06 after the effective date of this chapter shall either:
 - a. File a completed national pollutant discharge elimination system application no less than one hundred eighty days prior to the day on which it is desired to commence operation of the waste disposal operation; or
 - b. File a completed national pollutant discharge elimination system application in sufficient time prior to the commencement of waste disposal operations to allow the department to ensure compliance with any applicable water quality standards and effluent standards and the requirements of sections 306 and 208(b) and (c) of the Federal Water Pollution Control Act.
3. Application requirements.
 - a. All applications must comply with 40 CFR part 122.21(f), which is incorporated into this chapter by reference.
 - b. Applications by manufacturing, commercial mining, and silvicultural dischargers shall comply with 40 CFR part 122.21(g), which is incorporated into this chapter by reference.
 - c. Applications by manufacturing, commercial mining, and silvicultural facilities that discharge only nonprocess wastewater shall comply with 40 CFR part 122.21(h), which is incorporated into this chapter by reference.
 - d. Applications by concentrated animal feeding operations and aquatic animal production facilities shall comply with 40 CFR part 122.21(i) which is incorporated into this chapter by reference.
 - e. Applications from publicly owned treatment works shall comply with 40 CFR part 122.21(j), which is incorporated into this chapter by reference.

f. Applications from new sources shall comply with 40 CFR part 122.21(k), which is incorporated into this chapter by reference.

4. The department may require whatever additional information is necessary to complete the processing of the application. No application will be processed by the department until all of the requested information is supplied and the application is complete.

5. When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit.

6. Applicants shall keep records of all data used to complete permit applications and any supplemental information submitted with an application for a period of at least three years from the date the application is signed.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-02.1. Requests for variance.

1. Applicants for a national pollutant discharge elimination system permit may request a variance from otherwise applicable effluent limitations under the following provisions:

a. Variance requests by nonpublicly owned treatment works, 40 CFR 122.21(m), which is incorporated into this chapter by reference;

b. Variance requests by publicly owned treatment works, 40 CFR 122.21(n), which is incorporated into this chapter by reference; and

c. Expedited variance procedures and time extensions, 40 CFR 122.21(o), which is incorporated into this chapter by reference.

2. The public notice for a draft permit for which a variance has been requested under section 316(a) of the Federal Water Pollution Control Act shall comply with the provisions of 40 CFR 124.57(a), which is incorporated into this chapter by reference.

3. Decision on variances, 40 CFR 124.62, is incorporated into this chapter by reference.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-03. Receipt and use of federal data.

1. The department shall receive national pollutant discharge elimination system applications and other relevant data collected by the regional administrator prior to North Dakota's participation in the national pollutant discharge elimination system. The procedure for such transmittal of data shall be set out in a formal agreement entered into by the department and the regional administrator.

2. No national pollutant discharge elimination system permits shall be issued by the department based upon any Refuse Act or national pollutant discharge elimination system application which the regional administrator has identified as incomplete or otherwise deficient until the department receives information sufficient to correct the deficiency to the satisfaction of the regional administrator.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-04. Transmission of data to the regional administrator.

The department shall enter into a formal agreement with the regional administrator, setting out procedures for the following actions:

1. Transmittal to the regional administrator of a complete copy of any national pollutant discharge elimination system form received by the department.
2. Transmittal to the national data bank of a complete copy of any appropriate national pollutant discharge elimination system form received by the department.
3. Procedures for acting on the regional administrator's written waiver, if any, of the regional administrator's rights to receive copies of national pollutant discharge elimination system forms with respect to classes, types, and sizes within any category of point sources and with respect to minor discharges or discharges to particular navigable waters as such are defined by section 502(7) of the Federal Water Pollution Control Act, or parts thereof.
4. An opportunity for the regional administrator to object in writing to deficiencies in any national pollutant discharge elimination system application or reporting form received by the regional administrator and to have such deficiency corrected. If the regional administrator's objection relates to a national pollutant discharge elimination system application, the department shall send the regional administrator any information necessary to correct the deficiency and, if the regional administrator so requests, shall not issue the national pollutant discharge elimination system permit until the department receives notice from the regional administrator that the deficiency has been corrected.
5. An opportunity for the regional administrator to identify any discharge which has a total volume of less than fifty thousand gallons [189,250 liters] on every day of the year as a discharge which is not a minor discharge. If the regional administrator so identifies a discharge and notifies the department, the latter shall require the applicant for such discharge to submit additional national pollutant discharge elimination system application forms or any other information requested by the regional administrator in the regional administrator's notification to the department.
6. Procedures for the transmittal, if requested by the regional administrator, of copies of notice received by the department from publicly owned treatment works pursuant to subsection 4 of section 33.1-16-01-16.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-05. Identity of signatories to national pollutant discharge elimination system forms.

1. Any national pollutant discharge elimination system application form or other document required to accompany the form when submitted to the department must be signed as follows:
 - a. In the case of corporations, by a principal executive officer of at least the level of vice president, or the officer's duly authorized representative, if such representative is responsible for the overall operation of the facility from which the discharge described in the national pollutant discharge elimination system form originates.
 - b. In the case of a partnership, by a general partner.

c. In the case of sole proprietorship, by the proprietor.

d. In the case of a municipal, state, federal, or other public facility, by either a principal executive officer or a ranking elected official.

2. All reports required by permits and other information requested by the department shall be signed by the person described in subsection 1 or that person's duly authorized representative. Authorization for a representative shall be submitted to the department in writing by the person described in subsection 1 and shall specify either an individual or a position having responsibility for the overall operation of the regulated facility.

3. If an authorization becomes invalid, a new authorization shall be submitted to the department prior to or together with any reports, information, or applications to be signed by an authorized representative.

4. Any person signing application forms, reports, or other information, shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-06. Notice and public participation.

In the formulation of tentative determinations and draft national pollutant discharge elimination system permits, including general permits:

1. The department will prepare a tentative staff determination, with respect to any completed national pollutant discharge elimination system application. Such tentative determinations shall include at least the following:

a. A proposed determination to issue or deny a national pollutant discharge elimination system permit for the discharge described in the application.

b. If the proposed determination is to issue a national pollutant discharge elimination system permit, the following additional tentative determinations shall be made:

(1) Proposed effluent limitations, standards, and prohibitions, identified pursuant to section 33.1-16-01-13 for those pollutants proposed to be limited.

(2) If necessary, a proposed schedule of compliance, including interim dates and requirements, for meeting the proposed effluent limitations.

(3) Proposed permit conditions pursuant to sections 33.1-16-01-12 and 33.1-16-01-13.

(4) Proposed monitoring requirements pursuant to section 33.1-16-01-12.

(5) Proposed variances pursuant to section 33.1-16-01-02.1.

(6) A brief description of any other proposed special condition which will have a significant impact upon the discharge described in the national pollutant discharge elimination system application.

2. The department shall organize the tentative determinations prepared pursuant to subsection 1 into a draft national pollutant discharge elimination system permit for the discharge which is the subject of the application.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-07. Public notice.

1. Public notice of every national pollutant discharge elimination system draft permit shall be circulated in a manner designed to inform interested and potentially interested persons of the proposed discharge and of the proposed determination to issue or deny a national pollutant discharge elimination system permit for the proposed discharge. Procedures for the circulation of public notice shall include at least the following:

a. Notice of a major facility permit or general permit shall be published in a daily or weekly newspaper within the area affected by the facility or activity.

b. Notice of all other permits shall be circulated within the geographical areas of the proposed discharge; such circulation may include any or all of the following:

(1) Posting in the post office and public places of the municipality nearest the premises of the applicant in which the effluent source is located.

(2) Posting near the entrance to the applicant's premises and in nearby places.

(3) Publishing in local newspapers and periodicals, or, if appropriate, in a daily newspaper of general circulation.

(4) Any other method, including press releases, which will reasonably provide actual notice of the proposed action to the persons potentially affected.

c. Notice shall be mailed to the following persons:

(1) Any user identified in the permit application of a privately owned treatment works.

(2) Persons who are on the mailing list.

(3) Local governmental units which have jurisdiction over the area where the facility is proposed to be located and each state agency which has authority with respect to the facility's construction or operation.

d. Notice, a copy of the permit application, the statement of basis or fact sheet if required by section 33.1-16-01-08, and the draft permit prepared pursuant to section 33.1-16-01-06 shall be mailed to the following persons:

(1) The applicant, except for those national pollutant discharge elimination system general permits for which there is no applicant.

(2) Any other agency which is known to have issued or to be required to issue an environmental control permit for the same facility or activity.

(3) Federal and state agencies with jurisdiction over fish, shellfish, and wildlife resources, the advisory council on historic preservation, and the state historic preservation officers, including any affected states or Indian tribes.

(4) Any state agency responsible for plan development under sections 208(b)(2), 208(b)(4), and 303(e) of the Clean Water Act, the United States army corps of engineers, the United States fish and wildlife service, and the national marine fisheries service.

e. The department shall add the name of any person or group upon request to the mailing list. The department shall also post on its website annually an invitation to be added to the mailing list.

2. The department shall provide a period of not less than thirty days following the date of the public notice during which time interested persons may submit their written views on the tentative determinations with respect to the national pollutant discharge elimination system application. All written comments submitted during the thirty-day comment period shall be retained by the department and considered in the formulation of its final determinations with respect to the national pollutant discharge elimination system application. The period for comment may be extended at the discretion of the department.

3. The contents of public notice of applications for a national pollutant discharge elimination system permit shall include at least the following:

a. Name, address, and telephone number of the agency issuing the public notice.

b. Name and address of each applicant and facility, except for public notices of general permits.

c. Brief description of each applicant's activities or operations which result in the discharge described in the national pollutant discharge elimination system application or draft general permit, e.g., municipal waste treatment plant, steel manufacturing, or drainage for mining activities.

d. Name of waterway to which each discharge is made and a short description of the location of each discharge on the waterway indicating whether such discharge is a new or an existing discharge. For general permits, the public notice shall include a description of the permit area.

e. A statement of the tentative determination to issue or deny a national pollutant discharge elimination system permit for the discharge described in the national pollutant discharge elimination system application.

f. A brief description of the procedures for the formulation of final determinations, including the thirty-day comment period required by subsection 2, the right to request a public hearing, and any other means by which interested persons may influence or comment upon those determinations.

g. Address and telephone number of the department, where interested persons may obtain further information or request a copy of the draft permit prepared pursuant to section 33.1-16-01-06, request a copy of the fact sheet prepared pursuant to section 33.1-16-01-08, and inspect and copy national pollutant discharge elimination system forms and related documents.

h. The date, time, and location of any public hearing or meeting which has been scheduled.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-07.1. Response to comments.

Upon issuance of any final permit, the department shall issue a response to comments which briefly describes and responds to all significant comments received during the public comment period, public hearing, or public meeting. The response shall specify each provision of the draft permit which has been changed and the reasons for each change and shall be available to the public.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-08. Fact sheets.

1. The department shall prepare, and following public notice, shall send, upon request to any person, a fact sheet with respect to the application described in the public notice, when a draft permit is prepared in the following circumstances:

- a. The draft permit is for a major facility or a general permit;
- b. The draft permit incorporates a variance or requires an explanation pursuant to paragraph 3 of subdivision c of subsection 2; or
- c. The draft permit is subject to widespread public interest or raises major issues.

2. The contents of such fact sheets shall include at least the following information:

- a. A brief description of the facility or activity and, when appropriate, a sketch or detailed description of the location of the discharge or regulated activity described in the national pollutant discharge elimination system application.
- b. The type and quantity of wastes, fluids, or pollutants which are proposed to be or are being discharged.
- c. The tentative determinations required under section 33.1-16-01-06, in addition to the following:
 - (1) A brief summary of the basis for the draft permit conditions, including references to applicable statutory or regulatory provisions.
 - (2) Any calculation or explanation of the derivation of specific effluent limitations and conditions, including a citation to the applicable effluent limitation guideline or performance standard, and reasons why they are applicable or an explanation of how the alternative effluent limitations were developed.
 - (3) When the draft permit contains limitations to control toxic pollutants, limitations on internal waste streams, limitations on indicator pollutants, or case-by-case limitations derived from technology-based treatment requirements, an explanation of the limitations' applicability.
- d. A brief citation, including a brief identification of the uses for which the receiving waters have been classified, of the water quality standards and effluent standards and limitations applied to the proposed discharge.
- e. Reasons why any requested variances or alternatives to required standards do or do not appear justified.

f. When applicable, an explanation of the proposed method of regulating users of privately owned treatment works.

g. A more detailed description of the procedures for the formulation of final determinations than that given in the public notice, including:

(1) The thirty-day comment period required by section 33.1-16-01-07 and the address where the comments will be received.

(2) Any procedures by which the public may participate in the formulation of the final determinations, including procedures for requesting a hearing pursuant to section 33.1-16-01-11.

h. The name and telephone number of a person to contact for additional information.

3. The department shall add the name of any person or group upon request to a mailing list to receive copies of fact sheets.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-09. Notice to government agencies.

The state shall notify other appropriate government agencies of each complete application for a national pollutant discharge elimination system permit and shall provide such agencies an opportunity to submit their written views and recommendations.

1. The department shall ensure that a copy of each fact sheet prepared under the provisions of this chapter is mailed to the following parties:

a. Any other state whose waters might be affected by the issuance of a national pollutant discharge elimination system permit.

b. Any interstate agency having water quality authority over affected waters.

c. Any other appropriate federal, state, or local agency, including other appropriate public health agencies.

d. The appropriate district engineer of the United States army corps of engineers.

2. Each such governmental body listed in subsection 1 shall be given an opportunity to submit written recommendations concerning the proposed permit to the department.

a. Whenever a state makes recommendations concerning the proposed permit, and such recommendations are not incorporated into the final version of the permit, the department shall provide the recommending state with a written explanation for the failure to incorporate such recommendations.

b. Response to written comments provided by the corps of engineers during the comment period pursuant to section 33.1-16-01-06 shall conform to the following:

(1) If the corps of engineers advises that anchorage and navigation of any of the waters of the United States would be substantially impaired by the granting of a permit, the permit shall be denied and the applicant notified.

(2) If the corps of engineers advises that imposing specified conditions in the permit is necessary to avoid any substantial impairment of anchorage or navigation, the department shall include the specified conditions in the permit.

(3) Review or appeal of a permit denial or of conditions specified by the corps of engineers shall be made through the applicable procedures of the corps of engineers. If the conditions are stayed by a court of competent jurisdiction or by applicable procedures of the corps of engineers, those conditions shall be considered stayed in the national pollutant discharge elimination system permit for the duration of that stay.

c. Whenever the United States fish and wildlife service, the national marine fisheries service, or any other state or federal agency with jurisdiction over fish, wildlife, or public health makes recommendations of specified permit conditions necessary to avoid substantial impairment of fish, shellfish, or wildlife resources, the department may include the specified conditions in the permit to the extent necessary to carry out the provisions of 40 CFR part 122.49, and of the Clean Water Act.

3. In appropriate cases, the department may consult with the United States corps of engineers or the United States fish and wildlife service before issuing a draft permit. The department may reflect these agencies' views in the statement of basis, the fact sheet, or the draft permit.

4. The department may enter into a written agreement with the appropriate district engineer of the United States army corps of engineers to provide for procedures which will ensure the transmission of all forms and information required by the corps, and procedures for the recording of any comment or objections the corps may have on a proposed permit. A copy of the agreement, if promulgated, shall be forwarded to the regional administrator.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-10. Public access to information.

In addition to the provisions of section 33.1-16-01-07, the department shall provide the following:

1. Facilities for the public inspection of all information relating to national pollutant discharge elimination system forms, including monitoring data, and a machine or device for the copying of those papers and documents at a reasonable fee.

2. A copy of any request for the confidential treatment of any information relating to a North Dakota pollutant discharge elimination system permit application to the regional administrator, together with all information related to such request.

3. If the department determines that certain information should be accorded confidential status for reason of being a trade secret, it shall disclose such information to the administrator upon the latter's request; the administrator shall maintain the disclosed information in confidence, unless the administrator determines that such information, if made public, would not divulge methods of processes entitled to protection as trade secrets.

4. Information required by national pollutant discharge elimination system application forms may not be claimed confidential. This includes information submitted on the forms and any attachments used to supply information required by the form. In no case shall the name and address of any applicant or permittee, permit applications, permits, or effluent data be considered confidential by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-11. Hearings and notice.

1. A national pollutant discharge elimination system applicant, any affected state, any affected interstate agency, any affected country, the regional administrator, or any interested agency, person, or group of persons may request or petition the department for a public hearing with respect to national pollutant discharge elimination system applications. Any such request or petition for public hearing shall be filed in writing within the thirty-day period prescribed in subsection 2 of section 33.1-16-01-07 and shall indicate the interest of the person filing such request and the reasons why a hearing is warranted.
2. The department shall hold a hearing if it determines that there is a significant public interest, including the filing of requests or petitions for such hearing, in holding such a hearing. The department may also hold a hearing at its discretion for any other reason. Any hearing brought pursuant to this subsection shall be held in the geographical area of the proposed discharge or other appropriate area, in the discretion of the department and may, as appropriate, consider related groups of permit applications.
3. Public notice of any hearing held under this section shall be circulated at least as widely as was the notice of the national pollutant discharge elimination system application pursuant to section 33.1-16-01-07. Procedures for the circulation of public notice for hearings held under this section shall include at least the following:
 - a. Notice shall be published in at least one newspaper of general circulation within the geographical area of the discharge.
 - b. Notice shall be sent to all persons and government agencies which received a copy of the notice or the fact sheet for the national pollutant discharge elimination system application.
 - c. Notice shall be mailed to any person or group upon request.
 - d. Notice shall also be given to all persons who submitted comments on the proposed national pollutant discharge elimination system permit pursuant to section 33.1-16-01-07.
 - e. Notice shall be effected pursuant to subdivision a at least thirty days in advance of the hearing.
4. The contents of public notice of any hearing held pursuant to this section shall include at least the following:
 - a. Name, address, and telephone number of the agency holding the public hearing.
 - b. Name and address of each applicant whose application will be considered at the hearing, except in the case of draft general permits.
 - c. A brief description of the business conducted at the facility of the activity described in the permit application or draft permit.
 - d. Name of waterway to which each discharge is made and a short description of the location of each discharge on the waterway.
 - e. A reference to the date of previous public notices relating to the permit.
 - f. Information regarding the date, time, and location for the hearing.

- g. The purpose of the hearing.
- h. A concise statement of the issues raised by the persons requesting the hearing.
- i. Address and telephone number of the premises at which interested persons may obtain further information, request a copy of each draft national pollutant discharge elimination system permit prepared pursuant to section 33.1-16-01-06, request a copy of each fact sheet prepared pursuant to section 33.1-16-01-08, and inspect and copy national pollutant discharge elimination system forms and related documents.
- j. A brief description of the nature of the hearing, including the rules and procedures to be followed.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-12. Terms and conditions of national pollutant discharge elimination system permits.

1. The following discharges into the waters of the state are prohibited:
 - a. Any radiological, chemical, or biological warfare agent or high-level radioactive waste.
 - b. Any discharge into the navigable waters that the secretary of the army acting through the chief of engineers finds would substantially impair anchorage and navigation.
 - c. Any discharge to which the regional administrator has objected in writing.
 - d. Any discharge from a point source which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Federal Water Pollution Control Act.
 - e. Any discharge requiring certification under section 401 of the Federal Water Pollution Control Act and 40 CFR part 124.53, for which the department has neither granted nor waived the certification.
 - f. Any discharge from a new source or new discharger which causes or contributes to the violation of applicable water quality standards, unless the owner or operator of the new source or new discharger demonstrates that:
 - (1) The existing dischargers to the stream segment are subject to compliance schedules designed to bring the stream segment into compliance; and
 - (2) Remaining pollutant load allocations are sufficient to allow for the discharge.
2. All national pollutant discharge elimination system permits shall contain, either expressly or by reference, the permit conditions listed in 40 CFR 122.41, which is incorporated into this chapter by reference.
3. National pollutant discharge elimination system permits shall contain all applicable permit conditions listed in 40 CFR 122.42, which is incorporated into this chapter by reference.
4. National pollutant discharge elimination system permit conditions shall be established in compliance with 40 CFR 122.43, which is incorporated into this chapter by reference.
5. National pollutant discharge elimination system permits shall include requirements for recording and reporting of monitoring results in compliance with 40 CFR 122.48, which is incorporated into this chapter by reference.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-13. Application of effluent standards and limitations, water quality standards, and other requirements.

All of the terms and conditions of any permit issued by the department will comply with the following requirements whenever applicable:

1. Effluent limitations as incorporated by reference in sections 33.1-16-01-30 and 33.1-16-01-31.
2. Standards of performance for new sources as incorporated by reference in section 33.1-16-01-31.
3. Effluent standards or prohibitions for toxic pollutants as incorporated by reference in section 33.1-16-01-29.
4. Pretreatment standards for the introduction of pollutants into treatment works as incorporated by reference in section 33.1-16-01-31.
5. Water quality standards, classifications, or effluent requirements established pursuant to North Dakota Century Code sections 61-28-04 and 61-28-05 if such standards and requirements are more stringent than those described in subsections 1 through 4.
6. Water quality standards and total maximum daily loads established pursuant to the authority and guidelines specified in the Federal Water Pollution Control Act and properly transmitted to the department.
7. Prior to the adoption of effluent limitations and standards by the administrator under the Federal Water Pollution Control Act, any such additional conditions as the department determines are necessary to carry out the provisions of that Act.
8. Any applicable regulations promulgated by the secretary of the department in which the coast guard is operating regulating the discharge of pollutants from vessels.
9. Any more stringent legally applicable requirements necessary to comply with a plan approved pursuant to section 208(b) of the Federal Water Pollution Control Act.
10. When an issued national pollutant discharge elimination system permit applies the effluent standards and limitations described in subsections 1 through 4, the department must state that the discharge authorized by the permit will not violate applicable water quality standards and must have prepared some explicit verification of that statement.
11. When an issued national pollutant discharge elimination system permit applies any more stringent effluent limitation based upon applicable water quality standards, a waste load allocation must be prepared to ensure that the discharge authorized by the permit is consistent with applicable water quality standards.
12. National pollutant discharge elimination system permits shall include limitations, standards, and other permit conditions in compliance with the requirements of 40 CFR 122.44, which is incorporated into this chapter by reference.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-14. Effluent limitations in issued national pollutant discharge elimination system permits.

1. Any permit issued by the department shall specify average and maximum daily quantitative limitations for the level of pollutants in the authorized discharge in terms of weight or some other appropriate measure such as pH, temperature, or radiation. When it is at all appropriate the requirement is that the discharge must be expressed in terms of weight. The department may also impose additional quantitative limitations in terms of average or maximum concentration levels.
2. When applicable, permit conditions in national pollutant discharge elimination system permits shall be calculated in compliance with the requirements of 40 CFR 122.45, which is incorporated into this chapter by reference.
3. The effluent quality for municipal wastes shall be that required by the department and shall be based on the following:
 - a. Municipal wastes shall receive a minimum of secondary treatment or equivalent in compliance with 40 CFR 133, which is incorporated by reference in section 33.1-16-01-30.
 - b. Wastes shall be effectively disinfected before discharge into state waters if such discharges cause violation of the bacteria criteria as set forth in the standards of water quality for the state of North Dakota, chapter 33.1-16-02.1. The effluent shall meet the water quality criteria for bacteria except as provided in subdivision c.
 - c. The effluent limitations specified under secondary treatment and bacteria criteria may be adjusted to reflect site-specific considerations as provided in the following:
 - (1) A five-day biochemical oxygen limit of twenty-five milligrams per liter (consecutive thirty-day average) may be applied in instances in which limits expressed in terms of secondary treatment standards would be impractical or deemed inappropriate to protect receiving waters.
 - (2) In certain instances, external circumstances or specific uses of the receiving waters make either attainment or application of the suspended solids or bacteria limitations an ineffective means of controlling water quality. For this reason, the department reserves the right to evaluate the application of these limitations on a case-by-case basis.
 - (3) The pH of natural ground waters and surface waters in some parts of the state (presently used for water supplies with or without treatment) are basic, and the stabilization process of wastewater treatment in lagoon systems can result in more alkaline (increased pH) water. Discharges from waste treatment facilities may exceed the upper pH limit of 9.0 provided in the secondary treatment standard due to these uncontrollable properties. Approval to discharge may be granted, providing the pH of the receiving water is not violated.
 - d. The department may require treatment in addition to that listed in this section if such waste discharges, made during low streamflows, cause violations of stream water quality standards or have a detrimental effect on the beneficial uses of the receiving waters.
4. Industrial waste effluents shall meet all parameters of quality as set forth in section 33.1-16-01-13 and shall not violate North Dakota water quality standards.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

33.1-16-01-15. Schedules of compliance in issued national pollutant discharge elimination system permits.

1. With respect to any discharge which is not in compliance with applicable effluent standards and limitations, water quality standards, or other requirements listed in section 33.1-16-01-13, the permittee shall be required to take specific steps to achieve compliance with such applicable effluent standards and limitations, water quality standards, or other requirements:
 - a. In accordance with any applicable schedule of compliance contained in:
 - (1) Applicable effluent standards and limitations;
 - (2) If more stringent, water quality standards; or
 - (3) If more stringent, requirements listed in section 33.1-16-01-13; or
 - b. In the absence of any applicable schedule of compliance, within a reasonable period of time, as provided in subsection 13 of North Dakota Century Code section 61-28-04; provided, that such period shall be consistent with the guidelines and requirements of the Federal Water Pollution Control Act.
2. A permit issued to a new source, new discharger, or recommencing discharger may contain a compliance schedule, but only when necessary to allow a reasonable opportunity to attain compliance with requirements issued or revised less than three years before commencement or recommencement of the discharge. For a new source or new discharger, such requirements must also have been issued or revised prior to commencement of construction.
3. When the period of time for compliance specified in subsection 1 exceeds nine months, a schedule of compliance shall be specified in the permit which will set forth interim requirements and the dates for their achievement; in no event shall more than nine months elapse between interim dates. If the time necessary for the completion of the interim requirements, such as the construction of a treatment facility, is more than nine months and is not readily divided into stages for completion, interim dates shall be specified for the submission of reports of progress toward completion of the interim requirement. For each national pollutant discharge elimination system permit schedule of compliance, interim dates and the final date for compliance shall, to the extent practicable, fall on the last day of the months of March, June, September, and December.
4. Either before or up to fourteen days following each interim date and the final date of compliance, the permittee shall provide the department with written notice of the permittee's compliance or noncompliance with the interim or final requirement.
5. On the last day of the months of February, May, August, and November, the department shall transmit to the regional administrator a list of all instances, as of thirty days prior to the date of such report, of failure or refusal of a permittee to comply with an interim or final requirement or to notify the department of compliance or noncompliance with each interim or final requirement of this section. Such list shall be available to the public for inspection and copying and shall contain at least the following information with respect to each instance of noncompliance:
 - a. Name and address of each noncomplying permittee.
 - b. A short description of each instance of noncompliance.

- c. A short description of any actions or proposed actions by the permittee or department to comply or enforce compliance with the interim or final requirement.
- d. Any details which tend to explain or mitigate an instance of noncompliance with an interim or final requirement.

6. If a permittee fails or refuses to comply with an interim or final requirement in a national pollutant discharge elimination system permit, such noncompliance shall constitute a violation of the permit for which the department may modify, suspend, or revoke the permit or take direct enforcement action.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-16. Other terms and conditions of issued national pollutant discharge elimination system permits.

1. All discharges authorized by the national pollutant discharge elimination system permit shall be consistent with the terms and conditions of the permit; that facility expansions, production increases, or process modifications which result in new or increased discharge of pollutants must be reported by submission of a new national pollutant discharge elimination system application or, if such discharge does not violate effluent limitations specified in the national pollutant discharge elimination system permit, by submission to the department of notice of such new or increased discharges of pollutants; that the discharges of any pollutant more frequently than or at a level in excess of that identified and authorized by the permit shall constitute a violation of the terms and conditions of the permit.

2. A permit may be transferred by the permittee to a new owner or operator in either of the following ways:

a. The current permittee may request that the department modify or revoke and reissue the permit to identify the new permittee, and incorporate any other requirements as may be necessary under the Federal Water Pollution Control Act; or

b. The current permittee may notify the department in writing at least thirty days in advance of the proposed transfer date. The notice shall include a written agreement between the current and new permittees containing a specific date of transfer of permit responsibility, coverage, and liability between them. Unless the department notifies the current permittee that the permit will be transferred by modification or revocation and reissuance, the transfer will be effective on the date specified in the agreement.

3. A permit may be modified, suspended, or revoked in whole or in part during its term, or denied renewal, for cause, including the following:

a. Violation of any terms or conditions of the permit.

b. Obtaining a permit by misrepresentation or failure to disclose fully all relevant facts.

c. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.

d. A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification, suspension, or revocation.

e. If the department receives notice of a proposed permit transfer, the permit may be modified or revoked and reissued, but may not be suspended or denied renewal unless other cause exists.

4. The permittee shall permit an authorized representative of the department upon presentation of the representative's credentials:

a. To enter upon permittee's premises in which an effluent source is located or in which any records are required to be kept under terms and conditions of the permit.

b. To have access to and copy any records required to be kept under terms and conditions of the permit.

c. To inspect any monitoring equipment or method required in the permit.

d. To sample any discharge of pollutants.

5. Publicly owned treatment works shall provide notice to the department in the following situations:

a. Any new introduction of pollutants into such treatment works from a new source, if such source would be subject to the provisions of section 306 of the Federal Water Pollution Control Act and if such source was discharging such pollutants.

b. Except as to such categories and classes of point sources or discharges specified by the department, any new introduction of pollutants into such treatment works from a source which would be subject to the Act if such source were discharging pollutants.

c. Any substantial change in volume or character of pollutants being introduced into such treatment works by a source introducing pollutants into such works at the time of issuance of the permit.

Such notice shall include information on:

(1) The quality and quantity of effluent to be introduced into such treatment works; and

(2) Any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works.

d. If the permit is for a discharge from a publicly owned treatment works, the permittee shall require any industrial user of such treatment works to comply with the requirements of sections 204(b), 307, and 308 of the Federal Water Pollution Control Act. As a means of ensuring such compliance, the permittee shall require of each industrial user subject to the requirements of section 307 of that Act and shall forward a copy to the department periodic notice over intervals not to exceed nine months of progress toward full compliance with section 307 requirements.

e. The permittee at all times shall maintain in good working order and operate as efficiently as possible any facilities or systems of control installed by the permittee to achieve compliance with the terms and conditions of the permit.

f. If a toxic effluent standard or prohibition is established pursuant to section 307 of the Federal Water Pollution Control Act for a toxic pollutant which is present in the permittee's discharge, and if such standard or prohibition is more stringent than any limitation upon such pollutant in the national pollutant discharge elimination system permit, the department shall revise or modify the permit in accordance with such toxic effluent standard or prohibition and so notify the permittee.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-17. Transmission to regional administrator of proposed national pollutant discharge elimination system permits.

The department shall ensure that the regional administrator is provided with copies of all national pollutant discharge elimination system permits that are proposed to be issued by the department. Such procedures shall provide for at least the following:

1. Except as waived pursuant to subsection 4, the transmission by the department of any and all terms, conditions, requirements, or documents which are a part of the proposed permit or which affect the authorization by the proposed permit of the discharge of pollutants.
2. A period of time (up to ninety days) in which the regional administrator, pursuant to any right to object provided in section 402(d)(2) of the Federal Water Pollution Control Act, may comment upon, object to, or make recommendations with respect to the proposed permit.
3. Procedures for the department's acceptance or rejection of a written objection by the regional administrator.
4. Any written waiver by the regional administrator of the regional administrator's rights to receive, review, object to, or comment upon proposed national pollutant discharge elimination system permits for classes, types, or sizes within any category of point sources.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-18. Transmission to regional administrator of issued national pollutant discharge elimination system permits.

A copy of every national pollutant discharge elimination system permit issued by the department will be sent to the regional administrator immediately following issuance along with any and all terms, conditions, requirements, or documents which are a part of such permit or which affect the authorization by the permit of the discharge of pollutants.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-19. Duration and review of national pollutant discharge elimination system permits.

Duration of permits, 40 CFR part 122.46, is incorporated into this chapter by reference.

1. Every permit issued by the department shall have a fixed term not to exceed five years. When the permittee has complied with section 33.1-16-01-20, but the department, through no fault of the permittee, fails to issue a new permit prior to the expiration of the previous permit, the department may extend the expired permit until the permit is reissued. Permits extended under this section remain fully effective and enforceable.
2. The department may issue any permit for a duration that is less than five years.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-20. Reissuance of national pollutant discharge elimination system permits.

1. Any permittee who wishes to continue to discharge after the expiration date of the permittee's permit must file for reissuance of the permittee's permit at least one hundred eighty days prior to its expiration.
2. The request for reissuance of a permit shall be in letter form and contain, as a minimum, the following:
 - a. The permit number and date of issue.
 - b. Any past, present, or future changes in the effluent quantity or quality not reflected in the present permit conditions.
3. The department will review each permit to ensure that the following conditions exist:
 - a. The permittee is in compliance with or has substantially complied with all the terms, conditions, requirements, and schedules of compliance of the expired national pollutant discharge elimination system permit.
 - b. The department has up-to-date information on the permittee's production levels, permittee's waste treatment practices, nature, contents, and frequency of permittee's discharge, either pursuant to the submission of new forms and applications or pursuant to monitoring records submitted to the department by the permittee.
 - c. The discharge is consistent with applicable effluent standards and limitations, water quality standards, and other legally applicable requirements listed in section 33.1-16-01-13, including any additions to, or revisions or modifications of, such effluent standards and limitations, water quality standards, or other legally applicable requirements during the term of the permit.
 - d. The notice and public participation procedures set out in section 33.1-16-01-06 shall be followed for every reissuance under this chapter.
 - e. Notwithstanding any other provision in this chapter, any point source the construction of which is commenced after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 and which is so constructed as to meet all applicable standards of performance shall not be subject to any more stringent standard of performance during a ten-year period beginning on the date of completion of such construction or during the period of depreciation or amortization of such facility for the purposes of section 167 or 169 (or both) of the federal Internal Revenue Code of 1954, whichever period ends first.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-21. Monitoring, recording, and reporting.

1. Any discharge authorized by a national pollutant discharge elimination system permit may be subject to such monitoring requirements as may be reasonably required by the department pursuant to its authority under subsection 10 of North Dakota Century Code section 61-28-04.
2. Any discharge authorized by a national pollutant discharge elimination system permit which (a) is not a minor discharge, and (b) the regional administrator requests, in writing, be monitored, or (c) contains toxic pollutants for which an effluent standard has been established

by the administrator pursuant to section 307(a) of the Act shall be monitored by the permittee for at least the following:

a. Flow (in gallons per day).

b. All of the following pollutants:

(1) Pollutants (either directly or indirectly through the use of accepted correlation coefficients or equivalent measurements) which are subject to reduction or elimination under the terms and conditions of the permit.

(2) Pollutants which the director finds, on the basis of information available to the director, could have a significant impact on the quality of navigable waters.

(3) Pollutants specified by the administrator, in regulations issued pursuant to the Federal Water Pollution Control Act as subject to monitoring.

(4) Any pollutants in addition to the above which the regional administrator requests, in writing, be monitored.

3. Each effluent flow or pollutant required to be monitored pursuant to subsection 2 shall be monitored at intervals sufficiently frequent to yield data which reasonably characterizes the nature of the discharge of the monitored effluent flow or pollutant. Variable effluent flows and pollutant levels may be monitored at more frequent intervals than relatively constant effluent flows and pollutant levels which may be monitored at less frequent intervals.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-22. Recording of monitoring activities and results.

1. The results of any monitoring activity required pursuant to section 33.1-16-01-21 and subsection 10 of North Dakota Century Code section 61-28-04 shall be recorded and maintained for a period of not less than three years. This period of retention shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the permittee or when requested by the department or the regional administrator.

2. Any records of monitoring activities and results shall include for all samples:

a. The date, exact place, and time of sampling.

b. The date analyses were performed.

c. Who performed the analyses.

d. The analytical techniques or methods utilized.

e. The results of such analysis.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-23. Reporting of monitoring results.

Monitoring results obtained by a permittee shall be reported to the department in accordance with a reporting schedule prescribed by the department in the national pollutant discharge elimination system

permit. In no case shall the required frequency of reporting be less than on an annual basis. Reports shall be submitted on the proper national pollutant discharge elimination system reporting form which will be supplied to the permittee by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-24. Enforcement.

The department shall evaluate all reports, notifications, and data submitted by a permittee in compliance with this chapter and shall investigate and follow up all apparent violations for possible enforcement action pursuant to North Dakota Century Code section 61-28-08. All such information received by the department, if forwarded to the regional administrator pursuant to the requirements of this chapter, shall constitute information available to the administrator for purposes of section 309 of the Federal Water Pollution Control Act.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-25. Modification, suspension, and revocation of national pollutant discharge elimination system permits.

1. The department may modify, suspend, or revoke any national pollutant discharge elimination system permit in whole or in part during its term for cause including the causes listed in subsection 2 of section 33.1-16-01-16, or for failure or refusal of the permittee to carry out the requirements of subsection 3 of section 33.1-16-01-16.
2. Causes for modification, 40 CFR 122.62(a), is incorporated into this chapter by reference.
3. Any such modification, suspension, or revocation by the department shall be governed by the procedures outlined in North Dakota Century Code section 61-28-07, and the following procedures:
 - a. Permit actions may be undertaken at the request of any interested person or upon the department's initiative. Permits may be modified, suspended, or revoked and reissued only for the reasons specified in subsections 1, 2, and 4.
 - b. If the department tentatively decides to modify or revoke and reissue a permit, a draft permit incorporating the proposed changes shall be prepared pursuant to section 33.1-16-01-06. The department may request additional information from the permittee. If the permit is to be modified, the department may require the submission of an updated application. If the permit is to be revoked and reissued, the permittee shall submit a new application.
 - c. In a permit modification, only those conditions to be modified shall be reopened when the draft permit is prepared. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. When a permit is revoked and reissued, the entire permit is reopened, but the permittee shall comply with all conditions of the existing permit until a new final permit is issued.
 - d. If the department tentatively decides to suspend a permit under subsection 3 of section 33.1-16-01-16, a notice of intent to terminate, a type of draft permit, shall be issued. The notice of intent to terminate shall be prepared pursuant to section 33.1-16-01-06.

4. Minor modifications of permits, 40 CFR 122.63, is incorporated into this chapter by reference. Such modifications are not subject to subsection 3.
5. The department may, upon request of the permittee, revise or modify a schedule of compliance in an issued national pollutant discharge elimination system permit if it determines good and valid cause, such as an act of God, strike, flood, materials shortage, or other event over which the permittee has little or no control, exists for such revision and if within thirty days following receipt of notice from the department, the regional administrator does not object in writing. All revisions or modifications made pursuant to this section during the period ending thirty days prior to the date of transmission of such list shall be included in the list prepared by the director pursuant to subsection 4 of section 33.1-16-01-15.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-26. Disposal of pollutants into wells, into publicly owned treatment works, or by land application.

1. Disposal of pollutants into wells that affect the waters of the state is prohibited, except as provided under an underground injection control authorization pursuant to chapter 33.1-25-01, or as provided in applicable regulations of the state industrial commission. Any permit issued for the disposal of pollutants into wells shall be issued in accordance with the procedures and requirements specified in the applicable regulations.
2. When part of a discharger's process wastewater is not subject to a national pollutant discharge elimination system permit because it is being disposed into a well, into a publicly owned treatment works, or by land application, applicable effluent standards and limitations shall be adjusted to reflect the reduced waste load. Permit effluent standards and limitations shall be calculated by one of the following methods:
 - a. If none of the waste from a particular process is discharged into waters of the state, and effluent limitations guidelines provide separate allocation for wastes from that process, all allocations from that process shall be eliminated from the permit limit calculations.
 - b. In all other cases, effluent limitations shall be adjusted proportionally to the amount of wastewater to be diverted from discharge into waters of the state. Effluent limitations and standards may be further adjusted under subsection 4 of section 33.1-13-01-32 if the character or treatability of the pollutants is changed by the alternative disposal method.
 - c. Subdivisions a and b do not apply to the extent that promulgated effluent limitations guidelines control concentrations of pollutants but not mass or specify a different specific technique for adjusting effluent limitations to account for well injection, land application, or disposal into publicly owned treatment works.
3. This section shall not alter a discharger's obligation to comply with any more stringent applicable requirements in this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01-26.1. General permits.

1. **Coverage.** The department may issue a general permit in accordance with the following:

- a. Area. The general permit will be written to cover a category of discharges described in the permit under subdivision b, except those covered by individual permits, within a designated area. The area will correspond to existing geographic or political boundaries or any other appropriate division or combination of boundaries.
- b. Sources. The general permit may be written to regulate, within the designated area as described in subdivision a, categories of point sources if the sources all:
 - (1) Involve the same or substantially similar types of operations;
 - (2) Discharge the same types of wastes;
 - (3) Require the same effluent limitations or operating conditions;
 - (4) Require the same or similar monitoring; and
 - (5) In the opinion of the department, are more appropriately controlled under a general permit than under individual permits.
- c. Storm water. The general permit may be written to regulate storm water point sources within the designated area as described in subdivision a.

2. Administration.

- a. General permits may be issued, modified, revoked and reissued, or terminated in accordance with applicable requirements of chapter 33.1-16-01.
- b. Requiring an individual permit.
 - (1) The department may require any person authorized by a general permit to apply for and obtain an individual North Dakota pollutant discharge elimination system permit. Any interested person may petition the director to take action under this paragraph. Cases when an individual North Dakota pollutant discharge elimination system permit may be required include the following:
 - (a) The discharge is a significant contributor of pollution as determined by the factors set forth in chapter 33.1-16-01;
 - (b) The discharger is not in compliance with the conditions of the general North Dakota pollutant discharge elimination system permit;
 - (c) A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source;
 - (d) Effluent limitation guidelines are promulgated for point sources covered by the general North Dakota pollutant discharge elimination system permit;
 - (e) A North Dakota water quality management plan containing requirements applicable to such point sources is approved;
 - (f) Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit or either a temporary or permanent reduction or elimination of the authorized discharge is necessary; or
 - (g) The requirements of subsection 1 are not met.

(2) Any owner or operator authorized by a general permit may request to be excluded from the coverage of the general permit by applying for an individual permit. The owner or operator shall submit an application under section 33.1-16-01-02 to the department with reasons supporting the request. The request must be submitted no later than ninety days after the notice by the department in accordance with section 33.1-16-01-07. The request must be processed under chapter 33.1-16-01. If the reasons cited by the owner or operator are adequate to support the request, the department may issue an individual permit.

(3) When an individual North Dakota pollutant discharge elimination system permit is issued to an owner or operator otherwise subject to a general North Dakota pollutant discharge elimination system permit, the applicability of the general permit to the individual North Dakota pollutant discharge elimination system permittee is automatically terminated on the effective date of the individual permit.

(4) A permittee, excluded from a general permit solely because the permittee already has an individual permit, may request that the individual permit be revoked. The permittee shall then request to be covered by the general permit. Upon revocation of the individual permit, the general permit shall apply to the source.

3. **Federal requirements.** General permits, 40 CFR 122.28, is incorporated into this chapter by reference.

History: Effective January 1, 2019.

33.1-16-01.1-01. Definitions.

The definitions in section 33.1-16-01-01 apply to this chapter unless defined differently below.

1. "Act" means Federal Water Pollution Control Act, also known as the Clean Water Act, as amended [33 U.S.C. 1251, et seq.].
2. "Approval authority" means the department.
3. "Best management practices" or "BMPs" means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to implement the prohibitions listed in 40 CFR 403.5(a)(1) and (b). Best management practices also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw materials storage.
4. "Bypass" means the intentional diversion of wastestreams from any portion of an industrial user's treatment facility.
5. "Categorical industrial user" means an industrial user that is subject to a categorical pretreatment standard or categorical standard.
6. "Categorical pretreatment standard" or "categorical standard" means any regulation containing pollutant discharge limits promulgated by the environmental protection agency in accordance

with sections 307(b) and (c) of the Act (33 U.S.C. section 1317) that apply to a specific category of users and that appear in 40 CFR chapter I, subchapter N, parts 405 through 471.

7. "Control authority" means either:

- a. The publicly owned treatment works, if the publicly owned treatment works which receives the indirect discharge administers an approved pretreatment program in accordance with sections 33.1-16-01.1-06 and 33.1-16-01.1-08; or
- b. The department, if the publicly owned treatment works which receives the indirect discharge does not administer an approved pretreatment program in accordance with sections 33.1-16-01.1-06 and 33.1-16-01.1-08.

8. "Director" means the department.

9. "Indirect discharge" means the introduction of pollutants into a publicly owned treatment works from any nondomestic source regulated under section 307(b), (c), or (d) of the Federal Water Pollution Control Act.

10. "Industrial user" or "user" means a source of indirect discharge.

11. "Interference" means an indirect discharge which, alone or in conjunction with any other indirect discharges, both:

- a. Inhibits or disrupts the publicly owned treatment works processes or operations, or its sludge processes, use, or disposal; and
- b. Causes a violation of any requirement of the publicly owned treatment works North Dakota pollutant discharge elimination system permit, including an increase in the magnitude or duration of a violation or prevents sewage sludge use or disposal in compliance with federal or state law or statute.

12. "New source" means:

- a. Any building, structure, facility, or installation for which construction commenced after the publication of proposed pretreatment standards which will apply to such source after promulgation, from which there is or may be an indirect discharge, provided that:
 - (1) The building, structure, facility, or installation is constructed at a site at which no other source is located;
 - (2) The building, structure, facility, or installation totally replaces the process or production equipment that causes the indirect discharge at an existing source; or
 - (3) The production or wastewater generating processes of the building, structure, facility, or installation is substantially independent of an existing source at the same site. In determining whether these are substantially independent factors, such as the extent to which the new facility is integrated with the existing plant and the extent to which the new facility is engaged in the same general type of activity as the existing source, should be considered.
- b. Construction on a site at which an existing source is located results in a modification rather than a new source if the construction does not create a new building, structure, facility, or installation meeting the criteria of paragraphs 2 and 3 of subdivision a, but otherwise alters, replaces, or adds to existing process or production equipment.
- c. Construction of a new source as defined under this subsection has commenced if the owner or operator has:

- (1) Begun, or caused to begin, as part of a continuous onsite construction program:
- (a) Any placement, assembly, or installation of facilities or equipment; or
- (b) Significant site preparation work which is necessary for the placement, assembly, or installation of new source facilities or equipment; or
- (2) Entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation under this subsection.
13. "Passthrough" means a discharge which exits the publicly owned treatment works into waters of the state in quantities or concentrations which, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirement of the publicly owned treatment works North Dakota pollutant discharge elimination system permit, including an increase in the magnitude or duration of a violation.
14. "Pretreatment" means the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a publicly owned treatment works. The reduction or alteration may be obtained by physical, chemical, or biological processes, process changes or by other means, except as prohibited by 40 CFR 403.6(d). Appropriate pretreatment technology includes control equipment, such as equalization tanks or facilities, for protection against surges or slug loadings that might interfere with or otherwise be incompatible with the publicly owned treatment works. However, where wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or with wastewater from another regulated process, the effluent from the equalization facility must meet an adjusted pretreatment limit calculated in accordance with 40 CFR 403.6(e).
15. "Pretreatment requirements" means any substantive or procedural requirement related to pretreatment, other than a pretreatment standard, imposed on an industrial user.
16. "Pretreatment standards" means any regulation which applies to industrial users that contains pollutant discharge limits promulgated by the environmental protection agency in accordance with the Federal Water Pollution Control Act, including prohibitive discharge limits established pursuant to section 33.1-16-01.1-02.
17. "Publicly owned treatment works" or "POTW" means a treatment works as defined by section 212 of the Federal Water Pollution Control Act, which is owned by a state or municipality, including any devices or systems used in the storage, treatment, recycling, and reclamation of municipal sewage or liquid industrial wastes, as well as sewers, pipes, and other conveyances that convey wastewater to a publicly owned treatment works treatment plant. This term also means the municipality that has jurisdiction over the indirect discharges to and the discharges from the treatment works.
18. "Publicly owned treatment works treatment plant" means that portion of the publicly owned treatment works which is designed to provide treatment of municipal sewage and industrial waste.
19. "Severe property damage" means substantial physical damage to property, damage to treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

20. "Significant industrial user" means:

a. All industrial users subject to categorical pretreatment standards under sections 33.1-16-01-31 and 33.1-16-01.1-04;

b. Any other industrial user that meets at least one of the following criteria:

(1) Discharges an average of twenty-five thousand gallons [94,635 liters] per day or more of process wastewater to the publicly owned treatment works, excluding sanitary wastewater, noncontact cooling water, and boiler blowdown wastewater;

(2) Contributes a process wastestream which makes up five percent or more of the average dry weather hydraulic or organic capacity of the publicly owned treatment works treatment plant; or

(3) Is designated as a significant industrial user by the control authority on the basis that the user has a reasonable potential for adversely affecting the publicly owned treatment works operation or for violating any pretreatment standard or requirement.

c. The control authority may determine that an industrial user subject to categorical pretreatment standards under 40 CFR 403.6 and 40 CFR chapter I, subchapter N is a nonsignificant categorical industrial user rather than a significant industrial user on a finding that the industrial user never discharges more than one hundred gallons per day (gpd) of total categorical wastewater (excluding sanitary, noncontact cooling and boiler blowdown wastewater, unless specifically included in the pretreatment standard) and the following conditions are met:

(1) The industrial user, prior to the control authority's finding, has consistently complied with all applicable categorical pretreatment standards and requirements;

(2) The industrial user annually submits the certification statement required in 40 CFR 403.12(q) together with any additional information necessary to support the certification statement; and

(3) The industrial user never discharges any untreated concentrated wastewater.

d. Upon a finding that an industrial user which meets the criteria of subdivision b has no reasonable potential for adversely affecting the publicly owned treatment works operation or for violating any pretreatment standard or requirement, the control authority may, at any time, determine that the industrial user is not a significant industrial user.

21. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with categorical pretreatment standards because of factors beyond the reasonable control of the industrial user. Upset does not include noncompliance to the extent caused by operational error, inadequate or improperly designed treatment facilities, lack of preventive maintenance, or careless or improper operation.

22. "Water management division director" means the director of the water management division of the regional office of the United States environmental protection agency or this person's delegated representative.

History: Effective, January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-01.1. Purpose and applicability.

1. This chapter establishes responsibilities of state and local government, industry, and the public to implement the national pretreatment standards to control pollutants, which pass through or interfere with treatment processes in publicly owned treatment works or which contaminate sewage sludge.
2. The regulations in this chapter apply:
 - a. To pollutants from nondomestic sources covered by pretreatment regulations, which are indirectly discharged into or transported by truck or rail or otherwise introduced into publicly owned treatment works;
 - b. To publicly owned treatment works which receive wastewater from sources subject to pretreatment regulations; and
 - c. Any new or existing sources subject to pretreatment regulations. Pretreatment regulations do not apply to sources which discharge to a sewer which is not connected to a publicly owned treatment works treatment plant.

History: Effective, January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-02. Prohibited discharges.

The following prohibitions apply to each industrial user whether or not the user is subject to other pretreatment standards or any national, state, or local pretreatment requirements:

1. **General prohibitions.** An industrial user may not introduce into a publicly owned treatment works any pollutant which causes passthrough or interference.
2. **Affirmative defenses.** A user shall have an affirmative defense in any action brought against it alleging a violation of the general prohibitions established in subsection 1 and the specific prohibitions in subdivisions c through g of subsection 3 where the user can demonstrate that:
 - a. The user did not know or have reason to know that its discharge, alone or in conjunction with a discharge or discharges from other sources, would cause passthrough or interference; and
 - b. (1) A local limit designed to prevent passthrough or interference, or both, as the case may be, was developed in accordance with section 33.1-16-01.1-03 for each pollutant in the user's discharge that caused passthrough or interference, and the user was in compliance with each such local limit directly prior to and during the passthrough or interference; or
 - (2) If a local limit designed to prevent passthrough or interference, or both, as the case may be, has not been developed in accordance with section 33.1-16-01.1-03 for the pollutant that caused the passthrough or interference, the user's discharge directly prior to and during the passthrough or interference did not change substantially in nature or constituents from the user's prior discharge activity when the publicly owned treatment works was regularly in compliance with the publicly owned treatment work's North Dakota pollutant discharge elimination system permit requirements and, in the case of interference, applicable requirements for sewage sludge use or disposal.

3. **Specific prohibitions.** In addition, the following pollutants may not be introduced into a publicly owned treatment works from any source:

- a. Pollutants which create a fire or explosion hazard in the publicly owned treatment works, including wastestreams with a closed cup flashpoint of less than sixty degrees Celsius [140 degrees Fahrenheit] using the test methods specified in 40 CFR 261.21.
- b. Pollutants which will cause corrosive structural damage to the publicly owned treatment works, but in no case discharges with pH lower than 5.0, unless the publicly owned treatment works is specifically designed to accommodate such discharges.
- c. Solid or viscous pollutants in amounts which will cause obstruction to the flow in the publicly owned treatment works resulting in interference.
- d. Any pollutant released in a discharge at a flow rate or pollutant concentration which will cause interference.
- e. Heat in amounts which will inhibit biological activity in the publicly owned treatment works resulting in interference, but in no case heat in such quantities that the temperature at the publicly owned treatment works treatment plant exceeds forty degrees Celsius [104 degrees Fahrenheit], unless the department, upon request of the publicly owned treatment works, approves alternate temperature limits.
- f. Petroleum oil, nonbiodegradable cutting oil, or products of mineral oil origin in amounts that will cause interference or passthrough.
- g. Pollutants which result in the presence of toxic gases, vapors, or fumes within the publicly owned treatment works in a quantity that may cause acute worker health and safety problems.
- h. Any trucked or hauled pollutants, except at discharge points designated by the publicly owned treatment works.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28-06

33.1-16-01.1-03. Local limits.

1. Each publicly owned treatment works developing an approved pretreatment program shall develop and enforce specific limits to implement the prohibitions of section 33.1-16-01.1-02. Each publicly owned treatment works with an approved pretreatment program shall continue to develop these limits as necessary and effectively enforce such limits.
2. All other publicly owned treatment works shall, if pollutants contributed by a user or users result in interference or passthrough and such violation is likely to recur, develop and enforce specific effluent limits for indirect discharges which, together with appropriate changes in the publicly owned treatment works treatment plant facilities or operation, are necessary to ensure renewed and continued compliance with the publicly owned treatment works North Dakota pollutant discharge elimination system permit or sludge use or disposal practices.
3. Specific effluent limits shall not be developed and enforced without individual notice to persons or groups that have requested such notice and an opportunity to respond.
4. Publicly owned treatment works may develop best management practices to implement subsections 1 and 2. Such best management practices shall be considered local limits and pretreatment standards for the purposes of this chapter and section 307(d) of the Act.

5. When specific prohibitions or limits on pollutants are developed by a publicly owned treatment works in accordance with this section, the limits shall be deemed pretreatment standards.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 61-28-06

33.1-16-01.1-03.1. Local law.

Nothing in this chapter is intended to affect any pretreatment requirements, including any standards or prohibitions, established by local law as long as the local requirements are not less stringent than any set forth in national or state pretreatment standards or regulations, or any other requirements or prohibitions established by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-04. Categorical pretreatment standards.

1. Industrial users shall comply with all applicable pretreatment standards and requirements.
2. Pretreatment standards and regulations specifying quantities or concentrations of pollutants or pollutant properties which may be discharged to a publicly owned treatment works by existing or new industrial users in specific industrial subcategories will be established as separate regulations under the appropriate subpart of 40 CFR chapter I, subchapter N. These standards, unless specifically noted otherwise, shall be in addition to all applicable pretreatment standards and requirements set forth in this regulation.
3. Category determination request, 40 CFR 403.6(a), is incorporated into this chapter by reference.
4. Categorical industrial users shall comply with the following deadlines for compliance with categorical pretreatment standards:
 - a. Compliance by existing sources with categorical pretreatment standards shall be within three years of the date the standard is effective, unless a shorter compliance time is specified in the specific standard.
 - b. New sources shall have all pollution control equipment required to meet applicable pretreatment standards installed and operational before beginning to discharge. Within the shortest feasible time, but within ninety days, new sources shall meet all applicable pretreatment standards.
 - c. An existing source which becomes an industrial user after the promulgation of an applicable categorical pretreatment standard shall be considered an existing industrial user, unless the existing source is a new source.
5. Concentration and mass limits, 40 CFR 403.6(c), is incorporated into this chapter by reference.
6. Except when expressly authorized to do so by an applicable pretreatment standard or pretreatment requirement, an industrial user may not increase the use of process water, or in any other way attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with a pretreatment standard or pretreatment requirement. The control authority may impose mass limitations on industrial users which are using dilution

to meet applicable pretreatment standards or pretreatment requirements, or in other cases when the imposition of mass limitations is appropriate.

7. Combined wastestream formula, 40 CFR 403.6(e), is incorporated into this chapter by reference. When wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or wastewater from another regulated process, the effluent from the equalization facility shall meet the adjusted pretreatment limit or limits calculated using the combined wastestream formula.

History: Effective January 1, 2019.

Law Implemented: NDCC 61-28-04

33.1-16-01.1-05. Publicly owned treatment works pretreatment programs - Development by publicly owned treatment works.

1. The following publicly owned treatment works shall develop and submit for department approval a pretreatment program within one year after receiving notice that program development is required:
 - a. Any publicly owned treatment works with a total design flow of greater than five million gallons [18,927,058 liters] per day that receives from any industrial user pollutants which pass through or interfere with the treatment process or are otherwise subject to pretreatment standards.
 - b. Any other publicly owned treatment works for which the department determines a pretreatment program is warranted.
2. Upon development or modification of a pretreatment program, the publicly owned treatment works North Dakota pollutant discharge elimination system permit shall be modified to incorporate the approved or modified program conditions as enforceable conditions of the North Dakota pollutant discharge elimination system permit.

History: Effective January 1, 2019.

Law Implemented: NDCC 61-28-04

33.1-16-01.1-06. Publicly owned treatment works pretreatment program requirements.

1. Each publicly owned treatment works pretreatment program shall satisfy the program element requirements described in appendix A.
2. The publicly owned treatment works may request conditional approval of the pretreatment program pending the acquisition of funding and personnel for certain elements of the program. The publicly owned treatment works shall describe in the submission the mechanism by which the funding will be acquired. The request for conditional approval must satisfy the requirements of section 33.1-16-01.1-07, except that the requirements may be relaxed if the submission demonstrates that:
 - a. A limited aspect of the program does not need to be implemented immediately;
 - b. The publicly owned treatment works has adequate legal authority and procedures to carry out those aspects of the program which will not be implemented immediately; and
 - c. Funding and personnel for the program aspects to be implemented at a later date will be available when needed.

3. Upon receipt of a request for conditional approval, the department will establish a fixed date for the acquisition of the needed funding and personnel. If funding is not acquired by this date, the conditional approval of the pretreatment program and any removal allowances granted to the publicly owned treatment works may be modified or withdrawn.

Law Implemented: NDCC 61-28-04

33.1-16-01.1-07. Publicly owned treatment works pretreatment program submission packages.

The submission package for publicly owned treatment works pretreatment program approval must include each of the items described in appendix B. Three copies of the submission package shall be submitted to the department as a formal request for approval.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-08. Approval process for publicly owned treatment works pretreatment programs and requests for authority to grant removal credits.

1. Within sixty days after receiving a request for publicly owned treatment works pretreatment program approval or a request for authority to grant removal credits, the department shall make a preliminary determination of whether the submission is complete.
2. If the submission is determined to be incomplete, the department shall notify the publicly owned treatment works and each person who has requested individual notice, in writing, of the defects identified and of the means by which the publicly owned treatment works can amend its submission package.
3. If the submission is determined to be complete, the department shall:
 - a. Notify the publicly owned treatment works that the submission has been received and is under review;
 - b. Commence public notice activities as prescribed in sections 33.1-16-01.1-09 and 33.1-16-01.1-10; and
 - c. Evaluate the submission for compliance with applicable requirements.
4. The department shall have ninety days from the date of public notice of any complete submission to review the submission to determine compliance with the applicable requirements of sections 33.1-16-01.1-05 and 33.1-16-01.1-14 and appendix A. The department may have up to an additional ninety days to complete the evaluation if the public comment period is extended beyond thirty days or if a public hearing or public meeting is held. The evaluation period for any submission shall not exceed a total of one hundred eighty days from the date of public notice of any complete submission.
5. Departmental procedures shall allow the transmittal of such documents and data to and from the environmental protection agency and to other appropriate governmental agencies as may be necessary.
6. After the public comment period has ended, and prior to the deadline contained in subsection 4, the department shall approve or deny the submission based upon departmental evaluation and consideration of any comments received.

7. If the submission is denied, the department shall notify the publicly owned treatment works and each person who requested individual notice. The notification shall include suggested modifications and the department may allow the publicly owned treatment works additional time to bring the submission into compliance with applicable requirements.
8. No publicly owned treatment works pretreatment program or request for authorization to grant removal credit allowances shall be approved if, following the public notice period and any hearing or meeting held pursuant to section 33.1-16-01.1-09, the regional administrator sets forth in writing objections to the approval and the reasons for the objection. A copy of the regional administrator's objections shall be provided to the applicant and each person who has requested individual notice. The regional administrator shall provide an opportunity for written comments and may convene a public hearing on the objections. Unless retracted, the regional administrator's objections shall constitute a final ruling to deny approval of a publicly owned treatment works pretreatment program or authorization to grant removal allowances ninety days after the date the objections are issued.
9. The department shall provide notice of the decision by:
 - a. Notifying those persons who submitted comments and participated in the public hearing or public meeting, if held; and
 - b. Causing to be published a notice of approval or disapproval in the same newspapers as the original notice of request for submission approval was published. The notice shall identify any removal credit authority which was granted as part of the pretreatment program approval.
10. The submission and any comments upon such submission shall be available to the public for inspection and copying.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-09. Public notice.

1. Within twenty days of determining that a submission for publicly owned treatment works pretreatment program approval or removal credit authorization is complete, the department shall issue a public notice of request for approval of the submission.
2. The public notice shall be circulated in a manner designed to inform interested persons of the submission. Procedures for the circulation of public notice shall include at least the following:
 - a. Notice shall be mailed to state and federal fish, shellfish, and wildlife agencies, unless such agencies have asked not to be sent the notices.
 - b. Notice shall be mailed to any other person or group that has requested individual notice, including those on appropriate mailing lists.
 - c. Notice shall be published in local newspapers and periodicals or, if appropriate, in a daily newspaper of general circulation.
3. The public notice shall provide a period of not less than thirty days following the date of the public notice during which time interested persons may submit their written views on the submission. All written comments submitted during the public comment period shall be retained by the department and shall be considered in the decision on whether to approve the submission.

History: Effective January 1, 2019.

Law Implemented: NDCC 61-28-04

33.1-16-01.1-10. Opportunity for hearing.

1. An applicant for publicly owned treatment works pretreatment program approval or removal credit authorization, affected state, interested state agency or federal agency, or interested person or group of persons may request a public hearing or public meeting with respect to the submission.
2. The request for public hearing or public meeting shall be filed within the public comment period specified in the public notice pursuant to section 33.1-16-01.1-09 and shall indicate the interest of the person filing the request and the reasons why a hearing or meeting is warranted.
3. The department shall hold a hearing or meeting if the publicly owned treatment works so requests. In addition, a hearing or meeting shall be held if there is significant public interest in issues relating to whether or not the submission should be approved.
4. The department shall publish notice of a hearing or meeting to consider a submission in the same newspaper or newspapers as the notice of the original request for publicly owned treatment works pretreatment program approval or removal credit authorization. In addition, notice of the hearing or meeting shall be sent to those persons requesting individual notice. The notice shall inform interested parties of the nature of the hearing or meeting and the right to participate.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-11. General monitoring and reporting requirements.

1. Publicly owned treatment works that are required to develop a pretreatment program and industrial users which are subject to pretreatment standards shall install, calibrate, use, and maintain the monitoring equipment or methods, including if appropriate, biological monitoring methods, necessary to determine continued compliance with pretreatment standards and requirements.
2. All reports submitted by a user or publicly owned treatment works shall conform to the signatory requirements of section 33.1-16-01-05.
3. In addition to the requirements of sections 33.1-16-01.1-12 and 33.1-16-01.1-13, industrial users and publicly owned treatment works shall submit any other information and reports required under the North Dakota pollutant discharge elimination system or pretreatment regulation or under state law.
4. All information submitted to the state or publicly owned treatment works shall be available to the public at least to the extent provided by 40 CFR 2.302. Monitoring data and other such data as is necessary to determine whether a user is in compliance with applicable pretreatment standards shall be available to the public without restriction.
5. All records of monitoring activity pursuant to sections 33.1-16-01.1-12 and 33.1-16-01.1-13 shall conform to the requirements of section 33.1-16-01-22. The monitoring record shall also include the sampling methods used. The period of retention shall be extended during the course of any unresolved litigation regarding an indirect discharge or the operations of the publicly owned treatment works pretreatment program, or when requested by the department

or the administrator of the environmental protection agency. Such records shall be made available for inspection and copying for a reasonable fee by the department and the regional administrator.

6. Any publicly owned treatment works to which reports are submitted by industrial users pursuant to section 33.1-16-01.1-12 shall make such reports available for inspection and copying by the department and the regional administrator. The publicly owned treatment works shall retain such reports for a minimum of three years. The retention period shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the industrial user or the operation of the publicly owned treatment works pretreatment program, or when requested by the department or the administrator of the environmental protection agency.

7. Provisions governing fraud and false statements. The reports and other documents required to be submitted or maintained under this section shall be subject to:

a. The provisions of 18 U.S.C. 1001 relating to fraud and false statements;

b. The provisions of section 309(c)(4) of the Act, governing false statements, representation or certification; and

c. The provisions of section 309(c)(6) of the Act, regarding responsible corporate officers.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-12. Industrial user monitoring and reporting requirements.

1. Each categorical industrial user shall submit a complete baseline monitoring report to the control authority.

a. The baseline monitoring report shall be submitted on the appropriate baseline monitoring reporting form, in accordance with 40 CFR 403.12(b).

In cases where the standard requires compliance with a best management practice or pollution prevention alternative, the user shall submit documentation as required by the control authority or the applicable standards to determine with the standard.

Where an alternate concentration or mass limit has been calculated in accordance with 40 CFR 403.6(e) this adjusted limit along with supporting data shall be submitted to the control authority.

b. For existing industrial users, the report shall be due one hundred eighty days after the effective date of the applicable categorical pretreatment standard or the final administrative decision made upon a category determination submission, whichever is later.

c. For new sources and sources that become industrial users after the promulgation of an applicable categorical pretreatment standard, the report shall be due ninety days prior to the commencement of the indirect discharge.

2. If a baseline monitoring report contains a compliance schedule for meeting categorical pretreatment standards, the industrial user shall submit compliance schedule progress reports to the control authority. The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the construction and operation of additional pretreatment required for the industrial user to meet the applicable

categorical pretreatment standards (e.g., hiring an engineer, completing preliminary plans, completing final plans, executing contract for major components, commencing construction, completing construction, etc.). No increment of the compliance schedule shall exceed nine months.

a. Each compliance schedule progress report shall be due fourteen days after the applicable progress date in the compliance schedule.

b. Each compliance schedule progress report shall include:

(1) A statement whether the user achieved the scheduled action on the applicable date; and

(2) If the user has not achieved the scheduled action, the date on which the user expects to achieve the action, the reason for delay, and the steps being taken to return the construction to the established schedule.

c. In no case shall more than nine months elapse between compliance schedule progress report submittals.

3. Each categorical industrial user shall submit to the control authority a complete ninety-day compliance report for each applicable pretreatment standard, in accordance with 40 CFR 403.12(d). For industrial users subject to equivalent mass or concentration limits established by the control authority in accordance with the procedures in 40 CFR 403.6(c), this report shall contain a reasonable measure of the user's long-term production rate. For all other industrial users subject to categorical pretreatment standards expressed in terms of allowable pollutant discharge per unit of production (or other measure of operation), this report shall include the user's actual production during the appropriate sampling period.

a. For facilities covered when the department is the control authority, each ninety-day compliance report shall be submitted on a ninety-day compliance reporting form, which can be obtained from the department.

b. For existing industrial users, each report shall be due ninety days after the date for final compliance with the applicable categorical pretreatment standard.

c. For new sources and sources that become industrial users after the date for final compliance with the applicable categorical pretreatment standard, each report shall be due thirty days after commencement of the indirect discharge.

4. Each categorical industrial user shall submit complete periodic compliance reports to the control authority.

a. Periodic compliance reports submitted to the department shall be submitted on a periodic compliance reporting form, which will be supplied to the user by the department. If the publicly owned treatment works is the control authority, periodic compliance reports shall require, at a minimum, the data listed in 40 CFR part 403.12(e) and part 403.12(g).

(1) In cases where the pretreatment standard requires compliance with a best management practice (or pollution prevention alternative), the user shall submit documentation required by the control authority or the pretreatment standard necessary to determine the compliance of the user.

(2) The control authority may authorize the industrial user subject to a categorical pretreatment standard to forego sampling of a pollutant regulated by a categorical pretreatment standard if the industrial user has demonstrated through sampling and other technical factors that the pollutant is neither present nor expected to be

present in the discharge, or is present only at background levels from intake water and without any increase in the pollutant due to activities of the industrial user. This authorization is subject to the following conditions:

- (a) The control authority may authorize a waiver where a pollutant is determined to be present solely due to sanitary wastewater discharged from the facility provided that the sanitary wastewater is not regulated by an applicable categorical standard and otherwise includes no process wastewater.
- (b) The monitoring waiver is valid only for the duration of the effective period of the permit or other equivalent individual control mechanism, but in no case longer than five years. The user must submit a new request for the waiver before the waiver can be granted for each subsequent control mechanism.
- (c) In making a demonstration that a pollutant is not present, the industrial user must provide data from at least one sampling of the facility's process wastewater prior to any treatment present at the facility that is representative of all wastewater from all processes.

The request for a monitoring waiver must be signed in accordance with subsection 12 and include the certification statement in 40 CFR 403.6(a)(2)(ii). Nondetectable sample results may only be used as a demonstration that a pollutant is not present if the environmental protection agency-approved method from 40 CFR part 136 with the lowest minimum detection level for that pollutant was used in the analysis.

- (d) Any grant of the monitoring waiver by the control authority must be included as a condition in the user's control mechanism. The reasons supporting the waiver and any information submitted by the user in its request for the waiver must be maintained by the control authority for three years after expiration of the waiver.
- (e) Upon approval of the monitoring waiver and revision of the user's control mechanism by the control authority, the industrial user must certify on each report with the statement below, that there has been no increase in the pollutant in its wastestream due to activities of the industrial user:

Based on my inquiry of the person or persons directly responsible for managing compliance with the pretreatment standard 40 CFR _____ [specify applicable national pretreatment standard part(s)], I certify that, to the best of my knowledge and belief, there has been no increase in the level of _____ [list pollutant(s)] in the wastewaters due to the activities at the facility since filing of the last periodic report under 40 CFR 403.12(e)(1).

- (f) In the event that a waived pollutant is found to be present or is expected to be present based on changes that occur in the user's operations, the user must immediately: comply with the monitoring requirements of this subdivision or other more frequent monitoring requirements imposed by the control authority; and notify the control authority.
- (g) This provision does not supersede certification processes and requirements established in categorical pretreatment standards, except as otherwise specified in the categorical pretreatment standard.

- (3) The control authority may reduce the requirement in this subdivision to a requirement to report no less frequently than once a year, unless required more

frequently in the pretreatment standard or by the approval authority, where the industrial user meets all of the following conditions:

(a) The industrial user's total categorical wastewater flow does not exceed any of the following:

[1] 0.01 percent of the design dry weather hydraulic capacity of the publicly owned treatment works, or five thousand gallons per day, whichever is smaller, as measured by a continuous effluent flow monitoring device unless the industrial user discharges in batches;

[2] 0.01 percent of the design dry weather organic treatment capacity of the publicly owned treatment works; and

[3] 0.01 percent of the maximum allowable headworks loading for any pollutant regulated by the applicable categorical pretreatment standard for which approved local limits were developed by a publicly owned treatment works in accordance with subsections 1 through 5 of section 33.1-16-01.1-03;

(b) The industrial user has not been in significant noncompliance, as defined in appendix A procedure 7, for any time in the past two years;

(c) The industrial user does not have daily flow rates, production levels, or pollutant levels that vary so significantly that decreasing the reporting requirement for this industrial user would result in data that are not representative of conditions occurring during the reporting period pursuant to this subdivision;

(d) The industrial user must notify the control authority immediately of any changes at its facility causing it to no longer meet conditions of subparagraph a or b of this paragraph. Upon notification, the industrial user must immediately begin complying with the minimum reporting in this subdivision; and

(e) The control authority must retain documentation to support the control authority's determination that a specific industrial user qualifies for reduced reporting requirements under this paragraph for a period of three years after the expiration of the term of the control mechanism.

(4) For industrial users subject to equivalent mass or concentration limits established by the control authority in accordance with the procedures in 40 CFR 403.6(c), the report required by this subdivision must contain a reasonable measure of the user's long-term production rate. For all other industrial users subject to categorical pretreatment standards expressed only in terms of allowable pollutant discharge per unit of production (or other measure of operation), the report required by this subdivision must include the user's actual average production rate for the reporting period.

b. Periodic compliance reports shall be submitted in accordance with a reporting schedule prescribed by the control authority. Reporting schedules shall be consistent with any applicable pretreatment standard requirements. In no case shall the reporting frequency be less than twice per year.

5. Each industrial user shall notify the publicly owned treatment works immediately of all discharges that could cause problems to the publicly owned treatment works, including any slug loadings.

6. 40 CFR 403.12(p), which concerns hazardous waste notification, is incorporated into this chapter by reference.
7. All industrial users shall promptly notify the control authority and the publicly owned treatment works in advance of any substantial change in the volume or characteristic of pollutants in their discharge, including the listed or characteristic hazardous wastes for which the user has submitted initial notification under subsection 6.
8. The indirect discharge from each industrial user shall be sampled and analyzed in accordance with a monitoring schedule prescribed by the control authority. The monitoring schedule shall be adequate to allow assessment of the indirect discharge. All analyses shall be performed in accordance with the procedures contained in 40 CFR 136 or with any other test procedure approved by the administrator of the environmental protection agency.
9. Each noncategorical significant industrial user of a publicly owned treatment works which administers an approved pretreatment program shall submit to the publicly owned treatment works, at least semiannually, on dates specified by the publicly owned treatment works, a description of the discharge, including self-monitoring results as required by the publicly owned treatment works. In cases where a local limit requires compliance with a best management practice or pollution prevention alternative, the user must submit documentation required by the control authority to determine the compliance status of the user.
10. Annual certification by nonsignificant categorical industrial users. A facility determined to be a nonsignificant categorical industrial user pursuant to 40 CFR 403.3(v)(2) must annually submit the following certification statement, signed in accordance with the signatory requirements in subsection 12. This certification must accompany any alternative report required by the control authority:

Based on my inquiry of the person or persons directly responsible for managing compliance with the categorical pretreatment standards under 40 CFR _____, I certify that, to the best of my knowledge and belief that during the period from _____ to _____ [months, days, year]:

- a. The facility described as [facility name] met the definition of a nonsignificant categorical industrial user as described in 40 CFR 403.3(v)(2);
- b. The facility complied with all applicable pretreatment standards and requirements during this reporting period; and
- c. The facility never discharged more than one hundred gallons of total categorical wastewater on any given day during this reporting period.

This compliance certification is based upon the following information: [Insert the information].

11. The control authority that chooses to receive electronic documents must satisfy the requirements of 40 CFR part 3 (electronic reporting).
12. Signatory requirements for industrial user reports. The reports required in this chapter must include the certification statement as set forth in 40 CFR 403.6(a)(2)(ii), and must be signed as follows:
 - a. By a responsible corporate officer, if the industrial user submitting the reports is a corporation, including a limited liability company. A responsible corporate officer means:

- (1) A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policymaking or decisionmaking functions for the corporation; or
 - (2) The manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility, including having the explicit or implicit duty of making major capital investment recommendations, and initiate and direct other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; can ensure that the necessary systems are established or actions taken to gather complete and accurate information for control mechanism requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
- b. By a general partner or proprietor if the user submitting the reports is a partnership, or sole proprietorship respectively.
 - c. By a duly authorized representative of the individual designated in subdivision a or b if:
 - (1) The authorization is made in writing by the authorized representative defined in this section;
 - (2) The authorization specifies either an individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company; and
 - (3) The written authorization is submitted to the control authority.
 - d. If an authorization of this section is no longer accurate because a different individual or position has responsibility for environmental matters for the company, a new authorization satisfying the requirements of this section must be submitted to the control authority prior to or together with any reports to be signed by an authorized representative.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-13. Publicly owned treatment works reporting requirements.

1. Publicly owned treatment works with approved pretreatment programs shall submit to the department on an annual basis a report describing the program activities. Reports shall be due March twenty-eighth. Each report shall include, at a minimum:
 - a. An updated list of the publicly owned treatment works industrial users, including the name and address of each user, and identifying the categorical standards applicable to each user. The list shall indicate which users are subject to local standards that are more stringent than the categorical pretreatment standards and shall also include users that are subject only to local requirements. The list must also identify industrial users subject to categorical pretreatment standards that are subject to reduced reporting requirements under paragraph 3 of subdivision a of subsection 4 of section 33.1-16-01.1-12, and identify which industrial users are nonsignificant categorical industrial users. The publicly owned treatment works shall provide an explanation for each deletion from the previous list;

- b. A summary of the status of industrial user compliance over the reporting period;
- c. A summary of compliance and enforcement activities, including inspections, conducted by the publicly owned treatment works during the reporting period;
- d. A summary of changes to the publicly owned treatment works pretreatment program that have not been previously reported to the department; and
- e. Any other relevant information requested by the department.

2. If a publicly owned treatment works is under a compliance schedule for pretreatment program development, the publicly owned treatment works shall submit compliance schedule progress reports to the department.

The schedule shall contain increments of progress in the form of dates for the commencement and completion of major events leading to the development and implementation of a publicly owned treatment works pretreatment program (e.g., acquiring required authorities, developing funding mechanisms, acquiring equipment);

- a. Each compliance schedule progress report shall be due fourteen days after the applicable progress date in the compliance schedule.
- b. Each compliance schedule progress report shall include:
 - (1) A statement whether the publicly owned treatment works achieved the scheduled action on the applicable date; and
 - (2) If the publicly owned treatment works has not achieved the scheduled action, the date on which the publicly owned treatment works expects to achieve the action, the reason for delay, and the steps being taken to return to the established schedule.
- c. In no case shall more than nine months elapse between compliance schedule progress report submittals.

3. Signatory requirements for publicly owned treatment works reports. Reports submitted to the department by the publicly owned treatment works in accordance with this section shall be signed by a principal executive officer, ranking elected official or other duly authorized employee. The duly authorized employee must be an individual or position having responsibility for the overall operation of the facility or the pretreatment program. This authorization must be made in writing by the principal executive officer or ranking elected official, and submitted to the approval authority prior to or together with the report being submitted.

33.1-16-01.1-17. Upset.

1. An upset shall constitute an affirmative defense to an action brought for noncompliance with categorical pretreatment standards if the following criteria are demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence:

a. An upset occurred and the user can identify the cause or causes;

b. The facility was at the time being operated in a prudent and professional manner and in compliance with applicable operation and maintenance procedures; and

c. The user has submitted the following information to the publicly owned treatment works and to the control authority within twenty-four hours of becoming aware of the upset. If the information is submitted orally, a written submission shall be provided within five days:

(1) A description of the indirect discharge and the cause of noncompliance;

(2) The period of noncompliance, including exact dates and times or, if not corrected, the anticipated time the noncompliance is expected to continue; and

(3) Steps being taken or being planned to reduce, eliminate, and prevent recurrence of the noncompliance.

2. In any enforcement proceeding the industrial user seeking to establish the occurrence of an upset shall have the burden of proof.

3. No determination made during administrative review of claims, that noncompliance with categorical pretreatment standards was caused by upset, is final administrative action.

4. The industrial user shall control production or all indirect discharges to the extent necessary to maintain compliance with categorical pretreatment standards upon reduction, loss, or failure of its treatment facility until the facility is restored or an alternative method of treatment is provided.

Law Implemented: NDCC 61-28-04, 61-28-07

33.1-16-01.1-18. Bypass.

1. An industrial user may allow any bypass to occur which does not cause pretreatment standards or pretreatment requirements to be violated, but only if it also is for essential maintenance to assure efficient operation. Such bypasses are not subject to subsections 2 and 3.
2. The industrial user shall provide notification to the control authority of a bypass under the following circumstances:
 - a. If the user knows in advance of the need for a bypass, prior notice shall be submitted, at least ten days before the date of the bypass, if possible.
 - b. The user shall submit oral notice of an unanticipated bypass that exceeds applicable pretreatment standards within twenty-four hours from the time the user becomes aware of the bypass. A written submission shall also be provided within five days of the time the user becomes aware of the bypass. The control authority may waive the written report on a case-by-case basis if the oral report has been received within twenty-four hours.
 - c. The written submission shall contain the following items:
 - (1) A description of the bypass and its cause;
 - (2) The duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and
 - (3) The steps taken or planned to reduce, eliminate, and prevent reoccurrence of the bypass.
3. Bypasses are prohibited unless the following conditions are met. The control authority may approve an anticipated bypass, if the following conditions are met:
 - a. The bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
 - b. There were no feasible alternatives to the bypass. This condition is not satisfied if adequate backup equipment was not installed to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
 - c. The user submitted the notification required in subsection 2.
4. The control authority may approve an anticipated bypass, after considering its adverse effects, if the control authority determines that it will meet the three conditions listed in subsection 3.

History: Effective January 1, 2019.

Law Implemented: NDCC 61-28-04

33.1-16-01.1-19. Pretreatment program modifications.

Modification of publicly owned treatment works pretreatment programs, 40 CFR 403.18, is incorporated into this chapter by reference.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-20. Right of entry.

1. Each publicly owned treatment works and industrial user shall permit an authorized representative of the department, upon presentation of the representative's credentials:
 - a. To enter the premises of a publicly owned treatment works or of an industrial user of a publicly owned treatment works in which an effluent source is located or in which any records are maintained;
 - b. To have access to and copy any records required to be maintained;
 - c. To inspect any monitoring equipment or method which is required; and
 - d. To have access to and sample any discharge of pollutants to waters of the state or to a publicly owned treatment works which result from the activities or operation of the publicly owned treatment works or industrial user.
2. An industrial user of a publicly owned treatment works with an approved pretreatment program shall permit an authorized representative of the publicly owned treatment works, upon presentation of the representative's credentials, the access detailed in subsection 1.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-01.1-21. Enforcement.

The department shall evaluate all reports, notifications, and data submitted to or obtained by the department in compliance with this chapter and shall investigate and follow up all apparent violations for possible enforcement action pursuant to North Dakota Century Code section 61-28-08. The department shall have authority to seek judicial relief and may also use administrative penalty authority when the publicly owned treatment works has sought a monetary penalty which the approval authority believes to be insufficient.

Law Implemented: NDCC 61-28-04, 61-28-08

APPENDIX A

REQUIRED PUBLICLY OWNED TREATMENT WORKS PRETREATMENT PROGRAM ELEMENTS

Legal authority. The publicly owned treatment works shall operate pursuant to legal authority enforceable in federal, state, or local courts, which authorizes or enables the publicly owned treatment works to apply and to enforce the requirements of sections 307(b) and (c), and 402(b)(8) of the Federal Water Pollution Control Act and any regulations implementing those sections. Such authority may be contained in a statute, ordinance, joint powers agreements, or similar mechanisms which the publicly owned treatment works is authorized to enact, enter into, or implement, and which are authorized by state law. At a minimum, this legal authority shall enable the publicly owned treatment works to accomplish each of the following actions:

1. Deny or condition new or increased contributions of pollutants, or changes in the nature of pollutants, to the publicly owned treatment works by industrial users if such contributions do not meet applicable pretreatment standards and requirements or if such contributions would cause the publicly owned treatment works to violate its North Dakota pollutant discharge elimination system permit.
2. Require compliance with applicable pretreatment standards and requirements by industrial users.
3. Control through permit, order, or similar means the contribution to the publicly owned treatment works by each industrial user to ensure compliance with applicable pretreatment standards and requirements. In the case of significant industrial users, this control shall be achieved through permits or equivalent individual control mechanisms issued to each such user.
 - a. At the discretion of the publicly owned treatment works, this control may include use of general control mechanisms if the following conditions are met. All of the facilities to be covered must:
 - (1) Involve the same or substantially similar types of operations;
 - (2) Discharge the same types of wastes;
 - (3) Require the same effluent limitations;
 - (4) Require the same or similar monitoring; and
 - (5) In the opinion of the publicly owned treatment works, are more appropriately controlled under a general control mechanism than under individual control mechanisms.
 - b. To be covered by the general control mechanism, the significant industrial user must file a written request for coverage that identifies its contact information, production processes, the types of wastes generated, the location for monitoring all wastes covered by the general control mechanism, any requests in accordance with 40 CFR 403.12(e)(2) for a monitoring waiver for a pollutant neither present nor expected to be present in the discharge, and any other information the publicly owned treatment works deems appropriate. A monitoring waiver for a pollutant neither present nor expected to be present in the discharge is not effective in the general control mechanism until after the publicly owned treatment works has provided written notice to the significant industrial user that such a waiver request has been granted in accordance with 40 CFR 403.12(e)(2). The publicly owned treatment works must retain a copy of the general control mechanism, documentation to support the publicly owned treatment works' determination that a specific significant industrial user meets the criteria in paragraphs 1

through 5 of subdivision a of this subsection, and a copy of the user's written request for coverage for three years after the expiration of the general control mechanism. A publicly owned treatment works may not control a significant industrial user through a general control mechanism where the facility is subject to production-based categorical pretreatment standards or categorical pretreatment standards expressed as mass of pollutant discharged per day or for industrial users whose limits are based on the combined wastestream formula or net/gross calculations 40 CFR 403.6(e) and 40 CFR 403.15.

Both individual and general control mechanisms must be enforceable and contain, at a minimum, the following conditions:

- (1) Statement of duration (in no case more than five years);
- (2) Statement of nontransferability without, at a minimum, prior notification to the publicly owned treatment works and provision of a copy of the existing control mechanism to the new owner or operator;
- (3) Effluent limits, include best management practices, based on applicable general pretreatment standards in chapter 33.1-16-01.1, categorical pretreatment standards, local limits, and state and local law;
- (4) Self-monitoring, sampling, reporting, notification, and recordkeeping requirements, including an identification of the pollutants to be monitored, including the process for seeking a waiver for a pollutant neither present nor expected to be present in the discharge in accordance with 40 CFR 403.12(e)(2), or a specific waived pollutant in the case of an individual control mechanism, sampling location, sampling frequency, and sample type, based on the applicable general pretreatment standards in chapter 33.1-16-01.1, categorical pretreatment standards, local limits, and state and local law; and
- (5) Statement of applicable civil and criminal penalties for violation of pretreatment standards and requirements, and any applicable compliance schedule. Such schedules may not extend the compliance date beyond applicable federal deadlines.
- (6) Requirements to control slug discharges, if determined by the publicly owned treatment works to be necessary.

4. Require:

- a. The development of a compliance schedule by each industrial user for the installation of technology required to meet applicable pretreatment standards and requirements; and
- b. The submissions of all notices and self-monitoring reports from industrial users as are necessary to assess and assure their compliance with pretreatment standards and requirements, including the reports required in section 33.1-16-01.1-12.

5. Carry out all inspection, surveillance, and monitoring procedures necessary to determine, independent of information supplied by industrial users, compliance or noncompliance with applicable pretreatment standards and requirements by industrial users. Representatives of the publicly owned treatment works shall be authorized to enter any premises of any industrial user in which a discharge source or treatment system is located or in which records are required to be kept under subsection 5 of section 33.1-16-01.1-11 to assure compliance with pretreatment standards and requirements. Such authority shall be at least as extensive as the authority provided under section 308 of the Federal Water Pollution Control Act.

6. a. Obtain remedies for noncompliance by any industrial user with any pretreatment standards and requirements. All publicly owned treatment works shall be able to seek injunctive relief for noncompliance by industrial users with pretreatment standards and requirements. All publicly owned treatment works shall also have authority to seek or assess civil or criminal penalties in at least the amount of one thousand dollars a day for each violation by industrial users of pretreatment standards and requirements.
 - b. Pretreatment standards and requirements which will be enforced through these remedies will include the duty to allow or carry out inspections, entry, or monitoring activities; any rules, regulations, or orders issued by the publicly owned treatment works; any requirements set forth in individual control mechanisms issued by the publicly owned treatment works; or any reporting requirements imposed by the publicly owned treatment works or state or federal regulations. The publicly owned treatment works shall have authority and procedures after informal notice to the discharger immediately and effectively to halt or prevent any discharge of pollutants to the publicly owned treatment works which reasonably appears to present an imminent endangerment to the health or welfare of persons. The publicly owned treatment works shall also have authority and procedures which shall include notice to the affected industrial users and an opportunity to respond to halt or prevent any discharge to the publicly owned treatment works which presents or may present an endangerment to the environment or which threatens to interfere with the operation of the publicly owned treatment works.
7. Comply with the confidentiality requirements set forth in subsection 4 of section 33.1-16-01.1-11.

Procedures. The publicly owned treatment works shall develop and implement procedures to ensure compliance with the requirements of a pretreatment program. At a minimum, these procedures shall enable the publicly owned treatment works to accomplish each of the following actions:

1. Identify and locate all possible industrial users which might be subject to the publicly owned treatment works pretreatment program. Any compilation, index, or inventory of industrial users made under this subsection shall be made available to the department or regional administrator upon request.
2. Identify the character and volume of pollutants contributed to the publicly owned treatment works by the industrial users which are subject to the publicly owned treatment works pretreatment program. This information shall be made available to the department or regional administrator upon request.
3. Notify industrial users which are subject to the publicly owned treatment works pretreatment program of applicable pretreatment standards and any applicable requirements under sections 204(b) and 405 of the Federal Water Pollution Control Act and subtitles C and D of the Resource Conservation and Recovery Act. Within thirty days of departmental approval of a significant industrial user's list (see "Significant industrial users"), notify each significant industrial user of its status as such and of all requirements applicable to it as a result of such status.
4. Receive and analyze self-monitoring reports and other notices submitted by industrial users in accordance with the self-monitoring requirements in section 33.1-16-01.1-12.
5. Randomly sample and analyze the effluent from industrial users and conduct surveillance activities in order to identify, independent of information supplied by industrial users, occasional and continuing noncompliance with pretreatment standards. Inspect and sample the effluent from each significant industrial user at least once a year, except as otherwise below:

- a. Where the publicly owned treatment works has authorized the industrial user subject to a categorical pretreatment standard to forego sampling of a pollutant regulated by a categorical pretreatment standard in accordance with 40 CFR 403.12(e)(3), the publicly owned treatment works must sample for the waived pollutant at least once during the term of the categorical industrial user's control mechanism. In the event that the publicly owned treatment works subsequently determines that a waived pollutant is present or is expected to be present in the industrial user's wastewater based on changes that occur in the user's operations, the publicly owned treatment works must immediately begin at least annual effluent monitoring of the user's discharge and inspection.
 - b. Where the publicly owned treatment works has determined that an industrial user meets the criteria for classification as a nonsignificant categorical industrial user, the publicly owned treatment works must evaluate, at least once per year, whether an industrial user continues to meet the criteria in 40 CFR 403.3(v)(2).
 - c. In the case of industrial users subject to reduced reporting requirements under 40 CFR 403.12(e)(3), the publicly owned treatment works must randomly sample and analyze the effluent from industrial users and conduct inspections at least once every two years. If the industrial user no longer meets the conditions for reduced reporting in 40 CFR 403.12(e)(3), the publicly owned treatment works must immediately begin sampling and inspecting the industrial user at least once per year.
6. Evaluate, at least once every two years, whether each such significant industrial user needs a plan to control slug discharges. For purposes of this subsection, a slug discharge is any discharge of a nonroutine, episodic nature, including an accidental spill or a noncustomary batch discharge. The results of such activities shall be available to the department upon request. If the publicly owned treatment works decides that a slug control plan is needed, the plan shall contain, at a minimum, the following elements:
- a. Description of discharge practices, including nonroutine batch discharges;
 - b. Description of stored chemicals;
 - c. Procedures for immediately notifying the publicly owned treatment works of slug discharges, including any discharge that would violate a prohibition under subsection 2 of section 33.1-16-01.1-02, with procedures for followup written notification within five days; and
 - d. If necessary, procedures to prevent adverse impact from accidental spills, including inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operations, control of plant site runoff, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants (including solvents), and measures and equipment for emergency response.
7. Investigate instances of noncompliance with pretreatment standards and requirements, as indicated in the reports and notices required under section 33.1-16-01.1-12, or indicated by analysis, inspection, and surveillance activities. Sample collecting and analysis and the collection of other information shall be performed with sufficient care to produce evidence admissible in enforcement proceedings or in judicial actions.
8. Comply with the public participation requirements of 40 CFR 25 in the enforcement of national pretreatment standards. These procedures shall include provision for at least annual public notification, in the largest daily newspaper published in the municipality in which the publicly owned treatment works is located, of industrial users which, at any time during the previous twelve months, were in significant noncompliance with applicable pretreatment requirements.

For the purposes of this provision, an industrial user is in significant noncompliance if its violation meets one or more of the following criteria:

- a. Chronic violations of wastewater discharge limits, defined here as those in which sixty-six percent or more of all of the measurements taken during a six-month period exceed by any magnitude a numeric pretreatment standard or requirement, including instantaneous limits, as defined by 40 CFR 403.3(l);
- b. Technical review criteria violations, defined here as those in which thirty-three percent or more of all of the measurements for each pollutant parameter taken during a six-month period equal or exceed the product of the numeric pretreatment standard or requirement, including instantaneous limits, as defined by 40 CFR 403.3(l) limit multiplied by the applicable technical review criteria (equal to 1.4 for five-day biochemical oxygen demand, total suspended solids, fats, oil, and grease, and 1.2 for all other pollutants except pH);
- c. Any other violation of a pretreatment standard or requirement as defined by 40 CFR 403.3(l) (daily maximum, long-term average, instantaneous limit, or narrative standard) that the control authority determines has caused, alone or in combination with other discharges, interference, or passthrough (including endangering the health of the publicly owned treatment works' personnel or the general public);
- d. Any discharge of a pollutant that has caused imminent endangerment to human health, welfare, or to the environment or has resulted in the publicly owned treatment works' exercise of its emergency authority to halt or prevent such a discharge;
- e. Failure to meet, within ninety days after the schedule date, a compliance schedule milestone contained in a local control mechanism or enforcement order for starting construction, completing construction, or attaining final compliance;
- f. Failure to provide, within thirty days after the due date, required reports such as baseline monitoring reports, ninety-day compliance reports, periodic self-monitoring reports, and compliance schedule progress reports;
- g. Failure to accurately report noncompliance; or
- h. Any other violation or group of violations, which may include a violation of best management practices, which the control authority determines will adversely affect the operation or implementation of the local pretreatment program.

Funding. The publicly owned treatment works shall have sufficient resources and qualified personnel to carry out the authorities and procedures described in "Legal authority" and "Procedures." In some limited circumstances, funding and personnel may be delayed when the publicly owned treatment works has adequate legal authority and procedures to carry out these pretreatment program requirements, and a limited aspect of the pretreatment program does not need to be implemented immediately (see subsection 2 of section 33.1-16-01.1-06).

Local limits. The publicly owned treatment works shall develop local limits as required in section 33.1-16-01.1-03 or demonstrate that they are not necessary.

Enforcement response plan. The publicly owned treatment works shall develop and implement an enforcement response plan. This plan shall contain detailed procedures indicating how a publicly owned treatment works will investigate and respond to instances of an industrial user noncompliance. The plan shall, at a minimum:

1. Describe how the publicly owned treatment works will investigate the instances of noncompliance;

2. Describe the types of escalating enforcement responses the publicly owned treatment works will take in response to all anticipated types of industrial user violations and the time periods within which responses will take place;
3. Identify (by title) the official(s) responsible for each type of response; and
4. Adequately reflect the publicly owned treatment works primary responsibility to enforce all applicable pretreatment requirements and standards, as detailed in "Legal authority" and "Procedures."

Significant industrial users. The publicly owned treatment works shall prepare a list of its significant industrial users. The list shall identify the criteria in subsection 17 of section 33.1-16-01.1-01 applicable to each industrial user and, for industrial users meeting the criteria in subdivision b of subsection 17 of section 33.1-16-01.1-01, shall also indicate whether the publicly owned treatment works has made a determination pursuant to subdivision c of subsection 17 of section 33.1-16-01.1-01 that such industrial user should not be considered a significant industrial user. The initial list shall be submitted to the department as a nonsubstantial modification pursuant to section 33.1-16-01.1-19. Modifications to the list shall be submitted to the department pursuant to subdivision a of subsection 1 of section 33.1-16-01.1-13.

A publicly owned treatment works that chooses to receive electronic documents must satisfy the requirements of 40 CFR part 3 (electronic reporting).

History: Effective January 1, 2019.

APPENDIX B

PUBLICLY OWNED TREATMENT WORKS PRETREATMENT PROGRAM SUBMISSION PACKAGES

A publicly owned treatment works requesting approval of a publicly owned treatment works pretreatment program shall develop a program description, which includes the following information:

A statement from the city solicitor or a city official acting in a comparable capacity (or the attorney for those publicly owned treatment works which have independent legal counsel) that the publicly owned treatment works has authority adequate to carry out the programs described in Appendix A. This statement must:

1. Identify the provision of legal authority which provides the basis for each procedure described in "Procedures" in Appendix A;
2. Identify the manner in which the publicly owned treatment works will implement the program requirements set forth in Appendix A, including the means by which pretreatment standards will be applied to individual industrial users (e.g., by order, permit, ordinance, etc.); and
3. Identify how the publicly owned treatment works intends to ensure compliance with pretreatment standards and requirements, and to enforce them in the event of noncompliance by industrial users.

A copy of any statutes, ordinances, regulations, agreements, or other authorities relied upon by the publicly owned treatment works for its administration of the program. This submission shall include a statement reflecting the endorsement or approval of the local boards or bodies responsible for supervising or funding the publicly owned treatment works pretreatment program, or both, if approved;

A brief description, including organization charts, of the publicly owned treatment works organization which will administer the pretreatment program. If more than one agency is responsible for administration of the program, the responsible agencies should be identified, their respective responsibilities delineated, and their procedures for coordination set forth; and

A description of the funding levels and full-time and part-time manpower available to implement the program.

History: Effective January 1, 2019.

CHAPTER 33.1-16-02.1
STANDARDS OF QUALITY FOR WATERS OF THE STATE

Section

- 33.1-16-02.1-01 Authority
- 33.1-16-02.1-02 Purpose
- 33.1-16-02.1-03 Applicability
- 33.1-16-02.1-04 Definitions
- 33.1-16-02.1-05 Variances and Compliance Schedules
- 33.1-16-02.1-06 Severability
- 33.1-16-02.1-07 Classification of Waters of the State
- 33.1-16-02.1-08 General Water Quality Standards
- 33.1-16-02.1-09 Surface Water Classifications, Mixing Zones, and Numeric Standards
- 33.1-16-02.1-10 Ground Water Classifications and Standards
- 33.1-16-02.1-11 Discharge of Wastes

33.1-16-02.1-01. Authority.

These rules are promulgated pursuant to North Dakota Century Code chapters 61-28 and 23.1-11; specifically, sections 61-28-04 and 23.1-11-05, respectively.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-02. Purpose.

1. The purposes of this chapter are to establish a system for classifying waters of the state; provide standards of water quality for waters of the state; and protect existing and potential beneficial uses of waters of the state.
2. The state and public policy is to maintain or improve, or both, the quality of the waters of the state and to maintain and protect existing uses. Classifications and standards are established for the protection of public health and environmental resources and for the enjoyment of these waters, to ensure the propagation and well-being of resident fish, wildlife, and all biota associated with, or dependent upon, these waters; and to safeguard social, economical, and industrial development. Waters not being put to use shall be protected for all reasonable uses for which these waters are suitable. All known and reasonable methods to control and prevent pollution of the waters of this state are required, including improvement in quality of these waters, when feasible.
 - a. The "quality of the waters" shall be the quality of record existing at the time the first standards were established in 1967, or later records if these indicate an improved quality. Waters with existing quality that is higher than established standards will be maintained at the higher quality unless affirmatively demonstrated, after full satisfaction of the intergovernmental coordination and public participation provisions of the continuing planning process, that a change in quality is necessary to accommodate important social or economic development in the area in which the waters are located. In allowing the lowering of existing quality, the department shall assure that existing uses are fully protected and that the highest statutory and regulatory requirements for all point sources and cost-effective and reasonable best management practices for nonpoint sources are achieved.
 - b. Waters of the state having unique or high-quality characteristics that may constitute an outstanding state resource shall be maintained and protected.

- c. Any public or private project or development which constitutes a source of pollution shall provide the best degree of treatment as designated by the department in the North Dakota pollutant discharge elimination system. If review of data and public input indicates any detrimental water quality changes, appropriate actions will be taken by the department following procedures approved by the environmental protection agency. (North Dakota Antidegradation Implementation Procedure, Appendix IV.)

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28-04; S.L. 2017, ch. 199, § 26

33.1-16-02.1-03. Applicability.

Nothing in this chapter may be construed to limit or interfere with the jurisdiction, duties, or authorities of other North Dakota state agencies.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-04. Definitions.

The terms used in this chapter have the same meaning as in North Dakota Century Code chapter 61-28, except:

1. "Acute standard" means the one-hour average concentration does not exceed the listed concentration more than once every three years.
2. "Best management practices" are methods, measures, or procedures selected by the department to control nonpoint source pollution. Best management practices include structural and nonstructural measures and operation and maintenance procedures.
3. "Chronic standard" means the four-day average concentration does not exceed the listed concentration more than once every three years.
4. "Consecutive thirty-day average" is the average of samples taken during any consecutive thirty-day period. It is not a requirement for thirty consecutive daily samples.
5. "Department" means the department of environmental quality.
6. A standard defined as "dissolved" means the total quantity of a given material present in a filtered water sample, regardless of the form or nature of its occurrence.
7. "Eutrophication" means the process of enrichment of rivers, streams, lakes, reservoirs, and wetlands with nutrients needed to maintain primary production.
8. "Nutrients" mean the chemical elements, primarily nitrogen and phosphorus, which are critical to the growth of aquatic plants and animals.
9. "Pollution" means such contamination, or other alteration of the physical, chemical, or biological properties, of any waters of the state, including change in temperature, taste, color, turbidity, or odor. Pollution includes discharge of any liquid, gaseous, solid, radioactive, or other substance into any waters of the state that will or is likely to create a nuisance or render such waters harmful, detrimental, or injurious to public health, safety, or welfare; domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses; or livestock, wild animals, birds, fish, or other aquatic biota.

10. "Site-specific standards" mean water quality criteria developed to reflect local environmental conditions to protect the uses of a specific water body.
11. A standard defined as "total" means the entire quantity of a given material present in an unfiltered water sample regardless of the form or nature of its occurrence. This includes both dissolved and suspended forms of a substance, including the entire amount of the substance present as a constituent of the particulate material. Total recoverable is the quantity of a given material in an unfiltered aqueous sample following digestion by refluxing with hot dilute mineral acid.
12. "Water usage". The best usage for the waters shall be those uses determined to be the most consistent with present and potential uses in accordance with the economic and social development of the area. Present principal best uses are those defined in subdivisions a, b, c, d, and e. These are not to be construed to be the only possible usages.
 - a. Municipal and domestic water. Waters suitable for use as a source of water supply for drinking and culinary purposes after treatment to a level approved by the department.
 - b. Fish and aquatic biota. Waters suitable for the propagation and support of fish and other aquatic biota and waters that will not adversely affect wildlife in the area. Low flows or natural physical and chemical conditions in some waters may limit their value for fish propagation or aquatic biota.
 - c. Recreation. Primary recreational waters are suitable for recreation where direct body contact is involved, such as bathing and swimming, and where secondary recreational activities such as boating, fishing, and wading are involved. Natural high turbidities in some waters and physical characteristics of banks and streambeds of many streams are factors that limit their value for bathing.
 - d. Agricultural uses. Waters suitable for irrigation, stock watering, and other agricultural uses, but not suitable for use as a source of domestic supply for the farm unless satisfactory treatment is provided.
 - e. Industrial water. Waters suitable for industrial purposes, including food processing, after treatment. Treatment may include that necessary for prevention of boiler scale and corrosion.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-05. Variances and compliance schedules.

Upon written application by the responsible discharger, the department finds that by reason of substantial and widespread economic and social impacts the strict enforcement of state water quality criteria is not feasible, the department can permit a variance to the water quality standard for the affected segment. The department can set conditions and time limitations with the intent that progress toward improvements in water quality will be made. This can include interim criteria which must be reviewed at least once every three years. A variance will be granted only after fulfillment of the approved requirements at 40 CFR section 131.14, including public participation requirements and environmental protection agency approval. A variance will not preclude an existing use.

A North Dakota pollutant discharge elimination system permit may contain a schedule to return a permittee to compliance with water quality based effluent limits consistent with federal and state regulations. Compliance schedules in North Dakota pollutant discharge elimination system permits are subject to the requirements of section 33.1-16-01-15 and cannot be issued for new discharges or sources.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-06. Severability.

The rules contained in this chapter are severable. If any rules, or part thereof, or the application of such rules to any person or circumstance are declared invalid, that invalidity does not affect the validity of any remaining portion of this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-07. Classification of waters of the state.

General. Classification of waters of the state shall be used to maintain and protect the present and future beneficial uses of these waters. Classification of waters of the state shall be made or changed whenever new or additional data warrant the classification or a change of an existing classification.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-08. General water quality standards.

1. Narrative standards.

a. The following minimum conditions are applicable to all waters of the state except for class II ground waters. All waters of the state shall be:

- (1) Free from substances attributable to municipal, industrial, or other discharges or agricultural practices that will cause the formation of putrescent or otherwise objectionable sludge deposits.
- (2) Free from floating debris, oil, scum, and other floating materials attributable to municipal, industrial, or other discharges or agricultural practices in sufficient amounts to be unsightly or deleterious.
- (3) Free from materials attributable to municipal, industrial, or other discharges or agricultural practices producing color, odor, or other conditions to such a degree as to create a nuisance or render any undesirable taste to fish flesh or, in any way, make fish inedible.
- (4) Free from substances attributable to municipal, industrial, or other discharges or agricultural practices in concentrations or combinations which are toxic or harmful to humans, animals, plants, or resident aquatic biota. For surface water, this standard will be enforced in part through appropriate whole effluent toxicity requirements in North Dakota pollutant discharge elimination system permits.
- (5) Free from oil or grease residue attributable to wastewater, which causes a visible film or sheen upon the waters or any discoloration of the surface of adjoining shoreline or causes a sludge or emulsion to be deposited beneath the surface of the water or upon the adjoining shorelines or prevents classified uses of such waters.
- (6) Free from nutrients attributed to municipal, industrial, or other discharges or agricultural practices, in concentrations or loadings which will cause accelerated

eutrophication resulting in the objectionable growth of aquatic vegetation or algae or other impairments to the extent that it threatens public health or welfare or impairs present or future beneficial uses.

- b. There shall be no materials such as garbage, rubbish, offal, trash, cans, bottles, drums, or any unwanted or discarded material disposed of into the waters of the state.
- c. There shall be no disposal of livestock or domestic animals in waters of the state.
- d. The department shall propose and submit to the state engineer the minimum streamflows of major rivers in the state necessary to protect the public health and welfare. The department's determination shall address the present and prospective future use of the rivers for public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, and agricultural, industrial, and other legitimate uses.
- e. No discharge of pollutants, which alone or in combination with other substances, shall:
 - (1) Cause a public health hazard or injury to environmental resources;
 - (2) Impair existing or reasonable beneficial uses of the receiving waters; or
 - (3) Directly or indirectly cause concentrations of pollutants to exceed applicable standards of the receiving waters.
- f. If the department determines that site-specific criteria are necessary and appropriate for the protection of designated uses, procedures described in the environmental protection agency's Water Quality Standards Handbook 1994 or other defensible methods may be utilized to determine maximum limits. Where natural chemical, physical, and biological characteristics result in exceedences of the limits set forth in this section, the department may derive site-specific criteria based on the natural background level or condition. All available information shall be examined, and all possible sources of a contaminant will be identified in determining the naturally occurring concentration. All site-specific criteria shall be noticed for public comment and subjected to other applicable public participation requirements prior to being adopted.

2. Narrative biological goal.

- a. Goal. The biological condition of surface waters shall be similar to that of sites or water bodies determined by the department to be regional reference sites.
- b. Definitions.
 - (1) "Assemblage" means an association of aquatic organisms of similar taxonomic classification living in the same area. Examples of assemblages include fish, macroinvertebrates, algae, and vascular plants.
 - (2) "Aquatic organism" means any plant or animal which lives at least part of its life cycle in water.
 - (3) "Biological condition" means the taxonomic composition, richness, and functional organization of an assemblage of aquatic organisms at a site or within a water body.
 - (4) "Functional organization" means the number of species or abundance of organisms within an assemblage which perform the same or similar ecological functions.
 - (5) "Metric" means an expression of biological community composition, richness, or function which displays a predictable, measurable change in value along a gradient of pollution or other anthropogenic disturbance.

(6) "Regional reference sites" are sites or water bodies which are determined by the department to be representative of sites or water bodies of similar type (e.g., hydrology and ecoregion) and are least impaired with respect to habitat, water quality, watershed land use, and riparian and biological condition.

(7) "Richness" means the absolute number of taxa in an assemblage at a site or within a water body.

(8) "Taxonomic composition" means the identity and abundance of species or taxonomic groupings within an assemblage at a site or within a water body.

c. Implementation. The intent of the state in adopting a narrative biological goal is solely to provide an additional assessment method that can be used to identify impaired surface waters. Regulatory or enforcement actions based solely on a narrative biological goal, such as the development and enforcement of North Dakota pollutant discharge elimination system permit limits, are not authorized. However, adequate and representative biological assessment information may be used in combination with other information to assist in determining whether designated uses are attained and to assist in determining whether new or revised chemical-specific permit limitations may be needed. Implementation will be based on the comparison of current biological conditions at a particular site to the biological conditions deemed attainable based on regional reference sites. In implementing a narrative biological goal, biological condition may be expressed through an index composed of multiple metrics or through appropriate statistical procedures.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

33.1-16-02.1-09. Surface water classifications, mixing zones, and numeric standards.

1. **Surface water classifications.** Procedures for the classifications of streams and lakes of the state shall follow this subsection. Classifications of streams and lakes are listed in appendix I and appendix II, respectively.

a. Class I streams. The quality of the waters in this class shall be suitable for the propagation or protection, or both, of resident fish species and other aquatic biota and for swimming, boating, and other water recreation. The quality of the waters shall be suitable for irrigation, stock watering, and wildlife without injurious effects. After treatment consisting of coagulation, settling, filtration, and chlorination, or equivalent treatment processes, the water quality shall meet the bacteriological, physical, and chemical requirements of the department for municipal or domestic use.

b. Class IA streams. The quality of the waters in this class shall be the same as the quality of class I streams, except that where natural conditions exceed class I criteria for municipal and domestic use, the availability of softening or other treatment methods may be considered in determining whether ambient water quality meets the drinking water requirements of the department.

The Sheyenne River from its headwaters to one-tenth mile downstream from Baldhill Dam is not classified for municipal or domestic use.

c. Class II streams. The quality of the waters in this class shall be the same as the quality of class I streams, except that additional treatment may be required to meet the drinking water requirements of the department. Streams in this classification may be intermittent

in nature which would make these waters of limited value for beneficial uses such as municipal water, fish life, irrigation, bathing, or swimming.

- d. Class III streams. The quality of the waters in this class shall be suitable for agricultural and industrial uses. Streams in this class generally have low average flows with prolonged periods of no flow. During periods of no flow, they are of limited value for recreation and fish and aquatic biota. The quality of these waters must be maintained to protect secondary contact recreation uses (e.g., wading), fish and aquatic biota, and wildlife uses.
- e. Wetlands. These water bodies, including isolated ponds, sloughs, and marshes, are to be considered waters of the state and will be protected under section 33.1-16-02.1-08.
- f. Lakes and reservoirs. The type of fishery a lake or reservoir may be capable of supporting is based on the lake's or reservoir's geophysical characteristics. The capability of a lake or reservoir to support a fishery may be affected by seasonal or climatic variability or other natural occurrences, which may alter the physical and chemical characteristics of the lake or reservoir.

<u>Class</u>	<u>Characteristics</u>
<u>1</u>	<u>Cold water fishery. Waters capable of supporting growth of cold water fish species (e.g., salmonids) and associated aquatic biota.</u>
<u>2</u>	<u>Cool water fishery. Waters capable of supporting natural reproduction and growth of cool water fishes (e.g., northern pike and walleye) and associated aquatic biota. These waters are also capable of supporting the growth and marginal survival of cold water species and associated biota.</u>
<u>3</u>	<u>Warm water fishery. Waters capable of supporting natural reproduction and growth of warm water fishes (e.g., largemouth bass and bluegill) and associated aquatic biota. Some cool water species may also be present.</u>
<u>4</u>	<u>Marginal fishery. Waters capable of supporting a fishery on a short-term or seasonal basis (generally a "put and take" fishery).</u>
<u>5</u>	<u>Not capable of supporting a fishery due to high salinity.</u>

2. **Mixing zones.** North Dakota mixing zone and dilution policy is contained in appendix III.

3. **Numeric standards.**

- a. Class I streams. The physical and chemical criteria for class I streams are listed in table 1 and table 2.
- b. Class IA streams. The physical and chemical criteria shall be those for class I streams, with the exceptions for chloride, percent sodium, and sulfate as listed in table 1.
- c. Site-specific sulfate standard. The physical and chemical criteria for the Sheyenne River from its headwaters to one-tenth of a mile downstream from Baldhill Dam shall be those for class IA streams, with the exception of sulfate as listed in table 1.
- d. Class II streams. The physical and chemical criteria shall be those for class IA, with the chloride and pH as listed in table 1.
- e. Class III streams. The physical and chemical criteria shall be those for class II, with the exceptions for sulfate as listed in table 1.

f. Wetlands, including isolated ponds, class 4 lakes not listed in appendix II, sloughs and marshes. The physical and chemical criteria shall be those for class III streams, with exceptions for temperature, dissolved oxygen as listed in paragraph 6 of subdivision g., and other conditions not attributable to municipal, industrial, domestic, or agricultural sources.

g. Lakes and reservoirs.

- (1) The physical and chemical criteria for class I streams shall apply to all classified lakes or reservoirs listed in appendix II.
- (2) In addition, a guideline for use as a goal in any lake or reservoir improvement or maintenance program is a growing season (April through November) average chlorophyll-a concentration of twenty µg/l.
- (3) The temperature standard for class I streams does not apply to Nelson Lake in Oliver County. The temperature of any discharge to Nelson Lake shall not have an adverse effect on fish, aquatic biota, recreation, and wildlife.
- (4) A numeric temperature standard of not greater than fifty-nine degrees Fahrenheit [15 degrees Celsius] shall be maintained in the hypolimnion of class I lakes and reservoirs during periods of thermal stratification.
- (5) The numeric dissolved oxygen standard of five mg/l as a daily minimum does not apply to the hypolimnion of class III and IV lakes and reservoirs during periods of thermal stratification.
- (6) The numeric dissolved oxygen standard of five mg/l as a daily minimum and the maximum temperature of eighty-five degrees Fahrenheit [29.44 degrees Celsius] shall not apply to wetlands and class 4 lakes.
- (7) Lake Sakakawea must maintain a minimum volume of water of five hundred thousand-acre feet [61,674-hectare meters] that has a temperature of fifty-nine degrees Fahrenheit [15 degrees Celsius] or less and a dissolved oxygen concentration of not less than five mg/l.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

TABLE 1

MAXIMUM LIMITS FOR SUBSTANCES IN
OR CHARACTERISTICS OF CLASSES I, IA, II, AND III STREAMS

<u>CAS¹ No.</u>	<u>Substance or Characteristic (a = aquatic life) (b = municipal & domestic drinking water) (c = agricultural, irrigation, industrial) (d = recreation)</u>	<u>Maximum Limit</u>
7429905	Aluminum (a)	<p>Acute Standard 750 micrograms per liter (µg/l)</p> <p>Chronic Standard 87 µg/l Where the pH is equal to or greater than 7.0, and the hardness is equal to or greater than 50 mg/l as CaCO₃ in the receiving water after mixing, the 87 µg/l chronic total recoverable aluminum criterion will not apply, and aluminum will be regulated based on compliance with the 750 µg/l acute total recoverable aluminum criterion.</p>
7446-41-7	Ammonia (Total as N) (a)	<p>Acute Standard The one-hour average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula:</p> $\frac{0.411}{1 + 10^{7.204 - pH}} + \frac{58.4}{1 + 10^{pH - 7.204}}$ <p>where salmonids are absent; or</p> $\frac{0.275}{1 + 10^{7.204 - pH}} + \frac{39.0}{1 + 10^{pH - 7.204}}$ <p>where salmonids are present.</p> <p>Chronic Standard The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:</p>

$$(CV) \left(\frac{0.0577}{1 + 10^{7.688 - pH}} \right) + \left(\frac{2.487}{1 + 10^{pH - 7.688}} \right)$$

where CV = 2.85, when temperature (T) is ≤ 14°C;

or

where:

$$(CV) = 1.45^{10^{0.028(25 - T)}}$$

when T > 14°C

Site-Specific Chronic Standard

The following site-specific standard applies to the Red River of the North beginning at the 12th Avenue North bridge in Fargo, North Dakota, and extending approximately 32 miles downstream to its confluence with the Buffalo River, Minnesota. This site-specific standard applies only during the months of October, November, December, January, and February. During the months of March through September, the statewide chronic ammonia standard applies.

The 30-day average concentration of total ammonia (expressed as N in mg/l) does not exceed, more often than once every three years on the average, the numerical value given by the following formula; and the highest 4-day average concentration of total ammonia within the 30-day averaging period does not exceed 2.5 times the numerical value given by the following formula:

$$(CV) \left(\frac{0.0577}{1 + 10^{7.688 - pH}} \right) + \left(\frac{2.487}{1 + 10^{pH - 7.688}} \right)$$

where CV = 4.63, when T ≤ 7° C; or

or

where:

$$(CV) = 1.45^{10^{0.028(25 - T)}}$$

when T > 7°C

7440-39-3	Barium (Total) (b)	1.0 mg/l (1-day arithmetic average)
7440-42-8	Boron (Total) (c)	0.75 mg/l (30-day arithmetic average)
16887-00-6	Chloride (Total) (a, b, c)	Class I: 100 mg/l (30-day arithmetic average) Class IA: 175 mg/l (30-day arithmetic average) Class II and Class III: 250 mg/l (30-day arithmetic average)
7782-50-5	Chlorine	Acute: 0.019 mg/l

	<u>Residual (Total) (a)</u>	Chronic: 0.011 mg/l
<u>7782-44-7</u>	<u>Dissolved Oxygen (a)</u>	<u>5 mg/l as a daily minimum (up to 10% of representative samples collected during any 3-year period may be less than this value provided that lethal conditions are avoided)</u>
<u>14797-55-8</u>	<u>Nitrate as N² (a, b)</u>	<u>1.0 mg/l (up to 10% of samples may exceed)</u>
<u>14797-65-0</u>	<u>Nitrite as N (b)</u>	<u>1.0 mg/l</u>
	<u>E. coli³ (d)</u>	<u>Not to exceed 126 organisms per 100 ml as a geometric mean of representative samples collected during any 30-day consecutive period, nor shall more than 10 percent of samples collected during any 30-day consecutive period individually exceed 409 organisms per 100 ml. For assessment purposes, the 30-day consecutive period shall follow the calendar month. This standard shall apply only during the recreation season May 1 to September 30.</u>
	<u>pH (a)</u>	<u>Class I and IA: 7.0 - 9.0 (up to 10% of representative samples collected during any 3-year period may exceed this range, provided that lethal conditions are avoided).</u> <u>Class II and Class III: 6.0 - 9.0 (up to 10% of representative samples collected during any 3-year period may exceed this range, provided that lethal conditions are avoided).</u>
<u>108-95-2</u>	<u>Phenols (Total) (b)</u>	<u>0.3 mg/l (organoleptic criterion) (one-day arithmetic average)</u>
<u>7440-23-5</u>	<u>Sodium (b, c)</u>	<u>Class I: 50 percent of total cations as milliequivalents per liter (mEq/l)</u> <u>Class IA, II, and III: 60 percent of total cations as mEq/l</u>
<u>18785-72-3</u>	<u>Sulfates (Total as SO₄) (b)</u>	<u>Class I: 250 mg/l (30-day arithmetic average)</u> <u>Class IA and II: 450 mg/l (30-day arithmetic average)</u> <u>Class III: 750 mg/l (30-day arithmetic average)</u>
	<u>Sulfates (Total as SO₄) (a, b)</u>	<u>Site Specific: 750 mg/l (maximum) applies to the Sheyenne River from its headwaters to 0.1 mile downstream from Baldhill Dam</u> <u>131.10(b) requirement: The water quality standards for the Red River and the portions of the Sheyenne River located downstream from the segment of the Sheyenne River to which the site-specific sulfate standard applies must continue to be maintained. The Sheyenne River from 0.1 mile downstream from Baldhill Dam to the confluence with the Red River shall not exceed 450 mg/l sulfate (total) 30-day arithmetic average, and the Red River shall not exceed 250 mg/l sulfate (total) 30-day arithmetic average after mixing downstream from the confluence of the Sheyenne River. Regulated pollution control efforts must be developed to achieve compliance with these water quality standards.</u>
	<u>Temperature (a)</u>	<u>Eighty-five degrees Fahrenheit [29.44 degrees Celsius]. The maximum increase shall not be greater than five degrees Fahrenheit [2.78 degrees Celsius] above natural background conditions.</u>

Combined radium 226 and radium 228 (Total) (b) 5 pCi/l (30-day arithmetic average)

Gross alpha particle activity, including radium 226, but excluding radon and uranium (b) 15 pCi/l (30-day arithmetic average)

¹ CAS No. is the chemical abstract service registry number. The registry database contains records for specific substances identified by the chemical abstract service.

² The standard for nitrates (N) is intended as benchmark concentration when stream or lake specific data is insufficient to determine the concentration that will cause excessive plant growth (eutrophication). However, in no case shall the concentration for nitrate plus nitrite N exceed 10 mg/l for any waters used as a municipal or domestic drinking water supply.

³ Where the E. Coli criteria are exceeded and there are natural sources, the criteria may be considered attained, provided there is reasonable basis for concluding that the indicator bacteria density attributable to anthropogenic sources is consistent with the level of water quality required by the criteria. This may be the situation, for example, in headwater streams that are minimally affected by anthropogenic activities.

TABLE 2
WATER QUALITY CRITERIA¹
(MICROGRAMS PER LITER)

CAS No.	Pollutant (Compounds)	Aquatic Life Value Classes I, IA, II, III		Human Health Value	
		Acute	Chronic	Classes I, IA, II ²	Class III ²
71-55-6	1,1,1-Trichloroethane			10,000 ⁷	200,000
79-00-5	1,1,2-Trichloroethane ⁴			0.55	8.9

¹ Except for the aquatic life values for metals, the values given in this appendix refer to the total (dissolved plus suspended) amount of each substance. For the aquatic life values for metals, the values refer to the total recoverable method for ambient metals analyses.

² Based on two routes of exposure - ingestion of contaminated aquatic organisms and drinking water.

³ Based on one route of exposure - ingestion of contaminated aquatic organisms only.

⁴ Substance classified as a carcinogen, with the value based on an incremental risk of one additional instance of cancer in one million persons.

⁵ Chemicals which are not individually classified as carcinogens but which are contained within a class of chemicals, with carcinogenicity as the basis for the criteria derivation for that class of chemicals; an individual carcinogenicity assessment for these chemicals is pending.

⁶ Hardness dependent criteria. Value given is an example only and is based on a CaCO₃ hardness of 100 mg/l. Criteria for each case must be calculated using the following formula:

For the Criterion Maximum Concentration (CMC):

Cadmium CMC = 0.9789[ln (hardness)]

Chromum (III) CMC = 0.8190[ln (hardness)] + 3.7256

Copper CMC = 0.9422[ln (hardness)] - 1.7000

Lead CMC = 1.2730[ln (hardness)] - 1.4600

Nickel CMC = 0.8460[ln (hardness)] + 2.2550

Silver CMC = 1.7200[ln (hardness)] - 6.5900

Zinc CMC = 0.8473[ln (hardness)] + 0.8840

CMC = Criterion Maximum Concentration (acute exposure value)

The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and

their uses if the one-hour concentration does not exceed that CMC value more than once every three years on the average.

For the Criterion Continuous Concentration (CCC):

Cadmium	$CCC = 0.7977[\ln(\text{hardness})]$
Chromium (III)	$CCC = 0.8190[\ln(\text{hardness})] + 0.6848$
Copper	$CCC = 0.8545[\ln(\text{hardness})] - 1.7020$
Lead	$CCC = 1.2730[\ln(\text{hardness})] - 4.7050$
Nickel	$CCC = 0.8460[\ln(\text{hardness})] + 0.0584$
Silver	No CCC criterion for silver
Zinc	$CCC = 0.8473[\ln(\text{hardness})] + 0.8840$

CCC = Criterion Continuous Concentration (chronic exposure value)

The threshold value at or below which there should be no unacceptable effects to freshwater aquatic organisms and their uses if the four-day concentration does not exceed that CCC value more than once every three years on the average.

⁷ Safe Drinking Water Act (MCL).

⁸ Freshwater aquatic life criteria for pentachlorophenol are expressed as a function of pH. Values displayed in the table correspond to a pH of 7.8 and are calculated as follows:

$$CMC = \exp [1.005 (\text{pH}) - 4.869]$$

$$CCC = \exp [1.005 (\text{pH}) - 5.134]$$

⁹ This criterion applies to total arsenic.

¹⁰ This criterion applies to total PCBs (i.e., the sum of all congener or all isomer or homolog or Arochlor analyses).

¹¹ This criterion applies to the sum of alpha-endosulfan and beta-endosulfan.

¹² This criterion applies to DDT and its metabolites (i.e., the total concentration of DDT and its metabolites should not exceed this value).

¹³ The nonylphenol criteria address CAS numbers 84852-15-3 and 25154-52-3.

¹⁴ The criterion is for a total measurement of 5 haloacetic acids, dichloroacetic acid, trichloroacetic acid, monochloroacetic acid, bromoacetic acid, and dibromoacetic acid.

¹⁵ Hardness values shall be no greater than 400 mg/l. For waters with hardness concentrations greater than 400 mg/l, the actual ambient hardness may be used where a site-specific water effect ratio has been determined consistent with the environmental protection agency's water effect ratio procedure.

¹⁶ The department will recognize the biotic ligand model as an appropriate tool for developing site-specific limits for copper as well as the water-effects ratio (WER) method.

33.1-16-02.1-10. Ground water classifications and standards.

1. Class I ground waters. Class I ground waters are those with a total dissolved solids concentration of less than 10,000 mg/l. The minimum conditions described in subsection 1 of section 33.1-16-02.1-08 apply. Class I ground waters are not exempt under the North Dakota underground injection control program in section 33.1-25-01-05.

2. Class II ground waters. Class II ground waters are those with a total dissolved solids concentration of 10,000 mg/l or greater. Class II ground waters are exempt under the North Dakota underground injection control program in section 33.1-25-01-05.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-02.1-11. Discharge of wastes.

On-surface discharges. The following are general requirements for all waste discharges or chemical additions:

1. No untreated domestic sewage shall be discharged into the waters of the state.
2. No untreated industrial wastes or other wastes which contain substances or organisms which may endanger public health or degrade the water quality of water usage shall be discharged into the waters of the state.
3. The department must be notified at least twenty days prior to the application of any herbicide or pesticide to surface waters of the state for control of aquatic pests. Only certified applicators are allowed to apply chemicals. The notification must include the following information:
 - a. Chemical name and composition.
 - b. Map which identifies the area of application and aerial extent (e.g., acres or square feet).
 - c. A list of target species of aquatic biota the applicant desires to control.
 - d. The calculated concentration of the active ingredient in surface waters immediately after application.
 - e. Name, address, and telephone number of the certified applicator.
4. Any spill or discharge of waste which causes or is likely to cause pollution of waters of the state must be reported immediately. The owner, operator, or person responsible for a spill or discharge must notify the department as soon as possible (701-328-5210) or the North Dakota hazardous materials emergency assistance and spill reporting number (1-800-472-2121) and provide all relevant information about the spill. Depending on the severity of the spill or accidental discharge, the department may require the owner or operator to:
 - a. Take immediate remedial measures;
 - b. Determine the extent of pollution to waters of the state;
 - c. Provide alternate water sources to water users impacted by the spill or accidental discharge; or
 - d. Any other actions necessary to comply with this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-11, 61-28; S.L. 2017, ch. 199, § 26

APPENDIX I

STREAM CLASSIFICATIONS

The following intrastate and interstate streams are classified as the class of water quality which is to be maintained in the specified stream or segments noted. All tributaries, minor or intermittently flowing watercourse, unnamed creeks, or draws not specifically mentioned are classified as class III streams.

<u>RIVER BASINS, SUBBASINS, AND TRIBUTARIES</u>	<u>CLASSIFICATION</u>
<u>Missouri River, including Lake Sakakawea and Oahe Reservoir</u>	<u>I</u>
<u>Yellowstone</u>	<u>I</u>
<u>Little Muddy Creek near Williston</u>	<u>II</u>

<u>The Shyenne River from its headwaters to 0.1 mile downstream from Baldhill Dam is not classified for municipal or domestic use.</u>	

APPENDIX II

LAKE AND RESERVOIR CLASSIFICATION

Lakes and reservoirs are classified according to the water characteristics which are to be maintained in the specified lakes and reservoirs. The physical and chemical criteria for class I streams shall apply to all classified lakes and reservoirs listed. For lakes and other lentic water bodies not listed, the physical and chemical criteria designated for class III streams shall apply.

<u>COUNTY</u>	<u>LAKE</u>	<u>CLASSIFICATION</u>

APPENDIX III

MIXING ZONE AND DILUTION POLICY AND IMPLEMENTATION PROCEDURE

PURPOSE

This policy addresses how mixing and dilution of point source discharges with receiving waters will be addressed in developing chemical-specific and whole effluent toxicity discharge limitations for point source discharges. Depending upon site-specific mixing patterns and environmental concerns, some pollutants/criteria may be allowed a mixing zone or dilution while others may not. In all cases, mixing zone and dilution allowances shall be limited, as necessary, to protect the integrity of the receiving water's ecosystem and designated uses.

MIXING ZONES

Where dilution is available and the discharge does not mix at a near instantaneous and complete rate with the receiving water (incomplete mixing), an appropriate mixing zone may be designated. In addition, a mixing zone may only be designated if it is not possible to achieve chemical-specific standards and whole effluent toxicity objectives at the end-of-pipe with no allowance for dilution. The size and shape of a mixing zone will be determined on a case-by-case basis. At a maximum, mixing zones for streams and rivers shall not exceed one-half the cross-sectional area or a length ten times the stream width at critical low flows, whichever is more limiting. Also, at a maximum, mixing zones in lakes shall not exceed five percent of lake surface area or two hundred feet in radius, whichever is more limiting. Individual mixing zones may be limited or denied in consideration of designated beneficial uses or presence of the following concerns in the area affected by the discharge:

1. There is the potential for bioaccumulation in fish tissues or wildlife.
2. The area is biologically important, such as fish spawning/nursery areas.
3. The pollutant of concern exhibits a low acute to chronic ratio.
4. There is a potential for human exposure to pollutants resulting from drinking water use or recreational activities.
5. The effluent and resultant mixing zone results in an attraction of aquatic life to the effluent plume.
6. The pollutant of concern is extremely toxic and persistent in the environment.
7. The mixing zone would prohibit a zone of passage for migrating fish or other species (including access to tributaries).
8. There are cumulative effects of multiple discharges and their mixing zones.

Within the mixing zone designated for a particular pollutant, certain numeric water quality criteria for that substance may not apply. However, all mixing zones shall meet the general conditions set forth in section 33-16-02-08 of the state water quality standards.

While exceedences of acute chemical specific numeric standards are not allowed within the entire mixing zone, a portion of the mixing zone (the zone of initial dilution or ZID) may exceed acute chemical-specific numeric standards established for the protection of aquatic life. The ZID shall be determined on a case-by-case basis where the statement of basis for the discharge permit includes a rationale for concluding that a zone of initial dilution poses no unacceptable risks to aquatic life. Acute whole effluent toxicity (WET) limits shall be achieved at the end-of-pipe with no allowance for a ZID.

DILUTION ALLOWANCES

An appropriate dilution allowance may be provided in calculating chemical-specific acute and chronic and WET discharge limitations where: 1) the discharge is to a river or stream, 2) dilution is available at low-flow conditions, and 3) available information is sufficient to reasonably conclude that there is near instantaneous and complete mixing of the discharge with the receiving water (complete mixing). The basis for concluding that such near instantaneous and complete mixing is occurring shall be documented in the statement of basis for the North Dakota pollutant discharge elimination system permit. In the case of field studies, the dilution allowance for continuous dischargers shall be based on the critical low flow (or some portion of the critical low flow). The requirements and environmental concerns identified in the paragraphs above may be considered in deciding the portion of the critical low flow to provide as dilution. The following critical low flows shall be used for streams and effluents:

Stream Flows

<u>Aquatic life, chronic</u>	<u>4-day, 3-year flow (biologically based)**</u>
<u>Aquatic life, acute</u>	<u>1-day, 3-year flow (biologically based)</u>
<u>Human health (carcinogens)</u>	<u>Harmonic mean flow</u>
<u>Human health (noncarcinogens)</u>	<u>4-day, 3-year flow (biologically based) or 1-day, 3-year flow (biologically based)</u>

Effluent Flows

<u>Aquatic life, chronic</u>	<u>Mean daily flow</u>
<u>Aquatic life, acute</u>	<u>Maximum daily flow</u>
<u>Human health (all)</u>	<u>Mean daily flow</u>

* Biologically based refers to the biologically based design flow method developed by the environmental protection agency. It differs from the hydrologically based design flow method in that it directly uses the averaging periods and frequencies specified in the aquatic life water quality criteria for individual pollutants and whole effluents for determining design flows.

** A 30-day, 10-year flow (biologically based) can be used for ammonia or other chronic standard with a 30-day averaging period.

For chemical-specific and chronic WET limits, an appropriate dilution allowance may also be provided for certain minor publicly owned treatment works where allowing such dilution will pose insignificant environmental risks. For acute WET limits, an allowance for dilution is authorized only where dilution is available and mixing is complete.

For controlled discharges, such as lagoon facilities that discharge during high ambient flows, the stream flow to be used in the mixing zone analysis should be the lowest statistical flow expected to occur during the period of discharge.

Where a discharger has installed a diffuser in the receiving water, all or a portion of the critical low stream flow may be provided as a dilution allowance. The determination shall depend on the diffuser design and on the requirements and potential environmental concerns identified in the above paragraphs. Where a diffuser is installed across the entire river/stream width (at critical low flow), it will generally be presumed that near instantaneous and complete mixing is achieved and that providing the entire critical low flow as dilution is appropriate.

OTHER CONSIDERATIONS

Where dilution flow is not available at critical conditions (i.e., the water body is dry), the discharge limits will be based on achieving applicable water quality criteria (i.e., narrative and numeric, chronic and acute) at the end-of-pipe; neither a mixing zone or an allowance for dilution will be provided.

All mixing zone dilution assumptions are subject to review and revision as information on the nature and impacts of the discharge becomes available (e.g., chemical or biological monitoring at the mixing zone boundary). At a minimum, mixing zone and dilution decisions are subject to review and revision, along with all other aspects of the discharge permit upon expiration of the permit.

For certain pollutants (e.g., ammonia, dissolved oxygen, metals) that may exhibit increased toxicity or other effects on water quality after dilution and complete mixing is achieved, the waste load allocation shall address such effects on water quality, as necessary, to fully protect designated and existing uses. In other words, the point of compliance may be something other than the mixing zone boundary or the point where complete mixing is achieved.

The discharge will be consistent with the Antidegradation Procedure.

IMPLEMENTATION PROCEDURE

This procedure describes how dilution and mixing of point source discharges with receiving waters will be addressed in developing discharge limitations for point source discharges. For the purposes of this procedure, a mixing zone is defined as a designated area or volume of water surrounding or downstream of a point source discharge where the discharge is progressively diluted by the receiving water and numerical water quality criteria may not apply. Based on site-specific considerations, such a mixing zone may be designated in the context of an individual permit decision. Discharges may also be provided an allowance for dilution where it is determined that the discharge mixes with the receiving water in near instantaneous and complete fashion. Such mixing zones and allowances for dilution will be granted on a parameter-by-parameter and criterion-by-criterion basis as necessary to fully protect existing and designated uses.

The procedure to be followed is composed of six individual elements or steps. The relationship of the six steps and an overview of the mixing zone/dilution procedure is shown in figure 1.

Step 1 - No dilution available during critical conditions

Where dilution flow is not available at critical low-flow conditions, discharge limitations will be based on achieving applicable narrative and numeric water quality criteria at the end-of-pipe.

Step 2 - Dilution categorically prohibited for wetland discharges

Permit limitations for discharges to a wetland shall be based on achieving all applicable water quality criteria (i.e., narrative and numeric, chronic and acute) at end-of-pipe.

Step 3 - Procedure for certain minor publicly owned treatment works

Minor publicly owned treatment works that discharge to a lake or to a river/stream at a dilution greater than a 50-to-1 ratio qualify for this procedure. Minor publicly owned treatment works with dilution ratios less than a 50-to-1 ratio may also qualify (at the discretion of the permit writer) where it can be adequately demonstrated that this procedure poses insignificant environmental risks. For the purposes of this procedure, the river/stream dilution ratio is defined as the chronic low flow of the segment upstream of the publicly owned treatment works discharge divided by the mean daily flow of the publicly owned treatment works. For controlled discharges from lagoon facilities (discharging during high flows), the river/stream dilution ratio is defined as the lowest upstream flow expected during the period of discharge divided by the mean daily flow of the discharge.

For minor publicly owned treatment works that qualify for this procedure and discharge to lakes, the allowance for dilution for chemical-specific and chronic WET limits will be determined on a case-by-case basis. Dilution up to a 19-to-1 ratio (five percent effluent) may be provided.

For minor publicly owned treatment works that qualify for this procedure and discharge to a river/stream segment, dilution up to the full chronic aquatic life, acute aquatic life, and human health critical flows may be provided.

Step 4 - Site-specific risk considerations

Where allowing a mixing zone or a dilution allowance would pose unacceptable environmental risks, the discharge limitations will be based on achieving applicable narrative and numeric water quality criteria at the end-of-pipe. The existence of environmental risks may also be the basis for a site-specific mixing zone or dilution allowance. Such risk determinations will be made on a case-by-case and parameter-by-parameter basis. These decisions will take into account the designated and existing uses and all relevant site-specific environmental concerns, including the following:

1. Bioaccumulation in fish tissues or wildlife.
2. Biologically important areas such as fish spawning areas.
3. Low acute to chronic ratio.
4. Potential human exposure to pollutants resulting from drinking water or recreational areas.
5. Attraction of aquatic life to the effluent plume.
6. Toxicity/persistence of the substance discharged.
7. Zone of passage for migrating fish or other species (including access to tributaries).
8. Cumulative effects of multiple discharges and mixing zones.

Step 5 - Complete mix procedures

For point source discharges to rivers/streams where available data are adequate to support a conclusion that there is near instantaneous and complete mixing of the discharge with the receiving water (complete mix) the full critical low flow or a portion thereof may be provided as dilution for chemical-specific and WET limitations. Such determinations of complete mixing will be made on a case-by-case basis using best professional judgement. Presence of an effluent diffuser that covers the entire river/stream width at critical low flow will generally be assumed to provide complete mixing. Also, where the mean daily flow of the discharge exceeds the chronic low stream flow of the receiving water, complete mixing will generally be assumed. In addition, where the mean daily flow of the discharge is less than or equal to the chronic low flow of the receiving water, it will generally be assumed that complete mixing does not occur unless otherwise demonstrated by the permittee. Demonstrations for complete mixing should be consistent with the study plan developed in cooperation with the states/tribes and environmental protection agency region VIII. Near instantaneous and complete mixing is defined as no more than a ten percent difference in bank-to-bank concentrations within a longitudinal distance not greater than two river/stream widths. For controlled discharges (lagoon facilities), the test of near instantaneous and complete mixing will be made using the expected rate of effluent discharge and the lowest upstream flow expected to occur during the period of discharge.

The following critical low flows shall be applied for streams and effluents:

Stream Flows

<u>Aquatic life, chronic</u>	<u>4-day, 3-year flow (biologically based)**</u>
<u>Aquatic life, acute</u>	<u>1-day, 3-year flow (biologically based)</u>

Human health (carcinogens)

Harmonic mean flow

Human health (noncarcinogens)

4-day, 3-year flow (biologically based) or
1-day, 3-year flow (biologically based)

Effluent Flows

Aquatic life, chronic

Mean daily flow

Aquatic life, acute

Maximum daily flow

Human health (all)

Mean daily flow

* Biologically based refers to the biologically based design flow method developed by the environmental protection agency. It differs from the hydrologically based design flow method in that it directly uses the averaging periods and frequencies specified in the aquatic life water quality criteria for individual pollutants and whole effluents for determining design flows.

** A 30-day, 10-year flow (biologically based) can be used for ammonia or other chronic standard with a 30-day averaging period.

Where complete mixing can be concluded and the environmental concerns identified in step 4 do not justify denying dilution, but are nevertheless significant, some portion of the critical low flows identified above may be provided as dilution. Such decisions will take site-specific environmental concerns into account as necessary to ensure adequate protection of designated and existing uses.

Step 6 - Incomplete mix procedures

This step addresses point source discharges that exhibit incomplete mixing. Because acute WET limits are achieved at the end-of-pipe in incomplete mix situations, this step provides mixing zone procedures for chronic aquatic life, human health, and WET limits, and ZID procedures for acute chemical-specific limits. Where a ZID is allowed for chemical limits, the size of the ZID shall be limited as follows:

Lakes: The ZID volume shall not exceed ten percent of the volume of the chronic mixing zone.

Rivers: The ZID shall not exceed ten percent of the chronic mixing zone volume or flow, nor
and shall the ZID exceed a maximum downstream length of one hundred feet, whichever is
Streams: more restrictive.

The following provides guidelines for determining the amount of dilution available for dischargers that exhibit incomplete mixing.

Default Method

This method addresses situations where information needed for modeling is not available or there are concerns about potential environmental impacts of allowing a mixing zone. The default method provides a conservative dilution allowance.

Stream/river dischargers: Dilution calculation which uses up to ten percent of the critical low flow for chronic aquatic life limits or human health limits. However, this allowance may be adjusted downward on a case-by-case basis depending upon relevant site-specific information, designed and existing uses of the segment, and especially the uses of the segment portion affected by the discharge.

Lake/reservoir dischargers: Dilution up to a 4-to-1 ratio (twenty percent effluent) may be provided for chronic aquatic life analyses or human health analyses. However, this allowance may be adjusted downward on a case-by-case basis depending upon discharge flow, lake size, lake

flushing potential, designated and existing uses of the lake, and uses of the lake portion affected by the discharge.

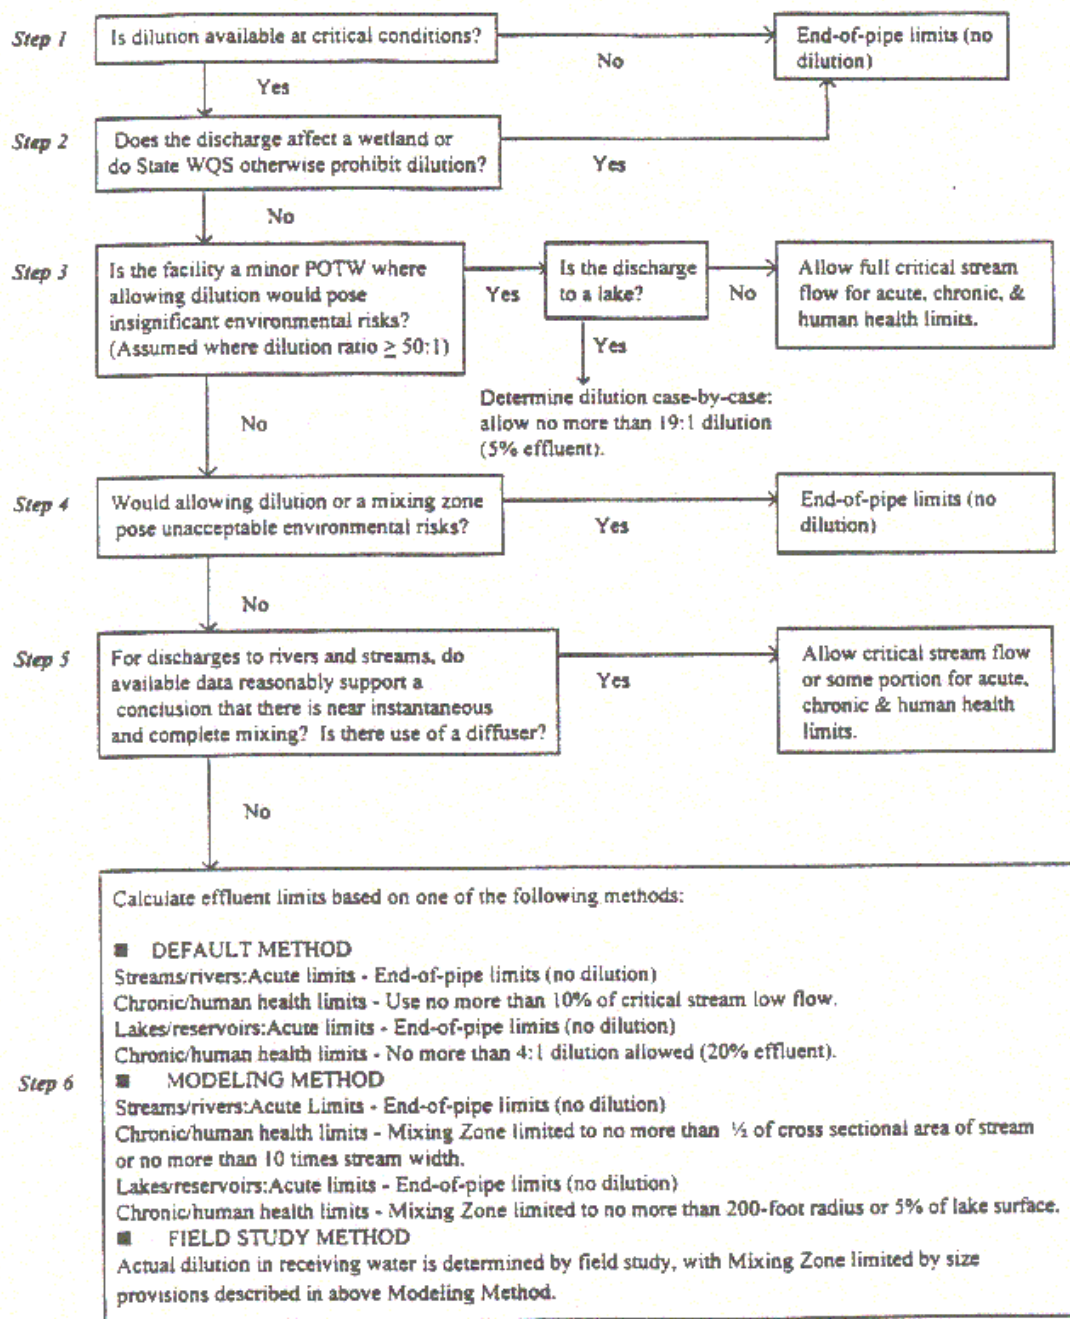

Modeling Method

An appropriate mixing zone model is used to calculate the dilution flow that will allow mixing zone limits to be achieved at the critical low flow. Prior to initiating modeling studies, it should be determined that compliance with criteria at the end-of-pipe is not practicable.

Field Study Method

Field studies which document the actual mixing characteristics in the receiving water are used to determine the dilution flow that will allow mixing zone size limits to be achieved at the critical low flow. For the purposes of field studies, "near instantaneous and complete mixing" is operationally defined as no more than a ten percent difference in bank-to-bank concentrations within a longitudinal distance not greater than two stream/river widths.

FIGURE 1
NORTH DAKOTA MODEL MIXING ZONE/DILUTION PROCEDURE*

* This procedure is applied to both chemical-specific and WET limits. In the case of complex discharges, the dilution or mixing zone may vary parameter-by-parameter.

APPENDIX IV

NORTH DAKOTA ANTIDEGRADATION PROCEDURE

I. INTRODUCTION

This antidegradation implementation procedure delineates the process that will be followed by the department of environmental quality for implementing the antidegradation policy found in Standards of Quality for Waters of the State, chapter 33.1-16-02.1.

Under this implementation procedure, all waters of the state are afforded one of three different levels of antidegradation protection. All existing uses, and the water quality necessary for those uses, shall be maintained and protected. Antidegradation requirements are necessary whenever a regulated activity is proposed that may have some effect on water quality. Regulated actions include permits issued under sections 402 (North Dakota pollutant discharge elimination system) and 404 (dredge and fill) of the Clean Water Act, and any other activity requiring section 401 water quality certification. Nonpoint sources of pollution are not included. When reviewing section 404 nationwide permits, the department will issue section 401 certifications only where it determines that the conditions imposed by such permits are expected to result in attainment of the applicable water quality standards, including the antidegradation requirements. However, it is anticipated that the department will exclude certain nationwide permits from the antidegradation procedures for category 1 waters on the basis that the category of activities covered by the permit is not expected to have significant permanent effects on the quality and beneficial uses of those waters, or the effects will be appropriately minimized and temporary.

II. EXISTING USE PROTECTION FOR CATEGORY 1, 2, AND 3 WATERS

Existing use means a use that was actually attained in the water body on or after 1967, whether or not it is included in the water quality standards. This procedure presumes that attainment of the criteria assigned to protect the current water body classification will serve to maintain and protect all existing uses. However, where an existing use has water quality requirements that are clearly defined, but are not addressed by the current classification and criteria, the department will ensure that such existing uses are protected fully, based on implementation of appropriate numeric or narrative water quality criteria or criteria guidance. In some cases, water quality may have improved in the segment since the classification was assigned, resulting in attainment of a higher use. In other cases, the classification may have been assigned based on inadequate information, resulting in a classification that does not describe or adequately protect actual uses of the segment. In such cases, the department will develop requirements necessary to protect the existing uses and, where appropriate, recommend reclassification of the segment.

III. ANTIDEGRADATION REVIEW PROCEDURE

The department will complete an antidegradation review for all proposed regulated activities. The findings of these reviews will be summarized using an antidegradation worksheet. A statement of basis for all conclusions will be attached to the completed worksheet. The level of detail of the review will depend upon the antidegradation protection applicable to the various classes of water.

In conducting an antidegradation review, the division of water quality will sequentially apply the following steps:

A. Determine which level of antidegradation applies.

B. Determine whether authorizing the proposed regulated activity is consistent with antidegradation requirements.

C. Review existing water quality data and other information submitted by the project applicant.

D. Determine if additional information or assessment is necessary to make a decision.

E. A preliminary decision is made by the department and subsequently distributed for public participation and intergovernmental coordination.

- The content of public notices will be determined case by case. In preparing a public notice, the department may address: a) the department's preliminary antidegradation review conclusions; b) a request for public input on particular aspects of the antidegradation review that might be improved based on public input (e.g., existing uses of a segment that needs to be protected); c) notice of the availability of the antidegradation review worksheet; d) notice of the availability of general information regarding the state antidegradation program; and e) a reference to the state antidegradation policy.
- The antidegradation review findings will be available for public comment; however, publication of a separate notice for purposes of antidegradation is not necessary. For example, the antidegradation preliminary findings may be included in the public notice issued for purposes of a North Dakota pollutant discharge elimination system permit or Clean Water Act section 401 certification.

The department will ensure appropriate intergovernmental coordination on all antidegradation reviews. At a minimum, the department will provide copies of the completed antidegradation review worksheet and/or the public notice to appropriate local, state, and federal government agencies, along with a written request to provide comments by the public comment deadline.

F. Comments are considered.

G. The department determines if the change in quality is necessary to accommodate important economic or social development.

H. The department makes a final decision.

The level of antidegradation protection afforded each water body in the state is consistent with beneficial uses of those water bodies. Appendix I and appendix II of the Standards of Quality for Waters of the State identify rivers, streams, and lakes in the state with their classification. The classification shall be consistent with the following categories:

Category 1: Very high level of protection that automatically applies to class I and class IA streams and class I, II, and III lakes, and wetlands that are functioning at their optimal level. In addition, category 1 is presumed to apply to class II and class III streams. Particular class II and class III streams may be excluded from category 1 if, at the time of the antidegradation review, it is determined that one or both of the following criteria are applicable: 1) there is no remaining assimilative capacity for any of the parameters that may potentially be affected by the proposed regulated activity in the segment in question, or 2) an evaluation submitted by the project applicant demonstrates (based on adequate and representative chemical, physical, and biological data) that aquatic life and primary contact recreation uses are not currently being attained because of stressors that will require a long-term effort to remedy. Evaluations in response to criterion #2 must include more than an identification of current water quality levels. They must include evidence of the current status of the aquatic life and primary contact recreation uses of the segment.

Category 2: Class 4 and class 5 lakes and particular wetlands after antidegradation review. In addition, class II and class III streams or wetlands meeting one of the criteria identified above at the time of the antidegradation review shall be included in category 2.

Category 3: Highest level of protection; outstanding state resource waters.

Procedures for Category 1 Waters

Regulated activities that result in a new or expanded source of pollutants to this category of water are subject to the review process, unless the source would have no significant permanent effect on the quality and beneficial uses of those waters, or if the effects will be appropriately minimized and temporary.

- Proposed activities that would lower the ambient quality in a water body of any parameter by more than fifteen percent, reduce the available assimilative capacity by more than fifteen percent, or increase permitted pollutant loadings to a water body by more than fifteen percent will be deemed to have significant effects.
- The department will identify and eliminate from further review those proposed activities that will have no significant effect on water quality or beneficial uses. Category 1 reviews will be conducted where significant effects are projected for one or more water quality parameters. Findings of significant effects may be based on the following factors: a) percent change in ambient concentrations predicted at the appropriate conditions; b) percent change in loadings for the individual discharge or to the segment from all discharges; c) reduction in available assimilative capacity; d) nature, persistence, and potential effects of the parameter; e) potential for cumulative effects; f) predicted impacts to aquatic biota; and g) degree of confidence in any modeling techniques utilized.
- The applicant may be required to provide available monitoring data or other information about the affected water body and/or proposed activity to help determine the significance of the proposed degradation for specific parameters. The information includes recent ambient chemical, physical, or biological monitoring data sufficient to characterize, during the appropriate conditions, the spatial and temporal variability of existing background quality of the segment for the parameters that would be affected by the proposed activity. The information would also describe the water quality that would result if the proposed activity were authorized.

The project applicant is required to provide an evaluation of the water quality effects of the project. This evaluation may consist of the following components:

- Pollution prevention measures.
- Reduction in scale of the project.
- Water recycle or reuse.
- Process changes.
- Alternative treatment technology.
- Advanced treatment technology.
- Seasonal or controlled discharge options to avoid critical water quality periods.
- Improved operation and maintenance of existing facilities.
- Alternative discharge locations.

The primary emphasis of the category 1 reviews will be to determine whether reasonable nondegrading or less-degrading alternatives to the proposed degradation are available. The department will first evaluate any alternatives analysis submitted by the applicant for adherence to the minimum requirements described below. If an acceptable analysis of alternatives was completed and submitted to the department as part of the initial project proposal, no further evaluation of alternatives will be required of the applicant. If an acceptable alternatives analysis has not been completed, the department will work with the project applicant to ensure that an acceptable alternatives analysis is developed.

Once the department has determined that feasible alternatives to allowing the degradation have been adequately evaluated, the department shall make a preliminary determination regarding whether reasonable nondegrading or less-degrading alternatives are available. This determination will be based primarily on the alternatives analysis developed by the project applicant, but may be supplemented with other information or data. As a rule-of-thumb, nondegrading or less-degrading pollution control alternatives with costs that are similar to the costs of the applicant's favored alternative shall be considered reasonable. If the department determines that reasonable alternatives to allowing the degradation do not exist, the department shall continue with the antidegradation review and document the basis for the preliminary determination.

If the department makes a preliminary determination that one or more reasonable alternatives exist, the department will work with the applicant to revise the project design. If a mutually acceptable resolution cannot be reached, the department will document the alternative analysis findings and provide public notice of a preliminary decision to deny the activity.

Although it is recognized that any activity resulting in a discharge to surface waters may have positive and negative aspects, the applicant must show that any discharge or increased discharge will be of economic or social importance in the area. Where there are existing regulated sources located in the area, the department will assure that those sources are complying with applicable requirements prior to authorizing the proposed regulated activity. New sources of a particular parameter will not be allowed where there are existing unresolved compliance problems (involving the same parameter) in the zone of influence of the proposed activity. The "zone of influence" is determined as appropriate for the parameter of concern, the characteristics of the receiving water body (e.g., lake versus river, etc.), and other relevant factors. Where available, a total maximum daily load analysis or other watershed-scale plan will be the basis for identifying the appropriate zone of influence. The department may conclude that such compliance has not been achieved where existing sources are violating their North Dakota pollutant discharge elimination system permit limits. However, the existence of a compliance schedule in the North Dakota pollutant discharge elimination system permit may be taken into consideration in such cases. Required controls on existing regulated sources need not be finally achieved prior to authorizing a proposed activity provided there is reasonable assurance of future compliance.

Procedures for Category 2 Waters

Regulated activities that result in a permanent or temporary, new or expanded source of pollution to this category of water are permitted if the following conditions are met:

1. The classified uses of the water would be maintained.
2. The assimilative capacity of the water is available for the parameters that would be affected by the regulated activity, and existing uses would be protected as discussed in section II.

A decision will be made on a case-by-case basis, using available data and best professional judgment. The applicant may be required to provide additional information necessary for the department to characterize or otherwise predict changes to the physical, chemical, and/or biological condition of the water.

Procedures for Category 3 Waters

Outstanding state resource waters - Eligibility. Outstanding state resource waters may be designated category 3 waters only after they have been determined to have exceptional value for present or prospective future use for public water supplies, propagation of fish or aquatic life, wildlife, recreational purposes, or agricultural, industrial, or other legitimate beneficial uses. The factors that may be considered in determining whether a water body is eligible for inclusion in category 3 include the following: a) location, b) previous special designations, c) existing water quality, d) physical characteristics, e) ecological value, and f) recreational value.

Nomination. Any person may nominate any waters of the state for designation as outstanding state resource waters. The nomination must be made in writing to the department, must describe its specific location and present uses, and must state the reasons why the resource has exceptional value for present or prospective future beneficial use.

Review process. The department with cooperation of the state water commission shall review any nomination to determine whether the nominated waters of the state are eligible, clearly defined, and identify beneficial uses of exceptional value for present or prospective future use. The department of environmental quality with cooperation of the state water commission shall provide as a part of its assessment: 1) a verification of the uses, properties, and attributes that define the proposed "exceptional" value; 2) an evaluation of the current and historical condition of the water with respect to the proposed value using the best data available; and 3) an estimate of likely regulatory measures needed to achieve the desired level of protection. If the identified waters of the state are eligible, clearly defined, and appear to identify beneficial uses of exceptional value for present or prospective future use, the water pollution control board, the department, and the state water commission will solicit public comment and/or hold a public hearing regarding the nomination. The water pollution control board will review the application record and the public comments, and make a recommendation to the department. After reviewing the board's recommendation, the department jointly with the state water commission will make a decision on whether to designate the defined water body as an outstanding state water resource. If both the department and the state water commission agree that the defined water body should be designated as an outstanding state water resource, the department shall submit the recommendation to the environmental review advisory council as part of the water quality standard revision process. The designation, if made, may be reviewed on a periodic basis.

Implementation process. Effects on category 3 waters resulting from regulated activity will be determined by appropriate evaluation and assessment techniques and best professional judgment. Any proposed regulated activity that would result in a new or expanded source of pollutants to a segment located in or upstream of a category 3 segment will be allowed only if there are appropriate restrictions to maintain and protect existing water quality. Reductions in water quality may be allowed only if they are temporary and negligible. Factors that may be considered in judging whether the quality of a category 3 water would be affected include: a) percent change in ambient concentrations predicted at the appropriate critical conditions; b) percent change in loadings; c) percent reduction in available assimilative capacity; d) nature, persistence, and potential effects of the parameter; e) potential for cumulative effects; and f) degree of confidence in any modeling techniques utilized.

CHAPTER 33.1-16-03.1

CONTROL OF POLLUTION FROM ANIMAL FEEDING OPERATIONS

Section

- 33.1-16-03.1-01 Authority

33.1-16-03.1-01. Authority.

The department of environmental quality has been authorized to provide and administer this chapter relating to the control of pollution from animal feeding operations under the provisions of North Dakota Century Code section 61-28-04.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-02. Scope and purpose.

This chapter establishes procedures governing the application for, and the issuance, denial, modification, and revocation of, permits for animal feeding operations to maintain beneficial uses of and prevent degradation of quality of the waters of the state.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-03. Definitions.

The terms used throughout this chapter have the same meaning as in North Dakota Century Code chapter 61-28, except:

1. "Animal feeding operation" means a lot or facility, other than an aquatic animal production facility, where the following conditions are met:
 - a. Animals, other than aquatic animals, have been, are, or will be stabled or confined and fed or maintained for a total of forty-five days or more in any twelve-month period; and
 - b. Crops, vegetation, forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility.
2. "Bedding material" means an absorbent substance applied to dirt or concrete flooring systems, including wood shavings, wood chips, sawdust, shredded paper, cardboard, hay, straw, hulls, sand, and other similar, locally available materials.

3. "Best management practices" means schedules of activities, prohibitions of practices, conservation practices, maintenance procedures, and other management strategies to prevent or reduce the pollution of waters of the state. Best management practices also include treatment requirements, operating procedures, and practices to control production area and land application area runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.
4. "Concentrated animal feeding operation" means an animal feeding operation that is defined as a large, medium, or small concentrated animal feeding operation or any animal feeding operation designated as a concentrated animal feeding operation under section 33.1-16-03.1-04. For purposes of determining animal numbers, two or more feeding operations under common ownership are considered to be a single animal feeding operation if they adjoin each other or if they use a common area or system for the disposal of wastes.
5. "Earthen storage pond" or "pond" means a topographic depression either below or above ground level, manmade excavation, or diked area formed primarily of earthen materials, although it may be lined with manmade materials or other seepage control materials, and used to store manure, process wastewater and runoff from the production area of a facility.
6. "Engineer" means a professional engineer registered to practice in the state of North Dakota.
7. "Facility" is an animal feeding operation.
8. "General permit" means a general state animal feeding operation permit. This is a permit issued to cover multiple facilities of the same or similar type, without requiring each facility to be covered under an individual permit.
9. "Large concentrated animal feeding operation" means any animal feeding operation that stables or confines as many as or more than the numbers of animals, not including unweaned young, specified in any of the following categories:
 - a. Seven hundred mature dairy cows, whether milked or dry;
 - b. One thousand veal calves;
 - c. One thousand cattle other than mature dairy cows or veal calves. "Cattle" includes heifers, steers, bulls, and cow-calf pairs;
 - d. Two thousand five hundred swine, each weighing fifty-five pounds or more;
 - e. Ten thousand swine, each weighing less than fifty-five pounds;
 - f. Five hundred horses;
 - g. Ten thousand sheep or lambs;
 - h. Fifty-five thousand turkeys;
 - i. Thirty thousand laying hens or broilers, if the animal feeding operation uses a liquid manure handling system;
 - j. One hundred twenty-five thousand chickens (other than laying hens), if the animal feeding operation uses other than a liquid manure handling system;
 - k. Eighty-two thousand laying hens, if the animal feeding operation uses other than a liquid manure handling system;

l. Thirty thousand ducks, if the animal feeding operation uses other than a liquid manure handling system; or

m. Five thousand ducks, if the animal feeding operation uses a liquid manure handling system.

10. "Litter" means a mixture of fecal material, urine, animal bedding material, and sometimes waste feed.

11. "Manure" means fecal material and urine, animal-housing wash water, bedding material, litter, compost, rainwater, or snowmelt that comes in contact with fecal material and urine, and raw or other materials commingled with fecal material and urine or set aside for disposal.

12. "Manure handling system" means all of the water pollution control structures used at the production area of a facility.

13. "Manure storage pond" means an earthen storage pond that stores liquid manure and process wastewater from indoor confined animal feeding operations.

14. "Manure storage structure" means any water pollution control structure used to contain or store manure or process wastewater. It includes earthen manure storage ponds; runoff ponds; concrete, metal, plastic, or other tanks; and stacking facilities.

15. "Medium animal feeding operation" means any animal feeding operation that stables or confines the numbers of animals, not including unweaned young, specified within any of the following ranges:

a. Two hundred to six hundred ninety-nine mature dairy cows, whether milked or dry;

b. Three hundred to nine hundred ninety-nine veal calves;

c. Three hundred to nine hundred ninety-nine cattle other than mature dairy cows or veal calves. "Cattle" includes heifers, steers, bulls, and cow-calf pairs;

d. Seven hundred fifty to two thousand four hundred ninety-nine swine, each weighing fifty-five pounds or more;

e. Three thousand to nine thousand nine hundred ninety-nine swine, each weighing less than fifty-five pounds;

f. One hundred fifty to four hundred ninety-nine horses;

g. Three thousand to nine thousand nine hundred ninety-nine sheep or lambs;

h. Sixteen thousand five hundred to fifty-four thousand nine hundred ninety-nine turkeys;

i. Nine thousand to twenty-nine thousand nine hundred ninety-nine laying hens or broilers, if the animal feeding operation uses a liquid manure handling system;

j. Thirty-seven thousand five hundred to one hundred twenty-four thousand nine hundred ninety-nine chickens (other than laying hens), if the animal feeding operation uses other than a liquid manure handling system;

k. Twenty-five thousand to eighty-one thousand nine hundred ninety-nine laying hens, if the animal feeding operation uses other than a liquid manure handling system;

l. Ten thousand to twenty-nine thousand nine hundred ninety-nine ducks, if the animal feeding operation uses other than a liquid manure handling system; or

- m. One thousand five hundred to four thousand nine hundred ninety-nine ducks, if the animal feeding operation uses a liquid manure handling system.
16. "Medium concentrated animal feeding operation" means a medium animal feeding operation that meets either one of the following conditions:
- a. Pollutants are discharged into waters of the state through a manmade ditch, flushing system, or other similar manmade device; or
 - b. Pollutants are discharged directly into waters of the state which originate outside of and pass over, across, or through the facility or otherwise come into direct contact with the animals confined in the operation.
17. "North Dakota Livestock Program Design Manual" means the guidelines established for use by the department in the review and permitting process for animal feeding operations.
18. "Nutrient management plan" means a written description of the equipment, methods, and schedules by which:
- a. Manure, litter, and process wastewater is beneficially reused in an environmentally safe manner such as being applied to land at appropriate agronomic rates as nutrients or fertilizers; and
 - b. Water pollution and air pollution, including odors, are controlled sufficiently to protect the environment and public health.
19. "Open lot" means livestock pens, feeding or holding areas at the production area of an animal feeding operation which are outside and not under roof, and where rain can fall directly on the lot area.
20. "Open manure storage structure" means an earthen pond or storage tank for holding liquid manure which is not covered so rainfall can fall directly into the pond or tank.
21. "Operation and maintenance plan" means a written description of the equipment, methods, and schedules for:
- a. Inspection, monitoring, operation, and maintenance of the animal feeding operation, including manure storage structures, water pollution control structures, and the production area; and
 - b. Controlling water pollution and air pollution, including odors sufficient to protect the environment and public health. It includes emergency response actions for spills, discharges or failure of a collection, storage, treatment, or transfer component.
22. "Operator" means an individual or group of individuals, partnership, corporation, joint venture, or any other entity owning or controlling, in whole or in part, one or more animal feeding operations.
23. "Overflow" means the discharge of manure or process wastewater resulting from the filling of wastewater or manure storage structures beyond the point at which no more manure, process wastewater, or storm water can be contained by the structure.
24. "Pollutant" means "wastes" as defined in North Dakota Century Code section 61-28-02, including dredged spoil, solid waste, incinerator residue, garbage, sewage, sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water.

25. "Process wastewater" means water directly or indirectly used in the operation of the animal feeding operation for any or all of the following: spillage or overflow from animal or poultry watering systems; washing, cleaning, or flushing pens, barns, manure pits, or other animal feeding operation facilities; direct contact swimming, washing, or spray cooling of animals; or dust control. Process wastewater also includes any water which comes into contact with any raw materials, products, or byproducts, including manure, litter, feed, milk, eggs, or bedding material.
26. "Production area" means those areas of an animal feeding operation used for animal confinement, manure storage, raw materials storage, and waste containment. The animal confinement area includes open lots, housed lots, feedlots, confinement houses, stall barns, free stall barns, milking rooms, milking centers, cattle yards, barnyards, medication pens, walkers, animal walkways, and stables. The manure storage area includes lagoons, runoff ponds, storage sheds, stockpiles, under-house or pit storages, liquid impoundments, static piles, and composting piles. The raw materials storage area includes feed silos, silage bunkers, and bedding materials. The waste containment area includes settling basins, areas within berms, and diversions which separate uncontaminated storm water. Also included in the definition of production area is any egg washing or egg processing facility and any area used in the storage, handling, treatment, or disposal of mortalities.
27. "Runoff" means rainwater or snowmelt that comes in contact with manure at an open lot or open manure storage area and, therefore, is defined as manure.
28. "Runoff pond" means an earthen storage pond that is used to collect and store runoff from an open lot or from a manure storage area.
29. "Seepage" means the volume of flow through a manure storage structure.
30. "Sensitive ground water area" means vulnerable hydrogeologic settings as determined by the department such as glacial outwash deposits or alluvial or aeolian sand deposits that are critical to protecting current or future underground sources of drinking water. Areas designated as sensitive ground water areas by the department include alluvial or aeolian sand deposits shown on Geologic Map of North Dakota (Clayton, 1980, North Dakota geological survey) and glacial drift aquifers listed in North Dakota Geographic Targeting System for Groundwater Monitoring (Radig, 1997, North Dakota department of health), or most recent editions of these publications, with DRASTIC scores greater than or equal to 100 based on methodology described in DRASTIC: A Standardized System For Evaluating Groundwater Pollution Potential (Aller et al., 1987, United States environmental protection agency).
31. "Small animal feeding operation" means any animal feeding operation that stables or confines less than the numbers of animals specified for a medium animal feeding operation.
32. "Small concentrated animal feeding operation" means a small animal feeding operation designated as a concentrated animal feeding operation under section 33.1-16-03.1-04.
33. "State animal feeding operation permit" means a permit issued by the department under this chapter to an animal feeding operation.
34. "Surface water" means waters of the state that are located on the ground surface, including all streams, lakes, ponds, impounding reservoirs, marshes, watercourses, waterways, and all other bodies or accumulations of water on the surface of the earth, natural or artificial public or private.
35. "Unconfined glacial drift aquifer" means a glacial drift aquifer that does not have an impervious soil layer which acts to prevent or minimize movement of water into, through, or out of the aquifer.

36. "Water pollution control structure" means a structure built or used for handling, holding, transferring, or treating manure or process wastewater, so as to prevent it from entering the waters of the state. The term also includes berms, ditches, or other structures used to prevent clean water from coming in contact with manure.

37. "Water quality standards" means the water quality standards contained in chapter 33.1-16-02.1.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-04. Designation of concentrated animal feeding operations.

1. The department may designate any small animal feeding operation as a concentrated animal feeding operation upon determining that it is a significant contributor of pollutants to waters of the state. In making this designation, the department shall consider the following factors:

- a. The size of the animal feeding operation and the amount of wastes reaching waters of the state;
- b. The location of the animal feeding operation relative to waters of the state;
- c. The means of conveyance of animal wastes, manure, and process wastewater into waters of the state; and
- d. The slope, vegetation, rainfall and other factors affecting the likelihood or frequency of discharge of animal wastes, manure, and process wastewater into waters of the state.

2. No small animal feeding operation shall be designated a concentrated animal feeding operation under this section unless the department has conducted an onsite inspection. In addition, no small animal feeding operation may be designated as a concentrated animal feeding operation unless:

- a. Pollutants are discharged into waters of the state through a manmade ditch, flushing system, or other similar manmade device; or
- b. Pollutants are discharged directly into waters of the state which originate outside the facility and pass over, across, or through the facility or otherwise come into direct contact with the animals confined in the operation.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-05. Operations requiring a permit.

The operator of an animal feeding operation shall apply for a state animal feeding operation permit as follows:

1. Any animal feeding operation that has been defined as a concentrated animal feeding operation in section 33.1-16-03.1-03 or designated a concentrated animal feeding operation under section 33.1-16-03.1-04 must obtain a state animal feeding operation permit.
2. Any medium animal feeding operation where manure or process wastewater from the operation causes or is likely to cause water pollution and is located within one-fourth mile [.40 kilometer] of a stream or surface water that contains water, except for infrequent periods of severe drought, shall apply for a state animal feeding operation permit. Waters completely

contained on an owner's property and which do not combine or affect a junction with natural surface or underground waters are not included.

3. A medium or small animal feeding operation shall apply for a state animal feeding operation permit when the department has determined that manure or process wastewater from the operation causes or is likely to cause water pollution. In making this determination, the department shall consider the following factors:
 - a. The size of the animal feeding operation and the amount of wastes reaching waters of the state;
 - b. The location of the animal feeding operation relative to waters of the state;
 - c. The means of conveyance of animal wastes, manure, and process wastewater into waters of the state; and
 - d. The slope, vegetation, rainfall, and other factors affecting the likelihood or frequency of discharge of animal wastes, manure, and process wastewater into waters of the state.
4. An animal feeding operation which stables or confines animals, other than the types of animals specified in the definition of medium animal feeding operation, shall apply for a state animal feeding operation permit when the department has determined that manure or process wastewater from the operation causes or is likely to cause water pollution.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-06. No potential to pollute determination.

[Reserved].

33.1-16-03.1-07. Permit application content and procedures.

1. Any new or existing facility that is proposing an increase in the number of animals above the level allowed in the current permit or above the level where a permit is required under section 33.1-16-03.1-05, shall apply for and obtain a state animal feeding operation permit prior to construction or expansion. Any facility that is proposing to expand the production area, or update or change the manure handling system, and which requires a permit under section 33.1-16-03.1-05, shall apply for and obtain a state animal feeding operation permit prior to construction.
2. Application forms for state animal feeding operation permits are available from the department. An operator shall furnish information requested by the department that is consistent with this chapter. The department will not process an application unless all of the necessary information is provided. The information within or attached to an application must include the following:
 - a. The owner's and operator's name and mailing addresses.
 - b. The facility's legal location and mailing address.
 - c. A topographic map of the area where the facility is or proposes to be located and showing the specific production area.

- d. Specific information about the number, size, and type of animals proposed for the facility; the number of days per year animals will be handled; and the type of confinement (open or housed under roof).
- e. The type of containment and storage (anaerobic lagoon, roofed storage shed, ponds, under-floor pits, aboveground storage tanks, underground storage tanks, concrete pad, impervious soil pad, water spreading system, other) and total capacity for manure, litter, and process wastewater storage (tons or gallons), or other measures to meet department requirements to prevent discharge of pollutants to waters of the state.
- f. The total number of acres under control of the applicant and available for land application of manure, litter, or process wastewater.
- g. Estimated amounts of manure, litter, and process wastewater generated per year (tons or gallons).
- h. Estimated amounts of manure, litter, and process wastewater transferred to other persons per year (tons or gallons).
- i. Designs, including location, for all manure storage and water pollution control structures and site-specific background information as specified in the North Dakota Livestock Program Design Manual. Design plans developed by anyone other than the facility owner must be signed by the engineer who prepared or supervised the preparation of the plans under North Dakota Century Code chapter 43-19.1.
- j. Site-specific information on topography, surface water, ground water, and soil geology.
- k. A nutrient management plan or information related to a nutrient management plan as specified in subsections 4 and 5 of section 33.1-16-03.1-08.
- l. The signatures of individuals responsible for the animal feeding operation.
- m. A description of how animal mortalities will be handled and disposed of by the facility operator.

In preparing an application, the operator shall follow the North Dakota Livestock Program Design Manual.

The operator of an existing animal feeding operation may reference any information previously submitted to the department rather than resubmitting it.

Existing information shall be updated if changes to the operation have been made since the prior application.

- 3. Permit conditions. The department may impose any conditions upon a state animal feeding operation permit to ensure proper operation of the facility to protect water and air quality, including:
 - a. Sampling, testing, and monitoring at or adjacent to the facility or of manure, process wastewater, ground water, or runoff.
 - b. Steps to prevent the facility from causing exceedances of water quality standards or air quality standards and to minimize odors during land application of manure.
 - c. Recordkeeping and reporting.
 - d. Compliance schedules for upgrades at facilities to meet the requirements of this chapter.

4. If the department determines that the animal feeding operation will not cause nor likely cause pollution of waters of the state, either after upgrades are made or at its current status, and the department determines that it is not likely to exceed air quality standards, a state animal feeding operation permit will be issued.
5. If manure storage or water pollution control structures were required at the facility, the operator shall notify the department within thirty days of construction completion and provide certification from an engineer or the designer that construction of manure storage and water pollution control structures was completed according to designs provided with the application or to department-approved changes.
6. The permit shall be valid until its expiration date as long as the animal feeding operation is not materially changed, or waters of the state are not impacted pursuant to chapter 33.1-16-02.1. If an operator plans to change the type or increase the number of animals or change the facility, including expanding barns or pens or changing manure storage or water pollution control structures, the operator shall inform the department in writing prior to implementation of these changes.
7. Expiration of permits. Every state animal feeding operation permit issued by the department shall have a fixed term not to exceed five years.
8. Renewal of permits. One hundred eighty days prior to the expiration of an existing permit, an application for permit renewal shall be submitted to the department for review. If an operator submits a complete application for a permit renewal at least one hundred eighty days prior to the expiration date, but the department, through no fault of the operator, fails to issue a new permit prior to the expiration of the previous permit, the department may extend the expired permit until the permit is reissued. All conditions and stipulations of permits extended under this subsection remain fully effective and enforceable.
9. Transfer of Permits. The holder of a state animal feeding operation permit may transfer it by notifying the department in writing at least thirty days in advance of the proposed transfer date. The notice shall include a written agreement between the current and new owners or operators and contain a specific date for the permit transfer, and the name and address of the individual responsible for compliance with the permit.
10. General permits. The department may issue a general state animal feeding operation permit covering similar facilities. Any general permit shall comply with all requirements of this chapter and shall identify criteria by which facilities may qualify for the general permit. Facilities that would qualify for a general permit shall apply to the department for coverage under the terms of the general permit. The department may grant a facility's request to construct and operate under a general permit or, at its discretion, issue an individual permit if circumstances warrant.
11. Confidentiality. The department will follow the requirements of North Dakota Century Code chapter 44-04 for all requests for facility information.
12. Setback. For the purposes of determining setbacks under North Dakota Century Code section 23.1-06-15(7), unweaned young are not included when calculating animal units, except a cow-calf pair equals 1.0 animal unit.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04, 23.1-06-15; S.L. 2017, ch. 199, § 21

33.1-16-03.1-08. Facility requirements.

1. A facility requiring a permit under this chapter must be located, designed, built, maintained, and operated to limit or prevent pollution of or the discharge of pollutants into waters of the

state consistent with the North Dakota Livestock Program Design Manual, best professional judgment, best management practices, and pursuant to the requirements of North Dakota Century Code chapter 61-28, this chapter, and the facility's state animal feeding operation permit.

2. Nutrient management plan. A nutrient management plan must be developed and a copy maintained onsite by the owner or operator of any facility that land applies manure, litter, or process wastewater to cropland or grassland and is required to obtain a permit. These facilities must land apply manure, litter, or process wastewater in accordance with the current properly developed nutrient management plan. At a minimum the nutrient management plan must contain the following information:

a. Description of the land to which an operator has access for applying manure or process wastewater, and adequate information to demonstrate that manure or process wastewater, or both, will be applied at agronomic rates. The agronomic rate for nitrogen must not exceed the plant utilization rate for the cropping year. Phosphorous must not be applied at rates exceeding the recommendations based on either the North Dakota phosphorous index, the North Dakota state university extension service soil tests, or other risk assessment methods approved by the department.

b. The proposed method and timing of land application of manure and process wastewater.

c. The precautions that will be taken to:

(1) Prevent manure and process wastewater from reaching waters of the state or areas where they have the potential to impact waters of the state; and

(2) Minimize odors to residences, and public areas where people are present during transport and land application of manure.

d. Other information specified in the North Dakota Livestock Program Design Manual.

3. Of the facilities identified in subsection 2, the following facilities must submit a copy of their current nutrient management plans to the department along with their application or design, or both, plans:

a. Concentrated animal feeding operations;

b. Facilities that plan to apply manure on frozen ground;

c. Facilities with land that is designated for manure application and which also has soil phosphorous levels that meet or exceed the very high levels for crop production based on North Dakota state university extension service information;

d. Facilities that daily haul and land apply manure; and

e. Facilities which fail to comply with these rules or permit conditions.

4. Facilities identified in subsection 2, which do not meet conditions in subsection 3, must submit to the department, along with their application or design, or both, plans, the following information:

a. An indication that the facility has a nutrient management plan that meets the department requirements;

b. The name of the individual who developed the nutrient management plan and the organization with which that individual is affiliated;

- c. The amount of land available for land application of manure;
- d. The type of crops or vegetation grown on this land;
- e. The typical manure application rate for each crop or vegetation grown;
- f. The method and timing of application;
- g. The precautions used to prevent manure from reaching waters of the state; and
- h. The precautions, if needed, used to minimize odors to residences, and public areas where people are present, during transport and land application of manure.

5. Manure storage structures. All facilities requiring permits under this chapter must meet the following requirements:

- a. All facilities regulated under this chapter shall have manure storage structures designed and constructed to store runoff from a twenty-five-year, twenty-four-hour rainfall event, except swine, chicken, turkey, and veal calf facilities which shall be designed and constructed to store runoff from a one hundred-year, twenty-four-hour rainfall event. In addition, all facilities shall collect and store all manure, process wastewater and runoff for a minimum of two hundred and seventy days. Overflows from a properly operated manure storage structure due to a chronic or catastrophic rainfall event in excess of those specified, or seepage from the storage structure that is within the standards as specified in the North Dakota Livestock Program Design Manual are not considered violations of this chapter.
- b. A ground water site assessment is required for all manure storage structures.
- c. All manure storage structures must be designed and maintained to withstand natural forces, to prevent impacts to waters of the state, and minimize seepage.
- d. All earthen storage ponds shall have a properly designed and constructed liner to minimize seepage, unless the department has determined a liner is not necessary based on site conditions.
- e. Other manure storage structure requirements specified in the North Dakota Livestock Program Design Manual must be met.
- f. The department may specify additional design or monitoring requirements as needed to ensure facilities will satisfactorily prevent pollution to waters of the state.

6. Liquid storage facilities. All facilities requiring permits under this chapter which store liquid manure, process wastewater, or manure-contaminated runoff must meet the following requirements:

- a. New facilities, expanding facilities significantly increasing their number of animals, or those facilities that have not housed animals within five years must not be located over an unconfined glacial drift aquifer unless approved by the department.
- b. All facilities requiring permits under this chapter must be designed by the facility owner or designed by or under the direct supervision of an engineer. If designed by an engineer, all final drawings, specifications, plans, reports, or other engineering documents, when issued, shall be signed by the engineers or land surveyors who supervised the preparation of these documents under North Dakota Century Code chapter 43-19.1. After construction completion, an engineer or the designer shall certify that the construction was completed according to the design plan.

c. Other requirements specified in the North Dakota Livestock Program Design Manual.

7. Odor management. An operator shall manage a facility to minimize the impact of odors on neighboring residents and public areas and comply with the odor requirements of North Dakota Century Code section 23.1-06-15, North Dakota Administrative Code chapter 33.1-15-16, and the North Dakota Livestock Program Design Manual.
8. Best management practices. An operator of a facility requiring a permit under this chapter is responsible for applying best management practices to ensure compliance with the requirements of this chapter and the permit and to prevent pollution of waters of the state. The best management practices used must be included in the design plans or in the nutrient management plan.
9. Additional requirements which the department may require for facilities requiring permits under this chapter. The department may:
 - a. Require the operator to install and collect routine samples from monitoring wells to ensure that potentially usable ground water resources are not adversely impacted.
 - b. Require odor control for manure storage and animal housing areas and require steps to minimize odors to residences or public areas during transport and land application of manure.
 - c. Based on site-specific conditions, specify additional design or monitoring requirements as needed to ensure the facility will satisfactorily prevent pollution of waters of the state.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-09. Recordkeeping and reporting requirements.

1. The operator of a facility requiring a permit under this chapter shall record and maintain the following for a period of not less than three years:
 - a. Any sampling, testing, and monitoring results as required by this chapter or by the department;
 - b. Maintenance and inspection records for water pollution control structures;
 - c. Reports and data required by this chapter, the North Dakota Livestock Program Design Manual, and the permit; and
 - d. A copy of this permit.

The department may request an extension of the record retention period if a facility has failed to comply with these rules or permit conditions or during the course of any unresolved litigation regarding the discharge of pollutants by the operation. The information shall be provided to department representatives upon request.

2. Reports shall be submitted to the department in accordance with the schedule prescribed and on the appropriate forms supplied by the department or in a manner specified by the department if required as a condition of the state animal feeding operation permit or based on site-specific conditions. Information requested may include sampling, testing, and monitoring results; maintenance and inspection records, records related to facility operation; or nutrient management plan information or records.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-10. Enforcement and compliance.

1. The department shall evaluate all reports, notifications, and data submitted by an operator in compliance with this chapter and the state animal feeding operation permit. The department shall investigate all apparent violations for possible enforcement action pursuant to North Dakota Century Code section 61-28-08.
2. No person may knowingly make a false statement, representation, or certification in any application, record, report, plan, or other document filed or required under this chapter or the permit. No person may knowingly falsify, tamper with, or provide inaccurate information regarding a monitoring well or other device required under this chapter or the permit.
3. Operators of permitted facilities that are not operating properly shall update those facilities to achieve compliance with this chapter and the conditions of the permit within a time frame approved by the department.
4. If the department finds that a facility, which has not been covered by a state animal feeding operation permit within the last five years, is causing or is likely to cause pollution of waters of the state, or poses a significant threat to public health or safety, the operator will be notified that actions shall be taken to prevent the pollution.
5. Within one hundred and twenty days following the notification described in subsection 4, the operator shall submit a compliance plan to prevent the facility from impacting waters of the state.
 - a. The compliance plan shall be prepared in accordance with the minimum requirements of this chapter and the North Dakota Livestock Program Design Manual. The plan shall contain adequate information to enable the department to determine whether the proposed measures will abate or prevent pollution of waters of the state. The operator also shall present a proposed schedule for plan implementation and completion.
 - b. If the compliance plan allows for operation of the facility in a manner that will not cause nor likely cause pollution of waters of the state, the department will issue a permit with a compliance schedule for construction. Approval of the permit shall be contingent upon any changes which may be required by the department after its review of the proposed plan. The construction must be completed within the time frame specified in the compliance schedule.
 - c. If the approved compliance plan needs to be modified or amended during construction, the operator shall notify the department prior to making any modifications or amendments and they must be approved by the department.
6. A permit may be modified, suspended, revoked, or denied by the department for reasons pertaining to: circumstances which do not meet the purpose and provisions of this article, the provisions of the permit, or the plans and specifications submitted as part of the application for permit; or, violations of any applicable laws or rules. The department shall provide written notice to the permittee.
7. If the department revokes a state animal feeding operation permit for cause, the operator can finish feeding the animals for up to one hundred and twenty days from the date of revocation, provided public and environmental health are not threatened. The operator will not be allowed to bring any other animals into the facility until the requirements of the permit, this chapter, and the North Dakota Livestock Program Design Manual have been met as approved by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-11. Department inspection.

Authorized representatives of the department may request access to a facility site under authority of North Dakota Century Code Section 61-28-04. The owner or operator of a facility may request to see the representatives' credentials. Authorized representatives of the department shall be allowed:

1. To enter the facility site or area in which any records required to be kept under terms and conditions of the permit, are stored;
2. To have access to and copy any records required to be kept under terms and conditions of the permit;
3. To inspect any monitoring equipment or water pollution control structures at the facility; or
4. To sample any discharge of pollutants.

The department representatives will abide by all security measures implemented by the owner or operator to protect the health and safety of the workers and the animals at the facility.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-12. Prohibited activities.

It shall be unlawful for any person:

1. To feed any livestock on the ice cover of streams or lakes.
2. To create or maintain an immediate threat to human, public, or environmental health.
3. To dispose of an animal carcass along or in any stream, lake, river, or other surface water; to bury the carcass near any such surface water; to dispose of a carcass in an area that will discharge into waters of the state; to dispose of a carcass in any structure used to store or treat liquid manure, process wastewater, or storm water unless the department-approved system is designed for such a purpose; or to dispose of a carcass in a manner that is in violation of North Dakota Administrative Code article 33.1-20 or North Dakota Century Code chapter 36-14.
4. To cause pollution of waters of the state or to place or cause to be placed any wastes in a location where they are likely to cause pollution of waters of the state.
5. To discharge any pollutants into waters of the state thereby reducing the quality so as not to comply with the water quality standards established by the department; except facilities that are in compliance with subsection 6.
6. To discharge manure or process wastewater from a facility except:
 - a. The overflow of a properly operated manure storage structure due to a chronic or catastrophic rainfall greater than a twenty-five-year, twenty-four-hour or greater than a one hundred-year, twenty-four-hour event for swine, chicken, turkey, or veal calf facilities;
or

- b. Seepage from the manure storage structures that is within the standards as specified in the North Dakota Livestock Program Design Manual.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04

33.1-16-03.1-13. Public participation.

1. If the department determines a significant degree of public interest exists regarding new or expanding facilities, or significant revisions to a facility's nutrient management plan, it shall issue a public notice requesting comment on applications for both individual permits and general state animal feeding operation permits.
2. The department shall provide a period of not less than thirty days during which time interested persons may submit comments. The period of comment may be extended at the discretion of the department.
3. The public notice must be placed in the official county newspaper or other daily or weekly newspaper circulated in the area of the proposed animal feeding operation. In the case of draft general permits, the public notice will be placed in applicable official county newspapers. The department may also use any other reasonable means to provide the public notice information to parties potentially affected.
4. The public notice must include at least the following:
 - a. Name, address, and telephone number of the agency issuing the public notice.
 - b. Name and address of the applicant and a brief description of the application information, including the proposed location of the facility. The exception would be draft general permits for which there is no specific applicant.
 - c. The date, time, and location of any scheduled public meeting or hearing.
 - d. An explanation of how to view or obtain materials (e.g., copy of design plans) related to the application and the department's review.
 - e. An explanation of how to submit comments.
5. The department shall send copies of the public notice to the applicant and to local governmental entities which have jurisdiction over the area where the facility is located or is proposed to be located.
6. The department shall hold a public meeting or hearing as it deems appropriate to allow additional public input or to provide information to the public concerning the department's review of the facility.
7. In making its final decision on the application or draft permit, the department shall consider all comments submitted within a time frame specified in the public notice and all comments received at any public hearing. Within twenty days of the close of the public comment period, the applicant, if any, may submit a written response to the public comments. The department shall consider the applicant's response in making its final decision.
8. Pursuant to the requirements of this chapter and within sixty days of the applicant's response to the public comments, the department shall make a final determination as to whether the permit should be approved, approved with conditions, or denied.

9. The department shall notify the applicant in writing of its final determination and provide to the applicant a copy of the final permit, if issued. Upon request, other interested individuals may also obtain copies of the final permit.
10. Once finalized, information on general permits and their availability must be provided to potentially eligible or affected facilities.
11. The department may combine proceedings under this chapter with proceedings to issue a North Dakota pollutant discharge elimination system permit under chapter 33.1-16-01. The combined proceedings will be subject to the public participation procedures in chapter 33.1-16-01.

33.1-17-01-01. Responsibility.

It is the responsibility of any supplier of water to comply within the meaning of this chapter pursuant to North Dakota Century Code chapter 61-28.1.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-02. Definitions.

For the purpose of this chapter the following definitions shall apply:

1. "Action level" means the concentration of lead or copper in water specified in title 40 Code of Federal Regulations part 141, subpart I, section 141.80(c), that determines, in some cases, the treatment requirements set forth under title 40 Code of Federal Regulations part 141, subpart I, that a water system is required to complete.

2. "Bag filters" means pressure-driven separation devices that remove particulate matter larger than one micrometer using an engineered porous filtration media. They are typically constructed of a nonrigid, fabric filtration media housed in a pressure vessel in which the direction of flow is from the inside of the bag to the outside.
3. "Bank filtration" means a water treatment process that uses a well to recover surface water that has naturally infiltrated into ground water through a riverbed or riverbanks. Infiltration is typically enhanced by the hydraulic gradient imposed by a nearby pumping water supply or other wells.
4. "Best available technology" or "BAT" means the best technology, treatment techniques, or other means which the department finds, after examination for efficacy under field conditions and not solely under laboratory conditions, are available (taking cost into consideration). For the purposes of setting maximum contaminant levels for synthetic organic chemicals, any best available technology must be at least as effective as granular activated carbon.
5. "Cartridge filters" means pressure-driven separation devices that remove particulate matter larger than one micrometer using an engineered porous filtration media. They are typically constructed as rigid or semirigid, self-supporting filter elements housed in pressure vessels in which flow is from the outside of the cartridge to the inside.
6. "Clean compliance history", for the purposes of subpart Y, means a record of no MCL violations as specified in title 40 Code of Federal Regulations part 141.63; no monitoring violations as specified in title 40 Code of Federal Regulations part 141.21 or as specified in title 40 Code of Federal Regulations part 141, subpart Y; and no coliform treatment technique trigger exceedances or treatment technique violations as specified in title 40 Code of Federal Regulations part 141, subpart Y.
7. "Coagulation" means a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs.
8. "Combined distribution system" means the interconnected distribution system consisting of the distribution systems of wholesale systems and of the consecutive systems that receive finished water.
9. "Community water system" means a public water system which serves at least fifteen service connections used by year-round residents or regularly serves at least twenty-five year-round residents.
10. "Compliance cycle" means the nine-year calendar year cycle during which public water systems must monitor for inorganic and organic chemicals excluding lead, copper, trihalomethanes, and unregulated contaminants. Each compliance cycle consists of three 3-year compliance periods.
11. "Compliance period" means a three-year calendar year period within a compliance cycle during which public water systems must monitor for inorganic and organic chemicals excluding lead, copper, trihalomethanes, and unregulated contaminants. Each compliance cycle has three 3-year compliance periods.
12. "Composite correction program" or "CCP" means a systematic, comprehensive procedure for identifying, prioritizing, and remedying factors that limit water treatment plant performance as set forth in the United States environmental protection agency handbook entitled Optimizing Water Treatment Plant Performance Using The Composite Correction Program, EPA/625/6-91/027, 1998 edition. A composite correction program consists of two phases, a comprehensive performance evaluation and comprehensive technical assistance.

13. "Comprehensive performance evaluation" or "CPE" means a thorough review and analysis of a treatment plant's performance-based capabilities and associated administrative, operation, and maintenance practices. It is conducted to identify factors that may be adversely impacting a plant's capability to achieve compliance and emphasizes approaches that can be implemented without significant capital improvements. For purposes of compliance with title 40 Code of Federal Regulations part 141, subpart P and subpart T, the comprehensive performance evaluation shall consist of at least the following components:
- a. Assessment of plant performance;
 - b. Evaluation of major unit processes;
 - c. Identification and prioritization of performance limiting factors;
 - d. Assessment of the applicability of comprehensive technical assistance; and
 - e. Preparation of a comprehensive performance evaluation report.
14. "Comprehensive technical assistance" or "CTA" means the performance improvement phase of a composite correction program that is implemented if the comprehensive performance evaluation results indicate improved performance potential. During the comprehensive technical assistance phase, identified and prioritized factors that limit water treatment plant performance are systematically addressed and eliminated.
15. "Confluent growth" means a continuous bacterial growth covering the entire filtration area of a membrane filter, or a portion thereof, in which bacterial colonies are not discrete.
16. "Consecutive system" means a public water system that receives some or all of its finished water from one or more wholesale systems. Delivery may be through a direct connection or through the distribution system of one or more consecutive systems.
17. "Contaminant" means any physical, chemical, biological, or radiological substance or matter in water.
18. "Conventional filtration treatment" means a series of processes, including coagulation, flocculation, sedimentation, and filtration resulting in substantial particulate removal.
19. "Corrosion inhibitor" means a substance capable of reducing the corrosivity of water toward metal plumbing materials, especially lead and copper, by forming a protective film on the interior surface of those materials.
20. "Cross connection" means any connection or arrangement between two otherwise separate piping systems, one of which contains potable water and the other either water of unknown or questionable safety or steam, gas, or chemical whereby there may be a flow from one system to the other, the direction of flow depending on the pressure differential between the two systems.
21. "CT" or "CT calc" means the product of residual disinfectant concentration (C) in milligrams per liter determined before or at the first customer and the corresponding disinfectant contact time (T) in minutes. If disinfectants are applied, at more than one point prior to the first customer, the CT of each disinfectant sequence must be determined before or at the first customer to determine the total percent inactivation or total inactivation ratio. In determining the total inactivation ratio, the residual disinfectant concentration of each disinfection sequence and the corresponding contact time must be determined before any subsequent disinfection application points. CT ninety-nine and nine-tenths is the CT value required for ninety-nine and nine-tenths percent (three-logarithm) inactivation of giardia lamblia cysts. CT ninety-nine point nine values for a wide variety of disinfectants and conditions are set forth

under title 40 Code of Federal Regulations part 141, subpart H. CT calculated divided by CT ninety-nine and nine-tenths is the inactivation ratio. The total inactivation ratio is determined by adding together the inactivation ratio for each disinfection sequence. A total inactivation ratio equal to or greater than one point zero is assumed to provide a three-logarithm inactivation of giardia lamblia cysts.

22. "Department" means the department of environmental quality.

23. "Diatomaceous earth filtration" means a process resulting in substantial particulate removal in which a precoat cake of diatomaceous earth filter media is deposited on a support membrane or septum, and while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake.

24. "Direct filtration" means a series of processes including coagulation and filtration but excluding sedimentation resulting in substantial particulate removal.

25. "Disinfectant" means any oxidant, including chlorine, chlorine dioxide, chloramines, and ozone added to water in any part of the treatment or distribution process, that is intended to kill or inactivate pathogenic microorganisms.

26. "Disinfectant contact time" (T in CT calculations) means the time in minutes that it takes for water to move from the point of disinfectant application or the previous point of disinfectant residual measurement to a point before or at the point where residual disinfectant concentration (C) is measured. Where only one C is measured, T is the time in minutes that it takes for water to move from the point of disinfectant application to a point before or at where C is measured. Where more than one C is measured, T, for the first measurement of C, is the time in minutes that it takes the water to move from the first or only point of disinfectant application to a point before or at the point where the first C is measured. For subsequent measurements of C, T is the time in minutes that it takes for water to move from the previous C measurement point to the C measurement point for which the particular T is being calculated. Disinfectant contact time in pipelines must be calculated by dividing the internal volume of the pipe by the maximum hourly flow rate through that pipe. T within mixing basins and storage reservoirs must be determined by tracer studies or an equivalent demonstration.

27. "Disinfection" means a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.

28. "Disinfection profile" means a summary of daily giardia lamblia inactivation through the treatment plant. The disinfection profile shall be developed as set forth under title 40 Code of Federal Regulations part 141, subpart P (141.172) and subpart T (141.530-141.536).

29. "Domestic or other nondistribution system plumbing problem" means a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken.

30. "Dual sample set" means a set of two samples collected at the same time and same location, with one sample analyzed for total trihalomethanes (TTHM) and the other sample analyzed for haloacetic acids five (HAA5). Dual sample sets are collected for the purpose of conducting an initial distribution system evaluation (IDSE) under title 40 Code of Federal Regulations parts 141.600 to 141.605 inclusive, and determining compliance with the TTHM and HAA5 MCLs under title 40 Code of Federal Regulations parts 141.620 to 141.629 inclusive.

31. "Effective corrosion inhibitor residual", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means a concentration sufficient to form a passivating film on the interior walls of pipe.

32. "Enhanced coagulation" means the addition of sufficient coagulant for improved removal of disinfection byproduct precursors by conventional filtration treatment.
33. "Enhanced softening" means the improved removal of disinfection byproduct precursors by precipitative softening.
34. "Filter profile" means a graphical representation of individual filter performance based on continuous turbidity measurements or total particle counts versus time for an entire filter run, from startup to backwash inclusively, that includes an assessment of filter performance while another filter is being backwashed.
35. "Filtration" means a process for removing particulate matter from water by passage through porous media.
36. "Finished water" means water that is introduced into the distribution system of a public water system and is intended for distribution and consumption without further treatment, except treatment necessary to maintain water quality in the distribution system (e.g., booster disinfection or addition of corrosion control chemicals).
37. "First draw sample" means a one-liter sample of tap water, collected in accordance with title 40 Code of Federal Regulations part 141, section 141.86(b)(2), that has been standing in plumbing pipes at least six hours and is collected without flushing the tap.
38. "Flocculation" means a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means.
39. "Flowing stream" means a course of running water flowing in a definite channel.
40. "Granular activated carbon ten" or "GAC10" means granular activated carbon filter beds with an empty-bed contact time of ten minutes based on average daily flow and a carbon reactivation frequency of every one hundred eighty days, except that the reactivation frequency for GAC10 used as a best available technology for compliance with subpart V MCLs under title 40 Code of Federal Regulations part 141.64(b)(2) shall be one hundred twenty days.
41. "Granular activated carbon twenty" or "GAC20" means granular activated carbon filter beds with an empty-bed contact time of twenty minutes based on average daily flow and a carbon reactivation frequency of every two hundred forty days.
42. "Gross alpha particle activity" means the total radioactivity due to alpha particle emission as inferred from measurements on a dry sample.
43. "Ground water under the direct influence of surface water" means any water beneath the surface of the ground with significant occurrence of insects or other macroorganisms, algae, or large-diameter pathogens such as giardia lamblia or cryptosporidium. Ground water under the direct influence of surface water also means significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions.
44. "Haloacetic acids five" or "HAA5" means the sum of the concentrations in milligrams per liter of the haloacetic acid compounds monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid, rounded to two significant figures after addition.
45. "Halogen" means one of the chemical elements chlorine, bromine, or iodine.

46. "Initial compliance period" means the first full compliance period during which public water systems must monitor for inorganic and organic chemicals excluding lead, copper, trihalomethanes, and unregulated contaminants.
47. "Lake/reservoir" means a natural or manmade basin or hollow on the earth's surface in which water collects or is stored that may or may not have a current or single direction of flow.
48. "Large water system", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means a water system that serves more than fifty thousand persons.
49. "Lead service line" means a service line made of lead that connects the water main to the building inlet and any pigtail, gooseneck, or other fitting that is connected to a lead line.
50. "Legionella" means a genus of bacteria, some species of which have caused a type of pneumonia called legionnaires disease.
51. "Level 1 assessment" means an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and, when possible, the likely reason that the system triggered the assessment. It is conducted by the system operator or owner. Minimum elements include review and identification of atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality, including water storage; source and treatment considerations that bear on distributed water quality, where appropriate, such as whether a ground water system is disinfected; existing water quality monitoring data; and inadequacies in sample sites, sampling protocol, and sampling processing. The system must conduct the assessment consistent with any state directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system.
52. "Level 2 assessment" means an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and, when possible, the likely reason that the system triggered the assessment. A level 2 assessment provides a more detailed examination of the system, including the system's monitoring and operational practices, than does a level 1 assessment through the use of more comprehensive investigation and review of available information, additional internal and external resources, and other relevant practices. It is conducted by an individual approved by the state, which may include the system operator. Minimum elements include review and identification of atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality, including water storage; source and treatment considerations that bear on distributed water quality, where appropriate, such as whether a ground water system is disinfected; existing water quality monitoring data; and inadequacies in sample sites, sampling protocol, and sample processing. The system must conduct the assessment consistent with any state directives that tailor specific assessment elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system. The system must comply with any expedited actions or additional actions required by the state in the case of an E. coli MCL violation.
53. "Locational running annual average" or "LRAA" means the average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters.
54. "Maximum contaminant level" or "MCL" means the maximum permissible level of a contaminant in water which is delivered to any user of a public water system.

55. "Maximum residual disinfectant level" or "MRDL" means a level of a disinfectant added for water treatment that must not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects.
56. "Maximum total trihalomethane potential" means the maximum concentration of total trihalomethanes produced in a given water containing a disinfectant residual after seven days at a temperature of twenty-five degrees Celsius [77 degrees Fahrenheit] or above.
57. "Medium-size water system", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means a water system that serves three thousand three hundred one to fifty thousand persons.
58. "Membrane filtration" means a pressure-driven or vacuum-driven separation process in which particulate matter larger than one micrometer is rejected by an engineered barrier, primarily through a size-exclusion mechanism, and which has a measurable removal efficiency of a target organism that can be verified through the application of a direct integrity test. This definition includes the common membrane technologies of microfiltration, ultrafiltration, nanofiltration, and reverse osmosis.
59. "Near the first service connection" means at one of the twenty percent of all service connections in the entire system that are nearest the water supply treatment facility as measured by water transport time within the distribution system.
60. "Noncommunity water system" means a public water system that is not a community water system that primarily provides service to other than year-round residents. A noncommunity water system is either a "nontransient noncommunity" or "transient noncommunity" water system.
61. "Nontransient noncommunity water system" means a noncommunity water system that regularly serves at least twenty-five of the same persons over six months per year.
62. "Optimal corrosion-control treatment", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means the corrosion-control treatment that minimizes the lead and copper concentrations at users' taps while ensuring that the treatment does not cause the water system to violate any national primary drinking water regulations.
63. "Person" means an individual, corporation, company, association, partnership, municipality, or any other entity.
64. "Plant intake" means the works or structures at the head of a conduit through which water is diverted from a source (e.g., river or lake) into the treatment plant.
65. "Point of disinfectant application" means the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff.
66. "Point-of-entry treatment device" means a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building.
67. "Point-of-use treatment device" means a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap.
68. "Potable water" means water free from impurities in amounts sufficient to cause disease or harmful physiological effects, with the physical, chemical, biological, or radiological quality conforming to applicable maximum permissible contaminant levels.

69. "Presedimentation" means a preliminary treatment process used to remove gravel, sand, and other particulate material from the source water through settling before the water enters the primary clarification and filtration processes in a treatment plant.
70. "Product" means any chemical or substance added to a public water system, any materials used in the manufacture of public water system components or appurtenances, or any pipe, storage tank, valve, fixture, or other materials that come in contact with water intended for use in a public water system.
71. "Public water system" means a system for the provision to the public of water for human consumption through pipes or other constructed conveyances, if such system has at least fifteen service connections or regularly serves at least twenty-five individuals sixty or more days out of the year. A public water system includes any collection, treatment, storage, and distribution facilities under control of the operator of the system and used primarily in connection with the system; and, any collection or pretreatment storage facilities that are not under control of the operator which are used primarily in connection with the system. A public water system does not include systems that provide water through pipes or constructed conveyances other than pipes that qualify for the exclusions set forth under section 1401(4)(B)(i) and (ii) of the federal Safe Drinking Water Act [42 U.S.C. 300f(4)(B)(i) and (ii)]. A public water system is either a "community" or a "noncommunity" water system.
72. "Repeat compliance period" means any subsequent compliance period after the initial compliance period during which public water systems must monitor for inorganic and organic chemicals excluding lead, copper, trihalomethanes, and unregulated contaminants.
73. "Residual disinfectant concentration" (C in CT calculations) means the concentration of disinfectant measured in milligrams per liter in a representative sample of water.
74. "Sampling schedule" means the frequency required for submitting drinking water samples to a certified laboratory for examination.
75. "Sanitary defect" means a defect that could provide a pathway of entry for microbial contamination into the distribution system or that is indicative of a failure or imminent failure in a barrier that is already in place.
76. "Sanitary survey" means an onsite review of the water source, facilities, equipment, operation, and maintenance of a public water system for the purpose of evaluating the adequacy of such source, facilities, equipment, operation, and maintenance for producing and distributing safe drinking water.
77. "Seasonal system" means a noncommunity water system that is not operated as a public water system on a year-round basis and starts up and shuts down at the beginning and end of each operating season.
78. "Sedimentation" means a process for removal of solids before filtration by gravity or separation.
79. "Service line sample" means a one-liter sample of water, collected in accordance with title 40 Code of Federal Regulations part 141, section 141.86(b)(3), that has been standing for at least six hours in a service line.
80. "Single-family structure", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means a building constructed as a single-family residence that is currently used either as a residence or a place of business.

81. "Slow sand filtration" means a process involving passage of raw water through a bed of sand at low velocity resulting in substantial particulate removal by physical and biological mechanisms.
82. "Small water system", for the purpose of title 40 Code of Federal Regulations part 141, subpart I only, means a water system that serves three thousand three hundred or fewer persons.
83. "Specific ultraviolet absorption" or "SUVA" means specific ultraviolet absorption at two hundred fifty-four nanometers, an indicator of the humic content of water. It is a calculated parameter obtained by dividing a sample's ultraviolet absorption at a wavelength of two hundred fifty-four nanometers in meters to the minus one by its concentration of dissolved organic carbon, the fraction of the total organic carbon that passes through a fifty-four hundredths micrometer pore diameter filter, in milligrams per liter.
84. "Subpart H systems" means public water systems using surface water or ground water under the direct influence of surface water as a source that are subject to the requirements of title 40 Code of Federal Regulations part 141, subpart H.
85. "Supplier of water" means any person who owns or operates a public water system.
86. "Surface water" means all water which is open to the atmosphere and subject to surface runoff.
87. "System with a single service connection" means a system which supplies drinking water to consumers with a single service line.
88. "Too numerous to count" means that the total number of bacterial colonies exceeds two hundred on a forty-seven millimeter membrane filter used for coliform detection.
89. "Total organic carbon" means total organic carbon in milligrams per liter measured using heat, oxygen, ultraviolet irradiation, chemical oxidants, or combinations of these oxidants that convert organic carbon to carbon dioxide, rounded to two significant figures.
90. "Total trihalomethanes" means the sum of the concentration in milligrams per liter of the trihalomethane compounds (trichloromethane [chloroform], dibromochloromethane, bromodichloromethane, and tribromomethane [bromoform]), rounded to two significant figures.
91. "Transient noncommunity water system" means a noncommunity water system that primarily provides service to transients.
92. "Trihalomethane" means one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure.
93. "Two-stage lime softening" means a process in which chemical addition and hardness precipitation occur in each of two distinct unit clarification processes in series prior to filtration.
94. "Uncovered finished water storage facility" means a tank, reservoir, or other facility used to store water that will undergo no further treatment except residual disinfection and is open to the atmosphere.
95. "Virus" means a virus of fecal origin which is infectious to humans by waterborne transmission.

96. "Water system" means all sources of water and their surroundings and includes all structures, conducts, and appurtenances by means of which the water is collected, treated, stored, or delivered.

97. "Waterborne disease outbreak" means the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the appropriate local or state agency.

98. "Wholesale system" means a public water system that treats source water as necessary to produce finished water and then delivers some or all of that finished water to another public water system. Delivery may be through a direct connection or through the distribution system of one or more consecutive systems.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-02, 61-28.1-03; S.L. 2017, ch. 199, §§ 68, 69

33.1-17-01-03. Coverage.

This chapter applies to all public water systems except those public water systems which meet all of the following conditions:

1. Consists only of distribution and storage facilities and does not have any collection and treatment facilities;
2. Obtains all of its water from, but is not owned or operated by, a public water system to which these regulations apply;
3. Does not sell water to any person; and
4. Is not a carrier which conveys passengers in interstate commerce.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-04. Designated responsible individuals.

The owner or operating entity of each public water system shall designate an individual, or individuals, who shall be responsible for communicating with the department in matters relating to system construction or alteration, monitoring and sampling, maintenance, operation, recordkeeping, and reporting required by these regulations. Any changes in designated individuals or assigned responsibilities shall be promptly reported to the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-05. Approved laboratories and analytical procedures.

All samples shall be examined by the department or by any other laboratory certified by the department for drinking water purposes, except that measurements for turbidity and free chlorine may be performed by any person deemed qualified by the department. Turbidity measurements shall be made by a nephelometric method approved by the department. All methods of sample preservation and analyses shall be as prescribed by the department and set forth under title 40 Code of Federal Regulations part 141.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03, 61-28.1-07; S.L. 2017, ch. 199, § 69

33.1-17-01-06. Maximum contaminant levels, action levels, treatment technique requirements, and maximum residual disinfectant levels.

1. **Inorganic chemicals.** The maximum contaminant levels, action levels, and treatment technique requirements for inorganic chemical contaminants excluding disinfection byproducts shall be as prescribed by the department and set forth under title 40 Code of Federal Regulations, part 141 subpart G.

<u>CONTAMINANT</u>	<u>MAXIMUM CONTAMINANT LEVEL MILLIGRAM(S) PER LITER</u>	<u>ACTION LEVEL MILLIGRAM(S) PER LITER</u>	<u>TREATMENT TECHNIQUE REQUIREMENTS</u>
<u>Antimony</u>	<u>0.006</u>		
<u>Arsenic</u>	<u>0.010</u>		
<u>Asbestos</u>	<u>7 million fibers per liter (longer than ten micrometers)</u>		
<u>Barium</u>	<u>2</u>		
<u>Beryllium</u>	<u>0.004</u>		
<u>Cadmium</u>	<u>0.005</u>		
<u>Chromium</u>	<u>0.1</u>		
<u>Copper</u>			<u>The 90th percentile level. Source water and corrosion must be less than or control treatment equal to 1.3</u>
<u>Cyanide (as free cyanide)</u>	<u>0.2</u>		
<u>Fluoride</u>	<u>4.0</u>		
<u>Lead</u>			<u>The 90th percentile level. Source water and corrosion must be less than or control treatment, public education, and lead service line replacement</u>
<u>Mercury</u>	<u>0.002</u>		
<u>Nickel</u>	<u>0.1</u>		
<u>Nitrate (as N)</u>	<u>10</u>		
<u>Nitrite (as N)</u>	<u>1</u>		
<u>Selenium</u>	<u>0.05</u>		
<u>Thallium</u>	<u>0.002</u>		
<u>Total Nitrate and Nitrite (as N)</u>	<u>10</u>		

At the discretion of the department, nitrate levels not to exceed twenty milligrams per liter may be allowed in a noncommunity water system if the supplier of water demonstrates to the satisfaction of the department that:

- a. Such water will not be available to children under six months of age;
- b. There will be continuous posting of the fact that nitrate levels exceed ten milligrams per liter and the potential health effect of exposure;
- c. Local and state public health authorities will be notified annually of nitrate levels that exceed ten milligrams per liter; and

d. No adverse health effects shall result.

2. Organic chemicals. The maximum contaminant levels and treatment technique requirements for organic chemical contaminants excluding disinfection byproducts and disinfection byproduct precursors shall be as prescribed by the department and set forth under title 40 Code of Federal Regulations part 141, subpart G.

<u>CONTAMINANT</u>	<u>MAXIMUM CONTAMINANT LEVEL MILLIGRAM(S) PER LITER</u>	<u>TREATMENT TECHNIQUE REQUIREMENTS</u>
<u>Nonvolatile Synthetic Organic Chemicals:</u>		
<u>Acrylamide</u>		<u>The combination (or product) of dose and monomer level may not exceed 0.05 percent dosed at 1 part per million (or equivalent)</u>
<u>Alachlor</u>	<u>0.002</u>	
<u>Atrazine</u>	<u>0.003</u>	
<u>Benzo (a) pyrene</u>	<u>0.0002</u>	
<u>Carbofuran</u>	<u>0.04</u>	
<u>Chlordane</u>	<u>0.002</u>	
<u>Dalapon</u>	<u>0.2</u>	
<u>Dibromochloropropane (DBCP)</u>	<u>0.0002</u>	
<u>Di (2-ethylhexyl) adipate</u>	<u>0.4</u>	
<u>Di (2-ethylhexyl) phthalate</u>	<u>0.006</u>	
<u>Dinoseb</u>	<u>0.007</u>	
<u>Diquat</u>	<u>0.02</u>	
<u>Endothall</u>	<u>0.1</u>	
<u>Endrin</u>	<u>0.002</u>	
<u>Epichlorohydrin</u>		<u>The combination (or product) of dose and monomer level may not exceed 0.01 percent dosed at 20 parts per million (or equivalent)</u>
<u>Ethylene dibromide (EDB)</u>	<u>0.00005</u>	
<u>Glyphosate</u>	<u>0.7</u>	
<u>Heptachlor</u>	<u>0.0004</u>	
<u>Heptachlor epoxide</u>	<u>0.0002</u>	
<u>Hexachlorobenzene</u>	<u>0.001</u>	
<u>Hexachlorocyclopentadiene</u>	<u>0.05</u>	
<u>Lindane</u>	<u>0.0002</u>	
<u>Methoxychlor</u>	<u>0.04</u>	
<u>Oxamyl (Vydate)</u>	<u>0.2</u>	
<u>Polychlorinated biphenyls (PCBs)</u>	<u>0.0005</u>	
<u>Pentachlorophenol</u>	<u>0.001</u>	
<u>Picloram</u>	<u>0.5</u>	
<u>Simazine</u>	<u>0.004</u>	
<u>Toxaphene</u>	<u>0.003</u>	
<u>2,3,7,8-TCDD (Dioxin)</u>	<u>0.00000003</u>	
<u>2,4-D</u>	<u>0.07</u>	

<u>2,4,5-TP Silvex</u>	<u>0.05</u>
<u>Volatile Synthetic Organic Chemicals:</u>	
<u>Benzene</u>	<u>0.005</u>
<u>Carbon tetrachloride</u>	<u>0.005</u>
<u>p-Dichlorobenzene</u>	<u>0.075</u>
<u>o-Dichlorobenzene</u>	<u>0.6</u>
<u>1,2-Dichloroethane</u>	<u>0.005</u>
<u>1,1-Dichloroethylene</u>	<u>0.007</u>
<u>cis-1,2-Dichloroethylene</u>	<u>0.07</u>
<u>trans-1,2-Dichloroethylene</u>	<u>0.1</u>
<u>Dichloromethane</u>	<u>0.005</u>
<u>1,2-Dichloropropane</u>	<u>0.005</u>
<u>Ethylbenzene</u>	<u>0.7</u>
<u>Monochlorobenzene</u>	<u>0.1</u>
<u>Styrene</u>	<u>0.1</u>
<u>Tetrachloroethylene</u>	<u>0.005</u>
<u>Toluene</u>	<u>1</u>
<u>1,2,4-Trichlorobenzene</u>	<u>0.07</u>
<u>1,1,1-Trichloroethane</u>	<u>0.2</u>
<u>1,1,2-Trichloroethane</u>	<u>0.005</u>
<u>Trichloroethylene</u>	<u>0.005</u>
<u>Vinyl chloride</u>	<u>0.002</u>
<u>Xylenes (total)</u>	<u>10</u>

3. Filtration and disinfection treatment.

- a. General requirements. All subpart H systems that utilize surface water sources shall provide filtration and disinfection treatment. All subpart H systems that utilize ground water sources deemed by the department to be under the direct influence of surface water shall provide disinfection treatment and shall either comply with filtration avoidance criteria or provide filtration treatment.
- b. Treatment technique requirements. The department hereby identifies filtration and disinfection as treatment techniques to protect against the potential adverse health effects of exposure to giardia lamblia, cryptosporidium, legionella, viruses, heterotrophic plate count bacteria, and turbidity. The treatment techniques apply only to subpart H systems. Subpart H systems that serve ten thousand or more persons shall be deemed to be in compliance with the treatment techniques if the requirements set forth under title 40 Code of Federal Regulations part 141, subparts H and P, are met. Subpart H systems that serve fewer than ten thousand persons shall be deemed to be in compliance with the treatment techniques if the requirements set forth under title 40 Code of Federal Regulations part 141, subpart H, are met.

4. Radioactivity. The maximum contaminant levels for radioactivity are as follows:

<u>CONTAMINANT</u>	<u>MAXIMUM CONTAMINANT LEVEL (MCL)</u>
<u>Combined radium-226 and radium-228</u>	<u>5 picocuries per liter (pCi/L)</u>

Gross alpha particle activity (including radium-226, but excluding radon and uranium)

15 picocuries per liter (pCi/L)

Uranium

30 micrograms per liter (ug/L)

5. **Microbiological.** The treatment technique triggers, treatment technique violations, E. coli maximum contaminant level violations, and monitoring violations are as follows:

a. Treatment technique triggers. A system must conduct assessments, in accordance with the requirements under title 40 Code of Federal Regulations part 141, subpart Y after exceeding the following treatment technique triggers:

(1) Level 1 treatment technique triggers.

(a) A system, which collects forty or more samples per month, exceeds 5.0 percent total coliform-positive samples per month.

(b) A system, which collects less than forty samples per month, has two or more total coliform-positive samples per month.

(c) A system fails to take all required repeat samples following a total coliform-positive sample.

(2) Level 2 treatment technique triggers.

(a) A system incurs an E. coli maximum contaminant level violation, as specified in title 40 Code of Federal Regulations part 141, subpart Y.

(b) A system has a second level 1 trigger, as specified in title 40 Code of Federal Regulations part 141, subpart Y, within a rolling twelve-month period unless the department has determined why the samples that caused the first level 1 treatment technique trigger were total coliform positive and has determined that the system has corrected the problem.

b. Treatment technique violations. A system has a treatment technique violation when any of the following conditions occur:

(1) A system exceeds a treatment technique trigger and then fails to conduct the required assessment or corrective actions within the required timeframe as specified in title 40 Code of Federal Regulations part 141, subpart Y.

(2) A seasonal system fails to complete a state-approved start-up procedure before serving water to the public.

c. E. coli maximum contaminant level violations. A system is in violation of the maximum contaminant level for E. coli when any of the following conditions occur:

(1) A system has an E. coli-positive repeat sample following a total coliform-positive routine sample.

(2) A system has a total coliform-positive repeat sample following an E. coli-positive routine sample.

(3) A system fails to take all required repeat samples following an E. coli-positive routine sample.

(4) A system fails to analyze for E. coli bacteria when any repeat sample tests positive for total coliform bacteria.

d. Monitoring violations. A system incurs a monitoring violation if any of the following conditions occur:

(1) A system fails to take every required routine sample in a compliance period.

(2) A system fails to analyze for E. coli following a total coliform-positive routine sample.

e. The department hereby identifies the following as the best technology, treatment techniques, or other means generally available for achieving compliance with the treatment technique triggers and E. coli maximum contaminant level: protection of wells from contamination by appropriate placement and construction; maintenance of a disinfection residual throughout the distribution system; proper maintenance of the distribution system including appropriate pipe replacement and repair procedures, cross-connection control programs, main flushing programs, proper operation and maintenance of storage tanks and reservoirs, and continual maintenance of a positive water pressure in all parts of the distribution system; filtration and disinfection or disinfection of surface water and disinfection of ground water using strong oxidants such as chlorine, chlorine dioxide, or ozone; and the development and implementation of a department-approved wellhead protection program.

6. **Disinfectants.** The maximum residual disinfectant levels for disinfectants are as follows:

<u>DISINFECTANT</u>	<u>MAXIMUM RESIDUAL DISINFECTANT LEVEL IN MILLIGRAMS PER LITER</u>
<u>Chlorine</u>	<u>4.0 as free chlorine</u>
<u>Chloramines</u>	<u>4.0 as combined chlorine</u>
<u>Chlorine dioxide</u>	<u>0.8 as chlorine dioxide</u>

The department identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum residual disinfectant levels: control of treatment processes to reduce disinfectant demand and control of disinfection treatment processes to reduce disinfectant levels.

7. **Disinfection byproducts.** The maximum contaminant levels for total trihalomethanes, haloacetic acids five, bromate, and chlorite are as follows:

<u>DISINFECTION BYPRODUCT</u>	<u>MAXIMUM CONTAMINANT LEVEL IN MILLIGRAMS PER LITER</u>
<u>Total trihalomethanes</u>	<u>0.080</u>
<u>Haloacetic acids five</u>	<u>0.060</u>
<u>Bromate</u>	<u>0.010</u>
<u>Chlorite</u>	<u>1.0</u>

The department identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant level for total trihalomethanes and the maximum contaminant levels for haloacetic acids five, bromate, and chlorite: for total trihalomethanes and haloacetic acids five, enhanced coagulation, enhanced softening, or granular activated carbon ten with chlorine as the primary and residual disinfectant; for bromate, control of the ozone treatment process to reduce production of bromate; and for chlorite, control of treatment processes to reduce disinfectant demand and

control of disinfection treatment processes to reduce disinfectant levels. All best available technology and compliance shall be prescribed by the department and set forth under title 40 Code of Federal Regulations part 141.64.

8. **Disinfection byproduct precursors.** The department hereby identifies enhanced coagulation and enhanced softening as treatment techniques to control the level of disinfection byproduct precursors in drinking water treatment and distribution systems. The treatment techniques apply only to subpart H community and nontransient noncommunity water systems that use conventional treatment. Such systems shall be deemed to be in compliance with the treatment techniques if the requirements set forth under title 40 Code of Federal Regulations part 141, subpart L, are met.

9. **Confirmation sampling.** The department may require confirmation samples and average confirmation sample results with initial sample results to determine compliance. At the discretion of the department, sample results due to obvious monitoring errors may be deleted prior to determining compliance.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-07. Inorganic chemical sampling and monitoring requirements.

1. Sampling frequency for community and nontransient noncommunity water systems.

a. Inorganics excluding lead and copper. Community and nontransient noncommunity water systems shall conduct monitoring to determine compliance with the maximum contaminant levels for the inorganic chemicals, excluding lead and copper, as set forth under title 40 Code of Federal Regulations part 141, subpart C.

b. Lead and copper. Community and nontransient noncommunity water systems shall comply with the monitoring and treatment technique requirements for lead and copper set forth under title 40 Code of Federal Regulations part 141, subpart I.

c. Unregulated contaminants. Community and nontransient noncommunity water systems shall monitor for sulfate as set forth under title 40 Code of Federal Regulations part 141, subpart E.

d. Monitoring waivers. With the exception of arsenic, copper, lead, nitrate, and nitrite, the department may grant community and nontransient noncommunity water systems waivers from the monitoring requirements for the inorganic chemicals as set forth under title 40 Code of Federal Regulations part 141, subparts C and E. The department may issue monitoring waivers only if the conditions set forth under title 40 Code of Federal Regulations part 142, subpart B, are fully met.

2. Sampling frequency for transient noncommunity water systems. Transient noncommunity water systems shall conduct monitoring to determine compliance with the maximum contaminant levels for nitrate and nitrite as set forth under title 40 Code of Federal Regulations part 141, subpart C.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-08. Organic chemical sampling and monitoring requirements.

1. Volatile and nonvolatile synthetic organic chemicals.

- a. Coverage. Community and nontransient noncommunity water systems shall conduct monitoring to determine compliance with the maximum contaminant levels for the volatile and nonvolatile synthetic organic chemicals.
- b. Sampling frequency. The number and frequency of samples shall be as prescribed by the department and set forth under title 40 Code of Federal Regulations part 141, subpart C.
- c. Compliance. Compliance for each point that is sampled shall be prescribed by the department and set forth under title 40 Code of Federal Regulations part 141, subpart C.

2. Unregulated contaminants.

- a. Coverage. Community and nontransient noncommunity water systems shall monitor for unregulated organic contaminants.
- b. Monitoring requirements. Systems shall monitor for unregulated organic contaminants as set forth under title 40 Code of Federal Regulations part 141, subpart E.

3. Monitoring waivers. With the exception of acrylamide and epichlorohydrin, the department may grant community and nontransient noncommunity water systems waivers from the monitoring requirements for the organic chemicals as set forth under title 40 Code of Federal Regulations part 141, subpart C. The department may issue waivers only if the conditions set forth under title 40 Code of Federal Regulations part 142, subpart B, are fully met.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-08.1. Disinfectants, disinfectant residuals, disinfection byproducts, and disinfection byproduct precursors.

Public water systems shall conduct monitoring to determine compliance with maximum contaminant levels, maximum residual disinfectant levels, and treatment technique requirements for disinfectants, disinfectant residuals, disinfection byproducts, and disinfection byproduct precursors as set forth under title 40 Code of Federal Regulations part 141, subparts L and V. Public water systems shall also comply with the requirements for conducting an initial distribution system evaluation as set forth under title 40 Code of Federal Regulations part 141, subpart U.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-09. Filtration and disinfection treatment sampling and monitoring requirements.

1. Coverage. All subpart H systems shall conduct monitoring to determine compliance with the treatment technique requirements for filtration and disinfection.
2. Systems utilizing surface water sources. All subpart H systems that utilize surface water sources shall comply with the turbidity and residual disinfectant concentration sampling and monitoring requirements set forth under title 40 Code of Federal Regulations part 141, subpart H. Those systems serving ten thousand or more persons shall also comply with the disinfection profiling and benchmarking requirements set forth under title 40 Code of Federal Regulations part 141, subpart P. Those systems that serve ten thousand or more persons and provide conventional filtration treatment or direct filtration shall also comply with the individual filter sampling and monitoring requirements set forth under title 40 Code of Federal Regulations part 141, subpart P. Those systems serving fewer than ten thousand persons shall also comply with the requirements set forth under title 40 Code of Federal Regulations

part 141, subpart T and the Federal Register volume 69, number 124, Tuesday, June 29, 2004, pages 38850-38857.

3. Systems utilizing ground water sources under the direct influence of surface water. The following sampling and monitoring requirements apply to subpart H systems that utilize ground water sources deemed by the department to be under the direct influence of surface water:

a. All systems that provide filtration treatment shall comply with the turbidity and residual disinfectant concentration sampling and monitoring requirements set forth under title 40 Code of Federal Regulations part 141, subpart H. Those systems serving ten thousand or more persons shall also comply with the disinfection profiling and benchmarking requirements set forth under title 40 Code of Federal Regulations part 141, subpart P. Those systems that serve ten thousand or more persons and provide conventional filtration treatment or direct filtration shall also comply with the individual filter sampling and monitoring requirements set forth under title 40 Code of Federal Regulations part 141, subpart P. Those systems serving fewer than ten thousand persons shall also comply with the requirements set forth under title 40 Code of Federal Regulations part 141, subpart T and the Federal Register volume 69, number 124, Tuesday, June 29, 2004, pages 38850-38857.

b. All systems that do not provide filtration treatment shall comply with the filtration avoidance criteria and applicable disinfection sampling and monitoring requirements set forth under title 40 Code of Federal Regulations part 141, subpart H. Those systems serving ten thousand or more persons shall also comply with the disinfection profiling and benchmarking requirements and the filtration avoidance criteria set forth under title 40 Code of Federal Regulations part 141, subpart P. Those systems serving fewer than ten thousand persons shall also comply with the requirements set forth under title 40 Code of Federal Regulations part 141, subpart T and the Federal Register volume 69, number 124, Tuesday, June 29, 2004, pages 38850-38857.

4. Recycle provisions. All subpart H systems that utilize conventional filtration or direct filtration treatment and that recycle spent filter backwash water, thickener supernatant, or liquids from dewatering processes must meet the requirements as prescribed by the department and set forth under title 40 Code of Federal Regulations part 141.76, subpart H.

5. Enhanced treatment for cryptosporidium. All public water systems that utilize a surface water source or a ground water source under the direct influence of surface water shall meet the treatment technique requirements for cryptosporidium set forth under title 40 Code of Federal Regulations part 141, subpart W. These requirements are in addition to requirements found in title 40 Code of Federal Regulations part 141, subparts H, P, and T.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-10. Radioactivity monitoring and compliance.

Community water systems shall sample for gross alpha particle activity, radium-226, radium-228, and uranium. Monitoring frequency and compliance shall be as prescribed by the department and set forth under title 40 Code of Federal Regulations parts 141.26 and 141.66.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-11. Microbiological sampling and monitoring requirements.

1. Monitoring requirements.

- a. General. The provisions set forth under title 40 Code of Federal Regulations part 141, subpart Y, include both the maximum contaminant level and treatment technique requirements for all public water systems.
- b. Sample siting plans. All total coliform samples must be collected according to a written sample siting plan. Systems must develop a written sample siting plan that identifies the sample collection schedule and sampling sites that are representative of the water throughout the distribution system. This plan must be submitted to the department. The plan is subject to department review and revisions. Routine, repeat, and any sampling sites necessary to meet the requirements specified under title 40 Code of Federal Regulations part 141, subparts S and Y must be shown on the plan.
 - (1) The routine samples must be collected at regular time intervals throughout the month except that systems using ground water and serving four thousand nine hundred people or less may collect all of the required samples on a single day if the samples are collected from different sites.
 - (2) Systems must take at least the minimum number of required samples even if the system has had an E. coli maximum contaminant level violation or has exceeded the coliform treatment technique triggers as specified in title 40 Code of Federal Regulations part 141, subpart Y.
 - (3) Systems may take more than the minimum number of required routine samples and these results must be used to determine whether a coliform treatment technique trigger has been exceeded as specified in title 40 Code of Federal Regulations part 141, subpart Y. All routine and repeat total coliform samples must be taken in accordance with the existing sample siting plan.
 - (4) Repeat monitoring locations must be identified in the sample siting plan. The repeat samples must be collected at the following locations, unless the provisions of paragraphs (b)(5)(a) or (b)(5)(b) are met:
 - (a) At least one repeat sample must be collected from the original sampling site that was total coliform-positive.
 - (b) At least one repeat sample must be collected from a site within five service connections upstream of the original total coliform-positive sampling site.
 - (c) At least one repeat sample must be collected from a site within five service connections downstream of the original total coliform-positive sampling site.
 - (5) If the original total coliform-positive sampling site is at or one away from the end of the distribution system the department may waive the requirement to collect at least one repeat sample upstream or downstream of the original total coliform-positive sampling site. The system must still take all required repeat samples. However, the department may allow alternate sampling locations other than the upstream or downstream sites. Systems required to conduct triggered source water monitoring as set forth under title 40 Code of Federal Regulations part 141, subpart S, must take ground water source samples in addition to the required repeat sampling.
 - (a) Systems may elect to identify alternative fixed repeat locations or criteria for selecting repeat sampling sites on a case-by-case basis in a standard operating procedure. These repeat monitoring locations should be indicative of

a pathway for contamination of the distribution system. The department shall review the alternative repeat monitoring locations to verify and determine the extent of potential contamination of the distribution system at the specific alternative repeat monitoring location. The department shall review the alternative repeat monitoring locations as needed.

(b) Ground water systems which serve one thousand or fewer persons may propose repeat sampling locations that differentiate potential source water and distribution system contamination, such as by sampling at entry points to the distribution system. A ground water system with a single well required to conduct triggered source water monitoring may, with the approval of the department, take one of its repeat samples at the triggered source water monitoring location as set forth under title 40 Code of Federal Regulations part 141.402(a), subpart S. The system must demonstrate, to the department's satisfaction, the sample siting plan remains representative of water quality in the distribution system. If approved by the department, the system may use that sample result to meet the monitoring requirements as set forth under title 40 Code of Federal Regulations part 141.402(a), subpart S and under title 40 Code of Federal Regulations part 141.853(a)(5)(ii), subpart Y.

[1] If a repeat sample is taken at a triggered source water monitoring location and is positive for E. coli bacteria, the system has violated the E. coli maximum contaminant level and must also comply with title 40 Code of Federal Regulations part 141.402(a)(3), subpart S. If a system takes more than one repeat sample at the triggered source water monitoring location, the system may reduce the number of additional source water samples required under title 40 Code of Federal Regulations part 141.402(a)(3), subpart S by the number of repeat samples taken at that location that were not positive for E. coli bacteria.

[2] If more than one repeat sample is taken at a triggered source water monitoring location under title 40 Code of Federal Regulations part 141.402(a), subpart S and more than one repeat sample is positive for E. coli bacteria, the system has violated the E. coli maximum contaminant level and must also comply with title 40 Code of Federal Regulations part 141.403(a)(1), subpart S.

[3] If all repeat samples taken at a triggered source water monitoring location are E. coli-negative and a repeat sample that is taken at a monitoring location other than the triggered source water monitoring location is E. coli-positive, the system has violated the E. coli maximum contaminant level, but is not required to comply with title 40 Code of Federal Regulations part 141.402(a)(3), subpart S.

(6) Any alternative repeat monitoring locations or triggered source water monitoring locations as specified under title 40 Code of Federal Regulations part 141, subpart Y and under title 40 Code of Federal Regulations part 141, subpart S, will be reviewed and approved by the department. When using these sites, the system must demonstrate that the sample siting plan remains representative of the water quality in the distribution system. It may be determined that monitoring at the entry point to the distribution system, such as for undisinfected ground water systems, is an effective way to differentiate between potential source water and distribution system problems.

c. Special purpose samples. Special purpose samples, such as those taken to determine whether disinfection practices following pipe placement, replacement, or repair are sufficient, and samples invalidated by the department or laboratory, must not be used to determine whether the coliform treatment technique trigger has been exceeded as specified under title 40 Code of Federal Regulations part 141, subpart Y. Repeat samples taken in accordance with title 40 Code of Federal Regulations part 141, subpart Y are not considered special purpose samples and must be used to determine whether the coliform treatment technique trigger has been exceeded.

d. Invalidation of total coliform samples. Any total coliform-positive samples invalidated under title 40 Code of Federal Regulations part 141, subpart Y, do not count towards meeting the minimum monitoring requirements.

The department may invalidate a total coliform-positive sample only if one of the following conditions is met:

(1) The laboratory establishes the total coliform-positive result was caused by improper sample analysis.

(2) The department determines, based upon the results of the repeat samples as required under title 40 Code of Federal Regulations part 141, subpart Y, that the total coliform-positive sample resulted from a domestic or other nondistribution system problem. This provision applies only to systems that have more than one service connection and only if:

(a) All repeat samples collected at the same site as the original total coliform-positive sample are also total coliform-positive; and

(b) All repeat samples collected at a location other than the original total coliform-positive sample site are total coliform-negative.

(3) The department may determine that substantial grounds exist to indicate that the total coliform-positive result was due to a circumstance or condition not reflective of the water quality in the distribution system. The system must still collect all repeat samples and use them to determine whether a coliform treatment technique trigger has been exceeded as specified under title 40 Code of Federal Regulations part 141, subpart Y. To invalidate a total coliform-positive sample under this provision, the decision and supporting paperwork must be documented in writing and approved and signed by the supervisor of the state official who recommended the decision. The department shall make this document available to the environmental protection agency and to the public. The written documentation must state the specific cause of the total coliform-positive sample and what action the system has or will take to correct the problem. Invalidation may not be based solely on the grounds that all repeat samples are total coliform-negative.

A laboratory must invalidate a total coliform sample, unless total coliforms are detected, only if one of the following conditions is met:

(1) The sample produces a turbid culture in the absence of gas production using an analytical technique where gas formation is examined, such as the multiple-tube fermentation technique;

(2) The sample produces a turbid culture in the absence of an acid reaction in the presence-absence coliform test; or

(3) The sample exhibits confluent growth or produces colonies too numerous to count with an analytical technique using a membrane filter, such as membrane filter technique.

Systems must collect a replacement sample for total coliform bacteria analysis from the same location as the original sample if the original sample is invalidated by the department or laboratory. Replacement samples must be collected within twenty-four hours of notification by the department or laboratory and submitted for total coliform analysis. The system must continue to resample within twenty-four hours and have the sample analyzed for total coliforms until a valid result is obtained. The department may waive the twenty-four hour time limit on a case-by-case basis.

Criteria the department may implement for waiving the twenty-four hour sampling time frame includes the following:

(1) Laboratory closures; or

(2) Mail delivery issues.

2. Monitoring frequency.

- a. General. All public water systems shall sample for total coliform bacteria in each calendar month that the system provides water to the public. The number of samples required must be determined by the population served by the system. The population range of twenty-five to one thousand includes public water systems which have at least fifteen service connections, but that serve less than twenty-five persons.

<u>POPULATION SERVED</u>	<u>MINIMUM NUMBER OF SAMPLES PER MONTH</u>
<u>25 to 1,000</u>	<u>1</u>
<u>1,001 to 2,500</u>	<u>2</u>
<u>2,501 to 3,300</u>	<u>3</u>
<u>3,301 to 4,100</u>	<u>4</u>
<u>4,101 to 4,900</u>	<u>5</u>
<u>4,901 to 5,800</u>	<u>6</u>
<u>5,801 to 6,700</u>	<u>7</u>
<u>6,701 to 7,600</u>	<u>8</u>
<u>7,601 to 8,500</u>	<u>9</u>
<u>8,501 to 12,900</u>	<u>10</u>
<u>12,901 to 17,200</u>	<u>15</u>
<u>17,201 to 21,500</u>	<u>20</u>
<u>21,501 to 25,000</u>	<u>25</u>
<u>25,001 to 33,000</u>	<u>30</u>
<u>33,001 to 41,000</u>	<u>40</u>
<u>41,001 to 50,000</u>	<u>50</u>
<u>50,001 to 59,000</u>	<u>60</u>
<u>59,001 to 70,000</u>	<u>70</u>

<u>70,001 to 83,000</u>	<u>80</u>
<u>83,001 to 96,000</u>	<u>90</u>
<u>96,001 to 130,000</u>	<u>100</u>
<u>130,001 to 220,000</u>	<u>120</u>
<u>220,001 to 320,000</u>	<u>150</u>
<u>320,001 to 450,000</u>	<u>180</u>
<u>450,001 to 600,000</u>	<u>210</u>
<u>600,001 to 780,000</u>	<u>240</u>
<u>780,001 to 970,000</u>	<u>270</u>
<u>970,001 to 1,230,000</u>	<u>300</u>
<u>1,230,001 to 1,520,000</u>	<u>330</u>
<u>1,520,001 to 1,850,000</u>	<u>360</u>
<u>1,850,001 to 2,270,000</u>	<u>390</u>
<u>2,270,001 to 3,020,000</u>	<u>420</u>
<u>3,020,001 to 3,960,000</u>	<u>450</u>
<u>3,960,001 or more</u>	<u>480</u>

Following any total coliform-positive sample taken, systems must comply with the repeat monitoring requirements and E. coli analytical requirements as specified in title 40 Code of Federal Regulations part 141, subpart Y.

As set forth under title 40 Code of Federal Regulations part 141, subpart Y, once all routine and repeat monitoring for a calendar month has been completed, either the system or the department must determine whether any coliform treatment technique triggers have been exceeded. The system must complete any assessments associated to the triggers.

b. Seasonal noncommunity water systems. All seasonal noncommunity water systems, including systems that keep the distribution system pressurized year-round must complete a state-approved start-up procedure. Start-up procedures may include source and distribution system disinfection and collection and analysis of water samples for total coliform bacteria. The system must certify back to the department, within fourteen days of opening, the start-up procedure was completed.

c. Unfiltered subpart H systems. At the discretion of the department, systems that use surface water or ground water under the direct influence of surface water that do not filter in compliance with title 40 Code of Federal Regulations part 141, subparts H, P, T, and W must collect at least one sample for total coliform bacteria analysis near the first service connection each day that the turbidity level of the source water exceeds one nephelometric turbidity unit as specified in title 40 Code of Federal Regulations part 141, subpart H. The sample must be collected within twenty-four hours of the first exceedance unless the department determines that the system, due to logistical or other problems beyond its control, cannot have the sample analyzed within thirty hours of collection. The system must identify an alternative sample collection schedule. The sample result must be included in determining whether the coliform treatment technique trigger has been exceeded as specified under title 40 Code of Federal Regulations part 141, subpart Y.

3. Repeat monitoring and E. coli requirements.

- a. Repeat monitoring. If a routine sample collected under the requirements specified in title 40 Code of Federal Regulations part 141, subpart Y is total coliform-positive, a system must collect no fewer than a set of three repeat samples for total coliform bacteria analysis for each total coliform-positive routine sample. The system must collect the set of repeat samples within twenty-four hours of being notified by the department or the laboratory of the positive total coliform sample. The department may extend the twenty-four hour time limit on a case-by-case basis if the system has a logistical problem or other problems beyond the system's control. The department may choose criteria for the system to use in lieu of the case-by-case decisions. The department shall specify to the system the time frame for collecting the repeat samples. The department may not waive the requirement to collect repeat samples under these provisions.

All repeat samples must be collected on the same day except that the department may allow systems with a single service connection to:

- (1) Collect the required set of repeat samples over a three-day period; or
- (2) Collect a larger volume repeat sample in one or more sample containers of any size as long as the total volume collected is at least three hundred milliliters.

If one or more repeat samples in the set of required repeat samples is total coliform-positive, an additional set of repeat samples must be collected, within twenty-four hours unless the department extends the twenty-four hour time frame, meeting the requirements set forth under title 40 Code of Federal Regulations part 141, subpart Y. Additional sets of repeat samples must be collected until no total coliform bacteria are detected in one complete set or the department determines a coliform treatment technique trigger as specified in title 40 Code of Federal Regulations part 141, subpart Y, has been exceeded as a result of a repeat sample being total coliform-positive. If a coliform treatment technique trigger, as identified in this provision, has been exceeded as a result of a routine sample being total coliform-positive, the system only needs to conduct one round of repeat monitoring for each total coliform-positive routine sample. The system shall report to the department and notify the public when an E. coli maximum contaminant level is exceeded.

After a system collects a routine sample and before it learns the results of that sample, if the system collects another routine sample from within five adjacent service connections of the first sample, and the first sample, after analysis, is found to contain total coliform bacteria, the system may count the subsequent sample as a repeat sample instead of a routine sample.

All routine and repeat results taken under title 40 Code of Federal Regulations part 141, subpart Y, and not invalidated by the department or laboratory, must be used to determine whether a coliform treatment technique trigger, under the provision stated above, has been exceeded.

- b. E. coli testing. A system must analyze each total coliform-positive routine or repeat sample for E. coli bacteria. The system must notify the department by the end of the business day or by the end of the next business day if the department offices are closed of a positive E. coli bacteria result. The department or laboratory will not forgo E. coli testing on any total coliform-positive bacteria sample.

4. Assessment requirements.

- a. Level 1 assessment. A level 1 assessment must be performed as soon as possible when a system exceeds a level 1 treatment technique trigger as specified in title 40 Code of Federal Regulations part 141, subpart Y.

A level 1 assessment must be conducted by the water system operator or by a consultation, such as a phone interview or onsite visit, with the department.

When completing the level 1 assessment, the system must describe sanitary defects found, what corrective actions were completed, the proposed time frame for any remaining corrective actions that need to be addressed, and any other department directives that may be required. The system may note on the assessment form that no sanitary defects were identified.

Within thirty days after learning of a treatment technique trigger exceedance, the system must submit a completed level 1 assessment form to the department. The department may extend the thirty-day time frame on a case-by-case basis.

The department shall review the completed level 1 assessment and determine if the assessment is sufficient. The assessment form must include proposed time frames for any corrective actions not completed. If the department determines the level 1 assessment not to be sufficient, the department shall consult with the system. If the department requires any revisions to the level 1 assessment, the system must submit, to the department, a revised level 1 assessment form on an agreed-upon schedule that will not exceed thirty days from the date of the consultation.

The department shall review the completed assessment form and determine if the cause of the level 1 assessment was found. If the cause of the level 1 assessment was found, the system must describe how the problem was corrected. The department shall determine on a case-by-case basis the schedule for any corrective actions that need to be addressed.

- b. Level 2 assessment. A level 2 assessment must be performed as soon as possible when a system exceeds a level 2 treatment technique trigger as specified in title 40 Code of Federal Regulations part 141, subpart Y. The system must comply with any expedited actions or additional actions required by the department in the case of an E. coli maximum contaminant level violation. The department shall require a level 2 assessment be completed before a boil water order is lifted. Only the department may perform a level 2 assessment as a result of an E. coli maximum contaminant level violation.

A level 2 assessment will be conducted by the department or department-approved assessors. A system may conduct a level 2 assessment if the system has personnel with the certification or qualifications as specified by the department. A system must have personnel with an operator certification level one level higher than the water system being evaluated.

When completing the level 2 assessment, the system must describe sanitary defects found, what corrective actions were completed, the proposed time frame for any remaining corrective actions that need to be addressed, and any other department directives that may be required. The system may note on the assessment form that no sanitary defects were identified.

Within thirty days after learning of a treatment technique trigger exceedance, the system must submit a completed level 2 assessment form to the department. The department may extend the thirty-day time frame on a case-by-case basis.

The department shall review the completed level 2 assessment and determine if the assessment is sufficient. The assessment form must include proposed time frames for any corrective actions not completed. If the department determines the level 2 assessment not to be sufficient, the department shall consult with the system. If the department requires any revisions to the level 2 assessment, the system must submit, to

the department, a revised level 2 assessment form on an agreed-upon schedule that does not exceed thirty days from the date of the consultation.

The department shall review the completed assessment form and determine if the cause of the level 2 assessment was found. If the cause of the level 2 assessment was found, the system must describe how the problem was corrected. The department shall determine on a case-by-case basis the schedule for any corrective actions that need to be addressed.

c. Corrective actions. A system must correct any sanitary defects identified in either the level 1 or the level 2 assessment as specified under title 40 Code of Federal Regulations part 141, subpart Y. If any corrective actions cannot be corrected by the time the level 1 or the level 2 assessment form is required to be submitted to the department, the system must complete the corrective action(s) in accordance with an approved time frame decided upon during the consultation between the system and the department. The system must notify the department when each corrective action is completed.

d. Consultation. The department or the system may at any time during the assessment or corrective action phase request a consultation with the other entity to determine the appropriate actions that need to be taken. The system may consult with the department on all relevant information that may affect its ability to complete the corrective action, a proposed time frame scheduled for a corrective action, or any other department directives.

5. Sanitary surveys.

a. Frequency. All surface water and ground water under the direct influence of surface water systems shall undergo a sanitary survey no less frequently than once every year. All systems purchasing surface water or ground water under the direct influence of surface water shall undergo a sanitary survey no less frequently than once every three years.

Community ground water systems, including systems purchasing ground water, that are not providing at least four-log treatment of viruses and have not been determined by the department to exhibit outstanding performance shall undergo a sanitary survey no less frequently than once every three years. Community ground water systems, including systems purchasing ground water, which are providing at least four-log treatment of viruses or which have been determined by the department to exhibit outstanding performance shall undergo a sanitary survey no less frequently than once every five years.

Noncommunity ground water systems, including systems purchasing ground water, which are not providing at least four-log treatment of viruses shall undergo a sanitary survey no less frequently than once every three years. Noncommunity ground water systems, including systems purchasing ground water, that are providing at least four-log treatment of viruses shall undergo a sanitary survey no less frequent than once every five years.

The department will allow sanitary surveys to be phased. The components of the phased sanitary survey must be completed within the established frequency.

b. Responsibilities. Sanitary surveys must be performed by the department or an agent approved by the department. Information collected on sources of contamination within a delineated wellhead protection area during the development and implementation of an approved wellhead protection program, if available, must be considered when conducting sanitary surveys.

The department shall review the sanitary surveys for systems serving one thousand persons or less to determine if the system is taking the proper number of monthly total coliform bacteria samples.

Public water systems are responsible for ensuring that the required sanitary surveys are conducted.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-12. Monitoring of consecutive public water systems.

When a public water system supplies water to one or more other public water systems, the department may modify the monitoring requirements imposed to the extent that the interconnection of the systems justifies treating them as a single system for monitoring purposes. Any modified monitoring shall be conducted pursuant to a schedule specified by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-13. Public notification.

All public water systems are required to notify the public they serve when they fail to comply with the requirements of the national primary drinking water regulations (NPDWRs), fail to comply with the requirements of any schedule prescribed pursuant to a variance or exemption, or incur other situations posing a risk to public health. Owners and operators must follow the form, manner, frequency, and content of a public notice as prescribed by the department and set forth under title 40 Code of Federal Regulations part 141, subpart Q.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-13.1. Consumer confidence reports.

1. **Coverage and general requirements.** Community water systems shall deliver an annual consumer confidence report to all billing units or service connections provided drinking water by the system. The report shall contain information on the quality of the drinking water delivered by the system and characterize risks from exposure to contaminants detected in the drinking water. For the purpose of the report, detected means at or above the levels set forth under title 40 Code of Federal Regulations part 141, subpart O.

2. **Effective dates.** Existing community water systems shall deliver annual reports by July first of each year. Annual reports shall contain information collected by December thirty-first of the previous calendar year.

New community water systems shall deliver the first report by July first of the year after its first full calendar year in operation and subsequent reports by July first of each year. Community water systems that sell water to other community water systems shall provide applicable information to the buyer systems as set forth under title 40 Code of Federal Regulations part 141, subpart O.

3. **Content.** Each report shall contain the information set forth under title 40 Code of Federal Regulations part 141, subpart O.

4. **Report delivery.** Community water systems shall comply with the report delivery requirements set forth under title 40 Code of Federal Regulations part 141, subpart O.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-14. Reporting and recordkeeping requirements.

1. **Reporting requirements for systems.** Except when a shorter reporting period is specified, the system shall report to the department the result of any test, measurement, or analysis required within the first ten days following the month in which the results are received or the first ten days following the end of the required monitoring period as stipulated by the department, whichever of these is shorter.

The system shall notify the department within forty-eight hours of the failure to comply with any primary drinking water regulations including failure to comply with monitoring requirements, except that failure to comply with the maximum contaminant levels for total coliform bacteria must be reported to the department no later than the end of the next business day after the system learns of the violation.

Community water systems required to comply with title 40 Code of Federal Regulations part 141, subpart G shall report the results of all analyses to the department within thirty days of the system's receipt of the results. Subpart H systems shall comply with the reporting requirements for filtration and disinfection treatment set forth under title 40 Code of Federal Regulations part 141, subparts H, P, T, and W. Community and nontransient noncommunity water systems shall comply with the reporting requirements for lead and copper set forth under title 40 Code of Federal Regulations part 141, subpart I. Community, nontransient noncommunity, and transient noncommunity water systems using chlorine dioxide shall comply with the applicable reporting requirements for disinfectants, disinfection byproducts, and disinfection byproduct precursors set forth under title 40 Code of Federal Regulations part 141, subparts L, U, and V. Community, nontransient noncommunity, and transient noncommunity water systems shall comply with the applicable reporting requirements for total coliform bacteria set forth under title 40 Code of Federal Regulations part 141, subpart Y.

The system is not required to report analytical results to the department in cases when the department performed the analysis.

Within ten days of completing the public notification requirements set forth under title 40 Code of Federal Regulations part 141, subpart Q for the initial public notice and any repeat notices, public water systems must submit to the department a certification that the system has fully complied with the public notification regulations. The public water system must include with this certification a representative copy of each type of notice distributed, published, posted, and made available to persons served by the system and to the media.

The system shall submit to the department, within the time stated in the request, copies of any records required to be maintained by the department or copies of any documents then in existence which the department is entitled to inspect under the provisions of state law.

2. **Reporting requirements for the department.** The department shall comply with the applicable reporting requirements set forth under title 40 Code of Federal Regulations part 142.15.
3. **Recordkeeping requirements for systems.** Subpart H systems shall comply with the recordkeeping requirements for filtration and disinfection treatment set forth under title 40 Code of Federal Regulations part 141, subparts H, P, T, and W. Community and nontransient

noncommunity water systems shall comply with the recordkeeping requirements for lead and copper set forth under title 40 Code of Federal Regulations part 141, subpart I. Community, nontransient noncommunity, and transient noncommunity water systems using chlorine dioxide shall comply with the applicable recordkeeping requirements for disinfectants, disinfection byproducts, and disinfection byproduct precursors set forth under title 40 Code of Federal Regulations part 141, subparts L, U, and V. Community, nontransient noncommunity, and transient noncommunity water systems shall comply with the applicable recordkeeping requirements for total coliform bacteria set forth under title 40 Code of Federal Regulations part 141, subpart Y. Community water systems shall retain copies of consumer confidence reports for no less than three years.

All public water systems shall retain on their premises or at a convenient location near their premises, the following additional records to document compliance with the remaining provisions of this chapter:

- a. Bacteriological and chemical analyses. Records of bacteriological analyses and turbidity analyses shall be kept for not less than five years. Records of chemical analyses shall be kept for not less than ten years. Actual laboratory reports may be kept, or data may be transferred to tabular summaries, provided that the following information is included:
 - (1) The date, place, and time of sampling and the name of the person who collected the sample;
 - (2) Identification of the sample as to whether it was a routine distribution system sample, check sample, or raw or other special purpose sample;
 - (3) Date of analysis;
 - (4) Laboratory and person responsible for performing analysis;
 - (5) The analytical technique or method used; and
 - (6) The result of the analysis.
- b. Corrective actions taken. Records of action taken by the system to correct violations shall be kept for a period of not less than three years after the last action taken with respect to the particular violation involved. Assessment forms and documentation showing a corrective action, as a result of an assessment, was completed must be kept for a period of not less than five years after completion of the assessment or corrective action.
- c. Reports and communications. Copies of any written reports, summaries, or communications relating to sanitary surveys of the system conducted by the system itself, by a private consultant, or by any local, state, or federal agency, shall be kept for a period not less than ten years after completion of the sanitary survey involved.
- d. Variances and exemptions. Records concerning a variance or exemption granted to the system shall be kept for a period ending not less than five years following the expiration of such variance or exemption.
- e. Public notices and certifications. Copies of public notices issued pursuant to title 40 Code of Federal Regulations part 141, subpart Q and certifications made to the department pursuant to title 40 Code of Federal Regulations part 141.31 must be kept for three years after issuance.
- f. Copies of monitoring plans developed pursuant to this part shall be kept for the same period of time as the records of analyses taken under the plan are required to be kept under subdivision a, except as specified elsewhere in this part.

4. **Recordkeeping requirements for the department.** The department shall comply with the applicable recordkeeping requirements set forth under title 40 Code of Federal Regulations part 142.14.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03, 61-28.1-05; S.L. 2017, ch. 199, § 69

33.1-17-01-15. Variances and exemptions.

1. **General authority and limitations.** The department may grant a variance to a public water system from any treatment technique requirement except the treatment technique requirements for filtration and disinfection set forth under title 40 Code of Federal Regulations part 141, subpart H. The department may grant an exemption to a public water system from any treatment technique requirement except the disinfection treatment requirements set forth under title 40 Code of Federal Regulations part 141, subpart H.

The department may grant a variance or an exemption to a public water system from any maximum contaminant level except the maximum contaminant level for E. coli bacteria.

2. **Variances.** Variances for public water systems serving ten thousand or more persons shall comply with section 1415(a) of the federal Safe Drinking Water Act [42 U.S.C. 300g-4(a)]. Variances for public water systems serving fewer than ten thousand persons shall comply with one of the following: section 1415(a) of the federal Safe Drinking Water Act [42 U.S.C. 300g-4(a)]; or section 1415(e) of the federal Safe Drinking Water Act [42 U.S.C. 300g-4(e)] and title 40 Code of Federal Regulations part 142, subpart K.

In granting variances pursuant to section 1415(a) of the federal Safe Drinking Water Act [42 U.S.C. 300g-4(a)], the department identifies as best technology, treatment techniques, or other means generally available for achieving compliance with the maximum contaminant levels and treatment technique requirements those set forth under title 40 Code of Federal Regulations part 142, subpart G. In granting variances pursuant to section 1415(e) of the federal Safe Drinking Water Act [42 U.S.C. 300g-4(e)], the department identifies as acceptable technologies those established under section 1412(b)(15) of the federal Safe Drinking Water Act [42 U.S.C. 300g-1(b)(15)].

3. **Exemptions.** Exemptions for public water systems shall comply with section 1416 of the federal Safe Drinking Water Act [42 U.S.C. 300g-5] and title 40 Code of Federal Regulations part 142, subpart G.
4. **Procedures.** Actions to consider a variance or exemption may be initiated by the department or by a public water system through a written request to the department. The department shall act on any written variance or exemption request submitted by a public water system within ninety days of receipt of the request. The department shall provide notice and opportunity for a public hearing before granting any variance and before prescribing a compliance schedule for any variance or exemption.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03, 61-28.1-05; S.L. 2017, ch. 199, § 69

33.1-17-01-16. Siting.

All new, altered, or expanded public water systems including wells and treatment and storage facilities necessary for the continuous operation of the system shall be located so as to:

1. Minimize potential breakdown as a result of floods, fires, or other disasters;

2. Except for intake structures, not be within the floodplain of a one hundred-year flood;
3. Prevent contamination of the water supply by existing sources of pollution; and
4. Provide sufficient property for water supply facilities to allow proper operation, maintenance, replacement, and storage of system components.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-04

33.1-17-01-17. Plans and specifications.

1. **Submission of plans.** Plans and specifications shall be prepared for all new public water systems and for alterations or extensions to existing systems. Such plans and specifications, together with other pertinent information, shall be submitted to the department for review and approval prior to awarding of contracts. Such plans and specifications shall:
 - a. Be submitted in triplicate and in sufficient time to permit at least a two-week period for review and comment and with additional time to incorporate changes, if required;
 - b. Be presented in legible form and of sufficient scale to facilitate review;
 - c. Include supplemental information pertaining to basis of design, description of existing facilities, appraisal of future needs and such other information normally included in an engineer's report, as may be requested by the department; and
 - d. Be replaced by "as-built" plans when change orders result in major changes in the facilities.
2. **Submission of revised plans, change orders, and addendums.** Any deviation from the approved plans and specifications, or use of alternate equipment, which would affect capacity, hydraulic conditions, operating units, the functioning of the water treatment process or distribution system, or the quality of water to be delivered will require department approval prior to contract for alternate equipment or any construction which is affected by such change. Revised plans and specifications, change orders, or addendums, along with pertinent supplemental information, are to be submitted to the department for review and approval.
3. **Approval of plans.** Plans and specifications reviewed by the department will be approved only when such plans and specifications fully meet and comply with existing statutes and such standards and guidelines as have been or may be established by the department.
4. **Compliance with plan approval.** Systems shall be constructed in accordance with the plans, specifications, and applicable change orders approved by the department. The department reserves the right to remove from service all or any part of a system found not to be constructed in accordance with approved plans, specifications, or change orders, or for which plans, specifications, or change orders were not approved.
5. **Operation and maintenance manual.** An operation and maintenance manual shall be prepared and supplied by the appropriate party to new or modified water supply facilities or systems. A copy of this manual shall be submitted to the department for review prior to initial operation of the new or modified facility or system.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03, 61-28.1-04; S.L. 2017, ch. 199, § 69

33.1-17-01-18. Operation and maintenance.

Public water systems shall be supervised by competent personnel and modified, operated, and maintained in accordance with guidelines that may be developed or amended by the department. North Dakota Century Code chapter 23.1-07 required certified operators for all public water systems except those that serve other than year-round residents and meet all of the following conditions:

1. The water supply is obtained solely from ground water sources that the department has determined are not under the direct influence of surface water.
2. Treatment, if provided, consists strictly of disinfection, fluoridation, sequestration, corrosion control, or other processes that involve simple chemical addition and minor operational control.
3. The water supply system is not required by the federal Safe Drinking Water Act or its implementing regulations to be operated by qualified personnel.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-19. Protection of public water systems.

1. Cross-connection control.

- a. Cross connections are prohibited except when and where, as approved by the authority having jurisdiction, suitable protective devices are installed, tested, and maintained to ensure proper operation on a continuing basis.
- b. A system shall be designed, installed, and maintained in such a manner as to prevent nonpotable liquids, solids, or gases from being introduced into the water through cross connections or any other piping connections to the system.

2. Interconnections.

- a. Interconnection between two or more systems shall be permitted only with the written approval of the department.
- b. Interconnection between a nonpublic and public water system shall not be permitted unless specifically approved in writing by the department.

3. Return of used water prohibited. Water used for cooling, heating, or other purposes shall not be returned to the system. Such water may be discharged into an approved drainage system through an airgap or may be used for nonpotable purposes.

4. Products in contact with water. All products that may come into contact with water intended for use in a public water system must meet American national standards institute/national sanitation foundation international standards 60 and 61. Suppliers of water for public water systems may not willfully introduce or permit the introduction of a product into the public water system which has not first been determined to meet these standards. At the discretion of the department, suppliers of water for public water systems shall compile and maintain on file for inspection by the department a list of all products used by the system. Prior to using a product not on the list, suppliers of water for public water systems shall either determine that the product meets appropriate American national standards institute/national sanitation foundation international standards or notify the department of the type, name, and manufacturer of the product. A product will be considered as meeting these standards if so certified by an

organization accredited by the American national standards institute to test and certify such products.

5. **Used materials.** Containers, piping, or materials which have been used for any purpose other than conveying potable water shall not be used.

6. **Water storage structures.** Finished water storage structures shall have a watertight cover which excludes the entrance of birds, animals, insects, and excessive dust. Public water systems shall not construct uncovered finished water storage facilities.

7. **Turbidity control.** Subpart H systems that provide conventional filtration treatment or direct filtration shall develop individual filter profiles, perform individual filter self-assessments, and arrange for the completion of comprehensive performance evaluations as set forth under title 40 Code of Federal Regulations subparts P and T. At the direction of the department, systems that are required to conduct a comprehensive performance evaluation shall arrange for the completion of a full composite correction program and implement followup recommendations that result from the composite correction program. Comprehensive performance evaluations and composite correction programs shall be conducted by a party other than the system which is approved by the department.

History: Effective January 1, 2019.

General Authority: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28.1-03; S.L. 2017, ch. 199, § 69

33.1-17-01-20. Ground water system - Source requirements.

In addition to the remaining provisions of this chapter, public water systems utilizing ground water sources shall comply with the monitoring and treatment technique requirements and undergo sanitary surveys as set forth under title 40 Code of Federal Regulations part 141, subpart S. This applies to public water systems that are consecutive users but not to subpart H systems and systems that combine all of their ground water with surface water prior to treatment.

33.1-18-01-01. Responsibility.

It is the responsibility of any person, partnership, association, or corporation engaged in the business of construction of water wells, the installation of water well pumps, pitless units, or other appurtenances, or both, or drilling of geothermal systems, to comply within the meaning of this chapter pursuant to North Dakota Century Code chapters 23.1-01, 43-35, and 61-28.1.

A person, partnership, association, or corporation may not engage in the business of water well construction, the installation of water well pumps, pitless units, or other appurtenances, or both, or drilling of geothermal systems, unless a certified water well contractor, water well pump and pitless unit installer, or geothermal system driller is in charge.

The certified water well contractor, water well pump and pitless installer, or geothermal system driller in charge shall provide inspection and supervision of all water well construction activities, installation of water well pumps, pitless units, or other appurtenances, or both, or drilling of geothermal systems.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19; S.L. 2017, ch. 199, § 45

33.1-18-01-02. Definitions.

For the purpose of this chapter, the following definitions shall apply:

1. "Abandoned well" means a well whose use has been permanently discontinued.
2. "Annular space" means the opening between a well hole excavation and the well casing or curb, or between a casing pipe and a liner pipe.
3. "Appurtenances" means valves, meters, taps, gauges, or other devices required for adequate control or measurement of the well output.

4. "Aquifer" means a water-bearing formation that transmits water in sufficient quantities to supply a well.
5. "Casing" shall mean the pipe installed in the drill hole to give unobstructed access to the water-bearing formation.
6. "Constructing" a well includes boring, digging, drilling, or excavation in installing casings, well screens, and other appurtenances.
7. "Contamination" means alteration of the physical, chemical, or biological quality of the water so that it is harmful or potentially injurious to the health of the users or for the intended use of the water.
8. "Department" means the department of environmental quality.
9. "Disinfection" means the killing of infectious agents outside the body by chemical or physical means.
10. "Drawdown" means the extent of lowering the water surface in a well and of the water table adjacent to the well, resulting from the discharge of water from the well by pumping or natural flow.
11. "Drilling" means making any opening in the earth's surface by drilling, boring, or otherwise, and includes inserting any object into any part of the earth's surface for the purpose of obtaining an underground water supply except drainage tiles or similar devices designed primarily to improve land by removing excess water.
12. "Established ground surface" means the permanent elevation of the surface of the ground at the site of the well.
13. "Filter pack" means a clean sand or sand and gravel material of selected grain size and gradation which is installed in the annular space between a well hole excavation and the outside of the well screen for the purpose of preventing formation material from entering the screen.
14. "Geothermal system driller" means any person who is certified to conduct the business of drilling, boring, or excavating for the purpose of constructing or substantially modifying a geothermal energy extraction facility.
15. "Ground water source" means all water obtained from dug, drilled, bored, or driven well, infiltration lines, and springs.
16. "Grout" or "grouting material" means any stable impervious bonding material which is capable of providing a watertight seal between the casing and the formation throughout the depth required to protect against objectionable matter and which is reasonably free of shrinkage.
17. "Liner pipe" means a pipe installed inside a completed and cased well for the purpose of sealing off undesirable water or for repairing ruptured or punctured casing or screens.
18. "Pitless adapter" means a commercially manufactured device designed for attachment to a well casing and is so constructed as to prevent the entrance of contaminants into the well or potable water supply, conduct water from the well below the frostline to prevent freezing, and provide full access to the water system components within the well.
19. "Pitless unit" means a factory-assembled device with cap which extends the upper end of a well casing to above grade and is so constructed as to prevent the entrance of contaminants

into the well or potable water supply, conduct water from the well below the frostline to prevent freezing, and provide full access to the well and the water system components within the well.

20. "Potable water" means water free from impurities in amounts sufficient to cause disease or harmful physiological effects, with the bacteriological and chemical quality conforming to applicable standards.
21. "Pressure tank" or "hydropneumatic tank" means a closed water storage container constructed to operate under a designed pressure rating to modulate the water system pressure within a selected range.
22. "Private water supply" means one that is not for public use.
23. "Public water supply" means a water supply connected to at least fifteen service connections or regularly serves an average of twenty-five persons daily, sixty days out of the year.
24. "Pumps" and "pumping equipment" means any equipment or materials utilized or intended for use in withdrawing or obtaining ground water for any use, including, without limitation, seals and tanks, together with fittings and controls.
25. "Repair" means any action which results in a breaking or opening of the well seal or replacement of a pump.
26. "Shall" means mandatory compliance with all aspects of the rules and regulations for water well construction and water well pump installation.
27. "Should" means provisions which are not mandatory but which are recommended or desirable procedures or methods. Deviation from the rules and regulations for water well construction and water well pump installation is subject to individual consideration.
28. "Static water level" means the elevation of the surface of the water in a well when no water is being discharged therefrom.
29. "Water well contractor" means any person who is certified to conduct the business of well drilling under the provisions of North Dakota Century Code chapter 43-35.
30. "Water well pump and pitless unit installer" means any person who is certified to conduct the business of installing water well pumps and pitless units under the provisions of North Dakota Century Code chapter 43-35.
31. "Well development" means the general process to achieve sand-free water at the highest possible well capacity.
32. "Well seal" means an approved arrangement or device used to cap a well or to establish and maintain a junction between the casing or curbing of a well and the piping or equipment installed therein, the purpose or function of which is to prevent pollutants from entering the well at the upper terminal.
33. "Well vent" means an outlet at the upper terminal of the well casing to allow equalization of air pressure in the well and escape of toxic or inflammable gases.
34. "Wells" means any artificial opening or artificially altered natural opening however made by which ground water is sought or through which ground water flows under natural pressure or is artificially withdrawn; provided, that this definition does not include a natural spring, stock ponds, or holes drilled for the purpose of exploration for production of oil, gas, gravel, or other minerals.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-03. Plans and specifications.

No public water well shall be constructed or modified, or water well pump, pitless unit, or other appurtenances be installed without prior approval of plans and specifications. Plans and specifications shall be submitted to the department for review prior to construction. Note chapter 33.1-03-08. The plans and specifications shall include:

1. Proposed well location.
2. Location and depths of existing wells, location of septic tanks, absorption fields, sewers, barnyards, feedlots, landfills, and high water marks of lakes or streams with a radius of five hundred feet [152.4 meters].
3. Elevation of highest known flood levels, upper terminal of well casing, floor of structure, and outside grade.
4. A schematic drawing of the well construction showing diameter and depth of drill holes, casing and liner diameters and depths, grouting depths, and other details as necessary to completely describe the proposed well.
5. Certification that the state engineer, state water commission, has issued a conditional water permit for the beneficial use of water from the well to be constructed, if such a permit is required pursuant to North Dakota Century Code section 61-04-02.

Routine maintenance and repair does not require submission of plans and specifications.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19; S.L. 2017, ch. 199, § 45

33.1-18-01-04. Location of wells.

1. **Relation to sources of contamination.** Determination of minimum lateral distances of a well from potential sources of contamination, involves evaluation of the character and location of the sources of contamination, types of geologic formations, depth to the aquifer, effect on ground water movement by well pumping, and possibilities of flooding of the site by surface waters.

Based on experience, accepted minimum lateral distances for some common sources of pollution with respect to a well have been established. The lack of specific distances for other possible sources of contamination such as refuse disposal sites, excavations, waste treatment facilities, buried oil and gasoline storage tanks, improperly constructed wells and cisterns, etc., does not minimize their potential hazards.

The site should be on high ground and be:

- a. At least one hundred feet [30.48 meters] (fifty feet [15.24 meters] for private wells) from privy pits, cesspools, septic tanks, absorption fields, barnyards, feedlots, high water marks of lakes, streams, sloughs, ponds, etc., when well is constructed in unconsolidated soils with filtering properties.
- b. At least thirty feet [9.14 meters] from sewerlines.
- c. At least ten feet [3.05 meters] from basements or pits.
- d. At least twenty feet [6.1 meters] from overhead powerlines and other hazardous devices. Note section 24-02-01-03.

Greater distances are always preferable and often necessary, depending upon soil conditions. When wells are constructed in consolidated formations, care must be taken in locating the wells as pollutants have traveled great distances in such formations.

2. **Relation to buildings.** When a well must be located adjacent to a building, it shall be located so that the centerline of the well extended vertically will clear any projection from the building by not less than two feet [60.96 centimeters].

Every well shall be reasonably accessible for proper repair, cleaning, testing, inspection, or other attention as may be necessary.

The well casing shall not extend through nor shall the top of the well casing or any other well opening terminate in the basement of any building or in a pit, room, or other space which is below ground surface.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19; S.L. 2017, ch. 199, § 1

33.1-18-01-05. Protection of ground water sources.

1. **Minimum protective depths of wells.** All wells shall be watertight to exclude contamination. Wells shall be designed to seal off formations that are or may be contaminated or undesirable.

Unless approved otherwise by the department, the annular space between a well hole excavation and the outside of the well casing shall be filled with neat cement grout, high-solids bentonite clay grout, bentonite chips, or bentonite tablets at least one and one-half inches [3.81 centimeters] in thickness from a depth of not less than thirty feet [9.1 meters] to the ground surface or the upper end of the well casing if a pitless unit or adapter is installed. Wells with a depth of thirty feet [9.1 meters] or less shall be grouted from within two feet [60.96 centimeters] of the top of the well screen to the ground surface or the upper end of the well casing if a pitless unit or adapter is installed. Greater depths are preferable and may be required for specific installations as determined by review of the plans and specifications.

The annular space of wells constructed in unconsolidated formations without overlying confining beds and static water levels less than thirty feet [9.1 meters] below the ground surface shall be filled with neat cement grout, high-solids bentonite clay grout, bentonite chips, or bentonite tablets at least one and one-half inches [3.81 centimeters] in thickness from the static water level or a depth of not less than ten feet [3.0 meters], whichever is greater, to the ground surface or the upper end of the well casing if a pitless unit or adapter is installed.

Driven well casing may, when conditions warrant, be installed without grouting.

2. **Required protection for various sources.**

a. Radial collector wells. The location of all caisson construction joints and porthole assemblies shall be indicated. The caisson wall shall be substantially reinforced. Radial collectors shall be in areas and at depths approved by the department. Provisions shall be made to assure minimum vertical rise. The top of the caisson shall be covered with a watertight floor. All openings in the floor shall be curbed and protected from entrance of foreign material. Pump discharge piping shall not be placed through caisson walls.

b. Dug or bored wells. Dug or bored wells greater than two feet [60.96 centimeters] in diameter shall be developed only where geological conditions preclude the development of a satisfactory drilled well.

Every dug or bored well shall have a continuous watertight casing. The section of casing in the producing zone serving as the well screen shall readily admit water and be structurally sound to withstand external pressures.

The open space between the excavation and the installed casing shall be sealed with neat cement grout, high-solids bentonite clay grout, bentonite chips, or bentonite tablets.

The watertight casing shall extend at least twelve inches [30.48 centimeters] above finished ground surface. A cover slab at least four inches [10.16 centimeters] thick, adequately reinforced and having a diameter sufficient to overlap the lining by two inches [5.08 centimeters] shall be provided. The slab shall be constructed without joints.

The top of the slab shall be sloped to drain to all sides and a watertight joint made where the slab rests on the well casing using cement mortar or a mastic compound.

A manhole, if installed, shall be provided with a curb cast in the slab and extending at least four to six inches [10.16 to 15.24 centimeters] above the slab. The manhole shall

have a watertight overlapping cover extending down around the curb by at least two inches [5.08 centimeters].

Adequate sized pipe sleeve or sleeves shall be cast in place in the slab to accommodate the type of pump or pump piping proposed for the well.

c. Infiltration wells. Infiltration wells may be considered where geological conditions preclude possibility of developing an acceptable drilled well. The area around the well shall be under the control of the water purveyor for a distance acceptable to or required by the department. The flow in the lines shall be by gravity to a collecting well. The water shall be continuously chlorinated to assure bacterial purity.

d. Flowing wells. The construction of flowing wells shall be in compliance with North Dakota Century Code chapter 61-20.

The construction of flowing wells shall be such that the flow from them can be controlled. Well casing shall be installed, and the annular space grouted with neat cement to form a tight seal. The neat cement grout shall extend upward from within twenty feet [6.1 meters] of the top of the aquifer to the ground surface or the upper end of the well casing if a pitless unit or adapter is installed.

Well casings shall be joined in a watertight manner. Flow control should consist of valved pipe connections, watertight pump connections, or receiving reservoirs set at an elevation corresponding to the artesian head.

e. Existing wells. The department shall be consulted for requirements concerning the reconstruction of existing wells.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-06. General well construction requirements.

1. **Construction water.** Water used in the drilling process shall be obtained from a source which will not result in contamination of the well. Chlorination of the water with an initial dosage of not less than fifty milligrams per liter (one gallon [3.78 liters] of laundry bleach or 0.6 pounds [1.32 kilograms] of calcium hypochlorite per one thousand gallons [3.78 kiloliters] of drilling water) is recommended.

Waters from surface sources must be chlorinated with a minimum dosage of one hundred milligrams per liter (two gallons [7.56 liters] of laundry bleach or 1.2 pounds [2.64 kilograms] of calcium hypochlorite per one thousand gallons [3.78 kiloliters] of drilling water).

2. Ferrous well casing.

a. **General.** Casing and liner pipe of wrought iron or steel through ten inches [25.4 centimeters] in diameter shall be prime pipe meeting current American society for testing and materials schedule 40, or equivalent specifications. Larger diameter pipes shall have a minimum wall thickness of three hundred seventy-five thousandths of an inch [0.952 centimeter].

All casing shall have additional thickness and weight if standard thickness is not considered sufficient to assure reasonable life expectancy of the well or be capable of withstanding forces to which they are subjected.

b. Drive shoe. Pipe that is to be driven shall be equipped with a drive shoe or other device approved by the department.

c. Joints. Casing and liner pipe joints shall be properly welded or threaded.

3. Nonferrous well casing.

a. General. Pipe other than wrought iron or steel must be adaptable to the stresses to which they will be subjected during and after installation and to the corrosiveness of the water.

b. Thermoplastic well casing. Thermoplastic well casing shall conform with American society for testing and materials specification F480-81 or latest revision as follows:

(1) Minimum standard dimension ratio shall be twenty-one for casings less than sixteen inches [40.64 centimeters] in diameter. Minimum standard dimension ratio shall be twenty-six for casings sixteen inches [40.64 centimeters] in diameter or larger. Casings with a lower standard dimension ratio (additional thickness) must be used when the minimum standard dimension ratio is not capable of withstanding the stresses encountered during and after installation.

(2) Minimum pipe stiffness shall be two hundred twenty-four pounds/foot [inch . inch] (kiloneutron/[meter . meter]) when tested according to section 5.4.1 of American society for testing and materials specification F480.

(3) All casing five inches [12.7 centimeters] and larger shall be tested for impact resistance and meet or exceed IC-1 impact classification according to section 6.5 and table 6 of American society for testing and materials specification F480.

c. Other materials. Other well casing materials that may be proposed shall carry the seal of the national sanitation foundation and be approved in writing by the department prior to installation.

4. Packers. Packers shall be of a material that will not impart taste, odors, toxic substances, or bacterial contamination to the water in the well.

5. Screens. Screens must be constructed of corrosion-resistant material and sufficiently strong to withstand stresses encountered during and after installation. Screen slot openings, screen length, and screen diameter should be sized and designed to provide sufficient open area consistent with strength requirements to transmit sand-free water at a capacity at least equal to one and one-half times the capacity of water anticipated. Screen slot size should be based on sieve analysis of formation samples.

Screens should be installed so that exposure above pumping level will not occur. A screen must be attached or connected to the casing by a threaded, solvent-welded, or welded joint or by threaded fasteners or a nontoxic packer. Solvent-welded joints should not impart taste, odors, toxic substances, or bacterial contamination to the water in the well.

6. Filter pack. Material used as a filter pack shall be sand or sand and gravel that is free of foreign material, properly sized, washed, and then disinfected prior to or during placement. Provisions for prevention of leakage of grout into the filter pack or screen shall be provided.

7. Well development. Every well shall be developed prior to yield and drawdown testing. Well development includes procedures to apply physical energy to the screen and aquifer formation adjacent to the well. After development, the well should produce sand-free water at a capacity at least equal to one and one-half times the capacity of water anticipated.

8. **Yield and drawdown test.** Every well should be tested for yield and drawdown. The test method to be followed should be clearly outlined in the specifications. The test pump should have a maximum capacity at least equal to one and one-half times the capacity of water anticipated. The test pump should be able to operate continuously until the rate of decline of the pumping water level has stabilized. Test data to be recorded should include:

- a. Static water level.
- b. Pumping rate.
- c. Drawdown during test.
- d. Recovery water levels.
- e. Depth of pump setting.

Duration of the test shall be determined with due consideration given to pumping of sand, clarity of water pumped, and the obtaining of a representative sample of water for chemical analysis.

9. **Chemical conditioning.** When chemical treatment of a public well is proposed, the method of conditioning shall be included in the specifications. The equipment, chemicals, and inhibitors to be used, the method of testing for chemical residuals, and the disposal of waste shall be indicated.

10. **Grouting requirements.**

a. Neat cement grout. The mixture should consist of one sack of cement (ninety-four pounds [42.64 kilograms]) to not more than six gallons [22.71 liters] of clean water. Bentonite additives up to five pounds [2.27 kilograms] per sack of cement to increase fluidity may be used. Pozzuolana additives up to thirty-three pounds [14.97 kilograms] per sack of cement may be used.

b. Heat of hydration. Care must be used when grouting thermoplastic well casing with neat cement grout. Heat caused by hydration during curing of the cement may cause weakening of the well casing. High peak temperatures may be minimized by adding sand or bentonite clay to the neat cement grout mixture to increase the curing time. The amount of sand or bentonite clay added to the neat cement grout may not exceed five pounds [2.27 kilograms] per sack of cement.

c. High-solids bentonite clay grout. The mixture must consist of not less than three pounds [1.36 kilograms] of bentonite clay per gallon [3.79 liters] of clean water.

High-solids bentonite clay grout, bentonite chips, or bentonite tablets must be commercially prepared specifically for the purpose of sealing water wells. The use of bentonite drilling fluids as a grouting material is not permitted.

d. Grouting guides. Casing that is to be grouted in the drill hole or annular opening shall be provided with sufficient guides welded to the casing to permit the unobstructed flow and uniform thickness of grout.

e. Grout application. Grout material must be positively and accurately placed to fill all voids. All grouting should be performed by adding the mixture, from the bottom of the annular space upward, in one continuous operation, until the annular space is filled. Sufficient annular opening shall be provided to permit a minimum of one and one-half inches [3.81 centimeters] of grout around the casing, including couplings, if used.

Bentonite chips or tablets may be added from the top of the annular space to a maximum depth of thirty feet [9.1 meters] provided the grout material is positively and accurately placed to fill all voids and hydrated after placement.

11. **Plumbness and alignment.** Every well shall be tested for plumbness and alignment upon completion of construction. The casing shall be sufficiently plumb so as not to interfere with the installation and operation of the pump. (See recommended procedures in the appendix to this chapter.)

12. **Well construction data.** The water well contractor shall provide the North Dakota board of water well contractors with an accurate record of well construction data. Drill cuttings should be obtained at five-foot [1.52-meter] intervals, and at all pronounced changes in formation. Well construction data shall include an accurate record of the drill hole diameters and depths, assembled order of size and length of casings and liners, grouting depths, formations penetrated, water levels, location of blast shots, and pumping tests. Well construction report forms are available from the North Dakota board of water well contractors.

13. **Upper terminal of well.** The casing or pitless unit for all ground water sources shall project not less than twelve inches [30.48 centimeters] above the final ground elevation, the well cover slab, or pumphouse floor.

Sites subject to flooding shall have the top of the protective casing, pitless unit, the cover of every dug well, and the floor of the pumphouse at least two feet [60.96 centimeters] above the highest-known flood elevation and be surrounded by earthfill.

14. **Capping.** The well must be protected during construction. A properly fitted cap designed for the type of well casing installed shall be used to protect the well from surface contamination until pumping equipment is installed.

15. **Bacteriological and chemical quality of water.** Every new, modified, or reconditioned ground water source shall be thoroughly cleaned and disinfected after the completion of construction and again after the permanent pump has been installed. The certified water well contractor or pump and pitless unit installer in charge during well construction and pump installation shall advise the well owner that one or more water samples from the source should be submitted to an approved laboratory for bacteriological analysis and that the well should not be placed into service until satisfactory bacteriological results are obtained.

Wells intended for use by a public water system shall be sampled for bacteriological analysis and the following chemicals and not placed into service until the results are deemed by the department to comply with the primary drinking water standards established under the Safe Drinking Water Act: antimony, arsenic, barium, beryllium, cadmium, chromium, copper, cyanide, fluoride, lead, mercury, nickel, combined nitrate/nitrite, selenium, thallium, manganese, and sulfate. When it is established that the ground water is subject to continuous or intermittent contamination, or for public water systems that the ground water is under the direct influence of surface water, provisions for continuous disinfection will be required.

16. **Chemical quality of water.** Every new, modified, or reconditioned ground water source should be examined for its chemical characteristics by tests of a representative sample in a department or other approved laboratory. The samples should be collected and tested as soon as practical.

17. **Water level measurement.** Provisions should be made for periodic measurement of the static and pumping water levels in the completed well. The installation shall be made in such manner as to prevent the entrances of foreign material.

18. **Water supply wells, geothermal ground water and return wells, and special purpose water wells.** All wells designed as water supply wells, geothermal ground water or return wells, or special purpose water wells shall be constructed in accordance with this chapter.

Each well shall be protected at its upper terminal to preclude the entrance of foreign materials.

19. **Abandoned wells.** Any abandoned water wells, including test wells, uncompleted wells, and completed wells shall be sealed by restoring, as far as possible, the controlling geological conditions which existed before the wells were drilled.

Sealing of wells results in:

- a. Elimination of physical hazards.
- b. Prevention of contamination of ground water.
- c. Conserving yield and hydrostatic head of aquifers.
- d. Prevention of intermingling of desirable and undesirable waters.

Wherever feasible, the wells should be filled with concrete grout or other approved materials. (Note: recommended grouting procedures are in the appendix to this chapter.)

At no time shall any sewage or other contaminated or toxic materials be discharged into an abandoned well.

20. **Organic polymers.** The use of biodegradable organic polymers as a drilling fluid additive has resulted in persistent microbiological contamination of ground water supplies. Organic polymers shall be used only when approved in writing by the department for a specific well construction project.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-07. Pump installation for water wells.

1. **Pumphouse appurtenances.** The installation of necessary appurtenances for public wells shall be as illustrated in pump installation details contained in the diagrams attached to this chapter.

- a. **Floor drain.** The pumphouse floor shall be watertight and shall slope away from the pump base. The pumphouse floor shall be provided with a floor drain discharging to a sump at least twenty-five feet [7.62 meters] from the well.
- b. **Vents.** Provisions shall be made for venting the well casing to the atmosphere. There shall be no holes in the pump base which might allow wastewater or other material to enter the well. A breather tube shall be installed of sufficient size to permit air to enter and leave the well freely with the changing of water elevation caused by starting and stopping the pump. The breather tube shall terminate in a full one-hundred-eighty-degree bend at least eighteen inches [45.72 centimeters] above the floor, securely screened with sixteen mesh wire screen. If the breather tube or a depth gauge line passes through the base of the pump or through the seal connection into the well, the hole about the tube shall be sealed.
- c. **Water level measurement.** An access plug for a measuring tape or an air line and drawdown gauge for determining location of the water level shall be installed during the installation of the pump on all public wells. Installation of permanent water level

measuring equipment shall be made using corrosion-resistant materials firmly attached, in a vertical position, to the drop pipe or pump column in such a manner as to prevent entrance of foreign materials. The air line shall extend from the top of the well to several feet [meters] below the lowest anticipated water level. The length of the air line shall be accurately measured and the length recorded.

2. **Cutting of well casing.** No casing shall be cut off or cut into below ground level except to install a pitless unit or adapter.

3. **Pitless unit and adapter.**

a. Pitless unit. Pitless units designed to replace a section of well casing must meet the standards of the national sanitation foundation or the water systems council and must:

(1) Be factory fabricated from point of connection with the well casing to the unit cap or cover. The materials used must be durable, at least equal in quality to the well casing, to prevent excessive corrosion.

(2) Form an unbroken extension of the well casing from the point of discharge to a point above ground level as specified for upper well terminals.

(3) Have an inside diameter equal to or greater than the inside diameter of the well casing to facilitate work and repair on the well, pump, or well screen. Any deviation from this paragraph must be approved in writing by the department.

(4) Conduct water from a well casing without exposing the well to contamination through openings in the casing.

(5) Have access to the casing for disinfection of the well.

(6) Be capped with a cover having a downward flange which will overlap the edge of the unit. The cover must be securely fastened to the unit and must be sufficiently snug to the unit to be verminproof or watertight if required.

The cover must provide for watertight entrance of electrical cables, vent piping, and an air line or a tap for wetted tape measurements of depth to water level of a well.

(7) Be installed by threaded, welded, or compression flange gasketed connection to the cutoff casing. The threaded, welded, or compression flange gasketed connection to the cutoff casing must be watertight. If the connection to the casing is to be a field weld, the factory-assembled unit must be designed specifically for field welding.

(8) Have all field connections between the pitless unit and the water service pipe threaded, flanged, or mechanical joint.

b. Pitless adapter. Commercially manufactured clamp-on or weld-on pitless adapters for attachment to the exterior of a well casing may be installed when approved by the department. Pitless adapters must be installed according to manufacturer's specifications and meet the standards of the national sanitation foundation. A list of approved pitless adapters is available from the department.

(1) Pitless adapters must be constructed and installed so as to prevent the entrance of contaminants into the well or water supply through openings in the well casing.

- (2) The pitless adapter must provide adequate clearance within the well to permit insertion and withdrawal of the pump and system components through the upper terminal of the well casing.
- (3) The pitless adapter must be connected to the well casing with clamps-and-gasket or by welding and must be watertight. To assure a watertight connection between the pitless adapter and the well casing, care must be used in cutting the hole in the well casing, preferably with a hole-cutting saw. All burrs from the cutting process must be removed. Both the outside and the inside surfaces of well casing surrounding the hole must be smooth.
- (4) A pitless cap or cover must enclose the upper terminal of the well casing. The cap, entrance of electrical cables, vent piping, air lines, etc., must be as specified for pitless units.
- (5) All field connections between the pitless adapter and the water service pipe must be threaded, flanged, or mechanical joint.
- (6) All other aspects of pitless adapter requirements must be as specified for pitless units.

c. Freezing. Water service piping must be installed below recorded frost penetration. A minimum depth of seven feet [2.28 meters] below grade is recommended to prevent freezing.

4. **Over-the-well pumps.** Power-driven pumps located over a well shall be installed on a concrete base of sufficient height to permit the outside casing to extend one inch [2.54 centimeters] above the concrete base. On all public water wells, the annular opening between the drill hole and casing shall be filled with cement grout before the pump base and pumphouse floor are constructed. If the well is of the gravel wall type, the outer casing shall extend at least twelve inches [30.48 centimeters] above the pumphouse floor with suitable provisions made for adding gravel. The inner casing shall extend one inch [2.54 centimeters] above the pump base. Note diagrams no. 1 and no. 2, pump installation details, in the diagrams attached to this chapter.

A sanitary well seal shall be installed at the top of the well casing to prevent the entrance of contaminated water or objectionable material.

5. **Pump column.** A separate pump column, suction or discharge pipe shall be installed inside the well casing in all instances, whether the well is to be pumped by suction, airlift, or deep well pump.

6. **Submersible pumps.** The discharge line installed inside of the well casing must meet the standards for ferrous or nonferrous well casing in subsections 2 and 3 of section 33.1-18-01-06. The discharge line shall leave the well at the top of the casing. The opening between the discharge line and casing or pipe sleeve shall be sealed watertight with an expanding rubber seal or equivalent device. When an underground discharge is desired, a properly installed pitless unit or, when approved by the department, a pitless adapter shall be used.

The electrical cable shall be firmly attached to the pump riser at intervals of twenty feet [6.10 meters] or less.

When a check valve is not part of the pump, a check valve shall be installed on the pump discharge line within the well.

A check valve on the pump discharge line is not required on nonpressurized wells for livestock use that would be damaged by freezing, when an airgap or other cross-connection control protection is provided.

7. **Offset pumps.** Pumps offset from public wells shall be located in an aboveground pumphouse or other building. All portions of suction lines buried below the ground surface between the well and the pump shall be enclosed in a protective pipe of standard thickness and be sealed watertight at both ends.

This requirement shall be considered satisfied if the suction line lies within a pressure discharge line.

Offset pumps for private wells may be located in a basement provided that the pumps and all suction pipes are elevated at least twelve inches [30.48 centimeters] above the floor.

8. **Hand pumps.** Hand pumps shall be of the force type equipped with a packing gland around the pump rod, a delivery spout which is closed and downward directed, and a one-piece bell-type base which is part of the pump stand or is attached to the pump column in a watertight manner.

The bell base of the pump shall be bolted with a gasket to a flange which is securely attached to the casing or pipe sleeve.

9. **Pump controls.**

a. Public water wells. Pump controls for public water wells must be installed in accordance with the manufacturer's recommendations as shown on approved plans and specifications.

b. Private water wells. Pump controls for private water wells should be installed in accordance with manufacturer's recommendations and must include:

(1) A pressure-activated pump switch.

(2) A thermal overload switch.

(3) A flow control orifice or a low water level cutoff switch on all pumps having an output in excess of the well capacity.

(4) A pressure relief valve on positive displacement pumps.

(5) The installation of necessary appurtenances for private water wells should be as illustrated in diagram no. 4 - pitless unit and appurtenances for private wells.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-08. Storage tanks.

1. **Public water systems.** Storage equipment for public water systems must be as shown on approved plans and specifications.

2. **Private water systems.** Storage equipment must be as follows:

a. All tanks must be certified under water system council standards for size and pressure.

- b. Hydropneumatic tanks must have a working pressure rating in excess of the maximum system pressure but not less than seventy-five pounds per square inch [34.02 kilograms per 6.45 square centimeters].
- c. All tanks must be coated or made of materials resistant to corrosion.
- d. All tanks must be constructed of materials or coatings which are nontoxic.
- e. All tanks must be provided with a means of draining.
- f. Atmospheric storage tanks must be provided with a cover to prevent the entrance of unauthorized persons, dirt, or vermin. The cover must be vented with a return bend vent pipe having an area not less than the area of the downfeed riser pipe and the vent must be screened with corrosion-resistant screen having not less than fourteen and not more than twenty openings per linear inch [2.54 centimeters].

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-09. Materials for water distribution.

1. Water service pipe.

- a. Public water systems. Water service pipe from the well to the point of entrance to a pumphouse or building must be as shown on approved plans and specifications.
- b. Private water systems. Water service pipe from the well to point of entrance to a pumphouse or building must be made of copper, galvanized steel, or approved plastic. Approved plastic (polyvinyl chloride, polyethylene, or polybutylene) must have a minimum pressure rating of one hundred sixty pounds per square inch at seventy-three degrees Fahrenheit [11.25 kilograms per square centimeter at 22.8 degrees Celsius]. Copper tube, when used underground, may not be less than type L. All threaded ferrous pipe and fittings must be galvanized or cement-lined and, when used underground in corrosive soil or filled ground, must be coal tar enamel-coated and threaded joints must be coated and wrapped when installed.

All piping must comply with applicable standards for such piping. Polyvinyl chloride, polyethylene, and polybutylene pipe shall carry the seal of the national sanitation foundation.

Permeation through polyethylene and polybutylene pipes by organic contaminants (including petroleum byproducts) can occur resulting in contamination of water supplies. Where there is known contamination of soils by organics or a high probability that contamination of soils by organics may occur, it is recommended that polyethylene and polybutylene pipe not be used to construct water supply lines.

- 2. **Fittings.** The materials of which water supply system pipe fittings are made must be compatible with the type of piping materials used in the water supply system.

3. Material strength.

- a. All materials used for water piping must be suitable for use with the maximum temperature, pressure, and velocity that may be encountered in the installation, including temporary increases and surges.

- b. When the standards for the piping material used for hot and cold water distribution limit the working pressure or temperature to values lower than usually encountered, the relief valve may be set no higher than the limits of the standard.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19, 43-35-19.1; S.L. 2017, ch. 199, §§ 45, 46

33.1-18-01-10. Cross-connection control.

All wells discharging to sources of contamination, such as livestock watering tanks, must be provided with an approved backflow prevention device or an airgap to prevent the backflow or siphonage of contaminants into the well. The airgap should provide a minimum vertical distance between the potable water pipe outlet and the water surface of not less than twice the diameter of the outlet pipe. Greater distances are preferable.

Overflow lines from stock watering tanks or other sources of contamination may not discharge to the well.

Please consult the North Dakota state plumbing code for details.

APPENDIX

I. WELL DISINFECTION.

A. General.

Immediately after construction or repair, always disinfect with a strong chlorine solution of fifty to one hundred milligrams per liter. Materials used in construction or repair of a well are contaminated with dirt and bacteria and the water from a well is considered safe to drink only when laboratory tests show that no harmful bacteria are present.

B. Procedure.

1. Determine the amount of water in the well by referring to the table.
2. Add the amount of chlorine compound necessary to give a dosage of fifty milligrams per liter as indicated on the table, into the opening between the casing and the drop pipe. On new well construction, the chlorine should be added just before installation of the pumping equipment.
 - a. Chlorine tablets may be dropped in the top of the well and allowed to settle to the bottom.
 - b. Deep wells with high water levels may require that chlorine solutions be added through a hose inserted down the well casing to ensure proper diffusion of the chlorine.

Chlorine can destroy only the bacteria with which it comes in contact. Agitation of the water in the well may be required to assure thorough mixing. After adding the chlorine, start the pump and operate until the odor of chlorine is detected at the pump discharge.

3. The storage and distribution system should be disinfected along with the well. Open the house faucets and let the water run until the odor of chlorine is apparent.
4. Allow the chlorine solution to remain in the well and distribution system for a period of twenty-four hours. Pump the well and flush the distribution system to remove all traces of chlorine.
5. After pumping, collect a water sample and submit to a laboratory for a bacteriological analysis to assure the safety of the water supply. If contamination is shown to be still present in the water supply, the chlorination procedure should be repeated.
6. When time does not permit well disinfection by the procedure previously described, apply to the entire depth of the well a total volume of 50 mg/l chlorine solution at least four times greater than the volume of water in the well. Allow the chlorine solution to remain in the well for a period of at least two hours. Pump the well and flush the distribution system to remove all traces of chlorine.

*Sodium Hypochlorite, also known as Bleach, Clorox, etc., can be purchased at most drug and grocery stores.

One heaping tablespoon of 65% calcium hypochlorite = approximately 1/2 oz.

Six (6) 65% calcium hypochlorite tablets = approximately 1 oz.

Heavy concentrations of chlorine on or near the well screen with waters very high in iron and/or iron bacteria may result in oxidation of iron on the well screen. Efficiency of the well screen and well output could be reduced under such conditions.

II. LABORATORY SERVICE. Chemical and microbiological laboratory service is provided by the department of environmental quality laboratory located at 1205 Avenue A West, Bismarck, North Dakota. Mailing address is:

Department of Environmental Quality
Division of Laboratory Services
P.O. Box 937
Bismarck, ND 58502

Microbiological laboratory service is available from:

First District Health Unit
801 11th Avenue SW
P.O. Box 1268
Minot, ND 58702-1268

Southwestern District Health Unit
2869 Third Avenue West
Dickinson, ND 58601

Fargo Cass Public Health
Environmental Laboratory
435 14th Avenue South
Fargo, ND 58103

Grand Forks Environmental
Laboratory
503 South Fourth Street
Grand Forks, ND 58201

III. RECOMMENDED PROCEDURES.

A. Plumbness and Alignment.

Every public water well, before being officially accepted, should be tested for plumbness and alignment. The test method to be followed should be clearly stated in the specifications. As a minimum, a forty-foot [12.19-meter] section of pipe, or rigid dummy of the same length, having an outside diameter not more than one-half inch [12.7 millimeters] smaller than the diameter of the casing or hole being tested, shall move freely throughout the length of the casing or hole

to the lowest anticipated pump setting. The well should not vary from the vertical in excess of two-thirds of the smallest inside diameter of that part of the well being tested, per one hundred feet [30.48 meters] of depth.

B. Abandoned Wells.

For detailed procedures for abandoning wells, see Section A1-13, Sealing Abandoned Wells, AWWA Standards for Deep Wells, A100-66 or later amendments prepared by the American Water Works Association and the National Water Well Association.

C. Springs.

Springs should be considered as a water supply only when it is not possible to develop an acceptable well. Springs shall be protected from entry of surface water and should be housed in a permanent structure. Continuous chlorination of springs is recommended to assure the bacterial purity of the water supply.

D. Continuous Chlorination of Public Well Water Supplies.

Continuous chlorination is recommended for the safeguarding of public well water supplies. Chlorination not only assists in maintaining the bacterial purity of the water, but also eliminates the growth of taste-and-odor-producing nuisance organisms.

E. Livestock Wells.

A check valve on the pump discharge line is not required on nonpressurized wells for livestock use that would be damaged by freezing. The pump discharge line shall have a minimum airgap equal to twice the effective diameter of the discharge line to prevent backflow or siphonage into the well to prevent contamination of the well.

IV. MEASUREMENT OF WATER WELL DRAWDOWN AND SPECIFIC CAPACITY.

Pumping tests of water supply wells can serve many purposes. Properly planned and conducted tests will reveal information about the performance and efficiency of the well being pumped. In addition, from the data obtained, calculations can be made which interpret ground water aquifer performance.

Measuring each well for pump and well yield, depth to water level, drawdown, and specific capacity should be done on a routine basis. These test results should be compared with previous tests to estimate current well and/or aquifer conditions.

A. Terminology.

It is important to understand the meaning of the terms used relating to the pumping test. Some of these terms are as follows:

1. Static Water Level. This is the level at which water stands in the well when no water is being pumped. It is generally expressed as the distance in feet from the ground surface to the water level in the well.
2. Pumping Level. This is the level at which water stands in the well when pumping is in progress. The pumping level may also be referred to as the dynamic water level.
3. Drawdown. When a well is pumped, the water level in the vicinity of the well will be lowered. Drawdown is the difference, measured in feet, between the static water level and the pumping level.

4. Well Yield. The well yield is the volume of water per unit of time discharged from a well either by pumping or by free flow.
5. Specific Capacity. Specific capacity of the well is its yield per unit of drawdown, usually expressed as gallons per minute (gpm) per foot of drawdown.

B. Determination of Depth to Water Level.

1. Wetted Tape Method. The wetted tape method will accurately measure the depth to water in a well and can be used for depths up to one hundred feet [30.5 meters] or more. Attach a lead weight to the end of a steel measuring tape, if needed. Wipe dry the lower three or four feet [.91 or 1.22 meters] of the tape and coat with carpenter's chalk. Lower the tape into the well through the air vent or other opening until part of the chalked section is below water. Continue to lower the tape until the next even foot mark can be held exactly at a reference point and record the number of feet indicated. The tape is then removed from the well and note is made of the footage of chalked section washed away by the water. Subtract this reading from the reading obtained at the top reference point. The difference in these readings is the depth from the reference point to the water level.
2. Air Line Method. The air line method measures depth to water level by determining the air pressure required to push all of the water out of a submerged tube of known length. The air line consists of a one-fourth inch [6.35 millimeters] pipe, copper or plastic tubing, extending from the top of the well to a point several feet below the lowest anticipated water level. To avoid turbulence near the intake of the pump, the lower end of the air line should be at least five feet [1.52 meters] above or below the point where water enters the pump. The exact length of the air line must be known or should be measured as it is placed in the well. Make all joints airtight with white lead or piping compound. The upper end of the tube is fitted with suitable connections for an air gauge, a tire valve, and an air pump.

Pump the air into the line until the gauge pressure is constant. This indicates that all of the water has been expelled from the tube. The gauge reading shows the pressure necessary to support a column of water of a height equal to the depth the tube was submerged. If the gauge indicates feet of water, then it shows directly the submerged length of the line in feet. Subtracting the submerged length from the total length of the air line gives the depth to static water level. Gauges calibrated in pounds per square inch (psi) may be converted to feet of water by multiplying by 2.31.

C. Determination of Drawdown.

Example: Depth to water before pumping \equiv 100 feet
 Depth to water after pumping \equiv 125 feet

Drawdown \equiv Depth after pumping - depth before pumping
 \equiv 125 feet - 100 feet = 25 feet

First, determine the static water level. Second, after the well has achieved a constant pumping rate or yield, measure the depth to the water level. The difference of these readings before and after pumping the well at a specific rate is measured in feet and recorded as feet of drawdown.

D. Determination of Specific Capacity.

system should be constructed to eliminate all sources of contamination to the water supply system and the ground water aquifer.

4. If municipal water supply systems are to be used as a source of geothermal energy, an approved backflow prevention device shall be used to separate the geothermal energy from the public water supply system.
5. To protect the drinking water supply, heat exchangers, unless otherwise permitted under the North Dakota state plumbing code, shall be of double-wall construction with a space between the two walls which is vented to the atmosphere.
6. Geothermal energy systems shall not discharge water to either municipal drinking water or sanitary sewer systems. Discharge to the municipal drinking water system is a cross-connection and could result in chemical and/or microbiological contamination of the system. Nearly all cities in the state have sewer use ordinances specifically prohibiting the connection of clear water discharges to the sewer system.
7. Geothermal energy systems may discharge to municipal storm sewer systems with approval of the municipality, and if the discharge water is compatible with the waters of the receiving stream. Degradation of surface waters by discharges from geothermal energy systems will not be allowed.
8. If water is to be reinjected into the ground water system, the discharge should be made to a similar or inferior quality aquifer.
9. Highly mineralized or saline waters, such as from the Dakota formation, should be returned to those aquifers if secondary use is not possible.
10. Evaporation ponds, which do not discharge, may be used as a means of disposal where other methods of disposal are not feasible.
11. Disposal permits under the Underground Injection Control Program or the National Pollutant Discharge Elimination System Regulations may be required. Users of geothermal energy systems should contact the department to determine whether a permit is required for their installation.

VI. ABANDONMENT OF TEST HOLES, PARTIALLY COMPLETED WELLS, AND COMPLETED WELLS.

Reprinted from AWWA Standard for Water Wells, A100-84, by permission. Copyright © 1984, American Water Works Association.

Section 1.1 - General

The recommendations contained in this appendix pertain to wells and test holes in consolidated and unconsolidated formations. Each sealing job should be considered as an individual problem, and methods and materials should be determined only after carefully considering the objectives outlined in the standard.

Section 1.2 - Wells in Unconsolidated Formations

Normally, abandoned wells extending only into consolidated formations near the surface and containing water under water-table conditions can be adequately sealed by filling with concrete, grout, neat cement, clay, or clay and sand. In the event that the water-bearing formation consists of coarse gravel and producing wells are located nearby, care must be taken to select sealing materials that will not affect the producing wells. Concrete may be used if the producing wells can be shut down for a sufficient time to allow the concrete to set. Clean, disinfected sand or gravel

may also be used as fill material opposite the water-bearing formation. The remainder of the well, especially the upper portion, should be filled with clay, concrete, grout, or neat cement to exclude surface water. The latter method, using clay as the upper sealing material, is especially applicable to large-diameter abandoned wells.

____ In gravel-packed, gravel-envelope, or other wells in which coarse material has been added around the inner casing to within twenty to thirty feet [6.1 to 9.1 meters] of the surface, sealing outside the casing is very important. Sometimes this sealing may require removal of the gravel or perforation of the casing.

Section 1.4 - Wells in Noncreviced Rock Formations

____ Abandoned wells encountering noncreviced sandstone or other water-bearing consolidated formations below the surface deposits may be satisfactorily sealed by filling the entire depth with clay, provided there is no movement of water in the well. Clean sand, disinfected if other producing wells are nearby, may also be used through the sandstone up to a point ten to twenty feet [3.0 to 6.1 meters] below the bottom of the casing. The upper portion of this type of well should be filled with concrete, neat cement, grout, or clay to provide an effective seal against entrance of surface water. If there is an appreciable amount of upward flow, pressure cementing or mudding may be advisable.

Section 1.5 - Multiple Aquifer Wells

____ Some special problems may develop in sealing wells extending into more than one aquifer. These wells should be filled and sealed in such a way that exchange of water from one aquifer to another is prevented. If no appreciable movement of water is encountered, filling with concrete, neat cement, grout, or alternate layers of these materials and sand will prove satisfactory. When velocities are high, the procedures outlined in section 1.6 are recommended. If alternate concrete plugs or bridges are used, they should be placed in known nonproducing horizons or, if locations of the nonproducing horizons are not known, at frequent intervals. Sometimes when the casing is not grouted or the formation is nocaving, it may be necessary to break, slit, or perforate the casing to fill any annular space on the outside.

Section 1.6 - Wells With Artesian Flow

____ The sealing of abandoned wells that have a movement of water between aquifers or to the surface requires special attention. Frequently the movements of water may be sufficient to make sealing by gravity placement of concrete, cement grout, neat cement, clay, or sand impractical. In such flow, if preshaped or precast plugs are used, they should be several times longer than the diameter of the well, to prevent tilting.

____ Since it is very important in wells of this type to prevent circulation between formations or loss of water to the surface or to the annular space outside the casing, it is recommended that pressure cementing, using the minimum quantity of water that will permit handling, be used. The use of wells, large stone aggregate (not more than one-third of the diameter of the hole), lead wool, steel shavings, a well packer, or a wood or cast-lead plug or bridge will be needed to restrict the flow and thereby permit the gravity placement of sealing material above the formation producing the pressure mudding instead of this process if sometimes permissible.

____ In wells which the hydrostatic head producing flow to the surface is low, the movement of water may be arrested by extending the well casing to an elevation above the artesian-pressure surface. Previously described sealing methods suitable to the geologic conditions can then be used.

Section 1.7 - Sealing Materials

A number of materials that can be used for sealing wells satisfactorily, including concrete, cement grout, neat cement, clay, sand, or combinations of these materials, are mentioned in this appendix. Each material has certain characteristics and distinctive properties; therefore, one material may be especially suited for doing a particular job. The selection of the material must be based on the construction of the well, the nature of the formations penetrated, the material and equipment available, the location of the well with respect to possible sources of contamination, and the cost of doing the work.

Concrete is generally used for filling the upper part of the well or water-bearing formations, for plugging short sections of casings, or for filling large-diameter wells. Its use is cheaper than neat cement or grout, and it makes a stronger plug or seal. However, concrete will not penetrate seams, crevices, or interstices. Furthermore, if not properly placed, the aggregate is likely to separate from the cement.

Cement grout or neat cement and water are far superior for sealing small openings, for penetrating any annular space outside of casings, and for filling voids in the surrounding formation. When applied under pressure, they are strongly favored for sealing wells under artesian pressure or those encountering more than one aquifer. Neat cement is generally preferred to grout because it does not separate.

Clay, as a heavy mud-laden or special clay fluid applied under pressure, has most of the advantages of cement grout. Its use is preferred by some competent authorities, particularly for sealing artesian wells. Others feel that it may, under some conditions, eventually be carried away into the surrounding formations.

Clay in a relatively dry state, clay and sand, or sand alone may be used advantageously as sealing materials, particularly under water-table conditions where diameters are large, depths are great, formations are caving, and there is no need for achieving penetration of openings in casings, liners, or formations, or for obtaining a watertight seal at any given spot.

Frequently combinations of these materials are necessary. The more expensive materials are used when strength, penetration, or watertightness are needed. The less expensive materials are used for the remainder of the well. Cement grout or neat cement is now being mixed with bentonite clays and various aggregates. Superior results and lower cost are claimed for such mixtures.

Pvc / Vinyl Chloride (PVC) casing for water wells will carry the following labels for compliance with the American Society for Testing and Materials (ASTM) specification F480-81.

8" WELL CASING PVC 1120 SDR 21 IC2 F480 NSF-WC

This label includes the SDR, IC number, and the NSF-WC logo.

8" WELL CASING PVC 1120 200 PSI SDR 21 IC2 F480 NSF-WC D2241 NSF-PW

This label is the same as the first except it has also been tested as ASTM D2241 pressure pipe; therefore, the label includes the NSF-PW logo, as well as the NSF-WC logo.

NOTE: A label will also include the manufacturer's name and production code number, which are not included in the above labels.

CHAPTER 33.1-18-02
GROUND WATER MONITORING WELL CONSTRUCTION REQUIREMENTS

Section

- 33.1-18-02-01 Purpose
- 33.1-18-02-02 Applicability
- 33.1-18-02-03 Exclusions
- 33.1-18-02-04 Definitions
- 33.1-18-02-05 Borehole and Well Locations
- 33.1-18-02-06 Drilling Methods
- 33.1-18-02-07 Borehole and Monitoring Well Documentation
- 33.1-18-02-08 Monitoring Well Construction Materials
- 33.1-18-02-09 Monitoring Well Development
- 33.1-18-02-10 Borehole and Monitoring Well Abandonment

33.1-18-02-01. Purpose.

The purpose of this chapter is to establish minimum acceptable standards for the design, installation, construction, decommissioning, and documentation of boreholes and ground water monitoring wells.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-02. Applicability.

The installation, construction, and decommissioning of boreholes and ground water monitoring wells must be supervised onsite by a certified and licensed contractor.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-18.2, 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-03. Exclusions.

1. Injection wells for the oil and gas industry;
2. Boreholes, piezometers, and monitoring wells for dams;
3. Monitoring well or borehole construction used for mineral exploration addressed under existing federal or state law;
4. Boreholes advanced above an aquifer for the purpose of determining the local stratigraphy;
and
5. Special cases, with prior approval of the department.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-04. Definitions.

The terms used in this chapter have the same meaning as in North Dakota Century Code chapter 43-35, except that:

1. "Annular-space: annulus" means the space between a casing and a riser or between the riser and the borehole.
2. "Aquifer" means a water-bearing formation that transmits water in sufficient quantities to supply a well for a beneficial use.
3. "Borehole" means an open or cased subsurface hole created by drilling.
4. "Casing" means the pipe installed to maintain the integrity of the borehole. The term casing is used in this chapter only in reference to protective casing; the definition is included to distinguish the term from riser.
5. "Department" means the department of environmental quality.
6. "Monitoring well" means any cased excavation or opening into the ground made by digging, boring, drilling, driving, jetting, or other methods for the purpose of determining the physical, chemical, biological, or radiological properties of ground water.
7. "Riser" means the pipe extending from the well screen to or above the ground surface.
8. "Shall" or "must" means mandatory compliance with all aspects of the specific provision of this chapter within which the word appears.
9. "Should" means the specific provision in which the word appears is not mandatory but is a recommended desirable procedure or method. Deviation from the provision is subject to site specific consideration by the certified contractor installing the borehole or monitoring well.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-05. Borehole and well locations.

1. Prior to the initiation of assessment activities in response to a contaminant release or when prior departmental approval is required, under existing state statute boreholes and monitoring wells must be installed at practicable locations based on plans and specifications approved by the department.
2. The riser of a monitoring well must terminate at least one foot [0.304 meter] above the ground surface, except:
 - a. Monitoring wells should not be located in drainage ditches, floodplains, or floodway. Where this is impractical, the monitoring well should terminate at least two feet [0.609 meter] above the one hundred-year flood elevation for the well site. Those risers that do not must be constructed to preclude flood impact to the monitoring well.
 - b. A riser for a well constructed in a high-traffic area or other limiting site conditions should be mounted flush to grade or below grade with a protective casing to minimize damage, provided that construction must include a watertight seal to preclude surface water from entering the protective casing or riser and that the well is clearly marked as a monitoring well.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-06. Drilling methods.

1. This subsection applies to areas not likely having subsurface contamination.
 - a. Whenever feasible, drilling methods should not introduce water or fluids into the borehole and should optimize cuttings control at ground surface. The selected drilling method must reflect the purpose or objective of the borehole or monitoring well.
 - b. During drilling of boreholes, adequate care must be taken to prevent commingling of water from separate aquifers.
 - c. The nominal diameter of a borehole must provide a minimum annular space of 1.9 inches [48 millimeters].
2. This subsection applies to areas having potential subsurface contamination. In addition to the requirements of subsection 1, drilling methods in areas of potential subsurface contamination must follow the procedures in this subsection.
 - a. During drilling of boreholes, precautions must be taken to prevent cross-contamination of boreholes.
 - (1) Augers, center plug, and soil sampling equipment must be decontaminated following procedures appropriate for the contaminants of concern, which do not result in the cross-contamination of boreholes or monitoring wells and which do not conflict with the monitoring objective.
 - (2) The drilling sequence of boreholes must consider the objective of the site assessment, including factors such as the suspected location of the contaminant, contaminant characteristics, and local site geology.
 - b. All potentially contaminated cuttings, as well as development and purge water, must be handled in an environmentally safe manner. When suspected contamination includes hazardous substances as defined and regulated under chapter 33.1-24-02, proper management methods for cuttings and water of each borehole must meet the requirements of North Dakota Century Code chapter 23.1-04 and North Dakota Administrative Code article 33.1-24.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-07. Borehole and monitoring well documentation.

1. A written log must be kept which records the depth below ground surface of the boundaries of all strata encountered when drilling a borehole. Each stratum encountered must be described using generally accepted geologic terminology.
2. The certified monitoring well contractor must provide a monitoring well completion report to the board of water well contractors on forms available from or acceptable to the board within thirty days after the well has been installed. A completed report must include project and location, date of drilling, logger's name and title, well number or borehole number, drilling method and fluids used, borehole diameter, total depth, decontamination procedures, and a lithologic description as provided by subsection 1. Additional information, the availability of which is dependent upon the drilling method used, should also be provided and includes moisture content, fractures, and depth at which water was first encountered. A completed report must also include certified monitoring well contractor's name and license number; riser material; screen material and screen slot size, length, and placement; filter pack materials; riser and

screen cleaning and installation procedures; sealing materials, placement and installation procedures; well development procedures; and any installation conditions which affected well construction.

3. When completion reports are required by the department as a matter of fulfillment of its regulatory functions, the reports must include the information required by subsections 1 and 2; a detailed drawing of each well, including dimensions, as part of the well driller's report; and a map drawn to a specified scale showing the locations of all monitoring wells with an accuracy of three feet [0.914 meter]. The map must include manmade structure boundaries, any pertinent property boundaries, a north arrow, the location coordinates and elevation of all permanent benchmarks, the horizontal position of each monitoring well and its survey coordinates, the vertical elevation of the top riser referenced to the nearest benchmark to an accuracy of 0.01 feet [0.003 meter], and the respective identification number for each well.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-08. Monitoring well construction materials.

1. Riser.

- a. Specifications. The riser for a monitoring well must retain structural integrity for the duration of the monitoring period under actual subsurface conditions.

- (1) The riser and couplings must be constructed of materials that neither absorb nor leach chemical constituents that could bias representative ground water samples. The riser and couplings must be compatible, resisting corrosion, with anticipated contaminants. Depending upon the intended use of the well, the riser should have a vented cap, except wells constructed in a potential flooding condition or flush-mounted wells must not have a vented cap.
- (2) The riser must be capable of withstanding installation and development stresses without damage.

b. Assembly and installation.

- (1) The interior and exterior surfaces of the riser and couplings must be thoroughly cleaned in a manner that does not conflict with the monitoring objective prior to assembly and installation.
- (2) The individual sections of the riser must be joined in a manner that neither absorbs nor leaches chemical constituents that could bias representative ground water samples.
- (3) The riser must be centered, as practicable, in the borehole.

2. Screen. A ground water monitoring well must be constructed with a screen.

a. Specifications.

- (1) A screen and bottom plug must be constructed of material that is nonreactive with constituents in soil and ground water at the monitoring location.
- (2) The screen must be capable of withstanding installation and well development stresses without damage.

- (3) The screen must be new, machine slotted or continuous wrapped wire-wound. The screen slots must not be hand-cut or wrapped with filter fabric, unless approved prior to installation by the department.
- (4) The screen slot size must retain and prevent at least fifty percent of the grain size of the collapsed formation or ninety percent of the filter pack from entering the screen.
- (5) The screen placement and length must allow for entry of ground water from a predetermined zone appropriate for the collection of representative ground water samples and future fluctuations of the water table.

b. Assembly and installation.

- (1) The screen and bottom plug must be thoroughly cleaned, in a manner which does not conflict with the monitoring objective, prior to assembly and prior to insertion into the borehole.
- (2) The screen must be permanently joined to the well riser in a manner that neither absorbs nor leaches chemical constituents that could bias representative ground water samples.
- (3) The screen must be centered, as practicable, in the borehole.

3. Filter packs.

- a. Specifications. When filter packs are used, they must be compatible with the purpose or objective of the monitoring well and have a specific gravity of two and one-half or greater. The filter pack grain size must minimize formation materials from entering the screen. Collapsed formation may be used as filter pack material if it limits passage of at least fifty percent of the formation to the screen.
- b. Installation. The filter pack should extend upward from the bottom of the screen to at least two feet [0.609 meter] above the top of the screen. Where shallow water tables occur, the required height of filter pack above the top of the screen may be reduced a maximum of one foot [0.304 meter] to allow space for the annulus sealant. In special cases where the potential for a cross-connection or commingling of different water-bearing zones is documented by the monitoring well contractor requiring less than a one-foot [0.304-meter] filter pack above the screen intake, a reduction in the filter pack to less than one foot [0.304 meter] above the top of the screen to meet site specific conditions is allowed.

4. Filter pack seal. A ground water monitoring well must be installed with a filter pack seal.

- a. Specifications. The filter pack seal should extend at least two feet [0.609 meter] upward from the top of the filter pack. Where shallow water tables occur, the filter pack seal may be reduced a maximum of one foot [0.304 meter] to allow for annular space sealant. Sodium bentonite chips of size three-eighths-inch [0.95-centimeter] diameter or smaller should be placed in a manner which avoids bridging of the chips. Sodium bentonite chips or pellets must be used for seals placed below the water table, except in circumstances where the sodium bentonite may bias representative ground water samples.
- b. Installation. Sodium bentonite pellets, chips, or granules used as filter pack seal above a water table must be hydrated after placement.

5. Annulus seal. A ground water monitoring well must be installed with an annulus seal.

- a. Specifications.

(1) The annulus seal should extend from the top of the filter pack seal upward to the ground surface seal, and it should be at least two feet [0.609 meter] in length.

(2) Grout material:

(a) Should have an equal or lower permeability than the least permeable geologic formation penetrated by the borehole.

(b) Should be compatible with formation material, well casing and riser and not capable of contaminating ground water.

(c) Should be in a form which can be positively and accurately placed to fill all voids.

(d) Should be self-leveling in the annulus and uniform in setup.

(e) Should, when setup, assist the structural stability of the riser.

(f) Should be capable of bonding to the riser and borehole wall to provide a watertight seal.

(3) Acceptable grouts above the water table include neat cement, bentonite chips, high solids bentonite grout, or a cement and bentonite clay mixture not exceeding five pounds [2.27 kilograms] of bentonite clay per ninety-four-pound [42.6-kilograms] sack of cement.

(4) Bentonite chips or pellets may be used as a seal material in the annulus of shallow monitoring wells provided it is hydrated after each bag is poured into the annulus.

b. Installation. The annulus seal must be placed in a manner so as to ensure the proper placement and distribution of the sealant material.

6. Ground surface seal and protective casing.

a. A protective casing and locking cap is required when the monitoring well is located in an area where the well needs physical protection or is likely to be tampered with.

(1) The protective casing should consist of a metal or polyvinyl chloride assembly at least two inches [5.08 centimeters] larger in diameter than the riser and have a locking cap.

(2) The protective casing should extend from the bottom of the ground surface seal, and it should extend above the top of the riser at least one inch [2.54 centimeters] but not more than four inches [10.15 centimeters].

(3) The locking cap should be secured and locked at all times when the monitoring well is not in use.

b. The ground surface seal should consist of concrete or neat cement. If a protective casing is used, the surface seal should be placed around the protective casing and may not be placed between the protective casing and the riser. The ground surface seal should be sloped to promote drainage away from the riser or protective casing.

c. Dry bentonite pellets or chips should be placed in the annular space between the protective casing and the riser up to the level corresponding with the top of the ground surface seal.

- d. A weep hole or vent should be used in the protective casing, provided it is placed at least six inches [15.2 centimeters] above the surface of the ground surface seal, but in no case should it be above a vent hole in the riser.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-09. Monitoring well development.

All monitoring wells must be developed as follows:

1. The waiting period for monitoring well development after completion of well installation shall allow setup of sealants.
2. The monitoring well must be developed utilizing procedures that are compatible with the monitoring objective and that do not adversely impact well integrity. Development of the monitoring well must include at least three cycles or last for approximately one hour until the water is free of sediments or stabilizes, whichever occurs first. Stabilization occurs when successive measurements of indicator parameters, such as instrument readings for turbidity or specific conductivity, taken from separate well volumes, are within ten percent.

History: Effective January 1, 2019.

General Authority: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 43-35-19.2; S.L. 2017, ch. 199, § 47

33.1-18-02-10. Borehole and monitoring well abandonment.

1. The department may require by written notification an owner of the site of a borehole or monitoring well to decommission the borehole or monitoring well when necessary to:
 - a. Eliminate physical hazards on the surface;
 - b. Prevent contamination of ground water;
 - c. Prevent intermingling of desirable and undesirable waters; or
 - d. Eliminate unintended use.
2. Any monitoring well which is constructed and installed after March 1, 1997, and which does not meet the requirements of this chapter must be decommissioned within thirty days after written notification by the department.
3. A borehole must be decommissioned within three working days of discontinuance of use according to subsection 5.
4. A monitoring well must be decommissioned in accordance with the requirements of subsection 5 within one year of discontinuance of use unless it may be reasonably anticipated the well will be reused in the future. If the well is anticipated to be used in the future, the owner of the well is responsible to periodically inspect and maintain the well to ensure the well remains in compliance with the standards established in this chapter.
5. Decommissioned and plugged boreholes and monitoring wells must have equal or less permeability than the local environment resulting in no greater influence on the local environment than the original geologic formation. Factors, such as topography, hydrogeology, borehole or well construction, and contaminants, must be considered in a decommissioning operation.

- a. Immediately prior to decommissioning a monitoring well, the water in the well must be disinfected, except water containing hydrocarbons should not be disinfected with a chlorine disinfectant or other reactive compounds.
- b. Sealant materials cannot be native soil materials. An acceptable sealant for dry boreholes is concrete. Acceptable sealant materials for wet boreholes and monitoring wells include neat cement, bentonite grout, bentonite pellets, and bentonite chips. Sealant materials must:
 - (1) Be durable;
 - (2) Not adversely impact local geologic materials or ground water;
 - (3) Form a bond and seal with the sidewall; and
 - (4) Resist cracking or shrinkage.
- c. Any settling of the sealant material must be topped off. Sealant material may be terminated two and one-half feet [0.761 meter] below the ground surface in agricultural areas, in which case a native soil plug must be placed on top of the sealant material.
- d. When monitoring well construction and installation documentation is not available, the well has been damaged down hole or the well is located in a proposed future solid waste treatment or disposal area, all protective casing, riser, screen, seals, and filter pack must be removed by pulling or over drilling.
- e. Monitoring wells known by available documentation to be constructed with an impermeable annular space seal may be decommissioned without removing the riser, screen, annular sealant, and filter pack provided:
 - (1) The remaining screen and riser are filled with sealant material;
 - (2) The ground surface seal and protective casing are removed; and
 - (3) The riser must be cut off at a depth to preclude interference with site-specific activities, but should be no less than two and one-half feet [0.761 meter] below the surface.

33.1-19-01-01. Responsibility.

It is the responsibility of any person or persons operating a water treatment, water distribution and storage, wastewater treatment, or wastewater collection and transfer facility or system to comply with this chapter pursuant to North Dakota Century Code chapter 23.1-07.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-02. Definitions.

As used in this chapter, unless the context or subject matter otherwise requires:

1. "Direct responsible charge" means full and active performance of onsite operation of a water or wastewater treatment facility or a water distribution and storage or wastewater collection and transfer system, where the operator is responsible for technical support of the facility or system and provides direction to other operators, is onsite or on call during shift operations, is responsible for the operation of a major segment of a facility or system, or is the sole person employed as the facility or system operator.

2. "Official census" means the census taken each decade or a special census taken by the United States bureau of the census.
3. "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof and any legal successor, representative agent, or agency of the foregoing.
4. "Water treatment facility" includes the source or sources of water or the water treatment plant or both.
5. "Water distribution and storage system" means that portion of the water supply system which obtains, stores, and conveys water from the treatment facility or other supply point to the premises of the consumer.
6. "Wastewater treatment facility" means those systems using mechanical or nonmechanical or both types of process units for the treatment of wastewater and for the treatment and disposal of solids removed from such wastes.
7. "Wastewater collection and transfer system" means that portion of a wastewater system in which wastewater is conveyed to a treatment facility from the premises of a contributor.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-03. General.

1. The official census must be used to determine the population served by a water treatment facility, water distribution and storage system, wastewater treatment facility, or wastewater collection and transfer system if population equivalent data is not available.
2. The total number of people served on an annual average daily basis must be used to determine population served by a water treatment facility, water distribution and storage system, wastewater treatment facility, or wastewater collection and transfer system if official census data is not available.
3. Facilities or systems with sufficiently complicated processes may be raised to a classification higher than that indicated by population equivalent or census.
4. Any facility which may have a combination of treatment processes, some of which may be in different facility classes, must be classified based on the treatment process which requires the highest numerical classification.
5. An operator who has direct responsible charge shall hold a certificate that is at least equal to the classification of the facility or system where the operator is employed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-04, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-04. Application for certification.

Applications for certification must be filed with the department fifteen days prior to the examination on appropriate forms. An application remains valid for a period of six months from the date of submission.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-04, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-05. Examinations.

1. Written examinations must be used in determining knowledge, ability, and judgment of the applicant. Oral examinations may be used in lieu of or in conjunction with the written examinations at the discretion of the department.
2. Examinations must be held at places and times set by the department. At least one examination session must be held annually. Additional examination sessions may be held at the discretion of the department.
3. Separate examinations will be prepared for each facility or system classification.
4. All examinations must be graded by personnel designated by the department.
5. An examination may be rewritten once within one year from the date on which the original examination was written. A new certification application and the required fee must be submitted to the department to rewrite an examination.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-06. Fees for certification.

1. Fees for certification are ten dollars per examination.
2. Fees for annual renewals are five dollars per certificate.
3. The certification fee from a qualified applicant is nonrefundable and must be received by the department prior to the examination. Applicants will be notified of the results of the examinations. Papers and test material remain the property of the department. Applicants may, upon request, review the results with the department.
4. Fees received from operators whose application for certification has been rejected will be returned.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-05, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-07. Issuance of certificates.

1. Upon satisfactory compliance with the certification qualifications, fee, and examination requirements provided herein, the department will issue a certificate to the applicant. The certificate will indicate the operator certification grade, the class of facility or system the applicant is certified to operate, the certificate number, and date of issuance.
2. To maintain certification, all certified operators are required to earn continuing education credits by attending training programs, seminars, workshops, and schools established or officially recognized by the department.
 - a. The number of continuing education credits that can be earned by attending officially recognized training programs, seminars, workshops, and schools must be established and regulated by the department.

- b. The number of continuing education credits to be earned within a three year period of time is twelve.
 - c. Training programs offered by other government agencies, educational institutions, and operator organizations may be used for the continuing education credit requirements at the discretion of the department.
 - d. Certified operators who no longer operate facilities or systems within the boundaries of the state are exempt from the continuing education credit requirements. They may maintain valid North Dakota operator's certificates by paying the required annual renewal fees. If they return to work as an operator in the state, the continuing education credit requirements are in effect and they must earn the required number of training credits during their first year upon returning to North Dakota.
 - e. A certified operator not in compliance with the continuing education credit requirements, as determined by the department, is subject to revocation or suspension of the operator's certification.
3. Certificates are valid for a maximum of one year and expire on the first day of July. Certificates which have been revoked for a cause, invalidated, or replaced by one of higher grade are not renewable, except as noted in this chapter. Annual certificate renewal cards must be issued by the department upon receipt of the renewal fee as previously set forth.
 4. An operator whose certification is invalidated because of failure to renew may apply for renewal within one year following the certificate's expiration date. The operator may be issued a certificate of the same category, grade, and classification if the request for renewal is received by the department within one year after the expiration date of the certificate, the continuing education requirements are satisfied, and all delinquent fees are paid. Failure to renew certification for a period of more than one year following expiration of the certificate will require requalification by reapplication, reexamination, and payment of examination fees before recertification is granted.
 5. Certificates remain valid as long as the operator exercises reasonable care and judgment in the application of duties and satisfies the continuing education and annual renewal requirements as previously set forth. Certificates may be revoked as provided in North Dakota Century Code chapter 23.1-07. No certificate will be valid if obtained through fraud, deceit, misrepresentation, or the submission of false or inaccurate data, information, or qualifications.
 6. The department may issue certificates by reciprocity, without written examination, to any person holding a certificate from any other state, territory, possession of the United States of America, or any country providing that the requirements for certification of operators under which the operator's certificate was issued are equal to or higher than specified under this chapter for a like certificate and providing further that reciprocal privileges are granted to certified operators in North Dakota.
 7. Certificates in an appropriate category, grade, and classification may be issued without examination to qualifying operators as provided by North Dakota Century Code chapter 23.1-07.
 8. A temporary restricted operator's permit may be issued by the department upon application by the facility or system owner on behalf of the operator where circumstances may exist to warrant issuance. A temporary restricted operator's permit will be valid for one year from the date of issuance. When the operator satisfies the minimum grade level qualifications and requirements for certification, the operator shall submit an application for certification to the department and write the appropriate category and class examination during the first examination session offered by the department following the date of application.

9. The department may revoke or suspend the certificate of an operator issued hereunder if it is found by the department that the operator has practiced fraud or deception by willfully changing records or by omission, or knowingly giving false information to the department, or failed to take corrective action required by the department, or failed to take required samples, or failed to protect the public health or the state's water resources; or when it is found that reasonable care, judgment, or the application of the operator's knowledge or ability was not used in the performance of the operator's duties. A certificate may not be revoked or suspended except after a hearing before the department. If a certificate is suspended or revoked as herein provided, a new application for certification may be considered by the department if, when, and after the conditions upon which suspension or revocation was based have been corrected and evidence of this fact has been satisfactorily submitted to the department. A new certificate may then be granted by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-04, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-08. Water treatment facility classifications.

Water treatment facilities must be classified in one of five classes. Classifications must be based on population served, design population, type of treatment, raw water quality and volume of water to be treated, and complexity of sludge handling units. Facilities may be classified one level higher than indicated solely by population at the discretion of the department if the facility has special design features or complex features or characteristics unusually difficult to operate, by reason of raw water unusually difficult to treat, by reason of volume of water treated, or by reason of a combination of such conditions or circumstances.

1. **Class IA.** All water facilities using simple chemical or physical treatment processes and designed to serve a population of less than five hundred persons.
2. **Class I.** All water facilities using chemical treatment processes and designed to serve a population of five hundred to five thousand persons. This will include water facilities utilizing disinfection, fluoridation, corrosion control, sequestering, or combinations of these processes or other processes that involve simple chemical addition and a minor degree of operational control.
3. **Class II.**
 - a. All water facilities using chemical treatment processes and designed to serve a population of five thousand to fifteen thousand persons. This will include water facilities utilizing disinfection, fluoridation, corrosion control, sequestering, or combinations of these processes or other processes that involve simple chemical addition and a moderate degree of operational control.
 - b. All water plants using chemical softening processes and filtration requiring a moderate degree of operational control serving a population of less than one thousand persons.
 - c. All water plants using coagulation, sedimentation, and filtration for clarification requiring a moderate degree of operational control serving a population of less than one thousand five hundred persons.
 - d. All water plants using chemical oxidation of iron or manganese and filtration requiring a moderate degree of operational control serving a population of less than two thousand persons.

- e. All water plants using processes requiring a moderate degree of operational control but not listed in subdivisions b, c, and d and serving a population of less than two thousand persons.

4. Class III.

- a. All water facilities using chemical treatment processes and designed to serve a population of fifteen thousand persons or more. This will include water facilities utilizing disinfection, fluoridation, corrosion control, sequestering, or combinations of these processes or other processes that involve simple chemical addition and a high degree of operational control.
- b. All water plants using chemical softening processes and filtration requiring a high degree of operational control serving a population of one thousand to five thousand persons.
- c. All water plants using coagulation, sedimentation, and filtration for clarification requiring a high degree of operational control serving a population of one thousand five hundred to ten thousand persons.
- d. All water plants using chemical oxidation of iron or manganese and filtration requiring a high degree of operational control serving a population of two thousand to fifteen thousand persons.
- e. All water plants using processes requiring a high degree of operational control but not listed in subdivisions b, c, and d and serving a population of two thousand to fifteen thousand persons.

5. Class IV.

- a. All water plants using chemical softening processes and filtration requiring a high degree of operational control serving a population of five thousand or more persons.
- b. All water plants using coagulation, sedimentation, and filtration for clarification requiring a high degree of operational control serving a population of ten thousand or more persons.
- c. All water plants using chemical oxidation of iron or manganese and filtration requiring a high degree of operational control serving a population of fifteen thousand or more persons.
- d. All water plants using processes requiring a high degree of operational control but not listed in subdivisions a, b, and c and serving a population of fifteen thousand or more persons.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-08.1. Water distribution and storage system classifications.

Water distribution and storage systems must be classified in one of five classes. Classifications must be based on population served, design population, type of distribution and storage system, and the volume of water to be handled. Systems may be classified one level higher than indicated solely by population at the discretion of the department by reason of the incorporation in the system of special design features or complex features or characteristics unusually difficult to operate, by reason of conditions of volume and flow, or by reason of a combination of such conditions and circumstances.

1. **Class IA.** All water distribution and storage systems serving a population of less than five hundred persons.
2. **Class I.** All water distribution and storage systems serving a population of five hundred to one thousand five hundred persons.
3. **Class II.** All water distribution and storage systems serving a population of one thousand five hundred to fifteen thousand persons.
4. **Class III.** All water distribution and storage systems serving a population of fifteen thousand to fifty thousand persons.
5. **Class IV.** All water distribution and storage systems serving a population of fifty thousand persons or more.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-09. Wastewater treatment facility classifications.

Wastewater treatment facilities must be classified in one of five classes. Classifications must be based on population served, design population, type of treatment, character and volume of wastes to be treated, and the use and nature of the water resources receiving the facility effluent. Facilities may be classified one level higher than indicated solely by population at the discretion of the department if the facility has special design features or complex features or characteristics unusually difficult to operate, by reason of a waste unusually difficult to treat, by reason of conditions of flow, or by reason of the receiving water quality classification requiring an unusually high degree of facility operational control, or by reason of a combination of such conditions or circumstances.

1. **Class IA.** All wastewater stabilization ponds, land treatment facilities, wetlands treatment facilities, or other nonmechanical facilities requiring a minor degree of operational control serving a population equivalent of less than five hundred persons.
2. **Class I.** All wastewater stabilization ponds, land treatment facilities, wetlands treatment facilities, or other nonmechanical facilities requiring a minor degree of operational control serving a population equivalent of five hundred to less than ten thousand persons.
3. **Class II.**
 - a. All mechanical facilities, mechanically aerated stabilization ponds, oxidation ditches, or other facilities requiring a moderate degree of operational control serving a population equivalent of less than ten thousand persons.
 - b. All wastewater stabilization ponds, land treatment facilities, wetlands treatment facilities, or other nonmechanical facilities requiring a minor degree of operational control serving a population equivalent of ten thousand persons or more.
4. **Class III.**
 - a. All mechanical facilities, mechanically aerated stabilization ponds, oxidation ditches, or other facilities requiring a moderate degree of operational and laboratory control serving a population equivalent of ten thousand persons or more.
 - b. All activated sludge facilities, trickling filter facilities, rotating biological contactor facilities, separate sludge stabilization facilities, or other mechanical facilities requiring a high

degree of operational and laboratory control serving a population equivalent of less than ten thousand persons.

5. **Class IV.** All activated sludge facilities, trickling filter facilities, rotating biological contactor facilities, separate sludge stabilization facilities, or other mechanical facilities requiring a high degree of operational and laboratory control serving a population equivalent of ten thousand persons or more.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-09.1. Wastewater collection and transfer system classifications.

Wastewater collection and transfer systems must be classified in one of five classes. Classifications must be based on population served, design population, type of collection and transfer system, and the character and volume of wastes to be handled. Systems may be classified one level higher than indicated solely by population at the discretion of the department by reason of the incorporation in the system of special design features or complex features or characteristics unusually difficult to operate, by reason of conditions of flow, or by reason of a combination of such conditions and circumstances.

1. **Class IA.** All wastewater collection and transfer systems serving a population of less than five hundred persons.
2. **Class I.** All wastewater collection and transfer systems serving a population of five hundred to one thousand five hundred persons.
3. **Class II.** All wastewater collection and transfer systems serving a population of one thousand five hundred to fifteen thousand persons.
4. **Class III.** All wastewater collection and transfer systems serving a population of fifteen thousand to fifty thousand persons.
5. **Class IV.** All wastewater collection and transfer systems serving a population of fifty thousand persons or more.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-10. Change of classification.

Classification of any treatment facility or distribution and storage or collection and transfer system may be changed at the discretion of the department by reason of changes in any condition or circumstance on which the original classification was based. The department shall provide notice of any classification change to the owner of the facility or system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-11. Certification requirements.

1. Operator certification is mandatory for all persons in direct responsible charge of the operation or maintenance of water treatment facilities, water distribution and storage systems, wastewater treatment facilities, or wastewater collection and transfer systems as required by North Dakota Century Code section 23.1-07-07 and applicable federal laws and regulations.

2. Five grades of operators for water treatment facilities, water distribution and storage systems, wastewater treatment facilities, and wastewater collection and transfer systems are hereby established. To qualify for certification in a given grade, an applicant must satisfy the education and experience requirements, or their equivalents, of the grade for which the certification application is submitted.

3. All applicants must pass a certification examination as developed and administered by the department for the class of facility or system for which the certification application is submitted.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-04, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-12. Operator qualifications.

The following grade qualifications are intended to be as nearly compatible as possible to the corresponding facility or system classification.

1. Grade IA.

- a. Completion of high school or equivalent, and a minimum of six months of acceptable operation of a facility or system of class IA or higher.
- b. A combination of education qualifications and experience that will be satisfactory to the department. No substitute may be permitted for minimum experience requirements, unless an exception is granted under section 33.1-19-01-07.

2. Grade I.

- a. Completion of high school or equivalent, and a minimum one year of acceptable operation of a facility or system class I or higher; or
- b. A combination of education qualifications and experience that will be satisfactory to the department. No substitute may be permitted for minimum experience requirements, unless an exception is granted under section 33.1-19-01-07.

3. Grade II.

- a. A four-year college degree and a minimum one year of acceptable operation of a facility or system of class I or higher, one year of which must have been in a position of direct responsible charge;
- b. Two years post high school education and a minimum two years of acceptable operation of a facility or system of class I or higher, one year of which must have been in a position of direct responsible charge;
- c. Completion of high school or equivalent, and a minimum three years of acceptable operation of a facility or system of class I or higher, one year of which must have been in a position of direct responsible charge; or
- d. A combination of education qualifications and experience that will be satisfactory to the department. No substitute may be permitted for the minimum experience requirement, unless an exception is granted under section 33.1-19-01-07.

4. Grade III.

- a. A four-year college degree and a minimum two years of acceptable operation of a facility or system of class II or higher, two years of which must have been in a position of direct responsible charge;
- b. Two years post high school education and a minimum three years of acceptable operation of a facility or system of class II or higher, two years of which must have been in a position of direct responsible charge;
- c. Completion of high school or equivalent, and a minimum four years of acceptable operation of a facility or system of class II or higher, two years of which must have been in a position of direct responsible charge; or
- d. A combination of education qualifications and experience that will be satisfactory to the department. No substitute may be permitted for the minimum experience requirement, unless an exception is granted under section 33.1-19-01-07.

5. Grade IV.

- a. A four-year college degree and a minimum three years of acceptable operation of a facility or system of class III or higher, two years of which must have been in a position of direct responsible charge;
- b. Two years of post high school education and a minimum four years of acceptable operation of a facility or system of class III or higher, two years of which must be in a position of direct responsible charge;
- c. Completion of high school or equivalent and a minimum five years of acceptable operation of a facility or system of class III or higher, two years of which must have been in a position of direct responsible charge; or
- d. A combination of education qualifications and experience that will be satisfactory to the department. No substitute may be permitted for the minimum experience requirement, unless an exception is granted under section 33.1-19-01-07.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-07-06; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-07-03, 23.1-07-06; S.L. 2017, ch. 199, § 22

33.1-19-01-13. [Reserved].

33.1-19-01-14. [Reserved].

33.1-19-01-15. [Reserved].

33.1-19-01-16. Substitutions or equivalents.

In determining the qualifications of operators desiring to be certified, the following substitutions or equivalents may be used:

1. One year of acceptable operating experience may be considered equivalent to one year of high school.
2. Experience applied to the educational requirement may not also be applied to the experience requirement.
3. An acceptable high school equivalency certificate may be used to substitute for graduation from high school.
4. No substitutions or equivalents will be allowed in lieu of the minimum acceptable experience in the operation of water treatment, water distribution and storage, wastewater treatment, and wastewater collection and transfer facilities or systems.
5. The department may waive the experience requirements in an exceptional set of circumstances.

33.1-20-01.1-01. Purpose.

It is the purpose of this article to provide performance criteria and standards for the management of solid waste in a manner that will control nuisance and litter, protect the public health, safety, and welfare, and prevent or minimize injury of environmental resources from exposure to solid waste or constituents of solid waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-02. Applicability.

Any person who operates or proposes to operate any type of solid waste management system, unit, or facility and any person who transports solid waste, is subject to the provisions of this article.

This article does not apply to the following:

1. The management of hazardous waste at hazardous waste management units or facilities as defined by chapter 33.1-24-01;
2. Solid waste management units which do not receive solid waste after October 9, 1993, except closure standards apply;
3. Recycled agricultural material;
4. The disposal of household waste generated by any individual who resides on unplatted land in unincorporated areas of this state, on that person's property, unless handling of this waste is not in keeping with the purpose of this article;
5. The beneficial use or reuse of materials, substances, energy, or other products derived from a resource recovery activity;
6. Additional exemptions of certain requirements as specified in provisions of this article; or

7. Agricultural waste from a farming operation that is disposed on land owned by the farming operation and which is not likely to pollute the waters of the state.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09, 23.1-08-22; S.L. 2017, ch. 199, § 23

33.1-20-01.1-03. Definitions.

The terms used throughout this title have the same meaning as in North Dakota Century Code chapter 23.1-08, except:

1. "Agricultural processing operation" means a facility that processes crops, livestock, or other agricultural products in preparation for wholesale or retail sale to the public such as meat packing, the milling of grain, the selling of livestock by licensed livestock auction facilities, or other similar activities.
2. "Agricultural waste" means solid waste derived from the production and processing of crops and livestock such as manure, spoiled grain, grain screenings, undigested rumen material, livestock carcasses, fertilizer, and fertilizer containers, but does not include pesticide waste or pesticide containers.
3. "Airport" means a public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities.
4. "Aquifer" means a geological formation, group of formations, or portion of formation capable of yielding significant quantities of ground water to wells or springs.
5. "Closed unit" means a landfill or surface impoundment or a portion thereof that has received solid waste for which closure is complete.
6. "Closure" means the taking of those actions to close and reclaim a solid waste management unit or facility. Closure actions may include sloping filled areas to provide adequate drainage, applying final cover, providing erosion control measures, grading and seeding, installing monitoring devices, constructing surface water control structures, installing gas control systems, and measures necessary to secure the site.
7. "Commercial waste" means solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities exclusive of household waste, industrial waste, and special waste.
8. "Compliance boundary" means the vertical planar surface that extends downward into the uppermost aquifer and that circumscribes the waste management units at which water quality standards or maximum concentration limits apply.
9. "Composting" means the controlled biological decomposition of organic solid waste under aerobic conditions.
10. "Detachable container" means a reusable container for the collection, storage, or transportation of solid waste that is mechanically loaded or handled (for example, "dumpsters" and "rolloffs").
11. "Drop box facility" means a facility used for the placement of a detachable container including the area adjacent for necessary entrance and exit roads, unloading, and turn-around areas. Drop box facilities normally serve the general public with loose loads and receive solid waste from off-site.

12. "Energy conversion facility" has the same meaning as in North Dakota Century Code subsection 5 of section 49-22-03, except that refining of liquid hydrocarbon products is excluded.
 13. "Existing unit" means a landfill or surface impoundment or a portion thereof that is receiving or has received solid waste for which closure has not been completed.
 14. "Facility" means all contiguous land and structures, other appurtenances, and improvements on land which include one or more solid waste management units, such as a transfer station, solid waste storage building, a solid waste processing system, a resource recovery system, an incinerator, a surface impoundment, a surface waste pile, a land treatment area, or a landfill. A facility may or may not be used solely for solid waste management.
 15. "Farming operation" means the production or raising of crops or livestock. Production or raising of crops or livestock includes the following:
 - a. Cultivating, growing, or harvesting agricultural crops;
 - b. Breeding, feeding, grazing, or finishing of livestock; or
 - c. Raising or producing poultry or unprocessed poultry products, unprocessed milk or dairy products, unprocessed livestock products such as wool, or unprocessed fruits, vegetables, or other horticultural products.
- The term "farming operation" includes any concentrated or confined animal feeding operation regulated under North Dakota Century Code chapter 61-28 or North Dakota Administrative Code chapter 33.1-16-03.1 that recycles or applies its manure and other residual agricultural material to soils as recycled agricultural material, but does not include a concentrated or confined animal feeding operation that generates manure or other residual agricultural material that is discarded as agricultural waste. The term "farming operation" does not include any processing of crops, livestock, or other agricultural products by an agricultural processing operation.
16. "Final cover" means any combination of compacted or uncompacted earthen material, synthetic material, and suitable plant growth material which, after closure, will be permanently exposed to the weather and which is spread on the top and side slopes of a landfill or facility.
 17. "Floodplain" means the lowland and relatively flat areas adjoining inland and coastal waters that are inundated by an one hundred-year flood.
 18. "Free liquid" means the liquid which separates from the solid portion of a solid waste under ambient pressure and normal, above freezing temperature. The environmental protection agency paint filter liquids test method or visual evidence must be used to determine if a waste contains free liquid.
 19. "Garbage" means putrescible solid waste such as animal and vegetable waste resulting from the handling, preparation, cooking, and consumption of food, including wastes from markets, storage facilities, and processing plants.
 20. "Gas condensate" means the liquid generated as a result of gas recovery processes at a landfill disposal unit.
 21. "Ground water" means water below the land surface in a geologic unit in which soil pores are filled with water and the pressure of that water is equal to or greater than atmospheric pressure.

22. "Hazardous waste" has the meaning given by North Dakota Century Code section 23.1-04-02 and further defined in North Dakota Administrative Code chapter 33.1-24-02.
23. "Household waste" means solid waste, such as trash and garbage, normally derived from households, single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day use recreation areas.
24. "Incinerator" has the meaning given by section 33.1-15-01-04.
25. "Industrial waste" has the same meaning as in North Dakota Century Code section 23.1-08-02. Such waste may include residues or spills of any industrial or manufacturing process and waste resulting from the following: fertilizer/agricultural chemicals; food and related products/byproducts; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; textile manufacturing; transportation equipment; petroleum refining; and the combustion of municipal waste or regulated infectious waste.
26. "Inert waste" means nonputrescible solid waste which will not generally contaminate water or form a contaminated leachate. Inert waste does not serve as food for vectors. Inert waste includes: construction and demolition material such as metal, wood, bricks, masonry and cement concrete; asphalt concrete; metal; tree branches; bottom ash from coal-fired boilers; and waste coal fines from air pollution control equipment.
27. "Land treatment" means the controlled application of solid waste, excluding application of animal manure, into the surface soil to alter the physical, chemical, and biological properties of the waste.
28. "Landfill" has the meaning given by North Dakota Century Code section 23.1-08-02 and that is not a land treatment unit, surface impoundment, injection well, or waste pile.
29. "Lateral expansion" means a horizontal extension of the waste boundaries of an existing landfill disposal unit.
30. "Leachate" means a liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste.
31. "Leachate removal system" means any combination of landfill base slopes, liners, permeable zones, pipes, detection systems, sumps, pumps, holding areas or retention structures, treatment systems, or other features that are designed, constructed, and maintained to contain, collect, detect, remove, and treat leachate.
32. "Lower explosive limit" means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at twenty-five degrees Celsius [77 degrees Fahrenheit].
33. "Municipal waste incinerator ash" means the residue produced by the incineration or gasification of municipal waste.
34. "Nutrient management plan" means a plan prepared by any concentrated or confined animal feeding operation regulated under North Dakota Century Code chapter 61-28 or North Dakota Administrative Code chapter 33.1-16-03, or by any agricultural processing operation. This plan shall be submitted to the department for approval and describe the method and schedule by which the recycled agricultural materials generated or stored by the operation are recycled or applied to the land at appropriate agronomic rates as nutrients or fertilizers, rather than discarded as agricultural waste. An approved nutrient management plan must address water pollution, odor, and other environmental and public health problems that are relevant because of size, location, or other environmental factors, and may include the following elements:

- a. Recycled agricultural material handling and storage, including construction and maintenance of buildings, feedlots, collection systems, storage systems with adequate storage and integrity, and diversion of runoff and flowing surface water from contact with the storage systems and the recycled agricultural material;
- b. Land application of recycled agricultural material, including soils testing, transportation, timing and methods of application, and nutrient management;
- c. Conservation management practices, including injection or tillage of the recycled agricultural materials into the soils, crop residue and pasture management practices, use of conservation buffers, and other conservation practices that prevent water pollution from land application of recycled agricultural materials;
- d. Recordkeeping, including the place, date, and amount of recycled agricultural material applied per acre, plus records of any testing;
- e. Feed management; and
- f. Other utilization options where residual agricultural materials are recycled.

35. "Operator" means the person responsible for the overall operation of a facility or part of a facility.

36. "Owner" means the person who owns a facility or part of a facility.

37. "Plan of operation" means the written plan developed by an owner or operator of a facility detailing how a facility is to be operated during its active life.

38. "Postclosure period" means the period of time following closure of a solid waste management unit during which the owner or operator must perform postclosure activities.

39. "Processing" means an operation designed to separate, shred, compress, or otherwise modify a recyclable material to facilitate the transport or resource recovery of the material.

40. "Radioactive waste" means solid waste containing radioactive material and subject to the requirements of article 33.1-10.

41. "Recyclable material" means a solid waste material that has been segregated for recycling or converted into a raw material, substitute for a raw material, or a commodity.

42. "Recycled agricultural material" means agricultural waste generated by a farming operation or agricultural processing operation that is recycled or applied to soils as a nutrient or as a fertilizer at appropriate agronomic rates, or that is left in place on soils during harvesting, grazing, or other similar agricultural activities. Recycled agricultural materials also include:

- a. Material, including manure, generated by any concentrated or confined animal feeding operation regulated under North Dakota Century Code chapter 61-28 or North Dakota Administrative Code chapter 33.1-16-03 that is stored in a feedlot or waste storage structure, provided that the material is stored in a manner that is not likely to pollute the waters of the state, and recycled or applied to soils as nutrients or fertilizers in accordance with an approved nutrient management plan; or
- b. Material, including manure, generated by any agricultural processing operation that is stored in a manner that is not likely to pollute the waters of the state, and recycled or applied to soils as nutrients or fertilizers in accordance with an approved nutrient management plan.

Recycled agricultural material does not include agricultural waste that is discarded as garbage, refuse, or other solid waste.

43. "Recycling" means collecting, sorting, or recovering material that would otherwise be solid waste and performing all or part of a method or technique, including processing, to create a recyclable material.
44. "Runoff" means any snowmelt, rainwater, leachate, or other liquid that drains from any part of a facility over another part of the facility or over land adjoining the facility.
45. "Run-on" means any snowmelt, rainwater, or other liquid that drains from land adjoining a facility onto any part of the facility or that drains from one part of the facility onto another part of the facility.
46. "Scavenging" means uncontrolled removal of solid waste materials from any solid waste management facility.
47. "Sequential partial closure" means bringing discrete, usually adjacent, portions of a disposal facility to elevation and grade in an orderly, continually progressing process as part of the operations of the facility for facilitating closure.
48. "Sludge" means solid waste in a semisolid form consisting of a mixture of solids and water, oils, or other liquids.
49. "Suitable plant growth material" means that soil material (normally the A and the upper portion of B horizons which are dark colored due to organic staining) which, based upon a soil survey, is acceptable as a medium for plant growth when respread on the surface of regraded areas.
50. "Surface impoundment" means a human-made excavation, diked area, or natural topographic depression designed to hold an accumulation of solid waste which is liquid, liquid bearing, or sludge for containment, treatment, or disposal.
51. "Technologically enhanced naturally occurring radioactive material (TENORM)" means naturally occurring radioactive material whose radionuclide concentrations are increased by or as a result of past or present human practices. TENORM does not include background radiation or the natural radioactivity of rocks or soils. TENORM does not include "source material" and "byproduct material" as both are defined in the Atomic Energy Act of 1954, as amended [42 U.S.C. 2011 et seq.] and relevant regulations implemented by the United States nuclear regulatory commission.
52. "Transfer station" means a site or building used to transfer solid waste from a vehicle or a container, such as a rolloff box, into another vehicle or container for transport to another facility.
53. "Treatment" means a method or process designed to change the physical, chemical, or biological character or composition of a solid waste or leachate so as to neutralize the waste or leachate or so as to render the waste or leachate safer for public health or environmental resources during transport, storage, or disposal. The term does not include resource recovery.
54. "Used oil" means any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities.
55. "Waste pile or pile" means any noncontainerized accumulation of nonflowing solid waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 61-28-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 61-28-04; S.L. 2017, ch. 199, § 23

33.1-20-01.1-04. Care and disposal of solid waste.

1. Any person who owns or operates any premises, business establishment, or industry is responsible for the solid waste management activities, such as storage, transportation, resource recovery, or disposal, of solid waste generated or managed at that person's premises, business establishment, or industry.
2. No solid waste may be delivered to a facility which is not in compliance with this article or abandoned upon any street, alley, highway, public place, or private premises.
3. Solid waste must be stored, collected, and transported in a manner that provides for public safety, prevents uncontrolled introduction into the environment, and minimizes harborage for insects, rats, or other vermin.
4. Except in unincorporated areas of this state, household waste must be removed from the premises or containers at regular intervals not to exceed seven days and transported to a solid waste management unit or facility.
5. Used oil, lead-acid batteries, major appliances, and scrap metal may not be collected or transported for disposal to any solid waste disposal unit or facility unless such unit or facility has provision for intermediate storage and recycling of these materials and all such materials are appropriately segregated for recycling.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-04.1. Storage containers and areas.

All household wastes are to be stored in the manner provided by this section.

1. Storage containers.

a. Single-use containers.

- (1) Single-use containers, such as paper or plastic bags, liners, or cartons, must have a maximum capacity of thirty-two gallons [121.1 liters] unless otherwise allowed by the local unit of government, must be leakproof and must be puncture resistant. Paper bags must be specifically designed for solid waste containment or disposal.
- (2) Paper containers may not be used for outside storage unless supported by wall-mounted or freestanding holders or frames. When filled, the container top must be tied, stapled, or crimped to completely confine the contents.

b. Residential containers.

- (1) Reusable residential containers must be rigid and durable, nonabsorbent, watertight, tapered, corrosion resistant, rodentproof, easily cleanable, and have a flytight cover. These containers must be covered except when adding or removing waste.
- (2) Residential containers must have a maximum capacity of thirty-two gallons [121.1 liters].
- (3) When residential containers are kept in the outdoor environment, storage racks or supports must be provided to minimize corrosion, to prevent breeding of insects, and to prevent rodent harborage. The bottom of the racks or supports must be at

least one foot [30.5 centimeters] above ground level. The covers may be chained to the rack or to a permanent structure.

- c. Bulk containers. Bulk containers or detachable containers, such as dumpsters, must be constructed of rigid and durable, rust-resistant and corrosion-resistant material, be equipped with tight-fitting lids or doors to prevent entrance of insects or rodents, and must be leakproof. Lids and covers must be closed except when adding or removing waste.

2. Enclosed storage areas.

- a. Storage rooms, buildings, or areas must be of rodentproof construction which is readily cleanable with proper drainage.
- b. Storage rooms or buildings, if not refrigerated, must be adequately vented and all openings must be screened.

3. Maintenance of containers and enclosed storage areas.

- a. All containers and enclosed areas for storage of solid waste must be maintained in good repair and in a manner as necessary to prevent litter, nuisances, odors, insect breeding, and rodents.
- b. Containers that are broken or otherwise fail to meet requirements of this section must be replaced with complying containers.

4. **Unconfined waste.** Unless special service or special equipment is provided by the collector for handling unconfined waste materials such as trash, brush, leaves, tree cuttings, newspapers and magazines, and other debris for manual pickup and collection, these materials must be in securely tied bundles or in boxes, sacks, or other receptacles and solid waste so bundled may not exceed fifty pounds [22.7 kilograms] in weight and four feet [1.8 meters] in length. Such wastes may not be placed out for collection twenty-four hours before scheduled pickup.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-05. Collection and transportation vehicles.

1. Vehicles used for the commercial collection and transportation of any residue, sludge, agricultural, inert, industrial waste, or special waste must be loaded and moved in such a manner that the contents will not fall, leak, or spill therefrom. Where spillage does occur, the collector or transporter shall immediately return spilled waste to the vehicle or container and, if necessary, clean and decontaminate the area.
2. Vehicles used for the commercial collection and transportation of regulated infectious waste, household waste, or municipal waste incinerator ash must be fully leakproof and fully enclosed or covered to prevent scattering of material. Regulated infectious waste may not be subject to mechanical stress or compaction during loading, unloading, and transit. Any spilled material must be immediately returned to the transport vehicle or container and, if necessary, the area must be cleaned and decontaminated.
3. The cargo-carrying body of a vehicle used for commercial collection or transportation of solid waste must be maintained in good repair and in sanitary condition.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-06. Hazardous waste.

The management of hazardous waste is regulated under article 33.1-24, except as otherwise provided in this article and section.

1. Containers having hazardous waste in excess of normal household quantities, which are not managed under article 33.1-24, must be marked to designate the content as toxic, explosive, or otherwise hazardous in a manner designed to give adequate warning to any person conducting the collection, transport, resource recovery, or disposal of the waste.
2. Every person who transports hazardous waste shall have a valid solid waste transporters permit, unless exempted by section 33.1-20-02-01.
3. Owners and operators of disposal, resource recovery, or solid waste processing facilities may not knowingly store, treat, handle, or dispose of hazardous waste in amounts that are in excess of quantities normally in household waste, unless the requirements of article 33.1-24 are met.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-07. Pesticide waste.

Every person who handles surplus agricultural pesticides and pesticide containers shall comply with this article, section 33.1-15-10-02, and North Dakota Century Code section 4.1-33-17. Surplus pesticides may not be discarded in any manner which endangers humans, animals, and the environment. Pesticide containers must be drained empty according to label directions and power or triple rinsed before processing or disposal.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-08. Asbestos waste.

Every person who handles and disposes of asbestos waste shall comply with section 33.1-15-13-02 and this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-09. Radioactive waste.

Every person who handles and disposes of radioactive waste shall comply with article 33.1-10. Every person who handles and disposes of TENORM shall also comply with the applicable requirements of this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-01.1-10. [Reserved].

33.1-20-01.1-11. Industrial waste and special waste.

Every person who generates industrial waste or special waste or who operates a landfill for disposal of municipal waste, industrial waste, or special waste shall comply with this article and this section.

1. Industrial waste, except as provided by subsection 3:

- a. May be codisposed with municipal waste in a municipal waste landfill in amounts less than or equal to ten percent by month of the weight of the municipal waste, except that the accumulated amount of industrial waste must not exceed twenty thousand tons [18,143.69 metric tons] per year or three thousand tons [2,721.55 metric tons] in any one month; or
- b. May be disposed in a landfill which complies with chapter 33.1-20-07.1, except that the accumulated amount must not exceed twenty-five thousand tons [22,679.62 metric tons] per year or three thousand tons [2,721.55 metric tons] in any one month unless larger amounts in one month resulting from remediation of spills or cleanup projects are approved by the department; or
- c. Otherwise must be disposed in a landfill which complies with chapter 33.1-20-10 when the amount exceeds twenty-five thousand tons [22,679.62 metric tons] per year.

2. The disposal of special waste must comply with chapter 33.1-20-07.1.

3. The disposal of municipal solid waste (MSW) incinerator ash in an accumulated amount greater than three thousand tons [2,721.55 metric tons] per year must comply with chapter 33.1-20-10.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-12. Waste treatment.

The department may require the treatment of a solid waste which may have incompatible characteristics with another solid waste prior to or during codisposal or which may produce a constituent in the waste's laboratory extract or leachate that exceeds twenty percent of a toxicity standard provided by section 33.1-24-02-14 or ten parts per million polychlorinated biphenols. The department must consider factors such as the site hydrogeological characteristics, toxicity of the waste, anticipated leachate quality, mobility of waste constituents, fate of leachate constituents during migration, potential site capacity, or local uses of waters of the state.

1. Treatment, when performed, must reduce:

- a. Toxicity of the waste;
- b. The mobility of constituents contained in or derived from the waste into leachate; or
- c. Both the toxicity and mobility.

2. When treatment is required, the generator of the solid waste or the owner or operator of the facility at which the waste would be treated must provide a demonstration of the treatment technology for approval by the department.

3. An owner or operator may propose and demonstrate treatment of solid waste so as to remove or separate toxic materials or constituents from the waste prior to disposal. In evaluating the demonstration, the department shall consider such factors as technical feasibility; the proposed management of the removed or separated waste materials or constituents; the physical, chemical, and biological processes affecting fate and transport; relative degree of removal of the toxic materials or constituents; or the resulting characteristics of the waste or leachate. If the treatment achieves leachate concentrations of constituents in or derived from the remaining waste which are less than the standards of article 33.1-16, the department may reduce or waive one or more of the criteria of this article which are enumerated in one or more of the following subdivisions:

a. The liner or hydraulic barrier.

b. The leachate removal system.

c. The site efficiency for collection or rejection of precipitation that falls on the landfill.

d. The ground water monitoring plan and system.

e. The plan of operation.

f. The postclosure plan and postclosure period.

g. Recordkeeping and reporting.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-13. Certified laboratory.

All waste, leachate, and water analysis required by article 33.1-20 must be conducted by a laboratory approved by the department's certification procedures.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-01.1-14. Variances.

Whereupon written application the department finds that by reason of exceptional circumstances strict conformity with any provisions of this article would cause undue hardship or would be unreasonable, impractical, or not feasible under the circumstances, the department may permit a variance from this article upon such conditions and within such time limitations as it may prescribe.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-02

[Reserved]

CHAPTER 33.1-20-02.1
PERMIT PROVISIONS AND PROCEDURES

Section

33.1-20-02.1-01 Solid Waste Management Permit Required

33.1-20-02.1-02 Permits by Rule

33.1-20-02.1-03 Permit Compliance

33.1-20-02.1-04 Record of Notice

33.1-20-02.1-05 Property Rights

33.1-20-02.1-06 Permit Modification, Suspension, or Revocation

33.1-20-02.1-07 Renewal of Permit

33.1-20-02.1-01. Solid waste management permit required.

Every person who treats or transports solid waste or operates a solid waste management unit or facility is required to have a valid permit issued by the department, unless the activity is an emergency, exemption, or exception as provided in this section.

1. If the department determines an emergency exists, it may issue an order citing the existence of such emergency and require that certain actions be taken as necessary to meet the emergency in accordance with the provisions of North Dakota Century Code section 23.1-08-19.
2. A solid waste management permit is not required for the following activities or facilities:
 - a. Backyard composting of leaves, grass clippings, or wood chips;
 - b. A collection point for parking lot or street sweepings;
 - c. Collection sites for wastes collected and received in sealed plastic bags from such activities as periodic cleanup campaigns for cities, rights of way, or roadside parks;
 - d. Places which receive one or more recyclable materials, excluding garbage, for storage or for processing after which the material is transported for resource recovery, disposal, or storage;
 - e. Onsite incinerators used by hospitals, clinics, laboratories, or other similar facilities solely for incineration of commercial waste or infectious waste generated onsite;
 - f. Rock and dirt fills that receive any combination of rock, dirt, or sand;
 - g. Surface impoundments for storage, handling, and disposal of oil and gas exploration and production wastes on a lease or area permitted through the North Dakota industrial commission under North Dakota Century Code section 38-08-04;
 - h. The disposal into the mine spoils of the following wastes generated in the mining operation:
 - (1) Rock, boulders, and dirt; and
 - (2) Trees and brush.
 - i. The disposal of the following mining operation wastes into areas designated in a surface coal mining permit issued by the North Dakota public service commission for such disposal:
 - (1) Inert waste from inspected farmsteads;

(2) Wood materials including pallets, lumber, lathe, cables, pools, and fenceposts;

(3) Brick, concrete block, and cured concrete; and

(4) Plastic material and pipe.

3. A permit for the transportation of solid waste is not required by persons who:

a. Transport solely their own waste to a solid waste management unit or facility;

b. Transport waste entirely within a facility regulated under this article or entirely on their property; or

c. Transport a recyclable material other than used oil or scrap tires.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-02. Permits by rule.

The owner or operator of the following facilities is deemed to have obtained a permit for a solid waste management facility without making application for it as long as the owner or operator remains in compliance with section 33.1-20-04.1-01 and the rules and requirements provided in the respective subsections of this section:

1. A facility for inert waste operated for municipalities which together have one thousand or fewer people provided:

a. The owner or operator of a new facility or lateral expansion of a landfill notifies the department, on forms available from the department, ninety days prior to any construction;

b. The facility is in compliance with sections 33.1-20-02.1-04, 33.1-20-04.1-02, and 33.1-20-04.1-09 and with chapter 33.1-20-05.1.

2. A drop box facility in compliance with subsection 2 of section 33.1-20-04.1-06.

3. A waste pile for composting only grass and leaves that is operated for ten thousand or fewer people in compliance with section 33.1-20-04.1-07 provided the owner or operator notifies the department, on forms available from the department, ninety days prior to construction.

4. A pile of scrap tires accumulated by a tire dealer, a municipality, or a county which contains either one thousand three hundred or fewer car tires, twenty-five tons [22.7 metric tons] or less of shredded tires or a pile of tires, which is equivalent in volume to one twin-axle semitrailer load or less, provided that no public nuisance is created and the following requirements are addressed:

a. Access to the facility is monitored or controlled;

b. The location is accessible by fire control and emergency equipment; and

c. The owner or operator has appropriate provisions and financial arrangements for the recycling or disposal of tires.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-03. Permit compliance.

All solid waste management facilities and activities must be performed, constructed, operated, and closed in a manner consistent with the permit application and subject to any modifications specified through permit conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-04. Record of notice.

1. Within sixty days of the issuance of a permit for any landfill, surface impoundment, or land treatment unit if not already completed, the owner or operator shall record a notarized affidavit with the county register of deeds. The affidavit must specify that this facility, as noted in the legal description, is permitted to accept solid waste for disposal. This affidavit must specify that another affidavit must be recorded upon the facility's final closure.
2. Within sixty days of completion of final closure of any landfill, surface impoundment, or land treatment facility and prior to sale or lease of the property on which the facility is located, the owner shall comply with North Dakota Century Code section 23.1-08-21. The record or plat shall, in perpetuity, notify any person conducting a title search that the land has been used as a solid waste disposal facility. The record or plat must indicate the types and quantities of solid waste placed in the site and details on the site's construction, operation, or closure (including precautions against any building, earth moving, or tillage on the closed site) that are necessary to ensure the long-term maintenance and integrity of the closed facility.
3. The department must be provided a certified copy of any affidavit or plat within sixty days of recording.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-05. Property rights.

An applicant for a permit for a solid waste management unit or facility shall acquire or possess a right to the use of the property for which a permit is sought, including the access route thereto. After closure, the applicant shall maintain the right of access to the site throughout the postclosure period.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-06. Permit modification, suspension, or revocation.

1. A permit may be modified, suspended, revoked, or denied by the department for reasons pertaining to: circumstances which do not meet the purpose and provisions of this article, the provisions of the permit, or the plans and specifications submitted as part of the application for permit; or, violations of any applicable laws or rules. The department shall provide written notice to the permittee.
2. If a change occurs during the life of a permit for transporting solid waste (such as the number or type of vehicles used to transport waste, the service area, the waste categories transported, or the solid waste management facilities use), the permittee shall notify the department in writing within thirty days.

3. If a change occurs during the life of a permit for a solid waste management unit or facility, as specified in subsection 4, the permittee shall apply for and receive a modification of the permit prior to enacting the change. Routine maintenance, repair, or replacement, or an increase in hours of operations may not be considered a construction or operation change. Changes, including frequency of monitoring and reporting, waste sampling or analysis method, schedules of compliance, and revised cost estimates for closure and postclosure may be effected through written notice to and approval by the department.

4. The following changes at a permitted solid waste management unit or facility require a permit modification:

a. A change to the facility boundaries or acreage;

b. An increase in average daily solid waste specified in the permit or permit application, calculated by weight or volume for any twelve consecutive months;

c. A change in the solid waste characteristics;

d. An increase or decrease in finished height or finished slope of a landfill;

e. Any increase in landfill trench or excavation depth;

f. A change in facility site development which will result in impact to or encroachment into a one hundred-year floodplain, a ravine, a wetland, or a drainageway;

g. A change in site drainage or management of runoff or run-on;

h. A change in facility site development which will result in disposal of wastes closer to site boundaries than originally approved;

i. The addition of solid waste management units, which, if sited independently, would require a permit; or

j. Other changes that could have an adverse effect on the safety, health, or welfare of nearby residents, property owners, or the environment.

5. An application for modification of a solid waste management unit or facility shall follow the procedures and provisions of section 33.1-20-03.1-02.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-02.1-07. Renewal of permit.

An application for renewal of any permit must be submitted at least sixty days prior to the expiration date. The application for renewal must follow the procedures and provisions of section 33.1-20-03.1-02. The conditions of an expired permit continue in force until the effective date of a new permit, if the permittee has submitted a timely and complete application for a new permit and the department, through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-03

CHAPTER 33.1-20-03.1

PERMIT APPLICATION PROVISIONS

Section

33.1-20-03.1-01 Preapplication Procedures

33.1-20-03.1-02 Permit Application Procedures

33.1-20-03.1-03 Permit Application Review and Action

33.1-20-03.1-04 Permit Application Review Timeline

33.1-20-03.1-01. Preapplication procedures.

1. For all new solid waste management facilities subject to the location standards of subsection 2 of section 33.1-20-04.1-01, a preapplication consisting of a preliminary facility description and a site assessment must be submitted to the department for review prior to submitting a permit application.
 - a. The preliminary facility description must include, at a minimum, the location of the facility; a projection of capacity, size, daily waste receipts, type of waste accepted, years of operation, description of operation, and costs; and a discussion of the proposed facility's compliance with local zoning requirements and the district waste management plan.
 - b. The preliminary site assessment must include available information pertaining to the site's geology, hydrogeology, topography, soils, and hydrology based on existing information.
2. Within sixty days of receipt of a preapplication, the department will provide written notification of approval or disapproval of the preapplication. If, after review of all information received, the department makes the determination to disapprove the preapplication, the department shall inform the applicant in writing of the reasons for the disapproval. If the preapplication is disapproved, the applicant may submit a new preapplication. A disapproval must be without prejudice to the applicant's right to a hearing before the department pursuant to North Dakota Century Code chapter 28-32.
3. An application may be filed only after approval of the preapplication and a finding by the department, after consultation with the state geologist and state engineer, that the site is geologically and hydrogeologically suitable for further evaluation and consideration.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09, 23.1-08-13, 23.1-08-17; S.L. 2017, ch. 199, § 23

33.1-20-03.1-02. Permit application procedures.

1. An application for a permit must be submitted on forms available from the department by any person desiring to transport solid waste or to establish, construct, or operate a solid waste management unit or facility.
2. The application for a permit must be prepared by the applicant or the applicant's authorized agent and signed by the applicant.
3. Four copies of the application and supporting documents are required to be submitted to the department with the fee specified in chapter 33.1-20-15.
4. Upon the submission of an application for a permit for a new solid waste management unit or facility, the applicant shall publish a public notice indicating that an application has been submitted to the department. The public notice must indicate the type and location of the unit

or facility and must be made by two separate publications in the official county newspaper in the county in which the site or operation is located. The applicant shall provide proof of publication by submitting to the department, within sixty days after the second publication of the notice, and affidavit from the publisher accompanied by a copy of the published notice, which shows the date of publication. The department may require public notice for facility changes listed in subsection 4 of section 33.1-20-02.1-06.

5. Applicants proposing a solid waste management facility in a mining permit area for disposal of coal processing waste must also file a copy of the application with the public service commission in accordance with subdivision a of subsection 1 of section 69-05.2-19-02.

6. Applications for a solid waste management unit or facility permit must include the following information where applicable:

a. A completed application form, subsection 1;

b. A description of the anticipated physical and chemical characteristics, estimated amounts, and sources of solid waste to be accepted, including the demonstration required by North Dakota Century Code section 23.1-08-14;

c. The site characterization of section 33.1-20-13-01 and a demonstration that the site fulfills the location standards of section 33.1-20-04.1-01;

d. Soil survey and segregation of suitable plant growth material;

e. Demonstrations of capability to fulfill the general facility standards of section 33.1-20-04.1-02;

f. Facility engineering specifications adequate to demonstrate the capability to fulfill performance, design, and construction criteria provided by this article and enumerated in this subdivision:

(1) Transfer stations and drop box facilities, section 33.1-20-04.1-06.

(2) Waste piles, section 33.1-20-04.1-07.

(3) Resource recovery, section 33.1-20-04.1-08.

(4) Land treatment, sections 33.1-20-04.1-09 and chapter 33.1-20-09.

(5) Surface impoundments, sections 33.1-20-04.1-09 and chapter 33.1-20-08.1.

(6) Any disposal, section 33.1-20-04.1-09.

(7) Inert waste landfill, chapter 33.1-20-05.1.

(8) Municipal waste landfill, chapter 33.1-20-06.1.

(9) Industrial waste landfill, chapters 33.1-20-07.1 or 33.1-20-10.

(10) Special waste landfill, chapter 33.1-20-07.1;

g. The plan of operation of section 33.1-20-04.1-03;

h. Demonstration of the treatment technology of section 33.1-20-01.1-12;

i. The place where the operating record is or will be kept, section 33.1-20-04.1-04;

j. Demonstration of capability to fulfill the ground water monitoring, section 33.1-20-13-02;

k. Construction quality assurance and quality control:

l. Demonstrations of capability to fulfill the closure standards, section 33.1-20-04.1-05 and otherwise provided by this article;

m. Demonstrations of capability to fulfill the postclosure standards, section 33.1-20-04.1-09 and otherwise provided by this article; and

n. A disclosure statement as required by North Dakota Century Code section 23.1-08-17.

7. Applications for a solid waste transporter's permit must include the following information:

a. A completed application form, subsection 1;

b. Description of the types of solid waste to be transported, approximate quantities, and anticipated generator sources;

c. A list of the anticipated solid waste management facilities that will store, treat, process, recycle, or dispose the solid waste;

d. Description of equipment and transportation spill prevention as required by section 33.1-20-01.1-05; and

e. A disclosure statement as required by North Dakota Century Code section 23.1-08-17.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09, 23.1-08-14, 23.1-08-17; S.L. 2017, ch. 199, § 23

33.1-20-03.1-03. Permit application review and action.

1. The department will review the applications, plans, and specifications for solid waste transporters and for solid waste management facilities and information submitted as a result of the public notices.

2. Upon completion of the department's review, the application for permit will be approved, returned for clarification and additional information, or denied.

a. The basis for approval must be an application which demonstrates compliance with this article and North Dakota Century Code chapter 23.1-08.

b. The basis for return must be an application which is procedurally or technically incomplete, inaccurate, or deficient in detail, or which precludes an orderly review and evaluation. If the application is returned, the applicant may resubmit an application, complete with all necessary information to satisfy deficiencies. If the applicant does not resubmit an application within six months, the department shall consider the application withdrawn, and any subsequent application must be considered a new application.

c. The basis for denial must be an application which contains false, misleading, misrepresented, or substantially incorrect or inaccurate information; fails to demonstrate compliance with this article; proposes construction, installation, or operation of a solid waste management unit or facility which will result in a violation of any part of this article; or is made by an applicant for whom an environmental compliance background review reveals any of the circumstances listed in subsection 14 of North Dakota Century Code section 23.1-08-03.

3. If the department makes a preliminary determination to issue a permit for a solid waste management facility, the department shall prepare a draft permit. The draft permit will be

available for public review and comment after the department publishes a notice of its intent to issue the permit. The public notice must be published in the official county newspaper in the county in which the solid waste management unit or facility is located and in a daily newspaper of general circulation in the area of the facility.

a. Interested persons may submit written comments to the department on the draft permit within thirty days of the final public notice. All written comments will be considered by the department in the formulation of its final determinations.

b. The department may hold a hearing if it determines there is significant public interest in holding such a hearing. Public notice for a hearing will be made in the same manner as for a draft permit. The hearing will be before the department and will be held at least fifteen days after the public notice has been published.

4. If, after review of all information received, the department approves the permit application, the department shall issue a permit. The department may impose reasonable conditions upon a permit.

5. If, after review of all information received, the department makes the determination to deny the permit, the applicant will be notified, in writing, of the denial. The department shall set forth in any notice of denial the reasons for denial. If the application is denied, the applicant may submit a new application, which will require a new public notice. A denial must be without prejudice to the applicant's right to a hearing before the department pursuant to North Dakota Century Code chapter 28-32.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-03.1-04. Permit application review timeline.

Upon receipt of a permit application, the department has one hundred twenty days to review and approve or disapprove the application and notify the applicant of the decision. The department may extend the period an additional one hundred twenty days if the applicant submits a significant change that in the department's judgment requires additional time to review.

History: Effective January 1, 2019.

[Reserved]

CHAPTER 33.1-20-04.1
GENERAL PERFORMANCE STANDARDS

Section

33.1-20-04.1-01 General Location Standards

33.1-20-04.1-02 General Facility Standards

33.1-20-04.1-03 Plan of Operation

33.1-20-04.1-04 Recordkeeping and Reporting

33.1-20-04.1-05 General Closure Standards

33.1-20-04.1-06 Transfer Stations, Processing Systems, and Drop Box Facilities

33.1-20-04.1-07 Piles Used for Storage and Treatment - Standards

33.1-20-04.1-08 Treatment and Resource Recovery Facilities

33.1-20-04.1-09 General Disposal Standards

33.1-20-04.1-10 Other Methods of Solid Waste Management - Standards

33.1-20-04.1-01. General location standards.

1. No solid waste management facility may be located in areas which result in impacts to human health or environmental resources or in an area which is unsuitable because of reasons of topography, geology, hydrology, or soils.

2. Sites for new, or for lateral expansions of, land treatment units, surface impoundments closed with solid waste in place, municipal waste landfills, industrial waste landfills, and special waste landfills must minimize, control, or prevent the movement of waste or waste constituents with geologic conditions and engineered improvements. Sites should be underlain by materials with low permeability to provide a barrier to contaminant migration.

a. The following geographic areas or conditions must be excluded in the consideration of a site:

(1) Where the waste is disposed within an aquifer;

(2) Within a public water supply designated wellhead protection area;

(3) Within a one hundred-year floodplain;

(4) Where geologic or manmade features, including underground mines, may result in differential settlement and failure of a structure or other improvement on the facility;

(5) On the edge of or within channels, ravines, or steep topography whose slope is unstable due to erosion or mass movement;

(6) Within woody draws; or

(7) In areas designated as critical habitats for endangered or threatened species of plant, fish, or wildlife.

b. The following geographic areas or conditions may not be approved by the department as a site unless the applicant demonstrates there are no reasonable alternatives:

(1) Over or immediately adjacent to principal glacial drift aquifers identified by the state engineer;

(2) Closer than one thousand feet [304.8 meters] to a down gradient drinking water supply well;

- (3) Closer than two hundred feet [60.96 meters] horizontally from the ordinary high water elevation of any surface water or wetland;
- (4) Within final cuts of surface mines; or
- (5) Closer than one thousand feet [304.8 meters] to any state or national park.

c. The department may establish alternative criteria based on specific site conditions.

3. No municipal waste landfill or lateral expansion may be located within ten thousand feet [3,048 meters] of any airport runway currently used by turbojet aircraft or five thousand feet [1,524 meters] of any runway currently used by only piston-type aircraft. Owner or operators proposing a new site or lateral expansions for a municipal waste landfill within a five-mile [8.05-kilometer] radius of an airport must notify the affected airport and the federal aviation administration.
4. A minimum horizontal separation of twenty-five feet [7.62 meters] must be maintained between new or lateral expansions of solid waste management units and any aboveground or underground pipeline or transmission line. The owner shall designate the location of all such lines and easements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-04.1-02. General facility standards.

An owner or operator of a solid waste management facility shall comply with these general facility standards:

1. All personnel involved in solid waste handling and in the facility operation or monitoring must be instructed in specific procedures to ensure compliance with the permit, the facility plans, and this article as necessary to prevent accidents and environmental impacts. Documentation of training, such as names, dates, description of instruction methods, and copies of certificates awarded, must be placed in the facility's operating record.
2. The solid waste management facility shall comply with the water protection provisions of chapter 33.1-20-13.
3. The solid waste management facility may not cause a discharge of pollutants into waters of the state unless such discharge is in compliance with requirements of the North Dakota pollutant discharge elimination system pursuant to chapter 33.1-16-01.
4. The solid waste management facility may not cause a violation of the ambient air quality standard or odor rules, article 33.1-15, at the facility boundary.
5. Suitable control measures must be taken whenever fugitive dust is a nuisance or exceeds the levels specified in article 33.1-15.
6. Open burning is prohibited except as allowed under article 33.1-15.
7. A permanent sign must be posted at the entrance of a facility, or at the entrance of a solid waste management unit used by a facility for wastes generated onsite, which indicates the following:
 - a. The name of the facility;
 - b. The permit number;

- c. The name and telephone number of the owner and the operator if different than the owner;
- d. The days and hours the facility is open for access;
- e. The wastes not accepted for disposal; and
- f. Any restrictions for trespassing, burning, hauling, or nonconforming dumping.

8. The owner or operator of a facility shall periodically inspect solid waste managed at the facility, on a schedule proposed by the owner or operator and approved by the department, to control and reject unauthorized solid wastes as specified by this article, a permit, or a plan of operation.

9. All litter or windblown rubbish, trash, or garbage must be returned to collection containers or vehicles, to storage containers or areas, or to a solid waste management facility as soon as practicable.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-04.1-03. Plan of operation.

All solid waste management facilities, except those permitted by rule, shall meet the requirements of this section.

1. The owner or operator of a solid waste management unit or facility shall prepare and implement a plan of operation approved by the department as part of the permit. The plan must describe the facility's operation to operating personnel and the facility must be operated in accordance with the plan. The plan of operation must be available for inspection at the request of the department. Each plan of operation must include, where applicable:

a. A description of waste acceptance procedures, including categories of solid waste to be accepted and waste rejection procedures as required by subsection 2 of section 33.1-20-05.1-02 or subsection 8 of section 33.1-20-06.1-02 or subsection 2 of section 33.1-20-07.1-01 or subsection 4 of section 33.1-20-10-03;

b. A description of waste handling procedures;

c. A description of facility inspection activities required by subsection 2, including frequency;

d. A description of contingency actions for the following:

(1) Fire or explosion;

(2) Leaks;

(3) Ground water contamination;

(4) Other releases (for example, dust, debris, failure of run-on diversion or runoff containment systems); and

(5) Any other issues pertinent to the facility.

e. Leachate removal system operation and maintenance procedures;

f. Safety procedures;

g. For landfills, implementation of sequential partial closure;

h. A description of industrial waste or special waste management procedures, which include:

(1) A procedure for notifying solid waste generators and haulers of the facility operating requirements and restrictions;

(2) A procedure for evaluating waste characteristics, liquid content, the specific analyses that may be required for specific wastes, and the criteria used to determine when analyses are necessary, the frequency of testing, and the analytical methods to be used;

(3) A procedure for inspecting and for identifying any special management requirements, and the rationale for accepting or rejecting a waste based on its volume and characteristics;

(4) Procedures for managing the following solid waste, as appropriate:

(a) Bulk chemical containers which contain free product or residue;

(b) Asbestos;

(c) Waste containing polychlorinated biphenyls at a concentration less than fifty parts per million;

(d) Radioactive waste;

(e) Rendering and slaughterhouse waste;

(f) Wastes that could spontaneously combust or that could ignite other waste because of high temperatures;

(g) Foundry waste;

(h) Ash from incinerators, resource recovery facilities, and power plants;

(i) Paint residues, paint filters, and paint dust;

(j) Sludges, including ink sludges, lime sludge, wood sludge, and paper sludge;

(k) Fiberglass, urethane, polyurethane, and epoxy resin waste;

(l) Spent activated carbon filters;

(m) Oil and gas exploration and production waste;

(n) Wastes containing free liquids;

(o) Contaminated soil waste from cleanup of spilled products or wastes; and

(p) Any other solid waste that the owner or operator plans to handle.

(5) The owner or operator must describe any solid waste that will not be accepted at the facility; and

i. The owner or operator must amend the plan whenever operating procedures, contingency actions, waste management procedures, or wastes have changed. The

owner or operator shall submit the amended plan to the department for approval or disapproval.

2. The owner or operator shall inspect the facility to ensure compliance with this article, a permit, and approved plans. The owner or operator shall keep an inspection log including information such as the date of inspection, the name of the inspector, a notation of observations made, and the date and nature of any repairs or corrective action taken.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-04.1-04. Recordkeeping and reporting.

The owner or operator of a solid waste management facility, except those permitted by rule, shall comply with these recordkeeping and reporting requirements:

1. A solid waste management facility may not accept solid waste until the department has received and approved a report which includes narrative, drawings, and test results to certify that the facility has been constructed in accordance with the approved plans and specifications and as required by the permit.
2. An owner or operator shall keep an operating record consisting of a copy of each application, plan, report, notice, drawing, inspection log, test result or other document required by this article, including those enumerated in the subdivisions of this subsection, or a permit. The operating record must include any deviations from this article, the permit, and facility plans where department approval is required. The owner or operator shall provide a copy of any document in the operating record upon receiving a request from the department. The operating record must be kept at the facility, or at a location near the facility within North Dakota and approved by the department.
 - a. The permit preapplication, section 33.1-20-03.1-01.
 - b. The permit application, section 33.1-20-03.1-02.
 - c. An amended permit application, section 33.1-20-03.1-03.
 - d. The site characterization, section 33.1-20-13-01.
 - e. Any site demonstrations, section 33.1-20-04.1-01.
 - f. Documentation of training, section 33.1-20-04.1-02.
 - g. The plan of operation, section 33.1-20-04.1-03.
 - h. Facility inspection logs, section 33.1-20-04.1-03.
 - i. Records of notice, section 33.1-20-02.1-04.
 - j. As-built drawings and certifications, sections 33.1-20-04.1-04 and 33.1-20-04.1-05.
 - k. The ground water monitoring plan, all monitoring data, and statistical interpretations, section 33.1-20-13-02.
 - l. Records of the weight or volume of waste, section 33.1-20-04.1-09.
 - m. The closure plan, sections 33.1-20-04.1-05 and 33.1-20-14-02.
 - n. The postclosure plan, sections 33.1-20-04.1-09 and 33.1-20-14-02.

- o. The financial assurance instruments for closure and postclosure, chapter 33.1-20-14.
 - p. Records of gas monitoring and remediation, section 33.1-20-06.1-02.
 - q. The annual report, section 33.1-20-04.1-04.
 - r. Notices of intent to close and completion of postclosure, sections 33.1-20-04.1-05 and 33.1-20-04.1-09 respectively.
 - s. The permit and any modifications, sections 33.1-20-02.1-03 and 33.1-20-02.1-06.
3. An owner or operator shall prepare and submit a copy of an annual report to the department by March first of each year. The annual report must cover facility activities during the previous calendar year and must include the following information:
- a. Name and address of the facility;
 - b. Calendar period covered by the report;
 - c. Annual quantity for each category of solid waste in tons or volume;
 - d. Identification of occurrences and conditions that prevented compliance with the permit and this article; and
 - e. Other items identified in the facility plans and permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-04.1-05. General closure standards.

The requirements of this section apply to all solid waste management facilities, unless otherwise specified.

1. Each owner or operator shall close their facility in a manner that achieves the following:
 - a. Minimizes the need for further maintenance; and
 - b. Controls, minimizes, or eliminates any escape of solid waste constituents, leachate, fugitive emissions, contaminated runoff, or waste decomposition products.
2. Sequential partial closure must be implemented to minimize the working face of a landfill.
3. Closure must be implemented within thirty days after receipt of the final volume of waste and must be completed within one hundred eighty days following the beginning of closure activities, unless otherwise specified and approved under subsection 5. Prior to beginning closure, the owner or operator must notify the department in writing of the intent to close.
4. The owner or operator of a landfill for which closure is completed in part or whole shall enter into the operating record and submit to the department:
 - a. As-built drawings showing the topography, pertinent design features, extent of waste, and other appropriate information; and
 - b. Certification by the owner or operator and a professional engineer that closure has been completed in accordance with the approved closure plan and this article.

5. Each owner or operator shall prepare and implement a written closure plan approved by the department as part of the permitting process. The closure plan must:

- a. Estimate the largest area ever requiring final cover at any time during the active life of the site;
- b. Estimate the maximum inventory of solid waste onsite over the active life of the facility;
- c. For landfills, describe the final cover and the methods to install the cover;
- d. Project time intervals at which sequential partial closure or closure is to be implemented;
- e. Describe the resources and equipment necessary for closure; and
- f. Identify closure costs estimates and provide financial assurance mechanisms as required by chapter 33.1-20-14.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-04.1-06. Transfer stations, processing systems, and drop box facilities.

1. Transfer stations and processing systems must be designed, constructed, and operated to meet the following, where applicable:

- a. Control access and maintain aesthetics with a combination of fencing, trees, shrubbery, or natural features;
- b. Be sturdy and constructed of easily cleanable material;
- c. Provide effective control of birds, rodents, insects, and other vermin;
- d. Be adequately screened to prevent and control blowing of litter;
- e. Provide protection of the tipping floor from wind, rain, or snow;
- f. Minimize noise and dust nuisances;
- g. Provide pollution control measures to protect surface water and ground water including runoff and equipment wash down water control measures;
- h. Provide all-weather access roads and vehicular traffic areas;
- i. Provide any necessary pollution control measures to protect air quality including odor and dust control and prohibit burning;
- j. Prohibit scavenging;
- k. Have communication capabilities to immediately summon fire, police, or emergency personnel in the event of an emergency; and
- l. Remove all solid waste from the facility at closure to a permitted facility.

2. Drop box facilities must:

- a. Be accessible by all-weather roads;

- b. Be designed and serviced as often as necessary to ensure adequate capacity. Storage of solid waste outside the detachable containers is prohibited; and
- c. Remove all remaining solid waste to a permitted facility and remove the drop box from the facility at closure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-04.1-07. Piles used for storage and treatment - Standards.

This section is applicable to solid waste stored or treated in piles, composting, sludge piles, scrap tire piles, garbage which is in place for more than three days, putrescible waste, other than garbage, which is in place for more than three weeks, and other solid waste not intended for recycling which is in place for more than three months.

- 1. Vector control measures must be instituted when necessary to prevent the transmission of disease and otherwise prevent and reduce hazards created by rats, snakes, insects, birds, cats, dogs, skunks, and other animals or vermin.
- 2. An owner and operator of a waste pile, except composting of grass and leaves, shall:
 - a. Comply with the general facility standards of section 33.1-20-04.1-02; and
 - b. Maintain the site including the removal of all solid waste, as necessary, and at closure to a permitted facility, or otherwise manage the waste that is in keeping with the purpose of this article.
- 3. Requirements for waste piles likely to produce a leachate are:
 - a. Waste piles must be underlain by concrete, asphalt, clay, or an artificial liner. The liner must be of sufficient thickness and strength to withstand stresses imposed by waste handling equipment and the pile;
 - b. Runoff and run-on control systems must be designed, installed, and maintained to handle a twenty-five-year, twenty-four-hour storm event;
 - c. Based on site and waste characteristics and the proposed operation, the department may require that waste piles have the following:
 - (1) A ground water monitoring system that complies with chapter 33.1-20-13;
 - (2) A leachate collection and treatment system; and
 - (3) Financial assurance; and
 - d. The department may require that the entire base or liner be inspected for wear and integrity and repaired or replaced by removing storage waste or otherwise providing inspection access to the base or liner.
- 4. An owner or operator of a tire pile shall:
 - a. Control access to the tire pile by fencing;
 - b. Limit piles of scrap tires to a maximum basal area of ten thousand square feet [929 square meters] in size, which, along with the fire lane, must be underlain by concrete, asphalt, clay overlain with gravel, or other appropriate material of sufficient

thickness, strength, and low permeability to withstand stresses imposed by waste handling equipment, fire control equipment, and to minimize liquid infiltration in case of a fire;

c. Limit the height of the tire pile to twenty feet [6.1 meters];

d. Provide for a fifty-foot [15.24-meter] fire lane around the tire pile;

e. Provide site access by fire control equipment;

f. Provide run-on and runoff control systems adequate to control surface water from a twenty-five-year, twenty-four-hour precipitation event; and

g. Provide financial assurance adequate to remove stockpiled waste and to remediate environmental contingencies.

5. An owner or operator of a composting facility for grass and leaves shall:

a. Direct surface water or storm water from composting and waste storage areas;

b. Control surface water drainage to prevent leachate runoff;

c. Store solid waste separated from compostable material in a manner that controls vectors and aesthetic degradation, and remove this solid waste from the site to an appropriate facility at least weekly;

d. Turn the yard waste periodically to aerate the waste, maintain temperatures, and control odors; and

e. Prevent the occurrence of sharp objects greater than one inch [2.54 centimeters] in size in finished compost offered for use.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-04.1-08. Treatment and resource recovery facilities.

In addition to sections 33.1-20-04.1-02, 33.1-20-04.1-03, 33.1-20-04.1-04, and 33.1-20-04.1-05, the owner or operator of a facility which conducts treatment or resource recovery other than processing shall comply with these standards.

1. All liquids must be collected and treated to meet the water protection provisions of chapter 33.1-20-13.

2. Surface water must be diverted away from all open storage areas.

3. Solid waste must be confined to storage containers and areas specifically designed to store waste. Waste handling and storage systems must provide sufficient excess capacity to prevent nuisances, environmental impacts, or health hazards in the event of mechanical failure or unusual waste flows.

4. Resource recovery systems or facilities must be operated on first-in, first-out basis. Stored solid waste containing garbage may not be allowed to remain unprocessed for more than forty-eight hours unless adequate provisions are made to control flies, rodents, odors, or other environmental hazards or nuisances.

5. All solid waste, recovered materials, or residues must be controlled and stored in a manner that does not constitute a fire or safety hazard or a sanitary nuisance.
6. All residues from resource recovery systems or facilities must be handled and disposed according to this article.
7. All incinerators used for solid waste must be constructed and operated in compliance with article 33.1-15.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-08, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-04.1-09. General disposal standards.

1. In addition to sections 33.1-20-04.1-02, 33.1-20-04.1-03, 33.1-20-04.1-04, and 33.1-20-04.1-05, the standards of this section apply to all landfills, surface impoundments closed with solid waste in place, and land treatment units, unless otherwise indicated.
2. Construction and operation standards for solid waste management facilities regulated by this section:
 - a. Every solid waste landfill or facility shall have and maintain, or have access to, equipment adequate for the excavation, compaction, covering, surface water management, and monitoring procedures required by approval plans and this article.
 - b. Roads must be constructed and maintained to provide access to the facility. Access roads must be cleaned and decontaminated as necessary.
 - c. There must be available an adequate supply of suitable cover material, which, if necessary, must be stockpiled and protected for winter operation.
 - d. The final cover of all disposal facilities must be designed and constructed in a manner that ensures the quality and integrity of the hydraulic barrier and the protective vegetative cover.
 - e. The working face or open area of a landfill must be limited in size to as small an area as practicable. Sequential partial closure must be implemented as necessary to keep the disposal area as small as practicable and to close filled areas in a timely manner.
 - f. All disposal facilities shall identify, quantify, remove, stockpile, and maintain suitable plant growth material for later use in closure.
 - g. Any recycling or salvage activity must be authorized by the owner or operator and must be in a separate area in a manner to avoid injury and interference with the landfill operation.
 - h. Vehicles, farm machinery, metal appliances, or other similar items brought to the facility for recycling may be stored temporarily in a separate area.
 - i. Vector control measures, in addition to the application of cover material, must be instituted whenever necessary to prevent the transmission of disease, prevent bird hazards to aircraft, and otherwise prevent and reduce hazards created by rats, flies, snakes, insects, birds, cats, dogs, and skunks.
 - j. All domestic animals must be excluded from the facility. Feeding of garbage to animals is prohibited.

k. All earthen material must be maintained onsite unless removal from the site is authorized by the department.

3. Construction and operation standards, excluding inert waste landfills.

a. The landfill must be designed and operated to prevent the run-on and runoff of surface waters resulting from a maximum flow of a twenty-five-year, twenty-four-hour storm.

b. Facilities receiving on average over twenty tons [18.2 metric tons] per day of solid waste shall make provisions for measuring all waste delivered to and disposed in the facility. Weight measurements are preferable; volume measurements (cubic yards) are acceptable.

c. Active areas of the landfill must be surveyed periodically to ensure that filling is proceeding in a manner consistent with the landfill design and that closure grades are not exceeded.

d. All run-on or runoff must be properly controlled to avoid its concentration on or in solid waste and to minimize infiltration into the waste material. Disposal shall avoid any areas within the facility where run-on or runoff accumulates.

e. Leachate removal systems must be operated and maintained to assure continued function according to the design efficiency. This shall include, where applicable:

(1) Flushing, inspection and, if necessary, repair of collection lines after placement of the first layer of waste in a landfill cell;

(2) Annual sampling and analysis of leachate for the parameters required under the ground water quality monitoring required under section 33.1-20-13-02;

(3) At minimum, semiannual monitoring of leachate head or elevations above the liner;

(4) Annual flushing of leachate collection lines to remove dirt and scale; and

(5) Inclusion of leachate removal system operation, inspection, and maintenance procedures in the operating record.

4. Closure standards, excluding land treatment units.

a. Closed solid waste management units may not be used for cultivated crops, heavy grazing, buildings, or any other use which might disturb the protective vegetative and soil cover.

b. All solid waste management units must be closed with a final cover designed to:

(1) Limit the amount of percolation that may enter the waste to meet the efficiency requirements for that type of solid waste management unit;

(2) Minimize precipitation run-on from adjacent areas;

(3) Minimize erosion and optimize drainage of precipitation falling on the landfill. The grade of slopes may not be less than three percent, nor more than fifteen percent, unless the applicant or permittee provides justification to show steeper slopes are stable and will not result in long-term surface soil loss in excess of two tons [1.82 metric tons] per acre per year. In no instance may slopes exceed twenty-five percent; and

(4) Provide a surface drainage system which does not adversely affect drainage from adjacent lands.

c. The final cover must include six inches [15.2 centimeters] or more of suitable plant growth material which must be seeded with shallow rooted grass or native vegetation.

d. The department may allow, on a case-by-case basis, the use of closed inert waste landfill sites for certain beneficial uses that would not pose a threat to human health or the environment.

5. Postclosure standards for solid waste management facilities regulated by this section.

a. The owner or operator of a landfill or a surface impoundment closed with solid waste in place shall meet the following during the postclosure period:

(1) Maintain the integrity and effectiveness of the final cover, including making repairs to the cover to correct effects of settlement, subsidence, and other events, and preventing run-on and runoff from eroding or otherwise damaging the final cover;

(2) Maintain and operate the leachate collection system, if applicable;

(3) Monitor the ground water and maintain the ground water monitoring system, if applicable; and

(4) Operate and maintain the gas control system, if applicable.

b. The owner or operator of a municipal waste landfill, an industrial waste landfill, a special waste landfill, a surface impoundment closed with solid waste remaining in place, or a land treatment facility shall prepare and implement a written postclosure plan approved by the department as a part of the permitting process. The postclosure plan must address facility maintenance and monitoring activities for a postclosure period of thirty years.

(1) Postclosure includes appropriate ground water monitoring; surface water monitoring; gas monitoring; and maintenance of the facility, facility structures, and ground water monitoring systems.

(2) The postclosure plan must provide the name, address, and telephone number of the person or office to contact during the postclosure period; and project time intervals at which postclosure activities are to be implemented, identify postclosure cost estimates, and provide financial assurance mechanisms as required by chapter 33.1-20-14.

(3) The department may require an owner or operator to amend the postclosure plan, including an extension of the postclosure period, and implement the changes. If the permittee demonstrates that the facility is stabilized, the department may authorize the owner or operator to discontinue postclosure activities.

c. Following completion of the postclosure period, the owner or operator shall notify the department verifying that postclosure management has been completed in accordance with the postclosure plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-04.1-10. Other methods of solid waste management - Standards.

New and unique methods developed subsequent to December 1, 1992, which can be utilized without environmental degradation and creation of hazards to public health and safety will be considered by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-05

[Reserved]

CHAPTER 33.1-20-05.1 INERT WASTE LANDFILLS

Section

33.1-20-05.1-01 Applicability

33.1-20-05.1-02 Performance and Design Criteria

33.1-20-05.1-03 Lime Sludge

33.1-20-05.1-04 Closure Criteria

33.1-20-05.1-05 Postclosure Criteria

33.1-20-05.1-01. Applicability.

An owner or operator of an inert waste landfill, which does not qualify for a permit by rule, shall comply with this chapter and with sections 33.1-20-04.1-02, 33.1-20-04.1-03, 33.1-20-04.1-04, 33.1-20-04.1-05, and 33.1-20-04.1-09. An inert waste landfill, which is permitted by rule, shall comply with section 33.1-20-02.1-02 and with this chapter, but is exempt from sections 33.1-20-04.1-03 and 33.1-20-04.1-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-05.1-02. Performance and design criteria.

The owner or operator of an inert waste landfill shall comply with these design, construction, and operating standards.

1. Access to the facility must be controlled by lockable gates and a combination of fencing, natural barriers, or artificial barriers.
2. Disposal of the following solid waste into inert waste landfills is prohibited: agricultural waste, asbestos waste, municipal waste, commercial waste, industrial waste, special waste, regulated infectious waste, liquid solid waste, hazardous waste, and radioactive waste.
3. All wastes deposited at the site must be spread and periodically compacted to promote drainage of surface water.
4. All wastes must be covered at least two times per year with a minimum of six inches [15.2 centimeters] of suitable earthen material.
 - a. The department may exempt the owner or operator of the landfill from this requirement based on the type and amount of waste received at the landfill and the site location.
 - b. This requirement does not apply to monofills used solely for bottom ash from coal-fired boilers.
5. Inert waste permits must be limited to an area no larger than necessary to properly conduct permitted inert waste disposal activities. The department shall take into consideration each applicant's operating needs and conditions when evaluating this requirement in order to best achieve the purposes of this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, § 23

33.1-20-05.1-03. Lime sludge.

Lime sludge from a water treatment plant may be disposed in an inert waste landfill contingent upon departmental approval, which must be based upon factors such as site characteristics, site design, site operation, or permit conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-05.1-04. Closure criteria.

Closure of an existing unit must be completed as outlined in sections 33.1-20-04.1-05 and 33.1-20-04.1-09. All existing units must be covered with two feet [61.0 centimeters] or more of earthen material, the lower twelve inches [30.5 centimeters] of which must be compacted clay-rich earthen material, free from cracks and extrusions of solid waste. If a cover of four feet [1.2 meters] or more of clay-rich earthen material is achieved, compaction is not required. At least six inches [15.2 centimeters] of suitable plant growth material must be placed over the covered landfill and planted with adapted grasses.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-05.1-05. Postclosure criteria.

Owners or operators of inert waste landfills shall conduct annual postclosure inspections for a period of five years after closure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-06

[Reserved]

CHAPTER 33.1-20-06.1 MUNICIPAL WASTE LANDFILLS

Section

33.1-20-06.1-01 Applicability

33.1-20-06.1-02 Performance and Design Criteria

33.1-20-06.1-03 Closure Criteria

33.1-20-06.1-01. Applicability.

The requirements of this chapter and of sections 33.1-20-01.1-08, 33.1-20-04.1-02, 33.1-20-04.1-03, 33.1-20-04.1-04, 33.1-20-04.1-05, and 33.1-20-04.1-09 apply to owners and operators of municipal waste landfills, except that the department may allow alternate performance and design criteria, as specified in subsections 2 and 3 of section 33.1-20-06.1-02, and it may waive section 33.1-20-04.1-03 for a municipal waste landfill receiving less than twenty tons [18.2 metric tons] per day based upon factors such as the site's climate, hydrogeology, topography, geology, ground water quality and location, and the type of wastes received. In addition to the requirements of this chapter, municipal solid waste landfills receiving on average more than five hundred tons [455 metric tons] per day shall comply with section 33.1-20-10-03, subsection 2 of section 33.1-20-10-04, and section 33.1-20-10-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-06.1-02. Performance and design criteria.

The owner or operator of a municipal waste landfill facility shall comply with these design, construction, and operating standards.

1. Access to the facility must be controlled by lockable gates and a combination of fencing, natural barriers, or artificial barriers. The gates must be locked when an attendant is on duty.
2. Any new or lateral expansion of a municipal waste landfill must be underlain with a hydraulic barrier and leachate removal system capable of collecting and removing leachate and contaminated surface water within the landfill.
 - a. The liner and leachate removal system must be compatible with the waste and leachate.
 - b. The liner and leachate removal system must maintain its integrity for the life of the facility and the postclosure period.
 - c. The leachate removal system must have a collection efficiency of ninety percent or better and be capable of maintaining a hydraulic head of twelve inches [30.5 centimeters] or less above the liner.
 - d. The liner must consist of one of the following:
 - (1) A natural soil liner constructed of at least four feet [1.2 meters] of natural soil having a hydraulic conductivity not to exceed 1×10^{-7} centimeters per second; or
 - (2) A composite liner consisting of two components; the upper component must consist of a minimum thirty mil flexible membrane liner, and the lower component must consist of at least a two-foot [61.0-centimeter] layer of compacted soil with a hydraulic conductivity of no more than 1×10^{-7} centimeters per second. Flexible membrane liner components consisting of high density polyethylene must be at

least sixty mil thick. The flexible membrane liner component must be installed in direct and uniform contact with the compacted soil component.

e. The drainage layer of the leachate removal system must have a hydraulic conductivity of 1×10^{-3} centimeters per second or greater throughout. The drainage layer must have sufficient thickness to provide a transmissivity of 3.0×10^{-2} centimeters squared per second or greater.

f. Appropriate measures must be provided as necessary for preparation of the liner subgrade, quality assurance, and quality control testing of the construction of the liner and leachate removal system, and protection and maintenance of the liner and leachate removal system to ensure the integrity of the system.

g. An alternative liner and leachate removal system for a landfill site may be approved by the department. The department must consider factors such as the proposed system's ability to control leachate migration, the hydrogeologic characteristics of the site and surrounding land, the climate of the area, or the potential leachate quality.

3. The liner and leachate removal system in combination with the final cover must achieve a site efficiency of ninety-five percent or better for rejection or collection of the precipitation that falls on the site.

4. Methane and other gases from waste decomposition may not be allowed to migrate laterally from the landfill so as to endanger structures, environmental resources, or adjacent properties.

a. The concentration of methane gas generated by landfills on the facility must not exceed twenty-five percent of the lower explosive limit for methane in structures or appurtenances on the facility.

b. The concentration of methane gas must not exceed the lower explosive limit for methane at the facility boundary.

c. Monitoring of methane gas must be conducted at least quarterly, on a schedule proposed by the owner or operator and approved by the department, to assure that the standards of subdivisions a and b are met. The frequency of monitoring must consider such factors as the facility site conditions, hydrogeologic conditions surrounding the site, or climate of the area.

d. If methane gas levels exceed the standards of subdivisions a and b, the owner or operator must:

(1) Immediately take action to protect public health;

(2) Notify the department within seven days; and

(3) Implement remedial measures within sixty days.

5. A certified operator must be on duty while the facility is receiving solid waste. Facilities receiving on average over twenty tons [18.2 metric tons] of municipal waste per day shall have an attendant at or near the entrance to the facility to monitor, accept or reject, measure, and record wastes arriving at the facility.

6. Solid waste must be unloaded at the bottom of the working face of the fill. The waste must then be spread in layers and compacted as densely as practicable. Each layer may not exceed a thickness of two feet [61.0 centimeters] of material after compaction is completed.

7. Household pet animal carcasses may be buried along with other municipal household waste. Larger animal carcasses must be disposed of immediately and must be placed at least four feet [1.2 meters] below grade with at least twelve inches [30.5 centimeters] of cover material directly covering the carcass.
8. The following wastes may not be accepted for disposal in municipal waste landfills unless approved by the department:
 - a. Hazardous waste, except in amounts normally in municipal waste;
 - b. Industrial waste, if not addressed in the industrial waste management plan and the permit;
 - c. Lead acid batteries;
 - d. Liquids, except in amounts normally in household waste, unless the liquid is leachate or gas condensate derived from the municipal solid waste landfill and the municipal solid waste landfill, whether it is a new or existing landfill or a lateral expansion, is designed with a composite liner and leachate collection system as described in this section;
 - e. Major appliances;
 - f. Municipal waste incinerator ash;
 - g. Other waste, if the department determines that such waste has toxic or adverse characteristics which can impact public health or environmental resources;
 - h. Pesticide containers which are not empty and have not been triple-rinsed, except those normally in municipal waste;
 - i. Polychlorinated biphenyls (PCB) waste as defined in 40 CFR part 761;
 - j. Raw or digested sewage sludges, lime sludges, grit chamber cleanings, animal manure, septic tank pumpings, bar screenings, and other sludges, if not included in the permit;
 - k. Regulated infectious waste, except in amounts normally in household waste;
 - l. Special waste; and
 - m. Used oil.
9. A uniform compacted layer of six inches [15.2 centimeters] or more of suitable earthen material or other departmentally approved material must be placed on all solid waste by the end of each working day. All cover must be free of trash, garbage, or other similar waste.
10. On all areas where final cover or additional solid waste will not be placed within one month, an additional six inches [15.2 centimeters] or more of compacted, clay-rich earthen material or other departmentally approved material must be placed. This intermediate cover may be removed when disposal operations resume.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-08, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-06.1-03. Closure criteria.

In addition to sections 33.1-20-04.1-05 and 33.1-20-04.1-09, at closure, an owner or operator shall cover an existing unit with a layer of compacted soil material having a thickness of eighteen inches

[45.7 centimeters] or more and a hydraulic conductivity of 1×10^{-7} centimeters per second or less. The compacted layer must be free from cracks and extrusions of solid waste. A second layer of twelve inches [30.5 centimeters] or more of clay-rich soil material suitable for serving as a plant root zone must be placed over the compacted layer. At least six inches [15.2 centimeters] of suitable plant growth material must be placed over the covered landfill and the facility planted with adapted grasses. The total depth of final cover must be three feet [91.4 centimeters] or more, as required to achieve subsection 3 of section 33.1-20-06.1-02. The requirements of this section may be modified by the department if the permit applicant demonstrates that an alternative design will appropriately limit percolation of liquid into the waste.

1. If the permit applicant wishes to pursue an alternative cover design, one of the following methods shall be used to demonstrate that the alternative cover design will appropriately limit the amount of percolation that may enter the waste:

a. Hydrologic modeling;

b. Lysimetry or instrumentation using a field-scale test section;

c. Comparison of the soil and climatic conditions at the site with the soil and climatic conditions at a site where the department has previously approved the same alternative cover design; or

d. Other method approved by the department.

2. To demonstrate that an alternative cover design will appropriately limit percolation of liquid into the waste, the alternative cover design must be shown to limit the average rate of percolation of liquid into wastes to an equal or lower value than the final cover design described in this section, or to an average long-term percolation rate less than 0.2 inches [5.0 millimeters] per year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-07

[Reserved]

CHAPTER 33.1-20-07.1
SMALL VOLUME INDUSTRIAL WASTE LANDFILLS AND SPECIAL WASTE LANDFILLS

Section

33.1-20-07.1-01 Performance and Design Criteria

33.1-20-07.1-02 Closure Criteria

33.1-20-07.1-01. Performance and design criteria.

In addition to the requirements of section 33.1-20-01.1-08 and chapter 33.1-20-04.1, the owner or operator of an industrial waste landfill or a special waste landfill shall comply with the design, construction, and operating standards as follows:

1. On all areas of the landfill where final cover or additional solid waste will not be placed within six months, eight inches [20.3 centimeters] or more of compacted clay-rich soil material, similar material, or a synthetic cover must be placed to prevent ponding of surface water, to minimize infiltration of surface water, and to control windblown dust.
2. Solid waste disposal in industrial waste landfills and special waste landfills must be limited to those wastes identified in the permit application or permit. Regulated infectious waste, used oil as a free liquid, and hazardous waste may not be accepted for disposal at the landfill. TENORM waste may only be accepted under the provisions of chapter 33.1-20-11.
3. All solid wastes deposited at the landfill must be spread and compacted as densely as practicable to minimize waste volume and promote drainage of surface water.
4. Any new or lateral expansion of an industrial waste landfill or special waste landfill must be designed with an appropriate hydraulic barrier and leachate management system capable of collecting and removing leachate and contaminated surface water within the disposal unit.
 - a. The liner and leachate removal system must be compatible with the waste and leachate.
 - b. The liner and leachate removal system must maintain its integrity during the operating period and through the postclosure period.
 - c. The system must have a collection efficiency of ninety percent or better and must be capable of maintaining a hydraulic head of twelve inches [30.5 centimeters] or less above the liner.
 - d. For landfills that receive wastes containing water soluble constituents, the liner must consist of at least four feet [1.2 meters] of compacted natural soil having a hydraulic conductivity not to exceed 1×10^{-7} centimeters per second.
 - e. A composite liner is required for landfills receiving TENORM waste or wastes which may contain leachable organic constituents. The liner must consist of at least three feet [91.4 centimeters] of recompacted clay with a hydraulic conductivity not to exceed 1×10^{-7} centimeters per second overlain with at least a sixty mil flexible membrane liner.
 - f. The drainage layer must have a hydraulic conductivity of 1×10^{-3} centimeters per second or greater throughout. The drainage layer must have a sufficient thickness to provide a transmissivity of 3×10^{-2} centimeters squared per second or greater.
 - g. The liner and leachate removal system in combination with the final cover must achieve a site efficiency of at least ninety-eight and one-half percent or better for collection or rejection of the precipitation that falls on the site.

- h. The requirements of this subsection for a liner, leachate collection system, or both liner and leachate collection system may be modified by the department if the permit applicant demonstrates that, based on factors such as geology and hydrology of the site, characteristics of the waste, and engineering design, any leachate migration can be prevented or controlled.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03, 23.1-08-09; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-07.1-02. Closure criteria.

In addition to sections 33.1-20-04.1-05 and 33.1-20-04.1-09, at closure, an owner or operator shall cover an existing unit with a layer of compacted soil material having a thickness of eighteen inches [45.7 centimeters] or more, and a saturated hydraulic conductivity of 1×10^{-7} centimeters per second or less. A second layer of twelve inches [30.5 centimeters] or more of clay-rich soil material suitable for serving as a plant root zone must be placed over the compacted layer. At least six inches [15.2 centimeters] of suitable plant growth material must be placed over the covered landfill and the facility planted with adapted grasses. The total depth of final cover must be three feet [91.4 centimeters] or more. The requirements of this section may be modified by the department if the permit applicant demonstrates that an alternative design will appropriately limit percolation of liquid into the waste.

1. If the permit applicant wishes to pursue an alternative cover design, one of the following methods shall be used to demonstrate that the alternative cover design will appropriately limit the amount of percolation that may enter the waste:
 - a. Hydrologic modeling;
 - b. Lysimetry or instrumentation using a field-scale test section;
 - c. Comparison of the soil and climatic conditions of the site with the soil and climatic conditions at a site where the department has previously approved the same alternative cover design; or
 - d. Other method approved by the department.
2. To demonstrate that an alternative cover design will appropriately limit percolation of liquid into the waste, the alternative cover design must be shown to limit the average rate of percolation of liquid into wastes to an equal or lower value than the final cover design described in this section or to an average long-term percolation rate less than 0.2 inches [5.0 millimeters] per year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-08

[Reserved]

CHAPTER 33.1-20-08.1
SURFACE IMPOUNDMENT PROVISIONS

Section

33.1-20-08.1-01 Performance and Design Criteria

33.1-20-08.1-02 Closure and Postclosure Criteria

33.1-20-08.1-01. Performance and design criteria.

In addition to the requirements of section 33.1-20-04.1-09, the owner or operator of a surface impoundment shall comply with the following:

1. Applicability.

a. The design, construction, and operating standards of this section are applicable to surface impoundments that store or treat solid waste, sludges containing free liquids, free liquids containing high concentrations of dissolved solids, or liquids derived from processing or handling solid waste.

b. The standards of this section are not applicable to the following units:

(1) Surface impoundments which treat wastewater, the discharge of which is subject to federal, state, or local water pollution discharge permits;

(2) Surface impoundments which handle agricultural waste generated by farming operations;

(3) Lime sludge settling basins;

(4) Basins used to collect and store storm water runoff; and

(5) Oil and gas exploration and production waste regulated under North Dakota Century Code section 38-08-04.

2. The owner or operator must design, construct, and operate each surface impoundment so as to:

a. Comply with the surface water and ground water protection standards of chapter 33.1-20-13;

b. New units must have a compacted soil liner of a minimum four feet [1.22 meters] of 1×10^{-7} centimeters per second or lesser hydraulic conductivity or any combination of soil liner thickness, underlying soil thickness and hydraulic conductivity, or a flexible membrane liner which would control the migration of waste or waste constituents during the active life of the surface impoundment and, for surface impoundments closed with solid waste in place, during the postclosure period;

c. Have dikes designed to maintain their structural integrity under conditions of a leaking liner and capable of withstanding erosion; and

d. Have the freeboard equal to or greater than two feet [61.0 centimeters] to avoid overtopping from wave action or precipitation.

3. Monitoring and inspection.

a. While a surface impoundment is in operation, it must be inspected by the owner or operator monthly and after storms to detect evidence of any of the following:

(1) Deterioration, malfunctions, or improper operation of control systems;

(2) Sudden drops in the level of the impoundment's contents; and

(3) Severe erosion, seepage, or other signs of deterioration in dikes or other containment devices.

b. Prior to placing a surface impoundment into operation or prior to renewed operation after six months or more during which the impoundment was not in service, a professional engineer must certify that the impoundment's dike and liner have structural integrity.

4. Emergency repairs and contingency plans.

a. When a malfunction occurs in the waste containment system which can cause a release to land or water, a surface impoundment must be removed from service and the owner or operator must take the following actions:

(1) Immediately shut down the flow of additional waste into the impoundment;

(2) Immediately stop the leak and contain the waste which has been released;

(3) Take steps to prevent catastrophic failure;

(4) If a leak cannot be stopped, empty the impoundment;

(5) Clean up all released waste and any contaminated materials; and

(6) Notify the department of the problem within twenty-four hours after detecting the problem.

b. As part of the contingency plan, the owner or operator must specify a procedure for complying with the requirements of subdivision a of this subsection.

c. No surface impoundment that has been removed from service in accordance with the requirements of this section may be restored to service unless the portion of the impoundment which was failing is repaired and the following steps are taken:

(1) If the impoundment was removed from service as the result of actual or imminent dike failure, the owner or operator must certify the dike's structural integrity; and

(2) If the impoundment was removed from service as the result of a sudden drop in the liquid level, the following actions must be taken:

(a) For any existing portion of the impoundment without a liner, a liner must be installed; and

(b) For any portion of the impoundment that is lined, the liner must be repaired and the owner or operator must certify that the repaired liner meets the design specification approved in the permit.

d. A surface impoundment, that has been removed from service in accordance with the requirements of this subsection and that is not repaired within six months, must be closed in accordance with the provisions of sections 33.1-20-04.1-05 and 33.1-20-04.1-09.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-08.1-02. Closure and postclosure criteria.

In addition to the requirements of section 33.1-20-04.1-09, at closure, the owner or operator shall complete the following:

1. Remove all standing liquids, waste and waste residues, the liners and leak detection system, and any underlying and surrounding contaminated soil. The site must then be reclaimed by regrading the site, replacing all suitable plant growth material, and properly revegetating the site; and
2. If all impoundment materials are not removed as provided in subsection 1, the owner must treat remaining liquids, residues, and soils by removal of liquids, drying, or other means and then close the impoundment and provide postclosure as provided for an industrial waste landfill under section 33.1-20-01.1-02.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-09
LAND TREATMENT PROVISIONS

Section

33.1-20-09-01 Applicability

33.1-20-09-02 Land Treatment Standards

33.1-20-09-01. Applicability.

The standards of this chapter apply to facilities that engage in land treatment of solid waste. These standards do not apply to the following:

1. Facilities utilizing municipal and domestic sludge;
2. Agricultural waste, including animal manure and agricultural residues, resulting from farming operations;
3. Composting grass clippings and leaves; and
4. Inert waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-09-02. Land treatment standards.

1. Owners or operators of land treatment facilities shall meet the location standards of section 33.1-20-04.1-01.
2. Owners or operators of land treatment facilities shall meet the minimum standards for performance of chapter 33.1-20-13, the general facility requirements of section 33.1-20-04.1-02, and the general disposal standards of section 33.1-20-04.1-09.
3. Owners or operators of land treatment facilities shall design these facilities to meet the following requirements:
 - a. Provide waste storage facilities, if appropriate, that meet the requirements of this article;
 - b. Collect and treat all runoff from a twenty-five-year, twenty-four-hour storm, and divert all run-on for the maximum flow of a twenty-five-year, twenty-four-hour storm around the active area;
 - c. Avoid standing water on the active area;
 - d. Avoid slopes and other features that will lead to soil and waste erosion, unless contour plowing or other measures are taken to avoid erosion; and
 - e. Control access to the site by fencing or other means.
4. Owners and operators of land treatment facilities shall maintain and operate these facilities in compliance with these following requirements:
 - a. Land treatment of garbage or regulated infectious waste is prohibited;
 - b. Analyze solid waste according to departmentally approved methods;

- c. Avoid applying waste at rates greater than ten times agronomic rates using the proposed cover crop, or depths greater than would allow for tilling the soil by tracked vehicles;
 - d. Provide tilling of soils during the growing season and after each application of waste to maintain aerobic soil conditions;
 - e. Amend the soil and soil nutrients as necessary to promote efficient biological breakdown of waste materials;
 - f. Avoid applying waste to any active area having standing water; and
 - g. Avoid food chain crops during the active life of the facility and after closure until demonstrated to be safe. Specific approval in writing from the department is required for any land treatment disposal facility that is used to raise food crops after closure.
5. All owners or operators of land treatment facilities shall close these facilities in accordance with section 33.1-20-04.1-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-10
LARGE VOLUME INDUSTRIAL WASTE AND
MUNICIPAL SOLID WASTE ASH LANDFILLS

Section

- 33.1-20-10-01 Applicability
- 33.1-20-10-02 Municipal Solid Waste Ash Treatment
- 33.1-20-10-03 Waste Disposal
- 33.1-20-10-04 Landfill Cover and Closure
- 33.1-20-10-05 Facility Inspector

33.1-20-10-01. Applicability.

The requirements of this chapter apply to the treatment and disposal of solid wastes which meet the criteria of subsections 1 and 3 of section 33.1-20-01.1-11.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-10-02. Municipal solid waste ash treatment.

The owner or operator must propose treatment of municipal solid waste incinerator ash for department approval.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-10-03. Waste disposal.

In addition to the requirements of section 33.1-20-01.1-08 and chapter 33.1-20-04.1, the owner or operator of a landfill shall comply with the performance and design criteria as follows:

1. Any new or lateral expansion of a landfill must be designed with a hydraulic barrier and leachate management system.
 - a. Synthetic liners, leachate detection systems, and leachate removal systems must be compatible with solid waste disposed and the waste's leachate.
 - b. Leachate removal and management systems must be capable of collecting and removing leachate and contaminated surface water.
 - c. Synthetic liners and leachate removal systems must withstand all physical and chemical stresses during the operating period and through the postclosure period.
 - d. The synthetic liners and leachate removal systems must have a collection efficiency of ninety-seven percent or better of precipitation falling on the fill area before closure and must be capable of removing leachate to limit the hydraulic head above the upper liner, exclusive of collection sumps, to twelve inches [30.5 centimeters] or less within thirty-six hours of a precipitation event.
 - e. A composite liner is required which includes at a minimum from bottom to top:
 - (1) At least three feet [91.4 centimeters] of recompacted clay with a hydraulic conductivity not to exceed 1×10^{-7} centimeters per second;

- (2) A synthetic flexible membrane liner at least sixty mil thick;
 - (3) A secondary drainage layer with a hydraulic conductivity of 1×10^{-3} centimeters per second or greater throughout and with sufficient thickness to provide a transmissivity of 3×10^{-2} centimeters squared per second or greater;
 - (4) A synthetic flexible membrane liner at least eighty mil thick; and
 - (5) A drainage layer with a hydraulic conductivity of 1×10^{-3} centimeters per second or greater and with sufficient thickness to provide a transmissivity of 3×10^{-2} centimeters squared per second or greater.
- f. No composite liner may be exposed to freezing more than one winter season. At least three feet of solid waste or other material approved by the department must be placed above the upper drainage layer on all lined areas by December first. No disposal may take place after December first in areas which have not met this requirement without first testing the composite liner's integrity and receiving approval from the department.
2. The facility must include a leachate detection and removal system and an onsite leachate management system or offsite leachate management.
 - a. The amount of leachate collected for onsite or offsite management must be measured and recorded.
 - b. The quality of the leachate must be periodically evaluated on a schedule proposed by the facility owner and approved by the department.
 - c. The department may require the construction of onsite surface impoundments to achieve the equivalent or better design standards of onsite landfills, based on site specific factors such as hydrogeological characteristics, anticipated leachate quality, anticipated static head or expected duration of use.
 - d. The department may require an owner or operator to control wildlife access to onsite surface impoundments based upon leachate quality and site circumstances.
3. Runoff must be contained, collected, and transferred to an onsite surface impoundment, unless another management method is approved by the department.
4. Solid waste disposal in landfills must be limited to those wastes identified in the permit application, waste acceptance plan, or permit. Regulated infectious waste, used oil as a free liquid which can be recovered or recycled, and hazardous waste may not be accepted for disposal at the landfill. TENORM waste may only be accepted under the provisions of chapter 33.1-20-11.
5. All solid wastes deposited at the landfill must be placed, spread, or compacted to minimize or prevent settlement and to promote drainage of surface water. The sequence and direction of below-grade operations must be conducted to prevent surface water from entering the active fill area.
6. On all areas of the landfill where final cover or additional solid waste will not be placed within one month, eight inches [20.3 centimeters] or more of compacted clay-rich soil material, similar material, or a synthetic cover must be placed to prevent ponding of surface water, to minimize infiltration of surface water, and to control windblown dust.
7. The composite liner in combination with the final cover after closure must achieve an efficiency of at least ninety-nine and nine-tenths percent or better for collection or rejection of the precipitation that falls on the landfill.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-10-04. Landfill cover and closure.

1. The owner or operator must place intermittent cover on all exposed solid waste according to the approved operation plan.
 - a. Unless specified otherwise in the operation plan, the solid waste must not be left uncovered for more than forty-eight hours. Cover must be provided by additional waste or with a suitable material proposed by the landfill owner and approved by the department.
 - b. The cover materials used and cover depth must be sufficient to cover the solid waste completely.
2. The final cover at closure must be eight feet [2.74 meters] or more, and meet the requirement of subsection 7 of section 33.1-20-10-03. In addition, the final cover must include, at a minimum from bottom to top:
 - a. A barrier layer consisting of at least twenty-four inches [61.0 centimeters] of compacted earthen materials with a hydraulic conductivity no greater than 1×10^{-7} centimeters per second;
 - b. A synthetic flexible membrane liner which is at least sixty mil thick;
 - c. A drainage layer consisting of at least six inches [15.2 centimeters] with a transmissivity of 3×10^{-2} centimeters squared per second or greater;
 - d. A layer which is at least thirty-six inches [91.4 centimeters] thick to protect the synthetic liner and barrier layer from freezing, the upper twelve inches [30.5 centimeters] of this layer must be suitable as a plant root zone; and
 - e. A top layer at least six inches [15.2 centimeters] thick consisting of suitable plant growth material.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-10-05. Facility inspector.

The owner or operator shall provide the funds necessary to employ an inspector for conducting onsite inspection services at the facility. The owner or operator shall provide funds by July thirty-first of each year for salary, wages, and operating expenses associated with employing an inspector for the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-20-11
LANDFILL DISPOSAL OF TECHNOLOGICALLY ENHANCED NATURALLY OCCURRING
RADIOACTIVE MATERIAL WASTE

Section

<u>33.1-20-11-01</u>	<u>Radioactive Waste Disposal</u>
<u>33.1-20-11-02</u>	<u>Prohibition</u>
<u>33.1-20-11-03</u>	<u>Authorization</u>
<u>33.1-20-11-04</u>	<u>Monitoring</u>
<u>33.1-20-11-05</u>	<u>Reporting</u>
<u>33.1-20-11-06</u>	<u>Worker Training and Safety</u>
<u>33.1-20-11-07</u>	<u>Record of Notice</u>

33.1-20-11-01. Radioactive waste disposal.

Disposal of radioactive waste subject to regulation under chapter 33.1-10-23, meeting the definition of TENORM, into special waste or industrial waste landfills shall comply with the following requirements and limitations:

1. TENORM waste up to, but not exceeding 50.0 picocuries per gram of radium-226 plus radium-228, may be disposed in a landfill which complies with chapter 33.1-20-07.1 or chapter 33.1-20-10, except that the accumulated amount must not exceed twenty-five thousand tons [22,679.22 metric tons] per year or three thousand tons [2,721.55 metric tons] in any one month unless larger amounts in one month resulting from special cleanup projects are preapproved by the department. Drums or shipping containers of TENORM waste which are not of uniform concentration must not exceed an average concentration of 50.0 picocuries per gram of radium-226 plus radium-228.
2. Equipment contaminated with TENORM which does not exceed a maximum exposure level of one hundred microrentgen per hour, including background radiation, at any accessible location may be disposed in a landfill which complies with chapter 33.1-20-07.1 or chapter 33.1-20-10.
3. TENORM waste must be covered by at least one foot of non-TENORM waste or daily cover material by the end of each operating day. For landfills that operate continuously (twenty-four hours per day), all TENORM waste shall be covered at least once every twenty-four hour period.
4. TENORM waste must be disposed at depth greater than ten feet below the surface of the final landfill cover.
5. For a landfill that is subject to chapter 33.1-20-07.1, if any part of the final cover has slope greater than fifteen percent, then the final cover must have an additional two feet of low permeability soil, for a total minimum cover thickness of five feet.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-02. Prohibition.

Disposal of TENORM waste subject to regulation under article 33.1-10 is prohibited in all municipal solid waste landfills and inert landfills. Disposal of radioactive waste subject to regulation under article 33.1-10, which does not meet the definition of TENORM, or TENORM waste that is greater than 50.0 picocuries per gram of radium-226 plus radium-228 is prohibited in all landfills. If prohibited TENORM

waste is delivered to a landfill for disposal, the waste must be rejected. The owner or operator of the landfill shall note the source, amount, generator, and other identifying information about the rejected waste and shall notify the department within five days of the rejection of such material.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-03. Authorization.

Approval for acceptance of TENORM waste by a landfill not previously authorized to accept such waste in its permit shall follow procedures in section 33.1-20-02.1-06. The facility is also subject to applicable approval and licensure requirements of chapter 33.1-10-23.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-04. Monitoring.

The leachate collection system and ground water monitoring network shall be analyzed for background concentration of radionuclide parameters prior to receipt of any TENORM waste. Leachate shall be analyzed for radionuclides at the same frequency as ground water samples are collected. If radionuclides are detected in the leachate at a concentration greater than the concentrations listed below, then the ground water monitoring network must begin analysis for radionuclide parameters.

Radon: 4,000 picocuries per liter (pCi/L).

Combined radium-226 and radium-228: 5 pCi/L.

Alpha particle activity (including radium-226, excluding radon and uranium): 15 pCi/L.

Uranium: 30 micrograms per liter (ug/L).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-05. Reporting.

Landfills approved for the disposal of TENORM waste shall file with the department a quarterly summary report stating the date, type, and total quantity by weight in tons, generator, and final disposal facility of each TENORM transferred. Each report shall be filed within thirty days of the end of each quarter. If no transfers of TENORM have been made during the reporting period, the report must so indicate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-06. Worker training and safety.

Landfills approved for the disposal of TENORM waste shall implement a worker training program and safety program to meet the requirements of section 33.1-10-23-27, so that protection of workers complies with radiation protection standards of chapters 33.1-10-04.2 and 33.1-10-10.1. The training and safety program shall be approved by the department prior to receipt of any TENORM waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

33.1-20-11-07. Record of notice.

The records of notice required by section 33.1-20-02.1-04 shall specify that the landfill is approved to accept TENORM waste. The final record of notice shall indicate the total quantity of TENORM waste disposed in the landfill.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-03-03, 23.1-03-04, 23.1-08-03; S.L. 2017, ch. 199, §§ 18, 23

CHAPTER 33.1-20-12

REGULATED INFECTIOUS WASTE

Section

33.1-20-12-01 Definitions

33.1-20-12-02 Management Standards

33.1-20-12-01. Definitions.

1. As used in this article, "regulated infectious waste" means an infectious waste which is listed in subdivisions a through g of this subsection. Ash from incineration and residues from disinfection processes are not infectious waste once the incineration or the disinfection has been completed.
 - a. Cultures and stocks. Cultures and stocks of infectious agents and associated biologicals, including cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures.
 - b. Pathological waste. Human pathological waste, including tissues, organs, and body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers.
 - c. Human blood and blood products. Liquid waste human blood; products of blood; items saturated or dripping with human blood; or items that were saturated or dripping with human blood that are now caked with dried human blood (including serum, plasma, and other blood components, and their containers).
 - d. Sharps. Sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, and culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips.
 - e. Animal waste. Contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biological, or testing of pharmaceuticals.
 - f. Isolation waste. Biological waste and discarded materials contaminated with blood, excretion, exudates, or secretions from humans who are isolated to protect others from highly communicable diseases, or isolated animals known to be infected with highly communicable diseases.
 - g. Unused sharps. Unused, discarded sharps, hypodermic needles, suture needles, and scalpel blades.
2. As used in this chapter, "disinfection or disinfect" means to remove, inactivate, or destroy blood borne pathogens on a surface or item to the point where the surface or item is no longer capable of transmitting infectious particles.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-12-02. Management standards.

In addition to sections 33.1-20-01.1-04, 33.1-20-01.1-05, 33.1-20-02.1-01, and 33.1-20-04.1-08, every person who collects, stores, transports, treats, or disposes of regulated infectious waste shall comply with these standards of performance.

1. At the point of origin, regulated infectious waste must be separated from other wastes and placed in distinctive containers which do not leak and which are impervious, puncture resistant, and tear resistant and which contain obvious markings (for example, red or orange plastic bags or the biohazard label). Bags and containers holding regulated infectious waste must be tied, closed, or sealed securely to prevent leakage.
2. At the point of origin, sharps must be:
 - a. Separated from other regulated infectious waste, disinfected onsite, rendered nonsharp onsite, and then disposed; or
 - b. Placed in rigid and puncture-resistant biohazard containers and handled as required by subsection 5.
3. The handling and storage of regulated infectious waste, before the treatment of subsection 5, must be conducted in a manner which minimizes exposure to employees of the waste generator, the waste transporter, and the public.
4. Recycled containers or devices such as carts used for the handling of wastes must be disinfected after each use.
5. All regulated infectious waste must be incinerated or disinfected and sharps that are not incinerated must be rendered nonsharp before disposal. Incineration and disinfection equipment and facilities shall meet the requirements of article 33.1-15 and this article.
6. Blood and blood products can be discarded without incineration or disinfection through municipal sewage disposal systems that meet the requirements of article 33.1-16.
7. The disposal of nonviable human fetuses shall meet the requirements of section 33.1-03-02-05.
8. An infectious waste which is not regulated by this chapter may be disposed at a permitted municipal waste landfill.
9. Household waste containing regulated infectious waste in amounts normally found in household waste may be disposed of at a permitted municipal waste landfill.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-13

WATER PROTECTION PROVISIONS

Section

- 33.1-20-13-01 Site Characterization
- 33.1-20-13-02 Ground Water Quality Monitoring
- 33.1-20-13-03 Water Quality Standards
- 33.1-20-13-04 Monitoring Well Construction
- 33.1-20-13-05 Assessment Monitoring, Remedial Measures, and Corrective Action

33.1-20-13-01. Site characterization.

The department shall require adequate site characterization to ensure that the waters of the state are not or will not be adversely impacted by the solid waste management facility. At a minimum, the site characterization must address the following:

1. Location and water quality of lakes, rivers, streams, springs, or wetlands within one mile [1.61 kilometers] of the site boundary based on available data;
2. Domestic and livestock wells within one mile [1.61 kilometers] of the site boundary. Information collected should include the location, water quality, depth to water, well depth, screened intervals, yields, and the aquifers tapped;
3. Site location in relation to the one hundred-year floodplain;
4. Depth to the thicknesses of the uppermost aquifers;
5. Hydrologic properties of the uppermost aquifers beneath the proposed facility, including existing water quality, flow directions, flow rates, porosity, coefficient of storage, hydraulic conductivity, and potentiometric surface or water table; and
6. An evaluation of the potential for impacts to surface and ground water quality from the proposed facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-13; S.L. 2017, ch. 199, § 23

33.1-20-13-02. Ground water quality monitoring.

1. An owner or operator of a resource recovery unit, a land treatment unit, a surface impoundment, or a landfill, except an inert waste landfill, must incorporate a ground water monitoring system into the design of the facility. If the owner or operator demonstrates to the department that there is no potential for migration of solid waste constituents to the uppermost aquifer during the life of the solid waste management unit and the postclosure period, the department may suspend this requirement. The demonstration must be based upon factors such as the site characterization, the solid waste characteristics and constituents, the potential capacity of the unit or facility, and the physical, chemical, and biological processes affecting contaminant fate and transport.
2. Ground water monitoring systems must be designed to effectively detect the migration of contamination. At a minimum, a water quality monitoring system shall:
 - a. Include one ground water monitoring well located upgradient of the solid waste management unit, and at least two wells located downgradient of the unit. The monitoring wells should be installed at appropriate locations and depths to yield ground water from

the uppermost aquifer and all hydraulically connected aquifers below the solid waste management units on the facility;

b. Represent the elevation of ground water in each well immediately prior to purging so that the owner or operator may determine the rate and direction of ground water flow each time ground water is sampled;

c. Represent the quality of ground water that has not been affected by spills or leakage from solid waste management units;

d. Represent the quality of ground water to ensure detection of contamination passing the compliance boundary;

e. Ground water samples at municipal waste landfills must not be filtered prior to analysis; and

f. The frequency and number of samples collected must be consistent with statistical procedures for evaluating ground water data. A minimum of four independent samples from each well must be collected for analysis during the first sampling event for establishing background data at upgradient (subdivision c) and downgradient (subdivision d) wells, unless four or more sampling events occur prior to acceptance of solid waste by the facility. The monitoring frequency must be semiannual during the active life of the facility and during the postclosure period. The department may specify an alternate frequency for sampling based upon such factors as site hydrogeological characteristics, solid waste characteristics, evidence of a spill or leakage, or resource value of the aquifer.

3. Additional wells may be required in complicated hydrogeological settings or to define the extent of contamination detected.

4. A written ground water monitoring plan must be developed for approval by the department and implemented as part of the permitting process. The plan must include:

a. Number and location of wells;

b. Procedures for decontamination of drilling and sampling equipment;

c. Procedures for sample collection;

d. Sample analytical procedures;

e. Chain of custody control;

f. Parameters for analysis;

g. Quality assurance or quality control procedures;

h. A monitoring schedule;

i. Data statistical methods and analysis procedures; and

j. Reporting of a statistically significant increase over a background value or of an exceedance of a maximum concentration limit or a water quality standard.

5. Ground water monitoring data obtained under this section must be analyzed within a reasonable period of time after completing sampling and laboratory analysis to determine whether or not a statistically significant increase over background values or an exceedance of

a maximum concentration limit or water quality standard has occurred for each parameter required in the monitoring plan or permit. Statistical methods must, as appropriate:

- a. Be appropriate for the distribution of the data and, if inappropriate for a normal theory test, be transformed or a distribution-free theory test must be used.
- b. Control or correct for seasonal and spatial variability in the data.
- c. Account for data below the limit of detection that can be reliably achieved by routine laboratory techniques, using the limit as the lowest concentration level for a chemical parameter which is below detection.
- d. Be protective of human health and environmental resources.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 23.1-11-05, 23.1-11-11, 61-28-04, 61-28-05; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-11-05, 23.1-11-06, 23.1-11-08, 23.1-11-11, 61-28-04; S.L. 2017, ch. 199, §§ 23, 26

33.1-20-13-03. Water quality standards.

1. All solid waste management systems, operations, units, and facilities must be designed, constructed, operated, maintained, closed, and maintained after closure so as to be in compliance with North Dakota Century Code chapter 61-28, and water quality standards defined in articles 33.1-16 and 33.1-17. Compliance with these standards is enforceable at the compliance boundary of the facility.
2. Whenever ground water monitoring is required, the department must specify in the facility permit the specific elements of ground water monitoring, including indicator parameters which are constituents in or derived from solid waste, the maximum concentration limits in ground water for each parameter not otherwise defined by subsection 1, and the compliance boundary, considering:
 - a. The physical and chemical characteristics of the waste, including the potential for migration in surface water, in the unsaturated zone beneath the facility, and in ground water;
 - b. The hydrogeological characteristics of the site and the surrounding land;
 - c. The existing quality and quantity of ground water, other possible sources of contamination, and the direction of ground water flow;
 - d. The detectability of the indicator parameters or constituents in surface water or in ground water; or
 - e. The proximity of the facility to surface waters; and
 - f. Appropriate parameters from the list in table 1.
3. The compliance boundary shall be located on land owned by the owner of the facility and no more than five hundred feet [152.4 meters] from a landfill or landfill disposal cell.

TABLE 1 List of Parameters for Assessing Ground Water Quality

a. Parameters measured in the field:

- (1) Appearance (including color, foaming, and odor)
- (2) pH¹
- (3) Specific conductance²
- (4) Temperature
- (5) Water elevation³

b. General geochemical parameters:

- | | |
|-----------------------------|------------------------------------------|
| (1) <u>Ammonia nitrogen</u> | (11) <u>Chloride</u> |
| (2) <u>Total hardness</u> | (12) <u>Fluoride</u> |
| (3) <u>Iron</u> | (13) <u>Nitrate + Nitrite, as N</u> |
| (4) <u>Calcium</u> | (14) <u>Total phosphorus</u> |
| (5) <u>Magnesium</u> | (15) <u>Sulfate</u> |
| (6) <u>Manganese</u> | (16) <u>Sodium</u> |
| (7) <u>Potassium</u> | (17) <u>Total dissolved solids (TDS)</u> |
| (8) <u>Total alkalinity</u> | (18) <u>Total suspended solids (TSS)</u> |
| (9) <u>Bicarbonate</u> | (19) <u>Cation/anion balance</u> |
| (10) <u>Carbonate</u> | |

c. Heavy metals:

Group A:

- (1) Arsenic
- (2) Barium
- (3) Cadmium
- (4) Chromium
- (5) Lead
- (6) Mercury
- (7) Selenium
- (8) Silver

Group B:

- (9) Antimony
- (10) Beryllium
- (11) Cobalt
- (12) Copper
- (13) Nickel
- (14) Thallium
- (15) Vanadium
- (16) Zinc

d. Total organic carbon (TOC)
Chemical oxygen demand (COD)

e. Naturally occurring radionuclides:

- (1) Radon
- (2) Radium
- (3) Uranium

f. Volatile organic compounds, both halogenated and nonhalogenated:

Halogenated:

- | | |
|-----------------------------|------------------------------------|
| <u>Acrylonitrile</u> | <u>1,1-Dichloroethylene</u> |
| <u>Allyl chloride</u> | <u>1,2-Dichloropropane</u> |
| <u>Bromochloromethane</u> | <u>cis-1,3-Dichloropropene</u> |
| <u>Bromodichloromethane</u> | <u>cis-1,2-Dichloroethylene</u> |
| <u>Bromoform</u> | <u>trans-1,2-Dichloroethylene</u> |
| <u>Bromomethane</u> | <u>trans-1,3-Dichloropropene</u> |
| <u>Carbon disulfide</u> | <u>trans-1,4-Dichloro-2-butene</u> |

Carbon tetrachloride
Chlorobenzene
(monochlorobenzene)
Chlorodibromomethane
Chloroethane
Chloroform
Chloromethane
Dibromomethane
1,2-Dibromo-3-chloropropane
1,2-Dibromoethane
Dichloroacetonitrile
1,2-Dichlorobenzene
1,3-Dichlorobenzene
1,4-Dichlorobenzene
Dichlorodifluoromethane
1,1-Dichloroethane
1,2-Dichloroethane

Dichlorofluoromethane
Dichloromethane (methylene chloride)
1,3-Dichloropropene
2,3-Dichloro-1-propene
Pentachloroethane
1,1,1,2-Tetrachloroethane
1,1,2,2-Tetrachloroethane
Tetrachloroethylene
1,1,1-Trichloroethane
1,1,2-Trichloroethane
Trichloroethylene
Trichlorofluoromethane
1,2,3-Trichloropropane
1,1,2-Trichlorotrifluoroethane
Vinyl acetate
Vinyl chloride

Nonhalogenated:

Acetone
Benzene
Cumene
Ethylbenzene
Ethyl ether
Methyl butyl ketone
Methyl ethyl ketone
Methyl iodide

Methyl isobutyl ketone
Pyrene
Styrene
Tetrahydrofuran
Toluene
m-Xylene
o-Xylene
p-Xylene

g. Pesticides:

Aldrin
Chlordane
Chloroform
4,4 DDT
Dibenzofuran
Dieldrin
Dimethoate
Endosulfan

Endrin
Heptachlor
Lindane
Methyl bromide
Methyl methacrylate
Methylene bromide
Naphthalene
Parathion

¹ Two measurements: in field, and immediately upon sample's arrival in laboratory.

² As measured in field.

³ As measured to the nearest 0.01 foot in field before pumping or bailing.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 23.1-11-05, 23.1-11-11, 61-28-04, 61-28-05; S.L. 2017, ch. 199, §1

Law Implemented: NDCC 23.1-08-03, 23.1-11-05, 23.1-11-06, 23.1-11-08, 23.1-11-11, 61-28-04; S.L. 2017, ch. 199, §§ 23, 26

33.1-20-13-04. Monitoring well construction.

1. All monitoring wells must be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing must allow collection of representative ground water samples. Wells must be constructed in such a manner as to prevent contamination of the samples, the sampled strata, and between aquifers and water bearing strata.

2. All soil borings or ground water monitoring wells must be completed by a driller licensed in North Dakota and must meet design and construction requirements as stipulated in North Dakota Century Code chapter 43-35 and article 33.1-18.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 43-35-19, 43-35-19.1, 43-35-19.2; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 43-35-19, 43-35-19.1, 43-35-19.2; S.L. 2017, ch. 199, §§ 23, 45, 46, 47

33.1-20-13-05. Assessment monitoring, remedial measures, and corrective action.

1. Within ninety days of finding that a parameter has been detected at a statistically significant level exceeding the ground water standards established under sections 33.1-20-13-02 and 33.1-20-13-03, the owner or operator shall initiate an assessment of remedial measures. The assessment must:

- a. Be completed within a reasonable time period, unless otherwise specified by permit or the department;
- b. Include an evaluation of the nature and extent of the release of the constituents including pathways to human and environmental receptors;
- c. For municipal landfills, include ground water sampling and analysis for all parameters listed in appendix 1 of this chapter. The department may delete any of the appendix 1 parameters if it can be shown that the removed constituents are not reasonably expected to be in or derived from the waste within the leaking facility;
- d. Include an analysis of the effectiveness of potential remedial measures in meeting all requirements of subsection 2 and include the following:
 - (1) The performance, reliability, ease of implementation, and potential impacts of each potential remedial measure;
 - (2) The time required to begin and complete each potential remedial measure;
 - (3) The costs of implementation of each potential remedial measure; and
 - (4) The permit requirements or other environmental or public health requirements that may substantially affect implementation of each potential remedial measure; and
- e. When requested by the department, the owner or operator must discuss results of the assessment of remedial measures, prior to selection of a corrective action remedy, in a public meeting with interested and affected persons.

2. Based on the results of the assessment of remedial measures conducted under subsection 1, the owner or operator must select a corrective action remedy within thirty days which, at minimum, meets the following standards:

- a. Is protective of human health and environmental resources;
- b. Attains the ground water protection standards under sections 33.1-20-13-02 and 33.1-20-13-03;
- c. Controls the sources of release so as to reduce or eliminate, to the maximum extent practicable, further releases of constituents that may pose a threat to human health or environmental resources; and
- d. Complies with this article and other applicable environmental statutes and rules.

3. When selecting a corrective action remedy under subsection 2, the owner or operator shall consider these factors:
 - a. The short-term and long-term effectiveness of the potential remedial measure considering:
 - (1) Magnitude of reducing exposure to constituents;
 - (2) Likelihood of further releases;
 - (3) Practical capability of technologies; and
 - (4) Time until the standards are achieved.
 - b. The ease or difficulty of implementing the potential remedial measure considering:
 - (1) Availability of equipment and specialists;
 - (2) Long-term management needs such as monitoring, operation, and maintenance; and
 - (3) Need to coordinate with and obtain necessary approvals or permits from other agencies.
 - c. The need for interim measures to control the sources of the release and to protect human health and environmental resources.
 - d. The schedules for initiating, conducting, and completing the potential remedial measure.
 - e. Practical capability of the owner or operator.
4. The owner or operator shall provide the department with a document fully describing the remedial measures assessment under subsection 1 and the selected corrective action remedy under subsections 2 and 3.
5. Upon selection of the corrective action remedy under subsection 2 and with the concurrence of the department, the owner or operator shall establish and implement the remedy.
 - a. During implementation, the owner or operator shall monitor the effectiveness of the remedy.
 - b. Implementation shall be considered complete when all actions and standards required to complete the remedy have been satisfied and approved by the department.
 - c. Upon completion of a corrective action remedy, the owner or operator shall place in the operating record a certification that the corrective action remedy has been completed. Within fourteen days of completion of the certification, the owner or operator shall notify the department that the certification has been placed in the operating record.

CHAPTER 33.1-20-14

FINANCIAL ASSURANCE REQUIREMENTS

Section

- 33.1-20-14-01 Financial Assurance for Solid Waste Disposal Facilities
- 33.1-20-14-02 Cost Estimates for Closure and Postclosure
- 33.1-20-14-03 Financial Assurance Mechanism for Closure and Postclosure
- 33.1-20-14-04 Implementation of Financial Assurance for Closure and Postclosure
- 33.1-20-14-05 Financial Assurance for Corrective Action
- 33.1-20-14-06 Liability Requirements for Industrial Waste Landfills
- 33.1-20-14-07 Specific Requirements of Mechanisms for Financial Assurance

33.1-20-14-01. Financial assurance for solid waste disposal facilities.

1. The requirements of this chapter apply to all new and expanded solid waste disposal facilities and to existing solid waste disposal facilities that have not been closed by April 9, 1994. These requirements do not apply to inert waste landfills.
2. New or expanded facilities must demonstrate financial assurance prior to acceptance of solid waste and existing facilities by the date given in subsection 1.
3. Owners of facilities may set up one mechanism to demonstrate financial assurance for both closure and postclosure care of each facility. The amount of funds available through the mechanisms must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for financial assurance of closure and of postclosure care.
4. Mechanisms used to demonstrate financial assurance under this chapter must ensure that the amount of funds assured is adequate to cover the costs of closure and postclosure care and that the funds will be available in a timely fashion whenever needed, until released from the financial assurance requirement by the department.
5. Mechanisms must be legally valid and binding under North Dakota law.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-02. Cost estimates for closure and postclosure.

1. Each owner or operator shall prepare separate written closure and postclosure estimates of the costs of hiring a third party to complete identified activities of the facility closure and postclosure plans.
 - a. The initial cost estimates must be in current dollars, and cost estimates must be adjusted annually for inflation.
 - b. The cost estimate for closure must equal the cost of closing the largest area requiring a final cover during the active life of the facility.
 - c. The owner or operator must increase the cost estimates if changes in the closure plan or postclosure plan increase the maximum costs of closure or postclosure care, respectively. The owner or operator may reduce a cost estimate for closure if it exceeds the maximum costs of closure during the remaining life of the facility or a cost estimate for postclosure care if it exceeds the maximum costs of postclosure during the remaining postclosure period.

d. The cost estimate for postclosure must account for the total costs of postclosure care over the entire postclosure period, including the most expensive costs of postclosure during the postclosure period.

2. Each owner or operator shall prepare a new closure or postclosure cost estimate whenever any of the following occurs:

a. Changes in operating plans or facility design affect the closure or postclosure plans;

b. There is a change in the expected year of closure; and

c. The department directs the owner or operator to revise the closure or postclosure plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-03. Financial assurance mechanism for closure and postclosure.

1. Each owner or operator of an applicable solid waste disposal facility shall establish one or more financial assurance mechanisms which together total an amount equal to the closure cost estimate or postclosure cost estimate prepared in accordance with section 33.1-20-14-02.

2. Each financial assurance mechanism must be approved by the department. The following financial assurance mechanisms are acceptable, provided respective requirements of section 33.1-20-14-07 are met:

a. Reserve account;

b. Trust fund;

c. Surety bond;

d. Irrevocable letter of credit;

e. Financial test;

f. Insurance policy; and

g. Corporate guarantee in accordance with the form and content of subdivision a of subsection 8 of section 33.1-24-05-81.

3. A trust fund, surety bond, letter of credit, corporate guarantee, financial test, or insurance policy may be terminated or canceled only if alternate financial assurance is substituted or if the owner or operator is released from the requirement by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-04. Implementation of financial assurance for closure and postclosure.

1. The closure plan and postclosure plan required by this article must specify the financial assurance mechanisms required by this chapter and, if a reserve account, trust fund, surety bond, or insurance policy, the methods and schedules for funding the mechanisms.

2. Publicly owned solid waste disposal facilities shall comply with the following:

- a. Closure and postclosure financial assurance funds must be generated for each facility as indicated in the closure and postclosure plans;
 - b. Each facility owner or operator must establish a procedure with the trustee of the financial assurance mechanism for notification of nonpayment of funds to be sent to the department; and
 - c. Each owner or operator shall file with the department no later than August thirty-first of each succeeding year an annual report of the financial assurance mechanism established for closure and postclosure activities.
3. Privately owned solid waste disposal facilities shall comply with the following:
- a. Each owner or operator shall file with the department no later than August thirty-first of each succeeding year an annual audit of the financial assurance mechanisms established for closure and postclosure activities; and
 - b. Annual audits must be conducted by a certified public accountant licensed in the state and must be filed with the department no later than August thirty-first of each year for the previous calendar year, including each year of the postclosure period.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-05. Financial assurance for corrective action.

1. The department may require an owner or operator to undertake remedial measures, including corrective action, under the provisions of subsection 10 of North Dakota Century Code section 23.1-08-03 and chapter 61-28 when a release occurs.
2. An owner or operator required to undertake corrective action must have a detailed estimate, in current dollars, of the cost of hiring a third party to perform the corrective action.
 - a. The cost estimate must account for the total costs of corrective action for the entire corrective action period.
 - b. The owner or operator must annually adjust the cost estimate for inflation until corrective action is completed.
 - c. The owner or operator shall increase the cost estimate if changes in corrective action or conditions increase the total costs. The owner or operator may reduce the cost estimate if the total costs exceed the maximum remaining costs of corrective action.
3. An owner or operator required to undertake corrective action shall establish financial assurance in accordance with section 33.1-20-14-07 no later than one hundred twenty days after the corrective action remedy has been selected. The owner or operator shall provide continuous coverage for corrective action until demonstrating compliance with article 33.1-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-06. Liability requirements for industrial waste landfills.

An owner or operator of an industrial waste landfill shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility. The owner or operator shall have and maintain liability coverage for

sudden accidental occurrences in the amount of at least one million dollars per occurrence with an annual aggregate of at least two million dollars, exclusive of legal defense costs. This liability coverage may be demonstrated with one or more of the mechanisms listed in subsection 2 of section 33.1-20-14-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

33.1-20-14-07. Specific requirements of mechanisms for financial assurance.

1. Trust fund. A trust fund must satisfy the requirements of this subsection.

- a. The trustee must be an entity which has authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.
- b. Payments into the trust fund must be made annually over the initial permit or over the remaining life of the solid waste management unit or facility, whichever is shorter. This is the pay-in period.
- c. The first payment into the trust fund must equal or exceed the current cost estimate for closure or postclosure, whichever is applicable, divided by the number of years defined in subdivision b. The amount of subsequent payments must be determined by the following formula:

$$\text{Next payment} = \frac{\text{CE} - \text{CV}}{\text{Y}}$$

Where CE is the current cost estimate, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

- d. The initial payment into the trust fund must be made for new or expanded facilities before the initial receipt of solid waste or for existing facilities before the effective date as provided by subsection 1 of section 33.1-20-14-01.
- e. If an owner or operator establishes a trust fund after having used one or more alternative mechanisms specified in section 33.1-20-14-03, the initial payment into the trust fund must equal or exceed the amount that the fund would contain if the fund were established initially and annual payments made according to subdivision c.
- f. The owner or operator, or other person authorized to conduct closure or postclosure care may request reimbursement from the trustee for these expenses. Requests for reimbursement will be approved by the trustee only if sufficient funds are remaining in the trust fund.

2. Surety bond. A surety bond guaranteeing payment or performance must satisfy to the requirements of this subsection.

- a. The penal sum of the bond must be in an amount equal to or greater than the current closure or postclosure cost estimate, whichever is applicable.
- b. Under the terms of the bond, the surety must become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

- c. The owner or operator must establish a standby trust fund that meets the requirement of subsection 1, except for payment provisions in subdivisions b, c, and d.
- d. Payments made under the terms of the bond must be deposited by the surety into the standby trust fund. Payments from the trust fund must be approved by the trustee.
- e. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department one hundred twenty days or more in advance of the cancellation. If the surety cancels the bond, the owner or operator must obtain alternate financial assurance.

3. Letter of credit. A letter of credit must satisfy the requirements of this subsection.

- a. The issuing institution of a letter of credit must have authority to issue letters of credit and its operations must be regulated and examined by a federal or state agency.
- b. A letter from the owner or operator, referring to the letter of credit by number, issuing institution, and date and including the name and address of the solid waste management unit or facility and the amount of funds assured, must be provided with the letter of credit to the department.
- c. The letter of credit must be irrevocable and issued for a period of at least one year in an amount at least equal to the current cost estimate for closure or postclosure care, whichever is applicable. The letter of credit must provide that the expiration date will be automatically extended for a period of one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation to the owner or operator and to the department one hundred twenty days or more in advance of the cancellation. If the letter of credit is canceled by the issuing institution, the owner or operator must obtain alternate financial assurance.

4. Insurance. Insurance must satisfy the requirements of this subsection.

- a. The insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer in one or more states.
- b. The insurance policy must guarantee that funds will be available to close the solid waste management unit or facility whenever closure occurs or to provide postclosure care whenever the postclosure period begins, whichever is applicable. The policy must also guarantee that, once closure or postclosure care begins, the insurer will be responsible for paying out funds to the owner or operator or other person authorized to conduct closure or postclosure care up to an amount equal to the face amount of the policy.
- c. The insurance policy must be issued for a face amount at least equal to the current cost estimate for closure or postclosure care, whichever is applicable. The term face amount means the total amount the insurer is obligated to pay under the policy.
- d. Each insurance policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer.
- e. The insurance policy must provide that the insurer may not cancel, terminate, or fail to renew the policy, except for failure to pay the premium. The automatic renewal of the policy must provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay a premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator and to the department one hundred twenty days or more in advance of cancellation. If the insurer cancels the policy, the owner or operator must obtain alternate financial assurance.

5. **Financial test and corporate guarantee.** A financial test or corporate guarantee must satisfy the requirements of this subsection.

a. For the financial test, the owner or operator must have:

- (1) A ratio of current assets to current liabilities greater than one and five-tenths, or a current rating for the owner's or operator's most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's; and
- (2) Net working capital and tangible net worth each at least four times the sum of the current cost estimates for closure or postclosure, whichever is applicable; and
- (3) Tangible net worth of at least two million dollars; and
- (4) Assets located in the United States amounting to at least four times the current cost estimates for closure or postclosure care, whichever is applicable.

b. To demonstrate the financial test, the owner or operator must submit the following items to the department in a letter which transmits:

- (1) A copy of an independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest fiscal year; and
- (2) A report from an independent certified public accountant to the owner or operator stating that:
 - (a) The accountant has compared the data which the letter from the chief financial officer specifies as having been derived from the independently audited, yearend financial statements for the latest fiscal year; and
 - (b) In connection with that procedure, no matters came to lead the accountant to believe that specified data should be adjusted.

c. After initial submission of the items in subdivision b, the owner or operator must send updated information to the department no later than August thirty-first of each succeeding fiscal year. This information must consist of all items specified in subdivision b.

d. If the owner or operator no longer meets the requirements of subdivision a, the owner or operator must send notice by certified mail to the department within ninety days and establish alternate financial assurance within one hundred twenty days.

e. The department may disallow use of the financial test on the basis of qualification in the opinion expressed by the certified public accountant in the accountant's report on examination of owner's or operator's statements. An adverse opinion or a disclaimer of opinion may be cause for disallowance. The owner or operator shall provide alternate financial assurance within thirty days after notification of the disallowance.

f. An owner or operator may meet the requirements of this subsection by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a substantial business relationship with the owner or operator. The guarantor must meet the requirements of subdivisions a through e and a certified copy of the guarantee must accompany the items in subdivision b. The terms of the guarantee must provide that:

- (1) Guarantor will complete closure or postclosure care, whichever is applicable, if the owner or operator fails to do so; and
- (2) The corporate guarantee will remain in effect unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the department; and
- (3) Guarantor will provide alternate financial assurance within ninety days if the corporate guarantee is canceled and if the owner or operator fails to provide approved alternate financial assurance.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-15
SOLID WASTE MANAGEMENT FEES

Section

33.1-20-15-01 Application Processing Fee

33.1-20-15-02 Annual Permit Fee

33.1-20-15-01. Application processing fee.

1. Applicants for permits for transporting solid waste and for solid waste management facilities shall pay, at the time the permit application is filed, an application processing fee as follows:
 - a. Seventy-five dollars for a solid waste transporter.
 - b. Five thousand dollars for any resource recovery system or facility.
 - c. One thousand dollars for any municipal waste landfill facility that receives on average less than twenty tons [18.2 metric tons] per day.
 - d. Three thousand dollars for any municipal waste landfill facility that receives on average from twenty tons [18.2 metric tons] per day to fifty tons [45.4 metric tons] per day.
 - e. Five thousand dollars for any municipal waste landfill facility that receives on average more than fifty tons [45.4 metric tons] per day to five hundred tons [453.5 metric tons] per day.
 - f. Twenty thousand dollars for any municipal waste landfill facility that receives on average more than five hundred tons [453.5 metric tons] per day.
 - g. Three thousand dollars for any surface impoundment facility plus two thousand dollars for each surface impoundment included in the facility. A surface impoundment receiving an average of more than ten tons [9.1 metric tons] of waste per day and which will be closed with the waste materials remaining in place shall pay applicable fees for the appropriate size of industrial waste or special waste landfill facility.
 - h. One thousand dollars for any industrial waste or special waste landfill facility that receives on average ten tons [9.1 metric tons] per day or less.
 - i. Ten thousand dollars for any industrial waste or special waste facility that receives on average more than ten tons [9.1 metric tons] but less than one hundred tons [90.7 metric tons] per day.
 - j. Twenty thousand dollars for any industrial waste or special waste facility that receives on average one hundred tons [90.7 metric tons] or more per day.
 - k. Two thousand dollars for any inert waste landfill that receives on average more than forty tons [18.1 metric tons] per day.
2. Modifications of existing unexpired permits which are initiated by the department may not require an application processing fee. Modifications of existing unexpired permits not initiated by the department that require major review may be required to submit a processing fee with the modification request.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 23.1-08-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-10; S.L. 2017, ch. 199, § 23

33.1-20-15-02. Annual permit fee.

Beginning July 1, 1993, the owners or operators of an activity or facility required to have a permit under these rules are subject to an annual permit fee for each permit. The fee period must begin each July first and the fee must be paid by July thirty-first. All fees must be made payable to the North Dakota department of environmental quality. The annual permit fee is as follows:

1. For transport of solid waste twenty-five dollars.
2. For a resource recovery system or facility system five hundred dollars.
3. For industrial waste or special waste facility five hundred dollars.
4. For a municipal waste landfill facility receiving on average more than twenty tons [18.2 metric tons] per day but less than fifty tons [45.4 metric tons] per day five hundred dollars.
5. For a municipal waste landfill facility receiving on average more than fifty tons [45.4 metric tons] per day and less than five hundred tons [453.5 metric tons] per day one thousand dollars.
6. For a municipal waste landfill facility receiving on average more than five hundred tons [453.5 metric tons] per day five thousand dollars.
7. For a surface impoundment facility five hundred dollars.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03, 23.1-08-10; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-10; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-16

CERTIFICATION OF OPERATORS

Section

- 33.1-20-16-01 Responsibility
- 33.1-20-16-02 Certification and Application
- 33.1-20-16-03 Training Course and Certification Requirements
- 33.1-20-16-04 Certificate Revocation
- 33.1-20-16-05 Term and Renewal of Certificates

33.1-20-16-01. Responsibility.

Permittees of all municipal waste landfills and municipal waste incinerators in North Dakota are required to have a certified operator onsite at all times during operation of the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-16-02. Certification and application.

1. In order to be certified as a municipal waste landfill operator, an applicant must take and pass a written examination given by the department or its authorized representative.
2. The department shall charge certification fees of twenty-five dollars for initial certification and fifteen dollars for annual renewal.
3. An individual desiring to attend the training session and take the certification examination shall file and submit the fee and application form at least thirty days before the scheduled training and certification session.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-16-03. Training course and certification requirements.

1. To be eligible for certification, a landfill or incinerator operator must have a minimum of one year experience in operating a municipal waste landfill or incinerator and attend a training session approved by the department for municipal waste facilities.
2. Training sessions will be held at least annually by the department to provide information on municipal waste landfill and incinerator operation and maintenance.
3. An applicant may submit documentation to demonstrate the equivalency of other training courses and certification successfully completed. The applicant may be eligible for certification without taking the training course or written examination if the department finds that the training and certification are substantially equivalent.
4. Applicants who fail an examination may reapply to the department.
5. Upon passage of the examination with a score of seventy percent or better, the department will issue a certificate to the applicant.
6. The certificates of personnel who terminate their employment at a landfill or incinerator facility will remain valid until expiration.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-16-04. Certificate revocation.

The department may suspend or revoke the certificate of an operator if it is found that the operator has practiced fraud or deception in obtaining the certificate or in the performance of operator duties. No certificate may be revoked or suspended except after a hearing conducted in accordance with North Dakota Century Code chapter 28-32. Upon certificate suspension or revocation, a new application for certification may be considered by the department if the conditions upon which the suspension or revocation was based have been corrected and evidence of this fact has been satisfactorily submitted to the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-15; S.L. 2017, ch. 199, § 23

33.1-20-16-05. Term and renewal of certificates.

Certificates expire each year on June thirtieth. The holder must reapply for renewal of an expired certificate and pay the renewal fee by July first. To be eligible for renewal, each certified operator must attend at least one departmentally approved training course every three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-08-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-08-03, 23.1-08-15; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-17
DISTRICT SOLID WASTE MANAGEMENT PLANS

Section

33.1-20-17-01 District Solid Waste Management Plans

33.1-20-17-01. District solid waste management plans.

1. The comprehensive solid waste management plan required by North Dakota Century Code chapter 23-29 for each solid waste management district must be developed and implemented for the following purposes:
 - a. Reduce the amount of solid waste generated.
 - b. Reuse materials.
 - c. Composting leaves and grass clippings.
 - d. Recycle everything possible.
 - e. Recover energy from waste.
 - f. Landfill the remaining wastes.
 - g. To coordinate solid waste management among district political subdivisions.
2. At a minimum, each district solid waste management plan must contain the following plan elements:
 - a. Documentation demonstrating compliance with North Dakota Century Code chapter 23-29 for formation of the district.
 - b. Solid waste management goals and objectives for ten-year plan.
 - c. Solid waste inventory (including special wastes, regulated infectious wastes and tires excluding regulated hazardous wastes), types, and quantities for each community and county; and a district summary.
 - d. Solid waste amounts and types transported to another district or state; and the amounts, types, and sources of waste received from another district or state.
 - e. Descriptions of existing solid waste collectors, service areas, routes, transfer stations, and types of service for all communities and counties served.
 - f. Descriptions of existing resource recovery, waste processing, and disposal methods and facilities, existing waste minimization practices, and local markets for recoverable waste materials; assessments of the capacities of these methods, practices, and markets; and identification of potential and new resource recovery efforts and markets.
 - g. Identification of current solid waste management problems, evaluate solutions, and identify a course of action to solve those problems.
 - h. Methods, procedures, or programs adequate to meet the following goals specified in North Dakota Century Code section 23-29-02:
 - (1) At least a ten percent reduction in volume of municipal waste deposited in landfills by 1995.

(2) At least a twenty percent reduction in volume of municipal waste deposited in landfills by 1997.

(3) At least a forty percent reduction in volume of municipal waste deposited in landfills by 2000.

i. Future solid waste management issues which may require adjustments to adopted solid waste management plans.

j. Implementation plan and schedule and a funding mechanism for the activities and strategies in the plan.

k. Existing local ordinances and rules and a strategy for the district's compliance with the plan.

l. Ensure and document public involvement and acceptance of the plan.

m. Resolution of adoption of the plan by the district.

n. Provision to review, amend, update, and submit solid waste management plans to the department every five years.

3. As required by North Dakota Century Code section 23-29-06, the districts must submit plans to the department for approval.

History: Effective January 1, 2019.

General Authority: NDCC 23-29-04; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23-29-04, 23-29-06; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-20-18
SOLID WASTE MANAGEMENT FUND

Section

33.1-20-18-01 Solid Waste Management Fund

33.1-20-18-01. Solid waste management fund.

1. Any political subdivision may apply for a loan or grant from the solid waste management fund.

2. The loan or grant application must be submitted to the department and include the following:

a. The political entity applying for the grant or loan.

b. The purpose of the grant or loan application:

(1) Market development.

(2) Waste reduction.

(3) Resource recovery.

(4) Recycling.

(5) Planning.

c. A description of how the proposed project is consistent with the district solid waste management plan.

d. A description of the work plan, implementation procedures, and schedule.

e. Identification of the amount of grant or loan requested and a cost analysis of the entire project.

f. Progress reporting schedule.

History: Effective January 1, 2019.

General Authority: NDCC 23-29-04, 23-29-07.5; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23-29-04, 23-29-07.5; S.L. 2017, ch. 199, § 23

CHAPTER 33.1-21-02
SERVICING OF SEPTIC OR HOLDING TANKS, PRIVIES, OR PORTABLE RESTROOMS

Section

- 33.1-21-02-01 Authority
- 33.1-21-02-02 Scope and Purpose
- 33.1-21-02-03 Definitions
- 33.1-21-02-04 Septic Pumper Classification
- 33.1-21-02-05 Permit Application and Renewal
- 33.1-21-02-06 Training Requirements
- 33.1-21-02-07 Vehicles and Equipment
- 33.1-21-02-08 Septage Disposal
- 33.1-21-02-09 Spill Reporting and Cleanup
- 33.1-21-02-10 Recordkeeping and Reporting Requirements

33.1-21-02-01. Authority.

The department of environmental quality has been authorized to provide and administer this chapter relating to septic system servicing under the provisions of North Dakota Century Code section 61-28-04.1.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-02. Scope and purpose.

This chapter establishes procedures governing the servicing of septic systems, including portable restrooms, holding tanks, and similar devices that receive domestic wastewater and establishes standards for the use and disposal of wastewater from those sources while protecting the general public and waters of the state from contamination by septage.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-03. Definitions.

The terms used throughout this chapter have the same meaning as in North Dakota Century Code chapter 61-28, except:

1. "Incorporation" means the mixing of septage with topsoil to a minimum depth of four inches within forty-eight hours.
2. "Injection" means the subsurface placement of septage to a depth of four inches to twelve inches.
3. "Land application" means the spraying or spreading of septage onto the land surface, the injection of septage below the land surface, or the incorporation of septage into the soil.
4. "Litter" means nonbiodegradable material, such as plastics or glass.
5. "Nonpublic contact site" means land not frequently visited or used by the public. Examples include agricultural land, forests, and reclamation sites.

6. "Portable restroom" means a self-contained portable enclosure containing a holding tank designed to directly receive human excrement.
7. "Privy" means a self-enclosure over a watertight structure located in a pit designed to directly receive human excrement.
8. "Public contact site" means land with a high potential for contact by the public. Examples include public parks, ballfields, golf courses, and cemeteries.
9. "Rural single-family residence" means a dwelling occupied by a single family or household situated on land greater than five acres and used primarily for agricultural or horticultural purpose. Examples include growing and harvesting crops and raising livestock.
10. "Snow-covered ground" means ground upon which the snow is at a depth greater than eight inches.
11. "Spill" means to cause or allow to fall, flow, or run out so as to be lost or wasted.
12. "Wastewater treatment facility" means a treatment system permitted by the department and designed to remove biological or chemical waste products from water.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-04. Septic pumper classification.

1. Class I classification is defined as a septic system servicer that operates three or more permitted servicing vehicles or at least one portable toilet servicing vehicle.
2. Class II classification is defined as all septic system servicers not classified as class I.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-05. Permit application and renewal.

1. Permit required. A person wishing to engage in the business of servicing septic systems, portable restrooms, holding tanks, and similar devices that receive domestic wastewater shall submit an application for a permit to the department on a form provided by the department.
2. Applicant information. All applicants shall provide the following information to the department:
 - a. The full name and physical business address of the applicant;
 - b. The mailing address of the applicant, if different from the physical address;
 - c. Septic system servicers that have held a permit in North Dakota within the past five years must submit records in accordance with subsection 4;
 - d. A copy of a North Dakota state training certificate or other acceptable training course as preapproved by the department;
 - e. A list of all counties in which business is conducted;
 - f. A list of all disposal methods and land application sites, not exempted under North Dakota Century Code section 61-28-04.1, that the applicant proposes to use, if applicable; and

g. The signature of the landowner, facility operator, or designated representative of the owner or operator, on a designated form granting permission to use the site for land application, disposal, or treatment.

3. Land application. Class I septic system servicers shall obtain the department's approval of all land application sites under subsection 2 of section 33.1-21-02-08. In addition, class I applicants shall include the following information on all land application sites--even sites that have already been approved--that they propose to use for the permit period:

a. The name of the property owner;

b. The street address or directions to the site;

c. The location of the property by township, range, section, and quarter section or the latitude and longitude of the property in degrees decimal;

d. The type of vegetation on the land application site (fallow land, pasture, range, forest, or other) and the nitrogen requirements for the vegetation;

e. The estimated depth in feet to seasonally high ground water at the site and the basis for the estimates;

f. A statement of the specific soil type (clay, gravel, sandy loam, or other) at each site;

g. The approximate slope of the land;

h. The acreage available for land application;

i. A proposed summer and winter disposal operation and maintenance plan for each land application site, including provisions for access control and the types and sources of wastes to be managed on the site; and

j. Indicate land application sites to be utilized between November fifteenth and April first.

4. Permit renewals. A permit shall expire on December thirty-first of each year. A permit holder shall have a grace period to submit a renewal application with the appropriate application fee to the department by March first of the following year. After March first, a new permit application with the appropriate application fee shall be submitted to the department. Until the new permit application is approved by the department, a septic system servicer is not permitted to operate.

a. An applicant for permit renewal must submit the same information required of a new permit applicant.

b. In addition, septic system servicers shall submit an annual report of disposal activities to the department when applying for a permit renewal. The annual report must include:

(1) A list of the disposal sites used, including all multiple-use land application sites and wastewater treatment facilities;

(2) The type of treatment done to address pathogen and vector control requirements;

(3) The total volume of gallons handled; and

(4) A record of all spills.

5. Permit transfers. Septic system servicers must notify the department upon sale or transfer of business within ninety days. Upon notification and the new owner's written agreement to

comply with the permit's terms, the new owner becomes the permitholder for the remainder of the calendar year and shall submit a renewal application in accordance with subsection 4.

6. Fees. An applicant shall pay the permit or renewal fee to the department at the time the permit or renewal application is submitted. A permit may not be issued or renewed prior to payment of the appropriate fee as follows:

a. A new permit applicant shall pay an application fee of one hundred dollars and a fifty dollar fee per servicing vehicle.

b. A permitholder shall pay a renewal fee of fifty dollars per servicing vehicle.

c. A new servicing unit may be added to an existing permit for a fee of fifty dollars.

d. A permit replacement fee of twenty-five dollars shall apply. Examples include lost or damaged plates.

e. An applicant who holds a valid plumber's license under North Dakota Century Code chapter 43-18 and operates no more than one septic servicing unit is exempt from these fees.

7. Application review. The department shall review each submitted application for a new or renewed permit. If additional information is required, the department shall notify the applicant within thirty days after the department receives the application and processing shall be postponed until the application is complete. If the department does not receive the requested information within ninety days of the request, a new application may be required. The department shall review the completed application and either issue, deny, or renew a permit within thirty days after the completed application is received.

History: Effective January 1, 2019.

Law Implemented: NDCC 61-28-04.1

33.1-21-02-06. Training requirements.

1. Septic system servicers and their employees engaged in the servicing of septic systems are required to pass an annual examination provided by the department.

2. Septic system servicers are required to attend a training course provided by the department once every five years.
