## ACKNOWLEDGEMENT

---

**Following Officers have made significant contributions towards the preparation of the Report on Population Projections for India and States, 2011-36**

## SUMMARY OF FINDINGS

---

Population projection is a scientific attempt to peep into the future population scenario, conditioned by certain assumptions using past data. Assumptions used and their holding true in future, is a critical condition in this exercise. Predicting the future course of human fertility and mortality is not easy, as medical and health interventions, production of food and its equitable availability, climatic variability, socio-cultural setting, politico-economic conditions and a host of other factors influence population dynamics, making it difficult to predict population with certainty. Therefore, caution must be exercised while using the projected numbers in the context of various assumptions prevailing. Apart from dynamic growth arising out of physical problems, it may also be added that despite the best efforts in Census for complete and correct enumeration, slight omission or duplication of population during enumeration can't be ruled out. In estimation of fertility and mortality from Sample Registration System, there may be some under or over-enumeration, in spite of best efforts to control non-sampling errors.

The Component Method is the universally accepted method of making population projections because growth of population is determined by fertility, mortality and migration rates. Twenty-one States and one UT have been considered and applied the Component method. They are Andhra Pradesh, Assam, Bihar, Chhattisgarh, NCT of Delhi, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir (UT), Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttarakhand, Uttar Pradesh and West Bengal. The projection of the seven north-eastern states (excluding Assam) has also been carried out as a whole using the Component Method. Based on the residual of the projected population of Jammu & Kashmir (State) and Jammu & Kashmir (UT), for which Component method has applied, projection of the Ladakh UT have been made. For the remaining state- Goa and UTs, Mathematical Method has been applied. The data used are 2011 Census and Sample Registration System (SRS). SRS provides time series data of fertility and mortality, which has been used for predicting their future levels. The figures for the year 2011 are the actual Census figures. The salient features of the population projections at the national level are as under:

- The population of India is expected to increase from 121.1 crores to 151.8 crores during the period 2011-2036 - an increase of 25 percent in twenty- five years at the rate of 1.0 percent annually. As a consequence, the density of population will increase from 368 to 462 persons per square kilometer.
- The crude birth rate will decline from 19.6 during 2011-15 to 13.0 during 2031-35 because of falling level of total fertility. In contrast, the crude death rate is expected to increase marginally due to changing age structure of the population with the rising median age as a result of continuing decline in fertility and increase in the expectation of life at birth. It will increase from 6.9 during 2011-15 to 7.3 during 2031-35.
- The infant mortality rate of the country, which is reported to be 46 in 2010 is expected to go down to 30 by the end of the period 2031-35.
- Between 2011 and 2036, because of the declining fertility, the proportion of population aged under 15 years is projected to decline from 30.8 to 19.8 percent; the proportion of the middle age-group (15-59 years) and the older ages (60 years and above) are set to increase considerably. With the declining fertility, along-with the increases in life expectancy, the number of older persons in the population is expected to increase by more than double from 10 crores in 2011 to 23 crores in 2036 - an increase in their share to the total population from 8.4 to 15.0 percent. The proportion of population in the working age-group 15-59 years is expected to rise from 60.7 percent in 2011 to 65.1 percent in 2036.
- Another important consequence of the declining fertility will be that, at the national level, the population in the school-going age of 5-14 years is expected to decline from 25.4 crores in 2011 to 20.7 crores in 2036. The share of the population aged 5-14 years to total population of all ages is expected to decrease by 7.3 percent from 20.9 percent in 2011 to 13.6 percent in 2036.

- The youth population in the age- group 15-24 years is expected to increase from 23.3 crores in 2011 to 25.2 crores in 2021 and then continue to decrease to 22.7 crores in 2036. Its proportion to total population is expected to fall from 19.3 percent in 2011 to 14.9 percent in 2036.
- From the above, it is evident that, 50.1 percent of the population in the country, was aged 24 years and below in 2011, constituting 30.8 percent and 19.3 percent in the ages 0-14 years and 15-24 years respectively. The combined proportion of these two age-groups is expected to fall from 50.1 percent in 2011 to 34.7 percent in 2036 (19.8 percent in the ages 0-14 years and 14.9 percent in the ages 15-24 years). The average age of Indians is expected to be of 34.7 years in 2036 as compared to 24.9 years in 2011.
- Out of the total population increase of 30.7 crores between 2011 and 2036, the share of the workers in the age-group 15-59 years in this total increase is 82.5 percent. This has implication in the availability of labour in future.
- The sex ratio of the total population (females per 1000 males) is expected to increase (i.e. become more feminine) from 943 in 2011 to 957 during 2036.
- The Total Fertility Rate (TFR) is expected to decline from 2.34 during 2011-2015 to 1.72 during 2031-35. The assumption is that the Total Fertility Rate (TFR) would follow the recent pace of decline.
- The urban population in the country, which is 31.8 percent in 2011, is expected to increase to 38.6 percent by 2036. The urban growth would account for over three-fourth (73 percent) of total population increase by 2036. Out of the total population increase of 30.7 crores during 2011-2036 in the country, the share of increase in urban population is expected to be 22.4 crores.

Changes in the age structure of the projected population at the national level between 2011 and 2036 have been depicted by graph (Figure- 1) and population pyramids (Figure- 2 and 3), which are enclosed at the end of the present 'Summary of Findings'. Figure- 1 shows the trend of the population by broad age-groups explained above. It is observed from the said population pyramids that in 2011, older cohorts would be smaller than younger cohorts. Subsequently, with the decline in fertility, the base of the pyramid in 2036 would narrow down, while the middle would be broadened. Considerable variation in the demographic growth amongst the States has been estimated. The salient features of the projections at the state level are as under:

- The State which is expected to have least growth during 2011-2036 is Himachal Pradesh (6 percent), followed by Tamil Nadu (8 percent). In contrast, NCT of Delhi will have the highest projected growth of 98 percent during the period. States, which will have projected growths in the range of 10-20 percent are, Andhra Pradesh, Punjab, Jammu & Kashmir, Manipur, Karnataka, Odisha, Maharashtra, Telangana and West Bengal. The population in the states of Gujarat, Rajasthan, Madhya Pradesh, Nagaland, Uttar Pradesh, Mizoram, Puducherry, Bihar, Meghalaya, Arunachal Pradesh, NCT of Delhi, Dadra & Nagar Haveli and Daman & Diu is projected to increase by more than 30 percent.
- Of the projected increase in population of 31 crores in India during 2011-36, 17 crores are likely to occur in the five States of Bihar, Uttar Pradesh, Maharashtra, West Bengal and Madhya Pradesh. Thus, nearly 50 percent of India's demographic growth during this period of twenty-five years is projected to take place in these five states. Nineteen percent of the total population increase in India of 30.7 crores during 2011-36 is anticipated to occur in Uttar Pradesh alone. The population in these five states together is expected to grow at 1.0 percent per annum during 2011-36. In contrast, the contribution of the five southern states, namely Andhra Pradesh, Karnataka, Kerala, Telangana and Tamil Nadu, to the total increase in population size of the country during 2011-2036 is expected to be 2.9 crores - nine percent of total demographic growth of the country. The population in these five states together is expected to grow at 0.4 percent per annum during 2011-36. Proportions of some of the other states to the total increase in population size during 2011-36 are Rajasthan (7.2 percent), Gujarat (6.8 percent), Haryana (3.0 percent) and NCT of Delhi (3.2 percent). The contribution of the remaining states and union territories to the total increase in population size during 2011-2036 is 17 percent. A pie chart

(Figure- 4) showing the contribution of each state for the total projected population growth during 2011- 2036 is depicted and enclosed at the end of the present 'Summary of Findings'.

- Continuing decline in fertility and increase in the expectation of life at birth is expected to make a difference to the proportion of older population (60 years and above) between states. The State of Kerala, where lower fertility and mortality rates have been achieved earlier than the other states, the proportion of older persons aged 60 years and above is expected to increase from 13 percent in 2011 to 23 percent in 2036. Thus, almost every fifth individual in Kerala is expected to be a senior citizen by 2036. In contrast, Uttar Pradesh is expected to have an increase of the proportion of old age population from 7 percent in 2011 to 12 percent in 2036, implying that the population of Uttar Pradesh will be expected to be relatively younger compared to that of Kerala. The median age of population in Kerala is expected to go up from 31.9 years in 2011 to 39.6 years in 2036. In contrast, the median age in Uttar Pradesh is expected to go up from 21.5 years to 31.7 years. Two projected population pyramids (Figure- 5 and 6), which bring out the expected differences in Kerala and Uttar Pradesh respectively are depicted, which are enclosed at the end of the present 'Summary of Findings'. Projected median age of population at the national level and state level during 2011-2036 is depicted in Figure- 7.

- Because of declining fertility level in all the states, the crude birth rates (CBR) will also be declining. By 2031-35, except Bihar, no state is expected to have a crude birth rate of more than 20. The highest CBR of 19.6 per thousand is expected to be in Bihar followed by Jharkhand (15.6) and Madhya Pradesh (15.4) during 2031-35. Assam, Chhattisgarh, Jharkhand, Jammu & Kashmir (UT), Rajasthan, Odisha, Haryana, Uttar Pradesh and Gujarat are expected to have CBRs in the range of 12.1-15.3, close to the projected national level of 13.0. In most of the other states, the CBRs will be in the range 9.9-12.1. Three states, Tamil Nadu, Punjab and Andhra Pradesh are expected to have the lowest CBR of 9.9 followed by Himachal Pradesh (10.0) during 2031-35. In contrast to the CBRs, the situation is expected to be different in case of crude death rates (CDR). Because of increase in the expected proportion of ageing, the crude death rates are likely to increase in 19 major states, except Madhya Pradesh, Uttar Pradesh, and Chhattisgarh during 2031-35 (Figure- 8 and 9).

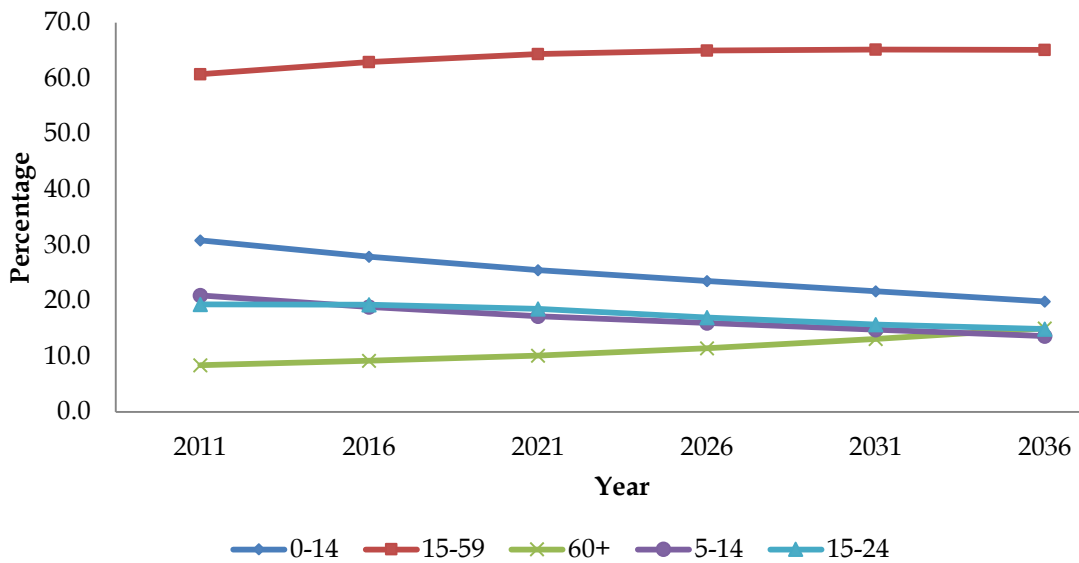

- The infant mortality rate (IMR) is expected to decline in all the states during 2011-35. The IMR, which was highest in Madhya Pradesh at 58 followed by 57 in Uttar Pradesh in 2011-15 is expected to come down to 37 in Madhya Pradesh, followed by Uttar Pradesh (38) in 2031-35. Other states, where IMRs are expected to be in the range of 30-40 during 2031-35 are Rajasthan, Assam, Odisha, Chhattisgarh, Madhya Pradesh and Uttar Pradesh. The lowest IMR is expected to be in Kerala at 9 in 2031-35. It will be followed by Tamil Nadu with IMR declining from 22 in 2011-15 to 16 during 2031-35 (Figure- 10)

- In so far as the projected sex ratio is concerned, it is observed that the population in 2036 is expected to be more feminine compared to the population as of 2011. It is observed that in 2036 sex ratio in eighteen states, except Kerala, Karnataka, Maharashtra and Gujarat will increase as compared to 2011. Lowest sex ratio of 899 is expected to be in NCT of Delhi in 2036, followed by 900 and 908 in Gujarat and Haryana respectively (Figure- 11).

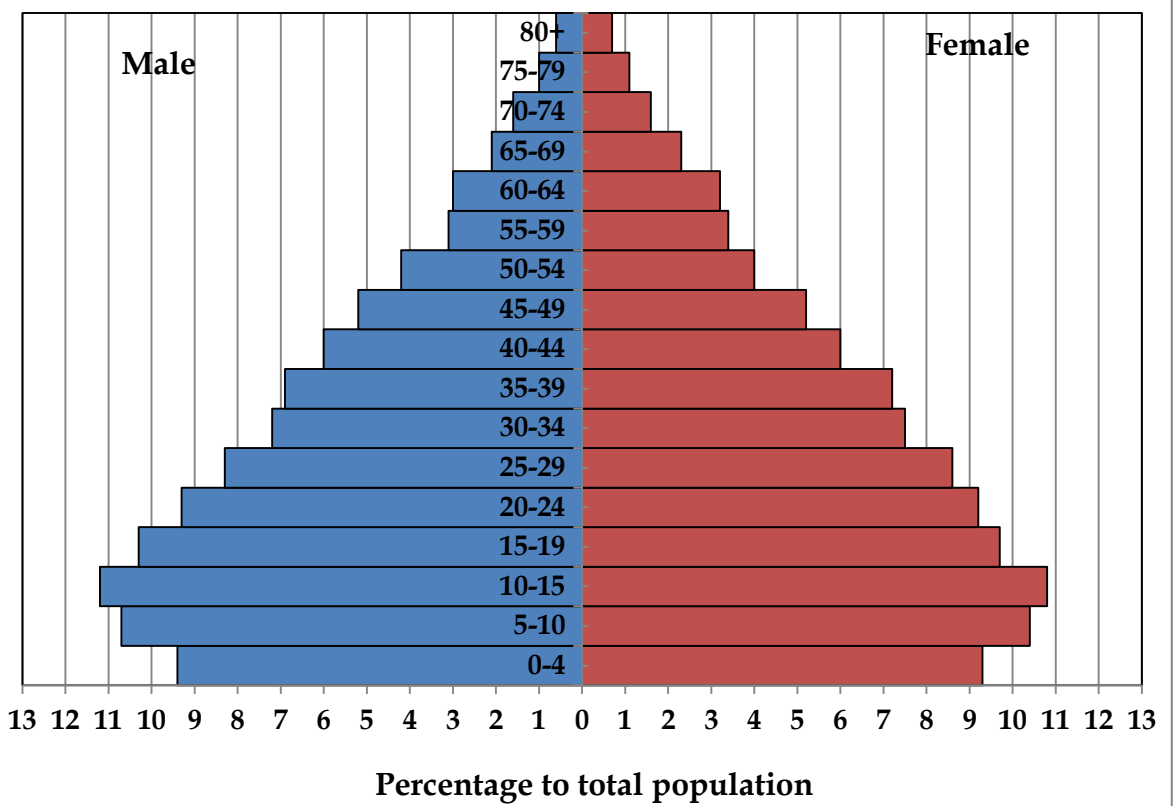

- State-wise proportion of population expected to live in urban areas by 2036 is depicted in Figure- 12. It is observed that by 2036, 100 percent population of NCT of Delhi, Chandigarh and Lakshadweep would be living in urban areas, which is highest among the states, included for projecting the population by component method. In contrast, 10.5 percent of the population of Himachal Pradesh would be expected to live in urban areas by the same year (2036), which is lowest among all the states.

# CHAPTER 1

---

## INTRODUCTION

Population projection is a scientific attempt to peep into the future population scenario, under certain assumptions by using available data at that point of time. The assumptions made with probability of their coming out to be true, forms a critical input in this mathematical effort. Predicting the future course of human fertility and mortality is not an easy task, especially when looking ahead in time, is bound to be influenced by medical and health intervention strategies, food production and its equitable distribution, climatic condition, socio-cultural setting, politico economic conditions and a host of other factors affecting the population dynamics. This makes it a really difficult exercise. Therefore, caution must be exercised while making or using the population projections in the context of various conditions imposed.

The need for population projection in India at various levels and by different components like age, sex, rural-urban etc., for use by the official agencies across the board, both at the centre and the states, was keenly felt in 1958 on the eve of the formulation of the Third Five Year Plan. From time to time, the official level projections of the country's population also became necessary for planning purposes. Being the second most populous country in the world, the size and growth of India's population have remained a matter of great interest not only to India but to the outside world also. Different population projections at the country level are made by the government, national and international agencies from time to time. In addition, individual demographers make their own projections for the country as a whole and, sometimes, at the sub-national level also. The international agencies which make projections for the world and for the individual countries are the United Nations Population Division (UNPD), the World Bank, the United Nations Population Fund (UNFPA) etc.

### Previous Projections

Beginning from 1958, it has been customary for the Office of the Registrar General and Census Commissioner, India to undertake the exercise of population projection on behalf of the Planning Commission of India. The first Expert Committee on Population Projections was set up by the Planning Commission in 1958 under the chairmanship of the Registrar General, India to provide a set of population projections for India and States for use in the preparation of the Third Five Year Plan. Thereafter, this Committee was revived from time to time to revise the existing official projection figures on the basis of the latest available census data.

### The Present Technical Group

In order to provide population projections which can be used by the National Commission on Population, NITI AAYOG and various other stakeholders it had been decided to constitute a Technical Group on Population Projections (TGPP) for the period 2011-2035. The Terms of Reference of the Technical Group on Population Projections are as follows:

- (a) To review the methodology of population projections adopted in the past.
- (b) To prepare fresh projections of fertility rate.
- (c) To prepare fresh projections of mortality rate.
- (d) To prepare fresh population projections up to the year 2035 with age, sex, urban-rural and State-UT break ups for five year intervals.
- (e) To prepare projections of the possible period when the population replacement level TFR 2.1 will be reached by States/UTs and the country as a whole. The Group may project reversal of the trend/continuation of trend of TFR in the States where it is below or at replacement level of 2.1.
- (f) In undertaking the above exercise, the Group may take into consideration data/information brought out by Census 2011, SRS, NSS, NFHS and other sources as may be needed.

- (g) The Group may take into account factors like level and pattern of contraceptive use, proportion of married females, the impact of major diseases like AIDS, and other factors like immigration, migration etc., while undertaking population projections.
- (h) The group may consider to have projections of migratory population so as to prepare plans by taking into account of migratory population.
- (i) The group may have population projections for SCs/STs/OBCs and religion-wise so as to design programmes for population stabilisation for targeted groups with a view to making suitable interventions.
- (j) The group may give guidance to adjust the existing population projections based on 2011 Census figures. To meet the requirements relating to use of population projections in the intervening period, both before and after the release of Census results 2011, the group may give guidance to adjust the existing Population Projections figures for the period 2002-2010 and also for the period 2012 onwards in consonance with 2011 Census figures. The Group may also give guidance for similar adjustment in the Population Projections of intervening periods, when Census 2021 results become available.
- (k) The group may constitute sub-groups to consider any specific issue.
- (l) The Technical Group will submit its report to the National Commission on Population, Ministry of Health and Family Welfare.

It was decided, with the agreement of the Technical Group on Population Projection and concurrence of the National Commission on Population, Ministry of Health and Family Welfare, to drop item no. (h) and item no. (i) as above from the Terms of Reference of the Technical Group, due to paucity of relevant data.

\_\_\_\_\_ x \_\_\_\_\_ x \_\_\_\_\_

## CHAPTER 2

### POPULATION PROJECTIONS FOR INDIA

The Component Method is the universally accepted method of making population projections because of the fact that the growth of population is determined by fertility, mortality and migration rates. In this exercise, 21 States and one UT have been applied the component method. These are Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh, West Bengal, Jharkhand, Chhattisgarh, Uttarakhand, Jammu & Kashmir (UT) and NCT of Delhi. Based on the residual of the projected population of Jammu & Kashmir (State) and Jammu & Kashmir (UT), for which Component method has applied, projection of the Ladakh UT have been made. For the projections of Jammu & Kashmir (UT), SRS fertility and mortality estimates of Jammu & Kashmir (State) are used. The projection of the seven north-eastern states (excluding Assam) has also been carried out as a whole using the Component Method. Separate projections for Andhra Pradesh and Telangana were done using the re-casted populations of these states. For the projections, for the years before 2014, combined SRS estimates of Andhra Pradesh and year 2014 onwards, separate SRS estimates of fertility and mortality of Andhra Pradesh and Telangana are used. For the remaining States and Union territories, Mathematical Method has been applied. The sources of data used are 2011 Census and Sample Registration System (SRS). SRS provides time series data of fertility and mortality, which has been used for predicting their future levels.

#### Base level population

It is well known that the age-sex data, whatever may be the source, would be subject to errors to some degree. In many cases, the erroneous reporting of age is attributable to ignorance of respondents. Accordingly, there has been a need to smoothen age-sex distribution. The various indices, which measure the accuracy of age-sex data, are the sex ratio score, the age ratio score, Whipple's index and Myers' index etc. A number of methods are available for smoothing of the data pertaining to the age-sex distribution. A summary of the indices of the different smoothing procedures for all India on the basis of the Census 2011 age-sex data is given below in Statement I.

**STATEMENT 1**  
**SUMMARY OF INDICES MEASURING THE ACCURACY OF DATA-CENSUS 2011**

Index	Reported	Smoothed					
		Carrier Farrag	K.-King Newton	Arriaga	United Nations	Strong	TGPP
Sex ratio score	3.84	2.52	2.57	2.54	2.76	1.19	2.28
Male age ratio score	4.07	3.10	2.84	2.61	2.02	0.58	1.50
Female age ratio score	5.40	2.83	2.47	2.41	1.94	0.87	1.41
Accuracy index	21.00	13.49	13.02	12.66	12.25	5.01	9.75

**Note:** The accuracy index is the sum of the male and female age ratio scores plus three times the sex ratio score, all calculated using data for ages 10-14 through 65-69.

Although Strong method of smoothing gave the lowest values of sex and age ratio scores, the Technical Group recommended the following method for age smoothing. The methodology is described below.

If  $W_1, W_2, W_3, \dots, W_n$  are respectively the  $n$  quinquennial age groups, 0-4, 5-9, 10-14 and so on upto 75+, then

$$S(W_2) = 0.25 \cdot O(W_1) + 0.50 \cdot O(W_2) + 0.25 \cdot O(W_3)$$

Where  $S$  is the smoothed population and  $O$  is the observed population

$$\text{Similarly, } S(W_3) = 0.25 \cdot O(W_2) + 0.50 \cdot O(W_3) + 0.25 \cdot O(W_4)$$

In this way, smoothing of all the n-2 (except the first group W1 and last group Wn) quinquennial age groups has been carried out. For smoothing, W1 and Wn, this formula cannot be applied since there are respectively no preceding and succeeding age groups in these two cases. So, W1 has been smoothed as under:

$$S(W0-4) = O(W0-14) - (S(W5-9) + S(W10-14))$$

$$\text{Similarly, } S(W75+) = O(W15-75+) - (S(W15-19) + \dots + S(W70-74))$$

Smoothing of age sex distribution for India and all major states including Himachal Pradesh and NCT of Delhi have been carried out by using the above-mentioned procedure. The smoothed population of 2011 by age and sex for India and states (for which Component Method has been applied) is presented in Table 2.

### Assumptions regarding fertility

SRS and NFHS provide estimates of TFR for States of the country. The SRS data has been used as base level estimates, these being available as a time series. The SRS data shows that in most of the States, the level of total fertility has been falling since 1971. It may be seen from the SRS data that there has been consistent decline in fertility during the last two decades. The trend analysis of TFR in terms of Exponential, Log linear, logistic and Gompertz model may be used for projecting the future levels of TFR in all the States as well as for the country as a whole. Following are the mathematical forms of the three models.

1. Log linear:  $\text{Ln}(TFR-L) = a+b(\text{time})$
2. Gompertz:  

$$\frac{TFR - L}{U - L} = (a)^{b^t}$$
 or alternatively,  

$$\text{Ln}[-(\text{Ln}(TFR-L)/(U-L))] = \text{Ln}(-\text{Ln}.a) + (\text{time}).\text{Ln}.b$$
3. Logistic:  $\text{Ln}[(TFR-L)/(U-TFR)] = a+b(\text{time})$

Where U and L are the upper and lower limits of TFR respectively and a and b are constants.

For all the States except Himachal Pradesh, the observed values of TFRs from 1991-2017 were considered for projecting the future levels of TFR as the reliable estimates from SRS are available from 1991 onwards. In fitting the Gompertz model, three types of upper asymptotes have been taken for the States depending upon whether the particular State is a higher or medium or low TFR State. The upper asymptote (U) has been taken as 4 for southern states and 6 for the northern states. For western and eastern states, U has been taken as 5. The projected values of TFR for India for the quinquennial period 2011-2035 at five yearly intervals have been presented below in Statement 2.

**STATEMENT 2**  
**PROJECTED LEVELS OF TFR, INDIA, 2011-2035**

Year/Period	Projected level of TFR
<b>SRS 2009-11</b>	2.50
<b>SRS 2011-15</b>	2.37
2016-2020	2.13
2021-2025	1.94
2026-2030	1.81
2031-2035	1.73

The following lowest thresholds of TFR were assumed in fitting the Gompertz model for projecting the TFR for future years. The TFR obtained through the Gompertz function specify that the replacement level TFR of 2.1 for the country as a whole is likely to be achieved by 2019. By 2030, the TFR is expected to reach 1.8. The probable year by which replacement level of fertility will be achieved by selected states, under the

assumption that the recent pace of decline in TFRs (observed during 1991-2017) continues in the future years also, is shown below in Statement 3.

Sl. No.	States	SRS, 2017	Lower asymptote
1	INDIA	2.2	1.667
2	ANDHRA PRADESH	1.6	1.5

### Sex Ratio at Birth (SRB) and Population Sex Ratio

Sex Ratio at Birth (number of females per thousand males) for the period 2009-11 has been presented in the report of the Sample Registration System, 2011 published by the Office of the Registrar General, India, for the country and the major states. These have been used for the present projection exercise. The Population Sex Ratio that has been used for the projection purposes has been taken from the data of Census 2011. Sex ratio at birth are kept varying at state level during the projection period. In the projections, the Sex Ratio at Birth are linearly projected in 2031 as 909 for the states (except Tamilnadu) in which in 2015-17, SRB were lower than 909. The states are Maharashtra, Punjab, Haryana, Rajasthan, Uttar Pradesh, Bihar, Gujarat, Uttarakhand and NCT of Delhi. For the remaining states, the projected SRB in 2031 is taken at constant level of 943 (converging SRB as per the international standards). Statement 4 showing the SRBs for the states, which have been considered for the projection exercise, is as follows:

**STATEMENT 4  
SEX RATIO AT BIRTH**

India/State	Sex ratio at birth 2009-11	Sex ratio at birth 2015-17	Population sex ratio-2011 (F/M*1000)

TAMIL NADU	926	907	996
TELANGANA	NA	897	988

### **Assumptions regarding mortality**

For projecting the likely levels of expectation of life at birth ( $e_0$ ), working models developed by the U.N. have been adopted. U.N. uses a standard pattern of improvement depending on whether the expectation is likely to improve slowly, moderately and fast based on historical patterns. It has been assumed that increase in the life expectancy becomes relatively slower as it reaches higher levels. The age specific survival rates were calculated by assuming that the age pattern of mortality observed in the SRS for 2009-2011 would slowly converge to the West model life table pattern as levels of life expectancy increase.

Starting with the average SRS based Age Specific Death Rate (ASDR) for 2009-2011 centered at 2010, which was taken as base year, separate life tables for males and females were prepared, separately taking into consideration the omission factor due to death reporting. Three years average was chosen, since the year wise mortality rates particularly at the state level would be subject to higher variability. With the help of the West model life table and the expectation of life at the base level, the values of  $nL_x$  for each of the five-year age groups were projected upto 2031-35 by interpolation. The West Model life tables were adopted as the standard life tables for this purpose.

To decide whether high, medium or low improvement should be assumed for each state, the  $e_0$ 's for the periods 2005-09 and 2010-14 obtained from SRS Life Table have been examined and pattern obtained through this for  $e_0$  been assumed to continue in future for India and all the states.

### **Assumptions regarding migration**

Based on the migration data of Census of India 2011, inter-state net migrants during decade 2001-11 has been assumed to remain constant throughout the projection periods for all the states, where Component Method of projections were used. The component of international migration has been assumed to be negligible, so it has not been considered for projection exercise.

### **Population Projections for smaller states and Union Territories**

The states for which projection has been made using the Component Method constitute about 99 percent of the total population as of 2011. The projection of the seven north-eastern states (excluding Assam) has also been carried out as a whole using the Component Method. For the remaining State- Goa and Union territories, contribute only 1 percent of the total population of India. These are Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli, Daman & Diu, Goa, Lakshadweep, and Puducherry. The population projection of these State/Union territories has been projected by Mathematical method using exponential growth rates. In order to project the future population, the exponential growth rates are estimated using the method of Least Squares, the steps of which are mentioned below:

**Step 1:** Using the Method of Least Square, Exponential Growth Rates are being estimated for 2021, 2031 and 2041. The data used pertains to the growth rates of 1981, 1991, 2001 and 2011.

**Step 2:** To get closer value of population, growth rate of 2016 has been estimated by using Geometric Mean (GM) of 2011 and 2021 & for 2026, the GM of 2021 and 2031. As such the most probable growth rate of 2016 and 2026 are obtained.

**Step 3:** The growth rate of 2016 has been used to estimate the population of 2012 to 2016, the growth rate of 2021 has been used to estimate the population of 2017 to 2021 and so on.

### **Projections for combined North-Eastern States (excluding Assam)**

An attempt has been made for working out the population projections of North- Eastern States combined (excluding Assam) by Component method. The states included in the North-Eastern States are Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim and Tripura. This was recommended by the Technical Group. In so far as the projection for the North -Eastern States, combined is concerned, TFRs for earlier years based on available data from 1995 onwards till 2017 has been used to project the future levels.

In case of mortality, the age specific death rates for the years 2009-2011, has been used for working out the expectation of life at birth for the base year.

Based on the projected population of the combined North-Eastern Region, as worked out for the quinquennial periods 2011-2035, the projected population of each of the seven states of the region (excluding Assam) for the quinquennial periods 2011-2035 have been worked out by pro-rata distribution of the population based on Census 2011 population, that is,

- (a) Proportion of population of each of the seven states to the total population of these seven states based on Census 2011 have been worked out;
- (b) Assuming the proportions to be constant in future years as well and using the same and the total projected population of the north-eastern region for each of the quinquennial periods, the projected population of each of the seven north-eastern states for the quinquennial periods 2011-2035 have been worked out.

### **Population Projection of Urban Population**

For projecting the urban population, the URGD method as given in Manual – VIII of U.N. has been adopted. This method is based on the fact that the urban-rural growth differentials follow a logistic pattern. The URGD for the period 2001-2011 has been assumed to be same in future as well upto 2036. These projected urban population by sex for India, states and union territories as on 1<sup>st</sup> March, 1<sup>st</sup> July and 1<sup>st</sup> October are provided in Tables 9, 12 and 15 respectively.

**APPENDIX - III**

---

**N-11011/05/2013-NCP  
GOVERNMENT OF INDIA  
MINISTRY OF HEALTH AND FAMILY WELFARE  
(NATIONAL COMMISSION ON POPULATION)**

Nirman Bhawan, New Delhi

Dated\_the 1<sup>st</sup> July, 2014

**ORDER**

**Subject: Constitution of a Technical Group on Population Projections.**

In order to provide population projections which can be used by the National Commission on Population, Planning Commission and various stakeholders & it has been decided to constitute a Technical Group on Population Projections for the period 2011-2035. The composition of the Technical Group will be as follows:

**Chariman**

1. Registrar General of India

**Members**

2. Additional Registrar General of India, RGI
  3. Additional Director (Demography & Training), RGI
  4. Advisor (Health), Planning Commission
  5. Advisor (Perspective Planning Division), Planning Commission
  6. Representative of Central Statistical Office
  7. Representative of National Sample Survey Office
  8. Representative of Ministry of Women and Child Development
  9. Representative of Ministry of Human Resource Development
  10. Representative of Ministry of Social Justice and Empowerment
  11. Representative of Ministry of Minority Affairs
  12. Chief Director (Statistics), Department of Health and Family Welfare
  13. Representative of Institute of Applied Manpower Research, New Delhi
  14. Representative of Indian Council of Medical Research, New Delhi
  15. Director, International Institute for Population Studies, Mumbai
  16. Prof. P.M. Kulkarni, Jawahar Lal Nehru University, New Delhi
  17. Director, National Institute of Medical Statistics, ICMR, New Delhi
  18. Shri K.S. Natarajan, Former Deputy Registrar General of India
  19. Joint Secretary (NCP) – Convener
2. Terms of reference of the Technical Group on Population Projections are given below :
- (a) To review the methodology of population projections adopted in the past.
  - (b) To prepare fresh projections of fertility rate.
  - (c) To prepare fresh projections of mortality rate.
  - (d) To prepare fresh population projections up to the year 2035 with age, sex, urban-rural and State-UT break ups for five year intervals.
  - (e) To prepare projections of the possible period when the population replacement level TFR 2.1 will be reached by States/Uts and the country as a whole. The Group may project reversal of the trend/continuation of trend of TFR in the States where it is below or replacement level of 2.1.
  - (f) In undertaking the above exercise, the Group may take into consideration data/information brought out by Census 2011, SRS, NSS, NFHS and other sources as may be needed.

- (g) The Group may take into account factors like level and pattern of contraceptive use, proportion of married females, the impact of major diseases like AIDS, and other factors like immigration, migration etc., while undertaking population projections.
- (h) The group may consider to have projections of migratory population so as to prepare plans by taking into account of migratory population.
- (i) The group may have population projections for SCs/STs/OBCs and religion-wise so as to design programmes for population stabilisation for targeted groups with a view to making suitable interventions
- (j) The group may give guidance to adjust the existing population projections based on 2011 Census figures. To meet the requirements relating to use of population projections in the intervening period, both before and after the release of Census results 2011, the group may give guidance to adjust the existing Population Projections figures for the period 2002-2010 and also for the period 2012 onwards in consonance with 2011 Census figures. The Group may also give guidance for similar adjustment in the Population Projections of intervening periods, when Census 2021 results become available.
- (k) The group may constitute sub-groups to consider any specific issue.
- (l) The Technical Group will submit its report to the National Commission on Population, Ministry of Health and Family Welfare by 30 November, 2014.
3. The Chairman, Technical Group may co-opt any member at a later stage, if required, and any official or non-official as a special invitee to one or more meeting of the Group.
4. The expenditure on TA/DA of the non-official members in connection with the meetings of the Technical Group will be borne by the National Commission on Population, as per rules and regulations of TA/DA applicable to Grade-I officers of Govt. of India or as otherwise decided by the Vice-Chairman, NCP. The expenditure on TA/DA of the official members, in connection with the meeting of the Technical Group will be borne by their respective Ministries/Departments.
5. This issues with the approval of Secretary (Health and Family Welfare), & Member-Secretary of National Commission on Population.
