3. Other examinations or training courses taken may be substituted for the requirements in subsections 1 and 2 with the department's prior approval.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-07. Vehicles and equipment.

1. Septic system servicers shall allow the department to inspect the equipment used in servicing at any reasonable time and place designated by the department.

2. Vehicles used in servicing shall meet the following identification requirements:

a. A valid septic pumper plate, as provided by the department, shall be prominently displayed on the rear of the servicing unit.

b. The septic system servicer's name shall be displayed on the side of the vehicle in writing no less than three inches tall with one-half-inch minimum thickness and in a color distinct from its background.

3. All servicing vehicles shall conform to the following:

a. Be maintained in operational condition.

b. Expressly used for the hauling or servicing of septage or municipal wastewater treatment sludge and for no other purpose. However, the use of the vehicle for fire protection service, oil recovery, and industrial wastes not regulated under this chapter is permissible if the tank is flushed or cleaned as necessary prior to and after use.

c. Stored in a manner which will not cause a public nuisance.

4. All approvable holding tanks or containers shall be attached to the vehicle by welding or bolts on a truck chassis.

a. Holding tanks shall be constructed of suitable metal or materials approved by the department.

b. Each tank shall be strong enough for all conditions of operation, leakproof, contain inertia baffles, and be designed to be kept tightly closed to prevent spillage or escape of odors while in transit or storage.

c. Discharge valves on tanks shall be watertight, capped when not in use, and constructed and located so as to permit unobstructed discharge.

5. Pumps shall be adequate for the required service. The installation shall be designed to prevent backflow or leakage. Connections shall be provided with caps or seals.

6. Hoses and piping, when not in use, shall be stored in a manner to prevent leakage or dripping of septage in transit.

7. All servicing equipment used for land application of septage shall have a splash plate or some other department-approved method or device to facilitate uniform septage application in land spreading.

8. Facilities used for washing the vehicles, tanks, implements, and tools shall be designed to prevent a public nuisance and shall comply with North Dakota Century Code chapter 61-28.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-08. Septage disposal.

1. Septage must be disposed of at a department-permitted wastewater treatment facility, or it may be land-applied. All septic system servicers shall submit disposal site information to the department with their permit applications under subsection 2 of section 33.1-21-02-05.

2. Class I septic system servicers shall obtain the department's written preapproval for land application sites. Approval requests may be submitted with a permit application or during the term of the permit. Approval requests not included in the permit application shall include the information on the proposed land application site listed in subsection 3 of section 33.1-21-02-05. If the approval request contains all the required information, the land application sites may be given conditional approval within thirty days of submission. Full approval is contingent on a site assessment conducted by the department and will be granted

automatically unless otherwise notified by the department. The department may not approve sites that may cause harm to the environment or threaten the public. Once given full approval by the department, land application sites shall retain approval for a period of not less than five years, unless additional future information indicates a change in the environmental status of the property. Examples for cause of termination of approval include excessive runoff, odor complaints, illegal disposal, etc.

Class II septic system servicers shall follow all general land application requirements as outlined in subsections 4 through 8.

3. A septic system servicer land applying septage from a rural single-family residence on property owned or leased by the owner or lessee of the rural single-family residence is exempt from obtaining the department's written approval for the land application site. General land application site requirements still apply and must be followed.

4. General land application site requirements shall be followed by all septic pumper classifications, including rural single-family exemptions, and are as follows:

a. Application of septage is not allowed on a designated one hundred-year floodplain as defined by federal emergency management agency flood maps nor below the ordinary high water mark.

b. Application of septage is not allowed on areas of a site ponded with water or septage.

c. Septage cannot be applied when soils are saturated.

d. Septage cannot be applied by spraying from public roads or across road right of ways.

e. All septage that is land-applied must be uniformly distributed over the area by use of a distribution device, such as a splash plate or spreader.

f. Measures must be taken to ensure that the ponding or septage and runoff does not occur.

g. Slope restrictions are as follows:

(1) Surface application, injection, or immediate incorporation of septage is allowed on slopes six percent and less.

(2) Injection of septage is required on slopes greater than six percent up to twelve percent.

(3) Land application of septage is not allowed on slopes greater than twelve percent.

h. Separation distances are as follows:

(1) Private drinking water wells must have two hundred feet of separation from land application of septage.

(2) Public drinking water supply wells must have one thousand feet of separation from land application of septage.

(3) Irrigation wells must have fifty feet of separation from land application of septage.

(4) Residences must have one thousand feet of separation from land application of septage, unless permission is obtained by the owner and resident to reduce this distance.

(5) Surface water features must have two hundred feet of separation distance from land application of septage.

(6) Public contact sites, including roads, must have a separation distance of two hundred feet from surface-applied and incorporated septage. A separation distance of fifty feet is required for injection of septage.

i. Public contact sites shall be posted with no trespassing signs for thirty days after application.

j. Septage shall be applied at a rate of less than twenty thousand gallons per acre per day and less than one hundred pounds of nitrogen per acre per year. The department may waive these rates upon a site-by-site review basis.

k. Land application sites shall be maintained free of litter.

l. The discharge from the servicing units shall be controlled so that pooling or ponding of septage during land application does not occur.

5. Pathogen reduction measures shall be taken by all classes in accordance with one of the following alternatives:

a. Alternative 1. Septic system servicers shall pump domestic septage from a septic tank or holding tank and land apply it without treatment. Crop, grazing, and site restrictions apply.

(1) Crop restrictions:

(a) Food crops with harvested parts that touch the septage and soil mixture and are totally aboveground shall not be harvested for fourteen months after application of domestic septage.

(b) Food crops with harvested parts below the surface of the land shall not be harvested for thirty-eight months after application of domestic septage.

(c) Animal feed, fiber, and those food crops that do not touch the soil surface shall not be harvested for thirty days after the application of the domestic septage.

(d) Turf grown on land where domestic septage is applied shall not be harvested for one year after application of the domestic septage when the harvested turf is placed on either a lawn or land with a high potential for public exposure, unless otherwise specified by the permitting authority.

(2) Grazing restrictions. Animals shall not be allowed to graze on the land for thirty days after application of domestic septage.

(3) Site restrictions. Public access to land with a low potential for public exposure shall be restricted for thirty days after application of domestic septage. Examples of restricted access include remoteness of site, posting with no trespassing signs, or simple fencing.

b. Alternative 2. Septic system servicers shall pump domestic septage from a septic tank or holding tank that has had its pH raised to twelve or higher by the addition of alkaline material and, without addition of more alkaline material, the septage must remain at a pH level of twelve or higher for at least thirty minutes prior to being land-applied. Crop restrictions apply.

(1) Crop restrictions:

- (a) Food crops with harvested parts that touch the septage and soil mixture and are totally aboveground shall not be harvested for fourteen months after application of domestic septage.
- (b) Food crops with harvested parts below the surface of the land shall not be harvested for twenty months after application of domestic septage when the domestic septage remains on the land surface for four months or longer prior to incorporation into the soil.
- (c) Food crops with harvested parts below the surface of the land shall not be harvested for thirty-eight months after application of domestic septage when the domestic septage remains on the land surface for less than four months prior to incorporation into the soil.
- (d) Animal feed, fiber, and those food crops that do not touch the soil surface shall not be harvested for thirty days after application of the domestic septage.
- (e) Turf grown on land where domestic septage is applied shall not be harvested for one year after application of the domestic septage when the harvested turf is placed on either a lawn or land with a high potential for public exposure, unless otherwise specified by the permitting authority.

c. Other equivalent alternatives may be acceptable with prior department approval.

6. Vector attraction reduction measures shall be taken by all classes in accordance with one of the following alternatives:

- a. Alternative 1. Septic system servicers shall inject domestic septage below the surface of the land, and no significant amount of the septage shall be present on the land surface within one hour after the septage is injected.
- b. Alternative 2. Septic system servicers shall incorporate domestic septage applied to the land surface into the soil surface plow layer within forty-eight hours after application.
- c. Alternative 3. Septic system servicers shall raise the pH of domestic septage to twelve or higher by addition of alkaline material and, without addition of more alkaline material, the septage must remain at a pH level of twelve or higher for thirty minutes prior to being land-applied.

d. Other equivalent alternatives may be acceptable with prior department approval.

7. Snow-covered ground application is acceptable if there are less than eight inches of snow and less than a six percent slope onsite and according to general land application requirements of subsection 4 of section 33.1-21-02-08.

8. Storage of septage greater than twenty-five thousand gallons requires department approval. All storage sites shall be designed and maintained to prevent a public nuisance and shall be in compliance with North Dakota Century Code chapter 61-28.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-09. Spill reporting and cleanup.

1. Septic system servicers and their employees shall report all spills to the department as soon as possible, but within twenty-four hours. The septic system servicers shall keep a copy of the spill report for five years. The report shall include:
 - a. Spill location;
 - b. Spill volume;
 - c. Type of material spilled; and
 - d. Steps taken to clean up the spill.

2. Septage shall be transported in a manner where it will not leak or spill onto public roads or into areas where it could enter surface or ground water. A written procedure for spill and accident cleanup must be developed by each permitholder, and a copy of the procedure must be kept in each permitted septic vehicle. When a spill occurs, a septic system servicer and any responsible employees shall:
 - a. Contain the spill to minimize the impact to the environment and general public;
 - b. Notify the department of all spills in accordance with notification requirements of subsection 4 of section 33.1-16-02.1-11;
 - c. Clean the spill area to render it harmless to humans and the environment; and
 - d. Properly dispose of spilled material.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-21-02-10. Recordkeeping and reporting requirements.

1. Septic system servicers must keep records of all their servicing and disposal activities. Each septic system servicer shall maintain records for not less than five years. Records must be available to the department for review upon request.

2. The records must contain:
 - a. The origin of the septage;
 - b. The location of the site where the septage is applied or taken;
 - c. The number of acres to which septage is applied at each site;
 - d. The date and time of each septage application;
 - e. Crop or vegetation on each site during the year;
 - f. The gallons of septage which are applied to the site during the specified three hundred sixty-five-day period;
 - g. A description of how the pathogen requirements are met for each land application of septage; and

h. A description of how the vector attraction reduction requirements are met for each land application of septage.

History: Effective January 1, 2019.

General Authority: NDCC 61-28-04, 61-28-04.1; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 61-28-04.1

33.1-24-01-01. Purpose.

It is the purpose of this article to provide for the comprehensive regulation of hazardous waste from "cradle-to-grave" in order to protect public health, safety and welfare, and to enhance the environment for the people of North Dakota.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-02. Scope.

This article is applicable to all hazardous waste generators; transporters; and owners or operators of treatment, storage, or disposal facilities.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-03. Authority.

The department has been authorized to promulgate and administer this article under the provisions of North Dakota Century Code chapter 23.1-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-04. Definitions.

As used in this article the following words have the meaning ascribed to them unless otherwise made inappropriate by use and context:

1. "Aboveground tank" means a device meeting the definition of "tank" in this section and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected.
2. "Act" means North Dakota Century Code chapter 23.1-04.
3. "Active life" of a facility means the period from the initial receipt of hazardous waste at the facility until the department receives certification of final closure.
4. "Active portion" means that portion of a facility where treatment, storage, or disposal operations are being or have been conducted after the effective date of the Act and which is not a closed portion. (See also "closed portion" and "inactive portion".)
5. "Administrator" or "regional administrator" means the administrator or regional administrator of the environmental protection agency, or that officer's designee.
6. "Ancillary equipment" means any device including, but not limited to, such devices as piping, fittings, flanges, valves, and pumps, that is used to distribute, meter, or control the flow of hazardous waste from its point of generation to storage or treatment tank or tanks, between hazardous waste storage and treatment tanks to a point of disposal onsite, or to a point of shipment for disposal offsite.
7. "Aquifer" means a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of ground water to wells or springs.
8. "Authorized representative" means the person responsible for the overall operation of a facility or an operational unit (for example, part of a facility), for example, the plant manager, superintendent, or person of equivalent responsibility.
9. "Battery" means a device consisting of one or more electrically connected electrochemical cells which is designed to receive, store, and deliver electric energy. An electrochemical cell is a system consisting of an anode, cathode, and an electrolyte, plus such connections (electrical and mechanical) as may be needed to allow the cell to deliver or receive electrical

energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed.

10. "Boiler" means an enclosed device using controlled flame combustion and:

a. Boilers must have the following characteristics:

(1) The unit must have physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases;

(2) The unit's combustion chamber and primary energy recovery section or sections must be of integral design. To be of integral design, the combustion chamber and the primary energy recovery section or sections (such as waterwalls and superheaters) must be physically formed into one manufactured or assembled unit. A unit in which the combustion chamber and the primary energy recovery section or sections are joined only by ducts or connections carrying flue gas is not integrally designed; however, secondary energy recovery equipment (such as economizers or air preheaters) need not be physically formed into the same unit as the combustion chamber and the primary energy recovery section. The following units are not precluded from being boilers solely because they are not of integral design--process heaters (units that transfer energy directly to processed steam) and fluidized bed combustion units;

(3) While in operation, the unit must maintain a thermal energy recovery efficiency of at least sixty percent, calculated in terms of the recovered energy compared with the thermal value of the fuel; and

(4) The unit must export and utilize at least seventy-five percent of the recovered energy, calculated on an annual basis. In this calculation, no credit should be given for recovered heat used internally in the same unit. (Examples of internal use are the preheating of fuel or combustion air, and the driving of induced or forced draft fans or feedwater pumps); or

b. The unit is one which the department has determined, on a case-by-case basis, to be a boiler, after considering the standards of section 33.1-24-01-11.

11. "Carbon dioxide stream" means carbon dioxide that has been captured from an emission source (for example, power plant), plus incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process.

12. "Carbon regeneration unit" means any enclosed thermal treatment device used to regenerate spent activated carbon.

13. "Cathode ray tube" means a vacuum tube, composed primarily of glass, which is the visual or video display component of an electronic device. A used, intact cathode ray tube means a cathode ray tube whose vacuum has not been released. A used, broken cathode ray tube means glass removed from its housing or casing whose vacuum has been released.

14. "Cathode ray tube collector" means a person who receives used, intact cathode ray tubes for recycling, repair, resale, or donation.

15. "Cathode ray tube exporter" means any person in the United States who initiates a transaction to send used cathode ray tubes outside the United States or its territories for recycling or reuse, or any intermediary in the United States arranging for such export.

16. "Cathode ray tube glass manufacturer" means an operation or part of an operation that uses a furnace to manufacture cathode ray tube glass.

17. "Cathode ray tube processing" means conducting all of the following activities:

a. Receiving broken or intact cathode ray tubes;

b. Intentionally breaking intact cathode ray tubes or further breaking or separating broken cathode ray tubes; and

c. Sorting or otherwise managing glass removed from cathode ray tube monitors.

18. "Certification" means a statement of professional opinion based on knowledge and belief.

19. "Closed portion" means that portion of a facility which an owner or operator has closed in accordance with the approved facility closure plan and all applicable closure requirements. (See also "active portion" and "inactive portion".)

20. "Component" means:

a. Either the tank or ancillary equipment of a tank system; or

b. Any constituent part of a unit or any group of constituent parts of a unit which are assembled to perform a specific function (for example, a pump seal, pump, kiln liner, or kiln thermocouple).

21. "Conditionally exempt small quantity generator" means a generator who generates no more than one hundred kilograms of hazardous waste in a calendar month.

22. "Confined aquifer" means an aquifer bounded above and below by impermeable beds or by beds of distinctly lower permeability than that of the aquifer itself; an aquifer containing confined ground water.

23. "Constituent" or "hazardous waste constituent" means a constituent that caused the department to list the hazardous waste in chapter 33.1-24-02, or a constituent listed in Table 1 of section 33.1-24-02-14.

24. "Contained" means held in a unit (including a land-based unit as defined in this section) that meets the following criteria:

a. The unit is in good condition, with no leaks or other continuing or intermittent unpermitted releases of the hazardous secondary materials to the environment, and is designed, as appropriate for the hazardous secondary materials, to prevent releases of hazardous secondary materials to the environment. Unpermitted releases are releases that are not covered by a permit (such as a permit to discharge to water or air) and may include releases through surface transport by precipitation runoff, releases to soil and groundwater, wind-blown dust, fugitive air emissions, and catastrophic unit failures;

b. The unit is properly labeled or otherwise has a system (such as a log) to immediately identify the hazardous secondary materials in the unit; and

c. The unit holds hazardous secondary materials that are compatible with other hazardous secondary materials placed in the unit and is compatible with the materials used to construct the unit and addresses any potential risks of fires or explosions.

d. Hazardous secondary materials in units that meet the applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524,

33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or subsection 5 of section 33.1-24-06-16.

25. "Container" means any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.

26. "Containment building" means a hazardous waste management unit that is used to store or treat hazardous waste under the provisions of sections 33.1-24-05-475 through 33.1-24-05-479 and subpart DD of 40 CFR 265.

27. "Contingency plan" means a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

28. "Corrosion expert" means a person who, by reason of the person's knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified as being qualified by the national association of corrosion engineers or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control on buried or submerged metal piping systems and metal tanks.

29. "Department" means the department of environmental quality.

30. a. "Designated facility" means a hazardous waste treatment, storage, or disposal facility that:

(1) Has received a permit (or interim status) in accordance with the requirements of chapters 33.1-24-06 and 33.1-24-07;

(2) Has received a permit (or interim status) from a state authorized in accordance with 40 CFR part 271; or

(3) Is regulated under subdivision b of subsection 3 of section 33.1-24-02-06 or sections 33.1-24-05-230 through 33.1-24-05-234; and

(4) Has been designated on the manifest by the generator pursuant to section 33.1-24-03-04.

b. Designated facility also means a generator site designated on the manifest to receive the generator's waste as a return shipment from a facility that has rejected the waste in accordance with subsection 6 of section 33.1-24-05-39 or the applicable requirements of subsection 5 of section 33.1-24-06-16.

c. If a waste is destined to a facility in an authorized state which has not yet obtained authorization to regulate that particular waste as hazardous, then the designated facility must be a facility allowed by the receiving state to accept such waste.

31. "Destination facility" means a facility that treats, disposes of, or recycles a particular category of universal waste, except those management activities described in subsections 1 and 3 of section 33.1-24-05-713. A facility at which a particular category of universal waste is only accumulated is not a destination facility for the purposes of managing that category of universal waste.

32. "Dike" means an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials.

33. "Dioxins and furans" means tetra-chlorinated, penta-chlorinated, hexa-chlorinated, hepta-chlorinated, and octa-chlorinated dibenzo dioxins and furans.
34. "Discharge" or "hazardous waste discharge" means the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.
35. "Disposal" means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid or hazardous waste into or on any land or water including ground water.
36. "Disposal facility" means a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water, and at which wastes will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed.
37. "Drip pad" is an engineered structure consisting of a curbed, free-draining base, constructed of nonearthen materials and designed to convey preservative kickback or drippage from treated wood, precipitation, and surface water run-on to an associated collection system at wood preserving plants.
38. "Electronic manifest" (or e-manifest) means the electronic format of the hazardous waste manifest which is obtained from the environmental protection agency's national e-manifest system and transmitted electronically to the system, and which is the legal equivalent of environmental protection agency forms 8700-22 (manifest) and 8700-22A (continuation sheet).
39. "Electronic manifest system (or e-manifest system)" means the environmental protection agency's national information technology system through which the electronic manifest may be obtained, completed, transmitted, and distributed to users of the electronic manifest and to regulatory agencies.
40. "Elementary neutralization unit" means a device which:
- a. Is used for neutralizing wastes that are hazardous only because they exhibit the corrosivity characteristic defined in section 33.1-24-02-12, or are listed in chapter 33.1-24-02 only for this reason; and
 - b. Meets the definition of tank, tank systems, container, transport vehicle, or vessel.
41. "Equivalent method" means any testing or analytical method approved by the department under sections 33.1-24-01-06 and 33.1-24-01-07.
42. "Existing hazardous waste management facility" or "existing facility" means a facility which was in operation, or for which construction commenced on or before November 19, 1980. A facility has commenced construction if:
- a. The owner or operator has obtained all necessary federal, state, and local approvals or permits necessary to begin physical construction; and
 - b. Either of the following:
 - (1) A continuous onsite, physical construction program has begun; or
 - (2) The owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction of the facility to be completed within a reasonable time.

43. "Existing portion" means that land surface area of an existing waste management unit, included in part A of the permit application, as originally filed, on which wastes have been placed prior to the issuance of a permit.

44. "Existing tank system" or "existing component" means a tank system or component that is used for the storage or treatment of hazardous waste and that is in operation, or for which installation has commenced on or prior to July 14, 1986. Installation will be considered to have commenced if the owner or operator has obtained all federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either (1) a continuous onsite physical construction or installation program has begun, or (2) the owner or operator has entered into contractual obligations, which cannot be canceled or modified without substantial loss, for physical construction of the site or installation of the tank system to be completed within a reasonable time.

45. "Explosives or munitions emergency" means a situation involving the suspected or detected presence of unexploded ordnance, damaged or deteriorated explosives or munitions, an improvised explosive device, other potentially explosive material or device, or other potentially harmful military chemical munitions or device, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. Such situations may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat.

46. "Explosives or munitions emergency response" means all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render-safe procedures, treatment or destruction of the explosives or munitions, or transporting, or any combination, those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at hazardous waste facilities.

47. "Explosives or munitions emergency response specialist" means an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or munitions emergency response specialists include United States department of defense emergency explosive ordnance disposal, technical escort unit, and department of defense-certified civilian or contractor personnel and other federal, state, or local government, or civilian personnel similarly trained in explosives or munitions emergency responses.

48. "Facility" means:

a. All contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste, or for managing hazardous secondary materials prior to reclamation. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combinations of them).

b. For the purpose of implementing corrective action under section 33.1-24-05-58 or 33.1-24-05-1031 all contiguous property under the control of the owner or operator seeking a permit under North Dakota Century Code chapter 23.1-04. This definition also applies to facilities implementing corrective action under Resource Conservation and Recovery Act section 3008(h).

c. Notwithstanding subdivision b, a remediation waste management site is not a facility that is subject to section 33.1-24-05-58, but is subject to corrective action requirements if the site is located within such a facility.

49. "Facility mailing list" means the mailing list for a facility developed and maintained by the department in accordance to the following:

a. Including those persons who request in writing to be added to the facility mailing list;

b. Soliciting persons for "area lists" from participants in past permit proceedings in that area; and

c. Notifying the public of the opportunity to be put on the mailing list through periodic publication in the public press and in such publications as regional and state-funded newsletters, environmental bulletins, or state law journals. (The department may update the mailing list from time to time by requesting written indication of continued interest from those listed. The department may delete from the list the name of any person who fails to respond to such a request.)

50. "Federal agency" means any department, agency, or other instrumentality of the federal government, any independent agency or establishment of the federal government including any government corporation, and the government printing office.

51. "Federal, state, and local approvals or permits necessary to begin physical construction" means permits and approvals required under federal, state, or local hazardous waste control statutes, regulations, or ordinances.

52. "Final closure" means the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities under chapter 33.1-24-05 are no longer conducted at the facility unless subject to the provisions in section 33.1-24-03-12.

53. "Food-chain crops" means tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans.

54. "Free liquids" means liquids which readily separate from the solid portion of a waste under ambient temperature and pressure.

55. "Freeboard" means the vertical distance between the top of a tank or surface impoundment dike and the surface of the waste contained therein.

56. "Functionally equivalent component" means a component which performs the same function or measurement and which meets or exceeds the performance specification of another component.

57. "Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in chapter 33.1-24-02 or whose act first causes a hazardous waste to become subject to regulation.

58. "Ground water" means water below the land surface in a zone of saturation.

59. "Hazardous secondary material" means a secondary material (for example, spent material, byproduct, or sludge) that, when discarded, would be identified as hazardous waste under chapter 33.1-24-02.

60. "Hazardous secondary material generator" means any person whose act or process produces hazardous secondary materials at the generating facility. For purposes of this subsection,

"generating facility" means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator.

61. "Hazardous waste" means a hazardous waste as defined in chapter 33.1-24-02.

62. "Hazardous waste constituent". See "constituent".

63. "Hazardous waste management unit" is a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples of hazardous waste management units include a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system, and a container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed.

64. "Hazardous waste number" means the number assigned to each hazardous waste identified in chapter 33.1-24-02.

65. "Identification number" means the number assigned by the environmental protection agency and the department to each generator; transporter; and treatment, storage, or disposal facility.

66. "In operation" refers to a facility which is treating, storing, or disposing of hazardous waste.

67. "Inactive portion" means that portion of a facility which is not operated after the effective date of this chapter. (See also "active portion" and "closed portion".)

68. "Incinerator" means any enclosed device that:

a. Uses controlled flame combustion and neither meets the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor is listed as an industrial furnace; or

b. Meets the definition of infrared incinerator or plasma arc incinerator.

69. "Incompatible waste" means a hazardous waste which is unsuitable for:

a. Placement in a particular device or facility because it may cause corrosion or decay of containment materials (for example, container inner liners or tank walls); or

b. Commingling with another waste or material under uncontrolled conditions because the commingling might produce heat or pressure, fire or explosion, violent reaction, toxic dust, mists, fumes, gases, or flammable fumes or gases.

(See appendix III of chapter 33.1-24-05 for examples.)

70. "Individual generation site" means the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste, but is considered a single or individual generation site if the site or property is contiguous.

71. "Industrial furnace" means any of the following enclosed devices that are integral components of manufacturing processes and that use thermal treatment to accomplish recovery of material for energy:

a. Cement kilns;

b. Lime kilns;

c. Aggregate kilns;

- d. Phosphate kilns;
 - e. Coke ovens;
 - f. Blast furnaces;
 - g. Smelting, melting, and refining furnaces (including pyrometallurgical devices, such as cupolas, reverberator furnaces, sintering machine, roasters, and foundry furnaces);
 - h. Titanium dioxide chloride process oxidation reactors;
 - i. Methane reforming furnaces;
 - j. Pulping liquor recovery furnaces;
 - k. Combustion devices used in the recovery of sulfur values from spent sulfuric acid;
 - l. Halogen acid furnaces for the production of acid from halogenated hazardous waste generated by chemical production facilities where the furnace is located on the site of a chemical production facility, the acid product has a halogen acid content of at least three percent, the acid product is used in a manufacturing process, and, except for hazardous waste burned as fuel, hazardous waste fed to the furnace has a minimum halogen content of twenty percent as generated; or
 - m. Such other devices as the department may, after notice and comment, add to this list on the basis of one or more of the following factors:
 - (1) The design and use of the device primarily to accomplish recovery of material products;
 - (2) The use of the device to burn or reduce raw materials to make a material product;
 - (3) The use of a device to burn or reduce secondary materials as effective substitutes for raw materials, in processes using raw materials as principal feed stock;
 - (4) The use of a device to burn or reduce secondary materials as ingredients in an industrial process to make a material product;
 - (5) The use of a device in common industrial practice to produce a material product; and
 - (6) Other factors, as appropriate.
72. "Infrared incinerator" means any enclosed device that uses electric powered resistance heaters as a source of radiant heat followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.
73. "Inground tank" means a device meeting the definition of a "tank" in this section, whereby a portion of the tank wall is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground.
74. "Injection well" means a well into which fluids are injected. (See also the definition of "underground injection" in this section.)
75. "Inner liner" means a continuous layer of material placed inside a tank or container which protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste.

76. "Installation inspector" means a person who, by reason of knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise the installation of tank systems.
77. "Intermediate facility" means any facility that stores hazardous secondary materials for more than ten days, other than a hazardous secondary material generator or reclaimer of such material.
78. "International shipment" means the transportation of hazardous waste into or out of the jurisdiction of the United States.
79. "Lamp", also referred to as "universal waste lamp", is defined as the bulb or tube portion of an electric lighting device. A lamp is specifically designed to produce radiant energy, most often in the ultraviolet, visible, and infrared regions of the electromagnetic spectrum. Examples of common universal waste lamps include fluorescent, high-intensity discharge, neon, mercury vapor, high-pressure sodium, and metal halide lamps.
80. "Land treatment facility" means a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure.
81. "Land-based unit" means an area where hazardous secondary materials are placed in or on the land before recycling. This definition does not include land-based production units.
82. "Landfill" means a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a pile, a land treatment facility, a surface impoundment, an underground injection well, a salt dome formation, a salt bed formation, an underground mine, a cave, or a corrective action management unit.
83. "Landfill cell" means a discrete volume of a hazardous waste landfill which uses a liner to provide isolation of wastes from adjacent cells or wastes. Examples of landfill cells are trenches and pits.
84. "Large quantity generator" means a generator who generates one thousand kilograms or more of hazardous waste in a calendar month.
85. "Leachate" means any liquid, including any suspended components in the liquid, that have percolated through or drained from hazardous waste.
86. "Leak detection system" means a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary containment structure. Such a system must employ operational controls (for example, daily visual inspections for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure.
87. "Liner" means a continuous layer of natural or manmade materials beneath or on the sides of a surface impoundment, landfill, or landfill cell, which restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.
88. "Major facility" means any facility classified as such by the environmental protection agency in conjunction with the department.

89. "Management" or "hazardous waste management" means the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste.
90. "Manifest" means the shipping document environmental protection agency form 8700-22 (including, if necessary, environmental protection agency form 8700-22A), or the electronic manifest, originated and signed in accordance with the applicable requirements of chapters 33.1-24-03 and 33.1-24-04, sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, and subsection 5 of section 33.1-24-06-16.
91. "Manifest tracking number" means the alphanumeric identification number (for example, a unique three-letter suffix preceded by nine numerical digits), which is preprinted in item 4 of the manifest by a registered source.
92. "Mercury-containing equipment" means a device or part of a device (including thermostats, but excluding batteries and lamps) that contains elemental mercury integral to its function.
93. "Military munitions" means all ammunition products and components produced or used by or for the United States department of defense or the United States armed services for national defense and security, including military munitions under the control of the department of defense, the United States coast guard, the United States department of energy, and national guard personnel. The term military munitions includes confined gaseous, liquid, and solid propellants; explosives; pyrotechnics; chemical and riot control agents; smokes; and incendiaries used by department of defense components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components thereof. Military munitions do not include wholly inert items; improvised explosive devices; and nuclear weapons, nuclear devices, and nuclear components thereof. However, the term does include non-nuclear components of nuclear devices, managed under the department of energy's nuclear weapons program after all required sanitization operations under the Atomic Energy Act of 1954, as amended, have been completed.
94. "Mining overburden returned to the minesite" means any material overlying an economic mineral deposit which is removed to gain access to that deposit and is then used for reclamation of a surface mine.
95. "Miscellaneous unit" means a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container; tank; surface impoundment; pile; land treatment unit; landfill; incinerator; boiler; industrial furnace; underground injection well with appropriate technical standards under 40 CFR part 146; containment building; corrective action management unit; unit eligible for research, development, and demonstration permit under section 33.1-24-06-20; or staging pile.
96. "Movement" means that hazardous waste transported to a facility in an individual vehicle.
97. "Municipality" means a city, county, district, association, or other public body created by or pursuant to state law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes.
98. "New hazardous waste management facility" or "new facility" means a facility which began operation, or for which construction commenced, after November 19, 1980. (See also "existing hazardous waste management facility".)

99. "New tank system" or "new tank components" means a tank system or component that will be used for the storage or treatment of hazardous waste and for which installation has commenced after July 14, 1986, except; however, for purposes of subdivision b of subsection 7 of section 33.1-24-05-106, a new tank system is one for which construction commences after July 14, 1986. (See also "existing tank system".)
100. "No free liquids" as used in subdivision w of subsection 1 and subdivision p of subsection 2 of section 33.1-24-02-04, means that solvent-contaminated wipes may not contain free liquids as determined by method 9095B (paint filter liquids test), included in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (environmental protection publication SW-846), as incorporated by reference in section 33.1-24-01-05, and that there is no free liquid in the container holding the wipes.
101. "Onground tank" means a device meeting the definition of "tank" in this section and that is situated in such a way the bottom of the tank is on the same level as the adjacent surrounding surface so the external tank bottom cannot be visually inspected.
102. "Onsite" means the same or geographically contiguous property which may be divided by public or private right of way, provided the entrance and exit between the properties is at a crossroads intersection, and access is by crossing, as opposed to going along, the right of way. Noncontiguous property owned by the same person, but connected by a right of way which that person controls and to which the public does not have access is also considered onsite property.
103. "Open burning" means the combustion of any material without the following characteristics:
- a. Control of combustion air to maintain adequate temperature for efficient combustion;
 - b. Containment of the combustion reactions in an enclosed device to provide sufficient residence time and mixing for complete combustion; and
 - c. Control of emission of the gaseous combustion products. (See also "incineration" and "thermal treatment".)
104. "Operator" means the person responsible for the overall operation of a facility.
105. "Owner" means the person who owns a facility or part of a facility.
106. "Partial closure" means the closure of a hazardous waste management unit in accordance with the applicable closure requirements of chapter 33.1-24-05 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems), landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.
107. "Permit" means an authorization, license, or equivalent control document issued by the department to implement the requirements of chapters 33.1-24-06 and 33.1-24-07. Permit includes permit by rule (section 33.1-24-06-18), emergency permit (subsection 1 of section 33.1-24-06-19), and standardized permit (sections 33.1-24-06-45 through 33.1-24-06-85). Permit does not include hazardous waste interim status (section 33.1-24-06-16), or any permit that has not been the subject of final department action, such as a draft permit or a proposed permit.
108. "Person" means an individual, trust, firm, joint stock company, federal agency, corporation (including a government corporation), partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body.

109. "Personnel" or "facility personnel" means all persons who work at, or oversee the operation of, a hazardous waste facility, and whose actions or failure to act may result in noncompliance with the requirements of chapter 33.1-24-05 or 40 CFR part 265.
110. "Pesticide" means any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest or intended for use as a plant regulator, defoliant, or desiccant, other than any article that:
- a. Is a new animal drug under federal Food, Drug, and Cosmetic Act section 201(w);
 - b. Is an animal drug that has been determined by regulation of the secretary of health and human services not to be a new animal drug; or
 - c. Is an animal feed under federal Food, Drug, and Cosmetic Act section 201(x) that bears or contains any substances described by subdivision a or b.
111. "Pile" means any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage and that is not a containment building.
112. "Plasma arc incinerator" means any enclosed device using a high-intensity electrical discharge or arc as a source of heat followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.
113. "Point source" means any discernible, confined, and discrete conveyance, including any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.
114. "Publicly owned treatment works" means any device or system used in the treatment (including recycling or reclamation) of municipal sewage or industrial wastes of a liquid nature which is owned by this state or a municipality. This definition includes sewers, pipes, or other conveyances only if they convey wastewater to a publicly owned treatment works providing treatment.
115. "Qualified ground water scientist" means a scientist or engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering, and has sufficient training and experience in ground water hydrology and related fields as may be demonstrated by state registration, professional certifications, or completion of accredited university courses that enable that individual to make sound professional judgments regarding ground water monitoring and contaminant fate and transport.
116. "Remanufacturing" means processing a higher value hazardous secondary material in order to manufacture a product that serves a similar functional purpose as the original commercial grade material. For the purpose of this subsection, a hazardous secondary material is considered higher value if it was generated from the use of a commercial grade material in a manufacturing process and can be remanufactured into a similar commercial grade material.
117. "Remediation waste" means all solid and hazardous wastes, and all media (including ground water, surface water, soils, and sediments) and debris that are managed for implementing cleanup.
118. "Remediation waste management site" means a facility where an owner or operator is or will be treating, storing, or disposing of hazardous remediation wastes. A remediation waste management site is not a facility that is subject to corrective action under section 33.1-24-05-58, but is subject to corrective action requirements if the site is located in such a facility.

119. "Replacement unit" means a landfill, surface impoundment, or waste pile unit from which all or substantially all of the waste is removed, and which is subsequently reused to treat, store, or dispose of hazardous waste. "Replacement unit" does not apply to a unit from which waste is removed during closure, if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in accordance with an approved closure plan or department-approved corrective action.
120. "Representative sample" means a sample of a universe or whole (for example, waste pile, lagoon, or ground water), which can be expected to exhibit the average properties of the universe or whole.
121. "Runoff" means any rainwater, leachate, or other liquid that drains over land from any part of a facility.
122. "Run-on" means any rainwater, leachate, or other liquid that drains over land onto any part of a facility.
123. "Saturated zone" or "zone of saturation" means that part of the earth's crust in which all voids are filled with water.
124. "Sludge" means any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant.
125. "Sludge dryer" means any enclosed thermal treatment device that is used to dehydrate sludge and that has a maximum total thermal input, excluding the heating value of the sludge itself, of two thousand five hundred British thermal unit per pound of sludge treated on a wet-weight basis.
126. "Small quantity generator" means a generator who generates more than one hundred kilograms, but less than one thousand kilograms, of hazardous waste in a calendar month.
127. "Solid waste" means a solid waste as defined in section 33.1-24-02-02.
128. a. "Solvent-contaminated wipe" means a wipe that, after use or after cleaning up a spill, either:
- (1) Contains one or more of the F001 through F005 solvents listed in section 33.1-24-02-16 or the corresponding P- or U-listed solvents found in section 33.1-24-02-18;
 - (2) Exhibits a hazardous characteristic found in sections 33.1-24-02-10 through 33.1-24-02-14 when that characteristic results from a solvent listed in chapter 33.1-24-02; or
 - (3) Exhibits only the hazardous waste characteristic of ignitability found in section 33.1-24-02-11 due to the presence of one or more solvents that are not listed in chapter 33.1-24-02; or
 - (4) Any combination of paragraphs 1, 2, or 3.
- b. Solvent-contaminated wipes that contain listed hazardous waste other than solvents, or exhibit the characteristic of toxicity, corrosivity, or reactivity due to contaminants other than solvents, are not eligible for the exclusions at subdivision w of subsection 1 of section 33.1-24-02-04 and subdivision p of subsection 2 of section 33.1-24-02-04.

129. "Sorberent" means a material that is used to soak up free liquids by either adsorption or absorption, or both. Sorb means to either adsorb or absorb, or both.
130. "Staging pile" means an accumulation of solid, nonflowing remediation waste that is not a containment building and that is used only during remedial operations for temporary storage at a facility. Staging piles must be designated by the department according to the requirements of section 33.1-24-05-554.
131. "Standardized permit" means a hazardous waste permit issued under sections 33.1-24-07-40 through 33.1-24-07-54 and sections 33.1-24-06-45 through 33.1-24-06-85 authorizing the facility owner or operator to manage hazardous waste. The standardized permit may have two parts--a uniform portion issued in all cases and a supplemental portion issued at the department's discretion.
132. "State" means this state.
133. "Storage" means the holding of hazardous waste at a site for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.
134. "Sump" means any pit or reservoir that meets the definition of tank and those troughs or trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities, except that as used in the landfill, surface impoundment, and waste pile rules, "sump" means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system.
135. "Surface impoundment" or "impoundment" means a facility or part of a facility which is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials), which is designed to hold an accumulation of liquid wastes or wastes containing free liquids, and which is not an injection well. Examples of surface impoundments are holding; storage; settling; and aeration pits, ponds, and lagoons.
136. "Tank" means a stationary device, designed to contain an accumulation of hazardous waste, which is constructed primarily of nonearthen materials (for example, wood, concrete, steel, or plastic), which provide structural support.
137. "Tank system" means a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.
138. "Thermal treatment" means the treatment of hazardous waste in a device which uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste. Examples of thermal treatment processes are incineration, molten salt, pyrolysis, calcination, wet air oxidation, and microwave discharge. (See also "incinerator" and "open burning".)
139. "Totally enclosed treatment facility" means a facility for the treatment of hazardous waste which is directly connected to an industrial production process and which is constructed and operated in a manner which prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized.
140. "Toxicity equivalence" means the international method of relating the toxicity of various dioxin, or furan, or both congeners to the toxicity of 2,3,7,8-tetrachlorodibenzo-p-dioxin.

141. "Transfer facility" means any transportation-related facility, including loading docks, parking areas, storage areas, or other similar areas where shipments of hazardous waste or hazardous secondary materials are held during the normal course of transportation.
142. "Transport vehicle" means a motor vehicle or railcar used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle.
143. "Transportation" means the movement of hazardous wastes by air, rail, highway, or water.
144. "Transporter" means a person engaged in the offsite transportation of hazardous waste by air, rail, highway, or water.
145. "Treatability study" means a study in which a hazardous waste is subjected to a treatment process to determine:
- a. Whether the waste is amenable to the treatment process;
 - b. What pretreatment (if any) is required;
 - c. The optimal process conditions needed to achieve the desired treatment;
 - d. The efficiency of a treatment process for a specific waste or wastes; or
 - e. The characteristics and volumes of residuals from a particular treatment process.

Also included in this definition for the purpose of subsections 5 and 6 of section 33.1-24-02-04 exemptions are liner compatibility, corrosion, and other material compatibility studies and toxicological and health effect studies. A "treatability study" is not a means to commercially treat or dispose of hazardous waste.

146. "Treatment" means any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize such waste, or so as to recover energy or material resources from the waste, or so as to render such waste nonhazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.
147. "Treatment zone" means a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized.
148. "Underground injection" means the subsurface emplacement of fluids through a bored, drilled, or driven well, or through a dug well, where the depth of the dug well is greater than the largest surface dimension. (See also the definition of "injection well" in this section.)
149. "Underground tank" means a device meeting the definition of "tank" in this section whose entire surface area is totally below the surface of and covered by the ground.
150. "Unfit for use tank system" means a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.
151. "User of the electronic manifest system" means a hazardous waste generator; a hazardous waste transporter; an owner or operator of a hazardous waste treatment, storage, recycling, or disposal facility; or any other person that:
- a. Is required to use a manifest to comply with:

- (1) Any federal or state requirement to track the shipment, transportation, and receipt of hazardous waste or other waste material that is shipped from the site of generation to an offsite-designated facility for treatment, storage, recycling, or disposal; or
- (2) Any federal or state requirement to track the shipment, transportation, and receipt of rejected wastes or regulated container residues that are shipped from a designated facility to an alternative facility, or returned to the generator; and

- b. Elects to use the system to obtain, complete, and transmit an electronic manifest format supplied by the environmental protection agency electronic manifest system; or
- c. Elects to use the paper manifest form and submits to the system for data processing purposes a paper copy of the manifest (or data from such a paper copy), in accordance with paragraph 5 of subdivision b of subsection 1 of section 33.1-24-05-38, or the applicable requirements of subsection 5 of section 33.1-24-06-16. These paper copies are submitted for data exchange purposes only and are not the official copies of record for legal purposes.

152. "United States" means the fifty states, the District of Columbia, the commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the commonwealth of the northern Mariana Islands.

153. "Universal waste" means any of the following hazardous wastes that are managed under the universal waste requirements of sections 33.1-24-05-700 through 33.1-24-05-799:

- a. Batteries as described in section 33.1-24-05-702;
- b. Pesticides as described in section 33.1-24-05-703;
- c. Mercury-containing equipment as described in section 33.1-24-05-704; and
- d. Lamps as described in section 33.1-24-05-705.

154. "Universal waste handler":

a. Means:

- (1) A generator (as defined in this section) of universal waste; or
- (2) The owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates universal waste and sends universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

b. Does not mean:

- (1) A person who treats, except under the provisions of subsection 1 or 3 of section 33.1-24-05-713, disposes of, or recycles universal waste; or
- (2) A person engaged in the offsite transportation of universal waste by air, rail, highway, or water, including a universal waste transfer facility.

155. "Universal waste transporter" means a person engaged in the offsite transportation of universal waste by air, rail, highway, or water.

156. "Unsaturated zone" or "zone of aeration" means the zone between the land surface and the water table.

157. "Uppermost aquifer" means the natural geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility's property boundary.
158. "Used oil" means any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities.
159. "Vessel" includes every description of watercraft, used or capable of being used as a means of transportation on the water.
160. "Wastewater treatment unit" means a device which:
- a. Is part of a wastewater treatment facility which is subject to regulation under either section 402 or 307(b) of the Clean Water Act;
 - b. Receives and treats or stores an influent wastewater, which is a hazardous waste as identified in section 33.1-24-02-03, or generates and accumulates a wastewater treatment sludge which is a hazardous waste as defined in section 33.1-24-02-03, or treats or stores a wastewater treatment sludge which is a hazardous waste as defined in section 33.1-24-02-03; and
 - c. Meets the definition of tank or tank system.
161. "Water (bulk shipment)" means the bulk transportation of hazardous waste which is loaded or carried on board a vessel without containers or labels.
162. "Well" means any shaft or pit dug or bored into the earth, generally of a cylindrical form and often walled with bricks or tubing to prevent the earth from caving in.
163. "Well injection". (See "underground injection".)
164. "Wipe" means a woven or nonwoven shop towel, rag, pad, or swab made of wood pulp, fabric, cotton, polyester blends, or other material.
165. "Zone of engineering control" means an area under the control of the owner or operator that, upon detection of a hazardous waste release, can be readily cleaned up prior to the release of hazardous waste or hazardous constituents to ground water or surface water.

33.1-24-01-06. General rulemaking petitions.

1. Any person may petition the department to modify or revoke any provisions in chapters 33.1-24-01 through 33.1-24-05. This section sets forth general requirements which apply to all such petitions. Section 33.1-24-01-07 sets forth additional requirements for petitions to add a testing or analytical method to chapter 33.1-24-02 or sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or subsection 5 of section 33.1-24-06-16. Section 33.1-24-01-08 sets forth additional requirements for petitions to exclude a waste or waste-derived material at a particular facility from section 33.1-24-02-03 or the lists of hazardous wastes in sections 33.1-24-02-15 through 33.1-24-02-19. Section 33.1-24-01-08 sets forth additional requirements for petitions to amend sections 33.1-24-05-700 through 33.1-24-05-799 to include additional hazardous wastes or categories of hazardous waste as universal waste.

2. Each petition must be submitted to the department by certified mail and must include:

a. The petitioner's name and address;

b. A statement of the petitioner's interest in the proposed action;

c. A description of the proposed action, including (where appropriate) suggested regulatory language; and

d. A statement of the need and justification for the proposed action, including any supporting tests, studies, or other information.

3. The department will make a tentative decision to grant or deny a petition and will publish notice of such tentative decision.
4. Upon the written request of any interested person, the department may, at its discretion, hold an informal public hearing to consider oral comments on the tentative decision. A person requesting a hearing must state the issues to be raised and explain why written comments would not suffice to communicate the person's views. The department may, in any case, decide on its own motion to hold an informal public hearing.
5. After evaluating all public comments, the department will make a final decision.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-07. Petitions for equivalent testing or analytical methods.

1. Any person seeking to add a testing or analytical method to chapter 33.1-24-02 or 33.1-24-05 may petition for a regulatory amendment to this section and section 33.1-24-01-06. To be successful, the person must demonstrate to the satisfaction of the department the proposed method is equal to or superior to the corresponding method prescribed in chapter 33.1-24-02 or 33.1-24-05, in terms of its sensitivity, accuracy, and precision, i.e., reproducibility.
2. Each petition must include, in addition to the information required by section 33.1-24-01-06:
 - a. A full description of the proposed method, including all procedural steps and equipment used in the method;
 - b. A description of the types of wastes or waste matrices for which the proposed method may be used;
 - c. Comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in chapter 33.1-24-02 or 33.1-24-05;
 - d. An assessment of any factors which may interfere with, or limit the use of, the proposed method; and
 - e. A description of the quality control procedures necessary to ensure the sensitivity, accuracy, and precision of the proposed method.
3. After receiving a petition for an equivalent method, the department may request any additional information of the proposed method which it may reasonably require to evaluate the method.
4. If the department amends the regulations to permit use of a new testing method, the method will be incorporated by reference in section 33.1-24-01-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-08. Petitions to amend chapter 33.1-24-02 to exclude a waste produced at a particular facility and amend chapter 33.1-24-05 to include additional hazardous waste or wastes as universal waste.

1. Any person seeking to exclude a waste at a particular generating facility from the lists in sections 33.1-24-02-15 through 33.1-24-02-19 may petition for a regulatory amendment under this section and section 33.1-24-01-06. To be successful:

- a. The petitioner must demonstrate to the satisfaction of the department the waste produced by a particular generating facility does not meet any of the criteria under which the waste was listed as a hazardous or an acutely hazardous waste; and
 - b. Based on a complete application, the department must determine, where it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A waste which is so excluded; however, still may be a hazardous waste by operation of sections 33.1-24-02-10 through 33.1-24-02-14.
2. The procedures in this section and section 33.1-24-01-06 may also be used to petition the department for a regulatory amendment to exclude waste from paragraph 2 of subdivision b of subsection 1 of section 33.1-24-02-03 or subsection 3 of section 33.1-24-02-03, a waste which is described in these sections and is either a waste listed in sections 33.1-24-02-15 through 33.1-24-02-19, or is derived from a waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. This exclusion may only be issued for a particular generating, storage, treatment, or disposal facility. The petitioner must make the same demonstration as required by subsection 1. Where the waste is a mixture of solid waste and one or more listed hazardous wastes or is derived from one or more hazardous wastes, this demonstration must be made with respect to the waste mixture as a whole; analysis must be conducted for not only those constituents for which the listed waste contained in the mixture was listed as hazardous, but also for factors (including additional constituents) that could cause the waste mixture to be a hazardous waste. A waste which is so excluded may still be a hazardous waste by operation of sections 33.1-24-02-10 through 33.1-24-02-14.
3. If the waste is listed with codes "I", "C", "R", or "E" in sections 33.1-24-02-15 through 33.1-24-02-19:
- a. The petitioner must show the waste does not exhibit the relevant characteristics for which the waste was listed as defined in sections 33.1-24-02-11, 33.1-24-02-12, 33.1-24-02-13, or 33.1-24-02-14 using any applicable methods prescribed therein. The petitioner also must show the waste does not exhibit any of the other characteristics defined in sections 33.1-24-02-11, 33.1-24-02-12, 33.1-24-02-13, or 33.1-24-02-14 using any applicable methods prescribed therein.
 - b. Based on a complete application, the department must determine, where it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A waste which is so excluded; however, still may be a hazardous waste by operation of sections 33.1-24-02-10 through 33.1-24-02-14.
4. If the waste is listed with code "T" in sections 33.1-24-02-15 through 33.1-24-02-19:
- a. The petitioner must demonstrate the waste:
 - (1) Does not contain the constituent or constituents (as defined in appendix IV of chapter 33.1-24-02) that caused the department to list the waste; or
 - (2) Although containing one or more of the hazardous constituents (as defined in appendix IV of chapter 33.1-24-02) that caused the department to list the waste, does not meet the criterion of subdivision c of subsection 1 of section 33.1-24-02-09 when considering the factors used by the department in paragraphs 1 through 11 of subdivision c of subsection 1 of section 33.1-24-02-09 under which the waste was listed as hazardous; and

b. Based on a complete application, the department must determine where they have a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste; and

c. The petitioner must demonstrate the waste does not exhibit any characteristics defined in sections 33.1-24-02-11, 33.1-24-02-12, 33.1-24-02-13, and 33.1-24-02-14.

d. A waste which is so excluded; however, still may be a hazardous waste by operation of sections 33.1-24-02-10 through 33.1-24-02-14.

5. If the waste is listed with the code "H" in sections 33.1-24-02-15 through 33.1-24-02-19:

a. The petitioner must demonstrate the waste does not meet the criterion of subdivision b of subsection 1 of section 33.1-24-02-09;

b. Based on a complete application, the department must determine where it has a reasonable basis to believe that additional factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste; and

c. The petitioner must demonstrate the waste does not exhibit any of the characteristics defined in sections 33.1-24-02-11, 33.1-24-02-12, 33.1-24-02-13, and 33.1-24-02-14 using any applicable methods prescribed therein.

d. A waste which is so excluded; however, still may be a hazardous waste by operation of sections 33.1-24-02-10 through 33.1-24-02-14.

6. Reserved for listing radioactive wastes.

7. Reserved for listing infectious wastes.

8. Demonstration samples must consist of enough representative samples, but in no case less than four samples, taken over a period of time sufficient to represent the variability or the uniformity of the waste.

9. Each petition must include, in addition to the information required by subsection 2 of section 33.1-24-01-06:

a. The name and address of the laboratory facility performing the sampling or tests of the wastes;

b. The names and qualifications of the persons sampling and testing the wastes;

c. The dates of sampling and testing;

d. The location of the generating facility;

e. A description of the manufacturing processes or other operations and feed materials producing the waste and an assessment of whether such processes, operations, or feed materials can or might produce a waste that is not covered by the demonstration;

f. A description of the waste and an estimate of average and maximum monthly and annual quantities of waste covered by the demonstration;

g. Pertinent data on and discussion of the factors delineated in the respective criterion for listing a hazardous waste where the demonstration is based on the factors in subdivision c of subsection 1 of section 33.1-24-02-09;

- h. A description of the methodologies and equipment used to obtain the representative sample;
- i. A description of the sample handling and preparation techniques, including techniques used for extraction, containerization, and preservation of the sample;
- j. A description of the tests performed (including results);
- k. The names and model numbers of the instruments used in performing the tests; and
- l. The following statement signed by the generator of the waste or the generator's authorized representative:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this demonstration and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

- 10. After receiving a petition for an exclusion, the department may request any additional information which it may reasonably require to evaluate the petition.
- 11. An exclusion will only apply to the waste generated at the individual facility covered by the demonstration and will not apply to wastes from any other facility.
- 12. The department may exclude only part of the waste for which the demonstration is submitted if it has reason to believe that variability of the waste justifies a partial exclusion.
- 13. Any person seeking to add a hazardous waste or category of hazardous waste to the universal waste regulations of sections 33.1-24-05-700 through 33.1-24-05-799 may petition for a regulatory amendment under this subsection and sections 33.1-24-01-06, 33.1-24-05-760, and 33.1-24-05-761.
- 14. To be successful, the petitioner must demonstrate to the satisfaction of the department that regulation under the universal waste regulations of sections 33.1-24-05-700 through 33.1-24-05-799 is appropriate for the waste or category of waste, will improve management practices for the waste or category of waste, and will improve implementation of the hazardous waste program. The petition must include the information required by subsection 2 of section 33.1-24-01-06. The petition should include as many of the factors listed in section 33.1-24-05-761 as are appropriate for the waste or category of waste addressed in the petition.
- 15. The department will grant or deny a petition using the factors listed in section 33.1-24-05-761. The decision will be based on the weight of evidence showing that regulation under sections 33.1-24-05-700 through 33.1-24-05-799 is appropriate for the waste or category of waste, will improve management for the waste or category of waste, and will improve implementation of the hazardous waste program.
- 16. The department may request additional information needed to evaluate the merits of the petition.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-09. Nonwaste determinations and variances from classification as a solid waste.

In accordance with the standards and criteria in sections 33.1-24-01-10 and 33.1-24-01-17 and the procedures in section 33.1-24-01-12, the department may determine on a case-by-case basis the following recycled materials are not solid wastes:

1. Materials that are accumulated speculatively without sufficient amounts being recycled (as defined in subdivision h of subsection 3 of section 33.1-24-02-01);
2. Materials that are reclaimed and then reused within the original production process in which they were generated;
3. Materials that have been reclaimed but must be reclaimed further before the materials are completely recovered;
4. Hazardous secondary materials that are reclaimed in a continuous industrial process;
5. Hazardous secondary materials that are indistinguishable in all relevant aspects from a product or intermediate; and
6. Hazardous secondary materials that are transferred for reclamation under subdivision y of subsection 1 of section 33.1-24-02-04, and are managed at a verified reclamation facility or intermediate facility where the management of the hazardous secondary materials is not addressed under a hazardous waste permit or interim status standards.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-10. Standards and criteria for variances from classification as a solid waste.

1. The department may grant requests for a variance from classifying as a solid waste those materials that are accumulated speculatively without sufficient amounts being recycled if the applicant demonstrates that sufficient amounts of the material will be recycled or transferred for recycling in the following year. If a variance is granted, it is valid only for the following year, but can be renewed, on an annual basis, by filing a new application. The department's decision will be based on the following criteria:
 - a. The manner in which the material is expected to be recycled, when the material is expected to be recycled, and whether this expected disposition is likely to occur (for example, because of past practice, market factors, the nature of the material, or contractual arrangements for recycling);
 - b. The reason the applicant has accumulated the material for one or more years without recycling seventy-five percent of the volume accumulated at the beginning of the year;
 - c. The quantity of material already accumulated and the quantity expected to be generated and accumulated before the material is recycled;
 - d. The extent to which the material is handled to minimize loss; and
 - e. Other relevant factors.
2. The department may grant requests for a variance from classifying as a solid waste those materials that are reclaimed and then reused as feed stock within the original production process in which the materials were generated if the reclamation operation is an essential part of the production process. This determination will be based on the following criteria:

- a. How economically viable the production process would be if it were to use virgin materials, rather than reclaimed materials;
- b. The extent to which the material is handled before reclamation to minimize loss;
- c. The time periods between generating the material and its reclamation, and between reclamation and return to the original primary production process;
- d. The location of the reclamation operation in relation to the production process;
- e. Whether the reclaimed material is used for the purpose for which it was originally produced when it is returned to the original process, and whether it is returned to the process in substantially its original form;
- f. Whether the person who generates the material also reclaims it; and
- g. Other relevant factors.

3. The department may grant requests for a variance from classifying as a solid waste those hazardous secondary materials that have been partially reclaimed, but must be reclaimed further before recovery is completed, if the partial reclamation has produced a commodity-like material. A determination that a partially reclaimed material for which the variance is sought is commodity-like will be based on whether the hazardous secondary material is legitimately recycled as specified in section 33.1-24-01-19 and on whether all of the following decision criteria are satisfied:

- a. Whether the degree of partial reclamation the material has undergone is substantial as demonstrated by using a partial reclamation process other than the process that generated the hazardous waste;
- b. Whether the partially reclaimed material has sufficient economic value that it will be purchased for further reclamation;
- c. Whether the partially reclaimed material is a viable substitute for a product or intermediate produced from virgin or raw materials which is used in subsequent production steps;
- d. Whether there is a market for the partially reclaimed material as demonstrated by known customer or customers who are further reclaiming the material (for example, records of sales or contracts, or both, and evidence of subsequent use, such as bills of lading); and
- e. Whether the partially reclaimed material is handled to minimize loss.

4. The department may grant requests for a variance from classifying as a solid waste those hazardous secondary materials that are transferred for reclamation under subdivision y of subsection 1 of section 33.1-24-02-04 and are managed at a verified reclamation facility or intermediate facility where the management of the hazardous secondary materials is not addressed under a hazardous waste permit or interim status standards. The department's decision will be based on the following criteria:

- a. The reclamation facility or intermediate facility must demonstrate the reclamation process for the hazardous secondary materials is legitimate pursuant to section 33.1-24-01-19;
- b. The reclamation facility or intermediate facility must satisfy the financial assurance condition in subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04;

- c. The reclamation facility or intermediate facility must not be subject to a formal enforcement action in the previous three years and not be classified as a significant noncomplier under Resource Conservation and Recovery Act Subtitle C, or must provide credible evidence the facility will manage the hazardous secondary materials properly. Credible evidence may include a demonstration the facility has taken remedial steps to address the violations and prevent future violations, or the violations are not relevant to the proper management of the hazardous secondary materials;
- d. The intermediate or reclamation facility must have the equipment and trained personnel needed to safely manage the hazardous secondary material and must meet emergency preparedness and response requirements under sections 33.1-24-02-120 through 33.1-24-02-129;
- e. If residuals are generated from the reclamation of the excluded hazardous secondary materials, the reclamation facility must have the permits required (if any) to manage the residuals, have a contract with an appropriately permitted facility to dispose of the residuals or present credible evidence the residuals will be managed in a manner that is protective of human health and the environment; and
- f. The intermediate or reclamation facility must address the potential for risk to proximate populations from unpermitted releases of the hazardous secondary material to the environment (for example, releases that are not covered by a permit, such as a permit to discharge to water or air), which may include potential releases through surface transport by precipitation runoff, releases to soil and groundwater, windblown dust, fugitive air emissions, and catastrophic unit failures, and must include consideration of potential cumulate risks from other nearby potential stressors.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-11. Variance to be classified as a boiler.

In accordance with the standards and criteria in section 33.1-24-01-04 (definition of "boiler"), and the procedures in section 33.1-24-01-12, the department may determine on a case-by-case basis that certain enclosed devices using controlled flame combustion are boilers, even though they do not otherwise meet the definition of boiler contained in section 33.1-24-01-04, after considering the following criteria:

- 1. The extent to which the unit has provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases;
- 2. The extent to which the combustion chamber and energy recovery equipment are of integral design;
- 3. The efficiency of energy recovery, calculated in terms of the recovered energy compared with the thermal value of the fuel;
- 4. The extent to which exported energy is utilized;
- 5. The extent to which the device is in common and customary use as a "boiler" functioning primarily to produce a steam, heated fluids, or heated gases; and
- 6. Other factors, as appropriate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-12. Procedures for variances from classification as a solid waste, for variances to be classified as a boiler or for nonwaste determinations.

The department will use the following procedures in evaluating applications for variances from classification as a solid waste or applications to classify particular enclosed flame combustion devices as boilers or applications for nonwaste determinations:

1. The applicant must apply to the department for the variance or nonwaste determination. The application must address the relevant criteria contained in section 33.1-24-01-10, 33.1-24-01-11 or 33.1-24-01-17, as applicable.
2. The department will evaluate the application and issue a draft notice tentatively granting or denying the application. Notification of this tentative decision will be provided by newspaper advertisement or radio broadcast in the locality where the recycler is located. The department will accept comments on the tentative decision for thirty days, and may also hold a public hearing upon request or at the department's discretion. The department will issue a final decision after receipt of comments and after the hearing, if any.
3. In the event of a change in circumstances that affects how a hazardous secondary material meets the relevant criteria contained in section 33.1-24-01-10, 33.1-24-01-11, or 33.1-24-01-17 upon which a variance or nonwaste determination has been based, the applicant shall send a description of the change in circumstances to the department. The department may issue a determination that the hazardous secondary material continues to meet the relevant criteria of the variance or nonwaste determination or may require the facility to reapply for the variance or nonwaste determination.
4. Variances and nonwaste determination are effective for a fixed term not to exceed ten years. No later than six months prior to the end of this term, facilities must reapply for a variance or nonwaste determination. If a facility reapplies for a variance or nonwaste determination within six months, the facility may continue to operate under an expired variance or nonwaste determination until receiving a decision on the facility's reapplication from the department.
5. Facilities receiving a variance or nonwaste determination must provide notification as required by section 33.1-24-01-18.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-13. Additional regulation of certain hazardous waste recycling activities on a case-by-case basis.

The department may decide on a case-by-case basis that persons accumulating or storing the recyclable materials described in paragraph 3 of subdivision b of subsection 1 of section 33.1-24-02-06 should be regulated under subsections 2 and 3 of section 33.1-24-02-06. The basis for this decision is that the materials are being accumulated or stored in a manner that does not protect human health and the environment because the materials or their toxic constituents have not been adequately contained, or because the materials being accumulated or stored together are incompatible. In making this decision, the department will consider the following factors:

1. The types of materials accumulated or stored and the amounts accumulated or stored;
2. The method of accumulation or storage;
3. The length of time the materials have been accumulated or stored before being reclaimed;

4. Whether any contaminants are being released into the environment or are likely to be so released; and
5. Other relevant factors. The procedures for this decision are set forth in section 33.1-24-01-14 of this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-14. Procedures for case-by-case regulation of hazardous waste recycling activities.

The department will use the following procedures when determining whether to regulate hazardous waste recycling activities described in paragraph 3 of subdivision b of subsection 1 of section 33.1-24-02-06 under the provisions of subsections 2 and 3 of section 33.1-24-02-06 rather than under the provisions of section 33.1-24-05-230:

1. If a generator is accumulating the waste, the department will issue a notice setting forth the factual basis for the decision and stating that the person must comply with the applicable requirements of chapter 33.1-24-03. The notice will become final within thirty days, unless the person served requests a public hearing to challenge the decision. Upon receiving such a request, the department will hold a public meeting and will provide notice of the hearing to the public and allow public participation at the hearing. The department will issue a final order after the hearing stating whether or not compliance with chapter 33.1-24-03 is required. The order becomes effective thirty days after serving the decision unless the department specifies a later date or unless review by the department is requested. The order may be appealed to the department by any person who participated in the public hearing. The department may choose to grant or to deny the appeal. Final department action occurs when a final order is issued and department review procedures are exhausted.
2. If the person is accumulating the recyclable materials at a storage facility, the notice will state that the person must obtain a permit in accordance with all applicable provisions of chapters 33.1-24-06 and 33.1-24-07. The owner or operator of the facility must apply for a permit within no less than sixty days and no more than six months of notice, as specified in the notice. If the owner or operator of the facility wishes to challenge the department's decision, the owner or operator may do so in his or her permit application, in a public hearing held on the draft permit, or in comments filed on the draft permit, or on the notice of intent to deny the permit. The fact sheet accompanying the permit will specify the reasons for the department's determination. The question whether the department's decision was proper will remain open for consideration during the public comment period discussed under chapter 33.1-24-07 and in any subsequent hearing.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-15. Variances.

The department may, on a case-by-case basis, grant a variance from this article upon such conditions and within such time limitations as it may prescribe provided it is no less stringent than the federal regulations, 40 CFR parts 260 through 281.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-16. Availability of information.

All records related to this article not specifically protected by state or federal law must be made available to the public in accordance with the following provisions:

1. Definitions. For the purposes of this article:

- a. "Record" means any document, writing, photograph, sound or magnetic recording, drawing, or other similar thing by which information has been preserved, from which the information can be retrieved and copied, and which is, was, or is alleged to be possessed by the department. The term includes informal writings (such as drafts and the like) and also includes information preserved in a form which must be translated or deciphered by machine in order to be intelligible to humans. The term includes documents and the like which were created or acquired by the department, its predecessors, its officers, and its employees by use of state funds or in the course of transacting official business. However, the term does not include materials which are legally owned by a department officer or employee in that person's purely personal capacity. Nor does the term include materials published by nonstate organizations which are readily available to the public, such as books, journals, and periodicals available through reference libraries, even if such materials are in the department's possession.
- b. "Request" means a request to inspect or obtain a copy of one or more records.
- c. "Requester" means any person who has submitted a request to the department.

2. Requests to which this section applies.

- a. This section applies to any written request received by the department whether or not it cites this availability of information section.
- b. Any written request to the department for existing records prepared by the department for routine public distribution, for example, pamphlets, copies of speeches, press releases, and educational materials must be honored. No individual determination is necessary in such cases, since preparation of the records for routine public distribution itself constitutes a determination that the records are available to the public.

3. Requests which do not reasonably describe records sought. The department will make every reasonable effort to assist in the identification and description of records sought and to assist the requester in formulating a request. If a request is described in general terms (for example, all records having to do with a certain area), the department may communicate with the requester (by telephone when practicable) with a view toward reducing the administrative burden of processing a broad request and minimizing the fees payable by the requester. Such attempts will not be used as a means to discourage requests, but rather as a means to help identify with more specificity the records actually sought.

4. Time allowed for issuance of initial determination.

- a. Except as otherwise provided in this section, not later than the tenth working day after the date of receipt of a request for records, the department shall issue a written determination to the requester stating which of the requested records will, and which will not, be released and the reason for any denial of a request. If the records are not known to exist or are not in the department's possession, the department shall so inform the requester. To the extent requested records which are in the department's possession are published by the department, the response may inform the requester that the records are available for inspection and where copies can be obtained.

- b. The period of ten working days must be measured from the date the request is first received and logged into the department.
- c. There must be excluded from the period of ten working days (or any extension thereof) any time which elapses between the date that a requester is notified by the department that the person's request does not reasonably identify the records sought, and the date that the requester furnishes a reasonable identification.
- d. There must be excluded from the period of ten working days (or any extension thereof) any time which elapses between the date that a requester is notified by the department that prepayment or assurance of payment of fees is required, and the date the requester pays (or makes suitable arrangements to pay) such charges.
- e. The department may extend the basic ten-day period established under subdivision a by a period not to exceed ten additional working days, by furnishing written notice to the requester within the basic ten-day period, stating the reasons for such extension and a date by which the office expects to be able to issue a determination. The period may be so extended only when absolutely necessary, only for the period required, and only when one or more of the following unusual circumstances require the extension:
 - (1) There is a need to search and collect the requested records from field facilities or other establishments that are separate from the office processing the request;
 - (2) There is a need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records which are demanded in a single request; or
 - (3) There is a need for consultation, which must be conducted with all practicable speed, with another division having a substantial interest in the determination of the request.
- f. Failure of the department to issue a determination within the ten-day period or any authorized extension constitutes final department action which authorizes the requester to commence an action in an appropriate state district court to obtain the records.

5. Initial denials of requests.

- a. An initial denial of a request may be issued only for the following reasons:
 - (1) The records requested are specifically protected by state or federal law; or
 - (2) The records are deemed enforcement-sensitive.
- b. Each initial determination which denies, in whole or in part, a request for one or more existing located records must state that the requester may appeal the initial denial by sending a written appeal to the department within thirty days of receipt of the determination.

6. Appeals from initial denials - Manner of making.

- a. Any person whose request for one or more existing, located department records has been denied, in whole or in part, by an initial determination may appeal that denial by addressing a written appeal to the department.
- b. An appeal should be mailed no later than thirty calendar days after the date the requester received the initial determination on the request. An untimely appeal may be treated either as a timely appeal or as a new request.

c. The appeal letter must contain a reference to the subject line, the date of initial determination, and the name and address of the person who issued the initial denial. The appeal letter must also indicate which of the records to which access was denied are the subjects of the appeal.

7. **Appeal determination - By whom made.** The department's legal counsel shall make one of the following legal determinations in connection with an appeal from the initial denial of a request for an existing, located record:

a. The record must be disclosed;

b. The record must not be disclosed because a statute or a provision of this section so requires; or

c. The record is exempt from mandatory disclosure but legally may be disclosed as a matter of department discretion.

8. **Contents of determination denying appeal.** A determination denying an appeal from an initial denial must be in writing, must state which of the exemptions apply to each requested existing record, and must state the reasons for denial of the appeal. A denial determination must also state the name and position of the department employee who directed that the appeal be denied. Such a determination must further state that the person whose request was denied may obtain de novo judicial review of the denial by complaint filed with the district court of the United States in the district in which the complainant resides, or in which the department's records are located. However, no determination denying an appeal may reveal the existence or nonexistence of records if identifying the mere fact of the existence or nonexistence of those records would reveal confidential business information, confidential personal information, or a confidential investigation. Instead of identifying the existence or nonexistence of the records, the determination must state that the appeal is denied because either the records do not exist or they are exempt from mandatory disclosure.

9. **Time allowed for issuance of appeal determination.**

a. Except as otherwise provided in this section, not later than the twentieth working day after the date of receipt of the informational request of an appeal from an initial denial of a request for records, the department's legal counsel shall issue a written determination stating which of the requested records (as to which an appeal was made) shall be disclosed and which shall not be disclosed.

b. The period of twenty working days must be measured from the date an appeal is first received by the department.

c. The department's legal counsel may extend the basic twenty-day period established under subdivision a by a period not to exceed ten additional working days, by furnishing written notice to the requester within the basic twenty-day period stating the reason for such extension and the date by which the office expects to be able to issue a determination. The period may be so extended only when absolutely necessary, only for the period required, and only when one or more of the following unusual circumstances require the extension:

(1) There is a need to search for and collect the records from field facilities or other establishments that are separate from the office processing the appeal;

(2) There is need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records which are demanded in a single request; or

(3) There is a need for consultation, which must be conducted with all practicable speed, with another division having a substantial interest in the determination of the request.

d. No extension of the twenty-day period shall be issued under subdivision c which would cause the total of all such extensions to exceed ten working days.

10. **Failure to decide on appeal by deadline.** Failure to decide if an appealed record must be disclosed by the deadline imposed in this section constitutes final agency action and the requester's right to judicial review.

11. **Fees - Payments - Waiver.**

a. Fees will be charged to requesters for searching for and producing requested records in accordance with department policy.

b. Reduction or waiver of fee. The fee chargeable under department policy must be reduced or waived by the department if the department determines that a waiver or reduction of the fee is in the public interest because furnishing the information can be considered as primarily benefiting the general public. Reduction or waiver of fees must be considered (need not necessarily be granted) in connection with each request from a representative of the press or other communications medium or from a public interest group.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-17. Standards and criteria for nonwaste determinations.

1. An applicant may apply to the department for a formal determination that a hazardous secondary material is not discarded and therefore not a solid waste. The determinations will be based on the criteria contained in subsections 2 or 3, as applicable. If an application is denied, the hazardous secondary material might still be eligible for a solid waste variance or exclusion (for example, one of the solid waste variances under section 33.1-24-01-10).

2. The department may grant a nonwaste determination for hazardous secondary material which is reclaimed in a continuous industrial process if the applicant demonstrates that the hazardous secondary material is a part of the production process and is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled as specified in section 33.1-24-01-19, and on the following criteria:

a. The extent that the management of the hazardous secondary material is part of the continuous primary production process and is not waste treatment;

b. Whether the capacity of the production process would use the hazardous secondary material in a reasonable timeframe and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);

c. Whether the hazardous constituents in the hazardous secondary material are reclaimed rather than released to the air, water, or land at significantly higher levels from either a statistical, or from a health and environmental risk perspective than would otherwise be released by the production process; and

d. Other relevant factors that demonstrate the hazardous secondary material is not discarded including why the hazardous secondary material cannot meet, or should not

have to meet, the conditions of an exclusion under section 33.1-24-02-02 or 33.1-24-02-04.

3. The department may grant a nonwaste determination for hazardous secondary material which is indistinguishable in all relevant aspects from a product or intermediate if the applicant demonstrates that the hazardous secondary material is comparable to a product or intermediate and is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled as specified in section 33.1-24-01-19, and on the following criteria:
 - a. Whether market participants treat the hazardous secondary material as a product or intermediate rather than a waste (for example, based on the current positive value of the hazardous secondary material, stability of demand, or any contractual arrangements);
 - b. Whether the chemical and physical identity of the hazardous secondary material is comparable to commercial products or intermediates;
 - c. Whether the capacity of the market would use the hazardous secondary material in a reasonable timeframe and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);
 - d. Whether the hazardous constituents in the hazardous secondary material are reclaimed rather than released to the air, water, or land at significantly higher levels from either a statistical, or from a health and environmental risk perspective than would otherwise be released by the production process; and
 - e. Other relevant factors that demonstrate the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under section 33.1-24-02-02 or 33.1-24-02-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-18. Notification requirements for hazardous secondary materials.

1. Facilities managing hazardous secondary materials under section 33.1-24-01-09, subdivision x, y, or z of subsection 1 of section 33.1-24-02-04, must send a notification prior to operating under the regulatory provision and by March first of each even-numbered year thereafter, to the department using department-approved forms that include the following information:
 - a. The name, address, and identification number (if applicable) of the facility;
 - b. The name and telephone number of a contact person;
 - c. The North American industry classification system code of the facility;
 - d. The regulation under which the hazardous secondary materials will be managed;
 - e. When the facility began or expects to begin managing the hazardous secondary materials in accordance with the regulation;

- f. A list of hazardous secondary materials that will be managed according to the regulation (reported as the hazardous waste numbers that would apply if the hazardous secondary materials were managed as hazardous wastes);
 - g. For each hazardous secondary material, whether the hazardous secondary material, or any portion thereof, will be managed in a land-based unit;
 - h. The quantity of each hazardous secondary material to be managed annually; and
 - i. The certification (included in the department-approved form) signed and dated by an authorized representative of the facility.
2. If a facility managing hazardous secondary materials has submitted a notification, but then subsequently stops managing hazardous secondary materials in accordance with the regulation or regulations listed above, the facility shall notify the department within thirty days using a department-approved form. For purposes of this section, a facility has stopped managing hazardous secondary materials if the facility no longer generates, manages or reclaims, or any combination, hazardous secondary materials under the regulation or regulations above and does not expect to manage any amount of hazardous secondary materials for at least one year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-01-19. Legitimate recycling of hazardous secondary materials.

1. Recycling of hazardous secondary materials for the purpose of the exclusions or exemptions from the hazardous waste rules must be legitimate. Hazardous secondary material that is not legitimately recycled is discarded material and is a solid waste. In determining if their recycling is legitimate, persons must address all the requirements of this subsection.
- a. Legitimate recycling must involve a hazardous secondary material that provides a useful contribution to the recycling process or to a product or intermediate of the recycling process. The hazardous secondary material provides a useful contribution if it:
 - (1) Contributes valuable ingredients to a product or intermediate;
 - (2) Replaces a catalyst or carrier in the recycling process;
 - (3) Is the source of a valuable constituent recovered in the recycling process;
 - (4) Is recovered or regenerated by the recycling process; or
 - (5) Is used as an effective substitute for a commercial product.
 - b. The recycling process must produce a valuable product or intermediate. The product or intermediate is valuable if it is:
 - (1) Sold to a third party; or
 - (2) Used by the recycler or the generator as an effective substitute for a commercial product or as an ingredient or intermediate in an industrial process.
 - c. The generator and the recycler shall manage the hazardous secondary material as a valuable commodity when the hazardous secondary material is under the generator's or recycler's control. Where there is an analogous raw material, the hazardous secondary material must be managed, at a minimum, in a manner consistent with the management

of the raw material or in an equally protective manner. Where there is no analogous raw material, the hazardous secondary material must be contained. Hazardous secondary materials that are released to the environment and are not recovered immediately are discarded.

d. The product of the recycling process must be comparable to a legitimate product or intermediate:

(1) Where there is an analogous product or intermediate, the product of the recycling process is comparable to a legitimate product or intermediate if:

(a) The product of the recycling process does not exhibit a hazardous characteristic (as defined in sections 33.1-24-02-10 through 33.1-24-02-14) that analogous products do not exhibit; and

(b) The concentrations of any hazardous constituents found in Appendix V of chapter 33.1-24-02 which are in the product or intermediate are at levels that are comparable to or lower than those found in analogous products or at levels that meet widely recognized commodity standards and specifications, in the case where the commodity standards and specifications include levels that specifically address those hazardous constituents.

(2) Where there is no analogous product, the product of the recycling process is comparable to a legitimate product or intermediate if:

(a) The product of the recycling process is a commodity that meets widely recognized commodity standards and specifications (for example, commodity specifications grades for common metals); or

(b) The hazardous secondary materials being recycled are returned to the original process or processes from which they were generated to be reused (for example, closed-loop recycling).

(3) If the product of the recycling process has levels of hazardous constituents which are not comparable to or unable to be compared to a legitimate product or intermediate per paragraph 1 or 2, the recycling still may be shown to be legitimate, if it meets the following specified requirements. The person performing the recycling shall conduct the necessary assessment and prepare documentation showing why the recycling is, in fact, still legitimate. The recycling can be shown to be legitimate based on lack of exposure from toxics in the product, lack of the bioavailability of the toxics in the product, or other relevant considerations that show the recycled product does not contain levels of hazardous constituents which pose a significant human health or environmental risk. The documentation must include a certification statement that the recycling is legitimate and must be maintained onsite for three years after the recycling operation has ceased. The person performing the recycling shall notify the department of this activity using a department-approved form.

33.1-24-02-01. Purpose and scope.

1. This chapter identifies those solid wastes which are subject to regulation as hazardous wastes and which are subject to the notification requirements. In this chapter:
 - a. Sections 33.1-24-02-01 through 33.1-24-02-07 define the terms "solid waste" and "hazardous waste", identify those wastes which were excluded from regulation under chapters 33.1-24-03 through 33.1-24-07, and establish special management requirements for hazardous waste produced by conditionally exempt small quantity generators and hazardous waste which is recycled.
 - b. Sections 33.1-24-02-08 and 33.1-24-02-09 set forth the criteria used to identify characteristics of hazardous waste and to list particular hazardous waste.
 - c. Sections 33.1-24-02-10 through 33.1-24-02-14 identify characteristics of hazardous waste.
 - d. Sections 33.1-24-02-15 through 33.1-24-02-19 list particular hazardous wastes.
2. The definition of solid waste contained in this chapter:
 - a. Applies only to wastes that also are hazardous for purposes of the rules implementing North Dakota Century Code chapter 23.1-04. For example, it does not apply to materials (such as nonhazardous scrap, paper, textiles, or rubber) that are not otherwise hazardous wastes and that are recyclable.
 - b. This chapter identifies only some of the materials which are solid wastes and hazardous wastes under North Dakota Century Code chapter 23.1-04. A material which is not defined as a solid waste in this chapter or is not a hazardous waste identified or listed in this chapter, is still a solid waste and a hazardous waste for purposes of these sections if:
 - (1) In the case of North Dakota Century Code section 23.1-04-12, the department has reason to believe that the material may be a hazardous waste within the meaning of subsection 6 of North Dakota Century Code section 23.1-04-02; or
 - (2) In the case of North Dakota Century Code section 23.1-04-14, the statutory elements are established.
3. For the purpose of sections 33.1-24-02-02 and 33.1-24-02-06:

- a. A "spent material" is any material that has been used and as a result of contamination can no longer serve the purpose for which it was produced without processing.
- b. "Sludge" has the same meaning used in section 33.1-24-01-04.
- c. A "byproduct" is a material that is not one of the primary products of a production process and is not solely or separately produced by the production process. Examples are process residue, such as slags or distillation column bottoms. The term does not include a coproduct that is produced for the general public's use and is ordinarily used in the form it is produced by the process.
- d. A material is "reclaimed" if it is processed to recover a usable product, or if it is regenerated. Examples are recovery of lead values from spent batteries and regeneration of spent solvents. In addition, for purposes of subdivisions x and y of subsection 1 of section 33.1-24-02-04, smelting, melting and refining furnaces are considered to be solely engaged in metals reclamation if the metal recovery from the hazardous secondary materials meets the same requirements as those specified for metals recovery from hazardous waste found in subdivisions a through c of subsection 4 of section 33.1-24-05-525, and if the residuals meet the requirements specified in section 33.1-24-05-537.
- e. A material is "used or reused" if it is either:
- (1) Employed as an ingredient (including use as an intermediate) in an industrial process to make a product (for example, distillation bottoms from one process used as feedstock in another process). However, a material will not satisfy this condition if distinct components of the material are recovered as separate end products (as when metals are recovered from metal containing secondary materials); or
 - (2) Employed in a particular function or application as an effective substitute for a commercial product (for example, spent pickle liquor used as phosphorous precipitant and sludge conditioner or in wastewater treatment).
- f. "Scrap metal" is bits and pieces of metal parts (for example, bars, turnings, rods, sheets, wire) or metal pieces that may be combined together with bolts or soldering (for example, radiators, scrap automobiles, railroad boxcars), which when worn or superfluous can be recycled.
- g. A material is "recycled" if it is used, reused, or reclaimed.
- h. A material is "accumulated speculatively" if it is accumulated before being recycled. A material is not accumulated speculatively, however, if the person accumulating it can show that the material is potentially recyclable and has a feasible means of being recycled; and that during the calendar year (commencing on January first) the amount of material that is recycled, or transferred to a different site for recycling, equals at least seventy-five percent by weight or volume of the amount of that material accumulated at the beginning of the period. Materials must be placed in a storage unit with a label indicating the first date that the material began to be accumulated. If placing a label on the storage unit is not practicable, the accumulation period must be documented through an inventory log or other appropriate method. In calculating the percentage of turnover, the seventy-five percent requirement is to be applied to each material of the same type (for example, slags from a single smelting process) that is recycled in the same way (for example, from which the same material is recovered or that is used in the same way). Material accumulating in units that would be exempt from regulation under subsection 3 of section 33.1-24-02-04 are not to be included in making the calculation. Materials that are already defined as solid wastes also are not to be included in making the calculation.

Materials are no longer in this category once they are removed from accumulation for recycling, however.

- i. "Excluded scrap metal" is processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.
- j. "Home scrap metal" is scrap metal as generated by steel mills, foundries, and refineries such as turnings, cuttings, punchings, and borings.
- k. "Processed scrap metal" is scrap metal which has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal includes scrap metal which has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (for example, sorted), and fines, drosses, and related materials which have been agglomerated. (Note: shredded circuit boards being sent for recycling are not considered processed scrap metal. They are covered under the exclusion from the definition of solid waste for shredded circuit boards being recycled (subdivision n of subsection 1 of section 33.1-24-02-04)).
- l. "Prompt scrap metal" is scrap metal as generated by the metal working and fabrication industries and includes such scrap metal as turnings, cuttings, punchings, and borings. Prompt scrap metal is also known as industrial or new scrap metal.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-02. Definition of solid waste.

1. A solid waste is:

- a. Any discarded material that is not excluded by subsection 1 of section 33.1-24-02-04 or that is not excluded by variance granted under sections 33.1-24-01-09 and 33.1-24-01-10 or that is not excluded by a nonwaste determination under sections 33.1-24-01-09 and 33.1-24-01-17.
- b. A discarded material is any material which is:
 - (1) Abandoned, as explained in subsection 2;
 - (2) Recycled, as explained in subsection 3;
 - (3) Considered inherently wastelike, as explained in subsection 4; or
 - (4) A military munition identified as a solid waste in section 33.1-24-05-822.

2. Materials are solid wastes if they are abandoned by being:

- a. Disposed of;
- b. Burned or incinerated;
- c. Accumulated, stored, or treated (but not recycled) before or in lieu of being abandoned by being disposed of, burned, or incinerated; or
- d. Sham recycled, as explained in subsection 7.

3. Materials are solid wastes if they are recycled or accumulated, stored, or treated before recycling as specified in subdivisions a through d.

a. Used in a manner constituting disposal.

(1) Materials noted with a "*" in column 1 of table 1 are solid wastes when they are:

(a) Applied to or placed on the land in a manner that constitutes disposal; or

(b) Used to produce products that are applied to or placed on the land or are otherwise contained in products that are applied to or placed on the land (in which case the product itself remains a solid waste).

(2) However, commercial chemical products listed in section 33.1-24-02-18 are not solid wastes if they are applied to the land and that is their ordinary manner of use.

b. Burning for energy recovery.

(1) Materials noted with a "*" in column 2 of table 1 are solid wastes when they are:

(a) Burned to recover energy; or

(b) Used to produce a fuel or are otherwise contained in fuels (in which case the fuel itself remains a solid waste).

(2) However, commercial chemical products listed in section 33.1-24-02-18 are not solid wastes if they are themselves fuels.

c. Reclaimed. Materials noted with a "*" in column 3 of table 1 are solid wastes when reclaimed unless they meet the requirements of subdivision q, x, y, or z of subsection 1 of section 33.1-24-02-04. Materials noted with a "-" in column 3 of table 1 are not solid wastes when reclaimed.

d. Accumulated speculatively. Materials noted with a "*" in column 4 of table 1 are solid wastes when accumulated speculatively.

4. Inherently wastelike materials. The following materials are solid wastes when they are recycled in any manner:

a. Hazardous waste numbers F020, F021 (unless used as an ingredient to make a product at the site of generation), F022, F023, F026, and F028.

b. Secondary materials fed to a halogen acid furnace that exhibit a characteristic of a hazardous waste or are listed as a hazardous waste as defined in sections 33.1-24-02-10 through 33.1-24-02-19, except for brominated material that meets the following criteria:

(1) The material must contain a bromine concentration of at least forty-five percent;

(2) The material must contain less than a total of one percent of toxic organic compounds listed in appendix V; and

(3) The material is processed continually onsite in the halogen acid furnace via direct conveyance (hard piping).

c. The department will use the following criteria to add wastes to that list:

(1) The materials:

(a) Are ordinarily disposed of, burned, or incinerated; or

(b) Contain toxic constituents listed in appendix V and these constituents are not ordinarily found in raw materials or products for which the materials substitute (or are found in raw materials or products in smaller concentrations) and are not used or reused during the recycling process; and

(2) The material may pose a substantial hazard to human health and the environment when recycled.

5. Materials that are not solid waste when recycled:

a. Materials are not solid waste when they can be shown to be legitimately recycled as specified in section 33.1-24-01-19 by being:

(1) Used or reused as ingredients in an industrial process to make a product provided the materials are not being reclaimed;

(2) Used or reused as effective substitutes for commercial products; or

(3) Returned to the original process from which they are generated, without first being reclaimed or land disposed. The material must be returned as a substitute for feedstock materials. If the original process to which the material is returned is a secondary process, the materials must be managed such that there is no placement on the land. If the materials are generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at subdivision q of subsection 1 of section 33.1-24-02-04 apply rather than this subsection.

b. The following materials are solid wastes, even if the recycling involves use, reuse, or return to the original process (described in paragraphs 1 through 3 of subdivision a):

(1) Materials used in a manner constituting disposal, or used to produce products that are applied to the land;

(2) Materials burned for energy recovery, used to produce a fuel, or contained in fuels;

(3) Materials accumulated speculatively; or

(4) Materials listed in subdivisions a and b of subsection 4.

6. Documentation of claims that materials are not solid wastes or are conditionally exempt from regulation. Respondents in actions to enforce regulations implementing North Dakota Century Code chapter 23.1-04 who raise a claim that a certain material is not a solid waste, or is conditionally exempt from regulation, must demonstrate that there is a known market or disposition for the material, and that they meet the terms of exclusion or exemption. In doing so, they must provide appropriate documentation (such as contracts showing that a second person uses the material as an ingredient in a production process) to demonstrate that the material is not a waste, or is exempt from the regulation. In addition, owners or operators of facilities claiming that they actually are recycling materials must show that they have the necessary equipment to do so.

7. Sham recycling. A hazardous secondary material found to be sham recycled is considered discarded and a solid waste. Sham recycling is recycling that is not legitimate recycling as defined in section 33.1-24-01-19.

TABLE 1				
	Use Constituting	Energy Recovery/Fuel	Reclamation	Speculative

	Disposal (Subdivision a of Subsection 3 of Section 33.1-24-02-02)	(Subdivision b of Subsection 3 of Section 33.1-24-02-02)	(Subdivision c of Subsection 3 of Section 33.1-24-02-02 ¹)	Accumulation (Subdivision d of Subsection 3 of Section 33.1-24-02-02)

¹Except as provided by Subdivision q, x, y, or z of Subsection 1 of Section 33.1-24-02-04.
NOTE: The terms "spent materials", "sludges", "byproducts", "scrap metal", and "processed scrap metal" are defined in Section 33.1-24-02-01.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-03. Definition of hazardous waste.

1. A solid waste, as defined in section 33.1-24-02-02, is a hazardous waste if:

a. It is not excluded from regulation as a hazardous waste under subsection 2 of section 33.1-24-02-04; and

b. It meets any of the following criteria:

(1) It exhibits any of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14. However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under subdivision g of subsection 2 of section 33.1-24-02-04 and any other solid waste exhibiting a characteristic of hazardous waste under sections 33.1-24-02-10 through 33.1-24-02-14 is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred or if it continues to exhibit any of the characteristics exhibited by the nonexcluded wastes prior to mixture. Further, for the purposes of applying the toxicity characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in table 1 to section 33.1-24-02-14 that would not have been exceeded by the excluded waste alone if

the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to the mixture.

(2) It is listed in sections 33.1-24-02-15 through 33.1-24-02-19 and has not been excluded from the lists in sections 33.1-24-02-15 through 33.1-24-02-19 by petitioning the department under sections 33.1-24-01-06 and 33.1-24-01-08.

(3) [Reserved].

(4) It is a mixture of solid waste and one or more hazardous wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19 and has not been excluded from this subdivision under sections 33.1-24-01-06 and 33.1-24-01-08, or subsection 7 or 8; however, the following mixtures of solid wastes and hazardous wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19 are not hazardous wastes (except by application of paragraph 1 or 2) if the generator can demonstrate that the mixture consists of wastewater the discharge of which is subject to regulation under subsections 18 and 19, or subsection 25 of North Dakota Century Code section 61-28-04 (including wastewater at the facilities which have eliminated the discharge of wastewater) and:

(a) One or more of the following spent solvents listed in section 33.1-24-02-16 - benzene, carbon tetrachloride, tetrachloroethylene, trichloroethylene or the scrubber waters derived from the combustion of these spent solvents - provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed one part per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act, as amended, at 40 CFR parts 60, 61, or 63, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions), does not exceed one part per million on an average weekly basis. Any facility that uses benzene as a solvent and claims this exemption must use an aerated biological wastewater treatment system and must use only lined surface impoundments or tanks prior to secondary clarification in the wastewater treatment system. Facilities that choose to measure concentration levels must file a copy of the facility's sampling and analysis plan with the department. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once the facility receives confirmation that the sampling and analysis plan has been received by the department. The department may reject the sampling and analysis plan if the department finds that, the sampling and analysis plan fails to include the above information, or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the department rejects the sampling and analysis plan or if the department finds that the facility is not following the sampling and analysis plan, the department shall notify the facility to cease the use of the direct monitoring option until such time as the basis for rejection are corrected;

(b) One or more of the following spent solvents listed in section 33.1-24-02-16 - methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene,

cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents, 2-ethoxyethanol, or the scrubber waters derived from the combustion of these spent solvents - provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed twenty-five parts per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR parts 60, 61, or 63, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions), does not exceed twenty-five parts per million on an average weekly basis. Facilities that choose to measure concentration levels must file a copy of the facility's sampling and analysis plan with the department. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once the facility receives confirmation that the sampling and analysis plan has been received by the department. The department may reject the sampling and analysis plan if the department finds that, the sampling and analysis plan fails to include the above information; or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the department rejects the sampling and analysis plan or if the department finds that the facility is not following the sampling and analysis plan, the department shall notify the facility to cease the use of the direct monitoring option until such time as the basis for rejection are corrected;

(c) One of the following wastes listed in section 33.1-24-02-17, provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation - heat exchanger bundle cleaning sludge from the petroleum refining industry (hazardous waste number K050), crude oil storage tank sediment from petroleum refining operations (hazardous waste number K169), clarified slurry oil tank sediment or in-line filter/separation solids, or both, from petroleum refining operations (hazardous waste number K170), spent hydrotreating catalyst (hazardous waste number K171), and spent hydrotreating catalyst (hazardous waste number K172);

(d) A discarded hazardous waste, chemical commercial product, or chemical intermediate listed in sections 33.1-24-02-16 through 33.1-24-02-18, arising from de minimis losses of these materials. For purposes of this subparagraph, "de minimis" losses are inadvertent releases to a wastewater treatment system, including those from normal material handling operations, (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers that are rendered empty by that rinsing. Any manufacturing facility that claims an exemption for de minimis quantities of wastes listed in sections 33.1-24-02-16 through 33.1-24-02-17, or any nonmanufacturing facility that claims an exemption for de minimis quantities of wastes listed in sections 33.1-24-02-15

through 33.1-24-02-19 must either have eliminated the discharge of wastewaters or have included in the facility's Clean Water Act permit application or submission to the facility's pretreatment control authority the constituents for which each waste was listed (in chapter 33.1-24-02 appendix IV); and the constituents in the table "treatment standards for hazardous wastes" in section 33.1-24-05-280 for which each waste has a treatment standard (for example, land disposal restriction constituents). A facility is eligible to claim the exemption once the permit writer or control authority has been notified of possible de minimis releases via the Clean Water Act permit application or the pretreatment control authority submission. A copy of the Clean Water Act permit application or the submission to the pretreatment control authority must be placed in the facility's onsite files;

(e) Wastewater resulting from laboratory operations containing toxic (T) wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system, or provided the wastes combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation;

(f) One or more of the following wastes listed in section 33.1-24-02-17 - wastewaters from the production of carbamates and carbamoyl oximes (hazardous waste number K157) - provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine (including all amounts that cannot be demonstrated to be reacted in the process, destroyed through treatment, or is recovered, for example, what is discharged or volatilized) divided by the average weekly flow of process wastewater prior to any dilution into the headworks of the facility's wastewater treatment system does not exceed a total of five parts per million by weight or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR parts 60, 61, or 63, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions), does not exceed five parts per million on an average weekly basis. Facilities that choose to measure concentration levels must file copy of the facility's sampling and analysis plan with the department. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once the facility receives confirmation that the sampling and analysis plan has been received by the department. The department may reject the sampling and analysis plan if the department finds that, the sampling and analysis plan fails to include the above information; or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the department rejects the sampling and analysis plan or if the department finds that the facility is not following the sampling and analysis plan, the department shall notify the facility to cease the use of the direct monitoring option until such time as the basis for rejection are corrected; or

(g) Wastewaters derived from the treatment of one or more of the following wastes listed in section 33.1-24-02-17 - organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (hazardous waste number K156) - provided, that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of five milligrams per liter or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at facilities subject to regulation under the Clean Air Act as amended, at 40 CFR parts 60, 61, or 63, or at facilities subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions), does not exceed five milligrams per liter on an average weekly basis. Facilities that choose to measure concentration levels must file a copy of the facility's sampling and analysis plan with the department. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once the facility receives confirmation that the sampling and analysis plan has been received by the department. The department may reject the sampling and analysis plan if the department finds that, the sampling and analysis plan fails to include the above information; or the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the department rejects the sampling and analysis plan or if the department finds that the facility is not following the sampling and analysis plan, the department shall notify the facility to cease the use of the direct monitoring option until such time as the basis for rejection are corrected.

(5) Rebuttable presumption for used oil. Used oil containing more than one thousand parts per million total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in appendix V of chapter 33.1-24-02).

(a) The rebuttable presumption does not apply to metalworking oils or fluids, or both, containing chlorinated paraffins, if they are processed, through a tolling agreement, to reclaim metalworking oils or fluids, or both. The presumption does apply to metalworking oils or fluids, or both, if such oils or fluids, or both, are recycled in any other manner, or disposed.

(b) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons removed from refrigeration units where the chlorofluorocarbons are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with chlorofluorocarbons that have been mixed with used oil from sources other than refrigeration units.

2. A solid waste which is not excluded from regulation under subdivision a of subsection 1 becomes a hazardous waste when any of the following events occur:

a. In the case of a waste listed in this chapter, when the waste first meets the listing description set forth in sections 33.1-24-02-15 through 33.1-24-02-19.

b. In the case of a mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 is first added to the solid waste.

c. In the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in sections 33.1-24-02-10 through 33.1-24-02-14.

3. Unless and until it meets the criteria of subsection 4:

a. A hazardous waste will remain a hazardous waste.

b. Except as otherwise provided in paragraph 2:

(1) Except as otherwise provided in paragraph 2, or subsection 7 or 8, any solid waste generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate (but not including precipitation runoff) is a hazardous waste. (However, materials that are reclaimed from solid wastes and that are used beneficially are not solid wastes and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.)

(2) The following solid wastes are not hazardous even though they are generated from the treatment, storage, or disposal of a hazardous waste, unless they exhibit one or more of the characteristics of hazardous waste:

(a) Waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry (standard industrial codes 331 and 332).

(b) Wastes from burning any of the materials exempted from regulation by paragraphs 3 and 4 of subdivision c of subsection 1 of section 33.1-24-02-06.

(c) Nonwastewater residue.

[1] Nonwastewater residues, such as slag, resulting from high temperature metals recovery (HTMR) processing of K061, K062, or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations or industrial furnaces (as defined in the definition for "industrial furnace" in section 33.1-24-01-04), that are disposed in solid waste management units, provided that these residues meet the generic exclusion levels identified in the tables in this paragraph for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly or when the process or operation generating the waste changes or both. Persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements.

<u>Constituent</u>	<u>Maximum for Any Single Composite Sample - Toxicity Characteristic Leaching Procedure (mg/l)</u>
--------------------	----------------------------------------------------------------------------------------------------

Generic exclusion levels for K061 and K062 nonwastewater high temperature metals recovery residues

<u>Antimony</u>	<u>0.10</u>
<u>Arsenic</u>	<u>0.50</u>
<u>Barium</u>	<u>7.6</u>
<u>Beryllium</u>	<u>0.010</u>
<u>Cadmium</u>	<u>0.050</u>
<u>Chromium (total)</u>	<u>0.33</u>
<u>Lead</u>	<u>0.15</u>
<u>Mercury</u>	<u>0.009</u>
<u>Nickel</u>	<u>1.0</u>
<u>Selenium</u>	<u>0.16</u>
<u>Silver</u>	<u>0.30</u>
<u>Thallium</u>	<u>0.020</u>
<u>Zinc</u>	<u>70</u>

Generic exclusion levels for F006 nonwastewater high temperature metals recovery residues

<u>Antimony</u>	<u>0.10</u>
<u>Arsenic</u>	<u>0.50</u>
<u>Barium</u>	<u>7.6</u>
<u>Beryllium</u>	<u>0.010</u>
<u>Cadmium</u>	<u>0.050</u>
<u>Chromium (total)</u>	<u>0.33</u>
<u>Cyanide (total) (mg/kg)</u>	<u>1.8</u>
<u>Lead</u>	<u>0.15</u>
<u>Mercury</u>	<u>0.009</u>
<u>Nickel</u>	<u>1.0</u>

<u>Silver</u>	<u>0.30</u>
<u>Thallium</u>	<u>0.020</u>
<u>Zinc</u>	<u>70</u>

[2] A one-time notification and certification must be placed in the facility's files and sent to the department for K061, K062, or F006 high temperatures metal recovery residues that meet the generic exclusion levels for all constituents and do not exhibit any characteristics that are sent to solid waste management units. The notification and certification that is placed in the generators or treaters files must be updated if the process or operation generating the waste changes or if the solid waste management unit receiving the waste changes. However, the generator or treater need only notify the department on an annual basis if such changes occur. Such notification and certification should be sent to the department by the end of the calendar year, but no later than December thirty-first. The

notification must include the following information: the name and address of the solid waste management unit receiving the waste shipments; the hazardous waste numbers and treatability groups at the initial point of generation; and, the treatment standards applicable to the waste at the initial point of generation. The certification must be signed by an authorized representative and must state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

(d) Biological treatment sludge from the treatment of one of the following wastes listed in section 33.1-24-02-17 organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (hazardous waste number K156), and wastewaters from the production of carbamates and carbamoyl oximes (hazardous waste number K157).

(e) Catalyst inert support media separated from one of the following wastes listed in section 33.1-24-02-17 spent hydrotreating catalyst (hazardous waste number K171), and spent hydrotreating catalyst (hazardous waste number K172).

4. Any solid waste described in subsection 3 is not a hazardous waste if it meets the following criteria:

a. In the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14. (However, wastes that exhibit a characteristic at the point of generation may still be subject to the requirements of sections 33.1-24-05-250 through 33.1-24-05-299, even if they no longer exhibit a characteristic at the point of land disposal.); or

b. In the case of a waste which is a listed waste in sections 33.1-24-02-15 through 33.1-24-02-19, contains a waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 or is derived from a waste listed in sections 33.1-24-02-15 through 33.1-24-02-19, it also has been excluded from subsection 3 under sections 33.1-24-01-06 and 33.1-24-01-08.

5. Notwithstanding subsections 1 through 4 and provided the debris as defined in sections 33.1-24-05-250 through 33.1-24-05-299 does not exhibit a characteristic identified at sections 33.1-24-02-10 through 33.1-24-02-14, the following materials are not subject to regulation under chapters 33.1-24-01 through 33.1-24-04, 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, or 33-24-05-800 through 33-24-05-929:

a. Hazardous debris as defined in sections 33.1-24-05-250 through 33.1-24-05-299 that has been treated using one of the required extraction or destruction technologies specified in table 1 of section 33.1-24-05-285; persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements; or

b. Debris as defined in sections 33.1-24-05-250 through 33.1-24-05-299 that the department, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.

6. [Reserved].

7. A hazardous waste that is listed in sections 33.1-24-02-15 through 33.1-24-02-19 solely because it exhibits one or more characteristics of ignitability as defined under section 33.1-24-02-11, corrosivity as defined under section 33.1-24-02-12, or reactivity as defined under section 33.1-24-02-13 is not a hazardous waste, if the waste no longer exhibits any characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14.

a. The exclusion described in this subsection also pertains to:

(1) Any mixture of a solid waste and a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity as regulated under paragraph 4 of subdivision b of subsection 1; and

(2) Any solid waste generated from treating, storing, or disposing of a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity as regulated under paragraph 1 of subdivision b of subsection 3.

b. Wastes excluded under this subsection are subject to the land disposal restrictions in sections 33.1-24-05-250 through 33.1-24-05-299, as applicable, even if the wastes no longer exhibit a characteristic at the point of land disposal.

c. Any mixture of a solid waste excluded from regulation under subdivision g of subsection 2 of section 33.1-24-02-04 and a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 solely because it exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity as regulated under paragraph 4 of subdivision b of subsection 1 is not a hazardous waste, if the mixture no longer exhibits any characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14 for which the hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 was listed.

8. Hazardous waste containing radioactive waste is no longer a hazardous waste when it meets the eligibility criteria and conditions of sections 33.1-24-05-850 through 33.1-24-05-929 "eligible radioactive mixed waste".

a. The exemption described in this subsection also pertains to:

(1) Any mixture of a solid waste and an eligible radioactive mixed waste; and

(2) Any solid waste generated from treating, storing, or disposing of an eligible radioactive mixed waste.

b. Waste exempted under this subsection must meet the eligibility criteria and specified conditions in sections 33.1-24-05-856 and 33.1-24-05-857, for storage and treatment, and in sections 33.1-24-05-890 and 33.1-24-05-895, for transportation and disposal. Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-04. Exclusions.

1. Materials that are not solid wastes. The following materials are not solid wastes for the purpose of this chapter:

- a. Domestic sewage and any mixture of domestic sewage and other wastes that pass through a sewer system to a publicly owned treatment works for treatment. "Domestic sewage" means untreated sanitary wastes that pass through a sewer system.
- b. Industrial wastewater discharges that are point source discharges subject to regulation under subsections 18 and 19 of North Dakota Century Code section 61-28-04. (Comment: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.)
- c. Irrigation return flows.
- d. Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954, as amended [42 U.S.C. 2011 et seq.].
- e. Materials subjected to in situ mining techniques which are not removed from the ground as part of the extraction process.
- f. Pulping liquors (for example, black liquor) that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless it is accumulated speculatively as defined in subsection 3 of section 33.1-24-02-01.
- g. Spent sulfuric acid used to produce virgin sulfuric acid, unless it is accumulated speculatively as defined in subsection 3 of section 33.1-24-02-01.
- h. Secondary materials that are reclaimed and returned to the original process or processes in which they were generated where they are reused in the production process provided:
 - (1) Only tank storage is involved, and the entire process through completion of reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;
 - (2) Reclamation does not involve controlled flame combustion (such as occurs in boilers, industrial furnaces, or incinerators);
 - (3) The secondary materials are never accumulated in such tanks for over twelve months without being reclaimed; and
 - (4) The reclaimed material is not used to produce a fuel, or used to produce products that are used in a manner constituting disposal.
- i. Wood preserving:
 - (1) Spent wood preserving solutions that have been reclaimed and are reused for their original intended purpose; and
 - (2) Wastewaters from the wood preserving process that have been reclaimed and are reused to treat wood.
 - (3) Prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in paragraphs 1 and 2, so long as they meet all of the following conditions:
 - (a) The wood preserving wastewaters and spent wood preserving solutions are reused onsite at waterborne plants in the production process for their original intended purpose;

- (b) Prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or ground water or both;
- (c) Any unit used to manage wastewaters and spent wood preserving solutions, or both, prior to reuse can be visually or otherwise determined to prevent such releases;
- (d) Any drip pad used to manage the wastewaters and spent wood preserving solutions, or both, prior to reuse complies with the applicable standards in subsection 5 of section 33.1-24-06-16, regardless of whether the plant generates a total of less than one hundred kilograms per month of hazardous waste; and
- (e) Prior to operating pursuant to this exclusion, the plant owner or operator prepares a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language:

"I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation."

The plant must maintain a copy of that document in its onsite records until closure of the facility. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, it may apply to the department for reinstatement. The department may reinstate the exclusion upon finding that the plant has returned to compliance with all conditions and that violations are not likely to recur.

- j. Hazardous waste numbers K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke byproducts processes that are hazardous only because they exhibit the toxicity characteristic specified in section 33.1-24-02-14 when, subsequent to generation, these materials are recycled to coke ovens, to the tar recovery process as a feedstock to produce coal tar, or mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens or tar recovery or refining processes, or mixed with coal tar.
- k. Nonwastewater splash condenser dross residue from the treatment of K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.

l. Materials considered:

- (1) Oil-bearing hazardous secondary materials (for example, sludges, byproducts, or spent materials) that are generated at a petroleum refinery (standard industrial code 2911) and are inserted into the petroleum refining process (standard industrial code 2911 - including distillation, catalytic cracking, fractionation, or thermal cracking units (for example, cokers)) unless the material is placed on the land, or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under this paragraph, provided that the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated, or sent directly to another petroleum refinery, and still be excluded under this provision. Except as provided in paragraph 2, oil-bearing hazardous

secondary materials generated elsewhere in the petroleum industry (for example, from sources other than petroleum refineries) are not excluded under this paragraph. Residuals generated from processing or recycling materials excluded under this paragraph, where such materials as generated would have otherwise met a listing under sections 33.1-24-02-15 through 33.1-24-02-19, are designated as F037 listed wastes when disposed or intended for disposal.

(2) Recovered oil that is recycled in the same manner and with the same conditions as described in paragraph 1. Recovered oil is oil that has been reclaimed from secondary materials, including wastewater, generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident thereto (standard industrial codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5172). Recovered oil does not include oil-bearing hazardous wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil as defined in section 33.1-24-05-600.

m. Excluded scrap metal (processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal) being recycled.

n. Shredded circuit boards being recycled provided that they are:

(1) Stored in containers sufficient to prevent a release to the environment prior to recovery; and

(2) Free of mercury switches, mercury relays, and nickel-cadmium batteries and lithium batteries.

o. Condensates derived from the overhead gases from kraft mill stream strippers that are used to comply with 40 CFR 63.446(e). The exemption applies only to combustion at the mill generating the condensates.

p. [Reserved].

q. Spent materials (as defined in section 33.1-24-02-01) (other than hazardous wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19) generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing, or by beneficiation, provided that:

(1) The spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;

(2) The spent material is not accumulated speculatively;

(3) Except as provided in paragraph 4, the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of nonearthen materials providing structural support (except smelter buildings may have partially earthen floors provided the spent material is stored on the nonearthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be freestanding, not be a surface impoundment (as defined in section 33.1-24-01-04), and be manufactured of a material suitable for containment of its contents; a container must be freestanding and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate which may be subject to wind dispersal, the owner or operator must operate these units in a manner which controls fugitive dust. Tanks, containers, and buildings must

be designed, constructed, and operated to prevent significant releases to the environment of these materials.

(4) The department may make a site-specific determination, after public review and comment, that only solid mineral processing spent material may be placed on pads, rather than in tanks, containers, or buildings. Solid mineral processing spent materials do not contain any free liquid. The decisionmaker must affirm that pads are designed, constructed, and operated to prevent significant releases of the spent material into the environment. Pads must provide the same degree of containment afforded by the hazardous waste tanks, containers, and buildings eligible for exclusion.

(a) The decisionmaker must also consider if storage on pads poses the potential for significant releases via ground water, surface water, and air exposure pathways. Factors to be considered for assessing the ground water, surface water, and air exposure pathways are the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway.

(b) Pads must meet the following minimum standards: be designed of nonearthen material that is compatible with the chemical nature of the mineral processing spent material, capable of withstanding physical stresses associated with placement and removal; have run-on or runoff controls, or both; be operated in a manner which controls fugitive dust; and have integrity assurance through inspections and maintenance programs.

(c) Before making a determination under this paragraph, the department must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers or broadcasting notice over local radio stations.

(5) The owner or operator provides notice to the department, providing the following information: the types of materials to be recycled, the type and location of the storage units and recycling processes, and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.

(6) For purposes of subdivision g of subsection 2, mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by nonmineral processing industries are not eligible for the conditional exclusion from the definition of solid waste.

r. Petrochemical recovered oil from an associated organic chemical manufacturing facility, where the oil is to be inserted into the petroleum refining process (standard industrial code 2911) along with normal petroleum refinery process streams, provided:

(1) The oil is hazardous only because it exhibits the characteristic of ignitability (as defined in section 33.1-24-02-11) or toxicity for benzene (as defined in section 33.1-24-02-14, hazardous waste code D018), or both; and

(2) The oil generated by the organic chemical manufacturing facility is not placed on the land, or speculatively accumulated before being recycled into the petroleum refining process. An "associated organic chemical manufacturing facility" is a facility where the primary standard industrial code is 2869, but where operations may also include standard industrial codes 2821, 2822, and 2865; and is physically colocated with a petroleum refinery; and where the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. "Petrochemical recovered oil" is oil that has been reclaimed from secondary materials (for example, sludges, byproducts, or spent materials, including wastewater) from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes.

s. Spent caustic solutions from petroleum refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid unless the material is placed on the land, or accumulated speculatively as defined in subsection 3 of section 33.1-24-02-01.

t. Hazardous secondary materials used to make zinc fertilizers, provided that the following conditions specified are satisfied:

(1) Hazardous secondary materials used to make zinc micronutrient fertilizers must not be accumulated speculatively, as defined in subdivision h of subsection 3 of section 33.1-24-02-01.

(2) Generators and intermediate handlers of zinc-bearing hazardous secondary materials that are to be incorporated into zinc fertilizers must:

(a) Submit a one-time notice to the department, which contains the name, address, and identification number of the generator or intermediate handler facility, provides a brief description of the secondary material that will be subject to the exclusion, and identifies when the manufacturer intends to begin managing excluded, zinc-bearing hazardous secondary materials under the conditions specified in this subdivision.

(b) Store the excluded secondary material in tanks, containers, or buildings that are constructed and maintained in a way that prevents releases of the secondary materials into the environment. At a minimum, any building used for this purpose must be an engineered structure made of nonearthen materials that provide structural support, and must have a floor, walls, and a roof that prevent wind dispersal and contact with rainwater. Tanks used for this purpose must be structurally sound and, if outdoors, must have roofs or covers that prevent contact with wind and rain. Containers used for this purpose must be kept closed except when it is necessary to add or remove material, and must be in sound condition. Containers that are stored outdoors must be managed within storage areas that:

[1] Have containment structures or systems sufficiently impervious to contain leaks, spills, and accumulated precipitation;

[2] Provide for effective drainage and removal of leaks, spills, and accumulated precipitation; and

[3] Prevent run-on into the containment system.

(c) With each offsite shipment of excluded hazardous secondary materials, provide written notice to the receiving facility that the material is subject to the conditions of this subdivision.

(a) For metal contaminants:

<u>Constituent</u>	<u>Maximum Allowable Total Concentration in Fertilizer, Per Unit (1 Percent) of Zinc (ppm)</u>
<u>Arsenic</u>	<u>0.3</u>
<u>Cadmium</u>	<u>1.4</u>
<u>Chromium</u>	<u>0.6</u>
<u>Lead</u>	<u>2.8</u>
<u>Mercury</u>	<u>0.3</u>

(b) For dioxin contaminants the fertilizer must contain no more than eight parts per trillion of dioxin, measured as toxic equivalent (TEQ).

(2) The manufacturer performs sampling and analysis of the fertilizer product to determine compliance with the contaminant limits for metals no less than every six months, and for dioxins no less than every twelve months. Testing must also be performed whenever changes occur to manufacturing processes or ingredients that could significantly affect the amounts of contaminants in the fertilizer product. The manufacturer may use any reliable analytical method to demonstrate that no constituent of concern is present in the product at concentrations above the applicable limits. It is the responsibility of the manufacturer to ensure that the sampling and analysis are unbiased, precise, and representative of the product or products introduced into commerce.

(3) The manufacturer maintains for no less than three years records of all sampling and analyses performed for purposes of determining compliance with the requirements of paragraph 2. Such records must at a minimum include:

(a) The dates and times product samples were taken and the dates the samples were analyzed;

(b) The names and qualifications of the person taking the samples;

(c) A description of the methods and equipment used to take the samples;

(d) The name and address of the laboratory facility at which analyses of the samples were performed;

(e) A description of the analytical methods used, including any cleanup and sample preparation methods; and

(f) All laboratory analytical results used to determine compliance with the contaminant limits specified in subdivision u.

v. Used cathode ray tubes:

(1) Used, intact cathode ray tubes as defined in section 33.1-24-01-04 are not solid wastes within the United States unless they are disposed, or unless they are speculatively accumulated as defined in subdivision h of subsection 3 of section 33.1-24-02-01 by cathode ray tube collectors or glass processors.

(2) Used, intact cathode ray tubes as defined in section 33.1-24-01-04 are not solid wastes when exported for recycling provided that they meet the requirements of section 33.1-24-02-26.

(3) Used, broken cathode ray tubes as defined in section 33.1-24-01-04 are not solid wastes provided that they meet the requirements of section 33.1-24-02-25.

(4) Glass removed from cathode ray tubes is not a solid waste provided that it meets the requirements of subsection 3 of section 33.1-24-02-25.

w. Solvent-contaminated wipes that are sent for cleaning and reuse are not solid wastes from the point of generation, provided that:

(1) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in nonleaking, closed containers that are labeled "excluded solvent-contaminated wipes." The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

(2) The solvent-contaminated wipes may be accumulated by the generator for up to one hundred eighty days from the start date of accumulation for each container prior to being sent for cleaning;

(3) At the point of being sent for cleaning onsite or at the point of being transported offsite for cleaning, the solvent-contaminated wipes must contain no free liquids as defined in section 33.1-24-01-04;

(4) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in chapters 33.1-24-01 through 33.1-24-04 and 33.1-24-06, and sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-700 through 33.1-24-05-929, and 33.1-24-05-950 through 33.1-24-05-1149;

(5) Generators must maintain at the facility the following documentation:

(a) Name and address of the laundry or dry cleaner that is receiving the solvent-contaminated wipes;

(b) Documentation that the 180-day accumulation time limit in paragraph 2 of subdivision w of subsection 1 of section 33.1-24-02-04 is being met; and

(c) Description of the process the generator is using to ensure the solvent-contaminated wipes contain no free liquids at the point of being laundered or dry cleaned onsite or at the point of being transported offsite for laundering or dry cleaning;

(6) The solvent-contaminated wipes are sent to a laundry or dry cleaner whose discharge, if any, is regulated under sections 301 and 402 or section 307 of the Clean Water Act.

x. Hazardous secondary material generated and legitimately reclaimed within the United States or its territories and under the control of the generator, provided that the material complies with:

(1) The hazardous secondary material:

- (a) Is generated and reclaimed at the generating facility (for purposes of this definition, generating facility means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator); or
- (b) Is generated and reclaimed at different facilities, if the reclaiming facility is controlled by the generator or if both the generating facility and the reclaiming facility are controlled by a person as defined in section 33.1-24-01-04, and if the generator provides one of the following certifications: "on behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], which is controlled by [insert generator facility name] and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material," or "on behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], that both facilities are under common control, and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material." For purposes of this subparagraph, "control" means the power to direct the policies of the facility, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate facilities on behalf of a different person as defined in section 33.1-24-01-04 shall not be deemed to "control" such facilities. The generating and receiving facilities must both maintain at their facilities for no less than three years records of hazardous secondary materials sent or received under this exclusion. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received under the exclusion. These requirements may be satisfied by routine business records (for example, financial records, bills of lading, copies of department of transportation shipping papers, or electronic confirmation); or
- (c) Is generated pursuant to a written contract between a tolling contractor and a toll manufacturer and is reclaimed by the tolling contractor, if the tolling contractor certifies the following: "On behalf of [insert tolling contractor name], I certify that [insert tolling contractor name] has a written contract with [insert toll manufacturer name] to manufacture [insert name of product or intermediate] which is made from specified unused materials, and that [insert tolling contractor name] will reclaim the hazardous secondary materials generated during this manufacture. On behalf of [insert tolling contractor name], I also certify that [insert tolling contractor name] retains ownership of, and responsibility for, the hazardous secondary materials that are generated during the course of the manufacture, including any releases of hazardous secondary materials that occur during the manufacturing process." The tolling contractor must maintain at its facility for no less than three years records of hazardous secondary materials received pursuant to its written contract with the tolling manufacturer, and the tolling manufacturer must maintain at its facility for no less than three years records of hazardous secondary materials shipped pursuant to its written contract with the tolling contractor. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received pursuant to the written contract. These requirements may be satisfied by routine business records (for example, financial records, bills of lading, copies of department of transportation shipping papers, or electronic confirmations). For purposes of this subparagraph, tolling contractor means a person who arranges for the production of a product or intermediate made from specified unused materials through a written contact with a toll

manufacturer. Toll manufacturer means a person who produces a product or intermediate made from specified unused materials pursuant to a written contract with a tolling contractor.

(2) The following requirements apply to hazardous secondary material managed under this exclusion:

(a) The hazardous secondary material is contained as defined in section 33.1-24-01-04. A hazardous secondary material released to the environment is discarded and a solid waste unless it is immediately recovered for the purpose of reclamation. Hazardous secondary material managed in a unit with leaks or other continuing or intermittent unpermitted releases is discarded and a solid waste.

(b) The hazardous secondary material is not speculatively accumulated, as defined in subdivision h of subsection 3 of section 33.1-24-02-01.

(c) Notice is provided as required by section 33.1-24-01-18.

(d) The material is not otherwise subject to material-specific management conditions under subsection 1 when reclaimed, and it is not a spent lead-acid battery (see sections 33.1-24-05-235 and 33.1-24-05-702).

(e) Persons performing the recycling of hazardous secondary materials under this exclusion must maintain documentation of their legitimacy determination onsite. Documentation must be a written description of how the recycling meets all four factors in subsection 1 of section 33.1-24-01-19. Documentation must be maintained for three years after the recycling operation has ceased.

(f) The emergency preparedness and response requirements found in sections 33.1-24-02-120 through 33.1-24-02-129 are met.

y. Hazardous secondary material that is generated and then transferred to a verified reclamation facility for the purpose of reclamation is not a solid waste, provided that:

(1) The material is not speculatively accumulated, as defined in subdivision h of subsection 3 of section 33.1-24-02-01;

(2) The material is not handled by any person or facility other than the hazardous secondary material generator, the transporter, an intermediate facility or a reclaimer, and, while in transport, is not stored for more than ten days at a transfer facility, as defined in section 33.1-24-01-04, and is packaged according to applicable department of transportation regulations at 49 CFR parts 173, 178, and 179 while in transport;

(3) The material is not otherwise subject to material-specific management conditions under subsection 1 when reclaimed, and it is not a spent lead-acid battery (see sections 33.1-24-05-235 and 33.1-24-05-702);

(4) The reclamation of the material is legitimate, as specified under section 33.1-24-01-19;

(5) The hazardous secondary material generator satisfied all of the following conditions;

(a) The material must be contained as defined in section 33.1-24-01-04. A hazardous secondary material released to the environment is discarded and a solid waste unless it is immediately recovered for the purpose of recycling.

Hazardous secondary material managed in a unit with leaks or other continuing releases is discarded and a solid waste.

(b) The hazardous secondary material generator must arrange for transport of hazardous secondary materials to a verified reclamation facility or facilities in the United States. A verified reclamation facility is a facility that has been granted a variance under subsection 4 of section 33.1-24-01-10, or a reclamation facility where the management of the hazardous secondary materials is addressed under a hazardous waste permit or interim status standards. If the hazardous secondary material will be passing through an intermediate facility, the intermediate facility must have been granted a variance under subsection 4 of section 33.1-24-01-10 or the management of the hazardous secondary materials at that facility must be addressed under a hazardous waste permit or interim status standards, and the hazardous secondary material generator must make contractual arrangements with the intermediate facility to ensure that the hazardous secondary material is sent to the reclamation facility identified by the hazardous secondary material generator.

(c) The hazardous secondary material generator must maintain at the generating facility for no less than three years records of all offsite shipments of hazardous secondary materials. For each shipment, these records must, at a minimum, contain the following information:

[1] Name of the transporter and date of the shipment;

[2] Name and address of each reclaimer and, if applicable, the name and address of each intermediate facility to which the hazardous secondary material was sent; and

[3] The type and quantity of hazardous secondary material in the shipment.

(d) The hazardous secondary material generator must maintain at the generating facility for no less than three years confirmations of receipt from each reclaimer and, if applicable, each intermediate facility for all offsite shipments of hazardous secondary materials. Confirmations of receipt must include the name and address of the reclaimer or intermediate facility, the type and quantity of the hazardous secondary materials received and the date which the hazardous secondary materials were received. This requirement may be satisfied by routine business records (for example, financial records, bills of lading, copies of department of transportation shipping papers, or electronic confirmations of receipt).

(e) The hazardous secondary material generator must comply with the emergency preparedness and response conditions in sections 33.1-24-02-120 through 33.1-24-02-129.

(6) Reclaimers of hazardous secondary material excluded from regulation under this exclusion and intermediate facilities as defined in section 33.1-24-01-04 satisfy all of the following conditions:

(a) The reclaimer and intermediate facility must maintain at its facility for no less than three years records of all shipments of hazardous secondary material that were received at the facility and, if applicable, for all shipments of hazardous secondary materials that were received and subsequently sent offsite from the

facility for further reclamation. For each shipment, these records must at a minimum contain the following information:

[1] Name of the transporter and date of the shipment;

[2] Name and address of the hazardous secondary material generator and, if applicable, the name and address of the reclaimer or intermediate facility which the hazardous secondary materials were received from;

[3] The type and quantity of hazardous secondary material in the shipment; and

[4] For hazardous secondary materials that, after being received by the reclaimer or intermediate facility, were subsequently transferred offsite for further reclamation, the name and address of the subsequent reclaimer and, if applicable, the name and address of each intermediate facility to which the hazardous secondary material was sent.

(b) The intermediate facility must send the hazardous secondary material to the reclaimer or reclaimers designated by the hazardous secondary materials generator.

(c) The reclaimer and intermediate facility must send to the hazardous secondary material generator confirmations of receipt for all offsite shipments of hazardous secondary materials. Confirmations of receipt must include the name and address of the reclaimer or intermediate facility, the type and quantity of the hazardous secondary materials received and the date which the hazardous secondary materials were received. This requirement may be satisfied by routine business records (for example, financial records, bills of lading, copies of department of transportation shipping papers, or electronic confirmations of receipt).

(d) The reclaimer and intermediate facility must manage the hazardous secondary material in a manner that is at least as protective as that employed for analogous raw material and must be contained. An "analogous raw material" is a raw material for which a hazardous secondary material is a substitute and serves the same function and has similar physical and chemical properties as the hazardous secondary material.

(e) Any residuals that are generated from reclamation processes will be managed in a manner that is protective of human health and the environment. If any residuals exhibit a hazardous characteristic according to sections 33.1-24-02-10 through 33.1-24-02-14, or if the residuals themselves are specifically listed in sections 33.1-24-02-15 through 33.1-24-02-19, such residuals are hazardous wastes and must be managed in accordance with the applicable requirements of chapters 33.1-24-01 through 33.1-24-04, sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-929, 33.1-24-05-950 through 33.1-24-05-1149, subsection 5 of section 33.1-24-06-16 and chapter 33.1-24-06.

(f) The reclaimer and intermediate facility have financial assurance as required under sections 33.1-24-02-33 through 33.1-24-02-42.

(g) The reclaimer and intermediate facility have been granted a variance under subsection 4 of section 33.1-24-01-10 or have a hazardous waste permit or

interim status standards that address the management of the hazardous secondary materials; and

(7) All persons claiming the exclusion under this subdivision provide notification as required under section 33.1-24-01-18.

z. Hazardous secondary material that is generated and then transferred to another person for the purpose of remanufacturing is not a solid waste, provided that:

(1) The hazardous secondary material consists of one or more of the following spent solvents: toluene, xylenes, ethylbenzene, 1,2,4-trimethylbenzene, chlorobenzene, n-hexane, cyclohexane, methyl tert-butyl ether, acetonitrile, chloroform, chloromethane, dichloromethane, methyl isobutyl ketone, NN-dimethylformamide, tetrahydrofuran, n-butyl alcohol, ethanol, and methanol;

(2) The hazardous secondary material originated from using one or more of the solvents listed in paragraph 1, in a commercial grade for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and the paints and coatings manufacturing sectors (NAICS 325510).

(3) The hazardous secondary material generator sends the hazardous secondary material spent solvents listed in paragraph 1 to a remanufacturer in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510).

(4) After remanufacturing one or more of the solvents listed in paragraph 1, the use of the remanufactured solvent shall be limited to reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and the paints and coatings manufacturing sectors (NAICS 325510) or to using them as ingredients in a product. These allowed uses correspond to chemical functional uses enumerated under the chemical data reporting rule of the Toxic Substances Control Act [40 CFR parts 704, 710-711], including industrial function codes U015 (solvents consumed in a reaction to produce other chemicals) and U030 (solvents become part of the mixture);

(5) After remanufacturing one or more of the solvents listed in paragraph 1, the use of the remanufactured solvent does not involve cleaning or degreasing oil, grease, or similar material from textiles, glassware, metal surfaces, or other articles. These disallowed continuing uses correspond to chemical functional uses in industrial function code U029 under the chemical data reporting rule of the Toxic Substances Control Act; and

(6) Both the hazardous secondary material generator and the remanufacturer must:

(a) Notify the department and update the notification every two years per section 33.1-24-01-18;

(b) Develop and maintain an up-to-date remanufacturing plan which identifies:

[1] The name, address, and identification number of the generator or generators and the remanufacturer or remanufacturers;

[2] The types and estimated annual volumes of spent solvents to be remanufactured;

[3] The processes and industry sectors that generate the spent solvents;

[4] The specific uses and industry sectors for the remanufactured solvents; and

[5] Certification from the remanufacturer stating "On behalf of [insert remanufacturer facility name], I certify that this facility is a remanufacturer under pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510), and will accept the spent solvent or solvents for the sole purpose of remanufacturing into commercial-grade solvent or solvents that will be used for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions), or for the use as product ingredient or ingredients. I also certify that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls in compliance with the appropriate Clean Air Act regulations under 40 CFR Part 60, Part 61 or Part 63, or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, are in compliance with the appropriate standards in sections 33.1-24-02-170 through 33.1-24-02-179 (vents), sections 33.1-24-02-180 through 33.1-24-02-199 (equipment), and sections 33.1-24-02-200 through 33.1-24-02-214 (tank storage)";

(c) Maintain records of shipments and confirmations of receipts for a period of three years from the dates of the shipments;

(d) Prior to remanufacturing, store the hazardous spent solvents in tanks or containers that meet technical standards found in sections 33.1-24-02-50 through 33.1-24-02-59 and sections 33.1-24-02-60 through 33.1-24-02-74, with the tanks and containers being labeled or otherwise having an immediately available record of material being stored;

(e) During remanufacturing, and during storage of the hazardous secondary materials prior to remanufacturing, the remanufacturer certifies that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls in compliance with the appropriate Clean Air Act regulations under 40 CFR parts 60, 61, or 63; or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, are in compliance with the appropriate standards in sections 33.1-24-02-170 through 33.1-24-02-179 (vents), sections 33.1-24-02-180 through 33.1-24-02-199 (equipment), and sections 33.1-24-02-200 through 33.1-24-02-214 (tank storage); and

(f) Meet the requirements prohibiting speculative accumulation per subdivision h of subsection 3 of section 33-24-02-01.

2. **Solid wastes that are not hazardous wastes.** The following solid wastes are not hazardous wastes:

a. Household waste, including household waste that has been collected, transported, stored, treated, disposed, recovered, for example, refuse-derived fuel, or reused.

"Household waste" means any waste material (including garbage, trash, and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels, and motels), bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas). A resource recovery facility managing municipal solid waste may not be deemed to be treating, storing, disposing of, or otherwise managing hazardous wastes for the purpose of regulation under this article, if such facility:

(1) Receives and burns only:

(a) Household waste (from single and multiple dwellings, hotels, motels, and other residential sources); and

(b) Solid waste from commercial or industrial sources that does not contain hazardous waste; and

(2) Such facility does not accept hazardous wastes and the owner or operator of such facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in such facility.

b. Solid wastes generated by any of the following and which are returned to the soils as fertilizers:

(1) The growing and harvesting of agricultural crops.

(2) The raising of animals, including animal manures.

c. Mining overburden returned to the minesite.

d. Wastes generated primarily from the combustion or processes that support the combustion of coal or other fossil fuels:

(1) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels, except as provided by section 33.1-24-05-537 for facilities that burn or process hazardous waste.

(2) The following wastes generated primarily from processes that support the combustion of coal or other fossil fuels that are codisposed with the wastes in paragraph 1, except as provided by section 33.1-24-05-537 for facilities that burn or process hazardous waste:

(a) Coal pile runoff. For purposes of this subdivision, coal pile runoff means any precipitation that drains off coal piles.

(b) Boiler cleaning solutions. For purposes of this subdivision, boiler cleaning solutions means water solutions and chemical solutions used to clean the fire-side and water-side of the boiler.

(c) Boiler blowdown. For purposes of this subdivision, boiler blowdown means water purged from boilers used to generate steam.

(d) Process water treatment and demineralizer regeneration wastes. For purposes of this subdivision, process water treatment and demineralizer regeneration wastes means sludges, rinses, and spent resins generated from processes to

remove dissolved gases, suspended solids, and dissolved chemical salts from combustion system process water.

(e) Cooling tower blowdown. For purposes of this subdivision, cooling tower blowdown means water purged from a closed-cycle cooling system. Closed-cycle cooling systems include cooling towers, cooling ponds, or spray canals.

(f) Air heater and precipitator washes. For purposes of this subdivision, air heater and precipitator washes means wastes from cleaning air preheaters and electrostatic precipitators.

(g) Effluents from floor and yard drains and sumps. For purposes of this subdivision, effluents from floor and yard drains and sumps means wastewaters, such as wash water, collected by or from floor drains, equipment drains, and sumps located inside the power plant building; and wastewaters, such as rain runoff, collected by yard drains and sumps located outside the power plant building.

(h) Wastewater treatment sludges. For purposes of this subdivision, wastewater treatment sludges refers to sludges generated from the treatment of wastewaters specified in subparagraphs a through f.

e. Drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas, or geothermal energy.

f. The following chromium-containing wastes:

(1) Wastes that fail the test for the toxicity characteristic because chromium is present or are listed in this chapter due to the presence of chromium, which do not fail the test for toxicity characteristic for any other constituent or are not listed due to the presence of any other constituent, and which do not fail the test for any other characteristic, if it is shown by a waste generator or by waste generators that:

(a) The chromium in the waste is exclusively (or nearly exclusively) trivalent chromium;

(b) The waste is generated from an industrial process which uses trivalent chromium exclusively (or nearly exclusively) and the process does not generate hexavalent chromium; and

(c) The waste is typically and frequently managed in nonoxidizing environments.

(2) Specific wastes which meet the standard of paragraph 1 (so long as they do not fail the test for the toxicity characteristic for any other constituent, and do not exhibit any other characteristic) are:

(a) Chrome (blue) trimmings, chrome (blue) shavings, sewer screenings, and wastewater treatment sludges, generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.

(b) Buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; and through-the-blue.

- (c) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; and through-the-blue.
 - (d) Waste scrap leather from the leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries.
 - (e) Wastewater treatment sludges from the production of TiO₂ pigment using chromium-bearing ores by the chloride process.
- g. Solid waste from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock, and overburden from the mining of uranium ore), except as provided by section 33.1-24-05-537 for facilities that burn or process hazardous waste.
 - (1) For purposes of this subdivision, beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water or carbon dioxide, or both; roasting, autoclaving, or chlorination, or a combination thereof, in preparation for leaching (except when the roasting, autoclaving, or chlorination or a combination thereof, and leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching.
 - (2) For the purposes of this subdivision, solid waste from the processing of ores and minerals includes only the following wastes as generated:
 - (a) Slag from primary copper processing;
 - (b) Slag from primary lead processing;
 - (c) Red and brown muds from bauxite refining;
 - (d) Phosphogypsum from phosphoric acid production;
 - (e) Slag from elemental phosphorous production;
 - (f) Gasifier ash from coal gasification;
 - (g) Process wastewater from coal gasification;
 - (h) Calcium sulfate wastewater treatment plant sludge from primary copper processing;
 - (i) Slag tailings from primary copper processing;
 - (j) Fluorogypsum from hydrofluoric acid production;
 - (k) Process wastewater from hydrofluoric acid production;
 - (l) Air pollution control dust or sludge from iron blast furnaces;
 - (m) Iron blast furnace slag;
 - (n) Treated residue from roasting or leaching of chrome ore;

- I. Used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air-conditioning systems, mobile refrigeration, and commercial and industrial air-conditioning and refrigeration systems that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use.

- m. Nonterne plated used oil filters that are not mixed with waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 if these oil filters have been gravity hot-drained using one of the following methods:
 - (1) Puncturing the filter antidrain back valve or the filter dome end and hot-draining;
 - (2) Hot-draining and crushing;
 - (3) Dismantling and hot-draining; or
 - (4) Any other equivalent hot-draining method that will remove used oil.

- n. Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.

- o. Leachate or gas condensate collected from landfills where certain solid wastes have been disposed, provided that:
 - (1) The solid wastes disposed would meet one or more of the listing descriptions for hazardous wastes codes K169, K170, K171, K172, K174, K175, K176, K177, K178, and K181 if these wastes had been generated after the effective date of the listing;
 - (2) The solid wastes described in paragraph 1 were disposed prior to the effective date of the listing;
 - (3) The leachate or gas condensate do not exhibit any characteristic of hazardous waste nor are derived from any other listed hazardous waste;
 - (4) Discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a publicly owned treatment works by truck, rail, or dedicated pipe, is subject to regulation under sections 307(b) or 402 of the Clean Water Act.
 - (5) As of February 13, 2001, leachate or gas condensate derived from K169 through K172 is no longer exempt if it is stored or managed in a surface impoundment prior to discharge. As of November 21, 2003, leachate or gas condensate derived from K176, K177, and K178 is no longer exempt if it is stored or managed in a surface impoundment prior to discharge. After February 26, 2007, leachate or gas condensate derived from K181 will no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation (for example, shutdown of wastewater treatment system), provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed in compliance with the conditions of this paragraph after the emergency ends.

- p. Solvent-contaminated wipes, except for wipes that are hazardous waste due to the presence of trichloroethylene, that are sent for disposal are not hazardous wastes from the point of generation, provided that:

(1) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in nonleaking, closed containers that are labeled "excluded solvent-contaminated wipes". The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

(2) The solvent-contaminated wipes may be accumulated by the generator for up to one hundred eighty days from the start date of accumulation for each container prior to being sent for disposal;

(3) At the point of being transported for disposal, the solvent-contaminated wipes must contain no free liquids as defined in section 33.1-24-01-04;

(4) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in chapters 33.1-24-01 through 33.1-24-04 and 33.1-24-06, sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-700 through 33.1-24-05-929, and 33.1-24-05-950 through 33.1-24-05-1149;

(5) Generators must maintain at the facility the following documentation:

(a) Name and address of the landfill or combustor that is receiving the solvent-contaminated wipes;

(b) Documentation that the one hundred eighty-day accumulation time limit in paragraph 2 of subdivision p of subsection 2 of section 33.1-24-02-04 is being met; and

(c) Description of the process the generator is using to ensure solvent-contaminated wipes contain no free liquids at the point of being transported for disposal;

(6) The solvent-contaminated wipes are sent for disposal:

(a) To a municipal solid waste landfill regulated under article 33.1-20, including chapter 33.1-20-06.1, or to a hazardous waste landfill regulated under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, or subsection 5 of section 33.1-24-06-16; or

(b) To a municipal waste combustor or other combustion facility regulated under section 129 of the Clean Air Act or to a hazardous waste combustor, boiler, or industrial furnace regulated under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-05-525 through 33.1-24-05-549.

3. **Hazardous wastes that are exempted from certain regulations.** A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit or an associated non-waste-treatment-manufacturing unit is not subject to regulation under chapters 33.1-24-03 through 33.1-24-07 or to the notification requirements until it exits the unit in which

it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than ninety days after the unit ceases to be operated for manufacturing, or for storage or transportation of product or raw materials.

4. Samples.

a. Except as provided in subdivision b, a sample of solid waste or a sample of water, soil, or air, which is collected for the sole purpose of testing to determine its characteristics or composition, is not subject to any requirements of this chapter or chapters 33.1-24-03 through 33.1-24-07 or to the notification requirements when:

- (1) The sample is being transported to a laboratory for the purpose of testing;
- (2) The sample is being transported back to the sample collector after testing;
- (3) The sample is being stored by the sample collector before transport to a laboratory for testing;
- (4) The sample is being stored in a laboratory before testing;
- (5) The sample is being stored in a laboratory after testing but before it is returned to the sample collector; or
- (6) The sample is being stored temporarily in the laboratory after testing for a specific purpose, e.g., until conclusion of a court case or enforcement action if further testing of the sample may be necessary.

b. In order to qualify for the exemption in paragraphs 1 and 2 of subdivision a, a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector must:

- (1) Comply with the United States department of transportation, the United States postal service, or any other applicable shipping requirement; or
- (2) Comply with the following requirements if the sample collector determines that the United States department of transportation, the United States postal service, or other shipping requirements do not apply to the shipment of the sample:

(a) Assure that the following information accompanies the sample:

- [1] The sample collector's name, mailing address, and telephone number;
- [2] The laboratory's name, mailing address, and telephone number;
- [3] The quantity of the sample;
- [4] The date of shipment; and
- [5] A description of the sample.

(b) Package the sample so that it does not leak, spill, or vaporize from its packaging.

c. This exemption does not apply if the laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in subdivision a.

5. Treatability study samples.

a. Except as provided in subdivision b, persons who generate or collect samples for the purpose of conducting treatability studies as defined in section 33.1-24-01-04 are not subject to any requirement of chapters 33.1-24-02 through 33.1-24-04 or to the notification requirements, nor are such samples included in the quantity determination of section 33.1-24-02-05 and subsection 4 of section 33.1-24-03-12 when:

- (1) The sample is being collected and prepared for transportation by the generator or sample collectors;
- (2) The sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or
- (3) The sample is being transported to the laboratory or testing facility for the purpose of conducting a treatability study.

b. The exemption in subdivision a is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies provided that:

(1) The generator or sample collector uses, in "treatability studies", no more than ten thousand kilograms of media contaminated with nonacute hazardous waste, one thousand kilograms of nonacute hazardous waste other than contaminated media, one kilogram of acute hazardous waste, twenty-five hundred kilograms of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream.

(2) The mass of each sample shipment does not exceed ten thousand kilograms; the ten thousand kilogram quantity may be all media contaminated with nonacute hazardous waste, or may include twenty-five hundred kilograms of media contaminated with acute hazardous waste, one thousand kilograms of hazardous waste, and one kilogram of acute hazardous waste.

(3) The sample must be packaged so that it will not leak, spill, or vaporize from its packaging during shipment and the requirements of subparagraph a or b are met.

(a) The transportation of each sample shipment complies with United States department of transportation, United States postal service, or any other applicable shipping requirements; or

(b) If the United States department of transportation, United States postal service, or other shipping requirements do not apply to the shipment of the sample, the following information must accompany the sample:

[1] The name, mailing address, and telephone number of the originator of the samples;

[2] The name, address, and telephone number of the facility that will perform the treatability study;

[3] The quantity of the sample;

[4] The date of shipment; and

[5] A description of the sample, including its hazardous waste number.

(4) The sample is shipped to a laboratory or testing facility which is exempt under subsection 6 of section 33.1-23-02-04 or has an appropriate hazardous waste permit or interim status.

(5) The generator or sample collector maintains the following records for a period ending three years after completion of the treatability study:

(a) Copies of the shipping document;

(b) A copy of the contract with the facility conducting the treatability study;

(c) Documentation showing:

[1] The amount of waste shipped under this exemption;

[2] The name, address, and identification number of the laboratory or testing facility that received the waste;

[3] The date the shipment was made; and

[4] Whether unused samples and residues were returned to the generator.

(6) The generator reports the information required under subparagraph c of paragraph 5 in its biennial report.

c. The department may grant requests, on a case-by-case basis, for up to an additional two years for treatability studies involving bioremediation. The department may grant requests on a case-by-case basis for quantity limits in excess of those specified in paragraphs 1 and 2 of subdivision b and subdivision d of subsection 6, for up to an additional five thousand kilograms of media contaminated with nonacute hazardous waste, five hundred kilograms of nonacute hazardous waste, twenty-five hundred kilograms of media contaminated with acute hazardous waste, and one kilogram of acute hazardous waste:

(1) In response to requests for authorization to ship, store, and conduct treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process, for example, batch versus continuous, size of the unit undergoing testing, particularly in relation to scale-up considerations, the time and quantity of material required to reach steady state operating conditions, or test design considerations such as mass balance calculations.

(2) In response to requests for authorization to ship, store, and conduct treatability studies on additional quantities after initiation or completion of initial treatability studies, when there has been an equipment or mechanical failure during the conduct of the treatability study; there is a need to verify the results of a previous study; there is a need to study and analyze alternative techniques within a previously evaluated process; or there is a need to do further evaluation of an ongoing treatability study to determine final specifications for treatment.

(3) The additional quantities and timeframes allowed in paragraphs 1 and 2 are subject to all the provisions in subdivision a and paragraphs 3 through 6 of subdivision b. The generator or sample collector must apply to the department and provide in writing the following information:

(a) The reason why the generator or sample collector requires additional time or quantity of sample for treatability study evaluation and the additional time or quantity needed;

(b) Documentation accounting for all samples of hazardous waste from the waste stream which have been sent for or undergone treatability studies, including

the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results on each treatability study;

(c) A description of the technical modifications or change in specifications which will be evaluated and the expected results;

(d) If such further study is being required due to equipment of mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and

(e) Such other information that the department considers necessary.

6. Samples undergoing treatability studies at laboratories and testing facilities. Samples undergoing treatability studies and the laboratory or testing facility conducting such treatability studies, to the extent such facilities are not otherwise subject to hazardous waste requirements, are not subject to any requirements of this article, or to the notification requirements provided that the conditions of subdivisions a through k are met. A mobile treatment unit may qualify as a testing facility subject to subdivisions a through k. Where a group of mobile treatment units are located at the same site, the limitations specified in subdivisions a through k apply to the entire group of mobile treatment units collectively as if the group were one mobile treatment unit.

a. No less than forty-five days before conducting treatability studies, the facility notifies the department in writing that it intends to conduct treatability studies under this subsection.

b. The laboratory or testing facility conducting the treatability study has an identification number.

c. No more than a total of ten thousand kilograms of "as received" media contaminated with nonacute hazardous waste, twenty-five hundred kilograms of media contaminated with acute hazardous waste, or two hundred fifty kilograms of other "as received" hazardous waste is subject to initiation of treatment in all treatability studies in any single day. "As received" wastes refers to the waste as received in the shipment from the generator or sample collector.

d. The quantity of "as received" hazardous waste stored at the facility for the purpose of evaluation in treatability studies does not exceed ten thousand kilograms, the total of which can include ten thousand kilograms of media contaminated with nonacute hazardous waste, twenty-five hundred kilograms of media contaminated with acute hazardous waste, one thousand kilograms of nonacute hazardous waste other than contaminated media, and one kilogram of acute hazardous waste. This quantity limitation does not include treatment materials, including nonhazardous solid waste, added to "as received" hazardous waste.

e. No more than ninety days have elapsed since the treatability study for the sample was completed, or no more than one year, two years for treatability studies involving bioremediation, have elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date occurs first. Up to five hundred kilograms of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial receipt. Quantities of materials archived are counted against the total storage limit for the facility.

- f. The treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste.
- g. The facility maintains records for three years following completion of each study that shows compliance with the treatment rate limits and the storage time and quantity limits. The following specific information must be included for each treatability study conducted:
 - (1) The name, address, and identification number of the generator or sample collector of each waste sampled;
 - (2) The date the shipment was received;
 - (3) The quantity of waste accepted;
 - (4) The quantity of "as received" waste in storage each day;
 - (5) The date the treatment study was initiated and the amount of "as received" waste introduced to treatment each day;
 - (6) The date the treatability study was concluded; and
 - (7) The date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the identification number.
- h. The facility keeps, onsite, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three years from the completion date of each treatability study.
- i. The facility prepares and submits a report to the department by March fifteenth of each year that includes the following information for the previous calendar year:
 - (1) The name, address, and identification number of the facility conducting the treatability study;
 - (2) The types, by process, of treatability studies conducted;
 - (3) The names and addresses of persons for whom studies have been conducted, including their identification numbers;
 - (4) The total quantity of waste in storage each day;
 - (5) The quantity and type of waste subjected to treatability studies;
 - (6) When each treatability study was conducted; and
 - (7) The final disposition of residues and unused samples from each treatability study.
- j. The facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under section 33.1-24-02-03 and, if so, are subject to chapters 33.1-24-02 through 33.1-24-06, unless the residues and unused samples are returned to the sample originator under the subsection 5 of section 33.1-24-02-04 exemption.
- k. The facility notifies the department by letter when the facility is no longer planning to conduct any treatability studies at the site.

7. Polychlorinated biphenyl wastes regulated under Toxic Substance Control Act. The disposal of polychlorinated biphenyl-containing dielectric fluid and electric equipment

containing such fluid authorized for use and regulated under 40 CFR 761 and that are hazardous only because they fail the test for the toxicity characteristic (hazardous waste codes D018 through D043 only) are exempt from regulation under this article, and the notification requirements.

8. Dredged material that is not a hazardous waste. Dredged material that is subject to the requirements of a permit that has been issued under section 404 of the Federal Water Pollution Control Act [33 U.S.C. 1344] or section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 [33 U.S.C. 1413] is not a hazardous waste. For this subsection, the following definitions apply:

a. The term dredged material has the same meaning as defined in 40 CFR 232.2.

b. The term permit means:

(1) A permit issued by the United States army corps of engineers (corps) or an approved state under section 404 of the Federal Water Pollution Control Act [33 U.S.C. 1344];

(2) A permit issued by the corps under section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 [33 U.S.C. 1413]; or

(3) In the case of corps civil work projects, the administrative equivalent of the permits referred to in paragraphs 1 and 2, as provided for in corps regulations (for example, see 33 CFR 336.1, 336.2, and 337.6).

9. Carbon dioxide stream injected for geologic sequestration. Carbon dioxide streams that are captured and transported for purposes of injection into an underground injection well subject to the requirements for class VI underground injection control wells, including the requirements in 40 CFR parts 144 and 146 of the underground injection control program of the Safe Drinking Water Act, are not a hazardous waste, provided the following conditions are met:

a. Transportation of the carbon dioxide stream must be in compliance with United States department of transportation requirements, including the pipeline safety laws [49 United States code 60101 et seq.] and regulations [49 CFR parts 190-199] of the United States department of transportation, and pipeline safety regulations adopted and administered by a state authority pursuant to a certification under 49 United States code 60105, as applicable;

b. Injection of the carbon dioxide stream must be in compliance with the applicable requirements for class VI underground injection control wells, including the applicable requirements in 40 CFR parts 144 and 146;

c. No hazardous wastes shall be mixed with, or otherwise coinjected with, the carbon dioxide stream; and

d. Certification statements:

(1) Any generator of a carbon dioxide stream, who claims that a carbon dioxide stream is excluded under this subsection, must have an authorized representative (as defined in section 33.1-24-01-04) sign a certification statement worded as follows: I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under subsection 9 of section 33.1-24-02-04 has not been mixed with hazardous wastes, and I have transported the carbon dioxide stream in compliance with (or have contracted with a pipeline operator or transporter to transport the carbon dioxide stream in compliance with) department of transportation

requirements, including the pipeline safety laws [49 United States code 60101 et seq.] and regulations [49 CFR parts 190-199] of the United States department of transportation, and the pipeline safety regulations adopted and administered by a state authority pursuant to a certification under 49 United States code 60105, as applicable, for injection into a well subject to the requirements for the class VI underground injection control program of the Safe Drinking Water Act.

- (2) Any class VI underground injection control well owner or operator, who claims that a carbon dioxide stream is excluded under this subsection, must have an authorized representative (as defined in section 33.1-24-01-04) sign a certification statement worded as follows: I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under subsection 9 of section 33.1-24-02-04 has not been mixed with, or otherwise coinjected with, hazardous waste at the underground injection control class VI permitted facility, and that injection of the carbon dioxide stream is in compliance with the applicable requirements for underground injection class VI wells, including the applicable requirements in 40 CFR parts 144 and 146.
- (3) The signed certification statement must be kept onsite for no less than three years, and must be made available within seventy-two hours of a written request from the administrator, regional administrator, or the department, or their designee. The signed certification statement must be renewed every year that the exclusion is claimed, by having an authorized representative (as defined in section 33.1-24-01-04) annually prepare and sign a new copy of the certification statement within one year of the date of the previous statement. The signed certification statement must also be readily accessible on the facility's publicly available website (if such website exists) as a public notification with the title of "carbon dioxide stream certification" at the time the exclusion is claimed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-16; S.L. 2017, ch. 199, § 19

33.1-24-02-05. Special requirements for hazardous waste generated by conditionally exempt small quantity generators.

1. A generator is a conditionally exempt small quantity generator in a calendar month if the generator generates no more than one hundred kilograms of hazardous waste in that month.
2. Except for those wastes identified in subsections 5, 6, 7, and 10, a conditionally exempt small quantity generator's hazardous wastes are not subject to regulation under chapters 33.1-24-03 through 33.1-24-07, and the notification requirements, provided the generator complies with the requirements of subsections 6, 7, and 10.
3. When making the quantity determinations, the generator must include all hazardous waste that it generates, except hazardous waste that:

 - a. Is exempt from regulation under subsections 3 through 7 of section 33.1-24-02-04, subdivision c of subsection 1 of section 33.1-24-02-06, or subsection 1 of section 33.1-24-02-07;
 - b. Is managed immediately upon generation only in onsite elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities as defined in section 33.1-24-01-04;
 - c. Is recycled, without prior storage or accumulation, only in an onsite process subject to regulation under subdivision b of subsection 3 of section 33.1-24-02-06;

- d. Is used oil managed under the requirements of subdivision d of subsection 1 of section 33.1-24-02-06 and sections 33.1-24-05-600 through 33.1-24-05-689;
- e. Is spent lead-acid batteries managed under sections 33.1-24-05-235 through 33.1-24-05-249;
- f. Is universal waste managed under subsection 5 of section 33.1-24-02-06 and sections 33.1-24-05-700 through 33.1-24-05-799; or
- g. Is a hazardous waste that is an unused commercial chemical product (listed in sections 33.1-24-02-15 through 33.1-24-02-19, or exhibiting one or more characteristics in sections 33.1-24-02-10 through 33.1-24-02-14) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic entity pursuant to section 33.1-24-03-74. For purposes of this subdivision, the term eligible academic entity shall have the meaning as defined in section 33.1-24-03-61.

4. In determining the quantity of hazardous waste generated, a generator need not include:

- a. Hazardous waste when it is removed from onsite storage;
- b. Hazardous waste produced by onsite treatment, including reclamation, of their hazardous waste, so long as the hazardous waste that is treated was counted once; or
- c. Spent materials that are generated, reclaimed, and subsequently reused onsite, so long as such spent materials have been counted once.

5. If a generator generates acute hazardous waste in a calendar month in quantities greater than set forth below, all quantities of that acute hazardous waste are subject to full regulation under chapters 33.1-24-03 through 33.1-24-07, and the notification requirements.

- a. A total of one kilogram of acute hazardous waste listed in section 33.1-24-02-16, or subsection 5 of section 33.1-24-02-18.
- b. A total of one hundred kilograms of any residue or contaminated soil, waste, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in section 33.1-24-02-16, or subsection 5 of section 33.1-24-02-18. [Comment: "Full regulation" means those regulations applicable to generators of one thousand kilograms or greater of hazardous waste in a calendar month.]

6. In order for acute hazardous wastes generated by a generator of acute hazardous wastes in quantities equal to or less than set forth in subdivisions a or b of subsection 5 to be excluded from full regulation under this section, the generator shall comply with the following requirements:

- a. Section 33.1-24-03-02;
- b. The generator may accumulate acute hazardous waste onsite. If the generator accumulates at any time acute hazardous waste in quantities greater than those set forth in subdivision a or b of subsection 5, all of those accumulated wastes are subject to regulation under chapters 33.1-24-03 through 33.1-24-07 and the applicable notification requirements. The time period of subsection 1 of section 33.1-24-03-12, for accumulation of wastes onsite, begins when the accumulated wastes exceed the applicable exclusion limit;

c. A conditionally exempt small quantity generator may either treat or dispose of the generator's acute hazardous waste in an onsite facility or ensure delivery to an offsite storage, treatment, or disposal facility, either of which, if located in the United States, is:

(1) Permitted under chapter 33.1-24-06;

(2) In interim status under North Dakota Century Code section 23.1-04-08;

(3) Authorized to manage hazardous waste by a state;

(4) Permitted, licensed, or registered by a state to manage municipal solid waste, and if managed in a municipal solid waste landfill subject to article 33.1-20 or other regulation equivalent to 40 CFR part 258;

(5) Permitted, licensed, or registered by a state to manage nonmunicipal nonhazardous waste and, if managed in a nonmunicipal nonhazardous waste landfill after January 1, 1998, is subject to article 33.1-20 or other regulation equivalent to sections 5 through 30 of 40 CFR part 257;

(6) A facility which:

(a) Beneficially uses or reuses, or legitimately recycles or reclaims its waste; or

(b) Treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation; or

(7) For universal waste managed under sections 33.1-24-05-700 through 33.1-24-05-799, a universal waste handler or destination facility subject to the requirements of sections 33.1-24-05-700 through 33.1-24-05-799.

[NOTE: Although provisions of this subsection exclude certain generators from full regulation under this section, all applicable provisions of article 33.1-20, North Dakota solid waste management rules apply.]

7. In order for hazardous waste generated by a conditionally exempt small quantity generator in quantities of one hundred kilograms or less of hazardous waste during a calendar month to be excluded from full regulation under this section, the generator shall comply with the following requirements:

a. Section 33.1-24-03-02;

b. The conditionally exempt small quantity generator may accumulate hazardous waste onsite. If the generator accumulates at any time one thousand kilograms or greater of the generator's hazardous waste, all of those accumulated wastes are subject to regulation under special provisions of chapter 33.1-24-03 applicable to generators of greater than one hundred kilograms and less than one thousand kilograms of hazardous waste in a calendar month as well as the requirements of chapters 33.1-24-03 through 33.1-24-07 and the applicable notification requirements. The time period of subsection 4 of section 33.1-24-03-12 for accumulation of wastes onsite begins for a conditionally exempt small quantity generator when the accumulated wastes equal or exceed one thousand kilograms;

c. A conditionally exempt small quantity generator may either treat or dispose of the generator's hazardous waste in an onsite facility, or ensure delivery to an offsite storage, treatment, or disposal facility, either of which, if located in the United States, is:

(1) Permitted under chapter 33.1-24-06;

- (2) In interim status under North Dakota Century Code section 23.1-04-08;
- (3) Authorized to manage hazardous waste by a state;
- (4) Permitted, licensed, or registered by a state to manage municipal solid waste and, if managed in a municipal solid waste landfill subject to article 33.1-20 or other regulation equivalent to 40 CFR part 258;
- (5) Permitted, licensed, or registered by a state to manage nonmunicipal nonhazardous waste and, if managed in a nonmunicipal nonhazardous waste disposal unit after January 1, 1998, is subject to article 33.1-20 or other regulation equivalent to sections 5 through 30 of 40 CFR part 257;
- (6) A facility which:
 - (a) Beneficially uses or reuses, or legitimately recycles or reclaims its waste; or
 - (b) Treats its waste prior to beneficial use or reuse, or legitimate recycling or reclamation; or
- (7) For universal waste managed under sections 33.1-24-05-700 through 33.1-24-05-799, a universal waste handler or destination facility subject to the requirements of sections 33.1-24-05-700 through 33.1-24-05-799.

[NOTE: Although provisions of this subsection exclude certain generators from full regulation under this section, all applicable provisions of article 33.1-20, North Dakota solid waste management rules apply.]

8. Hazardous waste subject to the reduced requirements of this section may be mixed with nonhazardous waste and remain subject to these reduced requirements even though the resultant mixture exceeds the quantity limitations identified in this section, unless the mixture meets any of the characteristics of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14.
9. If any person mixes a solid waste with a hazardous waste that exceeds the quantity exclusion level of this section, the mixture is subject to full regulation.
10. If a conditionally exempt small quantity generator's wastes are mixed with used oil, the mixture is subject to sections 33.1-24-05-600 through 33.1-24-05-689. Any material produced from such a mixture by processing, blending, or other treatment is also so regulated.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-06. Requirements for recyclable materials and universal waste.

1. The following requirements for recyclable materials are:
 - a. Hazardous wastes that are recycled are subject to the requirements for generators, transporters, and storage facilities of subsections 2 and 3, except for the materials listed in subdivisions b and c. Hazardous wastes that are recycled will be known as "recyclable materials".
 - b. The following recyclable materials are not subject to the requirements of this section but are regulated under sections 33.1-24-05-201 through 33.1-24-05-209, 33.1-24-05-230 through 33.1-24-05-249, 33.1-24-05-525 through 33.1-24-05-549, 33.1-24-05-820

through 33.1-24-05-929 and all applicable provisions in sections 33.1-24-05-250 through 33.1-24-05-299 and chapters 33.1-24-06 and 33.1-24-07:

- (1) Recyclable materials used in a manner constituting disposal (sections 33.1-24-05-201 through 33.1-24-05-209).
- (2) Hazardous wastes burned (as defined in subsection 1 of section 33.1-24-05-525) in boilers and industrial furnaces that are not regulated under sections 33.1-24-05-144 through 33.1-24-05-151 (sections 33.1-24-05-525 through 33.1-24-05-549).
- (3) Recyclable materials from which precious metals are reclaimed (sections 33.1-24-05-230 through 33.1-4-05-234).
- (4) Spent lead-acid batteries that are being reclaimed (sections 33.1-24-05-235 through 33.1-24-05-249).

c. The following recyclable materials are not subject to regulation under chapters 33.1-24-03 through 33.1-24-07 and are not subject to notification requirements:

- (1) Industrial ethyl alcohol that is reclaimed except that, unless provided otherwise in an international agreement as specified in section 33.1-24-03-25:
 - (a) A person initiating a shipment for reclamation in a foreign country, and any intermediary arranging for the shipment, must comply with the requirements applicable to a primary exporter in section 33.1-24-03-20, subdivisions a through d and f of subsection 1 and subsection 2 of section 33.1-24-03-23, and section 33.1-24-03-24, export such materials only upon consent of the receiving country and in conformance with the environmental protection agency acknowledgment of consent as defined in sections 33.1-24-03-17 through 33.1-24-03-25, and provide a copy of the environmental protection agency acknowledgment of consent to the shipment to the transporter transporting the shipment for export.
 - (b) Transporters transporting a shipment for export may not accept a shipment if the transporter knows the shipment does not conform to the environmental protection agency acknowledgment of consent, shall ensure that a copy of the environmental protection agency acknowledgment of consent accompanies the shipment, and shall ensure that it is delivered to the facility designated by the person initiating the shipment.

(2) Scrap metal that is not excluded under subdivision m of subsection 1 of section 33.1-24-02-04.

(3) Fuels produced from the refining of oil-bearing hazardous wastes along with normal process streams at a petroleum refining facility, if such wastes result from normal petroleum refining, production, and transportation practices (this exemption does not apply to fuels produced from oil recovered from oil-bearing hazardous waste, when such recovered oil is already excluded under subdivision l of subsection 1 of section 33.1-24-02-04).

(4) Subdivision c also applies to the following:

- (a) Hazardous waste fuel produced from oil-bearing hazardous wastes from petroleum refining, production, or transportation practices, or produced from oil reclaimed from such hazardous wastes, when such hazardous wastes are reintroduced into a process that does not use distillation or does not produce products from crude oil so long as the resulting fuel meets the used oil

specification under section 33.1-24-05-611 and so long as no other hazardous wastes are used to produce the hazardous waste fuel;

(b) Hazardous waste fuel produced from oil-bearing hazardous waste from petroleum refining, production, and transportation practices, when such hazardous wastes are reintroduced into a refining process after a point in which contaminants are removed, so long as the fuel meets the used oil fuel specification under section 33.1-24-05-611; and

(c) Oil reclaimed from oil-bearing hazardous wastes from petroleum refining, production, and transportation practices, which reclaimed oil is burned as a fuel without reintroduction to a refining process, so long as the reclaimed oil meets the used oil fuel specification under section 33.1-24-05-611.

d. Used oil that is recycled and is also a hazardous waste solely because it exhibits a hazardous characteristic is not subject to the requirements of chapters 33.1-24-01 through 33.1-24-04, and sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-1149, and subsection 5 of section 33.1-24-06-16, but is regulated under sections 33.1-24-05-600 through 33.1-24-05-689. Used oil that is recycled includes any used oil which is reused, following its original use, for any purpose (including the purpose for which the oil was originally used). Such term includes oil which is re-refined, reclaimed, burned for energy recovery, or reprocessed.

e. Hazardous waste that is exported to or imported from designated member countries of the organization for economic cooperation and development (as defined in subdivision a of subsection 1 of section 33.1-24-03-25) for purpose of recovery is subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59, if it is subject to either the manifesting requirements of chapter 33.1-24-03 or to the universal waste requirements of sections 33.1-24-05-700 through 33.1-24-05-799.

2. Generators and transporters of recyclable materials are subject to the applicable requirements of chapters 33.1-24-03 and 33.1-24-04 and the notification requirements, except as provided in subsection 1.

3. Owners or operators of facilities that:

a. Store recyclable materials before they are recycled are regulated under all applicable provisions of sections 33.1-24-05-01 through 33.1-24-05-143, sections 33.1-24-05-191 through 33.1-24-05-299, sections 33.1-24-05-400 through 33.1-24-05-474, 33.1-24-05-525 through 33.1-24-05-549, sections 33.1-24-05-820 through 33.1-24-05-1149, and chapters 33.1-24-06 and 33.1-24-07 and the notification requirements, under section 33.1-24-03-03, except as provided in subsection 1. The recycling process itself is exempt from regulation except as provided in subsection 4 of section 33.1-24-02-06.

b. Recycle recyclable materials without storing them before they are recycled are subject to the following requirements, except as provided in subsection 1:

(1) Notification requirements;

(2) Sections 33.1-24-05-38 and 33.1-24-05-39 (dealing with the use of the manifest and manifest discrepancies); and

(3) Subsection 4 of section 33.1-24-02-06.

4. Owners or operators of facilities subject to the hazardous waste permitting requirements with hazardous waste management units that recycle hazardous wastes are subject to the

requirements of sections 33.1-24-05-400 through 33.1-24-05-449, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-05-950 through 33.1-24-05-1149.

5. The wastes listed in this subsection are exempt from regulation under chapters 33.1-24-03 through 33.1-24-06 except as specified in sections 33.1-24-05-700 through 33.1-24-05-799 and, therefore are not fully regulated as hazardous waste. The wastes listed in this subsection are subject to regulation under sections 33.1-24-05-700 through 33.1-24-05-799:

- a. Batteries as described in section 33.1-24-05-702;
- b. Pesticides as described in section 33.1-24-05-703;
- c. Mercury-containing equipment as described in section 33.1-24-05-704; and
- d. Lamps as described in section 33.1-24-05-705.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-07. Residues of hazardous wastes in empty containers.

1. Any hazardous waste remaining in either an empty container or an inner liner removed from an empty container, as defined in subsections 3, 4, and 5, is not subject to regulation under chapters 33.1-24-02 through 33.1-24-07 or to the notification requirements of section 33.1-24-03-03.

2. Any hazardous waste in either a container that is not empty or an inner liner removed from a container that is not empty, as defined in subsections 3, 4, and 5, is subject to regulation under chapters 33.1-24-02 through 33.1-24-07 and to the notification requirements of section 33.1-24-03-03.

3. A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as an acute hazardous waste listed in section 33.1-24-02-16, or subsection 5 of section 33.1-24-02-18, is empty if:

- a. All wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, for example, pouring, pumping, and aspirating; and
- b. One of the following:

(1) No more than two and one-half centimeters [1 inch] of residue remain on the bottom of the container or inner liner;

(2) No more than three percent by weight of the total capacity of the container remains in the container or inner liner if the container is less than or equal to one hundred nineteen gallons in size; or

(3) No more than three-tenths of one percent by weight of the total capacity of the container remains in the container or inner liner if the container is greater than one hundred nineteen gallons in size.

4. A container that has held a hazardous waste that is a compressed gas is empty when the pressure in the container approaches atmospheric.

5. A container or an inner liner removed from a container that has held an acute hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 is empty if:

- a. The container or inner liner has been triple-rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;
- b. The container or inner liner has been cleaned by another method that has been shown in the scientific literature or by tests conducted by the generator, to achieve equivalent removal; or
- c. In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container has been removed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-08. Criteria for identifying the characteristics of hazardous waste.

The department shall identify and define a characteristic of hazardous waste in this chapter only upon determining that:

1. A solid waste that exhibits the characteristic may:

- a. Cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or
- b. Pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of, or otherwise managed; and

2. The characteristic can be:

- a. Measured by an available standardized test method which is reasonably within the capability of generators of solid waste or private sector laboratories that are available to serve generators of solid waste; or
- b. Reasonably detected by generators of solid waste through their knowledge of their waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-09. Criteria for listing hazardous waste.

1. The department shall list a solid waste as a hazardous waste only upon determining that the solid waste meets one of the following criteria:

- a. It exhibits any of the characteristics of hazardous waste identified in this chapter.
- b. It has been found to be fatal to humans in low doses or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity (rat) of less than fifty milligrams per kilogram, and inhalation LC 50 toxicity (rat) of less than two milligrams per liter, or a dermal LD 50 toxicity (rabbit) of less than two hundred milligrams per kilogram or is otherwise capable of causing or significantly contributing to an increase in serious irreversible, or incapacitating reversible, illness. (Waste listed in accordance with these criteria will be designated acute hazardous waste.)
- c. It contains any of the toxic constituents listed in appendix V and, after considering the following factors, the department concludes that the waste is not capable of posing a

substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of or otherwise managed:

- (1) The nature of the toxicity presented by the constituent;
- (2) The concentration of the constituent in the waste;
- (3) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in paragraph 7;
- (4) The persistence of the constituent or any toxic degradation product of the constituent;
- (5) The potential for the constituent or any toxic degradation product of the constituent to degrade into nonharmful constituents and the rate of degradation;
- (6) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems;
- (7) The plausible types of improper management to which the waste could be subjected;
- (8) The quantities of the waste generated at individual generation sites or on a statewide basis;
- (9) The nature and severity of the human health and environmental damage that has occurred as a result of the improper management of wastes containing the constituent;
- (10) Action taken by other governmental agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent; and
- (11) Such other factors as may be appropriate.

Substances will be listed on appendix V only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic, or teratogenic effects on human or other life forms. (Wastes listed in accordance with these criteria will be designated toxic wastes.)

2. The department may list classes or types of solid waste as hazardous wastes if it has reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in subsection 6 of North Dakota Century Code section 23.1-04-02.
3. The department will use the criteria for listing specified in this section to establish the exclusion limits referred to in subsection 3 of section 33.1-24-02-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-10. General characteristics of hazardous waste.

1. A solid waste, as defined in section 33.1-24-02-02, which is not excluded from regulation as a hazardous waste under subsection 2 of section 33.1-24-02-04 is a hazardous waste if it exhibits any of the characteristics identified in this chapter. [Comment: Section 33.1-24-03-02 sets forth the generator's responsibility to determine whether the generator's waste exhibits one or more of the characteristics identified in this chapter.]

2. A hazardous waste which is identified by a characteristic in sections 33.1-24-02-10 through 33.1-24-02-14 is assigned every hazardous waste number that is applicable as set forth in this chapter. This number must be used in complying with the notification requirements and all applicable recordkeeping and reporting requirements under chapters 33.1-24-03 through 33.1-24-06.
3. For purposes of sections 33.1-24-02-10 through 33.1-24-02-14, the department will consider a sample obtained using any of the applicable sampling methods specified in appendix I to be a representative sample within the meaning of chapter 33.1-24-01.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-11. Characteristic of ignitability.

1. A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

- a. It is a liquid, other than an aqueous solution containing less than twenty-four percent alcohol by volume, and has a flashpoint less than sixty degrees Celsius [140 degrees Fahrenheit], as determined by a Pensky-Martins closed cup tester, using the test method specified in American Society for Testing and Material Standard D93-79 or D93-80 (incorporated by reference, see section 33.1-24-01-05), or a setaflash closed cup tester, using the test method specified in American Society for Testing and Material Standard D3278-78 (incorporated by reference, see section 33.1-24-01-05), or a miniflash continuously closed cup tester, using the test method specified in American Society for Testing and Material D6450-99 (incorporated by reference in section 33.1-24-01-05).
- b. It is not a liquid and is capable, under standard temperature and pressure of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously that it creates a hazard.
- c. It is an ignitable compressed gas.

(1) The term "compressed gas" shall designate any material or mixture having in the container an absolute pressure exceeding forty pounds per square inch at seventy degrees Fahrenheit or, regardless of the pressure at seventy degrees Fahrenheit, having an absolute pressure exceeding one hundred four pounds per square inch at one hundred thirty degrees Fahrenheit; or any liquid flammable material having a vapor pressure exceeding forty pounds per square inch absolute at one hundred degrees Fahrenheit as determined by ASTM Test D323.

(2) A compressed gas shall be characterized as ignitable if any one of the following occurs:

(a) Either a mixture of thirteen percent or less (by volume) with air forms a flammable mixture or the flammable range with air is wider than twelve percent regardless of the lower limit. These limits shall be determined at atmospheric temperature and pressure. The method of sampling and test procedure shall be acceptable to the bureau of explosives and approved by the director, pipeline and hazardous materials technology, United States department of transportation (see note 2).

(b) Using the bureau of explosives' flame projection apparatus (see note 1), the flame projects more than eighteen inches beyond the ignition source with valve

opened fully, or, the flame flashes back and burns at the valve with any degree of valve opening.

(c) Using the bureau of explosives' open drum apparatus (see note 1), there is any significant propagation of flame away from the ignition source.

(d) Using the bureau of explosives' closed drum apparatus (see note 1), there is any explosion of the vapor-air mixture in the drum.

d. It is an oxidizer. An oxidizer for the purpose of this section is a substance such as a chlorate, permanganate, inorganic peroxide, or a nitrate, that yields oxygen readily to stimulate the combustion of organic matter (see note 4).

(1) An organic compound containing the bivalent -O-O- structure and which may be considered a derivative of hydrogen peroxide where one or more of the hydrogen atoms have been replaced by organic radicals must be classed as an organic peroxide unless:

(a) The material meets the definition of a division 1.1, 1.2, or 1.3 explosive, as defined in subdivision h of subsection 1 of section 33.1-24-02-13, in which case it must be classed as an explosive;

(b) The material is forbidden to be offered for transportation according to 49 CFR 172.101 and 49 CFR 173.21;

(c) It is determined that the predominant hazard of the material containing an organic peroxide is other than that of an organic peroxide; or

(d) According to data on file with the pipeline and hazardous materials safety administration in the United States department of transportation (see note 3), it has been determined that the material does not present a hazard in transportation.

2. A solid waste that exhibits the characteristic of ignitability has the hazardous waste number of D001.

Note 1: A description of the bureau of explosives' flame projection apparatus, open drum apparatus, closed drum apparatus, and method of tests may be procured from the bureau of explosives.

Note 2: As part of a United States department of transportation reorganization, the office of hazardous materials technology, which was the office listed in the 1980 publication of 49 CFR 173.300 for the purposes of approving sampling and test procedures for a flammable gas, ceased operations on February 20, 2005. Office of hazardous materials technology programs have moved to the pipeline and hazardous materials safety administration in the department of transportation.

Note 3: As part of a United States department of transportation reorganization, the research and special programs' administration, which was the office listed in the 1980 publication of 49 CFR 173.151a for the purposes of determining that a material does not present a hazard in transport, ceased operations on February 20, 2005. Research and special programs' administration programs have moved to the pipeline and hazardous materials safety administration in the department of transportation.

Note 4: The department of transportation regulatory definition of an oxidizer was contained in section 173.151 of 49 CFR, and the definition of an organic peroxide was contained in paragraph 173.151a. An organic peroxide is a type of oxidizer.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-12. Characteristic of corrosivity.

1. A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:
 - a. It is aqueous and has a pH less than or equal to two or greater than or equal to twelve and five-tenths, as determined by a pH meter, using method 9040C in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05.
 - b. It is a liquid and corrodes steel (SAE 1020) at a rate greater than six and thirty-five-hundredths millimeters [0.250 inch] per year at a test temperature of fifty-five degrees Celsius [130 degrees Fahrenheit] as determined by the method 1110A in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, and as incorporated by reference in section 33.1-24-01-05.
2. A solid waste that exhibits the characteristic of corrosivity has the hazardous waste number of D002.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-13. Characteristic of reactivity.

1. A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:
 - a. It is normally unstable and readily undergoes violent change without detonating.
 - b. It reacts violently with water.
 - c. It forms potentially explosive mixtures with water.
 - d. When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.
 - e. It is a cyanide-bearing or sulfide-bearing waste which, when exposed to pH conditions between two and twelve and five-tenths, can generate toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.
 - f. It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.
 - g. It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.
 - h. It is a forbidden explosive as defined in 49 CFR 173.54, or is a division 1.1, 1.2, or 1.3 explosive as defined in 49 CFR 173.50 and 173.53.
2. A solid waste that exhibits the characteristic of reactivity has the hazardous waste number of D003.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-14. Toxicity characteristic.

1. A solid waste (except manufactured gas plant waste) exhibits the characteristic of toxicity if, using the toxicity characteristic leaching procedure, test method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05, the extract from a representative sample of the waste contains any of the contaminants listed in table 1 at the concentration equal to or greater than the respective value given in that table. If the waste contains less than one-half of one percent filterable solids, the waste itself, after filtering using the methodology outlined in method 1311, is considered to be the extract for the purposes of this section.
2. A solid waste that exhibits the characteristic of toxicity has the hazardous waste number specified in table 1 which corresponds to the toxic contaminant causing it to be hazardous.

Table 1. Maximum Concentration of Contaminants for the Toxicity Characteristic			
<u>EPA HW No.¹</u>	<u>Contaminant</u>	<u>CAS No.²</u>	<u>Regulatory Level (mg/l)</u>
D004	Arsenic	7440-38-2	5.0

¹Hazardous waste number.

²Chemical abstracts service number.

³Quantitation limit is greater than the calculated regulatory level. The quantitation limit therefore becomes the regulatory level.

⁴If o-, m-, and p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used. The regulatory level of total cresol is 200 mg/l.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-15. Lists of hazardous wastes.

1. A solid waste is a hazardous waste if it is listed in sections 33.1-24-02-15 through 33.1-24-02-19, unless it has been excluded from these lists under section 33.1-24-01-06 or 33.1-24-01-08.
2. The department will indicate its basis for listing the classes or types of wastes listed in sections 33.1-24-02-15 through 33.1-24-02-19 by employing one or more of the following hazard codes:

<u>Waste Type</u>	<u>Waste Hazard Code</u>
<u>Ignitable waste</u>	(I)
<u>Corrosive waste</u>	(C)
<u>Reactive waste</u>	(R)
<u>Toxicity characteristic waste</u>	(E)
<u>Acute hazardous waste</u>	(H)
<u>Toxic waste</u>	(T)

Appendix IV identifies the constituent which caused the waste to be listed as a toxicity characteristic waste (E) or toxic wastes (T) in sections 33.1-24-02-16 and 33.1-24-02-17.

3. Each hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19 is assigned a hazardous waste number which precedes the name of the waste. The number must be used

in complying with the notification requirements and certain recordkeeping and reporting requirements under chapters 33.1-24-03 through 33.1-24-06.

4. The following hazardous wastes listed in section 33.1-24-02-16 are subject to the exclusion limits for acutely hazardous wastes established in section 33.1-24-02-05: hazardous waste numbers F020, F021, F022, F023, F026, and F027.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-16. Hazardous waste from nonspecific sources.

1. The following solid wastes are listed hazardous wastes from nonspecific sources unless they are excluded under sections 33.1-24-01-06 and 33.1-24-01-08 and listed in appendix VI.

<u>Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
<u>Generic:</u>		
<u>F001</u>	<u>The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.</u>	<u>(T)</u>
<u>F002</u>	<u>The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.</u>	<u>(T)</u>
<u>F003</u>	<u>The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.</u>	<u>(I)*</u>
<u>F004</u>	<u>The following spent nonhalogenated solvents: cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of ten percent</u>	<u>(T)</u>

or more (by volume) of the above nonhalogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

- F005 The following spent nonhalogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I, T)
- F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc, and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)
- F007 Spent cyanide plating bath solutions from electroplating operations. (R, T)
- F008 Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process. (R, T)
- F009 Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process. (R, T)
- F010 Quenching bath residue from oil baths from metal heat treating operations where cyanides are used in the process. (R, T)
- F011 Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations. (R, T)
- F012 Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process. (T)
- F019 Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process. Wastewater treatment sludges from the manufacturing of motor vehicles using a zinc phosphating process will not be subject to this listing at the point of generation if the wastes are not placed outside on the land prior to shipment to a landfill for disposal and are either: disposed in a subtitle D municipal or industrial landfill unit that is equipped with a single clay liner and is permitted, licensed or otherwise authorized by the department; or disposed in a landfill unit subject to, or otherwise meeting, the landfill requirements in 40 CFR 258.40, section 33.1-24-05-177, or subsection 5 of section 33.1-24-06-16. For the purposes of this listing, motor vehicle manufacturing is defined in paragraph 1 of subdivision d of subsection 2, and paragraph 2 of subdivision d of subsection 2, describes the recordkeeping requirements for motor vehicle manufacturing facilities. (T)

F020	<u>Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) or tri- or tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)</u>	(H)
F021	<u>Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.</u>	(H)
F022	<u>Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.</u>	(H)
F023	<u>Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.)</u>	(H)
F024	<u>Process wastes, including distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution. (This listing does not include wastewaters, wastewater treatment sludges, spent catalysts, and wastes listed in section 33.1-24-02-16 or 33.1-24-02-17.)</u>	(T)
F025	<u>Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.</u>	(T)
F026	<u>Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.</u>	(H)
F027	<u>Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified</u>	(H)

2,4,5-trichlorophenol as the sole component.)

- F028 Residues resulting from the incineration or thermal treatment of soil contaminated with environmental protection agency hazardous waste numbers F020, F021, F022, F023, F026, and F027. (T)
- *F032 Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with section 33.1-24-02-19 or potentially cross-contaminated wastes that are otherwise currently regulated as hazardous wastes, for example, F034 or F035, and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol, or both. (T)
- *F034 Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol, or both. (T)
- *F035 Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol, or both. (T)
- F037 Petroleum refinery primary oil/water/solids separation sludge - Any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include those generated in oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and storm water units receiving dry weather flow, sludge generated in storm water units that do not receive dry weather flow, sludges generated from noncontact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units as defined in subdivision b of subsection 2 of section 33.1-24-02-16 (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing. This listing does include residuals generated from (T)

processing or recycling oil-bearing hazardous secondary materials excluded under paragraph 1 of subdivision I of subsection 1 of section 33.1-24-02-04, if those residuals are to be disposed of.

F038 Petroleum refinery secondary (emulsified) oil/water/solids separation sludge - Any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include all sludges and floats generated in: induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in dissolved air flotation (DAF) units. Sludges generated in storm water units that do not receive dry weather flow, sludges generated from noncontact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges and floats generated in aggressive biological treatment units as defined in subdivision b of subsection 2 (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and F037, K048, and K051 wastes are not included in this listing. (T)

F039 Leachate (liquids that have percolated through land disposed wastes) resulting from the disposal of more than one restricted waste classified as hazardous under sections 33.1-24-02-15 through 33.1-24-02-19. (Leachate resulting from the disposal of one or more of the following hazardous wastes and no other hazardous wastes retains its hazardous waste numbers: F020, F021, F022, F026, F027, and/or F028.) (T)

*(I,T) should be used to specify mixtures that are ignitable and contain toxic constituents.

2. Listing specific definitions:

a. For the purposes of the F037 and F038 listings, oil/water/solids is defined as oil, water, or solids or any combination of them.

b. Aggressive biological treatment units are:

(1) For the purposes of the F037 and F038 listings, aggressive biological treatment units are defined as units which employ one of the following four treatment methods: activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity; and

(a) The unit employs a minimum of six horsepower per million gallons of treatment volume; and either

(b) The hydraulic retention time of the unit is no longer than five days; or

(c) The hydraulic retention time is no longer than thirty days and the unit does not generate a sludge that is a hazardous waste by the toxicity characteristic.

(2) Generators and treatment, storage, and disposal facilities have the burden of proving that their sludges are exempt from listing as F037 and F038 wastes under

this definition. Generators and treatment, storage, and disposal facilities must maintain, in their operating or other onsite records, documents, and data sufficient to prove that:

(a) The unit is an aggressive biological treatment unit as defined in this subsection; and

(b) The sludges sought to be exempted from the definitions of F037 or F038, or both, were actually generated in the aggressive biological treatment unit.

c. Sludges are:

(1) For the purposes of the F037 listing, sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement.

(2) For the purposes of the F038 listing:

(a) Sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement; and

(b) Floats are considered to be generated at the moment they are formed in the top of the unit.

d. For the purposes of the F019 listing, the following apply to wastewater treatment sludges from the manufacturing of motor vehicles using a zinc phosphating process.

(1) Motor vehicle manufacturing is defined to include the manufacture of automobiles, light trucks, and utility vehicles (including light duty vans, pickup trucks, minivans, and sport utility vehicles). Facilities must be engaged in manufacturing complete vehicles (body and chassis or unibody) or chassis only.

(2) Generators must maintain in their onsite records documentation and information sufficient to prove that the wastewater treatment sludges to be exempted from the F019 listing meet the conditions of the listing. These records must include: the volume of waste generated and disposed of offsite, documentation showing when the waste volumes were generated and sent offsite, the name and address of the receiving facility, and documentation confirming receipt of the waste by the receiving facility. Generators must maintain these documents onsite for no less than three years. The retention period for the documentation is automatically extended during the course of any enforcement action or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-17. Hazardous waste from specific sources.

1. The following solid wastes are listed hazardous wastes from specific sources unless they are excluded under sections 33.1-24-01-06 and 33.1-24-01-08 and listed in appendix VI.

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
<u>Wood Preservation:</u>		

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.	(T)
Inorganic Pigments:		
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments.	(T)
K003	Wastewater treatment sludge from the production of molybdate orange pigments.	(T)
K004	Wastewater treatment sludge from the production of zinc yellow pigments.	(T)
K005	Wastewater treatment sludge from the production of chrome green pigments.	(T)
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).	(T)
K007	Wastewater treatment sludge from the production of iron blue pigments.	(T)
K008	Oven residue from the production of chrome oxide green pigments.	(T)
Organic Chemicals:		
K009	Distillation bottoms from the production of acetaldehyde from ethylene.	(T)
K010	Distillation side cuts from the production of acetaldehyde from ethylene.	(T)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.	(R, T)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.	(R, T)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	(T)
K015	Still bottoms from the distillation of benzyl chloride.	(T)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.	(T)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	(T)
K018	Heavy ends from the fractionation column in ethyl chloride production.	(T)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	(T)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	(T)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production.	(T)
K022	Distillation bottom tars from the production of phenol/acetone from cumene.	(T)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.	(T)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.	(T)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.	(T)
K026	Stripping still tails from the production of methyl ethyl pyridines.	(T)
K027	Centrifuge and distillation residues from toluene diisocyanate production.	(R, T)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.	(T)
K029	Waste from the product steam stripper in the production of 1,1,1-trichloroethane.	(T)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.	(T)
K083	Distillation bottoms from aniline production.	(T)
K085	Distillation or fractionation column bottoms from the production of chlorobenzenes.	(T)
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene.	(T)
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene.	(T)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.	(T)

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(T)
K103	Process residues from aniline extraction from the production of aniline.	(T)
K104	Combined wastewater streams generated from nitrobenzene/aniline production.	(T)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(T)
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(C,T)
K108	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(I,T)
K109	Spent filter cartridges from product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.	(C,T)
K112	Reaction byproduct water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K113	Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K114	Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K115	Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.	(T)
K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.	(T)
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K149	Distillation bottoms from the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (this waste does not include still bottoms from the distillation of benzyl chloride).	(T)
K150	Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.	(T)
K151	Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.	(T)
K156	Organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K157	Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K158	<u>Baghouse dusts and filter/separation solids from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)</u>	(T)
K159	<u>Organics from the treatment of thiocarbamate wastes.</u>	(T)
K161	<u>Purification solids (including filtration, evaporation, and centrifugation solids), baghouse dust and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)</u>	(R, T)
K174	<u>Wastewater treatment sludges from the production of ethylene dichloride or vinyl chloride monomer (including sludges that result from commingled ethylene dichloride or vinyl chloride monomer wastewater and other wastewater), unless the sludges meet the following conditions: (1) the wastes are disposed of in a hazardous waste or nonhazardous waste landfill licensed or permitted by the state or federal government; (2) the wastes are not otherwise placed on the land prior to final disposal; and (3) the generator maintains documentation demonstrating that the waste was either disposed of in an onsite landfill or consigned to a transporter or disposal facility that provided a written commitment to dispose of the waste in an offsite landfill. Respondents in any action brought to enforce the requirements of article 33.1-24 must, upon a showing by the department that the respondent managed wastewater treatment sludges from the production of vinyl chloride monomer or ethylene dichloride, demonstrate that the respondent meet the terms of the exclusion set forth above. In doing so, the respondents must provide appropriate documentation (for example, contracts between the generator and the landfill owner or operator, invoices documenting delivery of waste to landfill, etc.) that the terms of the exclusion were met.</u>	(T)
K175	<u>Wastewater treatment sludges from the production of vinyl chloride monomer using mercuric chloride catalyst in an acetylene-based process.</u>	(T)
K181	<u>Nonwastewaters from the production of dyes or pigment, or both, (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass loadings of any of the constituents identified in subsection 3 that are equal to or greater than the corresponding subsection 3 levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are: (1) disposed in a nonhazardous waste landfill unit subject to the design criteria in section 33.1-20-06.1-02; (2) disposed in a hazardous waste landfill unit subject to either section 33.1-24-05-177 or subsection 5 of section 33.1-24-06-16; (3) disposed in other nonhazardous waste landfill units that meet the design criteria in section 33.1-20-06.1-02, section 33.1-24-05-177, or subsection 5 of section 33.1-24-06-16; or (4) treated in a combustion unit that is permitted under the hazardous waste management rules, or an onsite combustion unit that is permitted under the Clean Air Act. For the purposes of this listing, dyes or pigment, or both, production is defined in subdivision a of subsection 2. Subsection 4 describes the process for demonstrating that a facility's nonwastewaters are not K181. This listing does not apply to wastes that are otherwise identified as hazardous under sections 33.1-24-02-11 through 33.1-24-02-14 and sections 33.1-24-02-16 through 33.1-24-02-18 at the point of generation. Also, the listing does not apply to wastes generated before any annual mass loading limit is met.</u>	(T)
<u>Inorganic Chemicals:</u>		
K071	<u>Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.</u>	(T)
K073	<u>Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.</u>	(T)
K106	<u>Wastewater treatment sludge from the mercury cell process in chlorine production.</u>	(T)
K176	<u>Baghouse filters from the production of antimony oxide, including filters from the production of intermediates (for example, antimony metal or crude antimony oxide).</u>	(E)
K177	<u>Slag from the production of antimony oxide that is speculatively accumulated or disposed, including slag from the production of intermediates (for example, antimony metal or crude antimony oxide).</u>	(T)

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K178	<u>Residues from manufacturing and manufacturing-site storage of ferric chloride from acids formed during the production of titanium dioxide using the chloride-ilmenite process.</u>	(T)
Pesticides:		
K031	<u>Byproduct salts generated in the production of MSMA and cacodylic acid.</u>	(T)
K032	<u>Wastewater treatment sludge from the production of chlordane.</u>	(T)
K033	<u>Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.</u>	(T)
K034	<u>Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.</u>	(T)
K035	<u>Wastewater treatment sludges generated in the production of creosote.</u>	(T)
K036	<u>Still bottoms from toluene reclamation distillation in the production of disulfoton.</u>	(T)
K037	<u>Wastewater treatment sludges from the production of disulfoton.</u>	(T)
K038	<u>Wastewater from the washing and stripping of phorate production.</u>	(T)
K039	<u>Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.</u>	(T)
K040	<u>Wastewater treatment sludge from the production of phorate.</u>	(T)
K041	<u>Wastewater treatment sludge from the production of toxaphene.</u>	(T)
K042	<u>Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.</u>	(T)
K043	<u>2,6-Dichlorophenol waste from the production 2,4-D.</u>	(T)
K097	<u>Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.</u>	(T)
K098	<u>Untreated process wastewater from the production of toxaphene.</u>	(T)
K099	<u>Untreated wastewater from the production of 2,4-D.</u>	(T)
K123	<u>Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salt.</u>	(T)
K124	<u>Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.</u>	(C, T)
K125	<u>Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.</u>	(T)
K126	<u>Baghouse dust and floor sweepings in milling and packaging operations from the production or formulation of ethylenebisdithiocarbamic acid and its salts.</u>	(T)
K131	<u>Wastewater from the reactor and spent sulfuric acid from the acid dryer from the production of methyl bromide.</u>	(C, T)
K132	<u>Spent absorbent and wastewater separator solids from the production of methyl bromide.</u>	(T)
Explosives:		
K044	<u>Wastewater treatment sludges from the manufacturing and processing of explosives.</u>	(R)
K045	<u>Spent carbon from the treatment of wastewater containing explosives.</u>	(R)
K046	<u>Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds.</u>	(T)
K047	<u>Pink/red water from TNT operations.</u>	(R)
Petroleum Refining:		
K048	<u>Dissolved air flotation (DAF) float from the petroleum refining industry.</u>	(T)

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K049	Slop oil emulsion solids from the petroleum refining industry.	(T)
K050	Heat exchanger bundle cleaning sludge from the petroleum refining industry.	(T)
K051	API separator sludge from the petroleum refining industry.	(T)
K052	Tank bottoms (leaded) from the petroleum refining industry.	(T)
K169	Crude oil storage tank sediment from petroleum refining operations.	(T)
K170	Clarified slurry oil tank sediment or in-line filter/separation solids, or both, from petroleum refining operations.	(T)
K171	Spent hydrotreating catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media).	(I, T)
K172	Spent hydrorefining catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media).	(I, T)
Iron and Steel:		
K061	Emission control dust/sludge from the primary production of steel in electric furnaces.	(T)
K062	Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC codes 331 and 332).	(C, T)
Primary Aluminum:		
K088	Spent potliners from primary aluminum reduction.	(T)
Secondary Lead:		
K069	Emission control dust/sludge from secondary lead smelting. (Note: This listing is stayed administratively for sludge generated from secondary acid scrubber systems. The stay will remain in effect until further administrative action is taken. If EPA takes further action effecting this stay, EPA will publish a notice of the action in the Federal Register.)	(T)
K100	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.	(T)
Veterinary Pharmaceuticals:		
K084	Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
K101	Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
K102	Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.	(T)
Ink Formulation:		
K086	Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.	(T)
Coking:		
K060	Ammonia still lime sludge from coking operations.	(T)
K087	Decanter tank tar sludge from coking operations.	(T)
K141	Process residues from the recovery of coal tar, including collecting sump residues from the production of coke from coal or the recovery of coke byproducts produced from coal. This listing does not include K087 (decanter tank tar sludges from coking operations).	(T)

<u>Industry and Hazardous Waste No.</u>	<u>Hazardous Waste</u>	<u>Hazard Code</u>
K142	Tar storage tank residues from the production of coke from coal or from the recovery of coke byproducts produced from coal.	(T)
K143	Process residues from the recovery of light oil, including those generated in stills, decanters, and wash oil recovery units from the recovery of coke byproducts produced from coal.	(T)
K144	Wastewater sump residues from light oil refining, including intercepting or contamination sump sludges from the recovery of coke byproducts produced from coal.	(T)
K145	Residues from naphthalene collection and recovery operations from the recovery of coke byproducts produced from coal.	(T)
K147	Tar storage tank residues from coal tar refining.	(T)
K148	Residues from coal tar distillation, including still bottoms.	(T)

2. Listing specific definitions:

a. For the purposes of the K181 listing, dyes or pigments, or both, production is defined to include manufacture of the following product classes: dyes, pigments, or food and drug administration-certified colors that are classified as azo, triarylmethane, perylene, or anthraquinone classes. Azo products include azo, monoazo, diazo, triazo, polyazo, azoic, benzidine, and pyrazolone products. Triarylmethane products include both triarylmethane and triphenylmethane products. Wastes that are not generated at a dyes or pigment, or both, manufacturing site, such as wastes from the offsite use, formulation, and packaging of dyes or pigments, or both, are not included in the K181 listing.

b. [Reserved].

3. K181 listing levels.

Nonwastewaters containing constituents in amounts equal to or exceeding the following levels during any calendar year are subject to the K181 listing, unless the conditions in the K181 listing are met:

<u>Constituent</u>	<u>Chemical Abstracts No.</u>	<u>Mass Levels (Kilograms per Year)</u>
Aniline	62-53-3	9,300
o-Anisidine	90-04-0	110
4-Chloroaniline	106-47-8	4,800
p-Cresidine	120-71-8	660
2,4-Dimethylaniline	95-68-1	100
1,2-Phenylenediamine	95-54-5	710
1,3-Phenylenediamine	108-45-2	1,200

4. Procedures for demonstrating that dyes or pigments, or both, nonwastewaters are not K181. The procedures described in subdivisions a through c and e of this subsection establish when nonwastewaters from the production of dyes or pigments, or both, would not be hazardous (these procedures apply to wastes that are not disposed in landfill units or treated in combustion units as specified in subsection 1). If the nonwastewaters are disposed in landfill units or treated in combustion units as described in subsection 1, then the nonwastewaters are not hazardous. In order to demonstrate that the generator is meeting the landfill disposal

or combustion conditions contained in the K181 listing description, the generator must maintain documentation as described in subdivision d of this subsection.

a. Determination based on no K181 constituents. Generators that have knowledge (for example, knowledge of constituents in wastes based on prior sampling and analysis data or information about raw materials used, prior sampling and analysis data and information about raw materials used, production processes used, and reaction and degradation products formed) that their wastes contain none of the K181 constituents (see subsection 3) can use their knowledge to determine that their waste is not K181. The generator must document the basis for all such determinations on an annual basis and keep each annual documentation for three years.

b. Determination for generated quantities of one thousand metric tons per year or less for wastes that contain K181 constituents. If the total annual quantity of dyes or pigments, or both, nonwastewaters generated is one thousand metric tons or less, the generator can use knowledge of the wastes (for example, knowledge of constituents in wastes based on prior analytical data or information about raw materials used, prior analytical data and information about raw materials used, production processes used, and reaction and degradation products formed) to conclude that annual mass loadings for the K181 constituents are below the subsection 3 listing levels. To make this determination, the generator must:

(1) Each year document the basis for determining that the annual quantity of nonwastewaters expected to be generated will be less than one thousand metric tons.

(2) Track the actual quantity of nonwastewaters generated from January first through December thirty-first of each year. If, at any time within the year, the actual waste quantity exceeds one thousand metric tons, the generator must comply with the requirements of subdivision c of this subsection for the remainder of the year.

(3) Keep a running total of the K181 constituent mass loadings over the course of the calendar year.

(4) Keep the following records onsite for the three most recent calendar years in which the hazardous waste determinations are made:

(a) The quantity of dyes or pigments, or both, nonwastewaters generated.

(b) The relevant process information used.

(c) The calculations performed to determine annual total mass loadings for each K181 constituent in the nonwastewaters during the year.

c. Determination for generated quantities greater than one thousand metric tons per year for wastes that contain K181 constituents. If the total annual quantity of dyes or pigments, or both, nonwastewaters generated is greater than one thousand metric tons, the generator must perform all of the steps described in paragraphs 1 through 11 in order to make a determination that the generator's waste is not K181.

(1) Determine which K181 constituents (see subsection 3) are reasonably expected to be present in the wastes based on knowledge of the wastes (for example, based on prior sampling and analysis data or information about raw materials used, prior sampling and analysis data and information about raw materials used, production processes used, and reaction and degradation products formed).

- (2) If 1,2-phenylenediamine is present in the wastes, the generator can use either knowledge or sampling and analysis procedures to determine the level of this constituent in the wastes. For determinations based on use of knowledge, the generator must comply with the procedures for using knowledge described in subdivision b and keep the records described in paragraph 4 of subdivision b. For determinations based on sampling and analysis, the generator must comply with the sampling and analysis and recordkeeping requirements described below in this section.
- (3) Develop a waste sampling and analysis plan (or modify an existing plan) to collect and analyze representative waste samples for the K181 constituents reasonably expected to be present in the wastes. At a minimum, the plan must include:
 - (a) A discussion of the number of samples needed to characterize the wastes fully;
 - (b) The planned sample collection method to obtain representative waste samples;
 - (c) A discussion of how the sampling plan accounts for potential temporal and spatial variability of the wastes; and
 - (d) A detailed description of the test methods to be used, including sample preparation, clean up (if necessary), and determinative methods.
- (4) Collect and analyze samples in accordance with the waste sampling and analysis plan.
 - (a) The sampling and analysis must be unbiased, precise, and representative of the wastes.
 - (b) The analytical measurements must be sufficiently sensitive, accurate and precise to support any claim that the constituent mass loadings are below the subsection 3 listing levels.
- (5) Record the analytical results.
- (6) Record the waste quantity represented by the sampling and analysis results.
- (7) Calculate constituent-specific mass loadings (product of concentrations and waste quantity).
- (8) Keep a running total of the K181 constituent mass loadings over the course of the calendar year.
- (9) Determine whether the mass of any of the K181 constituents listed in subsection 3 of this section generated between January first and December thirty-first of any year is below the K181 listing levels.
- (10) Keep the following records onsite for the three most recent calendar years in which the hazardous waste determinations are made:
 - (a) The sampling and analysis plan.
 - (b) The sampling and analysis results (including quality assurance and quality control data).
 - (c) The quantity of dyes or pigments, or both, nonwastewaters generated.

(d) The calculations performed to determine annual mass loadings.

(11) Nonhazardous waste determinations must be conducted annually to verify that the wastes remain nonhazardous.

(a) The annual testing requirements are suspended after three consecutive successful annual demonstrations that the wastes are nonhazardous. The generator can then use knowledge of the wastes to support subsequent annual determinations.

(b) The annual testing requirements are reinstated if the manufacturing or waste treatment processes generating the wastes are significantly altered, resulting in an increase of the potential for the wastes to exceed the listing levels.

(c) If the annual testing requirements are suspended, the generator must keep records of the process knowledge information used to support a nonhazardous determination. If testing is reinstated, a description of the process change must be retained.

d. Recordkeeping for the landfill disposal and combustion exemptions. For the purposes of meeting the landfill disposal and combustion condition set out in the K181 listing description, the generator must maintain onsite for three years documentation demonstrating that each shipment of waste was received by a landfill unit that is subject to or meets the landfill design standards set out in the listing description, or was treated in combustion units as specified in the listing description.

e. Waste holding and handling. During the interim period, from the point of generation to completion of the hazardous waste determination, the generator is responsible for storing the wastes appropriately. If the wastes are determined to be hazardous and the generator has not complied with the hazardous waste management rules requirements during the interim period, the generator could be subject to an enforcement action for improper management.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-18. Discarded commercial chemical products, off-specification species, container residues, and spill residues thereof.

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded as described in paragraph 1 of subdivision b of subsection 1 of section 33.1-24-02-02, when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment, when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to the land in lieu of their original intended use, or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

1. Any commercial chemical product, manufacturing chemical intermediate, or any mixture of the chemicals having the generic name listed in subsection 5 or 6.

2. Any off-specification commercial chemical product, manufacturing chemical intermediate, or any mixture of the chemicals which, if it met specifications, would have the generic name listed in subsection 5 or 6.

3. Any residue remaining in a container or in an inner liner removed from a container that has held any commercial chemical product, manufacturing chemical intermediate, or any mixture

of the chemicals having the generic name listed in subsection 5 or 6, unless the container is empty as defined in subsections 3, 4, and 5 of section 33.1-24-02-07.

NOTE: Unless the residue is being beneficially used or legitimately recycled or reclaimed; or being accumulated, stored, transported, or treated prior to such use, reuse, recycling, or reclamation, the department considers the residue to be intended for discard, and thus a hazardous waste. An example of a legitimate reuse of the residue would be when the residue remains in the container and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be when the drum is sent to a drum reconditioner who reconditions the drum but discards the residue.

4. Any residue or contaminated soil, water, or other debris, resulting from the cleanup of a spill, into or on any land or water, of any commercial chemical product, manufacturing chemical intermediate, or mixture of the chemicals having the generic name listed in subsection 5 or 6, or any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any off-specification chemical product, manufacturing chemical intermediate, or mixture of the chemicals, which, if it met specifications would have the generic name listed in subsection 5 or 6. [Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in . . ." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use, which consists of the commercially pure grade of the chemical, any technical grades of the chemical, that are produced or marketed, and all formulations containing one or more of the chemicals having the generic name listed in subsection 5 or 6 as active ingredients. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in subsection 5 or 6. Where a manufacturing process is deemed to be a hazardous waste because it contains a substance listed in subsection 5 or 6, such wastes will be listed in either section 33.1-24-02-16 or 33.1-24-02-17 or will be identified as a hazardous waste by the characteristics set forth in sections 33.1-24-02-10 through 33.1-24-02-14.]

5. The commercial chemical products, manufacturing chemical intermediates, off-specification commercial chemical products or manufacturing chemical intermediates, or mixtures of the chemicals referred to in subsections 1 through 4, are identified as acute hazardous wastes (H) and are subject to the small quantity exclusion defined in subsection 5 of section 33.1-24-02-05.

Comment: For the convenience of the regulated community the primary hazardous properties of these materials have been indicated by the letters T (toxicity), and R (reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by hazardous waste number.

These wastes and their corresponding hazardous waste numbers are:

<u>Hazardous Waste No.</u>	<u>Chemical Abstracts No.</u>	<u>Substance</u>
----------------------------	-------------------------------	------------------

¹CAS number given for parent compound only.

6. The commercial chemical products, manufacturing chemical intermediates, off-specification commercial chemical products, or mixtures of the chemicals referred to in subsections 1 through 4, are identified as toxic wastes (T) unless otherwise designated and are subject to the small quantity exclusion defined in subsections 1 and 7 of section 33.1-24-02-05.

Comment: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (toxicity), R (reactivity), I (ignitability), and C (corrosivity). Absence of a letter indicates that the compound is only listed for toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by hazardous waste number.

These wastes and their corresponding hazardous waste numbers are:

¹CAS number given for parent compound only.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-19. Deletion of certain hazardous waste codes following equipment cleaning and replacement.

1. Wastes from wood preserving processes at plants that do not resume or initiate use of chlorophenolic preservatives will not meet the listing definition of F032 once the generator has met all the requirements of subsections 2 and 3. These wastes may, however, continue to meet another hazardous waste listing description or may exhibit one or more of the hazardous waste characteristics.
2. Generators must either clean or replace all process equipment that may have come into contact with chlorophenolic formulations or constituents thereof, including treatment cylinders, sumps, tanks, piping systems, drip pads, forklifts, and trams, in a manner that minimizes or eliminates the escape of hazardous waste or constituents, leachate, contaminated drippage, or hazardous waste decomposition products to the ground water, surface water, or atmosphere.
 - a. Generators shall do one of the following:

- (1) Prepare and follow an equipment cleaning plan and clean equipment in accordance with this section;
- (2) Prepare and follow an equipment replacement plan and replace equipment in accordance with this section; or
- (3) Document cleaning and replacement in accordance with this section, carried out after termination of use of chlorophenolic preservatives.

b. Cleaning requirements.

- (1) Prepare and sign a written equipment cleaning plan that describes:

- (a) The equipment to be cleaned;
- (b) How the equipment will be cleaned;
- (c) The solvent to be used in cleaning;
- (d) How solvent rinses will be tested; and
- (e) How cleaning residues will be disposed.

- (2) Equipment must be cleaned as follows:

- (a) Remove all visible residues from process equipment; and
- (b) Rinse process equipment with an appropriate solvent until dioxins and dibenzofurans are not detected in the final solvent rinse.

- (3) Analytical requirements.

- (a) Rinses must be tested by using an appropriate method.
- (b) "Not detected" means at or below the following lower method calibration limits (MCLs). The 2,3,7,8-TCDD-based MCL - 0.01 parts per trillion, sample weight of 1,000 grams IS spiking level of 1 parts per trillion, final extraction volume of 10-50 microliter. For other congeners, multiply the values by 1 for TCDF/PeCDD/PeCDF, by 2.5 for HxCDD/HxCDF/HpCDD/HpCDF, and by 5 for OCDD/OCDF.

- (4) The generator must manage all residues from the cleaning process as F032 waste.

c. Replacement requirements.

- (1) Prepare and sign a written equipment replacement plan that describes:

- (a) The equipment to be replaced;
- (b) How the equipment will be replaced; and
- (c) How the equipment will be disposed.

- (2) The generator must manage the discarded equipment as F032 waste.

d. Documentation requirements.

(1) Document that previous equipment cleaning or replacement, or both, was performed in accordance with this section and occurred after cessation of use of chlorophenolic preservatives.

(2) [Reserved].

3. The generator must maintain the following records documenting the cleaning and replacement as part of the facility's operating record:

- a. The name and address of the facility;
- b. Formulations previously used and the date on which their use ceased in each process at the plant;
- c. Formulations currently used in each process at the plant;
- d. The equipment cleaning or replacement plan;
- e. The name and address of any persons who conducted the cleaning and replacement;
- f. The dates on which cleaning and replacement were accomplished;
- g. The dates of sampling and testing;
- h. A description of the sample handling and preparation techniques, including techniques used for extraction, containerization, preservation, and chain-of-custody of the samples;
- i. A description of the tests performed, the date the tests were performed, and the results of the tests;
- j. The name and model numbers of the instruments used in performing the tests;
- k. QA/QC documentation; and
- l. The following statement signed by the generator or the generator's authorized representative: "I certify under penalty of law that all process equipment required to be cleaned or replaced under section 33.1-24-02-19 was cleaned or replaced as represented in the equipment cleaning and replacement plan and accompanying documentation. I am aware that there are significant penalties for providing false information, including the possibility of fine or imprisonment."

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-20. [Reserved].

33.1-24-02-21. [Reserved].

33.1-24-02-22. [Reserved].

33.1-24-02-23. [Reserved].

33.1-24-02-24. [Reserved].

33.1-24-02-25. Conditional exclusion for used, broken cathode ray tubes and processed cathode ray tube glass undergoing recycling.

Used, broken cathode ray tubes are not solid wastes if they meet the following conditions:

1. Prior to processing. These materials are not solid wastes if they are destined for recycling and if they meet the following requirements:

a. Storage. The broken cathode ray tubes must be either:

(1) Stored in a building with a roof, floor, and walls; or

(2) Placed in a container (for example, a package or a vehicle) that is constructed, filled, and closed to minimize releases to the environment of cathode ray tube glass (including fine solid materials).

b. Labeling. Each container in which the used, broken cathode ray tube is contained must be labeled or marked clearly with one of the following phrases: "Used cathode ray tubes-contains leaded glass" or "Leaded glass from televisions or computers." The container must also be labeled: "Do not mix with other glass materials".

c. Transportation. The used, broken cathode ray tubes must be transported in a container meeting the requirements of paragraph 2 of subdivision a and subdivision b.

d. Speculative accumulation and use constituting disposal. The used, broken cathode ray tubes are subject to the limitations on speculative accumulation as defined in subdivision h of subsection 3 of section 33.1-24-02-01. If they are used in a manner constituting disposal, they must comply with the applicable requirements of sections 33.1-24-05-201 through 33.1-24-05-209 instead of the requirements of this section.

e. Exports. In addition to the applicable conditions specified in subdivisions a through d, exporters of used, broken cathode ray tubes must comply with the following requirements:

(1) Notify the environmental protection agency and the department of an intended export before the cathode ray tubes are scheduled to leave the United States. A complete notification should be submitted sixty days before the initial shipment is intended to be shipped offsite. This notification may cover export activities extending over a twelve month or lesser period. The notification must be in writing, signed by the exporter, and include the following information:

(a) Name, mailing address, telephone number and identification number (if applicable) of the exporter of the cathode ray tubes.

(b) The estimated frequency or rate at which the cathode ray tubes are to be exported and the period of time over which the cathode ray tubes are to be exported.

- (c) The estimated total quantity of cathode ray tubes specified in kilograms.
- (d) All points of entry to and departure from each foreign country through which the cathode ray tubes will pass.
- (e) A description of the means by which each shipment of the cathode ray tubes will be transported (for example, mode of transportation vehicle (air, highway, rail, water), types of containers (drums, boxes, tanks)).
- (f) The name and address of the recycler or recyclers and the estimated quantity of used cathode ray tubes to be sent to each facility, as well as the names of any alternate recyclers.
- (g) A description of the manner in which the cathode ray tubes will be recycled in the foreign country that will be receiving the cathode ray tubes.
- (h) The name of any transit country through which the cathode ray tubes will be sent and a description of the approximate length of time the cathode ray tubes will remain in such country and the nature of their handling while there.
- (2) Notifications submitted by mail should be sent to the department and to the following mailing address:
- Office of Enforcement and Compliance Assurance, Office of Federal Activities
International Compliance Assurance Division, (Mail Code 2254A)
Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20460
- Hand-delivered notifications should be sent to:
- Office of Enforcement and Compliance Assurance, Office of Federal Activities
International Compliance Assurance Division, (Mail Code 2254A)
Environmental Protection Agency
Ariel Rios Building, Room 6144
1200 Pennsylvania Avenue NW
Washington, D.C.
- In both cases, the following must be prominently displayed on the front of the envelope: "Attention: Notification of Intent to Export Cathode Ray Tubes".
- (3) Upon request by the department or the environmental protection agency, the exporter shall furnish to the department and the environmental protection agency any additional information which a receiving country requests in order to respond to a notification.
- (4) The environmental protection agency will provide a complete notification to the receiving country and any transit countries. A notification is complete when the environmental protection agency receives a notification which the environmental protection agency determines satisfies the requirements of paragraph 1. Where a claim of confidentiality is asserted with respect to any notification information required by paragraph 1, the environmental protection agency may find the notification not complete until any such claim is resolved in accordance with 40 CFR 260.2.
- (5) The export of cathode ray tubes is prohibited unless the receiving country consents to the intended export. When the receiving country consents in writing to the receipt

of the cathode ray tubes, the environmental protection agency will forward an acknowledgment of consent to export cathode ray tubes to the exporter. Where the receiving country objects to receipt of the cathode ray tubes or withdraws a prior consent, the environmental protection agency will notify the exporter in writing. The environmental protection agency will also notify the exporter of any responses from transit countries.

- (6) When the conditions specified on the original notification change, the exporter must provide the department and the environmental protection agency with a written renotification of the change, except for changes to the telephone number in subparagraph a of paragraph 1 and decreases in the quantity indicated pursuant to subparagraph c of paragraph 1. The shipment cannot take place until consent of the receiving country to the changes has been obtained (except for changes to information about points of entry and departure and transit countries pursuant to subparagraphs d and h of paragraph 1) and the exporter of cathode ray tubes receives from the environmental protection agency a copy of the acknowledgment of consent to export cathode ray tubes reflecting the receiving country's consent to the changes.
- (7) A copy of the acknowledgment of consent to export cathode ray tubes must accompany the shipment of cathode ray tubes. The shipment must conform to the terms of the acknowledgment.
- (8) If a shipment of cathode ray tubes cannot be delivered for any reason to the recycler or the alternate recycler, the exporter of cathode ray tubes must renotify the department and the environmental protection agency of a change in the conditions of the original notification to allow shipment to a new recycler in accordance with paragraph 6 and obtain another acknowledgment of consent to export cathode ray tubes.
- (9) Exporters must keep copies of notifications and acknowledgments of consent to export cathode ray tubes for a period of three years following receipt of the acknowledgment.
- (10) Cathode ray tube exporters must file with the environmental protection agency and the department no later than March 1 of each year, an annual report summarizing the quantities (in kilograms), frequency of shipment, and ultimate destinations (for example, the facility or facilities where the recycling occurs) of all used cathode ray tubes exported during the previous calendar year. Such reports must also include the following:
 - (a) The name, environmental protection agency identification number (if applicable), and mailing and site address of the exporter;
 - (b) The calendar year covered by the report; and
 - (c) A certification signed by the cathode ray tube exporter which states: "I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

(11) Annual reports must be submitted to the department and the office specified in paragraph 2. Exporters shall keep copies of each annual report for a period of at least three years from the due date of the report.

2. Requirements for used cathode ray tube processing. Used, broken cathode ray tubes undergoing cathode ray tube processing as defined in section 33.1-24-01-04 are not solid wastes if they meet the following requirements:

a. Storage. Used, broken cathode ray tubes undergoing processing are subject to the requirement of subdivision d of subsection 1.

b. Processing.

(1) All activities specified in subdivisions b and c of the definition of "cathode ray tube processing" in section 33.1-24-01-04 must be performed within a building with a roof, floor, and walls; and

(2) No activities may be performed which use temperatures high enough to volatilize lead from cathode ray tubes.

3. Processed cathode ray tube glass sent to cathode ray tube glass making or lead smelting. Glass from used cathode ray tubes which is destined for recycling at a cathode ray tube glass manufacturer or a lead smelter after processing is not a solid waste unless it is speculatively accumulated as defined in subdivision h of subsection 3 of section 33.1-24-02-01.

4. Use constituting disposal. Glass from used cathode ray tubes which is used in a manner constituting disposal must comply with the requirements of sections 33.1-24-05-201 through 33.1-24-05-209 instead of the requirements of this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-26. Conditional exclusion for used, intact cathode ray tubes exported for recycling.

Used, intact cathode ray tubes exported for recycling are not solid wastes if they meet the notice and consent conditions of subdivision e of subsection 1 of section 33.1-24-02-25, and if they are not speculatively accumulated as defined in subdivision h of subsection 3 of section 33.1-24-02-01.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-27. Notification and recordkeeping for used, intact cathode ray tubes exported for reuse.

1. Cathode ray tube exporters who export used, intact cathode ray tubes for reuse shall send a notification to the department and the environmental protection agency. This notification may cover export activities extending over a twelve month or lesser period.

a. The notification must be in writing, signed by the exporter, and include the following information:

(1) Name, mailing address, telephone number, and identification number (if applicable) of the exporter of the used, intact cathode ray tubes;

- (2) The estimated frequency or rate at which the used, intact cathode ray tubes are to be exported for reuse and the period of time over which cathode ray tubes are to be exported;
- (3) The estimated total quantity of used, intact cathode ray tubes specified in kilograms;
- (4) All points of entry to and departure from each transit country through which the used, intact cathode ray tubes will pass, a description of the approximate length of time the used, intact cathode ray tubes will remain in such country, and the nature of cathode ray tubes handling while there;
- (5) A description of the means by which each shipment of the used, intact cathode ray tubes will be transported (for example, mode of transportation vehicle (air, highway, rail, water), type of container (for example, drums, boxes, tanks));
- (6) The name and address of the ultimate destination facility or facilities where the used, intact cathode ray tubes will be reused, refurbished, distributed, or sold for reuse and the estimated quantity of used, intact cathode ray tubes to be sent to each facility, as well as the name of any alternate destination facility or facilities;
- (7) A description of the manner in which the used, intact cathode ray tubes will be reused (including reuse after refurbishment) in the foreign country that will be receiving the used, intact cathode ray tubes; and
- (8) A certification signed by the cathode ray tube exporter which states:

I certify under penalty of law that the cathode ray tubes described in this notice are intact and fully functioning or capable of being functional after refurbishment and that the used cathode ray tubes will be reused or refurbished and reused. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

- b. Notifications submitted by mail should be sent to the department and to the following mailing address:

Office of Enforcement and Compliance Assurance, Office of Federal Activities
International Compliance Assurance Division, (Mail Code 2254A)
Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20460

Hand-delivered notifications should be sent to:

Office of Enforcement and Compliance Assurance, Office of Federal Activities
International Compliance Assurance Division, (Mail Code 2254A)
Environmental Protection Agency
William Jefferson Clinton Building, Room 6144
1200 Pennsylvania Avenue NW
Washington, D.C.

In both cases, the following must be prominently displayed on the front of the envelope: "Attention: Notification of Intent to Export Cathode Ray Tubes".

2. Cathode ray tube exporters of used, intact cathode ray tubes sent for reuse shall keep copies of normal business records, such as contracts, demonstrating that each shipment of exported used, intact cathode ray tubes will be reused. This documentation must be retained for a period of at least three years from the date the cathode ray tubes were exported. If the documents are written in a language other than English, cathode ray tube exporters of used, intact cathode ray tubes sent for reuse shall provide both the original, non-English version of the normal business records as well as a third-party translation of the normal business records into English within thirty days upon request by the department or the environmental protection agency.

33.1-24-02-33. Applicability of financial requirements for management of excluded hazardous secondary materials.

1. The requirements of sections 33.1-24-02-33 through 33.1-24-02-42 apply to owners or operators of reclamation and intermediate facilities managing hazardous secondary materials excluded under subdivision y of subsection 1 of section 33.1-24-02-04, except as provided otherwise in this section.
2. Federal agencies and agencies of the government of the state of North Dakota are exempt from the financial assurance requirements of sections 33.1-24-02-33 through 33.1-24-02-42.

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-35. Cost estimate for closure.

1. The cost estimates for closure.

a. The owner or operator shall have a detailed written estimate, in current dollars, of the cost of disposing of any hazardous secondary material as listed or characteristic hazardous waste, and the potential cost of closing the facility as a treatment, storage, and disposal facility.

(1) The estimate must equal the cost of conducting the activities described in subsection 1 at the point when the extent and manner of the facility's operation would make these activities the most expensive; and

(2) The cost estimate must be based on the costs to the owner or operator of hiring a third party to conduct these activities. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of parent corporation in subsection 4 of section 33.1-24-05-75.) The owner or operator may use costs for onsite disposal in accordance with applicable requirements if the owner or operator can demonstrate that onsite disposal capacity will exist at all times over the life of the facility.

(3) The cost estimate may not incorporate any salvage value that may be realized with the sale of hazardous secondary materials, or hazardous or nonhazardous wastes, facility structures or equipment, land, or other assets associated with the facility.

(4) The owner or operator may not incorporate a zero cost for hazardous secondary materials, or hazardous or nonhazardous wastes that might have economic value.

b. During the active life of the facility, the owner or operator shall adjust the cost estimate for inflation within sixty days prior to the anniversary date of the establishment of the financial instruments used to comply with section 33.1-24-02-36. For owners and operators using the financial test or corporate guarantee, the cost estimate must be updated for inflation within thirty days after the close of the firm's fiscal year and before submission of updated information to the department as specified in subdivision c of subsection 5 of section 33.1-24-02-36. The adjustment may be made by recalculating the cost estimate in current dollars, or by using an inflation factor derived from the most recent implicit price deflator for gross national product published by the United States department of commerce in its survey of current business, as specified in paragraphs 1 and 2. The inflation factor is the result of dividing the latest published annual deflator by the deflator for the previous year.

(1) The first adjustment is made by multiplying the cost estimate by the inflation factor. The result is the adjusted cost estimate.

(2) Subsequent adjustments are made by multiplying the latest adjusted cost estimate by the latest inflation factor.

c. During the active life of the facility, the owner or operator shall revise the cost estimate no later than thirty days after a change in a facility's operating plan or design that would increase the costs of conducting the activities described in subdivision a, or no later than sixty days after an unexpected event which increases the cost of conducting the activities described in subdivision a. The revised cost estimate must be adjusted for inflation as specified in subdivision b.

- d. The owner or operator shall keep the following at the facility during the operating life of the facility: The latest cost estimate prepared in accordance with subdivisions a and c and, when this estimate has been adjusted in accordance with subdivision b, the latest adjusted cost estimate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-36. Financial assurance condition.

In accordance with subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04, an owner or operator of a reclamation or intermediate facility shall have financial assurance as a condition of the exclusion as required under subdivision y of subsection 1 of section 33.1-24-02-04. The owner or operator shall choose from the options as specified in subsections 1 through 5.

1. Trust fund.

- a. An owner or operator may satisfy the requirements of this section by establishing a trust fund which conforms to the requirements of this subsection and submitting an originally signed duplicate of the trust agreement to the department. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal agency or by the state department of financial institutions.
- b. The wording of the trust agreement must be identical to the wording specified in subdivision a of subsection 1 of section 33.1-24-02-42 and the trust agreement must be accompanied by a formal certification of acknowledgment (for example, see subdivision b of subsection 1 of section 33.1-24-02-42). Schedule A of the trust agreement must be updated within sixty days after a change in the amount of the current cost estimate covered by the agreement.
- c. The trust fund must be funded for the full amount of the current cost estimate before it may be relied upon to satisfy the requirements of this subsection.
- d. Whenever the current cost estimate changes, the owner or operator shall compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner or operator, within sixty days after the change in the cost estimate, either shall deposit an amount into the fund so that its value after this deposit at least equals the amount of the current cost estimate, or obtain other financial assurance as specified in this section to cover the difference.
- e. If the value of the trust fund is greater than the total amount of the current cost estimate, the owner or operator may submit a written request to the department for release of the amount in excess of the current cost estimate.
- f. If an owner or operator substitutes other financial assurance as specified in this section for all or part of the trust fund, the owner or operator may submit a written request to the department for release of the amount in excess of the current cost estimate covered by the trust fund.
- g. Within sixty days after receiving a request from the owner or operator for release of funds as specified in subdivisions e or f, the department will instruct the trustee to release to the owner or operator such funds as the department specifies in writing. If the owner or operator begins final closure under sections 33.1-24-05-59 through 33.1-24-05-69 or subsection 5 of section 33.1-24-06-16, an owner or operator may request

reimbursements for partial or final closure expenditures by submitting itemized bills to the department. The owner or operator may request reimbursements for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs of closing the facility over its remaining operating life. No later than sixty days after receiving bills for partial or final closure activities, the department will instruct the trustee to make reimbursements in those amounts as the department specifies in writing, if the department determines that the partial or final closure expenditures are in accordance with the approved closure plan, or otherwise justified. If the department has reason to believe the maximum cost of closure over the remaining life of the facility will be significantly greater than the value of the trust fund, the department may withhold reimbursements of such amounts as the department deems prudent until the department determines, in accordance with subsection 9, that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the department does not instruct the trustee to make such reimbursements, the department will provide to the owner or operator a detailed written statement of reasons.

h. The department will agree to termination of the trust when:

- (1) An owner or operator substitutes alternate financial assurance as specified in this section; or
- (2) The department releases the owner or operator from the requirements of this section in accordance with subsection 9.

2. Surety bond guaranteeing payment into a trust fund.

a. An owner or operator may satisfy the requirements of this section by obtaining a surety bond that conforms to the requirements of this subsection and submitting the bond to the department. The surety company issuing the bond shall, at a minimum, be among those listed as acceptable sureties on federal bonds in circular 570 of the United States department of the treasury.

b. The wording of the surety bond must be identical to the wording specified in subsection 2 of section 33.1-24-02-42.

c. The owner or operator who uses a surety bond to satisfy the requirements of this section also shall establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the department. This standby trust fund must meet the requirements specified in subsection 1, except that:

- (1) An originally signed duplicate of the trust agreement must be submitted to the department with the surety bond; and
- (2) Until the standby trust fund is funded pursuant to the requirements of this subsection, the following are not required by this chapter:
 - (a) Payments into the trust fund as specified in subsection 1;
 - (b) Updating of schedule A of the trust agreement (see subsection 1 of section 33.1-24-02-42) to show current cost estimates;
 - (c) Annual valuations as required by the trust agreement; and
 - (d) Notices of nonpayment as required by the trust agreement.

d. The bond must guarantee that the owner or operator will:

- (1) Fund the standby trust fund in an amount equal to the penal sum of the bond before loss of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04;
 - (2) Fund the standby trust fund in an amount equal to the penal sum within fifteen days after an order to begin closure is issued by the department, or within fifteen days after an order to begin closure is issued by a United States district court or other court of competent jurisdiction; or
 - (3) Provide alternate financial assurance as specified in this section, and obtain the department's written approval of the assurance provided, within ninety days after receipt by both the owner or operator and the department of a notice of cancellation of the bond from the surety.
- e. Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.
 - f. The penal sum of the bond must be in an amount at least equal to the current cost estimate, except as provided in subsection 6.
 - g. Whenever the current cost estimate increases to an amount greater than the penal sum, the owner or operator, within sixty days after the increase, either shall cause the penal sum to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the department, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current cost estimate decreases, the penal sum may be reduced to the amount of the current cost estimate following written approval by the department.
 - h. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.
 - i. The owner or operator may cancel the bond if the department has given prior written consent based on the department's receipt of evidence of alternate financial assurance as specified in this section.

3. Letter of credit.

- a. An owner or operator may satisfy the requirements of this section by obtaining an irrevocable standby letter of credit which conforms to the requirements of this subsection and submitting the letter to the department. The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal agency or by the state department of financial institutions.
- b. The wording of the letter of credit must be identical to the wording specified in subsection 3 of section 33.1-24-02-42.
- c. An owner or operator who uses a letter of credit to satisfy the requirements of this section also shall establish a standby trust fund. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the department will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the department. This standby trust fund must meet the requirements of the trust fund specified in subsection 1, except that:

(1) An originally signed duplicate of the trust agreement must be submitted to the department with the letter of credit; and

(2) Unless the standby trust fund is funded pursuant to the requirements of this section, the following are not required by this chapter:

(a) Payments into the trust fund as specified in subsection 1;

(b) Updating of schedule A of the trust agreement (see subsection 1 of section 33.1-24-02-42) to show current cost estimates;

(c) Annual valuations as required by the trust agreement; and

(d) Notices of nonpayment as required by the trust agreement.

d. The letter of credit must be accompanied by a letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the following information: The identification number (if any issued), name, and address of the facility, and the amount of funds assured for the facility by the letter of credit.

e. The letter of credit must be irrevocable and issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least one hundred twenty days before the current expiration date, the issuing institution notifies both the owner or operator and the department by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the one hundred twenty days will begin on the date when both the owner or operator and the department have received the notice, as evidenced by the return receipts.

f. The letter of credit must be issued in an amount at least equal to the current cost estimate, except as provided in subsection 6.

g. Whenever the current cost estimate increases to an amount greater than the amount of the credit, the owner or operator, within sixty days after the increase, either shall cause the amount of the credit to be increased so that it at least equals the current cost estimate and submit evidence of such increase to the department, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current cost estimate decreases, the amount of the credit may be reduced to the amount of the current cost estimate following written approval by the department.

h. Following a determination by the department that the hazardous secondary materials do not meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, the department may draw on the letter of credit.

i. If the owner or operator does not establish alternate financial assurance as specified in this section and obtain written approval of such alternate assurance from the department within ninety days after receipt by both the owner or operator and the department of a notice from the issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the department will draw on the letter of credit. The department may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last thirty days of any such extension the department will draw on the letter of credit if the owner or operator has failed to provide alternate financial assurance as specified in this section and obtain written approval of such assurance from the department.

j. The department will return the letter of credit to the issuing institution for termination when:

- (1) An owner or operator substitutes alternate financial assurance as specified in this section; or
- (2) The department releases the owner or operator from the requirements of this section in accordance with subsection 9.

4. Insurance.

- a An owner or operator may satisfy the requirements of this section by obtaining insurance that conforms to the requirements of this subsection and submitting a certificate of such insurance to the department. At a minimum, the insurer must be licensed to transact the business of insurance in this state or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.
- b. The wording of the certificate of insurance must be identical to the wording specified in subsection 4 of section 33.1-24-02-42.
- c. The insurance policy must be issued for a face amount at least equal to the current cost estimate, except as provided in subsection 6. The term "face amount" means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.
- d. The insurance policy must guarantee funds will be available whenever needed to pay the cost of removal of all hazardous secondary materials from the unit, to pay the cost of decontamination of the unit, to pay the costs of the performance of activities required under section 33.1-24-05-59 through 33.1-24-05-69 or subsection 5 of section 33.1-24-06-16, as applicable, for the facilities covered by this policy. The policy also must guarantee once funds are needed, the insurer is responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the department, to such party or parties as the department specifies.
- e. After beginning partial or final closure under sections 33.1-24-05-59 through 33.1-24-05-69 or subsection 5 of section 33.1-24-06-16, as applicable, an owner or operator or any other authorized person may request reimbursements for closure expenditures by submitting itemized bills to the department. The owner or operator may request reimbursements only if the remaining value of the policy is sufficient to cover the maximum costs of closing the facility over its remaining operating life. Within sixty days after receiving bills for closure activities, the department will instruct the insurer to make reimbursements in such amounts as the department specifies in writing if the department determines that the expenditures are in accordance with the approved plan or otherwise justified. If the department has reason to believe the maximum cost over the remaining life of the facility will be significantly greater than the face amount of the policy, the department may withhold reimbursement of such amounts as the department deems prudent until the department determines, in accordance with subsection 8, the owner or operator is no longer required to maintain financial assurance for the particular facility. If the department does not instruct the insurer to make such reimbursements, the department will provide to the owner or operator a detailed written statement of reasons.
- f. The owner or operator shall maintain the policy in full force and effect until the department consents to termination of the policy by the owner or operator as specified in subdivision j of subsection 9. Failure to pay the premium, without substitution of alternate financial assurance as specified in this section, constitutes a significant violation of this chapter warranting such remedy as the department deems necessary. Such violation is deemed to begin upon receipt by the department of a notice of future cancellation.

termination, or failure to renew due to nonpayment of the premium, rather than upon the date of expiration.

g. Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.

h. The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the department. Cancellation, termination, or failure to renew may not occur, however, during the one hundred twenty days beginning with the date of receipt of the notice by both the department and the owner or operator, as evidenced by the return receipts. Cancellation, termination, or failure to renew may not occur and the policy will remain in full force and effect if on or before the date of expiration:

(1) The department deems the facility abandoned;

(2) Conditional exclusion or interim status is lost, terminated, or revoked;

(3) Closure is ordered by the department or a state court or other court of competent jurisdiction;

(4) The owner or operator is named as debtor in a voluntary or involuntary proceeding under United States Code title 11 (bankruptcy); or

(5) The premium due is paid.

i. Whenever the current cost estimate increases to an amount greater than the face amount of the policy, the owner or operator, within sixty days after the increase, shall either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the department, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current cost estimate decreases, the face amount may be reduced to the amount of the current cost estimate following written approval by the department.

j. The department will give written consent to the owner or operator that the department may terminate the insurance policy when:

(1) An owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The department releases the owner or operator from the requirements of this section in accordance with subsection 9.

5. Financial test and corporate guarantee.

a. An owner or operator may satisfy the requirements of this section by demonstrating that the owner or operator passes a financial test as specified in this subsection. To pass this test the owner or operator must meet the criteria of either paragraphs 1 or 2:

(1) The owner or operator shall have:

(a) Two of the following three ratios: A ratio of total liabilities to net worth less than two; a ratio of the sum of net income plus depreciation, depletion, and

amortization to total liabilities greater than one-tenth; and a ratio of current assets to current liabilities greater than one and five-tenths;

(b) Net working capital and tangible net worth each at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;

(c) Tangible net worth of at least ten million dollars; and

(d) Assets located in the United States amounting to at least ninety percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.

(2) The owner or operator shall have:

(a) A current rating for the owner's or operator's most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's;

(b) Tangible net worth at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;

(c) Tangible net worth of at least ten million dollars; and

(d) Assets located in the United States amounting to at least ninety percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.

b. The phrase "current cost estimates" as used in subdivision a refers to the cost estimates required to be shown in paragraphs 1 through 4 of the letter from the owner's or operator's chief financial officer (subsection 5 of section 33.1-24-02-42). The phrase "current plugging and abandonment cost estimates" as used in subdivision a refers to the cost estimates required to be shown in paragraphs 1 through 4 of the letter from the owner's or operator's chief financial officer (40 CFR 144.70(f)).

c. To demonstrate the owner or operator meets this test, the owner or operator shall submit the following items to the department:

(1) A letter signed by the owner's or operator's chief financial officer and worded as specified in subsection 5 of section 33.1-24-02-42;

(2) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and

(3) If the chief financial officer's letter providing evidence of financial assurance includes financial data showing the owner or operator satisfies paragraph 1 of subdivision a which is different from the data in the audited financial statements referred to in paragraph 2 or any other audited financial statement or data filed with the United States securities and exchange commission, a special report from the owner's or operator's independent certified public accountant to the owner or operator is required. The special report must be based upon an agreed upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of the comparison, and the reasons for any differences.

- d. The owner or operator may obtain an extension of the time allowed for submission of the documents specified in subdivision c if the fiscal year of the owner or operator ends during the ninety days prior to the effective date of this section and if the year end financial statements for that fiscal year will be audited by an independent certified public accountant. The extension will end no later than ninety days after the end of the owner's or operator's fiscal year. To obtain the extension, the owner's or operator's chief financial officer shall send, by the effective date of this section, a letter to the department. This letter from the chief financial officer must:
- (1) Request the extension;
 - (2) Certify that the owner or operator has grounds to believe that the owner or operator meets the criteria of the financial test;
 - (3) Specify for each facility to be covered by the test the identification number (if any issued), name, address, and current cost estimates to be covered by the test;
 - (4) Specify the date ending the owner's or operator's last complete fiscal year before the effective date of this section;
 - (5) Specify the date, no later than ninety days after the end of such fiscal year, when the owner or operator will submit the documents specified in subdivision c; and
 - (6) Certify that the year-end financial statements of the owner or operator for such fiscal year will be audited by an independent certified public accountant.
- e. After the initial submission of items specified in subdivision c, the owner or operator shall send updated information to the department within ninety days after the close of each succeeding fiscal year. This information must consist of all three items specified in subdivision c.
- f. If the owner or operator no longer meets the requirements of subdivision a, the owner or operator shall send notice to the department of intent to establish alternate financial assurance as specified in this section. The notice must be sent by certified mail within ninety days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator shall provide the alternate financial assurance within one hundred twenty days after the end of such fiscal year.
- g. The department, based on a reasonable belief that the owner or operator may no longer meet the requirements of subdivision a, may require reports of financial condition at any time from the owner or operator in addition to those specified in subdivision c. If the department finds, on the basis of such reports or other information, that the owner or operator no longer meets the requirements of subdivision a, the owner or operator shall provide alternate financial assurance as specified in this section within thirty days after notification of such a finding.
- h. The department may disallow use of this test on the basis of qualifications in the opinion expressed by the independent certified public accountant in the independent certified public accountant's report on examination of the owner's or operator's financial statements (see paragraph 2 of subdivision c). An adverse opinion or a disclaimer of opinion will be cause for disallowance. The department will evaluate other qualifications on an individual basis. The owner or operator shall provide alternate financial assurance as specified in this section within thirty days after notification of the disallowance.
- i. The owner or operator is no longer required to submit the items specified in subdivision c if:

- (1) An owner or operator substitutes alternate financial assurance as specified in this section; or
- (2) The department releases the owner or operator from the requirements of this section in accordance with subsection 9.

j. An owner or operator may meet the requirements of this section by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor shall meet the requirements for owners or operators in subdivisions a through h of subsection 5 and shall comply with the terms of the guarantee. The wording of the guarantee must be identical to the wording specified in subdivision a of subsection 7 of section 33.1-24-02-42. A certified copy of the guarantee must accompany the items sent to the department as specified in subdivision c. One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee. The terms of the guarantee must provide that:

- (1) Following a determination by the department that the hazardous secondary materials at the owner's or operator's facility covered by this guarantee do not meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, the guarantor will dispose of any hazardous secondary material as hazardous waste and close the facility in accordance with closure requirements found in sections 33.1-24-05-59 through 33.1-24-05-69 or subsection 5 of section 33.1-24-06-16, as applicable, or establish a trust fund as specified in subsection 1 in the name of the owner or operator in the amount of the current cost estimate.
- (2) The corporate guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.
- (3) If the owner or operator fails to provide alternate financial assurance as specified in this section and obtain the written approval of such alternate assurance from the department within ninety days after receipt by both the owner or operator and the department of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor will provide such alternate financial assurance in the name of the owner or operator.

6. Use of multiple financial mechanisms. An owner or operator may satisfy the requirements of this section by establishing more than one financial mechanism per facility. These mechanisms are limited to trust funds, surety bonds, letters of credit, and insurance. The mechanisms must be as specified in subsections 1 through 4, respectively, except that it is the combination of mechanisms, rather than the single mechanism, which must provide financial assurance for an amount at least equal to the current cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or a letter of credit, the owner or operator may use the trust fund as the standby trust fund for the other mechanisms. A single standby trust fund may be established for two or more mechanisms. The department may use any or all of the mechanisms to provide for the facility.

7. Use of a financial mechanism for multiple facilities. An owner or operator may use a financial assurance mechanism specified in this section to meet the requirements of this section for more than one facility. Evidence of financial assurance submitted to the department must include a list showing, for each facility, the identification number (if any issued), name, address, and the amount of funds assured by the mechanism. If the facilities covered by the mechanism are in more than one state, identical evidence of financial assurance must be submitted to and maintained with the department and other state's agencies that regulate reclamation and intermediate facilities managing hazardous secondary materials of all such states. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for each facility. In directing funds available through the mechanism for any of the facilities covered by the mechanism, the department may direct only the amount of funds designated for that facility, unless the owner or operator agrees to the use of additional funds available under the mechanism.

8. Removal and decontamination plan for release.

a. An owner or operator of a reclamation facility or an intermediate facility who wishes to be released from the owner's or operator's financial assurance obligations under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04 shall submit a plan for removing all hazardous secondary material residues to the department at least one hundred eighty days prior to the date on which the owner or operator expects to cease to operate under the exclusion.

b. The plan must include, at least:

(1) For each hazardous secondary materials storage unit subject to financial assurance requirements under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04, a description of how all excluded hazardous secondary materials will be recycled or sent for recycling, and how all residues, contaminated containment systems (such as liners), contaminated soils, subsoils, structures, and equipment will be removed or decontaminated as necessary to protect human health and the environment;

(2) A detailed description of the steps necessary to remove or decontaminate all hazardous secondary material residues and contaminated containment system components, equipment, structures, and soils including, procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination necessary to protect human health and the environment;

(3) A detailed description of any other activities necessary to protect human health and the environment during this time frame, including, leachate collection, run-on and runoff control; and

(4) A schedule for conducting the activities described which, at a minimum, includes the total time required to remove all excluded hazardous secondary materials for recycling and decontaminate all units subject to financial assurance under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04 and the time required for intervening activities which will allow tracking of the progress of decontamination.

c. The department will provide the owner or operator and the public, through a newspaper notice, the opportunity to submit written comments on the plan and request modifications to the plan no later than thirty days from the date of the notice. The department will also, in response to a request or at the department's discretion, hold a public hearing

whenever such a hearing might clarify one or more issues concerning the plan. The department will give public notice of the hearing at least thirty days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.) The department will approve, modify, or disapprove the plan within ninety days of its receipt. If the department does not approve the plan, the department shall provide the owner or operator with a detailed written statement of reasons for the refusal and the owner or operator must modify the plan or submit a new plan for approval within thirty days after receiving such written statement. The department will approve or modify this plan in writing within sixty days. If the department modifies the plan, this modified plan becomes the approved plan. The department shall assure the approved plan is consistent with this subsection. A copy of the modified plan with a detailed statement of reasons for the modifications must be mailed to the owner or operator.

d. Within sixty days of completion of the activities described for each hazardous secondary materials management unit, the owner or operator shall submit to the department, by registered mail, a certification that all hazardous secondary materials have been removed from the unit and the unit has been decontaminated in accordance with the specifications in the approved plan. The certification must be signed by the owner or operator and by a qualified professional engineer. Documentation supporting the professional engineer's certification must be furnished to the department, upon request, until the department releases the owner or operator from the financial assurance requirements for subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04.

9. Release of the owner or operator from the requirements of this section. Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that all hazardous secondary materials have been removed from the facility or a unit at the facility and the facility or a unit has been decontaminated in accordance with the approved plan per subsection 8, the department will notify the owner or operator in writing that the owner or operator is no longer required under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04 to maintain financial assurance for that facility or a unit at the facility, unless the department has reason to believe that all hazardous secondary materials have not been removed from the facility or unit at a facility or that the facility or unit has not been decontaminated in accordance with the approved plan. The department shall provide the owner or operator a detailed written statement of any such reason to believe that all hazardous secondary materials have not been removed from the unit or that the unit has not been decontaminated in accordance with the approved plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-37. [Reserved].

33.1-24-02-38. [Reserved].

33.1-24-02-39. [Reserved].

33.1-24-02-40. Liability requirements.

1. Coverage for sudden accidental occurrences. An owner or operator of a hazardous secondary material reclamation facility or an intermediate facility subject to financial assurance requirements under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04, or a group of such facilities, shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator shall have and maintain liability coverage for sudden accidental occurrences in the amount of at least one million dollars per occurrence with an annual aggregate of at least two million dollars, exclusive of legal defense costs. This liability coverage may be demonstrated as specified in subdivision a, b, c, d, e, or f:

a. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in this subdivision.

(1) Each insurance policy must be amended by attachment of the hazardous secondary material facility liability endorsement, or evidenced by a certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in subsection 8 of section 33.1-24-02-42. The wording of the certificate of insurance must be identical to the wording specified in subsection 9 of section 33.1-24-02-42. The owner or operator shall submit a signed duplicate original of the endorsement or the certificate of insurance to the department, and other state's agencies that regulate reclamation and intermediate facilities if the facilities are located in more than one state. If requested by the department, the owner or operator shall provide a signed duplicate original of the insurance policy.

(2) Each insurance policy must be issued by an insurer that, at a minimum, is licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

b. An owner or operator may meet the requirements of this section by passing a financial test or using the guarantee for liability coverage as specified in subsections 6 and 7.

c. An owner or operator may meet the requirements of this section by obtaining a letter of credit for liability coverage as specified in subsection 8.

d. An owner or operator may meet the requirements of this section by obtaining a surety bond for liability coverage as specified in subsection 9.

e. An owner or operator may meet the requirements of this section by obtaining a trust fund for liability coverage as specified in subsection 10.

f. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, guarantee, letter of credit, surety bond, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by this section. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this subdivision, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.

g. An owner or operator shall notify the department in writing within thirty days whenever:

- (1) A claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in subdivisions a through f;
- (2) A certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous secondary material reclamation facility or intermediate facility is entered between the owner or operator and third-party claimant for liability coverage under subdivision a through f; or
- (3) A final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous secondary material reclamation facility or intermediate facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under subdivision a through f.

2. Coverage for nonsudden accidental occurrences. An owner or operator of a hazardous secondary material reclamation facility or intermediate facility with landbased units, as defined in section 33.1-24-01-04, which are used to manage hazardous secondary materials excluded under subdivision y of subsection 1 of section 33.1-24-02-04 or a group of such facilities, shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator shall have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least three million dollars per occurrence with an annual aggregate of at least six million dollars, exclusive of legal defense costs. An owner or operator who must meet the requirements of this section may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences shall maintain liability coverage in the amount of at least four million dollars per occurrence and eight million dollars annual aggregate. This liability coverage may be demonstrated as specified in subdivision a, b, c, d, e, or f:

a. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in this subsection.

(1) Each insurance policy must be amended by attachment of the hazardous secondary material facility liability endorsement or evidenced by a certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in subsection 8 of section 33.1-24-02-42. The wording of the certificate of insurance must be identical to the wording specified in subsection 9 of section 33.1-24-02-42. The owner or operator shall submit a signed duplicate original of the endorsement or the certificate of insurance to the department, and other state's agencies that regulate reclamation and intermediate facilities if the facilities are located in more than one state. If requested by a department, the owner or operator shall provide a signed duplicate original of the insurance policy.

(2) Each insurance policy must be issued by an insurer which, at a minimum, is licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

b. An owner or operator may meet the requirements of this section by passing a financial test or using the guarantee for liability coverage as specified in subsections 6 and 7.

c. An owner or operator may meet the requirements of this section by obtaining a letter of credit for liability coverage as specified in subsection 8.

- d. An owner or operator may meet the requirements of this section by obtaining a surety bond for liability coverage as specified in subsection 9.
 - e. An owner or operator may meet the requirements of this section by obtaining a trust fund for liability coverage as specified in subsection 10.
 - f. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, guarantee, letter of credit, surety bond, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by this section. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this subdivision, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.
 - g. An owner or operator shall notify the department in writing within thirty days whenever:
 - (1) A claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in subdivisions a through f;
 - (2) A certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous secondary material treatment and/or storage facility is entered between the owner or operator and third-party claimant for liability coverage under subdivisions a through f; or
 - (3) A final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous secondary material treatment or storage facility, or both, is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under subdivisions a through f.
3. Request for variance. If an owner or operator can demonstrate to the satisfaction of the department that the levels of financial responsibility required by subsection 1 or 2 are not consistent with the degree and duration of risk associated with treatment or storage, or both, at the facility or group of facilities, the owner or operator may obtain a variance from the department. The request for a variance must be submitted in writing to the department. If granted, the variance will take the form of an adjusted level of required liability coverage, such level to be based on the department's assessment of the degree and duration of risk associated with the ownership or operation of the facility or group of facilities. The department may require an owner or operator who requests a variance to provide such technical and engineering information as is deemed necessary by the department to determine a level of financial responsibility other than that required by subsection 1 or 2.
4. Adjustments by the department. If the department determines the levels of financial responsibility required by subsection 1 or 2 are not consistent with the degree and duration of risk associated with treatment or storage, or both, at the facility or group of facilities, the department may adjust the level of financial responsibility required under subsection 1 or 2 as may be necessary to protect human health and the environment. This adjusted level will be based on the department's assessment of the degree and duration of risk associated with the ownership or operation of the facility or group of facilities. In addition, if the department determines there is a significant risk to human health and the environment from nonsudden accidental occurrences resulting from the operations of a facility that is not a surface impoundment, pile, or land treatment facility, the department may require an owner or operator

of the facility to comply with subsection 2. An owner or operator shall furnish to the department, within a reasonable time, any information the department requests to determine whether cause exists for such adjustments of level or type of coverage.

5. Period of coverage. Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that all hazardous secondary materials have been removed from the facility or a unit at the facility and the facility or a unit has been decontaminated in accordance with the approved plan per subsection 8 of section 33.1-24-02-36, the department will notify the owner or operator in writing that the owner or operator is no longer required under subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04 to maintain liability coverage for that facility or a unit at the facility, unless the department has reason to believe all hazardous secondary materials have not been removed from the facility or unit at a facility or that the facility or unit has not been decontaminated in accordance with the approved plan.

6. Financial test for liability coverage.

a. An owner or operator may satisfy the requirements of this section by demonstrating that the owner or operator passes a financial test as specified in this subsection. To pass this test the owner or operator shall meet the criteria of paragraph 1 or 2:

(1) The owner or operator shall have:

(a) Net working capital and tangible net worth each at least six times the amount of liability coverage to be demonstrated by this test;

(b) Tangible net worth of at least ten million dollars; and

(c) Assets in the United States amounting to either:

[1] At least ninety percent of the owner's or operator's total assets; or

[2] At least six times the amount of liability coverage to be demonstrated by this test.

(2) The owner or operator shall have:

(a) A current rating for the owner's or operator's most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's, or Aaa, Aa, A, or Baa as issued by Moody's;

(b) Tangible net worth of at least ten million dollars;

(c) Tangible net worth at least six times the amount of liability coverage to be demonstrated by this test; and

(d) Assets in the United States amounting to either:

[1] At least ninety percent of the owner's or operator's total assets; or

[2] At least six times the amount of liability coverage to be demonstrated by this test.

b. The phrase "amount of liability coverage" as used in subdivision a refers to the annual aggregate amounts for which coverage is required under subsections 1 and 2 and the annual aggregate amounts for which coverage is required under subsections 1 and 2 of section 33.1-24-05-79 and subsection 5 of section 33.1-24-06-16.

c. To demonstrate the owner or operator meets this test, the owner or operator shall submit the following three items to the department:

- (1) A letter signed by the owner's or operator's chief financial officer and worded as specified in subsection 6 of section 33.1-24-02-42. If an owner or operator is using the financial test to demonstrate both assurance as specified by subsection 5 of section 33.1-24-02-36, and liability coverage, the owner or operator shall submit the letter specified in subsection 6 of section 33.1-24-02-42 to cover both forms of financial responsibility; a separate letter as specified in subsection 5 of section 33.1-24-02-42 is not required.
- (2) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year.
- (3) If the chief financial officer's letter providing evidence of financial assurance includes financial data showing the owner or operator satisfies paragraph 1 of subdivision a which is different from the data in the audited financial statements referred to in paragraph 2 of subdivision c or any other audited financial statement or data filed with the securities and exchange commission, a special report from the owner's or operator's independent certified public accountant to the owner or operator is required. The special report must be based upon an agreed upon procedures engagement in accordance with professional auditing standards and must describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of the comparison, and the reasons for any difference.

d. The owner or operator may obtain a one-time extension of the time allowed for submission of the documents specified in subdivision c if the fiscal year of the owner or operator ends during the ninety days prior to the effective date of this section and if the year-end financial statements for that fiscal year will be audited by an independent certified public accountant. The extension will end no later than ninety days after the end of the owner's or operator's fiscal year. To obtain the extension, the owner's or operator's chief financial officer shall send, by the effective date of this section, a letter to the department. This letter from the chief financial officer must:

- (1) Request the extension;
- (2) Certify the owner or operator has grounds to believe that the owner or operator meets the criteria of the financial test;
- (3) Specify for each facility to be covered by the test the identification number, name, address, the amount of liability coverage and, when applicable, current closure and postclosure cost estimates to be covered by the test;
- (4) Specify the date ending the owner's or operator's last complete fiscal year before the effective date of this section;
- (5) Specify the date, no later than ninety days after the end of such fiscal year, when the owner or operator will submit the documents specified in subdivision c; and
- (6) Certify that the year-end financial statements of the owner or operator for such fiscal year will be audited by an independent certified public accountant.

e. After the initial submission of items specified in subdivision c, the owner or operator shall send updated information to the department within ninety days after the close of each

succeeding fiscal year. This information must consist of all three items specified in subdivision c.

f. If the owner or operator no longer meets the requirements of subdivision a, the owner or operator shall obtain insurance, a letter of credit, a surety bond, a trust fund, or a guarantee for the entire amount of required liability coverage as specified in this section. Evidence of liability coverage must be submitted to the department within ninety days after the end of the fiscal year for which the year-end financial data shows the owner or operator no longer meets the test requirements.

g. The department may disallow use of this test on the basis of qualifications in the opinion expressed by the independent certified public accountant in the independent certified public accountant's report on examination of the owner's or operator's financial statements (see paragraph 2 of subdivision c). An adverse opinion or a disclaimer of opinion will be cause for disallowance. The department will evaluate other qualifications on an individual basis. The owner or operator shall provide evidence of insurance for the entire amount of required liability coverage as specified in this section within thirty days after notification of disallowance.

7. Guarantee for liability coverage.

a. Subject to subdivision b, an owner or operator may meet the requirements of this section by obtaining a written guarantee, hereinafter referred to as "guarantee." The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor shall meet the requirements for owners or operators in subdivisions a through f of subsection 6. The wording of the guarantee must be identical to the wording specified in subdivision b of subsection 7 of section 33.1-24-02-42. A certified copy of the guarantee must accompany the items sent to the department as specified in paragraph c of subsection 6. One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, this letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

(1) If the owner or operator fails to satisfy a judgment based on a determination of liability for bodily injury or property damage to third parties caused by sudden or nonsudden accidental occurrences (or both as the case may be), arising from the operation of facilities covered by this corporate guarantee, or fails to pay an amount agreed to in settlement of claims arising from or alleged to arise from such injury or damage, the guarantor will do so up to the limits of coverage.

(2) [Reserved].

b. The following applies:

(1) In the case of corporations incorporated in the United States, a guarantee may be used to satisfy the requirements of this section only if the attorneys general or insurance commissioners of:

(a) The state in which the guarantor is incorporated; and

(b) Each state in which a facility covered by the guarantee is located have submitted a written statement to the department that a guarantee executed as

described in this section and subdivision b of subsection 7 of section 33.1-24-02-42 is a legally valid and enforceable obligation in that state.

(2) In the case of corporations incorporated outside the United States, a guarantee may be used to satisfy the requirements of this section only if:

(a) The non-United States corporation has identified a registered agent for service of process in each state in which a facility covered by the guarantee is located and in the state in which it has its principal place of business; and

(b) The attorney general or insurance commissioner of each state in which a facility covered by the guarantee is located and the state in which the guarantor corporation has its principal place of business, has submitted a written statement to the department that a guarantee executed as described in this section and subdivision b of subsection 8 of section 33.1-24-02-42 is a legally valid and enforceable obligation in that state.

8. Letter of credit for liability coverage.

a. An owner or operator may satisfy the requirements of this section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection and submitting a copy of the letter of credit to the department.

b. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

c. The wording of the letter of credit must be identical to the wording specified in subsection 10 of section 33.1-24-02-42.

d. An owner or operator who uses a letter of credit to satisfy the requirements of this section may also establish a standby trust fund. Under the terms of such a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

e. The wording of the standby trust fund must be identical to the wording specified in subsection 13 of section 33.1-24-02-42.

9. Surety bond for liability coverage.

a. An owner or operator may satisfy the requirements of this section by obtaining a surety bond that conforms to the requirements of this subsection and submitting a copy of the bond to the department.

b. The surety company issuing the bond must be among those listed as acceptable sureties on federal bonds in the most recent circular 570 of the United States department of the treasury.

c. The wording of the surety bond must be identical to the wording specified in subsection 11 of section 33.1-24-02-42.

d. A surety bond may be used to satisfy the requirements of this section only if the attorneys general or insurance commissioners of:

- (1) The state in which the surety is incorporated; and
- (2) Each state in which a facility covered by the surety bond is located have submitted a written statement to the department that a surety bond executed as described in this section and subsection 11 of section 33.1-24-02-42 is a legally valid and enforceable obligation in that state.

10. Trust fund for liability coverage.

- a. An owner or operator may satisfy the requirements of this section by establishing a trust fund that conforms to the requirements of this subsection and submitting an originally signed duplicate of the trust agreement to the department.
- b. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.
- c. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this section. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, either shall add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this section to cover the difference. For purposes of this subdivision, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden, or both, occurrences required to be provided by the owner or operator by this section, less the amount of financial assurance for liability coverage which is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.
- d. The wording of the trust fund must be identical to the wording specified in subsection 12 of section 33.1-24-02-42.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-41. Incapacity of owners or operators, guarantors, or financial institutions.

1. An owner or operator shall notify the department by certified mail of the commencement of a voluntary or involuntary proceeding under United States Code title 11 (bankruptcy), naming the owner or operator as debtor, within ten days after commencement of the proceeding. A guarantor of a corporate guarantee as specified in subsection 5 of section 33.1-24-02-36 shall make such a notification if the owner or operator is named as debtor, as required under the terms of the corporate guarantee.
2. An owner or operator who fulfills the requirements of section 33.1-24-02-36 or 33.1-24-02-40 by obtaining a trust fund, surety bond, letter of credit, or insurance policy will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy of the trustee or issuing institution, or a suspension or revocation of the authority of the trustee institution to act as trustee or of the institution issuing the surety bond, letter of credit, or insurance policy to issue such instruments. The owner or operator shall establish other financial assurance or liability coverage within sixty days after such an event.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-42. Wording of the instruments.

1. Trust agreement and certification of acknowledgment.

- a. A trust agreement for a trust fund as specified in subsection 1 of section 33.1-24-02-36 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT, the "AGREEMENT" entered into as of [date] by and between [name of the owner or operator] a [name of state] [insert "corporation" "partnership," "association" or "proprietorship"], the "GRANTOR," and [name of corporate trustee], [insert "incorporated in the state of _____" or "a national bank"], the "TRUSTEE".

Whereas, the North Dakota department of environmental quality "DEPARTMENT" a regulatory agency of the state of North Dakota, has established certain regulations applicable to the GRANTOR requiring that an owner or operator of a facility regulated under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819 or subsection 5 of section 33.1-24-06-16, or satisfying the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04 shall provide assurance that funds will be available when needed for care of the facility under sections 33.1-24-05-59 through 33.1-24-05-73 or subsection 5 of section 33.1-24-06-16, as applicable,

Whereas, the GRANTOR has elected to establish a trust to provide all or part of such financial assurance for the facilities identified herein,

Whereas, the GRANTOR acting through its duly authorized officers has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT and the TRUSTEE is willing to act as TRUSTEE,

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

- (a) The term GRANTOR means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.
- (b) The term TRUSTEE means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities and Cost Estimate. This AGREEMENT pertains to the facilities and cost estimates identified on attached schedule A [on schedule A for each facility list the identification number (if available), name, address, and the current cost estimates, or portions thereof, for which financial assurance is demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a trust fund, the FUND, for the benefit of the DEPARTMENT in the event that the hazardous secondary materials of the GRANTOR no longer meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04. The GRANTOR and the TRUSTEE intend that no third party have access to the FUND, except as herein provided. The FUND is established initially as consisting of the property which is acceptable to the TRUSTEE and described in schedule B attached hereto. Such property and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND must be held by the TRUSTEE, IN TRUST, as herein provided. The

TRUSTEE is not responsible, nor may it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payments from the Fund. The TRUSTEE shall make payments from the FUND as the DEPARTMENT shall direct, in writing, to provide for the payment of the costs of the performance of activities required under sections 33.1-24-05-59 through 33.1-24-05-73 or subsection 5 of section 33.1-24-06-16 for the facilities covered by this AGREEMENT. The TRUSTEE shall reimburse the GRANTOR or other persons as specified by the DEPARTMENT from the FUND for expenditures for such activities in such amounts as the DEPARTMENT shall direct in writing. In addition, the TRUSTEE shall refund to the GRANTOR such amounts as the DEPARTMENT specifies in writing. Upon refund such funds shall no longer constitute part of the FUND as defined herein.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND must consist of cash or securities acceptable to the TRUSTEE.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income of the FUND and keep the FUND invested as a single FUND without distinction between principal and income in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject however to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the FUND, the TRUSTEE shall discharge the TRUSTEE's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (a) Securities or other obligations of the GRANTOR or any other owner or operator of the facilities or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), may not be acquired or held unless they are securities or other obligations of a federal or state government;
- (b) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (c) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the FUND to any common, commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without, in any way, eliminating the powers and discretions conferred upon the TRUSTEE by the other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE is bound to see the application of the purchase money or to inquire into the validity or expediency of any such sale or disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;
- (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE shall at all times show that all such securities are part of the FUND;
- (d) To deposit any cash in the FUND in interest bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate capacity, or in any other banking institution affiliated with the TRUSTEE to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection with the administration of this TRUST, including fees for legal services rendered to the TRUSTEE, the compensation of the TRUSTEE to the extent not paid directly by the GRANTOR and all other proper charges and disbursements of the TRUSTEE, must be paid from the FUND.

Section 10. Annual Valuation. The TRUSTEE shall annually, at least thirty days prior to the anniversary date of establishment of the FUND, furnish to the GRANTOR and to the DEPARTMENT a statement confirming the value of the TRUST. Any securities in the FUND must be valued at market value as of no more than sixty days prior to the anniversary date of establishment of the FUND. The failure of the GRANTOR to object in writing to the TRUSTEE within ninety days after the statement has been furnished to the GRANTOR and the DEPARTMENT, constitutes a conclusively binding assent by the GRANTOR barring the GRANTOR from asserting any claim or liability against the TRUSTEE with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR, with respect to any question arising as to construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected to the extent permitted by law in acting upon the advice of counsel.

Section 12. TRUSTEE Compensation. The TRUSTEE is entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 13. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement is not effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE

hereunder. Upon the successor TRUSTEE's acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason, the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the TRUST in a writing sent to the GRANTOR, the DEPARTMENT, and the present TRUSTEE by certified mail ten days before such change becomes effective. Any expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section must be paid as provided in section 9.

Section 14. Instructions to the TRUSTEE. All orders, requests, and instructions by the GRANTOR to the TRUSTEE must be in writing, signed by such persons as are designated in the attached Exhibit A, or such other designees as the GRANTOR may designate by amendment to Exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR's orders, requests, and instructions. All orders, requests, and instructions by the DEPARTMENT to the TRUSTEE must be in writing, signed by an authorized DEPARTMENT representative and the TRUSTEE shall act and be fully protected in acting in accordance with such orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or the DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty to act in the absence of such orders, requests, and instructions from the GRANTOR or the DEPARTMENT, or both, except as provided for herein.

Section 15. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist.

Section 16. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in section 15, this TRUST is irrevocable and continues until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the TRUST, all remaining trust property, less final trust administration expenses, must be delivered to the GRANTOR.

Section 17. Immunity and Indemnification. The TRUSTEE may not incur personal liability of any nature in connection with any act or omission made in good faith in the administration of this TRUST or in carrying out any directions by the GRANTOR or the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE must be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 18. Choice of Law. This AGREEMENT must be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 19. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT do not affect the interpretation or the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto fixed and attested as of the date first above written: The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subdivision a of subsection 1 of North

Dakota Administrative Code section 33.1-24-02-42 as such regulation was constituted on the date first above written.

b. The following is an example of the certification of acknowledgment which must accompany the TRUST AGREEMENT for a trust fund as specified in subsection 1 of section 33.1-24-02-36.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of notary public]

2. A surety bond guaranteeing payment into a trust fund as specified in subsection 2 of section 33.1-24-02-36 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

FINANCIAL GUARANTEE BOND

Date bond executed: _____

Effective date: _____

Principal: [legal name and business address of owner or operator]

Type of organization: [insert "individual", "joint venture", "partnership", or "corporation"]

State of incorporation: _____

Surety(ies): [name(s) and business address(es)]

Identification number, name, address, and amount or amounts for each facility guaranteed by this bond: _____

Total penal sum of bond: \$ _____

Surety's bond number: _____

Know all persons by these presents that we the PRINCIPAL and SURETY(IES) hereto are firmly bound to the North Dakota Department of Environmental Quality (hereinafter called the DEPARTMENT) in the event that the hazardous secondary materials of the GRANTOR no longer meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assignors jointly and severally: provided that where the SURETY(IES) are corporations acting as cosureties, we, the SURETIES, bind ourselves in such sum "jointly and severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each SURETY binds itself, jointly and severally with the PRINCIPAL, for the payment of such sum only as is set forth opposite the name of such SURETY, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

Whereas said PRINCIPAL is required under North Dakota Century Code chapter 23.1-04 to have a permit or interim status in order to own or operate each facility identified above, or to meet conditions under subdivision y of subsection 1 of section 33.1-24-02-04, and

Whereas said PRINCIPAL is required to provide financial assurance as a condition of permit or interim status or as a condition of an exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, and

Whereas said PRINCIPAL shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the PRINCIPAL shall faithfully, before the beginning of final closure of each facility identified above, fund the standby trust fund in the amounts identified above for the facility,

Or, if the PRINCIPAL shall satisfy all the conditions established for exclusion of hazardous secondary materials from coverage as solid waste under subdivision y of subsection 1 of section 33.1-24-02-04,

Or, if the PRINCIPAL shall fund the standby trust fund in such amounts within fifteen days after an order to begin closure is issued by the DEPARTMENT or a state or other court of competent jurisdiction,

Or, if the PRINCIPAL shall provide alternate financial assurance as specified in sections 33.1-24-02-33 through 33.1-24-02-42, as applicable, and obtain the DEPARTMENT's written approval of such assurance within ninety days after the date of notice of cancellation is received by both the PRINCIPAL and the DEPARTMENT from the SURETY(IES), then this obligation shall be null and void, otherwise it is to remain in full force and effect.

The SURETY(IES) shall become liable on this bond obligation only when the PRINCIPAL has failed to fulfill the conditions described above. Upon notification by the DEPARTMENT that the PRINCIPAL has failed to perform as guaranteed by this bond, the SURETY(IES) shall place funds in the amount guaranteed for the facility(ies) into the standby trust fund as directed by the DEPARTMENT.

The liability of the SURETY(IES) shall not be discharged by any payment or any succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penal sum of the bond, but in no event shall the obligation of the SURETY(IES) hereunder exceed the amount of said penal sum.

The SURETY(IES) may cancel the bond by sending notice of cancellation by certified mail to the PRINCIPAL and to the DEPARTMENT, provided, however, that cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the PRINCIPAL and the DEPARTMENT as evidenced by the return receipts.

The PRINCIPAL may terminate this bond by sending written notice to the SURETY(IES) provided, however, that no such notice shall become effective until the SURETY(IES) receive(s) written authorization for termination of the bond by the DEPARTMENT.

[The following paragraph is an optional rider that may be included, but is not required]

The PRINCIPAL and SURETY(IES) hereby agree to adjust the penal sum of the bond yearly so that it guarantees a new amount, provided that the penal sum does not increase by more than twenty percent in any one year, and no decrease in the penal sum takes place without the written permission of the DEPARTMENT.

In witness whereof, the PRINCIPAL and SURETY(IES) have executed this financial guarantee bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the PRINCIPAL and SURETY(IES) and that the wording of this surety bond is identical to the wording specified in subsection 2 of North Dakota Administrative Code section 33.1-24-02-42 as such rule was constituted on the date this bond was executed.

3. A letter of credit as specified in subsection 3 of section 33.1-24-02-36 must be worded as follows except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

IRREVOCABLE STANDBY LETTER OF CREDIT

Director, North Dakota Department of Environmental Quality

Dear Sir or Madam:

We hereby establish our Irrevocable Standby Letter of Credit Number _____ in your favor, in the event that the hazardous secondary materials at the covered reclamation or intermediary facility or facilities no longer meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, at the request and for the account of [owner's or operator's name and address] up to the aggregate amount of [in words] United States Dollars \$ _____, available upon presentation by you of

(1) Your sight draft bearing reference to this letter of credit Number _____, and

(2) Your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulations issued under authority of North Dakota Century Code chapter 23.1-04".

This letter of credit is effective as of [date] and shall expire on [date at least one year later], but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least one hundred twenty days before the current expiration date, we notify both you and [owner's or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your sight draft for one hundred twenty days after the date of receipt by both you and [owner's or operator's name], as shown on the signed return receipts.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us, and we shall deposit the amount of the draft directly into the standby trust fund of [owner's or operator's name] in accordance with your instructions.

We certify that the wording of this letter of credit is identical to the wording specified in subsection 3 of North Dakota Administrative Code section 33.1-24-02-42 as such rule was constituted on the date shown immediately below.

[Signature(s) and Title(s) of Official(s) of issuing institution] [Date]

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published and copyrighted by the International Chamber of Commerce", or "the Uniform Commercial Code"]

4. A certificate of insurance as specified in subsection 4 of section 33.1-24-02-36 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATE OF INSURANCE

Name and address of insurer (hereinafter called the "INSURER"): _____

Name and address of insured (hereinafter called the "INSURED"): _____

Facilities covered: [List for each facility: the identification number (if any issued), name, address, and amount of insurance for closure or the amount of insurance for all facilities covered, which must total the face amount shown below.]

Face amount: _____

Policy Number: _____

Effective Date: _____

The INSURER hereby certifies that it has issued to the INSURED the policy of insurance identified above to provide financial assurance so that in accordance with applicable regulations all hazardous secondary materials can be removed from the facility or any unit at the facility and the facility or any unit at the facility can be decontaminated at the facilities identified above. The INSURER further warrants that such policy conforms in all respects with the requirements of subsection 4 of North Dakota Administrative Code section 33.1-24-02-36, as applicable and as such regulations were constituted on the date shown immediately below. It is agreed that any provision of the policy inconsistent with such rules is hereby amended to eliminate such inconsistency.

When requested by the North Dakota Department of Environmental Quality (DEPARTMENT) the INSURER agrees to furnish to the DEPARTMENT a duplicate original of the policy listed above, including all endorsements thereon.

I hereby certify that the wording of this certificate is identical to the wording specified in subsection 4 of North Dakota Administrative Code section 33.1-24-02-42 as such rule was constituted on the date shown immediately below.

[Authorized signature for INSURER]

5. A letter from the chief financial officer, as specified in subsection 5 of section 33.1-24-02-36, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

[Address to North Dakota Department of Environmental Quality].

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance, as specified in sections 33.1-24-02-33 through 33.1-24-02-42.

[Fill out the following nine paragraphs regarding facilities and associated cost estimates. If your firm has no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number (if any issued), name, address, and current cost estimates.]

1. This firm is the owner or operator of the following facilities for which financial assurance is demonstrated through the financial test specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates covered by the test are shown for each facility: _____.
2. This firm guarantees, through the guarantee specified in sections 33.1-24-02-33 through 33.1-24-02-42, the following facilities owned or operated by the guaranteed party. The current cost estimates so guaranteed are shown for each facility: _____. The firm identified above is [insert one or more: (1) The direct or higher-tier parent corporation of

the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

3. This firm, as owner or operator or guarantor, is demonstrating financial assurance for the following facilities through the use of the financial test specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates covered by such a test are shown for each facility: _____.

4. This firm is the owner or operator of the following hazardous secondary materials management facilities for which financial assurance is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanism specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator of the following underground injection control facilities for which financial assurance for plugging and abandonment is required under 40 CFR part 144. The current closure cost estimates as required by 40 CFR 144.62 are shown for each facility: _____.

6. This firm is the owner or operator of the following facilities for which financial assurance for closure or postclosure care is demonstrated through the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16. The current closure and/or postclosure cost estimates covered by the test are shown for each facility: _____.

7. This firm guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16, the closure or postclosure care of the following facilities owned or operated by the guaranteed party. The current cost estimates for the closure or postclosure care so guaranteed are shown for each facility: _____. The firm identified above is [insert one or more: (1) the direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

8. This firm, as owner or operator or guarantor, is demonstrating financial assurance for the closure or postclosure care of the following facilities through the use of the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16. The current closure and/or postclosure cost estimates covered by such a test are shown for each facility: _____.

9. This firm is the owner or operator of the following hazardous waste management facilities for which financial assurance for closure or, if a disposal facility, postclosure care, is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanism specified in sections 33.1-24-05-74 through 33.1-24-05-88 and subsection 5 of section 33.1-24-06-16. The current closure and/or postclosure estimates not covered by such financial assurance are shown for each facility: _____.

This firm [insert "is required" or "is not required"] to file a form 10K with the securities and exchange commission for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

[Fill in Alternative I if the criteria of paragraph 1 of subdivision a of subsection 5 of section 33.1-24-02-36 are used. Fill in Alternative II if the criteria of paragraph 2 of subdivision a of subsection 5 of section 33.1-24-02-36 are used.]

6. A letter from the chief financial officer, as specified in subsection 6 of section 33.1-24-02-40, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

[Address to North Dakota Department of Environmental Quality.]

I am the chief financial officer of [firm's name and address]. This letter is in support of the use of the financial test to demonstrate financial responsibility for liability coverage under section 33.1-24-02-40 [insert "and costs assured subsection 5 of section 33.1-24-02-36" if applicable] as specified in sections 33.1-24-02-33 through 33.1-24-02-42.

[Fill out the following paragraphs regarding facilities and liability coverage. If there are no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number (if any issued), name, and address.]

The firm identified above is the owner or operator of the following facilities for which liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrence is being demonstrated through the financial test specified in sections 33.1-24-02-33 through 33.1-24-02-42:

The firm identified above guarantees, through the guarantee specified in sections 33.1-24-02-33 through 33.1-24-02-42, liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences at the following facilities owned or operated by the following: _____. The firm identified above is [insert one or more: (1) the direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee; or (3) engaged in the following substantial business

relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

The firm identified above is the owner or operator of the following facilities for which liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences is being demonstrated through the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16.

The firm identified above guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16, liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences at the following facilities owned or operated by the following: _____. The firm identified above is [insert one or more: (1) the direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

[If you are using the financial test to demonstrate coverage of both liability and costs assured under subsection 5 of section 33.1-24-02-36 or closure or postclosure case costs under sections 33.1-24-05-77 or subsection 5 of section 33.1-24-06-16, fill in the following nine paragraphs regarding facilities and associated cost estimates. If there are no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number (if any issued), name, address, and current cost estimates.]

1. This firm is the owner or operator of the following facilities for which financial assurance is demonstrated through the financial test specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates covered by the test are shown for each facility _____.

2. This firm guarantees, through the guarantee specified in sections 33.1-24-02-33 through 33.1-24-02-42, the following facilities owned or operated by the guaranteed party. The current cost estimates so guaranteed are shown for each facility: _____. The firm identified above is [insert one or more: (1) the direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

3. This firm, as owner or operator or guarantor, is demonstrating financial assurance for the following facilities through the use of the financial test specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates covered by such a test are shown for each facility: _____.

4. This firm is the owner or operator of the following hazardous secondary materials management facilities for which financial assurance is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanism specified in sections 33.1-24-02-33 through 33.1-24-02-42. The current cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator or guarantor of the following underground injection control facilities for which financial assurance for plugging and abandonment is required under 40 CFR part 144. The current closure cost estimates as required by 40 CFR 144.62 are shown for each facility: _____.

6. This firm is the owner or operator of the following facilities for which financial assurance for closure or postclosure care is demonstrated through the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88 and subsection 5 of section 33.1-24-06-16. The current closure and/or postclosure cost estimates covered by the test are shown for each facility: _____.

7. This firm guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88 and subsection 5 of section 33.1-24-06-16, the closure or postclosure care of the following facilities owned or operated by the guaranteed party. The current cost estimates for the closure or postclosure care so guaranteed are shown for each facility: _____. The firm identified above is the [insert one or more: (1) the direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee: _____; or (3) engaged in the following substantial business relationship with the owner or operator: _____, and receiving the following value in consideration of this guarantee: _____]. [Attach a written description of the business relationship or a copy of the contract establishing such a relationship to this letter.]

8. This firm, as owner or operator or guarantor, is demonstrating financial assurance for the closure or postclosure care of the following facilities through the use the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88. The current closure and/or postclosure cost estimates covered by such a test are shown for each facility: _____.

9. This firm is the owner or operator of the following hazardous waste management facilities for which financial assurance for closure or, if a disposal facility, postclosure care, is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanism specified in sections 33.1-24-05-74 through 33.1-24-05-88 or subsection 5 of section 33.1-24-06-16. The current closure and/or postclosure cost estimates not covered by such financial assurance are shown for each facility: _____.

This firm [insert "is required" or "is not required"] to file a form 10K with the securities and exchange commission for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

Part A. Liability Coverage for Accidental Occurrences

[Fill in Alternative I if the criteria of paragraph 1 of subdivision a of subsection 6 of section 33.1-24-02-40 are used. Fill in Alternative II if the criteria of paragraph 2 of subdivision a of subsection 6 of section 33.1-24-02-40 are used.]

Alternative I	
1.	Amount of annual aggregate liability coverage to be demonstrated. \$ _____
*2.	Current assets. \$ _____

*3.	Current liabilities. \$ _____
4.	Net working capital (line 2 minus line 3). \$ _____
*5.	Tangible net worth. \$ _____
*6.	If less than 90% of assets are located in the United States, give total United States assets. \$ _____
Yes	
No	
7.	Is line 5 at least \$10 million?
8.	Is line 4 at least 6 times line 1?
9.	Is line 5 at last 6 times line 1?
*10.	Are at least 90% of assets located in the United States? If not, complete line 11.
11.	Is line 6 at least 6 times line 1?
Alternative II	
1.	Amount of annual aggregate liability coverage to be demonstrated. \$ _____
2.	Current bond rating of most recent issuance and name of rating service.
3.	Date of issuance of bond.
4.	Date of maturity of bond.
*5.	Tangible net worth. \$ _____
*6.	Total assets in United States (required only if less than 90% of assets are located in the United States). \$ _____
Yes	
No	
7.	Is line 5 at least \$10 million?
8.	Is line 5 at least 6 times line 1?
9.	Are at least 90% of assets located in the United States? If not, complete line 10.
10.	Is line 6 at least 6 times line 1?

[Fill in part B if you are using the financial test to demonstrate assurance of both liability coverage and costs assured under subsection 5 of section 33.1-24-02-36 or closure or postclosure care costs under section 33.1-24-05-77 or subsection 5 of section 33.1-24-06-16.]

Part B. Facility Care and Liability Coverage

[Fill in Alternative I if the criteria of paragraph 1 of subdivision a of subsection 5 of section 33.1-24-02-36 and paragraph 1 of subdivision a of subsection 6 of section 33.1-24-02-40 are used. Fill in Alternative II if the criteria of paragraph 2 of subdivision a of subsection 5 of section 33.1-24-02-36 and paragraph 2 of subdivision a of subsection 6 of section 33.1-24-02-40 are used.]

Alternative I

1.	Sum of current cost estimates (total of all cost estimates listed above). \$ _____
2.	Amount of annual aggregate liability coverage to be demonstrated. \$ _____
3.	Sum of lines 1 and 2. \$ _____
*4.	Total liabilities (if any portion of your closure or postclosure cost estimates is included in your total liabilities, you may deduct that portion from this line and add that amount to lines 5 and 6). \$ _____
*5.	Tangible net worth. \$ _____
*6.	Net worth. \$ _____
*7.	Current assets. \$ _____
*8.	Current liabilities. \$ _____
9.	Net working capital (line 7 minus line 8). \$ _____
*10.	The sum of net income plus depreciation, depletion, and amortization. \$ _____
*11.	Total assets in United States (required only if less than 90% of assets are located in the United States). \$ _____
<u>Yes</u>	
<u>No</u>	
12.	Is line 5 at least \$10 million?
13.	Is line 5 at least 6 times line 3?
14.	Is line 9 at least 6 times line 3?
*15.	Are at least 90% of assets located in the United States? If not, complete line 16.
16.	Is line 11 at least 6 times line 3?
17.	Is line 4 divided by line 6 less than 2.0?
18.	Is line 10 divided by line 4 greater than 0.1?
19.	Is line 7 divided by line 8 greater than 1.5?
Alternative II	
1.	Sum of current cost estimate (total of all cost estimates listed above). \$ _____
2.	Amount of annual aggregate liability coverage to be demonstrated. \$ _____
3.	Sum of lines 1 and 2. \$ _____
4.	Current bond rating of most recent issuance and name of rating service.
*5.	Date of issuance of bond.
*6.	Date of maturity of bond.
*7.	Tangible net worth (if any portion of the cost estimates is included in "total liabilities" on your financial statements you may add that portion to this line). \$ _____
*8.	Total assets in the United States (required only if less than 90% of assets are located in the United States). \$ _____
<u>Yes</u>	
<u>No</u>	
9.	Is line 7 at least \$10 million?

10.	Is line 7 at least 6 times line 3?
*11.	Are at least 90% of assets located in the United States? If not, complete line 12.
12.	Is line 8 at least 6 times line 3?

I hereby certify that the wording of this letter is identical to the wording specified in subsection 6 of section 33.1-24-02-42 as such regulations were constituted on the date shown immediately below.

7. Corporate guarantee for facility care.

- a. A corporate guarantee, as specified in subsection 5 of section 33.1-24-02-36, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CORPORATE GUARANTEE FOR FACILITY CARE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of the state of [insert name of state], herein referred to as guarantor. This guarantee is made on behalf of the [owner or operator] of [business address], which is [one of the following: "our subsidiary"; "a subsidiary of [name and address of common parent corporation], of which guarantor is a subsidiary"; or "an entity with which guarantor has a substantial business relationship, as defined in subsection 8 of section 33.1-24-05-75"] to the DEPARTMENT.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in subsection 5 of section 33.1-24-02-36.
2. [Owner or operator] owns or operates the following facility(ies) covered by this guarantee: [List for each facility: identification number (if any issued), name, and address.]
3. "Closure plans" as used below refer to the plans maintained as required by sections 33.1-24-02-33 through 33.1-24-02-42 for the care of facilities as identified above.
4. For value received from [owner or operator], guarantor guarantees that in the event of a determination by the department that the hazardous secondary materials at the owner's or operator's facility covered by this guarantee do not meet the conditions of the exclusion under subdivision y of subsection 1 of section 33.1-24-02-04, the guarantor shall dispose of any hazardous secondary material as hazardous waste, and close the facility in accordance with closure requirements found in sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819 or subsection 5 of section 33.1-24-06-16, as applicable, or establish

a trust fund as specified in subsection 1 of section 33.1-24-02-36 in the name of the owner or operator in the amount of the current cost estimate.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within ninety days, by certified mail, notice to the DEPARTMENT and to [owner or operator] that the guarantor intends to provide alternate financial assurance as specified in sections 33.1-24-02-33 through 33.1-24-02-42, as applicable, in the name of [owner or operator]. Within one hundred twenty days after the end of such fiscal year, the guarantor shall establish such financial assurance unless [owner or operator] has done so.
6. The guarantor agrees to notify the DEPARTMENT by certified mail, of a voluntary or involuntary proceeding under title 11 (bankruptcy), United States Code, naming guarantor as debtor, within ten days after commencement of the proceeding.
7. Guarantor agrees that within thirty days after being notified by the DEPARTMENT of a determination that guarantor no longer meets the financial test criteria or that the guarantor is disallowed from continuing as a guarantor, the guarantor shall establish alternate financial assurance as specified in sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-02-33 through 33.1-24-02-42, as applicable, in the name of [owner or operator] unless [owner or operator] has done so.
8. Guarantor agrees to remain bound under this guarantee notwithstanding any or all of the following: amendment or modification of the closure plan, the extension or reduction of the time of performance, or any other modification or alteration of an obligation of the owner or operator pursuant to sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-02-33 through 33.1-24-02-42.
9. Guarantor agrees to remain bound under this guarantee for as long as [owner or operator] must comply with the applicable financial assurance requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819 and subsection 5 of section 33.1-24-06-16 or the financial assurance condition of subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04 for the above listed facilities, except as provided in paragraph 10 of this AGREEMENT.
10. [Insert the following language if the guarantor is (a) a direct or higher-tier corporate parent, or (b) a firm whose parent corporation is also the parent corporation of the owner or operator]:

Guarantor may terminate this guarantee by sending notice by certified mail to the DEPARTMENT and to [owner or operator], provided that this guarantee may not be terminated unless and until [the owner or operator] obtains, and the DEPARTMENT approves, alternate coverage complying with section 33.1-24-02-36.

[Insert the following language if the guarantor is a firm qualifying as a guarantor due to its "substantial business relationship" with its owner or operator.]

Guarantor may terminate this guarantee one hundred twenty days following the receipt of notification, through certified mail, by the DEPARTMENT and by [the owner or operator].

11. Guarantor agrees that if [owner or operator] fails to provide alternate financial assurance as specified in sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-02-33 through 33.1-24-02-42, as applicable, and obtain written approval of such assurance from the DEPARTMENT within ninety days after a notice of cancellation by the guarantor is received by the DEPARTMENT from guarantor, guarantor shall provide such alternate financial assurance in the name of [owner or operator].

12. Guarantor expressly waives notice of acceptance of this guarantee by the DEPARTMENT or by [owner or operator]. Guarantor also expressly waives notice of amendments or modifications of the closure plan and of amendments or modifications of the applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, or sections 33.1-24-02-33 through 33.1-24-02-42.

I hereby certify that the wording of this guarantee is identical to the wording specified in subdivision a of subsection 7 of section 33.1-24-02-42 as such regulations were constituted on the date first above written.

b. A guarantee, as specified in subsection 7 of section 33.1-24-02-40, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

GUARANTEE FOR LIABILITY COVERAGE

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of [if incorporated within the United States insert "the state of " and insert name of state; if incorporated outside the United States insert the name of the country in which incorporated, the principal place of business within the United States, and the name and address of the registered agent in the state of the principal place of business], herein referred to as guarantor. This guarantee is made on behalf of [owner or operator] of [business address], which is one of the following: "our subsidiary"; "a subsidiary of [name and address of common parent corporation], of which guarantor is a subsidiary"; or "an entity with which guarantor has a substantial business relationship, as defined in subsection 8 of section 33.1-24-05-75", to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in subsection 7 of section 33.1-24-02-40.
2. [Owner or operator] owns or operates the following facility(ies) covered by this guarantee: [List for each facility: identification number (if any issued), name, and address; and if guarantor is incorporated outside the United States list the name and address of the guarantor's registered agent in each state.] This corporate guarantee satisfies Resource Conservation and Recovery Act third-party liability requirements for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences in above-named owner or operator facilities for coverage in the amount of [insert dollar amount] for each occurrence and [insert dollar amount] annual aggregate.
3. For value received from [owner or operator], guarantor guarantees to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operations of the facility(ies) covered by this guarantee that in the event that [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by [sudden and/or nonsudden] accidental occurrences, arising from the operation of the above-named facilities, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor will satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage identified above.
4. Such obligation does not apply to any of the following:
 - (a) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert owner or operator] would be obligated to pay in the absence of the contract or agreement.
 - (b) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.
 - (c) Bodily injury to:
 - (1) An employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator]; or
 - (2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert owner or operator]. This exclusion applies:
 - (A) Whether [insert owner or operator] may be liable as an employer or in any other capacity; and
 - (B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).
 - (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

- (1) Any property owned, rented, or occupied by [insert owner or operator];
- (2) Premises that are sold, given away, or abandoned by [insert owner or operator] if the property damage arises out of any part of those premises;
- (3) Property loaned to [insert owner or operator];
- (4) Personal property in the care, custody, or control of [insert owner or operator]; or
- (5) That particular part of real property on which [insert owner or operator] or any contractors or subcontractors working directly or indirectly on behalf of [insert owner or operator] are performing operations, if the property damage arises out of these operations.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within ninety days, by certified mail, notice to the DEPARTMENT and to [owner or operator] that the guarantor intends to provide alternate liability coverage as specified in section 33.1-24-02-40, as applicable, in the name of [owner or operator]. Within one hundred twenty days after the end of such fiscal year, the guarantor shall establish such liability coverage unless [owner or operator] has done so.

6. The guarantor agrees to notify the DEPARTMENT by certified mail of a voluntary or involuntary proceeding under title 11 (bankruptcy), United States Code, naming guarantor as debtor, within ten days after commencement of the proceeding. Guarantor agrees that within thirty days after being notified by the DEPARTMENT of a determination that guarantor no longer meets the financial test criteria or that the guarantor is disallowed from continuing as a guarantor, the guarantor shall establish alternate liability coverage as specified in section 33.1-24-02-40 in the name of [owner or operator], unless [owner or operator] has done so.

7. Guarantor reserves the right to modify this AGREEMENT to take into account amendment or modification of the liability requirements set by section 33.1-24-02-40, provided that such modification shall become effective only if the DEPARTMENT does not disapprove the modification within thirty days of receipt of notification of the modification.

8. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable requirements of section 33.1-24-02-40 for the above-listed facility(ies), except as provided in paragraph 10 of this AGREEMENT.

9. [Insert the following language if the guarantor is (a) a direct or higher-tier corporate parent, or (b) a firm whose parent corporation is also the parent corporation of the owner or operator]:

10. Guarantor may terminate this guarantee by sending notice by certified mail to the DEPARTMENT and to [owner or operator], provided that this guarantee may not be terminated unless and until [the owner or operator] obtains, and the DEPARTMENT approves, alternate liability coverage complying with section 33.1-24-02-40.

[Insert the following language if the guarantor is a firm qualifying as a guarantor due to its "substantial business relationship" with the owner or operator]:

Guarantor may terminate this guarantee one hundred twenty days following receipt of notification, through certified mail, by the DEPARTMENT and by [the owner or operator].

11. Guarantor hereby expressly waives notice of acceptance of this guarantee by any party.

12. Guarantor agrees that this guarantee is in addition to and does not affect any other responsibility or liability of the guarantor with respect to the covered facilities.

13. The guarantor shall satisfy a third-party liability claim only on receipt of one of the following documents:

(a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [principal's] facility should be paid in the amount of \$ ____.

[Signatures]

Principal

(Notary) Date

[Signatures]

Claimant(s)

(Notary) Date

(b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.

14. In the event of combination of this guarantee with another mechanism to meet liability requirements, this guarantee will be considered [insert "primary" or "excess"] coverage.

I hereby certify that the wording of the guarantee is identical to the wording specified in subdivision b of subsection 7 of section 33.1-24-02-42 as such regulations were constituted on the date shown immediately below.

8. A hazardous waste facility liability endorsement as required in section 33.1-24-02-40 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

HAZARDOUS SECONDARY MATERIAL RECLAMATION/INTERMEDIATE FACILITY LIABILITY ENDORSEMENT

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering bodily injury and property damage in connection with the insured's obligation to demonstrate financial responsibility under North Dakota Administrative Code section 33.1-24-02-40. The coverage applies at [list identification number (if any issued), name, and address for each facility] for [insert "sudden accidental occurrences", "nonsudden accidental occurrences", or "sudden and nonsudden accidental occurrences"; if coverage is for multiple facilities and the coverage is different for different facilities, indicate which facilities are insured for sudden accidental occurrences, which are insured for nonsudden accidental occurrences and which are insured for both]. The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's liability], exclusive of legal defense costs.
2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions of the policy inconsistent with subsections (a) through (e) of this paragraph 2 are hereby amended to conform with subsections (a) through (e):
 - (a) Bankruptcy or insolvency of the insured shall not relieve the insurer of its obligations under the policy to which this endorsement is attached.
 - (b) The insurer is liable for the payment of amounts within any deductible applicable to this policy, with a right of reimbursement by the insured for any such payment made by the insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated as specified in subsection 6 of North Dakota Administrative Code section 33.1-24-02-40.
 - (c) When requested by the DEPARTMENT, the insurer agrees to furnish to the DEPARTMENT a signed duplicate original of the policy and all endorsements.
 - (d) Cancellation of this endorsement, whether by the insurer, the insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the facility, will be effective only upon written notice and only after the expiration of sixty days after a copy of such written notice is received by the DEPARTMENT.
 - (e) Any other termination of this endorsement will be effective only upon written notice and only after the expiration of thirty days after a copy of such written notice is received by the DEPARTMENT, as evidenced by the return receipt.

Attached to and forming part of policy number ___ issued by [name of insurer], herein called the insurer of [address of insurer] to [name of insured] of [address] this ___ day of ___, 20___. The effective date of said policy is ___ day of ___, 20___.

I hereby certify that the wording of this endorsement is identical to the wording specified in subsection 8 of North Dakota Administrative Code section 33.1-24-02-42 as such rule was constituted on the date first above written, and that

the insurer is licensed to transact the business of insurance in the state of North Dakota or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

[Type name]

[Title], authorized representative of [name of insurer]

[Address of representative]

9. A certificate of liability insurance as required in section 33.1-24-02-40 must be worded as follows, except that the instructions in brackets are to be replaced with the relevant information and the brackets deleted:

HAZARDOUS SECONDARY MATERIAL RECLAMATION/INTERMEDIATE FACILITY
CERTIFICATE OF LIABILITY INSURANCE

1. [Name of insurer], (the "insurer") of [address of insurer] hereby certifies that it has issued liability insurance covering bodily injury and property damage to [name of insured], (the "insured"), of [address of insured] in connection with the insured's obligation to demonstrate financial responsibility under sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, and the financial assurance condition of subparagraph f of paragraph 6 of subdivision y of subsection 1 of section 33.1-24-02-04. The coverage applies at [list identification number (if any issued), name, and address for each facility] for [insert "sudden accidental occurrences", "nonsudden accidental occurrences", or "sudden and nonsudden accidental occurrences"; if coverage is for multiple facilities and the coverage is different for different facilities, indicate which facilities are insured for sudden accidental occurrences, which are insured for nonsudden accidental occurrences, and which are insured for both]. The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's liability], exclusive of legal defense costs. The coverage is provided under policy number _____, issued on [date]. The effective date of said policy is [date].
2. The insurer further certifies the following with respect to the insurance described in paragraph 1:
 - (a) Bankruptcy or insolvency of the insured shall not relieve the insurer of its obligations under the policy.
 - (b) The insurer is liable for the payment of amounts within any deductible applicable to the policy, with a right of reimbursement by the insured for any such payment made by the insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated as specified in North Dakota Administrative Code section 33.1-24-02-40.
 - (c) When requested by the DEPARTMENT, the insurer agrees to furnish to the DEPARTMENT a signed duplicate original of the policy and all endorsements.
 - (d) Cancellation of the insurance, whether by the insurer, the insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the hazardous waste management facility, will be effective only upon

written notice, and only after the expiration of sixty days after a copy of such written notice is received by the DEPARTMENT.

- (e) Any other termination of the insurance will be effective only upon written notice, and only after the expiration of thirty days after a copy of such written notice is received by the DEPARTMENT, as evidenced by the return receipt.

I hereby certify that the wording of this instrument is identical to the wording specified in subsection 9 of North Dakota Administrative Code section 33.1-24-02-42, as such regulation was constituted on the date first above written, and that the insurer is licensed to transact the business of insurance, in the state of North Dakota or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

10. A letter of credit, as specified in subsection 8 of section 33.1-24-02-40, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

IRREVOCABLE STANDBY LETTER OF CREDIT

[Name and Address of Issuing Institution]

North Dakota Department of Environmental Quality

Dear Sir or Madam:

We hereby establish our Irrevocable Standby Letter of Credit No. _____ in the favor of ["any and all third-party liability claimants" or insert name of TRUSTEE of the standby trust fund], at the request and for the account of [owner's or operator's name and address] for third-party liability awards or settlements up to [in words] United States dollars \$ _____ per occurrence and the annual aggregate amount of [in words] United States dollars \$ _____, for sudden accidental occurrences and/or for third-party liability awards or settlements up to the amount of [in words] United States dollars \$ _____ per occurrence, and the annual aggregate amount of [in words] United States dollars \$ _____, for nonsudden accidental occurrences available upon presentation of a sight draft bearing reference to this letter of credit No. _____, and [insert the following language if the letter of credit is being used without a standby trust fund]: (1) a signed certificate reading as follows:

CERTIFICATE OF VALID CLAIM

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operations of [principal's] facility should be paid in the amount of \$[_____]. We hereby certify that the claim does not apply to any of the following:

- (a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does

not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert principal] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) An employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal].

This exclusion applies:

(A) Whether [insert principal] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs 1 and 2.

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert principal];

(2) Premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;

(3) Property loaned to [insert principal];

(4) Personal property in the care, custody, or control of [insert principal]; or

(5) That particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert principal] are performing operations, if the property damage arises out of these operations.

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits published and copyrighted by the International Chamber of Commerce" or "the Uniform Commercial Code"].

11. A surety bond, as specified in subsection 9 of section 33.1-24-02-40, must be worded as follows: except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

PAYMENT BOND

Surety Bond No. [Insert number]

Parties [insert name and address of owner or operator], principal, incorporated in [insert state of incorporation] of [insert city and state of principal place of business] and [insert name and address of surety company(ies)], surety company(ies), of [insert surety(ies) place of business].

Identification number (if any issued), name, and address for each facility guaranteed by this bond:

	<u>Sudden Accidental Occurrences</u>	<u>Nonsudden Accidental Occurrences</u>
<u>Penal sum per occurrence</u>	<u>[insert amount]</u>	<u>[insert amount]</u>
<u>Annual aggregate</u>	<u>[insert amount]</u>	<u>[insert amount]</u>

Purpose: this is an AGREEMENT between the surety(ies) and the principal under which the surety(ies), its(their) successors and assignees, agree to be responsible for the payment of claims against the principal for bodily injury and/or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental occurrences arising from operations of the facility or group of facilities in the sums prescribed herein; subject to the governing provisions and the following conditions.

Governing Provisions

- (1) Section 3004 of the Resource Conservation and Recovery Act of 1976, as amended.

- (2) Rules and regulations of the United States environmental protection agency (EPA), particularly 40 CFR parts 264, 265, and Subpart H of 40 CFR part 261 (if applicable).
- (3) Rules and regulations of the North Dakota Department of Environmental Quality (DEPARTMENT), particularly sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, subsection 5 of section 33.1-24-06-16, and sections 33.1-24-02-33 through 33.1-24-02-42 of the North Dakota Administrative Code (if applicable).

Conditions

- (1) The principal is subject to the applicable governing provisions that require the principal to have and maintain liability coverage for bodily injury and property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental occurrences arising from operations of the facility or group of facilities. Such obligation does not apply to any of the following:
 - (a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.
 - (b) Any obligation of [insert principal] under a workers' compensation, disability benefits, or unemployment compensation law or similar law.
 - (c) Bodily injury to:
 - (1) An employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or
 - (2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal]. This exclusion applies:
 - (A) Whether [insert principal] may be liable as an employer or in any other capacity; and
 - (B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).
 - (d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.
 - (e) Property damage to:
 - (1) Any property owned, rented, or occupied by [insert principal];
 - (2) Premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;
 - (3) Property loaned to [insert principal];
 - (4) Personal property in the care, custody, or control of [insert principal]; or
 - (5) That particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert

principal] are performing operations, if the property damage arises out of these operations.

- (2) This bond assures that the principal will satisfy valid third-party liability claims, as described in condition 1.
- (3) If the principal fails to satisfy a valid third-party liability claim, as described above, the surety(ies) becomes liable on this bond obligation.
- (4) The surety(ies) shall satisfy a third-party liability claim only upon the receipt of one of the following documents:
- (a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert name of principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [principal's] facility should be paid in the amount of \$[_____].

[Signature]

Principal

[Notary] Date

[Signature(s)]

Claimant(s)

[Notary] Date

- (b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.
- (5) In the event of combination of this bond with another mechanism for liability coverage, this bond will be considered [insert "primary" or "excess"] coverage.
- (6) The liability of the surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penal sum of the bond. In no event shall the obligation of the surety(ies) hereunder exceed the amount of said annual aggregate penal sum, provided that the surety(ies) furnish(es) notice to the DEPARTMENT forthwith of all claims filed and payments made by the surety(ies) under this bond.
- (7) The surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the principal and the DEPARTMENT provided, however, the cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by the principal and the DEPARTMENT, as evidenced by the return receipt.
- (8) The principal may terminate this bond by sending written notice to the surety(ies) and to the DEPARTMENT.

(9) The surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agree(s) that no such amendment shall in any way alleviate its (their) obligation on this bond.

(10) This bond is effective from [insert date] (12:01 a.m., standard time, at the address of the principal as stated herein) and shall continue in force until terminated as described above.

In Witness Whereof, the principal and surety(ies) have executed this bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the principal and surety(ies) and that the wording of this surety bond is identical to the wording specified in subsection 11 of section 33.1-24-02-42, as such regulations were constituted on the date this bond was executed.

12. Trust agreement.

a. A trust agreement, as specified in subsection 10 of section 33.1-24-02-40, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT

TRUST AGREEMENT, the "AGREEMENT," entered into as of [date] by and between [name of the owner or operator] a [name of state] [insert "corporation", "partnership", "association", or "proprietorship"], the "GRANTOR", and [name of corporate TRUSTEE], [insert, "incorporated in the state of _____" or "a national bank"], the "TRUSTEE".

Whereas, the DEPARTMENT has established certain regulations applicable to the GRANTOR, requiring that an owner or operator must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the GRANTOR has elected to establish a trust to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the GRANTOR, acting through its duly authorized officers, has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT, and the TRUSTEE is willing to act as TRUSTEE.

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

- (a) The term "GRANTOR" means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.
- (b) The term "TRUSTEE" means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities. This AGREEMENT pertains to the facilities identified on attached schedule A [on schedule A, for each facility list the identification number (if any issued), name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a trust fund, hereinafter the "FUND", for the benefit of any and all third parties injured or damaged by [sudden or nonsudden, or both] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amount of \$_____ [up to \$1 million] per occurrence and \$_____ [up to \$2 million] annual aggregate for sudden accidental occurrences and \$_____ [up to \$3 million] per occurrence and \$_____ [up to \$6 million] annual aggregate for nonsudden occurrences, except that the FUND is not established for the benefit of third parties for the following:

- (a) Bodily injury or property damage for which [insert GRANTOR] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert GRANTOR] would be obligated to pay in the absence of the contract or agreement.
- (b) Any obligation of [insert GRANTOR] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.
- (c) Bodily injury to:
 - (1) An employee of [insert GRANTOR] arising from, and in the course of, employment by [insert GRANTOR]; or
 - (2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert GRANTOR].

This exclusion applies:

(A) Whether [insert GRANTOR] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert GRANTOR];

(2) Premises that are sold, given away, or abandoned by [insert GRANTOR] if the property damage arises out of any part of those premises;

(3) Property loaned to [insert GRANTOR];

(4) Personal property in the care, custody, or control of [insert GRANTOR]; or

(5) That particular part of real property on which [insert GRANTOR] or any contractors or subcontractors working directly or indirectly on behalf of [insert GRANTOR] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the FUND shall be considered [insert "primary" or "excess"] coverage.

The FUND is established initially as consisting of the property, which is acceptable to the TRUSTEE, described in schedule B attached hereto. Such property and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND shall be held by the TRUSTEE, IN TRUST, as hereinafter provided. The TRUSTEE shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR, any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payment for Bodily Injury or Property Damage. The TRUSTEE shall satisfy a third-party liability claim by making payments from the FUND only upon receipt of one of the following documents:

(a) Certification from the GRANTOR and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert GRANTOR] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [GRANTOR's] facility or group of facilities should be paid in the amount of \$[_____].

[Signatures]

GRANTOR

[Signatures]

Claimant(s)

- (b) A valid final court order establishing a judgment against the GRANTOR for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the GRANTOR's facility or group of facilities.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND shall consist of cash or securities acceptable to the TRUSTEE.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the FUND, the TRUSTEE shall discharge the TRUSTEE's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstance then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (i) Securities or other obligations of the GRANTOR, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held unless they are securities or other obligations of the federal or a state government;
- (ii) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (iii) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the FUND to any common commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without in any way limiting the powers and discretions conferred upon the TRUSTEE by the other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

- (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE shall at all times show that all such securities are part of the FUND;
- (d) To deposit any cash in the FUND in interest-bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate corporate capacity, or in any other banking institution affiliated with the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection with the administration of this trust, including fees for legal services rendered to the TRUSTEE, the compensation of the TRUSTEE to the extent not paid directly by the GRANTOR, and all other proper charges and disbursements of the TRUSTEE shall be paid from the FUND.

Section 10. Annual Valuations. The TRUSTEE shall annually, at least thirty days prior to the anniversary date of establishment of the FUND, furnish to the GRANTOR and to the DEPARTMENT a statement confirming the value of the trust. Any securities in the FUND shall be valued at market value as of no more than sixty days prior to the anniversary date of establishment of the FUND. The failure of the GRANTOR to object in writing to the TRUSTEE within ninety days after the statement has been furnished to the GRANTOR and the DEPARTMENT shall constitute a conclusively binding assent by the GRANTOR barring the GRANTOR from asserting any claim or liability against the TRUSTEE with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR with respect to any question arising as to the construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 12. TRUSTEE Compensation. The TRUSTEE shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 13. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement shall not be effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE hereunder. Upon the successor TRUSTEE's acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the trust in a writing sent to the GRANTOR, the DEPARTMENT, and the present TRUSTEE by certified mail ten days before such change becomes effective. Any

expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 14. Instructions to the TRUSTEE. All orders, requests, and instructions by the GRANTOR to the TRUSTEE shall be in writing, signed by such persons as are designated in the attached exhibit A or such other designees as the GRANTOR may designate by amendments to exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR's orders, requests, and instructions. All orders, requests, and instructions by the DEPARTMENT to the TRUSTEE shall be in writing, signed by the DEPARTMENT, or its designees, and the TRUSTEE shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty to act in the absence of such orders, requests, and instructions from the GRANTOR and/or the DEPARTMENT, except as provided for herein.

Section 15. Notice of Nonpayment. If a payment for bodily injury or property damage is made under Section 4 of this trust, the TRUSTEE shall notify the GRANTOR of such payment and the amount(s) thereof within five working days. The GRANTOR shall, on or before the anniversary date of the establishment of the FUND following such notice, either make payments to the TRUSTEE in amounts sufficient to cause the trust to return to its value immediately prior to the payment of claims under Section 4, or shall provide written proof to the TRUSTEE that other financial assurance for liability coverage has been obtained equaling the amount necessary to return the trust to its value prior to the payment of claims. If the GRANTOR does not either make payments to the TRUSTEE or provide the TRUSTEE with such proof, the TRUSTEE shall within ten working days after the anniversary date of the establishment of the FUND provide a written notice of nonpayment to the DEPARTMENT.

Section 16. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT if the GRANTOR ceases to exist.

Section 17. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in Section 16, this trust shall be irrevocable and shall continue until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE, and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the trust, all remaining trust property, less final trust administration expenses, shall be delivered to the GRANTOR. The DEPARTMENT will agree to termination of the trust when the owner or operator substitutes alternate financial assurance as specified in this section.

Section 18. Immunity and Indemnification. The TRUSTEE shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this trust, or in carrying out any directions by the GRANTOR or the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE shall be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 19. Choice of Law. This AGREEMENT shall be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 20. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT shall not affect the interpretation or the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subsection 12 of section 33.1-24-02-42, as such regulations were constituted on the date first above written.

b. The following is an example of the certification of acknowledgment which must accompany the TRUST AGREEMENT for a trust fund as specified in subsection 10 of section 33.1-24-02-40.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the board of directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of notary public]

13. Standby trust agreement.

a. A standby trust agreement, as specified in subsection 8 of section 33.1-24-02-40, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

STANDBY TRUST AGREEMENT

TRUST AGREEMENT, the "AGREEMENT", entered into as of [date] by and between [name of the owner or operator] a [name of a state] [insert "corporation", "partnership", "association", or "proprietorship"], the "GRANTOR", and [name of corporate TRUSTEE], [insert, "incorporated in the state of _____" or "a national bank"], the "TRUSTEE."

Whereas the DEPARTMENT has established certain regulations applicable to the GRANTOR, requiring that an owner or operator must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the GRANTOR has elected to establish a standby trust into which the proceeds from a letter of credit may be deposited to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the GRANTOR, acting through its duly authorized officers, has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT, and the TRUSTEE is willing to act as TRUSTEE.

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

- (a) The term "GRANTOR" means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.
- (b) The term "TRUSTEE" means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities. This AGREEMENT pertains to the facilities identified on attached schedule A [on schedule A, for each facility list the identification number (if any issued), name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a standby trust fund, hereafter the "FUND", for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of \$ _____ [up to \$1 million] per occurrence and \$ _____ [up to \$2 million] annual aggregate for sudden accidental occurrences and \$ _____ [up to \$3 million] per occurrence and \$ _____ [up to \$6 million] annual aggregate for nonsudden occurrences, except that the FUND is not established for the benefit of third parties for the following:

- (a) Bodily injury or property damage for which [insert GRANTOR] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert GRANTOR] would be obligated to pay in the absence of the contract or agreement.
- (b) Any obligation of [insert GRANTOR] under a workers' compensation, disability benefits, or unemployment compensation law, or any similar law.
- (c) Bodily injury to:
 - (1) An employee of [insert GRANTOR] arising from, and in the course of, employment by [insert GRANTOR]; or
 - (2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert GRANTOR].

This exclusion applies:

(A) Whether [insert GRANTOR] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert GRANTOR];

(2) Premises that are sold, given away, or abandoned by [insert GRANTOR] if the property damage arises out of any part of those premises;

(3) Property loaned by [insert GRANTOR];

(4) Personal property in the care, custody, or control of [insert GRANTOR]; or

(5) That particular part of real property on which [insert GRANTOR] or any contractors or subcontractors working directly or indirectly on behalf of [insert GRANTOR] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the FUND shall be considered [insert "primary" or "excess"] coverage.

The FUND is established initially as consisting of the proceeds of the letter of credit deposited into the FUND. Such proceeds and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND shall be held by the TRUSTEE, IN TRUST, as hereinafter provided. The TRUSTEE shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR, any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payment for Bodily Injury or Property Damage. The TRUSTEE shall satisfy a third party liability claim by drawing on the letter of credit described in schedule B and by making payments from the FUND only upon receipt of one of the following documents:

(a) Certification from the GRANTOR and the third party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

The undersigned, as parties [insert GRANTOR] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [GRANTOR's] facility should be paid in the amount of \$[____].

[Signature]

GRANTOR

[Signatures]

Claimant(s)

- (b) A valid final court order establishing a judgment against the GRANTOR for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the GRANTOR's facility or group of facilities.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND shall consist of the proceeds from the letter of credit drawn upon by the TRUSTEE in accordance with the requirements of subsection 11 of section 33.1-24-02-42 and Section 4 of this AGREEMENT.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the FUND, the TRUSTEE shall discharge the TRUSTEE's duties with respect to the trust FUND solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (i) Securities or other obligations of the GRANTOR, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;
- (ii) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or a state government; and
- (iii) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the FUND to any common, commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without in any way limiting the powers and discretions conferred upon the TRUSTEE by other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

- (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE shall at all times show that all such securities are part of the FUND;
- (d) To deposit any cash in the FUND in interest-bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate corporate capacity, or in any other banking institution affiliated with the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection with the administration of this trust, including fees for legal services rendered to the TRUSTEE, the compensation of the TRUSTEE to the extent not paid directly by the GRANTOR, and all other proper charges and disbursements to the TRUSTEE shall be paid from the FUND.

Section 10. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR, with respect to any question arising as to the construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. TRUSTEE Compensation. The TRUSTEE shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 12. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement shall not be effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE hereunder. Upon the successor TRUSTEE's acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the trust in a writing sent to the GRANTOR, the DEPARTMENT and the present TRUSTEE by certified mail ten days before such change becomes effective. Any expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 13. Instructions to the TRUSTEE. All orders, requests, certifications of valid claims, and instructions to the TRUSTEE shall be in writing, signed by such persons as are designated in the attached exhibit A or such other designees as the GRANTOR may designate by amendments to exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR's orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or the DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty

to act in the absence of such orders, requests, and instructions from the GRANTOR and/or the DEPARTMENT, except as provided for herein.

Section 14. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT if the GRANTOR ceases to exist.

Section 15. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in Section 14, this trust shall be irrevocable and shall continue until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the trust, all remaining trust property, less final trust administration expenses, shall be paid to the GRANTOR. The DEPARTMENT will agree to termination of the trust when the owner or operator substitutes alternative financial assurance as specified in this section.

Section 16. Immunity and Indemnification. The TRUSTEE shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this trust, or in carrying out any directions by the GRANTOR and the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE shall be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 17. Choice of Law. This AGREEMENT shall be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 18. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT shall not affect the interpretation of the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subsection 13 of section 33.1-24-02-42 as such regulations were constituted on the date first above written.

b. The following is an example of the certification of acknowledgment which must accompany the TRUST AGREEMENT for a standby trust fund as specified in subsection 8 of section 33.1-24-02-40.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the board of directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of notary public]

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-43. [Reserved].

33.1-24-02-44. [Reserved].

33.1-24-02-45. [Reserved].

33.1-24-02-46. [Reserved].

33.1-24-02-47. [Reserved].

33.1-24-02-48. [Reserved].

33.1-24-02-49. [Reserved].

33.1-24-02-50. Applicability of requirements for use and management of containers.

Sections 33.1-24-02-50 through 33.1-24-02-59 apply to hazardous secondary materials excluded under the remanufacturing exclusion at subdivision z of subsection 1 of section 33.1-24-02-04 and stored in containers.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-51. Conditions of containers.

If a container holding hazardous secondary material is not in good condition (for example, severe rusting, apparent structural defects) or if it begins to leak, the hazardous secondary material must be transferred from this container to a container that is in good condition or managed in some other way that complies with the requirements of this chapter.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-52. Compatibility of hazardous secondary materials with containers.

The container must be made of or lined with materials that will not react with, and are otherwise compatible with, the hazardous secondary material to be stored, so that the ability of the container to contain the material is not impaired.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-53. Management of containers.

1. A container holding hazardous secondary material must always be closed during storage, except when it is necessary to add or remove the hazardous secondary material.
2. A container holding hazardous secondary material must not be opened, handled, or stored in a manner that may rupture the container or cause it to leak.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-54. [Reserved].

33.1-24-02-55. Containment.

1. Container storage areas must have a containment system that is designed and operated in accordance with subsection 2.
2. A containment system must be designed and operated as follows:
 - a. A base must underlie the containers which is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed;

- b. The base must be sloped or the containment system must be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids;
- c. The containment system must have sufficient capacity to contain ten percent of the volume of containers or the volume of the largest container, whichever is greater.
- d. Run-on into the containment system must be prevented unless the collection system has sufficient excess capacity in addition to that required in subdivision c to contain any run-on which might enter the system; and
- e. Spilled or leaked material and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-56. Special requirements for ignitable or reactive hazardous secondary material.

Containers holding ignitable or reactive hazardous secondary material must be located at least fifteen meters [50 feet] from the facility's property line.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-57. Special requirements for incompatible materials.

- 1. Incompatible materials must not be placed in the same container.
- 2. Hazardous secondary material must not be placed in an unwashed container that previously held an incompatible material.
- 3. A storage container holding a hazardous secondary material that is incompatible with any other materials stored nearby must be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-58. [Reserved].

33.1-24-02-59. Air emission standards.

The remanufacturer or other person that stores or treats the hazardous secondary material shall manage all hazardous secondary material placed in a container in accordance with the applicable requirements of sections 33.1-24-02-170 through 33.1-24-02-214.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-60. Applicability of tank requirements.

1. Sections 33.1-24-02-60 through 33.1-24-02-74 apply to tank systems for storing or treating hazardous secondary material excluded under the remanufacturing exclusion at subdivision z of subsection 1 of section 33.1-24-02-04.
2. Tank systems, including sumps, as defined in section 33.1-24-01-04, which serve as part of a secondary containment system to collect or contain releases of hazardous secondary materials are exempted from the requirements in subsection 1 of section 33.1-24-02-63.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-61. Assessment of existing tank system's integrity.

1. Tank systems must meet the secondary containment requirements of section 33.1-24-02-63, or the remanufacturer or other person that handles the hazardous secondary material must determine that the tank system is not leaking or is unfit for use. Except as provided in subsection 3, a written assessment reviewed and certified by a qualified professional engineer must be kept on file at the remanufacturer's facility or other facility that stores or treats the hazardous secondary material that attests to the tank system's integrity.
2. This assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the materials to be stored or treated, to ensure that it will not collapse, rupture, or fail. At a minimum, this assessment must consider the following:
 - a. Design standards, if available, according to which the tank and ancillary equipment were constructed;
 - b. Hazardous characteristics of the materials that have been and will be handled;
 - c. Existing corrosion protection measures;
 - d. Documented age of the tank system, if available (otherwise, an estimate of the age); and
 - e. Results of a leak test, internal inspection, or other tank integrity examination such that:
 - (1) For nonenterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of temperature variations, tank end deflection, vapor pockets, and high water table effects; and
 - (2) For other than nonenterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above, or other integrity examination that is certified by a qualified professional engineer that addresses cracks, leaks, corrosion, and erosion.

Note: The practices described in the American Petroleum Institute (API) Publication, Guide for Inspection of Refinery Equipment, Chapter XIII, "Atmospheric and Low-Pressure Storage Tanks," 4th edition, 1981, may be used, where applicable, as guidelines in conducting other than a leak test.

3. If, as a result of the assessment conducted in accordance with subsection 1, a tank system is found to be leaking or unfit for use, the remanufacturer or other person that stores or treats the hazardous secondary material shall comply with the requirements of section 33.1-24-02-66.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-62. [Reserved].

33.1-24-02-63. Containment and detection of releases.

1. Secondary containment systems must be:

- a. Designed, installed, and operated to prevent any migration of materials or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
- b. Capable of detecting and collecting releases and accumulated liquids until the collected material is removed.

Note: If the collected material is a hazardous waste under this chapter, it is subject to management as a hazardous waste in accordance with all applicable requirements of chapters 33.1-24-03 and 33.1-24-04, sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-929, and subsection 5 of section 33.1-24-06-16. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of sections 301, 304, and 402 of the Clean Water Act, as amended. If discharged to a publicly owned treatment works, it is subject to the requirements of section 307 of the Clean Water Act, as amended. If the collected material is released to the environment, it may be subject to the reporting requirements of 40 CFR part 302.

2. To meet the requirements of subsection 1, secondary containment systems must be at a minimum:

- a. Constructed of or lined with materials that are compatible with the materials to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the material to which it is exposed, climatic conditions, and the stress of daily operation (including stresses from nearby vehicular traffic).
- b. Placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift;
- c. Provided with a leak-detection system that is designed and operated so that it will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous secondary material or accumulated liquid in the secondary containment system at the earliest practicable time; and
- d. Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked material and accumulated precipitation must be removed from the secondary containment system within twenty-four hours, or in as timely a manner as is possible to prevent harm to human health and the environment.

3. Secondary containment for tanks must include one or more of the following devices:

- a. A liner (external to the tank);
- b. A vault; or

c. A double-walled tank.

4. In addition to the requirements of subsections 1, 2, and 3, secondary containment systems must satisfy the following requirements:

a. External liner systems must be:

- (1) Designed or operated to contain one hundred percent of the capacity of the largest tank within its boundary;
- (2) Designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a twenty-five-year, twenty-four-hour rainfall event.
- (3) Free of cracks or gaps; and
- (4) Designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the material if the material is released from the tanks (for example, capable of preventing lateral as well as vertical migration of the material).

b. Vault systems must be:

- (1) Designed or operated to contain one hundred percent of the capacity of the largest tank within its boundary;
- (2) Designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a twenty-five-year, twenty-four-hour rainfall event;
- (3) Constructed with chemical-resistant water stops in place at all joints (if any);
- (4) Provided with an impermeable interior coating or lining that is compatible with the stored material and that will prevent migration of material into the concrete;
- (5) Provided with a means to protect against the formation of and ignition of vapors within the vault, if the material being stored or treated is ignitable or reactive; and
- (6) Provided with an exterior moisture barrier or be otherwise designed or operated to prevent migration of moisture into the vault if the vault is subject to hydraulic pressure.

c. Double-walled tanks must be:

- (1) Designed as an integral structure (for example, an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell;
- (2) Protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell; and
- (3) Provided with a built-in continuous leak detection system capable of detecting a release within twenty-four hours, or at the earliest practicable time.

Note to subdivision c: The provisions outlined in the Steel Tank Institute's (STI) "Standard for Dual Wall Underground Steel Storage Tanks" may be used as guidelines for aspects of the design of underground steel double-walled tanks.

5. [Reserved].

6. Ancillary equipment must be provided with secondary containment (for example, trench, jacketing, double-walled piping) that meets the requirements of subsections 1 and 2 except for:

- a. Aboveground piping (exclusive of flanges, joints, valves, and other connections) that are visually inspected for leaks on a daily basis;
- b. Welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis;
- c. Sealless or magnetic coupling pumps and sealless valves that are visually inspected for leaks on a daily basis; and
- d. Pressurized aboveground piping systems with automatic shutoff devices (for example, excess flow check valves, flow metering shutdown devices, loss of pressure actuated shutoff devices) that are visually inspected for leaks on a daily basis.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-64. General operating requirements.

1. Hazardous secondary materials or treatment reagents must not be placed in a tank system if they could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.

2. The remanufacturer or other person that stores or treats the hazardous secondary material must use appropriate controls and practices to prevent spills and overflows from tank or containment systems. These include at a minimum:

- a. Spill prevention controls (for example, check valves, dry disconnect couplings);
- b. Overfill prevention controls (for example, level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and
- c. Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation.

3. The remanufacturer or other person that stores or treats the hazardous secondary material shall comply with the requirements of section 33.1-24-02-66 if a leak or spill occurs in the tank system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-65. [Reserved].

33.1-24-02-66. Response to leaks or spills and disposition of leaking or unfit-for-use tank systems.

A tank system or secondary containment system from which there has been a leak or spill, or which is unfit for use, must be removed from service immediately, and the remanufacturer or other person that stores or treats the hazardous secondary material shall satisfy the following requirements:

1. Cessation of use; prevent flow or addition of materials. The remanufacturer or other person that stores or treats the hazardous secondary material immediately shall stop the flow of hazardous secondary material into the tank system or secondary containment system and inspect the system to determine the cause of the release.
2. Removal of material from tank system or secondary containment system.
 - a. If the release was from the tank system, the remanufacturer or other person that stores or treats the hazardous secondary material, within twenty-four hours after detection of the leak or, if the remanufacturer or other person that stores or treats the hazardous secondary material demonstrates that it is not possible, at the earliest practicable time, shall remove as much of the material as is necessary to prevent further release of hazardous secondary material to the environment and to allow inspection and repair of the tank system to be performed.
 - b. If the material released was to a secondary containment system, all released materials must be removed within twenty-four hours or in as timely a manner as is possible to prevent harm to human health and the environment.
3. Containment of visible releases to the environment. The remanufacturer or other person that stores or treats the hazardous secondary material immediately shall conduct a visual inspection of the release and, based upon that inspection:
 - a. Prevent further migration of the leak or spill to soils or surface water; and
 - b. Remove, and properly dispose of, any visible contamination of the soil or surface water.
4. Notifications, reports.
 - a. Any release to the environment, except as provided in subdivision b, must be reported to the department within twenty-four hours of its detection. The release should also be reported pursuant to 40 CFR part 302.
 - b. A leak or spill of hazardous secondary material is exempted from the requirements of this subsection if it is:
 - (1) Less than or equal to a quantity of one pound, and
 - (2) Immediately contained and cleaned up.
 - c. Within thirty days of detection of a release to the environment, a report containing the following information must be submitted to the department:
 - (1) Likely route of migration of the release;
 - (2) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate);
 - (3) Results of any monitoring or sampling conducted in connection with the release (if available). If sampling or monitoring data relating to the release are not available

within thirty days, these data must be submitted to the department as soon as they become available.

(4) Proximity to downgradient drinking water, surface water, and populated areas; and

(5) Description of response actions taken or planned.

5. Provision of secondary containment, repair, or closure.

a. Unless the remanufacturer or other person that stores or treats the hazardous secondary material satisfies the requirements of subdivisions b through d, the tank system must cease to operate under the remanufacturing exclusion at paragraph z of subsection 1 of section 33.1-24-02-04.

b. If the cause of the release was a spill that has not damaged the integrity of the system, the remanufacturer or other person that stores or treats the hazardous secondary material may return the system to service as soon as the released material is removed and repairs, if necessary, are made.

c. If the cause of the release was a leak from the primary tank system into the secondary containment system, the system must be repaired prior to returning the tank system to service.

d. If the source of the release was a leak to the environment from a component of a tank system without secondary containment, the remanufacturer or other person that stores or treats the hazardous secondary material shall provide the component of the system from which the leak occurred with secondary containment that satisfies the requirements of section 33.1-24-02-63 before it can be returned to service, unless the source of the leak is an aboveground portion of a tank system that can be inspected visually. If the source is an aboveground component that can be inspected visually, the component must be repaired and may be returned to service without secondary containment as long as the requirements of subsection 6 are satisfied. Additionally, if a leak has occurred in any portion of a tank system component that is not readily accessible for visual inspection (for example, the bottom of an inground or onground tank), the entire component must be provided with secondary containment in accordance with section 33.1-24-02-63 prior to being returned to use.

6. Certification of major repairs. If the remanufacturer or other person that stores or treats the hazardous secondary material has repaired a tank system in accordance with subsection 5, and the repair has been extensive (for example, installation of an internal liner; repair of a ruptured primary containment or secondary containment vessel), the tank system must not be returned to service unless the remanufacturer or other person that stores or treats the hazardous secondary material has obtained a certification by a qualified professional engineer that the repaired system is capable of handling hazardous secondary materials without release for the intended life of the system. This certification must be kept on file at the facility and maintained until closure of the facility.

Note: 40 CFR part 302 may require the owner or operator to notify the national response center of certain releases.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-67. Termination of remanufacturing exclusion.

Hazardous secondary material stored in units more than ninety days after the unit ceases to operate under the remanufacturing exclusion at paragraph z of subsection 1 of section 33.1-24-02-04 or otherwise ceases to be operated for manufacturing, or for storage of a product or a raw material, then becomes subject to regulation as hazardous waste under chapters 33.1-24-02 through 33.1-24-04, 33.1-24-06, 33.1-24-07, sections 33.1-24-05-01 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-929, and subsection 5 of section 33.1-24-06-16, as applicable.

History: Effective January 1, 2019.

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-68. Special requirements for ignitable or reactive materials.

1. Ignitable or reactive material must not be placed in tank systems, unless the material is stored or treated in such a way that it is protected from any material or conditions that may cause the material to ignite or react.
2. The remanufacturer or other person that stores or treats hazardous secondary material that is ignitable or reactive shall store or treat the hazardous secondary material in a tank that is in compliance with the requirements for the maintenance of protective distances between the material management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association's "Flammable and Combustible Liquids Code," (1977 or 1981), incorporated by reference, see section 33.1-24-01-05.

33.1-24-02-120. Applicability of emergency preparedness and response for management of excluded hazardous secondary materials.

The requirements of sections 33.1-24-02-120 through 33.1-24-02-129 apply to those areas of an entity managing hazardous secondary materials excluded under subdivision x or y, or both, of subsection 1 of section 33.1-24-02-04 where hazardous secondary materials are generated or accumulated onsite.

1. A generator of hazardous secondary material, or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10, which accumulates six thousand kilograms or less of hazardous secondary material at any time shall comply with sections 33.1-24-02-121 and 33.1-24-02-122.
2. A generator of hazardous secondary material, or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 which accumulates more than six thousand kilograms of hazardous secondary material at any time shall comply with sections 33.1-24-02-121 and 33.1-24-02-129.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-121. Preparedness and prevention.

1. Maintenance and operation of facility. Facilities generating or accumulating hazardous secondary material must be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of hazardous secondary materials or hazardous secondary material constituents to air, soil, or surface water which could threaten human health or the environment.
2. Required equipment. All facilities generating or accumulating hazardous secondary material must be equipped with the following, unless none of the hazards posed by hazardous secondary material handled at the facility could require a particular kind of equipment specified below:
 - a. An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
 - b. A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams;
 - c. Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and
 - d. Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.
3. Testing and maintenance of equipment. All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary to assure its proper operation in time of emergency.
4. Access to communications or alarm system.

a. Whenever hazardous secondary material is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under subsection 2.

b. If there is ever just one employee on the premises while the facility is operating, the employee must have immediate access to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under subsection 2.

5. Required aisle space. The hazardous secondary material generator or intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

6. Arrangements with local authorities.

a. The hazardous secondary material generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 must attempt to make the following arrangements, as appropriate for the type of waste handled at the facility and the potential need for the services of these organizations:

(1) Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous secondary material handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes;

(2) Where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

(3) Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

(4) Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

b. Where state or local authorities decline to enter such arrangements, the hazardous secondary material generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 must document the refusal in the operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-122. Emergency procedures for facilities generating or accumulating of six thousand kilograms or less of hazardous secondary material.

A generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 which generates or accumulates six thousand kilograms or less of hazardous secondary material shall comply with the following requirements:

1. At all times there must be at least one employee either on the premises or on call (for example, available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in subsection 4. This employee is the emergency coordinator.
2. The generator or intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 shall post the following information next to the telephone:
 - a. The name and telephone number of the emergency coordinator;
 - b. Location of fire extinguishers and spill control material, and, if present, fire alarm; and
 - c. The telephone number of the fire department, unless the facility has a direct alarm.
3. The generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 shall ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies;
4. The emergency coordinator or the emergency coordinator's designee shall respond to any emergencies that arise. The applicable responses are as follows:
 - a. In the event of a fire, call the fire department or attempt to extinguish it using a fire extinguisher;
 - b. In the event of a spill, contain the flow of hazardous waste to the extent possible, and as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil;
 - c. In the event of a fire, explosion, or other release that could threaten human health outside the facility or when the generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 has knowledge that a spill has reached surface water, the generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 immediately shall notify the national response center (using their 24-hour toll free number 800-424-8802). The report must include the following information:
 - (1) The name, address, and identification number of the facility;
 - (2) Date, time, and type of incident (for example, spill or fire);
 - (3) Quantity and type of hazardous waste involved in the incident;
 - (4) Extent of injuries, if any; and
 - (5) Estimated quantity and disposition of recovered materials, if any.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-02-123. [Reserved].

33.1-24-02-124. [Reserved].

33.1-24-02-125. [Reserved].

33.1-24-02-126. [Reserved].

33.1-24-02-127. [Reserved].

33.1-24-02-128. [Reserved].

33.1-24-02-129. Contingency planning and emergency procedures for facilities generating or accumulating more than six thousand kilograms of hazardous secondary material.

A generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 which generates or accumulates more than six thousand kilograms of hazardous secondary material shall comply with the following requirements:

1. Purpose and implementation of contingency plan.

- a. Each generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 which accumulates more than six thousand kilograms of hazardous secondary material shall have a contingency plan for the facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water.
- b. The provisions of the plan must be carried out immediately whenever there is a fire, explosion, or release of hazardous secondary material or hazardous secondary material constituents that could threaten human health or the environment.

2. Content of contingency plan.

- a. The contingency plan must describe the actions facility personnel must take to comply with subsections 1 and 6 in response to fires, explosions, or any unplanned sudden or nonsudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water at the facility.

b. If the generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 accumulating more than six thousand kilograms of hazardous secondary material has already prepared a spill prevention, control, and countermeasures plan in accordance with 40 CFR part 112, or some other emergency or contingency plan, the generator or an intermediate or reclamation facility need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the requirements of this section. The hazardous secondary material generator or an intermediate or reclamation facility operating under a verified recycler variance under subsection 4 of section 33.1-24-01-10 may develop one contingency plan which meets all regulatory requirements. The department recommends the plan be based on the National Response Team's Integrated Contingency Plan Guidance ("One Plan"). When modifications are made to nonhazardous waste provisions in an integrated contingency plan, the changes do not trigger the need for a hazardous waste permit modification.

c. The plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, pursuant to subsection 6 of section 33.1-24-02-121.

d. The plan must list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator (see subsection 5), and this list must be kept up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.

e. The plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.

f. The plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous secondary material, hazardous waste or fires).

3. Copies of contingency plan. A copy of the contingency plan and all revisions to the plan must be:

a. Maintained at the facility; and

b. Submitted to all local police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

4. Amendment of contingency plan. The contingency plan must be reviewed, and immediately amended, if necessary, whenever:

a. Applicable regulations are revised;

b. The plan fails in an emergency;

c. The facility changes in its design, construction, operation, maintenance, or other circumstances, in a way that materially increases the potential for fires, explosions, or releases of hazardous secondary material or hazardous secondary material constituents, or changes the response necessary in an emergency;

d. The list of emergency coordinators changes; or

e. The list of emergency equipment changes.

5. Emergency coordinator. At all times, there must be at least one employee either on the facility premises or on call (for example, available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan. The emergency coordinator's responsibilities are more fully spelled out in subsection 6. Applicable responsibilities for the emergency coordinator vary, depending on factors such as type and variety of hazardous secondary materials handled by the facility, and type and complexity of the facility.

6. Emergency procedures.

a. Whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) immediately shall:

(1) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

(2) Notify appropriate state or local agencies with designated response roles if their help is needed.

b. Whenever there is a release, fire, or explosion, the emergency coordinator immediately shall identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.

c. Concurrently, the emergency coordinator shall assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (for example, the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water runoffs from water or chemical agents used to control fire and heat-induced explosions).

d. If the emergency coordinator determines the facility has had a release, fire, or explosion that could threaten human health, or the environment, outside the facility, the emergency coordinator shall report the emergency coordinator's findings as follows:

(1) If the emergency coordinator's assessment indicates evacuation of local areas may be advisable, the emergency coordinator immediately shall notify appropriate local authorities. The emergency coordinator shall be available to help appropriate officials decide whether local areas should be evacuated; and

(2) The emergency coordinator immediately shall notify either the government official designated as the onscene coordinator for that geographical area, or the national response center (using their twenty-four-hour toll free number 800-424-8802). The report must include:

(a) Name and telephone number of reporter;

(b) Name and address of facility;

(c) Time and type of incident (for example, release, fire);

(d) Name and quantity of materials involved, to the extent known;

(e) The extent of injuries, if any; and

(f) The possible hazards to human health, or the environment, outside the facility.

e. During an emergency, the emergency coordinator shall take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous secondary material at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released material, and removing or isolating containers.

f. If the facility stops operations in response to a fire, explosion, or release, the emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

g. Immediately after an emergency, the emergency coordinator shall provide for treating, storing, or disposing of recovered secondary material, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the hazardous secondary material generator can demonstrate, in accordance with subsection 3 or 4 of section 33.1-24-02-03, that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of chapters 33.1-24-03, 33.1-24-04, and subsection 5 of section 33.1-24-06-16.

h. The emergency coordinator shall ensure that, in the affected areas of the facility:

(1) No secondary material that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

(2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

i. The hazardous secondary material generator shall note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within fifteen days after the incident, the hazardous secondary material generator shall submit a written report on the incident to the department. The report must include:

(1) Name, address, and telephone number of the hazardous secondary material generator;

(2) Name, address, and telephone number of the facility;

(3) Date, time, and type of incident (for example, fire, explosion);

(4) Name and quantity of materials involved;

(5) The extent of injuries, if any;

(6) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

(7) Estimated quantity and disposition of recovered material that resulted from the incident.

33.1-24-02-170. Applicability to air emission standards for process vents.

The requirements of sections 33.1-24-02-170 through 33.1-24-02-179 apply to process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations that manage hazardous secondary materials excluded under the remanufacturing exclusion at subdivision z of subsection 1 of section 33.1-24-02-04 with concentrations of at least ten parts per million weight, unless the process vents are equipped with operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, part 61, or part 63.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-171. Definitions.

As used in sections 33.1-24-02-170 through 33.1-24-02-179, all terms not defined in this section have the meaning given them in North Dakota Century Code chapter 23.1-04 and chapters 33.1-24-01 through 33.1-24-05 and section 33.1-24-05-401.

1. "Equipment" means each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, or flange or other connector, and any control devices or systems required by sections 33.1-24-02-170 through 33.1-24-02-179.
2. "Hazardous secondary material management unit shutdown" means a work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit. An unscheduled work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit for less than twenty-four hours is not a hazardous secondary material management unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping operation are not hazardous secondary material management unit shutdowns.
3. "In gas or vapor service" means that the piece of equipment contains or contacts a hazardous secondary material stream that is in the gaseous state at operating conditions.
4. "In light liquid service" means that the piece of equipment contains or contacts a material stream where the vapor pressure of one or more of the organic components in the stream is greater than three-tenths kilopascals at twenty degrees Celsius, the total concentration of the

pure organic components having a vapor pressure greater than three-tenths kilopascals at twenty degrees Celsius is equal to or greater than twenty percent by weight, and the fluid is a liquid at operating conditions.

5. "Malfunction" means any sudden failure of a control device or a hazardous secondary material management unit or failure of a hazardous secondary material management unit to operate in a normal or usual manner, so that organic emissions are increased.
6. "Open-ended valve or line" means any valve, except pressure relief valves, having one side of the valve seat in contact with hazardous secondary material and one side open to the atmosphere, either directly or through open piping.
7. "Process vent" means any open-ended pipe or stack that is vented to the atmosphere either directly, through a vacuum-producing system, or through a tank (for example, distillate receiver, condenser, bottoms receiver, surge control tank, separator tank, or hot well) associated with hazardous secondary material distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations.
8. "Sampling connection system" means an assembly of equipment within a process or material management unit used during periods of representative operation to take samples of the process or material fluid. Equipment used to take nonroutine grab samples is not considered a sampling connection system.
9. "Startup" means the setting in operation of a hazardous secondary material management unit or control device for any purpose.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-172. Standards - Process vents.

1. The remanufacturer or other person that stores or treats hazardous secondary materials in hazardous secondary material management units with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations managing hazardous secondary material with organic concentrations of at least ten parts per million weight either shall:
 - a. Reduce total organic emissions from all affected process vents at the facility below one and four-tenths kilograms per hour (three pounds per hour) and two and eight-tenths megagrams per year (three and one-tenth tons per year); or
 - b. Reduce, by use of a control device, total organic emissions from all affected process vents at the facility by ninety-five weight percent.
2. If the remanufacturer or other person that stores or treats the hazardous secondary material installs a closed-vent system and control device to comply with the provisions of subsection 1 the closed-vent system and control device must meet the requirements of section 33.1-24-02-173.
3. Determinations of vent emissions and emission reductions or total organic compound concentrations achieved by add-on control devices may be based on engineering calculations or performance tests. If performance tests are used to determine vent emissions, emission reductions, or total organic compound concentrations achieved by add-on control devices, the performance tests must conform with the requirements of subsection 3 of section 33.1-24-02-174.

4. When a remanufacturer or other person that stores or treats the hazardous secondary material and the department do not agree on determinations of vent emissions or emission reductions, or both, or total organic compound concentrations achieved by add-on control devices based on engineering calculations, the procedures in subsection 3 of section 33.1-24-02-174 must be used to resolve the disagreement.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-173. Standards - Closed-vent systems and control devices.

1. Requirements for remanufacturers or other persons of closed-vent systems and control devices.

- a. The remanufacturer or other person that stores or treats the hazardous secondary materials in hazardous secondary material management units using closed-vent systems and control devices used to comply with provisions of sections 33.1-24-02-170 through 33.1-24-02-179 shall comply with the provisions of this section.

- b. [Reserved].

2. A control device involving vapor recovery (for example, a condenser or adsorber) must be designed and operated to recover the organic vapors vented to it with an efficiency of ninety-five weight percent or greater unless the total organic emission limits of subdivision a of subsection 1 of section 33.1-24-02-172 for all affected process vents can be attained at an efficiency less than ninety-five weight percent.

3. An enclosed combustion device (for example, a vapor incinerator, boiler, or process heater) must be designed and operated to reduce the organic emissions vented to it by ninety-five weight percent or greater; to achieve a total organic compound concentration of twenty parts per million volume, expressed as the sum of the actual compounds, not carbon equivalents, on a dry basis corrected to three percent oxygen; or to provide a minimum residence time of fifty hundredths seconds at a minimum temperature of seven hundred sixty degrees Celsius. If a boiler or process heater is used as the control device, the vent stream must be introduced into the flame zone of the boiler or process heater.

4. Flares.

- a. A flare must be designed for and operated with no visible emissions as determined by the methods specified in subdivision a of subsection 5, except for periods not to exceed a total of five minutes during any two consecutive hours.

- b. A flare must be operated with a flame present at all times, as determined by the methods specified in paragraph 3 of subdivision b of subsection 6.

- c. A flare may be used only if the net heating value of the gas being combusted is eleven and two-tenths megajoules per standard cubic meter at standard conditions (three hundred British thermal units per standard cubic foot at standard conditions) or greater if the flare is steam-assisted or air-assisted; or if the net heating value of the gas being combusted is seven and forty-five hundredths megajoules per cubic meter at standard conditions (two hundred British thermal units per standard cubic foot at standard conditions) or greater if the flare is nonassisted. The net heating value of the gas being combusted must be determined by the methods specified in subdivision b of subsection 5.

- d. Steam-assisted or nonassisted flare.

- (1) A steam-assisted or nonassisted flare must be designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, less than eighteen and three-tenths meters per second [60 feet per second], except as provided in paragraphs 2 and 3.
- (2) A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, equal to or greater than eighteen and three-tenths meters per second [60 feet per second] but less than one hundred twenty-two meters per second [400 feet per second] is allowed if the net heating value of the gas being combusted is greater than thirty seven and three-tenths megajoules per cubic meter at standard conditions (one thousand British thermal units per standard cubic foot at standard conditions).
- (3) A steam-assisted or nonassisted flare designed for and operated with an exit velocity, as determined by the methods specified in subdivision c of subsection 5, less than the velocity, V_{max} , as determined by the method specified in subdivision d of subsection 5 and less than one hundred twenty-two meters per second [400 feet per second] is allowed.
- e. An air-assisted flare must be designed and operated with an exit velocity less than the velocity, V_{max} , as determined by the method specified in subdivision e of subsection 5.
- f. A flare used to comply with this section must be steam-assisted, air-assisted, or nonassisted.

5. Methods.

- a. Referenced Method 22 in 40 CFR part 60 must be used to determine the compliance of a flare with the visible emission provisions of sections 33.1-24-02-170 through 33.1-24-02-179. The observation period is two hours and shall be used according to Method 22.
- b. The net heating value of the gas being combusted in a flare must be calculated using the following equation:

$$H_T = K \left[\sum_{i=1}^n C_i H_i \right]$$

where:

- H_T = Net heating value of the sample, MJ/scm; where the net enthalpy per mole of offgas is based on combustion at 25°C and 760 mm Hg, but the standard temperature for determining the volume corresponding to 1 mol is 20°C;
- K = Constant, 1.74×10^{-7} (1/ppm) (g mol/scm) (MJ/kcal) where standard temperature for (g mol/scm) is 20°C;
- C_i = Concentration of sample component i in ppm on a wet basis, as measured for organics by Reference Method 18 in 40 CFR part 60 and measured for hydrogen and carbon monoxide by ASTM D 1946-82, as incorporated by reference as specified in section 33.1-24-01-05; and

H_i = Net heat of combustion of sample component i, kcal/9 mol at 25°C and 760 mm Hg. The heats of combustion may be determined using ASTM D 2382-83, as incorporated by reference as specified in section 33.1-24-01-05, if published values are not available or cannot be calculated.

c. The actual exit velocity of a flare must be determined by dividing the volumetric flow rate (in units of standard temperature and pressure), as determined by Reference Methods 2, 2A, 2C, or 2D in 40 CFR part 60 as appropriate, by the unobstructed (free) cross-sectional area of the flare tip.

d. The maximum allowed velocity in m/s, V_{max} , for a flare complying with paragraph 3 of subdivision d of subsection 4 shall be determined by the following equation:

$$\text{Log}_{10}(V_{max}) = (H_T + 28.8)/31.7$$

where:

28.8 = Constant,

31.7 = Constant,

H_T = The net heating value as determined in subdivision b.

e. The maximum allowed velocity in m/s, V_{max} , for an air-assisted flare must be determined by the following equation:

$$V_{max} = 8.706 + 0.7084(H_T)$$

where:

8.706 = Constant,

0.7084 = Constant,

H_T = The net heating value as determined in subdivision b.

6. The remanufacturer or other person that stores or treats the hazardous secondary material shall monitor and inspect each control device required to comply with this section to ensure proper operation and maintenance of the control device by implementing the following requirements:

a. Install, calibrate, maintain, and operate according to the manufacturer's specifications a flow indicator that provides a record of vent stream flow from each affected process vent to the control device at least once every hour. The flow indicator sensor must be installed in the vent stream at the nearest feasible point to the control device inlet but before the point at which the vent streams are combined.

b. Install, calibrate, maintain, and operate according to the manufacturer's specifications a device to continuously monitor control device operation as specified below:

(1) For a thermal vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor must be installed at a location in the combustion chamber downstream of the combustion zone.

(2) For a catalytic vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature at two locations and have an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. One temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed inlet and a second temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed outlet.

(3) For a flare, a heat sensing monitoring device equipped with a continuous recorder that indicates the continuous ignition of the pilot flame.

(4) For a boiler or process heater having a design heat input capacity less than forty-four megawatts, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor must be installed at a location in the furnace downstream of the combustion zone.

(5) For a boiler or process heater having a design heat input capacity greater than or equal to forty-four megawatts, a monitoring device equipped with a continuous recorder to measure a parameter or parameters that indicate good combustion operating practices are being used.

(6) For a condenser, either:

(a) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the condenser; or

(b) A temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature with an accuracy of plus or minus one percent of the temperature being monitored in degrees Celsius or plus or minus five-tenths degrees Celsius, whichever is greater. The temperature sensor must be installed at a location in the exhaust vent stream from the condenser exit (for example, product side).

(7) For a carbon adsorption system that regenerates the carbon bed directly in the control device such as a fixed-bed carbon adsorber, either:

(a) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the carbon bed; or

(b) A monitoring device equipped with a continuous recorder to measure a parameter that indicates the carbon bed is regenerated on a regular, predetermined time cycle.

c. Inspect the readings from each monitoring device required by subdivisions a and b at least once each operating day to check control device operation and, if necessary, immediately implement the corrective measures necessary to ensure the control device operates in compliance with the requirements of this section.

7. A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device shall replace the existing carbon in the control device with fresh carbon at a regular,

predetermined time interval that is no longer than the carbon service life established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-02-175.

8. A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device shall replace the existing carbon in the control device with fresh carbon on a regular basis by using one of the following procedures:

a. Monitor the concentration level of the organic compounds in the exhaust vent stream from the carbon adsorption system on a regular schedule, and replace the existing carbon with fresh carbon immediately when carbon breakthrough is indicated. The monitoring frequency must be daily or at an interval no greater than twenty percent of the time required to consume the total carbon working capacity established as a requirement of subparagraph g of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-02-175, whichever is longer.

b. Replace the existing carbon with fresh carbon at a regular, predetermined time interval that is less than the design carbon replacement interval established as a requirement of subparagraph g of paragraph 3 of subdivision d of subsection 2 of section 33.1-24-02-175.

9. An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.

10. A remanufacturer or other person that stores or treats hazardous secondary material at an affected facility seeking to comply with the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 by using a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system shall develop documentation including sufficient information to describe the control device operation and identify the process parameter or parameters that indicate proper operation and maintenance of the control device.

11. A closed-vent system must meet either of the following design requirements:

a. A closed-vent system must be designed to operate with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million volume above background as determined by the procedure in subsection 2 of section 33.1-24-02-174, and by visual inspections; or

b. A closed-vent system must be designed to operate at a pressure below atmospheric pressure. The system must be equipped with at least one pressure gauge or other pressure measurement device that can be read from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.

12. The remanufacturer or other person that stores or treats the hazardous secondary material shall monitor and inspect each closed-vent system required to comply with this section to ensure proper operation and maintenance of the closed-vent system by implementing the following requirements:

a. Each closed-vent system that is used to comply with subdivision a of subsection 11 must be inspected and monitored in accordance with the following requirements:

(1) An initial leak detection monitoring of the closed-vent system must be conducted by the remanufacturer or other person that stores or treats the hazardous secondary material on or before the date that the system becomes subject to this section. The remanufacturer or other person that stores or treats the hazardous secondary material shall monitor the closed-vent system components and connections using the procedures specified in subsection 2 of section 33.1-24-02-174 to demonstrate that the closed-vent system operates with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million volume above background.

(2) After initial leak detection monitoring required in paragraph 1, the remanufacturer or other person that stores or treats the hazardous secondary material shall inspect and monitor the closed-vent system as follows:

(a) Closed-vent system joints, seams, or other connections that are permanently or semi-permanently sealed (for example, a welded joint between two sections of hard piping or a bolted and gasketed ducting flange) must be visually inspected at least once per year to check for defects that could result in air pollutant emissions. The remanufacturer or other person that stores or treats the hazardous secondary material shall monitor a component or connection using the procedures specified in subsection 2 of section 33.1-24-02-174 to demonstrate that it operates with no detectable emissions following any time the component is repaired or replaced (for example, a section of damaged hard piping is replaced with new hard piping) or the connection is unsealed (for example, a flange is unbolted).

(b) Closed-vent system components or connections other than those specified in subparagraph a must be monitored annually and at other times as requested by the department, except as provided for in subsection 15, using the procedures specified in subsection 2 of section 33.1-24-02-174 to demonstrate that the components or connections operate with no detectable emissions.

(3) If a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect or leak in accordance with the requirements of subdivision c.

(4) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection and monitoring in accordance with the requirements specified in section 33.1-24-02-175.

b. Each closed-vent system that is used to comply with subdivision b of subsection 11 must be inspected and monitored in accordance with the following requirements:

(1) The closed-vent system must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in ductwork or piping or loose connections.

(2) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform an initial inspection of the closed-vent system on or before the date that the system becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material shall perform the inspections at least once every year.

(3) In the event that a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subdivision c.

(4) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection and monitoring in accordance with the requirements specified in section 33.1-24-02-175.

c. The remanufacturer or other person that stores or treats the hazardous secondary material shall repair all detected defects as follows:

(1) Detectable emissions, as indicated by visual inspection, or by an instrument reading greater than five hundred parts per million volume above background, must be controlled as soon as practicable, but not later than fifteen calendar days after the emission is detected, except as provided for in paragraph 3.

(2) A first attempt at repair must be made no later than five calendar days after the emission is detected.

(3) Delay of repair of a closed-vent system for which leaks have been detected is allowed if the repair is technically infeasible without a process unit shutdown, or if the remanufacturer or other person that stores or treats the hazardous secondary material determines that emissions resulting from immediate repair would be greater than the fugitive emissions likely to result from delay of repair. Repair of such equipment must be completed by the end of the next process unit shutdown.

(4) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the defect repair in accordance with the requirements specified in section 33.1-24-02-175.

13. Closed-vent systems and control devices used to comply with provisions of sections 33.1-24-02-170 through 33.1-24-02-179 must be operated at all times when emissions may be vented to them.

14. The owner or operator using a carbon adsorption system to control air pollutant emissions shall document all carbon that is a hazardous waste and which is removed from the control device is managed in one of the following manners, regardless of the average volatile organic concentration of the carbon:

a. Regenerated or reactivated in a thermal treatment unit that meets one of the following:

(1) The owner or operator of the unit has been issued a final hazardous waste permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-300 through 33.1-24-05-309;

(2) The unit is equipped with and operating air emission controls in accordance with the applicable requirements of sections 33.1-24-02-170 through 33.1-24-02-179 and sections 33.1-24-02-200 through 33.1-24-02-214 or the applicable requirements of subsection 5 of section 33.1-24-06-16; or

(3) The unit is equipped with and operating air emission controls in accordance with a national emission standard for hazardous air pollutants under 40 CFR part 61 or 40 CFR part 63.

b. Incinerated in a hazardous waste incinerator for which the owner or operator either:

(1) Has been issued a final hazardous waste permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-144 through 33.1-24-05-159; or

(2) Has designed and operates the incinerator in accordance with the interim status requirements of subsection 5 of section 33.1-24-06-16.

c. Burned in a boiler or industrial furnace for which the owner or operator either:

(1) Has been issued a final hazardous waste permit under chapter 33.1-24-06 which implements the requirements of sections 33.1-24-05-525 through 33.1-24-05-549; or

(2) Has designed and operates the boiler or industrial furnace in accordance with the interim status requirements of sections 33.1-24-05-525 through 33.1-24-05-549.

15. Any components of a closed-vent system that are designated, as described in subdivision i of subsection 3 of section 33.1-24-02-175, as unsafe to monitor are exempt from the requirements of subparagraph b of paragraph 2 of subdivision a of subsection 12 if:

a. The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system determines the components of the closed-vent system are unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subparagraph b of paragraph 2 of subdivision a of subsection 12; and

b. The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system adheres to a written plan that requires monitoring the closed-vent system components using the procedure specified in subparagraph b of paragraph 2 of subdivision a of subsection 12 as frequently as practicable during safe-to-monitor times.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-174. Test methods and procedures.

1. Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 shall comply with the test methods and procedural requirements provided in this section.

2. When a closed-vent system is tested for compliance with no detectable emissions, as required in subsection 12 of section 33.1-24-02-173, the test must comply with the following requirements:

a. Monitoring must comply with Reference Method 21 in 40 CFR part 60.

b. The detection instrument must meet the performance criteria of Reference Method 21.

c. The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.

d. Calibration gases must be:

(1) Zero air (less than ten parts per million hydrocarbon in air).

(2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million methane or n-hexane.

e. The background level must be determined as set forth in Reference Method 21.

f. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.

g. The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with five hundred parts per million for determining compliance.

3. Performance tests to determine compliance with subsection 1 of section 33.1-24-02-172 and with the total organic compound concentration limit of subsection 3 of section 33.1-24-02-173 must comply with the following:

a. Performance tests to determine total organic compound concentrations and mass flow rates entering and exiting control devices must be conducted and data reduced in accordance with the following reference methods and calculation procedures:

(1) Method 2 in 40 CFR part 60 for velocity and volumetric flow rate.

(2) Method 18 or Method 25A in 40 CFR part 60, appendix A, for organic content. If Method 25A is used, the organic hazardous air pollutant used as the calibration gas must be the single organic hazardous air pollutant representing the largest percent by volume of the emissions. The use of Method 25A is acceptable if the response from the high-level calibration gas is at least twenty times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.

(3) Each performance test must consist of three separate runs; each run conducted for at least one hour under the conditions that exist when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. For the purpose of determining total organic compound concentrations and mass flow rates, the average of results of all runs shall apply. The average must be computed on a time-weighted basis.

(4) Total organic mass flow rates must be determined by the following equation:

(a) For sources utilizing Method 18.

$$E_h = Q_{2sd} \left\{ \sum_{i=1}^n C_i MW_i \right\} [0.0416][10^{-6}]$$

where:

E_h = Total organic mass flow rate, kg/h;

Q_{2sd} = Volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h;

n = Number of organic compounds in the vent gas;

C_i = Organic concentration in ppm, dry basis, of compound i in the vent gas, as determined by Method 18;

MW_i = Molecular weight of organic compound i in the vent gas, kg/kg-mol;

0.0416 = Conversion factor for molar volume, kg-mol/m³ (@ 293 K and 760 mm Hg);

10⁻⁶ = Conversion from ppm.

(b) For sources utilizing Method 25A.

$$E_h = (Q)(C)(MW)(0.0416)(10^{-6})$$

where:

E_h = Total organic mass flow rate, kg/h;

Q = Volumetric flow rate of gases entering or exiting control device, as determined by Method 2, dscm/h;

C = Organic concentration in ppm, dry basis, as determined by Method 25A;

MW = Molecular weight of propane, 44;

0.0416 = Conversion factor for molar volume, kg-mol/m³ (@ 293 K and 760 mm Hg);

10⁻⁶ = Conversion from ppm.

(5) The annual total organic emission rate must be determined by the following equation:

$$E_A = (E_h)(H)$$

where:

E_A = Total organic mass emission rate, kg/y;

E_h = Total organic mass flow rate for the process vent, kg/h;

H = Total annual hours of operations for the affected unit, h.

(6) Total organic emissions from all affected process vents at the facility must be determined by summing the hourly total organic mass emission rates (E_h as determined in paragraph 4) and by summing the annual total A organic mass emission rates (E_A , as determined in paragraph 5) for all affected process vents at the facility.

b. The remanufacturer or other person that stores or treats the hazardous secondary material shall record such process information as may be necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction must not constitute representative conditions for the purpose of a performance test.

c. The remanufacturer or other person that stores or treats the hazardous secondary material at an affected facility shall provide, or cause to be provided, performance testing facilities as follows:

(1) Sampling ports adequate for the test methods specified in subdivision a.

(2) Safe sampling platforms.

(3) Safe access to sampling platforms.

(4) Utilities for sampling and testing equipment.

d. For the purpose of making compliance determinations, the time-weighted average of the results of the three runs must apply. If a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the remanufacturer's or other person's that stores or treats the hazardous secondary material control, compliance, upon the department's approval, may be determined using the average of the results of the two other runs.

4. To show that a process vent associated with a hazardous secondary material distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation is not subject to the requirements of section 33.1-24-02-170 through 33.1-24-02-179, the remanufacturer or other person that stores or treats the hazardous secondary material shall make an initial determination that the time-weighted, annual average total organic concentration of the material managed by the hazardous secondary material management unit is less than ten parts per million weight using one of the following two methods:

a. Direct measurement of the organic concentration of the material using the following procedures:

(1) The remanufacturer or other person that stores or treats the hazardous secondary material shall take a minimum of four grab samples of material for each material stream managed in the affected unit under process conditions expected to cause the maximum material organic concentration.

(2) For material generated onsite, the grab samples must be collected at a point before the material is exposed to the atmosphere such as in an enclosed pipe or other closed system that is used to transfer the material after generation to the first affected distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation. For material generated offsite, the grab samples must be collected at the inlet to the first material management unit that receives the material provided the material has been transferred to the facility in a closed system such as a tank truck and the material is not diluted or mixed with other material.

(3) Each sample must be analyzed and the total organic concentration of the sample must be computed using Method 9060A (as incorporated by reference in section 33.1-24-01-05) of "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," environmental protection agency Publication SW-846, or analyzed for its individual organic constituents.

(4) The arithmetic mean of the results of the analyses of the four samples applies for each material stream managed in the unit in determining the time-weighted, annual average total organic concentration of the material. The time-weighted average is to be calculated using the annual quantity of each material stream processed and the mean organic concentration of each material stream managed in the unit.

b. Using knowledge of the material to determine that its total organic concentration is less than ten parts per million weight. Documentation of the material determination is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to generate a material stream having a total

organic content less than ten parts per million weight, or prior speciation analysis results on the same material stream where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.

5. The determination that distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations manage hazardous secondary materials with time-weighted, annual average total organic concentrations less than ten parts per million weight must be made as follows:

a. By the effective date that the facility becomes subject to the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 or by the date when the material is first managed in a hazardous secondary material management unit, whichever is later:

b. For continuously generated material, annually; or

c. Whenever there is a change in the material being managed or a change in the process that generates or treats the material.

6. When a remanufacturer or other person that stores or treats the hazardous secondary material and the department do not agree on whether a distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation manages a hazardous secondary material with organic concentrations of at least ten parts per million weight based on knowledge of the material, the dispute may be resolved by using direct measurement as specified at subdivision a of subsection 4.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-175. Recordkeeping requirements.

1. Applicability.

a. Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 shall comply with the recordkeeping requirements of this section.

b. A remanufacturer or other person that stores or treats the hazardous secondary material of more than one hazardous secondary material management unit subject to the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 may comply with the recordkeeping requirements for these hazardous secondary material management units in one recordkeeping system if the system identifies each record by each hazardous secondary material management unit.

2. The remanufacturer or other person that stores or treats the hazardous secondary material must keep the following records onsite:

a. [Reserved].

b. Up-to-date documentation of compliance with the process vent standards in section 33.1-24-02-172, including:

(1) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility (for example, the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit

(for example, identify the hazardous secondary material management units on a facility plot plan).

(2) Information and data supporting determinations of vent emissions and emission reductions achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, determinations of vent emissions and emission reductions must be made using operating parameter values (for example, temperatures, flow rates, or vent stream organic compounds and concentrations) that represent the conditions that result in maximum organic emissions, such as when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. If the remanufacturer or other person that stores or treats the hazardous secondary material takes any action (for example, managing a material of different composition or increasing operating hours of affected hazardous secondary material management units) that would result in an increase in total organic emissions from affected process vents at the facility, then a new determination is required.

c. Where a remanufacturer or other person that stores or treats the hazardous secondary material chooses to use test data to determine the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan must be developed and include:

(1) A description of how it is determined that the planned test is going to be conducted when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. This must include the estimated or design flow rate and organic content of each vent stream and define the acceptable operating ranges of key process and control device parameters during the test program.

(2) A detailed engineering description of the closed-vent system and control device including:

(a) Manufacturer's name and model number of control device.

(b) Type of control device.

(c) Dimensions of the control device.

(d) Capacity.

(e) Construction materials.

(3) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

d. Documentation of compliance with section 33.1-24-02-173 must include the following information:

(1) A list of all information references and sources used in preparing the documentation.

(2) Records, including the dates, of each compliance test required by subsection 11 of section 33.1-24-02-173.

(3) If engineering calculations are used, a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions", as incorporated by

reference as specified in section 33.1-24-01-05, or other engineering texts acceptable to the department that present basic control device design information. Documentation provided by the control device manufacturer or vendor which describes the control device design in accordance with subparagraphs a through g may be used to comply with this requirement. The design analysis must address the vent stream characteristics and control device operation parameters as specified below.

- (a) For a thermal vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis also must establish the design minimum and average temperature in the combustion zone and the combustion zone residence time.
- (b) For a catalytic vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis also must establish the design minimum and average temperatures across the catalyst bed inlet and outlet.
- (c) For a boiler or process heater, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis also must establish the design minimum and average flame zone temperatures, combustion zone residence time, and description of method and location where the vent stream is introduced into the combustion zone.
- (d) For a flare, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis also must consider the requirements specified in subsection 4 of section 33.1-24-02-173.
- (e) For a condenser, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis also must establish the design outlet organic compound concentration level, design average temperature of the condenser exhaust vent stream, and design average temperatures of the coolant fluid at the condenser inlet and outlet.
- (f) For a carbon adsorption system such as a fixed-bed adsorber which regenerates the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis also must establish the design exhaust vent stream organic compound concentration level, number and capacity of carbon beds, type and working capacity of activated carbon used for carbon beds, design total steam flow over the period of each complete carbon bed regeneration cycle, duration of the carbon bed steaming and cooling or drying cycles, design carbon bed temperature after regeneration, design carbon bed regeneration time, and design service life of carbon.
- (g) For a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis also must establish the design outlet organic concentration level, capacity of carbon bed, type and working capacity of activated carbon used for carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule.

(4) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous secondary material management unit is or would be operating at the highest load or capacity level reasonably expected to occur.

(5) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the control device is designed to operate at an efficiency of ninety-five percent or greater unless the total organic concentration limit of subsection 1 of section 33.1-24-02-172 is achieved at an efficiency less than ninety-five weight percent or the total organic emission limits of subsection 1 of section 33.1-24-02-172 for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than ninety-five weight percent. A statement provided by the control device manufacturer or vendor certifying that the control equipment meets the design specifications may be used to comply with this requirement.

(6) If performance tests are used to demonstrate compliance, all test results.

3. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of sections 33.1-24-02-170 through 33.1-24-02-179 must be recorded and kept up to date at the facility. The information must include:

a. Description and date of each modification that is made to the closed-vent system or control device design.

b. Identification of operating parameter, description of monitoring device, and diagram of monitoring sensor location or locations used to comply with subdivisions a and b of subsection 6 of section 33.1-24-02-173.

c. Monitoring, operating, and inspection information required by subsections 6 through 11 of section 33.1-24-02-173.

d. Date, time, and duration of each period that occurs while the control device is operating when any monitored parameter exceeds the value established in the control device design analysis as specified below:

(1) For a thermal vapor incinerator designed to operate with a minimum residence time of fifty-hundredths seconds at a minimum temperature of seven hundred sixty degrees Celsius, period when the combustion temperature is below seven hundred sixty degrees Celsius.

(2) For a thermal vapor incinerator designed to operate with an organic emission reduction efficiency of ninety-five weight percent or greater, period when the combustion zone temperature is more than twenty-eight degrees Celsius below the design average combustion zone temperature established as a requirement of subparagraph a of paragraph 3 of subdivision d of subsection 2.

(3) For a catalytic vapor incinerator, period when:

(a) Temperature of the vent stream at the catalyst bed inlet is more than twenty-eight degrees Celsius below the average temperature of the inlet vent stream established as a requirement of subparagraph b of paragraph 3 of subdivision d of subsection 2; or

- (b) Temperature difference across the catalyst bed is less than eighty percent of the design average temperature difference established as a requirement of subparagraph b of paragraph 3 of subdivision d of subsection 2.
- (4) For a boiler or process heater, period when:
- (a) Flame zone temperature is more than twenty-eight degrees Celsius below the design average flame zone temperature established as a requirement of subparagraph c of paragraph 3 of subdivision d of subsection 2; or
- (b) Position changes where the vent stream is introduced to the combustion zone from the location established as a requirement of subparagraph c of paragraph 3 of subdivision d of subsection 2.
- (5) For a flare, period when the pilot flame is not ignited.
- (6) For a condenser that complies with subparagraph a of paragraph 6 of subdivision b of subsection 6 of section 33.1-24-02-173, period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the condenser are more than twenty percent greater than the design outlet organic compound concentration level established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2.
- (7) For a condenser that complies with subparagraph b of paragraph 6 of subdivision b of subsection 6 of section 33.1-24-02-173, period when:
- (a) Temperature of the exhaust vent stream from the condenser is more than six degrees Celsius above the design average exhaust vent stream temperature established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2; or
- (b) Temperature of the coolant fluid exiting the condenser is more than six degrees Celsius above the design average coolant fluid temperature at the condenser outlet established as a requirement of subparagraph e of paragraph 3 of subdivision d of subsection 2.
- (8) For a carbon adsorption system such as a fixed-bed carbon adsorber which regenerates the carbon bed directly onsite in the control device and complies with subparagraph a of paragraph 7 of subdivision b of subsection 6 of section 33.1-24-02-173, period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the carbon bed are more than twenty percent greater than the design exhaust vent stream organic compound concentration level established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2.
- (9) For a carbon adsorption system such as a fixed-bed carbon adsorber which regenerates the carbon bed directly onsite in the control device and complies with subparagraph b of paragraph 7 of subdivision b of subsection 6 of section 33.1-24-02-173, period when the vent stream continues to flow through the control device beyond the predetermined carbon bed regeneration time established as a requirement of subparagraph f of paragraph 3 of subdivision d of subsection 2.
- e. Explanation for each period recorded under subdivision d of the cause for control device operating parameter exceeding the design value and the measures implemented to correct the control device operation.

- f. For a carbon adsorption system operated subject to requirements specified in subsection 7 or subdivision b of subsection 8 of section 33.1-24-02-173, date when existing carbon in the control device is replaced with fresh carbon.
 - g. For a carbon adsorption system operated subject to requirements specified in subdivision a of subsection 8 of section 33.1-24-02-173, a log that records:
 - (1) Date and time when control device is monitored for carbon breakthrough and the monitoring device reading.
 - (2) Date when existing carbon in the control device is replaced with fresh carbon.
 - h. Date of each control device startup and shutdown.
 - i. A remanufacturer or other person that stores or treats the hazardous secondary material designating any components of a closed-vent system as unsafe to monitor pursuant to subsection 15 of section 33.1-24-02-173 shall record in a log that is kept at the facility the identification of closed-vent system components that are designated as unsafe to monitor in accordance with the requirements of subsection 15 of section 33.1-24-02-173, an explanation for each closed-vent system component stating why the closed-vent system component is unsafe to monitor, and the plan for monitoring each closed-vent system component.
 - j. When each leak is detected as specified in subsection 12 of section 33.1-24-02-173, the following information must be recorded:
 - (1) The instrument identification number, the closed-vent system component identification number, and the operator name, initials, or identification number.
 - (2) The date the leak was detected and the date of first attempt to repair the leak.
 - (3) The date of successful repair of the leak.
 - (4) Maximum instrument reading measured by Method 21 of 40 CFR part 60, appendix A after it is successfully repaired or determined to be nonreparable.
 - (5) "Repair delayed" and the reason for the delay if a leak is not repaired within fifteen calendar days after discovery of the leak.
 - (a) The remanufacturer or other person that stores or treats the hazardous secondary material may develop a written procedure that identifies the conditions that justify a delay of repair. In such cases, reasons for delay of repair may be documented by citing the relevant sections of the written procedure.
 - (b) If delay of repair was caused by depletion of stocked parts, there must be documentation that the spare parts were sufficiently stocked onsite before depletion and the reason for depletion.
4. Records of the monitoring, operating, and inspection information required by subdivisions c through j of subsection 3 must be maintained by the owner or operator for at least three years following the date of each occurrence, measurement, maintenance, corrective action, or record.
5. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the department will specify the appropriate recordkeeping requirements.

6. Up to date information and data used to determine whether or not a process vent is subject to the requirements in section 33.1-24-02-172 including supporting documentation as required by subdivision b of subsection 4 of section 33.1-24-02-174 when application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced is used, must be recorded in a log that is kept at the facility.

33.1-24-02-182. Standards - Pumps in light liquid service.

1. Timeframe.

- a. Each pump in light liquid service must be monitored monthly to detect leaks by the methods specified in subsection 2 of section 33.1-24-02-193, except as provided in subsections 4, 5, and 6.

b. Each pump in light liquid service must be checked by visual inspection each calendar week for indications of liquids dripping from the pump seal.

2. Indicators.

a. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.

b. If there are indications of liquids dripping from the pump seal, a leak is detected.

3. Response.

a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-02-189.

b. A first attempt at repair (for example, tightening the packing gland) must be made no later than five calendar days after each leak is detected.

4. Each pump equipped with a dual mechanical seal system that includes a barrier fluid system is exempt from the requirements of subsection 1, provided the following requirements are met:

a. Each dual mechanical seal system must be:

(1) Operated with the barrier fluid at a pressure that is at all times greater than the pump stuffing box pressure;

(2) Equipped with a barrier fluid degassing reservoir that is connected by a closed-vent system to a control device that complies with the requirements of section 33.1-24-02-190; or

(3) Equipped with a system that purges the barrier fluid into a hazardous secondary material stream with no detectable emissions to the atmosphere.

b. The barrier fluid system must not be a hazardous secondary material with organic concentrations ten percent or greater by weight.

c. Each barrier fluid system must be equipped with a sensor that will detect failure of the seal system, the barrier fluid system, or both.

d. Each pump must be checked by visual inspection, each calendar week, for indications of liquids dripping from the pump seals.

e. Checks.

(1) Each sensor as described in subdivision c of subsection 4 must be checked daily or be equipped with an audible alarm that must be checked monthly to ensure that it is functioning properly.

(2) The remanufacturer or other person that stores or treats the hazardous secondary material shall determine, based on design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

f. Leaks.

(1) If there are indications of liquids dripping from the pump seal or the sensor indicates failure of the seal system, the barrier fluid system, or both based on the criterion determined in paragraph 2 of subdivision e of subsection 4, a leak is detected.

(2) When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-02-189.

(3) A first attempt at repair (for example, relapping the seal) must be made no later than five calendar days after each leak is detected.

5. Any pump that is designated, as described in subdivision b of subsection 7 of section 33.1-24-02-194, for no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, is exempt from the requirements of subsections 1, 3, and 4 if the pump meets the following requirements:

a. Must have no externally actuated shaft penetrating the pump housing.

b. Must operate with no detectable emissions as indicated by an instrument reading of less than five hundred parts per million above background as measured by the methods specified in subsection 3 of section 33.1-24-02-193.

c. Must be tested for compliance with subdivision b initially upon designation, annually, and at other times as requested by the department.

6. If any pump is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal or seals to a control device that complies with the requirements of section 33.1-24-02-190, it is exempt from the requirements of subsections 1 through 5.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-183. Standards - Compressors.

1. Each compressor must be equipped with a seal system that includes a barrier fluid system and which prevents leakage of total organic emissions to the atmosphere, except as provided in subsections 8 and 9.

2. Each compressor seal system as required in subsection 1 must be:

a. Operated with the barrier fluid at a pressure that is at all times greater than the compressor stuffing box pressure;

b. Equipped with a barrier fluid system that is connected by a closed-vent system to a control device that complies with the requirements of section 33.1-24-02-190; or

c. Equipped with a system that purges the barrier fluid into a hazardous secondary material stream with no detectable emissions to atmosphere.

3. The barrier fluid must not be a hazardous secondary material with organic concentrations ten percent or greater by weight.

4. Each barrier fluid system as described in subsections 1 through 3 must be equipped with a sensor that will detect failure of the seal system, barrier fluid system, or both.

5. Checks.

a. Each sensor as required in subsection 4 must be checked daily or shall be equipped with an audible alarm that must be checked monthly to ensure it is functioning properly unless the compressor is located within the boundary of an unmanned plant site, in which case the sensor must be checked daily.

b. The remanufacturer or other person that stores or treats the hazardous secondary material shall determine, based on design considerations and operating experience, a criterion that indicates failure of the seal system, the barrier fluid system, or both.

6. If the sensor indicates failure of the seal system, the barrier fluid system, or both, based on the criterion determined under subdivision b of subsection 5, a leak is detected.

7. Leaks.

a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-02-189.

b. A first attempt at repair (for example, tightening the packing gland) must be made no later than five calendar days after each leak is detected.

8. A compressor is exempt from the requirements of subsections 1 and 2 if it is equipped with a closed-vent system capable of capturing and transporting any leakage from the seal to a control device that complies with the requirements of section 33.1-24-02-190, except as provided in subsection 9.

9. Any compressor that is designated, as described in subdivision b of subsection 7 of section 33.1-24-02-194, for no detectable emissions as indicated by an instrument reading of less than five hundred parts per million above background is exempt from the requirements of subsections 1 through 8 if the compressor:

a. Is determined to be operating with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-02-193.

b. Is tested for compliance with subdivision a initially upon designation, annually, and at other times as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-184. Standards - Pressure relief devices in gas or vapor service.

1. Except during pressure releases, each pressure relief device in gas or vapor service must be operated with no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-02-193.

2. Pressure release.

a. After each pressure release, the pressure relief device must be returned to a condition of no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as soon as practicable, but no later than five calendar days after each pressure release, except as provided in section 33.1-24-02-189.

b. No later than five calendar days after the pressure release, the pressure relief device must be monitored to confirm the condition of no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, as measured by the method specified in subsection 3 of section 33.1-24-02-193.

3. Any pressure relief device that is equipped with a closed-vent system capable of capturing and transporting leakage from the pressure relief device to a control device as described in section 33.1-24-02-190 is exempt from the requirements of subsections 1 and 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-185. Standards - Sampling connection systems.

1. Each sampling connection system must be equipped with a closed-purge, closed-loop, or closed-vent system. This system must collect the sample purge for return to the process or for routing to the appropriate treatment system. Gases displaced during filling of the sample container are not required to be collected or captured.
2. Each closed-purge, closed-loop, or closed-vent system as required in subsection 1 must meet one of the following requirements:
 - a. Return the purged process fluid directly to the process line;
 - b. Collect and recycle the purged process fluid; or
 - c. Be designed and operated to capture and transport all the purged process fluid to a material management unit that complies with the applicable requirements of sections 33.1-24-02-204 through 33.1-24-02-206 or a control device that complies with the requirements of section 33.1-24-02-190.
3. In situ sampling systems and sampling systems without purges are exempt from the requirements of subsections 1 and 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-186. Standards - Open-ended valves or lines.

1. Requirements.
 - a. Each open-ended valve or line must be equipped with a cap, blind flange, plug, or a second valve.
 - b. The cap, blind flange, plug, or second valve must seal the open end at all times except during operations requiring hazardous secondary material stream flow through the open-ended valve or line.
2. Each open-ended valve or line equipped with a second valve must be operated in a manner such that the valve on the hazardous secondary material stream end is closed before the second valve is closed.
3. When a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves but must comply with subsection 1 at all other times.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-187. Standards - Valves in gas or vapor service or in light liquid service.

1. Each valve in gas or vapor or light liquid service must be monitored monthly to detect leaks by the methods specified in subsection 2 of section 33.1-24-02-193 and must comply with subsections 2 through 5, except as provided in subsections 6, 7, and 8, and sections 33.1-24-02-191 and 33.1-24-02-192.
2. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.
3. Timeframe.
 - a. Any valve for which a leak is not detected for two successive months may be monitored the first month of every succeeding quarter, beginning with the next quarter, until a leak is detected.
 - b. If a leak is detected, the valve must be monitored monthly until a leak is not detected for two successive months.
4. Release.
 - a. When a leak is detected, it must be repaired as soon as practicable, but no later than fifteen calendar days after the leak is detected, except as provided in section 33.1-24-02-189.
 - b. A first attempt at repair must be made no later than five calendar days after each leak is detected.
5. First attempts at repair include the following best practices where practicable:
 - a. Tightening of bonnet bolts.
 - b. Replacement of bonnet bolts.
 - c. Tightening of packing gland nuts.
 - d. Injection of lubricant into lubricated packing.
6. Any valve that is designated, as described in subdivision b of subsection 7 of section 33.1-24-02-194, for no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, is exempt from the requirements of subsection 1 if the valve:
 - a. Has no external actuating mechanism in contact with the hazardous secondary material stream.
 - b. Is operated with emissions less than five hundred parts per million above background as determined by the method specified in subsection 3 of section 33.1-24-02-193.
 - c. Is tested for compliance with subdivision b initially upon designation, annually, and at other times as requested by the department.
7. Any valve that is designated, as described in subdivision a of subsection 8 of section 33.1-24-02-194, as an unsafe-to-monitor valve is exempt from the requirements of subsection 1 if:
 - a. The remanufacturer or other person that stores or treats the hazardous secondary material determines that the valve is unsafe-to-monitor because monitoring personnel

would be exposed to an immediate danger as a consequence of complying with subsection 1.

b. The remanufacturer or other person that stores or treats the hazardous secondary material adheres to a written plan that requires monitoring of the valve as frequently as practicable during safe-to-monitor times.

8. Any valve that is designated, as described in subdivision b of subsection 8 of section 33.1-24-02-194, as a difficult-to-monitor valve is exempt from the requirements of subsection 1 if:

a. The remanufacturer or other person that stores or treats the hazardous secondary material determines that the valve cannot be monitored without elevating the monitoring personnel more than two meters above a support surface.

b. The hazardous secondary material management unit within which the valve is located was in operation before January 15, 2015.

c. The owner or operator of the valve follows a written plan that requires monitoring of the valve at least once per calendar year.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-188. Standards - Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors.

1. Pumps and valves in heavy liquid service, pressure relief devices in light liquid or heavy liquid service, and flanges and other connectors must be monitored within five days by the method specified in subsection 2 of section 33.1-24-02-193 if evidence of a potential leak is found by visual, audible, olfactory, or any other detection method.

2. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.

3. Timeframe.

a. When a leak is detected, it must be repaired as soon as practicable, but not later than fifteen calendar days after it is detected, except as provided in section 33.1-24-02-189.

b. The first attempt at repair must be made no later than five calendar days after each leak is detected.

4. First attempts at repair include the best practices described under subsection 5 of section 33.1-24-02-187.

5. Any connector that is inaccessible or is ceramic or ceramic-lined (for example, porcelain, glass, or glass-lined) is exempt from the monitoring requirements of subsection 1 and from the recordkeeping requirements of section 33.1-24-02-194.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-189. Standards - Delay of repair.

1. Delay of repair of equipment for which leaks have been detected will be allowed if the repair is technically infeasible without a hazardous secondary material management unit shutdown. In such a case, repair of this equipment must occur before the end of the next hazardous secondary material management unit shutdown.
2. Delay of repair of equipment for which leaks have been detected will be allowed for equipment that is isolated from the hazardous secondary material management unit and that does not continue to contain or contact hazardous secondary material with organic concentrations at least ten percent by weight.
3. Delay of repair for valves will be allowed if:
 - a. The remanufacturer or other person that stores or treats the hazardous secondary material determines that emissions of purged material resulting from immediate repair are greater than the emissions likely to result from delay of repair.
 - b. When repair procedures are effected, the purged material is collected and destroyed or recovered in a control device complying with section 33.1-24-02-190.
4. Delay of repair for pumps will be allowed if:
 - a. Repair requires the use of a dual mechanical seal system that includes a barrier fluid system.
 - b. Repair is completed as soon as practicable, but not later than six months after the leak was detected.
5. Delay of repair beyond a hazardous secondary material management unit shutdown will be allowed for a valve if valve assembly replacement is necessary during the hazardous secondary material management unit shutdown, valve assembly supplies have been depleted, and valve assembly supplies had been sufficiently stocked before the supplies were depleted. Delay of repair beyond the next hazardous secondary material management unit shutdown will not be allowed unless the next hazardous secondary material management unit shutdown occurs sooner than six months after the first hazardous secondary material management unit shutdown.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-190. Standards - Closed-vent systems and control devices.

1. The remanufacturer or other person that stores or treats the hazardous secondary material in hazardous secondary material management units using closed-vent systems and control devices subject to sections 33.1-24-02-180 through 33.1-24-02-199 shall comply with the provisions of section 33.1-24-02-173.
2. For:
 - a. The remanufacturer or other person that stores or treats the hazardous secondary material at an existing facility who cannot install a closed-vent system and control device to comply with the provisions of this subpart on the effective date that the facility becomes subject to the provisions of sections 33.1-24-02-180 through 33.1-24-02-199 shall prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be

installed as soon as possible, but the implementation schedule may allow up to thirty months after the effective date that the facility becomes subject to sections 33.1-24-02-180 through 33.1-24-02-199 for installation and startup.

- b. Any unit that begins operation after July 13, 2015, and is subject to the provisions of sections 33.1-24-02-180 through 33.1-24-02-199 when operation begins, must comply with the rules immediately (for example, must have control devices installed and operating on startup of the affected unit); the thirty-month implementation schedule does not apply.
- c. The remanufacturer or other person that stores or treats the hazardous secondary material at any facility in existence on the effective date of a statutory or regulatory amendment that renders the facility subject to this subpart shall comply with all requirements of sections 33.1-24-02-180 through 33.1-24-02-199 as soon as practicable but no later than thirty months after the amendment's effective date. When control equipment required by sections 33.1-24-02-180 through 33.1-24-02-199 cannot be installed and begin operation by the effective date of the amendment, the facility owner or operator shall prepare an implementation schedule that includes the following information: Specific calendar dates for award of contracts or issuance of purchase orders for the control equipment, initiation of onsite installation of the control equipment, completion of the control equipment installation, and performance of any testing to demonstrate that the installed equipment meets the applicable standards of sections 33.1-24-02-180 through 33.1-24-02-199. The remanufacturer or other person that stores or treats the hazardous secondary material shall keep a copy of the implementation schedule at the facility.
- d. Remanufacturers or other persons that store or treat the hazardous secondary materials at facilities and units that become newly subject to the requirements of sections 33.1-24-02-180 through 33.1-24-02-199 after January 13, 2015, due to an action other than those described in subdivision c must comply with all applicable requirements immediately (for example, must have control devices installed and operating on the date the facility or unit becomes subject to sections 33.1-24-02-180 through 33.1-24-02-199); the thirty-month implementation schedule does not apply.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-191. Alternative standards for valves in gas or vapor service or in light liquid service - Percentage of valves allowed to leak.

- 1. A remanufacturer or other person that stores or treats the hazardous secondary material subject to the requirements of section 33.1-24-02-187 may elect to have all valves within a hazardous secondary material management unit comply with an alternative standard that allows no greater than two percent of the valves to leak.
- 2. The following requirements must be met if a remanufacturer or other person that stores or treats the hazardous secondary material decides to comply with the alternative standard of allowing two percent of valves to leak:
 - a. A performance test as specified in subsection 3 must be conducted initially upon designation, annually, and at other times requested by the department.
 - b. If a valve leak is detected, it must be repaired in accordance with subsections 4 and 5 of section 33.1-24-02-187.

3. Performance tests must be conducted in the following manner:

- a. All valves subject to the requirements in section 33.1-24-02-187 within the hazardous secondary material management unit must be monitored within one week by the methods specified in subsection 2 of section 33.1-24-02-193.
- b. If an instrument reading of ten thousand parts per million or greater is measured, a leak is detected.
- c. The leak percentage must be determined by dividing the number of valves subject to the requirements in section 33.1-24-02-187 for which leaks are detected by the total number of valves subject to the requirements in section 33.1-24-02-187 within the hazardous secondary material management unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-192. Alternative standards for valves in gas or vapor service or in light liquid service - Skip period leak detection and repair.

1. A remanufacturer or other person that stores or treats the hazardous secondary material subject to the requirements of section 33.1-24-02-187 may elect for all valves within a hazardous secondary material management unit to comply with one of the alternative work practices specified in subdivisions b and c of subsection 2.

2. Requirements.

- a. A remanufacturer or other person that stores or treats the hazardous secondary material shall comply with the requirements for valves, as described in section 33.1-24-02-187, except as described in subdivisions b and c.
- b. After two consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, a remanufacturer or other person that stores or treats the hazardous secondary material may begin to skip one of the quarterly leak detection periods (for example, monitor for leaks once every six months) for the valves subject to the requirements in section 33.1-24-02-187.
- c. After five consecutive quarterly leak detection periods with the percentage of valves leaking equal to or less than two percent, a remanufacturer or other person that stores or treats the hazardous secondary material may begin to skip three of the quarterly leak detection periods (for example, monitor for leaks once every year) for the valves subject to the requirements in section 33.1-24-02-187.
- d. If the percentage of valves leaking is greater than two percent, the remanufacturer or other person that stores or treats the hazardous secondary material shall monitor monthly in compliance with the requirements in section 33.1-24-02-187, but may again elect to use this section after meeting the requirements of subdivision a of subsection 3 of section 33.1-24-02-187.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-193. Test methods and procedures.

1. Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of sections 33.1-24-02-180 through 33.1-24-02-199 shall comply with the test methods and procedures requirements provided in this section.
2. Leak detection monitoring, as required in sections 33.1-24-02-182 through 33.1-24-02-192, must comply with the following requirements:
 - a. Monitoring must comply with Reference Method 21 in 40 CFR part 60.
 - b. The detection instrument must meet the performance criteria of Reference Method 21.
 - c. The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.
 - d. Calibration gases must be:
 - (1) Zero air (less than ten parts per million of hydrocarbon in air).
 - (2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million methane or n-hexane.
 - e. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.
3. When equipment is tested for compliance with no detectable emissions, as required in subsection 5 of section 33.1-24-02-182, subsection 9 of section 33.1-24-02-183, 33.1-24-02-184, and subsection 6 of section 33.1-24-02-187, the test must comply with the following requirements:
 - a. The requirements of subdivisions a through d of subsection 2 must apply.
 - b. The background level must be determined as set forth in Reference Method 21.
 - c. The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.
 - d. The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with five hundred parts per million for determining compliance.
4. A remanufacturer or other person that stores or treats the hazardous secondary material shall determine, for each piece of equipment, whether the equipment contains or contacts a hazardous secondary material with organic concentration that equals or exceeds ten percent by weight using the following:
 - a. Methods described in American society for testing and materials Methods D 2267-88, E 169-87, E 168-88, E 260-85 (as incorporated by reference under section 33.1-24-01-05);
 - b. Method 9060A (as incorporated by reference under section 33.1-24-01-05) of "Test Methods for Evaluating Solid Waste," environmental protection agency publication SW-846, for computing total organic concentration of the sample, or analyzed for its individual organic constituents; or
 - c. Application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced. Documentation of a material determination by

knowledge is required. Examples of documentation that shall be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to have a total organic content less than ten percent, or prior speciation analysis results on the same material stream where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.

5. If a remanufacturer or other person that stores or treats the hazardous secondary material determines that a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least ten percent by weight, the determination can be revised only after following the procedures in subdivision a or b of subsection 4.
6. When a remanufacturer or other person that stores or treats the hazardous secondary material and the department do not agree on whether a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least ten percent by weight, the procedures in subdivision a or b of subsection 4 can be used to resolve the dispute.
7. Samples used in determining the percent organic content must be representative of the highest total organic content hazardous secondary material that is expected to be contained in or contact the equipment.
8. To determine if pumps or valves are in light liquid service, the vapor pressures of constituents may be obtained from standard reference texts or may be determined by American society for testing and materials D-2879-86 (as incorporated by reference under section 33.1-24-01-05).
9. Performance tests to determine if a control device achieves ninety-five weight percent organic emission reduction must comply with the procedures of subdivisions a through d of subsection 3 of section 33.1-24-02-174.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-194. Recordkeeping requirements.

1. Remanufacturer or other person that stores or treats the hazardous secondary material.
 - a. Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of sections 33.1-24-02-180 through 33.1-24-02-199 shall comply with the recordkeeping requirements of this section.
 - b. A remanufacturer or other person that stores or treats the hazardous secondary material in more than one hazardous secondary material management unit subject to the provisions of sections 33.1-24-02-180 through 33.1-24-02-199 may comply with the recordkeeping requirements for these hazardous secondary material management units in one recordkeeping system if the system identifies each record by each hazardous secondary material management unit.
2. Remanufacturers and other persons that store or treat the hazardous secondary material shall record and keep the following information at the facility:
 - a. For each piece of equipment to which sections 33.1-24-02-180 through 33.1-24-02-199 applies:

- (1) Equipment identification number and hazardous secondary material management unit identification.
- (2) Approximate locations within the facility (for example, identify the hazardous secondary material management unit on a facility plot plan).
- (3) Type of equipment (for example, a pump or pipeline valve).
- (4) Percent-by-weight total organics in the hazardous secondary material stream at the equipment.
- (5) Hazardous secondary material state at the equipment (for example, gas and vapor or liquid).
- (6) Method of compliance with the standard (for example, "monthly leak detection and repair" or "equipped with dual mechanical seals").

b. [Reserved].

c. Where a remanufacturer or other person that stores or treats the hazardous secondary material chooses to use test data to demonstrate the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-02-175.

d. Documentation of compliance with section 33.1-24-02-190, including the detailed design documentation or performance test results specified in subdivision d of subsection 2 of section 33.1-24-02-175.

3. When each leak is detected as specified in sections 33.1-24-02-182, 33.1-24-02-183, 33.1-24-02-187, and 33.1-24-02-188, the following requirements apply:

a. A weatherproof and readily visible identification, marked with the equipment identification number, the date evidence of a potential leak was found in accordance with subsection 1 of section 33.1-24-02-188, and the date the leak was detected, must be attached to the leaking equipment.

b. The identification on equipment, except on a valve, may be removed after it has been repaired.

c. The identification on a valve may be removed after it has been monitored for two successive months as specified in subsection 3 of section 33.1-24-02-187 and no leak has been detected during those two months.

4. When each leak is detected as specified in sections 33.1-24-02-182, 33.1-24-02-183, 33.1-24-02-187, and 33.1-24-02-188, the following information must be recorded in an inspection log and must be kept at the facility:

a. The instrument and operator identification numbers and the equipment identification number.

b. The date evidence of a potential leak was found in accordance with subsection 1 of section 33.1-24-02-188.

c. The date the leak was detected and the dates of each attempt to repair the leak.

d. Repair methods applied in each attempt to repair the leak.

- e. "Above ten thousand" if the maximum instrument reading measured by the methods specified in subsection 2 of section 33.1-24-02-193 after each repair attempt is equal to or greater than ten thousand parts per million.
 - f. "Repair delayed" and the reason for the delay if a leak is not repaired within fifteen calendar days after discovery of the leak.
 - g. Documentation supporting the delay of repair of a valve in compliance with subsection 3 of section 33.1-24-02-189.
 - h. The signature of the remanufacturer or other person that stores or treats the hazardous secondary material (or designate) whose decision it was that repair could not be effected without a hazardous secondary material management unit shutdown.
 - i. The expected date of successful repair of the leak if a leak is not repaired within fifteen calendar days.
 - j. The date of successful repair of the leak.
5. Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of section 33.1-24-02-190 must be recorded and kept up-to-date at the facility as specified in subsection 3 of section 33.1-24-02-175. Design documentation is specified in subdivisions a and b of subsection 3 of section 33.1-24-02-175 and monitoring, operating, and inspection information in subdivisions c through h of subsection 3 of section 33.1-24-02-175.
6. For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the department will specify the appropriate recordkeeping requirements.
7. The following information pertaining to all equipment subject to the requirements in sections 33.1-24-02-182 through 33.1-24-02-190 must be recorded in a log that is kept at the facility:
- a. A list of identification numbers for equipment (except welded fittings) subject to the requirements of sections 33.1-24-02-180 through 33.1-24-02-199.
 - b. Equipment.
 - (1) A list of identification numbers for equipment that the remanufacturer or other person that stores or treats the hazardous secondary material elects to designate for no detectable emissions, as indicated by an instrument reading of less than five hundred parts per million above background, under the provisions of subsection 5 of section 33.1-24-02-182, subsection 9 of section 33.1-24-02-183, and subsection 6 of section 33.1-24-02-187.
 - (2) The designation of this equipment as subject to the requirements of subsection 5 of section 33.1-24-02-182, subsection 9 of section 33.1-24-02-183, or subsection 6 of section 33.1-24-02-187 must be signed by the remanufacturer or other person that stores or treats the hazardous secondary material.
 - c. A list of equipment identification numbers for pressure relief devices required to comply with subsection 1 of section 33.1-24-02-184.
 - d. Data.

(1) The dates of each compliance test required in subsection 5 of section 33.1-24-02-182, subsection 9 of section 33.1-24-02-183, section 33.1-24-02-184, and subsection 6 of section 33.1-24-02-187.

(2) The background level measured during each compliance test.

(3) The maximum instrument reading measured at the equipment during each compliance test.

e. A list of identification numbers for equipment in vacuum service.

f. Identification, either by list or location (area or group) of equipment that contains or contacts hazardous secondary material with an organic concentration of at least ten percent by weight for less than three hundred hours per calendar year.

8. The following information pertaining to all valves subject to the requirements of subsections 7 and 8 of section 33.1-24-02-187 must be recorded in a log that is kept at the facility:

a. A list of identification numbers for valves that are designated as unsafe to monitor, an explanation for each valve stating why the valve is unsafe to monitor, and the plan for monitoring each valve.

b. A list of identification numbers for valves that are designated as difficult to monitor, an explanation for each valve stating why the valve is difficult to monitor, and the planned schedule for monitoring each valve.

9. The following information must be recorded in a log that is kept at the facility for valves complying with section 33.1-24-02-192:

a. A schedule of monitoring.

b. The percent of valves found leaking during each monitoring period.

10. The following information must be recorded in a log that is kept at the facility:

a. Criteria required in paragraph 2 of subdivision e of subsection 4 of section 33.1-24-02-182 and subdivision b of subsection 5 of section 33.1-24-02-183 and an explanation of the design criteria.

b. Any changes to these criteria and the reasons for the changes.

11. The following information must be recorded in a log that is kept at the facility for use in determining exemptions as provided in the applicability section of sections 33.1-24-02-180 through 33.1-24-02-190 and other specific sections:

a. An analysis determining the design capacity of the hazardous secondary material management unit.

b. A statement listing the hazardous secondary material influent to and effluent from each hazardous secondary material management unit subject to the requirements in sections 33.1-24-02-182 through 33.1-24-02-190 and an analysis determining whether these hazardous secondary materials are heavy liquids.

c. An up-to-date analysis and the supporting information and data used to determine whether or not equipment is subject to the requirements in sections 33.1-24-02-182 through 33.1-24-02-190. The record must include supporting documentation as required by subdivision c of subsection 4 of section 33.1-24-02-193 when application of the knowledge of the nature of the hazardous secondary material stream or the process by

which it was produced is used. If the remanufacturer or other person that stores or treats the hazardous secondary material takes any action (for example, changing the process that produced the material) that could result in an increase in the total organic content of the material contained in or contacted by equipment determined not to be subject to the requirements in sections 33.1-24-02-182 through 33.1-24-02-190, then a new determination is required.

12. Records of the equipment leak information required by subsection 4 and the operating information required by subsection 5 need be kept only three years.

13. The remanufacturer or other person that stores or treats the hazardous secondary material at a facility with equipment that is subject to sections 33.1-24-02-180 through 33.1-24-02-199 and to regulations at 40 Code of Federal Regulations part 60, part 61, or part 63 may elect to determine compliance with sections 33.1-24-02-180 through 33.1-24-02-199 either by documentation pursuant to section 33.1-24-02-194, or by documentation of compliance with the regulations at 40 CFR part 60, part 61, or part 63 pursuant to the relevant provisions of the regulations at 40 CFR part 60, part 61, or part 63. The documentation of compliance under regulations at 40 CFR part 60, part 61, or part 63 must be kept with or made readily available at the facility.

33.1-24-02-200. Applicability of air emission standards for tanks and containers.

1. The requirements of sections 33.1-24-02-200 through 33.1-24-02-214 apply to tanks and containers that contain hazardous secondary materials excluded under the remanufacturing exclusion at subdivision z of subsection 1 of section 33.1-24-02-04, unless the tanks and containers are equipped with and operating air emission controls in accordance with the requirements of an applicable Clean Air Act regulation codified under 40 CFR part 60, part 61, or part 63.

2. [Reserved].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-201. Definitions.

As used in sections 33.1-24-02-200 through 33.1-24-02-214, all terms not defined herein have the meaning given them in North Dakota Century Code chapter 23.1-04 and chapters 33.1-24-01 through 33.1-24-05 and section 33.1-24-05-451.

1. "Average volatile organic concentration or average VO concentration" means the mass-weighted average volatile organic concentration of a hazardous secondary material as determined in accordance with the requirements of section 33.1-24-02-204.
2. "Cover" means a device that provides a continuous barrier over the hazardous secondary material managed in a unit to prevent or reduce air pollutant emissions to the atmosphere. A cover may have openings (such as access hatches, sampling ports, gauge wells) that are necessary for operation, inspection, maintenance, and repair of the unit on which the cover is used. A cover may be a separate piece of equipment which can be detached and removed from the unit or a cover may be formed by structural features permanently integrated into the design of the unit.
3. "Empty hazardous secondary material container" means:
 - a. A container from which all hazardous secondary materials have been removed that can be removed using the practices commonly employed to remove materials from that type of container, for example, pouring, pumping, and aspirating, and no more than two and one-half centimeters (one inch) of residue remain on the bottom of the container or inner liner;
 - b. A container that is less than or equal to one hundred nineteen gallons in size and no more than three percent by weight of the total capacity of the container remains in the container or inner liner; or
 - c. A container that is greater than one hundred nineteen gallons in size and no more than three-tenths of one percent by weight of the total capacity of the container remains in the container or inner liner.
4. "Floating membrane cover" means a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous secondary material being managed in a surface impoundment.
5. "Liquid-mounted seal" means a foam or liquid-filled primary seal mounted in contact with the hazardous secondary material between the tank wall and the floating roof continuously around the circumference of the tank.
6. "Material determination" means performing all applicable procedures in accordance with the requirements of section 33.1-24-02-204 to determine whether a hazardous secondary material meets standards specified in sections 33.1-24-02-200 through 33.1-24-02-214. Examples of a material determination include performing the procedures in accordance with the requirements of section 33.1-24-02-204 to determine the average volatile organic concentration of a hazardous secondary material at the point of material origination; the average volatile organic concentration of a hazardous secondary material at the point of material treatment and comparing the results to the exit concentration limit specified for the process used to treat the hazardous secondary material; the organic reduction efficiency and the organic biodegradation efficiency for a biological process used to treat a hazardous secondary material and comparing the results to the applicable standards; or the maximum volatile

organic vapor pressure for a hazardous secondary material in a tank and comparing the results to the applicable standards.

7. "Maximum organic vapor pressure" means the sum of the individual organic constituent partial pressures exerted by the material contained in a tank, at the maximum vapor pressure-causing conditions (for example, temperature, agitation, pH effects of combining materials) reasonably expected to occur in the tank. For the purpose of sections 33.1-24-02-200 through 33.1-24-02-214, maximum organic vapor pressure is determined using the procedures specified in subsection 3 of section 33.1-24-02-204.

8. "No detectable organic emissions" means no escape of organics to the atmosphere as determined using the procedure specified in subsection 4 of section 33.1-24-02-204.

9. "Point of material origination" means as follows:

a. When the remanufacturer or other person that stores or treats the hazardous secondary material is the generator of the hazardous secondary material, the point of material origination means the point where a material produced by a system, process, or material management unit is determined to be a hazardous secondary material excluded under subdivision z of subsection 1 of section 33.1-24-02-04.

b. When the remanufacturer or other person that stores or treats the hazardous secondary material is not the generator of the hazardous secondary material, point of material origination means the point where the remanufacturer or other person that stores or treats the hazardous secondary material accepts delivery or takes possession of the hazardous secondary material.

10. "Safety device" means a closure device such as a pressure relief valve, frangible disc, fusible plug, or any other type of device which functions exclusively to prevent physical damage or permanent deformation to a unit or its air emission control equipment by venting gases or vapors directly to the atmosphere during unsafe conditions resulting from an unplanned, accidental, or emergency event. For the purpose of sections 33.1-24-02-200 through 33.1-24-02-214, a safety device is not used for routine venting of gases or vapors from the vapor headspace underneath a cover such as during filling of the unit or to adjust the pressure in this vapor headspace in response to normal daily diurnal ambient temperature fluctuations. A safety device is designed to remain in a closed position during normal operations and open only when the internal pressure, or another relevant parameter, exceeds the device threshold setting applicable to the air emission control equipment as determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials.

11. "Vapor-mounted seal" means a continuous seal that is mounted such that there is a vapor space between the hazardous secondary material in the unit and the bottom of the seal.

12. "Volatile organic concentration" or "VO concentration" means the fraction by weight of the volatile organic compounds contained in a hazardous secondary material expressed in terms of parts per million as determined by direct measurement or by knowledge of the material in accordance with the requirements of section 33.1-24-02-204. For the purpose of determining the VO concentration of a hazardous secondary material, organic compounds with a Henry's law constant value of at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) [which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/meter³] at twenty-five degrees Celsius must be included.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-202. Standards - General.

1. This section applies to the management of hazardous secondary material in tanks and containers subject to sections 33.1-24-02-200 through 33.1-24-02-214.
2. The remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from each hazardous secondary material management unit in accordance with standards specified in sections 33.1-24-02-204 through 33.1-24-02-207, as applicable to the hazardous secondary material management unit, except as provided for in subsection 3.
3. A tank or container is exempt from standards specified in sections 33.1-24-02-204 through 33.1-24-02-207, as applicable, provided that the hazardous secondary material management unit is a tank or container for which all hazardous secondary material entering the unit has an average VO concentration at the point of material origination of less than five hundred parts per million by weight. The average VO concentration must be determined using the procedures specified in subsection 1 of section 33.1-24-02-203. The remanufacturer or other person that stores or treats the hazardous secondary material shall review and update, as necessary, this determination at least once every twelve months following the date of the initial determination for the hazardous secondary material streams entering the unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-203. Material determination procedures.

1. Material determination procedure to determine average volatile organic (VO) concentration of a hazardous secondary material at the point of material origination.
 - a. A remanufacturer or other person that stores or treats the hazardous secondary material shall determine the average VO concentration at the point of material origination for each hazardous secondary material placed in a hazardous secondary material management unit exempted under the provisions of subdivision a of subsection 3 of section 33.1-24-02-202 from using air emission controls in accordance with standards specified in sections 33.1-24-02-204 through 33.1-24-02-207, as applicable to the hazardous secondary material management unit.
 - (1) An initial determination of the average VO concentration of the material stream must be made before the first time any portion of the material in the hazardous secondary material stream is placed in a hazardous secondary material management unit exempted under the provisions of subdivision a of subsection 3 of section 33.1-24-02-202 from using air emission controls, and thereafter an initial determination of the average VO concentration of the material stream must be made for each averaging period that a hazardous secondary material is managed in the unit; and
 - (2) Perform a new material determination whenever changes to the source generating the material stream are reasonably likely to cause the average VO concentration of the hazardous secondary material to increase to a level that is equal to or greater than the applicable VO concentration limits specified in section 33.1-24-02-202.
 - b. For a material determination that is required by subdivision a, the average VO concentration of a hazardous secondary material at the point of material origination

must be determined using either direct measurement as specified in subdivision c or by knowledge as specified in subdivision d.

c. Direct measurement to determine average VO concentration of a hazardous secondary material at the point of material origination.

(1) Identification. The remanufacturer or other person that stores or treats the hazardous secondary material shall identify and record in a log that is kept at the facility the point of material origination for the hazardous secondary material.

(2) Sampling. Samples of the hazardous secondary material stream must be collected at the point of material origination in a manner such that volatilization of organics contained in the material and in the subsequent sample is minimized and an adequately representative sample is collected and maintained for analysis by the selected method.

(a) The averaging period to be used for determining the average VO concentration for the hazardous secondary material stream on a mass-weighted average basis must be designated and recorded. The averaging period can represent any time interval that the remanufacturer or other person that stores or treats the hazardous secondary material determines is appropriate for the hazardous secondary material stream but may not exceed one year.

(b) A sufficient number of samples, but no less than four samples, must be collected and analyzed for a hazardous secondary material determination. All of the samples for a given material determination must be collected within a one-hour period. The average of the four or more sample results constitutes a material determination for the material stream. One or more material determinations may be required to represent the complete range of material compositions and quantities that occur during the entire averaging period due to normal variations in the operating conditions for the source or process generating the hazardous secondary material stream. Examples of such normal variations are seasonal variations in material quantity or fluctuations in ambient temperature.

(c) All samples must be collected and handled in accordance with written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material stream are collected such that a minimum loss of organics occurs throughout the sample collection and handling process, and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling procedures for a total volatile organic constituent concentration may be found in Method 25D in 40 CFR part 60, appendix A.

(d) Sufficient information, as specified in the "site sampling plan" required under subparagraph c, must be prepared and recorded to document the material quantity represented by the samples and, as applicable, the operating conditions for the source or process generating the hazardous secondary material represented by the samples.

(3) Analysis. Each collected sample must be prepared and analyzed in accordance with Method 25D in 40 CFR part 60, appendix A for the total concentration of volatile organic constituents, or using one or more methods when the individual organic compound concentrations are identified and summed and the summed material

concentration accounts for and reflects all organic compounds in the material with Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) [which can also be expressed as 1.8x10⁻⁶ atmospheres/gram-mole/meters³] at twenty-five degrees Celsius. At the discretion of the remanufacturer or other person that stores or treats the hazardous secondary material, the test data obtained may be adjusted by any appropriate method to discount any contribution to the total volatile organic concentration that is a result of including a compound with a Henry's law constant value of less than 0.1 Y/X at twenty-five degrees Celsius. To adjust these data, the measured concentration of each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}). If the remanufacturer or other person that stores or treats the hazardous secondary material elects to adjust the test data, the adjustment must be made to all individual chemical constituents with a Henry's law constant value greater than or equal to 0.1 Y/X at twenty-five degrees Celsius contained in the material. Constituent-specific adjustment factors (f_{m25D}) can be obtained by contacting the Waste and Chemical Processes Group, Office of Air Quality Planning and Standards, Research Triangle Park, NC 27711. Other test methods may be used if they meet the requirements in subparagraph a or b and provided the requirement to reflect all organic compounds in the material with Henry's law constant values greater than or equal to 0.1 Y/X [which can also be expressed as 1.8x10⁻⁶ atmospheres/gram-mole/meters³] at twenty-five degrees Celsius, is met.

(a) Any environmental protection agency standard method that has been validated in accordance with "Alternative Validation Procedure for EPA Waste and Wastewater Methods," 40 CFR part 63, appendix D.

(b) Any other analysis method that has been validated in accordance with the procedures specified in Section 5.1 or Section 5.3, and the corresponding calculations in Section 6.1 or Section 6.3, of Method 301 in 40 CFR part 63, appendix A. The data are acceptable if they meet the criteria specified in Section 6.1.5 or Section 6.3.3 of Method 301. If correction is required under Section 6.3.3 of Method 301, the data are acceptable if the correction factor is within the range 0.7 to 1.30. Other sections of Method 301 are not required.

(4) Calculations.

(a) The average VO concentration (\bar{c}) on a mass-weighted basis must be calculated by using the results for all material determinations conducted in accordance with paragraphs 2 and 3 and the following equation:

$$\bar{c} = \frac{1}{Q_T} \sum_{i=1}^n (Q_i \times C_i)$$

where:

\bar{c} = Average VO concentration of the hazardous secondary material at the point of material origination on a mass-weighted basis, parts per million weight.

i = Individual material determination "i" of the hazardous secondary material.

n = Total number of material determinations of the hazardous secondary material conducted for the averaging period (not to exceed one year).

Q_i = Mass quantity of hazardous secondary material stream represented by C_i, kilograms per hour.

Q_T = Total mass quantity of hazardous secondary material during the averaging period, kilogram per hour.

C_i = Measured VO concentration of material determination "i" as determined in accordance with the requirements of paragraph 3 (for example, the average of the four or more samples specified in subparagraph b of paragraph 2), parts per million weight.

(b) For the purpose of determining C_i, for individual material samples analyzed in accordance with paragraph 3, the remanufacturer or other person that stores or treats the hazardous secondary material shall account for VO concentrations determined to be below the limit of detection of the analytical method by using the following VO concentration:

[1] If Method 25D in 40 CFR part 60, appendix A is used for the analysis, one-half the blank value determined in the method at Section 4.4 of Method 25D in 40 CFR part 60, appendix A.

[2] If any other analytical method is used, one-half the sum of the limits of detection established for each organic constituent in the material that has a Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) [which can also be expressed as 1.8x10⁻⁶ atmospheres/gram-mole/meter³] at twenty-five degrees Celsius.

d. Use of knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material to determine average VO concentration of a hazardous secondary material at the point of material origination.

(1) Documentation must be prepared that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material of the hazardous secondary material stream's average VO concentration. Examples of information that may be used as the basis for knowledge include: material balances for the source or process generating the hazardous secondary material stream; constituent-specific chemical test data for the hazardous secondary material stream from previous testing which are still applicable to the current material stream; previous test data for other locations managing the same type of material stream; or other knowledge based on information included in shipping papers or material certification notices.

(2) If test data are used as the basis for knowledge, then the remanufacturer or other person that stores or treats the hazardous secondary material shall document the test method, sampling protocol, and the means by which sampling variability and analytical variability are accounted for in the determination of the average VO concentration. For example, a remanufacturer or other person that stores or treats the hazardous secondary material may use organic concentration test data for the hazardous secondary material stream which are validated in accordance with Method 301 in 40 CFR part 63, appendix A as the basis for knowledge of the material.

(3) A remanufacturer or other person that stores or treats the hazardous secondary material using chemical constituent-specific concentration test data as the basis for knowledge of the hazardous secondary material may adjust the test data to the corresponding average VO concentration value which would have been obtained had the material samples been analyzed using Method 25D in 40 CFR part 60, appendix A. To adjust these data, the measured concentration for each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}).

(4) In the event that the department and the remanufacturer or other person that stores or treats the hazardous secondary material disagree on a determination of the average VO concentration for a hazardous secondary material stream using knowledge, then the results from a determination of average VO concentration using direct measurement as specified in subdivision c shall be used to establish compliance with the applicable requirements of sections 33.1-24-02-200 through 33.1-24-02-214. The department may perform or request that the remanufacturer or other person that stores or treats the hazardous secondary material perform this determination using direct measurement. The remanufacturer or other person that stores or treats the hazardous secondary material may choose one or more appropriate methods to analyze each collected sample in accordance with the requirements of paragraph 3 of subdivision c.

2. [Reserved].

3. Procedure to determine the maximum organic vapor pressure of a hazardous secondary material in a tank.

a. A remanufacturer or other person that stores or treats the hazardous secondary material shall determine the maximum organic vapor pressure for each hazardous secondary material placed in a tank using tank level 1 controls in accordance with standards specified in subsection 3 of section 33.1-24-02-204.

b. A remanufacturer or other person that stores or treats the hazardous secondary material shall use either direct measurement as specified in subdivision c or knowledge of the waste as specified by subdivision d to determine the maximum organic vapor pressure which is representative of the hazardous secondary material composition stored or treated in the tank.

c. Direct measurement to determine the maximum organic vapor pressure of a hazardous secondary material.

(1) Sampling. A sufficient number of samples must be collected to be representative of the hazardous secondary material contained in the tank. All samples must be collected and handled in accordance with written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material are collected such that a minimum loss of organics occurs throughout the sample collection and handling process and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling procedures may be found in Method 25D in 40 CFR part 60, appendix A.

(2) Analysis. Any one of the following appropriate methods may be used to analyze the samples and compute the maximum organic vapor pressure of the hazardous secondary material:

- (a) Method 25E in 40 CFR part 60, appendix A;
 - (b) Methods described in American Petroleum Institute Publication 2517, Third Edition, February 1989, "Evaporative Loss from External Floating-Roof Tanks," (as incorporated by reference in section 33.1-24-01-05);
 - (c) Methods obtained from standard reference texts;
 - (d) ASTM Method 2879-92 (as incorporated by reference in section 33.1-24-01-05); and
 - (e) Any other method approved by the department.
- d. Use of knowledge to determine the maximum organic vapor pressure of the hazardous secondary material. Documentation must be prepared and recorded that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material that the maximum organic vapor pressure of the hazardous secondary material is less than the maximum vapor pressure limit listed in paragraph 1 of subdivision a of subsection 2 of section 33.1-24-02-204 for the applicable tank design capacity category. An example of information that may be used is documentation that the hazardous secondary material is generated by a process for which at other locations it previously has been determined by direct measurement that the hazardous secondary material's waste maximum organic vapor pressure is less than the maximum vapor pressure limit for the appropriate tank design capacity category.

4. Procedure for determining no detectable organic emissions for the purpose of complying with sections 33.1-24-02-200 through 33.1-24-02-214:

- a. The test must be conducted in accordance with the procedures specified in Method 21 of 40 CFR part 60, appendix A. Each potential leak interface (for example, a location where organic vapor leakage could occur) on the cover and associated closure devices must be checked. Potential leak interfaces that are associated with covers and closure devices include: the interface of the cover and its foundation mounting; the periphery of any opening on the cover and its associated closure device; and the sealing seat interface on a spring-loaded pressure relief valve.
- b. The test must be performed when the unit contains a hazardous secondary material having an organic concentration representative of the range of concentrations for the hazardous secondary material expected to be managed in the unit. During the test, the cover and closure devices must be secured in the closed position.
- c. The detection instrument must meet the performance criteria of Method 21 of 40 CFR part 60, appendix A, except the instrument response factor criteria in Section 3.1.2(a) of Method 21 must be for the average composition of the organic constituents in the hazardous secondary material placed in the hazardous secondary management unit, not for each individual organic constituent.
- d. The detection instrument must be calibrated before use on each day of its use by the procedures specified in Method 21 of 40 CFR part 60, appendix A.
- e. Calibration gases must be as follows:
 - (1) Zero air (less than ten parts per million volume hydrocarbon in air); and
 - (2) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, ten thousand parts per million volume methane or n-hexane.

- f. The background level must be determined according to the procedures in Method 21 of 40 CFR part 60, appendix A.
- g. Each potential leak interface must be checked by traversing the instrument probe around the potential leak interface as close to the interface as possible, as described in Method 21 of 40 CFR part 60, appendix A. In the case when the configuration of the cover or closure device prevents a complete traverse of the interface, all accessible portions of the interface must be sampled. In the case when the configuration of the closure device prevents any sampling at the interface and the device is equipped with an enclosed extension or horn (for example, some pressure relief devices), the instrument probe inlet must be placed at approximately the center of the exhaust area to the atmosphere.
- h. The arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of five hundred parts per million volume except when monitoring a seal around a rotating shaft that passes through a cover opening, in which case the comparison must be as specified in subdivision i. If the difference is less than five hundred parts per million volume, then the potential leak interface is determined to operate with no detectable organic emissions.
- i. For the seals around a rotating shaft that passes through a cover opening, the arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of ten thousand parts per million weight. If the difference is less than ten thousand parts per million weight, then the potential leak interface is determined to operate with no detectable organic emissions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-204. Standards - Tanks.

- 1. The provisions of this section apply to the control of air pollutant emissions from tanks for which subsection 2 of section 33.1-24-02-202 references the use of this section for such air emission control.
- 2. The remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from each tank subject to this section in accordance with the following requirements as applicable:
 - a. For a tank that manages hazardous secondary material that meets all of the conditions specified in paragraphs 1 through 2, the remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from the tank in accordance with the tank level 1 controls specified in subsection 3 or the tank level 2 controls specified in subsection 4.
 - (1) The hazardous secondary material in the tank has a maximum organic vapor pressure which is less than the maximum organic vapor pressure limit for the tank's design capacity category as follows:
 - (a) For a tank design capacity equal to or greater than one hundred fifty-one meters³ (5,330 feet³), the maximum organic vapor pressure limit for the tank is five and two-tenths kilopascals.
 - (b) For a tank design capacity equal to or greater than seventy-five meters³ (2,650 feet³) but less than one hundred fifty-one meters³ (5,330 feet³), the

maximum organic vapor pressure limit for the tank is twenty-seven and six-tenths kilopascals.

(c) For a tank design capacity less than seventy-five meters³ (2,650 feet³), the maximum organic vapor pressure limit for the tank is seventy-six and six-tenths kilopascals.

(2) The hazardous secondary material in the tank is not heated by the remanufacturer or other person that stores or treats the hazardous secondary material to a temperature that is greater than the temperature at which the maximum organic vapor pressure of the hazardous secondary material is determined for the purpose of complying with paragraph 1.

b. For a tank that manages hazardous secondary material which does not meet all of the conditions specified in paragraphs 1 through 2 of subdivision a, the remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from the tank by using tank level 2 controls in accordance with the requirements of subsection 4. An example of tanks required to use tank level 2 controls is a tank for which the hazardous secondary material in the tank has a maximum organic vapor pressure that is equal to or greater than the maximum organic vapor pressure limit for the tank's design capacity category as specified in paragraph 1 of subdivision a.

3. Remanufacturers or other persons that store or treat the hazardous secondary material controlling air pollutant emissions from a tank using tank level 1 controls shall meet the requirements specified in subdivisions a through d:

a. The remanufacturer or other person that stores or treats that hazardous secondary material shall determine the maximum organic vapor pressure for a hazardous secondary material to be managed in the tank using tank level 1 controls before the first time the hazardous secondary material is placed in the tank. The maximum organic vapor pressure must be determined using the procedures specified in subsection 3 of section 33.1-24-02-203. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material shall perform a new determination whenever changes to the hazardous secondary material managed in the tank could potentially cause the maximum organic vapor pressure to increase to a level that is equal to or greater than the maximum organic vapor pressure limit for the tank design capacity category specified in paragraph 1 of subdivision a of subsection 2, as applicable to the tank.

b. The tank must be equipped with a fixed roof designed to meet the following specifications:

(1) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the hazardous secondary material in the tank. The fixed roof may be a separate cover installed on the tank (for example, a removable cover mounted on an open-top tank) or may be an integral part of the tank structural design (for example, a horizontal cylindrical tank equipped with a hatch).

(2) The fixed roof must be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between roof section joints or between the interface of the roof edge and the tank wall.

(3) Each opening in the fixed roof, and any manifold system associated with the fixed roof, must be either:

(a) Equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the opening and the closure device; or

(b) Connected by a closed-vent system that is vented to a control device. The control device must remove or destroy organics in the vent stream, and must be operating whenever hazardous secondary material is managed in the tank, except as provided for in items 1 and 2.

[1] During periods when it is necessary to provide access to the tank for performing the activities of item 2, venting of the vapor headspace underneath the fixed roof to the control device is not required, opening of closure devices is allowed, and removal of the fixed roof is allowed. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure device in the closed position or reinstall the cover, as applicable, and resume operation of the control device.

[2] During periods of routine inspection, maintenance, or other activities needed for normal operations, and for removal of accumulated sludge or other residues from the bottom of the tank.

(4) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices include: organic vapor permeability, the effects of any contact with the hazardous secondary material or its vapors managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

c. Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position except as follows:

(1) Opening of closure devices or removal of the fixed roof is allowed at the following times:

(a) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

(b) To remove accumulated sludge or other residues from the bottom of tank.

(2) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the tank internal pressure in accordance with the tank design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such

that the device remains in the closed position whenever the tank internal pressure is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on the tank manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the tank internal pressure exceeds the internal pressure operating range for the tank as a result of loading operations or diurnal ambient temperature fluctuations.

(3) Opening of a safety device, as defined in section 33.1-24-02-201, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect the air emission control equipment in accordance with the following requirements:

(1) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

(2) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform an initial inspection of the fixed roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material shall perform the inspections at least once every year except under the special conditions provided for in subsection 12.

(3) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subsection 11.

(4) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-02-209.

4. Remanufacturers or other persons that store or treat the hazardous secondary material controlling air pollutant emissions from a tank using tank level 2 controls shall use one of the following tanks:

a. A fixed-roof tank equipped with an internal floating roof in accordance with the requirements specified in subsection 5;

b. A tank equipped with an external floating roof in accordance with the requirements specified in subsection 6;

c. A tank vented through a closed-vent system to a control device in accordance with the requirements specified in subsection 7;

d. A pressure tank designed and operated in accordance with the requirements specified in subsection 8; or

- e. A tank located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device in accordance with the requirements specified in subsection 9.
- 5. The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank using a fixed roof with an internal floating roof shall meet the requirements specified in subdivisions a through c.
 - a. The tank must be equipped with a fixed roof and an internal floating roof in accordance with the following requirements:
 - (1) The internal floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.
 - (2) The internal floating roof must be equipped with a continuous seal between the wall of the tank and the floating roof edge that meets either of the following requirements:
 - (a) A single continuous seal that is either a liquid-mounted seal or a metallic shoe seal, as defined in section 33.1-24-02-201; or
 - (b) Two continuous seals mounted one above the other. The lower seal may be a vapor-mounted seal.
 - (3) The internal floating roof must meet the following specifications:
 - (a) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and the rim space vents is to provide a projection below the liquid surface.
 - (b) Each opening in the internal floating roof must be equipped with a gasketed cover or a gasketed lid except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains.
 - (c) Each penetration of the internal floating roof for the purpose of sampling must have a slit fabric cover that covers at least ninety percent of the opening.
 - (d) Each automatic bleeder vent and rim space vent must be gasketed.
 - (e) Each penetration of the internal floating roof that allows for passage of a ladder must have a gasketed sliding cover.
 - (f) Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof must have a flexible fabric sleeve seal or a gasketed sliding cover.
 - b. The remanufacturer or other person that stores or treats the hazardous secondary material shall operate the tank in accordance with the following requirements:
 - (1) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and shall be completed as soon as practical.
 - (2) Automatic bleeder vents are to be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.
 - (3) Prior to filling the tank, each cover, access hatch, gauge float well, or lid on any opening in the internal floating roof must be bolted or fastened closed (for example, no visible gaps). Rim space vents are to be set to open only when the internal

floating roof is not floating or when the pressure beneath the rim exceeds the manufacturer's recommended setting.

c. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect the internal floating roof in accordance with the procedures specified as follows:

(1) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include: the internal floating roof is not floating on the surface of the liquid inside the tank; liquid has accumulated on top of the internal floating roof; any portion of the roof seals have detached from the roof rim; holes, tears, or other openings are visible in the seal fabric; the gaskets no longer close off the hazardous secondary material surface from the atmosphere; or the slotted membrane has more than ten percent open area.

(2) The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect the internal floating roof components as follows except as provided in paragraph 3:

(a) Visually inspect the internal floating roof components through openings on the fixed roof (for example, manholes and roof hatches) at least once every twelve months after initial fill; and

(b) Visually inspect the internal floating roof, primary seal, secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every ten years.

(3) As an alternative to performing the inspections specified in paragraph 2 for an internal floating roof equipped with two continuous seals mounted one above the other, the remanufacturer or other person that stores or treats the hazardous secondary material may visually inspect the internal floating roof, primary and secondary seals, gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every five years.

(4) Prior to each inspection required by paragraph 2 or 3, the remanufacturer or other person that stores or treats the hazardous secondary material shall notify the department in advance of each inspection to provide the department with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material shall notify the department of the date and location of the inspection as follows:

(a) Prior to each visual inspection of an internal floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the department at least thirty calendar days before refilling the tank except when an inspection is not planned as provided for in subparagraph b.

(b) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection thirty calendar days before refilling the tank, the remanufacturer or other person that stores or treats the hazardous secondary material shall notify the department as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made

by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the department at least seven calendar days before refilling the tank.

(5) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subsection 11.

(6) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-02-209.

d. Safety devices, as defined in section 33.1-24-02-201, may be installed and operated as necessary on any tank complying with the requirements of this subsection.

6. The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank using an external floating roof shall meet the requirements specified in subdivisions a through c.

a. The remanufacturer or other person that stores or treats the hazardous secondary material shall design the external floating roof in accordance with the following requirements:

(1) The external floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.

(2) The floating roof must be equipped with two continuous seals, one above the other, between the wall of the tank and the roof edge. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.

(a) The primary seal must be a liquid-mounted seal or a metallic shoe seal, as defined in section 33.1-24-02-201. The total area of the gaps between the tank wall and the primary seal may not exceed two hundred twelve square centimeters per meter (10.0 square inches per foot) of tank diameter, and the width of any portion of these gaps may not exceed three and eight-tenths centimeters (1.5 inches). If a metallic shoe seal is used for the primary seal, the metallic shoe seal must be designed so that one end extends into the liquid in the tank and the other end extends a vertical distance of at least sixty-one centimeters above the liquid surface.

(b) The secondary seal must be mounted above the primary seal and cover the annular space between the floating roof and the wall of the tank. The total area of the gaps between the tank wall and the secondary seal may not exceed twenty-one and two-tenths square centimeters per meter (1.0 square inches per foot) of tank diameter, and the width of any portion of these gaps shall not exceed one and three-tenths centimeters (0.5 inches).

(3) The external floating roof must meet the following specifications:

(a) Except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in a noncontact external floating roof must provide a projection below the liquid surface.

(b) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be equipped with a gasketed cover, seal, or lid.

- (c) Each access hatch and each gauge float well must be equipped with a cover designed to be bolted or fastened when the cover is secured in the closed position.
 - (d) Each automatic bleeder vent and each rim space vent must be equipped with a gasket.
 - (e) Each roof drain that empties into the liquid managed in the tank must be equipped with a slotted membrane fabric cover that covers at least ninety percent of the area of the opening.
 - (f) Each unslotted and slotted guide pole well must be equipped with a gasketed sliding cover or a flexible fabric sleeve seal.
 - (g) Each unslotted guide pole must be equipped with a gasketed cap on the end of the pole.
 - (h) Each slotted guide pole must be equipped with a gasketed float or other device which closes off the liquid surface from the atmosphere.
 - (i) Each gauge hatch and each sample well must be equipped with a gasketed cover.
- b. The remanufacturer or other person that stores or treats the hazardous secondary material shall operate the tank in accordance with the following requirements:
- (1) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.
 - (2) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be secured and maintained in a closed position at all times except when the closure device must be open for access.
 - (3) Covers on each access hatch and each gauge float well must be bolted or fastened when secured in the closed position.
 - (4) Automatic bleeder vents must be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.
 - (5) Rim space vents must be set to open only at those times that the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting.
 - (6) The cap on the end of each unslotted guide pole must be secured in the closed position at all times except when measuring the level or collecting samples of the liquid in the tank.
 - (7) The cover on each gauge hatch or sample well must be secured in the closed position at all times except when the hatch or well must be opened for access.
 - (8) Both the primary seal and the secondary seal must completely cover the annular space between the external floating roof and the wall of the tank in a continuous fashion except during inspections.
- c. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect the external floating roof in accordance with the procedures specified as follows:

- (1) The remanufacturer or other person that stores or treats the hazardous secondary material shall measure the external floating roof seal gaps in accordance with the following requirements:
- (a) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform measurements of gaps between the tank wall and the primary seal within sixty calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every five years.
- (b) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform measurements of gaps between the tank wall and the secondary seal within sixty calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every year.
- (c) If a tank ceases to hold hazardous secondary material for a period of one year or more, subsequent introduction of hazardous secondary material into the tank must be considered an initial operation for the purposes of subparagraphs a and b.
- (d) The remanufacturer or other person that stores or treats the hazardous secondary material shall determine the total surface area of gaps in the primary seal and in the secondary seal individually using the following procedure:
- [1] The seal gap measurements must be performed at one or more floating roof levels when the roof is floating off the roof supports.
- [2] Seal gaps, if any, must be measured around the entire perimeter of the floating roof in each place where a thirty-two one-hundredths centimeter (0.125 inch) diameter uniform probe passes freely (without forcing or binding against the seal) between the seal and the wall of the tank and measure the circumferential distance of each such location.
- [3] For a seal gap measured under this subdivision, the gap surface area must be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.
- [4] The total gap area must be calculated by adding the gap surface areas determined for each identified gap location for the primary seal and the secondary seal individually, and then dividing the sum for each seal type by the nominal diameter of the tank. These total gap areas for the primary seal and secondary seal are then compared to the respective standards for the seal type as specified in paragraph 2 of subdivision a.
- (e) In the event that the seal gap measurements do not conform to the specifications in paragraph 2 of subdivision a, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subsection 11.
- (f) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-02-209.

- (2) The remanufacturer or other person that stores or treats the hazardous secondary material shall visually inspect the external floating roof in accordance with the following requirements:
- (a) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include: holes, tears, or other openings in the rim seal or seal fabric of the floating roof; a rim seal detached from the floating roof; all or a portion of the floating roof deck being submerged below the surface of the liquid in the tank; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.
- (b) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform an initial inspection of the external floating roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material shall perform the inspections at least once every year except for the special conditions provided for in subsection 12.
- (c) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subsection 11.
- (d) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-02-209.
- (3) Prior to each inspection required by paragraph 1 or 2, the remanufacturer or other person that stores or treats the hazardous secondary material shall notify the department in advance of each inspection to provide the department with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material shall notify the department of the date and location of the inspection as follows:
- (a) Prior to each inspection to measure external floating roof seal gaps as required under paragraph 1, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the department at least thirty calendar days before the date the measurements are scheduled to be performed.
- (b) Prior to each visual inspection of an external floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the department at least thirty calendar days before refilling the tank except when an inspection is not planned as provided for in subparagraph c.
- (c) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection thirty calendar days before refilling the tank, the owner or operator shall notify the department as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why

the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the department at least seven calendar days before refilling the tank.

d. Safety devices, as defined in section 33.1-24-02-201, may be installed and operated as necessary on any tank complying with the requirements of this subsection.

7. The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank by venting the tank to a control device shall meet the requirements specified in subdivisions a through c.

a. The tank must be covered by a fixed roof and vented directly through a closed-vent system to a control device in accordance with the following requirements:

(1) The fixed roof and its closure devices shall be designed to form a continuous barrier over the entire surface area of the liquid in the tank.

(2) Each opening in the fixed roof not vented to the control device must be equipped with a closure device. If the pressure in the vapor headspace underneath the fixed roof is less than atmospheric pressure when the control device is operating, the closure devices must be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the fixed roof is equal to or greater than atmospheric pressure when the control device is operating, the closure device must be designed to operate with no detectable organic emissions.

(3) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices include: organic vapor permeability, the effects of any contact with the liquid and its vapor managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

(4) The closed-vent system and control device must be designed and operated in accordance with the requirements of section 33.1-24-02-207.

b. Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position and the vapor headspace underneath the fixed roof vented to the control device except as follows:

(1) Venting to the control device is not required, and opening of closure devices or removal of the fixed roof is allowed at the following times:

(a) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

(b) To remove accumulated sludge or other residues from the bottom of a tank.

(2) Opening of a safety device, as defined in section 33.1-24-02-201, is allowed at any time conditions require doing so to avoid an unsafe condition.

c. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect and monitor the air emission control equipment in accordance with the following procedures:

(1) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include: visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.

(2) The closed-vent system and control device must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedures specified in section 33.1-24-02-207.

(3) The remanufacturer or other person that stores or treats the hazardous secondary material shall perform an initial inspection of the air emission control equipment on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material shall perform the inspections at least once every year except for the special conditions provided for in subsection 12.

(4) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of subsection 11.

(5) The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain a record of the inspection in accordance with the requirements specified in subsection 2 of section 33.1-24-02-209.

8. The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions by using a pressure tank shall meet the following requirements.

a. The tank must be designed not to vent to the atmosphere as a result of compression of the vapor headspace in the tank during filling of the tank to its design capacity.

b. All tank openings must be equipped with closure devices designed to operate with no detectable organic emissions as determined using the procedure specified in subsection 4 of section 33.1-24-02-203.

c. Whenever a hazardous secondary material is in the tank, the tank must be operated as a closed system that does not vent to the atmosphere except under either of the following conditions as specified in paragraph 1 or 2:

(1) At those times when opening of a safety device, as defined in section 33.1-24-02-201, is required to avoid an unsafe condition.

(2) At those times when purging of inerts from the tank is required and the purge stream is routed to a closed-vent system and control device designed and operated in accordance with the requirements of section 33.1-24-02-207.

9. The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions by using an enclosure vented through a closed-vent system to an enclosed combustion control device shall meet the requirements specified in subdivisions a through d.

a. The tank must be located inside an enclosure. The enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or treats the hazardous secondary material shall perform the verification procedure for the enclosure as specified in Section 5.0 to "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and, thereafter, annually.

b. The enclosure must be vented through a closed-vent system to an enclosed combustion control device that is designed and operated in accordance with the standards for either a vapor incinerator, boiler, or process heater specified in section 33.1-24-02-207.

c. Safety devices, as defined in section 33.1-24-02-201, may be installed and operated as necessary on any enclosure, closed-vent system, or control device used to comply with the requirements of subdivisions a and b.

d. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect and monitor the closed-vent system and control device as specified in section 33.1-24-02-207.

10. The remanufacturer or other person that stores or treats the hazardous secondary material shall transfer hazardous secondary material to a tank subject to this section in accordance with the following requirements:

a. Transfer of hazardous secondary material, except as provided in subdivision b, to the tank from another tank subject to this section must be conducted using continuous hard-piping or another closed system that does not allow exposure of the hazardous secondary material to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of 40 CFR part 63, subpart RR - National Emission Standards for Individual Drain Systems.

b. The requirements of subdivision a do not apply when transferring a hazardous secondary material to the tank under any of the following conditions:

(1) The hazardous secondary material meets the average VO concentration conditions specified in subdivision a of subsection 3 of section 33.1-24-02-202 at the point of material origination.

(2) The hazardous secondary material has been treated by an organic destruction or removal process to meet the requirements in subdivision b of subsection 3 of section 33.1-24-02-202.

(3) The hazardous secondary material meets the requirements of subdivision d of subsection 3 of section 33.1-24-02-202.

11. The remanufacturer or other person that stores or treats the hazardous secondary material shall repair each defect detected during an inspection performed in accordance with the

requirements of subdivision d of subsection 3, subdivision c of subsection 5, subdivision c of subsection 6, or subdivision c of subsection 7 as follows:

- a. The remanufacturer or other person that stores or treats the hazardous secondary material shall make first efforts at repair of the defect no later than five calendar days after detection, and repair shall be completed as soon as possible but no later than forty-five calendar days after detection except as provided in subdivision b.
- b. Repair of a defect may be delayed beyond forty-five calendar days if the remanufacturer or other person that stores or treats the hazardous secondary material determines that repair of the defect requires emptying or temporary removal from service of the tank and no alternative tank capacity is available at the site to accept the hazardous secondary material normally managed in the tank. In this case, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect the next time the process or unit that is generating the hazardous secondary material managed in the tank stops operation. Repair of the defect must be completed before the process or unit resumes operation.

12. Following the initial inspection and monitoring of the cover as required by the applicable provisions of sections 33.1-24-02-200 through 33.1-24-02-214, subsequent inspection and monitoring may be performed at intervals longer than one year under the following special conditions:

- a. In the case when inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions, the remanufacturer or other person that stores or treats the hazardous secondary material may designate a cover as an "unsafe to inspect and monitor cover" and comply with all of the following requirements:
 - (1) Prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required.
 - (2) Develop and implement a written plan and schedule to inspect and monitor the cover, using the procedures specified in the applicable section of sections 33.1-24-02-200 through 33.1-24-02-214, as frequently as practicable during those times when a worker can safely access the cover.
- b. In the case when a tank is buried partially or entirely underground, a remanufacturer or other person that stores or treats the hazardous secondary material is required to inspect and monitor, as required by the applicable provisions of this section, only those portions of the tank cover and those connections to the tank (for example, fill ports, access hatches, gauge wells) which are located on or above the ground surface.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-205. [Reserved].

33.1-24-02-206. Standards - Containers.

1. The provisions of this section apply to the control of air pollutant emissions from containers for which subsection 2 of section 33.1-24-02-202 references the use of this section for such air emission control.

2. General requirements.

a. The remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from each container subject to this section in accordance with the following requirements, as applicable to the container.

(1) For a container having a design capacity greater than one-tenth meters³ (3.5 feet³) and less than or equal to forty-six one-hundredths meters³ (16.25 feet³), the remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from the container in accordance with the container level 1 standards specified in subsection 3.

(2) For a container having a design capacity greater than forty-six one-hundredths meters³ (16.25 feet³) which is not in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from the container in accordance with the container level 1 standards specified in subsection 3.

(3) For a container having a design capacity greater than forty-six one-hundredths meters³ (16.25 feet³) which is in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material shall control air pollutant emissions from the container in accordance with the container level 2 standards specified in subsection 4.

3. Container level 1 standards.

a. A container using container level 1 controls is one of the following:

(1) A container that meets the applicable United States department of transportation regulations on packaging hazardous materials for transportation as specified in subsection 6.

(2) A container equipped with a cover and closure devices that form a continuous barrier over the container openings such that when the cover and closure devices are secured in the closed position there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container (for example, a lid on a drum or a suitably secured tarp on a roll-off box) or may be an integral part of the container structural design (for example, a "portable tank" or bulk cargo container equipped with a screw-type cap).

(3) An open-top container in which an organic-vapor suppressing barrier is placed on or over the hazardous secondary material in the container such that no hazardous secondary material is exposed to the atmosphere. One example of such a barrier is application of a suitable organic-vapor suppressing foam.

b. A container used to meet the requirements of paragraph 2 or 3 of subdivision a must be equipped with covers and closure devices, as applicable to the container, which are composed of suitable materials to minimize exposure of the hazardous secondary material to the atmosphere and to maintain the equipment integrity, for as long as the container is in service. Factors to be considered in selecting the materials of construction and designing the cover and closure devices include: organic vapor permeability; the effects of contact with the hazardous secondary material or its vapor managed in the container; the effects of outdoor exposure of the closure device or cover material to wind, moisture, and sunlight; and the operating practices for which the container is intended to be used.

c. If a hazardous secondary material is in a container using container level 1 controls, the remanufacturer or other person that stores or treats the hazardous secondary material shall install all covers and closure devices for the container, as applicable to the container, and secure and maintain each closure device in the closed position except as follows:

(1) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container as follows:

(a) In the case when the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

(b) In the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within fifteen minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the hazardous secondary material being added to the container, whichever condition occurs first.

(2) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container as follows:

(a) For the purpose of meeting the requirements of this section, an empty hazardous secondary material container may be open to the atmosphere at any time (for example, covers and closure devices on such a container are not required to be secured in the closed position).

(b) In the case when discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary material container, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within fifteen minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

(3) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure device in the closed position or reinstall the cover, as applicable to the container.

(4) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the

container in accordance with the container design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

(5) Opening of a safety device, as defined in section 33.1-24-02-201, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The remanufacturer or other person that stores or treats the hazardous secondary material using containers with container level 1 controls shall inspect the containers and their covers and closure devices as follows:

(1) In the case when a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within twenty-four hours after the container is accepted at the facility (for example, is not an empty hazardous secondary material container) the remanufacturer or other person that stores or treats the hazardous secondary material visually shall inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection must be conducted on or before the date that the container is accepted at the facility (for example, the date the container becomes subject to the container standards in sections 33.1-24-02-200 through 33.1-24-02-214).

(2) In the case when a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material visually shall inspect the container and its cover and closure devices initially and thereafter, at least once every twelve months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of paragraph 3.

(3) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material shall make first efforts at repair of the defect no later than twenty-four hours after detection and repair must be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, the hazardous secondary material must be removed from the container and the container may not be used to manage hazardous secondary material until the defect is repaired.

e. The remanufacturer or other person that stores or treats the hazardous secondary material shall maintain at the facility a copy of the procedure used to determine that containers with capacity of forty-six one-hundredths meters³ (16.25 feet³) or greater, which do not meet applicable department of transportation regulations as specified in subsection 6, are not managing hazardous secondary material in light material service.

4. Container level 2 standards.

a. A container using container level 2 controls is one of the following:

- (1) A container that meets the applicable United States department of transportation regulations on packaging hazardous materials for transportation as specified in subsection 6.
- (2) A container that operates with no detectable organic emissions as defined in section 33.1-24-02-201 and determined in accordance with the procedure specified in subsection 7.
- (3) A container that has been demonstrated within the preceding twelve months to be vapor-tight by using 40 CFR part 60, appendix A, Method 27 in accordance with the procedure specified in subsection 8.

b. Transfer of hazardous secondary material in or out of a container using container level 2 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the department considers to meet the requirements of this subdivision include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and subsequently purging the transfer line before removing it from the container opening.

c. Whenever a hazardous secondary material is in a container using container level 2 controls, the remanufacturer or other person that stores or treats the hazardous secondary material shall install all covers and closure devices for the container, and secure and maintain each closure device in the closed position except as follows:

- (1) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container as follows:
 - (a) In the case when the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.
 - (b) In the case when discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material shall promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within fifteen minutes; the person

performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the material being added to the container, whichever condition occurs first.

(2) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container as follows:

(a) For the purpose of meeting the requirements of this section, an empty hazardous secondary material container may be open to the atmosphere at any time (for example, covers and closure devices are not required to be secured in the closed position on an empty container).

(b) In the case when discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary materials container, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within fifteen minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.

(3) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of such activities include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material promptly shall secure the closure device in the closed position or reinstall the cover, as applicable to the container.

(4) Opening of a spring-loaded, pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device must be designed to operate with no detectable organic emission when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.

(5) Opening of a safety device, as defined in section 33.1-24-02-201, is allowed at any time conditions require doing so to avoid an unsafe condition.

d. The remanufacturer or other person that stores or treats the hazardous secondary material using containers with container level 2 controls shall inspect the containers and their covers and closure devices as follows:

(1) In the case when a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within twenty-four hours after the container is accepted at the facility (for example, is not an empty hazardous secondary material container), the remanufacturer or other person that stores or treats the hazardous secondary material visually shall inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection shall be conducted on or before the date that the container is accepted at the facility (for example, the date the container becomes subject to the container standards in sections 33.1-24-02-200 through 33.1-24-02-214).

(2) In the case when a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material visually shall inspect the container and its cover and closure devices initially and thereafter, at least once every twelve months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material shall repair the defect in accordance with the requirements of paragraph 3.

(3) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than twenty-four hours after detection, and repair shall be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous secondary material must be removed from the container and the container may not be used to manage hazardous secondary material until the defect is repaired.

5. Container level 3 standards.

a. A container using container level 3 controls is one of the following:

(1) A container that is vented directly through a closed-vent system to a control device in accordance with the requirements of paragraph 2 of subdivision b.

(2) A container that is vented inside an enclosure which is exhausted through a closed-vent system to a control device in accordance with the requirements of paragraphs 1 and 2 of subdivision b.

b. The remanufacturer or other person that stores or treats the hazardous secondary material shall meet the following requirements, as applicable to the type of air emission control equipment selected by the remanufacturer or other person that stores or treats the hazardous secondary material:

(1) The container enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B. The enclosure may have permanent or temporary openings to allow worker access; passage of containers through the enclosure by conveyor or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or

treats the hazardous secondary material shall perform the verification procedure for the enclosure as specified in Section 5.0 to "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" initially when the enclosure is first installed and, thereafter, annually.

(2) The closed-vent system and control device must be designed and operated in accordance with the requirements of section 33.1-24-02-207.

c. Safety devices, as defined in section 33.1-24-02-201, may be installed and operated as necessary on any container, enclosure, closed-vent system, or control device used to comply with the requirements of subdivision a.

d. Remanufacturers or other persons that store or treat the hazardous secondary material using container level 3 controls in accordance with the provisions of sections 33.1-24-02-200 through 33.1-24-02-214 shall inspect and monitor the closed-vent systems and control devices as specified in section 33.1-24-02-207.

e. Remanufacturers or other persons that store or treat the hazardous secondary material that use container level 3 controls in accordance with the provisions of sections 33.1-24-02-200 through 33.1-24-02-214 shall prepare and maintain the records specified in subsection 4 of section 33.1-24-02-209.

f. Transfer of hazardous secondary material in or out of a container using container level 3 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that the department considers to meet the requirements of this subdivision include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and subsequently purging the transfer line before removing it from the container opening.

6. For the purpose of compliance with paragraph 1 of subdivision a of subsection 3 or paragraph 1 of subdivision a of subsection 4, containers must be used that meet the applicable United States department of transportation regulations on packaging hazardous materials for transportation as follows:

a. The container meets the applicable requirements specified in 49 CFR part 178 - Specifications for Packaging or 49 CFR part 179 - Specifications for Tank Cars.

b. Hazardous secondary material is managed in the container in accordance with the applicable requirements specified in 49 CFR part 107, subpart B - Special Permits; 49 CFR part 172 - Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, Training Requirements, and Security Plans; 49 CFR part 173 - Shippers - General Requirements for Shipments and Packaging; and 49 CFR part 180 - Continuing Qualification and Maintenance of Packagings.

c. For the purpose of complying with sections 33.1-24-02-200 through 33.1-24-02-214, no exceptions to the 49 CFR part 178 or part 179 regulations are allowed.

7. To determine compliance with the no detectable organic emissions requirement of paragraph 2 of subdivision a of subsection 4, the procedure specified in subsection 4 of section 33.1-24-02-203 must be used.
 - a. Each potential leak interface (for example, a location where organic vapor leakage could occur) on the container, its cover, and associated closure devices, as applicable to the container, must be checked. Potential leak interfaces that are associated with containers include: the interface of the cover rim and the container wall; the periphery of any opening on the container or container cover and its associated closure device; and the sealing seat interface on a spring-loaded pressure-relief valve.
 - b. The test must be performed when the container is filled with a material having a volatile organic concentration representative of the range of volatile organic concentrations for the hazardous secondary materials expected to be managed in this type of container. During the test, the container cover and closure devices must be secured in the closed position.
8. Procedure for determining a container to be vapor-tight using Method 27 of 40 CFR part 60, appendix A for the purpose of complying with paragraph 3 of subdivision a of subsection 4.
 - a. The test must be performed in accordance with Method 27 of 40 CFR part 60, appendix A.
 - b. A pressure measurement device must be used that has a precision of plus or minus two and five-tenths millimeters [0.1 inch] water and that is capable of measuring above the pressure at which the container is to be tested for vapor tightness.
 - c. If the test results determined by Method 27 indicate the container sustains a pressure change less than or equal to seven hundred fifty pascals within five minutes after it is pressurized to a minimum of four thousand five hundred pascals, the container is determined to be vapor-tight.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-207. Standards - Closed-vent systems and control devices.

1. This section applies to each closed-vent system and control device installed and operated by the remanufacturer or other person that stores or treats the hazardous secondary material to control air emissions in accordance with standards of sections 33.1-24-02-200 through 33.1-24-02-214.
2. The closed-vent system must meet the following requirements:
 - a. The closed-vent system must route the gases, vapors, and fumes emitted from the hazardous secondary material in the hazardous secondary material management unit to a control device that meets the requirements specified in subsection 3.
 - b. The closed-vent system must be designed and operated in accordance with the requirements specified in subsection 11 of section 33.1-24-02-173.
 - c. In the case when the closed-vent system includes bypass devices that could be used to divert the gas or vapor stream to the atmosphere before entering the control device, each bypass device must be equipped with either a flow indicator as specified in paragraph 1 or a seal or locking device as specified in paragraph 2. For the purpose of complying with this paragraph, low leg drains, high point bleeds, analyzer vents, open-ended valves or

lines, spring-loaded pressure-relief valves, and other fittings used for safety purposes are not considered to be bypass devices.

(1) If a flow indicator is used to comply with this subdivision, the indicator must be installed at the inlet to the bypass line used to divert gases and vapors from the closed-vent system to the atmosphere at a point upstream of the control device inlet. For this subdivision, a flow indicator means a device which indicates the presence of either gas or vapor flow in the bypass line.

(2) If a seal or locking device is used to comply with this subdivision, the device must be placed on the mechanism by which the bypass device position is controlled (for example, valve handle, damper lever) when the bypass device is in the closed position such that the bypass device cannot be opened without breaking the seal or removing the lock. Examples of such devices include, a car-seal or a lock-and-key configuration valve. The remanufacturer or other person that stores or treats the hazardous secondary material visually shall inspect the seal or closure mechanism at least once every month to verify that the bypass mechanism is maintained in the closed position.

d. The closed-vent system must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedure specified in subsection 12 of section 33.1-24-02-173.

3. The control device must meet the following requirements:

a. The control device must be one of the following devices:

(1) A control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least ninety-five percent by weight;

(2) An enclosed combustion device designed and operated in accordance with the requirements of subsection 3 of section 33.1-24-02-173; or

(3) A flare designed and operated in accordance with the requirements of subsection 4 of section 33.1-24-02-173.

b. The remanufacturer or other person that stores or treats the hazardous secondary material who elects to use a closed-vent system and control device to comply with the requirements of this section shall comply with the requirements specified in paragraphs 1 through 6.

(1) Periods of planned routine maintenance of the control device, during which the control device does not meet the specifications of paragraphs 1, 2, or 3 of subdivision a, as applicable, must not exceed two hundred forty hours per year.

(2) The specifications and requirements in paragraphs 1, 2, and 3 of subdivision a for control devices do not apply during periods of planned routine maintenance.

(3) The specifications and requirements in paragraphs 1, 2, and 3 of subdivision a for control devices do not apply during a control device system malfunction.

(4) The remanufacturer or other person that stores or treats the hazardous secondary material shall demonstrate compliance with the requirements of paragraph 1 (for example, planned routine maintenance of a control device, during which the control device does not meet the specifications of paragraph 1, 2, or 3 of subdivision a, as applicable, shall not exceed two hundred forty hours per year) by recording the

information specified in paragraph 5 of subdivision a of subsection 5 of section 33.1-24-02-209.

(5) The remanufacturer or other person that stores or treats the hazardous secondary material shall correct control device system malfunctions as soon as practicable after their occurrence in order to minimize excess emissions of air pollutants.

(6) The remanufacturer or other person that stores or treats the hazardous secondary material shall operate the closed-vent system such that gases, vapors, or fumes are not actively vented to the control device during periods of planned maintenance or control device system malfunction (for example, periods when the control device is not operating or not operating normally) except in cases when it is necessary to vent the gases, vapors, or fumes, or any combination, to avoid an unsafe condition or to implement malfunction corrective actions or planned maintenance actions.

c. The remanufacturer or other person that stores or treats the hazardous secondary material using a carbon adsorption system to comply with subdivision a shall operate and maintain the control device in accordance with the following requirements:

(1) Following the initial startup of the control device, all activated carbon in the control device must be replaced with fresh carbon on a regular basis in accordance with the requirements of subsection 7 or 8 of section 33.1-24-02-173.

(2) All carbon that is hazardous waste and that is removed from the control device must be managed in accordance with the requirements of subsection 14 of section 33.1-24-02-173, regardless of the average volatile organic concentration of the carbon.

d. A remanufacturer or other person that stores or treats the hazardous secondary material using a control device other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with subdivision a shall operate and maintain the control device in accordance with the requirements of subsection 10 of section 33.1-24-02-173.

e. The remanufacturer or other person that stores or treats the hazardous secondary material shall demonstrate that a control device achieves the performance requirements of subdivision a as follows:

(1) A remanufacturer or other person that stores or treats the hazardous secondary material shall demonstrate using either a performance test as specified in paragraph 3 or a design analysis as specified in paragraph 4 the performance of each control device except for the following:

(a) A flare;

(b) A boiler or process heater with a design heat input capacity of forty-four megawatts or greater; or

(c) A boiler or process heater into which the vent stream is introduced with the primary fuel.

(2) A remanufacturer or other person that stores or treats the hazardous secondary material shall demonstrate the performance of each flare in accordance with the requirements specified in subsection 5 of section 33.1-24-02-173.

(3) For a performance test conducted to meet the requirements of paragraph 1, the remanufacturer or other person that stores or treats the hazardous secondary

material shall use the test methods and procedures specified in subdivisions a through d of subsection 3 of section 33.1-24-02-174.

(4) For a design analysis conducted to meet the requirements of paragraph 1, the design analysis must meet the requirements specified in paragraph 3 of subdivision d of subsection 2 of section 33.1-24-02-175.

(5) The remanufacturer or other person that stores or treats the hazardous secondary material shall demonstrate that a carbon adsorption system achieves the performance requirements of subdivision a based on the total quantity of organics vented to the atmosphere from all carbon adsorption system equipment that is used for organic adsorption, organic desorption or carbon regeneration, organic recovery, and carbon disposal.

f. If the remanufacturer or other person that stores or treats the hazardous secondary material and the department do not agree on a demonstration of control device performance using a design analysis, the disagreement must be resolved using the results of a performance test performed by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the requirements of paragraph 3 of subdivision e. The department may choose to have an authorized representative observe the performance test.

g. The closed-vent system and control device must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedures specified in subdivision b of subsection 6 and subsection 12 of section 33.1-24-02-173. The readings from each monitoring device required by subdivision b of subsection 6 of section 33.1-24-02-173 must be inspected at least once each operating day to check control device operation. Any necessary corrective measures must be implemented immediately to ensure the control device is operated in compliance with the requirements of this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-208. Inspection and monitoring requirements.

1. The remanufacturer or other person that stores or treats the hazardous secondary material shall inspect and monitor air emission control equipment used to comply with sections 33.1-24-02-200 through 33.1-24-02-214 in accordance with the applicable requirements specified in sections 33.1-24-02-204 through 33.1-24-02-207.

2. The remanufacturer or other person that stores or treats the hazardous secondary material shall develop and implement a written plan and schedule to perform the inspections and monitoring required by subsection 1. The remanufacturer or other person that stores or treats the hazardous secondary material shall keep the plan and schedule at the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-02-209. Recordkeeping requirements.

1. Each remanufacturer or other person that stores or treats the hazardous secondary material subject to requirements of sections 33.1-24-02-200 through 33.1-24-02-214 shall record and maintain the information specified in subsections 2 through 10, as applicable to the facility. Except for air emission control equipment design documentation and information required by

subsections 9 and 10, records required by this section must be maintained at the facility for a minimum of three years. Air emission control equipment design documentation must be maintained at the facility until the air emission control equipment is replaced or otherwise no longer in service. Information required by subsections 9 and 10 must be maintained at the facility for as long as the hazardous secondary material management unit is not using air emission controls specified in sections 33.1-24-02-204 through 33.1-24-02-207 in accordance with the conditions specified in subsection 4 or subdivision g of subsection 2 of section 33.1-24-02-200, respectively.

2. The remanufacturer or other person that stores or treats the hazardous secondary material using a tank with air emission controls in accordance with the requirements of section 33.1-24-02-204 shall prepare and maintain records for the tank that include the following information:

a. For each tank using air emission controls in accordance with the requirements of section 33.1-24-02-204, the remanufacturer or other person that stores or treats the hazardous secondary material shall record:

(1) A tank identification number (or other unique identification description as selected by the remanufacturer or other person that stores or treats the hazardous secondary material).

(2) A record for each inspection required by section 33.1-24-02-204 which includes the following information:

(a) Date inspection was conducted.

(b) For each defect detected during the inspection: the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. If repair of the defect is delayed in accordance with the requirements of section 33.1-24-02-204, the remanufacturer or other person that stores or treats the hazardous secondary material also shall record the reason for the delay and the date that completion of repair of the defect is expected.

b. In addition to the information required by subdivision a, the remanufacturer or other person that stores or treats the hazardous secondary material shall record the following information, as applicable to the tank:

(1) The remanufacturer or other person that stores or treats the hazardous secondary material using a fixed roof to comply with the tank level 1 control requirements specified in subsection 3 of section 33.1-24-02-204 shall prepare and maintain records for each determination for the maximum organic vapor pressure of the hazardous secondary material in the tank performed in accordance with the requirements of subsection 3 of section 33.1-24-02-204. The records must include the date and time the samples were collected, the analysis method used, and the analysis results.

(2) The remanufacturer or other person that stores or treats the hazardous secondary material using an internal floating roof to comply with the tank level 2 control requirements specified in subsection 5 of section 33.1-24-02-204 shall prepare and maintain documentation describing the floating roof design.

(3) Remanufacturers or other persons that store or treat the hazardous secondary material using an external floating roof to comply with the tank level 2 control

requirements specified in subsection 6 of section 33.1-24-02-204 shall prepare and maintain the following records:

(a) Documentation describing the floating roof design and the dimensions of the tank.

(b) Records for each seal gap inspection required by subdivision c of subsection 6 of section 33.1-24-02-204 describing the results of the seal gap measurements. The records must include the date that the measurements were performed, the raw data obtained for the measurements, and the calculations of the total gap surface area. If the seal gap measurements do not conform to the specifications in subdivision a of subsection 6 of section 33.1-24-02-204, the records must include a description of the repairs that were made, the date the repairs were made, and the date the tank was emptied, if necessary.

(4) Each remanufacturer or other person that stores or treats the hazardous secondary material using an enclosure to comply with the tank level 2 control requirements specified in subsection 9 of section 33.1-24-02-204 shall prepare and maintain the following records:

(a) Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.

(b) Records required for the closed-vent system and control device in accordance with the requirements of subsection 5.

3. [Reserved].

4. The remanufacturer or other person that stores or treats the hazardous secondary material using containers with container level 3 air emission controls in accordance with the requirements of section 33.1-24-02-206 shall prepare and maintain records that include the following information:

a. Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in "Procedure T - Criteria for and Verification of a Permanent or Temporary Total Enclosure" under 40 CFR 52.741, appendix B.

b. Records required for the closed-vent system and control device in accordance with the requirements of subsection 5.

5. The remanufacturer or other person that stores or treats the hazardous secondary material using a closed-vent system and control device in accordance with the requirements of section 33.1-24-02-207 shall prepare and maintain records that include the following information:

a. Documentation for the closed-vent system and control device which includes:

(1) Certification that is signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material stating the control device is designed to operate at the performance level documented by a design analysis as specified in paragraph 2 or by performance tests as specified in paragraph 3 when

the tank or container is or would be operating at capacity or the highest level reasonably expected to occur.

- (2) If a design analysis is used, then design documentation as specified in subdivision d of subsection 2 of section 33.1-24-02-175. The documentation must include information prepared by the remanufacturer or other person that stores or treats the hazardous secondary material or provided by the control device manufacturer or vendor that describes the control device design in accordance with paragraph 3 of subdivision d of subsection 2 of section 33.1-24-02-175 and certification by the remanufacturer or other person that stores or treats the hazardous secondary material that the control equipment meets the applicable specifications.
- (3) If performance tests are used, then a performance test plan as specified in subdivision c of subsection 2 of section 33.1-24-02-175 and all test results.
- (4) Information as required by subdivisions a and b of subsection 3 of section 33.1-24-02-175, as applicable.
- (5) A remanufacturer or other person that stores or treats the hazardous secondary material shall record, on a semiannual basis, the information specified in subparagraphs a and b for those planned routine maintenance operations that would require the control device not to meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-02-207, as applicable.

 - (a) A description of the planned routine maintenance that is anticipated to be performed for the control device during the next six-month period. This description must include the type of maintenance necessary, planned frequency of maintenance, and lengths of maintenance periods.
 - (b) A description of the planned routine maintenance that was performed for the control device during the previous six-month period. This description must include the type of maintenance performed and the total number of hours during those six months that the control device did not meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-02-207, as applicable, due to planned routine maintenance.
- (6) A remanufacturer or other person that stores or treats the hazardous secondary material shall record the information specified in subparagraphs a through c for those unexpected control device system malfunctions that would require the control device not to meet the requirements of paragraph 1, 2, or 3 of subdivision a of subsection 3 of section 33.1-24-02-207, as applicable.

 - (a) The occurrence and duration of each malfunction of the control device system.
 - (b) The duration of each period during a malfunction when gases, vapors, or fumes are vented from the hazardous secondary material management unit through the closed-vent system to the control device while the control device is not properly functioning.
 - (c) Actions taken during periods of malfunction to restore a malfunctioning control device to its normal or usual manner of operation.
- (7) Records of the management of carbon removed from a carbon adsorption system conducted in accordance with paragraph 2 of subdivision c of subsection 3 of section 33.1-24-02-207.

6. The remanufacturer or other person that stores or treats the hazardous secondary material using a tank or container exempted under the hazardous secondary material organic concentration conditions specified in subsection 3 of section 33.1-24-02-202, shall prepare and maintain at the facility records documenting the information used for each material determination (for example, test results, measurements, calculations, and other documentation). If analysis results for material samples are used for the material determination, the remanufacturer or other person that stores or treats the hazardous secondary material shall record the date, time, and location that each material sample is collected in accordance with applicable requirements of section 33.1-24-02-203.
7. A remanufacturer or other person that stores or treats the hazardous secondary material designating a cover as "unsafe to inspect and monitor" pursuant to subsection 12 of section 33.1-24-02-204 or subsection 7 of section 33.1-24-02-205 shall record and keep at the facility the following information: the identification numbers for hazardous secondary material management units with covers that are designated as "unsafe to inspect and monitor," the explanation for each cover stating why the cover is unsafe to inspect and monitor, and the plan and schedule for inspecting and monitoring each cover.
8. The remanufacturer or other person that stores or treats the hazardous secondary material that is subject to sections 33.1-24-02-200 through 33.1-24-02-214 and to the control device standards in 40 CFR part 60, subpart VV, or 40 CFR part 61, subpart V, may elect to demonstrate compliance with the applicable sections of sections 33.1-24-02-200 through 33.1-24-02-214 by documentation either pursuant to sections 33.1-24-02-200 through 33.1-24-02-214, or pursuant to the provisions of 40 CFR part 60, subpart VV or 40 CFR part 61, subpart V, to the extent that the documentation required by 40 CFR parts 60 or 61 duplicates the documentation required by this section.

APPENDIX I

Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, will be considered by the agency to be representative of the waste.

Extremely viscous liquid - ASTM Standard D140-70 Crushed or powdered material - ASTM Standard D346-75 Soil or rock-like material - ASTM Standard D420-69 Soil-like material - ASTM Standard D1452-65

Fly Ash-like material - ASTM Standard D2234-76 (ASTM Standards are available from ASTM, 1916 Race Street, Philadelphia, Pennsylvania 19103)

Containerized liquid wastes - "COLIWASA."

Liquid waste in pits, ponds, lagoons, and similar reservoirs - "Pond Sampler."

This manual also contains additional information on application of these protocols.

APPENDIX II

[Reserved]

APPENDIX III

[Reserved]

APPENDIX IV

Basis for Listing Hazardous Waste

EPA Hazardous Waste No.	Hazardous Waste Constituents for Which Listed
F001	Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, chlorinated fluorocarbons.
F002	Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane.
F003	N.A.
F004	Cresols and cresylic acid, nitrobenzene.
F005	Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, 2-ethoxyethanol, benzene, 2-nitropropane.
F006	Cadmium, hexavalent chromium, nickel, cyanide (complexed).
F007	Cyanide (salts).
F008	Cyanide (salts).
F009	Cyanide (salts).
F010	Cyanide (salts).
F011	Cyanide (salts).
F012	Cyanide (complexed).
F019	Hexavalent chromium, cyanide (complexed).
F020	Tetra- and pentachlorodibenzo-p-dioxins; tetra- and pentachlorodi-benzofurans; tri- and tetrachloro-phenols and their chlorophenoxy derivative acids, esters, ethers, amine and other salts.
F021	Penta- and hexachlorodibenzo-p-dioxins; penta- and hexachlorodibenzofurans; pentachlorophenol and its derivatives.
F022	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans.
F023	Tetra- and pentachlorodibenzo-p-dioxins; tetra-, and pentachlorodibenzofurans; tri- and tetra-chlorophenols and their chlorophenoxy derivative acids, esters, ethers, amine and other salts.
F024	Chloromethane, dichloromethane, trichloromethane, carbon tetrachloride, chloroethylene, 1,1-dichloroethane, 1,2-dichloroethane, trans-1,2-dichloroethylene, 1,1-dichloroethylene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethylene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, tetrachloroethylene, pentachloroethane, hexachloroethane, allyl chloride (3-chloropropene), dichloropropane, dichloropropene, 2-chloro-1,3-butadiene, hexachloro-1,3-butadiene, hexachlorocyclopentadiene, hexachlorocyclohexane, benzene, chlorobenzene, dichlorobenzenes, trichlorobenzene, tetrachlorobenzene, pentachlorobenzene, hexachlorobenzene, toluene, naphthalene.
F025	Chloromethane; dichloromethane; 1,2,4-trichloromethane; carbon tetrachloride; chloroethylene; 1,1-dichloroethane; 1,2-dichloroethane; trans-1,2-dichloroethylene; 1,1-dichloroethylene; 1,1,1-trichloroethane; 1,1,2-trichloroethane; trichloroethylene; 1,1,1,2-tetrachloroethane; 1,1,2,2-tetrachloroethane; tetrachloroethylene; pentachloroethane; hexachloroethane; allyl chloride (3-chloropropene); dichloropropane; dichloropropene; 2-chloro-1,3-butadiene; hexachloro-1,3-butadiene; hexachlorocyclopentadiene; benzene; chlorobenzene; dichlorobenzene; 1,2,4-trichlorobenzene; tetrachlorobenzene; pentachlorobenzene; hexachlorobenzene; toluene; naphthalene.
F026	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans.
F027	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans; tri-, tetra-, and pentachlorophenols and their chlorophenoxy derivative acids, esters, ethers, amine and other salts.
F028	Tetra-, penta-, and hexachlorodibenzo-p-dioxins; tetra-, penta-, and hexachlorodibenzofurans; tri-, tetra-, and pentachlorophenols and their chlorophenoxy derivative acids, esters, ethers, amine and other salts.
F032	Benz(a)anthracene, benzo(a)pyrene, dibenz(a,h)-anthracene, indeno(1,2,3-cd)pyrene, pentachlorophenol, arsenic, chromium, tetra-, penta-, hexa-, heptachlorodibenzo-p-dioxins, tetra-, penta-, hexa-, heptachlorodibenzofurans.
F034	Benz(a)anthracene, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, naphthalene, arsenic, chromium.
F035	Arsenic, chromium, lead.
F037	Benzene, benzo(a)pyrene, chrysene, lead, chromium.

EPA Hazardous Waste No.	Hazardous Waste Constituents for Which Listed
F038	Benzene, benzo(a)pyrene, chrysene, lead, chromium.
F039	All constituents for which treatment standards are specified for multisource leachate (wastewaters and nonwastewaters) under section 33.1-24-05-283, Table CCW.
K001	Pentachlorophenol, phenol, 2-chlorophenol, p-chloro-m-cresol, 2,4-dimethylphenyl, 2,4-dinitrophenol, trichlorophenols, tetrachlorophenols, 2,4-dinitrophenol, creosote, chrysene, naphthalene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, benz(a)anthracene, dibenz(a)anthracene, acenaphthalene.
K002	Hexavalent chromium, lead.
K003	Hexavalent chromium, lead.
K004	Hexavalent chromium.
K005	Hexavalent chromium, lead.
K006	Hexavalent chromium.
K007	Cyanide (complexed), hexavalent chromium.
K008	Hexavalent chromium.
K009	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid.
K010	Chloroform, formaldehyde, methylene chloride, methyl chloride, paraldehyde, formic acid, chloroacetaldehyde.
K011	Acrylonitrile, acetonitrile, hydrocyanic acid.
K013	Hydrocyanic acid, acrylonitrile, acetonitrile.
K014	Acetonitrile, acrylamide.
K015	Benzyl chloride, chlorobenzene, toluene, benzotrichloride.
K016	Hexachlorobenzene, hexachlorobutadiene, carbon tetrachloride, hexachloroethane, perchloroethylene.
K017	Epichlorohydrin, chloroethers [bis(chloromethyl)ether and bis(2-chloroethyl)ether], trichloropropane, dichloropropanols.
K018	1,2-Dichloroethane, trichloroethylene, hexachlorobutadiene, hexachlorobenzene.
K019	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.
K020	Ethylene dichloride, 1,1,1-trichloroethane, 1,1,2-trichloroethane, tetrachloroethanes, (1,1,2,2-tetrachloroethane and 1,1,1,2-tetrachloroethane), trichloroethylene, tetrachloroethylene, carbon tetrachloride, chloroform, vinyl chloride, vinylidene chloride.
K021	Antimony, carbon tetrachloride, chloroform.
K022	Phenol, tars (polycyclic aromatic hydrocarbons).
K023	Phthalic anhydride, maleic anhydride.
K024	Phthalic anhydride, 1,4-naphthoquinone.
K025	Meta-dinitrobenzene, 2,4-dinitrotoluene.
K026	Paraldehyde, pyridines, 2-picoline.
K027	Toluene diisocyanate, toluene-2,4-diamine.
K028	1,1,1-Trichloroethane, vinyl chloride.
K029	1,2-Dichloroethane, 1,1,1-trichloroethane, vinyl chloride, vinylidene chloride, chloroform.
K030	Hexachlorobenzene, hexachlorobutadiene, hexachloroethane, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, ethylene dichloride.
K031	Arsenic.
K032	Hexachlorocyclopentadiene.
K033	Hexachlorocyclopentadiene.
K034	Hexachlorocyclopentadiene.
K035	Creosote, chrysene, naphthalene, fluoranthene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, benzo(a)anthracene, dibenzo(a)anthracene, acenaphthalene.

<u>EPA Hazardous Waste No.</u>	<u>Hazardous Waste Constituents for Which Listed</u>
K036	Toluene, phosphorodithioic and phosphorothioic acid esters.
K037	Toluene, phosphorodithioic and phosphorothioic acid esters.
K038	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K039	Phosphorodithioic and phosphorothioic acid esters.
K040	Phorate, formaldehyde, phosphorodithioic and phosphorothioic acid esters.
K041	Toxaphene.
K042	Hexachlorobenzene, ortho-dichlorobenzene.
K043	2,4-Dichlorophenol, 2,6-dichlorophenol, 2,4,6-trichlorophenol.
K044	N.A.
K045	N.A.
K046	Lead.
K047	N.A.

K143	Benzene, benz(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene.
K144	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene.
K145	Benzene, benz(a)anthracene, benzo(a)pyrene, dibenz(a,h)anthracene, naphthalene.
K147	Benzene, benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K148	Benz(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene.
K149	Benzotrichloride, benzyl chloride, chloroform, chloromethane, chlorobenzene, 1,4-dichlorobenzene, hexachlorobenzene, pentachlorobenzene, 1,2,4,5-tetrachlorobenzene, toluene.
K150	Carbon tetrachloride, chloroform, chloromethane, 1,4-dichlorobenzene, hexachlorobenzene, pentachlorobenzene, 1,2,4,5-tetrachlorobenzene, 1,1,1,2-tetrachloroethane, tetrachloroethylene, 1,2,4-trichlorobenzene.
K151	Benzene, carbon tetrachloride, chloroform, hexachlorobenzene, pentachlorobenzene, toluene, 1,2,4,5-tetrachlorobenzene, tetrachloroethylene.
K156	Benomyl, carbaryl, carbendazim, carbofuran, carbosulfan, formaldehyde, methylene chloride, triethylamine.
K157	Carbon tetrachloride, formaldehyde, methyl chloride, methylene chloride, pyridine, triethylamine.
K158	Benomyl, carbendazim, carbofuran, carbosulfan, chloroform, methylene chloride.
K159	Benzene, butylate, EPTC, molinate, pebulate, vernolate.
K161	Antimony, arsenic, metam-sodium, ziram.
K169	Benzene.
K170	Benzo(a)pyrene, dibenz(a,h)anthracene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, 3-methylcholanthrene, 7,12-dimethylbenz(a)anthracene.

<u>EPA Hazardous Waste No.</u>	<u>Hazardous Waste Constituents for Which Listed</u>
K171	Benzene, arsenic.
K172	Benzene, arsenic.
K174	1,2,3,4,6,7,8-Heptachlorodibenzo-p-dioxin (1,2,3,4,6,7,8-HpCDD), 1,2,3,4,6,7,8-Heptachlorodibenzofuran (1,2,3,4,6,7,8-HpCDF), 1,2,3,4,7,8,9-Heptachlorodibenzofuran (1,2,3,4,7,8,9-HpCDF), HxCDDs (All Hexachlorodibenzo-p-dioxins), HxCDFs (All Hexachlorodibenzofurans), PeCDDs (All Pentachlorodibenzo-p-dioxins), OCDD (1,2,3,4,6,7,8,9-Octachlorodibenzo-p-dioxin), OCDF (1,2,3,4,6,7,8,9-Octachlorodibenzofuran), PeCDFs (All Pentachlorodibenzofurans), TCDDs (All Tetrachlorodibenzo-p-dioxins), TCDFs (All Tetrachlorodibenzofurans).
K175	Mercury.
K176	Arsenic, lead.
K177	Antimony.
K178	Thallium.
K181	Aniline, o-anisidine, 4-chloroaniline, p-cresidine, 2,4-dimethylaniline, 1,2-phenylenediamine, 1,3-phenylenediamine.

N.A. - Waste is hazardous because it fails the test for the characteristic of ignitability, corrosivity, or reactivity.

APPENDIX V
Hazardous Constituents

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
A2213	Ethanimidothioic acid, 2-(dimethylamino)-N-hydroxy-2-oxo-, methyl ester	30558-43-1	U394
Acetonitrile	Same	75-05-8	U003
Acetophenone	Ethanone, 1-phenyl-	98-86-2	U004
2-Acetylaminefluorone	Acetamide, N-9H-fluoren-2-yl-	53-96-3	U005
Acetyl chloride	Same	75-36-5	U006
1-Acetyl-2-thiourea	Acetamide, N-(aminothioxomethyl)-	591-08-2	P002
Acrolein	2-Propenal	107-02-08	P003
Acrylamide	2-Propenamamide	79-06-1	U007
Acrylonitrile	2-Propenenitrile	107-13-1	U009
Aflatoxins	Same	1402-68-2	
Aldicarb	Propanal, 2-methyl-2-(methylthio)-, O-[(methylamino)carbonyl]oxime	116-06-3	P070
Aldicarb sulfone	Propanal, 2-methyl-2-(methylsulfonyl)-, O-[(methylamino) carbonyl] oxime	1646-88-4	P203
Aldrin	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, (1alpha,4alpha,4abeta,5alpha,8alpha,8abeta)-	309-00-2	P004
Allyl alcohol	2-Propen-1-ol	107-18-6	P005
Allyl chloride	1-Propene, 3-chloro	107-05-1	
Aluminum phosphide	Same	20859-73-8	P006
4-Aminobiphenyl	[1,1'-Biphenyl]-4-amine	92-67-1	
5-(Aminomethyl)-3-isoxazolol	3(2H)-Isoxazolone, 5-(aminomethyl)-	2763-96-4	P007
4-Aminopyridine	4-Pyridinamine	504-24-5	P008
Amitrole	1H-1,2,4-Triazol-3-amine	61-82-5	U011
Ammonium vanadate	Vanadic acid, ammonium salt	7803-55-6	P119
Aniline	Benzenamine	62-53-3	U012
o-Anisidine (2-methoxyaniline)	Benzenamine, 2-methoxy-	90-04-0	
Antimony	Same	7440-36-0	
Antimony compounds, N.O.S. ¹			
Aramite	Sulfurous acid, 2-chloroethyl 2-[4-(1,1-dimethylethyl)phenoxy]-1-methylethyl ester	140-57-8	
Arsenic	Same	7440-38-2	
Arsenic compounds, N.O.S. ¹			
Arsenic acid	Arsenic acid H ₃ AsO ₄	7778-39-4	P010
Arsenic pentoxide	Arsenic oxide As ₂ O ₅	1303-28-2	P011
Arsenic trioxide	Arsenic oxide As ₂ O ₃	1327-53-3	P012
Auramine	Benzenamine, 4,4'-carbonimidoylbis[N,N-dimethyl	492-80-8	U014
Azaserine	L-Serine, diazoacetate (ester)	115-02-6	U015
Barban	Carbamic acid, (3-chlorophenyl) -, 4-chloro-2-butynyl ester	101-27-9	U280
Barium	Same	7440-39-3	
Barium compounds, N.O.S. ¹			
Barium cyanide	Same	542-62-1	P013

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Bendiocarb	1,3-Benzodioxol-4-ol, 2,2-dimethyl-, methylcarbamate	22781-23-3	U278
Bendiocarb pheonol	1,3-Benzodioxol-4-ol, 2,2-dimethyl-	22961-82-6	U364
Benomyl	Carbamic acid, [1-[(butylamino) carbonyl]-1H-benzimidazol-2-yl]-, methyl ester	17804-35-2	U271
Benz[c]acridine	Same	225-51-4	U016
Benz[a]anthracene	Same	56-55-3	U018
Benzalchloride	Benzene, (dichloromethyl)-	98-87-3	U017
Benzene	Same	71-43-2	U019
Benzene arsonic acid	Arsonic acid, phenyl-	98-05-5	
Benzidine	[1,1'-Biphenyl]-4,4'-diamine	92-87-5	U021
Benzo[b]fluoranthene	Benz[e]acephenanthrylene	205-99-2	
Benzo[j]fluoranthene	Same	205-82-3	
Benzo[k]fluoranthene	Same	207-08-9	
Benzo[a]pyrene	Same	50-32-8	U022
p-Benzoquinone	2,5-Cyclohexadiene-1,4-dione	106-51-4	U197
Benzotrichloride	Benzene, (trichloromethyl)-	98-07-7	U023
Benzyl chloride	Benzene, (chloromethyl)-	100-44-7	P028
Beryllium powder	Same	7440-41-7	P015
Beryllium compounds, N.O.S. ¹			
Bis (pentamethylene)-thiuram tetrasulfide	Piperidine, 1,1'-(tetrathiodicarbonothioyl)-bis-	120-54-7	
Bromoacetone	2-Propanone, 1-bromo-	598-31-2	P017
Bromoform	Methane, tribromo-	75-25-2	U225
4-Bromophenyl phenyl ether	Benzene, 1-bromo-4-phenoxy-	101-55-3	U030
Brucine	Strychnidin-10-one, 2,3-dimethoxy-	357-57-3	P018
Butyl benzyl phthalate	1,2-Benzenedicarboxylic acid, butyl phenylmethyl ester	85-68-7	
Butylate	Carbamothioic acid, bis (2-methylpropyl)-, S-ethyl ester	2008-41-5	
Cacodylic acid	Arsinic acid, dimethyl-	75-60-5	U136
Cadmium	Same	7440-43-9	
Cadmium compounds, N.O.S. ¹			
Calcium chromate	Chromic acid H ₂ CrO ₄ , calcium salt	13765-19-0	U032
Calcium cyanide	Calcium cyanide Ca(CN) ₂	592-01-8	P021
Carbaryl	1-Naphthalenol, methylcarbamate	63-25-2	U279
Carbendazim	Carbamic acid, 1H-benzimidazol-2-yl, methyl ester	10605-21-7	U372
Carbofuran	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate	1563-66-2	P127
Carbofuran phenol	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-	1563-38-8	U367
Carbon disulfide	Same	75-15-0	P022
Carbon oxyfluoride	Carbonic difluoride	353-50-4	U033
Carbon tetrachloride	Methane, tetrachloro-	56-23-5	U211
Carbosulfan	Carbamic acid, [(dibutylamino)thio]methyl-, 2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester	55285-14-8	P189
Chloral	Acetaldehyde, trichloro-	75-87-6	U034
Chlorambucil	Benzenebutanoic acid, 4-[bis(2-chloroethyl)amino]-	305-03-3	U035
Chlordane	4,7-Methano-1H-indene, 1,2,4,5,6,7,8,8-octachloro-2,3,3a,4,7,7a-hexahydro-	57-74-9	U036
Chlordane (alpha and gamma isomers)			U036

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
1,4-Diethyleneoxide	1,4-Dioxane	123-91-1	U108
Diethylhexyl phthalate	1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester	117-81-7	U028
N,N'-Diethylhydrazine	Hydrazine, 1,2-diethyl-	1615-80-1	U086
O,O-Diethyl S-methyl dithiophosphate	Phosphorodithioic acid, O,O-diethyl S-methyl ester	3288-58-2	U087
Diethyl-p-nitrophenyl phosphate	Phosphoric acid, diethyl 4-nitrophenyl ester	311-45-5	P041
Diethyl phthalate	1,2-Benzenedicarboxylic acid, diethyl ester	84-66-2	U088
O,O-Diethyl O-pyrazinyl phosphorothioate	Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester	297-97-2	P040
Diethylstilbesterol	Phenol, 4,4'-(1,2-diethyl-1,2-ethenediyl)bis-, (E)-	56-53-1	U089
Dihydrosafrole	1,3-Benzodioxole, 5-propyl-	94-58-6	U090
Diisopropylfluorophosphate (DFP)	Phosphorofluoric acid, bis(1-methylethyl) ester	55-91-4	P043
Dimethoate	Phosphorodithioic acid, O,O-dimethyl S-[2-(methylamino)-2-oxoethyl] ester	60-51-5	P044
3,3'-Dimethoxybenzidine	[1,1'-Biphenyl]-4,4'-diamine, 3,3'-dimethoxy-	119-90-4	U091
p-Dimethylaminoazobenzene	Benzenamine, N,N-dimethyl-4-(phenylazo)-	60-11-7	U093
2,4-Dimethylaniline (2,4-xylidine)	Benzenamine, 2,4-dimethyl-	95-68-1	
7,12-Dimethylbenz[a]anthracene	Benz[a]anthracene, 7,12-dimethyl-	57-97-6	U094
3,3'-Dimethylbenzidine	[1,1'-Biphenyl]-4,4'-diamine, 3,3'-dimethyl-	119-93-7	U095
Dimethylcarbamoyl chloride	Carbamic chloride, dimethyl-	79-44-7	U097
1,1-Dimethylhydrazine	Hydrazine, 1,1-dimethyl-	57-14-7	U098
1,2-Dimethylhydrazine	Hydrazine, 1,2-dimethyl-	540-73-8	U099
alpha, alpha-Dimethylphenethylamine	Benzeneethanamine, alpha, alpha-dimethyl-	122-09-8	P046
2,4-Dimethylphenol	Phenol, 2,4-dimethyl-	105-67-9	U101
Dimethyl phthalate	1,2-Benzenedicarboxylic acid, dimethyl ester	131-11-3	U102
Dimethyl sulfate	Sulfuric acid, dimethyl ester	77-78-1	U103
Dimetilan	Carbamic acid, dimethyl-, 1-[(dimethylamino)carbonyl]-5-methyl-1H-pyrazol-3-yl ester	644-64-4	P191
Dinitrobenzene, N.O.S.¹	Benzene, dinitro-	25154-54-5	
4,6-Dinitro-o-cresol	Phenol, 2-methyl-4,6-dinitro-	534-52-1	P047
4,6-Dintro-o-cresol salts			P047
2,4-Dinitrophenol	Phenol, 2,4-dinitro-	51-28-5	P048
2,4-Dinitrotoluene	Benzene, 1-methyl-2,4-dinitro-	121-14-2	U105
2,6-Dinitrotoluene	Benzene, 2-methyl-1,3-dinitro-	606-20-2	U106
Dinoseb	Phenol, 2-(1-methylpropyl)-4,6-dinitro-	88-85-7	P020
Di-n-octyl phthalate	1,2-Benzenedicarboxylic acid, dioctyl ester	117-84-0	U107
Diphenylamine	Benzenamine, N-phenyl-	122-39-4	
1,2-Diphenylhydrazine	Hydrazine, 1,2-diphenyl-	122-66-7	U109
Di-n-propylnitrosamine	1-Propanamine, N-nitroso-N-propyl-	621-64-7	U111
Disulfiram	Thioperoxydicarbonic diamide, tetraethyl	97-77-8	
Disulfoton	Phosphorodithioic acid, O,O-diethyl S-[2-(ethylthio)ethyl] ester	298-04-4	P039
Dithiobiuret	Thioimidodicarbonic diamide [(H₂N)C(S)]₂NH	541-53-7	P049
EPTC	Carbamothioic acid, dipropyl-, S-ethyl ester	759-94-4	
Endosulfan	6,9-Methano-2,4,3-benzodioxathiepin, 6,7,8,9,10,10-hexachloro-1,5,5a,6,9, 9a-hexahydro-,	115-29-7	P050

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
	3-oxide		
Endothall	7-Oxabicyclo[2.2.1]heptane-2,3-dicarboxylic acid	145-73-3	P088
Endrin	2,7:3,6-Dimethanonaphth[2,3-b]oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1aalpha,2beta,2abeta,3alpha,6alpha,6abeta,7beta, 7alpha)-	72-20-8	P051
Endrin metabolites			P051
Epichlorohydrin	Oxirane, (chloromethyl)-	106-89-8	U041
Epinephrine	1,2-Benzenediol, 4-[1-hydroxy-2-(methylamino)ethyl]-, (R)-	51-43-4	P042
Ethyl carbamate (urethane)	Carbamic acid, ethyl ester	51-79-6	U238
Ethyl cyanide	Propanenitrile	107-12-0	P101
Ethyl Ziram	Zinc, bis(diethylcarbamodithioato-S,S')-	14324-55-1	
Ethylenebisdithiocarbamic acid	Carbamodithioic acid, 1,2-ethanediylbis-	111-54-6	U114
Ethylenebisdithiocarbamic acid, salts and esters			U114
Ethylene dibromide	Ethane, 1,2-dibromo-	106-93-4	U067
Ethylene dichloride	Ethane, 1,2-dichloro-	107-06-2	U077
Ethylene glycol monoethyl ether	Ethanol, 2-ethoxy-	110-80-5	U359
Ethyleneimine	Aziridine	151-56-4	P054
Ethylene oxide	Oxirane	75-21-8	U115
Ethylenethiourea	2-Imidazolidinethione	96-45-7	U116
Ethylidene dichloride	Ethane, 1,1-dichloro-	75-34-3	U076
Ethyl methacrylate	2-Propenoic acid, 2-methyl-, ethyl ester	97-63-2	U118
Ethyl methanesulfonate	Methanesulfonic acid, ethyl ester	62-50-0	U119
Famphur	Phosphorothioic acid, O-[4-[(dimethylamino)sulfonyl]phenyl] O,O-dimethyl ester	52-85-7	P097
Ferbam	Iron, tris(dimethylcarbamodithioato-S,S')-,	14484-64-1	
Fluoranthene	Same	206-44-0	U120
Fluorine	Same	7782-41-4	P056
Fluoroacetamide	Acetamide, 2-fluoro-	640-19-7	P057
Fluoroacetic acid, sodium salt	Acetic acid, fluoro-, sodium salt	62-74-8	P058
Formaldehyde	Same	50-00-0	U122
Formetanate hydrochloride	Methanimidamide, N,N-dimethyl-N'-[3-[(methylamino)carbonyl]oxy] phenyl]-, monohydrochloride	23422-53-9	P198
Formic acid	Same	64-18-6	U123
Formparante	Methanimidamide, N,N-dimethyl-N'-[2-methyl-4-[(methylamino) carbonyl]oxy]phenyl]-	17702-57-7	p197
Glycidylaldehyde	Oxiranecarboxyaldehyde	765-34-4	U126
Halomethanes, N.O.S. ¹			
Heptachlor	4,7-Methano-1H-indene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-	76-44-8	P059
Heptachlor epoxide	2,5-Methano-2H-indeno[1,2-b]oxirene, 2,3,4,5,6,7,7-heptachloro-1a,1b,5,5a,6,6a-hexa-hydro-, (1aalpha,1bbeta,2alpha,5alpha,5abeta,6beta,6aalpha)-	1024-57-3	
Heptachlor epoxide (alpha, beta, and gamma isomers)			

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Heptachlorodibenzofurans			
Heptachlorodibenzo-p-dioxins			
Hexachlorobenzene	Benzene, hexachloro-	118-74-1	U127
Hexachlorobutadiene	1,3-Butadiene, 1,1,2,3,4,4-hexachloro-	87-68-3	U128
Hexachlorocyclopentadiene	1,3-Cyclopentadiene, 1,2,3,4,5,5-hexachloro-	77-47-4	U130
Hexachlorodibenzo-p-dioxins			
Hexachlorodibenzofurans			
Hexachloroethane	Ethane, hexachloro-	67-72-1	U131
Hexachlorophene	Phenol, 2,2'-methylenebis[3,4,6-trichloro-	70-30-4	U132
Hexachloropropene	1-Propene, 1,1,2,3,3,3-hexachloro-	1888-71-7	U243
Hexaethyl tetraphosphate	Tetraphosphoric acid, hexaethyl ester	757-58-4	P062
Hydrazine	Same	302-01-2	U133
Hydrogen cyanide	Hydrocyanic acid	74-90-8	P063
Hydrogen fluoride	Hydrofluoric acid	7664-39-3	U134
Hydrogen sulfide	Hydrogen sulfide H₂S	7783-06-4	U135
Indeno[1,2,3-cd]pyrene	Same	193-39-5	U137
3-Iodo-2-propynyl n-butylcarbamate	Carbamic acid, butyl-, 3-iodo-2-propynyl ester	55406-53-6	
Isobutyl alcohol	1-Propanol, 2-methyl-	78-83-1	U140
Isodrin	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, (1alpha,4alpha,4abeta,5beta,8beta,8beta)-	465-73-6	P060
Isolan	Carbamic acid, dimethyl-, 3-methyl-1-(1-methylethyl)-1H-pyrazol-5-yl ester	119-38-0	P192
Isosafrole	1,3-Benzodioxole, 5-(1-propenyl)-	120-58-1	U141
Kepone	1,3,4-Metheno-2H-cyclobuta[cd]pentalen-2-one, 1,1a,3,3a,4,5,5,5a,5b,6-decachlorooctahydro-	143-50-0	U142
Lasiocarpine	2-Butenoic acid, 2-methyl-, 7-[[[2,3-dihydroxy-2-(1-methoxyethyl)-3-methyl-1-oxobutoxy]methyl]-2,3,5,7a-tetrahydro-1H-pyrrolizin-1-yl ester, [1S-[1alpha(Z),7(2S*,3R*),7aalpha]]-	303-34-4	U143
Lead	Same	7439-92-1	
Lead compounds, N.O.S.¹			
Lead acetate	Acetic acid, lead(2+) salt	301-04-2	U144
Lead phosphate	Phosphoric acid, lead(2+) salt (2:3)	7446-27-7	U145
Lead subacetate	Lead, bis(acetato-O)tetrahydroxytri-	1335-32-6	U146
Lindane	Cyclohexane, 1,2,3,4,5,6-hexachloro-, (1alpha,2alpha,3beta,4alpha,5alpha,6beta)-	58-89-9	U129
Maleic anhydride	2,5-Furandione	108-31-6	U147
Maleic hydrazide	3,6-Pyridazinedione, 1,2-dihydro-	123-33-1	U148
Malononitrile	Propanedinitrile	109-77-3	U149
Manganese dimethyldithiocarbamate	Manganese, bis(dimethylcarbamodithioato-S,S')-,	15339-36-3	P196
Melphalan	L-Phenylalanine, 4-[bis(2-chloroethyl)amino]-	148-82-3	U150
Mercury	Same	7439-97-6	U151
Mercury compounds, N.O.S.¹			
Mercury fulminate	Fulminic acid, mercury(2+) salt	628-86-4	P065
Metam Sodium	Carbamodithioic acid, methyl-, monosodium salt	137-42-8	
Methacrylonitrile	2-Propenenitrile, 2-methyl-	126-98-7	U152

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Methapyrilene	1,2-Ethanediamine, N,N-dimethyl-N'-2-pyridinyl-N'-(2-thienylmethyl)-	91-80-5	U155
Methiocarb	Phenol, (3,5-dimethyl-4-(methylthio)-, methylcarbamate	2032-65-7	P199
Methomyl	Ethanimidothioic acid, N-[[[(methylamino)carbonyl]oxy]-, methyl ester	16752-77-5	P066
Methoxychlor	Benzene, 1,1'-(2,2,2-trichloroethylidene)bis[4-methoxy-	72-43-5	U247
Methyl bromide	Methane, bromo-	74-83-9	U029
Methyl chloride	Methane, chloro-	74-87-3	U045
Methyl chlorocarbonate	Carbonochloridic acid, methyl ester	79-22-1	U156
Methyl chloroform	Ethane, 1,1,1-trichloro-	71-55-6	U226
3-Methylcholanthrene	Benz[<i>l</i>]aceanthrylene, 1,2-dihydro-3-methyl-	56-49-5	U157
4,4'-Methylenebis(2-chloroaniline)	Benzenamine, 4,4'-methylenebis[2-chloro-	101-14-4	U158
Methylene bromide	Methane, dibromo-	74-95-3	U068
Methylene chloride	Methane, dichloro-	75-09-2	U080
Methyl ethyl ketone (MEK)	2-Butanone	78-93-3	U159
Methyl ethyl ketone peroxide	2-Butanone, peroxide	1338-23-4	U160
Methyl hydrazine	Hydrazine, methyl-	60-34-4	P068
Methyl iodide	Methane, iodo-	74-88-4	U138
Methyl isocyanate	Methane, isocyanato-	624-83-9	P064
2-Methylacetonitrile	Propanenitrile, 2-hydroxy-2-methyl-	75-86-5	P069
Methyl methacrylate	2-Propenoic acid, 2-methyl-, methyl ester	80-62-6	U162
Methyl methanesulfonate	Methanesulfonic acid, methyl ester	66-27-3	
Methyl parathion	Phosphorothioic acid, O,O-dimethyl O-(4-nitrophenyl) ester	298-00-0	P071
Methylthiouracil	4(1H)-Pyrimidinone, 2,3-dihydro-6-methyl-2-thioxo-	56-04-2	U164
Metolcarb	Carbamic acid, methyl-, 3-methylphenyl ester	1129-41-5	P190
Mexacarbate	Phenol, 4-(dimethylamino)-3,5-dimethyl-, methylcarbamate (ester)	315-18-4	P128
Mitomycin C	Azirino[2',3':3,4]pyrrolo[1,2-a]indole-4,7-dione, 6-amino-8-[[[(aminocarbonyl)oxy]methyl]-1,1a,2,8,8a,8b-hexahydro-8a-methoxy-5-methyl-, [1aS-(1aalpha,8beta,8aalpha,8balpha)]-	50-07-7	U010
MNNG	Guanidine, N-methyl-N'-nitro-N-nitroso-	70-25-7	U163
Molinate	1H-Azepine-1-carbothioic acid, hexahydro-, S- ethyl ester	2212-67-1	
Mustard gas	Ethane, 1,1'-thiobis[2-chloro-	505-60-2	
Naphthalene	Same	91-20-3	U165
1,4-Naphthoquinone	1,4-Naphthalenedione	130-15-4	U166
alpha-Naphthylamine	1-Naphthalenamine	134-32-7	U167
beta-Naphthylamine	2-Naphthalenamine	91-59-8	U168
alpha-Naphthylthiourea	Thiourea, 1-naphthalenyl-	86-88-4	P072
Nickel	Same	7440-02-0	
Nickel compounds, N.O.S.¹			
Nickel carbonyl	Nickel carbonyl Ni(CO)₄, (T-4)-	13463-39-3	P073
Nickel cyanide	Nickel cyanide Ni(CN)₂	557-19-7	P074
Nicotine	Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (S)-	54-11-5	P075
Nicotine salts			P075

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Nitric oxide	Nitrogen oxide NO	10102-43-9	P076

Potassium pentachlorophenate	Pentachlorophenol, potassium salt	7778-73-6	
Potassium silver cyanide	Argentate(1-), bis(cyano-C)-, potassium	506-61-6	P099
Promecarb	Phenol, 3-methyl-5-(1-methylethyl)-, methylcarbamate	2631-37-0	P201
Pronamide	Benzamide, 3,5-dichloro-N-(1,1-dimethyl-2-propynyl)-	23950-58-5	U192
1,3-Propane sultone	1,2-Oxathiolane, 2,2-dioxide	1120-71-4	U193
Propham	Carbamic acid, phenyl-, 1-methylethyl ester	122-42-9	U373
n-Propylamine	1-Propanamine	107-10-8	U194
Propargyl alcohol	2-Propyn-1-ol	107-19-7	P102
Propylene dichloride	Propane, 1,2-dichloro-	78-87-5	U083
1,2-Propylenimine	Aziridine, 2-methyl-	75-55-8	P067
Propylthiouracil	4(1H)-Pyrimidinone, 2,3-dihydro-6-propyl-2-thioxo-	51-52-5	
Propoxur	Phenol, 2-(1-methylethoxy)-, methylcarbamate	114-26-1	U411
Prosulfocarb	Carbamothioic acid, dipropyl-, S-(phenylmethyl) ester	52888-80-9	U387
Pyridine	Same	110-86-1	U196
Reserpine	Yohimban-16-carboxylic acid, 11,17-dimethoxy-18-[(3,4,5-trimethoxybenzoyl)oxy]-methyl ester, (3beta,16beta,17alpha,18beta,20alpha)-	50-55-5	U200
Resorcinol	1,3-Benzenediol	108-46-3	U201
Safrole	1,3-Benzodioxole, 5-(2-propenyl)-	94-59-7	U203
Selenium	Same	7782-49-2	
Selenium compounds, N.O.S. ¹			

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Selenium dioxide	Selenious acid	7783-00-8	U204
Selenium sulfide	Selenium sulfide SeS₂	7488-56-4	U205
Selenium, tetrakis (dimethyl-dithiocarbamate)	Carbamodithioic acid, dimethyl-, tetraanhydro-sulfide with orthothioselenious acid	144-34-3	
Selenourea	Same	630-10-4	P103
Silver	Same	7440-22-4	
Silver compounds, N.O.S.¹			
Silver cyanide	Silver cyanide Ag(CN)	506-64-9	P104
Silvex (2,4,5-TP)	Propanoic acid, 2-(2,4,5-trichlorophenoxy)-	93-72-1	See F027
Sodium cyanide	Sodium cyanide Na(CN)	143-33-9	P106
Sodium dibutylidithiocarbamate	Carbamodithioic acid, dibutyl, sodium salt	136-30-1	
Sodium diethyldithiocarbamate	Carbamodithioic acid, diethyl-, sodium salt	148-18-5	
Sodium dimethyldithiocarbamate	Carbamodithioic acid, dimethyl-, sodium salt	128-04-1	
Sodium pentachlorophenate	Pentachlorophenol, sodium salt	131-52-2	
Streptozotocin	D-Glucose, 2-deoxy-2-[[[(methylnitrosoamino)carbonyl]amino]-	18883-66-4	U206
Strychnine	Strychnidin-10-one	57-24-9	P108
Strychnine salts			P108
Sulfallate	Carbamodithioic acid, diethyl-, 2-chloro-2-propenyl ester	95-06-7	
TCDD	Dibenzo[b,e][1,4]dioxin, 2,3,7,8-tetrachloro-	1746-01-6	
Tetrabutylthiuram disulfide	Thioperoxydicarbonic diamide, tetrabutyl	1634-02-2	
Tetramethylthiuram monosulfide	Bis (dimethylthiocarbamoyl) sulfide	97-74-5	
1,2,4,5-Tetrachlorobenzene	Benzene, 1,2,4,5-tetrachloro-	95-94-3	U207
Tetrachlorodibenzo-p-dioxins			
Tetrachlorodibenzofurans			
Tetrachloroethane, N.O.S.¹	Ethane, tetrachloro-, N.O.S.	25322-20-7	
1,1,1,2-Tetrachloroethane	Ethane, 1,1,1,2-tetrachloro-	630-20-6	U208
1,1,2,2-Tetrachloroethane	Ethane, 1,1,2,2-tetrachloro-	79-34-5	U209
Tetrachloroethylene	Ethene, tetrachloro-	127-18-4	U210
2,3,4,6-Tetrachlorophenol	Phenol, 2,3,4,6-tetrachloro-	58-90-2	See F027
2,3,4,6-Tetrachlorophenol, potassium salt	Same	53535-27-6	
2,3,4,6-Tetrachlorophenol, sodium salt	Same	25567-55-9	
Tetraethyldithiopyrophosphate	Thiodiphosphoric acid, tetraethyl ester	3689-24-5	P109
Tetraethyl lead	Plumbane, tetraethyl-	78-00-2	P110
Tetraethyl pyrophosphate	Diphosphoric acid, tetraethyl ester	107-49-3	P111
Tetranitromethane	Methane, tetranitro-	509-14-8	P112
Thallium	Same	7440-28-0	
Thallium compounds, N.O.S.¹			
Thallic oxide	Thallium oxide Tl₂O₃	1314-32-5	P113
Thallium(I) acetate	Acetic acid, thallium(1+) salt	563-68-8	U214
Thallium(I) carbonate	Carbonic acid, dithallium(1+) salt	6533-73-9	U215
Thallium(I) chloride	Thallium chloride TlCl	7791-12-0	U216
Thallium(I) nitrate	Nitric acid, thallium(1+) salt	10102-45-1	U217
Thallium(I) selenite	Selenious acid, dithallium(1+) salt	12039-52-0	P114

Common Name	Chemical Abstracts Name	Chemical Abstracts No.	Hazardous Waste No.
Thallium(I) sulfate	Sulfuric acid, dithallium(1+) salt	7446-18-6	P115
Thioacetamide	Ethanethioamide	62-55-5	U218
Thiodicarb	Ethanimidothioic acid, N,N'-[thiobis[(methylimino) carbonyloxy]]bis-, dimethyl ester	59669-26-0	U410
Thiofanox	2-Butanone, 3,3-dimethyl-1-(methylthio)-, O-[(methylamino)carbonyl] oxime	39196-18-4	P045
Thiomethanol	Methanethiol	74-93-1	U153
Thiophanate-methyl	Carbamic acid, [1,2-phenylenebis (iminocarbonothioyl)]bis-, dimethyl ester	23564-05-8	U409
Thiophenol	Benzenethiol	108-98-5	P014
Thiosemicarbazide	Hydrazinecarbothioamide	79-19-6	P116
Thiourea	Same	62-56-6	U219
Thiram	Thioperoxydicarbonic diamide [(H₂N)C(S)]₂S₂, tetramethyl-	137-26-8	U244
Tirpate	1,3-Dithiolane-2-carboxaldehyde, 2,4-dimethyl-, O-[(methylamino)carbonyl] oxime.	26419-73-8	P185
Toluene	Benzene, methyl-	108-88-3	U220
Toluenediamine	Benzenediamine, ar-methyl-	25376-45-8	U221
Toluene-2,4-diamine	1,3-Benzenediamine, 4-methyl-	95-80-7	
Toluene-2,6-diamine	1,3-Benzenediamine, 2-methyl-	823-40-5	
Toluene-3,4-diamine	1,2-Benzenediamine, 4-methyl-	496-72-0	
Toluene diisocyanate	Benzene, 1,3-diisocyanatomethyl-	26471-62-5	U223
o-Toluidine	Benzenamine, 2-methyl-	95-53-4	U328
o-Toluidine hydrochloride	Benzenamine, 2-methyl-, hydrochloride	636-21-5	U222
p-Toluidine	Benzenamine, 4-methyl-	106-49-0	U353
Toxaphene	Same	8001-35-2	P123
Triallate	Carbamothioic acid, bis(1-methylethyl)-, S-(2,3,3-trichloro-2-propenyl) ester	2303-17-5	U389
1,2,4-Trichlorobenzene	Benzene, 1,2,4-trichloro-	120-82-1	
1,1,2-Trichloroethane	Ethane, 1,1,2-trichloro-	79-00-5	U227
Trichloroethylene	Ethene, trichloro-	79-01-6	U228
Trichloromethanethiol	Methanethiol, trichloro-	75-70-7	P118
Trichloromonofluoromethane	Methane, trichlorofluoro-	75-69-4	U121
2,4,5-Trichlorophenol	Phenol, 2,4,5-trichloro-	95-95-4	See F027
2,4,6-Trichlorophenol	Phenol, 2,4,6-trichloro-	88-06-2	See F027
2,4,5-T	Acetic acid, (2,4,5-trichlorophenoxy)-	93-76-5	See F027

33.1-24-03-01. Scope and applicability.

This chapter establishes standards for generators of hazardous waste.

1. Subsections 3 and 4 of section 33.1-24-02-05 must be used to determine the applicability of provisions of this chapter that are dependent on calculations of the quantity of hazardous waste generated per month.

2. A generator who treats, stores, or disposes of hazardous waste onsite must only comply with the following sections of this chapter with respect to that waste: Section 33.1-24-03-02 for determining whether or not the generator has a hazardous waste, section 33.1-24-03-03 for obtaining an identification number, section 33.1-24-03-12 for accumulation of hazardous waste, subsections 3 and 4 of section 33.1-24-03-13 for recordkeeping, section 33.1-24-03-16 for additional reporting and if applicable, section 33.1-24-03-40 for farmers.
3. Any person who exports or imports hazardous waste into the United States through this state must comply with the standards applicable to generators established in this chapter.
4. Any person who exports or imports wastes that are considered hazardous under United States national procedures to or from the countries listed in subdivision a of subsection 1 of section 33.1-24-03-25 for recovery must comply with sections 33.1-24-03-50 through 33.1-24-03-59. A waste is considered hazardous under United States national procedures if the waste meets the federal definition of hazardous waste in 40 CFR 261.3 and is subject to manifesting requirements at sections 33.1-24-03-04 through 33.1-24-03-07, the universal waste management standards of sections 33.1-24-05-700 through 33.1-24-05-799 or the export requirements in the spent lead-acid battery management standards of sections 33.1-24-05-235 through 33.1-24-05-249.
5. A farmer who generates waste pesticides which are hazardous waste and who complies with all the requirements of section 33.1-24-03-40 is not required to comply with other standards in chapters 33.1-24-03, 33.1-24-05, and 33.1-24-06 with respect to such pesticides.
6. A person who generates a hazardous waste as defined in chapter 33.1-24-02 is subject to the compliance requirements and penalties prescribed in North Dakota Century Code chapter 23.1-04 if the person does not comply with the requirements of this chapter.
7. An owner or operator who initiates a shipment of hazardous waste from a treatment, storage, or disposal facility must comply with the generator standards established in this chapter.
8. Persons responding to an explosives or munitions emergency in accordance with subparagraph d of paragraph 1 of subdivision g of subsection 6 of section 33.1-24-05-01 or paragraph 4 of subdivision g of subsection 6 of section 33.1-24-05-01 or 40 CFR 265.1(c)(11) (i)(D) or (iv) as incorporated by reference at subsection 5 of section 33.1-24-06-16, and item 4 of subparagraph a and subparagraph c of paragraph 9 of subdivision b of subsection 2 of section 33.1-24-06-01, are not required to comply with the standards of chapter 33.1-24-03.
9. The laboratories owned by an eligible academic entity that chooses to be subject to the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 are not subject to (for purposes of this subsection, the terms "laboratory" and "eligible academic entity" shall have the meaning as defined in section 33.1-24-03-61):
 - a. The requirements of section 33.1-24-03-02 or subsection 3 of section 33.1-24-03-12, for large quantity generators and small quantity generators, except as provided in sections 33.1-24-03-60 through 33.1-24-03-77; and
 - b. The conditions of subsection 2 of section 33.1-24-02-05, for conditionally exempt small quantity generators, except as provided in sections 33.1-24-03-60 through 33.1-24-03-77.

Note 1: The provisions of section 33.1-24-03-12 are applicable to the onsite accumulation of hazardous waste by generators. Therefore, the provisions of section 33.1-24-03-12 only apply to owners or operators who are shipping hazardous waste that they generated at that facility.

Note 2: A generator who treats, stores, or disposes of hazardous waste onsite must comply with the applicable standards and permit requirements set forth in chapters 33.1-24-05 and 33.1-24-06.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-02. Hazardous waste determination.

A person who generates a solid waste as defined in section 33.1-24-02-02 must determine if that waste is a hazardous waste using the following method:

1. The person should first determine if the waste is excluded from regulation under section 33.1-24-02-04.
2. The person must then determine if the waste is listed as a hazardous waste in chapter 33.1-24-02.
3. For purposes of compliance with sections 33.1-24-05-250 through 33.1-24-05-299, or if the waste is not listed in sections 33.1-24-02-15 through 33.1-24-02-18, the generator must then determine whether the waste is identified in sections 33.1-24-02-10 through 33.1-24-02-14 by either:
 - a. Testing the waste according to the methods set forth in chapter 33.1-24-02 or an equivalent method as approved by the department; or
 - b. Applying knowledge of the hazard characteristic of the waste in light of the materials or the processes used.

All waste analysis pursuant to subdivision a must be conducted by a laboratory approved by the department's certification procedures.

4. If the waste is determined to be hazardous, the generator must refer to chapter 33.1-24-02 and sections 33.1-24-05-01 through 33.1-24-05-559, sections 33.1-24-05-700 through 33.1-24-05-1149, and subsection 5 of section 33.1-24-06-16 for possible exclusions or restrictions pertaining to management of the generator's specific waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-03. Identification number and registration certificate.

1. A generator may not treat, store, dispose of, transport, or offer for transportation hazardous waste without having received an identification number and a registration certificate from the department.
2. A generator who has not received an identification number and a registration certificate may obtain one by applying to the department. Upon receiving the request the department will assign an identification number and issue a registration certificate to the generator.
3. A generator may not offer the generator's hazardous waste to transporters that have not received an identification number and a transporter permit, or to treatment, storage, or disposal facilities that have not received an identification number and applied for a hazardous waste permit.

4. The department may assess and collect reasonable fees for the issuance of registration certificates.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-09; S.L. 2017, ch. 199, § 19

33.1-24-03-04. General requirements of the manifest.

1. A generator who transports, or offers for transport a hazardous waste for offsite treatment, storage, or disposal, or a treatment, storage, and disposal facility who offers for transport a rejected hazardous waste load, must prepare a manifest on environmental protection agency form 8700-22, and if necessary, environmental protection agency form 8700-22A, according to instructions included in appendix I to this chapter.
 - a. The revised manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-03-04, 33.1-24-03-05, subsection 6 of section 33.1-24-03-07, sections 33.1-24-03-10, 33.1-24-03-12, 33.1-24-03-21, 33.1-24-03-30, and appendix I to this chapter, shall not apply until September 5, 2006, or article 33.1-24 is amended and effective, but not prior to September 5, 2006. The manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-03-04, 33.1-24-03-05, 33.1-24-03-10, 33.1-24-03-12, 33.1-24-03-21, 33.1-24-03-30, and appendix I to this chapter contained in article 33.1-24, amended December 1, 2003, shall be applicable until September 5, 2006, or when amended, but not prior to September 5, 2006.
 - b. Electronic manifest. In lieu of using the manifest form specified in subsection 1, a person required to prepare a manifest under subsection 1 may prepare and use an electronic manifest, provided that the person:
 - (1) Complies with the requirements in subsection 8 of section 33.1-24-03-07 for use of electronic manifests; and
 - (2) Complies with the requirements of 40 CFR 3.10 for the reporting of electronic documents to the environmental protection agency.
2. A generator must designate on the manifest one facility which is permitted to handle the waste described on the manifest.
3. A generator may also designate on the manifest one alternate facility which is permitted to handle the generator's waste in the event an emergency prevents delivery of the waste to the primary designated facility.
4. If the transporter is unable to deliver the hazardous waste to the designated facility or the alternate facility, the generator must either designate another facility or instruct the transporter to return the waste.
5. The requirements of sections 33.1-24-03-04 through 33.1-24-03-07 do not apply to hazardous waste produced by generators of greater than one hundred kilograms but less than one thousand kilograms in a calendar month where:
 - a. The waste is reclaimed under a contractual agreement pursuant to which:
 - (1) The type of waste and frequency of shipments are specified in the agreement; and
 - (2) The vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer of the waste; and

b. The generator maintains a copy of the reclamation agreement in the generator's files for a period of at least three years after termination or expiration of the agreement.

6. The requirements of sections 33.1-24-03-04 through 33.1-24-03-07 and subsection 2 of section 33.1-24-03-10 do not apply to the transport of hazardous wastes on a public or private right of way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right of way. Notwithstanding subsection 1 of section 33.1-24-04-01, the generator or transporter must comply with the requirements for transporters set forth in sections 33.1-24-04-07 and 33.1-24-04-08 in the event of a discharge of hazardous waste on a public or private right of way.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-05. Manifest tracking numbers, manifest printing, and obtaining manifests.

1. A registrant:

a. May not print, or have printed, the manifest for use of distribution unless it has received approval from the environmental protection agency director of the office of resource conservation and recovery to do so under subsections 3 and 5.

b. The approved registrant is responsible for ensuring that the organizations identified in its application are in compliance with the procedures of its approved application and the requirements of this section. The registrant is responsible for assigning manifest tracking numbers to the registrant's manifests.

2. A registrant must submit an initial application to the environmental protection agency director of the office of resource conservation and recovery that contains the following information:

a. Name and mailing address of registrant.

b. Name, telephone number, and electronic mail address of contact person.

c. Brief description of registrant's government or business activity.

d. Environmental protection agency identification number of the registrant, if applicable.

e. Description of the scope of the operations that the registrant plans to undertake in printing, distributing, and using its manifests, including:

(1) A description of the printing operation. The description should include an explanation of whether the registrant intends to print the registrant's manifests in-house (for example, using the registrant's own printing establishments) or through a separate (for example, unaffiliated) printing company. If the registrant intends to use a separate printing company to print the manifest on the registrant's behalf, the application must identify this printing company and discuss how the registrant will oversee the company. If this includes the use of intermediaries (for example, prime and subcontractor relationships), the role of each must be discussed. The application must provide the name and mailing address of each company. It also must provide the name and telephone number of the contact person at each company.

(2) A description of how the registrant will ensure that the registrant's organization and unaffiliated companies, if any, comply with the requirements of this section. The

application must discuss how the registrant will ensure that a unique manifest tracking number will be preprinted on each manifest. The application must describe the internal control procedures to be followed by the registrant and unaffiliated companies to ensure that numbers are tightly controlled and remain unique. In particular, the application must describe how the registrant will assign manifest tracking numbers to its manifests. If computer systems or other infrastructure will be used to maintain, track, or assign numbers, these should be indicated. The application must also indicate how the printer will preprint a unique number on each form (for example, crash or press numbering). The application also must explain the other quality procedures to be followed by each establishment and printing company to ensure that all required print specifications are consistently achieved and that printing violations are identified and corrected at the earliest practicable time.

(3) An indication of whether the registrant intends to use the manifests for the registrant's own business operations or to distribute the manifests to a separate company or to the general public (for example, for purchase).

f. A brief description of the qualifications of the company that will print the manifest. The registrant may use readily available information to do so (for example, corporate brochures, product samples, customer references, documentation of international organization for standardization certification), so long as such information pertains to the establishments or company being proposed to print the manifest.

g. Proposed unique three letter manifest tracking number suffix. If the registrant is approved to print the manifest, the registrant must use this suffix to preprint a unique manifest tracking number on each manifest.

h. A signed certification by a duly authorized employee of the registrant that the organizations and companies in the registrant's application will comply with the procedures of its approved application and the requirements of this section and that the registrant will notify the environmental protection agency director of the office of resource conservation and recovery of any duplicated manifest tracking numbers on manifests that have been used or distributed to other parties as soon as this becomes known.

3. The environmental protection agency will review the application submitted under subsection 2 and either approve the application or request additional information or modification before approving the application.

4. The environmental protection agency upon approval of the application under subsection 3:

a. Will provide the registrant an electronic file of the manifest, continuation sheet, and manifest instructions and ask the registrant to submit three fully assembled manifests and continuation sheet samples, except as noted in subdivision c of this subsection. The registrant's samples must meet all of the specifications in subsection 6 and be printed by the company that will print the manifest as identified in the application approved under subsection 3.

b. The registrant must submit a description of the manifest samples as follows:

(1) Paper type (for example, manufacturer and grade of the manifest paper);

(2) Paper weight of each copy;

(3) Ink color of the manifest's instructions. If screening of the ink was used, the registrant must indicate the extent of the screening; and

(4) Method of binding the copies.

c. The registrant need not submit samples of the continuation sheet if the registrant will print the registrant's continuation sheet using the same paper type, paper weight of each copy, ink color of the instructions, and binding method as its manifest form samples.

5. The environmental protection agency will evaluate the forms and either approve the registrant to print the forms as proposed or request additional information or modification to the forms before approval. The environmental protection agency will notify the registrant of the environmental protection agency's decision by mail. The registrant cannot use or distribute the registrant's forms until the environmental protection agency approves the forms. An approved registrant must print the manifest and continuation sheet according to the registrant's application approved under subsection 3 and the manifest specifications in subsection 6. The registrant also must print the forms according to the paper type, paper weight, ink color of the manifest instructions and binding method of the registrant's approved forms.

6. Paper manifests and continuation sheets must be printed according to the following specifications:

a. The manifest and continuation sheet must be printed with the exact format and appearance as environmental protection agency forms 8700-22 and 8700-22a, respectively. However, information required to complete the manifest may be preprinted on the manifest form.

b. A unique manifest tracking number assigned in accordance with a numbering system approved by the environmental protection agency must be preprinted in item 4 of the manifest. The tracking number must consist of a unique three letter suffix following nine digits.

c. The manifest and continuation sheet must be printed on eight and one-half by eleven inch white paper, excluding common stubs (for example, top or side bound stubs). The paper must be durable enough to withstand normal use.

d. The manifest and continuation sheet must be printed in black ink that can be legibly photocopied, scanned, and faxed, except that the marginal words indicating copy distribution must be printed with a distinct ink color or with another method (for example, white text against black background, in text box, or, black text against gray background in text box) that clearly distinguishes the copy distribution notations from the other text and data entries on the form.

e. The manifest and continuation sheet must be printed as six copy forms. Copy-to-copy registration must be exact within one thirty-second of an inch. Handwritten and typed impressions on the form must be legible on all six copies. Copies must be bound together by one or more common stubs that reasonably ensure that they will not become detached inadvertently during normal use.

f. Each copy of the manifest and continuation sheet must indicate how the copy must be distributed, as follows:

(1) Page 1 (top copy): "designated facility to destination state (if required)".

(2) Page 2: "designated facility to generator state (if required)".

(3) Page 3: "designated facility to generator".

(4) Page 4: "designated facility's copy".

(5) Page 5: "transporters' copy".

(6) Page 6 (bottom copy): "generator's initial copy".

g. The instructions in the appendix to 40 CFR regulations part 262 must appear legibly on the back of the copies of the manifest and continuation sheet as provided in subsection 6. The instructions must not be visible through the front of the copies when photocopied or faxed.

(1) Manifest form 8700-22.

(a) The "instructions for generators" on copy 6;

(b) The "instructions for international shipment block" and "instructions for transporters" on copy 5; and

(c) The "instructions for treatment, storage, and disposal facilities" on copy 4.

(2) Manifest form 8700-22a.

(a) The "instructions for generators" on copy 6;

(b) The "instructions for transporters" on copy 5; and

(c) The "instructions for treatment, storage, and disposal facilities" on copy 4.

7. A generator:

a. May use manifests printed by any source so long as the source of the printed form has received approval from the environmental protection agency to print the manifest under subsections 3 and 5. A registered source may be a:

(1) State agency;

(2) Commercial printer;

(3) Hazardous waste generator, transporter or treatment, storage, or disposal facility; or

(4) Hazardous waste broker or other preparer who prepares or arranges shipments of hazardous waste for transportation.

b. Must determine whether the generator state or the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes under these states' authorized programs. Generators also must determine whether the consignment state or generator state requires the generator to submit any copies of the manifest to these states. In cases where the generator must supply copies to either the generator's state or the consignment state, the generator is responsible for supplying legible photocopies of the manifest to these states.

8. Registrant requests.

a. If an approved registrant would like to update any of the information provided in its application approved under subsection 3 (for example, to update a company phone number or name of contact person), the registrant must revise the application and submit it to the environmental protection agency director of the office of resource conservation and recovery, along with an indication or explanation of the update, as soon as practicable after the change occurs. The agency either will approve or deny the revision. If the agency denies the revision, the agency will explain the reasons for the denial, and the agency will contact the registrant and request further modification before approval.

b. If the registrant would like a new tracking number suffix, the registrant must submit a proposed suffix to the environmental protection agency director of the office of resource conservation and recovery, along with the reason for requesting a new tracking number suffix. The agency will either approve the suffix or deny the suffix and provide an explanation why the proposed suffix is not acceptable.

c. If a registrant would like to change the paper type, paper weight, ink color of the manifest instructions, or binding method of the registrant's manifest or continuation sheet subsequent to approval under subsection 5, then the registrant must submit three samples of the revised form for the environmental protection agency's review and approval. If the approved registrant would like to use a new printer, the registrant must submit three manifest samples printed by the new printer, along with a brief description of the printer's qualifications to print the manifest. The environmental protection agency will evaluate the manifests and either approve the registrant to print the forms as proposed or request additional information or modification to the manifests before approval. The environmental protection agency will notify the registrant of the agency's decision by mail. The registrant cannot use or distribute the registrant's revised forms until the environmental protection agency approves the forms.

9. If, subsequent to the registrant's approval under subsection 5, a registrant typesets the registrant's manifest or continuation sheet instead of using the electronic file of the forms provided by the environmental protection agency, the registrant must submit three samples of the manifest or continuation sheet to the registry for approval. The environmental protection agency will evaluate the manifest or continuation sheet and either approve the registrant to print the manifest or continuation sheet as proposed or request additional information or modification to the manifest or continuation sheet before approval. The environmental protection agency will notify the registrant of the agency's decision by mail. The registrant cannot use or distribute its typeset forms until the environmental protection agency approves the forms.

10. The environmental protection agency may exempt a registrant from the requirement to submit form samples under subsection 4 or subdivision c of subsection 8 if the agency is persuaded that a separate review of the registrant's forms would serve little purpose in informing an approval decision (for example, a registrant certifies that it will print the manifest using the same paper type, paper weight, ink color of the instructions and binding method of the form samples approved for some other registrant). A registrant may request an exemption from the environmental protection agency by indicating why an exemption is warranted.

11. An approved registrant must notify the environmental protection agency by phone or electronic mail as soon as it becomes aware that it has duplicated tracking numbers on any manifests that have been used or distributed to other parties.

12. If, subsequent to approval of a registrant under subsection 5, the environmental protection agency becomes aware that the approved paper type, paper weight, ink color of the instructions, or binding method of the registrant's form is unsatisfactory, the environmental protection agency will contact the registrant and require modifications to the form.

13. The environmental protection agency:

a. May suspend and, if necessary, revoke printing privileges if the agency finds that the registrant:

(1) Has used or distributed forms that deviate from the registrant's approved form samples in regard to paper weight, paper type, ink color of the instructions, or binding method; or

(2) Exhibits a continuing pattern of behavior in using or distributing manifests that contain duplicate manifest tracking numbers.

b. Will send a warning letter to the registrant that specifies the date by which the registrant must come into compliance with the requirements. If the registrant does not come in compliance by the specified date, the environmental protection agency will send a second letter notifying the registrant that the environmental protection agency has suspended or revoked the registrant's printing privileges. An approved registrant must provide information on the registrant's printing activities to the environmental protection agency if requested.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-06. Number of copies of the manifest.

The manifest must consist of at least the number of copies which will provide the generator, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the generator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-07. Use of the manifest.

1. The generator must:

a. Sign the manifest certification by hand;

b. Obtain the handwritten signature of the initial transporter and date of acceptance on the manifest; and

c. Retain one copy, in accordance with subsection 1 of section 33.1-24-03-13.

2. The generator must give the transporter the remaining copies of the manifest.

3. For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must send three copies of the manifest dated and signed in accordance with this section to the owner or operator of the designated facility or the last water (bulk shipment) transporter to handle the waste in the United States if exported by water. Copies of the manifest are not required for each transporter.

4. For rail shipments of hazardous waste within the United States which originate at the site of generation, the generator must send at least three copies of the manifest dated and signed in accordance with this section to:

a. The next nonrail transporter, if any;

b. The designated facility if transported solely by rail; or

c. The last rail transporter to handle the waste in the United States if exported by rail.

5. For shipments of hazardous waste to a designated facility in an authorized state which has not yet obtained authorization to regulate that particular waste as hazardous, the generator must assure that the designated facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated facility.

6. Waste minimization certification. A generator who initiates a shipment of hazardous waste must certify to one of the following statements in item 15 of the uniform hazardous waste manifest:

a. "I am a large quantity generator. I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment"; or

b. "I am a small quantity generator. I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford."

7. For rejected shipments of hazardous waste or container residues contained in nonempty containers that are returned to the generator by the designated facility (following the procedures of subsection 6 of section 33.1-24-05-39), the generator must:

a. Sign either:

(1) Item 20 of the new manifest if a new manifest is used for the returned shipment; or

(2) Item 18c of the original manifest if the original manifest is used for the returned shipment.

b. Provide the transporter a copy of the manifest;

c. Within thirty days of delivery of the rejected shipment or container residues contained in nonempty containers, send a copy of the manifest to the designated facility that returned the shipment to the generator; and

d. Retain at the generator's site a copy of each manifest for at least three years from the date of delivery.

8. Use of the electronic manifest. Electronic manifests are equivalent to paper manifests.

a. Legal equivalence to paper manifests. Electronic manifests that are obtained, completed, and transmitted in accordance with subdivision b of subsection 1 of section 33.1-24-03-04, and used in accordance with this subsection in lieu of environmental protection agency forms 8700-22 and 8700-22a are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these rules to obtain, complete, sign, provide, use, or retain a manifest.

(1) Any requirement in these rules to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 40 CFR 262.25.

(2) Any requirement in these rules to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when an electronic manifest is transmitted to the other person by submission to the system.

(3) Any requirement in these rules for a generator to keep or retain a copy of each manifest is satisfied by retention of a signed electronic manifest in the generator's account on the national e-manifest system, provided that such copies are readily available for viewing and production if requested by any environmental protection agency or authorized department representative.

(4) No generator may be held liable for the inability to produce an electronic manifest for inspection under this subsection if the generator can demonstrate that the inability to produce the electronic manifest is due exclusively to a technical difficulty with the electronic manifest system for which the generator bears no responsibility.

b. A generator may participate in the electronic manifest system either by accessing the electronic manifest system from the generator's own electronic equipment, or by accessing the electronic manifest system from portable equipment brought to the generator's site by the transporter who accepts the hazardous waste shipment from the generator for offsite transportation.

c. Restriction on use of electronic manifests. A generator may prepare an electronic manifest for the tracking of hazardous waste shipments involving any hazardous waste only if it is known at the time the manifest is originated that all waste handlers named on the manifest participate in the electronic manifest system.

d. Requirement for one printed copy. To the extent the hazardous materials regulation on shipping papers for carriage by public highway requires shippers of hazardous materials to supply a paper document for compliance with 49 CFR 177.817, a generator originating an electronic manifest must also provide the initial transporter with one printed copy of the electronic manifest.

e. Special procedures when electronic manifest is unavailable. If a generator has prepared an electronic manifest for a hazardous waste shipment, but the electronic manifest system becomes unavailable for any reason prior to the time that the initial transporter has signed electronically to acknowledge the receipt of the hazardous waste from the generator, then the generator must obtain and complete a paper manifest and if necessary, a continuation sheet in accordance with the manifest instructions in appendix I to this chapter, and use these paper forms from this point forward in accordance with the requirements of subsections 1 through 5 and 7.

f. Special procedures for electronic signature methods undergoing tests. If a generator has prepared an electronic manifest for a hazardous waste shipment, and signs this manifest electronically using an electronic signature method which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the generator shall also sign with an ink signature the generator or offeror certification on the printed copy of the manifest provided under subdivision d.

g. Imposition of user fee. A generator who is a user of the electronic manifest may be assessed a user fee by the environmental protection agency for the origination of each electronic manifest. The environmental protection agency shall maintain and update from time-to-time the schedule of electronic manifest user fees, which shall be determined based on current and projected system costs and level of use of the electronic manifest system. The schedule of electronic manifest user fees shall be published by the environmental protection agency as an appendix to 40 CFR Part 262.

9. Electronic manifest signatures. Electronic signature methods for the e-manifest system shall:

a. Be a legally valid and enforceable signature under applicable environmental protection agency and other federal requirements pertaining to electronic signatures; and

b. Be a method that is designed and implemented in a manner that the environmental protection agency considers to be as cost-effective and practical as possible for users of the manifest.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-08. Packaging.

Before transporting hazardous waste or offering hazardous waste for transportation offsite, a generator must package the waste in accordance with the applicable department of transportation regulations on packaging under 49 CFR parts 173, 178, and 179.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-09. Labeling.

Before transporting or offering hazardous waste for transportation offsite, a generator must label each package in accordance with the applicable department of transportation regulations on hazardous materials under 49 CFR part 172.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-10. Marking.

1. Before transporting or offering hazardous waste for transportation offsite, a generator must mark each package of hazardous waste in accordance with the applicable department of transportation regulations on hazardous materials under 49 CFR part 172.

2. Before transporting hazardous waste or offering hazardous waste for transportation offsite, a generator must mark each container of one hundred nineteen gallons or less used in such transportation with the following words and information in accordance with the requirements of 49 CFR part 172.304:

HAZARDOUS WASTE - Federal Law prohibits improper disposal. If found, contact the nearest police or public safety authority or the United States Environmental Protection Agency.

Generator's Name and Address _____.

Generator's Identification Number _____.

Manifest Tracking Number _____.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-11. Placarding.

Before transporting hazardous waste or offering hazardous waste for transportation offsite, a generator must placard or offer the initial transporter the appropriate placards according to department of transportation regulations for hazardous materials under 49 CFR part 172, subpart F.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-12. Accumulation time.

1. Except as provided in subsections 4, 5, and 6, a generator may accumulate hazardous waste onsite for ninety days or less without a permit or without having interim status provided that:

a. The waste is placed:

(1) In containers and the generator complies with the applicable requirements of sections 33.1-24-05-89 through 33.1-24-05-102 and sections 33.1-24-05-400 through 33.1-24-05-474;

(2) In tanks and the generator complies with the applicable requirements of sections 33.1-24-05-103 through 33.1-24-05-115 and sections 33.1-24-05-400 through 33.1-24-05-474, except subsection 3 of section 33.1-24-05-110 and section 33.1-24-05-113;

(3) On drip pads and the generator complies with sections 33.1-24-05-501 through 33.1-24-05-524 and maintains the following records at the facility:

(a) A description of procedures that will be followed to ensure that all wastes are removed from the drip pad and associated collection system at least once every ninety days; and

(b) Documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system and the date and time of removal; or

(4) In containment buildings and the generator complies with sections 33.1-24-05-475 through 33.1-24-05-500 and has placed its professional engineer certification that the building complies with the design standards specified in section 33.1-24-05-476 in the facility's operating record no later than sixty days after the date of initial operation of the unit. After February 18, 1993, professional engineer certification will be required prior to operation of the unit. The owner or operator shall maintain the following records at the facility:

(a) A written description of procedures to ensure that each waste volume remains in the unit for no more than ninety days, a written description of the waste generation and management practices for the facility showing that they are consistent with respecting the ninety-day limit, and documentation that the procedures are complied with; or

(b) Documentation that the unit is emptied at least once every ninety days.

In addition, such a generator is exempt from all the requirements in sections 33.1-24-05-59 through 33.1-24-05-88, except for sections 33.1-24-05-60 and 33.1-24-05-63;

b. The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;

c. While being accumulated onsite, each container and tank is properly labeled or marked with the words "Hazardous Waste"; and

d. The generator complies with the requirements for owners or operators in sections 33.1-24-05-15 through 33.1-24-05-36, with section 33.1-24-05-07, and with all applicable requirements under sections 33.1-24-05-250 through 33.1-24-05-299.

2. A generator of one thousand kilograms or greater of hazardous waste in a calendar month, or greater than one kilogram of acute hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 in a calendar month, who accumulates hazardous waste or acute hazardous waste for more than ninety days is an operator of a storage facility and is subject to the requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, 33.1-24-05-950 through 33.1-24-05-1149, subsection 5 of section 33.1-24-06-16 and the permit requirements of chapter 33.1-24-06 unless the generator has been granted an extension to the ninety-day period. Such extension may be granted by the department if hazardous wastes must remain onsite for longer than ninety days due to unforeseen, temporary, and uncontrollable circumstances. An extension of up to thirty days may be granted at the discretion of the department on a case-by-case basis.

3. A generator may accumulate as much as fifty-five gallons of hazardous waste or one quart of acutely hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 in containers at or near any point of generation where wastes initially accumulate, which is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with subsections 1 or 4 provided the operator:

a. Complies with sections 33.1-24-05-90, 33.1-24-05-91, and subsection 1 of section 33.1-24-05-92; and

b. Marks the operator's containers either with the words "Hazardous Waste" or with other words that identify the contents of the containers.

c. A generator who accumulates either hazardous waste or acutely hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 in excess of the amounts listed in subsection 3 at or near any point of generation must, with respect to that amount of excess waste, comply within three days with subsection 1 or other applicable provisions of this section. During the three-day period, the generator must continue to comply with subdivisions a and b. The generator must mark the container holding the excess accumulation of hazardous waste with the date the excess amount began accumulating.

4. A generator who generates greater than one hundred kilograms but less than one thousand kilograms of hazardous waste in a calendar month may accumulate hazardous waste onsite for one hundred eighty days or less without a permit or without having interim status provided that:

a. The quantity of waste accumulated onsite never exceeds six thousand kilograms;

b. The generator complies with requirements of sections 33.1-24-05-89 through 33.1-24-05-102, except sections 33.1-24-05-95 and 33.1-24-05-98;

c. The generator complies with the requirements of section 33.1-24-05-114;

d. The generator complies with the requirements of subdivisions b and c of subsection 1, sections 33.1-24-05-12 through 33.1-24-05-21, with all applicable requirements of sections 33.1-24-05-250 through 33.1-24-05-299; and

e. The generator complies with the following requirements:

(1) At all times there must be at least one employee either on the premises or oncall (for example, available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all the emergency

response measures specified in paragraph 4. This employee is the emergency coordinator.

(2) The generator shall post the following information next to the telephone:

(a) The name and telephone number of the emergency coordinator;

(b) Location of fire extinguishers and spill control material and, if present, fire alarm; and

(c) The telephone number of the fire department, unless the facility has a direct alarm.

(3) The generator shall ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies;

(4) An emergency coordinator or the emergency coordinator's designee shall respond to any emergency that arises. The applicable responses are as follows:

(a) In the event of a fire, call the fire department or attempt to extinguish it using a fire extinguisher;

(b) In the event of a spill, contain the flow of hazardous waste to the extent possible, and as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil; and

(c) In the event of a fire, explosion, or other release which could threaten human health outside the facility, or when the generator has knowledge that a spill has reached surface water, the generator shall immediately notify the national response center using their twenty-four-hour toll-free number 1-800-424-8802. The report must include the following information:

[1] The name, address, and identification number of the generator;

[2] Date, time, and type of incident (for example, spill or fire);

[3] Quantity and type of hazardous waste involved in the incident;

[4] Extent of injuries, if any; and

[5] Estimated quantity and disposition of recovered materials, if any.

5. A generator who generates greater than one hundred kilograms but less than one thousand kilograms of hazardous waste in a calendar month and who must transport the waste, or offer the waste for transportation, over a distance of two hundred miles or more for offsite treatment, storage, or disposal may accumulate hazardous waste onsite for two hundred seventy days or less without a permit or without having interim status provided the generator complies with the requirements of subsection 4.

6. A generator who generates greater than one hundred kilograms but less than one thousand kilograms of hazardous waste in a calendar month and who accumulates hazardous waste in quantities exceeding six thousand kilograms or accumulates hazardous waste for more than one hundred eighty days (or for more than two hundred seventy days if the generator shall transport the waste or offer the waste for transportation, over a distance of two hundred miles [321.87 kilometers] or more) is an operator of a storage facility and is subject to the requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through

33.1-24-05-819, 33.1-24-05-950 through 33.1-24-05-1149, subsection 5 of section 33.1-24-06-16 and the permit requirements of chapter 33.1-24-06 unless the generator has been granted an extension to one hundred eighty days (or two hundred seventy days if applicable). Such extension may be granted by the department if hazardous waste must remain onsite for longer than one hundred eighty days (or two hundred seventy days if applicable) due to unforeseen, temporary, and uncontrollable circumstances. An extension of up to thirty days may be granted at the discretion of the department on a case-by-case basis.

7. A generator who generates one thousand kilograms or greater of hazardous waste per calendar month who also generates wastewater treatment sludges from electroplating operations that meet the listing description for the hazardous waste code F006, may accumulate F006 waste onsite for more than ninety days, but not more than one hundred eighty days without a permit or without having interim status provided that:

a. The generator has implemented pollution prevention practices that reduce the amount of any hazardous substances, pollutants, or contaminants entering F006 or otherwise released to the environment prior to its recycling;

b. The F006 waste is legitimately recycled through metals recovery;

c. No more than twenty thousand kilograms of F006 waste is accumulated onsite at any one time; and

d. The F006 waste is managed in accordance with the following:

(1) The F006 waste is placed:

(a) In containers and the generator complies with the applicable requirements of sections 33.1-24-05-89 through 33.1-24-05-102 and sections 33.1-24-05-400 through 33.1-24-05-474;

(b) In tanks and the generator complies with the applicable requirements of sections 33.1-24-05-103 through 33.1-24-05-117 and sections 33.1-24-05-400 through 33.1-24-05-474, except for subsection 3 of section 33.1-24-05-110 and section 33.1-24-05-113;

(c) In containment buildings and the generator complies with sections 33.1-24-05-475 through 33.1-24-05-500, and has placed its professional engineer certification that the building complies with the design standards specified in section 33.1-24-05-476 in the facility's operating record prior to operation of the unit. The owner or operator must maintain the following records at the facility:

[1] A written description of procedures to ensure that the F006 waste remains in the unit for no more than one hundred eighty days, a written description of the waste generation and management practices for the facility showing that they are consistent with the one-hundred-eighty-day limit, and documentation that the generator is complying with the procedures;
or

[2] Documentation that the unit is emptied at least once every one hundred eighty days.

(d) Or any combination of subparagraphs a, b, and c, as applicable;

- (2) In addition, such a generator is exempt from all the requirements in sections 33.1-24-05-59 through 33.1-24-05-88, except for sections 33.1-24-05-60 and 33.1-24-05-63;
- (3) The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;
- (4) While being accumulated onsite, each container and tank is labeled or marked clearly with the words, "Hazardous Waste"; and
- (5) The generator complies with the requirements for owners or operators in sections 33.1-24-05-15 through 33.1-24-05-36, with section 33.1-24-05-07, and with subdivision e of subsection 1 of section 33.1-24-05-256.

8. A generator who generates one thousand kilograms or greater of hazardous waste per calendar month who also generates wastewater treatment sludges from electroplating operations that meet the listing description for the hazardous waste code F006, and who must transport this waste, or offer this waste for transportation, over a distance of two hundred miles [321.87 kilometers] or more for offsite metals recovery, may accumulate F006 waste onsite for more than ninety days, but not more than two hundred seventy days without a permit or without having interim status if the generator complies with the requirements of subdivisions a through d of subsection 7.

9. A generator accumulating F006 waste in accordance with subsections 7 and 8 who accumulates F006 waste onsite for more than one hundred eighty days (or for more than two hundred seventy days if the generator must transport this waste, or offer this waste for transportation, over a distance of two hundred miles [321.87 kilometers] or more), or who accumulates more than twenty thousand kilograms of F006 waste onsite is an operator of a storage facility and is subject to the requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, 33.1-24-05-800 through 33.1-24-05-819, 33.1-24-05-950 through 33.1-24-05-1149, subsection 5 of section 33.1-24-06-16, and the permit requirements of chapter 33.1-24-06 unless the generator has been granted an extension to the one hundred eighty day (or two hundred seventy day if applicable) period or an exception to the twenty thousand kilogram accumulation limit. Such extensions and exceptions may be granted by the department if F006 waste must remain onsite for longer than one hundred eighty days (or two hundred seventy days if applicable) or if more than twenty thousand kilograms of F006 waste must remain onsite due to unforeseen, temporary, and uncontrollable circumstances. An extension of up to thirty days or an exception to the accumulation limit may be granted at the discretion of the department on a case-by-case basis.

10. A generator who sends a shipment of hazardous waste to a designated facility with the understanding that the designated facility can accept and manage the waste and later receives that shipment back as a rejected load or residue in accordance with the manifest discrepancy provisions of section 33.1-24-05-39 may accumulate the returned waste onsite in accordance with subsections 1 and 2 or 4, 5, and 6, depending on the amount of hazardous waste onsite in that calendar month. Upon receipt of the returned shipment, the generator must:

- a. Sign item 18c of the manifest, if the transporter returned the shipment using the original manifest; or
- b. Sign item 20 of the manifest, if the transporter returned the shipment using a new manifest.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-13. Recordkeeping.

1. A generator must keep a copy of each manifest signed in accordance with subsection 1 of section 33.1-24-03-07 for three years or until the generator receives a signed copy from the designated facility which received the waste. This signed copy must be retained as a record for at least three years from the date the waste was accepted by the initial transporter.
2. A generator must keep a copy of each biennial report and exception report for a period of at least three years from the due date of the report.
3. A generator must keep records of any test results, waste analyses, or other determinations made in accordance with section 33.1-24-03-02 for at least three years from the date the waste was last sent to onsite or offsite treatment, storage, or disposal.
4. The periods for retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-14. Biennial reporting.

1. A generator who ships any hazardous waste offsite to a treatment, storage, or disposal facility within the United States shall prepare and submit a single copy of a biennial report to the department by March first of each even-numbered year. The biennial report must be submitted on department-approved forms, must cover generator activities during the previous calendar year, and must include the following information:
 - a. The identification number, name, and address of the generator;
 - b. The calendar year covered by the report;
 - c. The identification number, name, and address for each offsite treatment, storage, or disposal facility in the United States to which waste was shipped during the year;
 - d. The name and identification number of each transporter used during the reporting year for shipments to a treatment, storage, or disposal facility within the United States;
 - e. A description, hazardous waste number (from chapter 33.1-24-02), department of transportation hazard class, and quantity of each hazardous waste shipped offsite for shipments to a treatment, storage, or disposal facility within the United States. This information must be listed by identification number of each such offsite facility to which waste was shipped;
 - f. A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated;
 - g. A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to the previous year to the extent such information is available for years prior to 1984; and
 - h. The certification signed by the generator or authorized representative.

2. Any generator who treats, stores, or disposes of hazardous waste onsite must submit a biennial report covering those wastes in accordance with the provisions of chapters 33.1-24-05 and 33.1-24-06.
3. Reporting for exports of hazardous waste is not required on the biennial report form. A separate annual report requirement is set forth in section 33.1-24-03-23.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-15. Exception reporting.

1. A generator of one thousand kilograms or greater of hazardous waste in a calendar month, or greater than one kilogram of acute hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 in a calendar month, who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within thirty-five days of the date the waste was accepted by the initial transporter shall contact the transporter or the owner or operator, or both, of the designated facility to determine the status of the hazardous waste.
2. A generator of one thousand kilograms or greater of hazardous waste in a calendar month, or greater than one kilogram of acute hazardous waste listed in section 33.1-24-02-16 or subsection 5 of section 33.1-24-02-18 in a calendar month, must submit an exception report to the department if the generator has not received a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within forty-five days of the date the waste was accepted by the initial transporter. The exception report must be submitted to the department within sixty days of the date the waste was accepted by the initial transporter and must include:
 - a. A legible copy of the manifest for which the generator does not have confirmation of delivery; and
 - b. A cover letter signed by the generator or the generator's authorized representative explaining the efforts taken to locate the hazardous waste and the results of those efforts.
3. A generator of greater than one hundred kilograms but less than one thousand kilograms of hazardous waste in a calendar month who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within sixty days of the date the waste was accepted by the initial transporter shall submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the department.
4. For rejected shipments of hazardous waste or container residues contained in nonempty containers that are forwarded to an alternate facility by a designated facility using a new manifest (following the procedures of paragraphs a through f of subsection 5 of section 33.1-24-05-39), the generator must comply with the requirements of subsections 1 through 3, as applicable, for the shipment forwarding the material from the designated facility to the alternate facility instead of for the shipment from the generator to the designated facility. For purposes of subsections 1 through 3 for a shipment forwarding such waste to an alternate facility by a designated facility:
 - a. The copy of the manifest received by the generator must have the handwritten signature of the owner or operator of the alternate facility in place of the signature of the owner or operator of the designated facility; and

- b. The thirty-five, forty-five, or sixty-day time frames begin the date the waste was accepted by the initial transporter forwarding the hazardous waste shipment from the designated facility to the alternate facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-16. Additional reporting.

The department, as it deems necessary, may require generators to furnish additional reports concerning the quantities and disposition of wastes identified or listed in this article.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-17. Exports of hazardous waste.

Sections 33.1-24-03-17 through 33.1-24-03-25 establish requirements applicable to exports of hazardous waste. Except to the extent section 33.1-24-03-25 provides otherwise, a primary exporter of hazardous waste must comply with the special requirements of sections 33.1-24-03-17 through 33.1-24-03-25 and a transporter transporting hazardous waste for export shall comply with applicable requirements of chapter 33.1-24-04. Section 33.1-24-03-25 sets forth the requirements of international agreements between the United States and receiving countries which establish different notice, export, and enforcement procedures for the transportation, treatment, storage, and disposal of hazardous waste for shipments between the United States and those countries.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-18. Definitions.

In addition to the definitions set forth in section 33.1-24-01-04, the following definitions apply to sections 33.1-24-03-17 through 33.1-24-03-25:

1. "Consignee" means the ultimate treatment, storage, or disposal facility in a receiving country to which the hazardous waste will be sent.
2. "Environmental protection agency acknowledgment of consent" means the cable sent to the environmental protection agency from the United States embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country's consent to the shipment.
3. "Primary exporter" means any person who is required to originate the manifest for a shipment of a hazardous waste in accordance with chapter 33.1-24-03, which specifies a treatment, storage, or disposal facility in a receiving country as the facility to which the hazardous waste will be sent and any intermediary arranging for the export.
4. "Receiving country" means a foreign country to which a hazardous waste is sent for the purpose of treatment, storage, or disposal (except short-term storage incidental to transportation).
5. "Transit country" means any foreign country, other than a receiving country, through which a hazardous waste is transported.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-19. General requirements.

Exports of hazardous wastes are prohibited except in compliance with the applicable requirements of sections 33.1-24-03-17 through 33.1-24-03-25 and chapter 33.1-24-04. Exports of hazardous waste are prohibited unless:

1. Notification in accordance with section 33.1-24-03-20 has been provided;
2. The receiving country has consented to accept the hazardous waste;
3. A copy of the environmental protection agency acknowledgment of consent to the shipment accompanies the hazardous waste shipment and, unless exported by rail, is attached to the manifest (or shipping paper for exports by water (bulk shipment)); and
4. The hazardous waste shipment conforms to the terms of the receiving country's written consent as reflected in the environmental protection agency acknowledgment of consent.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-20. Notification of intent to export.

1. A primary exporter of hazardous waste shall notify the department and the environmental protection agency of an intended export before such waste is scheduled to leave the United States. A complete notification should be submitted sixty days before the initial shipment is intended to be shipped offsite. This notification may cover export activities extending over a twelve-month or lesser period. The notification must be in writing, signed by the primary exporter, and include the following information:
 - a. Name, mailing address, telephone number, and identification number of the primary exporter; and
 - b. By consignee, for each hazardous waste type:
 - (1) A description of the hazardous waste and hazardous waste number (from chapter 33.1-24-02), United States department of transportation proper shipping name, hazard class, and identification number (UN/NA) for each hazardous waste as identified in 49 CFR part 171-177;
 - (2) The estimated frequency or rate at which such waste is to be exported and the period of time over which such waste is to be exported;
 - (3) The estimated total quantity of the hazardous waste in units as specified in the instructions to the uniform hazardous waste manifest form (8700-22);
 - (4) All points of entry to and departure from each foreign country through which the hazardous waste will pass;
 - (5) A description of the means by which each shipment of the hazardous waste will be transported (for example, mode of transportation vehicle (air, highway, rail, water, etc.)), types of container (drums, boxes, tanks, etc.);

- (6) A description of the manner in which the hazardous waste will be treated, stored, or disposed of in the receiving country (for example, land or ocean incineration, other land disposal, ocean dumping, recycling);
- (7) The name and site address of the consignee and any alternate consignee; and
- (8) The name of any transit countries through which the hazardous waste will be sent and a description of the approximate length of time the hazardous waste will remain in such country and the nature of its handling while there.

2. Notifications sent by mail must be sent to the department and to the following mailing address: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460. Hand-delivered notifications should be sent to: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division, Environmental Protection Agency, Ariel Rios Building, Room 6144, 12th Street and Pennsylvania Avenue NW, Washington, D.C. 20004. In both cases, the following shall be prominently displayed on the front of the envelope: "Attention: Notification of Intent to Export".
3. Except for changes to the telephone number in subdivision a of subsection 1, changes to paragraph 5 of subdivision b of subsection 1, and decreases in the quantity indicated pursuant to paragraph 3 of subdivision b of subsection 1 when the conditions specified on the original notification change (including any exceedance of the estimate of the quantity of hazardous waste specified in the original notification), the primary exporter shall provide the department and the environmental protection agency with a written renotification of the change. The shipment cannot take place until consent of the receiving country to the changes (except for changes to paragraph 8 of subdivision b of subsection 1 and in the ports of entry to and departure from transit countries pursuant to paragraph 4 of subdivision b of subsection 1) has been obtained and the primary exporter receives an environmental protection agency acknowledgment of consent reflecting the receiving country's consent to the changes.
4. Upon request by the department or the environmental protection agency, a primary exporter shall furnish to the department or the environmental protection agency any additional information which a receiving country requests in order to respond to a notification.
5. A notification is complete when the department receives a notification which the department determines satisfies the requirements of subsection 1 and the requirements of the environmental protection agency such that an environmental protection agency acknowledgment of consent is issued to the primary exporter.
6. The primary exporter shall provide the department with a copy of the environmental protection agency acknowledgment of consent prior to shipment offsite.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-21. Special manifest requirements.

A primary exporter shall comply with the manifest requirements of sections 33.1-24-03-04 through 33.1-24-03-07 except that:

1. In lieu of the name, site address, and identification number of the designated permitted facility, the primary exporter shall enter the name and site address of the consignee;

2. In lieu of the name, site address, and identification number of a permitted alternate facility, the primary exporter may enter the name and site address of any alternate consignee;
3. In the International Shipments block, the primary exporter must check the export box and enter the point of exit (city and state) from the United States;
4. The following statement must be added to the end of the first sentence of the certification set forth in item 16 of the uniform hazardous waste manifest form: "and conforms to the terms of the attached environmental protection agency acknowledgment of consent";
5. The primary exporter may obtain the manifest from any source that is registered with the United States environmental protection agency as a supplier of manifests (for example, states, waste handlers, or commercial forms printers);
6. The primary exporter shall require the consignee to confirm in writing the delivery of the hazardous waste to that facility and to describe any significant discrepancies (as defined in subsection 1 of section 33.1-24-05-39) between the manifest and the shipment. A copy of the manifest signed by such facility may be used to confirm delivery of the hazardous waste;
7. In lieu of the requirements of subsection 4 of section 33.1-24-03-04, where a shipment cannot be delivered for any reason to the designated or alternate consignee, the primary exporter shall:
 - a. Renotify the state and the environmental protection agency of a change in the conditions of the original notification to allow shipment to a new consignee in accordance with subsection 3 of section 33.1-24-03-20 and obtain an environmental protection agency acknowledgment of consent prior to delivery; or
 - b. Instruct the transporter to return the waste to the primary exporter in the United States or designate another facility within the United States; and
 - c. Instruct the transporter to revise the manifest in accordance with the primary exporter's instructions.
8. The primary exporter shall attach a copy of the environmental protection agency acknowledgment of consent to the shipment to the manifest which must accompany the hazardous waste shipment. For exports by rail or water (bulk shipments), the primary exporter shall provide the transporter with an environmental protection agency acknowledgment of consent which must accompany the hazardous waste but which need not be attached to the manifest except that for exports by water (bulk shipments) the primary exporter shall attach the copy of the environmental protection agency acknowledgment of consent to the shipping paper; and
9. The primary exporter shall provide the transporter with an additional copy of the manifest for delivery to the United States customs official at the point the hazardous waste leaves the United States in accordance with subdivision d of subsection 7 of section 33.1-24-04-04.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-22. Exception reports for exporters.

In lieu of the requirements of section 33.1-24-03-15, a primary exporter shall file an exception report with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460 and the department if any of the following occurs:

1. The primary exporter has not received a copy of the manifest signed by the transporter stating the date and place of departure from the United States within forty-five days from the date it was accepted by the initial transporter; or
2. Within ninety days from the date the waste was accepted by the initial transporter, the primary exporter has not received written confirmation from the consignee that the hazardous waste was received; or
3. The waste is returned to the United States.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-23. Annual reports for exporters.

1. Primary exporters of hazardous waste shall file with the environmental protection agency administrator and the department no later than March first of each year, a report summarizing the types, quantities, frequency, and ultimate destination of all hazardous waste exported during the previous calendar year. Such reports must include the following:
 - a. The identification number, name, mailing, and site address of the exporter;
 - b. The calendar year covered by the report;
 - c. The name and site address of each consignee;
 - d. By consignee, for each hazardous waste exported, a description of the hazardous waste, the hazardous waste number (from chapter 33.1-24-02), department of transportation hazard class, the name and identification number (where applicable) for each transporter used, the total amount of waste shipped, and number of shipments pursuant to each notification;
 - e. Except for hazardous waste produced by exporters of greater than one hundred kilograms but less than one thousand kilograms in a calendar month, unless provided pursuant to section 33.1-24-03-14, in even-numbered years:
 - (1) A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated; and
 - (2) A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984.
 - f. A certification signed by the primary exporter which states: I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.
2. Annual reports submitted by mail must be sent to the department and to the following mailing address: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460. Hand-delivered reports should be sent to: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International

Compliance Assurance Division, Environmental Protection Agency, Ariel Rios Building, Room 6144, 12th Street and Pennsylvania Avenue NW, Washington, D.C. 20004.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-24. Recordkeeping.

1. For all exports a primary exporter shall:
 - a. Keep a copy of each notification of intent to export for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;
 - b. Keep a copy of each environmental protection agency acknowledgment of consent for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;
 - c. Keep a copy of each confirmation of delivery of the hazardous waste from the consignee for at least three years from the date the hazardous waste was accepted by the initial transporter; and
 - d. Keep a copy of each annual report for a period of at least three years from the due date of the report.
2. The periods of retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department or the administrator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-25. International agreements.

1. Any person who exports or imports wastes that are considered hazardous under United States national procedures to or from designated member countries of the organization for economic cooperation and development as defined in subdivision a for purposes of recovery is subject to sections 33.1-24-03-50 through 33.1-24-03-59. The requirements of sections 33.1-24-03-17 through 33.1-24-03-25 and section 33.1-24-03-30 do not apply to such exports and imports. A waste is considered hazardous under United States national procedures if the waste meets the federal definition of hazardous waste in 40 CFR 261.3 and is subject to manifesting requirements at sections 33.1-24-03-04 through 33.1-24-03-07, the universal waste management standards of sections 33.1-24-05-700 through 33.1-24-05-799 or the export requirements in the spent lead-acid battery management standards of sections 33.1-24-05-235 through 33.1-24-05-249.
 - a. For the purposes of sections 33.1-24-03-50 through 33.1-24-03-59, the designated organization for economic cooperation and development member countries consist of Australia, Austria, Belgium, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Poland, Portugal, the Republic of Korea, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

b. For the purposes of sections 33.1-24-03-50 through 33.1-24-03-59, Canada and Mexico are considered organization for economic cooperation and development member countries only for the purposes of transit.

2. Any person who exports hazardous waste to or imports hazardous waste from: A designated organization for economic cooperation and development member country for purposes other than recovery (for example, incineration, disposal), Mexico (for any purpose), or Canada (for any purpose) remains subject to the requirements of sections 33.1-24-03-17 through 33.1-24-03-25 and section 33.1-24-03-30, and is not subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-27. [Reserved].

33.1-24-03-28. [Reserved].

33.1-24-03-29. [Reserved].

33.1-24-03-30. Imports of hazardous waste.

1. Any person who imports hazardous waste from a foreign country into the United States shall comply with the requirements of this chapter and the special requirements of this section.

2. When importing a hazardous waste, a person shall meet all the requirements of section 33.1-24-03-04 for the manifest except that:

a. In place of the generator's name, address, and identification number, the name and address of the foreign generator and the importer's name, address, and identification number must be used.

b. In place of the generator's signature on the certification statement, the United States importer or the importer's agent shall sign and date the certification and obtain the signature of the initial transporter.

3. A person who imports hazardous waste may obtain the manifest form from any source that is registered with the United States environmental protection agency as a supplier of manifests (for example, states, waste handlers, or commercial forms printers).

4. In the International Shipments block, the importer must check the import box and enter the point of entry (city and state) into the United States.

5. The importer must provide the transporter with additional copies of the manifest to be submitted by the receiving facility to the environmental protection agency and the department in accordance with subdivision c of subsection 1 of section 33.1-24-05-38 and the applicable requirements of subsection 5 of section 33.1-24-06-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-50. Transboundary movements of hazardous waste for recovery within the organization for economic cooperation and development.

Sections 33.1-24-03-50 through 33.1-24-03-59 establish requirements applicable to transboundary movements of hazardous waste for recovery within the organization for economic cooperation and development.

1. The requirements of sections 33.1-24-03-50 through 33.1-24-03-59 apply to imports and exports of wastes that are considered hazardous under United States national procedures and are destined for recovery operations in the countries listed in subdivision a of subsection 1 of section 33.1-24-03-25. A waste is considered hazardous under United States national procedures if the waste:

- a. Meets the federal definition of a hazardous waste in 40 CFR 261.3; and
 - b. Is subject to the manifesting requirements of sections 33.1-24-03-04 through 33.1-24-03-07, the universal waste management standards of sections 33.1-24-05-700 through 33.1-24-05-799 or the export requirements in the spent lead-acid battery management standards of sections 33.1-24-05-235 through 33.1-24-05-249.
2. Any person (exporter, importer, or recovery facility operator) who mixes two or more wastes (including hazardous and nonhazardous wastes) or otherwise subjects two or more wastes (including hazardous and nonhazardous wastes) to physical or chemical transformation operations, and thereby creates a new hazardous waste, becomes a generator and assumes all subsequent generator duties under chapter 33.1-24-03 and any exporter duties, if applicable, under sections 33.1-24-03-50 through 33.1-24-03-59.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-51. Definitions.

In addition to the definitions set forth in section 33.1-24-01-04, the following definitions apply to sections 33.1-24-03-50 through 33.1-24-03-59:

1. "Competent authority" means the regulatory authority or authorities of concerned countries having jurisdiction over transboundary movements of wastes destined for recovery operations.
2. "Countries concerned" means the organization for economic cooperation and development member countries of export or import and any organization for economic cooperation and development member countries of transit.
3. "Country of export" means any designated organization for economic cooperation and development member country listed in subdivision a of subsection 1 of section 33.1-24-03-25 from which a transboundary movement of hazardous wastes is planned to be initiated or is initiated.
4. "Country of import" means any designated organization for economic cooperation and development member country listed in subdivision a of subsection 1 of section 33.1-24-03-25 to which a transboundary movement of hazardous wastes is planned or takes place for the purpose of submitting the wastes to recovery operations therein.
5. "Country of transit" means any designated organization for economic cooperation and development member country listed in subdivisions a and b of subsection 1 of section 33.1-24-03-25 other than the country of export or country of import across which a transboundary movement of hazardous wastes is planned or takes place.
6. "Exporter" means the person under the jurisdiction of the country of export who has, or will have at the time the planned transboundary movement commences, possession or other forms of legal control of the wastes and who proposes transboundary movement of the hazardous wastes for the ultimate purpose of submitting them to recovery operations. When the United States is the country of export, exporter is interpreted to mean a person domiciled in the United States.
7. "Importer" means the person to whom possession or other form of legal control of the waste is assigned at the time the waste is received in the country of import.
8. "Organization for economic cooperation and development area" means all land or marine areas under the national jurisdiction of any organization for economic cooperation and

development member country listed in section 33.1-24-03-25. When the regulations refer to shipments to or from an organization for economic cooperation and development member country, this means organization for economic cooperation and development area.

9. "OECD" means the organization for economic cooperation and development.

10. "Recognized trader" means a person who, with appropriate authorization of countries concerned, acts in the role of principal to purchase and subsequently sell wastes; this person has legal control of such wastes from time of purchase to time of sale; such a person may act to arrange and facilitate transboundary movements of wastes destined for recovery operations.

11. "Recovery facility" means a facility which, under applicable domestic law, is operating or is authorized to operate in the country of import to receive wastes and to perform recovery operations on them.

12. "Recovery operations" means activities leading to resource recovery, recycling, reclamation, direct reuse or alternative uses, which include:

a. R1 - Use as a fuel (other than in direct incineration) or other means to generate energy.

b. R2 - Solvent reclamation/regeneration.

c. R3 - Recycling/reclamation of organic substances which are not used as solvents.

d. R4 - Recycling/reclamation of metals and metal compounds.

e. R5 - Recycling/reclamation of other inorganic materials.

f. R6 - Regeneration of acids or bases.

g. R7 - Recovery of components used for pollution abatement.

h. R8 - Recovery of components used from catalysts.

i. R9 - Used oil rerefining or other reuses of previously used oil.

j. R10 - Land treatment resulting in benefit to agriculture or ecological improvement.

k. R11 - Uses of residual materials obtained from any of the operations numbered R1 through R10.

l. R12 - Exchange of wastes for submission to any of the operations numbered R1 through R11.

m. R13 - Accumulation of material intended for any operation numbered R1 through R12.

13. "Transboundary movement" means any movement of wastes from an area under the national jurisdiction of one organization for economic cooperation and development member country to an area under the national jurisdiction of another organization for economic cooperation and development member country.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-52. General conditions.

1. The level of control for exports and imports of waste is indicated by assignment of the waste to either a list of wastes subject to the green control procedures or a list of wastes subject to the amber control procedures and by the national procedures of the United States, as defined in subsection 1 of section 33.1-24-03-50. The organization for economic cooperation and development green and amber lists are incorporated by reference in subsection 4 of section 33.1-24-03-59.

a. Listed wastes subject to the green control procedures.

(1) Green wastes that are not considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50 are subject to existing controls normally applied to commercial transactions.

(2) Green wastes that are considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50 are subject to the amber control procedures set forth in sections 33.1-24-03-50 through 33.1-24-03-59.

b. Listed wastes subject to the amber control procedures.

(1) Amber wastes that are considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50 are subject to the amber control procedures set forth in sections 33.1-24-03-50 through 33.1-24-03-59.

(2) Amber wastes that are considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50, are subject to the amber control procedures in the United States, even if they are imported to or exported from a designated member country listed in subdivision a of subsection 1 of section 33.1-24-03-25 that does not consider the waste to be hazardous. In such an event, the responsibilities of the amber control procedures shift as provided.

(a) For United States exports, the United States shall issue an acknowledgment of receipt and assume other responsibilities of the competent authority of the country of import.

(b) For United States imports, the United States recovery facility or importer, or both, and the United States shall assume the obligations associated with the amber control procedures that normally apply to the exporter and country of export, respectively.

(3) Amber wastes that are not considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50, but are considered hazardous by an organization for economic cooperation and development member country are subject to the amber control procedures in the organization for economic cooperation and development member country that considers the waste hazardous. All responsibilities of the United States importer or exporter, or both, shift to the importer or exporter, or both, of the organization for economic cooperation and development member country that considers the waste hazardous unless the parties make other arrangements through contracts.

Note: Some wastes subject to the amber control procedures are not listed or otherwise identified as hazardous under the Resource Conservation and Recovery Act, and therefore are not subject to the amber control procedures of sections 33.1-24-03-50 through 33.1-24-03-59. Regardless of the status of the waste under the Resource

Conservation and Recovery Act, however, other federal environmental statutes (for example, the Toxic Substances Control Act) restrict certain waste imports or exports. Such restrictions continue to apply with regard to sections 33.1-24-03-50 through 33.1-24-03-59.

c. Procedures for mixtures of wastes.

- (1) A green waste that is mixed with one or more other green wastes such that the resulting mixture is not considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50 shall be subject to the green control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.

Note: The regulated community should note that some organization for economic cooperation and development member countries may require, by domestic law, that mixtures of different green wastes be subject to the amber control procedures.

- (2) A green waste that is mixed with one or more amber wastes, in any amount, de minimis or otherwise, or a mixture of two or more amber wastes, such that the resulting waste mixture is considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50 are subject to the amber control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.

Note: The regulated community should note that some organization for economic cooperation and development member countries may require, by domestic law, that a mixture of a green waste and more than a de minimis amount of an amber waste or a mixture of two or more amber wastes be subject to the amber control procedures.

d. Wastes not yet assigned to an organization for economic cooperation and development waste list are eligible for transboundary movements, as follows:

- (1) If such wastes are considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50, such wastes are subject to the amber control procedures.
- (2) If such wastes are not considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50, such wastes are subject to the green control procedures.

2. General conditions applicable to transboundary movements of hazardous waste:

- a. The waste must be destined for recovery operations at a facility that, under applicable domestic law, is operating or is authorized to operate in the importing country;
- b. The transboundary movement must be in compliance with applicable international transport agreements; and

Note: These international agreements include the Chicago Convention (1944), ADR (1957), ADN (1970), MARPOL Convention (1973/1978), SILAS Convention (1974), IMDG Code (1985), COTIF (1985), and RID (1985).

- c. Any transit of waste through a non-organization for economic cooperation and development member country must be conducted in compliance with all applicable international and national laws and regulations.

3. Provisions relating to re-export for recovery to a third country:

- a. Re-export of wastes subject to the amber control procedures from the United States, as the country of import, to a third country listed in subdivision a of subsection 1 of section 33.1-24-03-25 may occur only after an exporter in the United States provides notification to and obtains consent from the competent authorities in the third country, the original country of export, and any transit countries. The notification must comply with the notice and consent procedures in section 33.1-24-03-53 for all countries concerned and the original country of export. The competent authorities of the original country of export, as well as the competent authorities of all other countries concerned have thirty days to object to the proposed movement.
- (1) The thirty-day period begins once the competent authorities of both the initial country of export and new country of import issue acknowledgments of receipt of the notification.
- (2) The transboundary movement may commence if no objection has been lodged after the thirty-day period has passed or immediately after written consent is received from all relevant organization for economic cooperation and development importing and transit countries.
- b. In the case of re-export of amber wastes to a country other than those listed in subdivision a of subsection 1 of section 33.1-24-03-25, notification to and consent of the competent authorities of the organization for economic cooperation and development member country of export and any organization for economic cooperation and development member countries of transit is required as specified in subdivision a, in addition to compliance with all international agreements and arrangements to which the first importing organization for economic cooperation and development member country is a party and all applicable regulatory requirements for exports from the first country of import.

4. Duty to return or re-export wastes subject to the amber control procedures. When a transboundary movement of wastes subject to the amber control procedures cannot be completed in accordance with the terms of the contract or the consents and alternative arrangements cannot be made to recover the wastes in an environmentally sound manner in the country of import, the waste must be returned to the country of export or re-exported to a third country. The provisions of subsection 3 apply to any shipments to be re-exported to a third country. The following provisions apply to shipments to be returned to the country of export as appropriate:

- a. Return from the United States to the country of export: The United States importer must inform the environmental protection agency at the specified address in paragraph 1 of subdivision a of subsection 2 of section 33.1-24-03-53 and the state of the need to return the shipment. The environmental protection agency will then inform the competent authorities of the countries of export and transit, citing the reasons for returning the wastes. The United States importer must complete the return within ninety days from the time the environmental protection agency informs the country of export of the need to return the waste, unless informed in writing by the environmental protection agency of another time frame agreed to by the concerned member countries. If the return shipment will cross any transit country, the return shipment may only occur after the environmental protection agency provides notification to and obtains consent from the competent authority of the country of transit, and provides a copy of that consent to the United States importer.
- b. Return from the country of import to the United States: The United States exporter must provide for the return of the hazardous waste shipment within ninety days from the time

the country of import informs the environmental protection agency of the need to return the waste or such other period of time as the concerned member countries agree. The United States exporter must submit an exception report to the environmental protection agency and the state in accordance with subsection 2 of section 33.1-24-03-57.

5. Duty to return wastes subject to the amber control procedures from a country of transit. When a transboundary movement of wastes subject to the amber control procedures does not comply with the requirements of the notification and movement documents or otherwise constitutes illegal shipment, and if alternative arrangements cannot be made to recover these wastes in an environmentally sound manner, the waste must be returned to the country of export. The following provisions apply as appropriate:

a. Return from the United States (as country of transit) to the country of export. The United States transporter must inform the environmental protection agency at the specified address in paragraph 1 of subdivision a of subsection 2 of section 33.1-24-03-53 and the state of the need to return the shipment. The environmental protection agency will then inform the competent authority of the country of export, citing the reasons for returning the waste. The United States transporter must complete the return within ninety days from the time the environmental protection agency informs the country of export of the need to return the waste, unless informed in writing by the environmental protection agency of another time frame agreed to by the concerned member countries.

b. Return from the country of transit to the United States (as country of export): The United States exporter must provide for the return of the hazardous waste shipment within ninety days from the time the competent authority of the country of transit informs the environmental protection agency of the need to return the waste or such other period of time as the concerned member countries agree. The United States exporter must submit an exception report to the environmental protection agency and the state in accordance with subsection 2 of section 33.1-24-03-57.

6. Requirements for wastes destined for and received by R12 and R13 facilities. The transboundary movement of wastes destined for R12 and R13 operations must comply with all amber control procedures for notification and consent as set forth in section 33.1-24-03-53 and for the movement document as set forth in section 33.1-24-03-54. Additional responsibilities of R12 or R13, or both, facilities include:

a. Indicating in the notification document the foreseen recovery facility or facilities where the subsequent R1 through R11 recovery operation takes place or may take place.

b. Within three days of the receipt of the wastes by the R12 or R13, or both, recovery facility or facilities, the facilities shall return a signed copy of the movement document to the exporter and to the competent authorities of the countries of export and import. The facilities shall retain the original of the movement document for three years.

c. As soon as possible, but no later than thirty days after the completion of the R12 or R13, or both, recovery operation and no later than one calendar year following the receipt of the waste, the R12 or R13 facilities shall send a certificate of recovery to the foreign exporter and to the competent authority of the country of export and to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and to the state, by electronic mail, electronic mail without digital signature followed by mail, or fax followed by mail.

d. When an R12 or R13, or both, recovery facility delivers wastes for recovery to an R1 through R11 recovery facility located in the country of import, it shall obtain as soon as possible, but no later than one calendar year following delivery of the waste, a

certification from the R1 through R11 facility that recovery of the wastes at that facility has been completed. The R12 or R13, or both, facility must promptly transmit the applicable certification to the competent authorities of the countries of import and export, identifying the transboundary movements to which the certification pertain.

e. When an R12 or R13, or both, recovery facility delivers wastes for recovery to an R1 through R11 recovery facility located:

(1) In the initial country of export, amber control procedures apply including a new notification;

(2) In a third country other than the initial country of export, amber control procedures apply, with the additional provision that the competent authority of the initial country of export shall also be notified of the transboundary movement.

7. **Laboratory analysis exemption.** The transboundary movement of an amber waste is exempt from the amber control procedures if it is in certain quantities and destined for laboratory analysis to assess its physical or chemical characteristics, or to determine its suitability for recovery operations. The quantity of such waste shall be determined by the minimum quantity reasonably needed to perform the analysis in each particular case adequately but in no case exceed twenty-five kilograms. Waste destined for laboratory analysis must still be appropriately packaged and labeled.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-53. Notification and consent.

1. **Applicability.** Consent must be obtained from the competent authorities of the relevant organization for economic cooperation and development countries of import and transit prior to exporting hazardous waste destined for recovery operations subject to sections 33.1-24-03-50 through 33.1-24-03-59. Hazardous wastes subject to the amber control procedures are subject to the requirements of subsection 2; and wastes not identified on any list are subject to the requirements of subsection 3.

2. **Amber wastes.** Exports of hazardous wastes from the United States as described in subsection 1 of section 33.1-24-03-50 that are subject to the amber control procedures are prohibited unless the notification and consent requirements of subdivision a or b of subsection 2 are met.

a. Transactions requiring specific consent:

(1) **Notification.** At least forty-five days prior to commencement of each transboundary movement, the exporter must provide written notification in English of the proposed transboundary movement to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and the state, with the words "Attention: Organization for Economic Cooperation and Development Export Notification" prominently displayed on the envelope. This notification must include all of the information identified in subsection 4. In cases where wastes having similar physical and chemical characteristics, the same United Nations classification, the same hazardous waste codes, and are to be sent periodically to the same recovery facility by the same exporter, the exporter may submit one general notification of intent to export these wastes in multiple shipments during a period of up to one year. Even when a

general notification is used for multiple shipments, each shipment still must be accompanied by its own movement document pursuant to section 33.1-24-03-54.

(2) **Tacit consent.** If no objection has been lodged by any countries concerned (for example, exporting, importing, or transit) to a notification provided pursuant to paragraph 1 within thirty days after the date of issuance of the acknowledgment of receipt of notification by the competent authority of the country of import, the transboundary movement may commence. Tacit consent expires one calendar year after the close of the thirty-day period; renotification and renewal of all consents are required for exports after that date.

(3) **Written consent.** If the competent authorities of all the relevant organization for economic cooperation and development importing and transit countries provide written consent in a period less than thirty days, the transboundary movement may commence immediately after all necessary consents are received. Written consent expires for each relevant organization for economic cooperation and development importing and transit country one calendar year after that date of that country's consent unless otherwise specified; renotification and renewal of each expired consent is required for exports after that date.

b. Transboundary movements to facilities preapproved by the competent authorities of the importing countries to accept specific wastes for recovery:

(1) Notification. The exporter must provide the environmental protection agency, and the state, a notification that contains all the information identified in subsection 4 in English, at least ten days in advance of commencing shipment to a preapproved facility. The notification must indicate that the recovery facility is preapproved, and may apply to a single specific shipment or to multiple shipments as described in paragraph 1 of subdivision a. This information must be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and the state, with the words "Organization for Economic Cooperation and Development Export Notification - Preapproved Facility" prominently displayed on the envelope. General notifications that cover multiple shipments as described in paragraph 1 of subdivision a may cover a period of up to three years. Even when a general notification is used for multiple shipments, each shipment still must be accompanied by its own movement document pursuant to section 33.1-24-03-54.

(2) Exports to preapproved facilities may take place after the elapse of seven working days from the issuance of an acknowledgment of receipt of the notification by the competent authority of the country of import unless the exporter has received information indicating that the competent authority of any countries concerned objects to the shipment.

3. **Wastes not covered in the organization for economic cooperation and development green and amber lists.** Wastes destined for recovery operations, that have not been assigned to the organization for economic cooperation and development green and amber lists, incorporated by reference in subsection 4 of section 33.1-24-03-59, but which are considered hazardous under United States national procedures as defined in subsection 1 of section 33.1-24-03-50, are subject to the notification and consent requirements established for the amber control procedures in accordance with subsection 2. Wastes destined for recovery operations, that have not been assigned to the organization for economic cooperation and development green and amber lists incorporated by reference in subsection 4 of section

33.1-24-03-59, and are not considered hazardous under United States national procedures as defined by subsection 1 of section 33.1-24-03-50 are subject to the green control procedures.

4. Notifications submitted under this section must include the following information:

- a. Serial number or other accepted identifier of the notification document;
- b. Exporter name and identification number (if applicable), address, telephone, fax numbers, and electronic mail address;
- c. Importing recovery facility name, address, telephone, fax number, electronic mail address, and technologies employed;
- d. Importer name (if not the owner or operator of the recovery facility), address, telephone, fax numbers, and electronic mail address; whether the importer will engage in waste exchange recovery operation R12 or waste accumulation recovery operation R13 prior to delivering the waste to the final recovery facility and identification of recovery operations to be employed at the final recovery facility;
- e. Intended transporters or their agents, or both, address, telephone, fax, and electronic mail address;
- f. Country of export and relevant competent authority, and point of departure;
- g. Countries of transit and relevant competent authorities and points of entry and departure;
- h. Country of import and relevant competent authority, and point of entry;
- i. Statement of whether the notification is a single notification or a general notification. If general, include period of validity requested;
- j. Dates foreseen for commencement of transboundary movements;
- k. Means of transport envisaged;
- l. Designation of waste types from the appropriate organization for economic cooperation and development list incorporated by reference in subsection 4 of section 33.1-24-03-59, descriptions of each waste type, estimated total quantity of each, hazardous waste code, and the United Nations number for each waste type;
- m. Specification of the recovery operations as defined in section 33.1-24-03-51.
- n. Certification signed by the exporter that states:

I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally-enforceable written contractual obligations have been entered into, and that any applicable insurance or other financial guarantees are or shall be in force covering the transboundary movement.

Name: _____

Signature: _____

Date: _____

Note: The United States does not currently require financial assurance for these waste shipments. However, United States exporters may be asked by other governments to provide and certify to such assurance as a condition of obtaining consent to a proposed movement.

5. **Certificate of Recovery.** As soon as possible, but no later than thirty days after the completion of recovery and no later than one calendar year following receipt of the waste, the United States recovery facility shall send a certificate of recovery to the exporter and to the competent authorities of the countries of export and import by mail, electronic mail without a digital signature followed by mail, or fax followed by mail. The certificate of recovery shall include a signed, written and dated statement that affirms that the waste materials were recovered in the manner agreed to by the parties to the contract required under section 33.1-24-03-55.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-54. Movement document.

1. All United States parties subject to the contract provisions of section 33.1-24-03-55 must ensure that a movement document meeting the conditions of subsection 2 of this section accompanies each transboundary movement of wastes subject to the amber control procedures from the initiation of the shipment until it reaches the final recovery facility, including cases in which the waste is stored or sorted, or both, by the importer prior to shipment to the final recovery facility, except as provided in subdivisions a and b of subsection 1.
 - a. For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must forward the movement document with the manifest to the last water (bulk shipment) transporter to handle the waste in the United States if exported by water (in accordance with the manifest routing procedures of subsection 3 of section 33.1-24-03-07).
 - b. For rail shipments of hazardous waste within the United States which originate at the site of generation, the generator must forward the movement document with the manifest (in accordance with the routing procedures for the manifest in subsection 4 of section 33.1-24-03-07) to the next nonrail transporter, if any, or the last rail transporter to handle the waste in the United States if exported by rail.
2. The movement document must include all information required under section 33.1-24-03-53 (for notification), as well as the following information:
 - a. Date movement commenced;
 - b. Name (if not exporter), address, telephone, fax numbers, and electronic mail of primary exporter;
 - c. Company name and identification number of all transporters;
 - d. Identification (license, registered name or registration number) of means of transport, including types of packaging envisaged;
 - e. Any special precautions to be taken by transporters;
 - f. Certification signed by the exporter that no objection to the shipment has been lodged, as follows:

I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally-enforceable written contractual obligations have been entered into, that any applicable insurance or other financial guarantees are or shall be in force covering the transboundary movement, and that:

- (1) All necessary consents have been received; or
- (2) The shipment is directed to a recovery facility within the organization for economic cooperation and development area and no objection has been received from any of the countries concerned within the thirty-day tacit consent period; or
- (3) The shipment is directed to a recovery facility preapproved for that type of waste within the organization for economic cooperation and development area; such an authorization has not been revoked, and no objection has been received from any of the countries concerned.

(Delete sentences that are not applicable)

Name: _____

Signature: _____

Date: _____

g. Appropriate signatures for each custody transfer (for example, transporter, importer, and owner or operator of the recovery facility).

3. Exporters also must comply with the special manifest requirements of subsections 1, 2, 3, 5, and 9 of section 33.1-24-03-21, and importers must comply with the import requirements of section 33.1-24-03-30.

4. Each United States person that has physical custody of the waste from the time the movement commences until it arrives at the recovery facility must sign the movement document (for example, transporter, importer, and owner or operator of the recovery facility).

5. Within three working days of the receipt of imports subject to sections 33.1-24-03-50 through 33.1-24-03-59, the owner or operator of the United States recovery facility must send signed copies of the movement document to the exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, to the state and to the competent authorities of the countries of export and transit. If the concerned United States recovery facility is a R12 or R13, or both, recovery facility as defined under section 33.1-24-03-51, the facility shall retain the original of the movement document for three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-55. Contracts.

1. Transboundary movements of hazardous wastes subject to the amber control procedures are prohibited unless they occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Such contracts or equivalent arrangements must be executed by the exporter and the owner or operator, or both, of the recovery facility, and must specify responsibilities for each. Contracts or equivalent arrangements are valid for the purposes of this section only if persons assuming obligations under the contracts or equivalent arrangements have appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.

2. Contracts or equivalent arrangements must specify the name and identification number, where available, of subdivisions a through d:

- a. The generator of each type of waste;
- b. Each person who will have physical custody of the wastes;
- c. Each person who will have legal control of the wastes; and
- d. The recovery facility.

3. Contracts or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the wastes if their disposition cannot be carried out as described in the notification of intent to export. In such cases, contracts must specify that:

- a. The person having actual possession or physical control over the wastes will immediately inform the exporter and the competent authorities of the countries of export and import and, if the wastes are located in a country of transit, the competent authorities of that country; and
- b. The person specified in the contract will assume responsibility for the adequate management of the wastes in compliance with applicable laws and regulations including, if necessary, arranging the return of wastes and, as the case may be, shall provide the notification for re-export.

4. Contracts must specify that the importer will provide the notification required in subsection 3 of section 33.1-24-03-52 prior to the re-export of controlled wastes to a third country.

5. Contracts or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of any countries concerned, in accordance with applicable national or international law requirements.

Note: Financial guarantees so required are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The United States does not require such financial guarantees at this time; however, some organization for economic cooperation and development member countries do. It is the responsibility of the exporter to ascertain and comply with such requirements; in some cases, transporters or importers may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

6. Contracts or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of sections 33.1-24-03-50 through 33.1-24-03-59.

7. Upon request by the environmental protection agency, United States exporters, importers, or recovery facilities must submit to the environmental protection agency copies of contracts, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Information contained in the contracts or equivalent arrangements for which a claim of confidentiality is asserted in accordance with 40 CFR 2.203(b) will be treated as confidential and will be disclosed by the environmental protection agency only as provided in 40 CFR 260.2.

Note: Although the United States does not require routine submission of contracts at this time, the organization for economic cooperation and development decision allows member countries to impose such requirements. When other organization for economic cooperation and development member countries require submission of partial or complete copies of the

contract as a condition to granting consent to proposed movements, the environmental protection agency will request the required information; absent submission of such information, some organization for economic cooperation and development member countries may deny consent for the proposed movement.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-56. Provisions relating to recognized traders.

1. A recognized trader who takes physical custody of a waste and conducts recovery operations (including storage prior to recovery) is acting as the owner or operator of a recovery facility and must be so authorized in accordance with all applicable federal laws and state rules.
2. A recognized trader acting as an exporter or importer for transboundary shipments of waste must comply with all the requirements of sections 33.1-24-03-50 through 33.1-24-03-59 associated with being an exporter or importer.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-57. Reporting and recordkeeping.

1. **Annual reports.** For all waste movements subject to sections 33.1-24-03-50 through 33.1-24-03-59, persons (for example, exporters and recognized traders) who meet the definition of primary exporter in section 33.1-24-03-18 or who initiate the movement documentation under section 33.1-24-03-54 shall file an annual report with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and the state, no later than March 1 of each year summarizing the types, quantities, frequency, and ultimate destination of all such hazardous waste exported during the previous calendar year. (If the primary exporter or the person who initiates the movement document under section 33.1-24-03-54 is required to file an annual report for waste exports that are not covered under sections 33.1-24-03-50 through 33.1-24-03-59, the primary exporter or the person who initiates the movement document under section 33.1-24-03-54 may include all export information in one report provided the following information on exports of waste destined for recovery within the designated organization for economic cooperation and development member countries is contained in a separate section.) Such reports shall include all of the following:
 - a. The identification number, name, and mailing and site address of the exporter filing the report;
 - b. The calendar year covered by the report;
 - c. The name and site address of each final recovery facility;
 - d. By final recovery facility, for each hazardous waste exported, a description of the hazardous waste, the hazardous waste number (from sections 33.1-24-02-10 through 33.1-24-02-19), designation of waste types and applicable waste codes from the appropriate organization for economic cooperation and development waste list incorporated by reference in subsection 4 of section 33.1-24-03-59, department of transportation hazard class, the name and identification number (where applicable) for each transporter used, the total amount of hazardous waste shipped pursuant to sections

33.1-24-03-50 through 33.1-24-03-59, and number of shipments pursuant to each notification;

e. In even-numbered years, for each hazardous waste exported, except for hazardous waste produced by exporters of greater than one hundred kilograms but less than one thousand kilograms in a calendar month, and except for hazardous waste for which information was already provided pursuant to section 33.1-24-03-14.

(1) A description of the efforts undertaken during the year to reduce the volume and toxicity of the waste generated; and

(2) A description of the changes in volume and toxicity of the waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984; and

f. A certification signed by the person acting as primary exporter or initiator of the movement document under section 33.1-24-03-54 that states:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

2. **Exception reports.** Any person who meets the definition of primary exporter in section 33.1-24-03-18 or who initiates the movement document under section 33.1-24-03-54 must file an exception report in lieu of the requirements of section 33.1-24-03-15 (if applicable) with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, and the state, if any of the following occurs:

a. The primary exporter or the person who initiates the movement document has not received a copy of the hazardous waste manifest (if applicable) signed by the transporter identifying the point of departure of the waste from the United States, within forty-five days from the date it was accepted by the initial transporter;

b. Within ninety days from the date the waste was accepted by the initial transporter, the exporter has not received written confirmation from the recovery facility that the hazardous waste was received;

c. The waste is returned to the United States.

3. **Recordkeeping.**

a. Persons who meet the definition of primary exporter in section 33.1-24-03-18 or who initiate the movement document under section 33.1-24-03-54 shall keep the following records:

(1) A copy of each notification of intent to export and all written consents obtained from the competent authorities of countries concerned for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;

(2) A copy of each annual report for a period of at least three years from the due date of the report;

(3) A copy of any exception reports and a copy of each confirmation of delivery (for example, movement document) sent by the recovery facility to the exporter for at least three years from the date the hazardous waste was accepted by the initial transporter or received by the recovery facility, whichever is applicable; and

(4) A copy of each certificate of recovery sent by the recovery facility to the exporter for at least three years from the date that the recovery facility completed processing the waste shipment.

b. The periods of retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the administrator or the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-58. [Reserved].

33.1-24-03-59. Organization for economic cooperation and development waste lists.

1. For the purposes of sections 33.1-24-03-50 through 33.1-24-03-59, a waste is considered hazardous under United States national procedures, and subject to sections 33.1-24-03-50 through 33.1-24-03-59, if the waste:

a. Meets the federal definition of hazardous waste in 40 CFR 261.3; and

b. Is subject to either the manifesting requirements at sections 33.1-24-03-04 through 33.1-24-03-07, the universal waste management standards of sections 33.1-24-05-700 through 33.1-24-05-799, or the export requirements in the spent lead-acid battery management standards of sections 33.1-24-05-235 through 33.1-24-05-249.

2. If a waste is hazardous under subsection 1, it is subject to the amber control procedures, regardless of whether it appears in appendix 4 of the organization for economic cooperation and development decision, as defined in section 33.1-24-03-51.

3. The appropriate control procedures for hazardous wastes and hazardous waste mixtures are addressed in section 33.1-24-03-52.

4. The organization for economic cooperation and development waste lists, as set forth in Annex B ("Green List") and Annex C ("Amber List") (collectively "Organization for Economic Cooperation and Development waste lists") of the 2009 "guidance manual for the implementation of council decision C(2001) 107/FINAL, as amended, on the control of transboundary movements of wastes destined for recovery operations", are incorporated by reference. This incorporation by reference was approved by the director of the federal register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. This material is incorporated as it exists on the date of the approval and a notice of any change in these materials will be published in the federal register. The materials are available for inspection at the United States Environmental Protection Agency, Docket Center Public Reading Room, Environmental Protection Agency West, Room 3334, 1301 Constitution Avenue NW, Washington, D.C. 20004, (Docket #EPA-HQ-RCRA-2005-0018) or at the national archives and records administration, and may be obtained from the Organization for Economic Cooperation and Development, Environment Directorate, 2 rue Andre Pascal, F-75775 Paris Cedex 16, France. History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-60. Alternative requirements for hazardous waste determination and accumulation of unwanted material for laboratories owned by eligible academic entities.

Sections 33.1-24-03-60 through 33.1-24-03-77 apply to laboratories owned by eligible academic entities that generate hazardous waste and choose to comply with these alternative requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-61. Definitions.

In addition to the definitions set forth in section 33.1-24-01-04, the following definitions apply to sections 33.1-24-03-60 through 33.1-24-03-77:

1. "Central accumulation area" means an onsite hazardous waste accumulation area subject to either subsections 1 and 2 of section 33.1-24-03-12 (large quantity generators), or subsections 4 through 6 of section 33.1-24-03-12 (small quantity generators). A central accumulation area at an eligible academic entity that chooses to be subject to sections 33.1-24-03-60 through 33.1-24-03-77 must also comply with section 33.1-24-03-72 when accumulating unwanted material, or hazardous waste, or both.
2. "College or university" means a private or public, postsecondary, degree-granting, academic institution, that is accredited by an accrediting agency listed annually by the United States department of education.
3. "Eligible academic entity" means a college or university, or a nonprofit research institute that is owned by or has a formal written affiliation agreement with a college or university, or a teaching hospital that is owned by or has a formal written affiliation agreement with a college or university.
4. "Formal written affiliation agreement" for a nonprofit research institute means a written document that establishes a relationship between institutions for the purposes of research or education, or both, and is signed by authorized representatives, as defined by section 33.1-24-01-04, from each institution. A relationship on a project-by-project, or grant-by-grant basis, is not considered a formal written affiliation agreement. A formal written affiliation agreement for a teaching hospital means a master affiliation agreement and program letter of agreement, as defined by the accreditation council for graduate medical education, with an accredited medical program or medical school.
5. "Laboratory" means an area owned by an eligible academic entity where relatively small quantities of chemicals and other substances are used on a nonproduction basis for teaching or research (or diagnostic purposes at a teaching hospital) and are stored and used in containers that are easily manipulated by one person. Photo laboratories, art studios, and field laboratories are considered laboratories. Areas such as chemical stockrooms and preparatory laboratories that provide a support function to teaching, or research laboratories (or diagnostic laboratories at teaching hospitals), are also considered laboratories.

6. "Laboratory clean-out" means an evaluation of the inventory of chemicals and other materials in a laboratory that are no longer needed or that have expired and the subsequent removal of those chemicals or other unwanted materials from the laboratory. A clean-out may occur for several reasons. It may be on a routine basis (for example, at the end of a semester or academic year), or as a result of a renovation, relocation, or change in laboratory supervisor, or occupant, or both. A regularly scheduled removal of unwanted material as required by section 33.1-24-03-69 does not qualify as a laboratory clean-out.
7. "Laboratory worker" means a person who handles chemicals, or unwanted material, or both, in a laboratory and may include faculty, staff, postdoctoral fellows, interns, researchers, technicians, supervisors or managers, and principal investigators. A person does not need to be paid or otherwise compensated for work in the laboratory to be considered a laboratory worker. Undergraduate and graduate students in a supervised classroom setting are not laboratory workers.
8. "Nonprofit research institute" means an organization that conducts research as its primary function and files as a nonprofit organization under the tax code of 26 United States Code 501(c)(3).
9. "Reactive acutely hazardous unwanted material" means an unwanted material that is one of the acutely hazardous commercial chemical products listed in subsection 5 of section 33.1-24-02-18 for reactivity.
10. "Teaching hospital" means a hospital that trains students to become physicians, nurses, or other health or laboratory personnel.
11. "Trained professional" means a person who has completed the applicable hazardous waste training requirements of section 33.1-24-05-07 for large quantity generators, or is knowledgeable about normal operations and emergencies in accordance with paragraph 3 of subdivision e of subsection 4 of section 33.1-24-03-12 for small quantity generators and conditionally exempt small quantity generators. A trained professional may be an employee of the eligible academic entity or may be a contractor or vendor who meets the requisite training requirements.
12. "Unwanted material" means any chemical, mixtures of chemicals, products of experiments, or other material from a laboratory that is no longer needed, wanted, or usable in the laboratory and that is destined for hazardous waste determination by a trained professional. Unwanted materials include reactive acutely hazardous unwanted materials and materials that may eventually be determined not to be solid waste pursuant to section 33.1-24-02-02, or a hazardous waste pursuant to section 33.1-24-02-03. If an eligible academic entity elects to use another equally effective term in lieu of "unwanted material", as allowed by paragraph 1 of subdivision a of subsection 1 of section 33.1-24-03-67, the equally effective term has the same meaning and is subject to the same requirements as "unwanted material" under sections 33.1-24-03-60 through 33.1-24-03-77.
13. "Working container" means a small container (for example, two gallons or less) that is in use at a laboratory bench, hood, or other work station, to collect unwanted material from a laboratory experiment or procedure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-62. Applicability of sections 33.1-24-03-60 through 33.1-24-03-77.

1. Large quantity generators and small quantity generators. Sections 33.1-24-03-60 through 33.1-24-03-77 provide alternative requirements to the requirements in section 33.1-24-03-02 and subsection 3 of section 33.1-24-03-12 for the hazardous waste determination and accumulation of hazardous waste in laboratories owned by eligible academic entities that choose to be subject to sections 33.1-24-03-60 through 33.1-24-03-77, provided that the eligible academic entity completes the notification requirements of section 33.1-24-03-64.
2. Conditionally exempt small quantity generators. Sections 33.1-24-03-60 through 33.1-24-03-77 provide alternative requirements to the conditional exemption in subsection 2 of section 33.1-24-02-05 for the accumulation of hazardous waste in laboratories owned by eligible academic entities that choose to be subject to sections 33.1-24-03-60 through 33.1-24-03-77, provided that the eligible academic entity completes the notification requirements of section 33.1-24-03-64.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-63. Complying with sections 33.1-24-03-60 through 33.1-24-03-77 is optional for eligible academic entities.

1. Large quantity generators and small quantity generators. Eligible academic entities have the option of complying with sections 33.1-24-03-60 through 33.1-24-03-77 with respect to the eligible academic entity's laboratories, as an alternative to complying with the requirements of section 33.1-24-03-02 and subsection 3 of section 33.1-24-03-12.
2. Conditionally exempt small quantity generators. Eligible academic entities have the option of complying with sections 33.1-24-03-60 through 33.1-24-03-77 with respect to the eligible academic entity's laboratories, as an alternative to complying with the conditional exemption of subsection 2 of section 33.1-24-02-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-64. Notification by an eligible academic entity electing to comply with sections 33.1-24-03-60 through 33.1-24-03-77.

1. An eligible academic entity must notify the department, in writing, using the identification form that the eligible academic entity is electing to be subject to the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 for all the laboratories owned by the eligible academic entity under the same identification number. An eligible academic entity that is a conditionally exempt small quantity generator and does not have an identification number must notify that the eligible academic entity is electing to be subject to the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 for all the laboratories owned by the eligible academic entity that are onsite, as defined by section 33.1-24-01-04. An eligible academic entity must submit a separate notification for each identification number (or site, for conditionally exempt small quantity generators) that is electing to be subject to the requirements of sections 33.1-24-03-60 through 33.1-24-03-77, and must submit the identification form before the eligible academic entity begins operating under sections 33.1-24-03-60 through 33.1-24-03-77.
2. When submitting the identification form, the eligible academic entity must, at a minimum, fill out the following fields on the form:

- a. Reason for submittal.
- b. Identification number (except for conditionally exempt small quantity generators).
- c. Site name.
- d. Site location information.
- e. Site land type.
- f. North American industry classification system codes for the site.
- g. Site mailing address.
- h. Site contact person.
- i. Operator and legal owner of the site.
- j. Type of regulated waste activity.
- k. Certification.

3. An eligible academic entity must keep a copy of the notification on file at the eligible academic entity for as long as the eligible academic entity's laboratories are subject to sections 33.1-24-03-60 through 33.1-24-03-77.

4. A teaching hospital that is not owned by a college or university must keep a copy of the teaching hospital's formal written affiliation agreement with a college or university on file at the teaching hospital for as long as the teaching hospital's laboratories are subject to sections 33.1-24-03-60 through 33.1-24-03-77.

5. A nonprofit research institute that is not owned by a college or university must keep a copy of the nonprofit research institute's formal written affiliation agreement with a college or university on file at the nonprofit research institute for as long as the nonprofit research institute's laboratories are subject to sections 33.1-24-03-60 through 33.1-24-03-77.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-65. Notification by an eligible academic entity electing to withdraw from complying with sections 33.1-24-03-60 through 33.1-24-03-77.

1. An eligible academic entity must notify the department, in writing, using the identification form, that it is electing to no longer be subject to the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 for all the laboratories owned by the eligible academic entity under the same identification number and that the eligible academic entity will comply with the requirements of section 33.1-24-03-02 and subsection 3 of section 33.1-24-03-12 for small quantity generators and large quantity generators. An eligible academic entity that is a conditionally exempt small quantity generator and does not have an identification number must notify that the eligible academic entity is withdrawing from the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 for all the laboratories owned by the eligible academic entity that are onsite and that the eligible academic entity will comply with the conditional exemption in subsection 2 of section 33.1-24-02-05. An eligible academic entity must submit a separate notification (identification form) for each identification number (or site, for conditionally exempt small quantity generators) that is withdrawing from the requirements of sections 33.1-24-03-60 through 33.1-24-03-77 and must submit the identification form before the eligible academic entity begins operating under the requirements of section 33.1-24-03-02

and subsection 3 of section 33.1-24-03-12 for small quantity generators and large quantity generators, or subsection 2 of section 33.1-24-02-05 for conditionally exempt small quantity generators.

2. When submitting the identification form, the eligible academic entity must, at a minimum, fill out the following fields on the form:

a. Reason for submittal.

b. Identification number (except for conditionally exempt small quantity generators).

c. Site name.

d. Site location information.

e. Site land type.

f. North American industry classification system codes for the site.

g. Site mailing address.

h. Site contact person.

i. Operator and legal owner of the site.

j. Type of regulated waste activity.

k. Certification.

3. An eligible academic entity must keep a copy of the withdrawal notice on file at the eligible academic entity for three years from the date of the notification.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-66. Requirements of sections 33.1-24-03-60 through 33.1-24-03-77.

An eligible academic entity that chooses to be subject to sections 33.1-24-03-60 through 33.1-24-03-77 is not required to have interim status or a hazardous waste permit for the accumulation of unwanted material and hazardous waste in an eligible academic entity's laboratories, provided the laboratories comply with the provisions of sections 33.1-24-03-60 through 33.1-24-03-77, and the eligible academic entity has a laboratory management plan in accordance with section 33.1-24-03-75 that describes how the laboratories owned by the eligible academic entity will comply with the requirements of sections 33.1-24-03-60 through 33.1-24-03-77.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-67. Labeling and management standards for containers of unwanted material in laboratories.

An eligible academic entity must manage containers of unwanted material while in the laboratory in accordance with the requirements in this section.

1. Label unwanted material as follows:

a. The following information must be affixed or attached to the container:

(1) The words "unwanted material" or another equally effective term that is to be used consistently by the eligible academic entity and that is identified in part I of the laboratory management plan; and

(2) Sufficient information to alert emergency responders to the contents of the container. Examples of information that would be sufficient to alert emergency responders to the contents of the container include:

(a) The name of the chemicals; and

(b) The type or class of chemical, such as organic solvents or halogenated organic solvents.

b. The following information may be affixed or attached to the container, but must at a minimum be associated with the container:

(1) The date that the unwanted material first began accumulating in the container; and

(2) Information sufficient to allow a trained professional to properly identify whether an unwanted material is a solid and hazardous waste and to assign the proper hazardous waste codes, pursuant to section 33.1-24-03-02. Examples of information that would allow a trained professional to properly identify whether an unwanted material is a solid or hazardous waste include:

(a) The name or description of the chemical contents, or both, or composition of the unwanted material, or, if known, the product of the chemical reaction;

(b) Whether the unwanted material has been used or is unused; and

(c) A description of the manner in which the chemical was produced or processed, if applicable.

2. Management of containers in the laboratory. An eligible academic entity must properly manage containers of unwanted material in the laboratory to assure safe storage of the unwanted material, to prevent leaks, spills, emissions to the air, adverse chemical reactions, and dangerous situations that may result in harm to human health or the environment. Proper container management must include the following:

a. Containers are maintained and kept in good condition and damaged containers are replaced, overpacked, or repaired; and

b. Containers are compatible with their contents to avoid reactions between the contents and the container and are made of, or lined with, material that is compatible with the unwanted material so that the container's integrity is not impaired; and

c. Containers must be kept closed at all times, except:

(1) When adding, removing, or bulking unwanted material; or

(2) A working container may be open until the end of the procedure or work shift, or until it is full, whichever comes first, at which time the working container must either be closed or the contents emptied into a separate container that is then closed; or

(3) When venting of a container is necessary.

(a) For the proper operation of laboratory equipment, such as with in-line collection of unwanted materials from high performance liquid chromatographs; or

(b) To prevent dangerous situations, such as buildup of extreme pressure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-68. Training.

An eligible academic entity must provide training to all individuals working in a laboratory at the eligible academic entity, as follows:

1. Training for laboratory workers and students must be commensurate with their duties so they understand the requirements in sections 33.1-24-03-60 through 33.1-24-03-77 and can implement them.
2. An eligible academic entity can provide training for laboratory workers and students in a variety of ways, including:
 - a. Instruction by the professor or laboratory manager before or during an experiment;
 - b. Formal classroom training;
 - c. Electronic or written training, or both;
 - d. On-the-job training; or
 - e. Written or oral examinations.
3. An eligible academic entity that is a large quantity generator must maintain documentation for the durations specified in subsection 5 of section 33.1-24-05-07 demonstrating training for all laboratory workers that is sufficient to determine whether laboratory workers have been trained. Examples of documentation demonstrating training can include the following:
 - a. Sign-in or attendance sheets for training sessions, or both;
 - b. Syllabus for training sessions;
 - c. Certificate of training completion; or
 - d. Test results.
4. A trained professional must:
 - a. Accompany the transfer of unwanted material and hazardous waste when the unwanted material and hazardous waste is removed from the laboratory; and
 - b. Make the hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-69. Removing containers of unwanted material from the laboratory.

1. Removing containers of unwanted material on a regular schedule. An eligible academic entity must either:

- a. Remove all containers of unwanted material from each laboratory on a regular interval, not to exceed six months; or
 - b. Remove containers of unwanted material from each laboratory within six months of each container's accumulation start date.
2. The eligible academic entity must specify in part I of its laboratory management plan whether the eligible academic entity will comply with subdivision a or b of subsection 1 for the regular removal of unwanted material from the eligible academic entity's laboratories.
 3. The eligible academic entity must specify in part II of its laboratory management plan how the eligible academic entity will comply with subdivision a or b of subsection 1 and develop a schedule for regular removals of unwanted material from the eligible academic entity's laboratories.
 4. Removing containers of unwanted material when volumes are exceeded.
 - a. If a laboratory accumulates a total volume of unwanted material (including reactive acutely hazardous unwanted material) in excess of fifty-five gallons before the regularly scheduled removal, the eligible academic entity must ensure that all containers of unwanted material in the laboratory (including reactive acutely hazardous unwanted material):
 - (1) Are marked on the label that is associated with the container (or on the label that is affixed or attached to the container) with the date that fifty-five gallons is exceeded; and
 - (2) Are removed from the laboratory within ten calendar days of the date that fifty-five gallons was exceeded, or at the next regularly scheduled removal, whichever comes first.
 - b. If a laboratory accumulates more than one quart of reactive acutely hazardous unwanted material before the regularly scheduled removal, then the eligible academic entity must ensure that all containers of reactive acutely hazardous unwanted material:
 - (1) Are marked on the label that is associated with the container (or on the label that is affixed or attached to the container) with the date that one quart is exceeded; and
 - (2) Are removed from the laboratory within ten calendar days of the date that one quart was exceeded, or at the next regularly scheduled removal, whichever comes first.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-70. Where and when to make the hazardous waste determination and where to send containers of unwanted material upon removal from the laboratory.

1. Large quantity generators and small quantity generators. An eligible academic entity must ensure that a trained professional makes a hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material in any of the following areas:
 - a. In the laboratory before the unwanted material is removed from the laboratory, in accordance with section 33.1-24-03-71.
 - b. Within four calendar days of arriving at an onsite central accumulation area, in accordance with section 33.1-24-03-72.

c. Within four calendar days of arriving at an onsite interim status or permitted treatment, storage, or disposal facility, in accordance with section 33.1-24-03-73.

2. Conditionally exempt small quantity generators. An eligible academic entity must ensure that a trained professional makes a hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material in the laboratory before the unwanted material is removed from the laboratory, in accordance with section 33.1-24-03-71.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-71. Hazardous waste determination in the laboratory before the unwanted material is removed.

If an eligible academic entity makes the hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material in the laboratory, the eligible academic entity must comply with the following:

1. A trained professional must make the hazardous waste determination, pursuant to section 33.1-24-03-02, before the unwanted material is removed from the laboratory.
2. If an unwanted material is a hazardous waste, the eligible academic entity must:
 - a. Write the words "hazardous waste" on the container label that is affixed or attached to the container, before the hazardous waste may be removed from the laboratory;
 - b. Write the appropriate hazardous waste codes on the label that is associated with the container (or the label that is affixed or attached to the container) before the hazardous waste is transported offsite; and
 - c. Count the hazardous waste toward the eligible academic entity's generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05, in the calendar month that the hazardous waste determination was made.
3. A trained professional must accompany all hazardous waste that is transferred from the laboratory, or laboratories, to an onsite central accumulation area or onsite interim status or permitted treatment, storage, or disposal facility.
4. When hazardous waste is removed from the laboratory:
 - a. Large quantity generators and small quantity generators must ensure it is taken directly from the laboratory, or laboratories, to an offsite central accumulation area, or onsite interim status or permitted treatment, storage, or disposal facility, or transported offsite.
 - b. Conditionally exempt small quantity generators must ensure it is taken directly from the laboratory, or laboratories, to any of the types of facilities listed in subdivision c of subsection 6 of section 33.1-24-02-05 for acute hazardous waste, or subdivision c of subsection 7 of section 33.1-24-02-05 for hazardous waste.
5. An unwanted material that is a hazardous waste is subject to all applicable provisions of article 33.1-24, North Dakota hazardous waste management rules, when it is removed from the laboratory.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-72. Hazardous waste determination at an onsite central accumulation area.

If an eligible academic entity makes the hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material at an onsite central accumulation area, the eligible academic entity must comply with the following:

1. A trained professional must accompany all unwanted material that is transferred from the laboratory, or laboratories, to an onsite central accumulation area.
2. All unwanted material removed from the laboratory, or laboratories, must be taken directly from the laboratory, or laboratories, to the onsite central accumulation area.
3. The unwanted material becomes subject to the generator accumulation requirements of subsection 1 of section 33.1-24-03-12 for large quantity generators or subsections 4 through 6 of section 33.1-24-03-12 for small quantity generators as soon as the unwanted material arrives in the central accumulation area, except for the "hazardous waste" labeling requirements of subdivision c of subsection 1 of section 33.1-24-03-12.
4. A trained professional must determine, pursuant to section 33.1-24-03-02, if the unwanted material is a hazardous waste within four calendar days of the unwanted material's arrival at the onsite central accumulation area.
5. If the unwanted material is a hazardous waste, the eligible academic entity must:
 - a. Write the words "hazardous waste" on the container label that is affixed or attached to the container, within four calendar days of arriving at the onsite central accumulation area and before the hazardous waste may be removed from the onsite central accumulation area;
 - b. Write the appropriate hazardous waste codes on the container label that is associated with the container (or on the label that is affixed or attached to the container) before the hazardous waste may be treated, or disposed of onsite or transported offsite;
 - c. Count the hazardous waste toward the eligible academic entity's generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05 in the calendar month that the hazardous waste determination was made; and
 - d. Manage the hazardous waste according to all applicable provisions of article 33.1-24, North Dakota hazardous waste management rules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-73. Hazardous waste determination at an onsite interim status or permitted treatment, storage, or disposal facility.

If an eligible academic entity makes the hazardous waste determination, pursuant to section 33.1-24-03-02, for unwanted material at an onsite interim status or permitted treatment, storage, or disposal facility, the eligible academic entity must comply with the following:

1. A trained professional must accompany all unwanted material that is transferred from the laboratory, or laboratories, to an onsite interim status or permitted treatment, storage, or disposal facility.

2. All unwanted material removed from the laboratory, or laboratories, must be taken directly from the laboratory, or laboratories, to the onsite interim status or permitted treatment, storage, or disposal facility.
3. The unwanted material becomes subject to the terms of the eligible academic entity's hazardous waste permit or interim status as soon as it arrives in the onsite treatment, storage, or disposal facility.
4. A trained professional must determine, pursuant to section 33.1-24-03-02, if the unwanted material is a hazardous waste within four calendar days of the unwanted material's arrival at the onsite interim status or permitted treatment, storage, or disposal facility.
5. If the unwanted material is a hazardous waste, the eligible academic entity must:
 - a. Write the words "hazardous waste" on the container label that is affixed or attached to the container within four calendar days of arriving at the onsite interim status or permitted treatment, storage, or disposal facility and before the hazardous waste may be removed from the onsite interim status or permitted treatment, storage, or disposal facility;
 - b. Write the appropriate hazardous waste codes on the container label that is associated with the container (or on the label that is affixed or attached to the container) before the hazardous waste may be treated or disposed onsite, or transported offsite;
 - c. Count the hazardous waste toward the eligible academic entity's generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05 in the calendar month that the hazardous waste determination was made; and
 - d. Manage the hazardous waste according to all applicable provisions of article 33.1-24, North Dakota hazardous waste management rules.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-74. Laboratory clean-outs.

1. One time per twelve-month period for each laboratory, an eligible academic entity may choose to conduct a laboratory clean-out that is subject to all the applicable requirements of sections 33.1-24-03-60 through 33.1-24-03-77, except that:
 - a. If the volume of unwanted material in the laboratory exceeds fifty-five gallons (or one quart of reactive acutely hazardous unwanted material), the eligible academic entity is not required to remove all unwanted materials from the laboratory within ten calendar days of exceeding fifty-five gallons (or one quart of reactive acutely hazardous unwanted material), as required by section 33.1-24-03-69. Instead, the eligible academic entity must remove all unwanted materials from the laboratory within thirty calendar days from the start of the laboratory clean-out;
 - b. For the purposes of onsite accumulation, an eligible academic entity is not required to count a hazardous waste that is an unused commercial chemical product (listed in sections 33.1-24-02-15 through 33.1-24-02-19, or exhibiting one or more characteristics in sections 33.1-24-02-10 through 33.1-24-02-14) generated solely during the laboratory clean-out toward its hazardous waste generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05. An unwanted material that is generated prior to the beginning of the laboratory clean-out and is still in the laboratory at the time the laboratory clean-out commences must be counted toward hazardous waste generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05, if it is determined to be hazardous waste;

c. For the purposes of offsite management, an eligible academic entity must count all its hazardous waste, regardless of whether the hazardous waste was counted toward generator status under subdivision b, and if the eligible academic entity generates more than one kilogram per month of acute hazardous waste, or one hundred kilograms per month of hazardous waste (for example, the conditionally exempt small quantity generator limits of section 33.1-24-02-05), the hazardous waste is subject to all applicable hazardous waste regulations when the hazardous waste is transported offsite; and

d. An eligible academic entity must document the activities of the laboratory clean-out. The documentation must, at a minimum, identify the laboratory being cleaned out, the date the laboratory clean-out begins and ends, and the volume of hazardous waste generated during the laboratory clean-out. The eligible academic entity must maintain the records for a period of three years from the date the clean-out ends; and

2. For all other laboratory clean-outs conducted during the same twelve-month period, an eligible academic entity is subject to all the applicable requirements of sections 33.1-24-03-60 through 33.1-24-03-77, including:

a. The requirement to remove all unwanted materials from the laboratory within ten calendar days of exceeding fifty-five gallons (or one quart of reactive acutely hazardous unwanted material), as required by section 33.1-24-03-69; and

b. The requirement to count all hazardous waste, including unused hazardous waste, generated during the laboratory clean-out toward its hazardous waste generator status, pursuant to subsections 3 and 4 of section 33.1-24-02-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-75. Laboratory management plan.

An eligible academic entity must develop and retain a written laboratory management plan, or revise an existing written plan. The laboratory management plan is a site-specific document that describes how the eligible academic entity will manage unwanted materials in compliance with sections 33.1-24-03-60 through 33.1-24-03-77. An eligible academic entity may write one laboratory management plan for all the laboratories owned by the eligible academic entity that have chosen to be subject to sections 33.1-24-03-60 through 33.1-24-03-77, even if the laboratories are located at sites with different identification numbers. The laboratory management plan must contain two parts with a total of nine elements identified in subsections 1 and 2. In part I of the eligible academic entity's laboratory management plan, an eligible academic entity must describe the eligible academic entity's procedures for each of the elements listed in subsection 1. An eligible academic entity must implement and comply with the specific provisions that the eligible academic entity develops to address the elements in part I of the laboratory management plan. In part II of the eligible academic entity's laboratory management plan, an eligible academic entity must describe the eligible academic entity's best management practices for each of the elements listed in subsection 2. The specific actions taken by an eligible academic entity to implement each element in part II of the eligible academic entity's laboratory management plan may vary from the procedures described in the eligible academic entity's laboratory management plan, without constituting a violation of sections 33.1-24-03-60 through 33.1-24-03-77. An eligible academic entity may include additional elements and best management practices in part II of the eligible academic entity's laboratory management plan if the eligible academic entity chooses.

1. The eligible academic entity must implement and comply with the specific provisions of part I of the eligible academic entity's laboratory management plan. In part I of the eligible academic entity's laboratory management plan, an eligible academic entity must:

a. Describe procedures for container labeling in accordance with subsection 1 of section 33.1-24-03-67, as follows:

(1) Identifying whether the eligible academic entity will use the term "unwanted material" on the containers in the laboratory. If not, identify an equally effective term that will be used in lieu of "unwanted material" and consistently by the eligible academic entity. The equally effective term, if used, has the same meaning and is subject to the same requirements as "unwanted material".

(2) Identifying the manner in which information that is "associated with the container" will be imparted.

b. Identify whether the eligible academic entity will comply with subdivisions a or b of subsection 1 of section 33.1-24-03-69 for regularly scheduled removals of unwanted material from the laboratory.

2. In part II of the laboratory management plan, an eligible academic entity must:

a. Describe intended best practices for container labeling and management (see the required standards in section 33.1-24-03-67).

b. Describe intended best practices for providing training for laboratory workers and students commensurate with their duties (subsection 1 of section 33.1-24-03-68).

c. Describe intended best practices for providing training to ensure safe onsite transfers of unwanted material and hazardous waste by trained professionals (subdivision a of subsection 4 of section 33.1-24-03-68).

d. Describe intended best practices for removing unwanted material from the laboratory, including:

(1) For regularly scheduled removals. Develop a regular schedule for identifying and removing unwanted materials from its laboratories (subdivisions a and b of subsection 1 of section 33.1-24-03-69).

(2) For removals when maximum volumes are exceeded:

(a) Describe intended best practices for removing unwanted materials from the laboratory within ten calendar days when unwanted materials have exceeded the unwanted materials maximum volumes (subsection 4 of section 33.1-24-03-69).

(b) Describe intended best practices for communicating that unwanted materials have exceeded the unwanted materials maximum volumes.

e. Describe intended best practices for making hazardous waste determinations, including specifying the duties of the individuals involved in the process (section 33.1-24-03-02, and sections 33.1-24-03-70 through 33.1-24-03-73).

f. Describe intended best practices for laboratory clean-outs, if the eligible academic entity plans to use the incentives for laboratory clean-outs provided in section 33.1-24-03-74, including:

(1) Procedures for conducting laboratory clean-outs (subdivisions a through c of subsection 1 of section 33.1-24-03-74).

(2) Procedures for documenting laboratory clean-outs (subdivision d of subsection 1 of section 33.1-24-03-74).

g. Describe intended best practices for emergency prevention, including:

(1) Procedures for emergency prevention, notification, and response, appropriate to the hazards in the laboratory;

(2) A list of chemicals that the eligible academic entity has, or is likely to have, that become more dangerous when the chemicals exceed their expiration date, or as they degrade, or both;

(3) Procedures to safely dispose of chemicals that become more dangerous when the chemicals exceed their expiration date, or as they degrade, or both; and

(4) Procedures for the timely characterization of unknown chemicals.

3. An eligible academic entity must make the eligible academic entity's laboratory management plan available to laboratory workers, students, or any others at the eligible academic entity who request the laboratory management plan.

4. An eligible academic entity must review and revise the eligible academic entity's laboratory management plan, as needed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-76. Unwanted material that is not solid waste or hazardous waste.

1. If an unwanted material does not meet the definition of solid waste in section 33.1-24-02-02, the unwanted material is no longer subject to sections 33.1-24-03-60 through 33.1-24-03-77, or to article 33.1-24, North Dakota hazardous waste management rules.

2. If an unwanted material does not meet the definition of hazardous waste in section 33.1-24-02-03, the unwanted material is no longer subject to sections 33.1-24-03-60 through 33.1-24-03-77, or to article 33.1-24, North Dakota hazardous waste management rules, but must be managed in compliance with any other application rules, or conditions, or both.

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-03-77. Nonlaboratory hazardous waste generated at an eligible academic entity.

An eligible academic entity that generates hazardous waste outside of a laboratory is not eligible to manage that hazardous waste under sections 33.1-24-03-60 through 33.1-24-03-77; and

1. Remains subject to the generator requirements of section 33.1-24-03-02 and subsection 3 of section 33.1-24-03-12 for large quantity generators and small quantity generators (if the hazardous waste is managed in a satellite accumulation area), and all other applicable generator requirements of chapter 33.1-24-03, with respect to that hazardous waste; or

2. Remains subject to the conditional exemption of subsection 2 of section 33.1-24-02-05 for conditionally exempt small quantity generators, with respect to that hazardous waste.

APPENDIX I

UNIFORM HAZARDOUS WASTE MANIFEST AND INSTRUCTIONS (Environmental Protection Agency Forms 8700-22 and 8700-22A and Their Instructions)

United States Environmental Protection Agency Form 8700-22

Read all instructions before completing this form.

1. This form has been designed for use on a 12-pitch (elite) typewriter which is also compatible with standard computer printers; a firm point pen may also be used - press down hard.
2. State and federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, and disposal facilities to use this form (8700-22) and, if necessary, the continuation sheet (form 8700-22A) for both interstate and intrastate transportation of hazardous waste.
3. State regulations also require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, and disposal facilities to complete the following information:
 - a. State regulations under section 33.1-24-03-16 (additional reporting) requires the generator to provide the department with a signed copy of the manifest when first signed by the generator and transporter and as signed by and received from the designated facility or alternate facility.

* * * * *

The following statement must be included with each uniform hazardous waste manifest, either on the form, in the instructions to the form, or accompanying the form:

Public reporting burden for this collection of information is estimated to average: thirty minutes for generators, ten minutes for transporters, and twenty-five minutes for owners or operators of treatment, storage, and disposal facilities. This includes time for reviewing instructions, gathering data, completing, reviewing, and transmitting the form. Any correspondence regarding the Paperwork Reduction Act burden statement for the manifest must be sent to the director of the collection strategies division in environmental protection agency's office of information collection at the following address: United States Environmental Protection Agency (2822T), 1200 Pennsylvania Avenue NW, Washington, D.C. 20460. Do not send the completed form to this address.

I. Instructions for generators

Item 1. Generator's identification number

Enter the generator's environmental protection agency twelve digit identification number, or the state generator identification number if the generator site does not have an environmental protection agency identification number.

Item 2. Page 1 of _____

Enter the total number of pages used to complete this manifest (for example, the first page (environmental protection agency form 8700-22) plus the number of continuation sheets (environmental protection agency form 8700-22A), if any).

Item 3. Emergency response phone number

Enter a phone number for which emergency response information can be obtained in the event of an incident during transportation. The emergency response phone number must:

1. Be the number of the generator or the number of an agency or organization who is capable of and accepts responsibility for providing detailed information about the shipment;
2. Reach a phone that is monitored twenty-four hours a day at all times the waste is in transportation (including transportation-related storage); and
3. Reach someone who is either knowledgeable of the hazardous waste being shipped and has comprehensive emergency response and spill cleanup or incident mitigation, or both, information for the material being shipped or has immediate access to a person who has that knowledge and information about the shipment.

NOTE: Emergency response phone number information should only be entered in item 3 when there is one phone number that applies to all the waste materials described in item 9b. If a situation (for example, consolidated shipments) arises where more than one emergency response phone number applies to the various wastes listed on the manifest, the phone numbers associated with each specific material should be entered after its description in item 9b.

Item 4. Manifest tracking number

This unique tracking number must be preprinted on the manifest by the forms printer.

Item 5. Generator's mailing address, phone number, and site address

Enter the name of the generator, the mailing address to which the completed manifest signed by the designated facility should be mailed, and the generator's telephone number. Note, the telephone number (including area code) should be the normal business number for the generator, or the number where the generator or the generator's authorized agent may be reached to provide instructions in the event the designated, or alternate, or both, (if any) facility rejects some or all of the shipment. Also enter the physical site address from which the shipment originates only if this address is different than the mailing address.

Item 6. Transporter 1 company name and identification number

Enter the company name and environmental protection agency identification number of the first transporter who will transport the waste. Vehicle or driver information may not be entered here.

Item 7. Transporter 2 company name and identification number

If applicable, enter the company name and environmental protection agency identification number of the second transporter who will transport the waste. Vehicle or driver information may not be entered here. If more than two transporters are needed, use a continuation sheet or sheets (environmental protection agency form 8700-22A).

Item 8. Designated facility name, site address, and identification number

Enter the company name and site address of the facility designated to receive the waste listed on this manifest. Also enter the facility's phone number and the environmental protection agency twelve digit identification number of the facility.

Item 9. United States department of transportation description (including proper shipping name, hazard class or division, identification number, and packing group)

Item 9a. If the wastes identified in item 9b consist of both hazardous and nonhazardous materials, then identify the hazardous materials by entering an "X" in this item next to the corresponding hazardous material identified in item 9b.

Item 9b. Enter the United States department of transportation proper shipping name, hazard class or division, identification number (UN/NA) and packing group for each waste as identified

in 49 CFR 172. Include technical name or names and reportable quantity references, if applicable.

NOTE: If additional space is needed for waste descriptions, enter these additional descriptions in item 27 on the continuation sheet (environmental protection agency form 8700-22A). Also, if more than one emergency response phone number applies to the various wastes described in either item 9b or item 27, enter applicable emergency response phone numbers immediately following the shipping descriptions for those items.

Item 10. Containers (number and type)

Enter the number of containers for each waste and the appropriate abbreviation from table I (below) for the type of container.

Table I - Types of Containers

<u>BA</u>	<u>≡</u>	<u>Burlap, cloth, paper, or plastic bags</u>
<u>CF</u>	<u>≡</u>	<u>Fiber or plastic boxes, cartons, cases</u>
<u>CM</u>	<u>≡</u>	<u>Metal boxes, cartons, cases (including roll-offs)</u>
<u>CW</u>	<u>≡</u>	<u>Wooden boxes, cartons, cases</u>
<u>CY</u>	<u>≡</u>	<u>Cylinders</u>
<u>DF</u>	<u>≡</u>	<u>Fiberboard or plastic drums, barrels, kegs</u>
<u>DM</u>	<u>≡</u>	<u>Metal drums, barrels, kegs</u>
<u>DT</u>	<u>≡</u>	<u>Dump truck</u>
<u>DW</u>	<u>≡</u>	<u>Wooden drums, barrels, kegs</u>
<u>HG</u>	<u>≡</u>	<u>Hopper or gondola cars</u>
<u>TC</u>	<u>≡</u>	<u>Tank cars</u>
<u>TP</u>	<u>≡</u>	<u>Portable tanks</u>
<u>TT</u>	<u>≡</u>	<u>Cargo tanks (tank trucks)</u>

Item 11. Total quantity

Enter, in designated boxes, the total quantity of waste. Round partial units to the nearest whole unit, and do not enter decimals or fractions. To the extent practical, report quantities using appropriate units of measure that will allow the generator to report quantities with precision. Waste quantities entered should be based on actual measurements or reasonably accurate estimates of actual quantities shipped. Container capacities are not acceptable as estimates.

Item 12. Units of measure (weight or volume)

Enter, in designated boxes, the appropriate abbreviation from table II (below) for the unit of measure.

Table II - Units of Measure

<u>G</u>	<u>≡</u>	<u>Gallons (liquids only)</u>
----------	----------	-------------------------------

<u>K</u>	<u>≡</u>	<u>Kilograms</u>
<u>L</u>	<u>≡</u>	<u>Liters (liquids only)</u>
<u>M</u>	<u>≡</u>	<u>Metric tons (1000 kilograms)</u>
<u>N</u>	<u>≡</u>	<u>Cubic meters</u>
<u>P</u>	<u>≡</u>	<u>Pounds</u>
<u>T</u>	<u>≡</u>	<u>Tons (2000 pounds)</u>
<u>Y</u>	<u>≡</u>	<u>Cubic yards</u>

NOTE: Tons, metric tons, cubic meters, and cubic yards should only be reported in connection with very large bulk shipments, such as rail cars, tank trucks, or barges.

Item 13. Waste codes

Enter up to six federal and state waste codes to describe each waste stream identified in item 9b. State waste codes that are not redundant with federal codes must be entered here, in addition to the federal waste codes which are most representative of the properties of the waste.

Item 14. Special handling instructions and additional information

1. Generators may enter any special handling or shipment specific information necessary for the proper management or tracking of the materials under the generator's or other handler's business processes, such as waste profile numbers, container codes, bar codes, or response guide numbers. Generators also may use this space to enter additional descriptive information about their shipped materials, such as chemical names, constituent percentages, physical state, or specific gravity of wastes identified with volume units in item 12.
2. This space may be used to record limited types of federally required information for which there is no specific space provided on the manifest, including any alternate facility designations; the manifest tracking number of the original manifest for rejected wastes and residues that are reshipped under a second manifest; and the specification of polychlorinated biphenyl waste descriptions and polychlorinated biphenyl out of service dates required under 40 CFR 761.207. Generators; however, cannot be required to enter information in this space to meet state regulatory requirements.

Item 15. Generator's or offeror's certifications

1. The generator must read, sign, and date the waste minimization certification statement. In signing the waste minimization certification statement, those generators who have not been exempted by statute or regulation from the duty to make a waste minimization certification under section 3002(b) of the Resource Conservation and Recovery Act are also certifying that they have complied with the waste minimization requirements. The generator's certification also contains the required attestation that the shipment has been properly prepared and is in proper condition for transportation (the shipper's certification). The content of the shipper's certification statement is as follows: "I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, or placarded, or both, and are in all respects in proper condition for transport by highway according to applicable international and national governmental regulations. If export shipment and I am the primary exporter, I certify that the contents of this consignment conform to the terms of the attached environmental protection agency acknowledgment of consent". When a party other than the generator prepares the shipment

for transportation, this party may also sign the shipper's certification statement as the offeror of the shipment.

2. Generator or offeror personnel may preprint the words, "on behalf of" in the signature block or may hand write this statement in the signature block prior to signing the generator or offeror certification, to indicate that the individual signs as the employee or agent of the named principal.

NOTE: All of the above information except the handwritten signature required in item 15 may be preprinted.

II. Instructions for international shipment block

Item 16. International shipments

For export shipments, the primary exporter must check the export box, and enter the point of exit (city and state) from the United States. For import shipments, the importer must check the import box and enter the point of entry (city and state) into the United States. For exports, the transporter must sign and date the manifest to indicate the day the shipment left the United States. Transporters of hazardous waste shipments must deliver a copy of the manifest to the United States customs when exporting the waste across United States borders.

III. Instructions for transporters

Item 17. Transporters' acknowledgments of receipt

Enter the name of the person accepting the waste on behalf of the first transporter. That person must acknowledge acceptance of the waste described on the manifest by signing and entering the date of receipt. Only one signature per transportation company is required. Signatures are not required to track the movement of wastes in and out of transfer facilities, unless there is a change of custody between transporters. If applicable, enter the name of the person accepting the waste on behalf of the second transporter. That person must acknowledge acceptance of the waste described on the manifest by signing and entering the date of receipt.

NOTE: Transporters carrying imports, who are acting as importers, may have responsibilities to enter information in the international shipments block. Transporters carrying exports may also have responsibilities to enter information in the international shipments block. See above instructions for item 16.

IV. Instructions for owners and operators of treatment, storage, and disposal facilities

Item 18. Discrepancy

Item 18a. Discrepancy indication space

1. The authorized representative of the designated (or alternate) facility's owner or operator must note in this space any discrepancies between the waste described on the manifest and the waste actually received at the facility. Manifest discrepancies are: significant differences (as defined by subsection 2 of section 33.1-24-05-39) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives, rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept, or container residues, which are residues that exceed the quantity limits for "empty" containers set forth in subsections 3, 4, and 5 of section 33.1-24-02-07.
2. For rejected loads and residues (subsections 4, 5, and 6 of section 33.1-24-05-39 or the applicable requirements of subsection 5 of section 33.1-24-06-16), check the appropriate box

if the shipment is a rejected load (for example, rejected by the designated or alternate facility, or both, and is sent to an alternate facility or returned to the generator) or a regulated residue that cannot be removed from a container. Enter the reason for the rejection or the inability to remove the residue and a description of the waste. Also, reference the manifest tracking number for any additional manifests being used to track the rejected waste or residue shipment on the original manifest. Indicate the original manifest tracking number in item 14, the special handling block and additional information block of the additional manifests.

3. Owners or operators of facilities located in unauthorized states (for example, states in which the environmental protection agency administers the hazardous waste management program) who cannot resolve significant differences in quantity or type within fifteen days of receiving the waste must submit to their regional administrator a letter with a copy of the manifest at issue describing the discrepancy and attempts to reconcile it (subsection 3 of section 33.1-24-05-39 and the applicable requirements of subsection 5 of section 33.1-24-06-16).

4. Owners or operators of facilities located in authorized states (for example, those states that have received authorization from the environmental protection agency to administer the hazardous waste management program) should contact their state agency for information on where to report discrepancies involving "significant differences" to state officials.

Item 18b. Alternate facility (or generator) for receipt of full load rejections

Enter the name, address, phone number, and environmental protection agency identification number of the alternate facility which the rejecting treatment, storage, or disposal facility has designated, after consulting with the generator, to receive a fully rejected waste shipment. In the event that a fully rejected shipment is being returned to the generator, the rejecting treatment, storage, or disposal facility may enter the generator's site information in this space. This field is not to be used to forward partially rejected loads or residue waste shipments.

Item 18c. Alternate facility (or generator) signature

The authorized representative of the alternate facility (or the generator in the event of a returned shipment) must sign and date this field of the form to acknowledge receipt of the fully rejected wastes or residues identified by the initial treatment, storage, or disposal facility.

Item 19. Hazardous waste report management method codes

Enter the most appropriate hazardous waste report management method code for each waste listed in item 9. The hazardous waste report management method code is to be entered by the first treatment, storage, or disposal facility that receives the waste and is the code that best describes the way in which the waste is to be managed when received by the treatment, storage, or disposal facility.

Item 20. Designated facility owner or operator certification of receipt (except as noted in item 18a)

Enter the name of the person receiving the waste on behalf of the owner or operator of the facility. That person must acknowledge receipt or rejection of the waste described on the manifest by signing and entering the date of receipt or rejection where indicated. Since the facility certification acknowledges receipt of the waste except as noted in the discrepancy space in item 18a, the certification should be signed for both waste receipt and waste rejection, with the rejection being noted and described in the space provided in item 18a. Fully rejected wastes may be forwarded or returned using item 18b after consultation with the generator. Enter the name of the person accepting the waste on behalf of the owner or operator of the alternate facility or the original generator. That person must acknowledge receipt or rejection of the waste described on the manifest by signing and entering the date they received or rejected the waste in item 18c. Partially rejected wastes and residues must be

reshipped under a new manifest, to be initiated and signed by the rejecting treatment, storage, or disposal facility as offeror of the shipment.

Manifest continuation sheet

Instructions - continuation sheet, environmental protection agency form 8700-22A

Read all instructions before completing this form. This form has been designed for use on a 12-pitch (elite) typewriter; a firm point pen may also be used - press down hard.

This form must be used as a continuation sheet to form 8700-22 if:

1. More than two transporters are to be used to transport the waste; or
2. More space is required for the United States department of transportation descriptions and related information in item 9 of environmental protection agency form 8700-22. State and federal regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, or disposal facilities to use the uniform hazardous waste manifest (environmental protection agency form 8700-22) and, if necessary, this continuation sheet (environmental protection agency form 8700-22A) for both interstate and intrastate transportation.

Item 21. Generator's identification number

Enter the generator's environmental protection agency twelve digit identification number or, the state generator identification number if the generator site does not have an environmental protection agency identification number.

Item 22. Page ___ -

Enter the page number of this continuation sheet.

Item 23. Manifest tracking number

Enter the manifest tracking number from item 4 of the manifest form to which this continuation sheet is attached.

Item 24. Generator's name -

Enter the generator's name as it appears in item 5 on the first page of the manifest.

Item 25. Transporter - company name

If additional transporters are used to transport the waste described on this manifest, enter the company name of each additional transporter in the order in which they will transport the waste. Enter after the word "transporter" the order of the transporter. For example, transporter three company name. Also, enter the environmental protection agency twelve digit identification number of the transporter described in item 25.

Item 26. Transporter - company name

If additional transporters are used to transport the waste described on this manifest, enter the company name of each additional transporter in the order in which they will transport the waste. Enter after the word "transporter" the order of the transporter. For example, transporter four company name. Each continuation sheet can record the names of two additional transporters. Also enter the environmental protection agency twelve digit identification number of the transporter named in item 26.

Item 27. United States department of transportation description including proper shipping name, hazardous class, and identification number (UN/NA)

For each row enter a sequential number under item 27b that corresponds to the order of waste codes from one continuation sheet to the next, to reflect the total number of wastes being shipped. Refer to instructions for item 9 of the manifest for the information to be entered.

Item 28. Containers (number and type)

Refer to the instructions for item 10 of the manifest for information to be entered.

Item 29. Total quantity

Refer to the instructions for item 11 of the manifest form.

Item 30. Units of measure (weight or volume)

Refer to the instructions for item 12 of the manifest form.

Item 31. Waste codes

Refer to the instructions for item 13 of the manifest form.

Item 32. Special handling instructions and additional information

Refer to the instructions for item 14 of the manifest form.

Transporters

Item 33. Transporter - acknowledgment of receipt of materials

Enter the same number of the transporter as identified in item 25. Enter also the name of the person accepting the waste on behalf of the transporter (company name) identified in item 25. That person must acknowledge acceptance of the waste described on the manifest by signing and entering the date of receipt.

Item 34. Transporter - acknowledgment of receipt of materials

Enter the same number of the transporter as identified in item 26. Enter also the name of the person accepting the waste on behalf of the transporter (company name) identified in item 26. That person must acknowledge acceptance of the waste described on the manifest by signing and entering the date of receipt.

Owner and operators of treatment, storage, or disposal facilities

Item 35. Discrepancy indication space

Refer to item 18. This space may be used to more fully describe information on discrepancies identified in item 18a of the manifest form.

Item 36. Hazardous waste report management method codes

For each field here, enter the sequential number that corresponds to the waste materials described under item 27, and enter the appropriate process code that describes how the materials will be processed when received. If additional continuation sheets are attached, continue numbering the waste materials and process code fields sequentially, and enter on each sheet the process codes corresponding to the waste materials identified on that sheet.

APPENDIX I

CHAPTER 33.1-24-04 STANDARDS FOR TRANSPORTERS

Section

<u>33.1-24-04-01</u>	<u>Scope</u>
<u>33.1-24-04-02</u>	<u>Identification Number and Registration Certificate</u>
<u>33.1-24-04-03</u>	<u>Transfer Facility Requirements</u>
<u>33.1-24-04-04</u>	<u>The Manifest System</u>
<u>33.1-24-04-05</u>	<u>Compliance With the Manifest</u>
<u>33.1-24-04-06</u>	<u>Recordkeeping</u>
<u>33.1-24-04-07</u>	<u>Immediate Action</u>
<u>33.1-24-04-08</u>	<u>Discharge Cleanup</u>

33.1-24-04-01. Scope.

1. This chapter establishes standards which apply to persons transporting hazardous waste within this state if the transportation requires a manifest under chapter 33.1-24-03.
2. This chapter does not apply to onsite transportation of hazardous waste by generators or by owners or by operators of permitted hazardous waste management facilities.
3. A transporter of hazardous waste must also comply with chapter 33.1-24-03 if the transporter:
 - a. Transports hazardous waste into this state from abroad; or
 - b. Mixes hazardous waste of different department of transportation shipping descriptions by placing them into a single container.

[NOTE: The transporter in complying with these requirements does not become the generator of the waste.]

4. A transporter of hazardous waste subject to manifesting requirements of chapter 33.1-24-03, or subject to the requirements of sections 33.1-24-05-700 through 33.1-24-05-799, that is being imported from or exported to any of the countries listed in subdivision a of subsection 1 of section 33.1-24-03-25 for purposes of recovery is subject to sections 33.1-24-04-01 through 33.1-24-04-03 and to all other relevant requirements of sections 33.1-24-03-50 through 33.1-24-03-59, including section 33.1-24-03-54 for movement documents.
5. Persons responding to an explosives or munitions emergency in accordance with subparagraph d of paragraph 1 of subdivision g of subsection 6 of section 33.1-24-05-01 or paragraph 4 of subdivision g of subsection 6 of section 33.1-24-05-01 or 40 CFR 265.1(c)(11)(i)(D) or (iv) as incorporated by reference in subsection 5 of section 33.1-24-06-16, and item 4 of subparagraph a and subparagraph c of paragraph 9 of subdivision b of subsection 2 of section 33.1-24-06-01, are not required to comply with the standards of chapter 33.1-24-03.
6. Section 33.1-24-05-823 identifies how the requirements of this chapter apply to military munitions classified as solid waste under section 33.1-24-05-822.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-02. Identification number and registration certificate.

1. A transporter may not transport hazardous wastes without having received an identification number, a transporter permit, and a registration certificate from the department.

2. A transporter who has not received an identification number and a registration certificate, or a transporter permit, may obtain them by applying to the department. Upon receiving the request, the department will assign an identification number and issue a registration certificate to the transporter.
3. The department may assess and collect reasonable fees for the issuance of registration certificates and transporter permits.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-03. Transfer facility requirements.

A transporter who stores manifested shipments of hazardous waste in containers meeting the requirements of section 33.1-24-03-08 at a transfer facility for a period of ten days or less is not subject to regulation under chapters 33.1-24-05 and 33.1-24-06 with respect to the storage of those wastes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-04. The manifest system.

1. Transporters subject to manifesting requirements.

- a. Manifest requirement. A transporter may not accept hazardous waste from a generator unless the transporter is also provided with a manifest signed in accordance with the provisions of subsections 1 through 7 of section 33.1-24-03-07, or is provided with an electronic manifest that is obtained, completed, and transmitted in accordance with subdivision b of subsection 1 of section 33.1-24-03-04, and signed with a valid and enforceable electronic signature as described in 40 CFR 262.25.
- b. Exports. In the case of exports other than those subject to sections 33.1-24-03-50 through 33.1-24-03-59, a transporter may not accept such waste from a primary exporter or other person if the transporter knows the shipment does not conform to the environmental protection agency acknowledgment of consent; and unless, in addition to a manifest signed by the generator as provided in this section, the transporter shall also be provided with an environmental protection agency acknowledgment of consent which, except for shipments by rail, is attached to the manifest (or shipping paper for exports by water (bulk shipment)). For exports of hazardous waste subject to the requirements of sections 33.1-24-03-50 through 33.1-24-03-59, a transporter may not accept hazardous waste without a tracking document that includes all information required by section 33.1-24-03-54.
- c. Compliance date for form revisions. The revised manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-04-04, and 33.1-24-04-05, shall not apply until September 5, 2006 or article 33.1-24 is amended and effective, but not prior to September 5, 2006. The manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-04-04, and 33.1-24-04-05, contained in article 33.1-24, amended December 1, 2003, shall be applicable until September 5, 2006, or when amended, but not after September 5, 2006.
- d. Use of electronic manifest. Legal equivalence to paper forms for participating transporters. Electronic manifests that are obtained, completed, and transmitted in accordance with subdivision b of subsection 1 of section 33.1-24-03-04, and used in accordance with this section in lieu of environmental protection agency forms 8700-22

and 8700-22A, are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these rules to obtain, complete, sign, carry, provide, give, use, or retain a manifest.

(1) Any requirement in these rules to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 40 CFR 262.25.

(2) Any requirement in these rules to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when a copy of an electronic manifest is transmitted to the other person by submission to the system.

(3) Any requirement in these rules for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an electronic manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment, except that to the extent that the hazardous materials regulation on shipping papers for carriage by public highway requires transporters of hazardous materials to carry a paper document to comply with 49 CFR 177.817, a hazardous waste transporter must carry one printed copy of the electronic manifest on the transport vehicle.

(4) Any requirement in these rules for a transporter to keep or retain a copy of a manifest is satisfied by the retention of an electronic manifest in the transporter's account on the e-manifest system, provided that such copies are readily available for viewing and production if requested by any environmental protection agency inspector or authorized department representative.

(5) No transporter may be held liable for the inability to produce an electronic manifest for inspection under this section if that transporter can demonstrate that the inability to produce the electronic manifest is exclusively due to a technical difficulty with the environmental protection agency system for which the transporter bears no responsibility.

e. A transporter may participate in the electronic manifest system either by accessing the electronic manifest system from the transporter's own electronic equipment, or by accessing the electronic manifest system from the equipment provided by a participating generator, by another transporter, or by a designated facility.

f. Special procedures when electronic manifest is not available. If after a manifest has been originated electronically and signed electronically by the initial transporter, and the electronic manifest system should become unavailable for any reason, then:

(1) The transporter in possession of the hazardous waste when the electronic manifest becomes unavailable shall reproduce sufficient copies of the printed manifest that is carried on the transport vehicle pursuant to paragraph 3 of subdivision d, or obtain and complete another paper manifest for this purpose. The transporter shall reproduce sufficient copies to provide the transporter and all subsequent waste handlers with a copy for the transporter and all subsequent waste handler files, plus two additional copies that will be delivered to the designated facility with the hazardous waste.

(2) On each printed copy, the transporter shall include a notation in the special handling and additional description space (item 14) that the paper manifest is a replacement manifest for a manifest originated in the electronic manifest system, shall include (if not preprinted on the replacement manifest) the manifest tracking number of the electronic manifest that is replaced by the paper manifest, and shall also include a

brief explanation why the electronic manifest was not available for completing the tracking of the shipment electronically.

(3) A transporter signing a replacement manifest to acknowledge receipt of the hazardous waste must ensure that each paper copy is individually signed and that a legible handwritten signature appears on each copy.

(4) From the point at which the electronic manifest is no longer available for tracking the waste shipment, the paper replacement manifest copies shall be carried, signed, retained as records, and given to a subsequent transporter or to the designated facility, following the instructions, procedures, and requirements that apply to the use of all other paper manifests.

g. Special procedures for electronic signature methods undergoing tests. If a transporter using an electronic manifest signs this manifest electronically using an electronic signature method which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the transporter shall sign the electronic manifest electronically and also sign with an ink signature the transporter acknowledgment of receipt of materials on the printed copy of the manifest that is carried on the vehicle in accordance with paragraph 3 of subdivision d. This printed copy bearing the generator's and transporter's ink signatures shall also be presented by the transporter to the designated facility to sign in ink to indicate the receipt of the waste materials or to indicate discrepancies. After the owner or operator of the designated facility has signed this printed manifest copy with the owner or operator's ink signature, the printed manifest copy shall be delivered to the designated facility with the waste materials.

h. Imposition of user fee for electronic manifest use. A transporter who is a user of the electronic manifest may be assessed a user fee by the environmental protection agency for the origination or processing of each electronic manifest. The environmental protection agency shall maintain and update from time-to-time the schedule of electronic manifest user fees, which shall be determined based on current and projected system costs and level of use of the electronic manifest system. The schedule of electronic manifest user fees shall be published by the environmental protection agency as an appendix to 40 CFR Part 262.

2. Before transporting the hazardous waste, the transporter must sign and date the manifest acknowledging acceptance of the hazardous waste from the generator. The transporter must return a signed copy to the generator before leaving the generator's property.

3. The transporter shall ensure that the manifest accompanies the hazardous waste. In the case of exports, the transporter shall ensure that a copy of the environmental protection agency acknowledgment of consent also accompanies the hazardous waste.

4. A transporter who delivers a hazardous waste to another transporter or to the designated facility must:

a. Obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest;

b. Retain one copy of the manifest in accordance with section 33.1-24-04-06; and

c. Give remaining copies of the manifest to the accepting transporter or designated facility.

5. The requirements of subsections 3, 4, and 6 do not apply to water (bulk shipment) transporters if:

- a. The hazardous waste is delivered by water (bulk shipment) to the designated facility;
- b. A shipping paper containing all the information required on the manifest (excluding the identification numbers, generator certification, and signatures) and, for exports, and environmental protection agency acknowledgment of consent accompanies the hazardous waste;
- c. The delivering transporter obtains the date of delivery and handwritten signature of the owner or operator of the designated facility on either the manifest or the shipping paper;
- d. The person delivering the hazardous waste to the initial water (bulk shipment) transporter obtains the date of delivery and signature of the water (bulk shipment) transporter on the manifest and forwards it to the designated facility; and
- e. A copy of the shipping paper or manifest is retained by each water (bulk shipment) transporter in accordance with section 33.1-24-04-06.

6. For shipments involving rail transportation, the requirements of subsections 3, 4, and 5 do not apply and the following requirements do apply:

- a. When accepting hazardous waste from nonrail transporter, the initial rail transporter must:
 - (1) Sign and date the manifest acknowledging acceptance of the hazardous waste;
 - (2) Return a signed copy of the manifest to the nonrail transporter;
 - (3) Forward at least three copies of the manifest to:
 - (a) The next nonrail transporter, if any; or
 - (b) The designated facility, if the shipment is delivered to that facility by rail; or
 - (c) The last rail transporter designated to handle the waste in the United States; and
 - (4) Retain one copy of the manifest and rail shipping paper in accordance with section 33.1-24-04-06;
- b. Rail transporters shall ensure that a shipping paper containing all the information required on the manifest (excluding the identification numbers, generator certification, and signatures) and, for exports, an environmental protection agency acknowledgment of consent accompanies the hazardous waste at all times;

[NOTE: Intermediate rail transporters are not required to sign either the manifest or shipping paper.]

- c. When delivering hazardous waste to the designated facility, a rail transporter must:
 - (1) Obtain the date of delivery and handwritten signature of the owner or operator of the designated facility on the manifest or shipping paper (if the manifest has not been received by the facility); and
 - (2) Retain a copy of the manifest or signed shipping paper in accordance with section 33.1-24-04-06;
- d. When delivering hazardous waste to a nonrail transporter, a rail transporter must:

(1) Obtain the date of delivery and the handwritten signature of the next nonrail transporter on the manifest; and

(2) Retain a copy of the manifest in accordance with section 33.1-24-04-06; and

e. Before accepting hazardous waste from a rail transporter, a nonrail transporter must sign and date the manifest and provide a copy to the rail transporter.

7. Transporters who transport hazardous waste out of the United States must:

a. Sign and date the manifest in the international shipment's block to indicate the date that the shipment left the United States;

b. Retain one copy in accordance with subsection 4 of section 33.1-24-04-06;

c. Return a signed copy of the manifest to the generator; and

d. Give a copy of the manifest to a United States customs official at the point of departure from the United States.

8. A transporter transporting hazardous waste from a generator who generates greater than one hundred kilograms but less than one thousand kilograms of hazardous waste in a calendar month need not comply with the requirements of this section or those in section 33.1-24-04-06 provided that:

a. The waste is being transported pursuant to a reclamation agreement as provided in subsection 5 of section 33.1-24-03-04;

b. The transporter records, on a log or shipping paper, the following information for each shipment:

(1) The name, address, and identification number of the generator of the waste;

(2) The quantity of waste accepted;

(3) All department of transportation required shipping information; and

(4) The date the waste is accepted;

c. The transporter carries this record when transporting waste to the reclamation facility; and

d. The transporter retains these records for a period of at least three years after termination or expiration of the agreement.

9. Electronic manifest signatures shall meet the criteria described in 40 CFR 262.25.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-05. Compliance with the manifest.

1. The transporter must deliver the entire quantity of hazardous waste which the transporter has accepted from a generator or a transporter to:

a. The designated facility listed on the manifest;

- b. The alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery;
 - c. The next designated transporter; or
 - d. The place outside the United States designated by the generator.
2. If the hazardous waste cannot be delivered in accordance with subsection 1, because of an emergency condition other than rejection of the waste by the designated facility, then the transporter must contact the generator for further directions and must revise the manifest according to the generator's instructions.
3. If hazardous waste is rejected by the designated facility while the transporter is on the facility's premises, then the transporter must obtain the following:
- a. For a partial load rejection or for regulated quantities of container residues, a copy of the original manifest that includes the facility's date and signature, and the manifest tracking number of the new manifest that will accompany the shipment, and a description of the partial rejection or container residue in the discrepancy block of the original manifest. The transporter must retain a copy of this manifest in accordance with section 33.1-24-04-06, and give the remaining copies of the original manifest to the rejecting designated facility. If the transporter is forwarding the rejected part of the shipment or a regulated container residue to an alternate facility or returning it to the generator, the transporter must obtain a new manifest to accompany the shipment, and the new manifest must include all of the information required in subdivisions a through f of subsection 5 or subdivisions a through f of subsection 6 of section 33.1-24-05-39 or the applicable requirements of subsection 5 of section 33.1-24-06-16.
 - b. For a full load rejection that will be taken back by the transporter, a copy of the original manifest that includes the rejecting facility's signature and date attesting to the rejection, the description of the rejection in the discrepancy block of the manifest, and the name, address, phone number, and identification number for the alternate facility or generator to whom the shipment must be delivered. The transporter must retain a copy of the manifest in accordance with section 33.1-24-04-06, and give a copy of the manifest containing this information to the rejecting designated facility. If the original manifest is not used, then the transporter must obtain a new manifest for the shipment and comply with subdivisions a through f of subsection 5 of section 33.1-24-05-39 or the applicable requirements of subsection 5 of section 33.1-24-06-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-06. Recordkeeping.

- 1. A transporter of hazardous waste must keep a copy of the manifest signed by the transporter, the generator, and the next designated transporter or the owner or operator of the designated facility for a period of three years from the date the hazardous waste was accepted by the initial transporter.
- 2. For shipments delivered to the designated facility by water (bulk shipment), each water (bulk shipment) transporter must retain a copy of the shipping paper containing all of the information required in subdivision b of subsection 5 of section 33.1-24-04-04 for a period of three years from the date the hazardous waste was accepted by the initial transporter.
- 3. For shipments of hazardous waste by rail within the United States:

- a. The initial rail transporter must keep a copy of the manifest and shipping paper with all the information required in subdivision b of subsection 6 of section 33.1-24-04-04 for a period of three years from the date the hazardous waste was accepted by the initial transporter; and
- b. The final rail transporter must keep a copy of the signed manifest (or the shipping paper if signed by the designated facility in lieu of the manifest) for a period of three years from the date the hazardous waste was accepted by the initial transporter.
4. A transporter who transports hazardous waste out of the United States must keep a copy of the manifest indicating that the hazardous waste left the United States for a period of three years from the date the hazardous waste was accepted by the initial transporter.
5. The periods of retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-07. Immediate action.

1. In the event of a discharge of hazardous waste during transportation, the transporter must take appropriate immediate action to protect human health and the environment, e.g., notify local authorities and dike the discharge area.
2. If a discharge of hazardous waste occurs during transportation and an official of a state or local government or a federal agency, acting within the scope of official responsibilities, determines that immediate removal of the waste is necessary to protect human health or the environment, that official may authorize the removal of the waste by transporters who do not have identification numbers and without the preparation of a manifest.
3. An air, rail, highway, or water transporter who has discharged hazardous waste must:
 - a. Give notice, if required by 49 CFR 171.15 to the national response center (800-424-8802 or 202-426-2675); and
 - b. Report in writing as required by 49 CFR 171.16 to the director, office of hazardous materials regulations, materials transportation bureau, department of transportation, Washington, D.C. 20590.
4. A water (bulk shipment) transporter who has discharged hazardous waste must give the same notice as required by 33 CFR 153.203 for oil and hazardous substances.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-04-08. Discharge cleanup.

A transporter must clean up any hazardous waste discharge that occurs during transportation or take such action as may be required or approved by federal, state, or local officials so that the hazardous waste discharge no longer presents a hazard to human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

CHAPTER 33.1-24-05
STANDARDS FOR TREATMENT, STORAGE, AND DISPOSAL FACILITIES AND FOR THE
MANAGEMENT OF SPECIFIC HAZARDOUS WASTES AND SPECIFIC TYPES OF
HAZARDOUS WASTE MANAGEMENT FACILITIES

Section

- 33.1-24-05-01 Purpose, Scope, and Applicability
- 33.1-24-05-02 Identification Number and Permit
- 33.1-24-05-03 Required Notices
- 33.1-24-05-04 General Waste Analysis
- 33.1-24-05-05 Security
- 33.1-24-05-06 General Inspection Requirements
- 33.1-24-05-07 Personnel Training
- 33.1-24-05-08 General Requirements for Ignitable, Reactive, or Incompatible Wastes
- 33.1-24-05-09 Location Standards
- 33.1-24-05-10 Construction Quality Assurance Program
- 33.1-24-05-11 [Reserved]
- 33.1-24-05-12 [Reserved]
- 33.1-24-05-13 [Reserved]
- 33.1-24-05-14 [Reserved]

PREPAREDNESS AND PREVENTION REQUIREMENTS

- 33.1-24-05-15 Design and Operation of Facility
- 33.1-24-05-16 Required Equipment
- 33.1-24-05-17 Testing and Maintenance of Equipment
- 33.1-24-05-18 Access to Communications or Alarm System
- 33.1-24-05-19 Required Aisle Space
- 33.1-24-05-20 Arrangements With Local Authorities
- 33.1-24-05-21 [Reserved]
- 33.1-24-05-22 [Reserved]
- 33.1-24-05-23 [Reserved]
- 33.1-24-05-24 [Reserved]
- 33.1-24-05-25 [Reserved]

CONTINGENCY PLAN AND EMERGENCY PROCEDURES REQUIREMENTS

- 33.1-24-05-26 Purpose and Implementation of Contingency Plan
- 33.1-24-05-27 Content of Contingency Plan
- 33.1-24-05-28 Copies of Contingency Plan
- 33.1-24-05-29 Amendment of Contingency Plan
- 33.1-24-05-30 Emergency Coordinator
- 33.1-24-05-31 Emergency Procedures
- 33.1-24-05-32 [Reserved]
- 33.1-24-05-33 [Reserved]
- 33.1-24-05-34 [Reserved]
- 33.1-24-05-35 [Reserved]
- 33.1-24-05-36 [Reserved]

MANIFEST, RECORDKEEPING, AND REPORTING REQUIREMENTS

- 33.1-24-05-37 Applicability of Manifest System, Recordkeeping, and Reporting Requirements
- 33.1-24-05-38 Use of Manifest System
- 33.1-24-05-39 Manifest Discrepancies
- 33.1-24-05-40 Operating Record

- 33.1-24-05-41 Availability, Retention, and Disposition of Records
- 33.1-24-05-42 Biennial Report
- 33.1-24-05-43 Unmanifested Waste Report
- 33.1-24-05-44 Additional Reports
- 33.1-24-05-45 [Reserved]
- 33.1-24-05-46 [Reserved]

RELEASES FROM SOLID WASTE MANAGEMENT UNITS REQUIREMENTS

- 33.1-24-05-47 Applicability of Releases From Solid Waste Management Units Requirements
- 33.1-24-05-48 Required Programs
- 33.1-24-05-49 Ground Water Protection Standard
- 33.1-24-05-50 Hazardous Constituents
- 33.1-24-05-51 Concentration Limits
- 33.1-24-05-52 Point of Compliance
- 33.1-24-05-53 Compliance Period
- 33.1-24-05-54 General Ground Water Monitoring Requirements
- 33.1-24-05-55 Detection Monitoring Program
- 33.1-24-05-56 Compliance Monitoring Program
- 33.1-24-05-57 Corrective Action Program
- 33.1-24-05-58 Corrective Action for Solid Waste Management Units

CLOSURE AND POSTCLOSURE REQUIREMENTS

- 33.1-24-05-59 Applicability of Closure and Postclosure Requirements
- 33.1-24-05-60 Closure Performance Standard
- 33.1-24-05-61 Closure Plan - Amendment of Plan
- 33.1-24-05-62 Closure - Time Allowed for Closure
- 33.1-24-05-63 Disposal or Decontamination of Equipment, Structures, and Soils
- 33.1-24-05-64 Certification of Closure
- 33.1-24-05-65 Survey Plat
- 33.1-24-05-66 Postclosure Care and Use of Property
- 33.1-24-05-67 Postclosure Plan - Amendment of Plan
- 33.1-24-05-68 Postclosure Notices
- 33.1-24-05-69 Certification of Completion of Postclosure Care
- 33.1-24-05-70 [Reserved]
- 33.1-24-05-71 [Reserved]
- 33.1-24-05-72 [Reserved]
- 33.1-24-05-73 [Reserved]

FINANCIAL REQUIREMENTS

- 33.1-24-05-74 Applicability of Financial Requirements
- 33.1-24-05-75 Definitions of Terms Used in Sections 33.1-24-05-74 Through 33.1-24-05-88
- 33.1-24-05-76 Cost Estimates for Closure and Postclosure Care
- 33.1-24-05-77 Financial Assurance for Closure and Postclosure Care
- 33.1-24-05-78 Use of a Financial Mechanism for Both Closure and Postclosure Care
- 33.1-24-05-79 Liability Requirements
- 33.1-24-05-80 Incapacity of Owners or Operators, Guarantors, or Financial Institutions
- 33.1-24-05-81 Wording of the Instruments
- 33.1-24-05-82 [Reserved]
- 33.1-24-05-83 [Reserved]
- 33.1-24-05-84 [Reserved]
- 33.1-24-05-85 [Reserved]
- 33.1-24-05-86 [Reserved]

33.1-24-05-87 [Reserved]

33.1-24-05-88 [Reserved]

CONTAINER REQUIREMENTS

33.1-24-05-89 Applicability of Requirements for Use and Management of Containers

33.1-24-05-90 Condition of Containers

33.1-24-05-91 Compatibility of Waste With Containers

33.1-24-05-92 Management of Containers

33.1-24-05-93 Inspections

33.1-24-05-94 Containment

33.1-24-05-95 Special Requirements for Ignitable or Reactive Wastes

33.1-24-05-96 Special Requirements for Incompatible Wastes

33.1-24-05-97 Closure

33.1-24-05-98 Air Emission Standards

33.1-24-05-99 [Reserved]

33.1-24-05-100 [Reserved]

33.1-24-05-101 [Reserved]

33.1-24-05-102 [Reserved]

TANK REQUIREMENTS

33.1-24-05-103 Applicability of Tank Requirements

33.1-24-05-104 Assessment of Existing Tank System's Integrity

33.1-24-05-105 Design and Installation of New Tank Systems or Components

33.1-24-05-106 Containment and Detection of Releases

33.1-24-05-107 General Operating Requirements

33.1-24-05-108 Inspections

33.1-24-05-109 Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems

33.1-24-05-110 Closure and Postclosure Care

33.1-24-05-111 Special Requirements for Ignitable or Reactive Waste

33.1-24-05-112 Special Requirements for Incompatible Wastes

33.1-24-05-113 Waste Analysis and Trial Tests

33.1-24-05-114 Special Requirements for Generators of Between One Hundred and One Thousand Kilograms Per Month That Accumulate Hazardous Waste in Tanks

33.1-24-05-115 Air Emission Standards

33.1-24-05-116 [Reserved]

33.1-24-05-117 [Reserved]

SURFACE IMPOUNDMENT REQUIREMENTS

33.1-24-05-118 Applicability of Surface Impoundment Requirements

33.1-24-05-119 Design and Operating Requirements

33.1-24-05-120 Monitoring and Inspection

33.1-24-05-121 Emergency Repairs - Contingency Plans

33.1-24-05-122 Closure and Postclosure Care

33.1-24-05-123 Special Requirements for Ignitable or Reactive Waste

33.1-24-05-124 Special Requirements for Incompatible Wastes

33.1-24-05-125 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

33.1-24-05-126 Action Leakage Rate

33.1-24-05-127 Response Actions

33.1-24-05-128 Air Emission Standards

33.1-24-05-129 [Reserved]

WASTE PILE REQUIREMENTS

- 33.1-24-05-130 Applicability of Waste Pile Requirements
- 33.1-24-05-131 Design and Operating Requirements
- 33.1-24-05-132 Monitoring and Inspection
- 33.1-24-05-133 Special Requirements for Ignitable or Reactive Waste
- 33.1-24-05-134 Special Requirements for Incompatible Wastes
- 33.1-24-05-135 Closure and Postclosure Care
- 33.1-24-05-136 Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027
- 33.1-24-05-137 Action Leakage Rate
- 33.1-24-05-138 Response Actions
- 33.1-24-05-139 [Reserved]
- 33.1-24-05-140 [Reserved]
- 33.1-24-05-141 [Reserved]
- 33.1-24-05-142 [Reserved]
- 33.1-24-05-143 [Reserved]
- 33.1-24-05-144 Applicability of Incinerator Requirements

INCINERATOR REQUIREMENTS

- 33.1-24-05-145 Waste Analysis
- 33.1-24-05-146 Designation of Principal Organic Hazardous Constituents
- 33.1-24-05-147 Performance Standards
- 33.1-24-05-148 Hazardous Waste Incinerator Permits
- 33.1-24-05-149 Operating Requirements
- 33.1-24-05-150 Monitoring and Inspections
- 33.1-24-05-151 Closure
- 33.1-24-05-152 [Reserved]

- 33.1-24-05-419 [Reserved]

AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

- 33.1-24-05-420 Applicability to Air Emission Standards for Equipment Leaks
- 33.1-24-05-421 Definitions as Used in Sections 33.1-24-05-420 Through 33.1-24-05-449
- 33.1-24-05-422 Standards - Pumps in Light Liquid Service
- 33.1-24-05-423 Standards - Compressors
- 33.1-24-05-424 Standards - Pressure Relief Devices in Gas or Vapor Service
- 33.1-24-05-425 Standards - Sampling Connection Systems
- 33.1-24-05-426 Standards - Open-Ended Valves or Lines
- 33.1-24-05-427 Standards - Valves in Gas or Vapor Service or in Light Liquid Service
- 33.1-24-05-428 Standards - Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors
- 33.1-24-05-429 Standards - Delay of Repair
- 33.1-24-05-430 Standards - Closed-Vent Systems and Control Devices
- 33.1-24-05-431 Alternative Standards for Valves in Gas or Vapor Service or Light Liquid Service - Percentage of Valves Allowed to Leak
- 33.1-24-05-432 Alternative Standard for Valves in Gas or Vapor Service or in Light Liquid Service - Skip Period Leak Detection and Repair
- 33.1-24-05-433 Test Methods and Procedures
- 33.1-24-05-434 Recordkeeping Requirements
- 33.1-24-05-435 Reporting Requirements
- 33.1-24-05-436 [Reserved]
- 33.1-24-05-437 [Reserved]
- 33.1-24-05-438 [Reserved]
- 33.1-24-05-439 [Reserved]
- 33.1-24-05-440 [Reserved]
- 33.1-24-05-441 [Reserved]
- 33.1-24-05-442 [Reserved]
- 33.1-24-05-443 [Reserved]
- 33.1-24-05-444 [Reserved]
- 33.1-24-05-445 [Reserved]
- 33.1-24-05-446 [Reserved]
- 33.1-24-05-447 [Reserved]
- 33.1-24-05-448 [Reserved]
- 33.1-24-05-449 [Reserved]

AIR EMISSION STANDARDS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS

- 33.1-24-05-450 Applicability to Air Emission Standards for Tanks, Surface Impoundments, and Containers
- 33.1-24-05-451 Definitions
- 33.1-24-05-452 Standards - General
- 33.1-24-05-453 Waste Determination Procedures
- 33.1-24-05-454 Standards - Tanks
- 33.1-24-05-455 Standards - Surface Impoundments
- 33.1-24-05-456 Standards - Containers
- 33.1-24-05-457 Standards - Closed-Vent Systems and Control Devices
- 33.1-24-05-458 Inspection and Monitoring Requirements
- 33.1-24-05-459 Recordkeeping Requirements
- 33.1-24-05-460 Reporting Requirements
- 33.1-24-05-461 [Reserved]
- 33.1-24-05-462 [Reserved]
- 33.1-24-05-463 [Reserved]
- 33.1-24-05-464 [Reserved]
- 33.1-24-05-465 [Reserved]

DRIP PADS

- 33.1-24-05-501 Applicability to Drip Pads
- 33.1-24-05-502 Assessment of Existing Drip Pad Integrity
- 33.1-24-05-503 Design and Installation of New Drip Pads
- 33.1-24-05-504 Design and Operating Requirements
- 33.1-24-05-505 Inspections
- 33.1-24-05-506 Closure
- 33.1-24-05-507 [Reserved]
- 33.1-24-05-508 [Reserved]
- 33.1-24-05-509 [Reserved]
- 33.1-24-05-510 [Reserved]
- 33.1-24-05-511 [Reserved]
- 33.1-24-05-512 [Reserved]
- 33.1-24-05-513 [Reserved]
- 33.1-24-05-514 [Reserved]
- 33.1-24-05-515 [Reserved]
- 33.1-24-05-516 [Reserved]
- 33.1-24-05-517 [Reserved]
- 33.1-24-05-518 [Reserved]
- 33.1-24-05-519 [Reserved]
- 33.1-24-05-520 [Reserved]
- 33.1-24-05-521 [Reserved]
- 33.1-24-05-522 [Reserved]
- 33.1-24-05-523 [Reserved]
- 33.1-24-05-524 [Reserved]

BOILERS AND INDUSTRIAL FURNACES

- 33.1-24-05-525 Applicability to Hazardous Waste Burned in Boilers and Industrial Furnaces
- 33.1-24-05-526 Management Prior to Burning
- 33.1-24-05-527 Permit Standards for Burners
- 33.1-24-05-528 Interim Status Standards for Burners
- 33.1-24-05-529 Standards to Control Organic Emissions
- 33.1-24-05-530 Standards to Control Particulate Matter
- 33.1-24-05-531 Standards to Control Metals Emissions
- 33.1-24-05-532 Standards to Control Hydrogen Chloride (HCl) and Chlorine Gas (Cl₂) Emissions
- 33.1-24-05-533 Small Quantity Onsite Burner Exemption
- 33.1-24-05-534 Low-Risk Waste Exemption
- 33.1-24-05-535 Waiver of Destruction and Removal Efficiency Trial Burn for Boilers
- 33.1-24-05-536 Standards for Direct Transfer
- 33.1-24-05-537 Regulation of Residues
- 33.1-24-05-538 [Reserved]
- 33.1-24-05-539 [Reserved]
- 33.1-24-05-540 [Reserved]
- 33.1-24-05-541 [Reserved]
- 33.1-24-05-542 [Reserved]
- 33.1-24-05-543 [Reserved]
- 33.1-24-05-544 [Reserved]
- 33.1-24-05-545 [Reserved]
- 33.1-24-05-546 [Reserved]

- 33.1-24-05-547 [Reserved]
- 33.1-24-05-548 [Reserved]
- 33.1-24-05-549 [Reserved]

SPECIAL PROVISIONS FOR CLEANUP

- 33.1-24-05-550 Applicability of Corrective Action Management Unit Regulations
- 33.1-24-05-551 Grandfathered Corrective Action Management Units
- 33.1-24-05-552 Corrective Action Management Unit
- 33.1-24-05-553 Temporary Units
- 33.1-24-05-554 Staging Piles
- 33.1-24-05-555 Disposal of Corrective Action Management Unit-Eligible Wastes in Permitted Hazardous Waste Landfills
- 33.1-24-05-556 [Reserved]
- 33.1-24-05-557 [Reserved]
- 33.1-24-05-558 [Reserved]

33.1-24-05-01. Purpose, scope, and applicability.

1. The purpose of this chapter is to establish minimum standards which define the acceptable management of hazardous waste.
2. The standards in this chapter apply to owners and operators of all facilities which treat, store, or dispose of hazardous waste, except as specifically provided otherwise in this chapter or chapter 33.1-24-02.
3. The requirements of this chapter apply to a person disposing of hazardous waste by means of underground injection subject to a permit issued under an underground injection control program approved or promulgated under the Safe Drinking Water Act only to the extent they are required by chapter 33.1-24-06.
4. The requirements of this chapter apply to the owner or operator of a publicly owned treatment works which treats, stores, or disposes of hazardous waste only to the extent they are included in a hazardous waste permit by rule granted to such a person under chapter 33.1-24-06.
5. The requirements of this chapter apply to recyclable materials used in a manner constituting disposal, hazardous waste burned for energy recovery, recyclable materials utilized for precious metal recovery, and spent lead acid batteries being reclaimed.
6. The requirements of this chapter do not apply to:
 - a. The owner or operator of a facility permitted, licensed, or registered by the department to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation under section 33.1-24-02-05.
 - b. The owner or operator of a facility managing recyclable materials described in subdivisions b, c, and d of subsection 1 of section 33.1-24-02-06 (except to the extent they are referred to in sections 33.1-24-05-600 through 33.1-24-05-689 or sections 33.1-24-05-201 through 33.1-24-05-209, sections 33.1-24-05-230 through 33.1-24-05-249, or sections 33.1-24-05-525 through 33.1-24-05-549).
 - c. A generator accumulating waste onsite in compliance with section 33.1-24-03-12.

- d. A farmer disposing of pesticide containers from the farmer's own use in compliance with section 33.1-24-03-40.
- e. The owner or operator of a totally enclosed treatment facility, as defined in section 33.1-24-01-04.
- f. The owner or operator of an elementary neutralization unit or a wastewater treatment unit as defined in section 33.1-24-01-04, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 high total organic carbon subcategory defined in section 33.1-24-05-280, table treatment standards for hazardous wastes, or reactive (D003) waste, to remove the characteristic before land disposal, the owner or operator must comply with the requirements set out in subsection 2 of section 33.1-24-05-08).
- g. Immediate response activities.
 - (1) Except as provided in paragraph 2, a person engaged in treatment or containment activities during immediate response to any of the following situations:
 - (a) A discharge of hazardous waste.
 - (b) An imminent and substantial threat of a discharge of hazardous waste.
 - (c) A discharge of material which, when discharged, becomes a hazardous waste.
 - (d) An immediate threat to human health, public safety, property, or the environment, from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosive or munitions emergency response specialist as defined in section 33.1-24-01-04.
 - (2) An owner or operator of a facility otherwise regulated by this chapter shall comply with all applicable requirements of sections 33.1-24-05-15 through 33.1-24-05-36.
 - (3) Any person who is covered by paragraph 1 and continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this chapter and chapters 33.1-24-06 and 33.1-24-07.
 - (4) In the case of an explosives or munitions emergency response, if a federal, state, tribal, or local official acting within the scope of that person's official responsibilities, or an explosives or munitions emergency response specialist, determines that immediate removal of the material or waste is necessary to protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters who do not have identification numbers and without the preparation of a manifest. In the case of emergencies involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.
- h. A transporter storing manifested shipments of hazardous waste in containers meeting the requirements of section 33.1-24-03-08 at a transfer facility for a period of ten days or less.
- i. The addition of absorbent material to waste in a container (as defined in section 33.1-24-01-04) or the addition of waste to absorbent material in a container provided that

these actions occur at the time waste is first placed in a container and subsection 2 of section 33.1-24-05-08 and sections 33.1-24-05-90 and 33.1-24-05-91 are complied with.

j. Universal waste handlers and universal waste transporters (as defined in section 33.1-24-01-04) handling the wastes listed below. These handlers are subject to regulation under sections 33.1-24-05-700 through 33.1-24-05-799, when handling the below-listed universal wastes:

(1) Batteries as described in section 33.1-24-05-702;

(2) Pesticides as described in section 33.1-24-05-703;

(3) Mercury-containing equipment as described in section 33.1-24-05-704; and

(4) Lamps as described in section 33.1-24-05-705.

7. The requirements of this chapter apply to owners or operators of all facilities which treat, store, or dispose of hazardous wastes referred to in sections 33.1-24-05-250 through 33.1-24-05-299.

8. Subsection 1 of section 33.1-24-05-09 applies only to facilities subject to regulation under sections 33.1-24-05-89 through 33.1-24-05-190 and sections 33.1-24-05-300 through 33.1-24-05-309.

9. Section 33.1-24-05-825 identifies when the requirements of this chapter apply to the storage of military munitions classified as solid waste under section 33.1-24-05-822. The treatment and disposal of hazardous waste military munitions are subject to the applicable permitting, procedural, and technical standards in article 33.1-24.

10. The requirements of sections 33.1-24-05-02 through 33.1-24-05-36 and section 33.1-24-05-58 do not apply to remediation waste management sites. (However, some remediation waste management sites may be a part of a facility that is subject to a traditional hazardous waste permit because the facility is also treating, storing, or disposing of hazardous wastes that are not remediation wastes. In these cases, sections 33.1-24-05-02 through 33.1-24-05-36 and section 33.1-24-05-58 do apply to the facility subject to the traditional hazardous waste permit.) Instead of the requirements of sections 33.1-24-05-02 through 33.1-24-05-36, owners or operators of remediation waste management sites must:

a. Obtain an identification number by applying to the department using environmental protection agency form 8700-12, or equivalent state form;

b. Obtain a detailed chemical and physical analysis of a representative sample of the hazardous remediation wastes to be managed at the site. At a minimum, the analysis must contain all of the information which must be known to treat, store, or dispose of the waste according to chapter 33.1-24-05, and must be kept accurate and up to date;

c. Prevent people who are unaware of the danger from entering, and minimize the possibility for unauthorized people or livestock to enter onto the active portion of the remediation waste management site, unless the owner or operator can demonstrate to the department that:

(1) Physical contact with the waste, structures, or equipment within the active portion of the remediation waste management site will not injure people or livestock who may enter the active portion of the remediation waste management site; and

(2) Disturbance of the waste or equipment by people or livestock who enter onto the active portion of the remediation waste management site will not cause a violation of the requirements of this article;

- d. Inspect the remediation waste management site for malfunctions, deterioration, operator errors, and discharges that may be causing, or may lead to, a release of hazardous waste constituents to the environment, or a threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment, and must remedy the problem before it leads to a human health or environmental hazard. If a hazard is imminent or has already occurred, the owner or operator must take remedial action immediately;
- e. Provide personnel with classroom or on-the-job training on how to perform their duties in a way that ensures the remediation waste management site complies with the requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 3-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819, and on how to respond effectively to emergencies;
- f. Take precautions to prevent accidental ignition or reaction of ignitable or reactive waste, and prevent threats to human health and the environment from ignitable, reactive, and incompatible waste;
- g. For remediation waste management sites subject to regulation under sections 33.1-24-05-89 through 33.1-24-05-190 and sections 33.1-24-05-300 through 33.1-24-05-309, the owner or operator must design, construct, operate, and maintain a unit within a one hundred-year floodplain to prevent washout of any hazardous waste by a one hundred-year flood, unless the owner or operator can meet the demonstration of subsection 1 of section 33.1-24-05-09;
- h. Not place any noncontainerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, or underground mine or cave;
- i. Develop and maintain a construction quality assurance program for all surface impoundments, waste piles, and landfill units that are required to comply with subsections 3 and 4 of section 33.1-24-05-119, subsections 2 and 3 of section 33.1-24-05-131, and subsections 3 and 4 of section 33.1-24-05-177 at the remediation waste management site, according to the requirements of section 33.1-24-05-10;
- j. Develop and maintain procedures to prevent accidents and a contingency and emergency plan to control accidents that occur. These procedures must address proper design, construction, maintenance, and operation of remediation waste management units at the site. The goal of the plan must be to minimize the possibility of, and the hazards from a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment. The plan must explain specifically how to treat, store, and dispose of the hazardous remediation waste in question, and must be implemented immediately whenever a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment;
- k. Designate at least one employee, either on the facility premises or on call (that is, available to respond to an emergency by reaching the facility quickly), to coordinate all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within

the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan;

I. Develop, maintain, and implement a plan to meet the requirements in subdivisions b through f, i, and j; and

m. Maintain records documenting compliance with subdivisions a through l.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-02. Identification number and permit.

Every facility owner or operator shall apply to the department for an identification number and a permit. The department may assess and collect reasonable fees for the review and issuance of permits.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03, 23.1-04-09; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05, 23.1-04-08, 23.1-04-09; S.L. 2017, ch. 199, § 19

33.1-24-05-03. Required notices.

1. The owner or operator of a facility that has arranged to receive hazardous waste from a foreign source shall notify the department and the environmental protection agency in writing at least four weeks in advance of the date the waste is expected to arrive at the facility. Notice of subsequent shipments of the same waste from the same foreign source is not required. The owner or operator of a recovery facility that has arranged to receive hazardous waste subject to sections 33.1-24-03-50 through 33.1-24-03-59 must provide a copy of the movement document bearing all required signatures to the foreign exporter; to the office of enforcement and compliance assurance, office of federal activities, international compliance assurance division (2254A), environmental protection agency, 1200 Pennsylvania Avenue, NW, Washington, D.C. 20460; the state; and to the competent authorities of all other countries concerned within three working days of receipt of the shipment. The original of the signed movement document must be maintained at the facility for at least three years. In addition, such owner or operator shall, as soon as possible, but no later than thirty days after the completion of recovery and no later than one calendar year following the receipt of the hazardous waste, send a certificate of recovery to the foreign exporter; to the competent authority of the country of export; to the environmental protection agency's office of enforcement and compliance assurance at the above address; and the state, by mail, electronic mail without a digital signature followed by mail, or fax followed by mail.

2. Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the postclosure care period, the owner or operator shall notify the new owner or operator in writing of the requirements in this chapter and chapter 33.1-24-06.

3. The owner or operator of a facility that receives hazardous waste from an offsite source (except where the owner or operator is also the generator) shall inform the generator in writing that the owner or operator has the appropriate permit for, and will accept, the waste the generator is shipping. The owner or operator shall keep a copy of this written notice as part of the operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-04. General waste analysis.

1. Waste analysis requirements.

- a. Before an owner or operator treats, stores, or disposes of any hazardous wastes, the owner or operator shall obtain a detailed chemical and physical analysis of a representative sample of the waste. At a minimum, this analysis must contain all the information which must be known to treat, store, or dispose of the waste in accordance with the requirements of this chapter or a permit issued under chapter 33.1-24-06.
- b. The analysis may include data developed under chapter 33.1-24-02 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes. (Comment: For example, the facility's records of analyses performed on the waste before the effective date of these rules, or studies conducted on hazardous wastes generated from processes similar to that which generated the waste to be managed at the facility, may be included in the database required to comply with subdivision a. The owner or operator of an offsite facility may arrange for the generator of the hazardous waste to supply part of the information required by subdivision a, except as otherwise specified in subsections 2 and 3 of section 33.1-24-05-256. If the generator does not supply the information, and the owner or operator chooses to accept a hazardous waste, the owner or operator is responsible for obtaining the information required to comply with this section.)
- c. The analysis must be repeated as necessary to ensure that it is accurate and up-to-date. At a minimum, the analysis must be repeated:
 - (1) When the owner or operator is notified, or has reason to believe, that the process or operation generating the hazardous waste has changed; and
 - (2) For offsite facilities when the results of the inspection required in subdivision d indicate that the hazardous waste received at the facility does not match the waste designated on the accompanying manifest or shipping paper.
- d. The owner or operator of an offsite facility shall inspect and, if necessary, analyze each hazardous waste movement received at the facility to determine whether it matches the identity of the waste specified on the accompanying manifest or shipping paper.

2. The owner or operator shall develop and follow a written waste analysis plan which describes the procedures which the owner or operator will carry out to comply with subsection 1. The owner or operator must keep this plan at the facility. At a minimum, the plan must specify:

- a. The parameters for which each hazardous waste will be analyzed and the rationale for the selection of these parameters, i.e., how analysis for these parameters will provide sufficient information on the waste's properties to comply with subsection 1.
- b. The test methods which will be used to test for these parameters.
- c. The sampling method which will be used to obtain a representative sample of the waste to be analyzed. A representative sample may be obtained using either:
 - (1) One of the sampling methods described in appendix I of chapter 33.1-24-02; or
 - (2) An equivalent sampling method.
- d. The frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up-to-date.

- e. For offsite facilities the waste analysis that hazardous waste generators have agreed to supply.
 - f. Where applicable, the methods which will be used to meet the additional waste analysis requirements for specific waste management methods as specified in sections 33.1-24-05-08, 33.1-24-05-145, 33.1-24-05-183, 33.1-24-05-256, subsection 4 of section 33.1-24-05-404, subsection 4 of section 33.1-24-05-433, and section 33.1-24-05-453.
 - g. For surface impoundments exempted from land disposal restrictions under subsection 1 of section 33.1-24-05-253, the procedures and schedules for:
 - (1) The sampling of impoundment contents;
 - (2) The analyses of test data; and
 - (3) The annual removal of residues which are not delisted under section 33.1-24-01-08 or which exhibit a characteristic of hazardous waste and either:
 - (a) Do not meet applicable treatment standards of sections 33.1-24-05-280 through 33.1-24-05-289; or
 - (b) Where no treatment standards have been established:
 - [1] Such residues are prohibited from land disposal under section 33.1-24-05-272 or Resource Conservation and Recovery Act section 3004(b); or
 - [2] Such residues are prohibited from land disposal under subsection 6 of section 33.1-24-05-273.
 - h. For owners and operators seeking an exemption to the air emission standards of sections 33.1-24-05-450 through 33.1-24-05-474 in accordance with section 33.1-24-05-452:
 - (1) If direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis, and the results of the analysis of test data to verify the exemption.
 - (2) If knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the hazardous waste, if the waste is received from offsite, that is used as the basis for knowledge of the waste.
3. For offsite facilities, the waste analysis plan required in subsection 2 must also specify the procedures which will be used to inspect and analyze each movement of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. At a minimum, the plan must describe:
- a. The procedures which will be used to determine the identity of each movement of waste managed at the facility.
 - b. The sampling method which will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling.
 - c. The procedures that the owner or operator of an offsite landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-05. Security.

1. The owner or operator shall prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of the owner's or operator's facility, unless the owner or operator can demonstrate to the department that:
 - a. Physical contact with the waste, structures, or equipment with the active portion of the facility will not injure unknowing or unauthorized persons or livestock which may enter the active portion of the facility.
 - b. Disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of this chapter.
2. Unless exempt under subdivisions a and b of subsection 1, the facility must have:
 - a. A twenty-four-hour surveillance system, for example, television monitoring or surveillance by guards or facility personnel, which continuously monitors and controls entry onto the active portion of the facility; or
 - b. Both of the following:
 - (1) An artificial or natural barrier, for example, a fence in good repair or a fence combined with a cliff, which completely surrounds the active portion of the facility.
 - (2) A means to control entry, at all times, through the gates or other entrances to the active portion of the facility, for example, an attendant, television monitors, locked entrance, or controlled roadway access to the facility.
3. Unless exempt under subdivisions a and b of subsection 1, a sign with a legend, "Danger - Unauthorized Personnel Keep Out", must be posted at each entrance to the active portion of a facility, and at other locations, in sufficient numbers to be seen from any approach to this active portion, and must be legible from a distance of at least twenty-five feet [7.62 meters]. The legend must be written in English and in any other language predominant in the area surrounding the facility. Existing signs with a legend other than "Danger - Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion can be dangerous.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-06. General inspection requirements.

1. The owner or operator shall inspect the facility for malfunctions and deterioration, operator errors, and discharges which may be causing or may lead to release of hazardous waste constituents to the environment, or a threat to human health. The owner or operator shall conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment.
2. Schedule requirements.

- a. The owner or operator shall develop and follow a written schedule for inspecting all monitoring equipment, safety, and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.
 - b. The owner or operator shall keep this schedule at the facility.
 - c. The schedule must identify the types of problems, for example, malfunctions or deterioration, which are to be looked for during the inspection, for example, inoperative sump pump, leaking fitting, eroding dike, etc.
 - d. The frequency of inspection may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the items and frequencies called for in sections 33.1-24-05-93, 33.1-24-05-106, 33.1-24-05-108, 33.1-24-05-120, 33.1-24-05-132, 33.1-24-05-150, 33.1-24-05-165, 33.1-24-05-178, 33.1-24-05-302, 33.1-24-05-403, 33.1-24-05-422, 33.1-24-05-423, 33.1-24-05-428, and 33.1-24-05-453 through 33.1-24-05-459, where applicable.
3. The owner or operator shall remedy any deterioration or malfunction of equipment or structures which the inspection reveals on a schedule which ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action must be taken immediately.
 4. The owner or operator shall record inspections in an inspection log or summary. The owner or operator shall keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of the inspection, the name of the inspector, a notation of the observations made, and the date and nature of any repairs or other remedial actions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-07. Personnel training.

1. Initial training requirements.
 - a. Facility personnel shall successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of these rules. The owner or operator shall ensure that this program includes all the elements described in the document required under subdivision c of subsection 4.
 - b. This program must be directed by a person trained in hazardous waste management procedures, and must include instruction which teaches facility personnel hazardous waste management procedures, including contingency plan implementation, relevant to the positions in which they are employed.
 - c. At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable:

- (1) Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment.
- (2) Key parameters for automatic waste feed cutoff systems.
- (3) Communications or alarm systems.
- (4) Response to fires or explosions.
- (5) Response to ground water contamination incidents.
- (6) Shutdown of operations.

d. For facility employees that receive emergency response training pursuant to occupational safety and health administration regulations 29 CFR 1910.120(p)(8) and 1910.120(q), the facility is not required to provide separate emergency response training pursuant to this section, provided that the overall facility training meets all the requirements of this section.

2. Facility personnel shall successfully complete the program required in subsection 1 within six months after January 1, 1984, or six months after the date of their employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after January 1, 1984, may not work in unsupervised positions until they have completed the training requirements of subsection 1.

3. Facility personnel shall take part in an annual review of the initial training required in subsection 1.

4. The owner or operator shall maintain the following documents and records at the facility:

a. The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job.

b. A written job description for each position listed under subdivision a. This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but must include the requisite skill, education, or other qualifications and duties of facility personnel assigned to each position.

c. A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under subdivision a.

d. Records that document that the training or job experience required under subsections 1, 2, and 3 has been given to, and completed by, facility personnel.

5. Training records on current personnel must be kept until closure of the facility. Training records on former employees must be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-08. General requirements for ignitable, reactive, or incompatible wastes.

1. The owner or operator shall take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste must be separated and protected from sources of ignition or reaction, including open flames, smoking, cutting and welding, hot surfaces,

frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (for example, from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the owner or operator shall confine smoking and open flames to specially designated locations. "No Smoking" signs must be conspicuously placed wherever there is a hazard from ignitable or reactive wastes.

2. Where specifically required by other sections of this chapter, the owner or operator of a facility that treats, stores, or disposes ignitable or reactive waste, or mixes incompatible wastes, or incompatible wastes and other materials, must take precautions to prevent reactions which:

- a. Generate extreme heat or pressure, fire or explosion, or violent reaction;
- b. Produce uncontrolled toxic mists, fumes, dust, or gases in sufficient quantity to threaten human health or the environment;
- c. Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
- d. Damage the structural integrity of the device or facility; or
- e. Through other like means threaten human health or the environment.

3. When required to comply with subsection 1 or 2, the owner or operator shall document that compliance. This documentation may be based on references to published scientific or engineering literature data, from trial tests (for example, bench scale or pilot scale tests), waste analysis (as specified in section 33.1-24-05-04), or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-09. Location standards.

1. The department will not issue a permit to any facility which is or will be constructed in a location with a geology, hydrogeology, hydrology, or topography which the department reasonably believes is incompatible with the type of hazardous waste management activity occurring or proposed to occur. Locations which are specifically within the meaning of this section include floodplains, ground water recharge areas, highly permeable soils, high ground water tables, and areas of high topographic relief.

2. The placement of any noncontainerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine, or cave is prohibited.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-10. Construction quality assurance program.

1. Construction quality assurance program.

- a. A construction quality assurance program is required for all surface impoundment, waste pile, and landfill units that are required to comply with subsections 3 and 4 of section 33.1-24-05-119, subsections 2 and 3 of section 33.1-24-05-131, and subsections 3 and 4 of section 33.1-24-05-177. The program must ensure that the constructed unit meets or exceeds all design criteria and specifications in the permit. The program must be

developed and implemented under the direction of a construction quality assurance officer who is a registered professional engineer.

b. The construction quality assurance program must address the following physical components, where applicable:

(1) Foundations;

(2) Dikes;

(3) Low-permeability soil liners;

(4) Geomembranes (flexible membrane liners);

(5) Leachate collection and removal systems and leak detection systems; and

(6) Final cover systems.

2. **Written construction quality assurance plan.** The owner or operator of units subject to the construction quality assurance program under subsection 1 must develop and implement a written construction quality assurance plan. The plan must identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The construction quality assurance plan must include:

a. Identification of applicable units and a description of how they will be constructed.

b. Identification of key personnel in the development and implementation of the construction quality assurance plan and construction quality assurance officer qualifications.

c. A description of inspection and sampling activities for all unit components identified in subdivision b of subsection 1, including observations and tests that will be used before, during, and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description must cover sampling size and locations, frequency of testing, data evaluation procedures, acceptance and rejection criteria for construction materials, plans for implementing corrective measures, and data or other information to be recorded and retained in the operating record under section 33.1-24-05-40.

3. **Contents of program.**

a. The construction quality assurance program must include observations, inspections, tests, and measurements sufficient to ensure:

(1) Structural stability and integrity of all components of the unit identified in subdivision b of subsection 1;

(2) Proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices, and proper installation of all components (for example, pipes) according to design specifications; and

(3) Conformity of all materials used with design and other material specifications under sections 33.1-24-05-119, 33.1-24-05-131, and 33.1-24-05-177.

b. The construction quality assurance program must include test fills for compacted soil liners, using the same compaction methods as in the full scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of subparagraph b of paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-119,

subparagraph b of paragraph 1 of subdivision a of subsection 2 of section 33.1-24-05-131, and subparagraph b of paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-177 in the field. Compliance with the hydraulic conductivity requirements must be verified by using in situ testing on the constructed test fill. The department may accept an alternative demonstration, in lieu of a test fill, where data are sufficient to show that a constructed soil liner will meet the hydraulic conductivity requirements of subparagraph b of paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-119, subparagraph b of paragraph 1 of subdivision a of subsection 2 of section 33.1-24-05-131, and subparagraph b of paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-177 in the field.

4. **Certification.** Waste shall not be received in a unit subject to section 33.1-24-05-10 until the owner or operator has submitted to the department by certified mail or hand delivery a certification signed by the construction quality assurance officer that the approved construction quality assurance plan has been successfully carried out and that the unit meets the requirements of subsection 3 or 4 of section 33.1-24-05-119, subsection 2 or 3 of section 33.1-24-05-131, or subsection 3 or 4 of section 33.1-24-05-177, and the procedure in paragraph 2 of subdivision b of subsection 12 of section 33.1-24-06-04 has been completed. Documentation supporting the construction quality assurance officer's certification must be furnished to the department upon request.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-11. [Reserved].

33.1-24-05-12. [Reserved].

33.1-24-05-13. [Reserved].

33.1-24-05-14. [Reserved].

33.1-24-05-15. Design and operation of facility.

Facilities must be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-16. Required equipment.

All facilities must be equipped with the following, unless it can be demonstrated to the department that none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

1. An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel.
2. A device, such as a telephone (immediately available at the scene of operations), or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or state or local emergency response teams.
3. Portable fire extinguishers, fire control equipment, including special extinguishing equipment (such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment.
4. Water at adequate volume and pressure to supply water hose streams, foam-producing equipment, automatic sprinklers, or water spray systems.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-17. Testing and maintenance of equipment.

All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary, to ensure its proper operation in time of emergency.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-18. Access to communications or alarm system.

1. Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under section 33.1-24-05-16.
2. If there is ever just one employee on the premises while the facility is operating, the employee must have immediate access to a device, such as a telephone, immediately available at the scene of the operation, or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under section 33.1-24-05-16.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-19. Required aisle space.

The owner or operator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the department that aisle space is not needed for any of these purposes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-20. Arrangements with local authorities.

1. The owner or operator shall attempt to make the following arrangements, as appropriate for the types of waste handled at the facility and the potential need for the services of these organizations:
 - a. Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes.
 - b. Where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department and agreements with any others to provide support to the primary emergency authority.
 - c. Agreements with state emergency response teams, emergency response contractors, and equipment suppliers.
 - d. Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.
2. Where state or local authorities decline to enter into such arrangements, the owner or operator shall document the refusal in the operating record.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-21. [Reserved].

33.1-24-05-22. [Reserved].

33.1-24-05-23. [Reserved].

33.1-24-05-24. [Reserved].

33.1-24-05-25. [Reserved].

33.1-24-05-26. Purpose and implementation of contingency plan.

1. Each owner or operator shall have a contingency plan for the facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.
2. The provisions of the plan must be carried out immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-27. Content of contingency plan.

1. The contingency plan must describe the actions facility personnel must take to comply with sections 33.1-24-05-26 and 33.1-24-05-31 in response to fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous constituents to air, soil, or surface water at the facility.
2. If the owner or operator has already prepared a spill prevention, control, and countermeasures plan in accordance with 40 CFR part 112, or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with these requirements. The owner or operator may develop one contingency plan which meets all regulatory requirements. The department recommends that the plan be based on the national response team's integrated contingency plan guidance ("one plan"). When modifications are made to nonhazardous waste provisions in an integrated contingency plan, the changes do not trigger the need for a hazardous waste permit modification.
3. The plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, pursuant to section 33.1-24-05-20.
4. The plan must list names, addresses, and telephone numbers (office and home) of all persons qualified to act as emergency coordinator and this list must be kept up to date. Where more than one is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.
5. The plan must include a list of all emergency equipment at the facility, such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment, where this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.
6. The plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes, in cases where the primary routes could be blocked by releases of hazardous waste or fires.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-28. Copies of contingency plan.

A copy of the contingency plan and all revisions to the plan must be:

1. Maintained at the facility; and
2. Submitted to all local police departments, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-29. Amendment of contingency plan.

The contingency plan must be reviewed, and immediately amended, if necessary, whenever:

1. The facility permit is revised;
2. The plan fails in an emergency;
3. The facility changes in its design, construction, operation, maintenance, or other circumstances, in a way that materially increases the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;
4. The list of emergency coordinators changes;
5. The list of emergency equipment changes; or
6. Applicable regulations are revised.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-30. Emergency coordinator.

At all times, there must be at least one employee either on the facility premises or on call, i.e., available to respond to an emergency by reaching the facility within a short period of time, with the responsibility for coordinating all emergency response measures. This emergency coordinator shall be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of wastes handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-31. Emergency procedures.

1. When there is an imminent or actual emergency situation, the emergency coordinator, or the coordinator's designee when the emergency coordinator is on call, shall immediately:
 - a. Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel.

b. Notify appropriate state or local agencies with designated response roles if their help is needed.

2. When there is a release, fire, or explosion, the emergency coordinator shall immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.

3. Concurrently, the emergency coordinator shall assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion, for example, the effects of any toxic irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water runoffs from water or chemical agents used to control fire and heat-induced explosions.

4. If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health or the environment outside the facility, the emergency coordinator shall report the coordinator's findings as follows:

a. If the coordinator's assessment indicates that evacuation of local areas may be advisable, the coordinator shall immediately notify appropriate local authorities. The coordinator shall be available to help appropriate officials decide whether local areas should be evacuated.

b. The coordinator shall immediately notify either the government official designated as the on-scene coordinator for that geographical area or the national response center (using their twenty-four-hour toll-free number 800-424-8802). The report must include:

(1) Name and telephone number of reporter.

(2) Name and address of facility.

(3) Time and type of incident, for example, release, fire.

(4) Name and quantity of materials involved, to the extent known.

(5) The extent of injuries, if any.

(6) The possible hazard to human health or the environment, outside the facility.

5. During an emergency, the emergency coordinator shall take all reasonable measures to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released waste, and removing or isolating containers.

6. If the facility stops operations in response to a fire, an explosion or release, the emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

7. Immediately after an emergency, the emergency coordinator shall provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

8. The emergency coordinator shall ensure that, in the affected areas of the facility:

a. No waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

b. All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

9. The owner or operator shall note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within fifteen days after the incident, the owner or operator must submit a written report on the incident to the department. The report must include:

a. Name, address, and telephone number of the owner or operator.

b. Name, address, and telephone number of the facility.

c. Date, time, and type of incident, for example, fire, explosion.

d. Name and quantity of materials involved.

e. The extent of injuries, if any.

f. An assessment of actual or potential hazards to human health or the environment, where this is applicable.

g. Estimated quantity and disposition of recovered material that resulted from the incident.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-32. [Reserved].

33.1-24-05-33. [Reserved].

33.1-24-05-34. [Reserved].

33.1-24-05-35. [Reserved].

33.1-24-05-36. [Reserved].

33.1-24-05-37. Applicability of manifest system, recordkeeping, and reporting requirements.

1. Sections 33.1-24-05-37 through 33.1-24-05-46 apply to owners and operators of both onsite and offsite facilities except as section 33.1-24-05-01 provides otherwise. Sections 33.1-24-05-38, 33.1-24-05-39, and 33.1-24-05-43 do not apply to owners and operators of onsite facilities that do not receive any hazardous waste from offsite sources, and to owners and operators of offsite facilities with respect to waste military munitions exempted from manifest requirements under subsection 1 of section 33.1-24-05-823. Subsection 2 of section

33.1-24-05-40 only applies to permittees who treat, store, or dispose of hazardous waste onsite where such wastes were generated.

2. The revised manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-05-37, 33.1-24-05-38, 33.1-24-05-39, and 33.1-24-05-43, shall not apply until September 5, 2006, or article 33.1-24 is amended and effective, but not prior to September 5, 2006. The manifest form and procedures in sections 33.1-24-01-04, 33.1-24-02-07, 33.1-24-05-37, 33.1-24-05-38, 33.1-24-05-39, and 33.1-24-05-43, contained in article 33.1-24, amended December 1, 2003, shall be applicable until September 5, 2006, or when amended, but not prior to September 5, 2006.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-38. Use of manifest system.

1. If a facility receives:

- a. Hazardous waste accompanied by a manifest, the owner or operator, or the owner's or operator's agent shall sign and date the manifest as indicated in subdivision b to certify that the hazardous waste covered by the manifest was received, that the hazardous waste was received except as noted in the discrepancy space of the manifest, or that the hazardous waste was rejected as noted in the manifest discrepancy space.

- b. A hazardous waste shipment accompanied by a manifest, the owner or operator, or the owner's or operator's agent, shall:

- (1) Sign and date, by hand, each copy of the manifest;

- (2) Note any discrepancies in the manifest, as defined in subsection 1 of section 33.1-24-05-39, on each copy of the manifest;

- (3) Immediately give the transporter at least one copy of the signed manifest;

- (4) Within thirty days after the delivery, send a copy (page 3) of the manifest to the generator;

- (5) Within thirty days of delivery, send the top copy (page 1) of the manifest to the e-manifest system for purposes of data entry and processing. In lieu of mailing this copy to the environmental protection agency, the owner or operator may transmit to the environmental protection agency system an image file of page 1 of the manifest, or both a data string file and the image file corresponding to page 1 of the manifest. Any data or image files transmitted to the environmental protection agency under this paragraph must be submitted in data file and image file formats that are acceptable to the environmental protection agency and that are supported by the environmental protection agency's electronic reporting requirements and by the electronic manifest system; and

- (6) Retain at the facility a copy of each manifest for at least three years from the date of delivery.

- c. Hazardous waste imported from a foreign source, the receiving facility must mail a copy of the manifest and documentation confirming the environmental protection agency's consent to the import of hazardous waste to the department and to the following address within thirty days of delivery: office of enforcement and compliance assurance, office of

federal activities, international compliance assurance division (2254A), environmental protection agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460.

2. If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste which is accompanied by a shipping paper containing all the information required on the manifest (excluding the identification numbers, generator's certification, and signatures), the owner or operator, or the owner's or operator's agent, shall:
 - a. Sign and date each copy of the manifest or shipping paper (if the manifest has not been received) to certify that the hazardous waste covered by the shipping paper was received;
 - b. Note any significant discrepancies (as defined in subsection 1 of section 33.1-24-05-39) in the manifest or shipping paper (if the manifest has not been received) on each copy of the manifest or shipping paper;
 - c. Immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest or shipping paper (if the manifest has not been received);
 - d. Within thirty days after the delivery, send a copy of the signed and dated manifest, or a signed and dated copy of the shipping paper (if the manifest has not been received within thirty days after delivery) to the generator; and
 - e. Retain at the facility a copy of each shipping paper (if signed in lieu of the manifest at the time of delivery) and manifest for at least three years from the date of delivery.
3. If a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility must comply with the requirements of chapter 33.1-24-03.
4. Within three working days of the receipt of a shipment subject to sections 33.1-24-03-50 through 33.1-24-03-59, the owner or operator of the facility must provide a copy of the movement document bearing all required signatures to the exporter, to the office of enforcement and compliance assurance, office of federal activities, international compliance assurance division (2254A), environmental protection agency, 1200 Pennsylvania Avenue NW, Washington, D.C. 20460, the state, and to competent authorities of all other concerned countries. The original copy of the movement document must be maintained at the facility for at least three years from the date of signature.
5. A facility must determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes under the state's hazardous waste program. Facilities must also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to these states.
6. Legal equivalence to paper manifests. Electronic manifests that are obtained, completed, and transmitted in accordance with subdivision b of subsection 1 of section 33.1-24-03-04, and used in accordance with this section in lieu of the paper manifest form are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these rules to obtain, complete, sign, provide, use, or retain a manifest.
 - a. Any requirement in these rules for the owner or operator of a facility to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 40 CFR 262.25.
 - b. Any requirement in these rules to give, provide, send, forward, or to return to another person a copy of the manifest is satisfied when a copy of an electronic manifest is transmitted to the other person.

- c. Any requirement in these rules for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an electronic manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment.
 - d. Any requirement in these rules for an owner or operator to keep or retain a copy of each manifest is satisfied by the retention of the facility's electronic manifest copies in its account on the e-manifest system, provided that such copies are readily available for viewing and production if requested by any environmental protection agency inspector or authorized department representative.
 - e. No owner or operator may be held liable for the inability to produce an electronic manifest for inspection under this section if the owner or operator can demonstrate that the inability to produce the electronic manifest is due exclusively to a technical difficulty with the electronic manifest system for which the owner or operator bears no responsibility.
7. An owner or operator may participate in the electronic manifest system either by accessing the electronic manifest system from the owner's or operator's electronic equipment, or by accessing the electronic manifest system from portable equipment brought to the owner's or operator's site by the transporter who delivers the waste shipment to the facility.
8. Special procedures applicable to replacement manifests. If a facility receives hazardous waste that is accompanied by a paper replacement manifest for a manifest that was originated electronically, the following procedures apply to the delivery of the hazardous waste by the final transporter:
- a. Upon delivery of the hazardous waste to the designated facility, the owner or operator must sign and date each copy of the paper replacement manifest by hand in item 20 (designated facility certification of receipt) and note any discrepancies in item 18 (discrepancy indication space) of the paper replacement manifest;
 - b. The owner or operator of the facility must give back to the final transporter one copy of the paper replacement manifest;
 - c. Within thirty days of delivery of the waste to the designated facility, the owner or operator of the facility must send one signed and dated copy of the paper replacement manifest to the generator, and send an additional signed and dated copy of the paper replacement manifest to the electronic manifest system; and
 - d. The owner or operator of the facility must retain at the facility one copy of the paper replacement manifest for at least three years from the date of delivery.
9. Special procedures applicable to electronic signature methods undergoing tests. If an owner or operator using an electronic manifest signs this manifest electronically using an electronic signature method which is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the owner or operator shall also sign with an ink signature the facility's certification of receipt or discrepancies on the printed copy of the manifest provided by the transporter. Upon executing its ink signature on this printed copy, the owner or operator shall retain this original copy among its records for at least three years from the date of delivery of the waste.
10. Imposition of user fee for electronic manifest use. An owner or operator who is a user of the electronic manifest format may be assessed a user fee by the environmental protection agency for the origination or processing of each electronic manifest. An owner or operator may also be assessed a user fee by the environmental protection agency for the collection

and processing of paper manifest copies that owners or operators must submit to the electronic manifest system operator under paragraph 5 of subdivision b of subsection 1. The environmental protection agency shall maintain and update from time-to-time the schedule of electronic manifest system user fees, which shall be determined based on current and projected system costs and level of use of the electronic manifest system. The schedule of electronic manifest user fees shall be published by the environmental protection agency as an appendix to 40 CFR 262.

11. Electronic manifest signatures. Electronic manifest signatures shall meet the criteria described in 40 CFR 262.25.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-39. Manifest discrepancies.

1. Manifest discrepancies are:

- a. Significant differences (as defined by subsection 2) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives;
- b. Rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept; or
- c. Container residues, which are residues that exceed the quantity limits for empty containers set forth in subsections 3, 4, and 5 of section 33.1-24-02-07.

2. Significant differences in quantity are for bulk waste, variations greater than ten percent in weight; and for batch waste, any variation in piece count, such as a discrepancy of one drum in a truckload. Significant differences in type are obvious differences which can be discovered by inspection or waste analysis, such as waste solvent substituted for waste acid, or toxic constituents not reported on the manifest or shipping paper.

3. Upon discovering a significant difference in quantity or type, the owner or operator must attempt to reconcile the discrepancy with the waste generator or transporter (for example, with telephone conversations). If the discrepancy is not resolved within fifteen days after receiving the waste, the owner or operator must immediately submit to the department a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

4. Rejected wastes or container residue.

- a. Upon rejecting waste or identifying a container residue that exceeds the quantity limits for empty containers set forth in subsections 3, 4, and 5 of section 33.1-24-02-07, the facility must consult with the generator prior to forwarding the waste to another facility that can manage the waste. If it is impossible to locate an alternative facility that can receive the waste, the facility may return the rejected waste or residue to the generator. The facility must send the waste to the alternative facility or to the generator within sixty days of the rejection or the container residue identification.
- b. While the facility is making arrangements for forwarding rejected wastes or residues to another facility under this section, the facility must ensure that either the delivering transporter retains custody of the waste, or the facility must provide for secure, temporary custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under subsection 5 or 6.

5. Except as provided in subdivision g, for full or partial load rejections and residues that are to be sent offsite to an alternate facility, the facility is required to prepare a new manifest in accordance with subsection 1 of section 33.1-24-03-04 and the following instructions:

- a. Write the generator's identification number in item 1 of the new manifest. Write the generator's name and mailing address in item 5 of the new manifest. If the mailing address is different from the generator's site address, then write the generator's site address in the designated space for item 5.
- b. Write the name of the alternate designated facility and the facility's identification number in the designated facility block (item 8) of the new manifest.
- c. Copy the manifest tracking number found in item 4 of the old manifest to the special handling and additional information block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.
- d. Copy the manifest tracking number found in item 4 of the new manifest to the manifest reference number line in the discrepancy block of the old manifest (item 18a).
- e. Write the department of transportation description for the rejected load or the residue in item 9 (United States department of transportation description) of the new manifest and write the container types, quantity, and volume or volumes of waste.
- f. Sign the generator's or offeror's certification to certify, as the offeror of the shipment, that the waste has been properly packaged, marked and labeled, and is in proper condition for transportation, and mail a signed copy of the manifest to the generator identified in item 5 of the new manifest.
- g. For full load rejections that are made while the transporter remains present at the facility, the facility may forward the rejected shipment to the alternate facility by completing item 18b of the original manifest and supplying the information on the next destination facility in the alternate facility space. The facility must retain a copy of this manifest for the facility's records, and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility must use a new manifest and comply with subdivisions a through f.

6. Except as provided in subdivision g, for rejected wastes and residues that must be sent back to the generator, the facility is required to prepare a new manifest in accordance with subsection 1 of section 33.1-24-03-04 and the following instructions:

- a. Write the facility's identification number in item 1 of the new manifest. Write the facility's name and mailing address in item 5 of the new manifest. If the mailing address is different from the facility's site address, then write the facility's site address in the designated space for item 5 of the new manifest.
- b. Write the name of the initial generator and the generator's identification number in the designated facility block (item 8) of the new manifest.
- c. Copy the manifest tracking number found in item 4 of the old manifest to the special handling and additional information block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.
- d. Copy the manifest tracking number found in item 4 of the new manifest to the manifest reference number line in the discrepancy block of the old manifest (item 18a).

- e. Write the department of transportation description for the rejected load or the residue in item 9 (United States department of transportation description) of the new manifest and write the container types, quantity, and volume or volumes of waste.
 - f. Sign the generator's or offeror's certification to certify, as offeror of the shipment, that the waste has been properly packaged, marked and labeled, and is in proper condition for transportation.
 - g. For full load rejections that are made while the transporter remains at the facility, the facility may return the shipment to the generator with the original manifest by completing items 18a and 18b of the manifest and supplying the generator's information in the alternate facility space. The facility must retain a copy for the facility's records and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility must use a new manifest and comply with subdivisions a through f and h.
 - h. For full or partial load rejections and container residues contained in nonempty containers that are returned to the generator, the facility must also comply with the exception reporting requirements in subsections 1 and 2 of section 33.1-24-03-15.
7. If a facility rejects a waste or identifies a container residue that exceeds the quantity limits for empty containers set forth in subsections 3, 4, and 5 of section 33.1-24-02-07 after the facility has signed, dated, and returned a copy of the manifest to the delivering transporter or to the generator, the facility must amend its copy of the manifest to indicate the rejected wastes or residues in the discrepancy space of the amended manifest. The facility must also copy the manifest tracking number from item 4 of the new manifest to the discrepancy space of the amended manifest, and must re-sign and date the manifest to certify to the information as amended. The facility must retain the amended manifest for at least three years from the date of amendment, and must within thirty days, send a copy of the amended manifest to the transporter and generator that received copies prior to the manifest being amended.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-40. Operating record.

- 1. The owner or operator shall keep a written operating record at the facility.
- 2. The following information must be recorded, as it becomes available, and maintained in the operating record for three years unless noted as follows:
 - a. A description and the quantity of each hazardous waste received and the methods and dates of its treatment, storage, or disposal at the facility as required by appendix I. This information must be maintained in the operating record until closure of the facility.
 - b. The location of each hazardous waste within the facility and the quantity at each location. For disposal facilities, the location and quantity of each hazardous waste must be recorded on a map or diagram that shows each cell or disposal area. For all facilities, this information must include cross-references to manifest document numbers if the waste was accompanied by a manifest. This information must be maintained in the operating record until closure of the facility.
 - c. Records and results of waste analysis and waste determinations performed as specified in sections 33.1-24-05-04, 33.1-24-05-08, 33.1-24-05-145, 33.1-24-05-183, subsection 1 of section 33.1-24-05-253, sections 33.1-24-05-256, 33.1-24-05-404, 33.1-24-05-433, and 33.1-24-05-453.

- d. Summary reports and details of all incidents that require implementing the contingency plan as specified in subsection 10 of section 33.1-24-05-31.
- e. Records and results of inspections as required by subsection 4 of section 33.1-24-05-06 (except these data need to be kept only three years).
- f. Monitoring, testing, or analytical data, and corrective action where required by sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-10, 33.1-24-05-104, 33.1-24-05-106, 33.1-24-05-108, 33.1-24-05-120, 33.1-24-05-126, 33.1-24-05-127, 33.1-24-05-132, 33.1-24-05-137, 33.1-24-05-138, 33.1-24-05-164, 33.1-24-05-165, 33.1-24-05-167, 33.1-24-05-178, 33.1-24-05-179, 33.1-24-05-187, 33.1-24-05-188, 33.1-24-05-302, subsections 3 through 6 of section 33.1-24-05-404, section 33.1-24-05-405, subsections 4 through 9 of section 33.1-24-05-433, section 33.1-24-05-434, and sections 33.1-24-05-452 through 33.1-24-05-460. Maintain in the operating record for three years, except for records and results pertaining to ground water monitoring and cleanup which must be maintained in the operating record until closure of the facility.
- g. For offsite facilities, notices to generators as specified in subsection 2 of section 33.1-24-05-03.
- h. All closure cost estimates under subsection 1 of section 33.1-24-05-76 and for disposal facilities, all postclosure cost estimates under subsection 2 of section 33.1-24-05-76. This information must be maintained in the operating record until closure of the facility.
- i. A certification by the permittee no less often than annually that the permittee has a program in place to reduce the volume and toxicity of hazardous waste that is generated to the degree determined by the permittee to be economically practicable; and the proposed method of treatment, storage, or disposal is that practicable method currently available to the permittee which minimizes the present and future threat to human health and the environment.
- j. Records of the quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted pursuant to section 33.1-24-05-254, a petition pursuant to section 33.1-24-05-255, and the applicable notice required by a generator under subsection 1 of section 33.1-24-05-256. This information must be maintained in the operating record until closure of the facility.
- k. For an offsite treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256.
- l. For an onsite treatment facility, the information contained in the notice except the manifest number, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256.
- m. For an offsite land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required by the generator or the owner or operator of a treatment facility under section 33.1-24-05-256.
- n. For an onsite land disposal facility, the information contained in the notice required by the generator or owner or operator of a treatment facility under section 33.1-24-05-256.
- o. For an offsite storage facility, a copy of the notice, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256.

- p. For an onsite storage facility, the information contained in the notice except the manifest number, and the certification and demonstration, if applicable, required by the generator or the owner or operator under section 33.1-24-05-256.
- q. Any records required under subdivision m of subsection 10 of section 33.1-24-05-01.
- r. Monitoring, testing, or analytical data where required by section 33.1-24-05-150 must be maintained in the operating record for five years.
- s. Certifications as required by subsection 6 of section 33.1-24-05-109 must be maintained in the operating record until closure of the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-41. Availability, retention, and disposition of records.

- 1. All records, including plans, required under this chapter must be furnished upon request, and made available at all reasonable times for inspection, by a duly designated officer, employee, or representative of the department.
- 2. The retention period for all records is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested by the department.
- 3. A copy of records of waste disposal locations and quantities under subdivision b of subsection 2 of section 33.1-24-05-40 must be submitted to the department and local land authority upon closure of the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-42. Biennial report.

The owner or operator shall prepare and submit a single copy of a biennial report to the department by March first of each even-numbered year. The report form and instructions can be obtained from the department's division of waste management. The biennial report must cover facility activities during the previous calendar year and must include the following information:

- 1. The identification number, name, and address of the facility.
- 2. The calendar year covered by the report.
- 3. For offsite facilities, identification number of each hazardous waste generator from which the facility received a hazardous waste during the year; for imported shipments, the report must give the name and address of the foreign generator.
- 4. A description and quantity of each hazardous waste the facility received during the year. For offsite facilities, this information must be listed by identification number of each generator.
- 5. The method of treatment, storage, or disposal for each hazardous waste.
- 6. Any ground water monitoring data which the owner or operator is required to collect under section 33.1-24-05-55, 33.1-24-05-56, or 33.1-24-05-57, and which the owner or operator has not otherwise submitted to the department under those sections.
- 7. The most recent closure and postclosure cost estimate under section 33.1-24-05-76.

8. For generators who treat, store, or dispose of hazardous waste onsite, a description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated.
9. For generators who treat, store, or dispose of hazardous waste onsite, a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for the years prior to 1984.
10. The certification signed by the owner or operator of the facility or the owner's or operator's authorized representative.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-43. Unmanifested waste report.

If a facility accepts for treatment, storage, or disposal any hazardous waste from an offsite source without an accompanying manifest, or without an accompanying shipping paper as described in subsection 5 of section 33.1-24-04-04 and if the waste is not excluded from the manifest requirement by this article, then the owner or operator shall prepare and submit a single copy of a report to the department within fifteen days after receiving the waste. The report must be designated "Unmanifested Waste Report" and must include the following information:

1. The identification number, name, and address of the facility;
2. The date the facility received the waste;
3. The identification number, name, and address of the generator and the transporter, if available;
4. A description and the quantity of each unmanifested hazardous waste the facility received;
5. The method of treatment, storage, or disposal for each hazardous waste;
6. The certification signed by the owner or operator of the facility or the owner's or operator's authorized representative; and
7. A brief explanation of why the waste was unmanifested, if known.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-44. Additional reports.

In addition to submitting the biennial reports and unmanifested waste reports described in sections 33.1-24-05-42 and 33.1-24-05-43, the owner or operator shall also report to the department:

1. Releases, fires, and explosions as specified in subsection 10 of section 33.1-24-05-31.
2. Facility closures specified in section 33.1-24-05-64.
3. As otherwise required by sections 33.1-24-05-47 through 33.1-24-05-58, 33.1-24-05-118 through 33.1-24-05-143, 33.1-24-05-160 through 33.1-24-05-190, and 33.1-24-05-400 through 33.1-24-05-474.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-05-45. [Reserved].

33.1-24-05-46. [Reserved].

33.1-24-05-47. Applicability of releases from solid waste management units requirements.

1. Applicability.

- a. Except as provided in subsection 2, sections 33.1-24-05-47 through 33.1-24-05-58 apply to owners or operators of facilities that treat, store, or dispose of hazardous waste. The owner or operator must satisfy the requirements identified in subdivision b for all wastes (or constituents thereof) contained in solid waste management units at the facility, regardless of the time at which waste was placed in such units.
- b. All solid waste management units must comply with the requirements in section 33.1-24-05-58. A surface impoundment, waste pile, and land treatment unit, or landfill that receives hazardous waste after July 26, 1982, (hereinafter referred to as a "regulated unit") must comply with the requirements of sections 33.1-24-05-48 through 33.1-24-05-57 in lieu of section 33.1-24-05-58 for purposes of detecting, characterizing, and responding to releases to the uppermost aquifer. The financial responsibility requirements of section 33.1-24-05-58 apply to regulated units.

2. The owner's or operator's regulated unit or units, are not subject to regulation for releases into the uppermost aquifer under sections 33.1-24-05-47 through 33.1-24-05-58 if:

- a. The owner or operator is exempted under section 33.1-24-05-01; or
- b. The owner or operator operates a unit which the department finds:
 - (1) Is an engineered structure;
 - (2) Does not receive or contain liquid waste or waste containing free liquids;
 - (3) Is designed and operated to exclude liquid, precipitation, and other run-on and runoff;
 - (4) Has both inner and outer layers of containment enclosing the waste;
 - (5) Has a leak detection system built into each containment layer;
 - (6) The owner or operator will provide continuing operation and maintenance of these leak detection systems during the active life of the unit and the closure and postclosure care periods; and
 - (7) To a reasonable degree of certainty, will not allow hazardous constituents to migrate beyond the outer containment layer prior to the end of the postclosure care period.
- c. The department finds, pursuant to subsection 4 of section 33.1-24-05-167, that the treatment zone of a land treatment unit that qualifies as a regulated unit does not contain levels of hazardous constituents that are above background levels of those constituents by an amount that is statistically significant, and if an unsaturated zone monitoring

program meeting the requirements of section 33.1-24-05-165 has not shown a statistically significant increase in hazardous constituents below the treatment zone during the operating life of the unit. An exemption under this subsection can only relieve an owner or operator of responsibility to meet the requirements of sections 33.1-24-05-47 through 33.1-24-05-58 during the postclosure care period;

d. The department finds that there is no potential for migration of liquid from a regulated unit to the uppermost aquifer during the active life of the regulated unit (including the closure period) and the postclosure care period specified under section 33.1-24-05-66. This demonstration must be certified by a qualified geologist or geotechnical engineer. In order to provide an adequate margin of safety in the prediction of potential migration of liquid, the owner or operator shall base any predictions made under this subsection on assumptions that maximize the rate of liquid migration; or

e. The owner or operator designs and operates a pile in compliance with subsection 3 of section 33.1-24-05-130.

3. The requirements of sections 33.1-24-05-47 through 33.1-24-05-58 apply during the active life of the regulated unit (including the closure period). After closure of the regulated unit, the requirements of sections 33.1-24-05-47 through 33.1-24-05-58:

a. Do not apply if all waste, waste residues, contaminated containment system components, and contaminated subsoils are removed or decontaminated at closure;

b. Apply during the postclosure care period under section 33.1-24-05-66 if the owner or operator is conducting a detection monitoring program under section 33.1-24-05-55; or

c. Apply during the compliance period under section 33.1-24-05-53 if the owner or operator is conducting a compliance monitoring program under section 33.1-24-05-56 or a corrective action program under section 33.1-24-05-57.

4. Sections 33.1-24-05-47 through 33.1-24-05-58 may apply to miscellaneous units when necessary to comply with sections 33.1-24-05-301 through 33.1-24-05-303.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-48. Required programs.

1. Owners and operators subject to the ground water protection requirements of sections 33.1-24-05-47 through 33.1-24-05-58 shall conduct a monitoring and response program as follows:

a. Whenever hazardous constituents under section 33.1-24-05-50 from a regulated unit are detected at a compliance point under section 33.1-24-05-52, the owner or operator must institute a compliance monitoring program under section 33.1-24-05-56. Detected is defined as statistically significant evidence of contamination as described in subsection 6 of section 33.1-24-05-55;

b. Whenever the ground water protection standard under section 33.1-24-05-49 is exceeded, the owner or operator must institute a corrective action program under section 33.1-24-05-57. Exceeded is defined as statistically significant evidence of increased contamination as described in subsection 4 of section 33.1-24-05-56;

c. Whenever hazardous constituents under section 33.1-24-05-50 from a regulated unit exceed concentration limits under section 33.1-24-05-51 in ground water between the

compliance point under section 33.1-24-05-52 and the downgradient facility boundary property, the owner or operator shall institute a corrective action program under section 33.1-24-05-57; or

d. In all other cases, the owner or operator shall institute a detection monitoring program under section 33.1-24-05-55.

2. The department will specify in the facility permit the specific elements of the monitoring and response program. The department may include one or more of the programs identified in subsection 1 in the facility permit as may be necessary to protect human health and the environment and will specify the circumstances under which each of the programs will be required. In deciding whether to require the owner or operator to be prepared to institute a particular program, the department will consider the potential adverse effects on human health and the environment that might occur before final administrative action on a permit modification application to incorporate such a program could be taken.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-49. Ground water protection standard.

The owner or operator must comply with conditions specified in the facility permit designed to ensure that hazardous constituents under section 33.1-24-05-50 detected in the ground water from a regulated unit do not exceed the concentration limits under section 33.1-24-05-51 in the uppermost aquifer underlying the waste management area beyond the point of compliance under section 33.1-24-05-52 during the compliance period under section 33.1-24-05-53. The department will establish this ground water protection standard in the facility permit when hazardous constituents have been detected in the ground water.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-50. Hazardous constituents.

1. The department will specify in the facility permit the hazardous constituents to which the ground water protection standard of section 33.1-24-05-49 applies. Hazardous constituents are constituents identified in appendix V of chapter 33.1-24-02 that have been detected in ground water in the uppermost aquifer underlying a regulated unit and that are reasonably expected to be in or derived from waste contained in a regulated unit, unless the department has excluded them under subsection 2.

2. The department will exclude an appendix V of chapter 33.1-24-02 constituent from the list of hazardous constituents specified in the facility permit if the department finds that the constituent is not capable of posing a substantial present or potential hazard to human health or the environment. In deciding whether to grant an exemption, the department will consider the following:

a. Potential adverse effects on ground water quality, considering:

(1) The physical and chemical characteristics of the waste in the regulated units, including its potential for migration.

(2) The hydrogeological characteristics of the facility and surrounding land.

(3) The quantity of ground water and the direction of ground water flow.

- (4) The proximity and withdrawal rates of ground water users.
- (5) The current and future uses of ground water in the area.
- (6) The existing quality of ground water, including other sources of contamination and their cumulative impact on the ground water quality.
- (7) The potential for health risks caused by human exposure to waste constituents.
- (8) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.
- (9) The persistence and permanence of the potential adverse effect.

b. Potential adverse effects on hydraulically connected surface water quality, considering:

- (1) The volume and physical and chemical characteristics of the waste in the regulated unit.
- (2) The hydrogeological characteristics of the facility and surrounding land.
- (3) The quantity and quality of ground water, and the direction of ground water flow.
- (4) The patterns of rainfall in the region.
- (5) The proximity of the regulated unit to surface water.
- (6) The current and future uses of surface water in the area and any water quality standards established for those surface waters.
- (7) The existing quality of surface water, including other sources of contamination and the cumulative impact on surface water quality.
- (8) The potential for health risks caused by human exposure to waste constituents.
- (9) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.
- (10) The persistence and permanence of the potential adverse effects.

3. In making any determination under subsection 2 about the use of ground water in the area around the facility, the department will consider any identification of underground sources of drinking water and exempted aquifers made under provisions of the Safe Drinking Water Act and 40 CFR 144.8.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-51. Concentration limits.

1. The department will specify in the facility permit concentration limits in the ground water for hazardous constituents established under section 33.1-24-05-50. The concentration of a hazardous constituent:
 - a. May not exceed the background level of that constituent in the ground water at the time that limit is specified in the permit;

- b. For any of the constituents listed in table 1, may not exceed the respective value given in that table if the background level of the constituent is below the value given in table 1; or
- c. May not exceed an alternate limit established by the department under subsection 2.

Table 1. Maximum Concentration of Constituents for Ground Water Protection	
Constituent	Maximum Concentration mg/l
Arsenic	0.05
Barium	1.0
Cadmium	0.01
Chromium	0.05
Lead	0.05
Mercury	0.002
Selenium	0.01
Silver	0.05
Endrin (1,2,3,4,10,10-hexachloro-1,7-epoxy-1,4,4a,5,6,7,8,9a-octahydro-1,4-endo-endo-5, 8-dimethano naphthalene)	0.0002
Lindane (1,2,3,4,5,6-hexachlorocyclohexane, gamma isomer)	0.004
Methoxychlor (1,1,1-trichloro-2, 2-bis[p-methoxyphenyl] ethane)	0.1
Toxaphene (C ₁₀ H ₁₀ Cl ₈ technical chlorinated camphene, 67-69% chlorine)	0.005
2,4-D (2,4-dichlorophenoxyacetic acid)	0.1
2,4,5-TP silvex (2,4,5-trichlorophen-oxy propionic acid)	0.01

2. The department will establish an alternate concentration limit for a hazardous constituent if the department finds that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the alternate concentration limit is not exceeded. In establishing alternate concentration limits, the department will consider the following factors:

a. Potential adverse effects on ground water quality, considering:

- (1) The physical and chemical characteristics of the waste in the regulated unit, including the potential for migration.
- (2) The hydrogeological characteristics of the facility and surrounding land.
- (3) The quantity of ground water and direction of ground water flow.
- (4) The proximity and withdrawal rates of ground water users.
- (5) Current and future uses of ground water in the area.
- (6) The existing quality of ground water, including other sources of contamination and their cumulative impact on the ground water quality.
- (7) The potential for health risks caused by human exposure to waste constituents.
- (8) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.
- (9) The persistence and permanence of potential adverse effects.

b. Potential adverse effects on hydraulically connected surface water quality, considering:

- (1) The volume and physical and chemical characteristics of the waste in the regulated unit.
- (2) The hydrogeological characteristics of the facility and surrounding land.
- (3) The quantity and quality of ground water, and the direction of ground water flow.
- (4) The patterns of rainfall in the region.
- (5) The proximity of the regulated unit to surface waters.
- (6) The current and future uses of surface waters in the area and any water quality standards established for those surface waters.
- (7) Existing quality of surface water, including other sources of contamination and the cumulative impact on surface water quality.
- (8) The potential for health risks caused by human exposure to waste constituents.
- (9) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents.
- (10) The persistence and permanence of the potential adverse effects.

3. In making any determination under subsection 2 about the use of ground water in the area around the facility, the department will consider any identification of underground sources of drinking water and exempted aquifers made under provisions of the Safe Drinking Water Act and 40 CFR 144.8.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-52. Points of compliance.

1. The department will specify in the facility permit the point of compliance at which the ground water protection standard of section 33.1-24-05-49 applies and at which monitoring must be conducted. The point of compliance is a vertical surface located at the hydraulically downgradient limit of the waste management area that extends down into the uppermost aquifer underlying the regulated units.
2. The waste management area is the limit projected in the horizontal plane of the area on which waste will be placed during the active life of a regulated unit.
 - a. The waste management area includes horizontal space taken up by any liner, dike, or other barrier designed to contain waste in a regulated unit.
 - b. If the facility contains more than one regulated unit, the waste management area is described by an imaginary line circumscribing the several regulated units.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-53. Compliance period.

1. The department will specify in the facility permit the compliance period during which the ground water protection standard of section 33.1-24-05-49 applies. The compliance period is the number of years equal to the active life of the waste management area (including any waste management activity prior to permitting and the closure period).
2. The compliance period begins when the owner or operator initiates a compliance monitoring program meeting the requirements of section 33.1-24-05-56.
3. If the owner or operator is engaged in a corrective action program at the end of the compliance period specified in subsection 1, the compliance period is extended until the owner or operator can demonstrate that the ground water protection standard of section 33.1-24-05-49 has not been exceeded for a period of three consecutive years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-54. General ground water monitoring requirements.

The owner or operator shall comply with the following requirements for any ground water monitoring program developed to satisfy section 33.1-24-05-55, 33.1-24-05-56, or 33.1-24-05-57:

1. The ground water monitoring system must consist of a sufficient number of wells, installed at appropriate locations and depth to yield ground water samples from the uppermost aquifer that:
 - a. Represent the quality of background ground water that has not been affected by leakage from a regulated unit. A determination of background ground water quality may include sampling of wells that are not hydraulically upgradient of the waste management area where:
 - (1) Hydrogeologic conditions do not allow the owner or operator to determine what wells are hydraulically upgradient; and
 - (2) Sampling at other wells will provide an indication of background ground water quality that is representative or more representative than that provided by the upgradient wells.
 - b. Represent the quality of ground water passing the point of compliance.
 - c. Allow for the detection of contamination when hazardous waste or hazardous constituents have migrated from the waste management area to the uppermost aquifer.
2. If a facility contains more than one regulated unit, separate ground water monitoring systems are not required for each regulated unit provided that provisions for sampling the ground water in the uppermost aquifer will enable detection and measurement at the compliance point of hazardous constituents from the regulated units that have entered the ground water in the uppermost aquifer.
3. All monitoring wells must be cased in a manner that maintains the integrity of the monitoring well borehole. This casing must be screened or perforated and packed with gravel or sand, where necessary, to enable collection of ground water samples. The annular space, i.e., the space between the borehole and well casing, above the sampling depth must be sealed to prevent contamination of samples and the ground water.

4. The ground water monitoring program must include consistent sampling and analysis procedures that are designed to ensure monitoring results that provide a reliable indication of ground water quality below the waste management area. At a minimum, the program must include procedures and techniques for:
 - a. Sample collection.
 - b. Sample preservation and shipment.
 - c. Analytical procedures.
 - d. Chain of custody control.
5. The ground water monitoring program must include sampling and analytical methods that are appropriate for ground water sampling and that accurately measure hazardous constituents in ground water samples.
6. The ground water monitoring program must include a determination of the ground water surface elevation each time ground water is sampled.
7. In detection monitoring or where appropriate in compliance monitoring, data on each hazardous constituent specified in the permit will be collected from background wells and wells at the compliance points the number and kinds of samples collected to establish background must be appropriate for the form of statistical test employed following generally accepted statistical principles. The sample site must be as large as necessary to ensure with reasonable confidence that a contaminant released to ground water from a facility will be detected. The owner or operator will determine an appropriate sampling procedure and interval for each hazardous constituent listed in the facility permit which must be specified in the unit permit upon approval by the department. This sampling procedure must be:
 - a. A sequence of at least four samples, taken at an interval that assures, to the greatest extent technically feasible, that an independent sample is obtained, by reference to the uppermost aquifers effective porosity, hydraulic conductivity, and hydraulic gradient, and the fate and transport characteristics of the potential contaminants; or
 - b. An alternate sampling procedure proposed by the owner or operator and approved by the department.
8. The owner or operator will specify one of the following statistical methods to be used in evaluating ground water monitoring data for each hazardous constituent which, upon approval by the department, will be specified in the unit permit. The statistical test chosen must be conducted separately for each hazardous constituent in each well. Where practical quantification limits are used in any of the following statistical procedures to comply with subdivision e of subsection 9, the practical quantification limits must be proposed by the owner or operator and approved by the department. Use of any of the following statistical methods must be protective of human health and the environment and must comply with the performance standards outlined in subsection 9.
 - a. A parametric analysis of variance followed by multiple comparison procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance wells mean and the background mean levels for each constituent.
 - b. An analysis of variance based on ranks followed by multiple comparison procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance wells median and the background median levels for each constituent.

- c. A tolerance or prediction interval procedure in which an interval for each constituent is established from the distribution of the background data, and the level of each constituent in each compliance well is compared to the upper tolerance or prediction limit.
 - d. A control chart approach that gives control limits for each constituent.
 - e. Another statistical test method submitted by the owner or operator and approved by the department.
9. Any statistical method chosen under subsection 8 for specification in the unit permit shall comply with the following performance standards, as appropriate:
- a. The statistical method used to evaluate ground water monitoring data must be appropriate for the distribution of chemical parameters or hazardous constituents. If the distribution of the chemical parameters or hazardous constituents is shown by the owner or operator to be inappropriate for a normal theory test, then the data should be transformed or a distribution-free theory test should be used. If the distributions for the constituents differ, more than one statistical method may be needed.
 - b. If an individual well comparison procedure is used to compare an individual compliance well constituent concentration with background constituent concentrations or a ground water protection standard, the test must be done at a type one error level no less than one hundredth for each testing period. If a multiple comparisons procedure is used, the type one experiment wise error rate for each testing period must be no less than five hundredths; however, the type one error of no less than one hundredth for individual well comparisons must be maintained. This performance standard does not apply to tolerance intervals, prediction intervals, or control charts.
 - c. If a control chart approach is used to evaluate ground water monitoring data, the specific type of control chart and its associated parameter values must be proposed by the owner or operator and approved by the department if the department finds it to be protective of human health and the environment.
 - d. If a tolerance interval or a prediction interval is used to evaluate ground water monitoring data, the levels of confidence and, for tolerance intervals, the percentage of the population that the interval must contain, must be proposed by the owner or operator and approved by the department if the department finds these parameters to be protective of human health and the environment. These parameters will be determined after considering the number of samples in the background data base, the data distribution, and the range of the concentration values for each constituent of concern.
 - e. The statistical method must account for data below the limit of detection with one or more statistical procedures that are protective of human health and the environment. Any practical quantification limit approved by the department under subsection 8 that is used in the statistical method must be the lowest concentration level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions that are available to the facility.
 - f. If necessary, the statistical method must include procedures to control or correct for seasonal and spacial variability as well as temporal correlation in the data.
10. Ground water monitoring data collected in accordance with subsection 7 including actual levels of constituents must be maintained in the facility operating record. The department will specify in the permit when the data must be submitted for review.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-55. Detection monitoring program.

An owner or operator required to establish a detection monitoring program under sections 33.1-24-05-47 through 33.1-24-05-58 shall, at a minimum, discharge the following responsibilities:

1. The owner or operator shall monitor for indicator parameters (for example, specific conductance, total organic carbon, or total organic halogen), waste constituents, or reaction products that provide a reliable indication of the presence of hazardous constituents in ground water. The department will specify the parameters or constituents to be monitored in the facility permit, after considering the following factors:
 - a. The types, quantities, and concentrations of constituents in wastes managed at the regulated unit.
 - b. The mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the waste management area.
 - c. The detectability of indicator parameters, waste constituents, and reaction products in ground water.
 - d. The concentrations or values and coefficients of variation of proposed monitoring parameters or constituents in the ground water background.
2. The owner or operator shall install a ground water monitoring system at the compliance point under section 33.1-24-05-52 which complies with subdivision b of subsection 1, and subsections 2 and 3, of section 33.1-24-05-54.
3. The owner or operator must conduct a ground water monitoring program for each chemical parameter and hazardous constituent specified in the permit pursuant to subsection 1 in accordance with subsection 7 of section 33.1-24-05-54. The owner or operator must maintain a record of ground water analytical data as measured and in a form necessary for the determination of statistical significance under subsection 8 of section 33.1-24-05-54.
4. The department will specify the frequencies for collecting samples and conducting statistical tests to determine whether there is statistically significant evidence of contamination for any parameter or hazardous constituent specified in the permit conditions under subsection 1 in accordance with subsection 7 of section 33.1-24-05-54.
5. The owner or operator shall determine the ground water flow rate and direction in the uppermost aquifer at least annually.
6. The owner or operator must determine whether there is statistically significant evidence of contamination for any chemical parameter or hazardous constituent specified in the permit pursuant to subsection 1 at a frequency specified under subsection 4.
 - a. In determining whether statistically significant evidence of contamination exists, the owner or operator must use the methods specified in the permit under subsection 8 of section 33.1-24-05-54. These methods must compare data collected at the compliance points to the background ground water quality data.
 - b. The owner or operator must determine whether there is statistically significant evidence of contamination at each monitoring well at the compliance point within a reasonable period of time at the completion of sampling. The department will specify in the facility permit what period of time is reasonable, after considering the complexity of the

statistical test and availability of laboratory facilities to perform the analysis of ground water samples.

7. If the owner or operator determines pursuant to subsection 6 that there is statistically significant evidence of contamination for chemical parameters or hazardous constituents specified pursuant to subsection 1 at any monitoring well at the compliance point, the owner or operator must:

a. Notify the department of this finding in writing within seven days. The notification must indicate what chemical parameters or hazardous constituents have shown statistically significant evidence of contamination.

b. Immediately sample the ground water in all monitoring wells and determine whether constituents in the list of appendix XII of chapter 33.1-24-05 are present, and if so, in what concentration. However, the department, on a discretionary basis, may allow sampling for a site-specific subset of constituents from the appendix XII of chapter 33.1-24-05 list and other representative or related, or both, waste constituents.

c. For any appendix XII compounds found in the analysis pursuant to subdivision b, the owner or operator may resample within one month or at an alternative site-specific schedule approved by the department and repeat the analysis for those compounds detected. If the results of the second analysis confirm the initial results, then these constituents will form the basis for compliance monitoring. If the owner or operator does not resample for the compounds in subdivision b, the hazardous constituents found during this initial appendix XII analysis will form the basis for compliance monitoring.

d. Within ninety days, submit to the department an application for a permit modification to establish a compliance monitoring program meeting the requirements of section 33.1-24-05-56. The application must include the following information:

(1) An identification of the concentration of any appendix XII constituent detected in the ground water at each monitoring well at the compliance point.

(2) Any proposed changes to the ground water monitoring system at the facility necessary to meet the requirements of section 33.1-24-05-56.

(3) Any proposed additions or changes to the monitoring frequency, sampling and analysis procedures or methods, or statistical methods used at the facility necessary to meet the requirements of section 33.1-24-05-56.

(4) For each hazardous constituent detected at the compliance point, a proposed concentration limit under subdivision a or b of subsection 1 of section 33.1-24-05-51, or a notice of intent to seek an alternate concentration limit under subsection 2 of section 33.1-24-05-51.

e. Within one hundred eighty days, submit to the department:

(1) All data necessary to justify an alternate concentration limit sought under subsection 2 of section 33.1-24-05-51; and

(2) An engineering feasibility plan for a corrective action program necessary to meet the requirements of section 33.1-24-05-57, unless:

(a) All hazardous constituents identified under subdivision b are listed in table 1 of section 33.1-24-05-51 and their concentrations do not exceed the respective values given in that table; or

(b) The owner or operator has sought an alternate concentration limit under subsection 2 of section 33.1-24-05-51 for every hazardous constituent identified under subdivision b.

f. If the owner or operator determines, pursuant to subsection 6, that there is a statistically significant difference for chemical parameters or hazardous constituents specified pursuant to subsection 1 at any monitoring well at the compliance point, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation or natural variation in the ground water. The owner or operator may make a demonstration under this subdivision in addition to, or in lieu of, submitting a permit modification application under subdivision d; however, the owner or operator is not relieved of the requirement to submit a permit modification application within the time specified in subdivision d unless the demonstration made under this subdivision successfully shows that a source other than a regulated unit caused the increase, or that the increase resulted from error in sampling, analysis, or evaluation. In making a demonstration under this subdivision, the owner or operator must:

- (1) Notify the department in writing within seven days of determining statistically significant evidence of contamination at the compliance point that the owner or operator intends to make a demonstration under this subdivision;
- (2) Within ninety days, submit a report to the department which demonstrates that a source other than a regulated unit caused the contamination or that the contamination resulted from error in sampling, analysis, or evaluation;
- (3) Within ninety days, submit to the department an application for a permit modification to make any appropriate changes to the detection monitoring program facility; and
- (4) Continue to monitor in accordance with the detection monitoring program established under this section.

8. If the owner or operator determines that the detection monitoring program no longer satisfies the requirements of this section, the owner or operator must, within ninety days, submit an application for a permit modification to make any appropriate changes to the program.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-56. Compliance monitoring program.

An owner or operator who is required to establish a compliance monitoring program under sections 33.1-24-05-47 through 33.1-24-05-58 shall, at a minimum, discharge the following responsibilities:

1. The owner or operator shall monitor the ground water to determine whether regulated units are in compliance with the ground water protection standard under section 33.1-24-05-49. The department will specify the ground water protection standard in the facility permit, including:

- a. A list of the hazardous constituents identified under section 33.1-24-05-50.
- b. Concentration limits under section 33.1-24-05-51 for each of those hazardous constituents.
- c. The compliance point under section 33.1-24-05-52.
- d. The compliance period under section 33.1-24-05-53.

2. The owner or operator shall install a ground water monitoring system at the compliance point as specified under section 33.1-24-05-52. The ground water monitoring system must comply with subdivision b of subsection 1, and subsections 2 and 3 of section 33.1-24-05-54.
3. The department will specify the sampling procedures and statistical methods appropriate for the constituents and the facility, consistent with subsections 7 and 8 of section 33.1-24-05-54.
 - a. The owner or operator must conduct a sampling program for each chemical parameter or hazardous constituent in accordance with subsection 7 of section 33.1-24-05-54.
 - b. The owner or operator must record ground water analytical data as measured and in form necessary for the determination of statistical significance under subsection 8 of section 33.1-24-05-54 for the compliance period of the facility.
4. The owner or operator must determine whether there is statistically significant evidence of increased contamination for any chemical parameter or hazardous constituent specified in the permit, pursuant to subsection 1, at a frequency specified under subsection 6.
 - a. In determining whether statistically significant evidence of increased contamination exists, the owner or operator must use the methods specified in the permit under subsection 8 of section 33.1-24-05-54. The methods must compare data collected at the compliance points to a concentration limit developed in accordance with section 33.1-24-05-51.
 - b. The owner or operator must determine whether there is statistically significant evidence of increased contamination at each monitoring well at the compliance point within a reasonable time period after completion of sampling. The department will specify that time period and the facility permit, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of ground water samples.
5. The owner or operator shall determine the ground water flow rate and direction in the uppermost aquifer at least annually.
6. The department will specify the frequencies for collecting samples and conducting statistical tests to determine statistically significant evidence of increased contamination in accordance with subsection 7 of section 33.1-24-05-54.
7. Annually, the owner or operator must determine whether additional hazardous constituents from appendix XII, which could possibly be present but are not on the detection monitoring list in the permit, are actually present in the uppermost aquifer and, if so, at what concentration, pursuant to procedures in subsection 6 of section 33.1-24-05-55. To accomplish this, the owner or operator must consult with the department to determine on a case-by-case basis which sample collection event during the year will involve enhanced sampling, the number of monitoring wells at the compliance point to undergo enhanced sampling, the number of samples to be collected from each of these monitoring wells, and the specific constituents from appendix XII for which these samples must be analyzed. If the enhanced sampling event indicates that appendix XII constituents are present in the ground water that are not already identified in the permit as monitoring constituents, the owner or operator may resample within one month or at an alternative site-specific schedule approved by the department, and repeat the appendix XII analysis. If the second analysis confirms the presence of new constituents, the owner or operator must report the concentration of these additional constituents to the department within seven days after the completion of the second analysis and add them to the monitoring list. If the owner or operator chooses not to resample, then the owner or operator must report the concentrations of these additional constituents to the department within seven days after completion of the initial analysis and add them to the monitoring list.

8. If the owner or operator determines pursuant to subsection 4 that any concentration limits under section 33.1-24-05-51 are being exceeded at any monitoring well at the point of compliance, the owner or operator must:

a. Notify the department of this finding in writing within seven days. The notification must indicate what concentration limits have been exceeded.

b. Submit to the department an application for a permit modification to establish a corrective action program meeting the requirements of section 33.1-24-05-57 within one hundred eighty days, or within ninety days if an engineering feasibility study has been previously submitted to the department under subdivision e of subsection 7 of section 33.1-24-05-55. The application must, at a minimum, include the following information:

(1) A detailed description of corrective actions that will achieve compliance within the ground water protection standard specified in the permit under subsection 1.

(2) A plan for a ground water monitoring program that will demonstrate the effectiveness of the corrective action. Such a ground water monitoring program may be based on a compliance monitoring program developed to meet the requirements of this section.

9. If the owner or operator determines, pursuant to subsection 4, that the ground water concentration limits under this section are being exceeded at any monitoring well at the point of compliance, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation or natural variation in the ground water. In making a demonstration under this subsection, the owner or operator must:

a. Notify the department in writing within seven days that the owner or operator intends to make a demonstration under this subsection.

b. Within ninety days, submit a report to the department which demonstrates that a source other than a regulated unit caused the standard to be exceeded or that the apparent noncompliance with the standards resulted from error in sampling, analysis, or evaluation.

c. Within ninety days, submit to the department an application for a permit modification to make any appropriate changes to the compliance monitoring program at the facility.

d. Continue to monitor in accordance with the compliance monitoring program established under this section.

10. If the owner or operator determines that the compliance monitoring program no longer satisfies the requirements of this section, the owner or operator shall, within ninety days, submit an application for a permit modification to make any appropriate changes to the program.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-57. Corrective action program.

An owner or operator required to establish a corrective action program under sections 33.1-24-05-47 through 33.1-24-05-58 shall, at a minimum, discharge the following responsibilities:

1. The owner or operator shall take corrective action to ensure that regulated units are in compliance with the ground water protection standard under section 33.1-24-05-49. The department will specify the ground water protection standard in the facility permit including:
 - a. A list of the hazardous constituents identified under section 33.1-24-05-50.
 - b. Concentration limits under section 33.1-24-05-51 for each of those hazardous constituents.
 - c. The compliance point under section 33.1-24-05-52.
 - d. The compliance period under section 33.1-24-05-53.
2. The owner or operator shall implement a corrective action program that prevents hazardous constituents from exceeding their respective concentration limits at the compliance point by removing the hazardous waste constituents or treating them in place. The permit will specify the specific measures that will be taken.
3. The owner or operator shall begin corrective action within a reasonable time period after the ground water protection standard is exceeded. The department will specify that time period in the facility permit. If a facility permit includes a corrective action program in addition to a compliance monitoring program, the permit will specify when the corrective action will begin and such a requirement will operate in lieu of subdivision b of subsection 9 of section 33.1-24-05-56.
4. In conjunction with a corrective action program, the owner or operator shall establish and implement a ground water monitoring program to demonstrate the effectiveness of the corrective action program. Such a monitoring program may be based on the requirements for a compliance monitoring program under section 33.1-24-05-56 and must be as effective as that program in determining compliance with the ground water protection standard under section 33.1-24-05-49 and in determining the success of a corrective action program under subsection 5 where appropriate.
5. In addition to the other requirements of this section, the owner or operator shall conduct a corrective action program to remove or treat in place any hazardous constituents under section 33.1-24-05-50 that exceed concentration limits under section 33.1-24-05-51 in ground water:
 - a. Between the compliance point under section 33.1-24-05-52 and the downgradient property boundary; and
 - b. Beyond the facility boundary, where necessary to protect human health and the environment, unless the owner or operator demonstrates to the satisfaction of the department that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such action. The owner or operator is not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where offsite access is denied. Onsite measures to address such releases will be determined on a case-by-case basis.
 - c. Corrective action measures under this subsection must be initiated and completed within a reasonable period of time considering the extent of contamination.
 - d. Corrective action measures under this subsection may be terminated once the concentration of hazardous constituents under section 33.1-24-05-50 is reduced to levels below their respective concentration limits under section 33.1-24-05-51.

6. The owner or operator shall continue corrective action measures during the compliance period to the extent necessary to ensure that the ground water protection standard is not exceeded. If the owner or operator is conducting corrective action at the end of the compliance period, the owner or operator shall continue that corrective action for as long as necessary to achieve compliance with the ground water protection standard. The owner or operator may terminate corrective action measures taken beyond the period equal to the active life of the waste management area (including the closure period) if the owner or operator can demonstrate, based on data from the ground water monitoring program under subsection 4, that the ground water protection standard of section 33.1-24-05-49 has not been exceeded for a period of three consecutive years.
7. The owner or operator shall report in writing to the department on the effectiveness of the corrective action program. The owner or operator shall submit these reports annually.
8. If the owner or operator determines that the corrective action program no longer satisfies the requirements of this section, the owner or operator shall, within ninety days, submit an application for a permit modification to make any appropriate changes to the program.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-58. Corrective action for solid waste management units.

1. The owner or operator of a facility seeking a permit for the treatment, storage, or disposal of hazardous waste must institute corrective action as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid waste management unit at the facility, regardless of the time at which waste was placed in such unit.
2. Corrective action will be specified in the permit in accordance with this section and sections 33.1-24-05-550 through 33.1-24-05-559. The permit will contain schedules of compliance for such corrective action (where such corrective action cannot be completed prior to issuance of the permit) and assurances of financial responsibility for completing such corrective action.
3. The owner or operator must implement corrective actions beyond the facility property boundary, where necessary to protect human health and the environment, unless the owner or operator demonstrates to the satisfaction of the department that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such actions. The owner or operator is not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where offsite access is denied. Onsite measures to address such releases will be determined on a case-by-case basis. Assurances of financial responsibility for such corrective action must be provided.
4. This section does not apply to remediation waste management sites unless they are part of a facility subject to a permit for treating, storing, or disposing of hazardous wastes that are not remediation wastes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-59. Applicability of closure and postclosure requirements.

Except as section 33.1-24-05-01 provides otherwise:

1. Sections 33.1-24-05-60 through 33.1-24-05-64 (which concern closure) apply to the owners and operators of all hazardous waste management facilities; and

2. Sections 33.1-24-05-65 through 33.1-24-05-69 (which concern postclosure care) apply to the owners and operators of:

- a. All hazardous waste disposal facilities;
- b. Waste piles and surface impoundments from which the owner or operator intends to remove the wastes at closure to the extent that these sections are made applicable to such facilities in section 33.1-24-05-119 or 33.1-24-05-135;
- c. Tank systems that are required under section 33.1-24-05-110 to meet the requirements for landfills; and
- d. Containment buildings that are required under section 33.1-24-05-477 to meet the requirement for landfills.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-60. Closure performance standard.

The owner or operator shall close the owner's or operator's facility in a manner that:

1. Minimizes the need for further maintenance;
2. Controls, minimizes, or eliminates, to the extent necessary to protect human health and the environment, postclosure escape of hazardous waste, hazardous constituents, leachate, contaminated runoff, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere; and
3. Complies with the closure requirements of sections 33.1-24-05-59 through 33.1-24-05-73, including the requirements of sections 33.1-24-05-97, 33.1-24-05-110, 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-151, 33.1-24-05-167, 33.1-24-05-180, 33.1-24-05-301 through 33.1-24-05-303, and section 33.1-24-05-477.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-61. Closure plan - Amendment of plan.

1. Written plan.

- a. The owner or operator of a hazardous waste management facility shall have a written closure plan. In addition, certain surface impoundments and waste piles from which the owner or operator intends to remove or decontaminate the hazardous waste at partial or final closure are required by paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-122 and paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-135 to have contingent closure plans. The plan must be submitted with the permit application, in accordance with subdivision m of subsection 2 of section 33.1-24-06-17, and approved by the department as part of the permit issuance procedure under chapter 33.1-24-07. In accordance with section 33.1-24-06-05, the approved closure plan will become a condition of any hazardous waste permit.
- b. The department's approval of the plan must ensure that the approved closure plan is consistent with sections 33.1-24-05-60 through 33.1-24-05-64 and the applicable requirements of sections 33.1-24-05-47 through 33.1-24-05-58, 33.1-24-05-97,

33.1-24-05-110, 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-151, 33.1-24-05-167, 33.1-24-05-180, 33.1-24-05-301, and 33.1-24-05-477. Until final closure is completed and certified in accordance with section 33.1-24-05-64, a copy of the approved plan and all approved revisions must be furnished to the department upon request, including requests by mail.

2. Content of plan. The plan must identify steps necessary to perform partial or final, or both, closure of the facility at any point during its active life. The closure plan must include:

- a. A description of how each hazardous waste management unit at the facility will be closed in accordance with section 33.1-24-05-60;
- b. A description of how final closure of the facility will be conducted in accordance with section 33.1-24-05-60. The description must identify the maximum extent of the operations which will be unclosed during the active life of the facility;
- c. An estimate of the maximum inventory of hazardous wastes ever onsite over the active life of the facility and a detailed description of the methods to be used during partial closures and final closure, including methods for removing, transporting, treating, storing, or disposing of all hazardous wastes, and identification of the types of the offsite hazardous waste management units to be used, if applicable;
- d. A detailed description of the steps needed to remove or decontaminate all hazardous waste residues and contaminated containment system components, equipment, structures, and soils during partial and final closure, including procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination required to satisfy the closure performance standards;
- e. A detailed description of other activities necessary during the closure period to ensure that all partial closures and final closures satisfy the closure performance standards, including ground water monitoring, leachate collection, and run-on and runoff control;
- f. A schedule for closure of each hazardous waste management unit and for final closure of the facility. The schedule must include, at a minimum, the total time required to close each hazardous waste management unit and the time required for intervening closure activities which will allow tracking of the progress of partial and final closure. (For example, in the case of a landfill unit, estimates of the time required to treat or dispose of all hazardous waste inventory and of the time required to place a final cover must be included.);
- g. For facilities that use trust funds or establish financial assurance under section 33.1-24-05-77 and that are expected to close prior to the expiration of the permit, an estimate of the expected year of final closure; and
- h. A closure cost estimate.

3. Amendment of plan. The owner or operator must submit a written notification of, or request for, a permit modification to authorize a change in operating plans, facility design, or the approved closure plan in accordance with the applicable procedures in chapters 33.1-24-06 and 33.1-24-07. The written notification or request must include a copy of the amended closure plan for review or approval by the department.

- a. The owner or operator may submit a written notification or request to the department for a permit modification to amend the closure plan at any time prior to the notification of partial or final closure of the facility.

- b. The owner or operator must submit a written notification of, or request for, a permit modification to authorize a change in the approved closure plan when:
 - (1) Changes in operating plans or facility design affect the closure plan;
 - (2) There is a change in the expected year of closure, if applicable; or
 - (3) In conducting partial or final closure activities, unexpected events require a modification of the approved closure plan.
- c. The owner or operator shall submit a written request for a permit modification, including a copy of the amended closure plan for approval at least sixty days prior to the proposed change in facility design or operation, or no later than sixty days after an unexpected event has occurred which has affected the closure plan. If an unexpected event occurs during the partial or final closure period, the owner or operator shall request a permit modification no later than thirty days after the unexpected event. An owner or operator of a surface impoundment or waste pile that intends to remove all hazardous waste at closure and is not otherwise required to prepare a contingent closure plan under paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-122 or paragraph 1 of subdivision a of subsection 3 of section 33.1-24-05-135 shall submit an amended closure plan to the department no later than sixty days from the date that the owner or operator or department determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of section 33.1-24-05-180, or no later than thirty days from that date if the determination is made during partial or final closure. The department will approve, disapprove, or modify this amended plan in accordance with the procedures in chapters 33.1-24-06 and 33.1-24-07. In accordance with section 33.1-24-06-05, the approved closure plan will become a condition of the hazardous waste permit issued.
- d. The department may request modifications to the plan under the conditions described in subdivision b. The owner or operator shall submit the modified plan within sixty days of the department's request, or within thirty days if the change in facility conditions occurs during partial or final closure. Any modifications requested by the department will be approved in accordance with procedures in chapters 33.1-24-06 and 33.1-24-07.

4. Notification of partial closure and final closure.

- a. The owner or operator shall notify the department in writing at least sixty days prior to the date on which the owner or operator expects to begin closure of a surface impoundment, waste pile, land treatment or landfill unit, or final closure of a facility with such a unit. The owner or operator shall notify the department in writing at least forty-five days prior to the date on which the owner or operator expects to begin final closure of a facility with only treatment or storage tanks, container storage, or incinerator units to be closed. The owner or operator must notify the department in writing at least forty-five days prior to the date which the owner or operator expects to begin partial or final closure of a boiler or industrial furnace, whichever is earlier.
- b. The date when the owner or operator "expects to begin closure" must be either no later than thirty days after the date on which any hazardous waste management unit receives the known final volume of hazardous wastes or, if there is a reasonable possibility that the hazardous waste management unit will receive additional hazardous waste, no later than one year after the date on which the unit received the most recent volume of hazardous waste. If the owner or operator of a hazardous waste management unit can demonstrate to the department that the hazardous waste management unit or facility has the capacity to receive additional hazardous wastes and the owner or operator has taken and will continue to take, all steps to prevent threats to human health and the

environment, including compliance with all applicable permit requirements, the department may approve an extension to this one-year limit.

- c. If the facility's permit is terminated, or if the facility is otherwise ordered, by judicial decree or final order under North Dakota Century Code section 23.1-04-14, to cease receiving hazardous waste or to close, then the requirements of this subsection do not apply. However, the owner or operator shall close the facility in accordance with the deadlines established in section 33.1-24-05-62.

5. **Removal of wastes and decontamination or dismantling of equipment.** Nothing in this section precludes the owner or operator from removing hazardous wastes and decontaminating or dismantling equipment in accordance with the approved partial or final closure plan at any time before or after notification of partial or final closure.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-62. Closure - Time allowed for closure.

1. Within ninety days after receiving the final volume of hazardous wastes at a hazardous waste management unit or facility, the owner or operator shall treat, remove from the unit or facility, or dispose of onsite, all hazardous wastes in accordance with the approved closure plan. The department may approve a longer period if the owner or operator complies with all applicable requirements for requesting a modification to the permit and demonstrates that one or both of the following subdivisions apply:

a. The activities required to comply with this subsection will, of necessity, take longer than ninety days to complete; or

b. All of the following apply:

(1) The hazardous waste management unit or facility has the capacity to receive additional hazardous waste;

(2) There is a reasonable likelihood that the owner or operator or another person will recommence operation of the hazardous waste management unit or the facility within one year;

(3) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and

(4) The owner or operator has taken and will continue to take all steps to prevent threats to human health and the environment, including compliance with all applicable permit requirements.

2. The owner or operator shall complete partial and final closure activities in accordance with the approved closure plan and within one hundred eighty days after receiving the final volume of hazardous wastes at the hazardous waste management unit or facility. The department may approve an extension to the closure period if the owner or operator complies with all applicable requirements for requesting a modification to the permit and demonstrates that one or both of the following subdivisions apply:

a. The partial or final closure activities will, of necessity, take longer than one hundred eighty days to complete; or

b. All of the following apply:

- (1) The hazardous waste management unit or facility has the capacity to receive additional hazardous waste;
- (2) There is reasonable likelihood that the owner or operator or another person will recommence operation of the hazardous waste management unit or the facility within one year;
- (3) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and
- (4) The owner or operator has taken and will continue to take all steps to prevent threats to human health and the environment from the unclosed but not operating hazardous waste management unit or facility, including compliance with all applicable permit requirements.

3. The demonstrations referred to in subsections 1 and 2 must be made as follows: The demonstrations in subsection 1 must be made at least thirty days prior to expiration of the ninety-day period in subsection 1; and the demonstration in subsection 2 must be made at least thirty days prior to the expiration of the one hundred eighty-day period in subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-63. Disposal or decontamination of equipment, structures, and soils.

During the partial and final closure periods, all contaminated equipment, structures, and soils must be properly disposed of or decontaminated unless otherwise specified in sections 33.1-24-05-110, 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-167, or 33.1-24-05-180. By removing any hazardous wastes or hazardous constituents during partial and final closure, the owner or operator may become a generator of hazardous waste and shall handle that waste in accordance with all applicable requirements of chapter 33.1-24-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-64. Certification of closure.

Within sixty days of completion of closure of each hazardous waste surface impoundment, waste pile, land treatment, and landfill unit, and within sixty days of the completion of final closure, the owner or operator shall submit to the department, by registered mail, a certification that the hazardous waste management unit or facility, as applicable, has been closed in accordance with the specifications in the approved closure plan. The certification must be signed by the owner or operator and by a qualified professional engineer. Documentation supporting the professional engineer's certification must be furnished to the department upon request until the department releases the owner or operator from the financial assurance requirements for closure under subsection 9 of section 33.1-24-05-77.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-65. Survey plat.

No later than the submission of the certification of closure of each hazardous waste disposal unit, the owner or operator shall submit to the local zoning authority, or the authority with jurisdiction over local land use, and to the department, a survey plot indicating the location and dimensions of landfill

cells, or other hazardous waste disposal units with respect to permanently surveyed benchmarks. This plat must be prepared and certified by a professional land surveyor. The plat filed with a local zoning authority or the authority with jurisdiction over local land use, must contain a note, prominently displayed, which states the owner's or operator's obligation to restrict disturbance of the hazardous waste disposal unit in accordance with the applicable regulations under sections 33.1-24-05-59 through 33.1-24-05-73.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-66. Postclosure care and use of property.

1. Postclosure care requirements.

a. Postclosure care for each hazardous waste management unit subject to the requirements of sections 33.1-24-05-66 through 33.1-24-05-69 must begin after completion of closure of the unit and continue for thirty years after that date and must consist of at least the following:

(1) Monitoring and reporting in accordance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-118 through 33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, and sections 33.1-24-05-300 through 33.1-24-05-309; and

(2) Maintenance and monitoring of waste containment systems in accordance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-118 through 33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, and sections 33.1-24-05-300 through 33.1-24-05-309.

b. Anytime preceding partial closure of a hazardous waste management unit subject to postclosure care requirements or final closure, or anytime during the postclosure period for a particular unit, the department may, in accordance with the permit modification procedures in chapters 33.1-24-06 and 33.1-24-07:

(1) Shorten the postclosure care period applicable to the hazardous waste management unit, or facility, if all disposal units have been closed, if the department finds that the reduced period is sufficient to protect human health and the environment (for example, leachate or ground water monitoring results, characteristics of the hazardous waste, application of advanced technology or alternative disposal, treatment, or reuse techniques indicate that the hazardous waste management unit or facility is secure); or

(2) Extend the postclosure care period applicable to the hazardous waste management unit or facility if the department finds that the extended period is necessary to protect human health or the environment (for example, leachate or ground water monitoring results indicate a potential for migration of hazardous waste at levels which may be harmful to human health or the environment).

2. The department may require, at partial and final closure, continuation of any of the security requirements of section 33.1-24-05-05 during part or all of the postclosure period when:

a. Hazardous wastes may remain exposed after completion of partial or final closure; or

b. Access by the public or domestic livestock may pose a hazard to human health.

3. Postclosure use of property on or in which hazardous wastes remain after partial or final closure must never be allowed to disturb the integrity of the final cover, liners, or any other components of the containment system, or the function of the facility's monitoring systems, unless the department finds that the disturbance:

a. Is necessary to the proposed use of the property, and will not increase the potential hazard to human health or the environment; or

b. Is necessary to reduce a threat to human health or the environment.

4. All postclosure care activities must be in accordance with the provisions of the approved postclosure plan as specified in section 33.1-24-05-67.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-67. Postclosure plan - Amendment of plan.

1. Written plan. The owner or operator of a hazardous waste disposal unit shall have a written postclosure plan. In addition, certain surface impoundments and waste piles from which the owner or operator intends to remove or decontaminate the hazardous wastes at partial or final closure are required by paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-122 and paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-135 to have contingent postclosure plans. Owners or operators of surface impoundments and waste piles not otherwise required to prepare contingent postclosure plans under paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-122 and paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-135 shall submit a postclosure plan to the department within ninety days from the date that the owner or operator or department determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of sections 33.1-24-05-66 through 33.1-24-05-69. The plan must be submitted with the permit application in accordance with section 33.1-24-06-17, and approved by the department as part of the permit issuance procedure under chapter 33.1-24-07. In accordance with section 33.1-24-06-05, the approved postclosure plan will become a condition of any hazardous waste permit issued.

2. For each hazardous waste management unit subject to the requirements of this section, the postclosure plan must identify the activities that will be carried on after closure of each disposal unit and the frequency of these activities, and include at least:

a. A description of the planned monitoring activities and frequencies at which they will be performed to comply with sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-118 through 33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, and sections 33.1-24-05-300 through 33.1-24-05-309 during the postclosure care period;

b. A description of the planned maintenance activities, and frequencies at which they will be performed to ensure:

(1) The integrity of the cap and final cover or other containment systems in accordance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-118 through 33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, and sections 33.1-24-05-300 through 33.1-24-05-309;

(2) The function of the monitoring equipment in accordance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58, sections 33.1-24-05-118 through

33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, and sections 33.1-24-05-300 through 33.1-24-05-309; and

c. The name, address, and telephone number of the persons or office to contact about the hazardous waste disposal unit or facility during the postclosure care period.

3. Until final closure of the facility, a copy of the approved postclosure plan must be furnished to the department upon request, including request by mail. After final closure has been certified, the person or office specified in subdivision c of subsection 2 shall keep the approved postclosure plan during the remainder of the postclosure period.

4. The owner or operator must submit a written notification of, or request for, a permit modification to authorize a change in the approved postclosure plan in accordance with the applicable requirements in chapters 33.1-24-06 and 33.1-24-07. The written notification or request must include a copy of the amended postclosure plan for review or approval by the department.

a. The owner or operator may submit a written notification or request to the department for a permit modification to amend the postclosure plan at any time during the active life of the facility or during the postclosure care period.

b. The owner or operator must submit a written notification of, or request for, a permit modification to authorize a change in the approved postclosure plan whenever:

(1) Changes in operating plans or facility design affect the approved postclosure plan;

(2) There is a change in the expected year of final closure, if applicable; or

(3) Events which occur during the active life of the facility, including partial and final closures, affect the approved postclosure plan.

c. The owner or operator shall submit a written request for a permit modification at least sixty days prior to the proposed change in facility design or operation, or no later than sixty days after an unexpected event has occurred which has affected the postclosure plan. An owner or operator of a surface impoundment or waste pile that intends to remove all hazardous waste at closure and is not otherwise required to submit a contingent postclosure plan under paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-122 and paragraph 2 of subdivision a of subsection 3 of section 33.1-24-05-135 shall submit a postclosure plan to the department no later than ninety days after the date that the owner or operator or department determine that the hazardous waste management unit must be closed as a landfill, subject to the requirements of section 33.1-24-05-180. The department will approve, disapprove, or modify this plan in accordance with the procedures in chapters 33.1-24-06 and 33.1-24-07. In accordance with section 33.1-24-06-05, the approved postclosure plan will become a permit condition.

d. The department may request modifications to the plan under the conditions described in subdivision b. The owner or operator shall submit the modified plan no later than sixty days after the department's request, or no later than ninety days if the unit is a surface impoundment or waste pile not previously required to prepare a contingent postclosure plan. Any modifications requested by the department will be approved, disapproved, or modified in accordance with the procedures in chapters 33.1-24-06 and 33.1-24-07.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-68. Postclosure notices.

1. No later than sixty days after certification of closure of each hazardous waste disposal unit, the owner or operator shall submit to the local zoning authority, or the authority with jurisdiction over local land use, and to the department a record of the type, location, and quantity of hazardous wastes disposed of within each cell or other disposal unit of the facility. For hazardous waste disposed of before January 12, 1981, the owner or operator shall identify the type, location, and quantity of the hazardous wastes to the best of the owner's or operator's knowledge and in accordance with any records the owner or operator has kept.
2. Within sixty days of certification of closure of the first hazardous waste disposal unit and within sixty days of certification of closure of the last hazardous waste disposal unit, the owner or operator shall:
 - a. Record, in accordance with state law, a notation on the deed to the facility property, or on some other instrument which is normally examined during title search, that will in perpetuity notify any potential purchaser of the property that:
 - (1) The land has been used to manage hazardous waste;
 - (2) Use of the land is restricted under sections 33.1-24-05-59 through 33.1-24-05-73; and
 - (3) The survey plat and record of the type, location, and quantity of hazardous wastes disposed of within each cell or other hazardous waste disposal unit of the facility required by section 33.1-24-05-65 and subsection 1 have been filed with the local zoning authority or the authority with jurisdiction over local land use and with the department; and
 - b. Submit a certification, signed by the owner or operator, that the owner or operator has recorded the notation specified in subdivision a of subsection 2, including a copy of the document in which the notation has been placed, to the department.
3. If the owner or operator or any subsequent owner or operator of the land upon which a hazardous waste disposal unit is located wishes to remove hazardous wastes and hazardous waste residues, the liner, if any, or contaminated soils, the owner or operator shall request a modification to the postclosure permit in accordance with the applicable requirements in chapters 33.1-24-06 and 33.1-24-07. The owner or operator shall demonstrate that the removal of the hazardous waste will satisfy the criteria of subsection 3 of section 33.1-24-05-66. By removing hazardous waste, the owner or operator may become a generator of hazardous waste and shall manage it in accordance with all applicable requirements of this article. If the owner or operator is granted a permit modification or otherwise granted approval to conduct such removal activities, the owner or operator may request that the department approve either:
 - a. The removal of the notation on the deed to the facility property or other instrument normally examined during title search; or
 - b. In addition of a notation to the deed or instrument indicating the removal of the hazardous waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-69. Certification of completion of postclosure care.

No later than sixty days after completion of the established postclosure care period for each hazardous waste disposal unit, the owner or operator shall submit to the department, by registered mail, a certification that the postclosure care period for the hazardous waste disposal unit was performed in accordance with the specifications in the approved postclosure plan. The certification must be signed by the owner or operator and a qualified professional engineer. Documentation supporting the professional engineer's certification must be furnished to the department upon request until the department releases the owner or operator from the financial assurance requirements for postclosure care under subsection 9 of section 33.1-24-05-77.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-70. [Reserved].

33.1-24-05-71. [Reserved].

33.1-24-05-72. [Reserved].

33.1-24-05-73. [Reserved].

33.1-24-05-74. Applicability of financial requirements.

1. The requirements of sections 33.1-24-05-76, 33.1-24-05-77, and 33.1-24-05-79 through 33.1-24-05-81 apply to owners and operators of all hazardous waste facilities, except as provided otherwise in this section or in section 33.1-24-05-01.
2. The requirements of sections 33.1-24-05-76 and 33.1-24-05-77 apply only to owners and operators of:
 - a. Disposal facilities;
 - b. Piles, and surface impoundments from which the owner or operator intends to remove the wastes at closure, to the extent that these sections are made applicable to such facilities in sections 33.1-24-05-122 and 33.1-24-05-135;
 - c. Tank systems that are required under section 33.1-24-05-110 to meet the requirements for landfills; and
 - d. Containment buildings that are required under section 33.1-24-05-477 to meet the requirements for landfills.
3. Federal agencies and agencies of the government of the state of North Dakota are exempt from the financial requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-75. Definitions of terms used in sections 33.1-24-05-74 through 33.1-24-05-88.

1. "Closure plan" means the plan for closure prepared in accordance with the requirements of section 33.1-24-05-61.
2. "Current closure cost estimate" means the most recent of the closure cost estimates prepared in accordance with subsections 1, 2, and 3 of section 33.1-24-05-76.
3. "Current postclosure cost estimate" means the most recent of the postclosure cost estimates prepared in accordance with subsections 1, 2, and 3 of section 33.1-24-05-76.
4. "Parent corporation" means a corporation which directly owns at least fifty percent of the voting stock of the corporation which is the facility owner or operator; the latter corporation is deemed a "subsidiary" of the parent corporation.
5. "Postclosure plan" means the plan for postclosure care prepared in accordance with the requirements of sections 33.1-24-05-66 through 33.1-24-05-69.
6. The following terms are used in the specifications for the financial tests for closure, postclosure care, and liability coverage. The definitions are intended to assist in the understanding of these sections and are not intended to limit the meanings of terms in a way that conflicts with generally accepted accounting practices.

"Assets" means all existing and all probable future economic benefits obtained or controlled by a particular entity.

"Current assets" means cash or other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

"Current liability" means obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.

"Current plugging and abandonment cost estimate" means the most recent of the estimates prepared in accordance with 40 CFR part 144.62(a), (b), and (c).

"Independently audited" refers to an audit performed by an independent certified public accountant in accordance with generally accepted auditing standards.

"Liabilities" means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.

"Net working capital" means current assets minus current liabilities.

"Net worth" means total assets minus total liabilities and is equivalent to owners equity.

"Tangible net worth" means the tangible assets that remain after deducting liabilities, such assets would not include intangibles such as goodwill and rights to patents or royalties.

7. In the liability insurance requirements, the terms "bodily injury" and "property damage" have the meanings given these terms by applicable state law. However, these terms do not include those liabilities which, consistent with standard industry practices, are excluded from coverage

and liability policies for bodily injury and property damage. The department intends the meanings of other terms used in the liability insurance requirements to be consistent with their common meanings within the insurance industry. The definitions given below of several of the terms are intended to assist in the understanding of these regulations and are not intended to limit their meanings in any way that conflicts with general insurance industry usage.

"Accidental occurrence" means an accident, including continuous or repeated exposure to conditions, which results in bodily injury or property damage, neither expected nor intended from the standpoint of the insured.

"Legal defense costs" means any expenses that an insurer incurs in defending against claims of third parties brought under the terms and conditions of an insurance policy.

"Nonsudden accidental occurrence" means an occurrence which takes place over time and involves continuous or repeated exposure.

"Sudden accidental occurrence" means an occurrence which is not continuous or repeated in nature.

8. "Substantial business relationship" means the extent of a business relationship necessary under applicable state law to make a guarantee contract issued incident to that relationship valid and enforceable. A "substantial business relationship" must arise from a pattern of recent or ongoing business transactions, in addition to the guarantee itself, such that a currently existing business relationship between the guarantor and the owner or operator is demonstrated to the satisfaction of the department.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-76. Cost estimates for closure and postclosure care.

1. The cost estimates for closure.

a. The owner or operator must have a detailed written estimate, in current dollars, of the cost of closing the facility in accordance with the requirements in sections 33.1-24-05-60 through 33.1-24-05-64 and applicable closure requirements in sections 33.1-24-05-97, 33.1-24-05-110, 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-151, 33.1-24-05-167, 33.1-24-05-180, sections 33.1-24-05-301 through 33.1-24-05-303, and section 33.1-24-05-477.

(1) The estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan (see subsection 2 of section 33.1-24-05-61).

(2) The closure cost estimate must be based on the costs to the owner or operator of hiring a third party to close the facility. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of parent corporation in subsection 4 of section 33.1-24-05-75.) The owner or operator may use costs for onsite disposal if the owner or operator can demonstrate that onsite disposal capacity will exist at all times over the life of the facility.

(3) The closure cost estimate may not incorporate any salvage value that may be realized with the sale of hazardous wastes, facility structures or equipment, land, or other assets associated with the facility at the time of partial or final closure.

(4) The owner or operator may not incorporate a zero cost for hazardous wastes that might have economic value.

b. During the active life of the facility, the owner or operator shall adjust the closure cost estimate for inflation within sixty days prior to the anniversary date of the establishment of the financial instruments used to comply with section 33.1-24-05-77. For owners and operators using the financial test or corporate guarantee, the closure cost estimate must be updated for inflation within thirty days after the close of the firm's fiscal year and before submission of updated information to the department as specified in subdivision c of subsection 6 of section 33.1-24-05-77. The adjustment may be made by recalculating the maximum costs of closure in current dollars, or by using an inflation factor derived from the most recent implicit price deflator for gross national product published by the United States department of commerce in its survey of current business as specified in paragraphs 1 and 2. The inflation factor is the result of dividing the latest published annual deflator by the deflator for the previous year.

(1) The first adjustment is made by multiplying the closure cost estimates by the inflation factor. The result is the adjusted closure cost estimate.

(2) Subsequent adjustments are made by multiplying the latest adjusted closure cost estimates by the latest inflation factor.

c. During the active life of the facility, the owner or operator shall revise the closure cost estimate no later than thirty days after the department has approved the request to modify the closure plan, if the change in the closure plan increases the cost of closure. The revised closure cost estimate must be adjusted for inflation as specified in subdivision b.

d. The owner or operator shall keep the following at the facility during the operating life of the facility: the latest closure cost estimate prepared in accordance with subdivisions a and c and, when this estimate has been adjusted in accordance with subdivision b, the latest adjusted closure cost estimate.

2. Cost estimate for postclosure care.

a. The owner or operator of a disposal surface impoundment, disposal miscellaneous unit, land treatment, or landfill unit, or a surface impoundment or waste pile required under sections 33.1-24-05-122 and 33.1-24-05-135 to prepare a contingent closure and postclosure plan, shall have a detailed written estimate in current dollars, of the annual cost of postclosure monitoring and maintenance of the facility in accordance with the applicable postclosure rules in sections 33.1-24-05-66 through 33.1-24-05-69, sections 33.1-24-05-122, 33.1-24-05-135, 33.1-24-05-167, 33.1-24-05-180, and 33.1-24-05-303.

(1) The postclosure cost estimate must be based on the cost to the owner or operator of hiring a third party to conduct postclosure care activities. A third party is a party who is neither a parent or subsidiary of the owner or operator. (See definition of parent corporation in subsection 4 of section 33.1-24-05-75.)

(2) The postclosure cost estimate is calculated by multiplying the annual postclosure cost estimate by the number of years of postclosure care required under section 33.1-24-05-66.

b. During the active life of the facility, the owner or operator shall address the postclosure cost estimate for inflation within sixty days prior to the anniversary date of the establishment of the financial instruments used to comply with section 33.1-24-05-77. For owners or operators using the financial test or corporate guarantee, the postclosure cost

estimate must be updated for inflation within thirty days after the close of the firm's fiscal year and before the submission of updated information to the department as specified in subdivision e of subsection 6 of section 33.1-24-05-77. The adjustment may be made by recalculating the postclosure cost estimate in current dollars or by using an inflation factor derived from the most recent implicit price deflator for gross national product published by the United States department of commerce in a survey of current business as specified in paragraphs 1 and 2. The inflation factor is the result of dividing the latest annual published deflator by the deflator for the previous year.

(1) The first adjustment is made by multiplying the postclosure cost estimate by the inflation factor. The result is the adjusted postclosure cost estimate.

(2) Subsequent adjustments are made by multiplying the latest adjusted postclosure cost estimate by the latest inflation factor.

c. During the active life of the facility, the owner or operator shall revise the postclosure cost estimate within thirty days after the department has approved a request to modify the postclosure plan, if the change in the postclosure plan increases the cost of postclosure care. The revised postclosure cost estimate must be adjusted for inflation as specified in subdivision b.

d. The owner or operator shall keep the following at the facility during the operating life of the facility: the latest postclosure cost estimate prepared in accordance with subdivisions a and c and, when this estimate has been adjusted in accordance with subdivision b, the latest adjusted postclosure cost estimate.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-77. Financial assurance for closure and postclosure care.

In accordance with section 33.1-24-05-74, an owner or operator of each facility shall establish financial assurance for closure and postclosure of the facility. The owner or operator of a hazardous waste management unit subject to the postclosure requirements of section 33.1-24-05-76 shall establish financial assurance for postclosure care in accordance with the approved postclosure plan for the facility sixty days prior to the initial receipt of hazardous waste or the effective date of the regulations, whichever is later. The owner or operator shall choose from the options as specified in subsections 1 through 6.

1. Closure and postclosure trust fund.

a. An owner or operator may satisfy the requirements of this section by establishing a closure and postclosure trust fund which conforms to the requirements of this subsection and submitting an originally signed duplicate of the trust agreement to the department. An owner or operator of the new facility shall submit the originally signed duplicate of the trust agreement to the department at least sixty days before the day on which hazardous waste is first received for treatment, storage, or disposal. The trustee must be an entity which has the authority to act as a trustee in this state and whose trust operations are regulated and examined by a federal agency or by the state department of financial institutions.

b. The wording of the trust agreement must be identical to the wording specified in subdivision a of subsection 1 of section 33.1-24-05-81 and the trust agreement must be accompanied by a formal certification of acknowledgment (for example see subdivision b of subsection 1 of section 33.1-24-05-81). Schedule A of the trust agreement must be

updated within sixty days after a change in the amount of the current closure and postclosure cost estimate covered by the agreement.

c. Payments into the trust fund must be made annually by the owner or operator over the term of the initial hazardous waste permit or over the remaining operating life of the facility as estimated in the closure plan, whichever period is shorter; this period is hereinafter referred to as the "pay-in period". The payments into the trust fund must be made as follows:

(1) For a new facility the first payment must be made before the initial receipt of hazardous waste for treatment, storage, or disposal. A receipt from the trustee for this payment must be submitted by the owner or operator to the department before the initial receipt of hazardous waste. The first payment must be at least equal to the current closure and postclosure cost estimate, except as provided in subsection 7, divided by the number of years in the pay-in period. Subsequent payments must be made no later than thirty days after each anniversary date of the first payment. The amount of each subsequent payment must be determined by this formula:

$$\text{Next Payment} = \frac{\text{CE} - \text{CV}}{\text{Y}}$$

Where CE is the current closure and postclosure cost estimate, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

(2) If an owner or operator establishes a trust fund as specified in 40 CFR part 265.143(a) or 265.145(a) of the federal hazardous waste regulations and the value of that trust fund is less than the current closure and postclosure cost estimate when a permit is awarded to the facility, the amount of the current closure and postclosure cost estimate still to be paid into the trust fund must be paid in over the pay-in period as defined in subdivision c. Payments must continue to be made no later than thirty days after each anniversary date of the first payment made pursuant to 40 CFR part 265. The amount of each payment must be determined by this formula:

$$\text{Next Payment} = \frac{\text{CE} - \text{CV}}{\text{Y}}$$

Where CE is the current closure and postclosure cost estimate, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

d. The owner or operator may accelerate payments into the trust fund or the owner or operator may deposit the full amount of the current closure and postclosure cost estimate at the time the fund is established. However, the owner or operator shall maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subdivision c.

e. If the owner or operator establishes a closure and postclosure trust fund after having used one or more alternate mechanisms specified in this section (or in 40 CFR part 265.143 or 265.145), the first payment must be in at least the amount that the fund would contain if the trust fund were established initially and annual payments were made according to the specifications of subdivision c.

f. After the pay-in period is completed, when the current closure and postclosure cost estimate changes, the owner or operator shall compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less

than the amount of the new estimate, the owner or operator within sixty days after the change in the cost estimate shall either deposit an amount into the fund so that its value after the deposit at least equals the amount of the current closure and postclosure cost estimate or obtain other financial assurance as specified in this section to cover the difference.

g. If the value of the trust fund is greater than the total amount of the current closure and postclosure cost estimate, the owner or operator may submit a written request to the department for release of the amount in excess of the current closure and postclosure cost estimate.

h. If an owner or operator substitutes other financial assurance as specified in this section for all or part of the trust fund, the owner or operator may submit a written request to the department for release of the amount in excess of the current closure and postclosure cost estimate covered by the trust fund.

i. Within sixty days after receiving a request from the owner or operator for release of funds as specified in subdivision g or h, the department will instruct the trustee to release to the owner or operator such funds as the department specifies in writing.

j. During the period of postclosure care, the department may approve a release of funds if the owner or operator demonstrates to the department that the value of the trust fund exceeds the remaining cost of the postclosure care.

k. After beginning partial or final closure or during the postclosure care period, or both, an owner or operator or any other person authorized to perform partial or final closure or postclosure activities may request reimbursement for expenditures incurred during these activities by submitting itemized bills to the department. The owner or operator may request reimbursements for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum cost of closing the facility over its remaining operating life. Within sixty days after receiving bills for partial or final closure or postclosure activities, the department will determine whether the expenditures are in accordance with the closure or postclosure plans or otherwise justified and if so, the department will instruct the trustee to make reimbursement in such amounts as the department specifies in writing. If the department has reason to believe that the cost of closure will be significantly greater than the value of the trust fund, the department may withhold reimbursement of such amounts as the department deems prudent until the department determines in accordance with subsection 9 that the owner or operator is no longer required to maintain financial assurance for final closure. If the department does not instruct the trustee to make such reimbursements, the department will provide the owner or operator with a detailed written statement of reasons.

l. The department will agree to termination of the trust when:

(1) An owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 9.

2. Surety bond guaranteeing payment into a closure and postclosure trust fund.

a. An owner or operator may satisfy the requirements of this section by obtaining a surety bond which conforms to the requirements of this subsection and submitting the bond to the department. An owner or operator of a new facility must submit the bond to the department at least sixty days before the date on which hazardous waste is first received

for treatment, storage, or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the United States department of treasury and be authorized to do business within this state. If the surety is using reinsurance, a treasury reinsurance form must be submitted with the bond or within forty-five days thereafter. If cosureties are being used, the original bond must reflect that fact.

b. The wording of the surety bond must be identical to the wording specified in subsection 2 of section 33.1-24-05-81.

c. The owner or operator who uses a surety bond to satisfy the requirements of this section shall also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the department. This standby trust fund must meet the requirements specified in subsection 1 except that:

(1) An originally signed duplicate of the trust agreement must be submitted to the department with the surety bond; and

(2) Until the standby trust fund is funded pursuant to the requirements of this subsection, the following are not required by this chapter:

(a) Payments into the trust fund as specified in subsection 1.

(b) Updating of schedule A of the trust agreement to show current closure and postclosure cost estimates.

(c) Annual evaluations as required by the trust agreement.

(d) Notices of nonpayment as required by the trust agreement.

d. The bond must guarantee that the owner or operator will:

(1) Fund the standby trust fund in an amount equal to the penal sum of the bond before the beginning of final closure of the facility;

(2) Fund the standby trust fund in an amount equal to the penal sum within fifteen days after an order to begin final closure is issued by the department or a United States district court or other court of competent jurisdiction; or

(3) Provide alternate financial assurance as specified in this section and obtain the department's written approval of the assurance provided within ninety days after receipt by both the owner or operator of a notice of cancellation of the bond from the surety.

e. Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

f. The penal sum of the bond must be in an amount at least equal to the current closure and postclosure cost estimate, except as provided in subsection 7.

g. Whenever the current closure and postclosure cost estimate increases to an amount greater than the penal sum, the owner or operator within sixty days after the increase must either cause the penal sum to be increased to an amount at least equal to the current closure and postclosure cost estimate and submit evidence of such increase to the department or obtain other financial assurance as specified in this section to cover

the increase. Whenever the current closure and postclosure cost estimate decreases, the penal sum may be reduced to the amount of the current closure and postclosure cost estimate following written approval by the department.

h. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur; however, during the one hundred twenty days beginning on the date of receipt of cancellation by both the owner or operator and the department as evidenced by the return receipts.

i. The owner or operator may cancel the bond if the department has given prior written consent based on the department's receipt of evidence of alternate financial assurance as specified in this section.

3. Surety bond guaranteeing performance of closure and postclosure care.

a. An owner or operator may satisfy the requirements of this section by obtaining a surety bond which conforms to the requirements of this subsection and submitting the bond to the department. An owner or operator of a new facility shall submit the bond to the department at least sixty days before the date on which hazardous waste is first received for treatment, storage, or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those acceptable sureties on federal bonds in Circular 570 of the United States department of treasury and be authorized to do business within the state of North Dakota. If the surety is using reinsurance a treasury reinsurance form must be submitted with the bond or within forty-five days thereafter. If cosureties are being used, the original bond must reflect that fact.

b. The wording of the surety bond must be identical to the wording specified in subsection 3 of section 33.1-24-05-81.

c. The owner or operator who uses a surety bond to satisfy the requirements of this section shall also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the department. This standby trust fund must meet the requirements specified in subsection 1, except that:

(1) An originally signed duplicate of the trust agreement must be submitted to the department with the surety bond; and

(2) Until the standby trust fund is funded pursuant to the requirements of this subsection, the following are not required by this chapter:

(a) Payments into the trust fund as specified in subsection 1.

(b) Updating of schedule A of the trust agreement to show current closure and postclosure cost estimates.

(c) Annual valuations as required by the trust agreement.

(d) Notices of nonpayment as required by the trust agreement.

d. The bond must guarantee that the owner or operator will:

(1) Perform postclosure care and final closure in accordance with the postclosure and closure plan and other requirements of the permit for the facility when required to do so; or

(2) Provide alternate financial assurance as specified in this section and obtain the department's written approval of the assurance provided within ninety days after receipt by both the owner or operator and the department of a notice of cancellation of the bond from the surety.

e. Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. Following a determination by the department that the owner or operator has failed to perform postclosure care or final closure in accordance with the closure or postclosure plan and other permit requirements when required to do so, under the terms of the bond the surety will perform the postclosure care or final closure as guaranteed by the bond or will deposit the amount of the penal sum into the standby trust fund.

f. The penal sum of the bond must be in an amount at least equal to the current closure or postclosure cost estimate, or both.

g. Whenever the current closure or postclosure cost estimate, or both, increases to an amount greater than the penal sum, the owner or operator within sixty days after the increase must either cause the penal sum to be increased to an amount at least equal to the current closure or postclosure cost estimate, or both, and submit evidence of such increase to the department or obtain other financial assurance as specified in this section. Whenever the current closure or postclosure cost estimate, or both, decreases the penal sum may be reduced to the amount of the current closure or postclosure cost estimate, or both, following written approval by the department.

h. During the period of postclosure care, the department may approve a decrease in the penal sum if the owner or operator demonstrates to the department that the amount exceeds the remaining cost of postclosure care.

i. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur; however, during the one hundred twenty days beginning on the date of receipt of this notice of cancellation by both the owner or operator and the department as evidenced by the return receipts.

j. The owner or operator may cancel the bond if the department has given prior written consent. The department will provide such written consent when:

(1) An owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 9.

k. The surety will not be liable for deficiencies in the performance of closure or postclosure care by the owner or operator after the department releases the owner or operator from the requirements of this subsection in accordance with subsection 9.

4. Closure and postclosure letter of credit.

a. An owner or operator may satisfy the requirements of this section by obtaining an irrevocable standby letter of credit which conforms to the requirements of this subsection and submitting the letter to the department. An owner or operator of a new facility must submit the letter of credit to the department at least sixty days before the date on which hazardous waste is first received for disposal. The letter of credit must be effective before this initial receipt of hazardous waste. The issuing institution must be an entity which has the authority to issue letters of credit in this state and whose letters of credit operations

are regulated and examined by a federal agency or by the state department of financial institutions.

b. The wording of the letter of credit must be identical to the wording specified in subsection 4 of section 33.1-24-05-81.

c. An owner or operator who uses a letter of credit to satisfy the requirements of this section shall also establish a standby trust fund. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the department will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the department. This standby trust fund must meet the requirements of the trust fund specified in subsection 1, except that:

(1) An originally signed duplicate of the trust agreement must be submitted to the department with the letter of credit.

(2) Unless the standby trust fund is funded pursuant to the requirements of this subsection the following are not required by this chapter:

(a) Payments into the trust fund as specified in subsection 1.

(b) Updating of schedule A of the trust agreement to show current or postclosure, or both, cost estimates.

(c) Annual valuations as required by the trust agreement; and

(d) Notices of nonpayment as required by the trust agreement.

d. The letter of credit must be accompanied by a letter from the owner or operator referring to the letter of credit by number, issuing institution and date and providing the following information: the identification number, name, and address of the facility and the amount of funds assured for closure and postclosure care of the facility by the letter of credit.

e. The letter of credit must be irrevocable and issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless at least one hundred twenty days before the current expiration date, the issuing institution notifies both the owner or operator and the department by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the one hundred twenty days will begin on the date when both the owner or operator and the department have received notice as evidenced by the return receipts.

f. The letter of credit must be issued in an amount at least equal to the current closure or postclosure, or both, cost estimate, except as provided in subsection 7.

g. Whenever the current closure or postclosure, or both, cost estimate increases to an amount greater than the amount of the letter of credit during the operating life of the facility, the owner or operator within sixty days after the increase shall either cause the amount of the letter of credit to be increased so that it at least equals the current closure or postclosure, or both, cost estimate, and submit evidence of such increase to the department, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current closure or postclosure, or both, cost estimate decreases, the amount of the credit may be reduced to the amount of the current estimate following written approval by the department.

- h. During the period of postclosure care, the department may approve a decrease in the amount of the letter of credit if the owner or operator demonstrates to the department that the amount exceeds the remaining cost of postclosure care.
- i. Following a determination by the department that the owner or operator has failed to perform closure or postclosure care in accordance with the closure or postclosure plan or other permit requirements, the department may draw on the letter of credit.
- j. If the owner or operator does not establish alternate financial assurance as specified in this section and obtain written approval of such alternate assurance from the department within ninety days after receipt by both the owner or operator and the department of a notice from the issuing institution that the issuing institution has decided not to extend the letter of credit beyond the current expiration date, the department will draw on the letter of credit. The department may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last thirty days of any such extension, the department will draw on the letter of credit if the owner or operator has failed to provide alternate financial assurance as specified in this section and obtain written approval of such assurance from the department.
- k. The department will return the letter of credit to the issuing institution when:
 - (1) An owner or operator substitutes alternate financial assurance as specified in this section; or
 - (2) The department releases the owner or operator from requirements of this subsection in accordance with subsection 9.

5. Closure and postclosure insurance.

- a. An owner or operator may satisfy the requirements of this section by obtaining closure and postclosure insurance which conforms to the requirements of this subsection and submitting a certificate of such insurance to the department. An owner or operator of a new facility must submit the certificate of insurance to the department at least sixty days before the date on which hazardous waste is first received for treatment, storage, or disposal. The insurance must be effective before this initial receipt of hazardous waste. At a minimum, the insurer must be licensed to transact the business of insurance in this state or eligible to provide insurance as an excess or surplus lines insurer in one or more states.
- b. The wording of the certificate of insurance must be identical to the wording specified in subsection 5 of section 33.1-24-05-81.
- c. The closure and postclosure insurance policy must be issued for a face amount of at least equal to the current closure or postclosure, or both, cost estimate, except as provided in subsection 7. The term "face amount" means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.
- d. The closure and postclosure insurance policy must guarantee that funds will be available to close the facility or perform postclosure final care, or both, when final closure or the postclosure period begins. The policy must also guarantee that once final closure or postclosure begins the insurer will be responsible for paying out funds up to an amount equal to the face amount of the policy upon the direction of the department to such party or parties as the department specifies.

- e. After beginning partial or final closure or during the postclosure period, or both, an owner or operator or any other person authorized to perform closure or postclosure may request reimbursement for closure or postclosure expenditures by submitting itemized bills to the department. The owner or operator may request reimbursement for partial closure only if the remaining value of the policy is sufficient to cover the maximum cost of closing the facility over its remaining operating life. Within sixty days after receiving bills for closure or postclosure activities, the department will determine whether the expenditures are in accordance with the partial or final closure or postclosure plan or otherwise justified and if so, the department will instruct the insurer to make reimbursement in such amounts as the department specifies in writing. If the department has reason to believe that the maximum cost of closure over the remaining life of the facility will be significantly greater than the face amount of the policy, the department may withhold reimbursement of such amounts as the department deems prudent until the department determines, in accordance with subsection 9, that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the department does not instruct the insurer to make such reimbursement, the department will provide the owner or operator with a detailed written statement of reasons.
- f. The owner or operator shall maintain the policy in full force and effect until the department consents to termination of the policy by the owner or operator as specified in subdivision k. Failure to pay the premium without substitution of alternate financial assurance, as specified in this section, will constitute a significant violation of this chapter warranting such remedy as the department deems necessary. Such violation will be deemed to begin upon receipt by the department of a notice of future cancellation, termination, or failure to renew due to nonpayment of the premium, rather than upon the date of expiration.
- g. Each policy must contain a provision allowing assignment of the policy to a successor, owner, or operator. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.
- h. The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy, except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the department. Cancellation, termination, or failure to renew may not occur; however, during the one hundred twenty days beginning with the date of receipt of a notice by the department and the owner or operator as evidenced by the return receipts. Cancellation, termination, or failure to renew may not occur and the policy will remain in full force and effect in the event that on or before the date of expiration:
- (1) The department deems the facility abandoned;
 - (2) The permit is terminated or revoked or a new permit is denied;
 - (3) Closure is ordered by the department or a state court or other court of competent jurisdiction;
 - (4) The owner or operator is named as debtor in a voluntary or involuntary proceeding under United States Code title 11 (bankruptcy); or
 - (5) The premium due is paid.
- i. Whenever the current closure or postclosure, or both, cost estimate increases to an amount greater than the face amount of the policy, the owner or operator within sixty

days after the increase must either cause the face amount to be increased to an amount at least equal to the current closure or postclosure, or both, cost estimate and submit evidence of such increase to the department, or obtain other financial assurance as specified in this section to cover the increase. Whenever the current closure or postclosure, or both, cost estimate decreases, the face amount may be reduced to the amount of the current closure or postclosure, or both, cost estimate following a written approval by the department.

j. For postclosure insurance only, commencing on the date that liability to make payments pursuant to a postclosure policy accrues, the insurer will thereafter annually increase the face amount of the policy. Such increase must be equivalent to the face amount of the policy less any payments made, multiplied by an amount equivalent to eighty-five percent of the most recent investment rate or of the equivalent coupon-issue yield announced by the United States treasury for twenty-six-week treasury securities.

k. The department will give written consent to the owner or operator that the owner or operator may terminate the insurance policy when:

(1) An owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 9.

6. Financial test and corporate guarantee for closure and postclosure care.

a. An owner or operator may satisfy the requirements of this section by demonstrating that the owner or operator passes a financial test as specified in this subsection. To pass this test, the owner or operator must meet the criteria of either paragraph 1 or 2.

(1) The owner or operator must have:

(a) Two of the following three ratios: a ratio of total liabilities to net worth less than two; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than one-tenth; and a ratio of current assets to current liabilities greater than one and five-tenths;

(b) Net working capital and tangible net worth each at least six times the sum of the current closure and postclosure cost estimates and the current plugging and abandonment cost estimate;

(c) Tangible net worth of at least ten million dollars; and

(d) Assets in the United States amounting to at least ninety percent of the owner's or operator's total assets or at least six times the sum of the current closure and postclosure cost estimates, and the current plugging and abandonment cost estimates.

(2) The owner or operator must have:

(a) A current rating for the owner's or operator's most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's;

(b) Tangible net worth at least six times the sum of the current closure and postclosure cost estimates and the current plugging and abandonment cost estimates;

- (c) Tangible net worth of at least ten million dollars; and
- (d) Assets located in the United States amounting to at least ninety percent of the owner's or operator's total assets or at least six times the sum of the current closure and postclosure cost estimates and the current plugging and abandonment cost estimates.
- b. The phrase "current closure and postclosure cost estimates" as used in subdivision a refers to the cost estimates required to be shown in paragraphs 1 through 4 of the letter from the owner's or operator's chief financial officer (subsection 6 of section 33.1-24-05-81). The phrase "current plugging and abandonment cost estimates" as used in subdivision a refers to the cost estimates required to be shown in paragraphs 1 through 3 of the letter from the owner's or operator's chief financial officer (40 CFR part 144.70(f)).
- c. To demonstrate that the owner or operator meets the financial test, the owner or operator must submit the following items to the department:

 - (1) A letter signed by the owner's or operator's chief financial officer and worded as specified in subsection 6 of section 33.1-24-05-81;
 - (2) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and
 - (3) A special report from the owner's or operator's independent certified public accountant to the owner or operator stating that:

 - (a) The accountant has compared the data which the letter from the chief financial officer specifies as having been derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements; and
 - (b) In connection with that procedure, no matters came to the accountant's attention which caused the accountant to believe that the specified data should be adjusted.
- d. An owner or operator of a new facility must submit the items specified in subdivision c to the department at least sixty days before the date on which hazardous waste is first received for treatment, storage, or disposal.
- e. After the initial submission of items specified in subdivision c, the owner or operator must send updated information to the department within ninety days after the close of each succeeding fiscal year. This information must consist of all three items specified in subdivision c.
- f. If the owner or operator no longer meets the requirements of subdivision a, the owner or operator must send notice to the department of intent to establish alternate financial assurance as specified in this section. The notice must be sent by certified mail within ninety days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator must provide the alternate financial assurance within one hundred twenty days after the end of each fiscal year.
- g. The department may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subdivision a, require reports of financial condition at any time from the owner or operator in addition to those specified in subdivision c. If the department finds, on the basis of such reports or other information, that the owner or

operator no longer meets the requirements of subdivision a, the owner or operator must provide alternate financial assurance specified in this section within thirty days after notification of such a finding.

h. The department may disallow use of this test on the basis of qualification in the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's statements (see paragraph 2 of subdivision c). An adverse opinion or a disclaimer of opinion will be cause for disallowance. The department will evaluate other qualifications on an individual basis. The owner or operator must provide alternate financial assurance as specified in this section within thirty days after notification of the disallowance.

i. The owner or operator is no longer required to submit the items specified in subdivision c when:

(1) An owner or operator substitutes alternate financial assurance as specified in this section; or

(2) The department releases the owner or operator from the requirements of this subsection in accordance with subsection 9.

j. An owner or operator may meet the requirements of this section by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in subdivisions a through h and must comply with the terms of the guarantee. The wording of the guarantee must be identical to the wording specified in subdivision a of subsection 8 of section 33.1-24-05-81. The certified copy of the guarantee must accompany the items sent to the department as specified in subdivision c. One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee. The terms of the guarantee must provide that:

(1) If the owner or operator fails to perform final closure or postclosure, or both, of a facility covered by the corporate guarantee in accordance with the closure or postclosure, or both, plan and other permit requirements when required to do so, the guarantor will do so or establish a trust fund as specified in subsection 1 in the name of the owner or operator.

(2) The corporate guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur; however, during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.

(3) If the owner or operator fails to provide alternate financial assurance as specified in this section and fails to obtain the written approval of such alternate assurance from the department within ninety days after receipt by both the owner or operator and the department of a notice of cancellation of the corporate guarantee from the guarantor, the guarantor will provide such alternate financial assurance in the name of the owner or operator.

k. Companies not required to submit an audited financial statement to the United States securities and exchange commission must have an auditor's opinion prepared by an auditor licensed in this state.

7. **The use of multiple financial mechanisms.** An owner or operator may satisfy the requirements of this section by establishing more than one financial mechanism per facility. These mechanisms are limited to trust funds, surety bonds guaranteeing payment into a trust fund, letters of credit, and insurance. The mechanisms must be as specified in this section, except that it is the combination of mechanisms, rather than the single mechanism which must provide financial assurance for an amount at least equal to the current closure or postclosure, or both, cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or a letter of credit, the owner or operator may use the trust fund as the standby trust fund for the other mechanisms. A single standby trust fund may be established for two or more mechanisms. The department may use any or all of the mechanisms to provide for closure or postclosure, or both, care of the facility.

8. **Use of a financial mechanism for multiple facilities.** An owner or operator may use a financial assurance mechanism specified in this section to meet the requirements of this section for more than one facility. Evidence of financial assurance submitted to the department must include a list showing for each facility the identification number, name, address, and the amount of funds for closure or postclosure, or both, care assured by the mechanism. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for each facility. In directing funds available through the mechanism for closure or postclosure care of any of the facilities covered by the mechanism, the department may direct only the amount of funds designated for that facility unless the owner or operator agrees to the use of additional funds available under the mechanism.

9. **Release of the owner or operator from the requirements of this section.** Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that final closure or postclosure care, or both, has been completed in accordance with an approved closure or postclosure care plan, the department will notify the owner or operator in writing that the owner or operator is no longer required by this section to maintain financial assurance for final closure or postclosure care, or both, of the facility, unless the department has reason to believe that final closure or postclosure care, or both, has not been in accordance with the approved closure or postclosure care plans. The department shall provide the owner or operator a detailed written statement of any such reason to believe that closure or postclosure, or both, has not been in accordance with the approved closure or postclosure plans.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-78. Use of a financial mechanism for both closure and postclosure care.

An owner or operator may satisfy the requirements for financial assurance for both closure and postclosure care for one or more facilities by using a trust fund, surety bond, letter of credit, insurance, financial test, or corporate guarantee that meets the specifications for the mechanism in section 33.1-24-05-77. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for financial assurance of closure and of postclosure care.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-79. Liability requirements.

1. Coverage for sudden accidental occurrences. An owner or operator of a hazardous waste treatment, storage, or disposal facility, or a group of facilities, must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator must have and maintain liability coverage for sudden accidental occurrences in the amount of at least one million dollars per occurrence with an annual aggregate of at least two million dollars, exclusive of legal defense costs. This liability coverage may be demonstrated as specified in subdivision a, b, c, d, e, or f:
 - a. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in this subdivision.
 - (1) Each insurance policy must be amended by attachment of the hazardous waste facility liability endorsement or evidenced by a certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in subsection 9 of section 33.1-24-05-81. The wording of the certificate of insurance must be identical to the wording specified in subsection 10 of section 33.1-24-05-81. The owner or operator shall submit a signed duplicate original of the endorsement or the certificate of insurance to the department. If requested by the department, the owner or operator shall provide a signed duplicate original of the insurance policy. An owner or operator of a new facility shall submit the signed duplicate original of the hazardous waste facility liability endorsement or the certificate of liability insurance to the department at least sixty days before the day on which hazardous waste is first received for treatment, storage, or disposal. The insurance must be effective before this initial receipt of hazardous waste.
 - (2) Each insurance policy must be issued by an insurer which, at a minimum, is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.
 - b. An owner or operator may meet the requirements of this subsection by passing a financial test or using the guarantee for liability coverage as specified in subsections 6 and 7.
 - c. An owner or operator may meet the requirements of this subsection by obtaining a letter of credit for liability coverage as specified in subsection 8.
 - d. An owner or operator may meet the requirements of this subsection by obtaining a surety bond for liability coverage as specified in subsection 9.
 - e. An owner or operator may meet the requirements of this subsection by obtaining a trust fund for liability coverage as specified in subsection 10.
 - f. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, guarantee, letter of credit, surety bond, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amounts required by this subsection. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this subdivision, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurances as "excess" coverage.

g. An owner or operator shall notify the department in writing within thirty days when:

- (1) A claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in subdivisions a through f; or
- (2) A certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under subdivisions a through f; or
- (3) A final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under subdivisions a through f.

2. Coverage for nonsudden accidental occurrences. An owner or operator of a surface impoundment, landfill, land treatment facility, or disposal miscellaneous unit which is used to manage hazardous waste, or a group of such facilities, must demonstrate financial responsibility for bodily injury and property damage to third parties caused by nonsudden accidental occurrences arising from operations of the facility or group of facilities. The owner or operator must have and maintain liability coverage for nonsudden accidental occurrences in the amount of at least three million dollars per occurrence with an annual aggregate of at least six million dollars, exclusive of legal defense costs. An owner or operator who must meet the requirements of this section may combine the required per-occurrence coverage levels for sudden and nonsudden accidental occurrences into a single per-occurrence level, and combine the required annual aggregate coverage levels for sudden and nonsudden accidental occurrences into a single annual aggregate level. Owners or operators who combine coverage levels for sudden and nonsudden accidental occurrences must maintain liability coverage in the amount of at least four million dollars per occurrence and eight million dollars annual aggregate. This liability coverage may be demonstrated as specified in subdivision a, b, c, d, e, or f:

a. An owner or operator may demonstrate the required liability coverage by having liability insurance as specified in this subdivision.

- (1) Each insurance policy must be amended by attachment of the hazardous waste facility liability endorsement or evidenced by certificate of liability insurance. The wording of the endorsement must be identical to the wording specified in subsection 9 of section 33.1-24-05-81. The wording of the certificate of insurance must be identical to the wording specified in subsection 10 of section 33.1-24-05-81. The owner or operator shall submit a signed duplicate original of the endorsement or the certificate of insurance to the department. If requested by the department, the owner or operator shall provide a signed duplicate original of the insurance policy. An owner or operator of a new facility shall submit the signed duplicate original of the hazardous waste facility liability endorsement or the certificate of liability insurance to the department at least sixty days before the date on which hazardous waste is first received for treatment, storage, or disposal. The insurance must be effective before this initial receipt of hazardous waste.
- (2) Each insurance policy must be issued by an insurer which, at a minimum, is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

- b. An owner or operator may meet the requirements of this subsection by passing a financial test or using the guarantee for liability coverage as specified in subsections 6 and 7.
- c. An owner or operator may meet the requirements of this subsection by obtaining a letter of credit for liability coverage as specified in subsection 8.
- d. An owner or operator may meet the requirements of this subsection by obtaining a surety bond for liability coverage as specified in subsection 9.
- e. An owner or operator may meet the requirements of this subsection by obtaining a trust fund for liability coverage as specified in subsection 10.
- f. An owner or operator may demonstrate the required liability coverage through the use of combinations of insurance, financial test, guarantee, letter of credit, surety bond, and trust fund, except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee unless the financial statement of the owner or operator is not consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated must total at least the minimum amount required by this section. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances under this subdivision, the owner or operator shall specify at least one such assurance as "primary" coverage and shall specify other assurance as "excess" coverage.
- g. An owner or operator shall notify the department in writing within thirty days when:
 - (1) A claim results in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized in subdivisions a through f;
 - (2) A certification of valid claim for bodily injury or property damages caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is entered between the owner or operator and third-party claimant for liability coverage under subdivisions a through f; or
 - (3) A final court order establishing a judgment for bodily injury or property damage caused by a sudden or nonsudden accidental occurrence arising from the operation of a hazardous waste treatment, storage, or disposal facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage under subdivisions a through f.

3. **Request for variance.** If an owner or operator can demonstrate to the satisfaction of the department that the levels of responsibility required by subsection 1 or 2 are not consistent with the degree and duration of risk associated with treatment, storage, or disposal at the facility or group of facilities, the owner or operator may obtain a variance from the department. The request for a variance must be submitted to the department as part of the permit application under chapter 33.1-24-06 for a facility that does not have a permit or pursuant to the procedures for permit modification under chapter 33.1-24-07 for a facility that has a permit. If granted, the variance will take the form of an adjusted level of required liability coverage, such level to be based on the department's assessment of the degree and duration of risk associated with the ownership or operation of the facility or group of facilities. The department may require an owner or operator who requests a variance to provide such technical and engineering information as is deemed necessary by the department to determine a level of financial responsibility other than that required by subsection 1 or 2. Any request for a variance for a permitted facility will be treated as a request for permit modification under chapters 33.1-24-06 and 33.1-24-07.

4. **Adjustments by the department.** If the department determines that the levels of financial responsibility required by subsection 1 or 2 are not consistent with the degree and duration of risk associated with treatment, storage, or disposal at the facility or group of facilities, the department may adjust the level of financial responsibility required under subsection 1 or 2 as may be necessary to protect human health and the environment. This adjusted level will be based on the department's assessment of the degree and duration of risk associated with the ownership or operation of the facility or group of facilities. In addition, if the department determines that there is a significant risk to human health and the environment from nonsudden accidental occurrences resulting from the operation of a facility that is not a surface impoundment, landfill, or land treatment facility, the department may require that an owner or operator of the facility comply with subsection 2. An owner or operator shall furnish to the department within a reasonable time any information which the department requests to determine whether cause exists for such adjustments of level or type of coverage. Any adjustment of the level or type of coverage for a type of facility that has a permit will be treated as a permit modification under chapters 33.1-24-06 and 33.1-24-07.

5. **Period of coverage.** Within sixty days after receiving certifications from the owner or operator and a qualified professional engineer that final closure has been completed in accordance with the approved closure plan, the department will notify the owner or operator in writing that the owner or operator is no longer required by this section to maintain liability coverage for that facility, unless the department has reason to believe that closure has not been in accordance with the approved closure plan.

6. **Financial tests for liability coverage.**

a. An owner or operator may satisfy the requirements of this section by demonstrating that the owner or operator passes a financial test as specified in this subsection. To pass this test the owner or operator must meet the criteria of paragraph 1 or paragraph 2:

(1) The owner or operator must have:

(a) Net working capital and tangible net worth each at least six times the amount of liability coverage to be demonstrated by this test;

(b) Tangible net worth of at least ten million dollars; and

(c) Assets in the United States amounting to either:

[1] At least ninety percent of the owner's or operator's total assets; or

[2] At least six times the amount of liability coverage to be demonstrated by this test.

(2) The owner or operator must have:

(a) A current rating for the owner's or operator's most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's, or Aaa, Aa, A, or Baa as issued by Moody's;

(b) Tangible net worth of at least ten million dollars;

(c) Tangible net worth at least six times the amount of liability coverage to be demonstrated by this test; and

(d) Assets in the United States amounting to either:

[1] At least ninety percent of the owner's or operator's total assets; or

[2] At least six times the amount of liability coverage to be demonstrated by this test.

b. The phrase "amount of liability coverage" as used in subdivision a refers to the annual aggregate amounts for which coverage is required under subsections 1 and 2.

c. To demonstrate that the owner or operator meets this test, the owner or operator must submit the following three items to the department:

(1) A letter signed by the owner's or operator's chief financial officer and worded as specified in subsection 7 of section 33.1-24-05-81. If an owner or operator is using the financial test to demonstrate both assurance for closure or postclosure care, as specified by subsection 6 of section 33.1-24-05-77, and liability coverage, the owner or operator must submit the letter specified in subsection 7 of section 33.1-24-05-81 to cover both forms of financial responsibility; a separate letter as specified in subsection 6 of section 33.1-24-05-81 is not required.

(2) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year.

(3) A special report from the owner's or operator's independent certified public accountant to the owner or operator stating that:

(a) The accountant has compared the data which the letter from the chief financial officer specifies as having been derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts of such financial statements; and

(b) In connection with that procedure, no matters came to the accountant's attention which cause the accountant to believe that the specified data should be adjusted.

d. An owner or operator of a new facility must submit the items specified in subdivision c to the department at least sixty days before the date on which hazardous waste is first received for treatment, storage, or disposal.

e. After the initial submission of items specified in subdivision c, the owner or operator must send updated information to the department within ninety days after the close of each succeeding fiscal year. This information must consist of all three items specified in subdivision c.

f. If the owner or operator no longer meets the requirements of subdivision a, the owner or operator must obtain insurance, a letter of credit, a surety bond, a trust fund, or a guarantee for the entire amount of required liability coverage as specified in this section. Evidence of liability coverage must be submitted to the department within ninety days after the end of the fiscal year for which the year-end financial data shows that the owner or operator no longer meets the test requirements.

g. The department may disallow use of this test on the basis of qualifications and the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's financial statement (see paragraph 2 of subdivision c). An adverse opinion or a disclaimer of opinion will be cause for disallowance. The department will evaluate other qualifications on an individual basis. The owner or operator must provide evidence of insurance for the entire amount of required liability coverage as specified in this section within thirty days after notification or disallowance.

7. Guarantee for liability coverage.

- a. Subject to subdivision b, an owner or operator may meet the requirements of this section by obtaining a written guarantee, hereinafter referred to as "guarantee". The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in subdivisions a through f of subsection 6. The wording of the guarantee must be identical to the wording specified in subdivision b of subsection 8 of section 33.1-24-05-81. A certified copy of the guarantee must accompany the items sent to the department as specified in subdivision c of subsection 6. One of these items must be the letter from the guarantor's chief financial officer. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the new guarantee.

If the owner or operator fails to satisfy a judgment based on a determination of liability for bodily injury or property damage to third parties caused by sudden or nonsudden accidental occurrences (or both as the case may be), arising from the operation of facilities covered by this corporate guarantee, or fails to pay an amount agreed to in settlement of claims arising from or alleged to arise from such injury or damage, the guarantor will do so up to the limits of the coverage.

- b. The following applies:

- (1) In the case of corporations incorporated in the United States, a guarantee may be used to satisfy the requirements of this section only if the attorneys general or insurance commissioners of the state in which the guarantor is incorporated, and each state in which a facility covered by the guarantee is located have submitted a written statement to the department that a guarantee executed as described in this section and subdivision b of subsection 8 of section 33.1-24-05-81 is a legally valid and enforceable obligation in that state.
- (2) In the case of corporations incorporated outside the United States, a guarantee may be used to satisfy the requirements of this section only if the non-United States corporation has identified a registered agent for service of process in each state in which a facility covered by the guarantee is located and in the state in which it has its principal place of business, and the attorney general or insurance commissioner of each state in which a facility covered by the guarantee is located and the state in which the guarantor corporation has its principal place of business, has submitted a written statement to the department that a guarantee executed as described in this section and subdivision b of subsection 8 of section 33.1-24-05-81 is a legally valid and enforceable obligation in that state.

8. Letter of credit for liability coverage.

- a. An owner or operator may satisfy the requirements of this section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection and submitting a copy of the letter of credit to the department.
- b. The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.

- c. The wording of the letter of credit must be identical to the wording specified in subsection 11 of section 33.1-24-05-81.
- d. An owner or operator who uses a letter of credit to satisfy the requirements of this section may also establish a standby trust fund. Under the terms of such a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust will be deposited by the issuing institution into the standby trust in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.
- e. The wording of the standby trust fund must be identical to the wording specified in subsection 14 of section 33.1-24-05-81.

9. Surety bond for liability coverage.

- a. An owner or operator may satisfy the requirements of this section by obtaining a surety bond that conforms to the requirements of this subsection and submitting a copy of the bond to the department.
- b. The surety company issuing the bond must be among those listed as acceptable sureties on federal bonds in the most recent Circular 570 of the United States department of the treasury.
- c. The wording of the surety bond must be identical to the wording specified in subsection 12 of section 33.1-24-05-81.
- d. A surety bond may be used to satisfy the requirements of this section only if the attorneys general or insurance commissioners of the state in which the surety is incorporated, and each state in which a facility covered by the surety bond is located have submitted a written statement to the department that a surety bond executed as described in this section and in subsection 12 of section 33.1-24-05-81 is a legally valid and enforceable obligation in that state.

10. Trust fund for liability coverage.

- a. An owner or operator may satisfy the requirements of this section by establishing a trust fund that conforms to the requirements of this subsection and submitting an originally signed duplicate of the trust agreement to the department.
- b. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.
- c. The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to satisfy the requirements of this section. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage to be provided, the owner or operator, by the anniversary date of the establishment of the fund, must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided or obtain other financial assurance as specified in this section to cover the difference. For purposes of this subdivision, "the full amount of the liability coverage to be provided" means the amount of coverage for sudden or nonsudden occurrences, or both, required to be provided by the owner or operator by this section, less the amounts of financial assurance for liability coverage that is being provided by other financial assurance mechanisms being used to demonstrate financial assurance by the owner or operator.

- d. The wording of the trust fund must be identical to the wording specified in subsection 13 of section 33.1-24-05-81.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-80. Incapacity of owners or operators, guarantors, or financial institutions.

1. An owner or operator must notify the department by certified mail of the commencement of a voluntary or involuntary proceeding under United States Code title 11 (bankruptcy), naming the owner or operator as debtor within ten days after commencement of the proceeding. A guarantor of a corporate guarantee as specified in subsection 6 of section 33.1-24-05-77 or in subsection 7 of section 33.1-24-05-79 must make such notification if the guarantor is named as debtor as required under the terms of the corporate guarantee.
2. An owner or operator who fulfills the requirements of section 33.1-24-05-77 or 33.1-24-05-79 by obtaining a trust fund, surety bond, letter of credit, or insurance policy will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy of the trustee or issuing institution, or a suspension or revocation of the authority of the trustee institution to act as a trustee, or of the institution issuing the surety bond, letter of credit, or insurance policy to issue such instruments. The owner or operator shall establish other financial assurance or liability coverage within sixty days after such an event.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-81. Wording of the instruments.

1. Trust agreement and certification of acknowledgment.
 - a. A trust agreement for a trust fund as specified in section 33.1-24-05-77 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted.

TRUST AGREEMENT, the "AGREEMENT" entered into as of [date] by and between [name of the owner or operator] a [name of state] [insert "corporation", "partnership", "association", or "proprietorship"], the "GRANTOR", and [name of corporate trustee], [insert "incorporated in the state of _____" or "a national bank"], the "TRUSTEE".

Whereas, the North Dakota Department of Environmental Quality, "DEPARTMENT" a regulatory agency of the state of North Dakota, has established certain regulations applicable to the GRANTOR requiring that an owner or operator of a hazardous waste management facility shall provide assurance that funds will be available when needed for closure or postclosure, or both, care of the facility,

Whereas, the GRANTOR has elected to establish a trust to provide all or part of such financial assurance for the facilities identified herein,

Whereas, the GRANTOR acting through its duly authorized officers has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT and the TRUSTEE is willing to act as TRUSTEE,

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

- (a) The term GRANTOR means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.
- (b) The term TRUSTEE means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities and Cost Estimate. This AGREEMENT pertains to the facilities and cost estimates identified on attached Schedule A [on Schedule A for each facility list the identification number, name, and the current closure or postclosure, or both, cost estimates or portions thereof for which financial assurance is demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a trust fund, the FUND, for the benefit of the DEPARTMENT. The GRANTOR and the TRUSTEE intend that no third party have access to the FUND, except as herein provided. The FUND is established initially as consisting of the property which is acceptable to the TRUSTEE and described in Schedule B attached hereto. Such property and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND must be held by the TRUSTEE, IN TRUST, as herein provided. The TRUSTEE is not responsible, nor may it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payment for Closure and Postclosure Care. The TRUSTEE shall make payments from the FUND as the DEPARTMENT shall direct, in writing, to provide for the payment of the cost of closure, and or postclosure care of the facilities covered by this AGREEMENT. The TRUSTEE shall reimburse the GRANTOR or other persons as specified by the DEPARTMENT from the FUND for closure and postclosure expenditures in such amounts as the DEPARTMENT shall direct in writing. In addition, the TRUSTEE shall refund to the GRANTOR such amounts as the DEPARTMENT specifies in writing. Upon refund such funds no longer constitute part of the FUND as defined herein.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND must consist of cash or securities acceptable to the TRUSTEE.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income of the FUND and keep the FUND invested as a single FUND without distinction between principal and income in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject however to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the FUND, the TRUSTEE shall discharge the trustee's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (a) Securities or other obligations of the GRANTOR or any other owner or operator of the facilities or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), may not be acquired or held unless they are securities or other obligations of a federal or state government;

- (b) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (c) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the FUND to any common, commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without, in any way, eliminating the powers and discretions conferred upon the TRUSTEE by the other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE is bound to see the application of the purchase money or to inquire into the validity or expediency of any such sale or disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;
- (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE must at all times show that all such securities are part of the FUND;
- (d) To deposit any cash in the FUND in interest-bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate capacity, or in any other banking institution affiliated with the TRUSTEE to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection

with the administration of this TRUST, including fees for legal services rendered to the TRUSTEE, the compensation of the TRUSTEE to the extent not paid directly by the GRANTOR, and all other proper charges and disbursements of the TRUSTEE, must be paid from the FUND.

Section 10. Annual Valuation. The TRUSTEE shall annually, at least thirty days prior to the anniversary date of establishment of the FUND, furnish to the GRANTOR and to the DEPARTMENT a statement confirming the value of the TRUST. Any securities in the FUND must be valued at market value as of no more than sixty days prior to the anniversary date of establishment of the FUND. The failure of the GRANTOR to object in writing to the TRUSTEE within ninety days after the statement has been furnished to the GRANTOR and the DEPARTMENT, constitutes a conclusively binding assent by the GRANTOR barring the GRANTOR from asserting any claim or liability against the TRUSTEE with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR, with respect to any question arising as to construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected to the extent permitted by law in acting upon the advice of counsel.

Section 12. TRUSTEE Compensation. The TRUSTEE is entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 13. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement is not effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE hereunder. Upon the successor TRUSTEE'S acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason, the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the TRUST in a writing sent to the GRANTOR, the DEPARTMENT, and the present TRUSTEE by certified mail ten days before such change becomes effective. Any expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section must be paid as provided in section 9.

Section 14. Instructions to the TRUSTEE. All orders, requests, and instructions by the GRANTOR to the TRUSTEE must be in writing, signed by such persons as are designated in the attached Exhibit A, or such other designees as the GRANTOR may designate by amendment to Exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR'S orders, requests, and instructions. All orders, requests, and instructions by the DEPARTMENT to the TRUSTEE must be in writing, signed by an authorized DEPARTMENT representative and the TRUSTEE shall act and be fully protected in acting in accordance with such orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or the DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty to act in the absence of such orders, requests, and instructions from the GRANTOR or the DEPARTMENT, or both, except as provided for herein.

Section 15. Notice of Nonpayment. The TRUSTEE shall notify the GRANTOR and the DEPARTMENT by certified mail within ten days following the expiration of the thirty-day period after the anniversary of the establishment of the TRUST if no payment is received from the GRANTOR during that period. After the pay-in period is completed, the TRUSTEE is not required to send a notice of nonpayment.

Section 16. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist.

Section 17. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in section 16, this TRUST is irrevocable and continues until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the TRUST, all remaining trust property, less final trust administration expenses, must be delivered to the GRANTOR.

Section 18. Immunity and Indemnification. The TRUSTEE may not incur personal liability of any nature in connection with any act or omission made in good faith in the administration of this TRUST or in carrying out any directions by the GRANTOR or the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE must be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 19. Choice of Law. This AGREEMENT must be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 20. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT do not affect the interpretation or the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto fixed and attested as of the date first above written: The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subdivision a of subsection 1 of North Dakota Administrative Code section 33.1-24-05-81 as such regulation was constituted on the date first above written.

b. The following is an example of the certification of acknowledgment which must accompany the TRUST AGREEMENT for a trust fund as specified in subsection 1 of section 33.1-24-05-77.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of notary public]

2. A surety bond guaranteeing payment into a trust fund as specified in subsection 2 of section 33.1-24-05-77 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

FINANCIAL GUARANTEE BOND

Date bond executed: _____

Effective date: _____

Principal: [legal name and business address of owner or operator]

Type of organization: [insert "individual", "joint venture", "partnership", or "corporation"]

State of incorporation: _____

Surety(ies): [name(s) and business address(es)]

Identification number, name, address, and closure or postclosure, or both, amount for each facility guaranteed by this bond [indicate closure and postclosure amounts separately]:

Total penal sum of bond: \$ _____

Surety's bond number: _____

Know all persons by these presents that we the PRINCIPAL and SURETY(IES) hereto are firmly bound to the North Dakota Department of Environmental Quality (hereinafter called the DEPARTMENT) in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, successors and assignors jointly and severally: provided that where the SURETY(IES) are corporations acting as cosureties, we, the SURETIES, bind ourselves in such sum "jointly and severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each SURETY binds itself, jointly and severally with the PRINCIPAL, for the payment of such sum only as is set forth opposite the name of such SURETY, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

Whereas said PRINCIPAL is required under North Dakota Century Code chapter 23.1-04 to have a permit in order to own or operate each hazardous waste management facility identified above, and

Whereas said PRINCIPAL is required to provide financial assurance for closure or closure and postclosure care as a condition of the permit, and

Whereas said PRINCIPAL shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, Therefore, the conditions of the obligation are such that if the PRINCIPAL shall faithfully, before the beginning of final closure of each facility identified above, fund the standby trust fund in the amounts identified above for the facility,

Or, if the PRINCIPAL shall fund the standby trust fund in such amounts within fifteen days after an order to begin closure is issued by the DEPARTMENT or a state or other court of competent jurisdiction,

Or, if the PRINCIPAL shall provide alternate financial assurance as specified in North Dakota Administrative Code chapter 33.1-24-05, as applicable, and obtain the DEPARTMENT'S written approval of such assurance within ninety days after the date of notice of cancellation is received by both the PRINCIPAL and the DEPARTMENT from the SURETY(IES), then this obligation shall be null and void, otherwise it is to remain in full force and effect.

The SURETY(IES) shall become liable on this bond obligation only when the PRINCIPAL has failed to fulfill the conditions described above. Upon notification by the DEPARTMENT that the PRINCIPAL has failed to perform as guaranteed by this bond, the SURETY(IES) shall place funds in the amount guaranteed for the facility(ies) into the standby trust fund as directed by the DEPARTMENT.

The liability of the SURETY(IES) shall not be discharged by any payment or any succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penal sum of the bond, but in no event shall the obligation of the SURETY(IES) hereunder exceed the amount of said penal sum.

The SURETY(IES) may cancel the bond by sending notice of cancellation by certified mail to the PRINCIPAL and to the DEPARTMENT, provided, however, that cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the PRINCIPAL and the DEPARTMENT as evidenced by the return receipts.

The PRINCIPAL may terminate this bond by sending written notice to the SURETY(IES) provided, however, that no such notice shall become effective until the SURETY(IES) receive(s) written authorization for termination of the bond by the DEPARTMENT.

[The following paragraph is an optional rider that may be included, but is not required.]

The PRINCIPAL and SURETY(IES) hereby agree to adjust the penal sum of the bond yearly so that it guarantees a new closure or postclosure, or both, amount, provided that the penal sum does not increase by more than twenty percent in any one year, and no decrease in the penal sum takes place without the written permission of the DEPARTMENT.

In witness whereof, the PRINCIPAL and SURETY(IES) have executed this financial guarantee bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the PRINCIPAL and SURETY(IES) and that the wording

of this surety bond is identical to the wording specified in subsection 2 of North Dakota Administrative Code section 33.1-24-05-81 as such rule was constituted on the date this bond was executed.

Bond premium: \$ _____

3. A surety bond guaranteeing performance of closure or postclosure care as specified in subsection 3 of section 33.1-24-05-77 must be worded as follows, except that the instructions in brackets are to be replaced with the relevant information and the brackets deleted:

PERFORMANCE BOND

Date bond executed: _____

Effective Date: _____

PRINCIPAL: [Legal name and business address of owner or operator]

Type of organization: [Insert "Individual", "joint venture", "partnership", or "corporation"]

State of incorporation: _____

SURETY(IES): [Name(s) and business address(es)]

Identification number, name, address and closure or postclosure, or both, amount(s) for each facility guaranteed by this bond.

[Indicate closure and postclosure amount separately]:

Total penal sum of bond: _____

Surety's bond number: _____

Know all persons by these presents, that we the PRINCIPAL and SURETY(IES) hereto are firmly bound to the North Dakota Department of Environmental Quality (hereinafter called the DEPARTMENT), in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, successors and assigns jointly and severally: Provided that, where the SURETY(IES) are corporations acting as cosureties, we the SURETIES bind

ourselves in such sum "jointly and severally" only for the purpose of allowing a joint action or actions against any or all of us and for all other purposes each SURETY binds itself jointly and severally with the PRINCIPAL for the payment of such sum only as is set forth opposite the name of each SURETY, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

Whereas said PRINCIPAL is required under North Dakota Century Code chapter 23.1-04 to have a permit to own or operate each hazardous waste management facility identified above, and

Whereas said PRINCIPAL is required to provide financial assurance for closure, or closure and postclosure care as a condition of the permit, and

Whereas said PRINCIPAL shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, Therefore, the conditions of this obligation are that if the PRINCIPAL shall faithfully perform closure, when required to do so, of each facility for which this bond guarantees closure, in accordance with the closure plan and other requirements of the permit as such plan and permit may be amended pursuant to all applicable laws, statutes, rules, and regulations, as such laws, statutes, rules, and regulations may be amended.

And if the PRINCIPAL shall faithfully perform postclosure care of each facility for which this bond guarantees postclosure care, in accordance with the postclosure plan and other requirements of the permit as such plan and permit may be amended pursuant to all applicable laws, statutes, rules, and regulations, as such laws, statutes, rules, and regulations may be amended,

Or, if the PRINCIPAL shall provide alternate financial assurance as specified in North Dakota Administrative Code chapter 33.1-24-05 and obtain the DEPARTMENT'S written approval of such assurance within ninety days after the date notice of cancellation is received by both the PRINCIPAL and the DEPARTMENT from the SURETY(IES) then this obligation shall be null and void, otherwise it is to remain in full force and effect.

The SURETY(IES) shall become liable on this bond obligation only when the PRINCIPAL has failed to fulfill the conditions described above.

Upon notification by the DEPARTMENT that the PRINCIPAL has been found in violation of the closure requirements of North Dakota Administrative Code chapter 33.1-24-05 for a facility for which this bond guarantees performance of closure, the SURETY(IES) shall either perform closure in accordance with the closure plan and other permit requirements or place the closure amount guaranteed for the facility into the standby trust fund as directed by the DEPARTMENT.

Upon notification by the DEPARTMENT that the PRINCIPAL has been found in violation of the postclosure requirements of North Dakota Administrative Code chapter 33.1-24-05 for a facility for which this bond guarantees performance of postclosure care, the SURETY(IES) shall either perform postclosure care in accordance with the postclosure plan and other permit requirements or place the postclosure amount guaranteed for the facility into a standby trust fund as directed by the DEPARTMENT.

Upon notification by the DEPARTMENT that the PRINCIPAL has failed to provide alternate financial assurance as specified in North Dakota Administrative Code chapter 33.1-24-05 and obtain written approval of such assurance from the DEPARTMENT during the ninety days following receipt by both the PRINCIPAL and the DEPARTMENT of a notice of cancellation of

the bond, the SURETY(IES) shall place funds in the amount guaranteed for the facility(ies) into the standby trust fund as directed by the DEPARTMENT.

The SURETY(IES) hereby waive(s) notification of amendments to closure plans, permits, applicable laws, statutes, rules, and regulations and agree(s) that no such amendment shall in any way alleviate its (their) obligation on this bond.

The liability of the SURETY(IES) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penal sum of the bond, but in no event shall the obligation of the SURETY(IES) hereunder exceed the amount of said penal sum.

The SURETY(IES) may cancel the bond by sending the notice of cancellation by certified mail to the PRINCIPAL and to the DEPARTMENT, provided, however, that cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by both the PRINCIPAL and the DEPARTMENT as evidenced by the return receipts.

The PRINCIPAL may terminate this bond by sending written notice to the SURETY(IES) provided, however, that no such notice shall become effective until the SURETY(IES) receive(s) written authorization for termination of the bond by the DEPARTMENT.

[The following paragraph is an optional rider that may be included, but is not required].

PRINCIPAL and SURETY(IES) hereby agree to adjust the penal sum of the bond yearly so that it guarantees a new closure or postclosure, or both, amount, provided that the penal sum does not increase by more than twenty percent in any one year, and no decrease in the penal sum takes place without the written permission of the DEPARTMENT.

In Witness Whereof, the PRINCIPAL and SURETY(IES) have executed this performance bond and have affixed their seals on the date set forth above.

The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the PRINCIPAL and the SURETY(IES) and that the wording of this surety bond is identical to the wording specified in subsection 3 of North Dakota Administrative Code section 33.1-24-05-81 as such rule was constituted on the date this bond was executed.

4. A letter of credit as specified in subsection 4 of section 33.1-24-05-77 must be worded as follows except that instructions in brackets are to be replaced with the relevant information and the brackets deleted.

IRREVOCABLE STANDBY LETTER OF CREDIT

Director, North Dakota Department of Environmental Quality

Dear Sir or Madam:

We hereby establish our Irrevocable Standby Letter of Credit Number _____ in your favor, at the request and for the account of [owner's or operator's name and address] up to the aggregate amount of [in words] United States Dollars \$ _____, available upon presentation by you of

- (1) You sight draft bearing reference to this letter of credit number _____, and
- (2) Your signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulations issued under authority of North Dakota Century Code chapter 23.1-04".

This letter of credit is effective as of [date] and shall expire on [date] at least one year later, but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least one hundred twenty days before the current expiration date, we notify both you and [owner's or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your sight draft for one hundred twenty days after the date of receipt by both you and [owner's or operator's name], as shown on the signed return receipts.

Whenever this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us, and we shall deposit the amount of the draft directly into the standby trust fund of [owner's or operator's name] in accordance with your instructions.

We certify that the wording of this letter of credit is identical to the wording specified in subsection 4 of North Dakota Administrative Code section 33.1-24-05-81 as such rule was constituted on the date shown immediately below.

[Signature(s) and Title(s) of Official(s) of issuing institution] [Date]

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published and copyrighted by the International Chamber of Commerce", or "the Uniform Commercial Code"]

5. A certificate of insurance as specified in subsection 5 of section 33.1-24-05-77 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted.

CERTIFICATE OF INSURANCE FOR CLOSURE OR POSTCLOSURE CARE

Name and address of Insurer (hereinafter called the "INSURER"):

Name and address of Insured (hereinafter called the "INSURED"):

Facilities covered: [List for each facility: the identification number, name, address and amount of insurance for closure or the amount for postclosure care, or both. (These amounts for all facilities covered must cover the face amount shown below.)]

Face amount: _____

Policy Number: _____

Effective Date: _____

The INSURER hereby certifies that it has issued to the INSURED the policy of insurance identified above to provide financial assurance for [insert "closure" or "closure and postclosure care" or "postclosure care"] for the facilities identified above. The INSURER further warrants that such policy conforms in all respects with the requirements of subsection 5 of North Dakota Administrative Code section 33.1-24-05-77, as applicable and as such regulations were constituted on the date shown immediately below. It is agreed that any provision of the policy inconsistent with such rules is hereby amended to eliminate such inconsistency.

Whenever requested by the North Dakota Department of Environmental Quality (DEPARTMENT) the INSURER agrees to furnish to the DEPARTMENT a duplicate original of the policy listed above, including all endorsements thereon.

I hereby certify that the wording of this certificate is identical to the wording specified in subsection 5 of North Dakota Administrative Code section 33.1-24-05-81 as such rule was constituted on the date shown immediately below.

[Authorized signature for INSURER]

6. A letter from the chief financial officer, as specified in subsection 6 of section 33.1-24-05-77, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Letter from Chief Financial Officer

[Address to North Dakota Department of Environmental Quality].

I am the chief financial officer of [name and address of firm]. This letter is in support of this firm's use of the financial test to demonstrate financial assurance for closure and/or postclosure costs, as specified in sections 33.1-24-05-74 through 33.1-24-05-88.

[Fill out the following five paragraphs regarding facilities and associated cost estimates. If your firm has no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number, name, address, and current closure and/or postclosure cost estimates. Identify each cost estimate as to whether it is for closure or postclosure care].

1. This firm is the owner or operator of the following facilities for which financial assurance for closure or postclosure care is demonstrated through the financial test specified in sections

33.1-24-05-74 through 33.1-24-05-88. The current closure and/or postclosure cost estimates covered by the test are shown for each facility: _____.

2. This firm guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88, the closure or postclosure care of the following facilities owned or operated by the guaranteed party. The current cost estimates for the closure or postclosure care so guaranteed are shown for each facility: _____. The firm identified above is [insert one or more: (1) The direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter].

3. In states where the environmental protection agency is not administering the financial requirements of subpart H of 40 CFR part 264 or 265, this firm, as owner or operator or guarantor, is demonstrating financial assurance for the closure or postclosure care of the following facilities through the use of a test equivalent or substantially equivalent to the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88. The current closure and/or postclosure cost estimates covered by such a test are shown for each facility: _____.

4. This firm is the owner or operator of the following hazardous waste management facilities for which financial assurance for closure or, if a disposal facility, postclosure care, is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanism specified in sections 33.1-24-05-74 through 33.1-24-05-88 or equivalent or substantially equivalent state mechanisms. The current closure and/or postclosure cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator of the following underground injective control facilities for which financial assurance for plugging and abandonment is required under 40 CFR part 144. The current closure cost estimates as required by 40 CFR 144.62 are shown for each facility: _____.

This firm [insert "is required" or "is not required"] to file a form 10K with the securities and exchange commission for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

[Fill in Alternative I if the criteria of paragraph 1 of subdivision a of subsection 6 of section 33.1-24-05-77 are used. Fill in Alternative II if the criteria of paragraph 2 of subdivision a of subsection 6 of section 33.1-24-05-77 are used.]

[Name] _____

[Title] _____

[Date] _____

7. A letter from the chief financial officer, as specified in subsection 6 of section 33.1-24-05-79, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted.

Letter from Chief Financial Officer:

[Address to North Dakota Department of Environmental Quality].

I am the chief financial officer of [firm's name and address]. This letter is in support of the use of the financial test to demonstrate financial responsibility for liability coverage [insert "and closure and/or postclosure care" if applicable] as specified in sections 33.1-24-05-74 through 33.1-24-05-88.

[Fill out the following paragraphs regarding facilities and liability coverage. If there are no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number, name, and address.]

The firm identified above is the owner or operator of the following facilities for which liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences is being demonstrated through the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88:

The firm identified above guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88, liability coverage for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences at the following facilities owned or operated by the following: _____. The firm identified above is [insert one or more: (1) The direct or higher-tier parent corporation of the owner or operator; (2) owned by the same parent corporation as the parent corporation of the owner or operator, and receiving the following value in consideration of this guarantee _____; or (3) engaged in the following substantial business relationship with the owner or operator _____, and receiving the following value in consideration of this guarantee _____]. [Attach a written description of the business relationship or a copy of the contract establishing such relationship to this letter.]

[If you are using the financial test to demonstrate coverage of both liability and closure and postclosure care, fill in the following five paragraphs regarding facilities and associated closure and postclosure cost estimates. If there are no facilities that belong in a particular paragraph, write "None" in the space indicated. For each facility, include its identification number, name,

address, and current closure and/or postclosure cost estimates. Identify each cost estimate as to whether it is for closure or postclosure care.]

1. The firm identified above owns or operates the following facilities for which financial assurance for closure or postclosure care or liability coverage is demonstrated through the financial test specified in sections 33.1-24-05-74 through 33.1-24-05-88. The current closure and postclosure cost estimates covered by the test are shown for each facility: _____.

2. The firm identified above guarantees, through the guarantee specified in sections 33.1-24-05-74 through 33.1-24-05-88, the closure and postclosure care or liability coverage of the following facilities owned or operated by the guaranteed party. The current cost estimates for closure or postclosure care so guaranteed are shown for each facility: _____.

3. In states where the environmental protection agency is not administering the financial requirements of subpart H of 40 CFR parts 264 and 265, this firm is demonstrating financial assurance for the closure or postclosure care of the following facilities through the use of a test equivalent or substantially equivalent to the financial test specified in subpart H of 40 CFR parts 264 and 265. The current closure or postclosure cost estimates covered by such a test are shown for each facility: _____.

4. The firm identified above owns or operates the following hazardous waste management facilities for which financial assurance for closure or, if a disposal facility, postclosure care, is not demonstrated to the DEPARTMENT through the financial test or any other financial assurance mechanisms specified in sections 33.1-24-05-74 through 33.1-24-05-88 or equivalent or substantially equivalent state mechanisms. The current closure and/or postclosure cost estimates not covered by such financial assurance are shown for each facility: _____.

5. This firm is the owner or operator or guarantor of the following underground injective control facilities for which financial assurance for plugging and abandonment is required under 40 CFR part 144 and is assured through a financial test. The current closure cost estimates as required by 40 CFR 144.62 are shown for each facility: _____.

This firm [insert "is required" or "is not required"] to file a form 10K with the securities and exchange commission for the latest fiscal year.

The fiscal year of this firm ends on [month, day]. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements for the latest completed fiscal year, ended [date].

Part A. Liability Coverage for Accidental Occurrences

[Fill in Alternative I if the criteria of paragraph 1 of subdivision a of subsection 6 of section 33.1-24-05-79 are used. Fill in Alternative II if the criteria of paragraph 2 of subdivision a of subsection 6 of section 33.1-24-05-79 are used.]

8. Corporate Guarantee

a. A corporate guarantee, as specified in subsection 6 of section 33.1-24-05-77, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Corporate Guarantee for Closure or Postclosure Care

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of the state of [insert name of state], herein referred to as guarantor. This guarantee is made on behalf of the [owner or operator] of [business address], which is [one of the following: "our subsidiary"; "a subsidiary of [name and address of common parent corporation], of which guarantor is a subsidiary"; or "an entity with which guarantor has a substantial business relationship, as defined in subsection 8 of section 33.1-24-05-75 to the DEPARTMENT.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in subsection 6 of section 33.1-24-05-77.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: identification number, name, and address. Indicate for each whether guarantee is for closure, postclosure care, or both.]

3. "Closure plans" and "postclosure plans" as used below refer to the plans maintained as required by sections 33.1-24-05-59 through 33.1-24-05-73 for the closure and postclosure care of facilities as identified above.

4. For value received from [owner or operator], guarantor guarantees to the DEPARTMENT that in the event that [owner or operator] fails to perform [insert "closure", "postclosure care", or "closure and postclosure care"] of the above facility(ies) in accordance with the closure or postclosure plans and other permit or interim status requirements when required to do so, the guarantor shall do so or establish a trust fund as specified in sections 33.1-24-05-74 through 33.1-24-05-88, as applicable, in the name of [owner or operator] in the amount of the current closure or postclosure cost estimates as specified in sections 33.1-24-05-74 through 33.1-24-05-88.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within ninety days, by certified mail, notice to the DEPARTMENT and to [owner or operator] that the guarantor intends to provide alternate financial assurance as specified in sections 33.1-24-05-74 through 33.1-24-05-88, as applicable, in the name of [owner or operator]. Within one hundred twenty days after the end of such fiscal year, the guarantor shall establish such financial assurance unless [owner or operator] has done so.

6. The guarantor agrees to notify the DEPARTMENT by certified mail, of a voluntary or involuntary proceeding under title 11 (Bankruptcy), United States Code, naming guarantor as debtor, within ten days after commencement of the proceeding.

7. Guarantor agrees that within thirty days after being notified by the DEPARTMENT of a determination that guarantor no longer meets the financial test criteria or that the guarantor is disallowed from continuing as a guarantor of closure or postclosure care, the guarantor shall establish alternate financial assurance as specified in sections 33.1-24-05-74 through 33.1-24-05-88, as applicable, in the name of [owner or operator] unless [owner or operator] has done so.

8. Guarantor agrees to remain bound under this guarantee notwithstanding any or all of the following: amendment or modification of the closure or postclosure plan, amendment or modification of the permit, the extension or reduction of the time of performance of closure or postclosure, or any other modification or alteration of an obligation of the owner or operator pursuant to sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819.

9. Guarantor agrees to remain bound under this guarantee for as long as [owner or operator] must comply with the applicable financial assurance requirements of sections 33.1-24-05-74 through 33.1-24-05-88 for the above-listed facilities, except as provided in paragraph 10 of this AGREEMENT.

10. [Insert the following language if the guarantor is (a) a direct or higher-tier corporate parent, or (b) a firm whose parent corporation is also the parent corporation of the owner or operator]:

Guarantor may terminate this guarantee by sending notice by certified mail to the DEPARTMENT and to [owner or operator], provided that this guarantee may not be terminated unless and until [the owner or operator] obtains, and the DEPARTMENT approves, alternate closure and/or postclosure care coverage complying with section 33.1-24-05-77.

[Insert the following language if the guarantor is a firm qualifying as a guarantor due to its "substantial business relationship" with its owner or operator.]

Guarantor may terminate this guarantee one hundred twenty days following the receipt of notification, through certified mail, by the DEPARTMENT and by [the owner or operator] obtains, and the DEPARTMENT approves, alternate closure or postclosure, or both, care coverage complying with section 33.1-24-05-77 or 33.1-24-05-78 or both.

[Insert the following language if the guarantor is a firm qualifying as a guarantor due to its "substantial business relationship" with its owner or operator.]

Guarantor may terminate this guarantee one hundred twenty days following the receipt of notification, through certified mail, by the DEPARTMENT and by the [owner or operator].

11. Guarantor agrees that if [owner or operator] fails to provide alternate financial assurance as specified in sections 33.1-24-05-74 through 33.1-24-05-88, as applicable, and obtain written approval of such assurance from the DEPARTMENT within ninety days after a notice of cancellation by the guarantor is received by the DEPARTMENT from guarantor, guarantor shall provide such alternate financial assurance in the name of [owner or operator].

12. Guarantor expressly waives notice of acceptance of this guarantee by the DEPARTMENT or by [owner or operator]. Guarantor also expressly waives notice of amendments or modifications of the closure and/or postclosure plan and of amendments or modifications of the facility permit(s).

I hereby certify that the wording of this guarantee is identical to the wording specified in subsection 8 of section 33.1-24-05-81 as such regulations were constituted on the date first above written.

Effective date: _____

[Name of guarantor] _____

[Authorized signature for guarantor] _____

[Name of person signing] _____

[Title of person signing] _____

Signature of witness or notary: _____

b. A guarantee, as specified in subsection 7 of section 33.1-24-05-79, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Guarantee for Liability Coverage

Guarantee made this [date] by [name of guaranteeing entity], a business corporation organized under the laws of [if incorporated within the United States insert "the state of _____" and insert name of state; if incorporated outside the United States insert the name of the country in which incorporated, the principal place of business within the United States, and the name and address of the registered agent in the state of the principal place of business], herein referred to as guarantor. This guarantee is made on behalf of [owner or operator] of [business address], which is one of the following: "our subsidiary"; "a subsidiary of [name and address of common parent corporation], of which guarantor is a subsidiary"; or "an entity with which guarantor has a substantial business relationship, as defined in subsection 8 of section 33.1-24-05-75", to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee.

Recitals

1. Guarantor meets or exceeds the financial test criteria and agrees to comply with the reporting requirements for guarantors as specified in subsection 7 of section 33.1-24-05-79.

2. [Owner or operator] owns or operates the following hazardous waste management facility(ies) covered by this guarantee: [List for each facility: identification number, name, and address; and if guarantor is incorporated outside the United States list the name and address of the guarantor's registered agent in each state.] This corporate guarantee satisfies Resource Conservation Recovery Act third-party liability requirements for [insert "sudden" or "nonsudden" or "both sudden and nonsudden"] accidental occurrences in above-named owner or operator facilities for coverage in the amount of [insert dollar amount] for each occurrence and [insert dollar amount] annual aggregate.

3. For value received from [owner or operator], guarantor guarantees to any and all third parties who have sustained or may sustain bodily injury or property damage caused by [sudden and/or nonsudden] accidental occurrences arising from operations of the facility(ies) covered by this guarantee that in the event that [owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by [sudden and/or nonsudden] accidental occurrences, arising from the operation of the above-named facilities, or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor will satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage identified above.

4. Such obligation does not apply to any of the following:

(a) Bodily injury or property damage for which [insert owner or operator] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert owner or operator] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert owner or operator] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) An employee of [insert owner or operator] arising from, and in the course of, employment by [insert owner or operator]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert owner or operator]. This exclusion applies:

(A) Whether [insert owner or operator] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert owner or operator];

(2) Premises that are sold, given away, or abandoned by [insert owner or operator] if the property damage arises out of any part of those premises;

(3) Property loaned to [insert owner or operator];

(4) Personal property in the care, custody, or control of [insert owner or operator];

(5) That particular part of real property on which [insert owner or operator] or any contractors or subcontractors working directly or indirectly on behalf of [insert owner or operator] are performing operations, if the property damage arises out of these operations.

5. Guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, the guarantor fails to meet the financial test criteria, guarantor shall send within ninety days, by certified mail, notice to the DEPARTMENT and to [owner or operator] that the guarantor intends to provide alternate liability coverage as specified in section 33.1-24-05-79, as applicable, in the name of [owner or operator]. Within one hundred twenty days after the end of such fiscal year, the guarantor shall establish such liability coverage unless [owner or operator] has done so.

6. The guarantor agrees to notify the DEPARTMENT by certified mail of a voluntary or involuntary proceeding under title 11 (Bankruptcy), United States Code, naming guarantor as debtor, within ten days after commencement of the proceeding.

7. Guarantor agrees that within thirty days after being notified by the DEPARTMENT of a determination that guarantor no longer meets the financial test criteria or that the guarantor is disallowed from continuing as a guarantor, the guarantor shall establish alternate liability coverage as specified in section 33.1-24-05-79 in the name of [owner or operator], unless [owner or operator] has done so.

8. Guarantor reserves the right to modify this AGREEMENT to take into account amendment or modification of the liability requirements set by section 33.1-24-05-79, provided that such modification shall become effective only if the DEPARTMENT does not disapprove the modification within thirty days of receipt of notification of the modification.

9. Guarantor agrees to remain bound under this guarantee for so long as [owner or operator] must comply with the applicable requirements of section 33.1-24-05-79 for the above-listed facility(ies), except as provided in paragraph 10 of this AGREEMENT.

10. [Insert the following language if the guarantor is (a) a direct or higher-tier corporate parent, or (b) a firm whose parent corporation is also the parent corporation of the owner or operator]:

Guarantor may terminate this guarantee by sending notice by certified mail to the DEPARTMENT and to [owner or operator], provided that this guarantee may not be terminated unless and until [the owner or operator] obtains, and the DEPARTMENT approves, alternate liability coverage complying with section 33.1-24-05-79.

[Insert the following language if the guarantor is a firm qualifying as a guarantor due to its "substantial business relationship" with the owner or operator]:

Guarantor may terminate this guarantee one hundred twenty days following receipt of notification, through certified mail, by the DEPARTMENT and by [the owner or operator].

11. Guarantor hereby expressly waives notice of acceptance of this guarantee by any party.

12. Guarantor agrees that this guarantee is in addition to and does not affect any other responsibility or liability of the guarantor with respect to the covered facilities.

13. The guarantor shall satisfy a third-party liability claim only on receipt of one of the following documents:

(a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [Principal's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of \$_____.

[Signatures] _____

Principal _____

(Notary) Date _____

[Signatures] _____

Claimant(s) _____

(Notary) Date _____

(b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.

14. In the event of combination of this guarantee with another mechanism to meet liability requirements, this guarantee will be considered [insert "primary" or "excess"] coverage.

I hereby certify that the wording of the guarantee is identical to the wording specified in subdivision b of subsection 8 of section 33.1-24-05-81 as such regulations were constituted on the date shown immediately below.

Effective date: _____

[Name of guarantor] _____

[Authorized signature for guarantor] _____

[Name of person signing] _____

[Title of person signing] _____

Signature of witness or notary: _____

9. A hazardous waste facility liability endorsement as required in section 33.1-24-05-79 must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

HAZARDOUS WASTE FACILITY LIABILITY ENDORSEMENT

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering bodily injury and property damage in connection with the insured's obligation to demonstrate financial responsibility under North Dakota Administrative Code section 33.1-24-05-79. The coverage applies at [list identification number, name, and address for each facility] for [insert "sudden accidental occurrences", "nonsudden accidental occurrences", or "sudden and nonsudden accidental occurrences"; if coverage is for multiple facilities and the coverage is different for different facilities, indicate which facilities are insured for sudden accidental occurrences, which are insured for nonsudden accidental occurrences and which are insured for both]. The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's liability] exclusive of legal defense costs.

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions of the policy inconsistent with subsections (a) through (e) of this paragraph 2 are hereby amended to conform with subsections (a) through (e):

(a) Bankruptcy or insolvency of the insured shall not relieve the insurer of its obligations under the policy to which this endorsement is attached.

(b) The insurer is liable for the payment of amounts within any deductible applicable to this policy with a right of reimbursement by the insured for any such payment made by the insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated as specified in subsection 6 of North Dakota Administrative Code section 33.1-24-05-79.

(c) When requested by the North Dakota Department of Environmental Quality (DEPARTMENT), the insurer agrees to furnish to the DEPARTMENT a signed duplicate original of the policy and all endorsements.

(d) Cancellation of this endorsement, whether by the insurer, the insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the hazardous waste management facility will be effective only upon written notice and only after the expiration of sixty days after a copy of such written notice is received by the DEPARTMENT.

(e) Any other termination of this endorsement will be effective only upon written notice, and only after the expiration of thirty days after a copy of such written notice is received by the DEPARTMENT, as evidenced by the return receipt.

Attached to and forming part of policy number _____ issued by [name of insurer] herein called the insurer of [address of insurer] to [name of insured] of [address] this _____ day of _____, 20____. The effective date of said policy is _____ day of _____, 20_____.

I hereby certify that the wording of this endorsement is identical to the wording specified in subsection 9 of North Dakota Administrative Code section 33.1-24-05-81, as such rule was constituted on the date first above written, and that the insurer is licensed to transact the business of insurance in the state of North Dakota or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

[Signature of authorized representative of insurer]

[Type name]

[Title], authorized representative of [name of insurer]

[Address of representative]

10. A certificate of liability insurance as required in section 33.1-24-05-79 must be worded as follows, except that the instructions in brackets are to be replaced with the relevant information and the brackets deleted:

HAZARDOUS WASTE FACILITY CERTIFICATE OF LIABILITY INSURANCE

1. [Name of insurer, (the "insurer") of [address of insurer] hereby certifies that it has issued liability insurance covering bodily injury and property damage to [name of insured], (the

"insured"), of [address of insured] in connection with the insured's obligation to demonstrate financial responsibility under North Dakota Administrative Code section 33.1-24-05-79. The coverage applies at [list identification number, name, and address for each facility] for [insert "sudden accidental occurrences", "nonsudden accidental occurrences", or "sudden and nonsudden accidental occurrences"; if coverage is for multiple facilities and the coverage is different for different facilities, indicate which facilities are insured for sudden accidental occurrences, which are insured for nonsudden accidental occurrences and which are insured for both]. The limits of liability are [insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the insurer's liability], exclusive of legal defense costs. The coverage is provided under policy number _____, issued on [date] the effective date of said policy is [date].

2. The insurer further certifies the following with respect to the insurance described in paragraph 1:

(a) Bankruptcy or insolvency of the insured shall not relieve the insurer of its obligations under the policy.

(b) The insurer is liable for the payment of amounts within any deductible applicable to the policy, with a right of reimbursement by the insured for any such payment made by the insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated as specified in subsection 6 of North Dakota Administrative Code section 33.1-24-05-79.

(c) When requested by the North Dakota Department of Environmental Quality (DEPARTMENT), the insurer agrees to furnish to the DEPARTMENT a signed duplicate original of the policy and all endorsements.

(d) Cancellation of the insurance, whether by the insurer, the insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the hazardous waste management facility, will be effective only upon written notice, and only after the expiration of sixty days after a copy of such written notice is received by the DEPARTMENT.

(e) Any other termination of the insurance will be effective only upon written notice, and only after the expiration of thirty days after a copy of such written notice is received by the DEPARTMENT, as evidenced by the return receipt.

I hereby certify that the wording of this instrument is identical to the wording specified in subsection 7 of North Dakota Administrative Code section 33.1-24-05-81, as such regulation was constituted on the date first above written, and that the insurer is licensed to transact the business of insurance, in the state of North Dakota or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

[Signature of authorized representative of insurer]

[Type name]

[Title], authorized representative of [name of insurer]

[Address of representative]

11. A letter of credit, as specified in subsection 8 of section 33.1-24-05-79, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Irrevocable Standby Letter of Credit
Name and Address of Issuing Institution
North Dakota Department of Environmental Quality

Dear Sir or Madam: We hereby establish our Irrevocable Standby Letter of Credit No. _____ in the favor of ["any and all third-party liability claimants" or insert name of TRUSTEE of the standby trust fund], at the request and for the account of [owner or operator's name and address] for third-party liability awards or settlements up to [in words] United States dollars \$ _____ per occurrence and the annual aggregate amount of [in words] United States dollars \$ _____, for sudden accidental occurrences and/or for third-party liability awards or settlements up to the amount of [in words] United States dollars \$ _____ per occurrence, and the annual aggregate amount of [in words] United States dollars \$ _____, for nonsudden accidental occurrences available upon presentation of a sight draft bearing reference to this letter of credit No. _____, and [insert the following language if the letter of credit is being used without a standby trust fund]: (1) a signed certificate reading as follows:

Certificate of Valid Claim

The undersigned, as parties [insert principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operations of [principal's], hazardous waste treatment, storage, or disposal facility should be paid in the amount of \$ [_____]. We hereby certify that the claim does not apply to any of the following:

(a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert principal] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) An employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal].

This exclusion applies:

(A) Whether [insert principal] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert principal];

(2) Premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;

(3) Property loaned to [insert principal];

(4) Personal property in the care, custody, or control of [insert principal];

(5) That particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert principal] are performing operations, if the property damage arises out of these operations.

[Signatures] _____

GRANTOR _____

[Signatures] _____

Claimant(s) _____

or (2) a valid final court order establishing a judgment against the GRANTOR for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the GRANTOR'S facility or group of facilities.

This letter of credit is effective as of [date] and shall expire on [date at least one year later], but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least one hundred twenty days before the current expiration date, we notify you, the DEPARTMENT, and [owner's or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date.

When this letter of credit is drawn on under and in compliance with the terms of this credit, we shall duly honor such draft upon presentation to us.

[Insert the following language if a standby trust fund is not being used: "In the event that this letter of credit is used in combination with another mechanism for liability coverage, this letter of credit shall be considered [insert "primary" or "excess"] coverage".]

We certify that the wording of this letter of credit is identical to the wording specified in subsection 11 of section 33.1-24-05-81 as such regulations were constituted on the date shown immediately below. [Signature(s) and title(s) of official(s) of issuing institution] [Date].

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits published and copyrighted by the International Chamber of Commerce" or "the Uniform Commercial Code"].

12. A surety bond, as specified in subsection 9 of section 33.1-24-05-79, must be worded as follows: except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

PAYMENT BOND

Surety Bond No. [Insert number]

_____ Parties [Insert name and address of owner or operator], principal, incorporated in [Insert state of incorporation] of [Insert city and state of principal place of business] and [Insert name and address of surety company(ies)], surety company(ies), of [Insert surety(ies) place of business].

_____ Identification number, name, and address for each facility guaranteed by this bond:

	<u>Sudden Accidental Occurrences</u>	<u>Nonsudden Accidental Occurrences</u>
<u>Penal Sum Per Occurrence</u>	<u>[Insert Amount]</u>	<u>[Insert Amount]</u>

Annual Aggregate	[Insert Amount]	[Insert Amount]
------------------	-----------------	-----------------

Purpose: This is an AGREEMENT between the surety(ies) and the principal under which the surety(ies), its (their) successors and assignees, agree to be responsible for the payment of claims against the principal for bodily injury and/or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental occurrences arising from operations of the facility or group of facilities in the sums prescribed herein; subject to the governing provisions and the following conditions.

Governing Provisions:

(1) Section 3004 of the Resource Conservation and Recovery Act of 1976, as amended.

(2) Rules and regulations of the United States environmental protection agency (EPA), particularly 40 CFR ["264.147" or "265.147"] (if applicable).

(3) Rules and regulations of the governing state agency [particularly section 33.1-24-05-79 and subsection 5 of section 33.1-24-06-16 of the North Dakota Administrative Code] (if applicable).

Conditions:

(1) The principal is subject to the applicable governing provisions that require the principal to have and maintain liability coverage for bodily injury and property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental occurrences arising from operations of the facility or group of facilities. Such obligation does not apply to any of the following:

(a) Bodily injury or property damage for which [insert principal] is obligated to pay damages by reason of the assumption of liability in a contract or agreement. This exclusion does not apply to liability for damages that [insert principal] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert principal] under a workers' compensation, disability benefits, or unemployment compensation law or similar law.

(c) Bodily injury to:

(1) An employee of [insert principal] arising from, and in the course of, employment by [insert principal]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert principal]. This exclusion applies:

(A) Whether [insert principal] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert principal];

____ (2) Premises that are sold, given away, or abandoned by [insert principal] if the property damage arises out of any part of those premises;

____ (3) Property loaned to [insert principal];

____ (4) Personal property in the care, custody, or control of [insert principal];

____ (5) That particular part of real property on which [insert principal] or any contractors or subcontractors working directly or indirectly on behalf of [insert principal] are performing operations, if the property damage arises out of these operations.

____ (2) This bond assures that the principal will satisfy valid third-party liability claims, as described in condition 1.

____ (3) If the principal fails to satisfy a valid third-party liability claim, as described above, the surety(ies) becomes liable on this bond obligation.

____ (4) The surety(ies) shall satisfy a third-party liability claim only upon the receipt of one of the following documents:

____ (a) Certification from the principal and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

____ The undersigned, as parties [insert name of principal] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [principal's] hazardous waste treatment, storage, or disposal facility should be paid in the amount of \$ [_____].

[Signature]

Principal

Claimant(s)

[Notary] [Date]

____ or (b) A valid final court order establishing a judgment against the principal for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the principal's facility or group of facilities.

____ (5) In the event of combination of this bond with another mechanism for liability coverage, this bond will be considered [insert "primary" or "excess"] coverage.

____ (6) The liability of the surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the aggregate to the penal sum of the bond. In no event shall the obligation of the surety(ies) hereunder exceed the amount of said annual aggregate penal sum, provided that the surety(ies) furnish(es) notice to the DEPARTMENT forthwith of all claims filed and payments made by the surety(ies) under this bond.

____ (7) The surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the principal and the DEPARTMENT provided, however, the cancellation shall not occur during the one hundred twenty days beginning on the date of receipt of the notice of cancellation by the principal and the DEPARTMENT, as evidenced by the return receipt.

____ (8) The principal may terminate this bond by sending written notice to the surety(ies) and to the DEPARTMENT.

____ (9) The surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agree(s) that no such amendment shall in any way alleviate its (their) obligation on this bond.

____ (10) This bond is effective from [insert date] (12:01 a.m., standard time, at the address of the principal as stated herein) and shall continue in force until terminated as described above.

____ In Witness Whereof, the principal and surety(ies) have executed this bond and have affixed their seals on the date set forth above.

____ The persons whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the principal and surety(ies) and that the wording of this surety bond is identical to the wording specified in subsection 12 of section 33.1-24-05-81, as such regulations were constituted on the date this bond was executed.

13. TRUST AGREEMENT

a. A TRUST AGREEMENT, as specified in subsection 10 of section 33.1-24-05-79, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

TRUST AGREEMENT

____ TRUST AGREEMENT, the "AGREEMENT", entered into as of [date] by and between [name of the owner or operator] a [name of state] [insert "corporation", "partnership", "association", or "proprietorship"], the "GRANTOR", and [name of corporate TRUSTEE], [insert, "incorporated in the state of _____" or "a national bank"], the "TRUSTEE".

____ Whereas, the North Dakota Department of Environmental Quality (DEPARTMENT) has established certain regulations applicable to the GRANTOR, requiring that an owner or operator of a hazardous waste management facility or group of facilities must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

____ Whereas, the GRANTOR has elected to establish a trust to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the GRANTOR, acting through its duly authorized officers, has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT, and the TRUSTEE is willing to act as TRUSTEE.

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

(a) The term "GRANTOR" means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.

(b) The term "TRUSTEE" means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities. This AGREEMENT pertains to the facilities identified on attached schedule A [on schedule A, for each facility list the identification number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a trust fund, hereinafter the "FUND", for the benefit of any and all third parties injured or damaged by [sudden or nonsudden, or both] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amount of _____ [up to \$1 million] per occurrence and _____ [up to \$2 million] annual aggregate for sudden accidental occurrences and _____ [up to \$3 million] per occurrence and _____ [up to \$6 million] annual aggregate for nonsudden occurrences, except that the FUND is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert GRANTOR] is obligated to pay damages by reason of the assumption of liability in a contract or AGREEMENT. This exclusion does not apply to liability for damages that [insert GRANTOR] would be obligated to pay in the absence of the contract or AGREEMENT.

(b) Any obligation of [insert GRANTOR] under a workers' compensation, disability benefits, or unemployment compensation law or any similar law.

(c) Bodily injury to:

(1) An employee of [insert GRANTOR] arising from, and in the course of, employment by [insert GRANTOR]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert GRANTOR].

This exclusion applies:

(A) Whether [insert GRANTOR] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert GRANTOR];

_____ (2) Premises that are sold, given away, or abandoned by [insert GRANTOR] if the property damage arises out of any part of those premises:

_____ (3) Property loaned to [insert GRANTOR]:

_____ (4) Personal property in the care, custody, or control of [insert GRANTOR]:

_____ (5) That particular part of real property on which [insert GRANTOR] or any contractors or subcontractors working directly or indirectly on behalf of [insert GRANTOR] are performing operations, if the property damage arises out of these operations.

_____ In the event of combination with another mechanism for liability coverage, the FUND shall be considered [insert "primary" or "excess"] coverage.

_____ The FUND is established initially as consisting of the property, which is acceptable to the TRUSTEE, described in schedule B attached hereto. Such property and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND shall be held by the TRUSTEE, IN TRUST, as hereinafter provided. The TRUSTEE shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR, any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payment for Bodily Injury or Property Damage. The TRUSTEE shall satisfy a third-party liability claim by making payments from the FUND only upon receipt of one of the following documents:

_____ (a) Certification from the GRANTOR and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

CERTIFICATION OF VALID CLAIM

_____ The undersigned, as parties [insert GRANTOR] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [GRANTOR'S] hazardous waste treatment, storage, or disposal facility should be paid in the amount of \$[_____].

[Signatures]
Grantor

[Signatures]
Claimant(s)

_____ (b) A valid final court order establishing a judgment against the GRANTOR for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the GRANTOR'S facility or group of facilities.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND shall consist of cash or securities acceptable to the TRUSTEE.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing

the FUND, the TRUSTEE shall discharge the trustee's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstance then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

_____ (i) Securities or other obligations of the GRANTOR, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), may not be acquired or held, unless they are securities or other obligations of the federal or a state government;

_____ (ii) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or a state government; and

_____ (iii) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

_____ (a) To transfer from time to time any or all of the assets of the FUND to any common commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and

_____ (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 81a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without in any way limiting the powers and discretions conferred upon the TRUSTEE by the other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

_____ (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;

_____ (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;

_____ (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE shall at all times show that all such securities are part of the FUND;

_____ (d) To deposit any cash in the FUND in interest-bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate corporate capacity, or in any other

banking institution affiliated with the TRUSTEE, to the extent insured by an agency of the federal or state government; and

(e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection with the administration of this trust, including fees for legal services rendered to the TRUSTEE, the compensation of the TRUSTEE to the extent not paid directly by the GRANTOR, and all other proper charges and disbursements of the TRUSTEE shall be paid from the FUND.

Section 10. Annual Valuations. The TRUSTEE shall annually, at least thirty days prior to the anniversary date of establishment of the FUND, furnish to the GRANTOR and to the DEPARTMENT a statement confirming the value of the trust. Any securities in the FUND shall be valued at market value as of no more than sixty days prior to the anniversary date of establishment of the FUND. The failure of the GRANTOR to object in writing to the TRUSTEE within ninety days after the statement has been furnished to the GRANTOR and the DEPARTMENT shall constitute a conclusively binding assent by the GRANTOR barring the GRANTOR from asserting any claim or liability against the TRUSTEE with respect to matters disclosed in the statement.

Section 11. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR with respect to any question arising as to the construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 12. TRUSTEE Compensation. The TRUSTEE shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 13. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement shall not be effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE hereunder. Upon the successor TRUSTEE'S acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the trust in a writing sent to the GRANTOR, the DEPARTMENT, and the present TRUSTEE by certified mail ten days before such change becomes effective. Any expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 14. Instructions to the TRUSTEE. All orders, requests, and instructions by the GRANTOR to the TRUSTEE shall be in writing, signed by such persons as are designated in the attached exhibit A or such other designees as the GRANTOR may designate by amendments to exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR'S orders, requests, and instructions. All orders, requests, and instructions by the DEPARTMENT to the TRUSTEE shall be in writing, signed by the DEPARTMENT, or its designees, and the TRUSTEE shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty to act in the

absence of such orders, requests, and instructions from the GRANTOR and/or the department, except as provided for herein.

Section 15. Notice of Nonpayment. If a payment for bodily injury or property damage is made under Section 4 of this trust, the TRUSTEE shall notify the GRANTOR of such payment and the amount(s) thereof within five working days. The GRANTOR shall, on or before the anniversary date of the establishment of the FUND following such notice, either make payments to the TRUSTEE in amounts sufficient to cause the trust to return to its value immediately prior to the payment of claims under Section 4, or shall provide written proof to the TRUSTEE that other financial assurance for liability coverage has been obtained equaling the amount necessary to return the trust to its value prior to the payment of claims. If the GRANTOR does not either make payments to the TRUSTEE or provide the TRUSTEE with such proof, the TRUSTEE shall within ten working days after the anniversary date of the establishment of the FUND provide a written notice of nonpayment to the DEPARTMENT.

Section 16. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE, and the appropriate DEPARTMENT administrator if the GRANTOR ceases to exist.

Section 17. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in Section 16, this trust shall be irrevocable and shall continue until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE, and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the trust, all remaining trust property, less final trust administration expenses, shall be delivered to the GRANTOR.

The DEPARTMENT will agree to termination of the trust when the owner or operator substitutes alternate financial assurance as specified in this section.

Section 18. Immunity and Indemnification. The TRUSTEE shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this trust, or in carrying out any directions by the GRANTOR or the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE shall be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 19. Choice of Law. This AGREEMENT shall be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 20. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT shall not affect the interpretation or the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subsection 13 of section 33.1-24-05-81, as such regulations were constituted on the date first above written.

14. Standby TRUST AGREEMENT

a. A standby TRUST AGREEMENT, as specified in subsection 8 of section 33.1-24-05-79, must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Standby TRUST AGREEMENT

TRUST AGREEMENT, the "AGREEMENT", entered into as of [date] by and between [name of the owner or operator] a [name of a state] [insert "corporation", "partnership", "association", or "proprietorship"], the "GRANTOR", and [name of corporate TRUSTEE], [insert, "incorporated in the state of _____" or "a national bank"], the "TRUSTEE".

Whereas the North Dakota Department of Environmental Quality has established certain regulations applicable to the GRANTOR, requiring that an owner or operator of a hazardous waste management facility or group of facilities must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental and/or nonsudden accidental occurrences arising from operations of the facility or group of facilities.

Whereas, the GRANTOR has elected to establish a standby trust into which the proceeds from a letter of credit may be deposited to assure all or part of such financial responsibility for the facilities identified herein.

Whereas, the GRANTOR, acting through its duly authorized officers, has selected the TRUSTEE to be the TRUSTEE under this AGREEMENT, and the TRUSTEE is willing to act as TRUSTEE.

Now, therefore, the GRANTOR and the TRUSTEE agree as follows:

Section 1. Definitions. As used in this AGREEMENT:

(a) The term "GRANTOR" means the owner or operator who enters into this AGREEMENT and any successors or assigns of the GRANTOR.

(b) The term "TRUSTEE" means the TRUSTEE who enters into this AGREEMENT and any successor TRUSTEE.

Section 2. Identification of Facilities. This AGREEMENT pertains to the facilities identified on attached schedule A [on schedule A, for each facility list the identification number, name, and address of the facility(ies) and the amount of liability coverage, or portions thereof, if more than one instrument affords combined coverage as demonstrated by this AGREEMENT].

Section 3. Establishment of FUND. The GRANTOR and the TRUSTEE hereby establish a standby trust fund, hereafter the "FUND", for the benefit of any and all third parties injured or damaged by [sudden and/or nonsudden] accidental occurrences arising from operation of the facility(ies) covered by this guarantee, in the amounts of _____ [up to \$1 million] per occurrence and _____ [up to \$2 million] annual aggregate for sudden accidental occurrences and _____ [up to \$3 million] per occurrence and _____ [up to \$6 million] annual aggregate for nonsudden occurrences, except that the FUND is not established for the benefit of third parties for the following:

(a) Bodily injury or property damage for which [insert GRANTOR] is obligated to pay damages by reason of the assumption of liability in a contract or AGREEMENT. This exclusion does not apply to liability for damages that [insert GRANTOR] would be obligated to pay in the absence of the contract or agreement.

(b) Any obligation of [insert GRANTOR] under a workers' compensation, disability benefits, or unemployment compensation law, or any similar law.

(c) Bodily injury to:

(1) An employee [insert GRANTOR] arising from, and in the course of, employment by [insert GRANTOR]; or

(2) The spouse, child, parent, brother, or sister of that employee as a consequence of, or arising from, and in the course of employment by [insert GRANTOR].

This exclusion applies:

(A) Whether [insert GRANTOR] may be liable as an employer or in any other capacity; and

(B) To any obligation to share damages with or repay another person who must pay damages because of the injury to persons identified in paragraphs (1) and (2).

(d) Bodily injury or property damage arising out of the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft.

(e) Property damage to:

(1) Any property owned, rented, or occupied by [insert GRANTOR];

(2) Premises that are sold, given away, or abandoned by [insert GRANTOR] if the property damage arises out of any part of those premises;

(3) Property loaned by [insert GRANTOR];

(4) Personal property in the care, custody, or control of [insert GRANTOR];

(5) That particular part of real property on which [insert GRANTOR] or any contractors or subcontractors working directly or indirectly on behalf of [insert GRANTOR] are performing operations, if the property damage arises out of these operations.

In the event of combination with another mechanism for liability coverage, the FUND shall be considered [insert "primary" or "excess"] coverage.

The FUND is established initially as consisting of the proceeds of the letter of credit deposited into the FUND. Such proceeds and any other property subsequently transferred to the TRUSTEE is referred to as the FUND, together with all earnings and profits thereon, less any payments or distributions made by the TRUSTEE pursuant to this AGREEMENT. The FUND shall be held by the TRUSTEE, IN TRUST, as hereinafter provided. The TRUSTEE shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the GRANTOR, any payments necessary to discharge any liabilities of the GRANTOR established by the DEPARTMENT.

Section 4. Payment for Bodily Injury or Property Damage. The TRUSTEE shall satisfy a third-party liability claim by drawing on the letter of credit described in schedule B and by making payments from the FUND only upon receipt of one of the following documents:

(a) Certification from the GRANTOR and the third-party claimant(s) that the liability claim should be paid. The certification must be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as parties [insert GRANTOR] and [insert name and address of third-party claimant(s)], hereby certify that the claim of bodily injury and/or property damage caused by a [sudden or nonsudden] accidental occurrence arising from operating [GRANTOR'S] hazardous waste treatment, storage, or disposal facility should be paid in the amount of \$ [_____].

[Signatures] _____

Grantor _____

[Signatures] _____

Claimant(s) _____

(b) A valid final court order establishing a judgment against the GRANTOR for bodily injury or property damage caused by sudden or nonsudden accidental occurrences arising from the operation of the GRANTOR'S facility or group of facilities.

Section 5. Payments Comprising the FUND. Payments made to the TRUSTEE for the FUND shall consist of the proceeds from the letter of credit drawn upon by the TRUSTEE in accordance with the requirements of subsection 11 of section 33.1-24-05-81 and Section 4 of this AGREEMENT.

Section 6. TRUSTEE Management. The TRUSTEE shall invest and reinvest the principal and income, in accordance with general investment policies and guidelines which the GRANTOR may communicate in writing to the TRUSTEE from time to time, subject, however, to the provisions of this section. In investing, reinvesting, exchanging, selling, and managing the FUND, the TRUSTEE shall discharge the trustee's duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

(i) Securities or other obligations of the GRANTOR, or any other owner or operator of the facilities, or any of their affiliates as defined in the Investment Company Act of 1940, as

amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the federal or a state government;

- (ii) The TRUSTEE is authorized to invest the FUND in time or demand deposits of the TRUSTEE, to the extent insured by an agency of the federal or a state government; and
- (iii) The TRUSTEE is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment. The TRUSTEE is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the FUND to any common, commingled, or collective trust fund created by the TRUSTEE in which the FUND is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 et seq., including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the TRUSTEE. The TRUSTEE may vote such shares in its discretion.

Section 8. Express Powers of TRUSTEE. Without in any way limiting the powers and discretions conferred upon the TRUSTEE by the other provisions of this AGREEMENT or by law, the TRUSTEE is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the TRUSTEE shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;
- (c) To register any securities held in the FUND in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the TRUSTEE in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States government, or any agency or instrumentality thereof, with a federal reserve bank, but the books and records of the TRUSTEE shall at all times show that all such securities are part of the FUND;
- (d) To deposit any cash in the FUND in interest-bearing accounts maintained or savings certificates issued by the TRUSTEE, in its separate corporate capacity, or in any other banking institution affiliated with the TRUSTEE, to the extent insured by an agency of the federal or state government; and
- (e) To compromise or otherwise adjust all claims in favor of or against the FUND.

Section 9. Taxes and Expenses. All taxes of any kind that may be assessed or levied against or in respect of the FUND and all brokerage commissions incurred by the FUND shall be paid from the FUND. All other expenses incurred by the TRUSTEE in connection with the administration of this trust, including fees for legal services rendered to the TRUSTEE, the

compensation of the TRUSTEE to the extent not paid directly by the GRANTOR, and all other proper charges and disbursements to the TRUSTEE shall be paid from the FUND.

Section 10. Advice of Counsel. The TRUSTEE may from time to time consult with counsel, who may be counsel to the GRANTOR, with respect to any question arising as to the construction of this AGREEMENT or any action to be taken hereunder. The TRUSTEE shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 11. TRUSTEE Compensation. The TRUSTEE shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the GRANTOR.

Section 12. Successor TRUSTEE. The TRUSTEE may resign or the GRANTOR may replace the TRUSTEE, but such resignation or replacement shall not be effective until the GRANTOR has appointed a successor TRUSTEE and this successor accepts the appointment. The successor TRUSTEE shall have the same powers and duties as those conferred upon the TRUSTEE hereunder. Upon the successor TRUSTEE'S acceptance of the appointment, the TRUSTEE shall assign, transfer, and pay over to the successor TRUSTEE the funds and properties then constituting the FUND. If for any reason the GRANTOR cannot or does not act in the event of the resignation of the TRUSTEE, the TRUSTEE may apply to a court of competent jurisdiction for the appointment of a successor TRUSTEE or for instructions. The successor TRUSTEE shall specify the date on which it assumes administration of the trust in a writing sent to the GRANTOR, the DEPARTMENT, and the present TRUSTEE by certified mail ten days before such change becomes effective. Any expenses incurred by the TRUSTEE as a result of any of the acts contemplated by this section shall be paid as provided in Section 9.

Section 13. Instructions to the TRUSTEE. All orders, requests, certifications of valid claims, and instructions to the TRUSTEE shall be in writing, signed by such persons as are designated in the attached exhibit A, or such other designees as the GRANTOR may designate by amendments to exhibit A. The TRUSTEE shall be fully protected in acting without inquiry in accordance with the GRANTOR'S orders, requests, and instructions. The TRUSTEE shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the GRANTOR or the DEPARTMENT hereunder has occurred. The TRUSTEE shall have no duty to act in the absence of such orders, requests, and instructions from the GRANTOR and/or the DEPARTMENT, except as provided for herein.

Section 14. Amendment of AGREEMENT. This AGREEMENT may be amended by an instrument in writing executed by the GRANTOR, the TRUSTEE and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT if the GRANTOR ceases to exist.

Section 15. Irrevocability and Termination. Subject to the right of the parties to amend this AGREEMENT as provided in Section 14, this trust shall be irrevocable and shall continue until terminated at the written AGREEMENT of the GRANTOR, the TRUSTEE, and the DEPARTMENT, or by the TRUSTEE and the DEPARTMENT, if the GRANTOR ceases to exist. Upon termination of the trust, all remaining trust property, less final trust administration expenses, shall be paid to the GRANTOR.

The DEPARTMENT will agree to termination of the trust when the owner or operator substitutes alternative financial assurance as specified in this section.

Section 16. Immunity and Indemnification. The TRUSTEE shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this trust, or in carrying out any directions by the GRANTOR and the DEPARTMENT issued in accordance with this AGREEMENT. The TRUSTEE shall be indemnified and saved harmless by the GRANTOR or from the trust fund, or both, from and against any personal

liability to which the TRUSTEE may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the GRANTOR fails to provide such defense.

Section 17. Choice of Law. This AGREEMENT shall be administered, construed, and enforced according to the laws of the state of North Dakota.

Section 18. Interpretation. As used in this AGREEMENT, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this AGREEMENT shall not affect the interpretation or the legal efficacy of this AGREEMENT.

In Witness Whereof the parties have caused this AGREEMENT to be executed by their respective officers duly authorized and their corporate seals to be hereunto affixed and attested as of the date first above written. The parties below certify that the wording of this AGREEMENT is identical to the wording specified in subsection 14 of section 33.1-24-05-81 as such regulations were constituted on the date first above written.

b. The following is an example of the certification of acknowledgment which must accompany the TRUST AGREEMENT for a standby trust fund as specified in subsection 8 of section 33.1-24-05-79. State requirements may differ on the proper content of this acknowledgment.

State of _____

County of _____

On this [date], before me personally came [owner or operator] to me known, who, being by me duly sworn, did depose and say that she/he resides at [address], that she/he is [title] of [corporation], the corporation described in and which executed the above instrument; that she/he knows the seal of said corporation; that the seal affixed to such instrument is such corporate seal; that it was so affixed by order of the board of directors of said corporation, and that she/he signed her/his name thereto by like order.

[Signature of notary public]

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-82. [Reserved].

33.1-24-05-83. [Reserved].

33.1-24-05-84. [Reserved].

33.1-24-05-85. [Reserved].

33.1-24-05-86. [Reserved].

33.1-24-05-87. [Reserved].

33.1-24-05-88. [Reserved].

33.1-24-05-89. Applicability of requirements for use and management of containers.

Sections 33.1-24-05-89 through 33.1-24-05-102 apply to owners and operators of all hazardous waste facilities that store containers of hazardous waste, except as section 33.1-24-05-01 provides otherwise.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-90. Condition of containers.

If a container holding hazardous waste is not in good condition (for example, severe rusting, apparent structural defects) or if it begins to leak, the owner or operator shall transfer the hazardous waste from this container to a container that is in good condition or manage the waste in some other way that complies with the requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-525, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-91. Compatibility of waste with containers.

The owner or operator must use a container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-92. Management of containers.

1. A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.

2. A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-93. Inspections.

At least weekly, the owner or operator shall inspect areas where containers are stored, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors. A logbook of these weekly inspections must be maintained.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-94. Containment.

1. Container storage areas must have a containment system that is designed and operated in accordance with subsection 2, except as provided otherwise in subsection 3.

2. The containment system must be designed and operated as follows:

a. A base must underlie the containers which is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed.

b. The base must be sloped or the containment system must be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids.

c. The containment system must have sufficient capacity to contain ten percent of the volume of containers or the volume of the largest container, whichever is greater. Containers that do not contain free liquid need not be considered in this determination.

d. Run-on into the containment system must be prevented, unless the collection system has sufficient excess capacity in addition to that required in subdivision c to contain any run-on which might enter the system.

e. Spilled or leaked waste and accumulated precipitation must be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system.

3. Storage areas that store containers holding only wastes that do not contain free liquids need not have a containment system defined by subsection 2, except as provided by subsection 4 or provided that:

a. The storage area is sloped or is otherwise designed and operated to drain and remove liquid resulting from precipitation; or

b. The containers are elevated or are otherwise protected from contact with accumulated liquid.

4. Storage areas that store containers holding the wastes listed below that do not contain free liquids must have a containment system defined by subsection 2:

a. F020, F021, F022, F023, F026, and F027.

b. [Reserved].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-95. Special requirements for ignitable or reactive wastes.

Containers holding ignitable or reactive waste must be located at least fifteen meters [50 feet] from the facility's property line.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-96. Special requirements for incompatible wastes.

1. Incompatible wastes, or incompatible wastes and materials, may not be placed in the same container, unless subsection 2 of section 33.1-24-05-08 is complied with.

2. Hazardous waste must not be placed in an unwashed container that previously held an incompatible waste or material.

3. A storage container holding a hazardous waste that is incompatible with any waste or other material stored nearby in other containers, piles, open tanks, or surface impoundments must be separated from the other materials or protected from them by means of a dike, berm, wall, or other device.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-97. Closure.

At closure, all hazardous waste and hazardous waste residues must be removed from the containment system. Remaining containers, liners, bases, and soil containing or contaminated with hazardous waste or hazardous waste residues must be decontaminated or removed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-98. Air emission standards.

The owner or operator shall manage all hazardous waste placed in a container in accordance with the requirements of sections 33.1-24-05-400 through 33.1-24-05-474.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-99. [Reserved].

33.1-24-05-100. [Reserved].

33.1-24-05-101. [Reserved].

33.1-24-05-102. [Reserved].

33.1-24-05-103. Applicability of tank requirements.

The requirements of sections 33.1-24-05-103 through 33.1-24-05-117 apply to owners and operators of facilities that use tank systems for storing or treating hazardous waste except as otherwise provided in subsections 1, 2, and 3 or in section 33.1-24-05-01.

1. Tank systems that are used to treat or store hazardous waste which contains no free liquids and are situated inside a building with an impermeable floor are exempted from the requirements in section 33.1-24-05-106. To demonstrate the absence or presence of free liquids in the stored, treated, or both, waste, the following test must be used: method 9095B (paint filter liquids test) as described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05.
2. Tank systems, including sumps, as defined in section 33.1-24-01-04, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes are exempted from the requirements in subsection 1 of section 33.1-24-05-106.
3. Tanks, sumps, and other such collection devices or systems used in conjunction with drip pads, as defined in section 33.1-24-01-04 and regulated under sections 33.1-24-05-501 through 33.1-24-05-524, must meet the requirements of sections 33.1-24-05-103 through 33.1-24-05-117.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-104. Assessment of existing tank system's integrity.

1. For each existing tank system that does not have secondary containment meeting the requirements of section 33.1-24-05-106, the owner or operator shall determine that the tank system is not leaking or is unfit for use. Except as provided in subsection 3, the owner or operator shall obtain and keep on file at the facility a written assessment reviewed and certified by a qualified professional engineer, in accordance with subsection 4 of section 33.1-24-06-03, that attests to the tank system's integrity by January 12, 1988.
2. This assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the wastes to be stored or treated, to ensure that it will not collapse, rupture, or fail. At a minimum, the assessment must consider of the following:
 - a. Design standards, if available, according to which the tank and ancillary equipment were constructed;
 - b. Hazardous characteristics of the wastes that have been and will be handled;
 - c. Existing corrosion protection measures;
 - d. Documented age of the tank system if available (otherwise, an estimate of the age); and
 - e. Results of a leak test, internal inspection, or other tank integrity examination such that:
 - (1) For nonenterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of temperature variations, tank end deflection, vapor pockets, and high-water table effects; and
 - (2) For other than nonenterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above, or other integrity examination that is certified by a qualified professional engineer in accordance with subsection 4 of section 33.1-24-06-03, that addresses cracks, leaks, corrosion, and erosion.

Note: The practices described in the American petroleum institute publication, guide for inspection of refinery equipment, chapter XIII, "Atmospheric and Low-Pressure Storage Tanks", fourth edition, 1981, may be used, where applicable, as guidelines in conducting other than a leak test.
3. Tank systems that store or treat materials that become hazardous waste subsequent to July 14, 1986, must conduct this assessment within twelve months after the date that the waste becomes a hazardous waste.
4. If, as a result of the assessment conducted in accordance with subsection 1, a tank system is found to be leaking or unfit for use, the owner or operator shall comply with the requirements of section 33.1-24-05-109.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-105. Design and installation of new tank systems or components.

1. Owners or operators of new tank systems or components shall obtain and submit to the department, at time of submittal of part B application information, a written assessment, reviewed and certified by a qualified professional engineer, in accordance with subsection 4 of

section 33.1-24-06-03, attesting that the tank system has sufficient structural integrity and is acceptable for the storing and treating of hazardous waste. The assessment must show that the foundation, structural support, seams, connections, and pressure controls (if applicable) are adequately designed and that the tank system has sufficient structural strength, compatibility with the wastes to be stored or treated, and corrosion protection to ensure that it will not collapse, rupture, or fail. This assessment, which will be used by the department to review and approve or disapprove the acceptability of the tank system design, must include, at a minimum, the following information:

a. Design standards according to which tanks or the ancillary equipment, or both, are constructed;

b. Hazardous characteristics of the waste to be handled;

c. For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system will be in contact with the soil or with water, a determination by a corrosion expert of:

(1) Factors affecting the potential for corrosion, including:

(a) Soil moisture content;

(b) Soil pH;

(c) Soil sulfides level;

(d) Soil resistivity;

(e) Structure to soil potential;

(f) Influence of nearby underground metal structures (for example, piping);

(g) Existence of stray electric current; and

(h) Existing corrosion protecting measures (for example, coating, cathodic protection); and

(2) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:

(a) Corrosion-resistant materials of construction, such as special alloys, fiberglass reinforced plastic, etc.;

(b) Corrosion-resistant coating (such as epoxy, fiberglass, etc.) with cathodic protection (for example, impressed current or sacrificial anodes);

(c) Electrical isolation devices, such as insulating joints and flanges;

Note: The practices described in the national association of corrosion engineers standard, "Recommended Practice (RP-02-85) Control of External Corrosion on Metallic Buried, Partially Buried, or Submerged Liquid Storage Systems", and the American petroleum institute publication 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems", may be used, where applicable, as guidelines in providing corrosion protection for tank systems.

(d) For underground tank system components that are likely to be adversely affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and

(e) Design considerations to ensure that:

[1] Tank foundations will maintain the load of a full tank;

[2] Tank systems will be anchored to prevent floatation or dislodgment where the tank system is placed in a saturated zone, or is located within a seismic fault zone subject to the standards of subsection 1 of section 33.1-24-05-09; and

[3] Tank systems will withstand the effects of frost heave.

2. The owner or operator of a new tank system shall ensure that proper handling procedures are adhered to in order to prevent damage to the system during installation. Prior to covering, enclosing, or placing a new tank system or component in use, an independent, qualified installation inspector or a qualified professional engineer, either of whom is trained and experienced in the proper installation of tank systems or components, shall inspect the system for the presence of any of the following items:

a. Weld breaks;

b. Punctures;

c. Scrapes of protective coating;

d. Cracks;

e. Corrosion; and

f. Other structural damage or inadequate construction or installation.

All discrepancies must be remedied before the tank system is covered, enclosed, or placed in use.

3. New tank systems or components that are placed underground and that are backfilled must be provided with a backfill material that is of a noncorrosive, porous, homogenous substance and that is installed so that the backfill is placed completely around the tank and compacted to ensure that the tank and piping are fully and uniformly supported.

4. All new tanks and ancillary equipment must be tested for tightness prior to being covered, enclosed, or placed into use. If a tank system is found not to be tight, all repairs necessary to remedy the leaks in the system must be performed prior to the tank system being covered, enclosed, or placed into use.

5. Ancillary equipment must be supported and protected against physical damage and excessive stress due to settlement, vibration, expansion, or contraction.

Note: The piping system installation procedures described in American petroleum institute publication 1615 (November 1979), "Installation of Underground Petroleum Storage Systems", or American national standards institute standard B31.3 "Petroleum Refinery Piping" and American national standards institute standard B31.4, "Liquid Petroleum Transportation Piping System", may be used where applicable, as guidelines for proper installation of piping systems.

6. The owner or operator shall provide the type and degree of corrosion protection recommended by an independent corrosion expert, based on information provided under subdivision c of subsection 1 or other corrosion protection if the department believes other corrosion protection is necessary to ensure the integrity of the tank system during use of the tank system. Installation of a corrosion protection system that is field fabricated must be supervised by an independent corrosion expert to ensure proper installation.

7. The owner or operator shall obtain and keep on file at the facility written statements by those persons required to certify the design of the tank system and supervise the installation of the tank system in accordance with the requirements of subsections 2 through 6, attesting that the tank system was properly designed and installed and that repairs, pursuant to subsections 2 and 4 were performed. These written statements must also include the certification statement as required in subsection 4 of section 33.1-24-06-03.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-106. Containment and detection of releases.

1. In order to prevent the release of hazardous waste or hazardous constituents to the environment, secondary containment that meets the requirements of this section must be provided (except as provided in subsections 6 and 7):

- a. For all new and existing tank systems or components, prior to their being put into service.
- b. For tank systems that store or treat materials that become hazardous wastes, within two years of the hazardous waste listing, or when the tank system has reached fifteen years of age, whichever comes later.

2. Secondary containment systems must be:

- a. Designed, installed, and operated to prevent any migration of wastes or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
- b. Capable of detecting and collecting releases and accumulated liquids until the collected material is removed.

3. To meet the requirements of subsection 2, secondary containment systems must be at a minimum:

- a. Constructed of or lined with materials that are compatible with the waste or wastes to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the waste to which it is exposed, climatic conditions, stress of installation, and the stress of daily operation (including stresses from nearby vehicular traffic);
- b. Placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift;
- c. Provided with a leak-detection system that is designed and operated so that it will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous waste or accumulated liquid in the secondary containment system within twenty-four hours, or at the earliest practicable time if the owner or

operator can demonstrate to the department that the existing detection technologies or site conditions will not allow detection of a release within twenty-four hours; and

- d. Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked waste and accumulated precipitation must be removed from the secondary containment system within twenty-four hours, or in as timely a manner as possible to prevent harm to human health and the environment, if the owner or operator can demonstrate to the department that removal of the released waste or accumulated precipitation cannot be accomplished within twenty-four hours. (Note: If the collected material is a hazardous waste under chapter 33.1-24-02, it is subject to management as a hazardous waste in accordance with all applicable requirements of chapters 33.1-24-03 through 33.1-24-05. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of sections 301, 304, and 402 of the Clean Water Act, as amended. If discharged to a publicly owned treatment works, it is subject to the requirements of section 307 of the Clean Water Act, as amended. If the collected material is released to the environment, it may be subject to the reporting requirements of 40 CFR part 302.)

4. Secondary containment for tanks must include one or more of the following devices:

- a. A liner (external to the tank);
- b. A vault;
- c. A double-walled tank; or
- d. An equivalent device as approved by the department.

5. In addition to the requirements of subsections 2, 3, and 4, secondary containment systems must satisfy the following requirements:

a. External liner systems must be:

- (1) Designed or operated to contain one hundred percent of the capacity of the largest tank within its boundary;
- (2) Designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a twenty-five-year, twenty-four-hour rainfall event;
- (3) Free of cracks or gaps; and
- (4) Designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the waste if the waste is released from the tanks (for example, capable of preventing lateral as well as vertical migration of the waste).

b. Vault systems must be:

- (1) Designed or operated to contain one hundred percent of the capacity of the largest tank within its boundary;
- (2) Designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. Such additional capacity must be sufficient to contain precipitation from a twenty-five-year, twenty-four-hour rainfall event;

- (3) Constructed with chemical-resistant water stops in place at all joints (if any);
- (4) Provided with an impermeable interior coating or lining that is compatible with the stored waste and that will prevent migration of waste into the concrete;
- (5) Provided with a means to protect against the formation of and ignition of vapors within the vault, if the waste being stored or treated:
 - (a) Meets the definition of ignitable wastes under section 33.1-24-02-11; or
 - (b) Meets the definition of reactive wastes under section 33.1-24-02-13, and may form an ignitable or explosive vapor; and
- (6) Provided with an exterior moisture barrier or be otherwise designed or operated to prevent migration of moisture into the vault if the vault is subject to hydraulic pressure.

c. Double-walled tanks must be:

- (1) Designed as an integral structure (for example, an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell;
- (2) Protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell; and
- (3) Provided with a built-in continuous leak detection system capable of detecting a release within twenty-four hours, or at the earliest practical time if the owner or operator can demonstrate to the department, and the department concludes, that the existing detection technology or site conditions would not allow detection with a release within twenty-four hours. (Note: The provisions outlined in the steel tank institute's "Standard for Dual Wall Underground Steel Storage Tanks" may be used as guidelines for aspects of the design of underground steel double-walled tanks.)

6. Ancillary equipment must be provided with secondary containment (for example, trench, jacketing, double-walled piping) that meets the requirements of subsections 2 and 3 except for:

- a. Aboveground piping (exclusive of flanges, joints, valves, and other connections) that are visually inspected for leaks on a daily basis;
- b. Welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis;
- c. Sealless or magnetic coupling pumps, and sealless valves, that are visually inspected for leaks on a daily basis; and
- d. Pressurized aboveground piping systems with automatic shutoff devices (for example, excess flow check valves, flow metering shutdown devices, loss of pressure actuated shutoff devices) that are visually inspected for leaks on a daily basis.

7. The owner or operator may obtain a variance from the requirements of this section if the department finds, as a result of a demonstration by the owner or operator that alternative design and operating practices, together with location characteristics, will prevent the migration of any hazardous waste or hazardous constituent into the ground water; or surface water at least as effectively as secondary containment during the active life of the tank system or that in the event of a release that does migrate to ground water or surface water, no

substantial present or potential hazard will be posed to human health or the environment. New underground tank systems may not, per a demonstration in accordance with subdivision b, be exempted from secondary containment requirements of this section.

a. In deciding whether to grant a variance based on a demonstration of equivalent protection of ground water and surface water, the department will consider:

- (1) The nature and quantity of the wastes;
- (2) The proposed alternate design and operation;
- (3) The hydrogeologic setting of the facility, including the thickness of soils present between the tank system and ground water; and
- (4) All other factors that would influence the quality and mobility of the hazardous constituents and the potential for them to migrate to ground water or surface water.

b. In deciding whether to grant a variance based on a demonstration of no substantial present or potential hazard, the department will consider:

- (1) The potential adverse effects on ground water, surface water, and land quality taking into account:
 - (a) The physical and chemical characteristics of the waste in the tank system, including its potential for migration;
 - (b) The hydrogeological characteristics of the facility and surrounding land;
 - (c) The potential for health risks caused by human exposure to waste constituents;
 - (d) The potential for damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and
 - (e) The persistence and permanence of potential adverse effects;
- (2) The potential adverse effects of a release on ground water quality, taking into account:
 - (a) The quantity and quality of ground water and the direction of ground water flow;
 - (b) The proximity and withdrawal rates of ground water users;
 - (c) The current and future uses of ground water in the area; and
 - (d) The existing quality of ground water, including other sources of contamination and their cumulative impact on the ground water quality;
- (3) The potential adverse effects of a release on surface water quality, taking into account:
 - (a) The quantity and quality of ground water and the direction of ground water flow;
 - (b) The patterns of rainfall in the region;
 - (c) The proximity of the tank system to surface waters;

- (d) The current and future uses of surface waters in the area and any water quality standards established for those surface waters; and
- (e) The existing quality of surface water, including other sources of contamination and cumulative impact on surface water quality; and
- (4) The potential adverse effects of a release on the land surrounding the tank system, taking into account:
 - (a) The patterns of rainfall in the region; and
 - (b) The current and future uses of the surrounding land.

c. The owner or operator of a tank system, for which a variance from secondary containment had been granted in accordance with the requirements of subdivision a, at which a release of hazardous waste has occurred from the primary tank system, but has not migrated beyond the zone of engineering control (as established in the variance), must:

- (1) Comply with the requirements of section 33.1-24-05-109, except subsection 4; and
- (2) Decontaminate or remove contaminated soil to the extent necessary to:
 - (a) Enable the tank system for which the variance was granted to resume operation with the capability for the detection of releases at least equivalent to the capability it had prior to the release; and
 - (b) Prevent the migration of hazardous waste or hazardous constituents to ground water or surface water; and
- (3) If contaminated soil cannot be removed or decontaminated in accordance with paragraph 2, comply with the requirements of subsection 2 of section 33.1-24-05-110.

d. The owner or operator of a tank system, for which a variance from secondary containment had been granted in accordance with the requirements of subdivision a, at which a release of hazardous waste has occurred from the primary tank system and has migrated beyond the zone of engineering control (as established in the variance), shall:

- (1) Comply with the requirements of subsections 1, 2, 3, and 4 of section 33.1-24-05-109;
- (2) Prevent the migration of hazardous waste or hazardous constituents to ground water or surface water, if possible, and decontaminate or remove contaminated soil. If contaminated soil cannot be decontaminated or removed or if ground water has been contaminated, the owner or operator shall comply with the requirements of subsection 2 of section 33.1-24-05-110;
- (3) If repairing, replacing, or reinstalling the tank system, provides secondary containment in accordance with the requirements of subsections 1 through 6 or reapply for a variance from the secondary containment and meet the requirements for new tank systems in section 33.1-24-05-105 if the tank system is replaced. The owner or operator shall comply with these requirements even if contaminated soil can be decontaminated or removed and ground water or surface water has not been contaminated.

8. The following procedures must be followed in order to request a variance from secondary containment:

a. The department must be notified in writing by the owner or operator that the owner or operator intends to conduct and submit a demonstration for a variance from secondary containment as allowed in subsection 7 according to the following schedule:

(1) For existing tank systems, at least twenty-four months prior to the date that secondary containment must be provided in accordance with subsection 1.

(2) For new tank systems, at least thirty days prior to entering into a contract for installation.

b. As part of the notification, the owner or operator shall also submit to the department a description of the steps necessary to conduct the demonstration and a timetable for completing each of the steps. The demonstration must address each of the factors listed in subdivision a or b of subsection 7;

c. The demonstration for a variance must be completed within one hundred eighty days after notifying the department of an intent to conduct the demonstration; and

d. If the department intends to grant a variance under this section:

(1) The department will inform the public, through a newspaper notice, of the availability of the demonstration for a variance. The notice shall be placed in a daily or weekly major local newspaper of general circulation and shall provide at least thirty days from the date of the notice for the public to review and comment on the demonstration for a variance. The department also will hold a public hearing, in response to a request or at the department's discretion, whenever such a hearing might clarify one or more issues concerning the demonstration for a variance. Public notice of the hearing will be given at least thirty days prior to the date of the hearing and may be given at the same time as notice of the opportunity for the public to review and comment on the demonstration. These two notices may be combined.

(2) The department will approve or disapprove the request for a variance within ninety days of receipt of the demonstration from the owner or operator and will notify in writing the owner or operator and each person who submitted written comments or requested notice of the variance decision. If the demonstration for a variance is incomplete or does not include sufficient information, the ninety-day time period will begin when the department receives a complete demonstration, including all information necessary to make a final determination. If the public comment period is extended, the ninety-day time period will be similarly extended.

(3) If a variance is approved, the department will require the permittee to construct and operate the tank system in the manner that was demonstrated to meet the requirements for the variance.

9. All tank systems, until such time as secondary containment that meets the requirements of this section is provided, must comply with the following:

a. For nonenterable underground tanks, a leak test that meets the requirements of subdivision e of subsection 2 of section 33.1-24-05-104 must be conducted at least annually.

b. For other than nonenterable underground tanks, the owner or operator shall either conduct a leak test as in subdivision a or develop a schedule and procedure for an assessment of the overall condition of the tank system by a qualified professional

engineer. The schedule and procedure must be adequate to detect obvious cracks, leaks, and corrosion or erosion that may lead to cracks and leaks. The owner or operator shall remove the stored waste from the tank, if necessary, to allow the condition of all internal tank surfaces to be assessed. The frequency of these assessments must be based on the material of construction of the tank and its ancillary equipment, the age of the system, the type of corrosion or erosion protection used, the rate of corrosion or erosion observed during the previous inspection, and the characteristics of the waste being stored or treated.

- c. For ancillary equipment, a leak test or other integrity assessment as approved by the department must be conducted by a qualified professional engineer at least annually.

Note: The practices described in the American petroleum institute publication guide for inspection of refinery equipment, chapter XIII, "Atmospheric and Low-Pressure Storage Tanks", fourth edition 1981, may be used, where applicable, as guidelines for assessing the overall condition of the tank system.

- d. The owner or operator shall maintain on file at the facility a record of the results of the assessments conducted in accordance with subdivisions a through c.

- e. If a tank system or component is found to be leaking or unfit for use as a result of the leak test or assessment in subdivisions a through c, the owner or operator shall comply with the requirements of section 33.1-24-05-109.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-107. General operating requirements.

1. Hazardous waste or treatment reagents must not be placed in a tank system if they could cause the tank, its ancillary equipment, or the containment system to rupture, leak, corrode, or otherwise fail.
2. The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or containment systems. These include at a minimum:
 - a. Spill prevention controls (for example, check valves, dry disconnect couplings);
 - b. Overfill prevention controls (for example, level-sensing devices, high-level alarms, automatic feed cutoff, or bypass to a standby tank); and
 - c. Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation.
3. The owner or operator shall comply with the requirements of section 33.1-24-05-109 if a leak or spill occurs in the tank system.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-108. Inspections.

1. The owner or operator shall develop and follow a schedule and procedure for inspecting overfill controls.

2. The owner or operator shall inspect at least once each operating day data gathered from monitoring and leak detection equipment (for example, pressure or temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design.

Note: Subsection 3 of section 33.1-24-05-06 requires the owner or operator to remedy any deterioration or malfunction the owner or operator finds. Section 33.1-24-05-109 requires the owner or operator to notify the department within twenty-four hours of confirming a leak. Also, 40 CFR 302 may require the owner or operator to notify the national response center of a release.

3. In addition, except as noted under subsection 4, the owner or operator must inspect at least once each operating day:

- a. Aboveground portions of the tank system, if any, to detect corrosion or releases of waste.
- b. The construction materials and the area immediately surrounding the externally accessible portion of the tank system, including the secondary containment system (for example, dikes) to detect erosion or signs of releases of hazardous waste (for example, wet spots, dead vegetation).

4. Owners or operators of tank systems that either use leak detection systems to alert facility personnel to leaks, or implement established workplace practices to ensure leaks are promptly identified, must inspect at least weekly those areas described in subdivisions a and b of subsection 3. Use of the alternate inspection schedule must be documented in the facility's operating record. This documentation must include a description of the established workplace practices at the facility.

5. Ancillary equipment that is not provided with secondary containment, as described in subdivisions a through d of subsection 6 of section 33.1-24-05-106, must be inspected at least once each operating day.

6. The owner or operator must inspect cathodic protection systems, if present, according to, at a minimum, the following schedule to ensure that they are functioning properly:

- a. The proper operation of the cathodic protection system must be confirmed within six months after initial installation and annually thereafter; and
- b. All sources of impressed current must be inspected or tested, or both, as appropriate, at least bimonthly (for example, every other month).

Note: The practices described in the national association of corrosion engineers standard, "Recommended Practice P-028-85 Control of External Corrosion on Metallic, Buried, Partially Buried, or Submerged Liquid Storage Systems", and American petroleum institute publication 1632, "Cathodic Protection of Underground Petroleum Storage Tanks and Piping Systems", may be used where applicable, as guidelines in maintaining and inspecting cathodic protection systems.

7. The owner or operator shall document in the operating record of the facility an inspection of those items in subsections 1 through 3.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-109. Response to leaks or spills and disposition of leaking or unfit-for-use tank systems.

A tank system or secondary containment system from which there has been a leak or spill, or which is unfit for use, must be removed from service immediately, and the owner or operator shall satisfy the following requirements:

1. **Cessation of use; prevent flow or addition of wastes.** The owner or operator shall immediately stop the flow of hazardous waste into the tank system or secondary containment system and inspect the system to determine the cause of the release.
2. **Removal of waste from tank system or secondary containment system.**
 - a. If the release was from the tank system, the owner or operator shall, within twenty-four hours after detection of the leak or, if the owner or operator demonstrates that it is not possible, at the earliest practicable time, remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed.
 - b. If the material released was to a secondary containment system, all released materials must be removed within twenty-four hours or in as timely a manner as is possible to prevent harm to human health and the environment.
3. **Containment of visible releases to the environment.** The owner or operator shall immediately conduct a visual inspection of the release and, based upon that inspection:
 - a. Prevent further migration of leak or spill to soils or surface water; and
 - b. Remove, and properly dispose of, any visible contamination of the soil or surface water.
4. **Notifications, reports.**
 - a. Any release to the environment, except as provided in subdivision b, must be reported to the department within twenty-four hours of its detection. The release should also be reported pursuant to 40 CFR 302.
 - b. A leak or spill of hazardous waste is exempted from the requirements of this subsection if it is:
 - (1) Less than or equal to a quantity of one pound; and
 - (2) Immediately contained and cleaned up.
 - c. Within thirty days of detection of a release to the environment, a report containing the following information must be submitted to the department:
 - (1) Likely route of migration of the release;
 - (2) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate);
 - (3) Results of any monitoring or sampling conducted in connection with the release (if available). If sampling or monitoring data relating to the release are not available within thirty days, these data must be submitted to the department as soon as they become available;
 - (4) Proximity to downgradient drinking water, surface water, and populated areas; and

(5) Description of response actions taken or planned.

5. Provision of secondary containment, repair, or closure.

- a. Unless the owner or operator satisfies the requirements of subdivisions b through d, the tank system must be closed in accordance with section 33.1-24-05-110.
- b. If the cause of the release was a spill that has not damaged the integrity of the system, the owner or operator may return the system to service as soon as the released waste is removed and repairs, if necessary, are made.
- c. If the cause of the release was a leak from the primary tank system into the secondary containment system, the system must be repaired prior to returning the tank system to service.
- d. If the source of the release was a leak to the environment from a component of a tank system without secondary containment, the owner or operator shall provide the component of the system from which the leak occurred with secondary containment that satisfies the requirements of section 33.1-24-05-106 before it can be returned to service unless the source of the leak is an aboveground portion of a leak system that can be inspected visually. If the source is an aboveground component that can be inspected visually, the component must be repaired and may be returned to service without secondary containment as long as the requirements of subsection 6 are satisfied. If a component is replaced to comply with the requirements of this subdivision, that component must satisfy the requirements for new tank systems or components in sections 33.1-24-05-105 and 33.1-24-05-106. Additionally, if a leak has occurred in any portion of a tank system component that is not readily accessible for visual inspection (for example, the bottom of an inground or onground tank), the entire component must be provided with secondary containment in accordance with section 33.1-24-05-106 prior to being returned to use.

- 6. Certification of major repairs.** If the owner or operator has repaired a tank system in accordance with subsection 5, and the repair has been extensive (for example, installation of an internal liner; repair of a ruptured primary containment or secondary containment vessel), the tank system must not be returned to service unless the owner or operator has obtained a certification by a qualified professional engineer in accordance with subsection 4 of section 33.1-24-06-03 that the repaired system is capable of handling hazardous wastes without release for the intended life of the system. This certification must be placed in the operating record and maintained until closure of the facility.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-110. Closure and postclosure care.

1. At closure of a tank system, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated soils, and structures and equipment contaminated with waste, and manage them as a hazardous waste, unless subsection 4 of section 33.1-24-02-03 applies. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems must meet all of the requirements specified in sections 33.1-24-05-59 through 33.1-24-05-88.
2. If the owner or operator demonstrates that not all contaminated soil can be practicably removed or decontaminated as required in subsection 1, then the owner or operator shall close the tank system and perform postclosure care in accordance with the closure and

postclosure care requirements that apply to landfills under section 33.1-24-05-180. In addition, for the purposes of closure, postclosure, and financial responsibility, such a tank system is then considered to be a landfill, and the owner or operator shall meet all the requirements for landfills specified in sections 33.1-24-05-59 through 33.1-24-05-88.

3. If an owner or operator has a tank system that does not have secondary containment that meets the requirements of subsections 2 through 6 of section 33.1-24-05-106 and has not been granted a variance from the secondary containment requirements in accordance with subsection 7 of section 33.1-24-05-106, then:
 - a. The closure plan for the tank system must include both a plan for complying with subsection 1 and a contingent plan for complying with subsection 2;
 - b. A contingent postclosure plan for complying with subsection 2 must be prepared and submitted as part of the permit application;
 - c. The cost estimates calculated for closure and postclosure care must reflect the cost of complying with the contingent closure plan and the contingent postclosure plan, if those costs are greater than the costs of complying with the closure plan prepared for the expected closure under subsection 1;
 - d. Financial assurance must be based on the cost estimates in subdivision c; and
 - e. For the purposes of the contingent closure and postclosure plans, such a tank system is considered to be a landfill, and the contingent plans must meet all of the closure, postclosure, and financial responsibility requirements for landfills under sections 33.1-24-05-59 through 33.1-24-05-88.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-111. Special requirements for ignitable or reactive waste.

1. Ignitable or reactive wastes may not be placed in tank systems, unless:
 - a. The waste is treated, rendered, or mixed before or immediately after placement in the tank systems so that:
 - (1) The resulting waste, mixture, or dissolved material no longer meets the definition of ignitable or reactive wastes under section 33.1-24-02-11 or 33.1-24-02-13; and
 - (2) Subsection 2 of section 33.1-24-05-08 is complied with;
 - b. The waste is stored or treated in such a way that it is protected from any material or conditions that may cause the wastes to ignite or react; or
 - c. The tank system is used solely for emergencies.
2. The owner or operator of the facility where ignitable or reactive waste is stored or treated in a tank shall comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in tables 2-1 through 2-6 of the national fire protection association's "Flammable and Combustible Liquids Code", (1977 or 1981), incorporated by reference, see section 33.1-24-01-05.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-112. Special requirements for incompatible wastes.

1. Incompatible wastes, or incompatible wastes and materials, may not be placed in the same tank system, unless subsection 2 of section 33.1-24-05-08 is complied with.
2. Hazardous waste may not be placed in a tank system that has not been decontaminated and that previously held an incompatible waste or material, unless subsection 2 of section 33.1-24-05-08 is complied with.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-113. Waste analysis and trial tests.

In addition to performing the waste analyses required by section 33.1-24-05-04, the owner or operator shall, whenever a tank system is to be used to treat chemically or to store a hazardous waste that is substantially different from waste previously treated or stored in that tank system or to be used to treat chemically a hazardous waste with a substantially different process than any previously used in that tank system:

1. Conduct waste analyses and trial treatment or storage tests (for example, bench scale or pilot-plant scale tests); or
2. Obtain written, documented information on similar wastes under similar operating conditions to show that the proposed treatment or storage will meet the requirements of subsection 1 of section 33.1-24-05-107.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-114. Special requirements for generators of between one hundred and one thousand kilograms per month that accumulate hazardous waste in tanks.

1. The requirements of this section apply to small quantity generators of more than one hundred kilograms, but less than one thousand kilograms of hazardous waste in a calendar month, that accumulate hazardous waste in tanks for less than one hundred eighty days (or two hundred seventy days if the generator must ship the waste greater than two hundred miles), and do not accumulate over six thousand kilograms onsite at any time.
2. Generators of between one hundred and one thousand kilograms per month hazardous waste shall comply with the following general operating requirements:
 - a. Treatment or storage of hazardous waste in tanks must comply with subsection 2 of section 33.1-24-05-08.
 - b. Hazardous wastes or treatment reagents may not be placed in a tank if they could cause the tank or its inner liner to rupture, leak, corrode, or otherwise fail before the end of its intended life.
 - c. Uncovered tanks must be operated to ensure at least sixty centimeters [2 feet] of freeboard, unless the tank is equipped with a containment structure (for example, dike or trench), a drainage control system, or a diversion structure (for example, standby tank)

with a capacity that equals or exceeds the volume of the top sixty centimeters [2 feet] of the tank.

- d. Where hazardous waste is continuously fed into a tank, the tank must be equipped with a means to stop this inflow (for example, waste feed cutoff system or bypass system to a standby tank).

Note: These systems are intended to be used in the event of a leak or overflow from the tank due to a system failure (for example, a malfunction in the treatment process, a crack in the tank, etc.).

3. Generators of between one hundred and one thousand kilograms per month accumulating hazardous waste in tanks shall inspect, where present:

- a. Discharge control equipment (for example, waste feed cutoff systems, bypass systems, and drainage systems) at least once each operating day to ensure that it is in good working order;
- b. Data gathered from monitoring equipment (for example, pressure and temperature gauges) at least once each operating day to ensure that the tank is being operated according to its design;
- c. The level of waste in the tank at least once each operating day to ensure compliance with subdivision c of subsection 2;
- d. The construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams; and
- e. The construction materials of, and the area immediately surrounding, discharge confinement structures (for example, dikes) at least weekly to detect erosion or obvious signs of leakage (for example, wet spots or dead vegetation).

4. Generators of between one hundred and one thousand kilograms per month accumulating hazardous waste in tanks must, upon closure of the facility, remove all hazardous waste from tanks, discharge control equipment, and discharge confinement structures.

Note: At closure, as throughout the operating period, unless the owner or operator can demonstrate, in accordance with subsection 3 or 4 of section 33.1-24-02-03 that any solid waste removed from the owner's or operator's tank is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements of chapters 33.1-24-03 through 33.1-24-06.

5. Generators of between one hundred and one thousand kilograms per month shall comply with the following special requirements for ignitable or reactive waste:

- a. Ignitable or reactive waste may not be placed in a tank, unless:
- (1) The waste is treated, rendered, or mixed before or immediately after placement in a tank so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive wastes under section 33.1-24-02-11 or 33.1-24-02-13, and subsection 2 of section 33.1-24-05-08 is complied with;
- (2) The waste is stored or treated in such a way that it is protected from any material or conditions that may cause the waste to ignite or react; or
- (3) The tank is used solely for emergencies.

b. The owner or operator of a facility which treats or stores ignitable or reactive waste in covered tanks shall comply with the buffer zone requirements for tanks contained in tables 2-1 through 2-6 of the national fire protection association's "Flammable and Combustible Liquids Code" (1977 or 1981). (Incorporated by reference, see section 33.1-24-01-05.)

6. Generators of between one hundred and one thousand kilograms per month must comply with the following special requirements for incompatible wastes:

a. Incompatible wastes, or incompatible wastes and materials, (see appendix III for examples) may not be placed in the same tank, unless subsection 2 of section 33.1-24-05-08 is complied with; and

b. Hazardous waste may not be placed in an unwashed tank which previously held an incompatible waste or material unless subsection 2 of section 33.1-24-05-08 is complied with.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-115. Air emission standards.

The owner or operator shall manage all hazardous waste placed in a tank in accordance with the requirements of sections 33.1-24-05-400 through 33.1-24-05-474.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-116. [Reserved].

33.1-24-05-117. [Reserved].

33.1-24-05-118. Applicability of surface impoundment requirements.

Sections 33.1-24-05-118 through 33.1-24-05-129 apply to owners and operators of facilities that use surface impoundments to treat, store, or dispose of hazardous waste, except as section 33.1-24-05-01 provides otherwise.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-119. Design and operating requirements.

1. Any surface impoundment that is not covered by subsection 3 must have a liner for all portions of the impoundment (except for existing portions of such impoundments). The liner must be designed, constructed, and installed to prevent any migration of wastes out of the impoundment to the adjacent subsurface soil or ground water or surface water at any time during the active life (including the closure period) of the impoundment. The liner may be constructed of materials that may allow wastes to migrate into the liner (but not into adjacent

subsurface soil or ground water or surface water) during the active life of the facility, provided that the impoundment is closed in accordance with subdivision a of subsection 1 of section 33.1-24-05-122. For impoundments that will be closed in accordance with subdivision b of subsection 1 of section 33.1-24-05-122, the liner must be constructed of materials that can prevent wastes from migrating into the liner during the active life of the facility. The liner must be:

- a. Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;
- b. Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and
- c. Installed to cover all surrounding earth likely to be in contact with the waste or leachate.

2. The owner or operator may be exempted from the requirements of subsection 1 if the department finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents (as defined in section 33.1-24-05-50) into the ground water or surface water at any future time. In deciding whether to grant an exemption, the department will consider:

- a. The nature and quantity of the wastes;
- b. The proposed alternate design and operation;
- c. The hydrogeologic setting of the facility, including the attenuative capacity and thickness of the liners and soils present between the impoundment and ground water or surface water; and
- d. All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to ground water or surface water.

3. The owner or operator of each new surface impoundment unit on which construction commences after January 29, 1992, each lateral expansion of a surface impoundment unit on which construction commences after July 29, 1992, and each replacement of an existing surface impoundment unit that is to commence reuse after July 29, 1992, must install two or more liners and a leachate collection and removal system between such liners. "Construction commences" is as defined in section 33.1-24-01-04 under "existing facility".

a. Liner.

(1) The liner system must include:

- (a) A top liner designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into such liner during the active life and postclosure care period; and
- (b) A composite bottom liner, consisting of at least two components. The upper component must be designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into this component during the active life and postclosure care period. The lower component must be designed and constructed of materials to minimize the

migration of hazardous constituents if a breach in the upper component were to occur. The lower component must be constructed of at least three feet [91.44 centimeters] of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} centimeters per second.

(2) The liners must comply with subdivisions a, b, and c of subsection 1.

b. The leachate collection and removal system between the liners, and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system must be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and postclosure care period. The requirements for a leak detection system in this subdivision are satisfied by installation of a system that is, at a minimum:

(1) Constructed with a bottom slope of one percent or more;

(2) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-1} centimeters per second or more and a thickness of twelve inches [30.5 centimeters] or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-4} meters squared per second or more;

(3) Constructed of materials that are chemically resistant to the waste managed in the surface impoundment and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes and any waste cover materials or equipment used at the surface impoundment;

(4) Designed and operated to minimize clogging during the active life and postclosure care period; and

(5) Constructed with a sump or sumps and liquid removal methods (for example, pumps) of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit must have its own sump or sumps. The design of each sump and removal system must provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

c. The owner or operator shall collect and remove pumpable liquids in the sumps to minimize the head on the bottom liner.

d. The owner or operator of a leak detection system that is not located completely above the seasonal high-water table must demonstrate that the operation of the leak detection system will not be adversely affected by the presence of ground water.

4. The department may approve alternative design or operating practices to those specified in subsection 3 if the owner or operator demonstrates to the department that such design and operating practices, together with location characteristics:

a. Will prevent the migration of any hazardous constituent into the ground water or surface water at least as effectively as the liners and leachate collection and removal system specified in subsection 3; and

b. Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

5. The double-liner requirement set forth in subsection 3 may be waived by the department for any monofill, if:

a. The monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and such wastes do not contain constituents which would render the wastes hazardous for reasons other than the toxicity characteristic in section 33.1-24-02-14; and

b. The monofill meets the following:

(1) The monofill:

(a) Has at least one liner for which there is no evidence that such liner is leaking. For the purposes of this paragraph, the term "liner" means a liner designed, constructed, installed, and operated to prevent hazardous waste from passing into the liner at any time during the active life of the facility, or a liner designed, constructed, installed, and operated to prevent hazardous waste from migrating beyond the liner to adjacent subsurface soil, ground water, or surface water at any time during the active life of the facility. In the case of any surface impoundment which has been exempted from the requirements of subsection 3 on the basis of a liner designed, constructed, installed, and operated to prevent hazardous waste from passing beyond the liner, at the closure of such impoundment, the owner or operator must remove or decontaminate all waste residues, all contaminated liner material, and contaminated soil to the extent practicable. If all contaminated soil is not removed or decontaminated, the owner or operator of such impoundment will comply with appropriate postclosure requirements, including ground water monitoring and corrective action;

(b) Is located more than one-quarter mile [.40 kilometer] from an "underground source of drinking water" (as that term is defined in 40 CFR section 270.2); and

(c) Is in compliance with generally applicable ground water monitoring requirements for facilities with hazardous waste permits under chapter 33.1-24-06; or

(2) The owner or operator demonstrates that the monofill is located, designed, and operated so as to assure that there will be no migration of any hazardous constituent into ground water or surface water at any future time.

6. The owner or operator of any replacement surface impoundment unit is exempt from subsection 3 if:

a. The existing unit was constructed in compliance with the design standards of sections 33.1-24-05-118 through 33.1-24-05-143, 33.1-24-05-160 through 33.1-24-05-190, and the applicable requirements of subsection 5 of section 33.1-24-06-16; and

b. There is no reason to believe that the liner is not functioning as designed.

7. A surface impoundment must be designed, constructed, maintained, and operated to prevent overtopping resulting from normal or abnormal operations; overfilling; wind and wave action; rainfall; run-on; malfunctions of level controllers, alarms, and other equipment; and human error.

8. A surface impoundment must have dikes that are designed, constructed, and maintained with sufficient structural integrity to prevent massive failure of the dikes. In ensuring structural

integrity, it must not be presumed that the liner system will function without leakage during the active life of the unit.

9. The department will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-120. Monitoring and inspection.

1. During construction and installation, liners (except in the case of existing portions of surface impoundments exempt from subsection 1 of section 33.1-24-05-119) and cover systems (for example, membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections (for example, holes, cracks, thin spots, or foreign materials). Immediately after construction or installation:

- a. Synthetic liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and
- b. Soil-based and admixed liners and covers must be inspected for imperfections, including lenses, cracks, channels, root holes, or other structural nonuniformities that may cause an increase in the permeability of the liner or cover.

These inspections must be conducted by a qualified professional (for example, registered professional engineer).

2. While a surface impoundment is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

- a. Deterioration, malfunctions, or improper operation of overtopping control systems;
- b. Sudden drops in the level of the impoundments contents;
- c. The presence of liquids in leak detection systems; and
- d. Severe erosion or other signs of deterioration in dikes or other containment devices.

3. Prior to the issuance of a permit, and after any period of time greater than six months during which the impoundment was not in service, the owner or operator shall obtain a certification from a qualified engineer that the impoundment's dike, including that portion of any dike which provides freeboard, has structural integrity. The certification must establish, in particular, that the dike:

- a. Will withstand the stress of the pressure exerted by the types and amounts of waste to be placed in the impoundment; and
- b. Will not fail due to scouring or piping, without dependence on any liner system included in the surface impoundment construction.

4. An owner or operator required to have a leak detection system shall comply with the following:

- a. An owner or operator required to have a leak detection system under subsection 3 or 4 of section 33.1-24-05-119 must record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

- b. After the final cover is installed, the amount of liquids removed from each leak detection system sump must be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps must be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps must be recorded at least semiannually. If at any time during the postclosure care period the pump operating level is exceeded at units on quarterly or semiannual recording schedules, the owner or operator must return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.
- c. "Pump operating level" is a liquid level proposed by the owner or operator and approved by the department based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-121. Emergency repairs - Contingency plans.

- 1. A surface impoundment must be removed from service in accordance with subsection 2 when:
 - a. The level of liquids in the impoundment suddenly drops and the drop is not known to be caused by changes in the flows into or out of the impoundment; or
 - b. The dike leaks.
- 2. When a surface impoundment must be removed from service as required by subsection 1, the owner or operator shall:
 - a. Immediately shut off the flow or stop the addition of wastes into the impoundment;
 - b. Immediately contain any surface leakage which has occurred or is occurring;
 - c. Immediately stop the leak;
 - d. Take any other necessary steps to stop or prevent catastrophic failure;
 - e. If a leak cannot be stopped by any other means, empty the impoundment; and
 - f. Notify the department of the problem in writing within seven days after detecting the problem.
- 3. As part of the contingency plan required in sections 33.1-24-05-26 through 33.1-24-05-36, the owner or operator shall specify a procedure for complying with the requirements of subsection 2.
- 4. No surface impoundment that has been removed from service in accordance with the requirements of this section may be restored to service unless the portion of the impoundment which was failing is repaired and the following steps are taken:
 - a. If the impoundment was removed from service as the result of actual or imminent dike failure, the dike's structural integrity must be recertified in accordance with subsection 3 of section 33.1-24-05-120.
 - b. If the impoundment was removed from service as the result of a sudden drop in the liquid level, then:

- (1) For any existing portion of the impoundment, a liner must be installed in compliance with subsection 1 of section 33.1-24-05-119; and
 - (2) For any other portion of the impoundment, the repaired liner system must be certified by a qualified engineer as meeting the design specifications approved in the permit.
5. A surface impoundment that has been removed from service in accordance with the requirements of this section and that is not being repaired must be closed in accordance with the provisions of section 33.1-24-05-122.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-122. Closure and postclosure care.

1. At closure, the owner or operator shall:

- a. Remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless subsection 4 of section 33.1-24-02-03 applies; or
- b. Comply with the following:
 - (1) Eliminate free liquids by removing liquid wastes or solidifying the remaining wastes and waste residues;
 - (2) Stabilize remaining wastes to a bearing capacity sufficient to support final cover; and
 - (3) Cover the surface impoundment with a final cover designed and constructed to:
 - (a) Provide long-term minimization of the migration of liquids through the closed impoundment;
 - (b) Function with minimum maintenance;
 - (c) Promote drainage and minimize erosion or abrasion of the final cover;
 - (d) Accommodate settling and subsidence so that the cover's integrity is maintained; and
 - (e) Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

2. If some waste residues or contaminated materials are left in place at final closure, the owner or operator shall comply with all postclosure requirements contained in sections 33.1-24-05-66 through 33.1-24-05-69, including maintenance and monitoring throughout the postclosure care period (specified in the permit under section 33.1-24-05-66). The owner or operator shall:

- a. Maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events;
- b. Maintain and monitor the leak detection system in accordance with paragraph 4 of subdivision b of subsection 3 of section 33.1-24-05-119, subdivision c of subsection 3 of section 33.1-24-05-119, and subsection 4 of section 33.1-24-05-120, and comply with all

other applicable leak detection system requirements of sections 33.1-24-05-118 through 33.1-24-05-129;

c. Maintain and monitor the ground water monitoring system and comply with all other applicable requirements of sections 33.1-24-05-47 through 33.1-24-05-58; and

d. Prevent run-on and runoff from eroding or otherwise damaging the final cover.

3. The owner or operator shall also meet the following requirements:

a. If an owner or operator plans to close a surface impoundment in accordance with subdivision a of subsection 1, and the impoundment does not comply with the liner requirements of subsection 1 of section 33.1-24-05-119 and is not exempt from them in accordance with subsection 2 of that section, then:

(1) The closure plan for the impoundment under section 33.1-24-05-61 must include both a plan for complying with subdivision a of subsection 1 and a contingent plan for complying with subdivision b of subsection 1 in case not all contaminated subsoils can be practicably removed at closure; and

(2) The owner or operator shall prepare a contingent postclosure plan under section 33.1-24-05-67 for complying with subsection 2 in case not all contaminated subsoils can be practicably removed at closure.

b. The cost estimates calculated under section 33.1-24-05-76 for closure and postclosure care of an impoundment subject to this section must include the cost of complying with the contingent closure plan and the contingent postclosure plan, but are not required to include the cost of expected closure under subdivision a of subsection 1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-123. Special requirements for ignitable or reactive waste.

Ignitable or reactive waste may not be placed in a surface impoundment, unless the waste and impoundment satisfy all applicable requirements of sections 33.1-24-05-250 through 33.1-24-05-299; and:

1. The waste is treated, rendered, or mixed before or immediately after placement in the impoundment so that:

a. The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under section 33.1-24-02-11 or 33.1-24-02-13; and

b. Subsection 2 of section 33.1-24-05-08 is complied with; or

2. The waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react; or

3. The surface impoundment is used solely for emergencies.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-124. Special requirements for incompatible wastes.

Incompatible wastes, or incompatible wastes and materials (see appendix III for examples of incompatible wastes and materials), may not be placed in the same surface impoundment, unless the owner or operator complies with subsection 2 of section 33.1-24-05-08.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-125. Special requirements for hazardous wastes F020, F021, F022, F023, F026, and F027.

1. Hazardous wastes F020, F021, F022, F023, F026, and F027 must not be placed in a surface impoundment unless the owner or operator operates the surface impoundment in accordance with a management plan for these wastes that is approved by the department pursuant to the standards set out in this subsection, and in accordance, with all other applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819. The factors to be considered are:
 - a. The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or volatilize or escape into the atmosphere;
 - b. The attenuative properties of underlying and surrounding soils or other materials;
 - c. The mobilizing properties of other materials codisposed with these wastes; and
 - d. The effectiveness of additional treatment, design, or monitoring techniques.
2. The department may determine that additional design, operating, and monitoring requirements are necessary for surface impoundments managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-126. Action leakage rate.

1. The department shall approve an action leakage rate for surface impoundment units subject to subsection 3 or 4 of section 33.1-24-05-119. The action leakage rate is the maximum design flow rate that the leak detection system can remove without the fluid head on the bottom liner exceeding one foot [.3048 meters]. The action leakage rate must include an adequate safety margin to allow for uncertainties in the design (for example, slope, hydraulic conductivity, thickness of drainage material), construction, operation, and location of the leak detection system, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the leak detection system, and proposed response actions (for example, the action leakage rate must consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.).
2. To determine if the action leakage rate has been exceeded, the owner or operator must convert the weekly or monthly flow rate from the monitoring data obtained under subsection 4 of section 33.1-24-05-120 to an average daily flow rate (gallons per acre per day) for each sump. Unless the department approves a different calculation, the average daily flow rate for

each sump must be calculated weekly during the active life and closure period, and if the unit is closed in accordance with subsection 2 of section 33.1-24-05-122, monthly during the postclosure care period when monthly monitoring is required under subsection 4 of section 33.1-24-05-120.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-127. Response actions.

1. The owner or operator of surface impoundment units subject to subsection 3 or 4 of section 33.1-24-05-119 must have an approved response action plan before receipt of waste. The response action plan must set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in subsection 2.

2. If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator must:
 - a. Notify the department in writing of the exceedance within seven days of the determination;

 - b. Submit a preliminary written assessment to the department within fourteen days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

 - c. Determine to the extent practicable the location, size, and cause of any leak;

 - d. Determine whether waste receipt should cease or be curtailed; whether any waste should be removed from the unit for inspection, repairs, or controls; and whether or not the unit should be closed;

 - e. Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and

 - f. Within thirty days after the notification that the action leakage rate has been exceeded, submit to the department the results of the analyses specified in subdivisions c, d, and e; the results of actions taken; and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the department a report summarizing the results of any remedial actions taken and actions planned.

3. To make the leak or remediation determinations, or both, in subdivisions c, d, and e of subsection 2, the owner or operator must:
 - a. Assess and conduct the following:
 - (1) Assess the source of liquids and amounts of liquids by source;

 - (2) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

 - (3) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

 - b. Document why such assessments are not needed.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-128. Air emission standards.

The owner or operator shall manage all hazardous waste placed in a surface impoundment in accordance with the requirements of sections 33.1-24-05-420 through 33.1-24-05-474.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-129. [Reserved].

33.1-24-05-130. Applicability of waste pile requirements.

1. Sections 33.1-24-05-130 through 33.1-24-05-143 apply to owners or operators of facilities that store or treat hazardous waste in piles, except as section 33.1-24-05-01 provides otherwise.
2. Sections 33.1-24-05-130 through 33.1-24-05-143 do not apply to owners and operators of waste piles that are closed with wastes left in place. Such waste piles are subject to regulation under sections 33.1-24-05-176 through 33.1-24-05-190.
3. The owner or operator of any waste pile that is inside or under a structure that provides protection from precipitation so that neither runoff nor leachate is generated is not subject to regulation under section 33.1-24-05-131 or under sections 33.1-24-05-47 through 33.1-24-05-58, provided that:
 - a. Liquids or materials containing free liquids are not placed in the pile;
 - b. The pile is protected from surface water run-on by the structure or in some other manner;
 - c. The pile is designed and operated to control dispersal of the waste by wind, where necessary, by means other than wetting; and
 - d. The pile will not generate leachate through decomposition or other reactions.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-131. Design and operating requirements.

1. A waste pile (except for an existing portion of a waste pile) must have:
 - a. A liner that is designed, constructed, and installed to prevent any migration of wastes out of the pile into the adjacent subsurface soil or ground water or surface water at any time during the active life (including the closure period) of the waste pile. The liner may be constructed of materials that may allow waste to migrate into the liner itself (but not into the adjacent subsurface soil or ground water or surface water) during the active life of the facility. The liner must be:
 - (1) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static

head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

(2) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and

(3) Installed to cover all surrounding earth likely to be in contact with the waste or leachate; and

b. A leachate collection and removal system immediately above the liner that is designed, constructed, maintained, and operated to collect and remove leachate from the pile. The department will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed one foot [.3048 meters]. The leachate collection and removal system must be:

(1) Constructed of materials that are:

(a) Chemically resistant to the waste managed in the pile and the leachate expected to be generated; and

(b) Of sufficient strength and thickness to prevent collapse under the pressures exerted by overlaying wastes, waste cover materials, and by any equipment used at the pile; and

(2) Designed and operated to function without clogging through the scheduled closure of the waste pile.

2. The owner or operator of each new waste pile unit, each lateral expansion of a waste pile unit, and each replacement of an existing waste pile unit, must install two or more liners and a leachate collection and removal system above and between such liners.

a. Liners.

(1) The liner system must include:

(a) A top liner designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into such liner during the active life and postclosure care period; and

(b) A composite bottom liner, consisting of at least two components. The upper component must be designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into this component during the active life and postclosure care period. The lower component must be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component must be constructed of at least three feet [91.44 centimeters] of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} centimeters per second.

(2) The liners must comply with paragraphs 1, 2, and 3 of subdivision a of subsection 1.

b. The leachate collection and removal system immediately above the top liner must be designed, constructed, operated, and maintained to collect and remove leachate from the waste pile during the active life and postclosure care period. The department will specify design and operating conditions in the permit to ensure that the leachate depth over the

liner does not exceed one foot [30.48 meters]. The leachate collection and removal system must comply with paragraphs 3 and 4 of subdivision c.

c. The leachate collection and removal system between the liners, and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system must be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and postclosure care period. The requirements for a leak detection system in this subsection are satisfied by installation of a system that is, at a minimum:

(1) Constructed with a bottom slope of one percent or more;

(2) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} centimeters per second or more and a thickness of twelve inches [30.5 centimeters] or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} square meters per second or more;

(3) Constructed of materials that are chemically resistant to the waste managed in the waste pile and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the waste pile;

(4) Designed and operated to minimize clogging during the active life and postclosure care period; and

(5) Constructed with sumps and liquid removal methods (for example, pumps) of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit must have its own sump or sumps. The design of each sump and removal system must provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

d. The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

e. The owner or operator of a leak detection system that is not located completely above the seasonal high-water table must demonstrate that the operation of the leak detection system will not be adversely affected by the presence of ground water.

3. The department may approve alternative design or operating practices to those specified in subsection 2 if the owner or operator demonstrates to the department that such design and operating practices, together with location characteristics:

a. Will prevent the migration of any hazardous constituent into the ground water or surface water at least as effectively as the liners and leachate collection and removal systems specified in subsection 2; and

b. Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

4. Subsection 2 does not apply to monofills that are granted a waiver by the department in accordance with subsection 5 of section 33.1-24-05-119.

5. The owner or operator of any replacement waste pile unit is exempt from subsection 2 if:

- a. The existing unit was constructed in compliance with the design standards of sections 33.1-24-05-118 through 33.1-24-05-143, 33.1-24-05-160 through 33.1-24-05-190, and the applicable requirements of subsection 5 of section 33.1-24-06-16; and
 - b. There is no reason to believe that the liner is not functioning as designed.
6. The owner or operator will be exempted from the requirements of subsection 1, if the department finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents (see section 33.1-24-05-50) into the ground water or surface water at any future time. In deciding whether to grant an exemption, the department will consider:
 - a. The nature and quantity of the waste;
 - b. The proposed alternate design and operation;
 - c. The hydrogeologic setting of the facility, including attenuative capacity and thickness of the liners and soils present between the pile and ground water or surface water; and
 - d. All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to ground water or surface water.
 7. The owner or operator must design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portions of the pile during peak discharge from at least a twenty-five-year storm.
 8. The owner or operator must design, construct, operate, and maintain a runoff management system to collect and control at least the water volume resulting from a twenty-four-hour, twenty-five-year storm.
 9. Collection and holding facilities (for example, tanks or basins) associated with run-on and runoff control systems must be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.
 10. If the pile contains any particulate matter which may be subject to wind dispersal, the owner or operator shall cover or otherwise manage the pile to control wind dispersal.
 11. The department will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-132. Monitoring and inspection.

1. During construction or installation, liners (except in the case of existing portions of piles exempt from subsection 1 of section 33.1-24-05-131) and cover systems (for example, membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections, for example, holes, cracks, thin spots, or foreign materials. Immediately after construction or installation:
 - a. Synthetic liners and covers must be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and
 - b. Soil-based and admixed liners and covers must be inspected for imperfections, including lenses, cracks, channels, root holes, or other structural nonuniformities that may cause an increase in the permeability of the liner or cover.

2. While a waste pile is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:
 - a. Deterioration, malfunctions, or improper operation of run-on and runoff control systems;
 - b. Proper functioning of wind dispersal control systems where present; and
 - c. The presence of leachate in and proper functioning of leachate collection and removal systems, where present.
3. An owner or operator required to have a leak detection system under subsection 2 of section 33.1-24-05-131 must record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-133. Special requirements for ignitable or reactive wastes.

Ignitable or reactive waste may not be placed in a waste pile unless the waste or waste pile satisfies all applicable requirements of sections 33.1-24-05-250 through 33.1-24-05-299.

1. The waste is treated, rendered, or mixed before or immediately after placement in the pile so that:
 - a. The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under section 33.1-24-02-11 or 33.1-24-02-13; and
 - b. Subsection 2 of section 33.1-24-05-08 is complied with; or
2. The waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-134. Special requirements for incompatible wastes.

1. Incompatible wastes, or incompatible wastes and materials, may not be placed in the same pile unless subsection 2 of section 33.1-24-05-08 is complied with.
2. A pile of hazardous waste that is incompatible with any waste or other material stored nearby in containers, other piles, open tanks, or surface impoundments must be separated from the other material, or protected from them by means of a dike, berm, wall, or other device.
3. Hazardous waste must not be piled on the same base where incompatible wastes or materials were previously piled, unless the base has been decontaminated sufficiently to ensure compliance with subsection 2 of section 33.1-24-05-08.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-135. Closure and postclosure care.

1. At closure, the owner or operator must remove or decontaminate all waste residue, contaminated containment system components (liners, etc.), contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless subsection 4 of section 33.1-24-02-03 applies.
2. If, after removing or decontaminating all residues and making all reasonable efforts to affect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in subsection 1, the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, the owner or operator shall close the facility and perform postclosure care in accordance with the closure and postclosure care requirements that apply to landfills (section 33.1-24-05-180).
3. In addition:
 - a. The owner or operator of a waste pile that does not comply with the liner requirements of subdivision a of subsection 1 of section 33.1-24-05-131 and is not exempt from them in accordance with subsection 3 of section 33.1-24-05-130 or subsection 6 of section 33.1-24-05-131, shall:
 - (1) Include in the closure plan for the pile under section 33.1-24-05-61 both a plan for complying with subsection 1 and a contingent plan for complying with subsection 2 in case not all contaminated subsoil can be practicably removed at closure; and
 - (2) Prepare a contingent postclosure plan under section 33.1-24-05-67 for complying with subsection 2 in case not all contaminated subsoil can be practicably removed at closure.
 - b. The cost estimates calculated under section 33.1-24-05-76 for closure and postclosure care of a pile subject to this subsection must include the cost of complying with the contingent closure plan and the contingent postclosure plan, but are not required to include the cost of expected closure under subsection 1.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-136. Special requirements for hazardous wastes F020, F021, F022, F023, F026, and F027.

1. Hazardous wastes F020, F021, F022, F023, F026, and F027 must not be placed in waste piles that are not enclosed (as defined in subsection 3 of section 33.1-24-05-130) unless the owner or operator operates the waste pile in accordance with a management plan for these wastes that is approved by the department pursuant to the standards set out in this subsection and in accord with all other applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819. The factors to be considered are:
 - a. The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;
 - b. The attenuative properties of underlying and surrounding soils or other materials;
 - c. The mobilizing properties of other materials codisposed with these wastes; and

d. The effectiveness of additional treatment, design, or monitoring techniques.

2. The department may determine that additional design, operating, and monitoring requirements are necessary for piles managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-137. Action leakage rate.

1. The department shall approve an action leakage rate for waste pile units subject to subsection 2 or 3 of section 33.1-24-05-131. The action leakage rate is the maximum design flow rate that the leak detection system can remove without the fluid head on the bottom liner exceeding one foot [.3048 meters]. The action leakage rate must include an adequate safety margin to allow for uncertainties in the design (for example, slope, hydraulic conductivity, thickness of drainage material), construction, operation, and location of the leak detection system, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the leak detection system, and proposed response actions (for example, the action leakage rate must consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.).
2. To determine if the action leakage rate has been exceeded, the owner or operator must convert the weekly flow rate from the monitoring data obtained under subsection 3 of section 33.1-24-05-132 to an average daily flow rate (gallons per acre per day) for each sump. Unless the department approves a different calculation, the average daily flow rate for each sump must be calculated weekly during the active life and closure period.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-138. Response actions.

1. The owner or operator of waste pile units subject to subsection 2 or 3 of section 33.1-24-05-131 must have an approved response action plan before receipt of waste. The response action plan must set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in subsection 2.
2. If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator must:
 - a. Notify the department in writing of the exceedance within seven days of the determination;
 - b. Submit a preliminary written assessment to the department within fourteen days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;
 - c. Determine to the extent practicable the location, size, and cause of any leak;

- d. Determine whether waste receipt should cease or be curtailed; whether any waste should be removed from the unit for inspection, repairs, or controls; and whether or not the unit should be closed;
- e. Determine any other short-term and long-term actions to be taken to mitigate or stop any leaks; and
- f. Within thirty days after the notification that the action leakage rate has been exceeded, submit to the department the results of the analyses specified in subdivisions c, d, and e; the results of actions taken; and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the department a report summarizing the results of any remedial actions taken and actions planned.

3. To make the leak or remediation determinations, or both, in subdivisions c, d, and e of subsection 2, the owner or operator must:

a. Assess and conduct the following:

- (1) Assess the source of liquids and amounts of liquids by source;
- (2) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and
- (3) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

b. Document why such assessments are not needed.

33.1-24-05-142. [Reserved].

33.1-24-05-143. [Reserved].

33.1-24-05-144. Applicability of incinerator requirements.

1. Sections 33.1-24-05-144 through 33.1-24-05-159 apply to owners or operators of hazardous waste incinerators, except as section 33.1-24-05-01 provides otherwise.
2. Integration of the maximum achievable control technology standards.
 - a. Except as provided by subdivisions b through d, the standards of sections 33.1-24-05-144 through 33.1-24-05-159 do not apply to a new hazardous waste incineration unit that becomes subject to hazardous waste permit requirements after October 12, 2005, or no longer apply when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the maximum achievable control technology requirements of 40 CFR part 63, subpart EEE by conducting a comprehensive performance test and submitting to the department a notification of compliance under 40 CFR sections 63.1207(j) and 63.1210(d) documenting compliance with the requirements of 40 CFR part 63, subpart EEE. Nevertheless, even after this demonstration of compliance with the maximum achievable control technology standards, hazardous waste permit conditions that were based on the standards of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819 will continue to be in effect until they are removed from the permit or the permit is terminated or revoked, unless the permit expressly provides otherwise.
 - b. The maximum achievable control technology standards do not replace the closure requirements of section 33.1-24-05-151 or the applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-88 and sections 33.1-24-05-420 through 33.1-24-05-474.
 - c. The particulate matter standard of subsection 3 of section 33.1-24-05-147 remains in effect for incinerators that elect to comply with the alternative to the particulate matter standard under 40 CFR sections 63.1206(b)(14) and 63.1219(e).
 - d. The following requirements remain in effect for startup, shutdown, and malfunction events if a permittee elects to comply with paragraph 1 of subdivision a of subsection 1 of section 33.1-24-06-100 to minimize emissions of toxic compounds from these events:
 - (1) Subsection 1 of section 33.1-24-05-149 requiring that an incinerator operate in accordance with operating requirements specified in the permit; and
 - (2) Subsection 3 of section 33.1-24-05-149 requiring compliance with emission standards and operating requirements during startup and shutdown if hazardous waste is in the combustion chamber, except for particular hazardous wastes.
3. After consideration of the waste analysis included with the permit application, and unless the department finds that the waste will pose a threat to human health or the environment when burned in an incinerator, the department may, on a case-by-case basis, exempt the applicant from some or all of the requirements of sections 33.1-24-05-144 through 33.1-24-05-159, except sections 33.1-24-05-145 and 33.1-24-05-151 if:
 - a. The waste to be burned is hazardous (either listed in or fails the characteristic tests in chapter 33.1-24-02) solely because it is:
 - (1) Ignitable, or corrosive, or both; or
 - (2) Reactive for characteristic other than those in subdivisions d and e of subsection 1 of section 33.1-24-02-13, and will not be burned when other hazardous wastes are present in the combustion zone; and

b. The waste contains insignificant concentrations of the hazardous constituents listed in appendix V of chapter 33.1-24-02.

4. The owner or operator of an incinerator may conduct trial burns subject only to the requirements of subsection 2 of section 33.1-24-06-19.

5. If the waste to be burned is one which is described by subdivision a, b, c, or d of subsection 2 and contains insignificant concentrations of the hazardous constituents listed in appendix V of chapter 33.1-24-02, then the department may, in establishing permit conditions, exempt the applicant from all requirements of sections 33.1-24-05-144 through 33.1-24-05-159, except sections 33.1-24-05-145 (waste analysis) and 33.1-24-05-151 (closure), after consideration of the waste analysis included in the permit application, unless the department finds that the waste will pose a threat to human health and the environment when burned in an incinerator.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-145. Waste analysis.

1. As a portion of the trial burn plan or with the permit application, the owner or operator shall have included an analysis of the waste feed sufficient to provide all information required by subdivision b of subsection 2 of section 33.1-24-06-19 or subdivision w of subsection 2 of section 33.1-24-06-17. Owners and operators of new hazardous waste incinerators shall provide the information required by subdivision c of subsection 2 of section 33.1-24-06-19 or subdivision w of subsection 2 of section 33.1-24-06-17 to the greatest extent possible.

2. Throughout normal operation the owner or operator shall conduct sufficient waste analysis to verify that waste feed to the incinerator is within the physical and chemical composition limit specified in the permit (under subsection 2 of section 33.1-24-05-149).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-146. Designation of principal organic hazardous constituents.

1. Principal organic hazardous constituents in the waste feed must be treated to the extent required by the performance standard specified in section 33.1-24-05-147.

2. Designation of principal organic hazardous constituents.

a. For each waste feed to be burned, one or more principal organic hazardous constituents will be specified in the facility's permit from among those constituents listed in chapter 33.1-24-02, appendix V. This specification will be based on the degree of difficulty of incineration of the organic constituents in the waste and on their concentration or mass in the waste feed, considering the results of waste analysis and trial burns or alternative data submitted with the facility's permit application. Organic constituents which represent the greatest degree of difficulty of incineration will be those most likely to be designated as principal organic hazardous constituents. Constituents are more likely to be designated as principal organic hazardous constituents if they are present in large quantities or concentrations in the waste.

b. Trial principal organic hazardous constituents will be designated for performance of trial burns in accordance with the procedure for obtaining trial burn permits in subsection 2 of section 33.1-24-06-19.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-147. Performance standards.

An incinerator burning hazardous waste must be designed, constructed, and maintained so that when operated in accordance with operating requirements specified under section 33.1-24-05-149 it will meet the following performance standards:

1. a. Except as provided in subdivision b, an incinerator burning hazardous waste must achieve a destruction and removal efficiency of ninety-nine and ninety-nine one hundredths percent for each principal organic hazardous constituent designated (under section 33.1-24-05-146) in its permit for each waste feed. The destruction and removal efficiency is determined for each principal organic hazardous constituent from the following equation:

$$DRE = \frac{(W_{in} - W_{out})}{W_{in}} \times 100\%$$

where:

W_{in} = mass feed rate of one principal organic constituent in the waste stream feeding the incinerator, and

W_{out} = mass emission rate of the same principal organic hazardous constituent present in exhaust emissions prior to release to the atmosphere.

- b. An incinerator burning wastes F020, F021, F022, F023, F026, or F027 must achieve a destruction and removal efficiency of ninety-nine and nine thousand nine hundred and ninety-nine ten thousandths percent for each principal organic hazardous constituent designated (under section 33.1-24-05-146) in its permit. This performance must be demonstrated on principal organic hazardous constituents that are more difficult to incinerate than tetra-, penta-, and hexachlorodibenzo-p-dioxins and dibenzofurans. Destruction and removal efficiency is determined for each principal organic hazardous constituent from the equation in subdivision a.
2. An incinerator burning hazardous waste and producing stack emissions of more than one and eight-tenths kilograms per hour [4 pounds per hour] of hydrogen chloride must control hydrogen chloride emissions such that the rate of emission is no greater than the larger of either one and eight-tenths kilograms per hour or one percent of the hydrogen chloride in the stack gas prior to entering any pollution control equipment.
3. An incinerator burning hazardous waste must not emit particulate matter in excess of one hundred eighty milligrams per dry standard cubic meter [0.08 grains per dry standard cubic foot] when corrected for the amount of oxygen in the stack gas according to the formula:

$$P_C = P_M \times \frac{14}{21 - Y}$$

where:

P_C = the corrected concentration of particulate matter,

P_M = the measured concentration of particulate matter, and

Y = the measured concentration of oxygen in the stack gas using the Orsat method for oxygen analysis of dry flue gas presented in 40 CFR, part 60, appendix A (method 3) of the federal air pollution control regulations.

This correction procedure is to be used by all hazardous waste incinerators except those operating under conditions of oxygen enrichment. For these facilities, the department will select an appropriate correction procedure to be specified in the facility permit.

4. For purposes of permit enforcement, compliance with the operating requirements specified in the permit under section 33.1-24-05-149 will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the performance requirements of this section may be "information" justifying modification, revocation, or reissuance of a permit under section 33.1-24-06-12.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-148. Hazardous waste incinerator permits.

1. The owner or operator of a hazardous waste incinerator may burn only waste specified in the permit and only under operating conditions specified for those wastes under section 33.1-24-05-149, except:
 - a. In approved trial burns under subsection 2 of section 33.1-24-06-19; or
 - b. Under exemptions created by section 33.1-24-05-144.
2. Other hazardous wastes may be burned only after operating conditions have been specified in a new permit or a permit modification as applicable. Operating requirements for new wastes may be based on either trial burn results or alternative data included with the permit application under subdivision w of subsection 2 of section 33.1-24-06-17.
3. The permit for a new hazardous waste incinerator must establish appropriate conditions for each of the applicable requirements of sections 33.1-24-05-144 through 33.1-24-05-159, including allowable waste feeds and operating conditions necessary to meet the requirements of section 33.1-24-05-149, sufficient to comply with the following standards:
 - a. For the period beginning with initial introduction of hazardous waste to the incinerator and ending with initiation of the trial burn, and only for the minimum time required to establish operating conditions required in subdivision b of this subsection, not to exceed a duration of seven hundred twenty hours operating time for treatment of hazardous waste, the operating requirements must be those most likely to ensure compliance with the performance standards of section 33.1-24-05-147, based on the department's engineering judgment. The department may extend the duration of this period once for up to seven hundred twenty additional hours when good cause for the extension is demonstrated by the applicant.
 - b. For the duration of the trial burn the operating requirements must be sufficient to demonstrate compliance with the performance standards of section 33.1-24-05-147 and must be in accordance with the approved trial burn plan.
 - c. For the period immediately following completion of the trial burn and only for the minimum period sufficient to allow sample analysis, data computation, and submission of the trial burn results by the applicant, and review of the trial burn results and modification

of the facility permit by the department, the operating requirements must be those most likely to ensure compliance with performance standards of section 33.1-24-05-147 based on the department's engineering judgment.

- d. For the remaining duration of the permit, the operating requirements must be those demonstrated in a trial burn or by alternative data specified in paragraph 3 of subdivision w of subsection 2 of section 33.1-24-06-17 as sufficient to ensure compliance with the performance standards of section 33.1-24-05-147.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-149. Operating requirements.

1. An incinerator must be operated in accordance with operating requirements specified in the permit. These will be specified on a case-by-case basis as those demonstrated (in a trial burn or in alternative data as specified in subsection 2 of section 33.1-24-05-148 and included with a facility's permit application) to be sufficient to comply with the performance standards of section 33.1-24-05-147.
2. Each set of operating requirements will specify the composition of the waste feed (including acceptable variations in the physical or chemical properties of the waste feed which will not affect compliance with the performance requirement of section 33.1-24-05-147) to which the operating requirements apply. For each such waste feed, the permit will specify acceptable operating limits including the following conditions:
 - a. Carbon monoxide level in the stack exhaust gas;
 - b. Waste feed rate;
 - c. Combustion temperature;
 - d. An appropriate indicator of combustion gas velocity;
 - e. Allowable variation in incinerator system design or operating procedures; and
 - f. Such operating requirements as are necessary to ensure that the performance standards of section 33.1-24-05-147 are met.
3. During startup and shutdown of an incinerator, hazardous waste (except waste exempted in accordance with section 33.1-24-05-144) may not be fed into the incinerator unless the incinerator is operating within the conditions of operation, (temperature, air feed rate, etc.) specified in the permit.
4. Fugitive emissions from the combustion zone must be controlled by:
 - a. Keeping the combustion zone totally sealed against fugitive emissions;
 - b. Maintaining a combustion zone pressure lower than atmospheric pressure; or
 - c. An alternate means of control demonstrated (with the permit application) to provide fugitive emissions control equivalent to maintenance of combustion zone pressure lower than atmospheric pressure.
5. An incinerator must be operated with a functioning system to automatically cut off waste feed to the incinerator when operating conditions deviate from limits established under subsection 1.

6. An incinerator must cease operation when changes in waste feed, incinerator design, or operating conditions exceed limits designated in its permit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-150. Monitoring and inspections.

1. The owner or operator shall conduct, at a minimum, the following monitoring while incinerating hazardous waste:
 - a. Combustion temperature, waste feed rate, and the indicator of combustion gas velocity specified in the permit must be monitored on a continuous basis;
 - b. Carbon monoxide must be monitored on a continuous basis at a point in the incinerator downstream of the combustion zone and prior to release to the atmosphere; and
 - c. Upon request by the department, sampling and analysis of the waste and exhaust emissions must be conducted to verify that the operating requirements established in the permit achieve the performance standards of section 33.1-24-05-147.
2. The incinerator and associated equipment (pumps, valves, conveyors, pipes, etc.) must be completely inspected at least daily for leaks, spills, fugitive emissions, and signs of tampering.
3. The emergency waste feed cutoff system and associated alarms must be tested at least weekly to verify operability, unless the applicant demonstrates to the department that weekly inspections will unduly restrict or upset operations and that less frequent inspection will be adequate. At a minimum, operational testing must be conducted monthly.
4. This monitoring and inspection data must be recorded and the records must be placed in the operating record required by section 33.1-24-05-40 and maintained in the operating record for five years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-151. Closure.

At closure the owner or operator shall remove all hazardous waste and hazardous waste residues (including ash, scrubber waters, and scrubber sludges) from the incinerator site.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

33.1-24-05-160. Applicability of land treatment requirements.

Sections 33.1-24-05-160 through 33.1-24-05-175 apply to owners and operators of facilities that treat or dispose of hazardous waste in land treatment units, except as section 33.1-24-05-01 provides otherwise.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-161. Treatment program.

1. An owner or operator subject to sections 33.1-24-05-160 through 33.1-24-05-175 shall establish a land treatment program that is designed to ensure that hazardous constituents placed in or on the treatment zone are degraded, transformed, or immobilized within the treatment zone. The department will specify in the facility permit the elements of the treatment program, including:
 - a. The wastes that are capable of being treated at the unit based on a demonstration under section 33.1-24-05-162;
 - b. Design measures and operating practices necessary to maximize the success of degradation, transformation, and the immobilization processes in the treatment zone in accordance with subsection 1 of section 33.1-24-05-163; and
 - c. Unsaturated zone monitoring provisions meeting the requirements of section 33.1-24-05-165.
2. The department will specify in the facility permit the hazardous constituents that must be degraded, transformed, or immobilized under sections 33.1-24-05-160 through

33.1-24-05-175. Hazardous constituents are constituents identified in appendix V of chapter 33.1-24-02 that are reasonably expected to be in or derived from waste placed in or on the treatment zone.

3. The department will specify the vertical and horizontal dimensions of the treatment zone in the facility permit. The treatment zone is the portion of the unsaturated zone below and including the land surface in which the owner or operator intends to maintain the conditions necessary for effective degradation, transformation, or immobilization of hazardous constituents. The maximum depth of the treatment zone must be:

a. No more than one and five-tenths meters [5 feet] from the initial soil surface; and

b. More than one meter [3 feet] above the seasonal high-water table.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-162. Treatment demonstration.

1. For each waste that will be applied to the treatment zone, the owner or operator shall demonstrate prior to application of the waste that hazardous constituents in the waste can be completely degraded, transformed, or immobilized in the treatment zone.

2. In making this demonstration, the owner or operator may use field tests, laboratory analyses, available data, or, in the case of existing units, operating data. If the owner or operator intends to conduct field tests or laboratory analyses in order to make the demonstration required under subsection 1 the owner or operator shall obtain a treatment or disposal permit under subsection 3 of section 33.1-24-06-19. The department will specify in this permit the testing, analytical, design, and operating requirements (including the duration of the tests and analyses, and, in the case of field tests, the horizontal and vertical dimensions of the treatment zone, monitoring procedures, closure and cleanup activities) necessary to meet the requirements in subsection 3.

3. Any field test or laboratory analysis conducted in order to make a demonstration under subsection 1 must:

a. Accurately simulate the characteristics and operating conditions for the proposed land treatment unit including:

(1) The characteristics of the waste (including the presence of constituents in appendix V of chapter 33.1-24-02);

(2) The climate of the area;

(3) The topography of the surrounding area;

(4) The characteristics of the soil in the treatment zone (including depth); and

(5) The operating practices to be used at the unit.

b. Be likely to show that hazardous constituents in the waste to be tested will be completely degraded, transformed, or immobilized in the treatment zone of the proposed land treatment unit; and

c. Be conducted in a manner that protects human health and the environment considering:

(1) The characteristics of the waste to be tested;

- (2) The operating and monitoring measures to be taken during the course of the test;
- (3) The duration of the tests;
- (4) The volume of waste used in the test; and
- (5) In the case of field tests, the potential for the migration of hazardous constituents to ground water or surface water.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-163. Design and operating requirements.

The department will specify in the facility permit how the owner or operator will design, construct, operate, and maintain the land treatment unit in compliance with this section.

1. The owner or operator shall design, construct, and maintain the unit to maximize the degradation, transformation, and immobilization of hazardous constituents in the treatment zone. The owner or operator shall design, construct, operate, and maintain the unit in accordance with all design and operating conditions that were used in the treatment demonstration under section 33.1-24-05-162. At a minimum, the department will specify the following in the facility permit:
 - a. The rate and method of waste application to the treatment zone;
 - b. Measures to control soil pH;
 - c. Measures to enhance microbial or chemical reaction, for example, fertilization, tilling; and
 - d. Measures to control the moisture content of the treatment zone.
2. The owner or operator shall design, construct, operate, and maintain the treatment zone to minimize runoff from hazardous constituents during the active life of the land treatment unit.
3. The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the treatment zone during peak discharge from at least a twenty-five-year storm.
4. The owner or operator shall design, construct, operate, and maintain a runoff management system to collect and control at least the water volume resulting from a twenty-four-hour, twenty-five-year storm.
5. Collection and holding facilities, for example, tanks or basins, associated with the run-on and runoff control systems must be emptied or otherwise managed expeditiously after storms to maintain the design capacity of the system.
6. If the treatment zone contains particulate matter which may be subject to wind dispersal, the owner or operator shall manage the unit to control wind dispersal.
7. The owner or operator shall inspect the unit weekly and after storms to detect evidence of:
 - a. Deterioration, malfunctions, or improper operation of run-on or runoff control systems; and
 - b. Improper functioning of wind dispersal control measures.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-164. Food chain crops.

The department may allow the growth of food chain crops in or on the treatment zone only if the owner or operator satisfies the conditions of this section. The department will specify in the facility permit the specific food chain crops which may be grown.

1. The owner or operator shall demonstrate that there is no substantial risk to human health caused by the growth of such crops in or on the treatment zone by demonstrating, prior to the planting of such crops, that hazardous constituents other than cadmium:
 - a. Will not be transferred to the food or feed portions of the crop by plant uptake or direct contact and will not otherwise be ingested by food chain animals, for example, by grazing; or
 - b. Will not occur in greater concentrations in or on the food or feed portions of crops grown on the treatment zone than in or on identical portions of the same crops grown on untreated soils under similar conditions in the same region.
2. The owner or operator shall make the demonstration required by subsection 1 prior to the planting of crops at the facility for all constituents identified in appendix V of chapter 33.1-24-02 that are reasonably expected to be in or derived from waste placed in or on the treatment zone.
3. In making a demonstration under subsection 1, the owner or operator may use field tests, greenhouse studies, available data, or in the case of existing units, operating data, and shall:
 - a. Base the demonstration on conditions similar to those present in the treatment zone, including soil characteristics (for example, pH, cation exchange capacity), specific wastes, application rates, application methods, and crops to be grown;
 - b. Describe the procedures used in conducting any tests, including the sample collection criteria, sample size, analytical methods, and statistical procedures.
4. If the owner or operator intends to conduct field tests or greenhouse studies in order to make the demonstration required under subsection 1, the owner or operator shall obtain a permit for conducting such activities.
5. The owner or operator shall comply with the conditions of either subdivision a or b if cadmium is contained in wastes applied to the treatment zone:
 - a. The following condition must be met:
 - (1) The pH of the waste and soil mixture must be 6.5 or greater at the time of each waste application, except for wastes containing cadmium in concentrations of two milligrams per kilogram (dry weight) or less;
 - (2) The annual application of cadmium from waste must not exceed five-tenths kilogram per hectare on land used for production of tobacco, leafy vegetables, or root crops grown for human consumption. For other food chain crops the annual cadmium rate may not exceed:
 - (a) Two kilograms per hectare through June 30, 1984;
 - (b) One and twenty-five-hundredths kilograms per hectare during the period from July 1, 1984, through December 31, 1986; or

(c) Five-tenths kilogram per hectare on and after January 1, 1987; and

- (3) The cumulative application rate of cadmium from waste must not exceed five kilograms per hectare if the waste and soil mixture has a pH of less than 6.5; and
- (4) If the waste and soil mixture has a pH of 6.5 or greater and is maintained at a pH of 6.5 or greater during crop growth, the cumulative application of cadmium from waste must not exceed five kilograms per hectare if soil cation exchange capacity is less than five milliequivalents per one hundred grams, ten kilograms per hectare if soil cation exchange capacity is five to fifteen milliequivalents per one hundred grams, and twenty kilograms per hectare if soil cation exchange capacity is greater than fifteen milliequivalents per one hundred grams.

b. The following conditions must be met:

- (1) Animal feed must be the only food chain crop produced;
- (2) The pH of the waste and soil mixture must be 6.5 or greater at the time of waste application or at the time the crop is planted, whichever occurs later, and this pH level must be maintained whenever food chain crops are grown;
- (3) There must be an operating plan which demonstrates how the animal feed will be distributed to preclude ingestion by humans. The operating plan must describe the measures to be taken to safeguard against the possible health hazards from cadmium entering the food chain which may result from alternative land uses; and
- (4) Future property owners must be notified by stipulation in the land record or property deed which states that the property has received waste at high cadmium application rates and that food chain crops must not be grown, except in compliance with subdivision b.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-165. Unsaturated zone monitoring.

An owner or operator subject to sections 33.1-24-05-160 through 33.1-24-05-175 shall establish an unsaturated zone monitoring program to discharge the following responsibilities:

1. The owner or operator shall monitor the soil and soil-pore liquid to determine whether hazardous constituents migrate out of the treatment zone.
 - a. The department will specify the hazardous constituents to be monitored in the facility permit. The hazardous constituents to be monitored are those specified under subsection 2 of section 33.1-24-05-161.
 - b. The department may require monitoring for principal hazardous constituents in lieu of the constituents specified under subsection 2 of section 33.1-24-05-161. Principal hazardous constituents are hazardous constituents contained in the waste to be applied at the unit that are the most difficult to treat, considering the combined effects of degradation, transformation, and immobilization. The department will establish principal hazardous constituents if the department finds, based on waste analyses, treatment demonstrations, or other data that effective degradation, transformation, or immobilization of the principal hazardous constituents will assure treatment of at least equivalent levels for the other hazardous constituents in the wastes.

2. The owner or operator must install an unsaturated zone monitoring system that includes soil monitoring using soil cores, and soil-pore liquid monitoring using devices such as lysimeters. The unsaturated zone monitoring system must consist of a sufficient number of sampling points at appropriate locations and depths to yield samples that:

 - a. Represent the quality of background soil-pore liquid quality and the chemical makeup of soil that has not been affected by leakage from the treatment zone; and
 - b. Indicate the quality of soil-pore liquid in the chemical makeup of the soil below the treatment zone.
3. The owner or operator shall establish a background value for each hazardous constituent to be monitored under subsection 1. The permit will specify the background values for each constituent or specify the procedures to be used to calculate the background values.

 - a. Background soil values may be based on a one-time sampling at a background plot having characteristics similar to that of the treatment zone.
 - b. Background soil-pore liquid values must be based on at least quarterly sampling for one year at a background plot having characteristics similar to those of the treatment zone.
 - c. The owner or operator shall express all background values in a form necessary for the determination of statistically significant increases under subsection 6.
 - d. In taking samples used in the determination of all background values, the owner or operator shall use an unsaturated zone monitoring system that complies with subdivision a of subsection 2.
4. The owner or operator shall conduct soil monitoring and soil-pore liquid monitoring immediately below the treatment zone. The department will specify the frequency and timing of soil and soil-pore liquid monitoring in the facility permit after considering the frequency, timing, and rate of waste application and the soil permeability. The owner or operator shall express the results of the soil and soil-pore liquid monitoring in a form necessary for the determination of statistically significant increases under subsection 6.
5. The owner or operator shall use consistent sampling and analysis procedures that are designed to ensure sampling results that provide a reliable indication of soil-pore liquid quality and the chemical makeup in the soil below the treatment zone. At a minimum, the owner or operator shall implement procedures and techniques for:

 - a. Sample collection;
 - b. Sample preservation and shipment;
 - c. Analytical procedures; and
 - d. Chain of custody control.
6. The owner or operator shall determine whether there is a statistically significant change over background values for any hazardous constituent to be monitored under subsection 1 below the treatment zone each time the owner or operator conducts soil monitoring and soil-pore liquid monitoring under subsection 4.

 - a. In determining whether a statistically significant increase has occurred, the owner or operator shall compare the value of each constituent as determined under subsection 4 to the background value for that constituent according to the statistical procedures specified in the facility permit under this subsection.

b. The owner or operator shall determine whether there has been a statistically significant increase below the treatment zone within a reasonable time period after completion of sampling. The department will specify that time period in the facility permit after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of the soil and soil-pore liquid samples.

c. The owner or operator shall determine whether there is a statistically significant increase below the treatment zone using a statistical procedure that provides reasonable confidence that migration from the treatment zone will be identified. The department will specify a statistical procedure in the facility permit that the department finds:

(1) Is appropriate for the distribution of data used to establish background values; and

(2) Provides a reasonable balance between the probability of falsely identifying migration from the treatment zone and the probability of failing to identify real migration from the treatment zone.

7. If the owner or operator determines pursuant to subsection 6 that there is a statistically significant increase of hazardous constituents below the treatment zone, the owner or operator shall:

a. Notify the department of this finding in writing within seven days. The notification must indicate what constituents have shown statistically significant increases.

b. Within ninety days submit to the department an application for a permit modification to modify the operating practices at the facility in order to maximize the success of degradation, transformation, or immobilization processes in the treatment zone.

8. If the owner or operator determines pursuant to subsection 6 that there is a statistically significant increase of hazardous constituents below the treatment zone, the owner or operator may demonstrate that a source other than regulated units caused the increase or that the increase resulted from an error in sampling, analysis, or evaluation. While the owner or operator may make this demonstration in addition to, or in lieu of, submitting a permit modification application under subdivision b of subsection 7, the owner or operator is still required to submit a permit modification within the time specified in subdivision b of subsection 7 should the demonstration be unsuccessful. In making this demonstration the owner or operator shall:

a. Notify the department in writing within seven days of determining a statistically significant increase below the treatment zone that the owner or operator intends to make a determination under this subsection;

b. Within ninety days submit a report to the department demonstrating that a source other than the regulated units caused the increase or that the increase resulted in error in sampling, analysis, or evaluation;

c. Within ninety days submit to the department an application for permit modification to make any appropriate changes to the unsaturated zone monitoring program at the facility; and

d. Continue to monitor in accordance with the unsaturated zone monitoring program established under this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-166. Recordkeeping.

The owner or operator shall include hazardous waste application dates and rates in the operating record required under section 33.1-24-05-40.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-167. Closure and postclosure care.

1. During the closure period the owner or operator shall:

- a. Continue all operations (including pH control) necessary to maximize degradation, transformation, or immobilization of hazardous constituents within the treatment zone as required under subsection 1 of section 33.1-24-05-163, except to the extent such measures are inconsistent with subdivision h;
- b. Continue all operations in the treatment zone to minimize runoff of hazardous constituents as required under subsection 2 of section 33.1-24-05-163;
- c. Maintain the run-on control system required under subsection 3 of section 33.1-24-05-163;
- d. Maintain the runoff management system required under subsection 4 of section 33.1-24-05-163;
- e. Control wind dispersal of hazardous waste if required under subsection 6 of section 33.1-24-05-163;
- f. Continue to comply with any prohibitions or conditions concerning growth of food chain crops under section 33.1-24-05-164;
- g. Continue unsaturated zone monitoring in compliance with section 33.1-24-05-165, except that soil-pore liquid monitoring may be terminated one year after the last application of waste to the treatment zone if, during that year, the soil-pore liquid monitoring shows that no hazardous constituents are leaching from the treatment zone in the soil-pore water; and
- h. Establish a vegetative cover on the portion of the facility being closed at such time that the cover will not substantially impede degradation, transformation, or immobilization of hazardous constituents in the treatment zone. The vegetative cover must be capable of maintaining growth without extensive maintenance.

2. For the purpose of complying with section 33.1-24-05-64, when closure is completed the owner or operator may submit to the department certification by an independent qualified soil scientist, in lieu of a qualified professional engineer, that the facility has been closed in accordance with the specifications in the approved closure plan.

3. During the postclosure care period the owner or operator shall:

- a. Continue all operations (including pH control) necessary to enhance degradation and transformation and sustain immobilization of hazardous constituents in the treatment zone to the extent that such measures are consistent with other postclosure care activities;
- b. Maintain a vegetative cover over closed portions of the facility;

c. Maintain the run-on control system required under subsection 3 of section 33.1-24-05-163;

d. Maintain the runoff management system required under subsection 4 of section 33.1-24-05-163;

e. Control wind dispersal of hazardous waste if required under subsection 6 of section 33.1-24-05-163;

f. Continue to comply with any prohibitions or conditions concerning growth of food chain crops under section 33.1-24-05-164; and

g. Continue unsaturated zone monitoring in compliance with section 33.1-24-05-165, except that soil-pore liquid monitoring may be terminated one year after the last application of waste to the treatment zone if, during that year, the soil-pore liquid monitoring shows that no hazardous constituents are leaching from the treatment zone in the soil-pore water.

4. The owner or operator is not subject to regulation under subsection 3 or subdivision h of subsection 1 if the department finds that the level of hazardous constituents in the treatment zone soil does not exceed the background value of those constituents by an amount that is statistically significant when using the test specified in subdivision c. The owner or operator may submit such a demonstration to the department at any time during the closure or postclosure care periods. For purposes of this subsection:

a. The owner or operator shall establish background soil values and determine whether there is a statistically significant increase over those values for all hazardous constituents specified in the facility permit under subsection 2 of section 33.1-24-05-161:

(1) Background soil values may be based on a one-time sampling of the background plot having characteristics similar to those of the treatment zone; and

(2) The owner or operator shall express background values and values for hazardous constituents in the treatment zone in a form necessary for the determination of statistically significant increases under subdivision c;

b. In taking samples used in the determination of background and treatment zone values, the owner or operator shall take samples at a sufficient number of sampling points and at appropriate locations and depths to yield samples that represent the chemical makeup of soil that has not been affected by leakage from the treatment zone and the soil within the treatment zone, respectively; and

c. In determining whether a statistically significant increase has occurred, the owner or operator shall compare the value of each constituent in the treatment zone to the background value of that constituent using a statistical procedure that provides reasonable confidence that constituent presence in the treatment zone will be identified. The owner or operator shall use a statistical procedure that:

(1) Is appropriate for the distribution of the data used to establish background values; and

(2) Provides a reasonable balance between the probability of falsely identifying hazardous constituent presence in the treatment zone and the probability of failing to identify a real presence in the treatment zone.

5. During closure or postclosure care, or both, the owner or operator is not subject to regulation under sections 33.1-24-05-47 through 33.1-24-05-58 if the department finds that the owner or operator satisfies subsection 4 and if unsaturated zone monitoring under section

33.1-24-05-165 indicates that hazardous constituents have not migrated beyond the treatment zone during the active life of the land treatment unit.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-168. Special requirements for ignitable or reactive waste.

The owner or operator may not apply ignitable or reactive waste to the treatment zone unless the waste and the treatment zone meet all applicable requirements of sections 33.1-24-05-250 through 33.1-24-05-299; and:

1. The waste is immediately incorporated into the soil so that:
 - a. The resulting waste mixture or dissolution of material no longer meets the definition of ignitable or reactive waste under section 33.1-24-02-11 or 33.1-24-02-13; and
 - b. Subsection 2 of section 33.1-24-05-08 is complied with; or
2. The waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-169. Special requirements for incompatible wastes.

The owner or operator may not place incompatible wastes or incompatible wastes and materials in or on the same treatment zone unless subsection 2 of section 33.1-24-05-08 is complied with.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-170. Special requirements for hazardous wastes F020, F021, F022, F023, F026, and F027.

1. Hazardous wastes F020, F021, F022, F023, F026, and F027 must not be placed in a land treatment unit unless the owner or operator operates the facility in accordance with a management plan for these wastes that is approved by the department pursuant to the standards set out in this subsection, and in accord with all other applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819. The factors to be considered are:
 - a. The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;
 - b. The attenuative properties of underlying and surrounding soils or other materials;
 - c. The mobilizing properties of other materials codisposed with these wastes; and
 - d. The effectiveness of additional treatment, design, or monitoring techniques.
2. The department may determine that additional design, operating, and monitoring requirements are necessary for land treatment facilities managing hazardous wastes F020, F021, F022,

F023, F026, and F027 in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-174. [Reserved].

33.1-24-05-175. [Reserved].

33.1-24-05-176. Applicability of landfill requirements.

Sections 33.1-24-05-176 through 33.1-24-05-190 apply to owners and operators of facilities that dispose of hazardous waste in landfills, except as section 33.1-24-05-01 provides otherwise.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-177. Design and operating requirements.

1. Any landfill that is not covered by subsection 3 must have a liner system for all portions of the landfill (except for existing portions of such landfill). The liner system must have:

a. A liner that is designed, constructed, and installed to prevent any migration of wastes out of the landfill to the adjacent subsurface soil or ground water or surface water at any time during the active life (including the closure period) of the landfill. The liner must be constructed of materials that prevent wastes from passing into the liner during the active life of the facility. The liner must be:

(1) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

(2) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and

(3) Installed to cover all surrounding earth likely to be in contact with the waste or leachate; and

b. A leachate collection and removal system immediately above the liner that is designed, constructed, maintained, and operated to collect and remove leachate from the landfill. The department will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed one foot [.3048 meter]. The leachate collection and removal system must be:

(1) Constructed of materials that are:

(a) Chemically resistant to the waste managed in the landfill and the leachate expected to be generated; and

(b) Of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and by any equipment used at the landfill; and

(2) Designed and operated to function without clogging through the scheduled closure of the landfill.

2. The owner or operator will be exempted from the requirements of subsection 1 if the department finds, based on a demonstration by the owner or operator, that alternative design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents (see section 33.1-24-05-50) into the ground water or surface water at any future time. In deciding whether to grant an exemption, the department will consider:

a. The nature and quantity of the waste;

b. The proposed alternate design and operation;

c. The hydrogeologic setting of the facility, including the attenuative capacity and thickness of the liners and soils present between the landfill and ground water or surface water; and

d. All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to ground water or surface water.

3. The owner or operator of each new landfill unit on which construction commences after January 19, 1992, each lateral expansion of a landfill unit on which construction commences after July 29, 1992, and each replacement of an existing landfill unit that is to commence reuse after July 29, 1992, must install two or more liners and a leachate collection and removal system above and between such liners. "Construction commences" is as defined in section 33.1-24-01-04 under "existing facility".

a. Liner.

(1) The liner system must include:

(a) A top liner designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into such liner during the active life and postclosure care period; and

(b) A composite bottom liner, consisting of at least two components. The upper component must be designed and constructed of materials (for example, a geomembrane) to prevent the migration of hazardous constituents into this component during the active life and postclosure care period. The lower component must be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component must be constructed of at least three feet [91.44 centimeters] of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} centimeters per second.

(2) The liners must comply with paragraphs 1, 2, and 3 of subdivision a of subsection 1.

b. The leachate collection and removal system immediately above the top liner must be designed, constructed, operated, and maintained to collect and remove leachate from the landfill during the active life and postclosure care period. The department will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed thirty centimeters [1 foot]. The leachate collection and removal system must comply with paragraphs 3 and 4 of subdivision c.

c. The leachate collection and removal system between the liners, and immediately above the bottom composite liners in the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system must be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and postclosure care period. The requirements for a leak detection system in this subdivision are satisfied by installation of a system that is, at a minimum:

(1) Constructed with a bottom slope of one percent or more;

(2) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} centimeters per second or more and a thickness of twelve inches [30.5 centimeters] or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} square meters per second or more;

(3) Constructed of materials that are chemically resistant to the waste managed in the landfill and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the landfill;

(4) Designed and operated to minimize clogging during the active life and postclosure care period; and

(5) Constructed with sumps and liquid removal methods (for example, pumps) of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit must have its own sump or sumps. The design of each sump and removal system must provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

d. The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

e. The owner or operator of a leak detection system that is not located completely above the seasonal high-water table must demonstrate that the operation of the leak detection system will not be adversely affected by the presence of ground water.

4. The department may approve alternative design or operating practices to those specified in subsection 3 if the owner or operator demonstrates to the department that such design and operating practices, together with location characteristics:
 - a. Will prevent the migration of any hazardous constituent into the ground water or surface water at least as effectively as the liners and leachate collection and removal systems specified in subsection 3; and
 - b. Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.
5. The double-liner requirements set forth in subsection 3 may be waived by the department for any monofill, if:
 - a. The monofill contains only hazardous waste from foundry furnace emission controls or metal casting molding sand and such wastes do not contain constituents which would render the wastes hazardous for reasons other than the toxicity characteristics in section 33.1-24-02-14 with hazardous waste numbers D004 through D017; and
 - b. Monofill liner.
 - (1) Evidence of leaking.
 - (a) The monofill has at least one liner for which there is no evidence that such liner is leaking;
 - (b) The monofill is located more than one-quarter mile from an "underground source of drinking water" (as that term is defined in 40 CFR section 270.2); and
 - (c) The monofill is in compliance with generally acceptable ground water monitoring requirements for facilities with hazardous waste permits; or
 - (2) The owner or operator demonstrates that the monofill is located, designed, and operated so as to assure that there will be no migration of any hazardous constituent into ground water or surface water at any future time.
6. The owner or operator of any replacement landfill unit is exempt from subsection 3 if:
 - a. The existing unit was constructed in compliance with the design standards of this article; and
 - b. There is no reason to believe that the liner is not functioning as designed.
7. The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the landfill during peak discharge from at least a twenty-five-year storm.
8. The owner or operator shall design, construct, operate, and maintain a runoff management system to collect and control at least the water volume resulting from a twenty-four-hour, twenty-five-year storm.
9. Collection and holding facilities (for example, tanks or basins) associated with run-on and runoff control systems must be emptied or otherwise managed expeditiously after storms to maintain design capacity of this system.
10. If the landfill contains any particulate matter which may be subject to wind dispersal, the owner or operator shall cover or otherwise manage the landfill to control wind dispersal.

11. The department will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-178. Monitoring and inspection.

1. During construction or installation, the liners (except in the case of existing portions of landfills exempt from subsection 1 of section 33.1-24-05-177) and cover systems (for example, membranes, sheets, or coatings) must be inspected for uniformity, damage, and imperfections (for example, holes, cracks, thin spots, or foreign materials) immediately after construction or installation:

- a. Synthetic liners and covers must be inspected by a qualified professional (for example, a registered professional engineer) to ensure tight seams and joints and the absence of tears, punctures, or blisters; and
- b. Soil based and admixed liners and covers must be inspected by a qualified professional (for example, a registered professional engineer) for imperfections, including lenses, cracks, channels, root holes, or other structural nonuniformities that may cause an increase in the permeability of the liner or cover.

2. While a landfill is in operation, it must be inspected weekly and after storms to detect evidence of any of the following:

- a. Deterioration, malfunctions, or improper operation of run-on and runoff control systems;
- b. Proper functioning of wind dispersal control systems, where present; and
- c. The presence of leachate in and proper functioning of leachate collection and removal systems, where present.

3. Leak detection system.

- a. An owner or operator required to have a leak detection system under subsection 3 or 4 of section 33.1-24-05-177 must record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.
- b. After the final cover is installed, the amount of liquids removed from each leak detection system sump must be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps must be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps must be recorded at least semiannually. If at any time during the postclosure care period the pump operating level is exceeded at units on quarterly or semiannual recording schedules, the owner or operator must return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.
- c. "Pump operating level" is a liquid level proposed by the owner or operator and approved by the department based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-179. Surveying and recordkeeping.

The owner or operator of a landfill shall maintain the following items in the operating records required under section 33.1-24-05-40:

1. On a map, the exact location and dimensions, including depth, of each cell with respect to permanently surveyed benchmarks; and
2. The contents of each cell and the approximate location of each hazardous waste type within each cell.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-180. Closure and postclosure care.

1. At final closure of the landfill or upon closure of any cell, the owner or operator shall cover the landfill or cell with a final cover designed and constructed to:
 - a. Provide long-term minimization of migration of liquids through the closed landfill;
 - b. Function with minimum maintenance;
 - c. Promote drainage and minimize erosion or abrasion of the cover;
 - d. Accommodate settling and subsidence so that the cover's integrity is maintained; and
 - e. Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.
2. After final closure, the owner or operator shall comply with all postclosure requirements contained in sections 33.1-24-05-66 through 33.1-24-05-69, including maintenance and monitoring throughout the postclosure care period (specified in the permit under section 33.1-24-05-66). The owner or operator shall:
 - a. Maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events;
 - b. Continue to operate the leachate collection and removal system until leachate is no longer detected;
 - c. Maintain and monitor the leak detection system in accordance with paragraph 4 of subdivision c of subsection 3 of section 33.1-24-05-177, subdivision d of subsection 3 of section 33.1-24-05-177, and subsection 3 of section 33.1-24-05-178, and comply with all other applicable leak detection system requirements of sections 33.1-24-05-176 through 33.1-24-05-190;
 - d. Maintain and monitor the ground water monitoring system and comply with all other applicable requirements of sections 33.1-24-05-47 through 33.1-24-05-58;
 - e. Prevent run-on and runoff from eroding or otherwise damaging the final cover; and
 - f. Protect and maintain surveyed benchmarks used in complying with section 33.1-24-05-179.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-181. Special requirements for ignitable or reactive waste.

1. Except as provided in subsection 2 and in section 33.1-24-05-185, ignitable or reactive waste may not be placed in a landfill, unless the waste and landfill meet all applicable requirements of sections 33.1-24-05-250 through 33.1-24-05-299, and:
 - a. The resulting waste mixture or dissolution of material no longer meets the definition of ignitable or reactive waste under section 33.1-24-02-11 or 33.1-24-02-13; and
 - b. Subsection 2 of section 33.1-24-05-08 is complied with.
2. Except for prohibited wastes which remain subject to treatment standards in sections 33.1-24-05-280 through 33.1-24-05-289, ignitable wastes in containers may be landfilled without meeting the requirements of subsection 1, provided that the wastes are disposed of in such a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes must be disposed of in nonleaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; must be covered daily with soil or other noncombustible material to minimize the potential for ignition of the wastes; and may not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-182. Special requirements for incompatible wastes.

Incompatible wastes, or incompatible wastes and materials (see appendix III for examples of incompatible wastes and materials), may not be placed in the same landfill cell, unless subsection 2 of section 33.1-24-05-08 is complied with.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-183. Special requirements for bulk and containerized liquids.

1. The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited.
2. To demonstrate the absence or presence of free liquids in either a containerized or a bulk waste, the following test must be used: method 9095B (paint filter liquids test) as described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05.
3. Containers holding free liquids must not be placed in a landfill unless:
 - a. All free-standing liquid:
 - (1) Has been removed by decanting, or other methods;
 - (2) Has been mixed with sorbent or solidified so that freestanding liquid is no longer observed; or

(3) Has been otherwise eliminated;

b. The container is very small, such as an ampule;

c. The container is designed to hold free liquids for use other than storage, such as a battery or capacitor; or

d. The container is a lab pack as defined in section 33.1-24-05-185 and is disposed of in accordance with section 33.1-24-05-185.

4. Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are materials listed or described in subdivision a, materials that pass one of the tests in subdivision b, or materials that are determined by the department to be nonbiodegradable through the chapter 33.1-24-01 petition process.

a. Nonbiodegradable sorbents.

(1) Inorganic minerals, other inorganic materials, and elemental carbon (for example, aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; activated charcoal/activated carbon);

(2) High molecular weight synthetic polymers (for example, polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(3) Mixtures of these nonbiodegradable materials.

b. Test for nonbiodegradable sorbents.

(1) The sorbent material is determined to be nonbiodegradable under ASTM method G21-70 (1984a)-Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi;

(2) The sorbent material is determined to be nonbiodegradable under ASTM method G22-76 (1984b)-Standard Practice for Determining Resistance of Plastics to Bacteria; or

(3) The sorbent material is determined to be nonbiodegradable under Organization for Economic Cooperation and Development test 301B: [CO₂ Evolution (Modified Sturm Test)].

5. The placement of any liquid which is not a hazardous waste in a landfill is prohibited unless the owner or operator of such landfill demonstrates to the department, or the department determines that:

a. The only reasonably available alternative to the placement in such landfill is placement in a landfill or unlined surface impoundment, whether or not permitted or operating under interim status, which contains, or may reasonably be anticipated to contain, hazardous waste; and

- b. Placement in such owner or operator's landfill will not present a risk of contamination of any "underground source of drinking water" (as that term is defined in 40 CFR section 270.2).

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-184. Special requirements for containers.

Unless they are very small, such as an ampule, containers must be either:

1. At least ninety percent full when placed in the landfill; or
2. Crushed, shredded, or similarly reduced in volume to the maximum practical extent before burial in the landfill.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-185. Disposal of small containers of hazardous waste in overpacked drums (lab packs).

Small containers of hazardous waste in overpacked drums (lab packs) may be placed in a landfill if the following requirements are met:

1. Hazardous waste must be packaged in nonleaking inside containers. The inside containers must be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the contained waste. Inside containers must be tightly and securely sealed. The inside containers must be of the size and type specified in the department of transportation hazardous materials regulations [49 CFR, parts 173, 178, and 179], if those regulations specify particular inside container for the waste.
2. The inside containers must be overpacked in an open head department of transportation specification metal shipping container [49 CFR, parts 178 and 179] of no more than four hundred sixteen-liter [110-gallon] capacity and surrounded by, at a minimum, a sufficient quantity of sorbent material, determined to be nonbiodegradable in accordance with subsection 4 of section 33.1-24-05-183, to completely sorb all of the liquid contents of the inside containers. The metal outer container must be full after it has been packed with inside containers and sorbent material.
3. The sorbent material used must not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with subsection 2 of section 33.1-24-05-08.
4. Incompatible wastes, as defined in section 33.1-24-01-04, may not be placed in this same outside container.
5. Reactive wastes, other than cyanide-bearing or sulfide-bearing waste, as defined in subdivision e of subsection 1 of section 33.1-24-02-13, must be treated or rendered nonreactive prior to packaging in accordance with subsections 1 through 4. Cyanide-bearing and sulfide-bearing reactive waste may be packed in accordance with subsections 1 through 4 without first being treated or rendered nonreactive.
6. Such disposal is in compliance with the requirements of sections 33.1-24-05-250 through 33.1-24-05-299. Persons who incinerate lab packs according to the requirements in

subdivision a of subsection 3 of section 33.1-24-05-282 may use fiber drums in place of metal outer containers. Such fiber drums must meet the department of transportation specifications in 49 CFR 173.12 and be overpacked according to the requirements in subsection 2.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-186. Special requirements for hazardous wastes F020, F021, F022, F023, F026, and F027.

1. Hazardous wastes F020, F021, F022, F023, F026, and F027 may not be placed in a landfill unless the owner or operator operates the landfill in accordance with a management plan for these wastes that is approved by the department pursuant to the standards set out in this subsection and in accord with all other applicable requirements of sections 33.1-24-05-01 through 33.1-24-05-190, 33.1-24-05-300 through 33.1-24-05-524, 33.1-24-05-550 through 33.1-24-05-559, and 33.1-24-05-800 through 33.1-24-05-819. The factors to be considered are:
 - a. The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through the soil or to volatilize or escape into the atmosphere;
 - b. The attenuative properties of underlying and surrounding soils or other materials;
 - c. The mobilizing properties of other materials codisposed with these wastes; and
 - d. The effectiveness of additional treatment, design, or monitoring requirements.
2. The department may determine that additional design, operating, and monitoring requirements are necessary for landfills managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to ground water, surface water, or air so as to protect human health and the environment.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-187. Action leakage rate.

1. The department shall approve an action leakage rate for landfill units subject to subsection 3 or 4 of section 33.1-24-05-177. The action leakage rate is the maximum design flow rate that the leak detection system can remove without the fluid head on the bottom liner exceeding one foot [.3048 meter]. The action leakage rate must include an adequate safety margin to allow for uncertainties in the design (for example, slope, hydraulic conductivity, thickness of drainage material), construction, operation, and location of the leak detection system, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the leak detection system, and proposed response actions (for example, the action leakage rate must consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.).
2. To determine if the action leakage rate has been exceeded, the owner or operator must convert the weekly or monthly flow rate from the monitoring data obtained under subsection 3 of section 33.1-24-05-178, to an average daily flow rate (gallons per acre per day) for each sump. Unless the department approves a different calculation, the average daily flow rate for each sump must be calculated weekly during the active life and closure period, and monthly

during the postclosure care period when monthly monitoring is required under subsection 3 of section 33.1-24-05-178.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-188. Response actions.

1. The owner or operator of landfill units subject to subsection 3 or 4 of section 33.1-24-05-177 must have an approved response action plan before receipt of waste. The response action plan must set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in subsection 2.
2. If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator must:
 - a. Notify the department in writing of the exceedance within seven days of the determination;
 - b. Submit a preliminary written assessment to the department within fourteen days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;
 - c. Determine to the extent practicable the location, size, and cause of any leak;
 - d. Determine whether waste receipt should cease or be curtailed; whether any waste should be removed from the unit for inspection, repairs, or controls; and whether or not the unit should be closed;
 - e. Determine any other short-term and long-term actions to be taken to mitigate or stop any leaks; and
 - f. Within thirty days after the notification that the action leakage rate has been exceeded, submit to the department the results of the analyses specified in subdivisions c, d, and e; the results of actions taken; and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the department a report summarizing the results of any remedial actions taken and actions planned.
3. To make the leak or remediation determinations, or both, in subdivisions c, d, and e of subsection 2, the owner or operator must:
 - a. Assess and conduct the following:
 - (1) Assess the source of liquids and amounts of liquids by source;
 - (2) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquids; and
 - (3) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or
 - b. Document why such assessments are not needed.

33.1-24-05-199. [Reserved].

33.1-24-05-200. [Reserved].

33.1-24-05-201. Applicability to recyclable materials used in a manner constituting disposal.

1. Sections 33.1-24-05-201 through 33.1-24-05-209 apply to recyclable materials that are applied to or placed on the land:
 - a. Without mixing with any other substances; or
 - b. After mixing or combination with any other substances. These materials will be referred to throughout sections 33.1-24-05-201 through 33.1-24-05-209 as "materials used in a manner that constitutes disposal".
2. Products produced for the general public's use that are used in a manner that constitutes disposal and that contain recyclable materials are not presently subject to regulation if the recyclable materials have undergone a chemical reaction in the course of producing the products so as to become inseparable by physical means and if such products meet the applicable treatment standards in sections 33.1-24-05-280 through 33.1-24-05-289 (or applicable prohibition levels in section 33.1-24-05-272 or Resource Conservation and Recovery Act section 3004(d), where no treatment standards have been established) for each recyclable material (for example, hazardous waste) that they contain, and the recycler complies with subdivision f of subsection 2 of section 33.1-24-05-256.
3. Antiskid or deicing uses of slags, which are generated from high temperature metals recovery processing of hazardous waste K061, K062, and F006, in a manner constituting disposal are not covered by the exemption in subsection 2 and remain subject to regulation.
4. Fertilizers that contain recyclable materials are not subject to regulation provided that:
 - a. They are zinc fertilizers excluded from the definition of solid waste according to subdivision u of subsection 1 of section 33.1-24-02-04; or
 - b. They meet the applicable treatment standards in sections 33.1-24-05-280 through 33.1-24-05-289 for each hazardous waste they contain.

History: Effective January 1, 2019.

33.1-24-05-202. Standards applicable to generators and transporters of materials used in a manner that constitutes disposal.

Generators and transporters of materials that are used in a manner that constitutes disposal are subject to the applicable requirements of chapters 33.1-24-03 through 33.1-24-04 and the notification requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-203. Standards applicable to storers of materials that are to be used in a manner that constitutes disposal who are not the ultimate users.

Owners or operators of facilities that store recyclable materials that are to be used in a manner that constitutes disposal, but who are not the ultimate users of the material, are regulated under all applicable provisions of sections 33.1-24-05-01 through 33.1-24-05-143, sections 33.1-24-05-950 through 33.1-24-05-1149, and chapters 33.1-24-06 and 33.1-24-07 and the notification requirements.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-204. Standards applicable to users of materials that are used in a manner that constitutes disposal.

1. Owners or operators of facilities that use recyclable materials in a manner that constitutes disposal are regulated under all applicable provisions of sections 33.1-24-05-01 through 33.1-24-05-143, sections 33.1-24-05-160 through 33.1-24-05-190, sections 33.1-24-05-250 through 33.1-24-05-299, and chapters 33.1-24-06 and 33.1-24-07, and the notification requirements. (These requirements do not apply to products which contain these recyclable materials under the provisions of subsection 2 of section 33.1-24-05-201.)
2. The use of waste oil or used oil or other material, which is contaminated with dioxin or any other hazardous waste (other than a waste identified solely on the basis of ignitability), for dust suppression or road treatment is prohibited.

33.1-24-05-229. [Reserved].

33.1-24-05-230. Applicability and requirements for recyclable materials utilized for precious metal recovery.

1. Sections 33.1-24-05-230 through 33.1-24-05-234 apply to recyclable materials that are reclaimed to recover economically significant amounts of gold, silver, platinum, palladium, iridium, osmium, rhodium, ruthenium, or any combination of these.
2. Persons who generate, transport, or store recyclable materials that are regulated under sections 33.1-24-05-230 through 33.1-24-05-234 are subject to the following requirements:
 - a. Notification requirements;
 - b. Sections 33.1-24-03-04 through 33.1-24-03-07 (for generators), sections 33.1-24-04-04 and 33.1-24-04-05 (for transporters), and sections 33.1-24-05-38 and 33.1-24-05-39 (for persons who store); and
 - c. For precious metals exported to or imported from designated organization for economic cooperation and development member countries for recovery, sections 33.1-24-03-50 through 33.1-24-03-59 and subsection 1 of section 33.1-24-05-02. For precious metals exported to or imported from nonorganization for economic cooperation and development countries for recovery, sections 33.1-24-03-17 through 33.1-24-03-25 and section 33.1-24-03-30.
3. Persons who store recycled materials that are regulated under sections 33.1-24-05-230 through 33.1-24-05-234 must keep the following records to document that they are not accumulating these materials speculatively (as defined in subsection 3 of section 33.1-24-02-01):
 - a. Records showing the volume of these materials stored at the beginning of the calendar year;
 - b. The amount of these materials generated or received during the calendar year; and
 - c. The amount of materials remaining at the end of the calendar year.

4. Recyclable materials that are regulated under sections 33.1-24-05-230 through 33.1-24-05-234 that are accumulated speculatively (as defined in subsection 3 of section 33.1-24-02-01) are subject to all applicable provisions of chapters 33.1-24-03 through 33.1-24-07.

33.1-24-05-235. Applicability and requirements of spent lead-acid batteries being reclaimed.

1. For a facility that generates, collects, transports, stores, or regenerates lead-acid batteries for reclamation purposes, the facility may be exempt from certain hazardous waste management requirements. Use the following table to determine which requirements apply. Alternatively, a generator may choose to manage spent lead-acid batteries under the universal waste rules in sections 33.1-24-05-700 through 33.1-24-05-799.

<u>If the batteries:</u>	<u>And if you:</u>	<u>Then you:</u>	<u>And you:</u>
<u>(1) Will be reclaimed through regeneration (such as by electrolyte replacement).</u>		<u>Are exempt from chapters 33.1-24-03 (except for section 33.1-24-03-02), 33.1-24-04, 33.1-24-06, and 33.1-24-07 and sections 33.1-24-05-01 through 33.1-24-05-599 and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03.</u>	<u>Are subject to chapter 33.1-24-02 and section 33.1-24-03-02.</u>
<u>(2) Will be reclaimed other than through</u>	<u>Generate, collect, or transport, or any</u>	<u>Are exempt from chapters 33.1-24-03</u>	<u>Are subject to chapter 33.1-24-02 and</u>

<u>regeneration.</u>	<u>combination of the above, these batteries.</u>	<u>(except for section 33.1-24-03-02), 33.1-24-04, 33.1-24-06, and 33.1-24-07 and sections 33.1-24-05-01 through 33.1-24-05-249, 33.1-24-05-300 through 33.1-24-05-599, and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03.</u>	<u>section 33.1-24-03-02, and the applicable provisions of sections 33.1-24-05-250 through 33.1-24-05-299.</u>
<u>(3) Will be reclaimed other than through regeneration.</u>	<u>Store these batteries but are not the claimer.</u>	<u>Are exempt from chapters 33.1-24-03 (except for section 33.1-24-03-02), 33.1-24-04, 33.1-24-06, and 33.1-24-07 and sections 33.1-24-05-01 through 33.1-24-05-249, 33.1-24-05-300 through 33.1-24-05-599, and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03.</u>	<u>Are subject to chapter 33.1-24-02 and section 33.1-24-03-02, and the applicable provisions of sections 33.1-24-05-250 through 33.1-24-05-299.</u>
<u>(4) Will be reclaimed other than through regeneration.</u>	<u>Store these batteries before you reclaim them.</u>	<u>Must comply with subsection 2 of section 33.1-24-05-235 and, as appropriate, other regulatory provisions in subsection 2 of section 33.1-24-06-235.</u>	<u>Are subject to chapter 33.1-24-02 and section 33.1-24-03-02, and the applicable provisions of sections 33.1-24-05-250 through 33.1-24-05-299.</u>
<u>(5) Will be reclaimed other than through regeneration.</u>	<u>Do not store these batteries before you reclaim them.</u>	<u>Are exempt from chapters 33.1-24-03 (except for section 33.1-24-03-02), 33.1-24-04, 33.1-24-06, and 33.1-24-07 and</u>	<u>Are subject to chapter 33.1-24-02 and section 33.1-24-03-02, and the applicable provisions of sections 33.1-24-05-250</u>

		<u>sections 33.1-24-05-01 through 33.1-24-05-249, 33.1-24-05-300 through 33.1-24-05-599, and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03.</u>	<u>through 33.1-24-05-299.</u>
<u>(6) Will be reclaimed through regeneration or any other means.</u>	<u>Export these batteries for reclamation in a foreign country.</u>	<u>Are exempt from chapters 33.1-24-03 (except for section 33.1-24-03-02), 33.1-24-04, 33.1-24-06, and 33.1-24-07 and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03, and except for the applicable requirements in either: (1) Sections 33.1-24-03-50 through 33.1-24-03-59; or (2) Section 33.1-24-03-20 "Notification of Intent to Export", subdivisions a through d and f of subsection 1 and subsection 2 of section 33.1-24-03-23 "Annual Reports", and section 33.1-24-03-24 "Recordkeeping."</u>	<u>Are subject to chapter 33.1-24-02 and section 33.1-24-03-02, and either must comply with sections 33.1-24-03-50 through 33.1-24-03-59 (if shipping to one of the organization for economic cooperation and development countries specified in subdivision a of subsection 1 of section 33.1-24-03-25, or must: (a) Comply with the requirements applicable to a primary exporter in section 33.1-24-03-20, subdivisions a through d and f of subsection 1 and subsection 2 of section 33.1-24-03-23 and section 33.1-24-03-24; (b) Export these batteries only upon consent of the receiving country and in conformance with the environmental protection agency acknowledgment of consent as defined in sections</u>

<u>(7) Will be reclaimed through regeneration or any other means.</u>	<u>Transport these batteries in the United States to export them for reclamation in a foreign country.</u>	<u>Are exempt from chapters 33.1-24-04, 33.1-24-06, and 33.1-24-07 and sections 33.1-24-05-01 through 33.1-24-05-559 and 33.1-24-05-800 through 33.1-24-05-929, and the notification requirements of section 33.1-24-03-03.</u>	<u>33.1-24-03-17 through 33.1-24-03-25; and (c) Provide a copy of the environmental protection agency acknowledgment of consent for the shipment to the transporter transporting the shipment for export.</u> <u>Must comply with applicable requirements in sections 33.1-24-03-50 through 33.1-24-03-59 (if shipping to one of the organization for economic cooperation and development countries specified in subdivision a of subsection 1 of section 33.1-24-03-25, or must comply with the following: (a) May not accept a shipment if the shipment does not conform to the environmental protection agency acknowledgment of consent; (b) Must ensure that a copy of the environmental protection agency acknowledgment of consent accompanies the shipment; and (c) Must ensure that the shipment is delivered to the facility designated by the person initiating the shipment.</u>

2. For a facility that stores spent lead-acid batteries before reclamation, but not through regeneration, the facility is subject to the following requirements:

a. Notification under section 33.1-24-03-03.

b. All applicable provisions in sections 33.1-24-05-01 through 33.1-24-05-143, and sections 33.1-24-05-950 through 33.1-24-05-1149, except sections 33.1-24-05-04, 33.1-24-05-38, and 33.1-24-05-39.

c. All applicable regulations in chapters 33.1-24-06 and 33.1-24-07.

History: Effective January 1, 2019.

33.1-24-05-250. Purpose, scope, and applicability to land disposal restrictions.

1. Sections 33.1-24-05-250 through 33.1-24-05-299 identify hazardous wastes that are restricted from land disposal and defines those limited circumstances under which an otherwise prohibited waste may continue to be land disposed.
2. Except as specifically provided otherwise in sections 33.1-24-05-250 through 33.1-24-05-299 or chapter 33.1-24-02, the requirements of sections 33.1-24-05-250 through 33.1-24-05-299 apply to persons who generate or transport hazardous waste and owners and operators of hazardous waste treatment, storage, and disposal facilities.
3. Restricted wastes may continue to be land disposed as follows:
 - a. Where persons have been granted an extension from the effective date of a prohibition under sections 33.1-24-05-266 through 33.1-24-05-279 or pursuant to section 33.1-24-05-254, with respect to those wastes covered by the extension;
 - b. Where persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. Wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under sections 33.1-24-05-250 through 33.1-24-05-299, or 40 CFR part 148, are not prohibited if the wastes:
 - (1) Are disposed into a nonhazardous or hazardous injection well as defined in 40 CFR 144.6(a); and
 - (2) Do not exhibit any prohibited characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14 at the point of injection; or
 - d. Wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under sections 33.1-24-05-250 through 33.1-24-05-299, are not prohibited if the wastes meet any of the following criteria, unless the wastes are subject to a specified method of treatment other than deactivation to remove the hazardous characteristic in section 33.1-24-05-280, or are D003 reactive cyanide:
 - (1) The wastes are managed in a treatment system which subsequently discharges to waters of the United States pursuant to a permit issued under section 402 of the Clean Water Act;

- (2) The wastes are treated for purposes of the pretreatment requirements of section 307 of the Clean Water Act; or
 - (3) The wastes are managed in a zero discharge system engaged in Clean Water Act-equivalent treatment as defined in subsection 1 of section 33.1-24-05-277; and
 - (4) The wastes no longer exhibit a prohibited characteristic at the point of land disposal (for example, placement in a surface impoundment).
4. The requirements of sections 33.1-24-05-250 through 33.1-24-05-299 do not affect the availability of a waiver under section 121(d)(4) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980.
5. The following hazardous wastes are not subject to any provision of sections 33.1-24-05-250 through 33.1-24-05-299:
- a. Waste generated by small quantity generators of less than one hundred kilograms of nonacute hazardous waste or less than one kilogram of acute hazardous waste per month, as defined in section 33.1-24-02-05.
 - b. Waste pesticides that a farmer disposes of pursuant to section 33.1-24-03-40.
 - c. Wastes identified or listed as hazardous after November 8, 1984, for which the department has not promulgated land disposal prohibitions or treatment standards.
 - d. De minimis losses of characteristic wastes to wastewaters are not considered to be prohibited wastes and are defined as losses from normal material handling operations (for example, spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks, or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; rinsate from empty containers or from containers that are rendered empty by that rinsing; and laboratory wastes not exceeding one percent of the total flow of wastewater into the facility's headworks on an annual basis, or with a combined annualized average concentration not exceeding one part per million in the headworks of the facility's wastewater treatment or pretreatment facility.
6. Universal waste handlers and universal waste transporters, as defined in section 33.1-24-01-04, are exempt from sections 33.1-24-05-256 and 33.1-24-05-290 for the wastes listed below. These handlers are subject to regulation under sections 33.1-24-05-700 through 33.1-24-05-799.
- a. Batteries as described in section 33.1-24-05-702;
 - b. Pesticides as described in section 33.1-24-05-703;
 - c. Mercury-containing equipment as described in section 33.1-24-05-704; and
 - d. Lamps as described in section 33.1-24-05-705.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-251. Definitions applicable to sections 33.1-24-05-250 through 33.1-24-05-299.

When used in sections 33.1-24-05-250 through 33.1-24-05-299, the following terms have the meanings given below:

1. "Debris" means solid material exceeding a sixty-millimeter particle size that is intended for disposal and that is a manufactured object, plant or animal matter, or natural geologic material. However, the following materials are not debris: any material for which a specific treatment standard is provided in sections 33.1-24-05-280 through 33.1-24-05-289, namely lead-acid batteries, cadmium batteries, and radioactive lead solids; process residuals such as smelter slag and residues from the treatment of waste, wastewater, sludges, or air emission residues; and intact containers of hazardous waste that are not ruptured and that retain at least seventy-five percent of their original volume. A mixture of debris that has not been treated to the standards provided by section 33.1-24-05-285 and other material is subject to regulation as debris if the mixture is comprised primarily of debris, by volume, based on visual inspection.
2. "Halogenated organic compounds or HOCs" mean those compounds having a carbon-halogen bond.
3. "Hazardous constituent or constituents" means those constituents listed in appendix V to chapter 33.1-24-02.
4. "Hazardous debris" means debris that contains a hazardous waste listed in sections 33.1-24-02-15 through 33.1-24-02-19, or that exhibits a characteristic of hazardous waste identified in sections 33.1-24-02-10 through 33.1-24-02-14. Any deliberate mixing of prohibited hazardous waste with debris that changes its treatment classification (for example, from waste to hazardous debris) is not allowed under the dilution prohibition in section 33.1-24-05-252.
5. "Inorganic metal-bearing waste" is a waste for which the environmental protection agency has established treatment standards for metal hazardous constituents, and which does not otherwise contain significant organic or cyanide content as described in subdivision a of subsection 3 of section 33.1-24-05-252, and is specifically listed in appendix XXIX of chapter 33.1-24-05.
6. "Land disposal" means placement in or on the land, except in a corrective action management unit or staging pile, and includes placement in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, salt bed formation, underground mine or cave, or placement in a concrete vault, or bunker intended for disposal purposes.
7. "Nonwastewaters" are wastes that do not meet the criteria for wastewaters in subsection 11.
8. "Polychlorinated biphenyls or PCBs" are halogenated organic compounds defined in accordance with 40 CFR 761.3.
9. "Soil" means unconsolidated earth material composing the superficial geologic strata (material overlying bedrock), consisting of clay, silt, sand, or gravel size particles as classified by the United States natural resources conservation service, or a mixture of such materials with liquids, sludges, or solids which is inseparable by simple mechanical removal processes and is made up primarily of soil by volume based on visual inspection. Any deliberate mixing of prohibited hazardous waste with soil that changes its treatment classification (for example, from waste to contaminated soil) is not allowed under the dilution prohibition in section 33.1-24-05-252.
10. "Underlying hazardous constituent" means any constituent listed in section 33.1-24-05-288, table universal treatment standards, except fluoride, selenium, sulfides, vanadium, and zinc, which can reasonably be expected to be present at the point of generation of the hazardous

waste, at a concentration above the constituent-specific universal treatment standards treatment standard.

11. "Wastewaters" are wastes that contain less than one percent by weight total organic carbon and less than one percent by weight total suspended solids.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-252. Dilution prohibited as a substitute for treatment.

1. Except as provided in subsection 2, no generator, transporter, handler, or owner or operator of a treatment, storage, or disposal facility shall in any way dilute a restricted waste or the residual from treatment of a restricted waste as a substitute for adequate treatment to achieve compliance with sections 33.1-24-05-280 through 33.1-24-05-289, to circumvent the effective date of a prohibition in sections 33.1-24-05-266 through 33.1-24-05-279, to otherwise avoid a prohibition in sections 33.1-24-05-266 through 33.1-24-05-279, or to circumvent a land disposal prohibition imposed by Resource Conservation and Recovery Act section 3004.
2. Dilution of wastes that are hazardous only because they exhibit a characteristic in treatment systems which include land-based units which treat wastes subsequently discharged to a water of the United States pursuant to a permit issued under section 402 of the Clean Water Act, or which treat wastes in a Clean Water Act-equivalent treatment system, or which treat wastes for the purposes of pretreatment requirements under section 307 of the Clean Water Act is not impermissible dilution for purposes of this section unless a method other than deactivation to remove the hazardous characteristic has been specified in section 33.1-24-05-280 as the treatment standard, or unless the waste is a D003 reactive cyanide wastewater or nonwastewater.
3. Combustion of the hazardous waste codes listed in appendix XXIX is prohibited, unless the waste, at the point of generation, or after any bona fide treatment such as cyanide destruction prior to combustion, can be demonstrated to comply with one or more of the following criteria, unless otherwise specifically prohibited from combustion:
 - a. The waste contains hazardous organic constituents or cyanide at levels exceeding the constituent-specific treatment standard specified in section 33.1-24-05-288;
 - b. The waste consists of organic, debris-like materials (for example, wood, paper, plastic, or cloth) contaminated with an inorganic metal-bearing hazardous waste;
 - c. The waste, at point of generation, has reasonable heating value such as greater than or equal to five thousand British thermal units per pound;
 - d. The waste is cogenerated with wastes for which combustion is a required method of treatment;
 - e. The waste is subject to requirements necessitating reduction of organics, including biological agents; or
 - f. The waste contains greater than one percent total organic carbon.
4. It is a form of impermissible dilution, and therefore prohibited, to add iron filings or other metallic forms of iron to lead-containing hazardous wastes in order to achieve any land disposal restriction treatment standard for lead. Lead-containing wastes include D008 wastes (wastes exhibiting a characteristic due to the presence of lead), all characteristic wastes containing lead as an underlying hazardous constituent, listed wastes containing lead as a

regulated constituent, and hazardous media containing any of the aforementioned lead-containing wastes.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-253. Treatment surface impoundment exemption.

1. Wastes which are otherwise prohibited from land disposal under sections 33.1-24-05-250 through 33.1-24-05-299 may be treated in a surface impoundment or series of impoundments provided that:

a. Treatment of such wastes occurs in the impoundments.

b. The following conditions are met:

(1) Sampling and testing. For wastes with treatment standards in sections 33.1-24-05-280 through 33.1-24-05-289 and prohibition levels in sections 33.1-24-05-266 through 33.1-24-05-279, or both, or Resource Conservation and Recovery Act section 3004(d), the residues from treatment are analyzed, as specified in section 33.1-24-05-256 or 33.1-24-05-272, to determine if the wastes meet the applicable treatment standards or where no treatment standards have been established for the waste, the applicable prohibition levels. The sampling method, specified in the waste analysis plan under section 33.1-24-05-04, must be designed such that representative samples of the sludge and the supernatant are tested separately rather than mixed to form homogeneous samples.

(2) Removal. The following treatment residues (including any liquid waste) must be removed at least annually: residues which do not meet the treatment standards promulgated under sections 33.1-24-05-280 through 33.1-24-05-289; residues which do not meet the prohibition levels established under sections 33.1-24-05-266 through 33.1-24-05-279 or imposed by statute (where no treatment standards have been established); residues which are from the treatment of wastes prohibited from land disposal under sections 33.1-24-05-266 through 33.1-24-05-279 (where no treatment standards have been established and no prohibition levels apply); or residues from managing listed wastes which are not delisted under section 33.1-24-01-08. If the volume of liquid flowing through the impoundment or series of impoundments annually is greater than the volume of the impoundment or impoundments, this flowthrough constitutes removal of the supernatant for the purpose of this requirement.

(3) Subsequent management. Treatment residues may not be placed in any other surface impoundment for subsequent management.

(4) Recordkeeping. Sampling and testing and recordkeeping provisions of section 33.1-24-05-04 apply.

c. The impoundment meets the design requirements of subsection 3 of section 33.1-24-05-119, regardless the unit may not be new, expanded, or a replacement, and be in compliance with applicable ground water monitoring requirements of sections 33.1-24-05-47 through 33.1-24-05-58 unless:

(1) Exempted pursuant to subsection 4 or 5 of section 33.1-24-05-119;

(2) Upon application by the owner or operator, the department, after notice and an opportunity to comment, has granted a waiver of the requirements on the basis that the surface impoundment:

(a) Has at least one liner, for which there is no evidence that such liner is leaking;

(b) Is located more than one-quarter mile [402.3 meters] from an underground source of drinking water; and

(c) Is in compliance with generally applicable ground water monitoring requirements for facilities with permits; or

(3) Upon application by the owner or operator, the department, after notice and an opportunity to comment, has granted a modification to the requirements on the basis of a demonstration that the surface impoundment is located, designed, and operated so as to assure that there will be no migration of any hazardous constituent into ground water or surface water at any future time.

d. The owner or operator submits to the department a written certification that the requirements of subdivision c of subsection 1 have been met. The following certification is required:

I certify under penalty of law that the requirements of subdivision c of subsection 1 of section 33.1-24-05-253 have been met for all surface impoundments being used to treat restricted wastes. I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

2. Evaporation of hazardous constituents as the principal means of treatment is not considered to be treatment for purposes of an exemption under this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-254. Procedures for case-by-case extensions to an effective date.

1. Any person who generates, treats, stores, or disposes of a hazardous waste may submit an application to the administrator for an extension to the effective date of any applicable restriction established under sections 33.1-24-05-266 through 33.1-24-05-279. The applicant shall demonstrate the following:

a. The applicant has made a good-faith effort to locate and contract with treatment, recovery, or disposal facilities nationwide to manage the applicant's waste in accordance with the effective date of the applicable restrictions established under sections 33.1-24-05-266 through 33.1-24-05-279;

b. The applicant has entered into a binding contractual commitment to construct or otherwise provide alternative treatment, recovery, (for example, recycling), or disposal capacity that meets the treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289 or, where treatment standards have not been specified, such treatment, recovery, or disposal capacity is protective of human health and the environment;

c. Due to circumstances beyond the applicant's control, such alternative capacity cannot reasonably be made available by the applicable effective date. This demonstration may include a showing that the technical and practical difficulties associated with providing the

alternative capacity will result in the capacity not being available by the applicable effective date;

- d. The capacity being constructed or otherwise provided by the applicant will be sufficient to manage the entire quantity of waste that is the subject of the application;
- e. The applicant provides a detailed schedule for obtaining required operating and construction permits or an outline of how and when alternative capacity will be available;
- f. The applicant has arranged for adequate capacity to manage the applicant's waste during an extension and has documented in the application the location of all sites at which the waste will be managed; and
- g. Any waste managed in a surface impoundment or landfill during the extension period will meet the requirements of subdivision b of subsection 8.

2. An authorized representative signing an application described under subsection 1 shall make the following certification: I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

3. After receiving an application for an extension, the administrator may request any additional information which the administrator deems as necessary to evaluate the application.

4. An extension will apply only to the waste generated at the individual facility covered by the application and will not apply to restricted waste from any other facility.

5. On the basis of the information referred to in subsection 1, after notice and opportunity for comment, and after consultation with appropriate state agencies in all affected states, the administrator may grant an extension of up to one year from the effective date. The administrator may renew this extension for up to one additional year upon the request of the applicant if the demonstration required in subsection 1 can still be made. In no event will an extension extend beyond twenty-four months from the applicable effective date specified in sections 33.1-24-05-266 through 33.1-24-05-279. The length of any extension authorized will be determined by the administrator based on the time required to construct or obtain the type of capacity needed by the applicant as described in the completion schedule discussed in subdivision e of subsection 1. The administrator will give public notice of the intent to approve or deny a petition and provide an opportunity for public comment. The final decision on a petition will be published in the federal register.

6. Any person granted an extension under this section shall immediately notify the administrator as soon as that person has knowledge of any change in the conditions certified to in the application.

7. Any person granted an extension under this section shall submit written progress reports at intervals designated by the administrator. Such reports must describe the overall progress made toward constructing or otherwise providing alternative treatment, recovery, or disposal capacity; must identify any event which may cause or has caused a delay in the development of the capacity; and must summarize the steps taken to mitigate the delay. The administrator can revoke an extension at any time if the applicant does not demonstrate a good-faith effort to meet the schedule for completion, if the environmental protection agency denies or revokes any required permit, if conditions certified in the application change, or for any violation of this article.

8. When the administrator establishes an extension to an effective date under this section, during the period for which such extension is in effect:

a. The storage restrictions under subsection 1 of section 33.1-24-05-290 do not apply; and

b. Such hazardous waste may be disposed in a landfill or surface impoundment only if such unit is in compliance with the technical requirements of the following provisions regardless of whether such unit is existing, new, or a replacement or lateral expansion.

(1) The landfill, if in interim status, is in compliance with the applicable requirements of subsection 5 of section 33.1-24-06-16;

(2) The landfill, if permitted, is in compliance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58 and subsections 3, 4, and 5 of section 33.1-24-05-177;

(3) The surface impoundment, if in interim status, is in compliance with the applicable requirements of subsection 5 of section 33.1-24-06-16, and Resource Conservation and Recovery Act section 3005(j)(1);

(4) The surface impoundment, if permitted, is in compliance with the requirements of sections 33.1-24-05-47 through 33.1-24-05-58 and subsections 3, 4, and 5 of section 33.1-24-05-119;

(5) The surface impoundment, if newly subject to Resource Conservation and Recovery Act section 3005(j)(1) due to the promulgation of additional listings or characteristics for the identification of hazardous waste, is in compliance with the requirements of subsection 5 of section 33.1-24-06-16 (subpart F of 40 CFR part 265) within twelve months after the promulgation of additional listings or characteristics of hazardous waste, and with the requirements of subsection 5 of section 33.1-24-06-16 (40 CFR section 265.221 (a), (c), and (d)) within forty-eight months after the promulgation of additional listings or characteristics of hazardous waste. If a national capacity variance is granted, during the period the variance is in effect, the surface impoundment, if newly subject to Resource Conservation and Recovery Act section 3005(j)(1) due to the promulgation of additional listings or characteristics of hazardous waste, is in compliance with the requirements of subsection 5 of section 33.1-24-06-16 (subpart F of 40 CFR part 265) within twelve months after the promulgation of additional listings or characteristics of hazardous waste, and with the requirements of subsection 5 of section 33.1-24-06-16 (40 CFR section 265.221 (a), (c), and (d)) within forty-eight months after the promulgation of additional listings or characteristics of hazardous waste; or

(6) The landfill, if disposing of containerized liquid hazardous wastes containing polychlorinated biphenyls of concentrations greater than or equal to fifty parts per million, but less than five hundred parts per million, is also in compliance with the requirements of 40 CFR 761.75 and this article.

9. Pending a decision on an application, the applicant is required to comply with all restrictions on land disposal under sections 33.1-24-05-250 through 33.1-24-05-299 once the effective date for the waste has been reached.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-255. Petitions to allow land disposal of a waste prohibited under sections 33.1-24-05-266 through 33.1-24-05-279.

1. Any person seeking an exemption from a prohibition under sections 33.1-24-05-266 through 33.1-24-05-279 for the disposal of a restricted hazardous waste in a particular unit or units shall submit a petition to the administrator demonstrating, to a reasonable degree of certainty, that there will be no migration of hazardous constituents from the disposal unit or injection zone for as long as the wastes remain hazardous. The demonstration must include the following components:

- a. An identification of the specific waste and the specific unit for which the demonstration will be made;
- b. A waste analysis to describe fully the chemical and physical characteristics of the subject waste;
- c. A comprehensive characterization of the disposal unit site, including an analysis of background air, soil, and water quality;
- d. A monitoring plan that detects migration at the earliest practicable time; and
- e. Sufficient information to assure the administrator that the owner or operator of a land disposal unit receiving restricted wastes will comply with other applicable federal, state, and local laws.

2. The demonstration referred to in subsection 1 must meet the following criteria:

- a. All waste and environmental sampling, test, and analysis data must be accurate and reproducible to the extent that state of the art techniques allow;
- b. All sampling, testing, and estimation techniques for chemical and physical properties of the waste and all environmental parameters must have been approved by the administrator;
- c. Simulation models must be calibrated for the specific waste and site conditions, and verified for accuracy by comparison with actual measurements;
- d. A quality assurance and quality control plan that addresses all aspects of the demonstration must be approved by the administrator; and
- e. An analysis must be performed to identify and quantify any aspects of the demonstration that contribute significantly to uncertainty. This analysis must include an evaluation of the consequences of predictable future events, including earthquakes, floods, severe storm events, droughts, or other natural phenomena.

3. Each petition referred to in subsection 1 must include the following:

- a. A monitoring plan that describes the monitoring program installed at or around the unit to verify continued compliance with the conditions of the variance. This monitoring plan must provide information on the monitoring of the unit or the environment around the unit, or both. The following specific information must be included in the plan:
 - (1) The media monitored in the cases where monitoring of the environment around the unit is required;
 - (2) The type of monitoring conducted at the unit, in the cases where monitoring of the unit is required;

- (3) The location of the monitoring station;
- (4) The monitoring interval (frequency of monitoring at each station);
- (5) The specific hazardous constituents to be monitored;
- (6) The implementation schedule for the monitoring program;
- (7) The equipment used at the monitoring station;
- (8) The sampling and analytical techniques employed; and
- (9) The data recording and reporting procedures.

b. Where applicable, the monitoring program described in subdivision a must be in place for a period of time specified by the administrator, as part of the administrator's approval of the petition, prior to receipt of prohibited waste at the unit.

c. The monitoring data collected according to the monitoring plan specified under subdivision a must be sent to the administrator according to a format and schedule specified and approved in the monitoring plan.

d. A copy of the monitoring data collected under the monitoring plan specified under subdivision a must be kept onsite at the facility in the operating record.

e. The monitoring program specified under subdivision a meets the following criteria:

(1) All sampling, testing, and analytical data must be approved by the administrator and must provide data that is accurate and reproducible.

(2) All estimation and monitoring techniques must be approved by the administrator.

(3) A quality assurance and quality control plan addressing all aspects of the monitoring program must be provided to and approved by the administrator.

4. Each petition must be submitted to the administrator.

5. After a petition has been approved, the owner or operator must report any changes in conditions at the unit or the environment around the unit, or both, that significantly depart from the conditions described in the variance and affect the potential for migration of hazardous constituents from the units as follows:

a. If the owner or operator plans to make changes to the unit design, construction, or operation, such a change must be proposed in writing and the owner or operator must submit a demonstration to the administrator at least thirty days prior to making the change. The administrator will determine whether the proposed change invalidates the terms of the petition and will determine the appropriate response. Any change must be approved by the administrator prior to being made.

b. If the owner or operator discovers that a condition at the site which was modeled or predicted in the petition does not occur as predicted, this change must be reported, in writing, to the administrator within ten days of discovering the change. The administrator will determine whether the reported change from the terms of the petition requires further action which may include termination of waste acceptance and revocation of the petition, petition modifications, or other responses.

6. If the owner or operator determines that there is migration of hazardous constituents from the unit, the owner or operator must:

- a. Immediately suspend receipt of prohibited waste at the unit; and
 - b. Notify the administrator in writing, within ten days of the determination that a release has occurred.
 - c. Following receipt of the notification the administrator will determine, within sixty days of receiving notification, whether the owner or operator can continue to receive prohibited waste in the unit and whether the variance is to be revoked. The administrator shall also determine whether further examination of any migration is warranted under applicable provisions of chapter 33.1-24-05.
7. Each petition must include the following statement signed by the petitioner or an authorized representative: I certify under penalty of law that I have personally examined and am familiar with the information submitted in this petition and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.
 8. After receiving a petition, the administrator may request any additional information that reasonably may be required to evaluate the demonstration.
 9. If approved, the petition will apply to land disposal of the specific restricted waste at the individual disposal unit described in the demonstration and will not apply to any other restricted waste at that disposal unit, or to that specific restricted waste at any other disposal unit.
 10. The administrator will give public notice in the federal register of the intent to approve or deny a petition and provide an opportunity for public comment. The final decision on a petition will be published in the federal register.
 11. The term of a petition granted under this section may be no longer than the term of the hazardous waste permit if the disposal unit is operating under a hazardous waste permit, or up to a maximum of five years from the date of approval provided under subsection 7 if the unit is operating under interim status. In either case, the term of the granted petition expires upon the termination or denial of a hazardous waste permit, or upon the termination of interim status or when the volume limit of waste to be land disposed during the term of petition is reached.
 12. Prior to the administrator's decision, the applicant is required to comply with all restrictions on land disposal under sections 33.1-24-05-250 through 33.1-24-05-299 once the effective date for the waste has been reached.
 13. The petition granted by the administrator does not relieve the petitioner of the petitioner's responsibility in the management of hazardous waste under chapters 33.1-24-01 through 33.1-24-07.
 14. Liquid hazardous wastes containing polychlorinated biphenyls of concentrations greater than or equal to five hundred parts per million are not eligible for an exemption under this section.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-256. Testing, tracking, and recordkeeping requirements for generators, treaters, and disposal facilities.

1. Requirements for generators:

a. A generator of hazardous waste must determine if the waste has to be treated before it can be land disposed. This is done by determining if the hazardous waste meets the treatment standards in section 33.1-24-05-280, 33.1-24-05-285, or 33.1-24-05-289. This determination can be made concurrently with the hazardous waste determination required in section 33.1-24-03-02, in either of two ways, testing the waste or using knowledge of the waste. If the generator tests the waste, testing would normally determine the total concentration of hazardous constituents, or the concentration of hazardous constituents in an extract of the waste obtained using test method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as referenced in section 33.1-24-01-05, depending on whether the treatment standard for the waste is expressed as a total concentration or concentration of hazardous constituent in the waste's extract. (Alternatively, the generator must send the waste to a hazardous waste permitted treatment facility, where the waste treatment facility must comply with the requirements of section 33.1-24-05-04 and subsection 2.) In addition, some hazardous wastes must be treated by particular treatment methods before they can be land disposed and some soils are contaminated by such hazardous wastes. These treatment standards are also found in section 33.1-24-05-280 and are described in detail in section 33.1-24-05-282, table 1. These wastes, and soils contaminated with such wastes, do not need to be tested (however, if they are in a waste mixture, other wastes with concentration level treatment standards would have to be tested). If a generator determines they are managing a waste or soil contaminated with a waste, that displays a hazardous characteristic of ignitability, corrosivity, reactivity, or toxicity, they must comply with the special requirements of section 33.1-24-05-258 in addition to any applicable requirements in this section.

b. If the waste or contaminated soil does not meet the treatment standards, or if the generator chooses not to make the determination of whether the generator's waste must be treated, with the initial shipment of waste to each treatment or storage facility, the generator must send a one-time written notice to each treatment or storage facility receiving the waste and place a copy in the file. The notice must include the information in column "subdivision b" of the generator paperwork requirements table in subdivision d. (Alternatively, if the generator chooses not to make the determination of whether the waste must be treated, the notification must include the hazardous waste numbers and manifest number of the first shipment and must state "This hazardous waste may or may not be subject to the land disposal restrictions treatment standards. The treatment facility must make the determination".) No further notification is necessary until such time that the waste or facility change, in which case a new notification must be sent and a copy placed in the generator's file.

(1) For contaminated soil, the following certification statement should be included, signed by an authorized representative:

I certify under penalty of law that I personally have examined this contaminated soil and it [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and requires treatment to meet the soil treatment standards as provided by subsection 3 of section 33.1-24-05-289.

(2) [Reserved]

c. If the waste or contaminated soil meets the treatment standard at the original point of generation:

(1) With the initial shipment of waste to each treatment, storage, or disposal facility, the generator must send a one-time written notice to each treatment, storage, or disposal facility receiving the waste and place a copy in the file. The notice must include the information indicated in column "subdivision c" of the generator paperwork requirements table in subdivision d of subsection 1 and the following certification statement, signed by an authorized representative:

I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289. I believe that the information I submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment.

(2) For contaminated soil, with the initial shipment of wastes to each treatment, storage, or disposal facility, the generator must send a one-time written notice to each facility receiving the waste and place a copy in the file. The notice must include the information in column "subdivision c" of the generator paperwork requirements table in subdivision d of subsection 1.

(3) If the waste changes, the generator must send a new notice and certification to the receiving facility and place a copy in its files. Generators of hazardous debris excluded from the definition of hazardous waste under subsection 5 of section 33.1-24-02-03 are not subject to these requirements.

d. For reporting, tracking, and recordkeeping when exceptions allow certain wastes or contaminated soil that do not meet the treatment standards to be land disposed there are certain exemptions from the requirement that hazardous wastes or contaminated soil meet treatment standards before they can be land disposed. These include case-by-case extensions under section 33.1-24-05-254, disposal in a no-migration unit under section 33.1-24-05-255, or a national capacity variance or case-by-case capacity variance under sections 33.1-24-05-266 through 33.1-24-05-279. If a generator's waste is so exempt, then with the initial shipment of waste, the generator must send a one-time written notice to each land disposal facility receiving the waste. The notice must include the information indicated in column "subdivision d" of the generator paperwork requirements table. If the waste changes, the generator must send a new notice to the receiving facility and place a copy in its files.

Generator Paperwork Requirements Table

Required Information*	Subdivision b	Subdivision c	Subdivision d	Subdivision i
1. <u>Environmental protection agency hazardous waste numbers and manifest number of first shipment.</u>	√	√	√	√
2. <u>Statement: This waste is not prohibited from land disposal.</u>			√	
3. <u>The waste is subject to the land disposal restrictions. The constituents of concern for F001-F005, and F039, and underlying hazardous constituents in characteristic wastes, unless the waste</u>	√	√		

Generator Paperwork Requirements Table

<u>Required Information*</u>	<u>Subdivision b</u>	<u>Subdivision c</u>	<u>Subdivision d</u>	<u>Subdivision i</u>
<u>will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the land disposal restriction notice.</u>				
<u>4. The notice must include the applicable wastewater/nonwastewater category (see subsections 7 and 11 of section 33-24-05-251) and subdivisions made within a waste code based on waste-specific criteria (such as D003 reactive cyanide).</u>	√	√		
<u>5. Waste analysis data (when available).</u>	√	√	√	
<u>6. Date the waste is subject to the prohibition.</u>			√	
<u>7. For hazardous debris, when treating with the alternative treatment technologies provided by section 33-24-05-285, the contaminants subject to treatment, as described in subsection 2 of section 33-24-05-285; and an indication that these contaminants are being treated to comply with section 33-24-05-285.</u>	√		√	
<u>8. For contaminated soil subject to land disposal restrictions as provided in subsection 1 of section 33-24-05-289, the constituents subject to treatment as described in subsection 4 of section 33-24-05-289, and the following statements: This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by subsection 3 of section 33-24-05-289 or the universal treatment standards.</u>	√	√		
<u>9. A certification is needed (see applicable section for exact wording).</u>			√	√

*Note: Information requirements referenced in the above table can be found in the indicated subdivision of subsection 1.

- e. If a generator is managing and treating prohibited waste, or contaminated soil in tanks, containers, or containment buildings regulated under section 33.1-24-03-12 to meet applicable land disposal restriction treatment standards found at section 33.1-24-05-280, the generator must develop and follow a written waste analysis plan which describes the procedures the generator will carry out to comply with the treatment standards. (Generators treating hazardous debris under the alternative treatment standards of table 1, section 33.1-24-05-285; however, are not subject to these waste analysis requirements.) The plan must be kept onsite in the generator's records, and the following requirements must be met:

(1) The waste analysis plan must be based on a detailed chemical and physical analysis of a representative sample of the prohibited waste or wastes being treated and contain all information necessary to treat the waste or wastes in accordance with the requirements of sections 33.1-24-05-250 through 33.1-24-05-299, including the selected testing frequency.

(2) Such plan must be kept in the facility's onsite files and made available to inspectors.

(3) Wastes shipped offsite pursuant to this subdivision must comply with the notification requirements of subdivision c.

f. If a generator determines that the waste, or contaminated soil, is restricted based solely on the generator's knowledge of the waste, all supporting data used to make this determination must be retained onsite in the generator's files. If a generator determines that the waste or contaminated soil is restricted based on testing this waste or an extract developed using the test method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, incorporated by reference in section 33.1-24-01-05, and all waste analysis data must be retained onsite in the generator's files.

g. If a generator determines that the generator is managing a prohibited waste that is excluded from the definition of hazardous or solid waste or is exempted from hazardous waste regulation under sections 33.1-24-02-02 through 33.1-24-02-06 subsequent to the point of generation (including deactivated characteristic hazardous wastes managed in wastewater treatment systems subject to the Clean Water Act, as specified at subdivision b of subsection 1 of section 33.1-24-02-04 or that are Clean Water Act-equivalent, or are managed in an underground injection well regulated by the Safe Drinking Water Act), the generator must place a one-time notice describing such generation, subsequent exclusion from the definition of hazardous or solid waste or exemption from hazardous waste regulation, and the disposition of the waste, in the facility's onsite files.

h. Generators must retain onsite a copy of all notices, certifications, waste analysis data, and other documentation produced pursuant to this section for at least three years from the date that the waste that is the subject of such documentation was last sent to onsite or offsite treatment, storage, or disposal. The three-year record retention period is automatically extended during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department. The requirements of this subsection apply to solid wastes even when the hazardous characteristic is removed prior to disposal, or when the waste is excluded from the definition of hazardous or solid waste under sections 33.1-24-02-02 through 33.1-24-02-06, or exempted from hazardous waste regulation, subsequent to the point of generation.

i. If a generator is managing a lab pack containing hazardous wastes and wishes to use the alternative treatment standard for lab packs found at subsection 3 of section 33.1-24-05-282:

(1) With the initial shipment of waste to a treatment facility, the generator must submit a notice that provides the information in column "subdivision i" in the generator paperwork requirements table of subdivision d, and the following certification. The certification, which must be signed by an authorized representative and must be placed in the generator's files, must say the following:

I certify under penalty of law that I personally have examined and am familiar with the waste and that the lab pack contains only wastes that have not been excluded under appendix VIII to chapter 33.1-24-05 and that this lab pack will be sent to a

combustion facility in compliance with the alternative treatment standards for lab packs at subsection 3 of section 33.1-24-05-282. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine or imprisonment.

(2) No further notification is necessary until such time that the wastes in the lab pack change, or the receiving facility changes, in which case a new notice and certification must be sent and a copy placed in the generator's file.

(3) If the lab pack contains characteristic hazardous wastes (D001-D043), underlying hazardous constituents (as defined in subsection 10 of section 33.1-24-05-251) need not be determined.

(4) The generator must also comply with the requirements in subdivisions f and g.

j. Small quantity generators with tolling agreements pursuant to subsection 5 of section 33.1-24-03-04 must comply with the applicable notification and certification requirements of subsection 1 for the initial shipment of the waste subject to the agreement. Such generators must retain onsite a copy of the notification and certification, together with the tolling agreement, for at least three years after termination or expiration of the agreement. The three-year record retention period is automatically extended during the course of any unresolved enforcement action regarding the regulated activity or as requested by the department.

2. Treatment facilities must test their wastes according to the frequency specified in their waste analysis plans as required by section 33.1-24-05-04 for permitted facilities or the applicable requirements of subsection 5 of section 33.1-24-06-16 for interim status facilities. Such testing must be performed as provided in subdivisions a, b, and c.

a. For wastes or contaminated soil with treatment standards expressed in the waste extract (toxicity characteristic leaching procedure), the owner or operator of the treatment facility must test an extract of the treatment residues, using test method 1311 (the toxicity characteristic leaching procedure, described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05) to assure that the treatment residues extract meet the applicable treatment standards.

b. For wastes or contaminated soil with treatment standards expressed as concentrations in the waste, the owner or operator of the treatment facility must test the treatment residues (not an extract of such residues) to assure that they meet the applicable treatment standards.

c. A one-time notice must be sent with the initial shipment of waste or contaminated soil to the land disposal facility. A copy of the notice must be placed in the treatment facility's file.

(1) No further notification is necessary until such time that the waste or receiving facility change, in which case a new notice must be sent and a copy placed in the treatment facility's file.

(2) The one-time notice must include these requirements:

Treatment Facility Paperwork Requirements Table	
Required Information	Subsection 2
1. Hazardous waste number or numbers and manifest number of first	√

<u>shipment.</u>	
<u>2. The waste is subject to the land disposal restrictions. The constituents of concern for F001-F005, and F039, and underlying hazardous constituents in characteristic wastes, unless the waste will be treated and monitored for all constituents. If all constituents will be treated and monitored, there is no need to put them all on the land disposal restriction notice.</u>	<u>√</u>
<u>3. The notice must include the applicable wastewater/nonwastewater category (see subsections 7 and 11 of section 33-24-05-251), and subdivisions made within a waste code based on waste-specific criteria (such as D003 reactive cyanides).</u>	<u>√</u>
<u>4. Waste analysis data (when available).</u>	<u>√</u>
<u>5. For contaminated soil subject to land disposal restrictions as provided in subsection 1 of section 33-24-05-289, the constituents subject to treatment as described in subsection 4 of section 33-24-05-289, and the following statement: "This contaminated soil [does/does not] contain listed hazardous waste and [does/does not] exhibit a characteristic of hazardous waste and [is subject to/complies with] the soil treatment standards as provided by subsection 3 of section 33-24-05-289."</u>	<u>√</u>
<u>6. A certification is needed (see applicable section for exact wording).</u>	<u>√</u>

- d. The treatment facility must submit a one-time certification signed by an authorized representative with the initial shipment of waste or treatment residue of a restricted waste to the land disposal facility. The certification must state:

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the treatment standards specified in section 33.1-24-05-280 without impermissible dilution of the prohibited waste. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

A certification is also necessary for contaminated soil and it must state:

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and believe that it has been maintained and operated properly so as to comply with treatment standards specified in section 33.1-24-05-289 without impermissible dilution of the prohibited wastes. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

- (1) A copy of the certification must be placed in the treatment facility's onsite files. If the waste or treatment residue changes, or the receiving facility changes, a new certification must be sent to the receiving facility, and a copy placed in the file.
- (2) Debris excluded from the definition of hazardous waste under subsection 5 of section 33.1-24-02-03 (for example, debris treated by an extraction or destruction technology provided by table 1, section 33.1-24-05-285, and debris that the department has determined does not contain hazardous waste); however, is subject to the notification and certification requirements of subsection 4 rather than the certification requirements of this subsection.

- (3) For wastes with organic constituents having treatment standards expressed as concentration levels, if compliance with the treatment standards is based in whole or in part on the analytical detection limit alternative specified in subsection 4 of section 33.1-24-05-280, the certification, signed by an authorized representative, must state the following:

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification. Based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the nonwastewater organic constituents have been treated by combustion units as specified in section 33.1-24-05-282, table 1. I have been unable to detect the nonwastewater organic constituents, despite having used best good-faith efforts to analyze for such constituents. I am aware there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

- (4) For characteristic wastes that are subject to the treatment standards in section 33.1-24-05-280 (other than those expressed as a method of treatment), or section 33.1-24-05-289, and that contain underlying hazardous constituents as defined in subsection 10 of section 33.1-24-05-251; if these wastes are treated onsite to remove the hazardous characteristic; and are then sent offsite for treatment of underlying hazardous constituents, the certification must state the following:

I certify under penalty of law that the waste has been treated in accordance with the requirements of section 33.1-24-05-280 or 33.1-24-05-289 to remove the hazardous characteristic. This decharacterized waste contains underlying hazardous constituents that require further treatment to meet treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

- (5) For characteristic wastes that contain underlying hazardous constituents as defined subsection 10 of section 33.1-24-05-251 that are treated onsite to remove the hazardous characteristic to treat underlying hazardous constituents to levels in section 33.1-24-05-288 universal treatment standards, the certification must state the following:

I certify under penalty of law that the waste has been treated in accordance with the requirements of section 33.1-24-05-280 to remove the hazardous characteristic and that underlying hazardous constituents, as defined in subsection 10 of section 33.1-24-05-251 have been treated onsite to meet the section 33.1-24-05-288 universal treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

- e. If the waste or treatment residue will be further managed at a different treatment, storage, or disposal facility, the treatment, storage, or disposal facility sending the waste or treatment residue offsite must comply with the notice and certification requirements applicable to generators under this section.

- f. Where the wastes are recyclable materials used in a manner constituting disposal subject to the provisions of subsection 2 of section 33.1-24-05-201 regarding treatment standards and prohibition levels, the owner or operator of a treatment facility (the recycler) must, for the initial shipment of waste, prepare a one-time certification described in subdivision d, and a one-time notice which includes the information listed in subdivision c (except the manifest number). The certification and notification must be placed in the facility's onsite files. If the waste or the receiving facility changes, a new certification and notification must be prepared and placed in the onsite files. In addition,

the recycling facility must also keep records of the name and location of each entity receiving the hazardous waste-derived product.

3. Except where the owner or operator is disposing of any waste that is a recyclable material used in a manner constituting disposal pursuant to subsection 2 of section 33.1-24-05-201, the owner or operator of any land disposal facility disposing any waste subject to restrictions under sections 33.1-24-05-250 through 33.1-24-05-299 must:

a. Have copies of the notice and certifications specified in subsection 1 or 2.

b. Test the waste, or an extract of the waste or treatment residue developed using test method 1311 (the toxicity characteristic leaching procedure, described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05), to assure that the wastes or treatment residues are in compliance with the applicable treatment standards set forth in sections 33.1-24-05-280 through 33.1-24-05-289. Such testing must be performed according to the frequency specified in the facility's waste analysis plan as required by section 33.1-24-05-04, or the applicable requirements of subsection 5 of section 33.1-24-06-16 for interim status facilities.

4. Generators or treaters who first claim that hazardous debris is excluded from the definition of hazardous waste under subsection 5 of section 33.1-24-02-03 (for example, debris treated by an extraction or destruction technology provided by table 1 in section 33.1-24-05-285, and debris that the department has determined does not contain hazardous waste) are subject to the following notification and certification requirements:

a. A one-time notification, including the following information, must be submitted to the department:

(1) The name and address of the nonhazardous waste facility receiving the treated debris;

(2) A description of the hazardous debris as initially generated, including the applicable hazardous waste numbers; and

(3) For debris excluded under subdivision a of subsection 5 of section 33.1-24-02-03, the technology from table 1, section 33.1-24-05-285, used to treat the debris.

b. The notification must be updated if the debris is shipped to a different facility, and, for debris excluded under subdivision a of subsection 5 of section 33.1-24-02-03, if a different type of debris is treated or if a different technology is used to treat the debris.

c. For debris excluded under subdivision a of subsection 5 of section 33.1-24-02-03, the owner or operator of the treatment facility must document and certify compliance with the treatment standards of table 1 in section 33.1-24-05-285, as follows:

(1) Records must be kept of all inspections, evaluations, and analyses of treated debris that are made to determine compliance with the treatment standards;

(2) Records must be kept of any data or information the treater obtains during treatment of the debris that identifies key operating parameters of the treatment unit; and

(3) For each shipment of treated debris, a certification of compliance with the treatment standards must be signed by an authorized representative and placed in the facility's files. The certification must state the following:

I certify under penalty of law that the debris has been treated in accordance with the requirements of section 33.1-24-05-285. I am aware that there are significant penalties for making a false certification, including the possibility of fine and imprisonment.

5. Generators and treaters who first receive from the department a determination that a given contaminated soil subject to the land disposal restrictions as provided in subsection 1 of section 33.1-24-05-289 no longer contains a listed hazardous waste and generators and treaters who first determine that a contaminated soil subject to the land disposal restrictions as provided in subsection 1 of section 33.1-24-05-289 no longer exhibits a characteristic of hazardous waste must:

- a. Prepare a one-time only documentation of these determinations, including all supporting information; and
- b. Maintain that information in the facility files and other records for a minimum of three years.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-257. [Reserved].

33.1-24-05-258. Special rules regarding wastes that exhibit a characteristic.

1. The initial generator of a solid waste must determine each hazardous waste number (waste code) applicable to the waste in order to determine the applicable treatment standards under sections 33.1-24-05-280 through 33.1-24-05-289. This determination may be made concurrently with the hazardous waste determination required in section 33.1-24-03-02. For purposes of sections 33.1-24-05-250 through 33.1-24-05-299, the waste will carry the waste code for any applicable listed waste (sections 33.1-24-02-15 through 33.1-24-02-19). In addition, where the waste exhibits a characteristic, the waste will carry one or more of the characteristic waste codes (sections 33.1-24-02-10 through 33.1-24-02-14), except when the treatment standard for the listed waste operates in lieu of the treatment standard for the characteristic waste, as specified in subsection 2. If the generator determines that the generator's waste displays a hazardous characteristic (and is not D001 nonwastewaters treated by CMBST, RORGS, or POLYM of section 33.1-24-05-282, table 1), the generator must determine the underlying hazardous constituents (as defined at subsection 10 of section 33.1-24-05-251) in the characteristic waste.
2. Where a prohibited waste is both listed under sections 33.1-24-02-15 through 33.1-24-02-19 and exhibits a characteristic under sections 33.1-24-02-10 through 33.1-24-02-14, the treatment standard for the waste code listed in sections 33.1-24-02-15 through 33.1-24-02-19 will operate in lieu of the standard for the waste code under sections 33.1-24-02-10 through 33.1-24-02-14 provided that the treatment standard for the listed waste includes a treatment standard for the constituent that causes the waste to exhibit the characteristic. Otherwise, the waste must meet the treatment standards for all applicable listed and characteristic waste codes.
3. In addition to any applicable standards determined from the initial point of generation, no prohibited waste which exhibits a characteristic under sections 33.1-24-02-10 through 33.1-24-02-14 may be land disposed unless the waste complies with the treatment standards under sections 33.1-24-05-280 through 33.1-24-05-289.

4. Wastes that exhibit a characteristic are also subject to section 33.1-24-05-256 requirements, except that once the waste is no longer hazardous, a one-time notification and certification must be placed in the generator's or treater's onsite files. The notification and certification must be updated if the process or operation generating the waste changes or if the permitted nonhazardous facility receiving the waste changes, or both change.

a. The notification must include the following information:

(1) The name and address of the permitted nonhazardous facility receiving the waste shipment; and

(2) A description of the waste as initially generated, including the applicable codes, treatability groups, and underlying hazardous constituents (as defined in subsection 10 of section 33.1-24-05-251), unless the waste will be treated and monitored for all underlying hazardous constituents. If all underlying hazardous constituents will be treated and monitored, there is no requirement to list any of the underlying hazardous constituents on the notice.

b. The certification must be signed by an authorized representative and must state the language specified in subdivision d of subsection 2 of section 33.1-24-05-256.

(1) If treatment removes the characteristic but does not meet standards applicable to underlying hazardous constituents, then the certification found in paragraph 4 of subdivision d of subsection 2 of section 33.1-24-05-256 applies.

(2) [Reserved].

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-259. [Reserved].

33.1-24-05-260. [Reserved].

33.1-24-05-261. [Reserved].

33.1-24-05-262. [Reserved].

33.1-24-05-263. [Reserved].

33.1-24-05-264. [Reserved].

33.1-24-05-265. Surface impoundment exemptions.

1. This section defines additional circumstances under which an otherwise prohibited waste may continue to be placed in a surface impoundment.
2. Wastes that are newly identified or listed under section 3001 after November 8, 1984, and stored in a surface impoundment that is newly subject to article 33.1-24 as a result of the additional identification or listing, may continue to be stored in the surface impoundment for forty-eight months after the promulgation of the additional listing or characteristic, notwithstanding that the waste is otherwise prohibited from land disposal, provided that the surface impoundment is in compliance with the requirements of subsection 5 of section 33.1-24-06-16 (subpart F of part 265 of 40 CFR) within twelve months after promulgation of the new listing or characteristic.
3. Wastes that are newly identified or listed under section 3001 after November 8, 1984, and treated in a surface impoundment that is newly subject to article 33.1-24 as a result of the additional identification or listing, may continue to be treated in that surface impoundment, notwithstanding that the waste is otherwise prohibited from land disposal, provided that surface impoundment is in compliance with the requirements of subsection 5 of section 33.1-24-06-16 (subpart F of part 265 of 40 CFR) within twelve months after the promulgation of the new listing or characteristic. In addition, if the surface impoundment continues to treat hazardous waste after forty-eight months from promulgation of the additional listing or characteristic, it must then be in compliance with section 33.1-24-05-253.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-266. Waste specific prohibitions - Dyes or pigments, or both, production wastes.

1. Effective August 23, 2005, the waste specified in chapter 33.1-24-02 as hazardous waste number K181, and soil and debris contaminated with this waste, radioactive wastes mixed with this waste, and soil and debris contaminated with radioactive wastes mixed with this waste are prohibited from land disposal.
2. The requirements of subsection 1 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable treatment standards established pursuant to a petition granted under section 33.1-24-05-284;
 - d. Hazardous debris has met the treatment standards in section 33.1-24-05-280, or the alternative treatment standards in 33.1-24-05-285; or
 - e. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
3. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract, or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract, or the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the

applicable sections 33.1-24-05-280 through 33.1-24-05-289 levels, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-267. [Reserved].

33.1-24-05-268. [Reserved].

33.1-24-05-269. [Reserved].

33.1-24-05-270. Waste specific prohibitions - Wood preserving wastes.

1. Effective August 11, 1997, the following wastes are prohibited from land disposal: the wastes specified in chapter 33.1-24-02 as hazardous waste numbers F032, F034, and F035.
2. Effective May 12, 1999, the following wastes are prohibited from land disposal: soil and debris contaminated with F032, F034, F035; and radioactive wastes mixed with hazardous waste numbers F032, F034, and F035.
3. Between May 12, 1997, and May 12, 1999, soil and debris contaminated with F032, F034, F035, and radioactive waste mixed with F032, F034, and F035 may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in subdivision b of subsection 8 of section 33.1-24-05-254.
4. The requirements of subsections 1 and 2 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable alternate treatment standards established pursuant to a petition granted under section 33.1-24-05-284; or
 - d. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to those wastes covered by the extension.
5. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable universal treatment standards levels of section 33.1-24-05-288, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-271. Waste specific prohibitions - Dioxin-containing wastes.

1. Effective November 8, 1988, the dioxin-containing wastes specified in section 33.1-24-02-16 as hazardous waste numbers F020, F021, F022, F023, F026, F027, and F028 are prohibited from land disposal unless the F020-F023 and F026-F028 dioxin-containing waste is contaminated soil and debris resulting from a response action taken under section 104 or 106 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 or a corrective action taken under article 33.1-24.
2. Effective November 8, 1990, the F020-F023 and F026-F028 dioxin-containing wastes listed in subsection 1 are prohibited from land disposal.
3. Between November 8, 1988, and November 8, 1990, wastes included in subsection 1 may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in subdivision b of subsection 8 of section 33.1-24-05-254 and all other applicable requirements of chapter 33.1-24-05.
4. The requirements of subsections 1 and 2 do not apply if:
 - a. The wastes meet the standards of sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
or
 - c. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to those wastes covered by the extension.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-272. Waste specific prohibitions - Soils exhibiting the toxicity characteristic for metals and containing polychlorinated biphenyls.

1. Effective December 26, 2000, the following wastes are prohibited from land disposal: any volumes of soil exhibiting the toxicity characteristic solely because of the presence of metals (D004 through D011) and containing polychlorinated biphenyls.
2. The requirements of subsection 1 do not apply if:
 - a. The wastes:
 - (1) Contain halogenated organic compounds in total concentration less than one thousand milligrams per kilogram; and
 - (2) Meet the treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289 for hazardous waste numbers D004 through D011, as applicable;
 - b. The wastes:
 - (1) Contain halogenated organic compounds in total concentration less than one thousand milligrams per kilogram; and

(2) Meet the alternative treatment standards specified in section 33.1-24-05-289 for contaminated soil;

c. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition; or

d. The wastes meet applicable alternative treatment standards established pursuant to a petition granted under section 33.1-24-05-284.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-273. Waste specific prohibitions - Chlorinated aliphatic wastes.

1. Effective May 8, 2001, the wastes specified in chapter 33.1-24-02 as hazardous waste numbers K174 and K175, soil and debris contaminated with these wastes, radioactive wastes mixed with these wastes, and soil and debris contaminated with radioactive wastes mixed with these wastes are prohibited from land disposal.

2. The requirements of subsection 1 do not apply if:

a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;

b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;

c. The wastes meet the applicable treatment standards established pursuant to a petition granted under section 33.1-24-05-284;

d. Hazardous debris has met the treatment standards in section 33.1-24-05-280 or the alternative treatment standards in section 33.1-24-05-285; or

e. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.

3. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the applicable levels of sections 33.1-24-05-280 through 33.1-24-05-289, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

4. Disposal of K175 wastes that have complied with all applicable section 33.1-24-05-280 treatment standards must also be macroencapsulated in accordance with section 33.1-24-05-285, table 1, unless the waste is placed in:

a. An article 33.1-24 monofill containing only K175 wastes that meet all applicable section 33.1-24-05-280 treatment standards; or

b. A dedicated article 33.1-24 landfill cell in which all other wastes being codisposed are at pH of 6.0 or less.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-274. Waste specific prohibitions - Toxicity characteristic metal wastes.

1. Effective August 24, 1998, the following wastes are prohibited from land disposal: the wastes specified in chapter 33.1-24-02 as hazardous waste numbers D004 through D011 that are newly identified (for example, wastes, soil, or debris identified as hazardous by the toxic characteristic leaching procedure but not the extraction procedure), and waste, soil, or debris from mineral processing operations that is identified as hazardous by the specifications at chapter 33.1-24-02.
2. Effective November 26, 1998, the following waste is prohibited from land disposal: slag from secondary lead smelting which exhibits the toxicity characteristic due to the presence of one or more metals listed in section 33.1-24-02-14.
3. Effective May 26, 2000, the following wastes are prohibited from land disposal: newly identified characteristic wastes from elemental phosphorus processing, radioactive waste mixed with D004 through D011 wastes that are newly identified (for example, wastes, soil, or debris identified as hazardous by the toxic characteristic leaching procedure but not the extraction procedure); or mixed with newly identified characteristic mineral processing wastes, soil, or debris.
4. Between May 26, 1998, and May 26, 2000, newly identified characteristic wastes from elemental phosphorus processing, radioactive waste mixed with D004 through D011 wastes that are newly identified (for example, wastes, soil, or debris identified as hazardous by the toxicity characteristic leaching procedure but not the extraction procedure), or mixed with newly identified characteristic mineral processing wastes, soil, or debris may be disposed in a landfill or surface impoundment only if such unit is in compliance with the requirements specified in subsection 8 of section 33.1-24-05-254.
5. The requirements of subsections 1 and 2 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable alternate treatment standards established pursuant to a petition granted under section 33.1-24-05-284; or
 - d. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
6. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents (including underlying hazardous constituents in characteristic wastes) in excess of the applicable universal treatment standard levels of section 33.1-24-05-288, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-275. Waste specific prohibitions - Petroleum refining wastes.

1. Effective February 8, 1999, the wastes specified in chapter 33.1-24-02 as hazardous waste numbers K169, K170, K171, and K172, soils and debris contaminated with these wastes, radioactive wastes mixed with these hazardous wastes, and soils and debris contaminated with these radioactive mixed wastes, are prohibited from land disposal.
2. The requirements of subsection 1 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable treatment standards established pursuant to a petition granted under section 33.1-24-05-284;
 - d. Hazardous debris that has met treatment standards in section 33.1-24-05-280 or in the alternative treatment standards in section 33.1-24-05-285; or
 - e. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
3. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable universal treatment standard levels of section 33.1-24-05-288, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-276. Waste specific prohibitions - Inorganic chemical wastes.

1. Effective May 20, 2002, the wastes specified in chapter 33.1-24-02 as hazardous waste numbers K176, K177, and K178, and soil and debris contaminated with these wastes, radioactive wastes mixed with these wastes, and soil and debris contaminated with radioactive wastes mixed with these wastes are prohibited from land disposal.
2. The requirements of subsection 1 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable treatment standards established pursuant to a petition granted under section 33.1-24-05-284;

- d. Hazardous debris has met the treatment standards in section 33.1-24-05-280 or the alternative treatment standards in section 33.1-24-05-285; or
 - e. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
3. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains regulated constituents in excess of the applicable levels provided in sections 33.1-24-05-280 through 33.1-24-05-289, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-277. Waste specific prohibitions - Ignitable and corrosive characteristic wastes whose treatment standards were vacated.

- 1. Effective August 9, 1993, the wastes specified in section 33.1-24-02-11 as D001 (and is not in the high total organic compound ignitable liquids subcategory), and specified in section 33.1-24-02-12 as D002, that are managed in systems other than those whose discharge is regulated under the Clean Water Act, or that inject in class I deep wells regulated under the Safe Drinking Water Act, or that are zero dischargers that engage in Clean Water Act-equivalent treatment before ultimate land disposal, are prohibited from land disposal. Clean Water Act-equivalent treatment means biological treatment for organics, alkaline chlorination or ferrous sulfate precipitation for cyanide, precipitation or sedimentation or both for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or greater than these technologies.
- 2. Effective February 10, 1994, the wastes specified in section 33.1-24-02-11 as D001 (and is not in the high total organic compound ignitable liquids subcategory), and specified in section 33.1-24-02-12 as D002, that are managed in systems defined in 40 CFR 144.6(e) and 146.6(e) as class V injection wells, that do not engage in Clean Water Act-equivalent treatment before injection, are prohibited from land disposal.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-278. Waste specific prohibitions - Newly identified organic toxicity characteristic wastes and newly listed coke byproduct and chlorotoluene production wastes.

- 1. Effective December 19, 1994, the wastes specified in section 33.1-24-02-17 as hazardous waste numbers K141, K142, K143, K144, K145, K147, K148, K149, K150, and K151 are prohibited from land disposal. In addition, debris contaminated with hazardous waste numbers F037, F038, K107 through K112, K117, K118, K123 through K126, K131, K132, K136, U328, U353, U359, and soil and debris contaminated with D012 through D043, K141 through K145, and K147 through K151 are prohibited from land disposal. The following wastes that are specified in section 33.1-24-02-14, table 1, as hazardous waste numbers: D012, D013, D014, D015, D016, D017, D018, D019, D020, D021, D022, D023, D024, D025, D026, D027, D028, D029, D030, D031, D032, D033, D034, D035, D036, D037, D038, D039, D040, D041, D042, and D043 that are not radioactive, or that are managed in systems other than those whose

discharge is regulated under the Clean Water Act, or that are zero discharges that do not engage in Clean Water Act-equivalent treatment before ultimate land disposal, or that are injected in class I deep wells regulated under the Safe Drinking Water Act, are prohibited from land disposal. Clean Water Act-equivalent treatment means biological treatment for organics, alkaline chlorination or ferrous sulfate precipitation for cyanide, precipitation or sedimentation, or both, for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or better than these technologies.

2. On September 19, 1996, radioactive wastes that are mixed with D018 through D043 that are managed in systems other than those whose discharge is regulated under the Clean Water Act, or that inject in class I deep wells regulated under the Safe Drinking Water Act, or that are zero dischargers that engage in Clean Water Act-equivalent treatment before ultimate land disposal, are prohibited from land disposal. Clean Water Act-equivalent treatment means biological treatment for organics, alkaline chlorination or ferrous sulfate precipitation for cyanide, precipitation or sedimentation, or both, for metals, reduction of hexavalent chromium, or other treatment technology that can be demonstrated to perform equally or greater than these technologies. Radioactive wastes mixed with K141 through K145, and K147 through K151 are also prohibited from land disposal. In addition, soil and debris contaminated with these radioactive mixed wastes are prohibited from land disposal.
3. Between December 19, 1994, and September 19, 1996, the wastes included in subsection 2 may be disposed in a landfill or surface impoundment, only if such unit is in compliance with the requirements specified in subdivision b of subsection 8 of section 33.1-24-05-254.
4. The requirements of subsections 1, 2, and 3 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable alternate treatment standards established pursuant to a petition granted under section 33.1-24-05-284; or
 - d. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
5. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable levels found in sections 33.1-24-05-280 through 33.1-24-05-289, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-279. Waste specific prohibitions - Spent aluminum potliners, reactive, and carbamate wastes.

1. On July 8, 1996, the wastes specified in section 33.1-24-02-17 as hazardous waste numbers K156 through K159, and K161; and in section 33.1-24-02-18 as hazardous waste numbers P127, P128, P185, P188 through P192, P194, P196 through P199, P201 through P205,

U271, U278 through U280, U364, U367, U372, U373, U387, U389, U394, U395, U404, and U409 through U411 are prohibited from land disposal. In addition, soil and debris contaminated with these wastes are prohibited from land disposal.

2. On July 8, 1996, the wastes identified in section 33.1-24-02-13 as D003 that are managed in systems other than those whose discharge is regulated under the Clean Water Act, or that inject in class I deep wells regulated under the Safe Drinking Water Act, or that are zero dischargers that engage in Clean Water Act-equivalent treatment before ultimate land disposal, are prohibited from land disposal. This prohibition does not apply to unexploded ordnance and other explosive devices which have been the subject of an emergency response. (Such D003 wastes are prohibited unless they meet the treatment standard of deactivate to remove the hazardous characteristic before land disposal (see section 33.1-24-05-280)).
3. On September 21, 1998, the wastes specified in section 33.1-24-02-17 as hazardous waste number K088 are prohibited from land disposal. In addition, soil and debris contaminated with these wastes are prohibited from land disposal.
4. On April 8, 1998, radioactive wastes mixed with K088, K156 through K159, K161, P127, P128, P185, P188 through P192, P194, P196 through P199, P201 through P205, U271, U278 through U280, U364, U367, U372, U373, U387, U389, U394, U395, U404, and U409 through U411 are also prohibited from land disposal. In addition, soil and debris contaminated with these radioactive mixed wastes are prohibited from land disposal.
5. Between July 8, 1996, and April 8, 1998, the wastes included in subsections 1, 3, and 4 may be disposed in a landfill or surface impoundment, only if such unit is in compliance with the requirements specified in subdivision b of subsection 8 of section 33.1-24-05-254.
6. The requirements of subsections 1 through 4 do not apply if:
 - a. The wastes meet the applicable treatment standards specified in sections 33.1-24-05-280 through 33.1-24-05-289;
 - b. Persons have been granted an exemption from a prohibition pursuant to a petition under section 33.1-24-05-255, with respect to those wastes and units covered by the petition;
 - c. The wastes meet the applicable alternate treatment standards established pursuant to a petition granted under section 33.1-24-05-284; or
 - d. Persons have been granted an extension to the effective date of a prohibition pursuant to section 33.1-24-05-254, with respect to these wastes covered by the extension.
7. To determine whether a hazardous waste identified in this section exceeds the applicable treatment standards specified in section 33.1-24-05-280, the initial generator must test a sample of the waste extract or the entire waste, depending on whether the treatment standards are expressed as concentrations in the waste extract or the waste, or the generator may use knowledge of the waste. If the waste contains constituents in excess of the applicable sections 33.1-24-05-280 through 33.1-24-05-289 levels, the waste is prohibited from land disposal, and all requirements of sections 33.1-24-05-250 through 33.1-24-05-299 are applicable, except as otherwise specified.

History: Effective January 1, 2019.

General Authority: NDCC 23.1-04-03; S.L. 2017, ch. 199, § 1

Law Implemented: NDCC 23.1-04-03, 23.1-04-05; S.L. 2017, ch. 199, § 19

33.1-24-05-280. Applicability of treatment standards.

1. A prohibited waste identified in the table "Treatment Standards for Hazardous Wastes" may be land disposed only if it meets the requirements found in the table. For each waste, the table identifies one of three types of treatment standard requirements:
 - a. All hazardous constituents in the waste or in the treatment residue must be at or below the values found in the table for that waste ("Total Waste Standards");
 - b. The hazardous constituents in the extract of the waste or in the extract of the treatment residue must be at or below the values found in the table ("Waste Extract Standards"); or
 - c. The waste must be treated using the technology specified in the table ("Technology Standard"), which are described in detail in section 33.1-24-05-282, table 1, "Technology Codes and Description of Technology-Based Standards.
2. For wastewaters, compliance with concentration level standards is based on maximums for any one day, except for D004 through D011 wastes for which the previously promulgated treatment standards based on grab samples remain in effect. For all nonwastewaters, compliance with concentration level standards is based on grab sampling. For wastes covered by the waste extract standards, the test method 1311, the toxicity characteristic leaching procedure found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05, must be used to measure compliance. An exception is made for D004 and D008, for which either of two test methods may be used method 1311 or method 1310B, the extraction procedure toxicity test. For wastes covered by a technology standard, the wastes may be land disposed after being treated using that specified technology or an equivalent treatment technology approved by the administrator under the procedures set forth in subsection 2 of section 33.1-24-05-282.
3. When wastes with differing treatment standards for a constituent of concern are combined for purposes of treatment, the treatment residue must meet the lowest treatment standard for the constituent of concern.
4. Notwithstanding the prohibitions specified in subsection 1, treatment and disposal facilities may demonstrate (and certify pursuant to subdivision e of subsection 2 of section 33.1-24-05-256) compliance with the treatment standards for organic constituents specified by a footnote in the table "Treatment Standards for Hazardous Wastes" in this section, provided the following conditions are satisfied:
 - a. The treatment standards for the organic constituents were established based on incineration in units operated in accordance with the technical requirements of sections 33.1-24-05-144 through 33.1-24-05-159, or based on combustion in fuel substitution units operating in accordance with applicable technical requirements;
 - b. The treatment or disposal facility has used the methods referenced in subdivision a to treat the organic constituents; and
 - c. The treatment or disposal facility may demonstrate compliance with organic constituents if good-faith analytical efforts achieve detection limits for the regulated organic constituents that do not exceed the treatment standards specified in this section by an order of magnitude.
5. For characteristic wastes (D001 through D043) that are subject to treatment standards in the following table "Treatment Standards for Hazardous Wastes", and are not managed in a wastewater treatment system that is regulated under the Clean Water Act, that is Clean Water Act-equivalent, or that is injected into a class I nonhazardous deep injection well, all

underlying hazardous constituents (as defined in subsection 10 of section 33.1-24-05-251) must meet universal treatment standards, found in section 33.1-24-05-288, table "Universal Treatment Standards", prior to land disposal as defined in subsection 6 of section 33.1-24-05-251.

6. The treatment standards for F001 through F005 nonwastewater constituents carbon disulfide, cyclohexanone, or methanol apply to wastes which contain only one, two, or three of these constituents. Compliance is measured for these constituents in the waste extract from test method 1311, the toxicity characteristic leaching procedure found in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", environmental protection agency publication SW-846, as incorporated by reference in section 33.1-24-01-05. If the waste contains any of these three constituents along with any of the other twenty-five constituents found in F001 through F005, then compliance with treatment standards for carbon disulfide, cyclohexanone, or methanol are not required.
7. Between August 26, 1996, and March 4, 1999, the treatment standards for the wastes specified in section 33.1-24-02-17 as hazardous waste numbers K156 through K159 and K161; and in section 33.1-24-02-18 as hazardous waste numbers P127, P128, P185, P188 through P192, P194, P196 through P199, P201 through P205, U271, U277 through U280, U364 through U367, U372, U373, U375 through U379, U381 through U387, U389 through U396, U400 through U404, U407, and U409 through U411; and soil contaminated with these wastes; may be satisfied by either meeting the constituent concentrations presented in the table "Treatment Standards for Hazardous Waste", or by treating the waste by the following technologies: combustion, as defined by the technology code CMBST in table 1 in section 33.1-24-05-282, for nonwastewaters; and, biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined by the technology code CMBST in table 1 of section 33.1-24-05-282, for wastewaters.
8. Prohibited D004 through D011 mixed radioactive wastes and mixed radioactive listed wastes containing metal constituents, that were previously treated by stabilization to the treatment standards in effect at that time and then put into storage, do not have to be retreated to meet treatment standards in this section prior to land disposal.
9. [Reserved].
10. Effective September 4, 1998, the treatment standards for the wastes specified in section 33.1-24-02-18 as hazardous waste numbers P185, P191, P192, P197, U364, U394, and U395 may be satisfied by either meeting the constituent concentrations presented in the table "Treatment Standards for Hazardous Wastes" in this section, or by treating the waste by the following technologies: combustion, as defined by the technology code CMBST in table 1 of section 33.1-24-05-282, for nonwastewaters; and biodegradation as defined by the technology code BIODG, carbon adsorption as defined by the technology code CARBN, chemical oxidation as defined by the technology code CHOXD, or combustion as defined by the technology code CMBST in table 1 in section 33.1-24-05-282, for wastewaters.
